WELCOME TO FRIDAY! I'm your host Kelsey Tamborrino, and no one guessed Alabama — the home state of the first officially designated Democratic floor leader, Oscar Underwood. For today: Name the only senator to be preceded by both of his or her parents. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

POLITICO's Ben White is bringing Morning Money to the Milken Institute Global Conference to provide coverage of the day's events and evening happenings. The newsletter will run April 29 - May 2. [Sign up to keep up with your daily conference coverage.](#)

PRUITT RAISES UNDONE AFTER FOX INTERVIEW: Amid the deluge of news coming out of the hearings, Pro's Emily Holden and Nick Juliano reported via [documents](#) released by EPA that the agency reversed raises for the two top aides to Pruitt the day after his interview with Fox News. Pruitt [told Fox](#) he had "corrected them" after finding out about them. A day later, on April 5, Pruitt's chief of staff Ryan Jackson signed personnel forms reverting the aides to their previous pay grades, according to copies of the forms reviewed by POLITICO. Read more [here](#).

McCONNELL'S WEST VIRGINIA REDEMPTION: Amid an increasingly tense GOP primary battle for Democratic Sen. [Joe Manchin](#)'s seat, coal baron Don Blankenship has focused his efforts into a relentless slash-and-burn campaign targeting Majority Leader [Mitch McConnell](#). Blankenship — who spent a year in prison following the deadly 2010 Upper Big Branch mine disaster — compared his current battle against the McConnell-led Republican establishment to his past legal fight against the federal government, POLITICO's Alex Isenstadt writes. But as the May 8 primary inches closer, McConnell is fighting back with an avalanche of attacks from a super PAC aligned with the Senate leader, among other efforts.

Blankenship's attacks have grown intensely personal. During an interview with POLITICO, Blankenship said that McConnell "has a lot of connections in China," adding that the GOP leader's wife is Transportation Secretary Elaine Chao. And during an [appearance](#) on a local radio show, Blankenship described Chao's father as a "wealthy Chinaperson," who was "well-connected in China." Read [more](#).

DOE TO ANNOUNCE FUNDS FOR ADVANCED NUCLEAR: Energy Secretary Rick Perry will announce today the selection of 13 projects that will receive about \$60 million in funding to support cost-shared research and development in advanced nuclear technologies. The selections — broken down into categories pertaining to nuclear demonstration readiness, advanced reactor development, and regulatory assistance grants — are the first under the Office of Nuclear Energy's "U.S. Industry Opportunities for Advanced Nuclear Technology Development" funding opportunity announcement. "Making these new investments is an important step to reviving and revitalizing nuclear energy, and ensuring that our nation continues to benefit from this clean, reliable, resilient source of electricity," Perry said in a statement.

ALL IN THE TIMING: The Office of Management and Budget completed its review of EPA's proposed "secret science" rule Wednesday, E&E News' Sean Reilly reports, even though Pruitt had already signed it by then. The policy that bars the agency from relying on studies that don't publicly disclose all their data got Pruitt's signature on Tuesday, but the Reginfo.gov site showed the review completion date as Wednesday. "While OMB is sometimes slow to update the site, it was unclear why Pruitt would have signed a rule before the review was completed," Reilly writes. EPA spokeswoman Liz Bowman suggested to E&E the fault lay with OMB. "Interagency review concluded before this proposal was signed," she said in a statement. Reilly later tweeted: "@OMBPress has now changed the date on the http://Reginfo.gov site to show that the review of this proposed #EPA rule was completed on April 23, not April 25. A #OMB spokesman won't discuss the reason for the change on the record."

TESTER TESTS TRUMP: The president is coming after Democratic Sen. Jon Tester, in what could be a problematic move for the Montanan as he fights to win reelection. Trump was enraged over Tester's work documenting allegations of malfeasance by Rear Adm. Ronny Jackson, provoking a series of inquiries that ultimately led to Jackson withdrawing his nomination to be VA secretary. POLITICO's Burgess Everett reports Tester is now at a turning point in his relationship with Trump, who railed against him on Thursday morning. "The incident and its fallout underscores how the burly, plain-spoken Tester hasn't exactly tacked to the center in an election year," Burgess writes. "Perhaps he feels emboldened after dodging a big-name opponent; after Ryan Zinke was drafted into the Trump administration and the state attorney general passed on the race, Tester's opposition is made up of lesser known opponents that will compete in a June primary." Read more.

SENATE MAKES POMPEO OFFICIAL: The Senate narrowly confirmed Mike Pompeo on Thursday, shifting him from CIA director to secretary of State. Pompeo was confirmed 57-42, ultimately winning support from Democrats Heidi Heitkamp, Manchin, Joe Donnelly, Bill Nelson, Claire McCaskill and Doug Jones. Supreme Court Justice Samuel Alito swore in Pompeo shortly after the vote Thursday, formally installing Pompeo, who has previously doubted climate science — a point greens jumped onto ahead of the vote. "There's some who think we're warming, there's some who think we're cooling," Pompeo said in 2013.

"Democrats that jumped ship to support this dangerous climate denier must and will be held accountable by the people," Food & Water Watch Executive Director Wenonah Hauter said in a statement. But others cheered the move: Competitive Enterprise Institute director of the Center for Energy and Environment, Myron Ebell, said in a statement he was "pleased." Pompeo, he said, "understands the importance of affordable, reliable energy to Americans' health and ability to provide for our families." Pompeo will be a "forceful advocate" of Trump's decision to remove the U.S. from the Paris climate agreement, Ebell said.

MANCHIN TRIES AGAIN: Manchin sent another letter this week urging Perry and Defense Secretary Jim Mattis to examine use of the Defense Production Act to protect coal-fired power plants. "The ability to produce reliable electricity and to recover from disruptions to our grid are critical to ensuring our nation's security against the various threats facing our nation today — whether those threats be extreme weather events or adversarial foreign actors," he writes. Earlier this month, Manchin similarly wrote to the president on the issue, although, as Pro's Eric Wolff reported, it faces an uphill battle on many fronts. Read the letter.

WATCH: House Speaker Paul Ryan was asked about climate change Thursday — by the 7-year-old daughter of E&E News' Scott Walden. See it here.

PRUITT FOCUS OF NEW AD: The opposition research firm American Bridge is scheduled to air an ad this morning on "Fox and Friends" focusing on Pruitt's swirling scandals and his previous criticism of the president. Watch it here.

DEMOCRATS COME OUT IN FULL FORCE FOR CPP: Ahead of the comment deadline, eight Democratic senators signed onto a letter led by EPW ranking member Tom Carper opposing EPA's proposal to repeal the Clean Power Plan. The senators write that the law is instrumental in fighting climate change and say

that rescinding it "ignores scientific evidence on the risks of climate change and puts generations of Americans at grave health and economic risk."

— **A coalition of 16 attorneys general and municipalities** submitted a supplemental comment letter to EPA with evidence of what they say are due process violations and ethical issues due to Pruitt's involvement. The group previously wrote to EPA, claiming Pruitt had not had an open mind on CPP. "Since then, the evidence continues to grow that Administrator Pruitt should have been disqualified from participating in this rulemaking before it began," they write. "His involvement has irreparably tainted the current administrative process, and as a result, EPA must withdraw the proposed CPP repeal." Read it [here](#).

MAIL CALL! WE NEED AN EXTENSION: Sens. [Ron Wyden](#) and [Jeff Merkley](#) and Reps. [Peter DeFazio](#) and [Jared Huffman](#) wrote to Interior Secretary Ryan Zinke and Agriculture Secretary Sonny Perdue on Thursday, urging an extension on interim mineral withdrawal protections for the Chetco River in southwest Oregon. Read it [here](#).

— **Sixteen senators, led by Democratic Sen. Tom Udall**, sent [this letter](#) to Zinke asking him to pause any plans for the management of Bears Ears and Grand Staircase-Escalante national monuments until legal challenges related to the president are resolved.

— **The House Biofuel Caucus sent a letter** to Pruitt objecting to Renewable Fuel Standard waivers issued by EPA, demanding Pruitt "immediately cease all waiver activity" and provide lawmakers a "full list" with further details. Read it [here](#).

CSB TO INVESTIGATE HUSKY EXPLOSION: The Chemical Safety Board said Thursday it is sending a four-person investigative team to Superior, Wis., to the scene of the Husky Energy explosion that injured several Thursday morning. The refinery was shutting down in preparation for a five-week turnaround, CSB said, when the explosion occurred. The Superior Police Department [evacuated](#) areas within miles of the explosion, including a small hospital nearby as a precaution. As of the latest count, at least 11 people were injured in the explosion, the Associated Press [reports](#).

CHA-CHING: Following a House Natural Resources hearing Thursday on offshore energy revenue sharing for Gulf-producing states, Interior announced it would disburse nearly \$188 million to four states: Alabama, Louisiana, Mississippi and Texas, as well as their coastal political subdivisions. It is the first disbursement of funds under Phase II of the Gulf of Mexico Energy Security Act of 2006, which comes from oil and gas leasing revenues on the Outer Continental Shelf, according to DOI. See the **massive** check [here](#).

Stories from POLITICO Pro

Ronny Jackson drama overshadows Pompeo success for White House Back

By Nancy Cook | 04/26/2018 06:05 PM EDT

White House aides were reveling in the pomp of French President Emmanuel Macron's state visit, viewing it as a welcome reprieve from the chaos of Cabinet confirmations, an intensifying Russia probe and a boss with a short fuse. Then reality hit.

President Donald Trump's pick for Veterans Affairs Secretary Ronny Jackson finally withdrew from the confirmation process amid escalating allegations of misconduct, and Trump called into the TV show *Fox and Friends* to deliver an unscripted interview touching on everything from the Russia probe and the investigation of his personal attorney Michael Cohen to fan-tweets from Kanye West—all before 10 a.m.

The day also included the confirmation of Mike Pompeo, previously Trump's CIA director, as secretary of state—an unexpectedly hard-fought victory that was overshadowed by routine House hearings featuring testimony from EPA Administrator Scott Pruitt, who has been accused of a string of ethics violations.

"The state visit was cool for folks in the White House and fun distraction for one hour from stories about Scott Pruitt or Michael Cohen before everyone got back to the shitshow," said one former White House official.

The president often publicly frames these hectic junctures as a White House unduly under siege from the press or other opponents. About Jackson's nomination, Trump said on Thursday: "He's a great man, and he got treated very, very unfairly. He got treated really unfairly. And he's a hell of a man."

The lack of vetting and Trump's tendency to name top-level nominees with little scrutiny dates back to the presidential transition in the fall of 2016. It's a pattern that surprises few insiders, even as it creates headaches for the White House and the nominees.

"Generally, White House aides are blaming the president from shooting from the hip and without giving it any thought, but this is how every decision he has made has gone," said the former White House official.

On Wednesday, the night before Jackson dropped out of consideration, a number of administration aides and Republicans close to the White House gathered at the Trump International Hotel for after-work drinks—and a few aides kept hoping aloud that Jackson would announce he was dropping out on TV, so no one would have to run back to the White House and everyone could keep drinking, according to one attendee.

The biggest beneficiary of this week's chaos was Pruitt, who started out the week under great scrutiny and disdain from several disparate circles of White House staffers and then ultimately skated through his two Capitol Hill hearings with little incident. Earlier in the week, those hearings were seen as a make-or-break moment for the EPA Administrator and ones that the president would pay attention to.

"As long as his explanations hold and there are no crazy discrepancies or smoking gun or anything like that, I don't think that creates any red flags for Pruitt," said one Republican close to the White House, who predicted Pruitt would survive the scrutiny.

What helps Pruitt and other Cabinet nominees who frustrate the White House or Trump is the math in the Senate. The Republicans do not have a large or cohesive enough majority to easily confirm new Cabinet secretaries, and the drama surrounding Jackson's departure puts a damper on creating any new vacancies to fill.

"In the ideal situation, the only headlines coming out of the agencies are the policy decisions advancing the president's agenda," said one senior administration aide, speaking about the spate of bad headlines surrounding Pruitt's leadership at the EPA. "That is the clear direction from the top, and we've communicated that."

But many White House officials—and the president himself—have adopted the view that the administration is unfairly maligned, no matter what it does.

Many aides were surprised that Pompeo's confirmation process seemed so shaky at certain points, given the White House's huge, upcoming foreign policy decisions on meeting with North Korea, keeping troops in Syria, and deciding the fate of the U.S.'s role in the Iran deal. The White House's Director of Legislative Affairs Marc Short devoted most of his time over the past few weeks to ensuring Pompeo got confirmed.

"We can only pick so many battles, and Pompeo has got to get done as quickly as possible," said one White House official.

Pruitt dodges blame [Back](#)

By Anthony Adragna, Annie Snider and Alex Guillén | 04/26/2018 10:46 AM EDT

Scott Pruitt may have handled his daylong congressional grilling well enough to salvage his job for now — but only after he blamed his torrent of scandals on staff, disavowed one of his top advisers and raised new questions about what he knew about massive raises awarded to some of his closest aides.

The Environmental Protection Agency administrator shrugged off responsibility Thursday for a \$43,000 privacy booth and more than \$100,000 in first-class flights, and even said he has no idea whether his chief policy adviser showed up for work at all during a three-month stretch.

But the former Oklahoma attorney general stayed calm throughout the nearly six hours of questioning. And his televised performance brought no immediate complaints from the one person whose opinion matters — the media-obsessed president who has so far stuck with Pruitt despite a multitude of investigations and the exasperation of key White House staff.

"Let me be very clear: I have nothing to hide as it relates to how I've run the agency for the past 16 months," Pruitt told a House Energy and Commerce subcommittee, the first of two panels to subject him to hours of questioning Thursday.

But he also didn't offer enough specifics to satisfy Democratic lawmakers — and a few Republicans — who criticized the lavish spending, cozy relations with lobbyists and other controversies that have taken root on his watch. He pointedly refused to apologize, instead accusing his critics of trying to "derail" President Donald Trump's policies.

Several Republican lawmakers who defended him during the hearings said he'd held his own against a barrage of Democratic complaints.

"I think he did well," said Rep. Tom Cole (R-Okla.), adding, "I know him well enough to not believe that he's deliberately done anything wrong or that he's made decisions in an inappropriate or unethical manner."

Still, Cole admitted any decision on Pruitt's fate is in Trump's hands.

Rep. Betty McCollum (D-Minn.) said Pruitt merely tried to dodge accountability for actions such as a massive expansion of his personal security team, while sidestepping accusations that he had punished staffers who questioned whether he faces serious threats to his safety.

"He could have taken personal responsibility and really meant it," McCollum told reporters after an afternoon hearing by a House Appropriations subcommittee, where she had told Pruitt he should resign. "Instead he messed up in that he got caught up in thinking he needed more security than he needed, and that when employees pushed back on him, he did retaliate."

One aspect of Thursday's testimony drew a notable amount of attention — Pruitt's shifting explanations for what he knew, and when, about raises as high as 72 percent that went to some of his key aides.

Weeks ago, Pruitt told [Fox News](#) that he hadn't known about the raises until after the fact, that he did not know who authorized them and that the aides should not have received them. But under lawmakers' questioning Thursday, he acknowledged that he had authorized his chief of staff to award pay increases to the aides — but said he did not know how high they would be or that they would circumvent the White House's disapproval.

"I was not aware of the amount, nor was I aware of the bypassing or the [Presidential Personnel Office] process not being respected," Pruitt said, responding to a question from Rep. [Paul Tonko](#) of New York, the top Democrat on the Energy and Commerce Environment Subcommittee.

An EPA spokesman later said Pruitt had given his chief of staff, Ryan Jackson, blanket authorization to handle hiring and raises using the EPA's power under a water law that didn't require the White House's sign-off.

Lawmakers didn't ask — and Pruitt didn't say — whether he would discipline Jackson for his handling of the raises.

A preliminary [report](#) from EPA's inspector general has found that Jackson signed off on the pay hikes to Sarah Greenwalt, a Pruitt adviser who previously worked as his general counsel in the Oklahoma attorney general's

office, and Millan Hupp, a former "Team Pruitt Operations Director" who is now his director of scheduling and advance.

Pruitt also said he didn't know whether one of his top aides, Samantha Dravis, had failed to show up for work for much or all of November through January, as Sen. Tom Carper (D-Del.) has alleged. His answer essentially abandoned a past statement by an EPA spokesman, who called the accusations "baseless and absurd."

"I'm not aware that she did or did not appear for work. So that's something that is being reviewed at this point," Pruitt told lawmakers Thursday, referring to an inspector general decision to review her attendance.

Dravis, EPA's associate administrator in charge of EPA's Office of Policy until last week, was such a senior aide that she had traveled with Pruitt on official business in Morocco as recently as December. She also appears with him in a meeting photo that Pruitt's EPA Twitter account tweeted Dec. 6.

Pruitt also blamed his staff for the controversial purchase and installation of the privacy booth in his office, and said he would have stopped it if he knew the cost. He said the installation came after he'd received a phone call "of a sensitive nature" and requested "access to secure communication."

"I gave direction to my staff to address that, and out of that came a \$43,000 expenditure that I did not approve," he said. "If I'd known about it, I would have refused it."

Pruitt did not single out the staff members he was blaming for the phone booth installation, but agency staffers have told POLITICO that those and other pricey expenditures were overseen by Pasquale "Nino" Perrotta, the career employee who heads his security detail.

Even after surviving Thursday's gauntlet, Pruitt is still facing numerous investigations from Congress, the White House and government watchdogs into his taxpayer-funded first-class travel; unprecedented, 24-hour security detail; and sweetheart rental deal with the wife of a lobbyist who sought to influence his agency. A senior EPA official said Thursday that high-level staffers including Jackson, Greenwalt and Perrotta are willing to sit for interviews with staff of the House Oversight Committee, which is carrying out one of the probes of Pruitt's actions.

Ahead of Thursday's hearing, EPA distributed a 23-page document responding to various allegations.

Democrats ripped into him from the start, charging that Pruitt had put his own interests and political ambitions over the job of protecting the environment and human health, and he had shown he didn't deserve the public trust.

"I think your actions are an embarrassment to President Trump and distract from the EPA's ability to effectively carry out the president's mission, and if I were the president I wouldn't want your help," said Frank Pallone (D-N.J.). "I'd get rid of you."

Sitting in front of protesters wearing "Impeach Pruitt" T-shirts and a sign calling him "Mr. Corruption" on Thursday morning, Pruitt dismissed the wave of criticism as an attempt to undercut "transformational change" happening at the agency.

"Let's have no illusions about what's really going on here: Those who have attacked the EPA and attacked me are doing so because they want to attack and derail the president's agenda and undermine this administration's priorities," he said. "I'm simply not going to let that happen."

Rep. John Shimkus (R-Ill.), who chaired the morning hearing, said afterward that he thought Pruitt had acquitted himself well.

"I think that he answered the questions in the best way that he could answer them," Shimkus said.

Shimkus wouldn't speculate about potential next steps by the Energy and Commerce panel, saying the decision was up to full committee Chairman Greg Walden (R-Ore.). He also declined say whether he thought questions remain unanswered.

"I'm just glad he showed up," Shimkus said.

Pruitt's defenders, like Rep. David McKinley (R-W.Va.), who has praised Pruitt's rollback of climate change and water regulations, dismissed the Democrats' complaints as political posturing.

"To the public, I think this has been a lot of classic display of innuendo and McCarthyism that we're seeing too often here in Washington that I think unfortunately works against civility and respect for people in public office," he said. "Some can't resist the limelight, the opportunity to grandstand."

Rep. Joe Barton (R-Texas) said the focus on the controversies was an attempt to undermine Pruitt's, and Trump's, policies.

"If you can't debate the policies in Washington, you attack the personality, and that's what's happening to you," Barton told Pruitt. "Republicans do it when it's a Democratic president. Democrats do it when it's a Republican president. And in my opinion, it's just my opinion, that's what's happening to you."

Not every Republican came to Pruitt's defense, though. Rep. Ryan Costello of Pennsylvania offered the harshest criticism from the GOP, saying his activities deserved the anger they had provoked.

"I think the opprobrium that you've generated on some of these spending decisions is actually warranted," Costello, who is retiring from Congress, told Pruitt. "I've reviewed your answers, and I find some of them lacking or insufficient. And I believe you've not demonstrated the requisite good judgment required of an appointed executive branch official on some of these spending items."

Trump has so far stood by Pruitt, praising his work to pare back environmental rules and remaining wary of upsetting conservatives who strongly support the administrator.

The administration's desire to avoid another tough confirmation fight also appears to be weighing in Pruitt's favor. While new Secretary of State Mike Pompeo narrowly won Senate confirmation and was sworn in Thursday, Rear Adm. Ronny Jackson's nomination to head the Department of Veterans Affairs crashed and burned, and Trump also needs to win approval for a controversial pick to head the CIA.

Democrats suggested that Pruitt's controversies were the result of his penchant for abusing the perks of his position and rewarding his political backers.

"Only in recent weeks have we come to understand the extent of your political ambitions, your tendency to abuse your position for personal gain and to advance the agendas of your political benefactors in what appears to be a propensity for grift," Tonko said.

Under questioning from Rep. Anna Eshoo (D-Calif.), Pruitt declined multiple times to answer whether he felt any remorse for wasteful spending at the agency,

"I think there are changes I've made already," he said. But he deflected several questions about his first-class flights, saying his security detail decides where he sits on airplanes, and that he now plans to fly coach.

Eshoo didn't buy it.

"With all due respect, I may be elected, but I'm not a fool," she said. "That's really a lousy answer from someone that has a high position in the federal government."

Emily Holden contributed to this report.

'Embarrassment' or 'McCarthyism': Key moments as Pruitt faces lawmakers [Back](#)

By Quint Forgey, Anthony Adragna, Alex Guillén and Annie Snider | 04/26/2018 01:40 PM EDT

Scott Pruitt, the scandal-ridden administrator of the Environmental Protection Agency, appeared on Capitol Hill on Thursday for back-to-back House committee hearings on his agency's budget request.

But the only spending most lawmakers wanted to discuss were reports of Pruitt's taxpayer-funded air travel, the sweetheart condo lease he secured from a lobbyist, and the numerous other allegations of misappropriating funds and unethical management that have tarred his tenure at the EPA.

Here are key moments from the contentious hearings, held by subcommittees of the House Energy and Commerce and House Appropriations committees:

A defiant Pruitt says he has nothing to hide. The former Oklahoma attorney general argued his critics were simply attempting to undercut the "transformational change" he's making at the agency on behalf of President Donald Trump. "Let's have no illusions about what's really going on here: Those who have attacked the EPA and attacked me are doing so because they want to attack and derail the president's agenda and undermine this administration's priorities," he said at the outside of the day's first hearing, in front of a House Energy and Commerce subcommittee. "I'm simply not going to let that happen." Pruitt maintained had "nothing to hide," and suggested some of the reports regarding his behavior were inaccurate. "Facts are facts and fiction are fiction," he said. "And a lie doesn't become truth just because it appears on the front page of a newspaper."

Pruitt acknowledged he authorized pay raises for his key aides. But he said he didn't know how much they were, or that his chief of staff — who took the blame for signing off on the salary hikes — circumvented the White House to award them. "I was not aware of the amount, nor was I aware of the bypassing or the [Presidential Personnel Office] process not being respected," Pruitt told lawmakers. Pruitt had earlier said on Fox News that he hadn't known about the raises and that the aides should not have received them. A preliminary report from EPA's inspector general found that chief of staff Ryan Jackson signed off on multiple large raises using Safe Drinking Water Act authority, which allows the agency to move forward without White House sign-off. The raises totaled as much as 72.3 percent.

But he blamed EPA's career staff for his \$43,000 privacy booth. He said career employees signed off on the expensive soundproof phone booth installed in his office — and maintained he would have refused it if he'd known about the cost. "I did have a phone call that came in of a sensitive nature and I did not have access to

secure communication," he said. "I gave direction to my staff to address that and out of that came a \$43,000 expenditure that I did not approve." The Government Accountability Office has said the agency violated spending laws by not informing Congress about the booth beforehand. To Pruitt's critics, the booth has come a prominent symbol of his reputation for high-spending and extreme secrecy. Pruitt later said he uses the booth only "rarely," and that "it depends on the nature of the call and how urgent the call is."

Pruitt also had trouble explaining the expensive biometric locks recently installed in his office. They require a code for him to enter, but he wouldn't say whether the locks feature fingerprint scanners or some other type of identification system. When Pruitt said career staffers made the decision to install the locks, Rep. Peter Welch (D-Vt.) wasn't impressed. "It's really starting to seem like there's something on the desk with a motto, 'The buck stops nowhere,'" he quipped.

It's still not clear whether one of Pruitt's top aides came to work for three months. "I'm not aware that she did or did not appear for work. So that's something that is being reviewed at this point," Pruitt said of Samantha Dravis, the associate administrator in charge of EPA's Office of Policy. Sen. Tom Carper (D-Del.) has alleged that Dravis largely did not work the months of November through January, and EPA's inspector general has agreed to review her attendance. Dravis said several weeks ago that she planned to resign, and her last day was reportedly April 20. Pruitt's comments Thursday were a shift from EPA's past statements that the no-show accusation is "completely baseless and absurd."

Democrats pounded him early and often. Those included top Energy and Commerce Democrat Frank Pallone of New Jersey, who said the scandals enveloping Pruitt are "an embarrassment to President Trump and distract from the EPA's ability to effectively carry out the president's mission. And if I were the president, I wouldn't want your help. I'd get rid of you."

Some Republicans also warned Pruitt he needs to answer questions. Environment subcommittee Chairman John Shimkus (R-Ill.) said he considered much of the media narrative surrounding the EPA chief's scandals to be "a distraction," but the committee "cannot ignore" reports of Pruitt's impropriety. "As public servants, our jobs are not based solely on the things we do, or the things we have done, but also on the way we conduct our business," Shimkus said in his opening statement. "It is no secret that there have been many stories in the press about the management and operations of the agency and your dealings with potentially regulated sectors." And full Energy and Commerce Chairman Greg Walden (R-Ore.) expressed concerns that Pruitt's progress on policy is being "undercut" by the allegations. "These issues are too persistent to ignore," said Walden, a member of House Republican leadership.

But other GOP lawmakers came to his rescue, and one likened the criticism to "McCarthyism." Rep. Joe Barton, a former Energy and Commerce chairman, and Rep. David McKinley (R-W. Va.), a staunch Pruitt ally, blamed Democrats and toxic partisanship for Pruitt's precarious professional standing. "If you can't debate the policies in Washington, you attack the personality, and that's what's happening to you," Barton lamented. McKinley accused Democrats on the panel of not being able to "resist the limelight" and said Pruitt's detractors were simply grandstanding. "I think this has been a lot of classic display of innuendo and McCarthyism that we're seeing too often here in Washington, that I think unfortunately works against civility and respect for people in public office," McKinley said.

Rep. Bill Johnson (R-Ohio) also jumped to shield Pruitt. "I think it's shameful today that this hearing has turned into a personal attack hearing and a shameful attempt to denigrate the work that's being done at the EPA and with this administration," he said. Public officials should have ethical standards "beyond reproach," Johnson said, "but so should members of Congress."

Staffers moved or dismissed under Pruitt weren't being punished, he said. "There's no truth to the assertion that decisions have been made about reassignments or otherwise as far as employment status based upon the things you reference. I'm not aware of that ever happening, and it's something I want to make very, very clear,"

Pruitt said, vowing he would not retaliate against civil servants who flag wrongdoing. The New York Times reported this month that several top staffers were reassigned or demoted after questioning Pruitt, and POLITICO reported that the agency's deputy homeland security chief was dismissed after signing off on a report questioning Pruitt's security spending.

One Republican ripped into Pruitt with particular gusto. "I think the opprobrium that you've generated on some of these spending decisions is actually warranted," Ryan Costello (R-Pa.), who is retiring from Congress, told the EPA chief. "I've reviewed your answers and I find some of them lacking or insufficient. And I believe you've not demonstrated the requisite good judgment required of an appointed executive branch official on some of these spending items." He went on to ask specifically about reports of retaliation against employees who questioned Pruitt, as well as whether security threats against him were "warranted or credible."

Pruitt: I only took that controversial trip to Morocco because the country's ambassador invited me. "There was a free trade agreement that is in existence with Morocco and the ambassador of Morocco invited me to Morocco to negotiate the environmental chapter on that free trade agreement," Pruitt told lawmakers. The EPA administrator's December jaunt to the North African nation came under intense scrutiny when the agency, in a news release after the fact, described the trip as dual-purpose: to discuss updates to a U.S.-Morocco Free Trade Agreement "and the potential benefit of liquified [sic] natural gas (LNG) imports on Morocco's economy." Later on Thursday, Pruitt attempted to downplay his role in promoting American natural gas exports. "There was a lot of reference made to LNG only because the ambassador [of Morocco] asked me to share that with individuals when I was in country," he said.

Pruitt the leaker? After facing questions about the severity of the threats the EPA chief has faced in office — which the agency has cited to justify his pricey security budget — Pruitt read part of a report from the inspector general's office that documented threats directed at him and his family. Asked whether EPA Inspector General Arthur Elkins Jr. had written the report he cited, Pruitt replied, "I'm looking at the document that says inspector general." But a spokeswoman for the IG's office said Thursday that it came from another official, not Elkins himself. "It was an internal memo from Assistant IG for Investigations Patrick Sullivan," OIG spokeswoman Tia Elbaum said in an email. "It was leaked without authorization. It will be released in the near future as part of an OIG FOIA response."

By the time Pruitt was finished, Shimkus was "just glad he showed up." The Illinois Republican, who chaired Pruitt's first hearing, said he thought the administrator handled himself well and that GOP members were suitably tough in their questioning. "Some of it was accountability for policy, so I don't know what more [critics] want," Shimkus told POLITICO of Pruitt's performance. "I think that he answered the questions in the best way that he could answer them." Shimkus declined to speculate about potential next steps the House Energy and Commerce Committee or the Environment subcommittee would take, and didn't specifically state whether he thought questions remain unanswered after today's grilling. "I knew it would be painful," he said.

Shimkus praises Pruitt performance in first hearing [Back](#)

By Anthony Adragna | 04/26/2018 02:39 PM EDT

Rep. [John Shimkus](#) (R-Ill.), who chaired EPA Administrator Scott Pruitt's first hearing today, said he thought Pruitt handled himself well and that Republican members were tough in their questions.

Shimkus pointed to questions from Reps. [Ryan Costello \(R-Pa.\)](#), [Leonard Lance \(R-N.J.\)](#) and [Billy Long \(R-Mo.\)](#) at the Energy and Commerce environment subcommittee hearing this morning.

"Some of it was accountability for policy, so I don't know what more [critics] want," Shimkus told POLITICO of Pruitt's performance. "I think that he answered the questions in the best way that he could answer them."

Shimkus declined to speculate about potential next steps, saying that decision was up to full committee Chairman [Greg Walden \(R-Ore.\)](#). And he declined to specifically state whether he thought questions remain unanswered.

"I'm just glad he showed up," he said. "I knew it would be painful. There would be policy and politics."

Gowdy expands probe into EPA's Pruitt [Back](#)

By Anthony Adragna and Alex Guillén | 04/13/2018 05:45 PM EDT

House Oversight Chairman Trey Gowdy (R-S.C.) said Friday he's expanding his probe into the alleged ethical and spending abuses by EPA Administrator Scott Pruitt one day after his staff met for several hours with a former EPA aide who was pushed out of the agency.

Gowdy's latest [letter](#) is a further sign of the deepening bipartisan scrutiny facing President Donald Trump's environmental chief, whose critics accuse him of excessive spending on travel, vehicles, staff raises and luxe security features such as a \$43,000 soundproof phone booth.

The committee's new request focuses on the decision to increase Pruitt's security to round-the-clock protection, contracts to sweep Pruitt's office for electronic surveillance, his trips to Italy and Morocco, the hiring of an Italian security firm, and travel by Pruitt's security chief, Pasquale "Nino" Perrotta.

The letter comes after the committee interviewed ousted EPA employee and former Trump campaign aide Kevin Chmielewski, who is being treated as a whistleblower. A committee spokeswoman said the information he provided is consistent with allegations laid out in [a letter](#) released Thursday by House and Senate Democrats who had also spoken to him.

The committee also asked for sit-down interviews with four senior EPA officials: Perrotta; Ryan Jackson, Pruitt's chief of staff; Millan Hupp, a scheduling and advance aide; and Sarah Greenwalt, a senior counsel to Pruitt. Gowdy requested the agency schedule those interviews and provide a litany of documents by April 27. Gowdy also requested an on-the-record interview with Chmielewski, who spoke more informally with lawmakers this week.

Hupp and Greenwalt, both of whom have worked for Pruitt since he was Oklahoma's attorney general, are the two staffers who received raises via a special authority granted Pruitt under the Safe Drinking Water Act. Pruitt told Fox News last week he was not aware of the raises, although Chmielewski told Democrats this week that the raises were "100 percent Pruitt himself."

EPA spokesman Jahan Wilcox said the agency had "responded to Chairman Gowdy's inquiries and we will continue to work with him."

EPA's inspector general is also investigating complaints about Pruitt's travel spending and other practices. The inspector general's office said it will release an interim report Monday afternoon on one of its probes, which involves whether Pruitt misused special hiring authority provided by the Safe Drinking Water Act to bring some key aides into the agency.

It's unclear whether the IG has expanded that probe to include a recent controversy around EPA's use of the same water law to grant raises to the two Pruitt aides despite the White House's disapproval.

Chmielewski told Democrats this week that EPA fired him after he refused to sign off retroactively on first-class travel for one of Pruitt's closest aides, Samantha Dravis. Gowdy's letter does not request an interview with Dravis, who has announced her intent to leave the agency.

During congressional interviews earlier this week, Chmielewski outlined a detailed litany of seemingly unethical behavior against Pruitt. He said the EPA chief insisted on staying at expensive hotels while traveling even if they exceeded permissible federal spending limits, directed staff to book him on Delta Air Lines so he could accrue frequent flier miles, made a close aide "act as a personal real estate representative" and then retaliated against staff who questioned his behavior, among other allegations.

EPA has previously dismissed Chmielewski as one of a "group of disgruntled employees who have either been dismissed or reassigned." The agency did not immediately comment on the latest letter.

Gowdy's probe into Pruitt's activities has been in contrast to his GOP colleagues, who have adopted a "wait and see" approach toward the EPA chief's ethical woes. Lawmakers this week expressed discomfort with Pruitt's spending when asked and vowed to press him about it at future hearings. But they've stopped short of demanding documents or issuing subpoenas to investigate the alleged ethics lapses.

Pruitt last appeared before Congress in late January before the Senate Environment and Public Works Committee. Unlike his fellow Cabinet members, he has yet to appear before any congressional committees to defend his fiscal 2019 budget request. And he's not scheduled to return to Capitol Hill for another two weeks, when he is scheduled to attend an April 26 session with the House Energy and Commerce Committee.

"The Republicans are absolving themselves of all oversight responsibility even in the face of the most egregious conduct. They may as well stop calling committees oversight," Melanie Sloan, senior adviser at American Oversight, told POLITICO. "What would it take? Would he literally have to kill somebody before they say it's a problem?"

GOP lawmakers were less patient with Obama EPA officials. Senate and House lawmakers questioned former Administrators Lisa Jackson and Gina McCarthy, as well as other senior brass, on issues ranging from the use of nonofficial email accounts, whether they used texting to avoid record-keeping requirements, whether they allowed a senior staffer to commit time fraud and why they hadn't fired employees who spent hours watching pornography at work more quickly.

EPW Chairman John Barrasso (R-Wyo.) has said he planned to await the results of a White House review of Pruitt's conduct and would not comment on multiple occasions this week on when the administrator would return to his committee.

"He was just here earlier this year and answered questions for 2½ hours, but I expect him to come back again," Barrasso told reporters.

EPA prepping documents in response to Oversight probe [Back](#)

By Anthony Adragna | 04/26/2018 08:11 PM EDT

EPA staff is in the process of providing documents to the House Oversight Committee that it believes will respond to allegations of lavish spending and unethical conduct by Administrator Scott Pruitt and may negate the need for several aides to appear for interviews, according to a senior EPA official.

The agency staffers believe the documents will show former Trump campaign aide Kevin Chmielewski, who served as a senior aide to Pruitt, made a number of "exaggerations" when he spoke with Democratic and Republican lawmakers, according to the official.

Senior staffers at the agency are also willing to sit for interviews with Oversight staff if desired, the official said. Those officials include: Pasquale "Nino" Perrotta, Pruitt's security chief; Ryan Jackson, Pruitt's chief of staff; Millan Hupp, a scheduling and advance aide; and Sarah Greenwalt, a senior counsel to Pruitt.

House Oversight Chairman [Trey Gowdy](#) (R-S.C.) [expanded his probe](#) into the embattled EPA chief's activities one day after his staff sat down with Chmielewski. In an April 13 letter, Gowdy requested a host of documents and that the interviews be scheduled by April 27.

In addition, an Oversight Committee aide said earlier this week the committee had informally requested on April 16 that Samantha Dravis, formerly one of Pruitt's closest aides, appear for a transcribed interview with committee staff. Dravis had not been included in Gowdy's original letter because it was thought she left the agency, but her resignation was actually effective April 20, according to the aide.

A spokeswoman for the Oversight Committee did not respond to request for comment today.

Documents: EPA reversed raises one day after Pruitt's Fox interview [Back](#)

By Emily Holden and Nick Juliano | 04/26/2018 06:45 PM EDT

EPA reversed raises for two top aides to Administrator Scott Pruitt the day after his interview with Fox News, according to [documents](#) shared by the agency today.

Pruitt [told Fox](#) his staff had authorized the raises and he had "corrected them." A day later, on April 5, Pruitt's chief of staff, Ryan Jackson, signed personnel forms reverting the aides to their previous pay grades, according to copies of the forms reviewed by POLITICO. Jackson signed the documents "for Scott Pruitt," as he had on forms authorizing the initial pay bumps a few days earlier, according to documents [previously released](#) by EPA's inspector general.

Sarah Greenwalt, senior counsel to Pruitt, received a \$56,765 increase in her annual salary on April 1, and Millan Hupp, director of scheduling and advance, saw a \$28,130 increase that same day, according to the earlier IG documents.

Jackson reversed those moves on April 5, bumping Greenwalt's salary back to \$109,900 per year, and Hupp's to \$88,450, according to the new documents.

Pruitt signed a memo in March 2017 delegating to Jackson the ability to make hiring and salary decisions using a special section of the Safe Drinking Water Act.

"Administrator Pruitt has consistently said he was not aware of the amount of the raises or the process that was used, as he said both today and in prior interviews," EPA spokesman Jahan Wilcox said in a statement. "He was aware one of the individuals was receiving changes to job responsibilities and might be asking for a raise, but had no further involvement in the discussions, negotiations or approvals, because he had authorized his Chief of Staff and other EPA officials to handle all personnel matters."

McConnell seeks redemption in ugly West Virginia primary [Back](#)

By Alex Isenstadt | 04/26/2018 04:48 PM EDT

HUNTINGTON, W. Va. — Don Blankenship walked into the Guyan Golf & Country Club on Tuesday afternoon and bluntly laid out his plan for the final two-week stretch of the GOP Senate primary: a relentless slash-and-burn campaign targeting Mitch McConnell.

As the assembled local GOP women's group munched on chocolate chip cookies, the coal baron who spent a year behind bars after a deadly 2010 mine explosion compared his current battle against the McConnell-led Republican establishment to his past legal fight against the federal government.

"When you've been falsely charged, when you've had seven of 10 bill of rights flagrantly violated, you tend to fight back. ... I make no apologies for that," he said, adding that when he sees people like McConnell "leading us to the left, I will speak out about it, because I know bad people join good organizations."

As the dramatic May 8 primary campaign hurtles to a close, it's taking on an all-too familiar outline. For the second time in a matter of months, an insurgent outsider is taking aim at McConnell, looking to capitalize on the broiling anti-establishment unrest that's dominating Republican politics. And just like last time, McConnell is fighting back.

In the fall, the leader's aggressive campaign to defeat Alabama Republican Roy Moore backfired spectacularly. This time, his attempt to stop the 68-year-old Blankenship seems to be faring better. Amid an avalanche of attacks from a McConnell-aligned super PAC, two new polls out this week show Blankenship, once seen as an early front-runner, plunging into third place.

Crisscrossing the state this week, Blankenship savaged the Kentucky Republican as weak-kneed, accused him of failing to stand up for the coal industry, and said he'd long ago lost touch with Republican voters.

Blankenship vowed to oppose McConnell as Senate GOP leader if he won and began airing a TV ad — which he personally composed — envisioning McConnell as a bog-enveloped "swamp captain."

At times, the attacks grew intensely personal. During an interview with POLITICO on Sunday, Blankenship said McConnell "has a lot of connections in China," adding that the GOP leader's wife, Transportation Secretary Elaine Chao, is "from China, so we have to be really concerned that we are in truth" putting America's interests first. Blankenship's girlfriend was born in China.

During an appearance on a local radio show the following day, Blankenship repeated the jab, describing Chao's father as a "wealthy Chinaperson," who was "well-connected in China."

Asked about the remarks, Josh Holmes, a longtime McConnell political adviser, charged that Blankenship is "mentally ill," noting that Blankenship had once spoken of moving to China and becoming a Chinese citizen. Holmes also said Blankenship had used a "racial blast" against the Taiwan-born Chao, whom he described as "the dictionary definition of the American dream."

"The one consistency we've seen over the last decade is that the death rattle of a primary candidate is always a tendency to attack other Republicans because they know reporters will report it," Holmes added. "At this point what's clear is that voters are writing him off and so he knows that by attacking McConnell he'll get attention."

Driving the McConnell team's offensive is a belief that Blankenship cannot defeat Democratic Sen. Joe Manchin in November.

This spring, Steven Law, president of the McConnell-aligned Senate Leadership Fund super PAC, wrote a memo to top Republican Party donors that stated Manchin was beatable — but not if Blankenship wins the primary.

"We would forfeit any chance of beating Manchin if Blankenship becomes the nominee," wrote Law, underlining the sentence for emphasis.

Republican strategists spent weeks deliberating how to take down Blankenship, concerned that an overtly Washington-led effort would only strengthen him - just as it did when Senate Leadership Fund spent millions of dollars against Moore.

Finally, a group of Republican strategists who've previously worked with Senate Leadership Fund mobilized and earlier this month launched the generically-titled Mountain Families PAC. Over the span of a little more than a week, the super PAC pummeled Blankenship with over \$700,000 in TV ads accusing him of contaminating drinking water with coal slurry.

The creative force behind the commercials was a GOP consulting firm spearheaded by Larry McCarthy, a McConnell ally who is widely viewed as the master of the political attack ad. Among his credits: the 1988 Willie Horton spot that helped to sink Democrat Michael Dukakis' presidential bid.

Apparently not finished with Blankenship, Mountain Families PAC on Thursday began purchasing additional commercial airtime.

With Blankenship cratering in polls, many Republicans are convinced that Blankenship has been effectively neutralized and that the contest has emerged as a two-person race between GOP Rep. Evan Jenkins and state Attorney General Patrick Morrisey. The coal baron has derided both as pawns of the establishment.

As he hit the trail this week, Blankenship bristled over the effort to upend his candidacy. Each time, he pointed to the super PAC's connection to the GOP leader.

"As you know," he said at the GOP women's luncheon in Huntington, "I've even been beat up by the Republican Mitch McConnell."

During a news conference on Monday afternoon, Blankenship fired back at Washington Republicans who called him unelectable, saying even his dog could beat Manchin.

At one point, he was asked point-blank whether he had a message for McConnell.

"He needs to understand that if I'm there I will not vote for him for majority leader, and so the rest of the senators should understand that they should not put him up if they need my vote," Blankenship responded.

In an interview, Blankenship recounted a personal history with McConnell, a fellow coal country pol, that he said dated back nearly three decades. He said he first met McConnell during the late 1980s while visiting the home of a GOP donor in Kentucky, and that their paths occasionally crossed over the years after. The coal company that Blankenship formerly presided over, Massey Energy, has mines in Kentucky.

Massey, Blankenship said, had been helpful to McConnell early in his political career. In 1999, Blankenship, a longtime GOP donor who for years bankrolled West Virginia campaigns, contributed \$1,000 to McConnell's reelection campaign, according to federal filings.

Over time, though, Blankenship said he came to see the Republican leader as insufficiently supportive of the mining industry. He said they haven't spoken in about a decade.

"I never felt that he fought very hard for coal. He seemed to be too willing to compromise on climate change legislation," said Blankenship, adding that West Virginians felt that McConnell didn't put up enough of a fight against President Barack Obama's push to regulate carbon emissions.

McConnell advisers dispute the criticism. "People have accused Mitch McConnell of a lot of things over the years, but I've never heard anyone say he's insufficiently pro-coal," said Holmes.

After being released from prison last year, Blankenship launched his campaign with an eye toward clearing his name and pushing back against the allegations the federal government leveled against him. As the race has progressed, he has come to see his war with McConnell as intertwined with the central theme of his candidacy: that the Washington establishment is out to get him.

At Blankenship campaign events, he hands out copies of "An American Political Prisoner," the manifesto he wrote while in jail.

The anti-McConnell campaign has a decidedly homemade flavor. Blankenship, who's staffed his campaign with West Virginia-based operatives rather than ones from Washington, personally wrote the "swamp captain" ad, an amateur-style spot that lacks the slick production of typical political commercials. After producing the concept and the script, his small group of advisers made some edits before releasing it to TV stations.

But as the race enters its final days, Blankenship finds himself playing catch-up against his more establishment-friendly rivals.

During his closing remarks in a Tuesday afternoon debate, he chose to go after one of his opponents with a familiar weapon.

"Will Evan Jenkins stand up when Mitch McConnell looks at him?" Blankenship asked as the congressman looked on. "That's the question."

Pruitt scales back EPA's use of science [Back](#)

By Emily Holden and Annie Snider | 04/24/2018 03:17 PM EDT

Environmental Protection Agency chief Scott Pruitt announced Tuesday he would seek to bar the agency from relying on studies that don't publicly disclose all their data, a major policy change that has long been sought by conservatives that will sharply reduce the research the agency can rely on when crafting new regulations.

The unveiling of the proposed rule delivers a win to Republicans like House Science Chairman [Lamar Smith](#) (R-Texas), who unsuccessfully pushed legislation to impose the same type of change. The move also demonstrates Pruitt's persistence in pursuing President Donald Trump's anti-regulation agenda just two days before the embattled EPA chief is due to face fierce questioning from lawmakers about his hefty spending, expanded security detail and cheap condominium rental from the wife of an energy lobbyist.

At an invitation-only meeting at EPA headquarters with Smith, Sen. [Mike Rounds](#) (R-S.D.) and other supporters of the policy, Pruitt said the proposed rule was critical in ensuring that the agency was transparent about how it is making decisions to justify costly new regulations. It is the latest step Pruitt has taken to fundamentally shift the agency's approach to science.

"It is a codification of an approach that says as we do our business at the agency the science that we use is going to be transparent, it's going to be reproducible, it's going to be able to be analyzed by those in the marketplace. And those who watch what we do can make informed decisions about whether we've drawn the proper conclusions or not," Pruitt said.

Text of the proposed rule was not immediately available.

The proposal, based on legislation pushed by Smith, is intensely controversial, and scientists and public health groups say it will prevent federal regulators from enacting health and safety protections. Nearly 1,000 scientists, including former EPA career staffers, signed a [letter](#) opposing the policy sent by the Union of Concerned Scientists to Pruitt on Monday.

Their primary concern was that many of the country's bedrock air and water quality regulations are based on research that cannot disclose raw data because it includes the personal health information.

But industry has its own version of the same problem. EPA often relies on industry studies that are considered by companies to be confidential business information when determining whether new pesticides and toxic chemicals are safe to use. Internal EPA emails obtained under the Freedom of Information Act show that EPA political officials, including Nancy Beck, who became the chief of the agency's chemical safety office last year after working for years at a chemical industry lobbying group, worried that the new policy would limit the agency's ability to consider industry data or would force companies to make this proprietary data public.

"We will need to thread this one real tight!" Richard Yamada, political official who led work on the new policy wrote to Beck after she raised the concerns.

It was not immediately clear if the new proposed rule included measures to address those concerns.

Rush Holt, CEO of the American Association for the Advancement of Science, said Pruitt's changes could keep the agency from revising public health regulations as problems arise or new data comes to light.

"On the surface it sounds so innocuous or even beneficial. What could be wrong with transparency? Well it's clear to me that this is not based on an effort to be transparent. It is rather based on an effort to be just the opposite," he said.

"EPA is particularly important because when science is misused, people die," he added.

Pruitt has been discussing the new scientific policy publicly for weeks, but it only went to the White House for interagency review last week. Such swift review is very rare for the Office of Management and Budget, which often takes months to vet a new policy. At least one group, the Environmental Defense Fund, has requested a meeting with OMB officials to discuss the rule, but OMB's website shows that no meetings have been scheduled with interested groups.

Many public health studies can't be replicated without exposing people to contaminants, and environmental disasters such as the Deepwater Horizon oil spill cannot be recreated, the group said, raising intellectual property, proprietary and privacy concerns.

Pruitt's predecessor Gina McCarthy, and her air chief Janet McCabe, in an op-ed in The New York Times in March said concerns about studies are dealt with through the existing peer-review process, which ensures scientific integrity.

"[Pruitt] and some conservative members of Congress are setting up a nonexistent problem in order to prevent the E.P.A. from using the best available science," they said.

'Jon poked the bear': Tester braces for Trump's revenge [Back](#)

By Burgess Everett | 04/26/2018 05:47 PM EDT

Jon Tester didn't intend to play a central role in taking down President Donald Trump's pick to lead the Veterans Affairs Department. Yet that's exactly what the Montana Democrat ended up doing

And now, Trump is coming after him.

The president is enraged over Tester's work documenting allegations of malfeasance by Rear Adm. Ronny Jackson, which quickly unraveled Jackson's nomination to be VA secretary and marks a turning point in the relationship between the moderate Democrat and Trump.

As Tester's reelection campaign kicks into high gear, Trump is more motivated than ever to campaign against him in the ruby-red state — accusing the senator of irresponsibly leaking the damaging information to undermine the president's nominee.

Trump said Thursday that Tester will have a "big price to pay" for his part in working to sink Jackson's nomination. But Tester is sanguine about his decision to go public with accusations about Jackson's workplace misconduct, poor prescription practices and drinking on the job.

"If he thinks it's my job to sweep his stuff under the table and ignore our military folks, he's wrong. If he thinks I should not be sticking up for veterans, he's wrong," Tester said Thursday of the president. "I look forward to working with President Trump. I've worked with him many times in the past, but we disagree."

Tester has repeatedly tried to emphasize points of agreement with Trump in his nascent reelection campaign, including sending Trump 13 of his bills to sign. But Trump and other Republicans are taking it personally that as ranking member of the Senate Veterans Affairs Committee, Tester and his staff compiled interviews with more than two dozen current and former military members describing Jackson's alleged wrongdoing and then released them this week.

Senate Majority Whip John Cornyn (R-Texas) said Tester "painted a big target on himself" this fall in Montana, which Trump won by 20 points. And a Republican senator, granted anonymity to speak candidly about a colleague, said a "livid" Trump is now set to prioritize the campaign to knock off Tester this fall.

"Jon poked the bear. Did you see the bear today? The bear was mad," the senator said. "If there was any doubt he was coming to Montana it was removed today. He overreached."

The allegations, sourced anonymously, were the death knell of Jackson's nomination.

"That was not Jon's best time with regards to his Senate career," said Sen. Pat Roberts (R-Kan.). "Man, they aim low. They really aim low. And they brought him down."

Democrats strongly reject that argument. They say Tester did the right thing by speaking up about a crucial post and that Trump and Republican are deflecting blame for the Jackson debacle.

"Sen. Tester released profoundly serious, credible allegations from military men and women who put their careers on the line," said Sen. Richard Blumenthal (D-Conn.). "The administration bungled this nomination from the start. And then it fumbled the defense of its nominee. So the blame really lies with the administration."

Former Secretary of Defense Chuck Hagel also defended Tester from partisan attacks.

"I've always admired Jon Tester's commitment to helping veterans — not using veterans for political purposes. Veterans know who their champions are, and Jon Tester is one of them," said Hagel, who also served as a Republican senator from Nebraska.

Still, in interviews this week, Tester acknowledged it was "risky" for him to release the information about Jackson. The allegations could turn out to be false, he acknowledged, and take on a more partisan tinge by coming from the Democratic minority.

Tester felt compelled to move given the circumstances and received no criticism for doing so from Senate Veterans' Affairs Chairman Johnny Isakson (R-Ga.) on Thursday. In fact, until about a week ago, Jackson's nomination appeared to be going relatively smoothly, save for concerns about his lack of experience. But then Tester's staff started getting calls. Lots of calls.

By Wednesday, 23 people had contacted the committee about Jackson's history of misconduct, according to Democratic aides. Tester spoke to some of them, while his staff handled most of the work.

And as inquiries poured in from the press, Tester felt he had no choice but to go forward publicly. Each allegation in the two-page document, including that Jackson drunkenly crashed a government vehicle and wrote his own prescriptions, was verified by at least two sources, Democratic aides said. Two more people buttressing the claims contacted the committee after the summary was released.

"I don't want to be in this situation. But the truth is. We got the information. It's our obligation to follow up," Tester said. "We did not initiate any of this. None of it. It was news to us."

Tester gradually ramped up his role in challenging Jackson's beleaguered nomination as the week wore on. After allegations about Jackson's history dangled anonymously for two days, Tester confirmed them in an NPR interview on Tuesday night then did several cable news hits before releasing the two-page summary of Jackson's alleged misconduct on Wednesday.

Sen. Dan Sullivan (R-Alaska) said Tester's move "poisons the well" in a committee that generally operates outside partisan politics, but allies said Tester had no choice and that Republicans were disingenuously claiming they wouldn't have done the same.

"Do you think if the shoe was on the other foot it would have been released? It would be irresponsible if it wasn't. Military members came forward wanting to talk about the doctor," said Sen. Claire McCaskill (D-Mo.).

But Tester is under heavy attack from Trump, the White House and Republicans for the move. Trump said Thursday that Tester's work "is going to cause him a lot of problems in his state."

"I find it outrageous for a senator for political gain to take uncorroborated allegations that have not been investigated and to throw them out in a way to besmirch somebody's character," said Marc Short, Trump's legislative director. "Very irresponsible to go on national TV and make those allegations knowing that that would besmirch that person's character."

The incident and its fallout underscores how the burly, plain-spoken Tester hasn't exactly tacked to the center in an election year. Perhaps he feels emboldened after dodging a big-name opponent; after former Rep. Ryan Zinke was drafted into the Trump administration and the state attorney general passed on the race, Tester's opposition is made up of lesser known opponents who will compete in a June primary.

And since Trump became president, Tester often votes in a different manner than his fellow red state incumbents, seemingly unworried about his state's GOP lean. He was the lone red state Democrat to oppose Mike Pompeo to be secretary of state on Thursday and voted twice against a government funding bill in January.

But Tester has also positioned himself as someone who sends Trump bills to sign, including eight on veterans issues, and is open to working with the president. And he seems to genuinely believe that if he sticks to his guns and does not try to pander to conservative voters, the politics will work out this fall.

"It was going to be difficult anyway," Tester said of his campaign. "Look, if I made decisions around here based on the election, I wouldn't be a very good senator."

Tester's decision to aggressively take on Trump is rare among at-risk senators. Now, Tester is credited with helping bring down the confirmation prospects of a man whom Trump counts as a confidant, friend and personal doctor.

And Trump is plainly angry about it, to almost no one's surprise.

"I can understand that, if [Trump] thinks it's a personal attack. If you have a friend and someone personally attacks your friend, you're going to have to fight back," said Sen. Joe Manchin (D-W.Va.). "But Jon is also going to have to do his job, too."

Pompeo confirmed as secretary of state [Back](#)

By Nolan D. McCaskill | 04/26/2018 12:35 PM EDT

The Senate confirmed Mike Pompeo to be President Donald Trump's secretary of state on Thursday, after a handful of Democrats facing difficult reelection challenges joined every Republican in backing the CIA director.

Pompeo's hawkish foreign policy views drew strong opposition from the left, but he ultimately won over Democratic Sens. Heidi Heitkamp of North Dakota, Joe Manchin of West Virginia, Joe Donnelly of Indiana, Bill Nelson of Florida, Claire McCaskill of Missouri and Doug Jones of Alabama.

Pompeo, who was confirmed on a 57-42 vote, was sworn in early Thursday afternoon by Supreme Court Justice Samuel Alito, according to State Department spokesperson Heather Nauert.

He's wasting little time. Almost immediately after being sworn in, Pompeo was to fly to Brussels for a meeting of foreign ministers, followed by stops in Riyadh, Jerusalem and Amman over the next four days. The newly minted secretary of state is expected to discuss a range of hot issues with counterparts in Europe and the Middle East, including the fate of the Iran nuclear deal.

Pompeo ultimately received more Democratic votes for secretary of state than Rex Tillerson. And unlike Tillerson, who repeatedly clashed with and was undercut by Trump, Pompeo enjoys a positive relationship with the president. Trump applauded Pompeo's confirmation, hailing him as a "patriot" with "immense talent, energy and intellect" who will be an asset for the United States.

"He will always put the interests of America first," Trump said in a statement. "He has my trust. He has my support."

Pompeo is also expected to play a major role in talks with North Korea. He met with dictator Kim Jong Un over Easter weekend in a private trip to Pyongyang. The secret summit came ahead of an expected meeting between Trump and Kim.

The Trump administration had little margin for error in confirming Pompeo. With Sen. John McCain (R-Ariz.) out recovering from cancer treatment, Republicans' majority had slimmed to 50-49. Libertarian-leaning Sen. Rand Paul (R-Ky.), a member of the Senate Foreign Relations Committee, had also initially announced his opposition to Pompeo.

The former Kansas congressman was poised just days ago to get an unfavorable recommendation from the Senate Foreign Relations Committee until Paul flipped, citing assurances from the president and incoming secretary that the war in Iraq was a "mistake" and that the U.S. should wind down its presence in Afghanistan.

Republican leaders were determined to bring Pompeo's nomination to the floor regardless of the committee vote. But had Paul remained opposed, he and Democrats could have killed the nomination outright.

Paul's shifting position, however, all but assured Pompeo would breeze through Thursday's confirmation. Republicans maintained that he is well-qualified to be America's top diplomat and criticized Democrats for playing politics with his nomination. Fourteen Senate Democrats had voted to confirm him as CIA director in January 2017.

"From the founding of the republic until 2017, the Senate has never required a cloture vote to confirm a secretary of state nominee. Now we're at two," Senate Majority Leader Mitch McConnell complained earlier Thursday. "I guess Senate Democrats are in a history-making mood. Because over the past 15 months, they've embarked on a partisan campaign to block, obstruct and delay President Trump's nominees that is quite simply without precedent in American history."

Senate Minority Leader Chuck Schumer (D-N.Y.) said Wednesday he was troubled by Pompeo's past rhetoric and argued that he was too hawkish to be secretary of state. He also indicated that Pompeo's confirmation hearing did nothing to convince him that he would serve as a check on the president.

"This is not about denying the president his team just for the sake of it," Schumer said. "This is about the role of the Congress and, frankly, the Cabinet to provide a check on the president, who might go off the rails and undo the respect for rule of law, the tradition of rule of law that we have had in this country for so long."

Aside from concerns about his foreign policy views, many Democrats also opposed Pompeo because of past comments he's made denigrating Muslims and members of the LGBT community.

Pompeo was among a trio of controversial Cabinet and Cabinet-level nominees the president named in recent weeks, and he is expected to have the easiest time getting confirmed.

Pompeo's deputy at the CIA, Gina Haspel, is expected to have her confirmation hearing to succeed him as CIA director next month. Department of Veterans Affairs secretary nominee Ronny Jackson withdrew from consideration Thursday morning following allegations that he drank on the job and loosely dispensed pills on foreign trips.

The Senate also confirmed Richard Grenell to be the ambassador to Germany on Thursday on a 56-42 vote.

Nahal Toosi contributed to this report.

Perry's latest bid to help coal faces uphill battle [Back](#)

By Eric Wolff | 04/25/2018 05:08 AM EDT

Energy Secretary Rick Perry's latest idea to protect coal-fired and nuclear power plants may not fare much better than his previous efforts, according to energy experts.

Perry is considering invoking the 1950 Defense Production Act to keep money-losing power plants running by designating them as crucial for national security. But that would stretch the definition of the law and almost certainly draw legal challenges — and it would hit a big hurdle in Congress, which would need to approve perhaps billions of dollars in funding to keep the plants afloat, the experts said.

At the urging of President Donald Trump, Perry has sought to keep open coal and nuclear power plants that are threatened with shutdowns amid the stagnant demand for power — and even as natural gas and renewable power sources grab a growing share of the market.

So far, Perry's had no luck. FERC earlier this year rejected his proposal to give the plants financial support, and Energy Department lawyers stymied a push last year to invoke the agency's authority under the Federal Power Act to force the plants to run.

Some experts said any attempt to use the DPA is likely to meet the same fate.

"To me, it's a tough argument to make. It's a specious argument on its surface that seems like a perversion of the intended use of the Defense Production Act," said Tom Hicks, a former acting undersecretary of the Navy under former President Barack Obama and now a principal at the advisory firm The Mabus Group. "Defense Production Act is on the vanguard of the need for resources, not on the back end for an industry being challenged by economic forces."

But the effort has been a priority for Trump and Perry, who sees saving coal-fired power generation as vital to U.S. security, according to a source familiar with the conversations on the issue.

The Cold War-era law grants the federal government powerful authorities to inject cash into companies essential for national defense in order to preserve domestic supplies of key products. But DOE will have to make the case that electricity produced specifically from coal and nuclear power plants, and not other types of power, is a critical resource.

Using the act to protect the plants when there appeared to be no immediate shortage of power supplies would be a novel application that would almost certainly face legal challenge.

"If the administration uses DPA, they're going to be using it very creatively," said Ari Peskoe, director of the Electricity Law Initiative at the Harvard Law School Environmental and Energy Law Program. "They may come up with reasoning for higher rates and who's going to pay for it. Whether that will hold up, I don't know."

Perry and his staff appear to have very few viable options for bailing out coal and nuclear power, a major energy priority for Trump, who has promised to revive the coal industry. DOE has opened a [comments process](#) for interested parties to weigh in on its use of the Federal Power Act's 202(c) emergency provisions, though that would require the agency to go through FERC, which unanimously rejected a similar Perry effort in January.

The 202(c) effort has been pushed by coal magnate Bob Murray, owner of Murray Energy, and by FirstEnergy Solutions, the unit of FirstEnergy Corp. that is in bankruptcy proceedings and which expects to shut down four coal and nuclear power plants. That company asked DOE to use the emergency authority to save not only its plants, but all 85 coal and nuclear power plants in the PJM Interconnection power market.

The DPA was last used by the Obama administration starting in 2012 to help spur the biofuels industry to develop the kind of advanced biofuels that could power ships and aircraft. The government can purchase capital equipment for the cause of national security, and it can fund advertising to support the effort.

And it allows the government to become the buyer of last resort, which could put Washington on the hook to buy excess power generated by coal and nuclear plants. Technically, this electricity could only be purchased at the "cost of production," a level that in the past has been determined by a team within the Defense Department.

While no hard estimate for the cost of a DPA subsidy exists, consultants analyzing Perry's previous bailout proposal estimated costs between \$4 billion and \$10.6 billion annually.

That's a far higher level than Congress typically allocates for the DPA. It provided \$67.4 million in the omnibus passed in March, H.R. 1625 (115), down slightly from the \$76 million it provided for all projects in 2017, according to a report submitted to Congress.

And Congress — and the Republican Party — is deeply divided on using government subsidies to save these plants. Rep. David McKinley (R-W.Va.) has some allies from other coal districts for the effort, but other free market-oriented lawmakers like Rep. Pete Olson (R-Texas) say they want to see markets function unimpeded.

McKinley's staff has been in touch with DOE and the White House, as has West Virginia Sen. Joe Manchin (D).

"I think it's an emergency national concern for the national defense of our country. I think Rick Perry agrees with it, and I think the president does also," Manchin told POLITICO.

PJM has itself said the retirement of FirstEnergy's coal plants did not pose a threat to the region's power supplies, and that it had ample generation to meet demand. It has opposed any effort to mandate to require the plants to stay online.

"We believe that a market-oriented approach consistent with the American free-enterprise system offers better results than government-mandated subsidies," said PJM spokesman Jeff Shields.

Anthony Adragna contributed to this report.

Subject: Morning Energy, presented by ExxonMobil: Democrats try to make GOP pay at the pump — Nukes out at PJM even as capacity prices double — Senate Appropriations marks up Energy-Water

By Kelsey Tamborrino | 05/24/2018 05:42 AM EDT

With help from Anthony Adragna and Eric Wolff

PUMP UP THE VOLUME: Days away from the Memorial Day weekend, gas prices are on the rise — and Democrats didn't have to look far for someone to blame. During a press conference in front of a notably pricey Exxon gas station, Democratic leaders blamed President Donald Trump's foreign policy decisions — including his move to reimpose sanctions on Iran — for the 50-cent-per-gallon surge in prices since he took office. "There's a straight line between Trump's policies and the price of gasoline," Sen. [Brian Schatz](#) told Pro's Ben Lefebvre and Anthony Adragna.

A page out of the Trump playbook: In pushing the blame onto Republicans, Democrats aren't breaking new ground. Trump himself called for former President Barack Obama's firing when in October 2012 gas prices hit "crazy levels." Republicans weren't surprised by the Democratic talking point, either. "Everyone's going to look for whatever political leverage they have going into an election," Sen. [Lisa Murkowski](#) said. "[But do] you think that Republicans created the high prices? No."

Roadblocks ahead: The Democratic message faces a big obstacle: Short of an energy crisis like the one President Jimmy Carter faced in his 1980 reelection campaign, it's tough to convince voters the president is to blame for expensive gas. Especially because the White House has little control over gas prices, which largely track the movement in global crude oil market prices. Energy market watchers say the price rally is largely due to moves by OPEC and Russia, in addition to the collapse of Venezuela's oil industry. [Read more.](#)

RELATED DOC: Trump has staffed his administration with oil and auto industry insiders, according to a new report from ethics watchdog group Public Citizen. The report breaks down industry influence by the numbers and finds 52 administration staff members have oil and gas ties, 15 with auto industry ties and 10 who have ties to both. Those industry ties are most concentrated at EPA, Interior and the White House. [Read the report.](#)

GOOD THURSDAY MORNING! I'm your host Kelsey Tamborrino. Congrats to the American Petroleum Institute's Khary Cauthen, who was the first to identify Franklin D. Roosevelt as the first president to have a state car custom built to Secret Service standards. For today: In what year did someone first attempt to jump the White House fence? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

POLITICO and the South China Morning Post are partnering to expand coverage of U.S.-China relations. If you want all China-related content that appears through this partnership sent directly to your inbox, go to your [account settings](#) to sign up for the South China Morning Post tag or reach out to your [account manager](#) for assistance.

COMMENT PERIOD EXTENDED: EPA [extended](#) the comment period for its controversial "secret science" proposal that was set to end on May 30. The public will now have until Aug 16 to make their voices heard on

the proposal to ban the use of studies that don't publicly disclose all data. EPA also said it would hold a public hearing July 17 in Washington on the proposal rule, heeding public requests to do so.

NUKES OUT OF PJM EVEN AS CAPACITY PRICES DOUBLE: PJM Interconnection, which manages the nation's largest power market, shed almost a third of its nuclear capacity in capacity auction results released yesterday for the 2021-22 delivery year. The auction, which provides extra payments to generators in return for staying available to run at any time, saw prices nearly double to \$140 per megawatt-day, and it will generate \$9.3 billion in revenue for companies with plants that cleared. Stu Bressler, PJM's senior vice president for Operations and Markets said prices rose because companies were trying to make up revenue lost to lower energy prices. "The offers from supply resources into the capacity auction take into account the actual as well as the anticipated energy revenues when they construct those offers in order to meet their required revenues," he told reporters Wednesday.

More megawatts cleared the auction for every other fuel type. Solar capacity quadrupled and wind added 529 MW, making up for ground lost in last year's auction. Coal added 500 MW compared to the previous auction, something that may catch the attention of the Department of Energy, which is trying to save coal plants. "The results of this auction should reassure everyone that the electricity markets are working and maintaining a reliable system," said Susan Buehler, a spokeswoman for the grid operator. "PJM has always said we don't believe there is any need for intervention."

Plenty of power: PJM continues to have far more power than it needs to meet reserve requirements. In 2021-22, it will have a 21.5 percent reserve, well above the 15.8 percent target. That reserve is actually down 2 points from the auction to supply power for 2020-21.

EVERY BILL GETS ITS DAY: The Senate Appropriations Committee will mark up its fiscal 2019 Energy-Water appropriation bill, which puts discretionary funding at \$43.8 billion — \$566 million more than this year's appropriation and \$7.2 billion more than the administration requested. The bill provides \$6.65 billion for the Office of Science — a \$390 million boost — and would increase funds for ARPA-E, which the White House has sought to eliminate. The committee will also consider so-called 302(b) allocations.

How it'll play out: Lamar Alexander is already eyeing how the Senate might move on the title in the coming weeks. "My guess would be two or three bills would come over from the House, Sen. [Mitch] McConnell could put those bills together, put them on the floor at once and allow amendments to them all," Alexander, who chairs the Energy and Water Subcommittee, told reporters. He added that 83 senators had provided input into his bill and that his subcommittee was able to address those suggestions "to some degree in almost every case."

If you go: The markup kicks off at 10:30 a.m. in 106 Dirksen.

BRIDENSTINE'S CLIMATE EVOLUTION COMPLETE: NASA Administrator Jim Bridenstine endorsed a major federal report that echoed the scientific consensus that human activity is the primary driver of climate change. Under questioning Wednesday from Sen. Brian Schatz, the former Oklahoma lawmaker said the National Climate Assessment "has clearly stated that it is extremely likely ... that human activity is the dominate cause of global warming and I have no reason to doubt the science that comes from that." Bridenstine agreed that his new position on the science constituted an evolution of his views and vowed to protect climate science work at the space agency. Keep in mind: The climate report in question is the same assessment Administrator Scott Pruitt sought to rebuff in his proposed "red team-blue team" debate. Watch the Bridenstine clip here.

WHEN WE LAST LEFT OUR HEROES: Top deputies across the Trump administration — including EPA Deputy Administrator Andrew Wheeler, Deputy Energy Secretary Dan Brouillette and USDA Deputy Secretary Stephen Censky — will meet today to try to resolve long-standing tensions over the Renewable Fuel Standard. The group will pick up where the president left off during his meeting on the topic last month, including the unfinished business of whether to allow biofuel exports to receive Renewable Identification Numbers, and whether to reallocate the gallons small refiners were exempted from blending under economic hardship waivers

from EPA. A refining source previously told Pro's Eric Wolff the USDA is trying to capitalize on the controversies surrounding EPA and has been pressing the agency to move quickly on allowing year-round sales of 15 percent ethanol fuel.

And with small refinery exemptions on the table, ME will be looking to see how Wednesday's news that Marathon Petroleum asked EPA for an exemption plays out. Ahead of today's meeting, the ethanol and biofuel trade association Growth Energy released a statement that called out the "flood of illegitimate waivers" and their resulting "'demand destruction' for U.S. farmers at a time when rural communities can least afford it."

**** Presented by ExxonMobil:** Biofuels refined from algae could transform how we power the vehicles that move people and things. It's energy-rich and emits significantly less CO₂ than most transportation fuels. And it doesn't compete with food and fresh water supplies. We're researching how to scale up algae biofuels production in a meaningful way. EnergyFactor.com **

BIODIESEL WANTS MORE: Biodiesel producers think EPA should crank up the biodiesel requirement, not leave it flat, as POLITICO reported yesterday. "These rumored numbers are disappointing," Kurt Kovarik, VO for federal affairs for the National Biodiesel Board said in a statement. "Holding biomass based diesel flat is a missed opportunity to signal growth, which is what the RFS is intended to do. ... The easiest way to fix this and turn around growing dissatisfaction among rural voters is to provide growth to the biodiesel industry and increase this number."

STILL WORKING: John Cornyn, the Senate's No. 2 Republican, said he continues to have discussions on his legislation to overhaul the Renewable Fuel Standard "almost daily, certainly at the staff level," but wasn't sure the talks would bear fruit this year. "We keep making progress but the goal line still seems some ways a way," he told reporters. "I'd love to solve the problem this year, but I just don't know."

CARB AND EPA HAVE A MEET: EPA and the California Air Resources Board met Wednesday to open negotiations on a single unified standard for fuel economy, following a White House meeting with automakers earlier in the month. EPA and the National Highway Traffic Safety Administration are threatening to try and revoke California's waiver, risking a lengthy court battle that could balkanize the auto market. "Today's conversations between Administration Officials and the California Air Resources Board were productive," EPA and the Department of Transportation said in a joint statement following the meeting. "We are fully supportive of an open dialogue that proceeds in an expedited manner. EPA and USDOT look forward to moving ahead on a joint proposed rule and receiving practical and productive feedback from all stakeholders."

MOVING QUICKLY: Senate EPW Chairman John Barrasso said Wednesday he's working to reach a time agreement with Democrats to speed floor consideration of a broad water infrastructure package S. 2800 (115) that cleared his panel unanimously earlier this week. Barrasso said it would "be great" to get the bill passed before the Fourth of July recess. His Democratic counterpart on the panel, Sen. Tom Carper, agreed it wouldn't take long for the Senate to complete its work on the bill: "I don't think we're going to need a week. We might need a day," he said.

N.J. GOV DEFENDS EXXON SETTLEMENT USE: New Jersey Gov. Phil Murphy defended using money from a \$225 million settlement with Exxon Mobil to help balance his state's budget. The Democratic governor told reporters he wasn't happy about the decision, but said the state had "been dealt a lousy hand." Environmental groups are appealing the settlement in the hopes of negotiating a new deal, Pro New Jersey's Danielle Muoio reports.

MAIL CALL! FINISH UP, FERC: A new letter from 16 Democratic senators calls on FERC to finish up its rule to allow distributed energy resources to connect to the grid. The letter, led by Sheldon Whitehouse and Ed Markey, concerns the integration of DERs and renewable aggregators into capacity and energy markets. "This

will enable consumers to play a central role in strengthening reliability and avoiding unnecessary costs by supplying localized energy services," the senators write. Read the [letter](#).

REPORT: TRIBAL COMMUNITIES AT RISK: The Clean Air Task Force published a new [brief](#) Wednesday on the adverse health effects from oil and gas pollution on tribal lands. The report, which looked at lands in New Mexico, North Dakota and Utah, found that Native Americans face disproportionate health risks from living near sources of pollutants, such as VOCs, NOx and resultant smog.

WHAT'S HAPPENING IN COLORADO? The Colorado Association of Commerce and Industry and the National Association of Manufacturers will host [an event](#) today with former Interior Secretary and Colorado Attorney General Gale Norton, focusing on the Boulder, Colo., [climate lawsuit](#) against energy manufacturers over their role in contributing to climate change. Ahead of the event, Independent Petroleum Association of America's Energy in Depth is launching a digital ad buy in the state on the opposition against the lawsuit. Watch [the video](#).

THANKS, CHARLIE: The Citizens for Responsible Energy Solutions will announce a \$185,000 [television and digital ad](#) buy today, thanking Massachusetts Gov. Charlie Baker for his actions addressing climate change and on clean energy solutions. The ads will run across the state and encourage residents to thank Baker for his leadership.

MOVER, SHAKER: Van Ness Feldman announced Wednesday that Jason Larrabee, former Interior principal deputy assistant secretary for fish and wildlife and parks, has joined the firm as a senior policy adviser.

Stories from POLITICO Pro

Democrats turn to GOP playbook in pinning gas prices on Trump [Back](#)

By Ben Lefebvre and Anthony Adragna | 05/24/2018 05:02 AM EDT

A spike in gasoline prices is giving Democrats a rare chance to borrow an old Republican tactic: pounding the occupant of the White House for motorists' pain at the pump.

They're unleashing the message with gusto against President Donald Trump, arguing that his foreign policy moves — including his push to reimpose sanctions on Iran — are to blame for a 50-cent-per-gallon surge in prices since he took office. Democrats also note that gas prices are the highest they've been in nearly four years despite the multibillion-dollar windfall that oil companies are set to receive from the GOP-backed tax bill.

"There's a straight line between Trump's policies and the price of gasoline," Rep. [Brian Schatz](#) (D-Hawaii) said in a brief interview, echoing a growing chorus of Democrats.

Voters are already feeling spooked: Forty-two percent of Americans won't take a road trip for summer vacation this year, a much lower number of people than last year, and many of them cited higher gas prices as the reason, according to a [survey](#) by gas station data company GasBuddy.

But the Democratic message faces a big obstacle, even as the party is riding a wave of optimism to the November midterms: Short of an energy crisis like the one former President Jimmy Carter faced in his 1980 reelection campaign, it's tough to convince voters the president is to blame for expensive gas, as GOP candidate Mitt Romney found out when he [tried to use it](#) against former President Barack Obama 2012.

Trump himself frequently criticized Obama for rising gas prices in the run-up to his reelection, [tweeting](#) weeks before the November 2012 vote, "Gas prices are at crazy levels--fire Obama!"

GOP lawmakers say they aren't surprised by the Democrats' efforts and they doubt voters will buy the attacks.

"Everyone's going to look for whatever political leverage they have going into an election," Sen. [Lisa Murkowski](#) (R-Alaska), chairwoman of the Energy and Natural Resources Committee, told POLITICO. "[But do] you think that Republicans created the high prices? No."

Still, Democrats believe that the jump in prices at the pump to [nearly \\$3 a gallon](#) will be a core pocketbook issue for voters on the Memorial Day weekend, which signals the beginning of the high-demand summer driving season.

"I'm going to be having town meetings at home over the course of the week. They'll be in rural areas. People drive a long way and they're not going to see this as an abstract issue," Sen. Ron Wyden (D-Ore.), the top Democrat on the Senate Finance Committee, told POLITICO.

Wyden's panel on Tuesday released a report highlighting the fact that the nation's four largest oil companies are poised to reap some \$15 billion in tax benefits over the next decade from the GOP's tax law, while gas prices reach their highest levels in years. Sen. Ed Markey (D-Mass.) released his own staff report this week using the same tactic, blaming higher prices on "President Trump's incoherent foreign policy."

To be sure, the White House has little control over gas prices, which largely track the movement in global crude oil market prices. Those prices have jumped more than 60 percent since last June, even as U.S. oil production climbs to record levels. Energy market watchers say the price rally is largely because OPEC and Russia have cooperated to sop up extra supplies in the international markets as demand continues to climb.

In addition, the collapse of Venezuela's oil industry, one of the biggest foreign suppliers to the U.S., has pushed prices up. Its oil exports have fallen by a third from January 2016 amid the country's political meltdown, and the Trump administration looks poised to place sanctions on the country's remaining exports.

"Even OPEC could not have hoped for this kind of result," said Kevin Book, analyst at energy consulting firm ClearView Energy.

But analysts are also saying that the White House may indeed be contributing to the rise in prices. Trump's appointment of John Bolton as his national security adviser has spooked oil traders who worry about tensions in the Middle East, said Citigroup energy analyst Eric Lee. Meanwhile, Trump's threat to place heavy sanctions on Iran could remove oil from the global markets, and his moving the U.S. embassy in Israel to Jerusalem may irritate Saudi Arabia enough that the kingdom won't increase its own oil flows to lessen the hurt on U.S. drivers.

"It's a combination of things, but what really took prices to the current level is U.S. policy or at least uncertainty," Lee said in an interview.

On Wednesday, a gaggle of Democratic senators including Markey, Minority Leader Chuck Schumer, Maria Cantwell (Wash.) and Bob Menendez (N.J.) held a news conference at an Exxon filling station near the Capitol to blame the price increase on Trump.

"It's well known that geopolitical instability drives oil prices, and gas prices, around the world higher and higher," said Menendez, ranking member of the Senate Foreign Relations Committee. "The Trump administration's chaotic approach to foreign policy not only served instability around the world, it certainly serves to drive up oil prices higher and higher."

When asked how any president could impact pump prices, Schumer told reporters that Trump should pressure OPEC member states and U.S. oil companies to lower their prices.

"He's very, very tight with the crown prince," Schumer said of Trump's relationship with the head of Saudi Arabia. "He's very, very tight with the head of the UAE, very, very tight, supposedly, with Putin. Why doesn't he use that? Oil companies just got a big tax break. Jawbone them."

Trump and Republicans still have one card to play, analysts said: releasing oil into the market from the Strategic Petroleum Reserve, which could tap down prices. That's precisely what some Democrats asked Obama to do in early 2012 when they faced rising retail prices.

"I wouldn't be surprised if the president were to consider the use of the SPR to dampen prices to play to his base for the midterm elections," said Gary Ross, head of global oil analytics at S&P Global Platts. "He might see

such as a signal that he cares, and one that might deflect some criticism for higher gasoline prices due to Iranian sanctions."

White House and Energy Department spokespeople declined to answer questions about whether the administration would consider an SPR release if prices continue to climb.

Editor's note: A POLITICO partnership in China [Back](#)

By John F. Harris and Carrie Budoff Brown | 05/22/2018 05:04 AM EDT

POLITICO readers will see on our pages today something new and important: the first stories reflecting the publication's commitment to illuminating the U.S. relationship with China.

POLITICO, which began in 2007 as preeminently a Washington publication, in recent years has had a global focus. In Europe, we have the largest news operation covering the increasingly complex and consequential workings of the European Union. Including our growing coverage in the U.S., POLITICO's 250 reporters and editors are now in 15 cities spanning nine time zones. Increasingly, we have heard from our most engaged readers that the place to expand our focus is toward the Pacific, as the U.S. relationship with China — intensely competitive in some spheres, intertwined and mutually dependent in others — will hover over the political and policy debates of the next generation.

One part of our expanding coverage involves a content partnership we are unveiling today with the South China Morning Post. SCMP, based in Hong Kong, is the oldest newspaper in Asia and is the only independent English-language publication in the region. SCMP has an editorial staff of 300 in Asia, with about 40 reporters stationed in mainland China. Like POLITICO, the publication has global ambitions. Under the partnership, SCMP editors will have access to POLITICO stories to share with their readers, and POLITICO editors can draw on the SCMP stories we believe our readers will find most relevant. Over time, editors in both newsrooms will look for opportunities to combine resources on original stories produced in combination with POLITICO and SCMP journalists.

Our experience shows often that the most important stories are best illuminated by being reported simultaneously from multiple perspectives. That's what we do every day in the United States and in Europe. In combination with SCMP, we will now be able to do the same on important subjects — trade, finance, technology and national security among them — at the heart of U.S. interests in China.

And you can expect POLITICO's growth to continue. As our readers' interests reflect a global perspective, so will our publication's journalistic focus and resources.

Senate subcommittee advances energy and water spending bill [Back](#)

By Eric Wolff | 05/22/2018 03:44 PM EDT

A Senate subcommittee today advanced the Energy-Water appropriations bill to the full committee.

The bill appropriates \$43.8 billion in discretionary funding, \$566 million more than last year's appropriation and \$7.2 billion more than the administration requested. Non-defense activities rose \$474 million, while defense activities were increased \$92 million.

The bill provides \$6.65 billion for the Office of Science, \$390 million more than the last appropriation. And it funds an increase for ARPA-E. It also maintains funding for a weatherization assistance program and includes an extra \$196 million for drought resilience, among other measures.

Chairman [Lamar Alexander](#) lamented that writing the bill was made more difficult because the committee "started with an unrealistic budget proposal from the administration."

Appropriators funded DOE's Office of Energy Efficiency and Renewable Energy at \$2.3 billion, the same level as the current appropriation, but \$1.6 billion than President Donald Trump's budget.

The bill also provides \$6.9 billion for the Army Corps of Engineers, the largest appropriation for the corps, according to Alexander. It makes full use of the Inland Waterways Trust Fund, specifically the top four priority projects.

Emails show Pruitt pushing 'red team-blue team' climate debate [Back](#)

By Alex Guillén and Anthony Adragna | 05/15/2018 06:39 PM EDT

EPA Administrator Scott Pruitt had hoped at least twice last year to announce his plans for a controversial red team-blue team debate that would take aim at a federal assessment supporting climate change science, according to newly released emails.

Pruitt's contentious review was abandoned because of the White House's objections, but the [communications](#) reveal new details about how the process would have worked and who was influencing Pruitt.

Many scientists have complained that a red team-blue team style debate was a poor way to examine the scientific evidence that overwhelmingly supports the findings that humans are the primary driver behind climate change. But for Pruitt, who had once suggested the event might be televised, [the debate](#) appeared to be directed at rebuffing the Fourth National Climate Assessment.

That government-wide report issued on Nov. 3 contradicted many Trump administration political appointees who have questioned the connection between greenhouse gas pollution and global warming.

A draft press release that circulated on Nov. 4 among top EPA officials, and which was shared with Pruitt on Nov. 5, laid out the line of attack, according to the documents made public on Tuesday by EPA following a records request from the Natural Resources Defense Council.

"EPA is standing up a Red Team peer review of the report," they wrote, while the "blue team" would essentially be the federal assessment and its authors.

"A robust, transparent public peer review evaluation of climate change is something everyone should support," Pruitt said in the unreleased November statement. "Now is a perfect opportunity for the formation of a 'Red Team' exercise."

The draft release also included space for quotes from two prominent climate science critics: Steve Koonin, an Obama-era Energy Department official, and William Happer, a Princeton physicist who argues that increased carbon dioxide would benefit the planet.

The duo appear to have been tapped to help guide the red-team review together.

"Your contributions even in a small way to the validity of the red team blue team approach would be appreciated," Ryan Jackson, Pruitt's chief of staff, wrote to Koonin and Happer on Nov. 4.

In an email to POLITICO, Happer said the exercise was "badly needed," while Koonin, now the director of the Center for Urban Science and Progress at New York University, told POLITICO the National Climate Assessment was "demonstrably deficient on a number of points."

EPA did not return a request for comment.

Pruitt has previously said a Wall Street Journal piece written by Koonin in April 2017 calling for a similar EPA review of climate science was his inspiration for instigating the "red team" review.

The emails, however, show that Koonin and his allies began wooing Pruitt even before that. In an email more than a week before Koonin's WSJ piece ran, Dan Yergin, the Pulitzer-winning oil historian and vice chairman of IHS Markit who joined a board advising President Donald Trump, introduced Koonin by email to Jackson.

Pruitt and Koonin met April 28, and the emails show Koonin was closely involved in the process afterward.

Koonin sent EPA a "prospectus" outlining the exercise, and though much of it was redacted by EPA before its release, Koonin suggested timing the red team review to the National Climate Assessment, which was due out six months later. Doing so would "ensure that certainties and uncertainties in projections of future climates are accurately presented to the public and decision makers," he wrote.

A revised version of the prospectus was circulated by EPA to White House officials in July after news of Pruitt's plans had leaked.

"There are a lot of press reports about EPA's planning on this. None of it is being run by us. This seems to be getting out of control," wrote Michael Catanzaro, a top energy adviser to Trump who has since left the administration, a few days after receiving Koonin's proposal.

In late June, Liz Bowman, then a top EPA spokeswoman, questioned whether the exercise could be announced as early as July 5 or 6. But it wasn't until November that top Pruitt staffers begin circulating a draft press release on the announcement.

A draft of the announcement on Nov. 5 inspired a [lengthy email chain](#), which EPA redacted, that involved direct messages from Trump chief of staff John Kelly, strategic communications director Mercedes Schlapp, and former White House staff secretary Rob Porter.

Pruitt was [touting](#) his plans to launch the red team review as late as December. Emails early in that month [indicate](#) the agency's air chief, Bill Wehrum, would make the announcement on Dec. 12 while Pruitt traveled in Morocco. One message that included Jackson had the subject line of "Red Team/Blue Team Announcement Planned for Tuesday, Dec. 12."

The [New York Times](#) reported in March that Kelly and other top officials stopped the announcement in the fall, and Kelly's deputy Rick Dearborn met with Pruitt in mid-December to declare the plan dead.

Sources: EPA, DOE, USDA to talk biofuels Thursday [Back](#)

By Eric Wolff | 05/22/2018 05:09 PM EDT

Top deputies for EPA and the departments of Energy and Agriculture will meet on Thursday to hash out changes to the Renewable Fuel Standard, sources in the ethanol industry and the Senate told POLITICO today.

EPA Deputy Administrator Andrew Wheeler, DOE Deputy Secretary Dan Brouillette and USDA Deputy Secretary Stephen Censky will try to resolve long-standing tensions over the program. None of the agencies responded to requests for comment.

The group will pick up the items left unfinished from the meeting with President Donald Trump last month, including whether to allow biofuel exports to receive Renewable Identification Numbers, and whether to reallocate the gallons small refiners were exempted from blending under the economic hardship waivers granted by EPA.

A refining industry source says that USDA has been pressing EPA to move quickly on allowing year-round sales of 15 percent ethanol fuel, and that USDA "is looking to jam EPA" on reallocating the gallons in the 2019 blending mandate.

"They are probably trying to take advantage of what they imagine to be Pruitt's weakened status these days," the source said. "Not sure it will work."

Subject: Morning Energy: Second 'minibus' pulls in — The great California divide — Trump-Putin meeting's energy potential

By Kelsey Tamborrino | 07/16/2018 05:42 AM EDT

With help from Daniel Lippman

SECOND 'MINIBUS' PULLS IN: With negotiations still stalled on the first fiscal 2019 "minibus" funding bill, the House Rules Committee will meet today on the second minibus, which means debate on a host of thorny, energy-related issues. The measure, H.R. 6147 (115), combines funding for Interior-Environment with Financial Services, and while not as controversial as some of the other spending bills the House is slated to take up, it'll offer lawmakers ample opportunity to zero in on the indiscretions of former EPA Administrator Scott Pruitt, as well as address issues like what coastlines should be exempt from offshore drilling.

House Republican leaders are aiming to keep any fighting off the floor by curtailing the amendments to the two-bill package, Pro's Lauren Aratani reports. And because the Rules panel will likely seek a "structured" rule, the most controversial tweaks are expected to be cast aside. Still, Democrats will use debate over the spending bill to rehash Pruitt's missteps, Lauren reports, and pursue continued investigation into allegations that he misused taxpayer money.

The panel begins work today on more than 160 proposed amendments submitted last week to the Interior-Environment portion, including one to ensure EPA's inspector general will continue its investigations into Pruitt, and another that would bar funds from being used to install a private phone booth in or near the office of the Interior secretary. Another proposed tweak would require EPA to publicly disclose all funds used for top-level travel, within 10 days of each trip — a clear call to Pruitt's tenure at EPA.

ME is also keeping an eye on an amendment from Democratic Rep. Paul Tonko that would bar EPA from using money to adopt a rule that would keep the agency from using research without publicly disclosed data, as Lauren highlights. Dozens of lawmakers from both parties have also sponsored amendments that would bar federal funds from being used to support offshore drilling in various locations off the nation's coasts, as the White House seeks to expand exploration for oil and gas. Read more here.

GOOD MONDAY MORNING! I'm your host, Kelsey Tamborrino. The League of Conservation Voters' Gene Karpinski was first to identify Hawaii as the state that does not have a straight line forming part of its border. Today's question comes from Bracewell's Frank Maisano in honor of this week's All-Star game: Which presidents threw out the first pitch at an All-Star game in D.C.? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

JUST RELEASED: View the latest POLITICO/AARP poll to better understand Arizona voters over 50, a voting bloc poised to shape the midterm election outcome. Get up to speed on priority issues for Hispanic voters age 50+, who will help determine whether Arizona turns blue or stays red.

What role will Hispanic voters over 50 play in Arizona this Fall? Read POLITICO Magazine's new series "The Deciders" which focuses on this powerful voting bloc that could be the determining factor in turning Arizona blue.

THE GREAT CALIFORNIA DIVIDE: California Democrats rebuked Sen. [Dianne Feinstein](#) this weekend and endorsed her progressive opponent, state Sen. Kevin de León, who has been embraced by climate hawks among other liberal activists in his long-shot bid to keep Feinstein from winning a fifth term. The vote offers a glimpse into the dynamics in the state Democratic party, POLITICO's Carla Marinucci and Jeremy B. White report, where infighting between moderate and progressive factions has taken over.

The decision to endorse de León delivers a much-needed lifeline to the struggling campaign of the state Senate president pro tem, who came in second in California's jungle primary earlier this year to earn a spot against Feinstein in November. De León has made climate and environmental policy keystone issues and has been endorsed by Climate Hawks Vote, 350 Action, 350.org's Bill McKibben and billionaire environmentalist [Tom Steyer](#). The nod from the state party ensures his campaign valuable voter outreach information and the potential for an infusion of federal campaign cash, Carla and Jeremy report.

Feinstein on Saturday downplayed the symbolism of the de León endorsement. "This was not a close primary election, and there were 32 people on the ballot," she said of the June vote. "I take nothing for granted ... we work hard." For his part, de León told POLITICO on Saturday that he thinks "it's always good to have younger generations rise up and assume positions of leadership."

Still, the vote draws attention to the deepening divide between in state's Democratic party and what action Feinstein is taking to lessen the pressure. Last week, the California Democrat [told E&E News](#) she supports a ban on fracking in the state, something she had previously stopped short of saying. As the ranking Democrat on the Senate Judiciary Committee, Feinstein has [also touted](#) her importance in the effort to oppose Brett Kavanaugh's nomination to the Supreme Court — another issue [closely watched](#) by environmentalists and industry alike.

Climate Hawks Vote Founder R.L. Miller said in a statement the group appreciated Feinstein's "new position on fracking," but highlighted de León's potential in California. "Kevin de Leon has shown vision, courage, and tenacity," Miller said. "He's an extraordinary leader for extraordinary times, moving California toward a bright future with bills like his SB 100 (100 percent clean energy by 2045) and SB 54, the California Values Act (sanctuary state) that was just upheld in court." Read [more](#).

TRUMP-PUTIN MEETING'S ENERGY POTENTIAL: The president is in Helsinki today for his highly anticipated meeting with Russian President Vladimir Putin. While the two have met before on the sidelines of other events, today's confab will be the first meeting between the two presidents, Jon Huntsman, the U.S. ambassador to Russia, [said Sunday](#). Unlike official presidential summits, the meeting in Helsinki will not feature a joint statement or any predetermined policy results. "You don't know what's going to come out of this meeting, but what it will be is the first opportunity for these presidents to actually sit down across a table, alone and then with their teams, to talk about everything from meddling in the election, to areas where we have some shared interests," Huntsman said.

Of course, President Donald Trump made news last week on the Russian energy front at a [breakfast meeting](#) with NATO chief Jens Stoltenberg where he said Germany is "totally controlled by Russia" and specifically called out the controversial Nord Stream 2 gas pipeline project. Energy Secretary Rick Perry said last week Trump thinks the "Nord Stream 2 is not in the European Union's best interest, and my bet is he'll be more than happy to tell President Putin that straight to his face," [Axios reported](#). The State Department [told Reuters](#) last week that Western firms invested in the pipeline were at risk of sanctions, although Perry told reporters that sanctions would be "kind of the last place we would like to land" but said they were an option.

WHERE'S WHEELER? Marking another departure from the Pruitt era at EPA, the agency gave a heads-up that acting Administrator Andrew Wheeler will be in Canonsburg, Pa., this afternoon. Wheeler will be in the area to attend a meeting of the Washington County Chamber of Commerce, alongside Region 3 Administrator Cosmo Servidio.

ON TAP THIS WEEK: The Rules Committee will meet Tuesday to consider a resolution, H. Con. Res. 119 (115), that calls a carbon tax "detrimental" to the U.S. economy and "not in the best interest" of the country. The meeting tees up a likely vote later this week on the non-binding resolution, following a recent push by conservative groups to take up the measure. The legislation is led by Majority Whip Steve Scalise, Pro's Anthony Adragna reports, and could offer an interesting vote for Climate Solutions Caucus members, who have yet to weigh in on specific solutions for addressing climate change.

EPA ETHICS OFFICIAL DEFENDS FOIA PROCESS: Kevin Minoli, EPA's principal deputy general counsel, replied last night to the top Democrat on the House Oversight Committee, who on Friday pressed for a subpoena over the agency's handling of FOIA requests. In his letter, Minoli offers to brief Congress on the agency's FOIA Expert Assistance Team that was created in 2013 to "make the FOIA process at EPA better." While Minoli's letter acknowledges "EPA's FOIA program is far from perfect," he highlights the work of the FEAT and other offices, writing that they have "laid a foundation from which EPA's FOIA program could be a model of what a FOIA program should be, not an example of what a FOIA program should not be." Read the letter.

MAIL CALL! Thirteen attorneys general on Friday demanded in a letter to Wheeler that his agency withdraw an order to manufacturers of glider trucks that the agency will not enforce a strict 300-unit production cap for 2018 and 2019, which was issued by Pruitt on his last day. The AGs call the move "clearly unlawful" and a violation of EPA's policy against "no action assurances." In a statement, New York AG Barbara Underwood said Pruitt gave "a parting gift to polluters on his very last day as EPA Administrator — bolstering the Trump Administration's legacy of siding with corporations over people." New York, along with California, Connecticut, Illinois, Maine, Maryland, Massachusetts, New Jersey, North Carolina, Oregon, Pennsylvania, Vermont and Washington, signed onto the letter, as did the Pennsylvania Department of Environmental Protection and the California Air Resources Board.

— **GOP Reps. Greg Walden, Gregg Harper and John Shimkus** wrote to Wheeler on Friday, seeking additional information on EPA's process for reviewing grant applications. Read the letter here.

CLEARPATH ACTION BACKS UPTON: Jay Faison's ClearPath Action Fund will announce its endorsement of Michigan Rep. Fred Upton today. The clean energy advocacy group will begin running digital ads backing the Michigan Republican as part of a six-figure effort for his reelection. Upton, who is the chairman of Energy and Commerce's Energy Subcommittee, "has an accomplished record of shepherding many bills hitting every facet of clean energy innovation," Faison said in a statement.

MOVERS, SHAKERS: Matthew Mailloux, managing director at the American Conservation Coalition, joined the New Hampshire Office of Strategic Initiatives as Gov. Chris Sununu's energy adviser.

— **Katie Valentine** is now a media relations associate at the Conservation Fund. She is the former deputy climate editor at ThinkProgress.

QUICK HITS

— "California is preparing for extreme weather. It's time to plant some trees," The New York Times.

— "Energy execs set fundraiser for Fla. Gov. Rick Scott," E&E News.

— "Widespread unrest erupts in southern Iraq amid acute shortages of water, electricity," The Washington Post.

— "Fill 'er up, or plug it in? Oil, utilities fight to fuel vehicles of the future," The Wall Street Journal.

— "Pence family's failed gas stations cost taxpayers \$20M+," The Associated Press.

— "National parks could get much-needed money for upkeep through bipartisan bill," [ABC News](#).

HAPPENING THIS WEEK

MONDAY

Noon — The National Iranian American Council [briefing](#) on "Joint Comprehensive Plan of Action (JCPOA) 2.0: Iran, Europe, Trump, and the Future of the Iran Deal," SVC-210.

2 p.m. — The Environmental and Energy Study Institute holds a [briefing](#) on safely decommissioning nuclear power plants, HC-8.

4 p.m. — The Institute of World Politics lecture on "Energy Trends: Nuclear and Non-nuclear," 1521 16th St. NW.

5 p.m. — House Rules Committee meets to formulate a rule on [H.R. 6147 \(115\)](#), the "Interior, Environment, Financial Services, and General Government Appropriations Act, 2019," H-313.

6:45 p.m. — Smithsonian Associates [discussion](#) on "Making Sense of Climate Change," 1100 Jefferson Drive SW.

TUESDAY

8:30 a.m. — POLITICO's [Pro Summit](#), 999 Ninth St. NW.

8:45 a.m. — The United States Institute of Peace [discussion](#) on "Wildlife Poaching and Trafficking: Combating a Vital Source of Terrorism," 2301 Constitution Ave. NW.

9:45 a.m. — Senate Environment and Public Works Committee [hearing](#) on "The Endangered Species Act Amendments of 2018," 406 Dirksen.

10 a.m. — House Natural Resources Federal Lands Subcommittee [hearing](#) on federal land bills, 1324 Longworth.

10 a.m. — The Atlantic Council discussion on "Ready and Resilient," focusing on disaster preparedness, 1030 15th St. NW.

10 a.m. — House Oversight Interior, Energy and Environment Subcommittee [hearing](#) on "Tribal Energy Resources: Reducing Barriers to Opportunity," 2247 Rayburn.

10 a.m. — House Science Energy and Environment Subcommittees [joint hearing](#) on "The Future of Fossil: Energy Technologies Leading the Way," 2318 Rayburn.

10 a.m. — Senate Energy and Natural Resources Committee [hearing](#) on the Interior Department's final list of critical minerals, 366 Dirksen.

1 p.m. — EPA [meeting](#) on pesticide health and safety, Rosslyn, Va.

WEDNESDAY

9 a.m. — EPA public hearing on "Proposed Renewable Fuel Standards for 2019, and the Biomass-Based Diesel Volume for 2020," Ypsilanti, Mich.

9 a.m. — House Energy and Commerce Energy Subcommittee hearing on "Powering America: The Role of Energy Storage in the Nation's Electricity System," 2322 Rayburn.

10 a.m. — Senate Commerce Committee hearing on "SHARKS! — Innovations in Shark Research and Technology," 253 Russell.

10 a.m. — House Transportation Economic Development, Public Buildings and Emergency Management Subcommittee hearing on "Are We Ready? Recovering from 2017 Disasters and Preparing for the 2018 Hurricane Season," 2167 Rayburn.

10:30 a.m. — The Center for Strategic and International Studies discussion on "Digitalization in the Industrial Sector: Implications for Energy, Technology, and Policy," 1616 Rhode Island Ave. NW.

2:30 p.m. — Senate Indian Affairs Committee hearing on three bills, including S. 3168 (115), to amend the Omnibus Public Land Management Act of 2009 to make Reclamation Water Settlements Fund permanent, 628 Dirksen.

1 p.m. — The Atlantic Council discussion on "Oil and Iran: How Renewed Sanctions Will Affect Iran and World Markets," 1030 15th St. NW.

THURSDAY

9 a.m. — The Atlantic Council discussion on "Finnish Perspectives on Energy Security in Europe," 1030 15th St. NW.

10 a.m. — Senate Environment and Public Works Committee hearing on nomination of Mary Bridget Neumayr to be a member of the Council on Environmental Quality, 406 Dirksen.

12 p.m. — The Woodrow Wilson Center's China Environment Forum discussion on "Aiming Low: Wielding New Low-carbon Tools to Help Chinese and U.S. Cities Peak Carbon," 1300 Pennsylvania Ave. NW.

FRIDAY

10 a.m. — The Middle East Policy Council briefing on "Withdrawal from the Joint Comprehensive Plan of Action (JCPOA): Options for the Trump Administration," 562 Dirksen.

CORRECTION: The July 13 edition of Morning Energy incorrectly attributed a statement related to Yucca Mountain. It came from Rep. Dina Titus.

Stories from POLITICO Pro

Lawmakers battle over busting budget to pay for veterans health care [Back](#)

Spooking House conservatives and risking a presidential veto, Senate spending leaders are proposing to blow past budget limits to fund a popular private health care program for military veterans.

Minutes before they were to meet on Thursday, congressional appropriators canceled their first public conference talk that had been intended to settle differences in three of the 12 annual spending bills President Donald Trump must sign by Sept. 30 to avert a government shutdown. One of the three provides for spending on veterans.

The 11th-hour cancellation came amid a cross-Congress showdown over how to pay for a program that allows some veterans to spend taxpayer money on private doctors and hospitals. The question is whether to break budget limits, known as caps, to come up with the cash.

"They canceled the meeting. But it's all about the VA," Senate Appropriations Chairman Richard Shelby (R-Ala.) told reporters Thursday, apparently referring to GOP leaders. "Do we break the caps? Do we prorate everything else? Do we cut other veterans programs to fund this? We got a shortfall, and we got to work it out. And we're not there yet."

Congress needs to approve \$1.6 billion for fiscal 2019, plus nearly \$18.2 billion more in the two years thereafter, to fully fund what has been authorized for the VA Choice program and its successor within the new VA Mission Act.

The suggestion that Congress "break the caps" set by the budget deal, H.R. 1892 (115), struck this year is already irking House conservatives, who would be loath to vote on any final spending bill that goes above those limits — even in the face of an impending shutdown this fall. The idea likely would not play well, either, in talks with a White House that was already seen as surprisingly conciliatory in signing that grand budget deal.

Money for veterans programs comes with special political protections, however, since policymakers want to avoid the uncomfortable optics of fighting funding for those who have served in the military. And top Democrats are already trying to use that perception to their advantage.

"You don't go to a veterans assembly and say 'We're not going to help the veterans,'" Sen. Patrick Leahy (D-Vt.), ranking Democrat on the Senate Appropriations Committee, said Thursday.

The administration has been heavily involved in discussions for weeks. The White House budget office has argued that any extra VA money would be akin to breaking this year's budget deal.

"It's obviously critically important to give veterans the resources they need, and we think that can happen inside the existing caps," according to a senior administration official.

Leahy planned to offer an amendment during the conference meeting that would have added funding for the veterans health care program. The meeting was then postponed, he said, because negotiators didn't want to go on record against doling out that cash. A GOP aide said that Republicans weren't expecting any amendments in Thursday's meeting, the first time negotiators would meet face-to-face.

"A lot of the people were I think concerned, I'm told, that they'd have to vote today," Leahy said.

The issue isn't as simple as supporting or opposing money for VA Choice, though.

The funding problem began last month, when Congress enacted a bill, [S. 2372 \(115\)](#), that created a budget gap by switching the program's community care services from the mandatory side of the ledger to the discretionary side.

Democrats — as well as some Republican appropriators — are in favor of exempting the new money from Congress' strict spending caps. But many Republicans, including White House officials, say the cash should come out of the government's already-determined budget, even if that means trimming the topline for other programs.

That means Congress would need to divert hundreds of millions of dollars from other programs into the veterans health care program, which until this year, was funded automatically.

For their part, House lawmakers have already agreed to pay for part of the program without blowing through budget limits. The veterans spending bill, [H.R. 5786 \(115\)](#), that the House passed last month as part of a three-bill [minibus](#) would fully fund the program for fiscal 2019.

In a statement to POLITICO on Thursday, House Speaker [Paul Ryan](#) called out Leahy by name, saying the Senate spending bill "neglected" to fund the VA program despite the House's action.

"This attack is the height of hypocrisy," said a senior House GOP aide. "Democrats are scrambling to cover up the fact they have not kept their promises as the House did."

House GOP leaders have repeatedly refused to adjust Congress' current spending cap to pay for the additional discretionary spending on the veterans program. Instead, Republicans agreed to pitch in that \$1.1 billion by reshuffling existing money from the House's funding bill for the Department of Homeland Security.

Their Democratic counterparts, led by Rep. [Nita Lowey \(D-N.Y.\)](#), have protested the move, arguing that it will shortchange other domestic programs. Lowey's own caps-busting amendment was rejected by the spending committee.

The fight over the budget caps has been long simmering and nearly broke out into the open earlier this summer.

Shelby had long backed Leahy's amendment to surpass the caps, but the GOP chairman was forced to shelve his support for bringing it to the floor at the last minute after several conservatives raised issues with it, according to Senate aides.

Shelby even declared on the Senate floor in May that he would support a plan that exceeds the caps, warning that Congress' newest version of the veterans law authorized large sums of spending "without providing any way to pay for it under the spending caps."

"Fortunately, there is existing law and ample precedent for adjusting spending caps to reflect changes resulting from a shift in mandatory spending to discretionary spending," Shelby said on the floor.

Anthony Adragna and John Bresnahan contributed to this report.

Pruitt scales back EPA's use of science [Back](#)

By Emily Holden and Annie Snider | 04/24/2018 03:28 PM EDT

Environmental Protection Agency chief Scott Pruitt announced Tuesday he would seek to bar the agency from relying on studies that don't publicly disclose all their data, a major policy change that has long been sought by conservatives that will sharply reduce the research the agency can rely on when crafting new regulations.

The unveiling of the proposed rule delivers a win to Republicans like House Science Chairman Lamar Smith (R-Texas), who unsuccessfully pushed legislation to impose the same type of change. The move also demonstrates Pruitt's persistence in pursuing President Donald Trump's anti-regulation agenda just two days before the embattled EPA chief is due to face fierce questioning from lawmakers about his hefty spending, expanded security detail and cheap condominium rental from the wife of an energy lobbyist.

At an invitation-only meeting at EPA headquarters with Smith, Sen. Mike Rounds (R-S.D.) and other supporters of the policy, Pruitt said the proposed rule was critical in ensuring that the agency was transparent about how it is making decisions to justify costly new regulations. It is the latest step Pruitt has taken to fundamentally shift the agency's approach to science.

"It is a codification of an approach that says as we do our business at the agency the science that we use is going to be transparent, it's going to be reproduceable, it's going to be able to be analyzed by those in the marketplace. And those who watch what we do can make informed decisions about whether we've drawn the proper conclusions or not," Pruitt said.

Text of the proposed rule was not immediately available.

The proposal, based on legislation pushed by Smith, is intensely controversial, and scientists and public health groups say it will prevent federal regulators from enacting health and safety protections. Nearly 1,000 scientists, including former EPA career staffers, signed a [letter](#) opposing the policy sent by the Union of Concerned Scientists to Pruitt on Monday.

Their primary concern was that many of the country's bedrock air and water quality regulations are based on research that cannot disclose raw data because it includes the personal health information.

But industry has its own version of the same problem. EPA often relies on industry studies that are considered by companies to be confidential business information when determining whether new pesticides and toxic chemicals are safe to use. Internal EPA emails obtained under the Freedom of Information Act show that EPA political officials, including Nancy Beck, who became the chief of the agency's chemical safety office last year after working for years at a chemical industry lobbying group, worried that the new policy would limit the agency's ability to consider industry data or would force companies to make this proprietary data public.

"We will need to thread this one real tight!" Richard Yamada, political official who led work on the new policy wrote to Beck after she raised the concerns.

It was not immediately clear if the new proposed rule included measures to address those concerns.

Rush Holt, CEO of the American Association for the Advancement of Science, said Pruitt's changes could keep the agency from revising public health regulations as problems arise or new data comes to light.

"On the surface it sounds so innocuous or even beneficial. What could be wrong with transparency? Well it's clear to me that this is not based on an effort to be transparent. It is rather based on an effort to be just the opposite," he said.

"EPA is particularly important because when science is misused, people die," he added.

Pruitt has been discussing the new scientific policy publicly for weeks, but it only went to the White House for interagency review last week. Such swift review is very rare for the Office of Management and Budget, which often takes months to vet a new policy. At least one group, the Environmental Defense Fund, has requested a meeting with OMB officials to discuss the rule, but OMB's website shows that no meetings have been scheduled with interested groups.

Many public health studies can't be replicated without exposing people to contaminants, and environmental disasters such as the Deepwater Horizon oil spill cannot be recreated, the group said, raising intellectual property, proprietary and privacy concerns.

Pruitt's predecessor Gina McCarthy, and her air chief Janet McCabe, in an op-ed in The New York Times in March said concerns about studies are dealt with through the existing peer-review process, which ensures scientific integrity.

"[Pruitt] and some conservative members of Congress are setting up a nonexistent problem in order to prevent the E.P.A. from using the best available science," they said.

Net neutrality, offshore drilling, tax-free churches: What's dredged up in the latest spending debate [Back](#)

By Lauren Aratani | 07/16/2018 05:03 AM EDT

House leaders will bring two more spending bills to the floor this week, still aiming to pass all 12 of the fiscal 2019 measures before federal cash runs out on Sept. 30. Albeit a softball compared to the more controversy-packed funding bills, this second "minibus" provides ample opportunity for political potshots and fiery policy debate.

House Republican leaders are expected to keep much of that fighting off the floor by curtailing amendments to the two-bill package, [H.R. 6147 \(115\)](#), which includes funding for the Interior Department, EPA, IRS, SEC and General Services Administration — among several other agencies — as well as federal courts and Washington, D.C.

But issues such as federal jobs for young immigrants, financial transactions with marijuana vendors and the indiscretions of former EPA Administrator Scott Pruitt are sure to come up as GOP leaders prep for floor debate.

The House Rules Committee is set to meet Monday night to wade through the more than 240 proposed amendments to the Financial Services, [H.R. 6258 \(115\)](#), and Interior-Environment titles. Because the panel will likely seek a "structured" rule, the most controversial tweaks are expected to be cast aside before the legislative duo is called up for floor debate. What to watch:

Sticking it to Scott Pruitt

Though Pruitt is EPA administrator no more, Democrats will use this week's spending bill to rehash his missteps and pursue continued investigation into allegations that he misused taxpayer money. One proposed amendment would withhold funds for finalizing any EPA rules Pruitt initiated, until the agency's inspector general completes its investigations into the former administrator's spending.

Another proposed tweak would require the EPA to publicly disclose all funds used for top-level travel, within 10 days of each trip.

The bill already includes a committee-approved, tongue-in-cheek provision that would bar the EPA's chief from purchasing fountain pens that cost more than \$50, following reports that Pruitt spent \$3,230 on especially pricey writing tools. And an amendment has been proposed that would essentially bar the Interior secretary from installing a private phone booth, after Pruitt spent \$43,000 on a soundproof stall.

Supporting the marijuana economy

More than 20 co-sponsors — from both sides of the aisle — have piled on in support of an amendment that would prevent financial institutions from being penalized for serving legal marijuana businesses.

Disputing research requirements

Rep. Paul Tonko (D-N.Y.) has drafted an amendment that would bar the EPA from using money to adopt a rule that would keep the agency from using research without publicly disclosed data. Conservatives argue that the rule brings transparency to scientific research, but many scientists contend that the stipulation would allow the agency, under the guise of transparency, to pick and choose which research it will use for regulations.

Protecting employment for DREAMers

An amendment by Rep. Pete Aguilar (D-Calif.), and another by Rep. Darren Michael Soto (D-Fla.), would ensure immigrants protected under the Deferred Action for Childhood Arrivals program are eligible for federal employment. Although some moderate Republicans have voiced support for that effort, chances of action have grown slim after House Republicans failed last month to bring GOP immigration proposals to the floor.

Stopping offshore drilling

Dozens of lawmakers from both parties have sponsored amendments that would bar federal funds from being used to support offshore drilling in various locations off the nation's coasts, as the White House seeks to expand exploration for oil and gas.

Curtailing church donations

Several Democrats have endorsed an amendment by Rep. Debbie Wasserman Schultz (D-Fla.), and another by Rep. John Lewis (D-Ga.), that would seek to continue enforcement of the current prohibition on tax-exempt nonprofit organizations endorsing or donating to political candidates. House Republicans have included language in the Financial Services title that would basically ban the IRS from rooting out churches that break that rule.

Reviving net neutrality

Democrats have proposed an amendment that would restore the FCC's net neutrality rules, after the commission's repeal took effect this month.

Billionaire Steyer endorses de León over Feinstein [Back](#)

By David Siders | 04/18/2018 11:53 AM EDT

LOS ANGELES — Tom Steyer, the billionaire Democratic mega-donor, is endorsing Kevin de León in his longshot bid to unseat California Sen. Dianne Feinstein, the latest rebuke of Feinstein from her party's increasingly agitated left flank.

Steyer's endorsement - if followed by outside spending - could improve de León's standing in a race that he has so far failed to make competitive. Feinstein, a centrist Democrat, holds a massive advantage over the progressive state senator in both fundraising and public opinion polls.

"I have known Sen. de León for years and have fought alongside him on immigrant rights, expanding health care, and climate change," Steyer said in a prepared statement. "Our work together on behalf of all Californians has assured me that he would be a champion of California's priorities and values. Kevin de León has proven himself to be the best of the next generation, and I am proud to support him for U.S. Senate."

The endorsement was not unexpected. Steyer once considered challenging Feinstein himself, and he has appeared on cable television previously as a near-surrogate for de León. Earlier this year, Steyer described the contest on MSNBC as "incrementalism versus visionary thinking in the Democratic Party."

Lauded by many young, progressive activists in California, de León in February deprived Feinstein of her own state Democratic Party's endorsement, outpolling her by 17 percentage points in the delegate vote.

But the state senator remains largely unknown to the broader electorate in California. Feinstein leads him 42 percent to 16 percent among likely voters, according to a Public Policy Institute of California poll last month.

The race between Feinstein and de León is unlikely to be decided before November. With no prominent Republican running in the state's top-two primary in June, Feinstein and de León are both expected to advance to the general election.

Feinstein: I'm equipped to lead anti-Kavanaugh brigade [Back](#)

By Carla Marinucci | 07/14/2018 01:39 PM EDT

OAKLAND, Calif. — Sen. Dianne Feinstein, the ranking Democrat on the Senate Judiciary Committee, said Saturday that the vetting process for the confirmation of Brett Kavanaugh to the Supreme Court will be "incredibly difficult," and that her staff is reading nearly 1 million documents that she said could give red-state Democrats reason to oppose his nomination.

Feinstein made her toughest comments to date about opposing Kavanaugh's nomination while addressing a "Unity Breakfast" of her supporters at a California Democratic Party executive Committee meeting in Oakland. State party activists will decide later Saturday on an endorsement in Feinstein's race against progressive state Sen. Kevin de León.

Reminding supporters of her seniority in the Senate and her leadership position on the Judiciary Committee, Feinstein said she has helped write the party's modern-day battle plan for a Supreme Court confirmation. She said that she has sat in on more than 10 confirmation hearings for Supreme Court justices since she was elected in 1992. But Kavanaugh's nomination, Feinstein said, "is beyond, [it is] different from all of them. ... Because this man will be the deciding vote on most things we hold most dear."

"This president has said he would appoint the person that would take down Roe [v.Wade] ... and I take him at his word," she said.

Feinstein told Democrats that now, as the nomination process goes forward, "we have a massive effort going ... We collect information from everywhere," including the Bush Presidential archives.

"The vetting process of this justice is going to be incredibly difficult... it's estimated that 1 million pieces of paper that our staff is going to need to go through prior to a hearing," she said. "I can tell you this: That it is really key and critical that Democrats, including those in difficult states, get the support of our party so that they can do the right thing in this vote..."

Feinstein noted that "we have five Democratic [senators up for reelection] from states that Donald Trump won [by large margins], and this makes this vote difficult for them," she said. "For me, it's not difficult at all. But I'm the lead Democrat on the committee, and we will put together a kind of message, I hope, for the American people which will enable those Democrats to vote along with us."

Feinstein gets progressive smackdown [Back](#)

By Carla Marinucci and Jeremy B. White | 07/15/2018 08:01 AM EDT

California Democrats, torn by infighting between moderate and progressive factions, rebuked Sen. Dianne Feinstein's bid for a fifth term — for the second time this year.

The state party's executive committee voted Saturday to endorse progressive state Sen. Kevin de León in the general election, signaling what many fear will be a divisive Democrat-on-Democrat battle going toward to the fall in California, where the party hoped to put the focus on a host of crucial congressional races that could determine control of the House of Representatives.

The endorsement delivers a lifeline to de León's struggling campaign — and the party's imprimatur, which is accompanied by valuable access to slate cards, email lists and voter outreach machinery that will allow him to reach an estimated 2 million Democratic voters. And he could also get an infusion of federal campaign cash shared with the party, party officials said.

Feinstein, who was also snubbed in February at the annual state convention where party activists declined to endorse her bid for reelection, had pleaded for party unity prior to Saturday's vote. She asked the executive committee of the California Democrats, the nation's largest state Democratic Party, to choose "no endorsement" — what many saw as a strategic defense to head off an aggressive challenge for the party's endorsement by de León.

And in an effort to frame the endorsement clash in the context of the national political landscape, the senator's team circulated a "no-endorsement" plea signed by a half-dozen Democrats whose campaigns in contested California districts are a linchpin of the national party's strategy to retake the House.

The final vote gave de León 217 votes, or 65 percent — beating the 60 percent required threshold — versus 94 votes, or 28 percent, for the "no endorsement" urged by Feinstein, and 22 votes, or 7 percent, for the senator herself.

The Senate contest pits two contrasting pols: Feinstein — at 85, the oldest member of the Senate — and De León, 51, a former state Senate president pro tem and son of a single immigrant mother. She is a centrist long at odds with her state party's leftist activist grass roots, while he is a progressive who has called for new "bold leadership" from Democrats unafraid of confronting President Donald Trump head-on.

"I think it's always good to have younger generations rise up and assume positions of leadership," de León told POLITICO on Saturday.

His fight, he said, was not about "a gender issue ... it's not an age issue." Pointing to progressive icons Sens. Elizabeth Warren and Bernie Sanders, de León said, "it's about the right values."

The weekend's nail-biter over the party's Senate general election endorsement underscored the depths of the bitter divisions still lingering from the 2016 battles between more progressive backers of Sanders' presidential bid and the more centrist faction of Hillary Clinton supporters in the nation's most populous state.

Although the endorsement involved just a small circle of the most activist voters — a 313-member executive committee in a party that represents 8.4 million voters — many Democratic insiders said it carried potentially dangerous implications for the party beyond the state's borders.

Not only did the internal battle threaten to extend the rift among Democrats in California — a traditional mother lode of campaign contributions — many Democratic leaders, including former state chair Art Torres, worried about the prospect of a circular firing squad.

"We have the opportunity to change the nature and the control of the House," said Torres, a Feinstein backer, adding that a de León endorsement threatened that Democrats "won't have enough federal money to put into those congressional campaigns."

"Federal money is the hardest to raise," he said, "and if the party is going to spend money on a U.S. Senate campaign — why do it?"

For de León's campaign, snagging the party's endorsement was widely seen as his last shot at making a serious run at Feinstein. California's senior senator pummeled him by 32 percentage points in the June all-party primary, winning more than 70 percent of the Democratic vote in a contest in which 32 candidates competed.

She has also dramatically outraised him: Feinstein reported \$10.3 million cash on hand at the end of March, compared with \$672,330 for de León, according to campaign finance reports.

But de León has gained traction among the party's far left as the author of the controversial SB54, the California Values Act, also known as the "sanctuary state" law. The legislation, aimed at curtailing the cooperation of local law enforcement with federal immigration officials, was recently largely upheld by a federal judge's ruling.

De Leon has also called for abolishing the Immigration and Customs Enforcement agency and impeaching Trump — a position that is shared by his friend, wealthy Democratic activist Tom Steyer.

In making the rounds this weekend in caucus meetings at Oakland's Marriott Hotel, Feinstein repeatedly reminded Democrats of her seniority in Washington, her legislative leadership on issues like the assault weapons ban, and of what she vowed will be her pivotal role as the ranking Democrat on the Senate Judiciary Committee — which will weigh Trump's nomination of Brett Kavanaugh to the Supreme Court.

Feinstein on Saturday downplayed the symbolism of a de León endorsement and her difficulty with the party's grass roots, insisting it would have no effect on her campaign. "This was not a close primary election, and there were 32 people on the ballot," she said of the June contest. "I take nothing for granted ... we work hard."

"I think people understand I'm now ranking on Judiciary, going into one of the biggest moments that this party has — the decisive Supreme Court justice," she said. "This is a very big deal because this affects the life of every American going forward. So who that Supreme Court seat goes to is all-important."

Asked why her decades of accomplishments in public office haven't earned her an easy endorsement from her party in her bid this year, Feinstein jokingly shrugged: "Well, that thought occurred to me — but I wiped it out of my mind completely."

In a measure of the contest's intensity, party members said they were inundated with appeals from both camps in recent days, and Feinstein's call for neutrality irked some pro-de León inhabitants of the party's progressive wing.

"Delegates are very angry at the constant barrage of emails we've gotten from people who have endorsed Dianne Feinstein telling us not to endorse," said R.L. Miller, a prominent environmental activist who was wearing one of a profusion of "United4KDL" stickers.

In caucus meetings and in hallways where he made the rounds, de León argued that Trump's recent actions on immigrant family separations, the Supreme Court and environmental policy demanded unfailingly tough action and confrontation from Democrats in Washington. And — without ever naming Feinstein — he repeatedly drew a sharp contrast with her centrist approach and more conciliatory style on Capitol Hill.

"We need bold leadership in Washington today," de León told a meeting of the Women's Caucus. "Brett Kavanaugh is in a position to take away the rights of every American. ... That's why we have to shut the Senate down — and never allow this individual to come to the Senate floor," he said to cheers. "This is where you need the courage of your convictions — to not be on the sidelines, but on the front lines because what's at stake is a generation of power."

Steyer also drew cheers from the Democratic crowd in Oakland when he delivered a similar message to Democratic lawmakers on Capitol Hill: "If you don't have what it takes to lead now, when we are totally under the gun, then don't come asking for support later," he said. "Lead, follow or get out of the way."

Feinstein has appeared to respond to progressive pressures as the campaign has unfolded. She moved left on a pair of issues where her moderation has long stood out in California: she endorsed legalizing marijuana, reversing her longtime opposition, and renounced her prior embrace of the death penalty.

Bill Carrick, Feinstein's campaign strategist, downplayed the importance of this weekend's vote, saying that the opposition of the party's far left to Feinstein is "not a surprise; we've been through this in the past."

Carrick noted that de León "got the lowest total of any candidate" ever in a top-two primary race, while "she won every county, 70 percent of the Democrats, every congressional district of every kind of demographic that exists in California. So I think we're in good shape."

Still, he acknowledged that it would have been "much better for the Democratic Party" to present a unified front as the November election approaches, and to have avoided an endorsement fight.

Despite the passion of progressive voters, he said, a political reality exists even in solidly blue California. "We can't be naïve about these swing districts," he said. "The idea that suddenly we vaporize the Republicans in these districts and just walk in, is just crazy. They're all going to be very, very close districts."

U.S. ambassador: Trump-Putin meeting 'isn't a summit' [Back](#)

By Quint Forgy | 07/15/2018 10:53 AM EDT

President Donald Trump's highly anticipated meeting on Monday in Helsinki with Russian President Vladimir Putin is just that — only a meeting, the U.S. ambassador to Russia said Sunday.

"It isn't a summit. I've heard it called a summit. This is a meeting," Jon Huntsman said on [NBC's "Meet the Press."](#)

"In fact, it's the first meeting between the two presidents," Huntsman added. "They've had some pull-asides, one at the G-20 in Hamburg and the other at the APEC Ministerial in Da Nang, Vietnam, but this is really the first time for both presidents to actually sit across the table and have a conversation."

Unlike previous presidential summits — such as Ronald Reagan's visit to China in 1984, Huntsman said — Trump and Putin's get-together in Helsinki will not feature a state dinner, a joint statement or any predetermined policy deliverables.

"You don't know what's going to come out of this meeting, but what it will be is the first opportunity for these presidents to actually sit down across a table, alone and then with their teams, to talk about everything from meddling in the election, to areas where we have some shared interests," Huntsman said.

Huntsman also said recent developments in special counsel Robert Mueller's investigation of Russian interference in the 2016 presidential election, including the Friday indictment of 12 Russian military officials for hacking the Democratic National Committee, will be a part of Monday's talks.

"That now makes probably almost 30 Russians who have been rolled up by the Mueller indictment. That investigation continues," Huntsman said. "The bigger picture is we need to hold the Russians accountable for what they did, their malign activity throughout Europe as well. That's a part of the conversation that needs to take place."

But Huntsman wouldn't say whether Trump would push Putin for the extradition of the dozen Russian military officers to stand trial in the United States.

"I don't know if he'll make the ask, but it may be part of the agenda. It may be part of their bilateral meeting together. We'll have to see," Huntsman said, adding that the FBI office and the U.S. Embassy in Moscow would work to advance that goal.

"That doesn't necessarily mean that the Russians are going to follow through with it," Huntsman cautioned. "But we'll see if those steps will be taken."

House to vote on whether carbon tax 'detrimental' to economy [Back](#)

By Anthony Adragna | 07/13/2018 01:18 PM EDT

The House Rules Committee will meet Tuesday to tee up chamber consideration of a resolution, [H. Con. Res. 119 \(115\)](#), arguing a carbon tax would be "detrimental" to the U.S. economy and "not in the best interest" of the country, according to [a notice](#).

Nineteen conservative groups, including the Competitive Enterprise Institute, American Energy Alliance and Americans for Tax Reform, sent House leadership [a letter](#) earlier this week urging them to take up the resolution.

The non-binding resolution is led by Majority Whip [Steve Scalise](#) and may be an interesting vote for members of the Climate Solutions Caucus. That bipartisan group's ranks have swelled to more than 80 lawmakers, but members have yet to weigh in on specific solutions for how to address climate change.

WHAT'S NEXT: The Rules Committee will [meet](#) on the resolution July 17 at 3 p.m.

Subject: Morning Energy: Another mess for Pruitt — Virgin Islands party boss: Zinke ties improved hurricane response — Coal magnate delivered draft orders to Trump

By Kelsey Tamborrino | 06/07/2018 05:41 AM EDT

With help from Darius Dixon, Anthony Adragna and Annie Snider

ANOTHER MESS FOR PRUITT: Scott Pruitt has an appetite for food from the White House mess — a U.S. Navy-run restaurant for use only by White House officials, Cabinet members and other dignitaries. In fact, he loves eating there so much, the White House asked him to stop coming by so often, POLITICO's Emily Holden, Andrew Restuccia and Anthony Adragna report.

The message was clear, according to one person close to Pruitt: "We love having Mr. Pruitt, but it's not meant for everyday use." A member of the White House's Cabinet affairs team told agency chiefs of staff last year that their bosses shouldn't treat the mess like their personal dining hall — a comment that came in response to Pruitt's recurring use of the restaurant, sources said.

Pruitt's allies privately disputed that the warning about overuse of the mess was aimed squarely at him, but nobody contests that he's a frequent presence at the establishment in the basement of the West Wing. The White House did not respond when asked about his lunch habits, and EPA declined to comment.

A billing statement from July 2017 offered a glimpse into Pruitt's trips to the mess, racking up a bill of \$400 over nine trips that month — a relative bargain in downtown Washington considering the menu. A cheeseburger at the White House runs just \$6.35, according to Pruitt's bill. Compare that to the \$17 you'd pay for a burger from another favorite Pruitt spot, French bistro Le Diplomate. Read [more](#).

Support for Pruitt is also falling on Capitol Hill, Anthony and Emily report, in the wake of this week's news that Pruitt sought to buy a used mattress from the Trump Hotel and inquired about securing a Chick-fil-A franchise for his wife. Two more top aides to Pruitt — scheduler Millan Hupp and counsel Sarah Greenwalt — also are leaving the agency. "I'm not going to come down here, just because he happens to be a nominee of a president I support or a nominee from my party, and try to defend the indefensible," Sen. [John Neely Kennedy](#) said. More [here](#).

On the other hand, [Cory Gardner](#), who heads the Senate GOP campaign arm, told reporters he doesn't think Pruitt's ongoing ethics woes will harm his party in the midterms. "The states like Missouri, Indiana, North Dakota have benefited from a regulatory approach this administration has taken," Gardner said.

Environmentalists' "Boot Pruitt" campaign will gather a "group of cows" outside the Capitol South Metro station today from 8 a.m. to 9:15 a.m. to hand out fake Chick-fil-A coupons for a free chicken sandwich with a donation to Pruitt's legal defense fund. They'll hold signs reading: "Breeth Mor Caribun" and "What the Cluck, Pruitt?"

VIRGIN ISLANDS BOSS PLAYS UP ZINKE RELATIONSHIP: The head of the Virgin Islands Republican Party suggested his fundraising group's longstanding relationship with Interior Secretary Ryan Zinke helped improve the department's response to last year's hurricanes that struck the island territory, Pro's

Ben Lefebvre reports. John Canegata said he had direct access to Interior officials after the storm thanks to money his group raised for Zinke when he was a member of Congress.

Calling Zinke a "close friend," Canegata boasted of his connections in a televised appearance that aired in the Virgin Islands last month but has not received widespread attention outside of the territory. While numerous officials played a role in helping the islands recover from hurricanes Maria and Irma, "behind the scenes, trust me, a lot of telephone calls, a lot of maneuvering was going on because, I think, some of the relationships we built," Canegata said of Zinke.

Interior acknowledged that officials contacted Canegata after the hurricanes but said they did so as part of a wider effort to contact business leaders based in the territory and Zinke did not call him personally. Canegata works for Cruzan Rum, but a company representative told Ben he was not involved in coordinating its relief efforts. Interior expedited the reimbursement of taxes on Virgin Islands rum following the storms, but it was unclear whether Canegata influenced that decision; he did not respond to a request for comment.

For his part, Zinke has known Canegata since at least 2015, Ben reports. The secretary previously came under fire for a fundraiser for the VIGOP, as the group is known, during an official trip to the islands in his first month in President Donald Trump's Cabinet. Read more.

IT'S THURSDAY! I'm your host Kelsey Tamborrino. NRECA's Dan Riedinger correctly identified John Tyler as the only president to have not been a resident of the U.S. when he died. Tyler resided in Virginia at the time, which was part of the Confederate States of America. Today's question: Which Congress had the largest number of veterans in office? MURRAY DELIVERED EXECUTIVE ORDERS TO TRUMP: Coal magnate Bob Murray handed off drafts of six executive orders that would roll back Obama-era environmental regulations to Trump during the beginning of his administration, according to documents from DOE released under FOIA. The documents include a letter to Energy Secretary Rick Perry from Murray praising Trump's March 2017 energy independence executive order, and included a note where Murray wrote, "we have developed the enclosed materials for your review and consideration, consisting of: six (6) Executive Orders further rescinding anti-coal regulations of the Obama administration; and one (1) memorandum outlining the legal rationale for each of these action, and others."

While Trump did not sign those exact orders, the administration has moved to enact similar policies, Pro's Darius Dixon reports. The documents, which were sent to DOE the day Trump signed his energy independence order and one day before Murray met with Perry and DOE chief of staff Brian McCormack, also included concepts about grid security and "resiliency" that Perry later touted as part of his push to stop coal power plants from closing. Read more.

BAILOUT ON HIS MIND: In private remarks given during his visit to FEMA headquarters Wednesday, Trump mentioned a slew of topics that had nothing to do with hurricanes, The Washington Post reports, while only briefly mentioning Puerto Rico. Trump instead encouraged Perry to make an announcement about rescuing economically struggling coal and nuclear power plants, the Post reports. "I'd love to put it out — 'clean coal, nuclear,' it's a very important message," he said, telling Perry he needed to hold a news conference.

WRDA MOVES AHEAD: The House passed the Water Resources Development Act of 2018 (H.R. 8 (115)) last night, marking the first major piece of infrastructure legislation to move under the Trump administration, Pro's Annie Snider reports. Lawmakers signed off on the measure on a broadly bipartisan vote of 408-2. The bill — markedly narrower than the Senate's measure — would authorize six new Army Corps of Engineers projects and enact a suite of policy reforms at the red tape-laden agency.

What about the Senate? For those wondering, EPW Chairman John Barrasso told ME he'd not yet locked down a time for the Senate to consider its broader version of the water resources infrastructure legislation. Separately, Sen. Tammy Baldwin sent this letter to Trump, calling on him to urge Congress to include a permanent Buy America provision in the legislation.

MUM'S THE WORD: Barrasso, whose state produces a lot of coal and uranium, told ME he isn't ready to back Trump's proposed bailout for coal and nuclear power plants. "I've read the article but I want to actually see what the proposal is," he said. DOE is still formulating the details of how it would intervene to save the struggling plants.

RESCISSIONS VOTE TODAY: The House is set to vote today on Trump's \$15 billion rescissions bill, Pro's Sarah Ferris reports. The House Rules Committee teed up the bill, H.R. 3 (115), on Wednesday, a quick turnaround that surprised even some GOP lawmakers.

ALL ABOARD: After the rescissions package, the House is ready to start debate on its "minibus" appropriations package, which includes energy and water, legislative branch and military construction-VA spending bills, Pro's Kaitlyn Burton reports. The Rules Committee has set up floor votes on 50 amendments to the energy and water title. A final vote on the overall bill is expected Friday.

SHIMKUS SPEAKS: Rep. John Shimkus, one of the most ardent Yucca Mountain champions in Congress, said his loud floor dispute with Paul Ryan on Tuesday was simply a dispute over "strategy going forward." Other members suggested it had to do with the timing of the Energy-Water bill, since Shimkus thinks delaying until after the midterms might allow Yucca language to make it into the title. The Senate has avoided tackling Yucca due to Sen. Dean Heller's close reelection contest.

POWER OF THE PEN: The House Appropriations Committee agreed to bar EPA from spending more than \$50 on a fountain pen. The amendment — an apparent reference to the \$1,560 Pruitt spent on a dozen fancy writing implements — passed on a voice vote at Wednesday's markup. The panel cleared its version of the fiscal 2019 EPA-Interior bill, on a vote of 25-20. Committee Republicans blocked an effort from Democrats to boost EPA's Office of Inspector General by \$12 million, but approved an amendment that would change revenue sharing for drilling in the Arctic National Wildlife Refuge. And while the pen amendment passed, the committee shot down another amendment from Democratic Rep. Mike Quigley related to Pruitt's travel.

MEETING WITH A FULL DECK: The last time the leadership of FERC and the Nuclear Regulatory Commission got together, there were just enough commissioners between the two agencies to fill one five-member board. Fast-forward to today, and it's a full house for the first time in years thanks to confirmation of two new NRC leaders last month. The get-together is slated to run for just over two hours. An agenda hasn't been released but the meetings usually involve staff presentations on grid reliability — and how it might be impacted by the retirement of nuclear plants — and cybersecurity regulations. Finding the areas where an

economic regulator overlaps with a safety watchdog isn't always obvious. The meeting is slated to run from 9 a.m. to 11:15 a.m. at FERC headquarters, and will be [webcast](#).

ROYALTY RUMPUS: Interior's Royalty Policy Committee approved recommendations Wednesday aimed at expanding energy lease sales and lowering royalty rates, Ben recaps. But during the advisory committee's meeting, two members questioned whether it had the power to suggest changes to federal environmental review. "NEPA is not referred to in the [committee] charter," Rod Eggert, a professor at the Colorado School of Mines, said during the meeting. "The text in the charter refers to royalties and collections of royalties." Read more [here](#).

Later Wednesday, BLM sent out a [memo](#) instructing field offices to look for ways to speed up permit processing, including by using categorical exclusions, Ben [reports](#).

— **Meanwhile, the Central Arizona Project will meet today** on proposals for sourcing cheaper power to run the Navajo Generating Station. The Bureau of Land Reclamation last week sought to delay the coal-fired power plant's closure, arguing that a 1968 law gives Zinke the authority to require the Arizona water project buy energy from the power plant. Reuters has the rundown [here](#).

GROUPS WARY OF INTERIOR DRAFT BILL: A coalition of sportsmen's groups is concerned about draft legislation that appeared before the House Natural Resources Energy Subcommittee on Wednesday. According to the [draft bill](#), it would enable Interior to recover the costs of administrative protests to oil and gas lease sales, drilling permits and other applications. The bill, [they say](#), would make it more difficult for sportsmen and women to comment on oil and gas lease sales on public land.

BLANKENSHIP IS BACK: Former coal baron Don Blankenship hasn't given up hope to take on the establishment and earn himself a spot in the Senate. After losing a primary bid to West Virginia Attorney General Patrick Morrisey, Blankenship's campaign [announced](#) Wednesday it is petitioning to gain ballot access for the general election as the nominee for the Constitution Party.

Another mess for Pruitt: Overstaying his White House welcome at lunch [Back](#)

By Emily Holden, Andrew Restuccia and Anthony Adragna | 06/06/2018 10:17 PM EDT

EPA Administrator Scott Pruitt loves eating at the White House mess, an exclusive U.S. Navy-run restaurant open only to White House officials, Cabinet members and other dignitaries.

But apparently he liked it too much, and the White House asked him to please eat elsewhere sometimes.

In response to Pruitt's recurring use of the restaurant next to the Situation Room in the basement of the West Wing, a member of the White House's Cabinet affairs team told agency chiefs of staff in a meeting last year that Cabinet members shouldn't treat the mess as their personal dining hall, according to three people with knowledge of the issue.

The message was clear, according to one person close to Pruitt: "We love having Mr. Pruitt, but it's not meant for everyday use." Another person added that the White House asked Cabinet members to visit the mess only occasionally because there are [few tables available](#).

A renovation to update the West Wing HVAC last August included the mess kitchen and may have limited space, one person said. The renovation came shortly after the president tapped John Kelly as chief of staff, and he implemented several day-to-day changes to bring order to the White House.

The White House did not respond to a request for comment and EPA declined to comment. Pruitt's allies privately disputed that the warning about overuse of the mess was aimed squarely at him, but nobody contests that he's a frequent presence at the White House for lunch.

Pruitt has been known to complain that EPA headquarters has no cafeteria of its own and no private dining quarters, according to multiple sources, who said Pruitt still often heads to the White House for lunch. One source said EPA officials called the White House to explain that Pruitt didn't have a place to eat at EPA and would like to continue to visit. Pruitt's EPA office is only a few blocks up Pennsylvania Avenue from the White House.

A [billing statement](#) from July 2017 offered a glimpse into Pruitt's use of the mess, showing the EPA chief or people linked to him dined at the mess at least nine times that month, racking up a bill of \$400, a relative bargain in downtown Washington. Pruitt and his guests dined on dishes like "cowboy" skirt steak, popcorn chicken and waffles, spinach strawberry salad and beer-braised brisket tacos.

While the food is considered to be top-notch, the prices are a real bargain. Skirt steak runs just \$10.25, while coriander beef kabobs were just \$11.95 each. And a cheeseburger runs just \$6.35, according to his bill. The burger at another of Pruitt's haunts, French bistro Le Diplomate, runs \$17.

Records obtained through a Sierra Club Freedom of Information Act request [also show](#) Pruitt often sought to bring friends from Oklahoma to the White House mess.

Five friends from Tulsa — Charlie Polston, Carlyn Mattox, David Mattox, Bob Wagoner and Jerry Dillon — were invited for a September lunch there with him, though it didn't appear in Pruitt's detailed calendar obtained through FOIA.

That lunch came just two weeks after Pruitt made a lunch date there with Bob Funk, a wealthy Oklahoma Republican with whom he bought a major stake in the minor league Oklahoma City RedHawks baseball team back in 2003.

"Please have Mr. Funk arrive at EPA building at 11:40am to ride with Administrator Pruitt to the WH," Lincoln Ferguson, a senior adviser for public affairs, wrote in [an email](#). There was no entry in Pruitt's calendar for the time when the lunch was to have taken place.

Calendars from Pruitt's senior aides show he made frequent use of the space in the month following his February 2017 Senate confirmation. He dined there on Feb. 27, March 2 and met with Ivanka Trump, the president's daughter and West Wing adviser, on March 13. Chief of staff Ryan Jackson's calendar also lists a lunch in the "Mess" on March 16.

Pruitt also hosted representatives from the Oklahoma Farm Bureau on March 29, according to Jackson's calendar. And he returned for lunch with Mike Catanzaro, a senior White House energy aide, and several senior aides on April 7.

Pruitt and his guests also seemed to have a sweet tooth, partaking of a dessert called "Chocolate Freedom" on multiple occasions. As POLITICO [reported](#) in January 2017, the dish — a molten cake made with imported French chocolate that must be ordered at the beginning of lunch because of the baking time — was also popular among Obama administration staffers on their way out the door.

Chocolate Freedom has garnered [rave reviews online](#), and once prompted comedian Zach Galifianakis to [ask](#) whether it was also the staff's nickname for former President Barack Obama.

Also available to diners: boxes of red, white and blue M&Ms featuring the presidential seal.

Pruitt wanted to buy 'old mattress' from Trump International Hotel [Back](#)

By Anthony Adragna | 06/04/2018 10:43 AM EDT

Two senior House Oversight Democrats are demanding Chairman Trey Gowdy (R-S.C.) subpoena Scott Pruitt for documents after one of his closest aides told congressional investigators the EPA administrator had her book a personal flight to the Rose Bowl, search for housing for him and try to buy him an "old mattress" from the Trump International Hotel.

Ranking member Elijah Cummings (D-Md.) and Gerry Connolly (D-Va.) demanded that Gowdy compel Pruitt to turn over all documents related to the potential mattress purchase, efforts to secure personal flights, and work that agency employees performed on non-EPA tasks for Pruitt that have been withheld from an earlier April Democratic request. That followed a May 18 transcribed interview with Millan Hupp, Pruitt's scheduler.

"If Ms. Hupp's statements to the Committee are accurate, Administrator Pruitt crossed a very clear line and must be held accountable," they wrote. "Federal ethics laws prohibit Administrator Pruitt from using his official position for personal gain and from requesting and accepting services from a subordinate employee that are not part of that employee's official duties."

As part of its investigation into Pruitt, the Oversight Committee said it has conducted several transcribed interviews and obtained 2,350 pages of documents, and a spokeswoman criticized the release of Hupp's testimony.

"Selectively releasing portions of witness interview transcripts damages the credibility of our investigation and discourages future witnesses from coming forward. The Committee will continue conducting a serious, fact-driven investigation, and therefore will wait until the conclusion of our investigation to release our findings," committee spokeswoman Amanda Gonzalez said in a statement.

White House Press Secretary Sarah Huckabee Sanders said Monday the administration is "looking into" the issues in the Democrats' letter, but didn't outline any more specific steps.

"I couldn't comment on the specifics of the furniture use in his apartment and certainly would not attempt to," she said, referring to Pruitt's interest in the mattress.

According to the Democrats' letter, Hupp told Oversight staff she worked with the managing director of the Trump International Hotel in hopes of securing an old mattress. She said Pruitt had told her someone at the hotel indicated he could purchase the mattress, though she did not know why he wished to do so and did not know if he ultimately bought it.

In addition, Hupp said she sent several emails to real estate agents over a period of several months last summer during work hours to help Pruitt find housing after he verbally asked for her help. She said she visited a "probably more than 10" properties during her lunch hour over the course of several months. Hupp said she didn't use work email for the searches and was not paid for her efforts.

Pruitt and his wife ultimately settled on an apartment on 13th and U streets, but left it shortly afterwards because "they were not comfortable in the area," according to Hupp.

Democratic lawmakers have honed in on Pruitt's admission during a May 16 Senate subcommittee hearing that Hupp had searched for housing for him without pay on her own personal time.

"It doesn't cut it that they're a friend or that kind of thing," Sen. Tom Udall (D-N.M.) told Pruitt at the hearing, because having a subordinate staff member voluntarily conduct tasks on personal time would constitute a gift.

"That's in violation of federal law," Udall told Pruitt.

An EPA spokesman said the agency continued to give the information it was seeking.

"We are working diligently with Chairman Gowdy and are in full cooperation in providing the Committee with the necessary documents, travel vouchers, receipts and witnesses to his inquiries." EPA spokesman Jahan Wilcox said in a statement.

According to the Democrats' letter, Hupp said around Christmas she used a personal credit card from Pruitt in her possession to arrange his personal trip to the Rose Bowl in California to watch the Oklahoma Sooners football team play. She did not know why Pruitt, who sent her the details for the trip, and couldn't book the flight on his own.

"He just sent me the flights details and asked me to book for him," Hupp said.

Hupp indicated she considered Pruitt a personal friend, which was why she did these tasks for him. She said the two had met for dinners that were attended by just the two of them.

"We worked very closely together and spent a lot of time together," she said. "I traveled with him, so naturally a friendship developed."

Republicans losing patience with scandal-scarred Pruitt [Back](#)

By Anthony Adragna and Emily Holden | 06/06/2018 05:37 PM EDT

Republicans on Capitol Hill are growing frustrated with EPA Administrator Scott Pruitt — and many are now publicly questioning whether he can hang on to his job amid the unending stream of scandals.

Several GOP lawmakers said their patience was running thin after this week's news that Pruitt sought to buy to buy a used mattress from the Trump Hotel and inquired about securing a Chick-fil-A franchise for his wife. And Pruitt's circle of confidantes inside the agency appeared to be shrinking as well, with two of his closest aides set to depart in the coming days.

"The constant drip needs to stop so the agency can get its footing and focus back," House Energy and Commerce Chairman Greg Walden (R-Ore.) told reporters. "They're doing some really good work in the environmental front, but this needs to stop."

"Sometimes people get tripped up on other things besides the core mission, and I think that's what you're seeing," Sen. Shelley Moore Capito (R-W.Va.) told reporters.

Pruitt's scheduler, Millan Hupp, is resigning following her interview by the House Oversight Committee during which she disclosed that she helped her boss find housing and inquired about purchasing a used mattress for him from the Trump International Hotel.

And his top legal counsel, Sarah Greenwalt, will also depart, according to sources. Both women had worked for Pruitt in the Oklahoma attorney general's office and both were among the staff that received raises that had been rejected by the White House.

"I think it's extremely fair to say her and Millan both are tired of the daily grind here," one EPA official said. "Everybody is painfully aware of that."

While acknowledging that President Donald Trump would ultimately make any decision about Pruitt's job, several Republicans indicated Pruitt's support was waning in their conference.

"I'm not going to come down here, just because he happens to be a nominee of a president I support or a nominee from my party, and try to defend the indefensible," Sen. John Kennedy (R-La.) said. "I thought that Mr. Pruitt would have learned his lesson."

Kennedy added: "I said the same thing about Tom Price," referring to Trump's former HHS secretary who resigned after spending lavishly on military and private jets.

Trump reaffirmed his support for Pruitt on Wednesday when they participated in a briefing on the 2018 hurricane season with several Cabinet officials.

"EPA is doing really, really well," Trump said. "You know, somebody has to say that about you a little bit. You know that, Scott."

But even staunch Pruitt allies like Sen. Jim Inhofe (R-Okla.) said the mounting scandals had them rethinking their support.

"Some are true, some are not true. Whether he can weather the storm, I'm not sure," Inhofe said. "The accusations are all troubling. They are."

A few Republicans stood by Pruitt, arguing he's been targeted by an environmental community and press corps eager to take him down.

"I like him," Sen. Roger Wicker (R-Miss.) said. "He is a target because he's keeping the president's campaign promises."

But a more common view among GOP lawmakers was the collective stream of scandals were taking their toll and making Pruitt's position untenable.

"Take a thousand cuts and [there's] not much energy left," Senate Appropriations Chairman Richard Shelby (R-Ala.) told reporters.

Rep. John Shimkus (R-Ill.), who leads the Energy and Commerce subcommittee overseeing EPA, joked he "can't keep up" with the flood of allegations and said he's concerned they haven't stopped.

"These unforced errors are unforced errors," he said. "I don't like being asked all the time about this."

But he raised a possible reason why Republicans weren't abandoning Pruitt: getting a replacement confirmed by the Senate would be nearly impossible.

"Are you going to promise me we could even get an administrator?" he said. "I think that's another concern."

In a video posted by a Nexstar Wednesday, Pruitt defended his attempts to set his wife up with a Chick-fil-A franchise Wednesday, while the president reaffirmed his support in the administrator.

Pruitt said that his wife is "an entrepreneur herself" and that the pair loved the fast-food franchise. As he has in the past, Pruitt dismissed criticism of his behavior as being driven by opposition to the Trump administration's deregulatory policies.

"With great change comes, I think, opposition," he said in a clip the reporter posted to Twitter.

Pruitt did not directly address whether he had asked an EPA aide to reach out to Chick-fil-A President Dan Cathy to inquire about his wife opening up her own restaurant, as the Washington Post first reported Tuesday.

"Chick-fil-A is a franchise of faith and it's one of the best in the country, so that was something we were very excited about," he told the Nextstar reporter Wednesday. "We need more of them in Tulsa, [Okla.]. We need more of them across the country."

Trump's Interior chief 'hopping around from campaign event to campaign event' [Back](#)

By Ben Lefebvre and Esther Whieldon | 10/05/2017 05:01 AM EDT

Republican donors paid up to \$5,000 per couple for a photo with Interior Secretary Ryan Zinke at a fundraiser held during a taxpayer-funded trip to the U.S. Virgin Islands, according to documents reviewed by POLITICO — raising questions about his habit of mixing official government business with political activism.

The new details about Zinke's March trip to the Caribbean, including the previously undisclosed invitation to the Virgin Islands Republican Party fundraiser, emerged after weeks of scrutiny of the former Montana GOP congressman's travels. The nearly two-hour event was one of more than a half-dozen times Zinke has met with big donors or political groups while on department-paid trips, Interior travel records and other documents show.

Ethics watchdogs say Zinke is combining politics with his Interior duties so frequently that he risks tripping over the prohibitions against using government resources for partisan activity, even though his appearance at the Virgin Islands event seems to have been legal. Democrats have also seized on the issue, including 26 House members who wrote in a letter Tuesday that Zinke's travels "give the appearance that you are mixing political gatherings and personal destinations with official business."

Zinke has said all his actions have obeyed the law, dismissing concerns about his travel as "a little BS."

But some ethics advocates say Zinke's attendance at a fundraiser during his first month as secretary is not in line with past administrations' conduct, even if he crossed no legal red lines.

"It happens on occasion with other Cabinet secretaries, perhaps even a little more often as you get near the election, but it is not a very common practice for Cabinet members to be hopping around from campaign event to campaign event like we're seeing with Zinke," said Craig Holman, government affairs specialist for government watchdog Public Citizen.

The secretary is already under investigation by his department's inspector general over his use of taxpayer-funded private planes for some of the trips, and the Office of Special Counsel is looking into an activist group's allegations that he violated the Hatch Act, the law limiting political activism by federal employees. The White House has cracked down on Cabinet members' travel habits following former HHS Secretary Tom Price's resignation on Friday, which occurred after POLITICO reported on his own expensive flights.

Zinke visited the Virgin Islands from March 30 to April 1 on an official trip related to the Interior Department's role overseeing the U.S. territory. On his first day, following a "veterans meet and greet" and a reception with Gov. Kenneth Mapp, he appeared in his personal capacity at a March fundraiser for the local Republican Party at the patio bar of the Club Comanche Hotel St. Croix, department records show.

Tickets for the fundraiser ranged from \$75 per person to as much as \$5,000 per couple to be an event "Patron," according to Zinke's official calendar and a copy of the invitation. Patrons and members of the host committee, who paid \$1,500 per couple, could get a photo with Zinke at the start of the event, which was attended by local party members and elected officials.

The following day, Zinke took a \$3,150 flight on a private plane, paid for by the department, from St. Croix to official functions on St. Thomas and returned later that evening. Interior Department officials said there was no

other way to accommodate his schedule, which included official events on both islands commemorating the 100th anniversary of the Dutch government transferring control of the islands to the United States.

Zinke is allowed to engage in partisan political activity in a "purely personal (not official) capacity," so long as he does not use government resources, according to Interior Department guidelines on the Hatch Act and other federal laws. The invitation to the GOP fundraiser did not identify Zinke by his official title and included a disclaimer that the money is being solicited by the local party and "not by any federal official."

All told, Zinke has spent around \$20,000 for three charter flights as secretary, nowhere near the \$1 million tab Price racked up on non-commercial trips. But he has on numerous occasions attended political receptions, spoken to influential conservative groups or appeared alongside past campaign donors during trips has taken outside of Washington, D.C., for official department business.

In one instance, Zinke gave a motivational speech for a professional hockey team owned by a major campaign contributor that he said was official business — and which required him to charter a \$12,000 flight to Montana for an appearance at the Western Governors Association the next day.

In another case, during a speech to the Western Conservative Summit in Denver, he was introduced via a recorded voice as the Interior secretary and Zinke proceeded to talk about the agency's priorities. The summit was organized by the Centennial Institute, which bills itself as Colorado Christian University's think tank and is a part of the State Policy Network of organizations that collectively push for conservative state-level legislation.

An Interior spokeswoman said Zinke always follows the law but declined to answer specific questions about his appearance at the Virgin Islands fundraiser, nor say whether he would keep raising political money. The agency also has yet to post Zinke's trip expenses involving any of the political events.

"The Interior Department under the Trump Administration has always and will always work to ensure all officials follow appropriate rules and regulations when traveling, including seeking commercial options at all times appropriate and feasible, to ensure the efficient use of government resources," spokeswoman Heather Swift said in a statement.

Swift did not respond to questions about whether the department had gotten reimbursement for the political portion of Zinke's three-day Virgin Islands trip, as the head of one watchdog group says it should have.

"Some of this travel is clearly political and that part of the travel should have been paid for by the RNC, NRCC, state political parties, a campaign committee or Zinke personally," said Daniel Stevens, executive director of the Campaign for Accountability.

No payments to the department are listed in the Virgin Islands Republican Party's FEC records.

Zinke is not the first Interior secretary, or Cabinet member, to have his activities questioned.

In 2012, a watchdog group called Cause of Action urged the Office of Special Counsel to investigate whether President Barack Obama's then- Interior Secretary Ken Salazar had violated the Hatch Act while taking an Obama reelection campaign RV tour of Colorado with a couple of lawmakers and the state lieutenant governor. Local organizers of one stop on that tour had billed Salazar on its online events calendar as attending the political rally in his official role. OSC would not say whether its investigation uncovered any problems, but travel records Interior has posted show that one of Salazar's aides had told the tour's coordinator the schedule "should not refer to (Salazar as) 'secretary.'" Salazar did not respond to a request for comment.

A former Salazar aide, who was not authorized to speak on the record, said the Obama administration generally tried to avoid scheduling political events that coincided with official travel because it was difficult to divvy up what expenses should be reimbursed by a campaign.

The special counsel's office found Obama HHS Secretary Kathleen Sebelius in violation of the Hatch Act in 2012, saying she had made "extemporaneous partisan remarks" by endorsing a candidate for North Carolina governor during a speech she made in her official capacity. Sebelius tried to scrub the violation by reclassifying the appearance as political and reimbursing the Treasury Department for costs associated with the trip.

Sally Jewell, who was Interior secretary during Obama's second term, said Zinke was within his rights to appear at the fundraiser in the Virgin Islands. Jewell said she once appeared at a fundraiser for Democratic Sen. Maria Cantwell while in Obama's Cabinet, though she paid her own way to Washington state and was not identified by her official title.

"If he had legitimate business while he's on the island, to do a political thing on the side, I don't think that is that unusual," Jewell said in an interview.

EPA Administrator Scott Pruitt canceled his scheduled appearance at a fundraiser for the Oklahoma Republican Party in April because an invitation had identified him by his official title and said he would discuss his work at the agency. EPA ethics officials said he would have been cleared to attend the event if not for that language on the invitation.

Watchdog groups say Zinke's behavior fits a pattern for Trump's Cabinet.

"These government resources have been abused by this administration," said Virginia Canter, an executive branch ethics counsel for Citizens for Responsibility and Ethics in Washington who previously worked as an ethics official for Presidents George H.W. Bush, George W. Bush and Obama. "To the extent that some of that supports their political ambitions is inconsistent with the intent of this authority."

The Campaign for Accountability called on Interior's inspector general and the Office of Special Counsel to investigate whether Zinke violated the Hatch Act or department ethics rules with his speech to the hockey team, which the group said appeared to be a favor for a donor. Interior's IG office announced its investigation earlier this week, and OSC told the Campaign for Accountability that it was looking into the group's complaint, according to an email shared with POLITICO. The OSC declined to comment.

Reps. Raúl Grijalva (D-Ariz.) and Donald McEachin (D-Va.) have asked Interior's IG to also look into any trips on which the secretary was accompanied by his wife, Lola Zinke, who is chairing the campaign of Montana Republican Troy Downing, a candidate to unseat Democratic Sen. Jon Tester next year. Swift said Lola Zinke was not in the Virgin Islands and has paid her own way whenever she has traveled with her husband on official trips.

Many who know him see Zinke's travels as an attempt to keep in touch with political contacts as he contemplates what he will do after leaving the Trump administration. Back home, the 55-year-old former Montana congressman is seen as an attractive candidate for the open-seat governor's race in 2020, when Democratic Gov. Steve Bullock will have to step down because of term limits.

"I think he's definitely got political aspirations; that's one of the reasons why he is where he is at right now," said Land Tawney, executive director of Backcountry Hunters and Anglers, a Montana-based sportsman group that supported Zinke's bid for Interior secretary. "You don't go from being a Montana legislator to a first-term congressman to [Interior] secretary without having ambition."

The Virgin Islands trip was Zinke's first interaction with big donors or influential conservative groups during his travel as Interior secretary.

A weeklong trip in May that took Zinke through Montana, Utah and California also offered a chance to squeeze in some political events.

Zinke delivered the keynote speech at the RNC spring meeting on May 11 in Coronado, Calif. Zinke had flown to California the previous night, after several days touring monuments in Utah, and the RNC speech was his only event in the state aside from a meeting earlier that afternoon with Rep. Amata Radewagen, the Republican delegate from American Samoa, and members of the American Tunaboat Association.

The next day, Zinke flew back to Montana, where he joined Sen. Steve Daines (R-Mont.) and Vice President Mike Pence to tour a coal mine on the Crow Indian reservation operated by the Westmoreland Coal Co.

The trip offered Zinke and Pence an opportunity to tout the Trump administration's work to promote new coal mining on federal lands — and it allowed them to make a brief detour to promote Zinke's congressional replacement. That Friday night, Zinke, Pence and Daines attended a political rally for GOP candidate Greg Gianforte, and Zinke attended a get-out-the vote event for the Montana GOP the next day.

Zinke apparently paid for his return trip to Washington out of his own pocket — it was marked "personal travel" on his calendar, a designation not applied to the other flights on that trip.

Gianforte, whose wife is a major political donor in Montana, won the May 25 special election to take over Zinke's House seat.

Greg and Susan Gianforte donated more than \$10,000 to Zinke's 2016 congressional campaign and another \$10,000 to a joint Zinke-Daines PAC, according to federal records. The couple donated \$5,000 for his earlier run for Congress.

Zinke met with big influencers and donors in June as well.

On June 25, he flew from D.C. to Reno, Nev., where his only scheduled event was a meeting of the Rule of Law Defense Fund, a group of Republican attorneys general that has been linked to the Koch brothers, where he spoke and took questions for about 30 minutes, according to his schedule.

After his remarks, he sat at a dinner table with Montana's attorney general, the government relations specialist for the Venetian Resort Hotel Casino and Las Vegas Sands, and Koch Industries lobbyist Allen Richardson, Interior documents show.

The next day, Zinke flew to Las Vegas for an event on public lands in nearby Pahrump, Nev., and a speech that night to the National Hockey League's Vegas Golden Knights. Bill Foley, the team owner and chairman of Fidelity, introduced Zinke. Foley donated \$7,800 to Zinke's 2014 campaign, while employees and PACs associated with Fidelity and related companies gave another \$180,000. Interior officials said the speech to the NHL team was part of Zinke's official duties, and they pointed to scheduling conflicts it created to justify his use of a \$12,000 private plane to get to a Western Governors Association meeting in Montana the next day.

In July, Zinke spoke to several conservative groups in Colorado during a three-day trip that also included tours of Interior Department facilities in the state. He flew into Denver on July 20 so he could appear that evening at a closed-door reception for the American Legislative Exchange Council, a group of conservative state legislators, lobbyists and industry groups that has pushed for more state control over federal lands.

And over the next two days, he was a featured speaker at a Republican committee roundtable and attended the Western Conservative Summit in Denver.

Eric Wolff contributed to this report.

Zinke's political ties to Virgin Islands improved Interior's hurricane response, party boss says [Back](#)

By Ben Lefebvre | 06/07/2018 05:11 AM EDT

The top GOP official in the U.S. Virgin Islands suggested his fundraising group's "behind the scenes" relationship with Interior Secretary Ryan Zinke helped influence the department's response to last year's hurricanes in the island territory.

John Canegata, the head of the Virgin Islands Republican Party, said he had direct access to Interior officials after the storm thanks to money his group raised for Zinke, whom he described as a "close friend." Zinke, a former congressman, has known Canegata since at least 2015, and the secretary was at a [fundraiser](#) for the VIGOP, as the group is known, during an official trip to the islands in his first month in President Donald Trump's Cabinet.

Interior officials acknowledged reaching out to Canegata, who also works for a major rum distiller in the territory, although they said it was part of a wider effort to contact business leaders based in the territory and Zinke did not call him personally. However, a representative of the distiller said Canegata was not involved in their relief efforts, and a spokesman for the Virgin Islands' House delegate disputed Canegata's involvement in the hurricane response.

The department expedited reimbursements of rum taxes as part of its response to the hurricanes, although it's unclear whether Canegata's connection influenced that decision. Interior has jurisdiction over U.S. territories including the Virgin Islands but not Puerto Rico, which suffered more extensive devastation.

Disaster response experts say it would be inappropriate for Canegata's political connections to influence Interior's efforts in the Virgin Islands.

"These are processes that are supposed to be transparent and supposed to be above the board," said Eric LeCompte, executive director of Jubilee USA, an anti-poverty group that has been involved in hurricane disaster relief efforts. "So, it would not be something a political party would be part of."

VIGOP is not a typical political party and faces frequent inquiries from the FEC to better explain its fundraising practices and expenses. Some critics, including past Republican clients, say the group bilks conservative donors with promises to fight Democrats while spending the bulk of its money on overhead instead of political advocacy. The group spends the [vast majority of its money](#) on a small group of Washington-area political consultants who have also done work for Zinke's campaign and leadership PACs.

Zinke was introduced to the VIGOP in 2015 by a Washington fundraising consultant who also did work for his campaigns, and as a member of Congress he has traveled to at least two political conferences in the Virgin

Islands sponsored by the group, POLITICO reported last year. Zinke and Canegata are seen together during a prior trip in a [photo posted to Facebook](#).

Canegata boasted about his Zinke ties in a televised [appearance](#) on WTJX Virgin Islands Public Broadcasting that aired last month but has not received widespread attention outside of the territory.

"We were in direct connection with the Department of Interior," Canegata said in the broadcast.

"Secretary Zinke, happens to be, I wouldn't say a personal friend, but a close friend," Canegata continued. "Prior to him being the secretary of Interior, we spent some time in Washington, we spent some time here in the Virgin Islands. We supported him when he was a congressman and, behold, he becomes the secretary of Interior."

While Canegata credited other officials with their part in aiding the island's response, he said the pre-existing connection to Zinke was key.

"Obviously, we have our congresswoman, our governor doing their job," Canegata continued. "But behind the scenes, trust me, a lot of telephone calls, a lot of maneuvering was going on because, I think, some of the relationships we built."

The Office of Special Counsel on Tuesday [closed its investigation](#) into Zinke's [appearance](#) at the Virgin Islands fundraiser in March 2017, finding that he had not violated the Hatch Act because he was there in his official capacity and VIGOP reimbursed Interior for its expenses. Interior's inspector general also recently said the appearance at the fundraiser was not inappropriate. It is unclear whether either of those investigations addressed any link between VIGOP and Interior's hurricane response; both offices declined to comment.

Interior's Office of Insular Affairs, which oversees the Virgin Islands, "reached out to dozens of local government employees as well as major private sector employers in the USVI to check their power status and to see how the office could help," Interior spokeswoman Heather Swift said in an email. Canegata "was contacted by those Insular Affairs officials because he works for one of those major private employers, Cruzan Rum."

Canegata, a supply chain specialist at the rum distillery, had no role in the company's disaster relief efforts, according to Cruzan Rum human resources manager Ayanda Daniels.

"He wasn't part of the coordination," Daniels told POLITICO. "Maybe he had a conversation with someone in order to do something, but we had another team for company response."

James Norton, a former Department of Homeland Security Deputy official during the George W. Bush administration, said it is important for disaster response efforts to be handled through the appropriate channels.

"As a matter of proper procedure, it would only be appropriate for all federal actions to be dealt with solely with official authorities at the Department of Defense, Interior, Homeland Security, FEMA, etc., and those local officials on the ground," said Norton, who is now head of the consulting agency Play-Action Strategies. "Anything other than raising awareness and reaching out to get an update on what's happening would be inappropriate, as a political party or other organization doesn't have command and control authority, nor would they be the designated principal federal official on the ground directing rescue operations."

A spokesman for [Stacey Plaskett](#), the Democratic House delegate from the Virgin Islands, disputed Canegata's version of events.

"I cannot honestly remember hearing them or seeing them do anything to that effect," Plaskett's spokesman Mike McQuerry said. "The congresswoman was the person here in D.C. that worked extremely hard during that time to get those funds to the Virgin Islands."

Canegata did not respond to a request for comment this week.

Interior expedited reimbursement of \$223 million in taxes on Virgin Islands rum imported into the mainland and provided a \$567,500 grant to help with a post-hurricane finance audit. Other hurricane relief funds would have come from FEMA, an Insular Affairs spokesperson said.

Otherwise, Zinke and Insular Affairs head Doug Domenech met with Virgin Islands Gov. Kenneth Mapp to discuss recovery efforts, the Insular Affairs spokesperson said. In November, Domenech also met representatives of Cruzan Rum's parent company, Beam Suntory, to discuss the rum tax reimbursements Interior makes to the territory. Beam Suntory donated \$1.5 million to hurricane relief efforts the previous month.

Swift said Zinke did not personally reach out to Canegata. "The only official in the USVI the Secretary called was Governor Mapp," she said.

Murray had early access to Perry to share coal plan [Back](#)

By Eric Wolff | 12/07/2017 04:22 PM EDT

Coal magnate Bob Murray pitched Energy Secretary Rick Perry on his plan to throw an economic lifeline to coal companies less than a month before Perry set in motion plans to aid the industry, according to newly disclosed photographs that show the two meeting.

The liberal magazine [In These Times](#) obtained pictures of Murray and Perry from a March 29 meeting at Energy Department headquarters, less than a month after Perry was sworn in. Several other officials were in attendance, including Andrew Wheeler, who at the time was a lobbyist for Murray and has since been nominated as EPA's No. 2 official.

The meeting puts Murray and Perry together at a crucial moment in the timeline of the Trump administration's push to save the struggling coal industry, an effort that would benefit Murray Energy in particular while hiking electricity prices for potentially millions of people. A month before the meeting, one of Murray's biggest customers, FirstEnergy Corp., had told investors it was seriously considering sending its merchant division, FirstEnergy Solutions, into bankruptcy, a move which would likely void its supply contracts with Murray's coal mines.

Three weeks after Murray's visit, Perry would order a grid study that later became part of the justification for a proposed rule to reward coal and nuclear power plants for providing "grid resiliency." FERC, which has jurisdiction over the proposal, must make a decision on it by Monday.

At the time of the meeting, Wheeler was already the leading candidate to become the deputy administrator for EPA. Wheeler, who represented Murray as a lobbyist for Faegre Baker Daniels, would not be officially

nominated for months. Wheeler, who has acknowledged participating in meetings on Murray's coal plan at DOE and on Capitol Hill, cleared committee last week and is awaiting Senate confirmation.

Murray is an outspoken supporter of President Donald Trump and held a fundraiser for him during the 2016 campaign.

DOE did not dispute the validity of the photos.

"Industry stakeholders visit the Department of Energy on a daily basis," DOE spokeswoman Shaylyn Hynes said, when asked about the meeting. "The DOE proposal to FERC was about the future and resiliency of the nation's power supply, an issue much bigger than one industry or company."

The photographs show Perry sitting at the head of a table in the Department of Energy, with Bob Murray, CEO of Murray Energy, to his left, and Wheeler down the table from Murray.

"Enclosed is an Action Plan for achieving reliable and low cost electricity ... and to assist in the survival of our Country's coal industry, which ... power grid reliability and low cost electricity," Murray writes in a cover letter to Perry, parts of which are visible in one photo from the meeting.

Though the document has never been publicly released, DOE critics say Murray's plan appears to have inspired DOE's grid study and the proposed rule Perry sent FERC in September. Copies are visible at the seats of most of the participants, including Perry and Murray. Wheeler, who told members of the Senate Environment Committee he had only seen the memo briefly, is not holding a copy in the photos obtained by In These Times. Murray told Greenwire in November he "didn't have any involvement" in writing the rule.

Murray has acknowledged sharing the plan with Trump.

"I gave Mr. Trump what I called an action plan very early," Murray said in a recent PBS Frontline documentary on EPA. "It's about three-and-a-half pages and — of what he needed to do in his administration. He's wiped out page one."

The meeting appears to have been successful for all. One of the photos shows Perry and Murray in a big bear hug.

Murray delivered executive orders on coal rules to Trump administration [Back](#)

By Darius Dixon | 06/06/2018 07:05 PM EDT

Coal magnate Bob Murray delivered six draft executive orders ready for President Donald Trump to sign to roll back Obama-era environmental regulations in the early weeks of the administration, according to newly released Energy Department documents.

The documents released Wednesday after a Freedom of Information Act request include a letter to Energy Secretary Rick Perry from Murray praising Trump's March 2017 energy independence executive order, which largely aimed to help the coal industry. And to bolster that effort, Murray wrote, "we have developed the

enclosed materials for your review and consideration, consisting of: six (6) Executive Orders further rescinding anti-coal regulations of the Obama administration; and one (1) memorandum outlining the legal rationale for each of these action, and others."

Those executive orders were also sent to EPA Administrator Scott Pruitt, whose agency had jurisdiction over most of the issues they involved, such as ozone rules and regulations on coal ash.

Trump has not signed executive orders resembling Murray's, but the administration has moved to enact the policies, such as pulling U.S. out of the Paris climate agreement. The documents, which were sent to DOE the day Trump signed his energy independence order and one day before Murray met with Perry and DOE chief of staff Brian McCormack, also included concepts about grid security and "resiliency" that Perry later touted as part of his push to stop coal power plants from closing.

"The Department of Energy ("DOE") must issue an emergency directive to have an immediate study done of the security and resiliency of our electric power grids," the document states. "DOE will direct that no power plants having an available fuel supply of at least forty-five (45) days be closed during the study period, or a minimum of two (2) years."

Perry later ordered his staff to write a study about the electric grid that was eventually tied to a regulatory proposal that FERC create financial rewards for power plants with a 90-day supply of fuel on-site. That condition would have overwhelmingly benefited coal and nuclear generators, but it was shot down by FERC in January.

Critics have said Murray would be the biggest beneficiary of Trump's efforts, since his company supplies coal to many of the power plants at risk of closing because of stiff competition from cheap natural gas and renewable power as well as lagging electricity demand from consumers.

Murray spokesman Gary Broadbent confirmed the company had submitted the documents to Perry "to assist in the reversal of the illegal, job-killing, anti-coal regulations of the Obama Administration."

"Mr. Murray has always sought to secure reliable, low-cost electricity for all Americans, as well as to preserve and protect the jobs and family livelihoods of thousands of coal mining families," he said in a statement. "We applaud the actions taken by President Trump's Administration, to date, to protect these jobs and to advance the energy security of the United States."

Murray has repeatedly called on DOE to issue must-run orders for FirstEnergy power plants that consume his coal, and he blasted the FERC commissioners who opposed the on-site fuel proposal.

On Tuesday, a top DOE official said the agency is still formulating a plan to keep struggling coal and nuclear power plants from closing, and it had no deadline to meet Trump's demand to rescue them.

"We are evaluating options," Energy Undersecretary Mark Menezes told reporters. Last week, Trump called on DOE to take "immediate steps" to stop a wave of coal and nuclear power plant retirements, and like Perry, he cast the shutdowns as a threat to national security.

House passes WRDA bill [Back](#)

By Annie Snider | 06/06/2018 09:42 PM EDT

The House has overwhelmingly approved the Water Resources Development Act of 2018, [H.R. 8 \(115\)](#), the first major infrastructure legislation to move under the Trump administration.

Lawmakers signed off on the measure on a broadly bipartisan vote of 408-2. The bill would authorize six new Army Corps of Engineers projects and enact a suite of policy reforms at the red tape-laden agency. It is significantly narrower than the Senate's measure, which would also make changes to EPA drinking water and wastewater programs.

And it includes a provision that could stir some controversy with the Senate, ordering a study of whether the Army Corps' civilian work should remain within the Department of Defense.

But House leaders dodged provisions that could have derailed the bill by blocking controversial amendments from floor consideration. Those included efforts to repeal the Obama administration's Waters of the U.S. rule, allow firearms at Army Corps recreational sites and exempt pesticide spraying from Clean Water Act permitting requirements.

WHAT'S NEXT: The Senate is expected to consider its version of the WRDA bill, America's Water Infrastructure Act of 2018, [S. 2800 \(115\)](#), this summer.

Trump calls for coal, nuclear power plant bailout [Back](#)

By Eric Wolff | 06/01/2018 02:29 PM EDT

President Donald Trump pressed for a quick regulatory bailout for struggling coal power plants on Friday — a move that would buoy a mining industry that offered him crucial support in 2016, but is riling other energy companies and even some free-market conservatives.

The White House called on Energy Secretary Rick Perry to take immediate steps to keep both coal and nuclear power plants running, backing Perry's claim that plant closures threaten national security. An administration strategy to do that laid out in a memo to the National Security Council circulated widely among industry groups on Friday, but it was not clear that intervention could survive the inevitable political and legal challenges.

It was the latest step in more than a year of efforts by the administration to compel power companies to keep operating the money-losing plants that are suffering from the rise of competing energy sources like natural gas. Those proposals have drawn opposition from most utilities, along with environmentalists, gas producers, power grid operators and conservatives who say it would be an unwarranted intrusion to the energy markets.

The White House statement calling for action came after days of Trump making similarly aggressive moves on international trade, slapping tariffs on the European Union, Canada and Mexico to protect U.S. industries like aluminum and steel. In this case, the president is acting on behalf of what he likes to call "beautiful, clean coal," a once-dominant fuel that still plays a major role in his stump speeches.

Trump "has directed Secretary of Energy Rick Perry to prepare immediate steps to stop the loss of these resources," White House press secretary Sarah Huckabee Sanders said in a statement Friday, referring to coal and nuclear plants.

She added that Trump believes "keeping America's energy grid and infrastructure strong and secure protects our national security... Unfortunately, impending retirements of fuel-secure power facilities are leading to a rapid depletion of a critical part of our nation's energy mix, and impacting the resilience of our power grid."

The statement came five months after federal energy regulators rejected Perry's call that they adopt his proposal to keep the struggling coal and nuclear power plants operating. That proposal would have overwhelmingly benefited mining magnate Bob Murray, an outspoken Trump supporter whose operations supply coal to several endangered plants in the Midwest and Northeast, according to a POLITICO analysis.

Trump's National Security Council gathered Friday to discuss the draft memo that lays out arguments why the administration should use federal authority to keep the money-losing power plants open — despite the assurances from some of the nation's grid operators that no such emergency exists.

"Any federal intervention in the market to order customers to buy electricity from specific power plants would be damaging to the markets and therefore costly to consumers," said the PJM Interconnection, which operates the nation's largest power grid and stretches from the Midwest the Atlantic Coast, in a statement. "There is no need for any such drastic action."

A broad swath of trade associations representing oil and gas, wind and solar power, consumer groups and advanced energy technologies slammed the plan, and they were joined by some congressional Democrats.

"This would be an egregious abuse of power," Sen. Ron Wyden (D-Ore.) said in a statement. "I fought this proposal before, and I will continue to fight this corrupt scheme to prop up the coal industry at the expense of American consumers."

That new 41-page memo, first revealed by Bloomberg News on Thursday evening, says that under the 2015 highway and transit bill known as the FAST Act, DOE must identify critical energy infrastructure, a process the agency is undertaking now with the help of its national labs. But because that is likely to take two years, DOE in the meantime should use the 1950 Defense Production Act and the Federal Power Act to require the plants to keep operating, the memo says.

Power sector experts have said using the two laws to keep specific plants operating would stretch both those measures, and would certainly trigger a major legal fight. Critics of the administration's strategy said the memo appears to signal that the White House is preparing for a fight.

"One way to view the release of this draft is that it is a trial balloon to see how fierce and fast the opposition will be," said Dena Wiggins, CEO of the industry lobby group Natural Gas Supply Association, which opposes the DOE plan. "We've known for some time that all of these federal authorities ... were in play, so the fact that we've now seen it in writing doesn't really change anything. It does, however, underscore how hard it is to cobble together a sound legal rationale to bail out otherwise uneconomic coal and nuclear plants."

And critics say the push to bail out the plants is simply Trump's effort to reward backers like Murray, the coal baron, and live up to his campaign promise to revive coal country. Perry first began work on the power plant issue in March 2017, when he met with Murray at DOE, and Trump himself personally directed Perry to take action on the issue since last summer.

Murray's coal mines have been a major supplier for power plants owned by FirstEnergy Solutions, a unit of Ohio-based utility giant FirstEnergy that sank into bankruptcy this spring. FirstEnergy Solutions has said it plans to close or sell five of its money-losing coal and nuclear power plants.

But the Federal Energy Regulatory Commission and the grid operator have said that even with the planned closures, the region has ample power to supply the market's needs. Stagnant power consumption growth, coupled with the rise of natural gas and renewable power sources like wind, has displaced many of the older coal and nuclear facilities in the markets.

The memo also calls for establishing a new requirement for the electric grid based on "resilience," a term Perry injected into the regulatory conversation last fall with a proposed rule that would have rewarded plants that could keep 90 days of fuel on site. FERC rejected that rule, but it also created a new proceeding to try to define "resilience," which some in the industry say pertains to the grid's ability to withstand and recover from a physical or cyberattack.

The memo largely focuses on the issue of resilience, which it says would suffer if coal and nuclear power plants retire. It specifically targets natural gas as a weakness, because the plants that burn the fuel rely on pipelines that could be disrupted, while coal and nuclear power plants can keep months' worth of fuel on site.

"Natural gas pipelines are increasingly vulnerable to cyber and physical attacks," the memo says. "The incapacitation of certain pipelines through the United States would have severe effects on electric generation necessary to supply critical infrastructure facilities."

House to vote Thursday on Trump's spending cuts plan [Back](#)

By Sarah Ferris | 06/06/2018 05:32 PM EDT

President Donald Trump's prized deficit-reduction package is rolling toward the House floor this week, though its prospects in the Senate remain in doubt — with little time to spare.

House leaders have set a vote Thursday on the Trump administration's roughly \$15 billion rescissions bill, according to a GOP aide, nearly a full month after the proposal was first delivered to Capitol Hill.

The House Rules Committee will tee up the bill, [H.R. 3 \(115\)](#), on Wednesday evening, a lightning turnaround that surprised even some GOP lawmakers.

The last-minute scheduling change comes after the White House [agreed this week](#) not to slash hundreds of millions of dollars from politically sensitive programs, like Hurricane Sandy aid, which helped [secure votes](#) from numerous GOP holdouts.

Even with some of those unpopular cuts reversed, several House Republicans remain anxious about the plan's optics — specifically, cuts to the ultra-popular Children's Health Insurance Program.

At a closed-door meeting of House Republicans Wednesday, several GOP lawmakers stood up to complain that the kids' health cuts could hit hard on the campaign trail, despite assurance from neutral budget experts that the cuts wouldn't harm the program.

In fact, the vast majority of the White House's proposed spending cuts would exist only on paper. The bill would save only \$1 billion over a decade, according to the CBO, which is far less than 1 percent of the size of Congress' last spending bill, H.R. 1625 (115).

Next, the White House will have to sell the bill to the Senate, where a single Republican "no" vote could sink the package.

Budget chief Mick Mulvaney has already met with Sen. Lisa Murkowski, an Alaska Republican who has raised issues with the cuts to CHIP. Sen. Susan Collins of Maine, another GOP moderate, has not yet said whether she supports the bill.

If the House clears the bill Thursday, the Senate will have roughly two weeks to send the measure to Trump's desk before its filibuster-proof powers expire June 22.

Minibus spending package ready for House floor action [Back](#)

By Kaitlyn Burton | 06/06/2018 07:46 PM EDT

The House Rules Committee today teed up a three-bill spending bundle for floor consideration as soon as Thursday.

All in all, the panel approved 50 Energy-Water amendments, 22 Military Construction-VA amendments and seven Legislative Branch amendments, setting them up for floor votes.

While the minibus, H.R. 5895 (115), will likely pass, House Democratic leaders threw a wrench in things when they urged lawmakers to oppose the bill, POLITICO reported Tuesday evening.

Votes on the package are expected to come after a separate Thursday vote on the White House's rescissions measure, H.R. 3 (115). Conservatives, including the Republican Study Committee, asked for the spending cuts to be taken up first, according to a House GOP aide. The Rules Committee teed up the rescissions proposal in a 9-3 vote tonight, allowing no amendment votes.

The minibus would be the first House-passed fiscal 2019 funding measure.

Sarah Ferris contributed to this alert.

House appropriators advance \$35B Interior-EPA spending package [Back](#)

By Alex Guillén | 06/06/2018 05:04 PM EDT

The House Appropriations Committee today approved its \$35 billion Interior-EPA spending bill by a party-line vote of 25-20.

Committee Republicans blocked an effort from Democrats to boost EPA's Office of Inspector General by \$12 million, saying the watchdog already has "robust" appropriations. The bill funds the OIG at \$12 million less than his request, but higher than the amount requested by the White House.

The committee voted down an amendment that would have required EPA's administrator and deputy administrator to report public details of travel costs within 10 days of a trip, along with various amendments targeting a repeal of the Waters of the U.S. rule and other policy riders, along with EPA's proposed science transparency policy, offshore drilling and other standard policy disputes.

Lawmakers approved an amendment that would change revenue sharing for drilling in the Arctic National Wildlife Refuge. The approved amendment would send 50 percent of revenue to the federal government, 47 percent to the state and 3 percent to the Alaskan Native claims settlement fund.

They also backed a tongue-in-cheek amendment from Rep. [Marcy Kaptur](#) (D-Mich.) that would limit EPA from spending more than \$50 on any one fountain pen, a response to a recent [Washington Post report](#) that Pruitt spent \$1,560 for a dozen personalized fountain pens. The amendment passed with no "nay" votes.

WHAT'S NEXT: Lawmakers hope to have the bill before the full House sometime this summer, but it is unclear whether the Senate will act on a similar timeframe. Like most other appropriations bills in recent years, Congress has passed an omnibus rather than conferencing directly.

GOP blocks funding increase for EPA watchdog probing Pruitt activities [Back](#)

By Alex Guillén | 06/06/2018 03:06 PM EDT

House Republicans today blocked a Democratic effort to increase funding for EPA's Office of Inspector General to help the watchdog deal with the increased workload stemming from Administrator Scott Pruitt's spending and ethics scandals.

Rep. [Mark Pocan](#) (D-Wis.) and a bloc of Democrats on the House Appropriations Committee pushed an amendment that would have boosted OIG funding for fiscal 2019. It ultimately was voted down on a party-line vote of 21-26.

"It's hard to imagine that there is a more overworked inspector general than at the EPA these days," Pocan said. "This is not a Democrat/Republican thing, this should be a good government thing."

Interior-EPA Appropriations Chairman [Ken Calvert](#) (R-Calif.) said the bill "already includes robust support for EPA's inspector general."

The House Interior-EPA spending package would provide the OIG funding of just over \$50 million, about flat with 2018's level. Most of that is appropriated directly, though some of it is pulled from the Superfund program for OIG's work on Superfund-specific issues. Pocan's amendment would have drawn the extra \$12 million from EPA's "workforce reshaping" account inside the \$2.5 billion environmental programs.

In a February [letter](#), EPA Inspector General Arthur Elkins said the president's proposed OIG budget of \$46 million would "substantially inhibit the OIG from performing the duties of the office." He asked instead for a budget of \$62 million. That request came before an avalanche of congressional requests to review various Pruitt-related issues on spending and ethics.

WHAT'S NEXT: The committee will vote later today on the full spending bill.

Interior advisory committee recommends streamlining environmental reviews for drilling [Back](#)

By Ben Lefebvre | 06/06/2018 06:31 PM EDT

An Interior Department advisory board on Wednesday approved a slew of recommendations aimed at expanding energy lease sales and lowering royalty rates, even as some members questioned whether it had the power to suggest changes to federal environmental reviews.

The Royalty Policy Committee wrapped up its latest meeting in New Mexico after approving nine [recommendations](#) for Secretary Ryan Zinke to change how the department collects payments from energy production on federal land. Most of the suggestions would benefit oil and gas companies operating on federal acres, while two recommendations were aimed at boosting renewable energy production.

Two committee members disagreed with a recommendation for the Bureau of Land Management to issue "categorical exclusions" for certain oil and gas projects, allowing those projects to forgo full environmental reviews under the National Environmental Protection Act.

"NEPA is not referred to in the [committee] charter," Rod Eggert, a professor at the Colorado School of Mines, said during the meeting. "The text in the charter refers to royalties and collections of royalties."

Committee member Monte Mills of the University of Montana agreed that recommending categorical exclusions fell outside of the committee's scope.

Western Energy Alliance President Kathleen Sgamma, another member of the committee, defended the recommendation, saying it would increase royalty payments to Interior by making it easier for companies to drill on public land.

"We're trying to increase competitiveness of federal lands," Sgamma said during the meeting. "NEPA is often the aspect of the federal process that takes the longest and decreases the competitiveness of public lands the most."

Ultimately, the committee approved the recommendation and deferred further discussion about the scope of its charter until its next meeting, yet to be scheduled.

The committee also suggested Interior make it easier for companies to pay lower royalty rates for mature oil and gas wells and those "difficult" to operate. And it recommended Zinke ask Congress to amend the Outer Continental Shelf Lands Act with language allowing Interior to hold offshore energy project lease sales in Guam and other U.S. territories.

The committee's two renewable power suggestions were that Interior offer annual lease sales for 2 gigawatts of offshore wind power every year for a decade starting in 2024; and to instruct BLM to reduce fees and streamline permit requirements for solar projects.

BLM tells field office to expedite drilling permit reviews [Back](#)

By Ben Lefebvre | 06/06/2018 08:20 PM EDT

The Bureau of Land Management instructed field offices to prioritize the use of old environmental reviews or categorical exclusions to expedite drilling permit applications for sites where work is already underway, according to a memo released today.

The bulletin posted on the BLM website said those methods will allow officials to process the applications "in the most expeditious and appropriate manner" under the National Environmental Policy Act.

The BLM bulletin directed its field offices that existing environmental analysis for new projects proposed for old sites "should be used to the greatest extent possible" instead of starting a new environmental review process.

If the old analysis isn't sufficient, field offices should determine whether the application falls under an existing categorical exclusion, meaning a new NEPA review would not be required. Criteria to determine whether an exclusion would be available include whether a similar project has already occurred on the same site within the previous five years.

BLM posted its memo soon after Interior's Royalty Policy Committee recommended earlier today that the agency increase its use of categorical exclusions.

WHAT'S NEXT: The environmental review priority list goes into effect immediately.

White House, EPA headed off chemical pollution study [Back](#)

By Annie Snider | 05/14/2018 12:43 PM EDT

Scott Pruitt's EPA and the White House sought to block publication of a federal health study on a nationwide water-contamination crisis, after one Trump administration aide warned it would cause a "public relations nightmare," newly disclosed emails reveal.

The intervention early this year — not previously disclosed — came as HHS' Agency for Toxic Substances and Disease Registry was preparing to publish its assessment of a class of toxic chemicals that has contaminated water supplies near military bases, chemical plants and other sites from New York to Michigan to West Virginia.

The study would show that the chemicals endanger human health at a far lower level than EPA has previously called safe, according to the emails.

"The public, media, and Congressional reaction to these numbers is going to be huge," one unidentified White House aide said in an email forwarded on Jan. 30 by James Herz, a political appointee who oversees environmental issues at the OMB. The email added: "The impact to EPA and [the Defense Department] is going to be extremely painful. We (DoD and EPA) cannot seem to get ATSDR to realize the potential public relations nightmare this is going to be."

More than three months later, the draft study remains unpublished, and the HHS unit says it has no scheduled date to release it for public comment. Critics say the delay shows the Trump administration is placing politics ahead of an urgent public health concern — something they had feared would happen after agency leaders like Pruitt started placing industry advocates in charge of issues like chemical safety.

Sen. Maggie Hassan (D-N.H.) called the delay "deeply troubling" on Monday, urging Pruitt and President Donald Trump "to immediately release this important study."

"Families who have been exposed to emerging contaminants in their drinking water have a right to know about any health impacts, and keeping such information from the public threatens the safety, health, and vitality of communities across our country," Hassan said, citing POLITICO's reporting of the issue. Details of the internal discussions emerged from EPA emails released to the Union of Concerned Scientists under the Freedom of Information Act.

Sen. Jeanne Shaheen, a fellow New Hampshire Democrat, called the delay "an egregious example of politics interfering with the public's right to know. ... [I]t's unconscionable that even the existence of this study has been withheld until now."

The emails portray a "brazenly political" response to the contamination crisis, said Judith Enck, a former EPA official who dealt with the same pollutants during the Obama administration — saying it goes far beyond a normal debate among scientists.

"Scientists always debate each other, but under the law, ATSDR is the agency that's supposed to make health recommendations," she said.

The White House referred questions about the issue to HHS, which confirmed that the study has no scheduled release date.

Pruitt's chief of staff, Ryan Jackson, defended EPA's actions, telling POLITICO the agency was helping "ensure that the federal government is responding in a uniform way to our local, state, and Congressional constituents and partners."

Still, Pruitt has faced steady criticism for his handling of science at the agency, even before the recent spate of ethics investigations into his upscale travels and dealings with lobbyists. In his year leading EPA, he has overhauled several scientific advisory panels to include more industry representatives and recently ordered limits on the kinds of scientific studies the agency will consider on the health effects of pollution.

On the other hand, Pruitt has also called water pollution one of his signature priorities.

The chemicals at issue in the HHS study have long been used in products like Teflon and firefighting foam, and are contaminating water systems around the country. Known as PFOA and PFOS, they have been linked with thyroid defects, problems in pregnancy and certain cancers, even at low levels of exposure.

The problem has already proven to be enormously costly for chemicals manufacturers. The 3M Co., which used them to make Scotchguard, paid more than \$1.5 billion to settle lawsuits related to water contamination and personal injury claims.

But some of the biggest liabilities reside with the Defense Department, which used foam containing the chemicals in exercises at bases across the country. In a March report to Congress, the Defense Department listed 126 facilities where tests of nearby water supplies showed the substances exceeded the current safety guidelines.

A government study concluding that the chemicals are more dangerous than previously thought could dramatically increase the cost of cleanups at sites like military bases and chemical manufacturing plants, and force neighboring communities to pour money into treating their drinking water supplies.

The discussions about how to address the HHS study involved Pruitt's chief of staff and other top aides, including a chemical industry official who now oversees EPA's chemical safety office.

Herz, the OMB staffer, forwarded the email warning about the study's "extremely painful" consequences to EPA's top financial officer on Jan. 30. Later that day, Nancy Beck, deputy assistant administrator for EPA's Office of Chemical Safety and Pollution Prevention, suggested elevating the study to OMB's Office of Information and Regulatory Affairs to coordinate an interagency review. Beck, who worked as a toxicologist in that office for 10 years, suggested it would be a "good neutral arbiter" of the dispute.

"OMB/OIRA played this role quite a bit under the Bush Administration, but under Obama they just let each agency do their own thing..." Beck wrote in one email that was released to UCS.

Beck, who started at OMB in 2002, worked on a similar issue involving perchlorate, an ingredient in rocket fuel — linked with thyroid problems and other ailments — that has leached from defense facilities and manufacturing sites into the drinking water of at least 20 million Americans. Beck stayed on at OMB into the Obama administration, leaving the office in January 2012 and going to work for the American Chemistry Council, where she was senior director for regulatory science policy until joining EPA last year.

Yogin Kothari, a lobbyist with the Union of Concerned Scientists, called Beck's January email "extremely troubling because it appears as though the White House is trying to interfere in a science-based risk assessment."

Environmentalists say such interference was routine during the Bush administration.

"It's why the Obama administration issued a call for scientific integrity policies across the federal government," Kothari said in an email to POLITICO. "Dr. Beck should know firsthand that the Bush administration sidelined science at every turn, given that she spent time at OMB during that time."

Soon after the Trump White House raised concerns about the impending study, EPA chief of staff Ryan Jackson reached out to his HHS counterpart, as well as senior officials in charge of the agency overseeing the assessment to discuss coordinating work among HHS, EPA and the Pentagon. Jackson confirmed the outreach last week, saying it is important for the government to speak with a single voice on such a serious issue.

"EPA is eager to participate in and, contribute to a coordinated approach so each federal stakeholder is fully informed on what the other stakeholders' concerns, roles, and expertise can contribute and to ensure that the federal government is responding in a uniform way to our local, state, and Congressional constituents and partners," Jackson told POLITICO via email.

Pruitt has made addressing per- and polyfluoroalkyl substances, or PFAS, a priority for EPA. The unpublished HHS study focused on two specific chemicals from this class, PFOA and PFOS.

States have been pleading with EPA for help, and experts say that contamination is so widespread, the chemicals are found in nearly every water supply that gets tested.

In December, the Trump administration's nominee to head the agency's chemical safety office, industry consultant Michael Dourson, withdrew his nomination after North Carolina's Republican senators said they would not support him, in large part because of their state's struggles with PFAS contamination. Dourson's previous research on the subject has been criticized as too favorable to the chemical industry.

Shortly after Dourson's nomination was dropped, Pruitt announced a "leadership summit" with states to discuss the issue scheduled for next week.

In 2016, the agency published a voluntary health advisory for PFOA and PFOS, warning that exposure to the chemicals at levels above 70 parts per trillion, total, could be dangerous. One part per trillion is roughly the equivalent of a single grain of sand in an Olympic-sized swimming pool.

The updated HHS assessment was poised to find that exposure to the chemicals at less than one-sixth of that level could be dangerous for sensitive populations like infants and breastfeeding mothers, according to the emails.

Dave Andrews, a senior scientist with the Environmental Working Group, said those conclusions line up with recent studies on the health effects of PFAS.

"They are looking at very subtle effects like increased risk of obesity for children exposed in womb, lowered immune response, and childhood vaccines becoming not as effective," Andrews said.

The HHS document at issue is called a toxicological profile, which describes the dangers of a chemical based on a review of previous scientific studies. It would carry no regulatory weight itself, but could factor into cleanup requirements at Superfund sites.

EPA scientists, including career staffers, were already talking with the HHS researchers about the differences in their two approaches to evaluating the chemicals when officials at the White House raised alarm in late January, the emails show. Those differences, according to the correspondence, stemmed from the agencies' use of different scientific studies as a basis, and from taking different approaches to accounting for the harm that the chemicals can do to the immune system — an area of research that has burgeoned in the two years since EPA issued its health advisory.

Enck, the former EPA official, said she sees one troubling gap in the emails: They make "no mention of the people who are exposed to PFOA or PFOS, there's no health concern expressed here."

Subject: Pruitt plans to change EPA policy on scientific studies

By Alex Guillén

03/20/2018 10:38 AM EDT

EPA Administrator Scott Pruitt plans to change how the agency considers scientific information when writing regulations in a way that likely will exclude certain studies, he told the [Daily Caller](#).

Pruitt told the news site he will reverse longtime agency policy to require that any studies used to support regulations make their raw data available for review and replication by independent scientists.

"We need to make sure their data and methodology are published as part of the record," Pruitt said. "Otherwise, it's not transparent. It's not objectively measured, and that's important."

The changes are in line with legislation that House Science Chairman [Lamar Smith](#) (R-Texas) has pushed for years, but which was never been passed by the Senate. Democrats, environmentalists and scientific groups have long criticized that legislation as an attempt to cherry-pick data friendly to industry from the voluminous body of epidemiological science. And EPA already releases significant amounts of this data, they said.

CBO [said last year](#) the changes "would significantly reduce the number of studies that the agency relies on." And although EPA said it could make the changes at little to no cost, CBO estimated it would spend \$5 million from 2018 through 2022. EPA [previously told CBO](#) it would have to spend \$250 million a year scrubbing information from thousands of studies "to ensure the transparency of information and data supporting some covered actions."

WHAT'S NEXT: Pruitt did not say when he will issue a formal directive changing EPA's science policy.

Subject: Morning Energy: Pruitt steps up to the plate — Tester's 'great equalizer' — Bishop still talking NEPA

By Kelsey Tamborrino | 04/26/2018 05:42 AM EDT

With help from Anthony Adragna

PRUITT STEPS UP TO THE PLATE: Scott Pruitt makes his eagerly anticipated trip to the Hill this morning, and the stakes couldn't be higher for the embattled EPA administrator. His appearances before the House E&C Committee in the morning and Appropriations panel in the afternoon — ostensibly to defend the Trump administration's proposed cuts to EPA's budget — will give lawmakers their first opportunity to directly question Pruitt since the news broke about his heavy spending, sweetheart condo rental, VIP security and first-class flights. And while both Democrats and Republicans are expected to pull no punches as they weigh Pruitt's behavior, the real audience will be sitting in 1600 Pennsylvania Ave.

Check out this [graphic breakdown](#) of Pruitt's problems by POLITICO's Emily Holden, Alex Guillén and your ME host.

— **The administrator has kept a low profile** in the lead-up to today's events — even leaving press out of a Tuesday announcement on his plan to ban [secret science](#) — but expect the cameras to be out in force this morning. ME breaks down what to expect today as Pruitt heads for the batter's box. (ME is also taking suggestions for an appropriate walk-up song. One option [here](#).)

THE GAME PLAN: Pruitt will point out he now flies coach when he travels, and shift the blame to staffers for the raises given to two of his close aides, according to a talking points [document](#) — dubbed "hot topics" — obtained by The New York Times. He will likely also say officials who were reassigned or demoted after challenging his spending all had performance issues.

— **EPA [did not dispute the authenticity](#)** of the Times document, but spokesman Jahan Wilcox said Pruitt would tout "the accomplishments of President Trump's EPA," including "working to repeal Obama's Clean Power Plan and Waters of the United States, providing regulatory certainty, and declaring a war on lead — all while returning to Reagan-era staffing levels." You can read Pruitt's full opening statement for the E&C hearing [here](#).

DEMOCRATS WILL SEARCH FOR ANSWERS: The afternoon session is expected to dive into Pruitt's proposed deep cuts to the agency's budget and his deregulatory actions, but that doesn't mean Democrats will ignore the ethics woes dogging the embattled chief. "Administrator Pruitt, you are letting the American people and your agency down," Rep. [Betty McCollum](#), ranking member of the Appropriations subpanel, plans to say. Democrat [Nita Lowey](#), the ranking House appropriator, will question Pruitt on the Antideficiency Act after the Government Accountability Office found EPA illegally failed to notify Congress about the cost of his secure phone booth. Meanwhile, E&C's top Democrat [Frank Pallone](#) wouldn't tip his hand: "I just hope he shows up," he said when ME asked for his plan of attack.

— **House Energy and Commerce Democrats** will hold a news conference at 9 a.m. to [once again](#) call for Pruitt's ouster. [Kathy Castor](#) and [Paul Tonko](#) will attend, alongside representatives from numerous green groups.

REPUBLICANS OFFER SOME ADVICE: "Answer the questions and stay calm," John Shimkus said. "And the time will eventually end." The Illinois Republican didn't let on about his line of questions to Pruitt, but added: "It's not going to all be addressing stewardship issues. There are going to be policy questions."

— **Fellow Oklahoman and member of the Approps committee** Tom Cole expects the "highly charged" hearing to contain some "pretty much straight budget questions" — at least from the Republican side. Cole said he recently spoke to Pruitt on the upcoming hearing and warned him it would be "rugged."

Keep in mind: None of the committee Republicans said they'd been in contact with the White House ahead of the session. Shimkus said the Republicans hadn't huddled ahead of time to develop a game plan as they sometimes do with high-profile hearings. And Democrats are expected to turn out in force — E&C members not on the Environment subpanel will "waive in" to the hearing. They don't need GOP permission to do so, but will have to wait until all subcommittee members participate before asking questions. ME would look here for especially fiery questions or any surprises.

STRIKE 3? Pruitt's critical audience, of course, will be President Donald Trump, who has so far stuck by him, but is expected to judge how Pruitt fares in front of the cameras, POLITICO's Anthony Adragna and Nancy Cook report. So far, Pruitt's support among Trump's conservative backers has kept him on solid ground, despite the growing resentment of a "high maintenance" EPA chief among White House officials. "The president is always nervous about offending his base, and Pruitt has real support in the base," said one Republican close to the White House. "If that base diminishes, he does not have a chance of being reelected. He generally likes what Pruitt is doing over there, but he has no relationship with Pruitt of any note. He could get someone else."

IN THE OUTFIELD: Environmental group Defend Our Future will hand out first-class boarding passes today at the Pruitt hearing, while Moms Clean Air Force will deliver these report cards. And the League of Conservation Voters and its state partners will launch television ads today urging Sens. Dean Heller and Cory Gardner to hold Pruitt accountable. Watch them here and here.

If you go: The E&C hearing will begin at 10 a.m. in 2323 Rayburn, and the Appropriations hearing at 2 p.m. in 2007 Rayburn. Watch the livestreams here and here.

IT'S THURSDAY! I'm your host Kelsey Tamborrino, and the American Petroleum Institute's Jeff Stein was the first to name Khartoum, Sudan — the capital city where the Blue and White Niles meet to form the Nile. For today: Name the state where the first officially designated Democratic floor leader hailed. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter @kelseytam, @Morning_Energy and @POLITICOPro.

POLITICO's Ben White is bringing Morning Money to the Milken Institute Global Conference to provide coverage of the day's events and evening happenings. The newsletter will run April 29 - May 2. Sign up to keep up with your daily conference coverage.

PUBLIC LANDS CRUCIAL FOR TESTER: Democratic Sen. Jon Tester's bid for reelection could come down to how he handles public lands issues, Pro's Kevin Robillard reports. Close to one-third of the land in Tester's home state of Montana is under federal government ownership, and the Democratic senator hopes to use it to keep on board those who voted Trump — including hunters, hikers, snowmobilers and ranchers. "Public lands is one of the great equalizers. It's part of who we are," Democratic Gov. Steve Bullock told Kevin. "It doesn't matter what our political beliefs are, it's a core part of our lives."

Tester's strategy is part of a larger effort by Democrats in the West to emphasize lands. Bullock emphasized it in his reelection bid in 2016 and New Mexico Sen. Martin Heinrich, who is expected to easily win reelection in 2018, started his reelection bid with a video focused heavily on public lands issues. And Democratic strategists think it can help them in states throughout the interior west. "There a lot of people here who are

single-issue voters, and that issue is public lands," said Nick Gevock, the conservation director at the Montana Wildlife Federation. Read [more](#).

DEMOCRATS CALL FOR SPECIAL COUNSEL: In a letter Wednesday to the U.S. Office of Special Counsel, Pallone and Oversight ranking member [Elijah Cummings](#) requested an investigation into whether there is a pattern of problematic personnel practices at EPA. The Democrats point to recent reports of agency officials being reassigned, demoted or requesting new roles, after voicing concerns on Pruitt. "The reassignment or dismissal of employees who questioned Administrator Pruitt's wasteful and potentially unlawful expenditures suggests a troubling pattern of retaliation against EPA employees that may be illegal," they write. Read the letter [here](#).

BISHOP STILL TALKING NEPA: House Natural Resources Chairman [Rob Bishop](#) told ME he's been in contact with administration officials "over the last few weeks" about a series of modifications to NEPA that he says "run the gamut." His two overarching goals are to speed the permitting process and to enact categorical exclusions that will limit litigation to allow projects to advance more quickly. "It's one of the consistent problems they recognize," he said of the administration's engagement on NEPA.

Apples to oranges: Controversy over [\\$139,000 spent on doors](#) at Interior is not comparable to spending woes engulfing Pruitt, according to Bishop. "There are some real issues and there are some issues that we play around with," he said. "This is one I think people are playing with." Interior officials said previously that career facilities and security officials recommended the work and that Secretary Ryan Zinke was not aware of it.

THAT DAM BILL: The House passed a heavily watched measure, [H.R. 3144 \(115\)](#), Wednesday that would override a court decision requiring changes in the operations of major hydropower dams in the Pacific Northwest to help protect endangered salmon. The measure, from Washington Rep. [Cathy McMorris Rodgers](#), passed by a nearly party-line vote of 225-189, and now heads to the Senate, where some of the region's Democratic senators have [made known](#) their opposition. Pro's Annie Snider breaks down [more here](#).

REFINERY WORKERS HIT THE HILL: Close to 100 workers from refineries Monroe Energy, Philadelphia Energy Solutions and PBF Energy will rally for their jobs and Renewable Fuel Standard reform on the Hill today, the United Steelworkers said. The rally begins at 1 p.m. in the "Senate Swamp" — the grass across the drive from the east Senate steps. Texas Sen. [Ted Cruz](#) will participate in a press conference with the workers at the same time. Watch the livestream [here](#).

OFF-SHORE UP SUPPORT: While it didn't have quite the same build-up as Pruitt's hearings this morning, the House Natural Resources energy and mineral resources subcommittee will hold a hearing today on offshore energy revenue sharing for Gulf-producing states, with a focus on the Gulf of Mexico Energy Security Act. Democrats intend to call out the oil and gas industry and demand they take responsibility for their role in causing the destruction of Louisiana wetlands, according to a release. Former Sen. Mary Landrieu (D-La.), now a senior policy adviser at Van Ness Feldman, and John Barry, former board member of the Southeast Louisiana Flood Protection Authority — East, will testify, among others. **If you go:** The [hearing](#) begins at 10 a.m. in 1324 Longworth.

GET YOUR COMMENTS IN: [Comments](#) are due today on EPA's proposed repeal of the Clean Power Plan. The Competitive Enterprise Institute, for one, will file a comment today in support of the proposed repeal, calling the CPP "unlawful." Close to 20 other individuals from free-market groups signed onto the joint comment. Google, meanwhile, submitted its own comment Wednesday "respectfully" urging EPA to forgo the repeal. "Google continues to believe that the Clean Power Plan aligns with overall electricity sector trends and the specific goals of our company," [it says](#). The Natural Resources Defense Council and NRDC Action Fund said it generated 208,000 comments in support of keeping the CPP.

MAIL CALL! IN THE AIR TONIGHT: California Sen. [Dianne Feinstein](#) wrote to Transportation Secretary Elaine Chao Wednesday, calling on her to maintain national fuel economy standards set by California under the Clean Air Act. "I ask for your commitment to maintain the Corporate Average Fuel Economy standards at the maximum feasible level, as required by law, and to seek consensus with California so that we can continue to enjoy the success of a coordinated national program to improve fuel economy," Feinstein wrote. Read the letter [here](#).

— **Eighty-seven lawmakers signed onto a letter Wednesday** that calls on Pruitt to reinstate the "once in, always in" [policy](#) to "safeguard" from harmful air pollutants. "This is a matter of critical human health and safety," the lawmakers write. Read it [here](#).

GoT RENEWABLES? Rapper Kanye West [tweeted](#) about his connection to Trump and their "dragon energy" on Wednesday. "We are both dragon energy. He is my brother. I love everyone. I don't agree with everything anyone does." Spoiler: It's not an energy company we forgot to tell you about. Pruitt scales back EPA's use of science [Back](#)

By Emily Holden and Annie Snider | 04/24/2018 03:17 PM EDT

Environmental Protection Agency chief Scott Pruitt announced Tuesday he would seek to bar the agency from relying on studies that don't publicly disclose all their data, a major policy change that has long been sought by conservatives that will sharply reduce the research the agency can rely on when crafting new regulations.

The unveiling of the proposed rule delivers a win to Republicans like House Science Chairman Lamar Smith (R-Texas), who unsuccessfully pushed legislation to impose the same type of change. The move also demonstrates Pruitt's persistence in pursuing President Donald Trump's anti-regulation agenda just two days before the embattled EPA chief is due to face fierce questioning from lawmakers about his hefty spending, expanded security detail and cheap condominium rental from the wife of an energy lobbyist.

At an invitation-only meeting at EPA headquarters with Smith, Sen. Mike Rounds (R-S.D.) and other supporters of the policy, Pruitt said the proposed rule was critical in ensuring that the agency was transparent about how it is making decisions to justify costly new regulations. It is the latest step Pruitt has taken to fundamentally shift the agency's approach to science.

"It is a codification of an approach that says as we do our business at the agency the science that we use is going to be transparent, it's going to be reproducible, it's going to be able to be analyzed by those in the marketplace. And those who watch what we do can make informed decisions about whether we've drawn the proper conclusions or not," Pruitt said.

Text of the proposed rule was not immediately available.

The proposal, based on legislation pushed by Smith, is intensely controversial, and scientists and public health groups say it will prevent federal regulators from enacting health and safety protections. Nearly 1,000 scientists, including former EPA career staffers, signed a letter opposing the policy sent by the Union of Concerned Scientists to Pruitt on Monday.

Their primary concern was that many of the country's bedrock air and water quality regulations are based on research that cannot disclose raw data because it includes the personal health information.

But industry has its own version of the same problem. EPA often relies on industry studies that are considered by companies to be confidential business information when determining whether new pesticides and toxic chemicals are safe to use. Internal EPA emails obtained under the Freedom of Information Act show that EPA political officials, including Nancy Beck, who became the chief of the agency's chemical safety office last year after working for years at a chemical industry lobbying group, worried that the new policy would limit the agency's ability to consider industry data or would force companies to make this proprietary data public.

"We will need to thread this one real tight!" Richard Yamada, political official who led work on the new policy wrote to Beck after she raised the concerns.

It was not immediately clear if the new proposed rule included measures to address those concerns.

Rush Holt, CEO of the American Association for the Advancement of Science, said Pruitt's changes could keep the agency from revising public health regulations as problems arise or new data comes to light.

"On the surface it sounds so innocuous or even beneficial. What could be wrong with transparency? Well it's clear to me that this is not based on an effort to be transparent. It is rather based on an effort to be just the opposite," he said.

"EPA is particularly important because when science is misused, people die," he added.

Pruitt has been discussing the new scientific policy publicly for weeks, but it only went to the White House for interagency review last week. Such swift review is very rare for the Office of Management and Budget, which often takes months to vet a new policy. At least one group, the Environmental Defense Fund, has requested a meeting with OMB officials to discuss the rule, but OMB's website shows that no meetings have been scheduled with interested groups.

Many public health studies can't be replicated without exposing people to contaminants, and environmental disasters such as the Deepwater Horizon oil spill cannot be recreated, the group said, raising intellectual property, proprietary and privacy concerns.

Pruitt's predecessor Gina McCarthy, and her air chief Janet McCabe, in an [op-ed](#) in The New York Times in March said concerns about studies are dealt with through the existing peer-review process, which ensures scientific integrity.

"[Pruitt] and some conservative members of Congress are setting up a nonexistent problem in order to prevent the E.P.A. from using the best available science," they said.

Report: Pruitt plans to shift blame for scandals [Back](#)

By Emily Holden | 04/25/2018 01:55 PM EDT

EPA chief Scott Pruitt will seek to shift the blame for some of his ethics controversies by blaming his staff when he testifies at two House hearings Thursday, according to an internal EPA document reviewed by [The New York Times](#).

Pruitt is prepared to say that he now flies coach rather than first-class, that staffers were responsible for large raises given to close aides without White House sign-off and that officials who were reportedly sidelined for questioning his behavior had performance issues, according to the Times.

The defenses are in line with what Pruitt and EPA spokespeople have said in recent months.

EPA did not dispute the authenticity of the document, but spokesman Jahan Wilcox said Pruitt would tout "the accomplishments of President [Donald] Trump's EPA," including "working to repeal Obama's Clean Power Plan and Waters of the United States, providing regulatory certainty, and declaring a war on lead — all while returning to Reagan-era staffing levels."

Pruitt is expected to face questions about his bargain condo rental from the wife of a lobbyist who has since resigned from his firm, his spending on a round-the-clock security detail and his previous refusal to fly coach. He is under investigation by three congressional committees, the EPA's inspector general and the GAO, among other oversight bodies. White House deputy press secretary Hogan Gidley told NPR today that Pruitt will have to answer questions about the potential ethics violations "in short order."

'It could be pretty painful' when Pruitt faces Congress [Back](#)

By Anthony Adragna and Nancy Cook | 04/25/2018 06:00 PM EDT

When Scott Pruitt returns to Capitol Hill on Thursday, he will find few friends ready to greet him — and an audience of one waiting to determine his fate.

Republicans say they aren't going to give the Environmental Protection Agency chief a free pass on accusations of lavish spending, a sweetheart condo lease and luxe air travel during a pair of high-stakes hearings. Since Pruitt's previous appearance on Capitol Hill in January, he has faced an avalanche of damaging headlines and investigations that have alienated much of the White House and raised questions about his future leading the agency.

President Donald Trump has so far stuck by Pruitt. But the biggest test for the media-obsessed president may be how Pruitt fares in front of the cameras — only three weeks after he drew poor reviews for a combative interview with Fox News' Ed Henry.

House Energy and Commerce Chairman Greg Walden (R-Ore.) said Pruitt will receive a "cordial reception, but he's got some tough questions to answer."

Rep. John Shimkus (R-Ill.), whose subcommittee will be Pruitt's first stop Thursday, said the administrator should expect a "cool" reception from Republicans — who still strongly support his work to pare back EPA rules.

"It could be pretty painful, but when you accept the position of a senior administrator in a federal agency you've got to expect [that]," Shimkus, who chairs the Energy and Commerce Environment Subcommittee, told Politico. "You've just to grin and bear it and get through it."

Pruitt has few allies left in the White House, apart from the president himself. Senior administration aides characterized the hearings as potential make-or-break moments for Pruitt but said it's ultimately up to the president as to whether the White House wants to tolerate Pruitt's bad press.

Trump is largely keeping Pruitt around because he appreciates Pruitt's hard-charging agenda and because the White House does not want to go through another bruising confirmation battle over another Republican to lead EPA, according to senior administration officials and Republicans close to the White House. Already the White House expended great political energy this week on its pick for secretary of state, Mike Pompeo, a former congressman whom the White House views as eminently qualified but who is barely expected to squeak through the Senate confirmation process.

Most important, the president fears that dumping Pruitt would anger conservatives.

"The president is always nervous about offending his base, and Pruitt has real support in the base," said one Republican close to the White House. "If that base diminishes, he does not have a chance of being reelected. He generally likes what Pruitt is doing over there, but he has no relationship with Pruitt of any note. He could get someone else."

When asked at the White House briefing on Wednesday about Pruitt's spending and potential ethical violations, press secretary Sarah Huckabee Sanders would only say: "We are evaluating these concerns, and we expect the EPA administrator to answer for them."

Pruitt's waning support among White House aides has been months in the making. And at this point, many administration officials say they are tired of the terrible headlines and consider the allegations about Pruitt a nonstop swirl of distractions. It's not just Pruitt's handling of the questions that has irked White House officials but the facts themselves about the way he's led the EPA and run his own staff.

Over the past year, Pruitt has also alienated members of the communications team, National Economic Council, and Cabinet Affairs in various fights over policy like the Paris climate deal, messaging over policy rollouts, and spending decisions at the EPA. Another Republican close to the White House said Pruitt has earned a reputation among White House aides as "high maintenance."

The White House was not involved in helping to prepare Pruitt for the two Hill hearings on Thursday.

Shimkus predicted the toughest questions would come from the other side of the aisle.

"We need to make sure that we understand and recognize the valid, valid concerns that are out there on policy and administrative activity," he said. "But I don't think we'll be gouging his eyes out either — I think we'll have other folks that'll do that."

Some Pruitt supporters say he should be judged on his overall tenure.

"It should be based on his past performance, not necessarily standing in front of a microphone," House Natural Resources Chairman Rob Bishop (R-Utah) said. Bishop's committee does not have jurisdiction over EPA, but he has been a strong supporter of Pruitt's policy goals.

In his opening statement released ahead of the hearing, Pruitt will sidestep any discussion of the latest controversies, instead focusing on policy goals like Superfund cleanups and working more closely with states. "I will focus on key objectives to improve air quality, provide for clean and safe water, revitalize land and prevent contamination, ensure the safety of chemicals in the marketplace, assure compliance with the law, and improve efficiency and effectiveness," Pruitt will say in his prepared remarks.

Democrats are expected to tie the scandals facing Pruitt to his aggressive deregulatory push and proposal to slash EPA's budget by more than a quarter — which they see as just as worrisome as his alleged ethical improprieties. Multiple aides said there's such strong interest in the session that committee Democrats not on the Environment Subcommittee plan to participate, which does not require signoff from the majority.

"There's a confluence of concerns here that I think the Democrats are going to want to get answers to," Rep. Paul Tonko of New York, top Democrat on the panel, told POLITICO. "We were concerned yesterday, we're concerned today and we'll be concerned tomorrow if he's there."

There will be no shortage of things to ask him about, including the more than \$105,000 the agency has spent on his first-class flights, lavish spending on a \$43,000 soundproof phone booth and round-the-clock security, a cushy \$50-per-night condo lease from a Washington lobbyist who personally met with Pruitt to discuss the agency's Chesapeake Bay work, and a trip to Morocco in December on which he spent time promoting liquefied natural gas exports — a topic that isn't part of his agency's portfolio. Pruitt is also facing scrutiny over the significant pay raises the agency gave to a handful of his longtime aides from Oklahoma despite the White House's objections.

Federal watchdogs, the agency's inspector general, congressional investigators and the White House have launched more than a dozen investigations into various aspects of Pruitt's conduct.

But Rep. Joe Barton (R-Texas), the longest-serving member of Energy and Commerce, said Pruitt's ethics issues are "not the purpose of the hearing" and suggested many Republicans would come to the administrator's defense. However, he said the panel's GOP members have not met in advance to plot strategy.

"He's had a lot of death threats. I don't have a problem with his security costs," Barton said Wednesday. "I don't really have a major problem with his telecommunications setup. It's a difficult job to be the EPA administrator when you're a Republican."

Still, signs are increasing of weariness toward Pruitt among congressional Republicans. Three senior Senate Environment and Public Works Committee Republicans, including his staunch ally Sen. Jim Inhofe (R-Okla.), called for hearings into Pruitt's behavior earlier this week. Four House Republicans have called for his resignation. And EPW Chairman John Barrasso (R-Wyo.) said he has "serious questions" about Pruitt's spending and pledged to send additional oversight letters.

"He'll need to acquit himself well," Sen. John Thune, the No. 3 Republican in the Senate, said when asked about how important the sessions will be for Pruitt's future in the administration.

An aide to Rep. Betty McCollum of Minnesota, top Democrat on the House Appropriations Interior and Environment Subcommittee, where Pruitt will appear Thursday afternoon, told POLITICO their hearing would likely focus more on Pruitt's proposed cuts to nearly a quarter of the agency's budget and regulatory rollbacks.

"I expect the E&C hearing will have a greater focus on the ethical concerns surrounding Pruitt," the aide said.

Some Democrats on Energy and Commerce acknowledge Pruitt has in the past performed well in congressional hearings, which they said could allow him to respond to some of the charges.

"If Mr. Trump is going to look for a good performance, I bet he'll put up a great performance," said Rep. Scott Peters (D-Calif.), another member of the subpanel. "But if he doesn't address the substance of the ethical and environmental challenges, I hope that they would think about finding someone else."

Other Democrats think Pruitt's main goal will be to avoid a major gaffe but they don't see any way he will emerge from the hearing in a significantly strengthened position.

"One or two of these transgressions would be survivable but there are so many scandals that it's really hard for me to imagine that Republicans want to lower the bar this much," said Sen. Brian Schatz (D-Hawaii), an outspoken Pruitt critic. "It is actually beyond me why they're sticking by him."

Tester leans on public lands as key reelection issue [Back](#)

By Kevin Robillard | 04/26/2018 05:05 AM EDT

HELENA, Mont. — The issue that could prove key to Democratic Sen. Jon Tester's reelection bid is under the radar in Washington politics but practically ever-present in Montana life.

Nearly a third of the land in Montana is under federal government ownership, and Tester wants to keep it that way. It's a way the Democratic senator, who is running for a third term, hopes to keep voters who pulled the lever for President Donald Trump — including hunters, hikers, snowmobilers and ranchers — on his side in 2018.

"Public lands is one of the great equalizers. It's part of who we are," Democratic Gov. Steve Bullock said in a phone interview. "It doesn't what matter what our political beliefs are, it's a core part of our lives."

Tester's strategy is part of a larger effort by Democrats in the West to emphasize the issue. Bullock emphasized it in his reelection bid in 2016 as he defeated Republican Greg Gianforte (now Montana's congressman) by 4 percentage points after hammering the Republican billionaire over stream access. New Mexico Sen. Martin Heinrich, who is expected to easily win reelection in 2018, started his reelection bid with a video focused heavily on public lands issues. And Democratic strategists think it can help them in states throughout the interior West.

"There are a lot of people here who are single-issue voters, and that issue is public lands," said Nick Gevock, the conservation director at the Montana Wildlife Federation.

Outdoor recreation is now Montana's largest industry, surpassing agriculture, and contributes \$7 billion and 71,000 jobs to the state's economy.

"They like to go hunting, they like to go fishing, they like to go hiking, they just like to get in the mountains where their cellphone doesn't work," Tester said in an interview. "I want to make sure there's not a mine put at the head of the Yellowstone River, or at the borders of Glacier Park."

A Montana Republican on the national stage is also raising the profile of the issue in-state. Conservationists had high hopes for Interior Secretary Ryan Zinke when he was first named to the job, but his decision to shrink the size of two national monuments has left them dismayed and disappointed.

"We were hopeful that, being a Montanan, he was going to live Montana values and be the Teddy Roosevelt conservationist he said he was," Gevock said, but noting Zinke's Interior Department was "putting the oil and gas industry above every other use."

Tester introduced Zinke at his confirmation hearing and had similar hopes, but is heavily critical of him today.

"It was because I thought he understood conversation. I haven't seen that over the last 14 months," Tester said, adding: "He has time to redeem himself."

The strategy is a proven vote-winner in Montana. Throughout the 2016 gubernatorial campaign, and in his earlier bids for governor and attorney general, Bullock emphasized stream access laws for fishermen. And he hammered Gianforte for fighting stream access laws in multiple television ads last cycle.

The state and national GOP platforms both support selling federal public lands to the states, where many environmentalists feel they would be exposed to oil and gas interests. Tester's opponents don't endorse those views.

"The people of Montana do not want the public lands transferred," state Auditor Matt Rosendale said in an interview, echoing the views of businessman Troy Downing and former judge Russ Fagg. (Rosendale supported selling the land during a 2014 bid for Congress but has changed his position.)

All three said they would like localities to have more say in how lands are managed and how federal authorities balance multiple uses. Rosendale, for instance, criticized the Forest Service for shutting down too many roads in the state.

But while Democrats in Montana have aggressively used the issue, public lands haven't become a top-tier issue in Colorado, Arizona or elsewhere in the interior West, which some Democratic strategists believe is a missed opportunity.

The Western Values Project, a Colorado-based nonprofit, ran ads late last year pressuring three potentially vulnerable Republicans — Arizona Rep. Martha McSally, who is now running for Senate, along with Oregon Rep. Greg Walden and Washington Rep. Jaime Herrera Beutler — over their support for Zinke's decision to shrink the national monuments.

And the attacks had an impact: In Arizona, McSally held a 3-point lead against a generic Democrat in her congressional district in a poll conducted by Global Strategy Group. But when "asked to consider a scenario where she votes to reduce the size of the Bears Ears and Grand Staircase-Escalante national monuments," her support dropped to 38 percent, with a generic Democrat winning 50 percent of the vote.

Interior spent \$139K on Zinke office doors Back

By Anthony Adragna | 03/08/2018 05:58 PM EDT

The Interior Department is spending \$139,000 for new doors for Secretary Ryan Zinke's office suite, according to records posted online.

The work was recommended by Interior career facilities and security officials, an agency spokeswoman said, not by Zinke.

"The secretary was not aware of this contract but agrees that this is a lot of money for demo, install, materials, and labor," Heather Swift, the spokeswoman, said in a statement.

The award to Maryland-based Conquest Solutions LLC was first reported by the Associated Press. The work involves replacing three sets of double doors, including two that open onto a balcony and leak during rain storms, the AP reported. An existing set of doors to Zinke's office from a hallway do not have a lock, so the security will be upgraded with the new doors.

Swift said the work is part of a "decade-long modernization of the historic FDR-era building."

"Between regulations that require historic preservation and outdated government procurement rules, the costs for everything from pencils to printing to doors is astronomical. This is a perfect example of why the Secretary believes we need to reform procurement processes."

Housing and Urban Development Secretary Ben Carson drew criticism recently over news that HUD would spend \$31,000 on a dining set. That order was subsequently canceled.

House passes controversial dam bill Back

By Annie Snider | 04/25/2018 04:45 PM EDT

The House passed a controversial measure to override a court decision that required changes in the operations of major hydropower dams in the Pacific Northwest to help protect endangered salmon.

The measure, [H.R. 3144 \(115\)](#), from Rep. [Cathy McMorris Rodgers](#) (R-Wash.), was passed by a nearly party-line vote of 225-189.

The 9th Circuit Court of Appeals earlier this month [upheld](#) a lower court decision requiring that water be spilled over the tops of dams along the Columbia and Snake rivers, including the powerhouse Grand Coulee Dam, the largest power station in the U.S., during periods when young salmon and steelhead migrate to the ocean. The suit was brought by the state of Washington, tribes and conservation groups.

McMorris Rodgers and other Republicans in the region have fought the decision because it would reduce the dams' hydropower output. Their legislation would override the courts and require that dam operations continue as they have historically to maximize power production until an environmental review of the system can be completed.

The legislation is the latest front in a yearslong battle over the nearly 100-year-old hydropower system on the rivers. Conservation groups and tribes with treaty fishing rights want it altered and operated to benefit wildlife, including calling for the removal of four dams along the Snake River.

WHAT'S NEXT: The legislation moves to the Senate, where some of the region's Democratic senators have [registered](#) their opposition.

EPA drops 'once in, always in' policy from key Clean Air Act requirements [Back](#)

By Alex Guillén | 01/25/2018 06:11 PM EDT

EPA today withdrew a Clinton-era policy that was designed to prevent major emitters like power plants and factories from getting out of tough requirements to limit their toxic air emissions.

In a new [memo](#), EPA air chief Bill Wehrum wrote that the "once in, always in" policy "is contrary to the plain language" of the Clean Air Act. Wehrum revoked a [1995 guidance memo](#) outlining the policy and said EPA would consider new regulations to clarify its interpretation of the law.

Under the now-revoked guidance, any emitter that qualified as a "major" source of hazardous air pollutants would forever be subject to that tougher standard to comply with MACT rules, even if its emissions dropped low enough to be considered an "area" source subject to fewer or no requirements. Wehrum's memo said the law does not specify that such classifications are permanent.

"EPA has now determined that a major source which takes an enforceable limit on its [potential emissions] and takes measures to bring its HAP emissions below the applicable threshold becomes an area source, no matter when the source may choose to take measures to limit its" potential pollution emissions, Wehrum wrote.

Wehrum argued that the policy shift will actually encourage sources that hesitated to install emission reduction projects to move forward. Environmentalists, however, quickly blasted the change on social media.

The Bush administration twice attempted to change the OIAI policy but never succeeded.

WHAT'S NEXT: Wehrum's memo says EPA will "soon publish a Federal Register notice to take comment on adding regulatory text that will reflect EPA's plain language reading of the statute."

Subject: Morning Energy: Perry's latest bid to save coal — NEPA focus of hearing today — More on the Pruitt front

By Kelsey Tamborrino | 04/25/2018 05:54 AM EDT

With help from Anthony Adragna

PERRY'S LATEST BID TO SAVE COAL: So far, Energy Secretary Rick Perry has had no success in his effort to construct a safety net to keep alive coal-fired and nuclear power plants threatened with shutdowns — a mission that's come straight from President Donald Trump. And Perry's latest potential gambit to use the 1950 Defense Production Act in hopes of designating the plants as crucial for national security may not fare better than his previous efforts, energy experts tell Pro's Eric Wolff.

Experts say the bid would stretch the definition of the law and almost certainly draw legal challenges. Plus invoking the act that was last used by the Obama administration to push advanced biofuels would probably hit a snag in Congress, since lawmakers would need to approve perhaps billions of dollars in funding to keep the plants afloat, the experts say.

Using the Korean War-era law to protect the plants could be a novel approach to aiding power plants, Eric writes, especially after Perry failed to gain FERC's support for his proposal to give the plants financial backing. And since Energy Department lawyers stymied a push last year to invoke the agency's authority under the Federal Power Act to force the plants to run, Perry and his staff appear to have very few viable options left.

But the fresh take on the act doesn't necessarily mean it'll work. "To me, it's a tough argument to make. It's a specious argument on its surface that seems like a perversion of the intended use of the Defense Production Act," said Tom Hicks, a former acting undersecretary of the U.S. Navy under former President Barack Obama and now a principal at the advisory firm The Mabus Group. Read [more](#).

WELCOME TO WEDNESDAY! I'm your host Kelsey Tamborrino, and James Daniel was the first to guess the most recent senator to appear on a U.S. postage stamp. It was Maine's Margaret Chase Smith, who [appeared](#) during the Distinguished Americans Issue in 2007, worth a whopping 58 cents face value. A geography question for today: The Blue Nile and the White Nile combine to form the Nile River at which capital city? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

POLITICO's Ben White is bringing Morning Money to the Milken Institute Global Conference to provide coverage of the day's events and evening happenings. The newsletter will run April 29 — May 2, 2018. [Sign up](#) to keep up with your daily conference coverage.

DON'T FEAR THE NEPA? House Natural Resources will hold an oversight [hearing](#) this afternoon on what it calls the "weaponization" of the National Environmental Policy Act, and it could be a doozy. The committee notice calls NEPA — the seminal law that requires an environmental review on all federal actions — activists' "weapon of choice." Republicans have long-sought to undo parts of the law, and today's hearing will likely echo some of the rhetoric out of the Trump administration, which has supported faster NEPA reviews as part of its [infrastructure push](#). The hearing will review challenges from NEPA and will evaluate reforms to "de-

weaponize" the law to "minimize opportunities for bad faith litigation, and restore the law to its original intent," according to a committee [notice](#).

The committee previously took up the topic last year, holding a similar [hearing](#) in November on modernizing the law for the 21st century. James Coleman, a law professor at the Southern Methodist University, is expected to say the current NEPA process is "broken" and that bipartisan efforts to fix the problem have failed. "As President Obama's regulatory czar put it, 'If the permitting bureaucracy were a supervillain, it would be the Blob,'" he'll say, according to his testimony. "Right now, the Blob is winning: We have lost decades of investment while environment reviews grow longer and longer. How can we ensure that the U.S. does not fall behind our global competitors?"

Meanwhile, Laura Alice Watt of Sonoma State University, who says she is a proponent of environmental reviews that are conducted consistently, will discuss the effect of NEPA on the Point Reyes National Seashore, where a review over the last 20 years has contributed to the erosion of active ranches. Melissa Hamsher of Eclipse Energy Resource Corporation and former CEQ official Horst Greczmiel will also testify. Democratic Rep. [Donald McEachin](#), ranking member of the Oversight subcommittee, will say that he'll hold the administration and Republicans to account on NEPA. "Many communities — and especially vulnerable minority and low-income communities — have had to endure a decades-long pattern of environmental injustice, in no small part because they were denied a say in important decisions that affected them," McEachin is expected to say. **If you go:** The hearing kicks off at 2 p.m. in 1324 Longworth.

SPEAKING OF NEPA: The League of Conservation Voters [sent this letter](#) to House members Tuesday urging them to oppose [H.R. 3144 \(115\)](#), which LCV says would "attack" the Endangered Species Act and NEPA by "mandating dam operations harmful to endangered salmon and steelhead in the Pacific Northwest."

ADD THIS TO THE LIST: Two days before two House hearings and fresh off an [announcement](#) on EPA's plan to bar scientific studies that don't publicly disclose data, Administrator Scott Pruitt got another appointment to testify on his agency's budget. This time Pruitt will appear in May before the Senate appropriations subcommittee that oversees EPA's budget, [Lisa Murkowski said](#) Tuesday.

OH, TO BE A FLY ON THE WALL: Sen. [Shelley Moore Capito](#), one of the Republican EPW members [open to a hearing](#) with Pruitt, told ME Tuesday she has a "well-timed" phone call with him scheduled for this week. "I think he wants to talk about some regulatory measures," she said. "But I'm going to probably ask him questions on the current state of some of the things that I've read and we'll see where it goes." She said the call had been set up last week.

McConnell voices support ... again: Majority Leader [Mitch McConnell](#) told reporters Tuesday he remained a supporter of Pruitt's, while noting the EPA chief's busy Thursday on the Hill. "We'll just see," he said. "I expect there will be a lot of interest."

PERROTTA WORKED FOR TRUMP-BACKED MEDIA COMPANY: Pasquale "Nino" Perrotta — the Secret Service veteran who heads Pruitt's security detail — previously worked on assignments for the tabloid publishing company American Media Inc. during the 2016 presidential campaign, The New York Times reported Tuesday. While it is unclear when Perrotta started working at AMI, the Times reports some of his activities at the company included physical security, cybersecurity and investigative services involving litigation. [Read more](#).

OLD AD-AGE: The Natural Resources Defense Council is sponsoring an ad today in The Washington Post that calls for Pruitt's ouster. The ad — which says: "President Trump promised to drain the swamp. He should start with EPA Administrator Scott Pruitt" — will run as an insert in 3,000 copies of the Post and will be delivered to Capitol Hill on Thursday. [See it](#).

IF YOU PLAY YOUR CARDS RIGHT: The Environmental Defense Fund mapped out what it says are Pruitt's unanswered questions surrounding scandals while he helms EPA and during his time as Oklahoma attorney general — 86 of them to be exact. The group will also hand out a deck of "Non Trivial Pruitt Questions" during Thursday's hearings with a sampling of the ethical questions. See the cards here.

Rally cry: Separately, the American Federation of Government Employees will hold a rally today from noon until 1 p.m. in support of EPA workers. Democratic Reps. Salud Carbajal, Don Beyer, Bill Foster, Sheila Jackson Lee, Alan Lowenthal, Grace Meng, Jamie Raskin and Debbie Wasserman Schultz are all set to attend the rally, which will take place outside of EPA headquarters.

MACRON ADDRESS LAWMAKERS: French President Emmanuel Macron hits the Hill this morning to address a joint session of Congress. Earlier this week, the French president said he'd call for continued U.S. intervention in Syria in his speech. "I will advocate for multilateralism," Macron said in an interview on "Fox News Sunday." But it's also possible issues concerning climate will come up — which would likely receive a welcome reception from Democrats.

Macron, a staunch supporter of the Paris accord, also briefly mentioned climate during a joint press conference with the president Tuesday. "We also talked about the climate. And here, also, we know where we stand," Macron said vaguely. "France will continue to work on major pieces, including the global compact for the environment. But I think I can say that our economic — our businesses, our researchers can continue to work on — can create solutions in the field." Both he and Trump are "attached to that," he said.

Bold move: It's probably not an indication of environmental topics to come, but Apple CEO Tim Cook brought former EPA chief Lisa Jackson to Tuesday's state dinner with Macron. Jackson, who now works as vice president of environment, policy and social initiatives at Apple, has attended events with Cook in the past — but it's an interesting move considering Jackson's not been known to mince words about the Trump administration. For what its worth, Cook will meet today with Trump in the Oval Office.

MORE NOMS: Trump sent James Hubbard's nomination to be undersecretary of Agriculture for natural resources and the environment to the Senate Tuesday. Hubbard, of Colorado, replaces Robert Bonnie, who resigned from the post.

DEMOCRATS CITE SAFETY: Three Energy and Commerce Democratic leaders on Tuesday called on the Government Accountability Office to probe EPA's enforcement of federal health and environmental safeguards. "We are concerned that President Trump's and Administrator Pruitt's policies to 'streamline' permitting processes, reduce regulatory 'burdens' for industry, and defer to states on enforcement will lead to more environmental law violations due to lax enforcement at both the state and federal level," ranking member Frank Pallone and Reps. Diana DeGette and Paul Tonko write in a letter to GAO Comptroller Gene Dodaro. Read it here.

MAIL CALL! GOING NUCLEAR: Former national security officials and nonproliferation experts will send this letter today to congressional foreign affairs leadership stating that for national security reasons, it is in the U.S.' best interest to have a nuclear cooperation agreement — a so-called 123 Agreement — with Saudi Arabia.

— **Democratic Sens. Maria Cantwell and Jeff Merkley** and Reps. Raúl Grijalva and Jared Huffman sent a letter to Interior Secretary Ryan Zinke on Tuesday, calling on him to undo plans for a 2019 lease sale in Alaska's Beaufort Sea. Read it here.

— **Sen. John Barrasso, chairman of the Senate EPW Committee and Capito**, subcommittee chairwoman on clean air and nuclear safety, sent a letter to Pruitt and Perry, asking them to protect the confidential business information of U.S. small refineries. Read the letter here.

AT IT AGAIN: Michigan GOP Rep. [Fred Upton](#) officially filed for reelection in the state's 6th District, [MLive reports](#). "We are full steam ahead and excited about the future," the Energy and Commerce lawmaker said in a statement.

A TANGLED WEB: The Environmental Data & Governance Initiative is out with a new monitoring report this morning that says EPA removed pages related to "international priorities" and "international grants and cooperative agreements," as well as corresponding links, from its [International Cooperation](#) web page. The page in question listed priority areas including "strong environmental institutions," "climate change" and "clean water," among other terms, which EDGI says were removed in December 2017. Read the report [here](#) and see screenshots [here](#).

GROUPS TO SUE OVER DRINKING WATER IN NEW JERSEY: The NRDC and Newark Education Workers Caucus say they will sue the city of Newark, N.J., and Catherine McCabe, the acting commissioner of the New Jersey Department of Environmental Protection, over lead contamination in the city's drinking water, [Pro New Jersey's Danielle Muoio reports](#). A Newark city official [said Tuesday](#) that the complaint filed by the groups is "absolutely and outrageously false."

OLYMPIANS HEAD TO HILL FOR CLIMATE: Five Winter Olympians will brief House and Senate offices today on the impact of climate change on winter sports and outdoor recreation. Cross-country skier Jessie Diggins, freestyle skier David Wise, halfpipe snowboarder Arielle Gold, biathlete Maddie Phaneuf and alpine skier Stacey Cook all will appear on the panel, which is co-hosted by nonprofit Protect Our Winters, Citizens Climate Lobby, and Sens. [Michael Bennet](#) and [Susan Collins](#). **If you go** : The briefing begins at 12:30 p.m. in 538 Dirksen.

CORRECTION: The April 24 edition of Morning Energy misstated the purpose of H.R. 3144 (115). The bill would codify the 2014 Biological Opinion until 2022, while the NEPA and the environmental impact statement processes continue.

QUICK HITS

— Trump White House offered to help prep Pruitt for hearings. EPA told the White House to "get lost," [The New York Times](#).

Perry's latest bid to help coal faces uphill battle [Back](#)

By Eric Wolff | 04/25/2018 05:08 AM EDT

Energy Secretary Rick Perry's latest idea to protect coal-fired and nuclear power plants may not fare much better than his previous efforts, according to energy experts.

Perry is considering invoking the 1950 Defense Production Act to keep money-losing power plants running by designating them as crucial for national security. But that would stretch the definition of the law and almost certainly draw legal challenges — and it would hit a big hurdle in Congress, which would need to approve perhaps billions of dollars in funding to keep the plants afloat, the experts said.

At the urging of President Donald Trump, Perry has sought to keep open coal and nuclear power plants that are threatened with shutdowns amid the stagnant demand for power — and even as natural gas and renewable power sources grab a growing share of the market.

So far, Perry's had no luck. FERC earlier this year rejected his proposal to give the plants financial support, and Energy Department lawyers stymied a push last year to invoke the agency's authority under the Federal Power Act to force the plants to run.

Some experts said any attempt to use the DPA is likely to meet the same fate.

"To me, it's a tough argument to make. It's a specious argument on its surface that seems like a perversion of the intended use of the Defense Production Act," said Tom Hicks, a former acting undersecretary of the Navy under former President Barack Obama and now a principal at the advisory firm The Mabus Group. "Defense Production Act is on the vanguard of the need for resources, not on the back end for an industry being challenged by economic forces."

But the effort has been a priority for Trump and Perry, who sees saving coal-fired power generation as vital to U.S. security, according to a source familiar with the conversations on the issue.

The Cold War-era law grants the federal government powerful authorities to inject cash into companies essential for national defense in order to preserve domestic supplies of key products. But DOE will have to make the case that electricity produced specifically from coal and nuclear power plants, and not other types of power, is a critical resource.

Using the act to protect the plants when there appeared to be no immediate shortage of power supplies would be a novel application that would almost certainly face legal challenge.

"If the administration uses DPA, they're going to be using it very creatively," said Ari Peskoe, director of the Electricity Law Initiative at the Harvard Law School Environmental and Energy Law Program. "They may come up with reasoning for higher rates and who's going to pay for it. Whether that will hold up, I don't know."

Perry and his staff appear to have very few viable options for bailing out coal and nuclear power, a major energy priority for Trump, who has promised to revive the coal industry. DOE has opened a comments process for interested parties to weigh in on its use of the Federal Power Act's 202(c) emergency provisions, though that would require the agency to go through FERC, which unanimously rejected a similar Perry effort in January.

The 202(c) effort has been pushed by coal magnate Bob Murray, owner of Murray Energy, and by FirstEnergy Solutions, the unit of FirstEnergy Corp. that is in bankruptcy proceedings and which expects to shut down four coal and nuclear power plants. That company asked DOE to use the emergency authority to save not only its plants, but all 85 coal and nuclear power plants in the PJM Interconnection power market.

The DPA was last used by the Obama administration starting in 2012 to help spur the biofuels industry to develop the kind of advanced biofuels that could power ships and aircraft. The government can purchase capital equipment for the cause of national security, and it can fund advertising to support the effort.

And it allows the government to become the buyer of last resort, which could put Washington on the hook to buy excess power generated by coal and nuclear plants. Technically, this electricity could only be purchased at the "cost of production," a level that in the past has been determined by a team within the Defense Department.

While no hard estimate for the cost of a DPA subsidy exists, consultants analyzing Perry's previous bailout proposal estimated costs between \$4 billion and \$10.6 billion annually.

That's a far higher level than Congress typically allocates for the DPA. It provided \$67.4 million in the omnibus passed in March, H.R. 1625 (115), down slightly from the \$76 million it provided for all projects in 2017, according to a report submitted to Congress.

And Congress — and the Republican Party — is deeply divided on using government subsidies to save these plants. Rep. [David McKinley](#) (R-W.Va.) has some allies from other coal districts for the effort, but other free market-oriented lawmakers like Rep. [Pete Olson](#) (R-Texas) say they want to see markets function unimpeded.

McKinley's staff has been in touch with DOE and the White House, as has West Virginia Sen. [Joe Manchin](#) (D).

"I think it's an emergency national concern for the national defense of our country. I think Rick Perry agrees with it, and I think the president does also," Manchin told POLITICO.

PJM has itself said the retirement of FirstEnergy's coal plants did not pose a threat to the region's power supplies, and that it had ample generation to meet demand. It has opposed any effort to mandate to require the plants to stay online.

"We believe that a market-oriented approach consistent with the American free-enterprise system offers better results than government-mandated subsidies," said PJM spokesman Jeff Shields.

Anthony Adragna contributed to this report.

Pruitt scales back EPA's use of science [Back](#)

By Emily Holden and Annie Snider | 04/24/2018 03:28 PM EDT

Environmental Protection Agency chief Scott Pruitt announced Tuesday he would seek to bar the agency from relying on studies that don't publicly disclose all their data, a major policy change that has long been sought by conservatives that will sharply reduce the research the agency can rely on when crafting new regulations.

The unveiling of the proposed rule delivers a win to Republicans like House Science Chairman Lamar Smith (R-Texas), who unsuccessfully pushed legislation to impose the same type of change. The move also demonstrates Pruitt's persistence in pursuing President Donald Trump's anti-regulation agenda just two days before the embattled EPA chief is due to face fierce questioning from lawmakers about his hefty spending, expanded security detail and cheap condominium rental from the wife of an energy lobbyist.

At an invitation-only meeting at EPA headquarters with Smith, Sen. Mike Rounds (R-S.D.) and other supporters of the policy, Pruitt said the proposed rule was critical in ensuring that the agency was transparent about how it is making decisions to justify costly new regulations. It is the latest step Pruitt has taken to fundamentally shift the agency's approach to science.

"It is a codification of an approach that says as we do our business at the agency the science that we use is going to be transparent, it's going to be reproduceable, it's going to be able to be analyzed by those in the marketplace. And those who watch what we do can make informed decisions about whether we've drawn the proper conclusions or not," Pruitt said.

Text of the proposed rule was not immediately available.

The proposal, based on legislation pushed by Smith, is intensely controversial, and scientists and public health groups say it will prevent federal regulators from enacting health and safety protections. Nearly 1,000 scientists, including former EPA career staffers, signed a letter opposing the policy sent by the Union of Concerned Scientists to Pruitt on Monday.

Their primary concern was that many of the country's bedrock air and water quality regulations are based on research that cannot disclose raw data because it includes the personal health information.

But industry has its own version of the same problem. EPA often relies on industry studies that are considered by companies to be confidential business information when determining whether new pesticides and toxic chemicals are safe to use. Internal EPA emails obtained under the Freedom of Information Act show that EPA political officials, including Nancy Beck, who became the chief of the agency's chemical safety office last year after working for years at a chemical industry lobbying group, worried that the new policy would limit the agency's ability to consider industry data or would force companies to make this proprietary data public.

"We will need to thread this one real tight!" Richard Yamada, political official who led work on the new policy wrote to Beck after she raised the concerns.

It was not immediately clear if the new proposed rule included measures to address those concerns.

Rush Holt, CEO of the American Association for the Advancement of Science, said Pruitt's changes could keep the agency from revising public health regulations as problems arise or new data comes to light.

"On the surface it sounds so innocuous or even beneficial. What could be wrong with transparency? Well it's clear to me that this is not based on an effort to be transparent. It is rather based on an effort to be just the opposite," he said.

"EPA is particularly important because when science is misused, people die," he added.

Pruitt has been discussing the new scientific policy publicly for weeks, but it only went to the White House for interagency review last week. Such swift review is very rare for the Office of Management and Budget, which often takes months to vet a new policy. At least one group, the Environmental Defense Fund, has requested a meeting with OMB officials to discuss the rule, but OMB's website shows that no meetings have been scheduled with interested groups.

Many public health studies can't be replicated without exposing people to contaminants, and environmental disasters such as the Deepwater Horizon oil spill cannot be recreated, the group said, raising intellectual property, proprietary and privacy concerns.

Pruitt's predecessor Gina McCarthy, and her air chief Janet McCabe, in an op-ed in The New York Times in March said concerns about studies are dealt with through the existing peer-review process, which ensures scientific integrity.

"[Pruitt] and some conservative members of Congress are setting up a nonexistent problem in order to prevent the E.P.A. from using the best available science," they said.

Murkowski: Pruitt will testify to Senate appropriators [Back](#)

By Anthony Adragna | 04/24/2018 03:03 PM EDT

EPA Administrator Scott Pruitt is scheduled to testify in May before the Senate appropriations subcommittee that oversees his budget, Sen. [Lisa Murkowski](#) (R-Alaska), who chairs the panel, said today.

Murkowski did not elaborate on her plans for the hearing or how much it would delve into Pruitt's ethics and spending. But she said it was "absolutely appropriate" for the Environment and Public Works Committee to hold an oversight hearing on the administrator's conduct in office, an idea that has been endorsed by [multiple Republicans](#) on the authorization committee.

"I'm hoping they move on it sooner than later," Murkowski said of the EPW committee.

EPW Chairman [John Barrasso](#) (R-Wyo.) said today he has "serious questions" about how Pruitt has handled taxpayer dollars but stopped short of announcing plans for Pruitt to testify.

"We'll see what comes out of the hearings this Thursday," Barrasso said, referring to Pruitt's scheduled appearance of two House hearings that day.

Barrasso said he planned to send additional letters to EPA, following his recent request for details on the administrator's use of four separate email accounts. In response to that earlier letter, EPA [told him](#) all of Pruitt's accounts are searched in response to public records requests.

"You want to make sure taxpayers are getting value for their dollars," Barrasso told reporters today. "We want to make sure money is being spent appropriately."

WHAT'S NEXT: Murkowski declined to say when Pruitt would appear before her Appropriations Subcommittee on Interior, Environment and Related Agencies, but she has [said previously](#) it was expected to be the week of May 7.

Pruitt support in Senate erodes as GOP lawmakers seek hearings [Back](#)

By Anthony Adragna | 04/23/2018 08:32 PM EDT

Scott Pruitt's wall of GOP support is developing new cracks, with three key Senate defenders calling for hearings into the embattled EPA administrator's recent controversies — and Sen. Lisa Murkowski announcing Tuesday that she plans to bring him before her appropriations panel in May.

Three other Republicans, including staunch Pruitt ally Sen. Jim Inhofe (R-Okla.), told POLITICO on Monday that they would also support hearings by the Senate Environment and Public Works Committee to look into the former Oklahoma attorney general's actions. Their words came as Pruitt, who has managed to hold onto President Donald Trump's public support for now, faces a pair of House hearings Thursday that could be make-or-break for his hopes of remaining in the Cabinet.

"I think that a couple of us on the committee think it's appropriate to have a hearing in so far as any accusation having to do with his office is concerned," Inhofe told POLITICO.

Inhofe said he was troubled by a report over the weekend in The New York Times detailing a sweetheart deal Pruitt received on an Oklahoma City home previously owned by a lobbyist while serving in a state government. The Oklahoma Republican declined to discuss which allegations he found disturbing, but said "there are some things in there that I'd like to check out and see."

Joining his call for a Senate hearing were two other senior GOP members of the EPW panel, Sens. Shelley Moore Capito (W.Va.) and John Boozman (Ark.).

"Most people have concerns about some of the allegations," Boozman said. "At some point he'll be before the committee and we'll dig deeper and see exactly what's going on."

EPW Chairman John Barrasso (R-Wyo.) said Tuesday that he has "serious questions" about how Pruitt has handled taxpayer dollars, but he stopped short of announcing plans for Pruitt to testify.

"We want to make sure money is being spent appropriately," Barrasso said.

Murkowski (R-Alaska), who chairs the subcommittee that oversees EPA's appropriations, did not elaborate on her plans for her own hearing with Pruitt, or how much it would delve into his ethics and spending. But she said it would be "absolutely appropriate" for Barrasso's panel to hold an oversight hearing on the administrator's conduct in office, an idea that multiple Republicans on the authorization committee have endorsed.

"I'm hoping they move on it sooner than later," Murkowski said of the EPW Committee.

To date, four House Republicans have called on Pruitt to resign, along with scores of elected Democrats. And Sen. Susan Collins (R-Maine), has said Pruitt was "the wrong person" to lead the agency based on his policies.

Pruitt has drawn criticism about his ethics and lavish spending in recent months. Three congressional committees, the White House and EPA's inspector general are all probing his behavior, ranging from his security expenses, high pay raises for aides, first-class travel and meetings with a coal group.

The House Oversight Committee has requested interviews with five senior agency aides. The White House said it would formally investigate Pruitt's expenses after the Government Accountability Office last week found EPA broke the law by failing to notify Congress about a \$43,000 privacy booth Pruitt had built in his office.

Pruitt will go to the Hill on Thursday to testify before a House Energy and Commerce subcommittee in the morning and at a House Appropriations subpanel in the afternoon. Those appearances will mark his first time before Congress since the recent allegations broke.

Both Inhofe and Capito said they thought those House hearings would prove pivotal for Pruitt's long-term future in the administration.

"It's really important," Capito said. "He's going to have to answer some tough questions. I'm sure they'll be put to him by both sides and we'll see what his response is."

Meanwhile, EPW ranking member Tom Carper (D-Del.) said he had a good conversation with House Oversight Chairman Trey Gowdy (R-S.C.) regarding Pruitt, but he said there was no formal bipartisan agreement to work together on an investigation.

"I just gave him plenty of encouragement that he's doing the right thing," he said.

But the mounting public criticism from Republicans suggests GOP lawmakers' patience in defending the EPA chief's behavior is waning.

"Some of the things that he's done and that he's been alleged to do are just indefensible," Sen. John Kennedy (R-La.) said. "You just can't put lipstick on those pigs. You can't."

French president to call for American role in Syria [Back](#)

By Ian Kullgren | 04/22/2018 10:03 AM EDT

French President Emmanuel Macron said Sunday he will call for continued U.S. intervention in Syria before a joint session of Congress this week.

"I will advocate for multilateralism," Macron said in an interview on "Fox News Sunday."

Macron is visiting Washington this week in the first official state visit of the Trump presidency. In an interview with Chris Wallace at the presidential palace in Paris, Macron said he has a "special relationship" with President Donald Trump, describing them both as political outsiders.

"Both of us are probably the maverick of the systems on both sides," Macron said. "President Trump's election was unexpected in your country and probably my election was unexpected in my country."

Macron said that the United States is still an indispensable player for achieving peace in the Middle East, adding that France will rely on the U.S. in Syria once the conflict comes to an end.

"We will have to build a new Syria afterwards," he said.

Apple's Tim Cook attending White House state dinner for Macron [Back](#)

By POLITICO Pro Staff | 04/24/2018 07:15 PM EDT

Apple CEO Tim Cook is attending tonight's White House state dinner for French President Emmanuel Macron.

Cook was spotted arriving for the dinner with former EPA Administrator Lisa Jackson, who is now vice president of environment, policy and social initiatives for Apple, according to a pool report.

Jackson served as head of the EPA under former President Barack Obama.

Subject: Morning Energy: How 'the swamp' could overtake West Virginia's primary — Groups react to EPA's proposed 'secret science' rule — API to tap Mike Sommers

By Kelsey Tamborrino | 05/01/2018 06:01 AM EDT

With help from Garrett Ross

HOW 'THE SWAMP' COULD OVERTAKE WEST VIRGINIA'S PRIMARY: West Virginia Attorney General Patrick Morrisey may be touting himself in the GOP Senate primary as a Washington outsider who wants to "blow up" D.C., but his opponents are dragging him through the muddy swamp. "Morrisey got filthy rich in the swamp lobbying for special interests," says the narrator of one of his opponent Rep. Evan Jenkins' ads, Pro's Theodoric Meyer reports. And while Morrisey, who's hoping to take on Democratic Sen. Joe Manchin this fall, has so far weathered the attacks and continues to do well in public polling, the May 8 vote will ultimately test whether GOP voters are willing to send a former lobbyist to Washington.

"Morrisey's self-described 'outsider' rhetoric cloaks an insider record: Before he was elected attorney general, Morrisey spent eight years as a Washington lobbyist, and the influence industry has fueled his campaign with hundreds of thousands of dollars in contributions," Theo writes. "It's going to be challenging, because the word 'lobbyist' has such negative connotations," said Cam Savage, a Republican operative who helped run Sen. Todd Young's successful 2016 campaign against former Democratic Sen. Evan Bayh, whose work for a Washington law and lobbying firm hindered his campaign. Read more.

IN THE OTHER CORNER of the Republican primary sits coal baron Don Blankenship, who spent a year in prison following the 2010 explosion at his Upper Big Branch Mine that killed 29 workers and who continues to escalate his attacks against Senate Majority Leader Mitch McConnell, POLITICO's Alex Isenstadt reports. The Senate hopeful is out with a new ad that dubs McConnell "Cocaine Mitch" as polls show Blankenship falling behind his more mainstream opponents. "One of my goals as U.S. senator will be to ditch Cocaine Mitch," Blankenship says toward the end of the new ad, possibly referring to a 2014 report in the liberal Nation magazine that drugs were once found aboard a shipping vessel owned by the family of McConnell's wife, Transportation Secretary Elaine Chao, Alex reports.

WELCOME TO TUESDAY! I'm your host Kelsey Tamborrino. BP America's Bob Stout was the first to correctly guess that former President Calvin Coolidge was the first president to attend the White House Correspondents' Dinner. For today: Which president brought the first professional baseball team to the White House to visit? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter @kelseytam, @Morning_Energy and @POLITICOPro.

POLITICO's Ben White is bringing Morning Money to the Milken Institute Global Conference to provide coverage of the day's events and evening happenings. The newsletter will run April 29 - May 2. **Sign up to keep up with your daily conference coverage.**

WHILE CONGRESS IS AWAY, THE CONFERENCES WILL PLAY: The National Hydropower Association continues its Waterpower Week in Washington today with remarks from FERC Chairman Kevin McIntyre and Thomas Smith, chief of operations and regulatory division for the U.S. Army Corps of Engineers. McIntyre will discuss the "global frontiers of waterpower," providing an update on FERC's

hydropower activities and his perspective on the industry's future. Smith will deliver remarks during the presidential luncheon this afternoon, alongside Herbie Johnson, hydro general manager at the Southern Company. The annual conference is tied to three co-located conferences, including the NHA conference, the International Marine Renewable Energy Conference and the Marine Energy Technology Symposium.

— **The Solar Summit 2018 also kicks off today in San Diego**, where Abigail Ross Hopper, president and CEO of the Solar Energy Industries Association, will discuss solar in the Trump era, with a focus on the corporate tax reform, Section 201 and other macro-level risks. Hopper will be joined on stage by Avangrid Renewables' Laura Beane and Charlie Gray, director of the Solar Energy Technologies Office at DOE's Office of Energy Efficiency & Renewable Energy.

A LOAN IN THE SUN: Coinciding with the solar conference, GTM Research is out with a new report this morning on U.S. residential solar financing. The report found that last year was the first year since 2011 when more systems have been purchased with cash and loans (59 percent) than with leases and power purchase agreements (41 percent). That's in part due to the availability of loan products, as well as a shortage of third-party ownership suppliers, and Tesla and Vivint's move away from third-party ownership, the GTM report found.

The report also said that competition has intensified in solar loans, with various solar-specific loan providers, traditional banks and credit unions entering the realm. The increased competition has led to "uber-competitive rates and therefore compressed margins, leaving questions about the financial health and long-term viability of many of these loan providers," a summary of the report said.

RULE REACTIONS: EPA is moving full-speed ahead in its controversial scientific policy that would exclude the use of studies that don't publicly disclose all data. The agency published the proposed rule in the Federal Register on Monday, kicking into gear a 30-day comment period. And already, several groups have come forward to oppose the policy, laying out what they see as the policy's adverse effects — and calling for more consideration before any formal change.

— **The Union of Concerned Scientists** — which sent a letter signed by more than 1,000 scientists to EPA Administrator Scott Pruitt last week asking him to reverse course prior to the rule's announcement — plans to send another urging for the comment period to be extended a minimum of 60 days and calling for the agency to hold three public hearings across the U.S. to receive additional input. "The current timeframe and lack of opportunities for engagement are wholly inadequate and will not allow for thorough public input of this proposed rule and its impact on science-based health and environmental safeguards." Read the letter here.

— **A group of scientific journals** released a joint statement saying that the proposal "does not strengthen policies based on scientific evidence to limit the scientific evidence that can inform them; rather, it is paramount that the full suite of relevant science vetted through peer review, which includes ever more rigorous features, inform the landscape of decision making. Excluding relevant studies simply because they do not meet rigid transparency standards will adversely affect decision-making processes."

A SOMMERS DAY: The American Petroleum Institute is expected to tap Mike Sommers to replace Jack Gerard to lead the oil and gas industry lobbying group, two sources tell POLITICO's Emily Holden and Eric Wolff. Sommers was former House Speaker John Boehner's chief of staff and has since spent two years leading the American Investment Council, a private equity trade group. Gerard announced earlier this year that he would step down in August. Read more.

TRUMP GRANTS TARIFF EXTENSION FOR SOME: The president extended a temporary exemption by one month for Canada, Mexico and the European Union from heavily watched steel and aluminum tariffs, the White House announced Monday. The move gives the key U.S. allies until June 1 to reach a deal with the administration to avoid the tariffs of 25 percent on steel and 10 percent on aluminum exports sent to the United

States. The tariffs were slated to take effect at 12:01 a.m. today if President Donald Trump had not moved to extend the deadline, POLITICO's Megan Cassella [reports](#).

WHISTLEBLOWER SAYS PRUITT LIED: Kevin Chmielewski, the former deputy chief of staff for operations at EPA, told ABC News Pruitt was telling a "bold-faced" lie last week when he testified to lawmakers that none of his employees were retaliated against for raising concerns about his spending decisions. Chmielewski, who was dismissed and is now acting as a whistleblower, told ABC that chief of staff Ryan Jackson called him into his office and said: "Hey — Administrator Pruitt either wants me to fire you or put you in an office so that he doesn't have to see you again." Chmielewski added: "And in addition to that, he wants to put Millan (Hupp) in your spot, as your title and your pay grade."

EPA declined to comment to ABC in response to Chmielewski's allegations, but the outlet said it obtained a personnel form filled out by EPA human resources officials that said Chmielewski resigned on March 17. "The form is not signed by Chmielewski, who says he was actually forced to leave a month before that date," ABC writes. [Read more.](#)

DEMOCRATS PRESS PRUITT ON TESTIMONY: Separately, Democratic Reps. [Doris Matsui](#) and [Paul Tonko](#) sent a letter Monday calling out a different aspect of Pruitt's testimony last week before Congress. The pair point to a contradiction between Pruitt's remarks and reports that the administration has [drafted](#) a proposed rulemaking to block California's waiver authority to set stricter standards for light-duty vehicles. "If true, these reports directly contradict your testimony last week. As you were reminded at the start of that hearing, it is a violation of the law to knowingly make false statements to a Congressional committee," Matsui and Tonko write in a letter to Pruitt. Asked last week about whether he would revoke California's special Clean Air Act waiver, Pruitt [told lawmakers](#) "not at present." The lawmakers requested Monday that Pruitt provide all documentation related to the development of the notice of proposed rulemaking by Friday. [Read the letter here.](#)

SAGE SUIT: Conservation groups are suing the Trump administration over policies that they say would "adversely impact essential habitats and populations" for the greater sage grouse. The lawsuit, filed in the U.S. District Court in Boise, concerns Interior Department's oil and gas lease auctions in Nevada, Utah, Montana, Wyoming and Idaho — and calls on the court to reverse the sales. "There's no scientific or legal support behind these policies, and no public support for them either," said Michael Saul, a senior attorney at the Center for Biological Diversity. "They're clearly intended to make fossil fuel development the dominant use of public land, and that's illegal." [Read the complaint.](#)

DOE 'ENCOURAGED' BY PJM MOVE: The Energy Department said it was "encouraged" by news Monday that PJM Interconnection [will perform](#) "stress tests" on different parts of the grid to identify fuel supply vulnerabilities. "PJM's concerns are consistent with what DOE, NERC, and others have been saying for years: premature retirements of fuel-secure resources are putting the future of our nation's electric grid at risk, and that undermines our national security," DOE press secretary Shaylyn Hynes said in a statement. DOE urges the regulatory agency "to take immediate action to stop the loss of fuel-secure capacity," Hynes said, adding that DOE continues to review all of its options within its authority to ensure a resilient grid. Recently, Energy Secretary Rick Perry [has considered](#) invoking the 1950 Defense Production Act to keep money-losing power plants running by designating them as crucial for national security.

BY PROXY: A new report from the American Council for Capital Formation out today found that proxy advisory firms — which advise shareholders on how to assess and vote on company plans — are operating with minimal oversight and are moving toward an increasingly activist stance on issues relating to the environment, as well as social and political issues. The report, titled "The Conflicted Role of Proxy Advisors," examines the impact such proxy firms have on major policies at most publicly traded companies. [Read it here.](#)

FIRST OFFICIAL DAY ON THE JOB: Today is Secretary of State Mike Pompeo's first full day in Foggy Bottom, where he will deliver a speech to introduce himself to the department. POLITICO's Nahal Toosi breaks

down the differences between Pompeo and his predecessor and former Exxon Mobil CEO Rex Tillerson [here](#). But keep an ear out for any climate mentions, as diplomats and environmentalists [gather](#) today in Bonn, Germany, to work out the kinks of the Paris climate agreement. Greens have hit Pompeo as a climate science doubter, while others like Competitive Enterprise Institute's Myron Ebell have said the Kansas Republican will be a "forceful advocate" of Trump's decision to exit the Paris accord.

A PENNY FOR YOUR FREETHOUGHT CAUCUS: Democratic Reps. [Jared Huffman](#), [Jamie Raskin](#), [Jerry McNerney](#) and [Dan Kildee](#) launched the Congressional Freethought Caucus on Monday "to promote sound public policy based on reason, science, and moral values, protect the secular character of our government, and champion the value of freedom of thought worldwide." In a [statement](#), Huffman said the caucus "will help spark an open dialogue about science and reason-based policy solutions."

PAY THE PRICE: The New York Independent System Operator and state policymakers released [a draft plan](#) on Monday to price carbon as part of the electric system, Pro New York's Marie French reports. The move comes as an early step toward addressing the impact of state subsidies for renewables and nuclear power on the competitive market. "Under the proposal, a social cost of carbon set by state regulators would be added on to regional energy prices," Marie writes. Read [more](#).

MAIL CALL! A coalition of more than 160 groups sent a letter to Interior Secretary Ryan Zinke on Monday in opposition to the department's [proposal](#) to rescind the "blanket rule" the U.S. Fish and Wildlife Service used to extend protections for endangered species. Read the [letter](#).

— **Oregon Sens. [Ron Wyden](#) and [Jeff Merkley](#)** and Reps. [Earl Blumenauer](#), [Peter DeFazio](#), [Suzanne Bonamici](#) and [Kurt Schrader](#) sent a letter Monday to Office of Management and Budget Director Mick Mulvaney and Assistant Army Secretary R.D. James., requesting federal officials support a flood protection feasibility study for Portland. Read it [here](#).

MOVER, SHAKER: The White House is expected to tap California agriculture attorney Michael Stoker to lead EPA's San Francisco-based Region 9 office, [sources tell E&E News](#). The regional office is the only one to which Trump has not appointed a leader.

A NEW LOOK: Trade association the American Exploration & Production Council is launching today a [new website](#) and [Twitter](#) and [Facebook](#) accounts. The new website will include videos, fact sheets, info-graphics and issue pages.

QUICK HITS

— Utilities, oil interests clash over EV policy at conservative policy summit, [Utility Dive](#).

— Contura, Alpha to merge, creating largest U.S. met coal producer, [Reuters](#).

Stories from POLITICO Pro

Lobbyists fuel lobbyist-turned-'outsider' Senate candidate [Back](#)

By Theodoric Meyer | 05/01/2018 05:00 AM EDT

West Virginia Attorney General Patrick Morrisey has gone a notch above pledging to "drain the swamp" during his Senate campaign. "Let's not just change Washington; let's blow it up," Morrisey says in an early [TV ad](#), as he drops a mountain on the Capitol dome.

But Morrisey's self-described "outsider" rhetoric cloaks an insider record: Before he was elected attorney general, Morrisey spent eight years as a Washington lobbyist, and the influence industry has fueled his campaign with hundreds of thousands of dollars in contributions. Morrisey's wife is also a lobbyist, and their work in D.C. has been the subject of unforgiving attacks from both of Morrisey's opponents in the Republican Senate primary.

"Morrisey got filthy rich in the swamp lobbying for special interests," the narrator says in [one](#) of Rep. [Evan Jenkins'](#) commercials.

Morrisey has weathered the attacks, leading the field or running a close second in recent public polls of the Republican primary to take on Democrat [Joe Manchin](#), one of the most vulnerable senators up for reelection this year. The race has attracted national attention as Washington Republicans attempt to derail the candidacy of Don Blankenship, the former coal-mining executive who spent a year in prison for his role in a mine explosion that killed 29 men. But next week's primary will also test whether GOP voters are willing to send a former lobbyist to Washington, despite President Donald Trump's vow to curb K Street's influence.

"It's going to be challenging, because the word 'lobbyist' has such negative connotations," said Cam Savage, a Republican operative who helped run Sen. [Todd Young's](#) (R-Ind.) successful 2016 campaign against former Democratic Sen. Evan Bayh, whose work for a Washington law and lobbying firm hindered his campaign.

While Morrisey has tried to deflect attention away from his lobbying past, he has embraced it behind the scenes. Morrisey's campaign raised more than \$250,000 from more than 200 current and former registered lobbyists through March 31, according to a POLITICO review of campaign finance records — accounting for nearly 20 percent of his individual donations.

Morrisey has raised even more from corporate and lobbying firm PACs, as well as from people who aren't registered lobbyists but clearly work in Washington's influence industry, such as former Rep. Mike Ferguson (R-N.J.), who heads BakerHostetler's federal policy team but isn't registered as a lobbyist. Of the \$250,000, roughly \$167,000 of it comes from lobbyists who are currently registered.

Many of Morrisey's lobbyist contributors work for health care and pharmaceutical interests, which Morrisey represented during his own years on K Street. They include Rodger Currie, the top lobbyist for Pharmaceutical

Research and Manufacturers of America, the powerful trade group for drug companies, who wrote Morrisey's campaign a \$2,000 check in December.

Former Rep. David Jolly (R-Fla.), a former lobbyist elected in 2014, said his lobbying background "was definitely an issue that my opponents tried to use to define me" in the race. He was able to overcome those attacks, he said, because he hadn't lobbied for clients that voters found objectionable.

Morrisey represented about 30 clients during his time at two Washington firms, Sidley Austin and King & Spalding, including big pharmaceutical companies such as Bayer, Novartis and Novo Nordisk. If Jolly had represented such clients, he said, he might have had a tougher race.

"These are very fair and legitimate questions," Jolly said.

Morrisey has shied away from discussing his lobbying days, instead casting himself as an outsider and conservative in contrast with Jenkins, who used to be a Democratic state legislator.

Morrisey refused to say the word "lobbyist" during a debate last week, even as Jenkins and Blankenship attacked him for lobbying for the pharmaceutical industry — a sensitive subject in a state that's struggling to combat an opiate crisis partly fueled by drug distributors. Asked by the moderators at the end of the debate to clear up a misconception about himself, Morrisey said only that he'd "never worked on opiate issues in the private sector."

Morrisey's campaign website uses similar language, describing him as a former "health care attorney in the private sector."

Jenkins, who's facing Blankenship and Morrisey in the three-way race for the nomination, has raised far less from K Street, even though, as a sitting congressman, he has plenty of opportunity to mingle with lobbyists, too.

A review of Jenkins' campaign finance reports turned up only 10 current and former lobbyists who had given a combined \$20,000 to his campaign since he filed to run last May. Four of them are currently registered. Jenkins has raised much more than Morrisey from corporate PACs: about \$136,000 to Morrisey's \$86,000, according to a POLITICO analysis.

Morrisey's campaign declined to make him available for an interview.

"Patrick Morrisey served as a law partner and practice group co-chair at two of the largest law firms in the country, focusing his practice on health care regulatory matters, legislative issues, compliance, fraud and abuse, administrative law, investigations, and solving client problems," Nachama Soloveichik, a Morrisey campaign spokeswoman, said in a statement.

Preeya Noronha Pinto, a partner at King & Spalding who lobbied alongside Morrisey and gave his campaign \$500 last year, said much of their work involved meeting with administration officials and, occasionally, members of Congress in an effort to get Medicare, Medicaid and other government health care programs to cover new drugs and medical devices developed by their clients. She said she hadn't seen the ad in which Morrisey drops a mountain on the Capitol, but she wasn't surprised he was running a campaign critical of Washington.

"I think everybody in a certain respect, even if they've worked here for years, thinks that D.C. is dysfunctional and there's a lot of room for improvement," Pinto said.

Morrisey's wife, Denise Henry Morrisey, has also been the subject of attacks based on her lobbying work.

"His wife's firm lobbies for Planned Parenthood," the narrator charges in one of Blankenship's TV ads. "The Morrisseys won't stop drug abuse or abortions by lobbying for drug companies and abortion clinics."

Soloveichik, the Morrissey campaign spokeswoman, said Denise Morrissey would stop lobbying if her husband were elected to the Senate. But she declined to say whether Denise Morrissey would give up her stake in Capitol Counsel, a top Washington firm in which she owns a 15 percent stake.

Denise Morrissey agreed to an interview with POLITICO last week but later stopped responding to emails and phone calls.

Savage, the Republican operative who worked as a consultant on Young's campaign in 2016, said it was possible to parry lobbying attacks — but only with willingness to answer questions about it.

Savage managed former GOP Sen. Dan Coats' comeback campaign in Indiana in 2010, when he won back his old seat in 2010 after working as a lobbyist. Savage credited Coats' victory, in part, to his willingness to be forthcoming about his lobbying work.

"The attacks after that kind of fell flat, to be honest with you," Savage said.

Kevin Robillard contributed to this report.

Blankenship slams 'Cocaine Mitch' in anti-McConnell ad [Back](#)

By Alex Isenstadt | 04/30/2018 06:23 PM EDT

West Virginia Senate hopeful Don Blankenship is intensifying his offensive against Majority Leader Mitch McConnell, calling him "Cocaine Mitch" in a new TV ad released just more than a week until the Republican primary.

"One of my goals as U.S. senator will be to ditch Cocaine Mitch," Blankenship says toward the end of the [spot](#), which comes as polls show the coal baron falling behind his more mainstream opponents.

Blankenship, who spent a year in prison following the 2010 explosion at his Upper Big Branch Mine that killed 29 workers, offers no context for the jab. But he may be referring to a 2014 [report](#) in the liberal Nation magazine that drugs were once found aboard a shipping vessel owned by the family of McConnell's wife, Transportation Secretary Elaine Chao.

Blankenship has gone after McConnell in startlingly personal ways. During a recent interview with POLITICO, Blankenship said McConnell "has a lot of connections in China," and that Chao is "from China, so we have to be really concerned that we are in truth" putting America's interests first.

A McConnell representative did not respond to a request for comment.

With the May 8 primary fast approaching, Blankenship has launched a slash-and-burn campaign targeting the Senate GOP leader. Blankenship's offensive comes as polls show him falling behind GOP Rep. Evan Jenkins and state Attorney General Patrick Morrisey in the primary.

McConnell's political operation has moved aggressively to block Blankenship's path. Operatives close to the majority leader, convinced that Blankenship would lose to Democrat Joe Manchin in the November general election, have launched a super PAC that has spent about \$1.3 million on TV ads attacking the coal baron.

One ad from Mountain Families PAC describes Blankenship as a "convicted criminal," who lived a lavish lifestyle while ignoring mine safety laws.

"Don Blankenship was about the money," the spot concludes. "West Virginia families paid the price."

Pruitt scales back EPA's use of science [Back](#)

By Emily Holden and Annie Snider | 04/24/2018 03:17 PM EDT

Environmental Protection Agency chief Scott Pruitt announced Tuesday he would seek to bar the agency from relying on studies that don't publicly disclose all their data, a major policy change that has long been sought by conservatives that will sharply reduce the research the agency can rely on when crafting new regulations.

The unveiling of the proposed rule delivers a win to Republicans like House Science Chairman [Lamar Smith](#) (R-Texas), who unsuccessfully pushed legislation to impose the same type of change. The move also demonstrates Pruitt's persistence in pursuing President Donald Trump's anti-regulation agenda just two days before the embattled EPA chief is due to face fierce questioning from lawmakers about his hefty spending, expanded security detail and cheap condominium rental from the wife of an energy lobbyist.

At an invitation-only meeting at EPA headquarters with Smith, Sen. [Mike Rounds](#) (R-S.D.) and other supporters of the policy, Pruitt said the proposed rule was critical in ensuring that the agency was transparent about how it is making decisions to justify costly new regulations. It is the latest step Pruitt has taken to fundamentally shift the agency's approach to science.

"It is a codification of an approach that says as we do our business at the agency the science that we use is going to be transparent, it's going to be reproducible, it's going to be able to be analyzed by those in the marketplace. And those who watch what we do can make informed decisions about whether we've drawn the proper conclusions or not," Pruitt said.

Text of the proposed rule was not immediately available.

The proposal, based on legislation pushed by Smith, is intensely controversial, and scientists and public health groups say it will prevent federal regulators from enacting health and safety protections. Nearly 1,000 scientists, including former EPA career staffers, signed a [letter](#) opposing the policy sent by the Union of Concerned Scientists to Pruitt on Monday.

Their primary concern was that many of the country's bedrock air and water quality regulations are based on research that cannot disclose raw data because it includes the personal health information.

But industry has its own version of the same problem. EPA often relies on industry studies that are considered by companies to be confidential business information when determining whether new pesticides and toxic chemicals are safe to use. Internal EPA emails obtained under the Freedom of Information Act show that EPA political officials, including Nancy Beck, who became the chief of the agency's chemical safety office last year after working for years at a chemical industry lobbying group, worried that the new policy would limit the agency's ability to consider industry data or would force companies to make this proprietary data public.

"We will need to thread this one real tight!" Richard Yamada, political official who led work on the new policy wrote to Beck after she raised the concerns.

It was not immediately clear if the new proposed rule included measures to address those concerns.

Rush Holt, CEO of the American Association for the Advancement of Science, said Pruitt's changes could keep the agency from revising public health regulations as problems arise or new data comes to light.

"On the surface it sounds so innocuous or even beneficial. What could be wrong with transparency? Well it's clear to me that this is not based on an effort to be transparent. It is rather based on an effort to be just the opposite," he said.

"EPA is particularly important because when science is misused, people die," he added.

Pruitt has been discussing the new scientific policy publicly for weeks, but it only went to the White House for interagency review last week. Such swift review is very rare for the Office of Management and Budget, which often takes months to vet a new policy. At least one group, the Environmental Defense Fund, has requested a meeting with OMB officials to discuss the rule, but OMB's website shows that no meetings have been scheduled with interested groups.

Many public health studies can't be replicated without exposing people to contaminants, and environmental disasters such as the Deepwater Horizon oil spill cannot be recreated, the group said, raising intellectual property, proprietary and privacy concerns.

Pruitt's predecessor Gina McCarthy, and her air chief Janet McCabe, in an op-ed in The New York Times in March said concerns about studies are dealt with through the existing peer-review process, which ensures scientific integrity.

"[Pruitt] and some conservative members of Congress are setting up a nonexistent problem in order to prevent the E.P.A. from using the best available science," they said.

Pruitt scales back EPA's use of science [Back](#)

By Emily Holden and Annie Snider | 04/24/2018 03:17 PM EDT

Environmental Protection Agency chief Scott Pruitt announced Tuesday he would seek to bar the agency from relying on studies that don't publicly disclose all their data, a major policy change that has long been sought by conservatives that will sharply reduce the research the agency can rely on when crafting new regulations.

The unveiling of the proposed rule delivers a win to Republicans like House Science Chairman Lamar Smith (R-Texas), who unsuccessfully pushed legislation to impose the same type of change. The move also demonstrates Pruitt's persistence in pursuing President Donald Trump's anti-regulation agenda just two days before the embattled EPA chief is due to face fierce questioning from lawmakers about his hefty spending, expanded security detail and cheap condominium rental from the wife of an energy lobbyist.

At an invitation-only meeting at EPA headquarters with Smith, Sen. Mike Rounds (R-S.D.) and other supporters of the policy, Pruitt said the proposed rule was critical in ensuring that the agency was transparent

about how it is making decisions to justify costly new regulations. It is the latest step Pruitt has taken to fundamentally shift the agency's approach to science.

"It is a codification of an approach that says as we do our business at the agency the science that we use is going to be transparent, it's going to be reproducible, it's going to be able to be analyzed by those in the marketplace. And those who watch what we do can make informed decisions about whether we've drawn the proper conclusions or not," Pruitt said.

Text of the proposed rule was not immediately available.

The proposal, based on legislation pushed by Smith, is intensely controversial, and scientists and public health groups say it will prevent federal regulators from enacting health and safety protections. Nearly 1,000 scientists, including former EPA career staffers, signed a letter opposing the policy sent by the Union of Concerned Scientists to Pruitt on Monday.

Their primary concern was that many of the country's bedrock air and water quality regulations are based on research that cannot disclose raw data because it includes the personal health information.

But industry has its own version of the same problem. EPA often relies on industry studies that are considered by companies to be confidential business information when determining whether new pesticides and toxic chemicals are safe to use. Internal EPA emails obtained under the Freedom of Information Act show that EPA political officials, including Nancy Beck, who became the chief of the agency's chemical safety office last year after working for years at a chemical industry lobbying group, worried that the new policy would limit the agency's ability to consider industry data or would force companies to make this proprietary data public.

"We will need to thread this one real tight!" Richard Yamada, political official who led work on the new policy wrote to Beck after she raised the concerns.

It was not immediately clear if the new proposed rule included measures to address those concerns.

Rush Holt, CEO of the American Association for the Advancement of Science, said Pruitt's changes could keep the agency from revising public health regulations as problems arise or new data comes to light.

"On the surface it sounds so innocuous or even beneficial. What could be wrong with transparency? Well it's clear to me that this is not based on an effort to be transparent. It is rather based on an effort to be just the opposite," he said.

"EPA is particularly important because when science is misused, people die," he added.

Pruitt has been discussing the new scientific policy publicly for weeks, but it only went to the White House for interagency review last week. Such swift review is very rare for the Office of Management and Budget, which often takes months to vet a new policy. At least one group, the Environmental Defense Fund, has requested a meeting with OMB officials to discuss the rule, but OMB's website shows that no meetings have been scheduled with interested groups.

Many public health studies can't be replicated without exposing people to contaminants, and environmental disasters such as the Deepwater Horizon oil spill cannot be recreated, the group said, raising intellectual property, proprietary and privacy concerns.

Pruitt's predecessor Gina McCarthy, and her air chief Janet McCabe, in an op-ed in The New York Times in March said concerns about studies are dealt with through the existing peer-review process, which ensures scientific integrity.

"[Pruitt] and some conservative members of Congress are setting up a nonexistent problem in order to prevent the E.P.A. from using the best available science," they said.

API's Gerard to exit on an oil industry winning streak [Back](#)

By Ben Lefebvre | 01/17/2018 06:05 PM EDT

American Petroleum Institute President and CEO Jack Gerard's plan to exit the powerful trade association could signal the end an era for oil industry lobbying.

Gerard notched up a long list of achievements during his 10-year tenure, which coincided with the oil and gas boom that turned the U.S. into the world's largest energy producer. He will step down in August after deciding not to renew his contract, API announced.

Gerard took the helm at the API after leading the American Chemistry Council and the National Mining Association. And he was well compensated, receiving \$6 million in salary and other compensation as of 2015, according to the API's latest tax forms.

During his time atop API, flagging U.S. production rebounded with the advent of fracking and horizontal drilling, allowing energy producers to tap new resources in North Dakota, Appalachia and West Texas. And as overall oil output doubled to nearly 10 million barrels a day, API's membership swelled by 50 percent, to more than 600 companies.

That helped API to expand its reach, and it doled out \$9.4 million on lobbying Washington lawmakers in 2017, quadruple the amount it spent in the year Gerard took the helm.

API helped overturn the decades-old ban on oil exports, open new areas to drilling — including the Arctic National Wildlife Refuge — and win federal approval for the Keystone XL pipeline. And under Gerard, API also introduced the term that would eventually be taken up by President Donald Trump, when in 2012 it called for a "new era of American world energy dominance."

"We've taken the nation from energy scarcity to energy abundance," Gerard said of the industry at the API's annual State of American Energy address in Washington earlier this month.

But he warned at that event that it wasn't time for API to take "a victory lap," as he cited a to-do list that contained little more than continuing a yearslong fight to repeal a biofuels mandate the industry finds burdensome and streamlining the federal permitting process.

"It's hard to say API wasn't successful under his tenure," said John Northington, a former Clinton-era Interior Department official who works as an energy consultant for many API member companies, adding that it delivered much of what the industry wanted to accomplish.

Not all energy industry insiders agreed, however. Some pointed that for an organization with annual revenue of around \$250 million — much of which it spent on advertisements, including one that ran during last year's Super Bowl, or donations to Republicans — the API's influence was limited. Despite a string of recent wins, it hadn't managed to record any progress in altering the decade-old Renewable Fuel Standard for biofuels or ending restrictions under the Jones Act against foreign-flagged ships transporting fuel between U.S. ports.

"They have this ridiculous amount of money, but they don't get a lot of results," said one refining industry source who requested anonymity to discuss the association. "They don't do bad work, but for that kind of money, you expect more."

The API's ranks have also become divided over how to handle growing public concern about the oil and gas industry's role in climate change. The group in 2016 created a task force to massage the industry's environmental image and work Democrats on a potential carbon tax, a policy that drives a wedge between companies like Exxon Mobil, which has supported such a tax, and Chevron, which has opposed it.

An API spokeswoman said it was unknown whether Gerard was retiring or would join another organization. Gerard will help lead the search for a new president and CEO, the spokeswoman added.

One possible replacement for Gerard is API's current executive vice president and chief strategy officer, Marty Durbin. Durbin had been in charge of API's government affairs before departing to become head of the lobby group America's Natural Gas Alliance, which subsequently merged with API.

Other names floated by industry insiders as potential candidates included Mike Sommers, a former chief of staff for former House Speaker John Boehner, now CEO of the American Investment Council; Karen Harbert, head of the U.S. Chamber of Commerce's Global Energy Institute; and former Sen. Blanche Lincoln, an Arkansas Democrat.

An API spokeswoman did not comment on possible candidates.

Sources: API expected to tap Sommers as new chief [Back](#)

By Emily Holden and Eric Wolff | 04/30/2018 04:33 PM EDT

The American Petroleum Institute is expected to tap Mike Sommers, the head of a private equity trade group who worked as a top aide to former House Speaker John Boehner, to replace Jack Gerard at the helm of the powerful oil and gas industry lobby group, according to two sources.

Gerard announced his retirement earlier this year after a decade at the helm of the API, where he notched up a long list of achievements including overturning the decades-old ban on crude oil exports. He will step down in August.

API did not reply to a request for comment.

The oil and gas industry has so far gotten strong support from the Trump administration, which has moved to open the Arctic National Wildlife Refuge to exploration, is considering making wide swathes of coastal waters available to the industry, and last week said it would roll back some Obama offshore drilling rules.

But API has urged the White House to scrap its steel and aluminum tariffs, and to keep core provisions of NAFTA in place as it negotiates an update to the trade agreement.

Sommers, who was Boehner's chief of staff, has led the American Investment Council for two years, a position that kept him close to Arclight Capital Partners, The Blackstone Group, EnCap Investments and other firms that have invested heavily in energy projects. He also served as an aide to former President George W. Bush in 2005 at the National Economic Council working on agriculture, trade and food policy.

Barry Worthington, CEO of the United States Energy Association, which brings together public and private organizations, corporations and government agencies, said he'd been told Sommers would succeed Gerard.

"Jack Gerard is going to be a tough act to follow," he said.

Gerard was also one of the best-paid lobbyists in Washington, D.C. He received \$5 million in direct compensation from API, plus another \$1.2 million in perks in 2015, according to the group's latest IRS forms.

Marianne Levine and Ben Lefebvre contributed to this report.

Trump grants key U.S. allies an extra month of tariff relief [Back](#)

By Megan Cassella | 04/30/2018 05:57 PM EDT

President Donald Trump has decided to extend by one month a temporary exemption from steel and aluminum tariffs for Canada, Mexico and the European Union, the White House announced Monday evening.

The move gives key allies — and three of the U.S.' four largest trading partners — until June 1 to reach some sort of deal with the Trump administration to avoid duties of 25 percent on steel and 10 percent on aluminum exports sent to the United States. The tariffs had been set to take effect at 12:01 a.m. Tuesday if Trump had not moved to extend the deadline.

The administration has also reached preliminary agreements with three other countries that had initially been granted a temporary exemption — Argentina, Brazil and Australia — allowing them to escape the duties as details are finalized over the next 30 days, the White House said. Trump did not set a deadline for those details to be worked out but said he would consider reimposing the tariffs if the agreements are not finalized "shortly."

One other country, South Korea, had already reached a preliminary deal for a permanent exemption from the steel tariffs because it agreed to cap its exports to the U.S. at 70 percent of the average export volume over the previous three years. Trump's official proclamation said the administration will monitor the implementation and effectiveness of that quota and left room for Trump to "revisit" his decision if needed.

"In all of these negotiations, the administration is focused on quotas that will restrain imports, prevent transshipment, and protect the national security," the White House said in its declaration. "These agreements underscore the Trump administration's successful strategy to reach fair outcomes with allies to protect our national security and address global challenges to the steel and aluminum industries."

The declaration brings some clarity to a decision-making process that until the official release left key allies wondering whether they would beginning Tuesday face penalties sure to roil international markets and disrupt global supply chains. Few people inside the White House or overseas had been sure of what or even when Trump would decide.

Imposing the duties would also have affected foreign steel industries that depend on access to the U.S. market. Canada and Mexico both send more than half of their steel produced annually into the United States, while the 28 nations of the EU together serve as the largest single supplier of steel to the U.S.

Of \$29.1 billion worth of steel that the United States imported last year, \$6.2 billion came from the 28 nations of the EU and \$2.9 billion from other European countries. About \$5.1 billion came from Canada, \$2.8 billion from South Korea, \$2.5 billion from Mexico, \$1.6 billion from Japan, \$1.4 billion from Russia and just \$976 million from China.

A U.K. government spokesperson called the extension "positive" and said EU countries would continue to work to reach a permanent solution.

"We remain concerned about the impact of these tariffs on global trade and will continue to work with the EU on a multilateral solution to the global problem of overcapacity, as well as to manage the impact on domestic markets," the spokesperson said in a statement Monday night.

Although the move grants some of the United States' closest allies another month to work out a deal, it remains unclear what sort of concessions would satisfy Trump and his administration.

Commerce Secretary Wilbur Ross and other administration officials have said in recent days that countries would have to choose between either quotas or tariffs — but the EU, Canada and Mexico have said they expect a full exemption without having to agree to such restrictions.

"We're busy alienating the few friends we have left," said Bill Reinsch, a senior adviser at the Center for Strategic and International Studies. "The president clearly, on trade issues, doesn't make a distinction between the good guys and the bad guys. If you're not doing exactly what he wants, you're a bad guy by definition — and nothing else counts."

The process of deciding on the exclusions and exemptions has been chaotic since the departure of former White House staff secretary Rob Porter, who was heavily invested in trade policy and making sure that differing viewpoints were included in the decision-making process.

U.S. Trade Representative Robert Lighthizer, meanwhile, has had myriad policy questions on his plate, including the ongoing NAFTA talks and his upcoming trip to China later this week to talk trade.

With any final decision still up in the air, some nations have indicated exactly how they will retaliate if and when Trump does impose the tariffs. The European Union last month generated a list of U.S. exports ranging from peanut butter to lipstick and yachts that would face punitive 25 percent duties on their way into the European market if Brussels is not spared. The EU's list, which is valued at roughly \$3.4 billion, is largely comprised of products from Republican states and districts that would bear the brunt of the tariff impact.

At the same time, European nations have also been working among themselves and with the United States to strike a compromise. German Chancellor Angela Merkel and French President Emmanuel Macron both traveled to the White House last week to talk face-to-face about the issue with Trump, who is still toying with the decision.

Merkel and Macron both spoke over the weekend with U.K. Prime Minister Theresa May about the "vital importance" of Europe's steel and aluminum industries and pledged to work together with the rest of the EU to push for a compromise and a permanent exemption.

To that end, EU Trade Commissioner Cecilia Malmström also spoke again over the phone on Monday with Ross.

Tensions are similarly high with Canada and Mexico, who are in intensive trade negotiations with the United States to update NAFTA.

Both countries have repeatedly made clear that they expect to be granted a full, permanent exemption from the tariffs without having to agree to quotas or any other restrictions. But their temporary reprieve was contingent upon a successful completion of the NAFTA rewrite — and with that deal still at least a week away, it remains unclear whether Trump will make the exemption permanent or at least extend it on a temporary basis while negotiations continue.

For either of the U.S. neighbors, imposition of the duties would ratchet up trade tensions at a time when all three countries are working to wrap up a NAFTA negotiation that has already been technically and politically difficult.

"Obviously, Lighthizer knows very clearly our position and how we have to react if any measure is imposed," Mexican Economy Secretary Ildefonso Guajardo said Friday during a visit to Washington to talk NAFTA. "I have been very clear that in this context a quota on steel won't be the best way to go."

If the tariffs do go ultimately into effect for any of the countries involved, a key question will be whether Trump will ratchet up the pressure again after the countries inevitably retaliate, Reinsch said.

"We act, they act, that's round one. The question will be, is [Trump] then going to start round two?" he said, noting that one round of tit-for-tat is "not that unusual" but that two would be more remarkable. "I think the trade war starts in round two."

Source: EPA draft would halt auto standards at 2021 levels, block California authority [Back](#)

By Alex Guillén | 04/27/2018 06:28 PM EDT

A draft proposal from EPA would freeze auto emissions standards after model year 2021 and seek to block California's ability to enact its own more stringent regulations, according to a source familiar with the draft.

The text of the draft is still reportedly in flux, but if ultimately finalized, it would erase half a decade's worth of the Obama administration's much-touted emissions savings, handing a major win to the oil industry. It would also set up a nasty legal fight with California that many legal experts believe the state could win.

The [Los Angeles Times](#) first reported on the draft plan today.

EPA Administrator Scott Pruitt on Thursday [told](#) a House Energy and Commerce subcommittee that he did "not at present" have any plans to try to revoke California's Clean Air Act waiver to enforce more stringent standards.

"It's important that we work together to achieve, as was indicated earlier, a national standard," Pruitt added.

Automakers successfully lobbied the Trump administration to revisit the 2022-2025 standards — although most indicated they simply wanted more flexibility to reach the ultimate emissions goals in 2025. They had complained it would be difficult to meet the Obama administration's goals that would have ultimately lifted the average fuel economy target for the nation's fleet of cars and light trucks to 55 miles per gallon by 2025.

Industry trade groups and individual automakers have also cautioned that a single national standard is preferable to a regulatory patchwork of rules.

WHAT'S NEXT: EPA reportedly will send the proposal to the White House for review in the near future. The agency is working alongside the National Highway Traffic Safety Administration, which is writing its own separate but related fuel economy rules for 2022-2025 vehicles.

Pruitt: EPA not going after California's waiver 'at present' [Back](#)

By Anthony Adragna | 04/26/2018 12:04 PM EDT

EPA Administrator Scott Pruitt said today his agency is "not at present" attempting to undo California's special Clean Air Act waiver allowing the state to set stricter emissions levels for vehicles.

"It's important that we work together to achieve, as was indicated earlier, a national standard," Pruitt said at a House Energy and Commerce subcommittee hearing this morning. "We are working very diligently and diplomatically with California to find answers on this issue."

California officials have warned they would diligently challenge any effort by the Trump administration to go after the waiver.

PJM to probe fuel supply vulnerabilities [Back](#)

By Eric Wolff | 04/30/2018 11:08 AM EDT

PJM Interconnection said today it would seek to identify any fuel supply vulnerabilities in its grid and design market tools to increase resilience, a move that appears designed to head off Energy Secretary Rick Perry's effort to bail out coal-fired and nuclear power plants.

PJM says in a report out today it will run models to "stress test" different parts of the grid to see if fuel security could be compromised under different circumstances. If it finds risks of fuel constraints, it would consider allowing different prices for power from generators that are better able to hedge against fuel problems.

"As is the case with reliability standards, PJM believes the most effective way to address fuel security is to define and establish fuel security criteria and then use market forces to allow all resources to compete to meet those criteria," the report says.

The report's biggest concern appears to be a grid dominated by natural gas, since cold weather can increase demand for home heating and constrain gas supplies. The report makes only one mention of renewables.

PJM has consistently opposed efforts by DOE to exercise emergency authority under either the Federal Power Act or the Defense Production Act to directly subsidize coal or nuclear power plants struggling in the face of low cost power from natural gas and renewables.

Perry's latest bid to help coal faces uphill battle [Back](#)

By Eric Wolff | 04/25/2018 05:08 AM EDT

Energy Secretary Rick Perry's latest idea to protect coal-fired and nuclear power plants may not fare much better than his previous efforts, according to energy experts.

Perry is considering invoking the 1950 Defense Production Act to keep money-losing power plants running by designating them as crucial for national security. But that would stretch the definition of the law and almost certainly draw legal challenges — and it would hit a big hurdle in Congress, which would need to approve perhaps billions of dollars in funding to keep the plants afloat, the experts said.

At the urging of President Donald Trump, Perry has sought to keep open coal and nuclear power plants that are threatened with shutdowns amid the stagnant demand for power — and even as natural gas and renewable power sources grab a growing share of the market.

So far, Perry's had no luck. FERC earlier this year rejected his proposal to give the plants financial support, and Energy Department lawyers stymied a push last year to invoke the agency's authority under the Federal Power Act to force the plants to run.

Some experts said any attempt to use the DPA is likely to meet the same fate.

"To me, it's a tough argument to make. It's a specious argument on its surface that seems like a perversion of the intended use of the Defense Production Act," said Tom Hicks, a former acting undersecretary of the Navy under

former President Barack Obama and now a principal at the advisory firm The Mabus Group. "Defense Production Act is on the vanguard of the need for resources, not on the back end for an industry being challenged by economic forces."

But the effort has been a priority for Trump and Perry, who sees saving coal-fired power generation as vital to U.S. security, according to a source familiar with the conversations on the issue.

The Cold War-era law grants the federal government powerful authorities to inject cash into companies essential for national defense in order to preserve domestic supplies of key products. But DOE will have to make the case that electricity produced specifically from coal and nuclear power plants, and not other types of power, is a critical resource.

Using the act to protect the plants when there appeared to be no immediate shortage of power supplies would be a novel application that would almost certainly face legal challenge.

"If the administration uses DPA, they're going to be using it very creatively," said Ari Peskoe, director of the Electricity Law Initiative at the Harvard Law School Environmental and Energy Law Program. "They may come up with reasoning for higher rates and who's going to pay for it. Whether that will hold up, I don't know."

Perry and his staff appear to have very few viable options for bailing out coal and nuclear power, a major energy priority for Trump, who has promised to revive the coal industry. DOE has opened a comments process for interested parties to weigh in on its use of the Federal Power Act's 202(c) emergency provisions, though that would require the agency to go through FERC, which unanimously rejected a similar Perry effort in January.

The 202(c) effort has been pushed by coal magnate Bob Murray, owner of Murray Energy, and by FirstEnergy Solutions, the unit of FirstEnergy Corp. that is in bankruptcy proceedings and which expects to shut down four coal and nuclear power plants. That company asked DOE to use the emergency authority to save not only its plants, but all 85 coal and nuclear power plants in the PJM Interconnection power market.

The DPA was last used by the Obama administration starting in 2012 to help spur the biofuels industry to develop the kind of advanced biofuels that could power ships and aircraft. The government can purchase capital equipment for the cause of national security, and it can fund advertising to support the effort.

And it allows the government to become the buyer of last resort, which could put Washington on the hook to buy excess power generated by coal and nuclear plants. Technically, this electricity could only be purchased at the "cost of production," a level that in the past has been determined by a team within the Defense Department.

While no hard estimate for the cost of a DPA subsidy exists, consultants analyzing Perry's previous bailout proposal estimated costs between \$4 billion and \$10.6 billion annually.

That's a far higher level than Congress typically allocates for the DPA. It provided \$67.4 million in the omnibus passed in March, H.R. 1625 (115), down slightly from the \$76 million it provided for all projects in 2017, according to a report submitted to Congress.

And Congress — and the Republican Party — is deeply divided on using government subsidies to save these plants. Rep. David McKinley (R-W.Va.) has some allies from other coal districts for the effort, but other free market-oriented lawmakers like Rep. Pete Olson (R-Texas) say they want to see markets function unimpeded.

McKinley's staff has been in touch with DOE and the White House, as has West Virginia Sen. Joe Manchin (D).

"I think it's an emergency national concern for the national defense of our country. I think Rick Perry agrees with it, and I think the president does also," Manchin told POLITICO.

PJM has itself said the retirement of FirstEnergy's coal plants did not pose a threat to the region's power supplies, and that it had ample generation to meet demand. It has opposed any effort to mandate to require the plants to stay online.

"We believe that a market-oriented approach consistent with the American free-enterprise system offers better results than government-mandated subsidies," said PJM spokesman Jeff Shields.

Anthony Adragna contributed to this report.

Chatty Pompeo strikes early contrast with reclusive Tillerson [Back](#)

By Nahal Toosi | 04/30/2018 06:11 PM EDT

Mike Pompeo, the new secretary of state, is leaning hard into the side of the job his predecessor seemed to hate the most: public relations.

Within hours of being confirmed last week, Pompeo took along several journalists on a trip to Europe and the Middle East, answering their questions in public and private, and appearing Sunday on ABC News' "This Week." He's planning a town hall meeting with State Department staff soon. And he may even start tweeting.

The moves are in many ways a return to tradition for a secretary of state, a high-profile position where words are the most powerful tool. But they stand in marked contrast to the man Pompeo replaced, Rex Tillerson, whose early lack of visibility caused lingering damage to his reputation inside the Trump administration and beyond.

"It signals that, unlike Tillerson, Pompeo recognizes some of the basic things he needs to do to make the State Department relevant," said Ilan Goldenberg, a former Obama-era State official now with the Center for a New American Security. "By itself, it won't make Pompeo an effective secretary of state. But not doing these things really hurt Tillerson."

On Tuesday afternoon, his first full day in Foggy Bottom itself, Pompeo will deliver a speech introducing himself to the department. Staffers and journalists won't be the only ones listening; foreign diplomats will also parse Pompeo's words carefully.

Tillerson, too, gave a well-received speech his first full day on the job. But for months afterward, he almost seemed to have taken a vow of silence.

He refused to engage reporters, didn't hold a town hall until three months in and had no social media presence. U.S. diplomats soon found themselves aimless, lacking guidance from Tillerson and his small coterie of advisers. Veteran NBC News reporter Andrea Mitchell took to loudly asking questions of a silent Tillerson during his public appearances, videos of which went viral. The department's daily press briefing, a decades-old

tradition, was put on ice for nearly two months. Under pressure, Tillerson brought it back, but in a scaled back format. Headlines asked: "Where's Rex?"

Tillerson puzzled a foreign policy establishment used to secretaries of state — including Hillary Clinton and John Kerry — who sought, rather than shunned, public attention. Many State Department staffers came to see Tillerson as isolated and aloof. And foreign leaders who concluded he was ineffectual and out of the loop engaged directly with the White House instead.

Tillerson greatly increased his visibility in the second half of his 14-month tenure, but the damage was done. Trump fired Tillerson in mid-March.

The difference between Tillerson and Pompeo might be explained, in part, by their respective backgrounds: Tillerson had previously been a taciturn CEO of ExxonMobil, Pompeo a pugnacious congressman from Kansas.

"His background as a congressman is a great asset in his current position," said Brett Schaefer, a foreign policy analyst with the conservative Heritage Foundation. "He has a great deal of experience in interacting with a broad number of people and doing so in a way that is designed to listen to their concerns and respond to them."

Pompeo has also pledged to stay in close touch with his former colleagues in Congress. Tillerson drew criticism for being slow to respond to lawmakers' requests.

And while Tillerson showed no visible interest in social media, a person familiar with Pompeo's situation said he is considering using Twitter.

David Wade, a former chief of staff to Secretary of State John Kerry, argued that a secretary of state's public words matter well beyond the Washington Beltway. "Externally, you're in a race to define the American narrative against those like Russia and China which will fill in their own narrative if you're absent," he said.

Calling Tillerson "an abysmal failure at communications both internally and externally," Wade said Pompeo "can be a good communicator, and as a politician he's more talented than his predecessor." But, he added, "all the public diplomacy in the world can't get him out from under the weight of Trump's tweets and slurs about people from the Middle East to Africa."

The timing of Pompeo's Thursday confirmation vote allowed him to attend a long-scheduled meeting of NATO foreign ministers in Brussels the next day, winning him early plaudits from others in the military alliance.

"He actually jumped on a plane just after he was sworn in and he was able to address the North Atlantic Council, the foreign ministers of NATO, just 12 hours and 34 minutes after his confirmation," NATO Secretary General Jens Stoltenberg said with admiration.

Pompeo left Washington with six journalists on his plane. On his first major overseas trip, Tillerson brought just one reporter, from the conservative Independent Journal Review.

As he continued from Brussels to Saudi Arabia, Israel and Jordan over the weekend, Pompeo picked up two more reporters. He spoke to the reporters on the plane and also took questions during news conferences on the ground.

Tillerson, by contrast, generally avoided even the reporters who — having been denied seats on his official plane — chased him around the world on commercial flights.

Shortly after he took office, Tillerson took a quick trip to Bonn, Germany, for a meeting of G-20 foreign ministers. At an appearance on the sidelines with Russian Foreign Minister Sergey Lavrov, reporters were escorted out of the room before Tillerson gave remarks. Even Lavrov was puzzled: "Why did they shush them out?" he asked.

"I'm not a big media press access person. I personally don't need it," Tillerson would later tell the IJR reporter, who traveled with him to Asia a month later.

During his 15 months as CIA director, Pompeo forged a much closer relationship with Trump than Tillerson. He is believed to have a much better sense of where the president stands, and his own, often-hawkish views appear more in line with Trump's thinking. Pompeo has also been vocal about wanting to improve morale at the State Department, where many diplomats have been distressed over Trump's attempts to slash their budget and Tillerson's unwillingness to listen to their expertise.

In a news conference in Brussels, Pompeo pointed out that he'd met with U.S. diplomats who work in the Belgian capital and that he was committed to making his department more relevant.

The diplomats, he said, "may have been demoralized, but they seemed in good spirits. They are hopeful that the State Department will get its swagger back."

Sent: 5/9/2018 9:44:25 AM
To: Wehrum, Bill [/o=ExchangeLabs/ou=Exchange Administrative Group (FYDIBOHF23SPDLT)/cn=Recipients/cn=33d96ae800cf43a3911d94a7130b6c41-Wehrum, Wil]
Subject: Morning Energy, presented by Anheuser-Busch: Returning to the battlefield over California car rules — Pruitt screens friendly questions — Art of the RFS deal

By Kelsey Tamborrino | 05/09/2018 05:42 AM EDT

With help from Anthony Adragna

IF AT FIRST YOU DON'T SUCCEED: The looming fight between the Trump administration and the state of California over climate change rules for cars will cover some familiar terrain — where the liberal state and its environmentalist allies have won major legal battles in the past, Pro's Alex Guillén reports. The White House strategy appears to mirror the approach that automakers and dealers unsuccessfully pursued more than a decade ago in an attempt to reverse California's strict limits on vehicles' greenhouse gas emissions.

This again? California — which has a waiver under the Clean Air Act to enact stricter standards — is hoping things play out the same way it did the last time around, when two federal district courts upheld its rules, which other states also can choose to follow. "It's sort of déjà vu because it's going to be basically round two," said Kevin Leske, who was an assistant attorney general in Vermont in 2007 when the state fought off an industry lawsuit seeking to block the greenhouse gas rules for cars.

The details: At issue is the interplay between the long-standing Corporate Average Fuel Economy standards that were established under the 1975 Energy Policy and Conservation Act, and the relatively new emissions standards enforced nationally for the first time under the Obama administration. The Trump administration is expected to nullify the waiver granted to California and then try to circumvent any questions by arguing that EPCA preempts California from enforcing its auto emissions standards — essentially the same argument automakers and dealers deployed in multiple lawsuits over a decade ago.

But keep in mind: That strategy fell short the first time around. A U.S. district court judge in California concluded that greenhouse gas standards are too different from fuel economy regulations to fall under EPCA's "related to" preemption language. However, the cases were never appealed after a larger political deal was reached on the car rules, but advocates of the Trump administration's approach say they hope to take the issue to a higher court this time around. BEGS THE QUESTION: EPA Administrator Scott Pruitt and his staff sought extensive control over questions that could be asked to the administrator when he toured the country speaking to industry groups, POLITICO's Anthony Adragna and Emily Holden report. Even seemingly friendly questions got axed by the agency, like, "How often do you get back to Oklahoma?" That question was crossed off a proposed list of questions without

an explanation ahead of Pruitt's appearance in December at an event in Iowa, internal emails made public by the Sierra Club through a public records lawsuit show. (At the time, EPA's inspector general was already investigating Pruitt's frequent trips back home.) The emails offer new insight into EPA staff's desires to limit access by independent journalists, pre-screen questions from friendly interviewers and coordinate Pruitt's message with lobbyists ahead of gatherings with conservative or industry groups. Read the details [here](#).

WHAT HAPPENED AT THAT BIOFUELS POWWOW: President Donald Trump appears to have brokered a deal in the long-running fight between ethanol producers and oil refiners over federal biofuels mandates. At a White House meeting Tuesday with Pruitt, Agriculture Secretary Sonny Perdue and a few Republican senators. Trump reiterated his pledge to allow 15 percent ethanol fuels year-round and rejected a price cap on biofuel credits, called Renewable Identification Numbers. Those are both big wins for the corn crowd, Pro's Eric Wolff [reports](#). But ethanol producers groused about another proposed aspect of the deal that would lower compliance costs for refiners: allowing ethanol exports to qualify for RINs. Refiners, meanwhile, were wary of a separate proposal for EPA to require large refiners to take on the ethanol-blending requirements for which it issued dozens of waivers to smaller refiners.

IT'S KIND OF INFRASTRUCTURE WEEK: Close to none of Trump's big-ticket [proposals](#) to streamline environmental rules made it into the first major bill infrastructure bill introduced in Congress since his election. America's Water Infrastructure Act of 2018, as the Senate bill is called, is so far the "most significant step lawmakers have taken to help fulfill the president's marquee campaign promise to revitalize the country's transportation arteries," Pro's Annie Snider writes. The bill's authors purposefully set their sights on bipartisanship in light of the fast-approaching midterm elections. "We focus on the 80 percent where we have general agreement, and we're going to get something done," said Sen. [Tom Carper](#) (D-Del.), the top Democrat on the panel and a cosponsor of the measure. Read [more](#).

MORRISEY WINS: West Virginia Attorney General Patrick Morrisey came out on top Tuesday, clinching the Republican nomination to take on Democratic Sen. [Joe Manchin](#) come November. Coal baron Don Blankenship, who was running a controversial campaign against the Republican establishment and Mitch McConnell, ended up in third place in the most-watched race of the night. Blankenship, who was convicted in 2015 of conspiring to skirt mine standards after 29 miners were killed at Massey Energy's Upper Big Branch facility, only [received](#) 19.9 percent of the vote to Morrisey's 34.9 percent, and 29.3 percent for Rep. [Evan Jenkins](#), the other major candidate in the race. Read more on all of Tuesday's primaries [here](#).

NEW DETAILS IN PRUITT SAGA: EPA worked closely with groups such as the Heartland Institute and the CO2 Coalition — both of which dispute the scientific consensus on climate change — when planning Pruitt's proposed "red team, blue team" debate over climate science, The New York Times [reports](#) via new documents released by the NRDC. The emails show that EPA scientists were not involved in the discussion, and that political aides continued to work on the idea even after White House chief of staff John Kelly tried to squelch the plan, according to the Times. In a separate report, the Times got a hold of documents that shed new light on the day security officers, fearing for Pruitt's safety, smashed down his condo door. Read it [here](#).

— **Pruitt's former security chief** Pasquale "Nino" Perrotta told the House Oversight Committee that Pruitt and his staff missed a connecting flight on a trip to Morocco because his security detail's weapons and gear couldn't be transferred between the planes in time, the Associated Press reports, citing anonymous committee aides. The delay forced Pruitt to spend more than 24 hours in Paris, and Perrotta's version of events calls into question the official rationale given by EPA. Read that story [here](#).

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks. The zero-emission trucks will be able to travel between 500 and 1,200 miles. Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025. [Learn more](#). **

BARRASSO: 'CLOSELY MONITORING' PRUITT SITUATION: EPW Chairman [John Barrasso](#) told ME he's "closely monitoring" the ongoing ethical woes of Pruitt and continuing with unspecified "oversight" of the agency. "The job that he's doing — in terms of the job assigned by the president to roll back regulations and overreach by the federal government — he continues to do well," Barrasso said. "We want to make sure taxpayer money is being well spent and appropriately spent." But Barrasso wouldn't specify if he'd sent additional letters to the agency, again deferring to the White House's vague, ongoing review of the situation.

Wait and see: Senior House Republicans overseeing the EPA also appeared to be publicly sticking with Pruitt as well. Rep. [John Shimkus](#), who oversees the EPA on the House Energy and Commerce Committee, told ME he didn't have plans for additional oversight on his subcommittee but deferred to Chairman [Greg Walden](#) on whether it was appropriate. Shimkus acknowledged his lack of oversight plans "might disappoint some of my colleagues," including some Republicans who questioned Pruitt's spending at a hearing several weeks ago. A spokesman for the committee didn't respond to requests for comments on its oversight plans.

HEWITT KNEW IT: Conservative radio host Hugh Hewitt responded Tuesday on his radio show to a POLITICO [report](#) about a meeting set up by Hewitt between Pruitt and a water utility that sought a Superfund distinction in his hometown — which it ultimately received. "I knew it was going to show up in the FOIA request," Hewitt said of the meeting request. "I just didn't think it was a story." Separately, the liberal media watchdog group Media Matters [reported](#) Tuesday, that The Washington Post's Editorial Page Editor Fred Hiatt had not known of ties between EPA and Hewitt's law firm. "Hewitt, who has not written about Pruitt since September, has agreed not to write about him going forward and has assured us that similar incidents won't occur in the future," Hiatt said in an email to the group.

PERRY PULLS UP: Energy Secretary Rick Perry will testify this morning before the House Science Committee on his department's overall budget for fiscal 2019. Members will likely discuss funding for Advanced Research Projects Agency-Energy and Department's Loan Programs, which are terminated under the budget, as well as Perry's recent moves on coal plants. "Termination of these programs will save over \$300 million in FY 2019 alone while significantly reducing financial risk to the taxpayer moving forward," Perry is expected to say. **If you go:** The hearing kicks off at 9 a.m. in 2318 Rayburn. Watch the livestream [here](#).

AT THE SAME TIME: The House Energy and Commerce Committee is slated to hold a [markup](#) on five cybersecurity, small-scale LNG bills this morning. Included in the docket: The bipartisan [H.R. 5175 \(115\)](#), the "Pipeline and LNG Facility Cybersecurity Preparedness Act." The slate of bills — which also includes [H.R. 4606 \(115\)](#), [H.R. 5174 \(115\)](#), [H.R. 5239 \(115\)](#), [H.R. 5240 \(115\)](#) — were approved by the subpanel in April. [H.R. 4606](#) — which would allow the expedited approval of small-scale shipments of liquefied natural gas — [got a vote](#) of 19-14 over the objections of most Democrats.

CHATTERJEE SEES CHALLENGES: FERC Commissioner Neil Chatterjee called out natural gas pipeline permitting in New York Tuesday, while speaking at the at the Independent Power Producers of New York conference. "The gravest threat we face to resilience and fuel security is in New England and that's not the result of coal and nuke retirements but because of gas constraints due to a lack of adequate infrastructure," Chatterjee told reporters. Read more from Pro New York's Marie French [here](#).

INTERIOR FACES FOIA SUIT: The Wilderness Society will file a lawsuit today to compel Interior to release documents related to the administration's environmental protection plans on public lands. The group says it filed 21 requests under the Freedom of Information Act for documents related to orders issued by Trump and DOI in March 2017 aimed at removing "potential burdens" to energy development on public lands. TWS says it only received responses to two of those requests.

MAIL CALL! The Environmental Protection Network sent [this letter](#) to EPA requesting a public hearing and an extension of the 30-day public comment period on the agency's "secret science" proposal to ban the use of

studies that don't publicly disclose all their data. "The proposal is far too complex, with effects too broad and indeterminate, and requests comment on far too many issues, for a thirty-day response period," the letter says.

WATCH IT: The American Council for Capital Formation released a new ad on Tuesday calling on the president to uphold the investor-state dispute settlement mechanism in any negotiation of NAFTA. Watch it [here](#).

E2 LAUNCHES CLEAN JOBS CAMPAIGN: Environmental Entrepreneurs launched a nationwide campaign Tuesday, dubbed [Clean Jobs Count](#), "to advance awareness and support of America's fastest-growing energy sector." The campaign includes digital ads in Michigan, Ohio, Illinois and Colorado, and additional ad campaigns are planned throughout the rest of the year in at least half a dozen more states.

MOVER, SHAKER: Exelon [announced](#) Constellation CEO Joseph Nigro was promoted to Exelon senior executive vice president and CFO, succeeding Jack Thayer, who becomes senior executive vice president and chief transformation officer. ComEd President and CEO Anne Pramaggiore was promoted to CEO of Exelon Utilities, succeeding Denis O'Brien. And Joseph Dominguez, the executive vice president of governmental and regulatory affairs and public policy, was promoted to CEO of ComEd Chicago.

— **Power Ledger**, a blockchain-powered renewable energy trading platform, announced Dante Disparte was appointed its strategic adviser and ambassador.

9:30 a.m. — Center for Climate and Energy Solutions [discussion](#) on "Zero-Carbon Power: Maintaining U.S. Nuclear Capacity," 2000 H St NW

9:30 a.m. — NAS Committee on Earth Resources spring meeting on "Critical Minerals and Materials: Opportunities, Challenges and the Needs for U.S. Manufacturing, Economy and Security," 500 Fifth Street NW

9:30 a.m. — The U.S. Chamber of Commerce's annual Sustainability and Circular Economy Summit on "Translating Value to Ignite Action," 1615 H Street NW

10:00 a.m. — Senate Energy and Natural Resources Public Lands Subcommittee hearing on law enforcement programs at the Bureau of Land Management and the Forest Service, 366 Dirksen

10:00 a.m. — Senate Environment and Public Works Committee hearing on the "America's Water Infrastructure Act of 2018," 406 Dirksen

10:00 a.m. — House Foreign Affairs Committee markup of H.R. 5535 (115), the "Energy Diplomacy Act of 2018," 2172 Rayburn

12:00 p.m. — The Environmental Law Institute discussion on the Ramsar Convention on Wetlands of International Importance, 1730 M Street NW

4:00 p.m. — Senate Indian Affairs Committee hearing on the nomination of Tara Mac Lean Sweeney to be assistant Interior secretary for Indian affairs, 628 Dirksen

6:00 p.m. — The Environmental Law Institute holds National Wetlands Awards, 100 Maryland Avenue SW

6:30 p.m. — The Carnegie Institution for Science discussion on "Deep Earth Through a Diamond Looking Glass," 1530 P Street NW

THAT'S ALL FOR ME!

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks from the pioneer in hydrogen-electric renewable technology, Nikola Motor Company. The zero-emission trucks — which will be able to travel between 500 and 1,200 miles and be refilled within 20 minutes, reducing idle time — are expected to be integrated into Anheuser-Busch's dedicated fleet beginning in 2020.

Through this agreement Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025.

"At Anheuser-Busch we're continuously searching for ways to improve sustainability across our entire value chain and drive our industry forward," said Michel Doukeris, CEO of Anheuser-Busch. "The transport industry is one that is ripe for innovative solutions and Nikola is leading the way with hydrogen-electric, zero-emission capabilities. We are very excited by the possibilities our partnership with them can offer."

Stories from POLITICO Pro

Failed legal argument against California car rules gets second wind under Trump Back

The Trump administration's plan to stymie California's tough greenhouse gas emissions for cars is about to trigger an epic legal fight — and the White House appears to be planning to use the same strategy that failed to block the state's rules a decade ago.

California's supporters, however, hope any courtroom battles will play out the way they did when the auto industry tried to prevent California and other like-minded states from setting stricter emissions limits than those pushed by EPA: with a pair of resounding legal defeats.

"It's sort of déjà vu because it's going to be basically round two," said Kevin Leske, who was an assistant attorney general in Vermont in 2007 when the state fought off an industry lawsuit seeking to block the greenhouse gas rules for cars.

"Here we are, 10 or 11 years later, basically facing the prospect, it sounds like, of the Trump administration making the same arguments that the auto industry did," added Leske, now a law professor at Barry University in Florida.

If finalized, the move would be one of the biggest regulatory rollbacks of the Trump administration, and it could go even further than what automakers have asked the White House to do. And its advocates say despite the previous legal setbacks, they hope to take the issue to a higher court, something they were denied in the previous battle when a political deal ended the conflict.

In the meantime, California, which has already spearheaded a lawsuit over EPA's April decision to weaken the standards, is already preparing for a major regulatory break with the Trump administration. The state's Air Resources Board on Monday asked for public input for regulatory language that it will not consider cars complying with a weakened federal standard to be acceptable in California.

The legal issue will center on the interplay between the long-standing fuel economy standards known as the Corporate Average Fuel Economy, which is issued by the National Highway Traffic Safety Administration under the 1975 Energy Policy and Conservation Act, and the relatively new greenhouse gas emissions standards enforced nationally for the first time under the Obama administration.

In requiring a national CAFE standard, Congress barred states from issuing their own laws or regulations "related to" fuel economy standards. But California's novel approach to regulate carbon dioxide emissions via the state's special authority under the Clean Air Act gave it significant leverage to force car makers to meet stricter rules.

In order to avoid a patchwork of different regulations between California and its allies and the rest country, the Trump administration is expected to seek to nullify the waiver EPA granted California in 2009 allowing it to enforce its own rules. EPA has never tried to revoke a waiver, and legal observers note the law does not explicitly grant EPA such authority.

But the Trump administration is expected to try to circumvent any questions around revoking the waiver by arguing that EPCA preempts California from enforcing its auto emissions standards — essentially the same argument automakers and dealers deployed in multiple lawsuits over a decade ago.

A May 1 letter from Sen. Tom Carper to EPA and DOT says the draft proposal would adopt that EPCA preemption argument.

That strategy fell short first time around, when a California judge concluded that greenhouse gas standards are too different from fuel economy regulations to fall under EPCA's "related to" preemption language. Emissions

may be closely correlated to fuel efficiency, he ruled, but factors like air conditioning usage and credits for electric vehicles mean that the pollution rules are not explicitly aimed at fuel economy, and thus are not preempted

Meanwhile, a Vermont judge also ruled in 2007 that since EPA had approved the California standard under the Clean Air Act waiver, it becomes a proper government motor vehicle standard, which EPCA requires DOT to take into account when setting fuel economy targets. Congress "could not have intended that an EPA-approved emissions reduction regulation did not have the force of a federal regulation," the judge wrote.

Those two legal rulings with the span of a few months would seem to be formidable hurdles for any EPCA preemption argument. And they case gets even more difficult for the Trump administration when the Supreme Court's landmark ruling in that year's *Massachusetts v. EPA* is added in. In that case, the majority said that fuel economy and greenhouse gas rules may "overlap," but could both be administered in a way that would "avoid inconsistency."

"I think it's fair to say this ground has been trod before and it's not looking good if Pruitt's EPA trots out this EPCA preemption argument again," said Sara Colangelo, the environmental law and policy program director at Georgetown University.

Congress also passed two major Clean Air Act updates after EPCA, in 1977 and 1990, that expanded California's special powers and didn't address the exemption at all, a move Colangelo said "really signals that they intended California to maintain this special position as the laboratory for advancing pollution controls in the emissions arena."

NHTSA declined to address the preemption issue, but said in a statement that its "top priority" is safety and that the administration "must also consider economic practicability." A spokesman for California's Air Resources Board said that the preemption proposal "would harm people's health, boost greenhouse gas pollution and force drivers to pay more money at the pump for years."

Those two previous court losses are not slowing down conservatives pushing the Trump administration to adopt the preemption argument now.

Undeterred, a coalition of industry groups wrote to EPA Administrator Scott Pruitt in March urging him to revoke California's waiver by concluding it is preempted by EPCA.

"Even though these two lower courts have weighed in, I think there's opportunity now for the lawsuits to move on to a higher level," Patrick Hedger, the policy director for the FreedomWorks Foundation, a conservative advocacy group.

He added that no higher court ultimately addressed the issue. Appeals in both cases were dropped as part of the single national standard deal reached between the Obama administration, California and automakers. Hedger noted that the Supreme Court's *Massachusetts v. EPA* ruling was not specifically about EPCA preemption.

Marlo Lewis, a senior fellow at the Competitive Enterprise Institute, believes the best way to win the preemption argument is to focus on the high degree of overlap to show the two standards are "related" under EPCA

"You and your dad are different people. Are you not related?" Lewis said. "The idea that they're not related because they're not identical is just pure rhetorical flimflam."

Like many other deregulatory actions, this proposal would substantially benefit the energy-producing that voted for Trump.

For conservatives, blocking California's climate change authority is the ultimate goal, since the Democratic hold on state politics and California's size mean its aggressive action on climate change has an outsize influence on the rest of the nation.

"I think this is one step in basically saying, 'Look, we're not going to allow California on this issue or any others in the future to continue to supersede federal policy on these issues and basically impose their standards on the entire country just because of the size of the market,'" said Hedger.

Halting fuel economy standards at 2020 levels would mean needing roughly 2 billion barrels more oil over the lifetime of cars built from 2021 to 2026, said David Cooke, a senior vehicles analyst at the Union of Concerned Scientists. And that's not counting the longer-term demands that would be caused for future model years that would start with lower targets because of this potential freeze.

[Back](#)

Pruitt sought tight control of events even on friendly turf [Back](#)

By Anthony Adragna and Emily Holden | 05/08/2018 06:38 PM EDT

EPA Administrator Scott Pruitt and his staff went to great lengths to avoid unscripted questions when he toured the country speaking to industry groups, and even a seemingly friendly ice breaker can be deemed unacceptable.

"How often do you get back to Oklahoma?" the top official from the Iowa Association of Electric Cooperatives planned to ask Pruitt when he addressed the group last December, according to internal emails that were recently made public.

That question was crossed out when an EPA staff member sent back a proposed list of questions for Pruitt's "fireside chat" with Chuck Soderberg, the association's executive vice president. Tate Bennett, EPA's associate administrator of public engagement, did not explain why that and another question had been removed, but at the time of his Nov. 29 email the administrator was already [facing questions](#) over his travel practices. A few months earlier, EPA's inspector general had [launched an investigation](#) into whether the agency had sufficient policies in place to "prevent fraud, waste and abuse with the Administrator's travel that included trips to Oklahoma."

The [emails](#) among Bennett, other EPA staffers and representatives of the Iowa cooperatives were included in the thousands of documents obtained by the Sierra Club through a public records lawsuit. They reveal a pattern of Pruitt and his staff working to limit access by independent journalists, pre-screen questions from friendly interviewers and coordinate his message with lobbyists ahead of gatherings with conservative or industry groups.

Ahead of the Iowa event, the co-op association's director of government relations, Kevin Condon, confirmed that neither his group nor EPA would issue a media advisory, and they would cancel a press gaggle but still host an interview with the group's internal Living with Energy in Iowa magazine.

That publication also got questions [pre-approved](#) by EPA staff.

"Let me know if any of these give you heartburn," said Erin Campbell, the co-op group's director of communications. "This would be a friendly interview environment and we're keeping the conversation focused on Iowa consumers."

In another instance, before Pruitt spoke at a U.S. Chamber of Commerce event in June, EPA received a list of 10 proposed questions from the head of the group's energy institute, Karen Harbert. They touched on his regulatory philosophy, his efforts to rollback rules, and whether co-owning a minor league baseball team taught him lessons useful for running a federal agency. EPA staff did not appear to object to Harbert's proposed list.

When Pruitt was slotted to speak at a Texas Oil and Gas Association conference in October, EPA staff asked for a Q&A format with a representative of the group, rather than have the administrator take three pre-screened questions from the crowd.

EPA aides asked for the change in plans after being made aware that four reporters would be attending from the Houston Chronicle, Bloomberg BNA and Reuters.

Bennett wrote that after updating Pruitt that the media would attend, "he'd like to respectfully request that the entire format now be Q&A with two chairs on stage." She also shared a list of questions the moderator could ask, including on regulatory rollbacks, on what Pruitt would consider "true environmentalism" and on what his relationship was like with the president.

"What has it been like to run such a newsworthy agency? More difficult than you imagined?" the last question read.

And in at least one instance, a lobbyist for a group Pruitt was set to address offered to help write his speech for him. Before Pruitt and an entourage of eight staffers and security agents traveled in November to Kiawah Island, South Carolina, for a speaking engagement with the American Chemistry Council, the group's lobbyist Bryan Zumwalt asked a scheduler who to contact to help write Pruitt's speech.

"Who in your sop (sic) should I be working with to help prepare Administrator Pruitt's talking points/speech? Figure someone there might like the help on key areas to discuss," he said.

The scheduler, deputy White House liaison Hayley Ford, replied that Millan Hupp, director of scheduling and advance, and Bennett could assist.

Trump plan leaves biofuel makers cold [Back](#)

By Eric Wolff | 05/08/2018 06:48 PM EDT

President Donald Trump's latest bid to strike a deal on biofuels on Tuesday appeared to win over oil refiners, but a plan to allow ethanol exports to qualify for credits under the federal program left biofuel producers irate.

Trump gave ethanol producers two big victories at the White House meeting by reiterating his promise to allow 15 percent ethanol fuels year-round and rejecting a price cap on the credits, called Renewable Identification Numbers, that are used to prove compliance with the Renewable Fuel Standard. But ethanol producers balked at

the plan to have EPA Administrator Scott Pruitt and Agriculture Secretary Sonny Perdue set up a system to allow ethanol exports to receive RINs.

"The notion of allowing exported ethanol to count toward an oil company's RFS obligation is extremely problematic," Bob Dinneen, president and CEO of the Renewable Fuels Association, said in a statement. "In no way will that ever be acceptable or considered a win for our industry."

But the Trump administration said it has found the right balance between competing parts of its electorate.

"After several meetings and input from stakeholders on both sides, President Trump is pleased to announce that a final decision has been made that allows E15 to be sold year-round, while providing relief to refiners," White House spokeswoman Lindsay Walters said in a statement. "This outcome will protect our hardworking farmers and refinery workers. The President is satisfied with the attention and care that all parties devoted to this issue."

Refiners backed the idea, although they were wary of a separate proposal to allow EPA to consider requiring large oil refineries to take on the ethanol-blending requirements the agency lifted from small refiners by issuing dozens of compliance waivers.

Sen. Ted Cruz (R-Texas) emerged from Tuesday's meeting calling the deal a "win-win." Refiners have been pressing for years to change the program to lower compliance costs that they say are eating away at their profits.

"President Trump brought together two sides that thought a deal couldn't be reached and he found a 'win-win' solution to one of the most intractable regulatory problems facing the nation — a problem that has been neglected for years," refiner Valero Energy said in a statement.

The group of independent refiners pushing for changes, led by Valero, Carl Icahn's CVR and some Philadelphia-area refiners, had previously sought a cap on RIN prices in exchange for supporting an increase in the sales of E15.

At Tuesday's meeting, the seventh so far held by the White House, a source said Trump agreed to definitively reject any price cap, but he also asked Pruitt and Perdue to work out a plan for how exports could ease price pressure on RINs. Currently, ethanol that is shipped abroad is stripped of the RINs that can be used to meet a refiner's RFS obligation. Sources who work with refiners say preserving those credits would increase the supply and drive down prices for refineries.

"Because biofuels exports are a long-time major objective of the farm community, allowing export RINs is literally the anticipated win-win solution, obviating the need for more direct cost containment devices," said a refining industry source close to discussions.

But ethanol producers, who have been increasing their exports in recent years, complain that allowing those shipments to earn RINS would undermine the biofuel program's goals.

"Pursuing a path that includes RIN credits on export gallons would violate the letter and spirit of the RFS, serving the interests of oil refiners who have already benefited from Administrator Pruitt's unprecedented RFS volume waivers at the further expense of America's farmers," Kevin Skunes, president of the National Corn Growers Association, said in a statement.

Sources said Tuesday's meeting included a lengthy discussion about whether EPA could potentially reallocate the 1.2 billion gallons of ethanol demand the industry says has been exempted under the dozens of compliance waivers the agency has granted to small refineries. One source said Pruitt expressed openness to shifting those gallons to large refiners, something the refiners opposed. But that reallocation discussion got tied up with the

idea of export RINs, and Pruitt and Perdue left the White House with instructions to develop some kind of proposal.

"There was discussion about how to reallocate the waived obligations so that demand for biofuels wouldn't be hurt," Sen. [Chuck Grassley](#) (R-Iowa) said in a statement. "While details weren't decided, I look forward to reviewing a plan being developed by Secretary Perdue and Administrator Pruitt. Any fix can't hurt domestic biofuels production."

Republican Sen. [Pat Toomey](#) of Pennsylvania also expressed reservations about the vague promise of changes to the program.

"The proposal discussed at our White House meeting today might result in lower RIN prices, which would relieve this artificial burden — but even that is not clear until details are established," he said in a statement.

Even as the White House has pushed for a deal, Sen. [John Cornyn](#) (R-Texas) and Rep. [John Shimkus](#) (R-Ill.) have been leading efforts in Congress to overhaul the program. Shimkus and his staff have said in the past that administrative changes to the program would undermine their effort, though they appear to be moving full-steam ahead for now.

"Executive actions aren't a substitute for legislation," said Shimkus spokesman Jordan Haverly. "The only path to an enduring and equitable deal for farmers, refiners, ethanol producers, automakers and consumers — especially one that won't spend more time in court than on the books — is through Congress. Those legislative efforts remain ongoing."

Trump's latest strike against regulations: His infrastructure plan [Back](#)

By Annie Snider and Anthony Adragna | 02/16/2018 05:01 AM EDT

President Donald Trump's infrastructure plan would trigger one of the most significant regulation rollbacks in decades, benefiting not just roads and bridges, but businesses ranging from coal mines to homebuilders to factories.

The blueprint the White House released this week would eliminate the Environmental Protection Agency's authority to veto the Army Corps of Engineers' wetlands permits, a power that the EPA wielded during the Obama administration to block a controversial mountaintop coal mine in West Virginia. Industrial facilities like coal plants and steel factories could get 15-year Clean Water Act pollution permits — up from five years — that would be automatically renewed. For some infrastructure permits, the deadline for opponents to file legal challenges would shrink from six years to 150 days.

The proposed revisions to some of the nation's bedrock environmental regulations are drawing heavy criticism from congressional Democrats — including in the Senate, where Republicans would need at least nine extra votes to enact Trump's plan. Environmental groups say the ambition of the plan's deregulation push contrasts with the relatively meager amount of federal money the White House is proposing to contribute toward the \$1.5 trillion total.

"This isn't an infrastructure package," said Melissa Samet, an attorney with the National Wildlife Federation. "This is an all-out attack on longstanding environmental protections that have done a lot of good for this country."

Republicans and business groups have long complained that the federal government's often cumbersome permitting process, governed by laws Congress enacted decades ago, creates unnecessary delays for projects. "We built the Empire State Building in just one year," Trump said in his State of the Union address last month. "Is it not a disgrace that it can now take 10 years just to get a permit approved for a simple road?"

Supporters of Trump's plan are happy the White House is pushing for changes.

"We're very pleased with the permitting provisions," said Ross Eisenberg, a vice president at the National Association of Manufacturers. "Even some of them being signed law would be a major improvement. We don't want to blow up the process. We just want it to go faster."

Senate Environment and Public Works Chairman John Barrasso (R-Wyo.) said he hopes Democrats will come around.

"You're never going to win over every obstructing Democrat, but they've got to realize that projects have been slowed down in their states," Barrasso said.

But Democrats say the nation's real infrastructure problem is money — and the Trump proposal calls for just \$200 billion in federal investments over the next decade for needs including roads, bridges, airports, water plants, veterans' hospitals and rural broadband service. And they questioned whether Trump's aim is really just to make regulatory reviews more efficient.

"The president's contentions are not to streamline a process, but to compromise needed environmental and public health issues," Sen. Ben Cardin (D-Md.) told reporters.

Some kind of environmental streamlining has been a part of most of the major infrastructure measures Congress has passed in recent years. Provisions in the 2012 highway bill and a 2014 water bill aimed to get agencies to coordinate their permit reviews more efficiently and impose consequences for delays.

Supporters of those changes included then-Sen. Barbara Boxer (D-Calif.), an environmental stalwart, who argued that the streamlining amounted to common sense despite the opposition of some environmentalists. Many of those provisions have yet to take effect, however.

Trump's infrastructure proposal would go much further, setting strict deadlines for reviews and curtailing EPA's say over projects.

For instance, Trump has touted the proposal's two-year limit for agencies to issue final permitting decisions, including a strict 21-month limit on analyses done under the National Environmental Policy Act of 1970, one of the nation's foundational environmental laws.

The law requires federal agencies to make a public estimate of the environmental impacts when the federal government spends money or makes a permitting decision, although nothing in the law requires agencies to limit environmental damage. Repeated environmental studies under NEPA were one factor that contributed to the Obama administration's nearly seven-year review of the Keystone XL oil pipeline, a project Trump has pushed to revive this year.

Under Trump's proposal, agencies would be required to complete environmental reviews in no more than 21 months. Anyone seeking to challenge the permits would have just 150 days to sue, instead of the current six years.

Industry groups argue the act's long statute of limitations for permit challenges leaves a cloud of uncertainty over projects. But Samet, the National Wildlife Federation attorney, said 150 days runs by quickly when challengers have to track down documents that regularly run hundreds of pages, decipher them, find experts to analyze the data, hire lawyers and scrounge up the money to cover legal costs.

The result, she said: "Bad projects will move forward. There'll be nothing to stop them."

Trump's plan would also deliver on a long-sought Republican goal of curbing EPA's authority under the Clean Water Act's wetlands program — a change that would have sweeping effects not just for infrastructure projects but for nearly any kind of development.

The blueprint would remove EPA's authority to oversee the Army Corps of Engineers' determinations about which streams and wetlands are subject to Clean Water Act protections. And it would take away the EPA's ability to veto dredge-and-fill permits that it decides would cause undue harm to the environment.

EPA has used that veto authority only 13 times since the Clean Water Act was enacted, including with its 2012 reversal of a Army Corps permit for the Mingo Logan mountaintop coal mine in West Virginia — a decision that angered the coal industry's supporters in Congress. Most of the other occasions when it used that power came during Republican administrations.

Trump's proposal would also extend pollution discharge permits under the Clean Water Act from five years to 15, and allow them to be automatically renewed as long as "water quality needs do not require more stringent permit limits." Those changes that would apply not only to municipal wastewater treatment plants but also to industrial facilities.

The plan also calls for eliminating a section of the Clean Air Act that requires EPA to review, comment on and rate other agencies' environmental impact statements.

While the proposal may allow construction on projects to get started faster, it might end up creating bigger problems in the end, argued Kym Hunter, an attorney with the Southern Environmental Law Center. She said a narrower NEPA review wouldn't just keep potential environmental problems from coming to light, but it would also keep the public in the dark about whether a project would live up to its promises.

"NEPA is about taking that hard look," Hunter argued. "When it was promulgated in 1970, the idea was if you think about what you are doing you're likely to make a better decision. This [Trump proposal] would just encourage agencies to rush forward without being thoughtful, without being careful."

Trump's plan also attempts to limit the ability of courts to halt work on projects while lawsuits proceed. But that could backfire too, Hunter said, if it keeps courts from halting an ill-conceived project until after a government body has started spending money and taking on debt.

Sen. Tom Carper of Delaware, the top Democrat on the Environment and Public Works Committee, didn't dismiss the idea of making updates to the decade-old laws. But if the administration's goal is to weaken environmental regulations, he said, "we're not going to get very far."

Trump's proposed regulatory rollbacks left out of Senate infrastructure bill [Back](#)

By Annie Snider | 05/08/2018 06:44 PM EDT

The first major infrastructure bill introduced in Congress since President Donald Trump took office ignores virtually all of the big-ticket deregulatory proposals the White House laid out in its blueprint earlier this year.

Chief among Trump's complaints about the country's infrastructure system is the amount of time it takes to get environmental permits. The package the White House [unveiled](#) in February included a meager \$200 billion in federal funding for infrastructure, and instead focused on a number of so-called environmental streamlining provisions. Among them: proposals to eliminate the EPA's authority to veto the Army Corps of Engineers' wetlands permits and reduce the length of time opponents have to file legal challenges to permits from six years to 150 days.

But none of those provisions made it into what stands to be a multibillion dollar water resources measure introduced by top Republicans and Democrats on the Senate Environment and Public Works Committee on Tuesday.

That bill, dubbed America's Water Infrastructure Act of 2018, is so far the most significant step lawmakers have taken to help fulfill the president's marquee campaign promise to revitalize the country's transportation arteries. And in a bid to have a feather in their caps to take home before the 2018 midterm elections, lawmakers in the upper chamber are charting a bipartisan course with the measure.

"We focus on the 80 percent where we have general agreement, and we're going to get something done," Sen. [Tom Carper](#) (D-Del.), the top Democrat on the panel and a cosponsor of the measure, told reporters.

The House Transportation and Infrastructure Committee is working on its own water resources bill that also could be released this month, and members are pursuing a bipartisan approach, too, as they have historically.

The Senate bill is sidestepping battles over the nation's foundational environmental laws, including the National Environmental Policy Act and the Clean Water Act. Republicans and business groups fault those laws for delays and skyrocketing costs — "Is it not a disgrace that it can now take 10 years just to get a permit approved for a simple road?" Trump asked in his State of the Union address in January — but Democrats and environmentalists defend them as critical protections.

Instead, the bill's authors set their sights on a suite of more practical changes at the Army Corps of Engineers — one of the government's most red-tape-laden bureaucracies that just about every lawmaker loves to hate.

The bill includes dozens of provisions aimed at making the agency more transparent and responsive to Congress and the communities it works with to build projects. It would make a major change to the way the Army Corps budgets, in an effort to help projects that are important to states but aren't competing well for scarce federal dollars under the current approach. And it would create a board related to water storage projects that an environment committee aide said is aimed at helping communities understand early on whether their project will be able to get a permit.

The measure also includes a number of drinking water and wastewater provisions, issues that became a major component of the last such measure in 2016, when an aid package to help Flint, Mich., recover from its lead

contamination crisis was included. The new Senate bill includes provisions to help small and rural water utilities with technical assistance, allow communities to use federal drinking water dollars to protect their water sources, and to help communities balance multiple costly wastewater upgrade requirements at the same time.

The meat of the bill is six new project authorizations for the Army Corps, including a ship channel extension project in Texas, flood control projects in New York and Hawaii, and hurricane protection projects in Florida and Texas. The bill would also increase the amount that can be spent for the Savannah Harbor expansion project, a top priority for Georgia's senators, and allow more water to be stored at a key Wyoming reservoir.

And it's not just Trump's environmental permitting changes that senators rejected in the bill; they also responded to the White House's past proposals to eliminate or significantly cut a popular Great Lakes restoration program by increasing its authorization. The bill would also require EPA to open a new program office for the Long Island Sound, where the Trump administration also proposed eliminating funding.

Asked Tuesday how work on the the House's measure is coming, Transportation Committee Chairman [Bill Shuster](#) (R-Pa.) said "good."

But one fault line is already emerging between the two chambers.

Shuster has backed a proposal from his water resources subcommittee chairman, Rep. [Garret Graves](#) (R-La.) to move the Army Corps of Engineers out of the Pentagon and to another agency like the Department of Transportation or the Interior Department. But an EPW aide said that both Republicans and Democrats in the Senate have concerns with the idea; their bill would instead mandate a study by the National Academy of Sciences into the structuring of the Army Corps.

"We're trying to pass a bipartisan bill and I think that would make it very difficult to do with the limited amount of time that we have," the aide said.

Top takeaways from the first big primary of 2018 [Back](#)

By Steven Shepard, Elena Schneider and Scott Bland | 05/09/2018 01:13 AM EDT

Republicans can exhale now.

Convicted coal magnate Don Blankenship's surprise third-place finish in Tuesday's West Virginia GOP Senate primary sidestepped yet another debacle for the party after consecutive meltdowns in special elections in Alabama and Pennsylvania. Instead, party leaders celebrated state Attorney General Patrick Morrisey's win, which capped the first multi-state primary of 2018.

The night saw Republicans pick three of the 10 candidates who will take on Democratic senators in states President Donald Trump won, and the first House incumbent go down in a primary in 2018.

Here are POLITICO's seven takeaways from Tuesday:

1. Republicans averted catastrophe, but victory in West Virginia is far from assured.

A Blankenship nomination might well have extinguished GOP hopes of toppling Democratic Sen. Joe Manchin, despite the state's heavy Republican electorate. Blankenship was living in a Phoenix halfway house this time last year, after his conviction for conspiracy to skirt mine safety rules after an incident claimed the life of 29 miners at one of his facilities. He called Senate Majority Leader Mitch McConnell "Cocaine Mitch," and made racially charged comments about McConnell's family.

Morrisey is someone national Republicans can embrace. National Republican Senatorial Committee executive director Chris Hansen said in a statement Tuesday night that Morrisey will "fight for conservative values" and predicted his victory over Manchin in the general election.

But Morrisey enters the race with his own baggage — even if it's nothing like Blankenship's. Morrisey used to be a Washington lobbyist, and Morrisey's wife still is one. Also, Morrisey ran for Congress in 2000 — in New Jersey.

Rep. Evan Jenkins, who finished second on Tuesday night, tried to level those attacks. But the punches didn't land with Blankenship's circus-like candidacy stealing the spotlight.

With Blankenship fading into the distance, Manchin can contrast his folksy, "Pepperoni Roll," West Virginia affect against Morrisey's Jersey accent and D.C. "swamp" ties. Republicans will fire back, alleging that Manchin isn't the aw-shucks bipartisan he claims to be and doesn't stick up for Trump, who is very popular in the state.

2. Words alone can't earn the Trump mantle.

Reps. Luke Messer and Todd Rokita spent the final week of the GOP Senate primary in Indiana trying to convince voters that Mike Braun — the businessman and former one-term state representative who had surged to the front of the field on an outsider message — wasn't a reliable conservative. They cited Braun's participation in Democratic primaries for more than three decades.

But Braun easily defeated both Messer and Rokita because his outsider message, in contrast with his two D.C. insider rivals, resonated more than his Democratic past. (Braun said he only voted in Democratic primaries to influence local elections, but Messer and Rokita painted that as a lame excuse.)

Braun's argument was easier to make after Trump's 2016 presidential campaign. Trump's opponents in the GOP primaries needed the billionaire for his past donations to Democratic candidates, or his past conservative apostasies on issues like abortion and universal health care. Trump parried those attacks, barely breaking a sweat.

Ultimately, as much as Rokita (who donned a red "Make America Great Again" hat in his ads) or Messer (who talked up Trump for a Nobel Peace Prize) tried to claim the Trump mantle, Braun seemed more like the real deal. He hit Messer and Rokita for being attorneys who never practiced law, instead getting into politics at a young age. And Braun, who will now try to unseat Democratic Sen. Joe Donnelly, said he was the only candidate who had signed the front of a paycheck, while his opponents had been endorsing government checks for most of their careers.

3. House members went down hard.

It was a bad night for House members running statewide: Jenkins lost to Morrisey by more than 5 points. Rokita and Messer finished even further behind Braun.

Rep. Jim Renacci, who still won the GOP nomination to face Sen. Sherrod Brown in Ohio, failed to win a majority of the vote in the primary, despite endorsements from Trump and the state Republican Party.

For a party led by a first-time-candidate-turned-president, it's not surprising that Congress isn't the ideal springboard to higher office. But the GOP is relying on other House members to maintain its Senate majority — whether it's Martha McSally in Arizona, Marsha Blackburn in Tennessee or Kevin Cramer in North Dakota.

And for members facing competitive statewide primaries — think McSally, Kristi Noem for governor in South Dakota, Raul Labrador for Idaho governor or Diane Black for Tennessee governor — they may find their congressional résumés are more anchors than propulsion for their candidacies.

4. The first incumbent falls. Will others join?

Rep. Robert Pittenger (R-N.C.) became the first incumbent member of Congress knocked out in a primary in 2018.

Pittenger tried to align himself closely to Trump, touting in his first TV ad that he was the "strongest supporter" of the president. But Mark Harris, a pastor who nearly beat Pittenger in 2016, successfully tagged Pittenger as a part of the "Washington swamp." Republicans in primaries across the country are questioning their opponents' pro-Trump bona fides, a strategy that proved effective here.

Pittenger's loss surprised national and local Republicans, who expected the congressman to survive the primary challenge. But Harris' campaign said Pittenger's "votes didn't match his rhetoric," pointing to his support for the omnibus spending bill in March, said Andy Yates, a spokesman for the campaign. (Harris, a social conservative, said he planned to join the House Freedom Caucus.)

It's not clear that there's a long list of Pittengers about to be swept away in primaries. Still, his defeat could serve as a wake-up call to incumbents who have struggled to unite Republicans at the ballot box in the past, like Reps. Martha Roby (Ala.) and Doug Lamborn (Colo.).

5. Both parties got their men for Ohio governor.

It was an easy night for both parties watching the Ohio gubernatorial race. State Attorney General Mike DeWine easily dispatched Lt. Gov. Mary Taylor in the GOP primary, aided by the imprimatur of the state party.

And on the Democratic side, former state Attorney General Richard Cordray cruised past Rep. Dennis Kucinich after weeks of hand-wringing that the race against the at-times eccentric Kucinich was closer than it should have been.

In the end, Cordray — who until recently headed the federal Consumer Financial Protection Bureau — crushed Kucinich and four other challengers, even winning a greater percentage in the Democratic primary among a fractured field than DeWine earned in a one-on-one matchup with Taylor.

Both parties quickly pivoted to trying to attach a Washington brand to their opponents. The Republican Governors Association called Cordray "a Washington D.C. power-hungry insider," despite DeWine's 20-year congressional tenure.

Meanwhile, the Democratic Governors Association said DeWine was "a card-carrying member of the D.C. and Columbus swamp," despite the fact that Cordray was DeWine's predecessor as attorney general and was an Obama political appointee.

Either way, the gubernatorial election this year will be a rematch of the 2010 attorney general race. DeWine, four years removed from a loss to Brown, toppled the then-incumbent Cordray by 1 percentage point in the GOP wave year.

6. Chalk two up for the GOP establishment.

Establishment Republicans got more good news in Ohio when Troy Balderson and Anthony Gonzalez won primaries for open congressional seats.

Balderson, backed by former Rep. Pat Tiberi, beat Melanie Leneghan in two primaries in Ohio's 12th District on Tuesday — one for the November election, and one for an August special election to complete Tiberi's unexpired term.

The race was a proxy war between Tiberi — an long-time ally of former House Speaker John Boehner — and Rep. Jim Jordan (R-Ohio). Tiberi spent money on TV ads to back Balderson, while Jordan, the House Freedom Caucus co-founder, cut a competing TV ad for Leneghan that aired with help from conservative megadonor Richard Uihlein.

Gonzalez, a former Ohio State University football star, won a similar fight in the state's 16th District. He defeated state Sen. Christina Hagan, who had Jordan's backing in the race.

Both districts have been Republican strongholds — the 16th is even more solidly red than the 12th. But given Democrats' stronger-than-expected performances in special elections in the Trump era, Republicans are gearing up for a fight for the Tiberi seat over the next three months.

"There will be a very clear contrast between Troy and ... [Democratic nominee] Danny O'Connor in the months ahead," said Rep. Steve Stivers (R-Ohio), who chairs the National Republican Congressional Committee.

7. Women are dominating Democratic primaries

Women are running for federal office in record numbers in 2018 — and it looks like Democratic primary voters are poised to support those candidates like never before. There were 20 open Democratic House primaries with women on the ballot Tuesday night, and voters selected a female nominee in 17 of them.

It's a sharp turnaround from past years when female Democrats faced big hurdles in trying to win support from voters. A good number of the primary winners Tuesday night are running in heavily Republican seats with little chance of winning general elections. But they are still part of an important trend: Evidence is building that Democratic voters are tilting toward supporting women this year.

Keep this in mind as we approach primaries in big states full of battleground districts over the next two months: California and New York in June, and Pennsylvania next week.

Pruitt fast-tracked California cleanup after Hugh Hewitt brokered meeting [Back](#)

By Emily Holden and Anthony Adragna | 05/07/2018 10:12 PM EDT

EPA Administrator Scott Pruitt [placed](#) a polluted California area on his personal priority list of Superfund sites targeted for "immediate and intense" action after conservative radio and television host Hugh Hewitt brokered a

meeting between him and lawyers for the water district that was seeking federal help to clean up the polluted Orange County site.

The previously unreported meeting, which was documented in emails released by EPA under a Freedom of Information Act lawsuit by the Sierra Club, showed Pruitt's staff reacting quickly to the request last September by Hewitt, who has been one of Pruitt's staunchest defenders amid a raft of ethics controversies around his expensive travel, security team spending and a cheap Washington condo rental from a lobbyist.

Pruitt has drawn criticism from environmentalists and other critics for letting prominent GOP backers and industry groups influence the agency's agenda — even as he has kicked scientists off of EPA's advisory panels and moved to limit the kinds of peer-reviewed research it will consider when making decisions.

In many cases, the people whose advice Pruitt is heeding could be useful supporters for him in a future race for U.S. senator or president. They include GOP megadonor Sheldon Adelson, who — as POLITICO reported in March — persuaded Pruitt last year to take a meeting with an Israeli water purification company called Water-Gen that later won a research deal with the EPA.

Hewitt, a resident of Orange County whose son James works in EPA's press office, emailed Pruitt in September to set up a meeting between the administrator and the law firm Larson O'Brien, which employs Hewitt and represents the Orange County Water District. Pruitt had been planning to meet with the lawyers in California a month earlier, but cancelled the trip to undergo knee surgery.

"I'll join if the Administrator would like me too or can catch up later at a dinner," Hewitt wrote in his Sept. 18 message. Hewitt added that the issues surrounding the Superfund site were "Greek to me but a big deal in my home county."

Pruitt's aides responded within minutes and quickly confirmed an Oct. 18 meeting for the lawyers and a project director.

Six weeks after that meeting, on Dec. 8, the Orange County North Basin site appeared on Pruitt's list of 21 contaminated areas to address. A month later, Pruitt proposed listing the site on EPA's National Priorities List, a move that could make it eligible for long-term federal cleanup funding from the federal government if the responsible polluters cannot be identified and forced to pay for its remediation.

Since then, Hewitt has been a robust defender of Pruitt, dismissing his recent controversies as "nonsense scandals" on MSNBC in early April and saying his detractors were "just trying to stop the deregulation effort."

Pruitt has touted the agency's Superfund work as one of his key priorities, setting up a task force to seek to speed up the clean-up of the nation's worst contaminated sites. That task force had been headed by Albert "Kell" Kelly, a former banker and longtime friend, who departed the agency last week after news about loans he provided to Pruitt in Oklahoma, including the mortgage provided to Pruitt for a house he bought from a lobbyist when he was a state senator.

Environmental advocates have worried Pruitt's efforts to identify Superfund priority sites would bypass the process set up by Congress to ensure cleanup resources are divided fairly, and that he could focus on sites seen as important to his political supporters. And environmentalists have said Pruitt's rush to claim that contaminated properties have been remediated could risk turning them over to local governments and businesses that might pursue cheaper, inadequate solutions.

Elgie Holstein, senior director for strategic planning at the Environmental Defense Fund who has been tracking EPA's Superfund actions, said the connection to Hewitt is "not a surprise."

"The biggest fear we have is that No. 1, the administrator's political priorities and personal ambitions, political ambitions become the primary criteria for action under this program instead of science and health," Holstein said.

EPA never disclosed the meeting with Hewitt's contacts. It was listed on Pruitt's public calendar as a staff briefing. But on his private Outlook schedule, which the agency has released in response to lawsuits, it appeared as an "Orange County Superfund Site" meeting with Kelly and two other staffers. The records did not list the Californians in attendance at the meeting at EPA headquarters in Washington.

But EPA spokesman Jahan Wilcox confirmed that two lawyers representing the water district, Robert O'Brien and Scott Sommer, and the water district director of special projects, Bill Hunt, were there. A third lawyer, former federal Judge Stephen G. Larson, was forced to cancel his trip due to wildfires in California, according to emails.

"Hugh Hewitt helped arrange the meeting at the request of the water district but did not attend," Wilcox said.

Wilcox said the meeting was for the water district to "brief EPA on the Superfund site's cleanup efforts and request expedited cleanup," following a 2016 agreement with the agency to conduct a remedial investigation and feasibility study, at a cost of \$4 million over two years. Hunt did not immediately respond to a request for comment.

Hewitt in an email to POLITICO called Pruitt a friend and said he does not have a working relationship with him. He said that his firm has represented the water district and worked on the site with EPA's regional office for years but that he had not participated in that work.

Hewitt said he requested a meeting because the water district wanted to brief the new EPA team, he said, adding that he was an Orange County resident until 2016 as well as an Orange County Children and Families Commission member. He said that he "very much" wanted the Superfund site remediated as soon as possible.

According to an EPA [fact sheet](#), the Orange County site has more than five square miles of polluted groundwater containing chlorinated solvents and other contaminants across the cities of Anaheim, Fullerton, and Placentia. It includes the Orange County Groundwater Basin, which provides drinking water to more than 2.4 million residents across 22 cities, according to the agency. Those pollutants can damage humans' nervous systems, kidneys and livers, and some are considered carcinogenic.

EPA has just begun its process of studying the contamination and it has not determined which companies caused the pollution in the area. But an [administrative settlement](#) with the EPA in 2016 says the area was home to "electronics manufacturing, metals processing, aerospace manufacturing, musical instrument manufacturing, rubber and plastics manufacturing, and dry cleaning."

Hewitt also thanked EPA schedulers for working to arrange a meeting between Pruitt and the California Lincoln Clubs, which describe themselves as in favor of "limited government, fiscal discipline and personal responsibility." After some rescheduling Pruitt eventually met with representatives of the group on a trip to California in March of this year, according to his public calendar. Prominent Orange County businessman John Warner also helped to connect that group with staffers.

Pruitt and his scheduling staff have frequently sought to set up meetings with or for influential Republican figures, according to the internal EPA emails.

His team accepted an invitation for him to address The Philanthropy Roundtable at an invitation-only event at the White House for "conservative and free-market foundation CEOs and individual wealth creators to discuss

the greatest opportunities for foundations to protect and strengthen free society" and "what [Pruitt] views as unique opportunities for philanthropic action.

As POLITICO reported in March, Pruitt also met with an Indiana coal executive and Trump fundraiser who was seeking to soften a pollution rule.

Pruitt also crafted his travel schedule — including a tour of states in August — to meet with big business much like a member of Congress would during the annual recess.

In July, EPA's associate administrator of public engagement Tate Bennett was working with Pruitt to "essentially create an August recess for the EPA to be out in the states talking with individual companies & doing listening sessions within sectors," said Leah Curtsinger, the federal policy director for the Colorado Association of Commerce & Industry, in an email introducing Bennett to her husband, public affairs director at coal company Cloud Peak Energy and a fellow alum of Senate Majority Leader Mitch McConnell's office.

Annie Snider contributed to this report.

House subpanel approves cybersecurity, small-scale LNG bills [Back](#)

By Anthony Adragna | 04/18/2018 11:19 AM EDT

A House Energy and Commerce subpanel today approved a quartet of bills designed to boost DOE's efforts to protect the nation's electric grid from cyberattack.

All four cybersecurity measures — [H.R. 5174 \(115\)](#), [H.R. 5175 \(115\)](#), [H.R. 5239 \(115\)](#), [H.R. 5240 \(115\)](#) — advanced by voice vote.

H.R. 5175 asks DOE to coordinate the federal, state and business responses to physical and cybersecurity threats. H.R. 5239 would establish a voluntary DOE program to test the cybersecurity of products intended for use in the bulk-power system. H.R. 5240 would encourage public-private partnerships on cybersecurity efforts, while H.R. 5174 would have DOE bolster its emergency response efforts.

In addition, the subcommittee approved [H.R. 4606 \(115\)](#), which would allow the expedited approval of small-scale shipments of liquefied natural gas, over the objections of most Democrats. That vote was 19 to 14.

"Leave it to the Republican leadership of this committee to markup a bill that has even fewer environmental safeguards than a Trump Administration proposal," Rep. [Frank Pallone \(D-N.J.\)](#), ranking member of the full committee, said. "This bill is unnecessary, it is bad policy and it is a legislative earmark."

WHAT'S NEXT: The bills will get consideration by the full House Energy and Commerce Committee.

Subject: Morning Energy: Trump wildfire tweets renew spending fight — Several API staffers head for exit — City goes to court over PFAS

By Kelsey Tamborrino | 08/08/2018 05:38 AM EDT

With help from Annie Snider and Eric Wolff

MAKING WAVES: In attempting to blame California's devastating wildfires on environmental laws and Democratic Gov. Jerry Brown, President Donald Trump may have upped the stakes for one of the many spending fights Congress will have to resolve this fall. No serious expert has endorsed the president's view that allowing some water to follow its natural course to the Pacific Ocean has complicated efforts to battle the blaze, and the president offered more measured comments late Tuesday night. But Trump's earlier series of tweets this week echoed arguments that agricultural interests have been making for years in long-running wars over how the thirsty state's scant supplies get used.

In Congress, California Republicans are trying to block the state from diverting less water to central and southern California farms and cities to preserve more for endangered fish, a plan that has won support from local green groups like the San Francisco chapter of the Sierra Club. The State Water Resources Control Board, whose members were appointed by Brown, is set to vote this month on the plan, and while agricultural interests and their allies are largely powerless to stop him in Sacramento they have had better luck in Washington. GOP Rep. Jeff Denham, whose Central California district would feel some of the deepest cuts under the state's plan, successfully attached an amendment to the House Interior-EPA appropriations bill to block federal funding related to implementation of the plan.

The policy rider faces an uphill battle as appropriators attempt to conference the House measure with the Senate's companion bill, H.R. 6147 (115), which contains no such language. Sen. Dianne Feinstein, the California Democrat who was key to a 2016 California drought deal, hasn't taken a public position on the issue, but has historically opposed legislative efforts to override California law. And the provision is sure to draw the ire of Northern California Democrats who have called Denham's provision a water grab.

Denham hosted Interior Secretary Ryan Zinke at the New Melones Dam late last month, and shortly thereafter the Interior Department formally weighed in with comments opposing the state's plan, saying it would "essentially elevate the Project's fish and wildlife purposes over the Project's irrigation and domestic purposes contrary to the prioritization scheme carefully established by Congress."

Don't forget: Zinke's No. 2, David Bernhardt, was previously the long-time lobbyist for the powerhouse Westlands Water District, battling to send more water to the district's massive farms.

That's not all: The president presented a subdued response to the California wildfires during remarks Tuesday night, where he told reporters he was "monitoring the situation very close," adding that his administration "is in constant contact with everything going out in the state and with the local authorities and with the state authorities." Trump applauded the firefighters and first responders and said his administration would hold meetings about the wildfires, "because there are reasons and there are things you can do to mitigate what's happening," per a pool report.

WELCOME TO WEDNESDAY! I'm your host, Kelsey Tamborrino. Bracewell's Frank Maisano is back with the win for knowing the island country of Tokelau is powered entirely by solar. SEVERAL API STAFFERS HEAD FOR EXIT: The oil and gas industry's top trade association is losing several staffers after hiring [a new chief executive](#), according to sources and social media posts. At least six officials at the American Petroleum Institute, including one of its top lobbyists, have left in recent months, an association spokesman confirmed to Pro's Ben Lefebvre and Marianne LeVine. API's former senior director of federal affairs, Khary Cauthen, is among those who've exited. Cauthen is now vice president of federal affairs at LNG supplier Cheniere, according to a Cheniere spokesperson. Additional senior officials at API are expected to leave in the coming weeks, sources said. Read more [here](#).

DINNER GUESTS: Trump dined last night with [business executives](#) at the White House, including Continental Resources CEO Harold Hamm, according to a pool report. The dinner follows [news](#) this week that Hamm's company gave \$25,000 in May to the legal defense fund created for Trump aides caught up in special counsel Robert Mueller's Russia investigation.

VOTERS SELECT MICHIGAN GOV. CONTENDERS: Come November, Democrat Gretchen Whitmer will face off against Republican state Attorney General Bill Schuette for Gov. Rick Snyder's term-limited seat amid the still-unresolved drinking water crisis in Flint and PFAS contamination elsewhere. Whitmer won the Democratic nomination Tuesday, turning back a primary challenge from progressive [outsider candidate](#) Abdul El-Sayed. Schuette, who leads the state's investigation into the Flint water crisis, also handily won his race. Read the recap of last night's primary winners and losers [here](#).

Detroit-area voters faced power outages in at least 14 polling sites due to thunderstorms that struck the area Monday night, electric and gas company DTE Energy [said](#) Tuesday morning. The outages caused some poll workers to rely on flashlights and small generators to keep things running for voters, according to [tweets](#) sent by Rashida Tlaib, a Democratic candidate in the 13th District. Power was eventually restored to all 14 polling places by around 4:30 p.m., the electric company [said](#).

CITY GOES TO COURT OVER PFAS: The toxic nonstick chemicals known as PFAS that have been popping up in water supplies across the country will be the focus of a lawsuit sought by the New York city of Newburgh. The city [filed a federal lawsuit](#) Monday over the contamination in its own water supply in the U.S. District Court of the Southern District of New York. The suit, the city said, seeks to require 23 defendants to clean up the watershed contamination and pay for the supply of clean water needed until the contamination is gone. The defendants range from those who have manufactured or sold the chemicals to those who owned and operated the Stewart Air National Guard Base and Stewart International Airport, where the contamination originated. The lawsuit alleges the defendants' use of the "aqueous film forming foam" resulted in the spread of 12 different types of PFAS chemicals within Washington Lake, the city's primary water supply.

EDF FILES 'SECRET SCIENCE' FOIA SUIT: The Environmental Defense Fund is suing EPA over its failure to release documents requested under the Freedom of Information Act pertaining to EPA's proposed "secret science" rule to ban the use of studies that don't publicly disclose all their data. Earthjustice is representing EDF in the [lawsuit](#), which was filed Tuesday in the District Court for the Southern District of New York. The suit comes as a slate of experts at Harvard University also submitted a [comment letter](#) on the transparency rule Tuesday, ahead of the Aug. 16 comment deadline.

SECRET KEEPERS: The Trump administration won't have to turn over documents to a law firm related to its legal arguments for the decision to shrink national monuments, U.S. District Judge David Nye said Monday. The law firm, Advocates for the West, sued for 12 documents withheld from a public records request related to the move to downsize the Bears Ears and Grand-Staircase-Escalante national monuments, The Associated Press reports. Instead the federal judge said the records are protected presidential communications. The Advocates for the West's lawyer told the AP the group hasn't decided whether to appeal the decision to the 9th U.S. Circuit Court of Appeals, but said the decision "shows how difficult it is to force sunlight on a government that flourishes in secrecy."

PRIVATE PRACTICE: Tesla CEO Elon Musk took to Twitter on Tuesday to say he's considering taking the electric car company private, jolting the company's stock. The tweet came after a Financial Times report that said Saudi Arabia's sovereign wealth fund has acquired an undisclosed stake of between 3 percent and 5 percent of Tesla's shares this year. In a vague tweet, Musk said he was considering taking the company private at \$420 a share and already has secured funding.

Shortly after, the company posted an email Musk sent to staff explaining the potential move. Musk wrote that the intention is not to merge SpaceX and Tesla, but to instead emulate SpaceX's structure. Tesla shares were at about \$342 in morning trading, Pro's Patrick Temple-West reports, but shortly after 2 p.m., trading was halted on the Nasdaq market at \$367.09, up 7 percent from the start of the day. When trading resumed, Tesla shares bid higher to close at \$379.44.

HAPPY BIRTHDAY, RFS: The Renewable Fuel Standard turns 13 today, making it old enough to have its bar or bat mitzvah. Ethanol producers are filled with naches over the program's expansion of domestic biofuel production, but they want presents. What they'd really like is a Clean Air Act waiver allowing year-round sales of E15, something Trump promised Iowans last week was "very close" (though acting EPA Administrator Andrew Wheeler was skeptical). "President Trump vowed to protect the engine of economic growth that has delivered for 13 years," Kyle Gilley, a spokesman for ethanol producer POET, said in a statement. "It is time to allow year-round E15 access for America's drivers."

BLM SEEKS COMMENT ON ALASKA PROSPECT: The Bureau of Land Management announced Tuesday it is taking comment until Sept. 6 on scoping for an environmental impact statement for the Willow oil and gas prospect within the Bear Tooth Unit of Alaska's National Petroleum Reserve. ConocoPhillips Alaska initiated discussions with the agency regarding the potential development of the prospect, BLM said, which is located within federal leases held by ConocoPhillips.

The proposed project includes the construction of a central processing facility, roadways, an infrastructure pad, drill pads with up to 50 wells on each, an airstrip, pipelines, and a gravel mine on the BLM-managed lands within the reserve, which makes up 23 million acres. Already environmentalists are targeting the project's potential adverse effects. "It will scar the land, harm wildlife and worsen climate change," said Kristen Monsell, senior attorney at the Center for Biological Diversity, in a statement.

POWER BACK FOR MOST: The Puerto Rico Electric Power Authority said this week that just 25 customers — or .002 percent — remain without electricity in the aftermath of Hurricane Maria, which first hit the island 11 months ago. That number is out of the close to 1.4 million customers who initially lost power from the hurricane.

CLIMATE SUMMIT IN SIGHTS: The Peoples Climate Movement will host a press conference in San Francisco today announcing its "Rise for Climate, Jobs and Justice" day of action on Sept. 8 — one week before the Global Climate Action Summit takes place in the city. Today's press conference will involve a street mural drawn in real-time by artists using materials from areas affected by the California wildfires.

MAIL CALL! NUCLEAR REACTIONS: Four senators are expressing concern over a draft proposed rule to decommission nuclear power plants. In a letter to Nuclear Regulatory Commission Chairwoman Kristine Svinicki, the lawmakers question the rule's changes to environmental considerations and financial protection requirements, among other issues, and write that the proposal would make it easier for nuclear power plants to be exempt from safety, security and emergency planning regulations. The letter was signed by Sens. Ed Markey, Bernie Sanders, Kirsten Gillibrand and Kamala Harris.

Trump wildfire tweets spark bewilderment about California water Back

By Annie Snider, Carla Marinucci and Jeremy B. White | 08/06/2018 03:10 PM EDT

OAKLAND, Calif. — Californians are stunned at President Donald Trump's latest tweets on the state's catastrophic wildfires — and his insistence that the state is burning because leaders are letting too much fresh water flow into the Pacific Ocean.

Trump tweeted Monday that California "Governor Jerry Brown must allow the Free Flow of the vast amounts of water coming from the North and foolishly being diverted into the Pacific Ocean. Can be used for fires, farming and everything else. Think of California with plenty of Water - Nice! Fast Federal govt. approvals."

That tweet — on the heels of a Sunday tweet that referenced California's "bad environmental laws" as a cause of the state's current raging wildfires — drew an immediate reaction from veteran California GOP strategist Rob Stutzman, who responded via Twitter: "This is nuts" and also "low water IQ." Stutzman has advised former Gov. Arnold Schwarzenegger and a host of national and state GOP candidates.

Trump's comments may be referencing an unrelated dispute between Brown's administration and California Republicans over how much of the state's water can be diverted to Southern California farms and cities and how much must be allowed to flow naturally to benefit endangered and threatened fish species.

Wildfires around California have killed nine people, but firefighters have not raised concerns about the available water supplies.

"The notion that somehow more water would be mitigating or better in fighting these fires is just mind-boggling," Stutzman told POLITICO on Monday. "I don't watch 'Fox & Friends,' but it would seem that someone has put the idea in his head. It doesn't even show an elementary understanding of water policy."

Fox & Friends had aired a segment about the California fires nearly five hours before Trump's Monday tweet but didn't discuss water issues as part of the segment.

Stutzman called the president's recent tweets on California fires and water policy "frightening," saying that "water has nothing to do with why these places are tinder boxes. It's very exasperating. ... It's a statement from the president that shows no understanding of hydrology."

He said he would advise Brown, a Democrat, to "not take the bait" and react to such uninformed views.

Indeed, Evan Westrup, the spokesman for Brown, told POLITICO that "this does not merit a response." But he also added via email: "It's a sad state of affairs when journalism is reduced to chasing the uninformed, unsupervised tweets of the president."

Some Democrats seized on the latest tweet. Rhys Williams, spokesman for Democratic gubernatorial candidate Gavin Newsom, tweeted: "Has anybody seen the baby's pacifier? He dropped it again."

In a purely political sense, Trump's tweets reflected his alignment with California Republicans who have long complained that the state unfairly prioritizes environmental uses for water over the state's sprawling agricultural industry. Putting "fish over farms" is a popular formulation that has been invoked by Trump allies from California's agricultural heartland, such as Reps. [Devin Nunes](#) and [Kevin McCarthy](#).

"Forests should be managed properly and water should be allowed for farmers to grow food to feed people," Nunes wrote on Twitter in response to Trump's Sunday tweet, cheering the president "for bringing much needed attention to our flawed environmental policies!"

Trump has courted the Republican-leaning Farm Bureau heavily. California's water wars are a huge issue for the group. Trump addressed the annual Farm Bureau convention in January, becoming the first president in more than two decades to do so. He also [raised the issue](#) during a campaign stop in Fresno in 2016.

But experts who make their living studying California's water system reacted for the second consecutive day with a communal groan of exasperation. Peter Gleick of the Pacific Institute, one of the state's foremost experts on how the state manages its water, issued a tweet calling Trump's latest missive "nuts" after labeling the president's initial tweet "gobbledygook bullsh--."

In an email to POLITICO, Gleick noted that the water that flows from California's rivers into the ocean is what remains after cities and farms take their gulp — and that those flows are critical to shoring up ecosystems that, in some parts of the state, are teetering on the brink of collapse.

"Trump's tweets last night and today show a profound misunderstanding about water, fires, California environmental policy, and of course, climate change," Gleick said, adding that the "idea that somehow state water policies are leading to a shortage of water for fighting the fires is too stupid to rebut."

Stutzman said that even more potentially damaging is that the president's Twitter pronouncement is "even somewhat offensive, given that he's trying to make a point on the backs of these fires."

He noted the president on Twitter to date has shown "no sympathy" and expressed no personal concern for the 18 active and raging blazes around the state, which have to date been responsible for the destruction of more than 1,000 homes and billions of dollars in damage.

Ironically, Stutzman said, Trump has stepped on what could have been his own positive message to California — that the White House "has been quick to approve funds and the emergency declarations have come without any complications."

In July, the State Water Resources Control Board proposed major changes to the state's water allocations, preserving more for ailing fish populations. The changes are slated for a vote later this month. That announcement drew the ire of the state's agricultural groups, and state Republicans have turned to their allies in Congress, who have voted to block federal funding related to the allocation plan.

API sees staff departures as new chief settles in [Back](#)

By Ben Lefebvre and Marianne LeVine | 08/07/2018 06:04 PM EDT

The American Petroleum Institute, the oil and gas industry's top trade association, is losing several staffers as its new chief executive settles in, according to sources and social media.

At least six API officials, including one of its top lobbyists, have left in recent months, an association spokesman confirmed. Additional senior officials are expected to leave in the coming weeks, according to two other sources familiar with the moves.

The departures come as Mike Sommers, a former chief of staff to then-House Speaker John Boehner, formally [takes over](#) API from former president and chief executive Jack Gerard. The industry is negotiating a host of issues with Congress and the White House, including a new offshore drilling plan, renewable fuel standards and steel tariffs.

API's former senior director of federal affairs Khary Cauthen has left to become vice president of federal affairs at LNG supplier Cheniere, according to a Cheniere spokesperson. Former API policy adviser Heidi Keller joined oil company BP as associate director in July, according to her LinkedIn account. Former API Senior Director for External Mobilization Deryck Spooner joined e-cigarette company JUUL Labs, according to a JUUL spokesman. Tyra Metoyer, who worked in API's Houston office, also decamped for JUUL in July, according to her LinkedIn profile.

Former Chief Financial Officer John Robertson left in June, according to his LinkedIn page. Vice President of Global Industry Services Lisa Salley has also left the association, the API spokesperson confirmed. Their current activities are unknown.

The former API staffers did not immediately reply to requests for comment sent via social media.

Business executives come back to Trump a year after Charlottesville [Back](#)

By Andrew Restuccia, Christopher Cadelago and Stephanie Murray | 08/07/2018 01:52 PM EDT

Business executives who distanced themselves from President Donald Trump a year ago in the wake of the deadly clashes in Charlottesville are back to finding common cause with the administration.

The guest list for a Tuesday night dinner at the president's Bedminster, New Jersey, country club includes 15 top executives of some of the country's largest companies. Of the guests, one publicly resigned from a Trump outside advisory council after the president's refusal to condemn white supremacists and neo-Nazis. And two others were reportedly close to stepping down from another advisory council before Trump abruptly dissolved the councils himself amid the backlash.

The dinner offers Trump a high-profile opportunity to show his critics that at least some in the business community have set aside their previous criticism of him.

"They feel that they can associate with [Trump] now because his policies have been such an amazing success," said Stephen Moore, an economic adviser to Trump during the 2016 presidential campaign.

Moore added that he was surprised the president, infamous for blocking those he believes have betrayed him, invited some executives back into the fold: "I don't understand why President Trump would invite anyone who ran for the high grass when there were the first signs of trouble."

One of the attendees slated to attend Tuesday's dinner, Johnson & Johnson CEO Alex Gorsky, released a statement last year criticizing Trump and announcing his decision to step down from Trump's advisory council on manufacturing.

Though Gorsky had initially insisted he would remain on the council, he changed his mind after Trump gave a press conference at Trump Tower in which he drew an equivalence between white supremacists and the protesters who rallied in Charlottesville against their racist views. "[T]he president's remarks yesterday — equating those who are motivated by race-based hate with those who stand up against hatred — were unacceptable," Gorsky said in the statement at the time. A Johnson & Johnson spokesperson did not immediately respond to a request for comment about why Gorsky decided to attend the Bedminster dinner.

At least two other attendees - PepsiCo CEO Indra Nooyi and Ernst & Young CEO Mark Weinberger - were reportedly weighing stepping down from a separate outside policy advisory group before the president announced that he was disbanding the councils.

Several Trump loyalists are also among the invitees to the dinner, including Continental Resources CEO Harold Hamm, Red Apple Group CEO John Catsimatidis and LeFrak CEO Richard LeFrak. Hamm, a vocal defender of Trump who has advised him on energy policy, donated \$25,000 in May to a legal defense fund created for the benefit of White House aides.

Another attendee, FedEx CEO Fred Smith, also has close ties to Trump, even though he has criticized Trump's trade policies. Smith was among the business executives who attended a "Pledge to America's Workers" event last month at the White House, where he received repeated shoutouts from Trump.

Boeing CEO Dennis Muilenburg, who will also attend the dinner, has also courted Trump since he took office and regularly speaks with the president.

Though Nooyi was among the executives who were angry about Trump's remarks about Charlottesville, she also has close ties to the White House. Ivanka Trump, Trump's daughter and adviser, called Nooyi a "mentor" to her in a tweet Tuesday morning amid news that Nooyi would step down as Pepsi's CEO.

International Paper CEO Mark Sutton, another of the participants scheduled to attend Tuesday's dinner, condemned the violence that took place in Charlottesville in a statement at the time, but said he was remaining on Trump's manufacturing council.

Other attendees scheduled to attend Tuesday's dinner include Fiat Chrysler CEO Michael Manley, Mastercard CEO Ajaypal Banga, Boston Beer Company chairman Jim Koch, Honeywell CEO Darius Adamczyk, Newsmax CEO Christopher Ruddy and DocuSign chairman Keith Krach.

The dinner comes during Trump's working vacation in Bedminster, which White House spokesman Hogan Gidley said Monday is taking place while the "White House undergoes needed renovations to the Oval Office and other areas in the West Wing."

White House aides have organized several meetings with the president throughout the week.

Trump allies back fund for aides' legal defense in Mueller probe [Back](#)

By Kyle Cheney and Lorraine Woellert | 08/06/2018 01:54 PM EDT

A legal defense fund created for the benefit of White House aides has largely relied on contributions from a handful of President Donald Trump's longtime friends and political allies in the first five months of its existence.

Phillip Ruffin, a billionaire casino mogul who has worked with Trump and accompanied him to Moscow for the Miss Universe Pageant in 2013, contributed \$50,000 in April, the documents show. Continental Resources, an oil shale company whose CEO, Harold Hamm, has advised Trump on policy, kicked in \$25,000 in May.

The largest donation in the most recent quarter came from Geoffrey Palmer, a Los Angeles developer who has been a large political contributor of Trump's. He contributed \$100,000 in late June.

The contributions are being collected by the Patriot Legal Expense Fund Trust, a vehicle established by Trump allies in February and managed by former New York GOP Congresswoman Nan Hayworth. It is designed to pay for legal fees for Trump aides who are roped into special counsel Robert Mueller's investigation of Russian interference in the 2016 presidential election. Aides to former President Bill Clinton had a similar arrangement for congressional and special counsel probes during his administration.

The only money raised in the fund's first quarter, which ended March 31, came from a Virginia-based consulting firm called ProActive Communications, which chipped in \$22,000. The firm is owned by Mark Serrano, a onetime consultant to Trump's presidential campaign who is also the spokesman for the legal defense fund.

In all, the fund raised about \$200,000 from February to the end of June. It released its required first- and second-quarter paperwork Monday, after watchdog groups filed complaints with the IRS that the fund had missed a July filing deadline.

"I expected to see millions of dollars raised already," said Craig Holman, a lobbyist with the nonprofit Public Citizen, which filed a complaint with the IRS. "Clearly, there has not yet been a comprehensive effort to raise funds and support the legal costs of administration officials."

Clinton's first fund, established in 1994 to help pay for his personal legal defense amid inquiries into a land deal and a sexual harassment lawsuit, raised more than \$608,000 in the first six months of its existence. The Trump defense fund was designed to pay for his aides' expenses, not for the president's own legal fees.

The Republican National Committee also has been paying legal fees for Trump family members and others under investigation for activities related to the 2016 campaign.

Hayworth did not respond to requests for comment. A lawyer for the fund referred questions to Serrano, who also did not respond.

The Trump team's fund does not accept donations from lobbyists, and anyone giving at least \$200 over a calendar year must have their donations disclosed.

Ocasio-Cortez and Sanders work to elect first Muslim governor [Back](#)

By Daniel Strauss | 08/04/2018 06:42 AM EDT

Bernie Sanders and Alexandria Ocasio-Cortez are joining forces to elect an underdog but potentially history-making candidate on the ballot in Michigan next week: Abdul El-Sayed, a 33-year-old physician who would be the nation's first Muslim governor.

Sanders is spending the final weekend of the race in the state, and Ocasio-Cortez was there last week to campaign with El-Sayed ahead of Tuesday's Democratic primary. He also has a constellation of hard-left groups in his corner, including MoveOn.org, Justice Democrats and Our Revolution, the offshoot of Sanders' failed presidential campaign.

After a July lull in primary season, the race in Michigan represents the first opportunity for insurgent liberals to shove Democrats leftward since Ocasio-Cortez's upset victory over Rep. Joe Crowley (D-N.Y.) six weeks ago. Tuesday is also the first real test of the burgeoning alliance between Sanders and Ocasio-Cortez, who have also campaigned for two congressional candidates on the ballot next week in Kansas.

El-Sayed, a first-time candidate who's trailed in public polls, has emerged as a threat to the front-runner, former state Sen. Gretchen Whitmer. Whitmer is a favorite of most elected Democrats as well as organized labor and women's groups such as EMILY's List, which backs Democratic women who support abortion rights.

Every public poll of the primary has shown Whitmer leading El-Sayed and entrepreneur Shri Thanedar, a self-funder who has blanketed the airwaves with television ads but hasn't caught fire. But with Sanders parachuting into Michigan this weekend, El-Sayed backers and Sanders allies see a parallel in recent history.

"Bernie was written off" going into the 2016 presidential primary in Michigan, said Democratic strategist Julian Mulvey, whose firm worked for Sanders on that campaign. "I think Nate Silver predicted that Hillary Clinton had a 99 percent chance of winning in Michigan, and Bernie was able to pull it out. So the best thing you can do is have Bernie going in there to help try to close."

Attorney General Bill Schuette is the favorite to win the Republican primary and has been endorsed by President Donald Trump. Schuette has worked to distance himself from unpopular term-limited Gov. Rick Snyder, a Republican. The state is seen as a prime pickup opportunity for Democrats.

According to a Democrat close to her campaign, Whitmer's most recent internal polling showed her with a 16-point lead in the primary. She has raised more money than El-Sayed, and she has more institutional support: In addition to local politicians, unions and EMILY's List, Whitmer was just endorsed by Sen. Kirsten Gillibrand (D-N.Y.).

But El-Sayed, a former executive director of the Detroit Health Department and a public-health expert, has built a significant support base by presenting himself as a Sanders-aligned progressive alternative to the more mainstream Whitmer. Some of the same outside groups that backed Sanders in 2016 are behind El-Sayed, as are Rep. Ro Khanna (D-Calif.) and grass-roots favorites like Ocasio-Cortez and activist Michael Moore. El-Sayed has also received donations from Ben Affleck and received praise from the hosts of the liberal podcast Pod Save America.

Sanders endorsed the candidate only this week, even though El-Sayed had embraced the Vermont senator and many of his core issues, like a \$15 minimum wage, single-payer health care and tuition-free college for families making less than \$150,000 a year. Sanders is planning to appear at two El-Sayed rallies on Sunday, in Detroit and Ypsilanti.

"Abdul has run a campaign — win or lose — that speaks explicitly to the policies that Bernie talked about during the 2016 campaign and continues to talk about in the Senate," said Ari Rabin-Havt, a senior adviser to Sanders. "Abdul lines up so perfectly on these values that the endorsement is a testament to running a campaign based on that."

El-Sayed hasn't shied from his religion in the campaign, even as he's had to swat away rumors that he's a George Soros plant sympathetic to the Muslim Brotherhood. He's happily described the immigrant story of his father moving to the United States from Egypt and spending time with his stepmother, whose family history in Michigan goes back to before the Civil War.

But foremost, El-Sayed and his liberal supporters are betting that campaigning on a Sanders-style platform isn't just good politics in a primary: They're trying to prove that a candidate can tout these issues and win one of the three states that Trump flipped in 2016.

"Michigan is ground zero for the debate over how you win back power from Trump and Trumpism," said Ben Wikler, the Washington director of MoveOn.org, which is backing El-Sayed. "And Abdul El-Sayed is the living avatar of the idea that to defeat Trump you don't move right."

In addition to El-Sayed, Sanders and Ocasio-Cortez are backing two congressional candidates on the ballot Tuesday in Kansas. The two New York natives traveled last month to the state to stump with two candidates: Brent Welder, a former Sanders campaign staffer running for a battleground seat in the Kansas City suburbs, and James Thompson, a repeat, liberal challenger for a more solidly Republican seat.

Welder is running in a crowded, six-candidate Democratic primary for the right to take on Rep. Kevin Yoder (R-Kan.) in a district Clinton narrowly won in 2016. But in a sign that Republicans see Welder's ties to Sanders as a liability, a conservative group began running last-minute ads on Friday that appear designed to boost Welder in the Democratic primary, meddling that Welder's opponents decried, blaming Yoder and the GOP.

Back in Michigan, while El-Sayed is rallying with Sanders, Whitmer will be campaigning with prominent Michigan Democratic politicians, including Detroit Mayor Mike Duggan and Rep. Brenda Lawrence.

Whitmer's surrogates and supporters remain bullish about her chances but also are familiar with their state's history of upsets in gubernatorial races. Democrat Jennifer Granholm wasn't the front-runner when she ran for governor in 2002.

"There's polling data, but primaries are tough to poll," said former Gov. Jim Blanchard, a Whitmer supporter, adding that he still expects Whitmer to win.

EMILY's List President Stephanie Schriock painted the primary as an ultimately constructive argument about how to win a general election fight in a battleground state. The differences between Whitmer and El-Sayed, Schriock said, pale in comparison to the contrast between either of them and Schuette, the front-runner in the Republican primary.

"The values all these Democrats share is the same," Schriock said. "What we're having is a very active debate on how to get there. I'll take that. That's what we're talking about there. You've got Schuette on the other side, who wants to tear it all down."

El-Sayed echoed that sentiment on Friday, promising that Democrats will come together, despite the intraparty battle playing out in the final days before the primary.

"Four days out, things can get heated," El-Sayed tweeted Friday. "I admire [Whitmer and] the vigorous debate we share. While I deeply disagree on health care [and] corporate money in politics, I admire her work [and] commitment to serve. We will walk in lockstep, whoever wins, to a blue wave in November."

Chaotic day for Tesla shares amid Musk's tweeting [Back](#)

By Patrick Temple-West | 08/07/2018 05:59 PM EDT

Trading in shares of electric vehicle maker Tesla Inc. was halted today after founder and CEO Elon Musk said on Twitter that his company could be taken private.

Musk stunned the stock market with a message from his personal Twitter account: "Am considering taking Tesla private at \$420. Funding secured."

Tesla shares were at about \$342 in morning trading. Shortly after 2 p.m., trading was halted on the Nasdaq market at \$367.09, up 7 percent from the start of the day. When trading resumed, Tesla shares bid higher to close at \$379.44.

Tesla's shares have been attacked by short-sellers this year, and Musk has taunted them on Twitter before.

"It is possible that he wants to hurt short sellers of Tesla now [and] he has been very vocal against them recently." analysts for Morningstar wrote today.

WHAT'S NEXT: In a [blog](#) posting on Tesla's website, Musk said no final decision has been made and he did not elaborate about funding for the deal.

Good afternoon

Today, the Administrator signed the proposed rule "Strengthening Transparency in Regulatory Science."

This proposed regulation is intended to strengthen the transparency of EPA regulatory science. The proposed regulation provides that when EPA develops regulations, including regulations for which the public is likely to bear the cost of compliance, with regard to those scientific studies that are pivotal to the action being taken, EPA should ensure that the data underlying those are publicly available in a manner sufficient for independent validation.

In this notice, EPA solicits comment on this proposal and how it can best be promulgated and implemented in light of existing law and prior Federal policies that already require increasing public access to data and influential scientific information used to inform federal regulation.

Attached is the signed and dated proposed rule. For your convenience, please go to p. 19 for the Administrator's signature.

Please contact me if you have any questions.

Sincerely,
Laura

Laura S. Johnson | U.S. Environmental Protection Agency

Subject: Morning Energy, presented by Anheuser-Busch: Conservative talker has pull with Pruitt — It's primary day in coal country — Trump meets with ethanol

By Kelsey Tamborrino | 05/08/2018 05:40 AM EDT

With help from Eric Wolff and Anthony Adragna

PRUITT GETS TO IT FOR HEWITT: New emails emerged Monday that provide previously unknown details in the ongoing raft of controversies that have plagued EPA Administrator Scott Pruitt — and provide more ammo for onlookers who worry Pruitt spends too much time currying favor with his political allies.

Conservative commentator Hugh Hewitt brokered a meeting that ultimately ended with a polluted California area on Pruitt's personal priority list of Superfund sites, POLITICO's Emily Holden and Anthony Adragna report. Hewitt lives in Orange County, where the Superfund site sits, and has a son who works in EPA's press office. The TV and radio host emailed Pruitt back in September to set up a meeting between Pruitt and the law firm Larson O'Brien, which employs Hewitt and represents the Orange County Water District. "I'll join if the Administrator would like me too or can catch up later at a dinner," Hewitt wrote in the email, which was obtained under a FOIA lawsuit by the Sierra Club. He added that the issues surrounding the Superfund site were "Greek to me but a big deal in my home county."

Weeks later, the Orange County North Basin site in question appeared on Pruitt's list of 21 contaminated areas to address. Pruitt then proposed listing the site on the agency's National Priorities List, making it potentially eligible for long-term federal cleanup funding. Since the meet-up, Hewitt has been a staunch defender of Pruitt, dismissing his recent controversies as "nonsense scandals" on MSNBC in early April. EPA spokesman Jahan Wilcox confirmed that Hewitt helped arrange the meeting at the request of the water district but didn't attend.

The meeting adds to environmentalists' concerns about Pruitt. "The biggest fear we have is that No. 1 the administrator's political priorities and personal ambitions, political ambitions become the primary criteria for action under this program instead of science and health," said Elgie Holstein, senior director for strategic planning at the Environmental Defense Fund who has been tracking EPA's Superfund actions. [Read the story here.](#)

FIRST CLASS MEMO: EPA on Monday also released a copy of a memo written by the former head of Pruitt's security detail justifying his first class flights. "We have observed and increased awareness and at times lashing out from passengers which occurs while the Administrator is seated in coach with [his security detail] not easily accessible to him due to uncontrolled full flights," Pasquale "Nino" Perrotta wrote in the May 1, 2017, memo. "Therefore, we believe that the continued use of coach seats for the Administrator would endanger his life and therefore respectfully ask that he be placed in either business and or first class accommodations." The Washington Post and E&E obtained copies of the memo via a FOIA request. Perrotta retired from the agency last week.

WELCOME TO TUESDAY! I'm your host Kelsey Tamborrino. Congrats to Cummins Inc.'s Patrick Wilson, who was first to identify former House Speaker Nathaniel Banks of Massachusetts as the representative who served 11 terms and ran for election on five different party tickets. He was successful in all but the Liberal

Republican ticket. For today: What president was first to watch a major league baseball game from the dugout? Bonus points if you can name the team. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseydam](https://twitter.com/kelseydam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

BLANKENSHIP'S BIG DAY: We should know by tonight who will face Sen. [Joe Manchin](#) in a West Virginia Senate race that Republicans see as one of their biggest pickup opportunities of the year — that is, unless coal baron Don Blankenship scores a surprise upset in the surprisingly tight GOP primary. President Donald Trump [tweeted Monday](#) that Blankenship "can't win the General Election in your State," though he didn't endorse one of his opponents. That likely didn't ease fears that the two other major candidates — Rep. [Evan Jenkins](#) and state Attorney General Patrick Morrisey — will split the anti-Blankenship vote evenly and allow the former Massey Energy CEO to come out ahead. Blankenship recently was released from a year in jail following an explosion at the Upper Big Branch Mine that killed 29 workers. Blankenship has called the Upper Big Branch disaster the "worst tragedy" of his life, and is working to have his [conviction thrown out](#). (He has previously lost on appeal and failed to convince the Supreme Court to take the case.) For his part, Blankenship said Monday he was confident he would win, POLITICO's Alex Isenstadt [reports from Mount Hope, W. Va.](#)

That's not all: The Mountain State is not alone in kicking the 2018 midterms into gear. Statewide primary elections also are happening today in Ohio and Indiana and North Carolina, including solar energy entrepreneur and Democrat Dan McCready, who is running in North Carolina's 9th District. Vox nicely breaks down today's big races nationwide [here](#) and POLITICO has 7 things to watch [here](#).

SCHNEIDERMAN RESIGNS: New York Attorney General Eric Schneiderman, who has sued Exxon Mobil and fought the Trump administration's deregulatory agenda, [announced](#) his resignation Monday night in the wake of a report from the [New Yorker](#) that four women had accused him of abuse in previous romantic relationships. Two of the women who went on the record "say that they eventually sought medical attention after having been slapped hard across the ear and face, and also choked," according to the magazine. In a statement, Schneiderman disputed the allegations but said they "will effectively prevent me from leading the office's work at this critical time." The resignation takes effect at the close of business today.

Before the New Yorker story broke, Schneiderman and the attorneys general from seven other states called on Pruitt to withdraw his "secret science" proposal to ban the use of studies that don't publicly disclose all their data. Read the letter [here](#).

CHOPPING BLOCK: The White House on Monday [outlined](#) its package of proposed spending cuts, rescinding \$4.3 billion from the Energy Department's Advanced Technology Vehicles Manufacturing loan program, which supports the production of fuel-efficient, advanced technology vehicles. It was part of an overall request for \$15 billion worth of rescissions from previously appropriated funds from prior years. Another package going after the FY18 omnibus is expected later this year. More [here](#).

ON THE GRID: Puerto Rico's electric grid — which failed to provide power for much of the island for several months after last year's hurricanes — will be the focus of a Senate Energy and Natural Resources hearing this morning. The CEO of the Puerto Rico Electric Power Authority Walter Higgins and Bruce Walker, assistant Energy secretary for electricity delivery and energy reliability, are among the names set to testify. "The end goal is a modern and intelligent energy system that can serve as the resilient engine for Puerto Rico's economic revitalization," Walker is expected to say. Officials [say](#) close to 95 percent of power has now been restored on the island. **If you go:** The [hearing](#) kicks off at 10 a.m. in 366 Dirksen.

— **Forty-seven U.S. and international scientific groups** sent a [letter](#) to Puerto Rico Gov. Ricardo Rosselló on Monday, urging him to keep the island's statistical agency, the Puerto Rico Institute of Statistics, and its board of directors fully independent. "To address the challenges posed by its decade-long economic recession and the devastation of back-to-back hurricanes, Puerto Rico must chart its path toward sustainable recovery using reputable and reliable data and statistical methods," the letter says.

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks. The zero-emission trucks will be able to travel between 500 and 1,200 miles. Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025. [Learn more.](#) **

ENERGY-WATER BILL ADVANCES: The House Appropriations Energy-Water subpanel swiftly approved its \$44.7 billion energy and water spending bill on a voice vote Monday, sending the measure to the full committee for consideration. The appropriations bill largely ignores the president's budget request, earning the approval of Democrats, who applauded the boost in funding for the Army Corps of Engineers and DOE thanks to the bipartisan agreement to lift spending caps. [Read more.](#)

TRUMP MEETS WITH SENATORS ON RFS: In what could perhaps be the final time, Trump plans to meet today with at least Sens. [Chuck Grassley](#), [Joni Ernst](#), [Ted Cruz](#) and [Pat Toomey](#) to discuss their dueling priorities around federal ethanol policy. Who else will be in the room remains unclear, as sources told ME conflicting stories: An ethanol source said neither Pruitt, nor the Ag secretary, would be present, while a Republican Senate aide said both would be there.

A source said Team Ethanol's main goal is to get Trump to affirm his commitment to year-round sales of 15 percent ethanol, but the rest of the agenda seems to be unclear. A biofuels source said they expect Trump to kick the biofuels battle to Congress, where Sen. [John Cornyn](#) and Rep. [John Shimkus](#) have been trying to write a bill to overhaul the RFS. Cruz said at a Capitol Hill rally last week that he would view that decision as doing nothing. Cruz and Toomey are still seeking Renewable Fuel Standard changes to dramatically lower the program's compliance costs for refineries. Trump is scheduled to meet with Republican senators at 11:15 this morning, according to his public schedule.

— **Continuing their push for year-round sales of E15**, fuel retailers from 11 states sent a letter to Trump on Monday, calling on him to instruct EPA to immediately follow up on a pledge to allow the year-round sale of E15 before summer restrictions kick in on June 1. [Read the letter here.](#) Eighteen other groups, including the Sierra Club and Earthjustice, signed [onto their own letter](#) expressing concern with the administration's openness to the year-round sale of E15. And the American Energy Alliance launched a digital ad campaign Monday urging for the repeal of the RFS. [Watch that ad here.](#)

EXPECTING BIG THINGS: Shimkus is expecting broad support from the House when his comprehensive nuclear waste package [H.R. 3053 \(115\)](#) gets a vote Thursday. "I think people are ready to do something rather than nothing," he told reporters Monday. Shimkus said it's been a months-long process to educate members about the importance of the legislation and added he sent texts to Speaker [Paul Ryan](#) and Majority Leader [Kevin McCarthy](#) thanking them for finally bringing the package to the floor.

But he's not crazy: Shimkus said he hadn't had any recent talks with Senate counterparts about potentially moving the bill across the Capitol and he didn't expect they would this year with one of their most vulnerable incumbents (and ardent Yucca opponent), Sen. [Dean Heller](#), locked in a competitive reelection.

WHERE'S PERRY? Perry is slated to speak today during the Washington Conference on the Americas, where Commerce Secretary Wilbur Ross and Deputy Secretary of State John Sullivan, among others, are set to also appear. Perry will deliver remarks on "energy integration in the Americas" at 3:15 p.m. See the full agenda [here.](#)

E&C TACKLES EVs: The House Energy and Commerce Environment Subcommittee will listen to discussion today on how fuel vehicles and electric vehicles will coexist as electric vehicles become more popular. The hearing begins at 10:15 a.m. in 2322 Rayburn, or stream it [here.](#)

MAIL CALL: A diverse coalition of energy groups — including Advanced Energy Economy, the American Petroleum Institute and the American Wind Energy Association — on Monday urged Perry not to bail out coal and nuclear plants. Read their [letter](#).

INHOFE BACKS JACKSON: An Axios [report](#) that Pruitt chief of staff Ryan Jackson has been frozen out of the EPA chief's inner circle didn't sound right to his former boss, Sen. [Jim Inhofe](#). "I've known him well since he was 18 years old and I don't think they'd be capable of sidelining him," he told ME. Inhofe admitted that if the report is true — "that's an if I'm not willing to accept," he cautioned — it would be deeply concerning.

PRUITT MEETS MOTHERS ON CHEMICAL BAN: Two mothers will meet today with Pruitt, where they will press the administrator to ban paint strippers containing methylene chloride after their sons died using products with the chemical, according to the Environmental Defense Fund. On former President Barack Obama's last day in office, his administration proposed using the updated Toxic Substances Control Act to ban the use of the chemical in most commercial paint removers. Pruitt [told lawmakers](#) recently that he thinks EPA can make a decision on its proposed ban by the end of the year.

QUICK HITS

- Pruitt's Rome trip: More time on tourism than official business, [The Daily Beast](#).
- Steel town that voted for Trump banks on renewables, [E&E News](#).
- Interior sending officers to assist patrolling the U.S., Mexico border, [The Hill](#).
- EPA proposal pushed by ex-coal lobbyist could transform agency's use of science, [S&P Global](#).
- Booming tourism emits 8 percent of greenhouse gases, study shows, [Reuters](#).
- Old-boys' club that ran power world cracking with its model, [Bloomberg](#).

HAPPENING TODAY

8:30 a.m. — CHP Association holds [CHP policy forum](#) begins, 555 13th St NW

9:00 a.m. — The Atlantic Council's Global Energy Center [discussion](#) on "Transformations in Energy Technology: Innovations for a Secure Energy Future," 1030 15th Street NW

9:00 a.m. — The Bipartisan Policy Center [discussion](#) on "Investing for the Nation's Future: A Renewed Commitment to Federal Science Funding," 1225 I Street NW

10:00 a.m. — The International Energy Agency Bioenergy Technology Collaboration Program [international webinar](#) on "Biofuels for the Marine Sector: New Opportunities and New Challenges."

10:00 a.m. — The United States Energy Association [briefing](#) on "Economic Benefits of U.S. Liquid Natural Gas Exports," 1300 Pennsylvania Avenue NW

10:00 a.m. — Senate Energy and Natural Resources Committee [hearing](#) on the current status of Puerto Rico's electric grid and proposals for the future, 366 Dirksen

10:00 a.m. — The Woodrow Wilson Center's China Environment Forum [discussion](#) on "How Low (on Energy and Carbon) Can Buildings in China and the U.S. Go?" 1300 Pennsylvania Avenue NW

10:00 a.m. — House Transportation and Infrastructure Coast Guard and Maritime Transportation Subcommittee hearing on "blue technologies," 2167 Rayburn

10:15 a.m. — House Energy and Commerce Environment Subcommittee hearing on "Sharing the Road: Policy Implications of Electric and Conventional Vehicles in the Years Ahead," 2322 Rayburn

10:15 a.m. — House Natural Resources Committee markup on various bills, 1324 Longworth

12:00 p.m. — The Americas Society/Council of the Americas annual Washington Conference on the Americas with the theme "Investing in the Americas: The New Agenda for Growth," 2201 C Street NW

3:00 p.m. — House Rules Committee meets to formulate a rule on H.R. 3053 (115), the "Nuclear Waste Policy Amendments Act of 2018," H-313

THAT'S ALL FOR ME!

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks from the pioneer in hydrogen-electric renewable technology, Nikola Motor Company. The zero-emission trucks — which will be able to travel between 500 and 1,200 miles and be refilled within 20 minutes, reducing idle time — are expected to be integrated into Anheuser-Busch's dedicated fleet beginning in 2020.

Through this agreement Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025.

"At Anheuser-Busch we're continuously searching for ways to improve sustainability across our entire value chain and drive our industry forward," said Michel Doukeris, CEO of Anheuser-Busch. "The transport industry is one that is ripe for innovative solutions and Nikola is leading the way with hydrogen-electric, zero-emission capabilities. We are very excited by the possibilities our partnership with them can offer."

Stories from POLITICO Pro

Pruitt fast-tracked California cleanup after Hugh Hewitt brokered meeting [Back](#)

By Emily Holden and Anthony Adragna | 05/07/2018 10:12 PM EDT

EPA Administrator Scott Pruitt placed a polluted California area on his personal priority list of Superfund sites targeted for "immediate and intense" action after conservative radio and television host Hugh Hewitt brokered a meeting between him and lawyers for the water district that was seeking federal help to clean up the polluted Orange County site.

The previously unreported meeting, which was documented in emails released by EPA under a Freedom of Information Act lawsuit by the Sierra Club, showed Pruitt's staff reacting quickly to the request last September by Hewitt, who has been one of Pruitt's staunchest defenders amid a raft of ethics controversies around his expensive travel, security team spending and a cheap Washington condo rental from a lobbyist.

Pruitt has drawn criticism from environmentalists and other critics for letting prominent GOP backers and industry groups influence the agency's agenda — even as he has kicked scientists off of EPA's advisory panels and moved to limit the kinds of peer-reviewed research it will consider when making decisions.

In many cases, the people whose advice Pruitt is heeding could be useful supporters for him in a future race for U.S. senator or president. They include GOP megadonor Sheldon Adelson, who — as POLITICO reported in March — persuaded Pruitt last year to take a meeting with an Israeli water purification company called Water-Gen that later won a research deal with the EPA.

Hewitt, a resident of Orange County whose son James works in EPA's press office, emailed Pruitt in September to set up a meeting between the administrator and the law firm Larson O'Brien, which employs Hewitt and represents the Orange County Water District. Pruitt had been planning to meet with the lawyers in California a month earlier, but cancelled the trip to undergo knee surgery.

"I'll join if the Administrator would like me too or can catch up later at a dinner," Hewitt wrote in his Sept. 18 message. Hewitt added that the issues surrounding the Superfund site were "Greek to me but a big deal in my home county."

Pruitt's aides responded within minutes and quickly confirmed an Oct. 18 meeting for the lawyers and a project director.

Six weeks after that meeting, on Dec. 8, the Orange County North Basin site appeared on Pruitt's list of 21 contaminated areas to address. A month later, Pruitt proposed listing the site on EPA's National Priorities List, a move that could make it eligible for long-term federal cleanup funding from the federal government if the responsible polluters cannot be identified and forced to pay for its remediation.

Since then, Hewitt has been a robust defender of Pruitt, dismissing his recent controversies as "nonsense scandals" on MSNBC in early April and saying his detractors were "just trying to stop the deregulation effort."

Pruitt has touted the agency's Superfund work as one of his key priorities, setting up a task force to seek to speed up the clean-up of the nation's worst contaminated sites. That task force had been headed by Albert "Kell" Kelly, a former banker and longtime friend, who departed the agency last week after news about loans he provided to Pruitt in Oklahoma, including the mortgage provided to Pruitt for a house he bought from a lobbyist when he was a state senator.

Environmental advocates have worried Pruitt's efforts to identify Superfund priority sites would bypass the process set up by Congress to ensure cleanup resources are divided fairly, and that he could focus on sites seen as important to his political supporters. And environmentalists have said Pruitt's rush to claim that contaminated properties have been remediated could risk turning them over to local governments and businesses that might pursue cheaper, inadequate solutions.

Elgie Holstein, senior director for strategic planning at the Environmental Defense Fund who has been tracking EPA's Superfund actions, said the connection to Hewitt is "not a surprise."

"The biggest fear we have is that No. 1, the administrator's political priorities and personal ambitions, political ambitions become the primary criteria for action under this program instead of science and health," Holstein said.

EPA never disclosed the meeting with Hewitt's contacts. It was listed on Pruitt's public calendar as a staff briefing. But on his private Outlook schedule, which the agency has released in response to lawsuits, it appeared as an "Orange County Superfund Site" meeting with Kelly and two other staffers. The records did not list the Californians in attendance at the meeting at EPA headquarters in Washington.

But EPA spokesman Jahan Wilcox confirmed that two lawyers representing the water district, Robert O'Brien and Scott Sommer, and the water district director of special projects, Bill Hunt, were there. A third lawyer, former federal Judge Stephen G. Larson, was forced to cancel his trip due to wildfires in California, according to emails.

"Hugh Hewitt helped arrange the meeting at the request of the water district but did not attend," Wilcox said.

Wilcox said the meeting was for the water district to "brief EPA on the Superfund site's cleanup efforts and request expedited cleanup," following a 2016 agreement with the agency to conduct a remedial investigation and feasibility study, at a cost of \$4 million over two years. Hunt did not immediately respond to a request for comment.

Hewitt in an email to POLITICO called Pruitt a friend and said he does not have a working relationship with him. He said that his firm has represented the water district and worked on the site with EPA's regional office for years but that he had not participated in that work.

Hewitt said he requested a meeting because the water district wanted to brief the new EPA team, he said, adding that he was an Orange County resident until 2016 as well as an Orange County Children and Families Commission member. He said that he "very much" wanted the Superfund site remediated as soon as possible.

According to an EPA [fact sheet](#), the Orange County site has more than five square miles of polluted groundwater containing chlorinated solvents and other contaminants across the cities of Anaheim, Fullerton, and Placentia. It includes the Orange County Groundwater Basin, which provides drinking water to more than 2.4 million residents across 22 cities, according to the agency. Those pollutants can damage humans' nervous systems, kidneys and livers, and some are considered carcinogenic.

EPA has just begun its process of studying the contamination and it has not determined which companies caused the pollution in the area. But an [administrative settlement](#) with the EPA in 2016 says the area was home to "electronics manufacturing, metals processing, aerospace manufacturing, musical instrument manufacturing, rubber and plastics manufacturing, and dry cleaning."

Hewitt also thanked EPA schedulers for working to arrange a meeting between Pruitt and the California Lincoln Clubs, which describe themselves as in favor of "limited government, fiscal discipline and personal responsibility." After some rescheduling Pruitt eventually met with representatives of the group on a trip to California in March of this year, according to his public calendar. Prominent Orange County businessman John Warner also helped to connect that group with staffers.

Pruitt and his scheduling staff have frequently sought to set up meetings with or for influential Republican figures, according to the internal EPA emails.

His team accepted an invitation for him to address The Philanthropy Roundtable at an invitation-only event at the White House for "conservative and free-market foundation CEOs and individual wealth creators to discuss the greatest opportunities for foundations to protect and strengthen free society" and "what [Pruitt] views as unique opportunities for philanthropic action.

As POLITICO [reported](#) in March, Pruitt also met with an Indiana coal executive and Trump fundraiser who was seeking to soften a pollution rule.

Pruitt also crafted his travel schedule — including a tour of states in August — to meet with big business much like a member of Congress would during the annual recess.

In July, EPA's associate administrator of public engagement Tate Bennett was working with Pruitt to "essentially create an August recess for the EPA to be out in the states talking with individual companies & doing listening sessions within sectors," said Leah Curtsinger, the federal policy director for the Colorado Association of Commerce & Industry, in an email introducing Bennett to her husband, public affairs director at coal company Cloud Peak Energy and a fellow alum of Senate Majority Leader Mitch McConnell's office.

Annie Snider contributed to this report.

Blankenship, predicting victory, thumbs his nose at GOP [Back](#)

By Alex Isenstadt | 05/07/2018 08:27 PM EDT

MOUNT HOPE, W. Va. — A defiant Don Blankenship on Monday shrugged off President Donald Trump's last-minute plea for Republican primary voters to reject his insurgent Senate candidacy — and flatly predicted it would fail to halt his momentum.

On the final day of the dramatic West Virginia campaign, the coal baron and ex-prisoner seemed unbothered by the president's foray into the contest, arguing that voters would see through it as the latest ploy in an establishment-led effort aimed at keeping him from winning the nomination.

"I think it's still over," he declared to reporters here during a frenzied final day of the race. "It probably tightens it a point or two, but I don't think it matters much."

At another point in the day, after a reporter asked if he was feeling confident, Blankenship had a deadpan response: "Yeah, we're gonna win."

Senior Republicans are fretting that Blankenship, who spent a year behind bars after the 2010 explosion at his Upper Big Branch Mine that killed 29 workers, has vaulted into the lead heading into Tuesday's primary. GOP officials reviewed a range of surveys over the weekend, with some showing Blankenship holding a narrow single-digit advantage over his mainstream opponents, Rep. Evan Jenkins and state Attorney General Patrick Morrisey. Others had Blankenship ahead by more.

The national GOP has waged an all-out campaign to stop him from winning the nomination. They're convinced would destroy the party's prospects of ousting Democratic Sen. Joe Manchin in November. And many Republicans say a Blankenship win would be yet another black eye for the party, which is still reeling from last year's loss in the Alabama special election.

Over the past month, a super PAC aligned with Senate Majority Leader Mitch McConnell has spent over \$1.3 million on a barrage of anti-Blankenship TV ads.

With the former prisoner gaining momentum, the effort to stop him has gone into overdrive. As the race entered its final day, Blankenship's rivals — who had spent almost the entire campaign attacking one another — turned their fire on him.

In a not-so-veiled jab at Blankenship, Jenkins held a morning campaign event at a memorial for coal workers. At one point, he noted that one of his great grandfathers died in a mine explosion.

"The president could not have made it any clearer this morning that Don Blankenship is not the guy to beat Joe Manchin," Jenkins said.

Morrissey, who spent the day hopscotching across central West Virginia, announced that he'd sent a letter to Blankenship's parole officer highlighting what he argued was a violation. At one point, he took to Twitter to suggest questions for reporters to ask Blankenship. And he released a digital advertisement unloading on the coal baron, and highlighting his role in the 2010 explosion.

"Families devastated, children left fatherless, wives widowed," a narrator intoned. Many in the party are skeptical that the 11th-hour offensive will succeed — and, behind the scenes, finger-pointing is underway. Some are pinning the blame on the White House, saying it should have rebuked Blankenship earlier. Others say the fault lies with Jenkins and Morrissey, whose near constant attacks left one another badly damaged and created an opening for Blankenship.

Still others are pinning the blame on McConnell, saying that he should have long ago used his political muscle to clear the primary field and thereby avoid the three-way dynamic that has played to Blankenship's benefit.

McConnell has privately expressed concern to associates about Blankenship, whom he has long viewed as a serious threat in the contest. A loss for the Senate GOP leader, who hails from a neighboring Appalachian state and has faced withering attacks from Blankenship, would be embarrassing.

Over the weekend, McConnell spoke by phone with the president about the contest. According to a Republican official briefed on the call, Trump informed McConnell that he planned to criticize Blankenship publicly, a step he hadn't taken previously. Among the issues that arose on the call were Blankenship's TV ads, some of which have gone after McConnell's family in deeply personal, racial terms.

White House aides spent part of Friday drafting a tweet targeting Blankenship. Then, on Monday, the president hit send.

"To the great people of West Virginia we have, together, a really great chance to keep making a big difference," he wrote. "Problem is, Don Blankenship, currently running for Senate, can't win the General Election in your State...No way! Remember Alabama. Vote Rep. Jenkins or A.G. Morrissey!"

For Blankenship, who has tied himself closely to the president and on Monday declared himself "Trumpier than Trump," the attack could have stung. Yet as the race came to a close, Blankenship seemed unbothered.

Speaking to reporters after touring a freight shipping office here, Blankenship said he placed no stock in the president's tweet. It was McConnell, Blankenship said, who convinced Trump to weigh in. After Tuesday, Blankenship added, the president would be embarrassed he followed McConnell's lead.

"It's obvious that the president is suffering from the same thing that many in the public do, which is misinformation and untruths," Blankenship said. "The lesson that will be learned here when I win is that you shouldn't blindly endorse or cast doubts or favoritism unless you actually look at their record and not depend on the people in that swamp that you're trying to drain."

At times, Blankenship seemed to take pleasure in his recalcitrance. He refused to commit to endorsing his primary rivals should they win, which he said wouldn't happen, anyway. He wouldn't apologize for running TV ads lambasting McConnell's "China family." And he reiterated that he wouldn't vote for McConnell to serve as Senate GOP leader.

At one point, Blankenship noted that he'd been disrespected at other times in his career. The Marshall University-educated businessman noted that he'd grown up poor before becoming a multimillionaire, and recalled one episode in which he easily passed a CPA exam that Ivy Leaguers he knew had struggled with.

Now, he said, he was confronting another kind of establishment.

"I've been underestimated," he said, "all my life."

What's in Trump's \$15B spending cuts package [Back](#)

By Kaitlyn Burton | 05/07/2018 08:29 PM EDT

The White House is set to release a \$15 billion spending cuts package Tuesday. Here are some of the plan's targets, a senior administration official told reporters today:

- \$7 billion from the Children's Health Insurance Program, which covers about 9 million low-income children.
- \$4.3 billion from the Energy Department's Advanced Technology Vehicles Manufacturing loan program, which supports the production of fuel-efficient, advanced technology vehicles.
- \$800 million from the Center for Medicare and Medicaid Innovation, which was created under Obamacare.
- \$252 million from the 2015 Ebola outbreak response.
- \$148 million from the Animal and Plant Health Inspection Service for responding to disease outbreaks "that have already been resolved," the official said.
- \$107 million for technical assistance after Hurricane Sandy for emergency watershed programs.
- \$15 million from USDA's Rural Cooperative Development Grant program, which seeks to boost the economies of rural areas.

Trump tries to woo conservatives with bid to cut spending [Back](#)

By Sarah Ferris and Kaitlyn Burton | 05/07/2018 09:05 AM EDT

The White House on Tuesday will send \$15 billion in proposed spending cuts to Congress in an attempt to demonstrate fiscal austerity to skeptical conservatives, senior administration officials confirmed Monday night.

The administration had last week planned to send Congress a package of \$11 billion in spending reductions. But since then, some conservatives have quietly pushed for an even bolder proposal, particularly after the GOP's spending binge in recent months, said Republicans familiar with the discussions.

The White House initially floated as much as \$60 billion in cuts, including an unprecedented attempt to cancel money from this year's omnibus spending bill. The proposal was later downsized to \$11 billion, and then back up to \$15 billion, targeting only unused funding from past years, which POLITICO first reported.

One senior administration official told reporters that the proposal coming Tuesday is "the largest single rescissions package at one time."

The White House also plans to make a second attempt at clawing back funding from the omnibus, but the senior administration official said that could come weeks later.

The official said President Donald Trump will be personally involved in the details of the next package, which will include "substantial" cuts in current spending based on the president's own budget request.

Unlike regular spending bills, a presidential rescissions package is given fast-track authority in both chambers. That means the proposal is one of the rare spending-related bills that is able to bypass the 60-vote threshold in the Senate.

Nearly half of the package, a whopping \$7 billion, pulls from the Children's Health Insurance Program, which covers about 9 million low-income children.

Of this, \$5 billion is fiscal 2017 funding that has already expired, and \$2 billion is money from a so-called contingency fund that states can tap into if they're short on cash.

These CHIP rollbacks "will not impact the program," the senior administration official said.

It would also cut \$800 million from the Center for Medicare & Medicaid Innovation, which was created under Obamacare.

In addition, the proposal will target 38 programs with large amounts of leftover cash, including \$148 million from the Animal and Plant Health Inspection Service, \$107 million for Hurricane Sandy in 2013 and \$252 million for the Ebola outbreak in 2015.

The senior administration official said the White House is starting with "uncontroversial" cutbacks as a sweetener to bring Democrats on board.

"I don't think we believe there's a reason we wouldn't get bipartisan support for a package like this," the official said.

The process also includes a special bonus for fiscal hawks: Whenever the president submits a rescissions request, that spending is frozen automatically for 45 legislative days, or until Congress formally rejects it.

OMB Director Mick Mulvaney said in April that he hopes for a vote in the House before the July Fourth recess, and officials told reporters Monday that the House is "very interested in this package."

The GOP-dominated House is expected to easily clear the rescissions package, but even White House officials are less confident about its fate in the Senate, White House legislative affairs director Marc Short told POLITICO on Monday. Trump is pleased with the \$15 billion proposal, Short said.

In a call with Capitol Hill staff on Monday, White House officials skirted a question about whether Majority Leader Mitch McConnell had signed off on the proposal.

"We are in discussions with the majority leader," the administration official said on the call, which POLITICO was permitted to listen to by a staffer. "We're hopeful the Senate's going to come our way but I would say it's an ongoing conversation right now."

Trump's unusually large request would come after a nearly two-decade drought of any formal rescissions proposal.

Former President Bill Clinton was the last president to propose rescissions. His three requests totaled just \$128 million, a fraction of Trump's request.

Even with Trump's record-setting sum, conservative groups are demanding the Trump administration go further by proposing to cancel funds from the omnibus, which Trump threatened to veto.

Americans for Prosperity, the right-leaning group founded by the Koch brothers, is asking the White House to reel back \$45 billion from the \$1.3 trillion omnibus.

The group on Monday released an exhaustive list of programs it believes should go on the chopping block, including homeless assistance grants, a Coast Guard security center, FBI salaries and the National Cancer Institute.

Behind the scenes, top budget officials have wrestled for weeks with Republican lawmakers on the size and scope of the rescissions package.

The debate was largely centered on whether to cut money across the board from the omnibus spending package, or whether to target individual programs.

Few Republicans wanted the across-the-board cuts as those would have hit the hard-won increases to military spending. But officials also worried that going after specific programs would spur infighting among Republicans, according to one former top GOP congressional aide briefed on the deliberations — an outcome everyone hoped to avoid ahead of the 2018 midterm elections.

Meanwhile, belt-tightening conservatives in the House are still hoping for more than \$15 billion in cuts.

An internal survey of dozens of House Republican Study Committee members found that lawmakers overwhelmingly support the largest possible rescissions request. The survey, which was obtained by POLITICO, found that 71 percent of RSC members said they would back a proposal that cut at least \$60 billion. Another 9 percent said they'd support any amount.

And 94 percent of RSC members surveyed said the rescissions package should cut at least some domestic funding from this year's \$1.3 trillion omnibus. Only 6 percent said "maybe."

Republican budget wonks also wondered if the final package would accomplish the task of reducing government spending in a meaningful way, if it indeed took previously unspent money from old programs.

"This is not a deficit reduction exercise, but more of a public relations exercise to soothe the base and convince them that the White House is fiscally responsible," said G. William Hoagland, a senior vice president at the Bipartisan Policy Center and former director of budget and appropriations for former Senate Majority Leader Bill Frist as well as the former director of the Senate Budget Committee.

"If they are finding unused budget authority and putting that in a special package to Congress as appropriators are trying to put together the [fiscal] 2019 bill, it may have the effect of creating more spending for 2019 rather than less," Hoagland said.

House Appropriations panel advances \$44.7B energy and water bill [Back](#)

By Annie Snider | 05/07/2018 06:15 PM EDT

A House Appropriations Committee subpanel swiftly approved its \$44.7 billion energy and water spending bill on a voice vote today, sending it to the full committee for consideration.

Democrats applauded the boost in funding that the measure provides for the Army Corps of Engineers and DOE thanks to the bipartisan agreement to lift spending caps.

"Our bill is certainly a message to the executive branch that the legislative branch rejects the ill-considered, draconian cuts we have come to expect to every important agency we fund in this bill," said Rep. [Marcy Kaptur](#), the top Democrat on the subcommittee.

Overall, the bill would provide \$7.28 billion to the Army Corps of Engineers, \$451 million over 2018 levels. That includes \$1.6 billion for harbor maintenance activities, or \$160 million more than the level appropriators committed in a major 2014 bill.

DOE's energy programs would get \$13.4 billion under the measure, with increases for fossil and nuclear energy research and cuts for renewable energy and energy efficiency.

Democrats objected to that disparity, as well as to a spate of policy riders in the bill such as a provision to repeal the Obama administration's Waters of the U.S. rule and another to override a court decision and operate the Columbia and Snake rivers' dams for hydropower production rather than protecting endangered salmon.

WHAT'S NEXT: The full House Appropriations Committee is expected to consider the measure soon.

Sent: 5/4/2018 9:43:13 AM
To: Wehrum, Bill [/o=ExchangeLabs/ou=Exchange Administrative Group (FYDIBOHF23SPDLT)/cn=Recipients/cn=33d96ae800cf43a3911d94a7130b6c41-Wehrum, Wil]
Subject: Morning Energy: Heightened vetting for Pruitt-related FOIAs — EPA narrows air permitting guidelines — Coolant industry: Global warming industry is so cool it's hot

By Kelsey Tamborrino | 05/04/2018 05:41 AM EDT

With help from Anthony Adragna, Eric Wolff and Emily Holden

ALL FOIA ONE, ONE FOIA ALL: You may need to have a little patience if you're waiting for EPA to ship over any documents about Administrator Scott Pruitt's activities. Freedom of Information Act requests that relate to Pruitt get an extra layer of vetting before they are released to the public, new internal emails obtained by POLITICO show. Top aides to the administrator, including chief of staff Ryan Jackson, perform the "awareness reviews" on all or most document requests related to Pruitt — on top of the reviews done by career experts. And that is contributing to the slow flow of information released under records requests at EPA, Pro's Alex Guillén reports.

The new vetting processes described in the emails are done before the agency releases essentially any documents involving the administrator. And the emails show Pruitt's political appointees chastising career employees who released documents in accordance with FOIA without letting them screen the records first.

In one exchange from last August, Jackson and Liz Bowman — the head of EPA's Office of Public Affairs who announced on Thursday she was stepping down — expressed concern about documents related to comments Pruitt made on CNBC disputing that carbon dioxide from human activities was the primary cause of climate change. "Why did Kevin Bogardus from E&E all of a sudden get a response to a FOIA today, without any awareness from our FOIA office?" Bowman wrote on Aug. 2, adding later that the deadline wasn't until the end of the month.

ME readers will recall from February that EPA has been flooded with FOIA requests under Pruitt, forcing many groups to sue for the release of documents. But the new emails, which EPA gave to the Natural Resources Defense Council following legal action, shed new light on the cloud of secrecy that surrounds the agency.

While Obama-era EPA officials said the agency sometimes used awareness reviews during their time at the agency when career staff thought documents would generate a lot of interest, FOIA experts say the extra vetting of documents appears to be on the rise under Pruitt. "This does look like the most burdensome review process that I've seen documented," said Nate Jones, director of the FOIA Project at George Washington University's National Security Archive. Read more.

HAPPY FRIDAY! I'm your host Kelsey Tamborrino, and the American Petroleum Institute's Khary Cauthen correctly guessed that Roger Taney — who was nominated for Treasury secretary — was rejected by the Senate, 18-28, in 1834. Not all hope was lost, however, as Taney went on to become a Supreme Court justice. For today: Who was the only member of the Continental Congress to sign all four of the great state papers? Bonus points if you can name all four papers. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

EPA NARROWS GUIDELINES: EPA will alter its interpretation of when related facilities are considered a single source for air permitting purposes in a way that could ease their permitting requirements, Alex reports.

The April 30 [memo](#) was sent by EPA air chief Bill Wehrum concerning the so-called common control designation, which says plants located near each other should be aggregated for permitting purposes and subject to stricter standards if they are operated by the same entity. Under the new guidance, that will include entities that can "dictate decisions of the other that could affect the applicability of, or compliance with, relevant air pollution regulatory requirements." The memo concerns a Pennsylvania landfill and nearby biogas processing facility that are owned by different companies. Read [more](#).

ADD ADELSON'S NAME TO THE LIST: Yet another high-profile political ally emerged Thursday to have helped Pruitt arrange an international trip: GOP mega-donor Sheldon Adelson. According to new documents obtained by The Washington Post, Adelson arranged parts of Pruitt's canceled trip to Israel — where he was in part scheduled to unveil an agreement with Water-Gen, an Israeli water purification company championed by Adelson. Read the full report [here](#).

MORE INFO PLEASE: Four senior House Energy and Commerce Democrats — [Frank Pallone](#), [Paul Tonko](#), [Diana DeGette](#) and [Kathy Castor](#) — sent a [letter](#) to Pruitt Thursday asking for the names of three people Steven Hart — a lobbyist who was also married to the EPA chief's landlord — [recommended](#) for slots on the agency's Scientific Advisory Board. "Despite your earlier claims that J. Steven Hart had no clients with business before EPA, it is now clear that Mr. Hart did represent clients with business before your agency and, in fact, lobbied you on their behalf," they wrote.

MORE TIME PLEASE: Sixty-four Democrats signed onto a letter to Pruitt calling for a 90-day comment period on a his recent "secret science" proposal to ban the use of studies that don't publicly disclose all their data. "Given the large response from scientists and stakeholders before the rule was officially proposed, a comment period of 30 days will not allow for meaningful engagement from stakeholders," the letter states. Read it [here](#).

'NOT OKAY': Interior's inspector general found a male National Park Service regional office official made unwanted sexual advances toward a female employee on consecutive days that she told him were "not okay." The official retired before a scheduled interview and stopped responding to the IG. Read the report [here](#).

CLOVIS OUT ... AGAIN: Sam Clovis, a former Trump campaign aide who had been serving as the Agriculture Department's liaison to the White House, is departing the department and will return home to Iowa, a USDA official confirmed to POLITICO's Liz Crampton. The president had previously nominated him to be USDA undersecretary for research, education and economics, where he faced backlash for his lack of science credentials and ultimately withdrew his name from consideration for that position in November. Greens had also particularly focused on Clovis for his comments that he did not believe in man-made climate change. Read [more](#).

COOLANT INDUSTRY: GLOBAL WARMING INDUSTRY IS SO COOL IT'S HOT: The White House now has evidence that a global warming treaty limiting coolants would generate thousands of new jobs, and now it must decide whether to send the treaty to the Senate for ratification. A [report](#) released Thursday by the Air Conditioning Heating and Refrigeration Institute and the Alliance for Responsible Atmospheric Policy said that the amendment to the Montreal Protocol limiting use of hydrofluorocarbons, a greenhouse gas, would help American manufacturers who produce the bulk of the world's supply of advanced coolants. Ratifying the treaty would produce 33,000 additional jobs and an extra \$12.5 billion of annual manufacturing output.

The report is considered critical to help presidential aides persuade President Donald Trump to advance the treaty to the Senate, despite the president's aversion to multilateral treaties, his predecessor's accomplishments, and anything involving global warming. "U.S. ratification of the Kigali Amendment is good for American jobs, good for the economy, and crucial for maintaining U.S. leadership across the globe," said John Hurst, Chairman of The Alliance, and Vice President of Lennox International. He added, "Over 30 countries have ratified the amendment. America cannot afford to be on the sideline. America must continue to lead."

ZINKE HIRES GOP ADVISER FOR NPS: Interior Secretary Ryan Zinke hired Chuck Laudner, a Iowa Republican political consultant who was an adviser to Trump's campaign, for a position with the National Park Service, an Interior spokeswoman confirmed to Pro's Ben Lefevre. Laudner previously worked with Rick Santorum's presidential campaign in Iowa in 2012 and was executive director for the Iowa Republican Party from 2007-08. Interior hired Laudner "a few weeks ago," spokeswoman Heather Swift said, though she did not say what job he had taken.

MAY THE FOURTH BE WITH YOU: Zinke teased out some "Star Wars" related news on Thursday. In a video featuring the secretary walking alongside motorized BB-8 and R2-D2 toys, the droid rolls over an Interior logo. Zinke tweeted the video with a message: "Tomorrow is a big day. More to come. #MayTheFourthBeWithYou." See it.

BLANKENSHIP ATTACKS McCONNELL'S "CHINA FAMILY": West Virginia GOP Senate hopeful Don Blankenship released another ad on Thursday attacking Majority Leader Mitch McConnell. This time, the spot claims "Swamp Captain Mitch McConnell has created millions of jobs for China people." The ad, which POLITICO's Alex Isenstadt reports on here, is expected to start airing today. It closes with a shot of Blankenship holding two young children, one on each arm as he pronounces, "I will beat Joe Manchin and ditch cocaine Mitch for the sake of the kids." The ad arrives days ahead of the state's May 8 primary.

FOIA WHAT IT'S WORTH: The Montana-based Western Values Project filed a FOIA request to EPA in an effort to make public any communication about Zinke. The request includes all communications between select EPA employees that contain "Zinke," "RZ" or "Interior Secretary" and comes in response to a report in The Atlantic that alleges an EPA press employee planted stories about Zinke in order to distract from his boss. EPA spokesman Jahan Wilcox in a statement to the Atlantic called the allegations "categorically false."

CLIMATE LAWMAKERS REBUT CARBON LEGISLATION: The Citizens' Climate Lobby released a rebuttal to Rep. Steve Scalise's concurrent resolution, H. Con. Res. 119 (115), which expresses the sense of Congress that a carbon tax would be detrimental to the U.S. economy. The climate lobby refutes the resolution, claiming that if done correctly, a tax or fee on carbon could boost the economy. Read the rebuttal here and the bill text here.

MAIL CALL! BIOFUELS WRITE TO EPA ON STRATEGY: A coalition of Midwest biofuels associations sent a letter Thursday to EPA asking it to move administrative time and staff away from Renewable Fuel Standard exemptions and instead toward approvals for cellulosic ethanol. "The discrepancy between the way EPA is handling RFS exemptions and cellulosic ethanol pathway approvals tells you everything you need to know about how this EPA is treating the RFS," said Iowa Renewable Fuels Association Executive Director Monte Shaw in a statement. Read the letter.

— **The Business Council for Sustainable Energy**, a coalition of companies and trade associations, wrote to members of Congress on Thursday, asking that they reauthorize energy title programs in the farm bill, H.R. 2 (115). "It is essential that a healthy, robust bipartisan energy title continue as part of new comprehensive agriculture legislation," writes the group's president, Lisa Jacobson. The letter also lays out potential improvements to the programs. Read it here.

— **Congressional Western Caucus Chairman Paul Gosar led 18 lawmakers** in a letter requesting Pruitt reverse course and proceed with an intention to withdraw the Obama-era EPA's preemptive veto of the Pebble Limited Partnership mining project under Section 404(c) of the Clean Water Act. They write that EPA's January decision not to overturn the preemptive vote "has sowed tumult for interested parties."

VW'S WINTERKORN CHARGED: Former Volkswagen AG leader Martin Winterkorn was charged with conspiracy and wire fraud in connection with the company's long-running emissions cheating scheme, according to an indictment unsealed Thursday by the Justice Department. The indictment, issued by a federal

grand jury sitting in the Eastern District of Michigan, charged Winterkorn with four counts of violating federal law. The first count charges that he conspired with other senior executives and Volkswagen employees to defraud customers, the United States and violate the Clean Air Act by making false representations about the company's supposedly "clean diesel" vehicles. The other three counts concern wire fraud tied to the scheme. More from Pro's Lauren Gardner [here](#).

GOING OUT WEST: New Mexico Sen. [Martin Heinrich](#) delivers a keynote address today at the [Outdoor Economics Conference](#), and he's [expected to discuss](#) his legislation to establish the White Sands National Monument as a national park, as well as discuss the outdoor recreation industry in the region. Watch it live [here](#).

REPORT: GRID RESILIENCY IN THE FACE OF NUCLEAR CLOSURES: A new IHS Markit report released Thursday examines the effect of five nuclear closures in the PJM Interconnection, finding the closures will reduce annual net benefits for consumers from PJM grid-based electricity by about \$8 billion per year over 2013-2016. That "translates into a consumer net benefit per kilowatt-hour of PJM nuclear generation of about 3 cents per kWh," the report found. The report was prepared for Nuclear Matters, an industry-funded organization. Read it [here](#).

MOVER, SHAKER: The Joseph Rainey Center for Public Policy, a think tank focused on sustainable politics and inclusive governance, has named Sarah Hunt its founding CEO. Hunt previously was director at the Center for Innovation and Technology at the American Legislative Exchange Council.

HITTING THE ROADMAP: The Delta Institute released a "Coal Plant Redevelopment Roadmap" on Thursday to provide insight into coal-impacted municipalities and their transition processes. Modules in the roadmap will show economic and environmental impacts, as well as provide information on engagement strategies for such communities, among other topics. See it [here](#).

ON THE POD: NPR's podcast, Embedded, released a new episode Thursday on coal in Buchanan County, Va. Listen [here](#).

Stories from POLITICO Pro

EPA's top spokesperson to depart [Back](#)

By Emily Holden | 05/03/2018 11:26 AM EDT

EPA's top spokeswoman is leaving the agency, the latest in a string of departures by key staffers amid the swarm of investigations into Administrator Scott Pruitt's potential ethical [lapses](#).

The exit of Liz Bowman comes after Pruitt's lead security agent, Pasquale "Nino" Perrotta, and EPA's Superfund task force head and adviser Albert "Kell" Kelly both [quit](#) earlier this week. Perrotta has cited negative media attention as contributing to his decision. His role in Pruitt's [security spending](#) was under review by the agency's inspector general, and he was interviewed by House Oversight Committee staffers on Wednesday.

EPA also confirmed Kelly was leaving because he attracted controversy over being banned from the banking industry.

Bowman, who will join Iowa Republican Sen. Joni Ernst's staff, has been associate administrator for public affairs since shortly after Pruitt was confirmed in early 2017. She was previously director of issue and advocacy communications for the American Chemistry Council.

"I leave extremely thankful for the opportunity to serve the Trump administration and Administrator Pruitt," Bowman said. "Being a member of the EPA team has allowed me to further my skills, learn from my mistakes and make lifelong friendships. It has also provided me the opportunity to develop a new, and deep, respect for the public servants who serve the American people, day in and day out, to ensure that we all have access to clean air, land and water."

EPA chief of staff Ryan Jackson said Bowman "has been an invaluable lead of our public affairs office during this past year."

"I congratulate her on pursuing great and new opportunities on Capitol Hill where we'll continue to work with her, just in a different capacity," he said.

Bowman's last day at EPA is May 11.

Critics pound EPA chief after he disputes human role in climate change [Back](#)

By Alex Guillén | 03/09/2017 12:04 PM EDT

EPA Administrator Scott Pruitt said Thursday that carbon dioxide emitted by human activity is not the primary driver of climate change, a conclusion out of step with mainstream climate science that drew immediate condemnation from Democrats and environmentalists.

"I think that measuring with precision human activity on the climate is something very challenging to do, and there's tremendous disagreement about the degree of impact," Pruitt said on CNBC. "So, no, I would not agree that it's a primary contributor to the global warming that we see." He also called for continued study of the issue.

That is a stronger position than Pruitt took during his confirmation hearing, when he said that the degree of human contribution to climate change is "subject to more debate."

Democrats rushed to condemn Pruitt's remarks.

"This is just nuts: EPA chief Scott Pruitt just claimed carbon not causing climate change," Sen. Brian Schatz (D-Hawaii) tweeted a few minutes after the interview aired. "We Senate D's will be a check on his crazy views."

Most scientists agree that greenhouse gases emitted by human activity like burning fossil fuels is the primary driver of climate change. That includes Pruitt's own agency, which says that human-emitted CO2 "is the primary greenhouse gas that is contributing to recent climate change."

One prominent environmentalist suggested Pruitt should be impeached.

"Pruitt misled Congress about his willingness to do a core part of his job," Sierra Club Executive Director Michael Brune wrote on Twitter. "Contradicting science + law should mean removal from office now."

Pruitt also acknowledged on his CNBC appearance that the Supreme Court has ruled on the matter and that the Obama administration issued an "endangerment finding" concluding greenhouse gases are a threatening pollutant.

But, he added, "nowhere in the continuum, nowhere in the equation, has Congress spoken. The legislative branch has not addressed this issue at all."

Pruitt was slated to speak at the CERAWEEK oil industry conference in Houston later Thursday. He said on CNBC that he would bring a "pro-growth, pro-jobs and pro-environment" message to the conference.

EPA narrows guidelines for aggregating sources for air permitting [Back](#)

By Alex Guillén | 05/03/2018 05:59 PM EDT

EPA will alter its interpretation of when related facilities are considered a single source for air permitting purposes in a way that could ease their permitting requirements.

Permitting rules say that plants located near each other should be aggregated for permitting purposes if they are operated by the same entity, known as "common control." In that case, the facilities' emissions can be aggregated and be subject to more stringent permitting requirements than if treated separately.

In an April 30 [memo](#) concerning a common control designation for a Pennsylvania landfill and nearby biogas processing facility that are owned by different companies, EPA air chief Bill Wehrum revised the agency's interpretation so that facilities meet the definition if one entity has "the power or authority ... to dictate decisions of the other that could affect the applicability of, or compliance with, relevant air pollution regulatory requirements."

A dependent relationship should not necessarily mean common control, he added. Facilities can be "economically or operationally interconnected" without being able to direct the other.

In the immediate case of the Pennsylvania landfill and processing plant, Wehrum concluded that the two are not commonly controlled because the landfill could otherwise meet methane emissions limits by burning off biogas and because the processing plant hopes to secure other sources of biogas.

WHAT'S NEXT: Ultimately, EPA's reasoning is only a recommendation. Pennsylvania regulators have the final say on whether these particular facilities fall under "common control."

Sam Clovis is leaving USDA [Back](#)

By Liz Crampton | 05/03/2018 08:16 PM EDT

Sam Clovis, the former Trump campaign aide who had been serving as USDA's liaison to the White House, is leaving the Agriculture Department and will return home to Iowa, a USDA official confirmed Thursday evening.

Clovis' last day is Friday. A "goodbye party" was being held for him on Thursday night, according to a source attending the party.

Clovis had served as a co-chairman and policy adviser on the Trump campaign and later led the USDA beachhead team for the Trump transition, but ran into trouble when President Donald Trump nominated him to be USDA undersecretary for research, education and economics.

Clovis withdrew his name from consideration in November — before the Senate Agriculture Committee could hold a confirmation hearing — after facing a torrent of criticism from Senate Democrats and environmental advocates. Clovis drew fire for his skepticism of climate science, past comments on issues like race and gender, and what critics on the left said was his lack of scientific credentials that are legally required for the position, which would also have had him serve as the department's chief scientist.

Clovis had endured criticism for months, but his withdrawal came shortly after he was swept up in special counsel Robert Mueller's probe of Russian interference in the 2016 campaign and the Trump campaign's alleged ties to Russian interests. While serving on the campaign, Clovis had supervised George Papadopoulos, a Trump campaign foreign policy adviser who struck a plea deal on charges he lied to FBI investigators about his communications with Russia-linked contacts. Clovis' withdrawal followed shortly after news of Papadopoulos' plea deal.

More recently, Clovis had been posted to the Natural Resources Conservation Service to provide guidance.

"Dr. Clovis was one of the first people through the door at USDA in January 2017, and we are grateful for his time here," a USDA spokesman said. "He is a good man and a patriot who for decades has served his country admirably. While we are sad Dr. Clovis is leaving USDA, we wish him well on his future endeavors back home in Iowa."

Daniel Lippman contributed to this report.

Zinke hires Iowa political consultant for Interior parks job [Back](#)

By Ben Lefebvre | 05/03/2018 06:55 PM EDT

Interior Secretary Ryan Zinke has hired Iowa Republican political consultant Chuck Laudner for a position with the National Park Service, an Interior spokeswoman confirmed today.

Interior hired Laudner "a few weeks ago," spokeswoman Heather Swift said, though she did not say what his job he had taken.

"Rebuilding our National Parks infrastructure is a major legislative priority of the Secretary and President and Chuck is helping make it happen," Swift said.

Laudner was an [adviser](#) to President Donald Trump's campaign, and he previously worked with Pennsylvania Republican Sen. Rick Santorum's presidential campaign in Iowa in 2012. Laudner also worked as the executive director for the Iowa Republican Party from 2007 to 2008.

Iowa has two national parks, according to the NPS website.

Laudner's appointment could be the latest example that Zinke is considering a possible presidential run. A [polling firm](#) asked Iowa residents in April their opinion on Zinke, while a political group run by former advisers to Vice President Mike Pence paid for a 30-second [television ad](#) featuring Zinke that aired in Washington, D.C. in March.

"What a curious hire," said Aaron Weiss, media director at Center for Western Priorities, a conservation group. "Chuck Laudner doesn't appear to be at all qualified for a job at the Interior Department, but he's very well-qualified to advise a politician with future ambitions in Iowa."

Blankenship goes after McConnell's 'China family' in new ad [Back](#)

By Alex Isenstadt | 05/03/2018 05:25 PM EDT

West Virginia GOP Senate hopeful Don Blankenship is amping up his racial attacks on Senate Majority Leader Mitch McConnell with a new ad declaring, "Swamp captain Mitch McConnell has created millions of jobs for China people."

"While doing so, Mitch has gotten rich," Blankenship adds. "In fact, his China family has given him tens of millions of dollars."

McConnell's wife, Transportation Secretary Elaine Chao, was born in Taiwan and her parents are Chinese. Her father is chairman of a shipping company.

The new spot, which is expected to start airing on Friday, comes just ahead of the May 8 primary. As the dramatic contest comes to a close, Blankenship, a former coal baron who spent a year in prison following the 2010 explosion at his Upper Big Branch Mine that killed 29 workers, has focused his assault squarely on McConnell — sometimes in harshly racial terms.

During a recent interview with POLITICO, Blankenship said McConnell "has a lot of connections in China." He also said that Chao is "from China, so we have to be really concerned that we are in truth" putting America's interests first.

Earlier this week, Blankenship began running another TV spot labeling McConnell "cocaine Mitch." The spot is apparently in reference to a 2014 report that drugs were once found aboard a shipping vessel owned by Chao's family.

McConnell has singled out Blankenship for defeat, convinced that a Blankenship primary win would destroy the party's prospects for defeating Democratic Sen. Joe Manchin in November. A McConnell-aligned super PAC has aired about \$1.3 million in negative ads against Blankenship.

Blankenship is facing two more mainstream GOP opponents, Rep. Evan Jenkins and state Attorney General Patrick Morrisey. Recent polls have shown Blankenship fading.

With Blankenship going after Chao, McConnell's political team has swung back aggressively. Josh Holmes, a longtime McConnell political adviser, has described Blankenship as "mentally ill."

In his new spot, Blankenship responds to that accusation, saying: "Mitch's swamp people are now running false, negative ads against me. They're also childishly calling me despicable and mentally ill."

The ad closes with a shot of Blankenship holding two young children, one on each arm as he pronounces, "I will beat Joe Manchin and ditch cocaine Mitch for the sake of the kids."

Holmes fired back at Blankenship. "This clown is a walking talking case study for the limitation of a prison's ability to rehabilitate," he wrote in a text message.

While Blankenship has attempted to focus the campaign on China during the closing stretch of the race, McConnell's team has noted that in 1999 Blankenship spoke of moving to China and becoming a Chinese citizen. Blankenship's girlfriend was born in China, according to media reports.

Pruitt airs environmental concerns about proposed Alaska mine [Back](#)

By Alex Guillén | 01/26/2018 07:34 PM EDT

EPA Administrator Scott Pruitt today announced he has serious concerns about any potential mining project in Alaska's Bristol Bay region, creating doubt that the controversial Pebble Mine proposal may ultimately be approved.

EPA said in a release today that it will suspend its proposed withdrawal of Obama-era restrictions after hearing from Alaskan residents and other interested parties. The proposed mine has long drawn opposition from some in the state, including independent Gov. Bill Walker, as well as environmentalists, over worries that it could harm Bristol Bay's critical salmon fisheries.

"It is my judgment at this time that any mining projects in the region likely pose a risk to the abundant natural resources that exist there," Pruitt said in a statement. "Until we know the full extent of that risk, those natural resources and world-class fisheries deserve the utmost protection."

The permitting process, which is handled at this stage by the Army Corps of Engineers, can continue, EPA said. But the agency warned that the developers will have to clear a "high bar." The agency added in a release that not revealing Pruitt's doubts at this stage would be "disingenuous." EPA has veto power over such Army Corps permits.

Pebble Limited Partnership CEO Tom Collier said in a statement that the company "can demonstrate that we can responsibly construct and operate a mine at the Pebble Deposit that meets Alaska's high environmental standards."

DOJ charges former VW CEO with conspiracy, wire fraud [Back](#)

By Lauren Gardner | 05/03/2018 04:42 PM EDT

DOJ unsealed an indictment today charging former Volkswagen AG leader Martin Winterkorn with conspiracy and wire fraud linked to the automaker's effort to cheat U.S. diesel emissions standards.

Winterkorn is charged with one count of conspiracy with other VW executives to defraud the United States, along with the manufacturer's customers. The other three counts concern wire fraud tied to the scheme.

"If you try to deceive the United States, then you will pay a heavy price," Attorney General Jeff Sessions said in a statement. "The indictment unsealed today alleges that Volkswagen's scheme to cheat its legal requirements went all the way to the top of the company. These are serious allegations, and we will prosecute this case to the fullest extent of the law."

The indictment alleges that Winterkorn knew of the emissions cheating as far back as May 2014, and that he was informed again of it in July 2015. VW as a company pleaded guilty in March 2017 to criminal charges related to the regulatory deception and agreed to pay a \$2.8 billion criminal penalty.

Subject: Morning Energy, presented by Chevron: Pruitt makes his Senate return — Emails: Pruitt pushed 'red team-blue team' climate debate — The WIFIA balancing act

By Kelsey Tamborrino | 05/16/2018 05:40 AM EDT

With help from Anthony Adragna

TIME TO FACE THE MUSIC: Scott Pruitt hits the Hill again today, and on top of the questions he can expect on his lavish spending and ethical quandaries, the EPA administrator will be asked to explain why EPA helped to bury a federal study that would have increased warnings about toxic chemicals found in hundreds of water supplies across the country. As POLITICO reported this week, emails released under the Freedom of Information Act indicate the study was being prepared for release in January, before EPA intervened. It has not been made public more than three months later and the agency producing it says it has no timeline for doing so.

Now lawmakers are looking for answers, including Republicans whose districts suffered contamination from the chemicals PFOA and PFOS, which are linked with certain cancers, thyroid problems and life-threatening pregnancy complications. Annie Snider, who broke the story, has more on the fallout [here](#).

Plus, today's hearing in front of a Senate Appropriations panel comes less than 24 hours after yet [another probe](#) was launched by the agency's inspector general into the handling of Pruitt's emails. That brings the number of probes and investigations into his behavior to an even dozen.

Sparks flying: When Pruitt last appeared on the Hill in April before two House committees, he played the [blame game](#), in part pushing the burden of some of his ethical decisions onto his staff. And since today's appearance will be his first before the Senate since the steady drip of news stories began earlier this year, he'll face a range of inquiries from Democrats, some of whom have been leading the charge against him. The subpanel's ranking Democrat, [Tom Udall](#), has been critical of Pruitt in the past and plans to question him on his spending and ethical issues. "Administrator Pruitt, it's hard to know where to begin this morning. Every day there seems to be a new scandal ... with you at the dead center," Udall will say.

Expect the New Mexico Democrat to discuss the [range of investigations](#) that currently eye Pruitt. "I can only wonder if more investigations will start based on your fast-tracking a new Superfund site at the behest of a conservative media personality and other reports that EPA has taken quick actions to help political donors and lobbyists," he'll say, referencing another [POLITICO story](#).

Both Democrats and Republicans on the subcommittee tell ME they want to discuss the policy at hand. Republican [Shelley Moore Capito](#) said she wants to ask Pruitt about a number of different things, but added she wanted to "just concentrate on the policy." Still, Democrat [Chris Van Hollen](#) said he has a long list of questions for the administrator that involve policy as well as a "betrayal of the public trust." And, fellow subpanel Democrat [Jeff Merkley](#) told ME: "[I] certainly want to get a better understanding of why he feels that he's so comfortable using government funds in all kinds of inappropriate ways, but also the policy."

Separately, EPW Chairman John Barrasso, who is not on the Appropriations committee, suggested [in a letter](#) Tuesday he'll also be watching to see what comes out of today's hearing. That letter comes in response to a request from six Democratic EPW members, who [demanded](#) Barrasso bring Pruitt before the panel. Barrasso

said EPA provided Pruitt's responses to previous questions from the panel earlier this week and added that he intends to call Pruitt for another hearing but will wait to see what comes out of the ongoing probes already looking into Pruitt's activities.

In the crowd: Environmental groups in the audience today will look for senators to ask the tough questions. Moms Clean Air Force will be bringing in local moms and their children, and the group will hand out their Pruitt "report card." Similarly, the Environmental Defense Fund will be watching to see if Pruitt dodges on questions that aim to hold him accountable. EDF will again hand out its "Non-Trivial Pruitt Questions" cards and dropped off hard copies of its "101 Questions" document to committee members' offices. **If you go:** The hearing kicks off at 9:30 a.m. in 124 Dirksen.

GONE QUIET: Sen. Jim Inhofe told reporters he hasn't talked with his buddy Pruitt in "about a month" but said the former Oklahoma attorney general is "weathering the storm" fine. But, he predicted, the tempest was not done yet. "Storms are never over," he said. "They always come back — you know that — in Washington."

WELCOME TO WEDNESDAY! I'm your host Kelsey Tamborrino. Clean Energy Business Network's Andy Barnes was the first to guess that two bathtubs remain in the Senate after they were uncovered in 1936 — although six were first installed in the chamber. Today's question: Who was the first sitting member of Congress sentenced to prison? Bonus points if you can guess the charge. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

THIS MIGHT COME UP: New communications reveal additional details about how the controversial red team-blue team debate over climate science would have played out at EPA and who was influencing Pruitt. Pro's Alex Guillén and Anthony Adragna report on a draft press release that circulated on Nov. 4 among top EPA officials, which laid out the line of attack. "EPA is standing up a Red Team peer review of the report," they wrote, rebuffing the Fourth National Climate Assessment, which countered many Trump administration political appointees who have questioned the connection between greenhouse gas pollution and global warming. The "blue team" would essentially be the federal assessment and its authors. Read more on that here.

THE WIFIA BALANCING ACT: A battle is brewing between small and rural communities and the larger ones whose infrastructure projects can be costly — and it could upend a bipartisan effort to pass the first major infrastructure bill during the Trump era. Annie reports on the measure at hand, called the Securing Required Funding for Water Infrastructure Now, or SRF WIN Act. The provision would expand the WIFIA program that loans federal money for water infrastructure projects at Treasury's attractive long-term interest rates, but also includes changes to make the WIFIA program more accessible to small and mid-sized communities. Now the measure has sparked opposition from the groups that originally conceived of the WIFIA program, who say the new proposal tilts too far toward the small communities. Read more here.

**** A message from Chevron:** Chevron and local partners are helping to provide DOERS with the hands-on technical training needed for today's jobs in the manufacturing and energy industries. Watch the video: <https://politi.co/2rBPIuI> **

CANCEL THOSE VACATIONS: Senate Appropriations Chairman Richard Shelby told reporters he's been in talks with Majority Leader Mitch McConnell about shelving the chamber's planned August recess unless they make more progress in the appropriations process. "We might not have an August recess," he said. Asked if it would be realistic to do so in an election year, Shelby quipped: "Might not be realistic for the Democrats — they have a lot more seats." Put ME down as skeptical on this one. Never underestimate the power of late July jet fumes.

INTERIOR-EPA PACKAGE MOVES AHEAD: The House Appropriations Committee's Interior-Environment panel cleared a \$35.25 billion spending package on Tuesday, setting the measure up for committee consideration as early as next week. The [bill](#) cleared on a voice vote, Alex reports, and is likely to face contentious amendments before the full committee. Alex breaks down the bill further [here](#).

FOR YOUR RADAR: The full House Appropriations Committee will [mark up](#) the fiscal 2019 Energy-Water bill this morning. Read the bill text [here](#).

ENERGY NOM ON TAP: The Senate Foreign Relations Committee will hold a markup on the nomination of Frank Fannon to be an assistant secretary of State for energy resources. Fannon was a former staffer to Inhofe, who released a statement ahead of the vote that called the nominee a "good friend." Inhofe pointed out expanding U.S. energy exports to Eastern Europe, and said Fannon "can use his leadership and expertise effectively to advance American energy dominance and enforce energy sanctions, like those against Russia and Iran."

LISTEN IN: EPA [announced](#) Tuesday its Office of Enforcement and Compliance Assurance will host a series of "web-based listening sessions" beginning May 21, on specific recommendations from the agency's [Superfund Task Force Recommendations Report](#).

NEW FOSSIL FUEL ALLIANCE COMING? The Trump administration is weighing the creation of "a new, central institution" that would advocate for natural gas and coal technology and exports, according to draft document obtained and reported on by E&E News. The draft "Clean and Advanced Fossil Fuel Alliance" talking points, though "pre-decisional," lay out a previously described loose affiliation of countries the United States is courting. Read the story [here](#).

MONIZ UNVEILS ENERGY EMPLOYMENT REPORT: Former Energy Secretary Ernest Moniz will unveil the third installment of the 2018 U.S. Energy & Employment Report this morning. The report arrives via Energy Futures Initiative — where Moniz is CEO and president — and the National Association of State Energy Officials. It was originally established during Moniz' time at the DOE, and offers insight into the employment trends of four energy sectors. Moniz will be joined by NASEO head David Terry and author David Foster, as well as Senate Energy ranking member [Maria Cantwell](#). The event will be livestreamed on both the [NASEO](#) and [EFI](#) websites.

JUDGES HALT ATLANTIC COAST: A federal appeals court [ordered](#) the construction of the Atlantic Coast pipeline be halted, following a legal challenge by environmental opponents who argued a review by the U.S. Fish and Wildlife Service was inadequate, the Richmond Times-Dispatch [reports](#). The order vacates FWS' Incidental Take Statement. In a research notice sent by ClearView Energy Partners, the group said there was "a high probability that FERC will direct suspension of construction operations in these areas while the FWS revises the ITS."

NSR PERMITTING FOCUS OF HEARING: The House Energy and Commerce Environment Subcommittee holds a [hearing](#) on new source review permitting reform this morning. EPA air chief Bill Wehrum will testify, as well as Bracewell's Jeff Holmstead, NRECA's Kirk Johnson and NAM's Ross Eisenberg, among others. Although the administration doesn't have an official position on the [discussion draft](#) that is the focus of the hearing, Wehrum [will say](#) the current "program is unnecessarily complicated and confusing," and should be improved.

Eisenberg will say that NAM supports the bill and the need to reform NSR, more so now than ever. "One of our members estimates that there are over a hundred million tons of CO2 that could be reduced by deploying the full suite of available turbine upgrades at power plants," he'll say, adding that many such upgrades "have been impeded because they may potentially trigger NSR." **If you go:** It begins at 10:15 a.m. in 2322 Rayburn.

NWF MEETS WITH ZINKE: The National Wildlife Federation will meet today with Interior Secretary Ryan Zinke, where the group will discuss conservation issues. Ahead of the meeting, the group submitted five of its priorities, including concerns about some of the locations of upcoming lease sales and mining proposals and Zinke's broader conservation agenda.

Heads up! Zinke will deliver the keynote speech at next week's annual Williston Basin Petroleum Conference, in Bismarck, N.D., local KFYP-TV [reports](#).

IT'S A BIRD, IT'S A DRONE: Interior is for the first time investing in small-unmanned aircraft systems services, or drones, to help tackle wildfires. DOI [awarded](#) a "Call When Needed" contract to four U.S. companies, which will allow the agency to employ the drones when needed to support wildland fire operations, search and rescue and emergency management.

MAIL CALL! A group of 20 Democratic senators called on Pruitt Tuesday to extend the comment deadline until July 30 for the agency's "secret science" proposal to ban the use of studies that don't publicly disclose all their data, and to hold more public hearings on the topic. Read [the letter](#).

— **Ahead of the House's vote on the farm bill**, 114 state legislators signed a letter in opposition to a provision they say would exempt EPA from key requirements under the Endangered Species Act that protect pollinators. Read it [here](#).

STUDY: BUSINESSES TAKING THE LEAD: Deloitte is out with two new reports today — one on global battery storage markets and another on energy management and consumption views from businesses and consumers. The latter report found that businesses are taking the lead to address climate change. They are reviewing or changing their energy management policies in response to the U.S. pulling out of the Paris climate agreement, the report found. According to the report, the number of companies with carbon footprint goals increased to 61 percent in 2018, from slightly more than half the year before. Read that report [here](#) and the energy storage report [here](#).

REPORT OUT ON MANUFACTURING AT DOE: The Information Technology and Innovation Foundation will release its new report today reviewing DOE's "Manufacturing USA" institutes, looking at areas of progress and stability. Given the potential ITIF says the institutes have to bridge gaps in private sector investment, the report lays out national goals at stake at the nexus of manufacturing and energy, and outlines why federal action is necessary. Read the report [here](#).

EPA move on chemical study may trip up Pruitt [Back](#)

By Annie Snider | 05/16/2018 05:02 AM EDT

EPA Administrator Scott Pruitt is facing a new controversy over chemical contamination that could prove even more damaging than his spate of recent ethics scandals.

When Pruitt returns to Capitol Hill Wednesday, he will likely be asked to explain why EPA helped to bury a federal study that would have increased warnings about toxic chemicals found in hundreds of water supplies across the country. A handful of Republicans were quick to demand answers after POLITICO reported Monday that senior aides to Pruitt intervened after the White House warned of a "public relations nightmare" from the impending Health and Human Services Department assessment.

While Pruitt has said partisan witch hunts are to blame for the controversies around his first-class travel, extensive security spending and friendliness with lobbyists, he will struggle to make the same case this time. Emails released under the Freedom of Information Act indicate the HHS study was being prepared for release in January, before EPA intervened. It has not been made public more than three months later, and the agency producing it says it has no timeline for doing so.

Long used in Teflon and firefighting foam, the chemicals PFOA and PFOS are linked with certain cancers, thyroid problems and life-threatening pregnancy complications. Studies have found them in 98 percent of Americans' blood, and communities from West Virginia to Michigan to New York have been in an uproar after discovering that their drinking water has been contaminated with the chemicals.

Tristan Brown, who served as the Obama administration's liaison between EPA and members of Congress when the agency issued a health advisory for PFOA and PFOS in 2016, said that lawmakers on both sides of the aisle are deeply concerned about the issue. He said anger over the Trump administration's interference could snowball if powerful Republicans who have experienced contamination in their states speak out strongly.

"That could be the beginning of a breach of the dam," Brown said.

Already, key Senate Republicans have shown their willingness to break with the Trump administration when it comes to chemical contamination. In December, North Carolina's two Republican senators came out in opposition to the administration's nominee to head EPA's chemical safety office, industry consultant Michael Dourson, in part because of a crisis in their home state with a chemical similar to PFOA and PFOS, called GenX.

At least three Republican lawmakers have joined a host of Democrats in demanding answers from the Trump administration about the HHS study.

Sen. Shelley Moore Capito of West Virginia, which experienced a major chemical spill a few years ago and has a major PFOA and PFOS problem, said she wants to see the study made public.

"It's important that the findings of the study are released so we can determine the health impacts and any potential threats our communities may face as a result of exposure to perfluorinated chemicals. I would encourage the administration to look into this matter," Capito, a member of the Appropriations subcommittee with EPA jurisdiction, where Pruitt will testify Wednesday, said in a statement to POLITICO.

Rep. Mike Turner (R-Ohio), who chairs a House Armed Services subcommittee, chimed in as well.

"This is not an issue of public relations — this is an issue of public health and safety," he said in a statement Tuesday after writing to Pruitt on the matter.

"It would be unacceptable if the political considerations of those at the highest levels of the EPA led to the suppression of information concerning the public health of Americans," Rep. Brian Fitzpatrick (R-Pa.) said in a statement. "The EPA must provide my constituents with answers to these allegations immediately."

"It is vital that there are proper measures in place to perform accurate, expeditious, scientific assessments for chemicals that pose a threat to public health," he said in a statement to POLITICO, citing his state's "tragic history" with chemical contamination.

Pruitt says he is taking the chemicals issue seriously. Not long after the North Carolina senators torpedoed the chemicals nominee, Pruitt announced a "leadership summit" on PFOA, PFOS and related chemicals that is scheduled to be held at EPA headquarters next week.

But few are expecting his response to include any new regulatory action.

EPA has not regulated a single new contaminant under the Safe Drinking Water Act in more than two decades. The agency's 2016 drinking water advisory only provided advice to the states and local water managers — it set no mandatory limits.

And Pruitt's EPA doesn't even plan to go that far for other chemicals. The agency's No. 2 water official, Dennis Lee Forsgren, has told drinking water groups that under Pruitt, the agency won't issue any new health advisories for GenX or other chemicals.

Betsy Southerland, a career staffer who led work on the 2016 health advisory as director of science and technology at EPA's water office before resigning last year, said states would have to translate the information provided by EPA about the chemicals into health advisory levels or drinking water limits on their own, something few are equipped to do.

Pruitt's "not allowing EPA to provide the state with that expertise," she said.

EPA spokesman Jahan Wilcox, defending the agency's approach, said officials are "stressing that all options — not just health advisories — are on the table as we move into the National Leadership Summit and taking additional steps to address PFAS."

EPA watchdog launches new probe into Pruitt's email habits [Back](#)

By Anthony Adragna | 05/15/2018 06:18 PM EDT

EPA's inspector general said Tuesday it would look into Scott Pruitt's use of nonpublic email accounts, bringing the number of federal probes into the EPA administrator's behavior to an even dozen.

Specifically, the inspector general said it would look into whether Pruitt is properly preserving email records as required under federal law and whether the agency is properly searching all of his accounts in response to public records requests.

Two senior Senate Environment and Public Works Committee Democrats — ranking member Tom Carper of Delaware and Jeff Merkley of Oregon — released [the letter](#), dated May 2, confirming the probe.

EPW Chairman John Barrasso (R-Wyo.) has previously raised concerns about Pruitt's use of nonpublic email accounts. In response, the agency said it searches all of his accounts when responding to public records

requests. Previous EPA administrators also routinely used nonpublic accounts for day-to-day email communications.

The new probe comes as Pruitt faces a litany of questions surrounding his spending and ethical woes. EPA's inspector general, the Government Accountability Office and the House Oversight Committee are all looking into aspects of his conduct.

Those probes involve Pruitt's first-class travel, use of security on personal trips, pay for top political aides and a sweetheart condo deal with an energy lobbyist who later met with him, among others.

In the letter, EPA Inspector General Arthur Elkins warned that a stretched budget and staff meant he could not say when the probe would begin.

"The fact is that the OIG has been funded at less than the levels we deem adequate to do all of the work that should be done, and we therefore have to make difficult decisions about whether to accept any given potential undertaking," he said. "However, despite these constraints, we have determined that the issues raised in your letter are within the authority of the OIG to review, and we will do so."

Pruitt is set to appear before a Senate Appropriations subpanel Wednesday.

EPA staff in 'despair' after Pruitt blame game [Back](#)

By Emily Holden | 04/27/2018 05:33 PM EDT

Scott Pruitt may have survived his testimony on Capitol Hill, but he's coming back to a further enraged and demoralized Environmental Protection Agency staff.

Several current and former EPA officials and other people close to the agency said Pruitt did himself no favors with his congressional testimony Thursday, in which he blamed his aides for installing a \$43,000 privacy booth in his office and approving more than \$100,000 in first-class flights that he took last year. Pruitt also denied knowing key details about raises that his top staff received last year. And he declined to defend his former policy chief against Democrats' accusations that she had failed to show up for work for three months, even though she and Pruitt had been photographed attending the same meeting during the period in question.

In conversations with 11 people who know the atmosphere inside EPA, including Republican political appointees, a handful said his refusal to grovel may have pleased President Donald Trump. But others said his strategy was appalling to the current and former staffers who found themselves thrown under the bus.

"I think his credibility is damaged, and whether or not he gets fired by a tweet isn't going to diminish the fact that his credibility has been seriously damaged by all of this," one person close to the administration told POLITICO. "It shows a real lack of leadership that he did not defend, or blame, his staff. These are the people that he's asking for loyalty from. These are the people that are defending him. He's not returning the favor. That's not leadership."

A current EPA official said Friday that employees are veering between "despair" and "embarrassment," and Pruitt's televised performance did not help.

"I will tell you, it did not go unnoticed from people who watched the hearing that he did not take responsibility on the policy pieces" of the testimony, the official said. "It was not lost on us on the stuff we know about that he used very careful language, he was parsing his words, that some might say he did not speak the whole truth."

One former EPA official said even political aides are "sick of Pruitt constantly putting himself first," and "putting himself before the president's agenda."

"He's rarely been interested in selling regulatory reform as improving Americans' lives, and is far more interested in saving his political career," the former official said.

But Trump has shown no signs of abandoning his EPA chief, who has won the strong backing of conservative groups with his efforts to erase Obama-era environmental regulations. So far, that has outweighed the anger of White House staff members and exasperation of key Republican lawmakers at Pruitt's series of controversies over luxe travel, extensive security, a below-market D.C. condo rental from a lobbyist and history of questionable real estate deals in his native Oklahoma.

A senior EPA official said Pruitt's strategy of fighting the allegations was designed to appeal to Trump, who disdains members of his team who appear weak on television.

"They like fighters no matter what," the official said. "No matter what, fight. That's what we've been conditioned to."

The official predicted that the White House takeaway from the hours of hearings would be that Republican lawmakers stood with Pruitt, while Democrats squandered their opportunity by spending too much time criticizing Pruitt's deregulatory agenda — which Trump supports — rather than hitting him for the ethics issues.

"Any audience would say the White House saw a Republican bench entirely supportive of him," the EPA source said. "On the Democrat side, the White House also saw Democrats who used half their time to criticize policies he's doing that the White House likes. If they wanted to land punches, why do you ask about these policies? That's not going to do it for you."

Pruitt ally Sen. Jim Inhofe (R-Okla.) took that message from Thursday's hearings, despite saying earlier in the week that he was troubled by some recent allegations about the EPA leader's past dealings in Oklahoma. "After a full day of mudslinging and partisan questioning from the Democratic members of the committees, it is clear that the only fault they could find with Scott Pruitt is that he's successfully ending the EPA's history of overreach and over-regulation," Inhofe said in a statement Friday.

Still, the senior EPA official said, Pruitt's relatively good day in Congress could be "washed away" if his inconsistencies about what he knew about the raises generates a steady narrative that he lied to the White House, as at least one CNN pundit alleged.

And until Trump weighs in, the tension around Pruitt at EPA will remain high.

"There needs to be a halt to this because it's exhausting," the same official said.

Pruitt also still faces multiple investigations inside the executive branch and on Capitol Hill. On Friday, for example, the agency was due to deliver a "batch of documents" to the staff of House Oversight Chairman Trey Gowdy (R-S.C.), who is leading one of the probes.

Departed EPA aides who have said Pruitt didn't tolerate internal criticism of his spending and secrecy say current staffers still fear they'll be similarly swept up in the scandals — but won't be able to find jobs if they quit now and gain a reputation for disloyalty.

"They're trying to do the best they can in a toxic environment," one former staffer said. "You cannot express any idea that might be misconstrued as a political attack on Pruitt or any policy issues, so people just do what they're told. They're professional. ... They don't want to get caught in an undertow."

Another former EPA official has been getting phone calls from staffers who are frustrated by the controversies but keeping their heads down.

"Everyone in the building wants to come out and say something ... but as soon as they say something, they're out of a job," that person said.

Not everyone in the agency was upset that Pruitt pinned many of his controversies on his staff Thursday, after giving an opening statement in the House in which he confessed that his first year on the job had been "a learning process."

"When he was putting it on staff, that's the reality of it," one current EPA political appointee said. "Sure, he's the administrator; sure, he's the head of the agency. That doesn't mean he was aware of the \$40,000. He asked for a secure phone line and the next thing you know it turned into a secure phone booth. ... Overall, I think his staff continue to stand beside him today and will continue to do that."

In his testimony, Pruitt said he had never asked for a \$43,000 secure phone booth — only "access to secure communication" — or biometric locks for his office, and he said his security staffers made the call for him to fly first-class to avoid possible threats from other passengers. He said he had authorized his chief of staff, Ryan Jackson, to give raises to his top staff but had no idea that they were circumventing disapproval from the White House. And he chose not to defend his former policy chief against allegations from Democratic lawmakers that she was not in the office for months, even though an EPA spokesman had dismissed the accusations as "baseless and absurd."

A second political appointee said Pruitt didn't break any new ground with his defenses and that controversies dogging him had been "all blown out of context."

The person called Pruitt a "disruptor" and said "folks don't like that aggressive style."

"Administrator Pruitt speaks for a certain aspect of the Trump administration conservative movement," the appointee said.

Pruitt fast-tracked California cleanup after Hugh Hewitt brokered meeting [Back](#)

By Emily Holden and Anthony Adragna | 05/07/2018 10:12 PM EDT

EPA Administrator Scott Pruitt placed a polluted California area on his personal priority list of Superfund sites targeted for "immediate and intense" action after conservative radio and television host Hugh Hewitt brokered a meeting between him and lawyers for the water district that was seeking federal help to clean up the polluted Orange County site.

The previously unreported meeting, which was documented in emails released by EPA under a Freedom of Information Act lawsuit by the Sierra Club, showed Pruitt's staff reacting quickly to the request last September by Hewitt, who has been one of Pruitt's staunchest defenders amid a raft of ethics controversies around his expensive travel, security team spending and a cheap Washington condo rental from a lobbyist.

Pruitt has drawn criticism from environmentalists and other critics for letting prominent GOP backers and industry groups influence the agency's agenda — even as he has kicked scientists off of EPA's advisory panels and moved to limit the kinds of peer-reviewed research it will consider when making decisions.

In many cases, the people whose advice Pruitt is heeding could be useful supporters for him in a future race for U.S. senator or president. They include GOP megadonor Sheldon Adelson, who — as POLITICO reported in March — persuaded Pruitt last year to take a meeting with an Israeli water purification company called Water-Gen that later won a research deal with the EPA.

Hewitt, a resident of Orange County whose son James works in EPA's press office, emailed Pruitt in September to set up a meeting between the administrator and the law firm Larson O'Brien, which employs Hewitt and represents the Orange County Water District. Pruitt had been planning to meet with the lawyers in California a month earlier, but cancelled the trip to undergo knee surgery.

"I'll join if the Administrator would like me too or can catch up later at a dinner," Hewitt wrote in his Sept. 18 message. Hewitt added that the issues surrounding the Superfund site were "Greek to me but a big deal in my home county."

Pruitt's aides responded within minutes and quickly confirmed an Oct. 18 meeting for the lawyers and a project director.

Six weeks after that meeting, on Dec. 8, the Orange County North Basin site appeared on Pruitt's list of 21 contaminated areas to address. A month later, Pruitt proposed listing the site on EPA's National Priorities List, a move that could make it eligible for long-term federal cleanup funding from the federal government if the responsible polluters cannot be identified and forced to pay for its remediation.

Since then, Hewitt has been a robust defender of Pruitt, dismissing his recent controversies as "nonsense scandals" on MSNBC in early April and saying his detractors were "just trying to stop the deregulation effort."

Pruitt has touted the agency's Superfund work as one of his key priorities, setting up a task force to seek to speed up the clean-up of the nation's worst contaminated sites. That task force had been headed by Albert "Kell" Kelly, a former banker and longtime friend, who departed the agency last week after news about loans he provided to Pruitt in Oklahoma, including the mortgage provided to Pruitt for a house he bought from a lobbyist when he was a state senator.

Environmental advocates have worried Pruitt's efforts to identify Superfund priority sites would bypass the process set up by Congress to ensure cleanup resources are divided fairly, and that he could focus on sites seen as important to his political supporters. And environmentalists have said Pruitt's rush to claim that contaminated properties have been remediated could risk turning them over to local governments and businesses that might pursue cheaper, inadequate solutions.

Elgie Holstein, senior director for strategic planning at the Environmental Defense Fund who has been tracking EPA's Superfund actions, said the connection to Hewitt is "not a surprise."

"The biggest fear we have is that No. 1, the administrator's political priorities and personal ambitions, political ambitions become the primary criteria for action under this program instead of science and health," Holstein said.

EPA never disclosed the meeting with Hewitt's contacts. It was listed on Pruitt's public calendar as a staff briefing. But on his private Outlook schedule, which the agency has released in response to lawsuits, it appeared as an "Orange County Superfund Site" meeting with Kelly and two other staffers. The records did not list the Californians in attendance at the meeting at EPA headquarters in Washington.

But EPA spokesman Jahan Wilcox confirmed that two lawyers representing the water district, Robert O'Brien and Scott Sommer, and the water district director of special projects, Bill Hunt, were there. A third lawyer, former federal Judge Stephen G. Larson, was forced to cancel his trip due to wildfires in California, according to emails.

"Hugh Hewitt helped arrange the meeting at the request of the water district but did not attend," Wilcox said.

Wilcox said the meeting was for the water district to "brief EPA on the Superfund site's cleanup efforts and request expedited cleanup," following a 2016 agreement with the agency to conduct a remedial investigation and feasibility study, at a cost of \$4 million over two years. Hunt did not immediately respond to a request for comment.

Hewitt in an email to POLITICO called Pruitt a friend and said he does not have a working relationship with him. He said that his firm has represented the water district and worked on the site with EPA's regional office for years but that he had not participated in that work.

Hewitt said he requested a meeting because the water district wanted to brief the new EPA team, he said, adding that he was an Orange County resident until 2016 as well as an Orange County Children and Families Commission member. He said that he "very much" wanted the Superfund site remediated as soon as possible.

According to an EPA [fact sheet](#), the Orange County site has more than five square miles of polluted groundwater containing chlorinated solvents and other contaminants across the cities of Anaheim, Fullerton, and Placentia. It includes the Orange County Groundwater Basin, which provides drinking water to more than 2.4 million residents across 22 cities, according to the agency. Those pollutants can damage humans' nervous systems, kidneys and livers, and some are considered carcinogenic.

EPA has just begun its process of studying the contamination and it has not determined which companies caused the pollution in the area. But an [administrative settlement](#) with the EPA in 2016 says the area was home to "electronics manufacturing, metals processing, aerospace manufacturing, musical instrument manufacturing, rubber and plastics manufacturing, and dry cleaning."

Hewitt also thanked EPA schedulers for working to arrange a meeting between Pruitt and the California Lincoln Clubs, which describe themselves as in favor of "limited government, fiscal discipline and personal responsibility." After some rescheduling Pruitt eventually met with representatives of the group on a trip to California in March of this year, according to his public calendar. Prominent Orange County businessman John Warner also helped to connect that group with staffers.

Pruitt and his scheduling staff have frequently sought to set up meetings with or for influential Republican figures, according to the internal EPA emails.

His team accepted an invitation for him to address The Philanthropy Roundtable at an invitation-only event at the White House for "conservative and free-market foundation CEOs and individual wealth creators to discuss the greatest opportunities for foundations to protect and strengthen free society" and "what [Pruitt] views as unique opportunities for philanthropic action.

As POLITICO [reported](#) in March, Pruitt also met with an Indiana coal executive and Trump fundraiser who was seeking to soften a pollution rule.

Pruitt also crafted his travel schedule — including a tour of states in August — to meet with big business much like a member of Congress would during the annual recess.

In July, EPA's associate administrator of public engagement Tate Bennett was working with Pruitt to "essentially create an August recess for the EPA to be out in the states talking with individual companies & doing listening sessions within sectors," said Leah Curtsinger, the federal policy director for the Colorado Association of Commerce & Industry, in an email introducing Bennett to her husband, public affairs director at coal company Cloud Peak Energy and a fellow alum of Senate Majority Leader Mitch McConnell's office.

Annie Snider contributed to this report.

Emails show Pruitt pushing 'red team-blue team' climate debate [Back](#)

By Alex Guillén and Anthony Adragna | 05/15/2018 06:39 PM EDT

EPA Administrator Scott Pruitt had hoped at least twice last year to announce his plans for a controversial red team-blue team debate that would take aim at a federal assessment supporting climate change science, according to newly released emails.

Pruitt's contentious review was abandoned because of the White House's objections, but the [communications](#) reveal new details about how the process would have worked and who was influencing Pruitt.

Many scientists have complained that a red team-blue team style debate was a poor way to examine the scientific evidence that overwhelmingly supports the findings that humans are the primary driver behind climate change. But for Pruitt, who had once suggested the event might be televised, [the debate](#) appeared to be directed at rebuffing the Fourth National Climate Assessment.

That government-wide report issued on Nov. 3 [contradicted](#) many Trump administration political appointees who have questioned the connection between greenhouse gas pollution and global warming.

A [draft press release](#) that circulated on Nov. 4 among top EPA officials, and which was shared with Pruitt on Nov. 5, laid out the line of attack, according to the documents made public on Tuesday by EPA following a records request from the Natural Resources Defense Council.

"EPA is standing up a Red Team peer review of the report," they wrote, while the "blue team" would essentially be the federal assessment and its authors.

"A robust, transparent public peer review evaluation of climate change is something everyone should support," Pruitt said in the unreleased November statement. "Now is a perfect opportunity for the formation of a 'Red Team' exercise."

The draft release also included space for quotes from two prominent climate science critics: Steve Koonin, an Obama-era Energy Department official, and William Happer, a Princeton physicist who argues that increased carbon dioxide would benefit the planet.

The duo appear to have been tapped to help guide the red-team review together.

"Your contributions even in a small way to the validity of the red team blue team approach would be appreciated," Ryan Jackson, Pruitt's chief of staff, wrote to Koonin and Happer on Nov. 4.

In an email to POLITICO, Happer said the exercise was "badly needed," while Koonin, now the director of the Center for Urban Science and Progress at New York University, told POLITICO the National Climate Assessment was "demonstrably deficient on a number of points."

EPA did not return a request for comment.

Pruitt has previously said a Wall Street Journal piece written by Koonin in April 2017 calling for a similar EPA review of climate science was his inspiration for instigating the "red team" review.

The emails, however, show that Koonin and his allies began wooing Pruitt even before that. In an email more than a week before Koonin's WSJ piece ran, Dan Yergin, the Pulitzer-winning oil historian and vice chairman of IHS Markit who joined a board advising President Donald Trump, introduced Koonin by email to Jackson.

Pruitt and Koonin met April 28, and the emails show Koonin was closely involved in the process afterward.

Koonin sent EPA a "prospectus" outlining the exercise, and though much of it was redacted by EPA before its release, Koonin suggested timing the red team review to the National Climate Assessment, which was due out six months later. Doing so would "ensure that certainties and uncertainties in projections of future climates are accurately presented to the public and decision makers," he wrote.

A revised version of the prospectus was circulated by EPA to White House officials in July after news of Pruitt's plans had leaked.

"There are a lot of press reports about EPA's planning on this. None of it is being run by us. This seems to be getting out of control," wrote Michael Catanzaro, a top energy adviser to Trump who has since left the administration, a few days after receiving Koonin's proposal.

In late June, Liz Bowman, then a top EPA spokeswoman, questioned whether the exercise could be announced as early as July 5 or 6. But it wasn't until November that top Pruitt staffers begin circulating a draft press release on the announcement.

A draft of the announcement on Nov. 5 inspired a lengthy email chain, which EPA redacted, that involved direct messages from Trump chief of staff John Kelly, strategic communications director Mercedes Schlapp, and former White House staff secretary Rob Porter.

Pruitt was touting his plans to launch the red team review as late as December. Emails early in that month indicate the agency's air chief, Bill Wehrum, would make the announcement on Dec. 12 while Pruitt traveled in

Morocco. One message that included Jackson had the subject line of "Red Team/Blue Team Announcement Planned for Tuesday, Dec. 12."

The [New York Times](#) reported in March that Kelly and other top officials stopped the announcement in the fall, and Kelly's deputy Rick Dearborn met with Pruitt in mid-December to declare the plan dead.

WRDA faces stumbling block over small community projects [Back](#)

By Annie Snider | 05/15/2018 04:48 PM EDT

A battle over boosting funding for drinking water and wastewater projects in small communities is threatening a bipartisan effort to pass the first major infrastructure bill under the Trump administration.

The measure at issue, Securing Required Funding for Water Infrastructure Now, or SRF WIN Act, would expand the popular WIFIA program that loans federal money for water infrastructure projects at Treasury's attractive long-term interest rates. The bill includes a number of changes seeking to make the WIFIA program more accessible to small and mid-sized communities.

Senate Environment and Public Works Chairman [John Barrasso](#) (R-Wyo.) said last week that he supported adding it to this year's Water Resources Development Act, [S. 2800 \(115\)](#), through a manager's amendment. But he said attaching the measure, which was introduced by Sens. [John Boozman](#) (R-Ark.), [Cory Booker](#) (D-N.J.) and nine others, wasn't a done deal. "We're working to try and get to that," he told reporters.

The SRF measure has sparked fierce opposition from the groups that originally conceived of the WIFIA program that say the new proposal tilts too far toward the small communities, and they are now threatening to revoke their support from the overall infrastructure bill if it gets added.

"We believe that SRF WIN Act is a fundamentally flawed proposal that, if enacted, would pose a severe threat to the future viability of the WIFIA program," the American Water Works Association, the Association of Metropolitan Water Agencies and the Water Environment Federation wrote in a [letter](#) to Senate EPW leaders last week.

The fight pits small and rural communities against larger communities whose projects can often run into the billions of dollars.

The WIFIA program, authorized as part of the 2014 WRDA bill, targets those larger-scale projects, in part because they have a harder time competing for money from the State Revolving Funds, the main federal funding mechanism for municipal water projects. Those funds prioritize spending in areas with public health problems, and some states have capped the amount that can go to larger projects so they don't drain the funds.

The groups opposing the new measure argue that small and rural communities already have access to a carve-out that gives them 15 percent of WIFIA funding. The proposed changes, they say, would put larger communities at an unfair disadvantage and could ultimately lead to the demise of EPA's State Revolving Funds program.

EPA estimates that \$472.6 billion will be needed over the next two decades to improve drinking water infrastructure, alone. The federal government funds just a fraction of that — most years Congress appropriates less than \$3 billion.

Beyond the rural carve-out under WIFIA, states can also bundle smaller projects together to reach the \$20 million minimum funding requirement, and EPA recently conditionally approved one such application from the Indiana Finance Authority.

The changes being proposed in the SRF WIN Act seek to make this option more accessible, including by waiving the \$100,000 application fee for states filing such applications and authorizing \$200 million annually to go toward such projects.

"This legislation is an innovative approach to helping communities of all sizes, in every state secure loans so they can improve their crumbling infrastructure," Boozman said in a statement introducing the legislation.

Dozens of groups have endorsed including the SRF WIN Act in the Senate's WRDA bill, called America's Water Infrastructure Act, including the Chamber of Commerce, the American Society of Civil Engineers and the Vinyl Institute.

"We believe the inclusion of the SRF WIN Act in the America's Water Infrastructure Act will make a really good bill even better," more than 25 groups wrote in a [letter](#) to Senate EPW leaders on Tuesday.

But the opposing groups argue that Boozman's bill would decrease the program's leveraging rate — an aspect that has been wildly popular with lawmakers since it allows small appropriations to fund much larger infrastructure investments. EPA expects that the \$25 million it got for WIFIA in fiscal 2017 will result in \$2.3 billion worth of loans, the groups said.

"These robust rates enable the federal government to get a tremendous 'bang for the buck' when appropriating funds for water and wastewater infrastructure," AWWA, AMWA and WEF wrote.

The Senate Environment and Public Works Committee is seeking to move its WRDA bill swiftly. It will hold its second legislative [hearing](#) on the measure Thursday, with the assistant secretary of the Army for Civil Works due to testify. Barrasso said a markup will be held shortly thereafter.

Panel moves \$35B Interior-EPA spending bill to full committee [Back](#)

By Alex Guillén | 05/15/2018 06:18 PM EDT

The House Appropriations Committee's Interior-Environment panel today cleared its \$35.25 billion spending package, teeing it up for consideration by the full committee as early as next week.

The [bill](#) cleared on a voice vote. It is likely to face contentious amendments before the full committee.

Before the bill advanced, ranking member Betty McCollum (D-Minn.) criticized the policy riders and complained that EPA has not yet reported to Congress regarding the GAO's April conclusion that EPA's construction of a soundproof booth for Administrator Scott Pruitt violated spending laws.

The bill provided \$7.96 billion for EPA, a \$100 million overall reduction from 2018 levels. Along with language repealing the Waters of the U.S. rule, the bill provided \$2.6 billion for the Clean Water and Drinking Water State Revolving Loans and \$75 million for the Water Infrastructure Finance and Innovation Act program.

Among the Interior Department's major agencies, the bill includes a \$55 million increase for the Bureau of Land Management to \$1.4 billion, a \$19 million hike for the U.S. Geological Survey to \$1.2 billion and another \$53 million to boost the National Park Service to \$3.25 billion.

The Office of Surface Mining would get \$229 million, including \$90 million for another year of a pilot program aimed at cleaning up abandoned Appalachian mines. The Fish and Wildlife Service's budget would drop by \$11 million to \$1.6 billion.

The bill also provided \$6.1 billion for the Agriculture Department's Forest Service, including \$3 billion for wildfire work.

WHAT'S NEXT: The full package will be considered by the full House Appropriations Committee at an unspecified later date.

Subject: Morning Energy: Pruitt's watershed moment — 'Secret science' policy coming — Blankenship slipping

By Kelsey Tamborrino | 04/24/2018 05:42 AM EDT

With help from Emily Holden

PRUITT'S WATERSHED MOMENT: EPA Administrator Scott Pruitt is approaching his two separate House committee hearings this week with sagging support on the hill. The make-or-break moment is approaching as once-stalwart backers begin to express concern about the controversies that have swirled in recent weeks. Republican Sen. Jim Inhofe (Okla.) — perhaps Pruitt's staunchest ally in Congress — told Pro's Anthony Adragna he thinks it's "appropriate to have a hearing in so far as any accusation having to do with his office is concerned," and he cited a report in The New York Times detailing a sweetheart deal Pruitt received on an Oklahoma City home previously owned by a lobbyist.

Sen. Shelley Moore Capito (R-W.Va.) also thought Thursday's hearings before the House Energy and Commerce and Appropriations committees would prove pivotal for Pruitt's long-term future in the administration. "It's really important," Capito said. "He's going to have to answer some tough questions. I'm sure they'll be put to him by both sides and we'll see what his response is."

And Sen. John Boozman joined his two Republican colleagues in supporting hearings by the Environment and Public Works Committee. Meanwhile, sources told Bloomberg that administration officials privately cautioned lawmakers and other conservative allies to pump the brakes on their defenses of Pruitt.

Publicly, however, the White House stands firm in its commitment to Pruitt. Press secretary Sarah Huckabee Sanders told reporters the administration is "continuing to review a number of the reports" about Pruitt, but noted the EPA chief "has done a good job of implementing the president's policies," particularly on deregulation and energy dominance. White House legislative affairs director Marc Short was more direct earlier Monday: "I think Scott Pruitt is doing a great job and we look forward to keeping him there as EPA administrator," he told MSNBC.

More to come? Earlier Monday, five senior congressional Democrats asked House Oversight Chairman Trey Gowdy to obtain further documents and hold hearings after obtaining new records they say raise "troubling" new questions about Pruitt's security expenditures. EPW ranking member Tom Carper told Anthony he had a good conversation with Gowdy regarding Pruitt, but said there was no formal bipartisan agreement to work together on an investigation. "I just gave him plenty of encouragement that he's doing the right thing," Carper said. Read more.

WELCOME TO TUESDAY! I'm your host Kelsey Tamborrino. Congrats to the Nuclear Energy Institute's Robert Powers, who was first to correctly guess Mary Walker was the first woman to receive the Medal of Honor. For today: Who is the last former senator to appear on a U.S. postage stamp? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter @kelseytam, @Morning_Energy and @POLITICPro.

POLITICO's Ben White is bringing Morning Money to the Milken Institute Global Conference to provide coverage of the day's events and evening happenings. The newsletter will run April 29 - May 2. **Sign up to keep up with your daily conference coverage.**

BLINDED WITH SCIENCE: EPA's Pruitt is expected to unveil his new science policy that restricts the agency from relying on research that doesn't make public all its available data, a source briefed on the announcement tells Pro's Emily Holden. The proposed rule, which the agency submitted to the White House for review last week, will mirror legislation from House Science Chairman Lamar Smith (R-Texas).

Pruitt argues the change will bolster transparency, but scientists and health advocates say it is an effort to constrain rulemaking. The rollout has been delayed as agency officials tried to determine how to treat industry research used to evaluate the safety of pesticides and toxic chemicals, as Pro's Annie Snider reported last week. While academic studies often can't disclose data that includes personal health records, corporations can't reveal proprietary information either.

SCIENTISTS REACT: Close to 1,000 scientists signed onto a letter to Pruitt Monday, calling on the administrator to reverse course on his plans to revise how the agency considers outside research. "EPA can only adequately protect our air and water and keep us safe from harmful chemicals if it takes full advantage of the wealth of scientific research that is available to the agency," write the scientists, including some former EPA career staffers. Read it here.

A BLANK SLIP: GOP establishment attacks on former coal baron Don Blankenship seem to be taking hold, POLITICO's Alex Isenstadt reports via new polling. With the West Virginia Senate primary a mere two weeks away, a poll out Monday found Blankenship falling behind his more mainstream rivals, GOP Rep. Evan Jenkins and state Attorney General Patrick Morrisey. The poll found Morrisey leading with 24 percent, followed by Jenkins with 20 percent, and Blankenship trailing with 12 percent.

National Republicans have scrambled to intervene in the race, concerned that a Blankenship primary win would destroy their prospects of defeating Democratic Sen. Joe Manchin in November. Blankenship, who spent a year in jail following the deadly 2010 explosion at his Upper Big Branch Mine, has poured nearly \$2 million of his own money into a slash-and-burn style campaign savaging Jenkins and Morrisey as pawns of the establishment, Alex writes. Blankenship has also used the Senate run as a path to clear his name. So far, much of his campaign has been geared toward portraying himself as the casualty of the Obama-era Justice Department, which he says was bent on locking him up.

The new survey, which was conducted April 17-April 19 and has a margin of error of 4.9 percentage points, precedes a GOP debate today, and another that will be hosted by Fox News next week for a nationally televised audience. Read more.

SPECIAL ELECTION TODAY: Arizona voters will decide today who will pick up the seat left vacant by Rep. Trent Franks' departure in the state's 8th District. While neither candidate highlights specific environmental issues on her campaign website, Republican Debbie Lesko and Democrat Hiral Tipirneni have markedly different takes on climate change. Tipirneni's site says she believes "climate change is real and that we need to reduce carbon emissions." Meanwhile, Lesko said during a debate earlier this year that "certainly not the majority" of climate change is human-caused. "I think it just goes through cycles and it has to do a lot with the sun. So no, I'm not a global warming proponent," she said.

RULES TO MEET ON COLUMBIA RIVER BILL: The House Rules Committee will meet at 5 p.m. to formulate a rule on H.R. 3144 (115), which would void the environmental impact statement process for altering the hydropower system along the Columbia and Snake rivers. Earlier this month, the 9th Circuit Court of Appeals sided with the state of Oregon, the Nez Perce tribe and conservation groups, ruling that dam operations on the Columbia and Snake rivers must forgo hydropower production during key times of the year to protect

endangered salmon. An environmental impact statement for the system has been the subject of congressional fights, with Rep. [Cathy McMorris Rodgers](#) filing the legislation to void that process.

COAL ASH HEARING TODAY: EPA holds a [public hearing](#) today on its proposal to [roll back](#) the Obama-era regulation for the cleanup and disposal of coal ash. The hearing will begin at 9 a.m. in Arlington, Va., where there will be three sessions: 9 a.m. until noon; another beginning at 1 p.m. and ending at 4 p.m.; and a final session beginning at 5 p.m. and ending at 8 p.m.

PROMISES, PROMISES: Senate spending leaders vowed to restore chamber-wide debate on amendments to individual appropriations bills, Pro's Sarah Ferris and Kaitlyn Burton [report](#). It's a risky move, ME readers may recall, considering how Democrats [blocked](#) a largely noncontroversial Energy and Water bill in 2016 because of a proposed amendment on Iran, and in 2015, House Republicans' Interior-Environment bill was tripped up by an unrelated rider on the Confederate flag. But Senate Appropriations Chairman [Richard Shelby](#) and his Democratic counterpart [Patrick Leahy](#) told committee members in a closed-door meeting Monday that leadership has agreed to allow amendments on the Senate floor for every individual spending bill. And the two have met with Majority Leader [Mitch McConnell](#) and Minority Leader [Chuck Schumer](#) in recent days about opening up the floor for debate on spending bills.

JUDGE: ENBRIDGE PIPELINE SHOULD STICK TO PLAN : An administrative law judge recommended on Monday that Minnesota regulators approve Enbridge Energy's proposal for replacing its Line 3 crude oil pipeline. But the court stipulated that the pipeline should follow the existing route, not the company's preferred route, which would carry Canadian tar sands crude from Alberta across areas in the Mississippi River, the Associated Press reports. Administrative Law Judge Ann O'Reilly's recommendation to the Public Utilities Commission sets up further disputes, "because the existing line crosses two Ojibwe reservations where tribal governments have made it clear that they won't consent and want the old line removed altogether." Read [more](#).

A METHANE TO THE MADNESS: The comment period on the Bureau of Land Management's proposal to reverse the Methane Waste Prevention Rule ended Monday, drawing thousands of far-reaching comments. The left-leaning Center for Western Priorities [analyzed a random sample](#) of 2,000 comments, it said, finding 99.8 percent of them were opposed to the proposal. The Independent Petroleum Association of America and Western Energy Alliance meanwhile submitted joint [comments](#) applauding the move. "We were pleased to see workable changes are being considered to the rule that more accurately represent the scope of power and authority given to the BLM for regulating this type of activity," IPAA's Dan Naatz said in a statement. And, E2, an affiliate of the Natural Resources Defense Council, sent a letter to Interior Secretary Ryan Zinke on Monday, expressing its opposition to BLM's proposal. Close to 400 businesses signed onto that letter, which calls BLM's proposal "a net negative for the American public." Read it [here](#).

MAIL CALL! IN HONOR OF NATIONAL PARKS WEEK: League of Conservation Voters organized 122 groups — including the American Civil Liberties Union and the Human Rights Campaign — in a letter to members of Congress opposing the administration's moves on public lands. National monuments "have helped make our public lands more inclusive," the letter states, before calling on lawmakers to "reject any legislation that would limit the president's authority under the Antiquities Act or codify any unlawful rollbacks of existing national monuments." Read it [here](#).

FOR YOUR RADAR: The House will vote to overhaul the 1988 Stafford Act this week, Pro's Budget & Appropriations team [reports](#). The three-decade-old bill is the main piece of legislation overseeing federal disaster-relief efforts, with proposed tweaks that include new incentives to build "smarter and stronger to better withstand disasters in the future," according to GOP Majority Leader [Kevin McCarthy](#)'s office. That could equate to big changes on how states spend disaster relief money.

ICYMI: ZINKE DRAWS OLIVER'S IRE: The Interior secretary got the full treatment from HBO host John Oliver on "Last Week Tonight" on Sunday. Oliver hit Zinke for [referring to himself](#) as a geologist and said he

"has a real flair for creative license." Of course, Zinke is not the first to draw scrutiny from the HBO host. A judge recently dismissed a defamation lawsuit brought by coal magnate Bob Murray against Oliver, who referred to Murray as a "geriatric Dr. Evil." Watch the Zinke video [here](#).

STATE NEWS — CUOMO INTRODUCES PLASTIC BAG BILL: New York Gov. Andrew Cuomo introduced a [bill](#) Monday to ban the use of plastic bags throughout the state, Pro New York's Danielle Muoio reports. The legislation — a long-sought promise from Cuomo — would give the state Department of Environmental Conservation jurisdiction over all matters concerning plastic bags and recycling, but comes with caveats that left some environmental advocates saying it isn't far-reaching enough. White House reiterates support for Pruitt [Back](#)

By Anthony Adragna | 04/23/2018 02:30 PM EDT

The White House says it is still standing behind EPA's Scott Pruitt, voicing support for the embattled administrator two days after it was revealed that a Washington lobbyist whose wife rented a condo to him personally lobbied Pruitt despite weeks of denying they had held any meetings.

"We're reviewing some of those allegations, however Administrator Pruitt has done a good job of implementing the president's policies, particularly on deregulation," press secretary Sarah Huckabee Sanders said at the White House briefing.

She added the administration continues its look into Pruitt's conduct, including his lavish spending, first-class travel arrangements, pay raises for political appointees and use of security personnel. White House budget director Mick Mulvaney told a congressional subcommittee last week he'd investigate the EPA chief's spending \$43,000 on a privacy booth for his office.

Pruitt is scheduled to testify at two House hearings on Thursday.

What's next: Sanders said the White House is "monitoring" additional reports about Pruitt.

White House stands behind Pruitt despite new lobbying disclosure [Back](#)

By Anthony Adragna | 04/23/2018 01:54 PM EDT

The White House said Monday it still stands behind EPA Administrator Scott Pruitt, praising him for enacting President Donald Trump's environmental and energy policies even as it looked into reports of ethical lapses.

It was the first statement from the White House since POLITICO first reported that despite his denials, Pruitt had met with a lobbyist whose wife rented the Environmental Protection Agency chief his \$50-per-night condo. A disclosure form filled late Friday said J. Steven Hart had lobbied the EPA, although both the agency and the lobbyist contend the meeting, held last July, did not constitute formal lobbying.

"We're reviewing some of those allegations. H however, Administrator Pruitt has done a good job of implementing the president's policies, particularly on deregulation," press secretary Sarah Huckabee Sanders said at the White House briefing.

The White House has been looking into Pruitt's lavish spending on first-class travel arrangements, pay raises for political appointees and use of security personnel. Budget director Mick Mulvaney told a congressional subcommittee last week he'd investigate the EPA chief's spending of \$43,000 on a privacy booth for his office.

That's on top of several ongoing probes by the EPA's own watchdog and three by congressional committees, including the House Committee on Oversight and Government Reform.

Pruitt is scheduled to testify at two House hearings on Thursday.

Sanders' comments come as five senior congressional Democrats asked House Oversight Chairman Trey Gowdy (R-S.C.) to seek new documents and hold hearings regarding "troubling" new questions about Pruitt's security expenditures.

According to nonpublic documents cited in the Democrats' letter, Pruitt's office was not cleared for classified communications as of March 2017. EPA previously said Pruitt's need to handle such information justified the installation of the privacy booth. The Government Accountability Office concluded last week the agency violated federal law by not informing Congress of the purchase.

The letter also alleges that a security sweep of Pruitt's office — the contract for which went to a business partner of Pruitt's security chief, Pasquale "Nino" Perrotta — went outside federal contracting norms without proper pre-approval.

"Given the latest developments and these new documents, we believe these and related matters are ripe for additional document requests to EPA and that Administrator Pruitt should testify about all of these matters immediately," the lawmakers wrote. Sens. Tom Carper of Delaware and Sheldon Whitehouse of Rhode Island and Reps. Elijah Cummings of Maryland and Gerry Connolly and Don Beyer, both of Virginia, signed the letter.

Pruitt support in Senate erodes as GOP lawmakers seek hearings [Back](#)

By Anthony Adragna | 04/23/2018 08:32 PM EDT

Scott Pruitt's wall of GOP support developed some new cracks on Monday, with three key Senate defenders calling for hearings into the embattled EPA administrator's recent controversies.

The three, including staunch Pruitt ally Sen. Jim Inhofe (R-Okla), all said they supported hearings by the Senate Environment and Public Works Committee to look into the former Oklahoma attorney general's actions.

"I think that a couple of us on the committee think it's appropriate to have a hearing in so far as any accusation having to do with his office is concerned," Inhofe told POLITICO.

Inhofe said he was troubled by a report over the weekend in The New York Times detailing a sweetheart deal Pruitt received on an Oklahoma City home previously owned by a lobbyist while serving in a state government. The Oklahoma Republican declined to discuss which allegations he found disturbing, but said "there are some things in there that I'd like to check out and see."

Joining his call for a Senate hearing were two other senior GOP members of the EPW panel, Sens. Shelley Moore Capito (W.Va.) and John Boozman (Ark.).

"Most people have concerns about some of the allegations," Boozman said. "At some point he'll be before the committee and we'll dig deeper and see exactly what's going on."

EPW Chairman John Barrasso (R-Wyo.) told reporters he expected Pruitt would come to testify at some point, but he stopped short of providing a specific timeframe or stating his intention to call a hearing.

To date, four House Republicans have called on Pruitt to resign, along with scores of elected Democrats. And Sen. Susan Collins (R-Maine), has said Pruitt was "the wrong person" to lead the agency based on his policies.

Pruitt has drawn criticism about his ethics and lavish spending in recent months. Three Congressional committees, the White House and EPA's inspector general are all probing his behavior, ranging from his security expenses, high pay raises for aides, first-class travel and meetings with a coal group.

The House Oversight Committee has requested interviews with five senior agency aides and the White House said it would formally investigate Pruitt's expenses after the Government Accountability Office last week found EPA broke the law by failing to notify Congress about a \$43,000 privacy booth Pruitt had built in his office.

Pruitt will go to the Hill on Thursday to testify before a House Energy and Commerce subcommittee in the morning and at a House Appropriations subpanel in the afternoon. Those appearances will mark his first time before Congress since the recent allegations broke.

Both Inhofe and Capito said they thought those House hearings would prove pivotal for Pruitt's long-term future in the administration.

"It's really important," Capito said. "He's going to have to answer some tough questions. I'm sure they'll be put to him by both sides and we'll see what his response is."

Meanwhile, EPW ranking member Tom Carper (D-Del.) said he had a good conversation with House Oversight Chairman Trey Gowdy (R-S.C.) regarding Pruitt, but he said there was no formal bipartisan agreement to work together on an investigation.

"I just gave him plenty of encouragement that he's doing the right thing," he said.

But the mounting public criticism from Republicans suggests GOP lawmakers' patience in defending the EPA chief's behavior is waning.

"Some of the things that he's done and that he's been alleged to do are just indefensible," Sen. John Kennedy (R-La.) said. "You just can't put lipstick on those pigs. You can't."

EPA emails show industry worries slowed new science policy [Back](#)

By Annie Snider | 04/19/2018 05:01 PM EDT

EPA's rollout of a controversial new transparency policy that would severely restrict the scientific research the agency can rely on when drafting new regulations has been slowed down by political officials' fears that it could have major unintended consequences for chemical makers, according to newly released EPA documents.

The issue of scientific transparency has been high on the agenda of House Science Chairman [Lamar Smith](#) (R-Texas), who has found strong support from EPA Administrator Scott Pruitt — much to the consternation of public health advocates and green groups, who view the effort as backdoor attack on the agency's ability to enact environmental regulations.

Since Pruitt announced plans for the new policy last month, researchers and public health proponents have raised alarms that it could restrict the agency's ability to consider a broad swath of data about the effects of pollution on human health. But documents released under the Freedom of Information Act show that top EPA officials are more worried the new restrictions would prevent the agency from considering industry studies that frequently support their efforts to justify less stringent regulations.

Emails between EPA officials obtained by the Union of Concerned Scientists show that Nancy Beck, the top political official in the agency's chemicals office who came to the agency after serving as a key expert for the chemical industry's lead lobbying group, voiced major concerns after she received a draft of the not-yet-released policy on Jan. 31.

The new scientific transparency directive is expected to require that the raw data for all studies EPA relies on be publicly available, and that the studies be peer-reviewed. But Beck said these requirements would exclude a great deal of industry data about pesticides and toxic chemicals that her office considers when determining whether a substance is safe or must be restricted.

It costs companies "millions of dollars to do these studies," Beck wrote in an email to Richard Yamada, the political official in EPA's office of research and development who is spearheading work on the new scientific policy and is also a former staffer for the House Science Committee chairman.

"These data will be extremely valuable, extremely high quality, and NOT published," Beck wrote. "The directive needs to be revised."

Moreover, much of this data, Beck noted, is considered proprietary by companies. It is dubbed confidential business information, and even though EPA can consider it as part of its regulatory review, the data cannot legally be made public.

Yamada replied to thank Beck for the heads up. "Yes, thanks this is helpful - didn't know about the intricacies of CBI," he wrote. "We will need to thread this one real tight!"

The term "confidential business information" primarily applies to industry information. That data is separate from the personal medical information that public health researchers worry could block consideration of their work.

Yogin Kothari, a lobbyist for the Union of Concerned Scientists, said the emails show the Trump administration's EPA has been "trying to stack the deck in favor of the industries they're supposed to be regulating."

"They want to potentially create exemptions for industry, but if you look at this entire set of documents ... you will see that there's not a single consideration for the impacts on public health data, on long-term health studies, on studies that EPA does after public health disasters like the BP oil spill," he said.

EPA spokeswoman Liz Bowman emphasized the policy is not yet finalized.

"These discussions are part of the deliberative process; the policy is still being developed. It's important to understand; however, that any standards for protecting [confidential business information] would be the same for all stakeholders," she said in a statement.

The emails indicate Pruitt wanted the new science policy rolled out at the end of February, and teased his plans in an interview with conservative outlet The Daily Caller in mid-March. But the agency has yet to finalize the policy.

The transparency directive has its origins in legislation introduced by Smith during the Obama administration, that had the backing of a number of industry groups, including the American Chemistry Council. The House Science Committee chairman frequently charged that the Obama EPA used "secret science" to justify "costly new regulations."

Although versions of the measure were approved by the House multiple times, the Senate never took it up. CBO estimated that one version of Smith's legislation would cost EPA \$250 million a year, at least in the initial years, and a leaked staff response to questions from the budget office said a later version would be even more costly, would endanger confidential medical and business information, and "would prevent EPA from using the best available science."

But Smith found an ally in Pruitt. The emails indicate that Smith met with Pruitt in early January and show that Pruitt's staff quickly began working on a directive to "internally implement" the legislation.

Industry's backing for the new scientific approach began to waiver under the Trump administration, though. When a top American Chemistry Council scientist testified before Smith's committee in February 2017, she emphasized the need to protect industry information if the transparency initiative moved forward.

"One of the things that we do need to take into consideration as making that data publicly available is that there are adequate protections for confidential business information to ensure that we keep innovation and competitiveness available for the marketplace," Kimberly White told the committee.

Industry has historically claimed that a wide range of information about chemicals, ranging from the processes by which they are produced, to the locations of manufacturing plants, to their very identities, must be kept confidential in order to keep competitors from learning trade secrets. Environmental and public health advocates argue that industry claims this exemption in many cases where it's not necessary and that it often keeps important health and safety information from public view.

The issue was a key point of debate when Congress considered a major overhaul of the nation's primary chemical safety law passed 2016 and has reemerged as Pruitt's EPA sets about implementing the law.

Asked for comment on EPA's new effort to implement the scientific transparency approach internally, American Chemistry Council spokesman Scott Openshaw said the group looks forward to reviewing the directive once it's finalized.

"It is critical that any final directive properly protect confidential business information and competitive intelligence," he said in a statement.

The internal emails show that EPA political staff were particularly attuned to this concern. In a Feb. 23 email to colleagues, Beck forwarded language from a 2005 White House document that laid out narrow exemptions from its requirement that all "important scientific information" disseminated by the federal government go through peer review.

"[Y]ou may need to tweak but hopefully there is something helpful here that can be borrowed/adopted," she wrote.

Richard Denison, lead senior scientist for the Environmental Defense Fund, said that EPA's access to industry data is indeed important to its ability to review the safety of new chemicals and pesticides, but said the internal EPA communications show that Pruitt's EPA wants to "have their cake and eat it too" with the new directive.

"They're trying to force peer review studies done by academic scientists to disclose every last detail, while at the same time allowing industry studies to be kept private or aspects of those to still be kept private," he said.

He pointed out that the concerns Beck raised about the burden the new policy would place on industry are the very same ones that the CBO report said the policy would place on EPA.

Poll: Coal baron Blankenship fading in W.Va. Senate primary [Back](#)

By Alex Isenstadt | 04/23/2018 07:26 PM EDT

WHEELING, W.Va. — A new poll out Monday evening shows recently imprisoned coal baron and Senate hopeful Don Blankenship fading in the Republican primary, amid an avalanche of establishment attacks aimed at stopping him from winning the nomination.

With the primary two weeks away, the survey shows Blankenship, who spent a year in jail following the deadly 2010 explosion at his Upper Big Branch Mine, falling far behind his more mainstream rivals, GOP Rep. Evan Jenkins and state Attorney General Patrick Morrisey. The poll found Morrisey leading with 24 percent, followed by Jenkins with 20 percent, and Blankenship trailing with 12 percent. Thirty-nine percent were undecided.

The survey, which was conducted April 17-19 and has a margin of error of 4.9 percentage points, came as Blankenship squared off against his rivals in a 90-minute debate held at Wheeling Jesuit University. The candidates spent much of the evening aligning themselves with President Donald Trump, and beating up on Democratic Sen. Joe Manchin.

They will also meet on Tuesday, and again next week for a nationally televised debate hosted by Fox News.

The survey of 411 primary voters was commissioned by GOPAC, an organization that promotes state Republican legislators, and was conducted by National Research Inc., a polling firm that worked on Trump's 2016 campaign. Neither has taken sides in the primary.

National Republicans have scrambled to intervene in the contest, fearing that a Blankenship primary win would destroy their prospects of unseating Manchin. The 68-year-old former coal executive has spent nearly \$2 million of his own to fund a slash-and-burn style campaign savaging Jenkins and Morrisey as establishment pawns.

He has also sought to clear his name. Much of Blankenship's campaign has been geared toward portraying himself as the casualty of an Obama Justice Department bent on locking him up.

Fearful that Blankenship was gaining traction, Mountain Families PAC, a super PAC overseen by strategists close to Senate Majority Leader Mitch McConnell's political operation, swung back — airing around \$700,000 worth of TV ads in recent days accusing Blankenship of contaminating drinking water.

The effort to defeat Blankenship has gone further. Earlier this month, Trump flew to West Virginia to hold an event aimed at selling his tax reform legislation. The president was seated next to Jenkins and Morrisey, a clear attempt to promote their candidacies over Blankenship, who was not in attendance.

For national Republicans, the move was not without risk. Last year, a McConnell-aligned super PAC spent millions to stop Alabama Senate candidate Roy Moore from winning the nomination, only to see it backfire. Moore used it to cast himself as the victim of the establishment, and went on to win the primary before losing the general election in a stunning upset.

Blankenship is taking a similar approach. With the contest hurtling into the final stretch, he has begun airing commercials calling McConnell a "swamp creature."

And during a news conference on Monday morning, Blankenship pledged not to support McConnell as Senate GOP leader if he's elected.

"He needs to understand that if I'm there I will not vote for him for majority leader, and so the rest of the senators should understand that they should not put him up if they need my vote," he told reporters.

The candidates largely avoided attacking each other at Monday's debate, perhaps because three lesser-known contenders were also included onstage, a setup that limited the amount of speaking time.

Blankenship used the debate to further his argument against the establishment. He called the 2010 mine explosion "heart-wrenching," and called it "one of the worst days of my life."

But he blamed the disaster on the government, saying it had taken steps to limit the amount of airflow available to the miners.

During his closing remarks, Blankenship referred to Washington as the "district of corruption," and argued that politicians there often tried to make themselves look like they were fighting over ideals when they were merely posturing.

"When I go to D.C.," he said, "it won't be a fake fight, it will be a real fight."

With candidates and outside groups crowding the TV airwaves, much of the firepower is being directed at Jenkins, a second-term congressman who in 2014 defeated longtime Democratic Rep. Nick Rahall. All told, around \$1.2 million is expected to be spent against Jenkins, according to a media buyer.

Among those spending heavily against Jenkins is Duty and Country, an outside Democratic group with offices in Washington. To date the group has spent around \$380,000 on TV, the vast majority of it against Jenkins.

At Monday's debate, Jenkins argued that Democrats were trying to "meddle" in the primary. He said their attacks on him was proof that the opposing party viewed him as the biggest threat to Manchin.

The Democratic effort, he added, was unprecedented in West Virginia politics.

"They're scared to death of Evan Jenkins on the ballot in November because they know Evan Jenkins can beat Joe Manchin," the congressman said.

Court chooses salmon over hydropower in Columbia River fight [Back](#)

By Annie Snider | 04/02/2018 02:34 PM EDT

The 9th Circuit Court of Appeals has sided with the state of Oregon, the Nez Perce tribe and nearly a dozen conservation groups, ruling that hotly contested dam operations on the Columbia and Snake Rivers must forgo hydropower production during key times of the year in order to protect endangered salmon.

The three-judge panel upheld a lower court's decision requiring that water be spilled over the top of dams along the Columbia River System, including the powerhouse Grand Coulee dam, the largest power station in the U.S., during periods when young salmon and steelhead migrate to the ocean. The hydropower turbines pose a threat to the fish.

The Justice Department, representing the National Marine Fisheries Service, Army Corps of Engineers and Bureau of Reclamation, had argued that requiring such operations would cause electricity rates to spike and could threaten the reliability of the electrical grid.

The ruling stems from a years-long battle over the nearly 100-year-old hydropower system along the Columbia and Snake rivers. Conservation groups and tribes with treaty fishing rights want the system altered and operated to benefit wildlife, including calling for the removal of four dams along the Snake River. As part of that litigation, the federal agencies are also working on an environmental impact statement for the system that has been the subject of congressional fights, with Rep. Cathy McMorris Rodgers (R-Wash.) filing a measure (H.R. 3144) to void that process, and Democratic lawmakers coming out in opposition.

WHAT'S NEXT: Unless they successfully appeal the decision, the federal agencies will need to release water over the top of dams beginning this spring. The ongoing environmental impact statement process will continue.

Senate spending leaders vow to open up floor debate for amendments [Back](#)

By Sarah Ferris and Kaitlyn Burton | 04/23/2018 06:20 PM EDT

Senate Appropriations Chairman Richard Shelby is vowing to restore chamber-wide debate on amendments to individual appropriations bills to help end Congress' stop-and-go funding cycle.

Shelby (R-Ala.), along with his Democratic counterpart Sen. Patrick Leahy, of Vermont, told committee members in a closed-door meeting today that leadership has agreed to allow amendments on the Senate floor for every individual spending bill.

"There is perhaps unanimity, but certainly strong consensus that if the appropriations process is going to work we're going to be casting votes on amendments and we stay here and we vote," Sen. Jerry Moran (R-Kan.) told reporters exiting the meeting, which was the committee's first bipartisan sit-down of fiscal 2019

"I think it's the single best way to restore the Senate the way the Senate's supposed to work. The full Senate gets a chance to offer a variety of amendments, and if you don't like it, you can vote against it," Sen. Lamar Alexander (R-Tenn.) added.

Shelby and Leahy have met with Majority Leader Mitch McConnell and Minority Leader Chuck Schumer in recent days about opening up the floor for debate on spending bills.

When asked if both leaders were on board, Shelby added: "They tell us they are, and I like to believe them." Leahy added: "We both talked with both of them. I think they both understand. The Senate can't go on like this."

It's a risky gambit, particularly in an election year. Contentious amendments have held up bills in both chambers in recent years.

Back in 2016, Senate Democrats blocked a largely noncontroversial Energy and Water bill because of a proposed amendment on Iran. In 2015, the House GOP's Interior-Environment bill was tripped up by an unrelated rider on the Confederate flag.

The number of amendments on Senate spending bills has dropped dramatically in the last two decades, as the chambers considers fewer and fewer individual bills.

Subject: Morning Energy, presented by America's Pledge: First SAB meeting to eye EPA reg rollbacks — Cramer hits Trump's legislative director — DOE: U.S. generally 'well prepared' for grid hacks

By Kelsey Tamborrino | 05/31/2018 05:43 AM EDT

With help from Eric Wolff

PRUITT'S SAB STORY: EPA's independent Science Advisory Board will meet today and Friday for the first time since Administrator Scott Pruitt barred scientists on the committee from receiving EPA grants and boosted its ranks with industry representatives — and the group's agenda is packed. The SAB will look at Pruitt's "secret science" proposal to bar EPA from using studies that don't make public all their data, as well as the Clean Power Plan repeal, Pruitt's decision to relax 2022-25 auto emissions standards, changes to the 2016 methane rule for new oil and gas wells and effort to repeal a rule regulating emissions from "glider" trucks — and that's not all.

A lot to dive into: The heavy slate of issues is unusual for the advisory board, Pro's Alex Guillén reports. Several current and former SAB members say it's unprecedented for the board to consider reviewing so many regulatory actions. But like green groups and critics of Pruitt, the SAB scientists say EPA has declined to share information about its regulatory rollbacks. "The agency has not been forthcoming about how they're developing the relevant science work products," said Chris Frey, a professor of environmental engineering at North Carolina State University and a SAB member since 2012.

EPA keeps quiet: SAB has been conducting twice-yearly reviews of EPA's planned regulatory actions since 2012, members said. It's an effort designed to enable the advisory board to help guide EPA before its rules are finalized. But this time around, the SAB's working groups say EPA wasn't being forthcoming with information. "Basically they just didn't provide us with any answers," said Frey. "That kind of put us in a position where all we can really do is say EPA has not identified the science or any plan to review it, and clearly there are science issues that are in the proposed rule."

What to expect: It's not immediately clear whether the full SAB will vote today to advance the reviews. But Frey noted that some of the members appointed by Pruitt had been on the working groups, giving him hope that the full board will back the recommendations to look deeper into the regulatory rollbacks. Should SAB adopt them, Alex reports, it likely would mean setting up special subcommittees that include current members plus outside experts to question EPA further. Read more [here](#).

Register for the Pro Summit: Join Pro subscribers, expert reporters and key decision-makers from the executive branch, federal agencies and Congress for a full day of incisive policy conversations on July 17. [Learn more](#).

THE LONG AND SHORT OF IT: In an unusual attack on the White House's legislative affairs director, North Dakota Rep. Kevin Cramer blamed Marc Short explicitly for the party's legislative failures in the Senate, including ending the Obama rule on flaring and venting from oil and gas wells. After POLITICO published a story outlining the awkward dynamic between Heidi Heitkamp, Cramer and the White House, Cramer told North Dakota radio host Rob Port that he had done some digging and believes that there "are some people in the White House that think, you know, the president's too friendly too her," Burgess Everett recaps.

Moreover, Cramer laid specific blame at Short's feet for failed GOP efforts in the Senate to roll back an Obama-era regulation limiting flaring and venting, as well as repealing Obamacare. Heitkamp voted against gutting that flaring rule, something Cramer has criticized her for, in particular. "If Marc Short was very good at his job, you know, we'd have a repeal and replacement of Obamacare, we'd have a replacement of the venting and flaring rule," Cramer said. Read that story here.

PRUITT'S MEDIA BLITZ: The EPA administrator visited Rosslyn, Va., on Wednesday to sit for interviews with two conservative media outlets. One was conducted by Boris Epshteyn for his Sinclair Broadcasting segment, "Bottom Line with Boris." (Watch that here.) The other was with the Washington Free Beacon, where Pruitt repeated familiar talking points in defense of the ongoing scandals and investigations that have surrounded him over the past few months. Pruitt said he still has President Donald Trump's backing, noting that Trump has "spoken very strongly and consistently" about their working relationship. "It's been intense the last couple of months, but he's been very encouraging, very empathetic and very supportive rather consistently," Pruitt said. The administrator also discusses the Paris climate agreement, "The Bachelorette" and, of course, baseball in the 13-minute segment, which you can listen to here.

GRID AND BEAR IT: In response to an executive order signed last year, the Energy Department released a new report Wednesday that said senior government officials and electric sector executives don't know enough about how energy companies could recover from a disruptive cyberattack, and those companies aren't thinking about cyber threats enough when building out their supply chains. While the report mainly hammered home some long-known problems with the grid, DOE highlighted how grid resilience efforts suffer because of "gaps in incorporating cybersecurity concerns, including planning for long-term disruption events, into state emergency response and energy assurance planning." Generally, however, the report said the U.S. is "well prepared to manage most electricity disruptions." Read more from Pro's Eric Geller here.

WHERE'S PERRY? Energy Secretary Rick Perry delivers remarks this morning on critical infrastructure at DOE's Texas-Israel Cyber Security Conference in Dallas. The department also announced that Perry would address the DOE's annual Cyber Conference in Austin on Monday. During both events Perry is expected to discuss DOE's new Cybersecurity, Energy Security and Emergency Response office, as well as efforts at DOE to address cyber vulnerabilities in the energy sector.

ABOUT THAT GLIDER RULE: The New York Times' Eric Lipton tweeted out new documents late Wednesday that give new details into the controversial Tennessee Technological University study on truck emissions that Pruitt used to consider rewriting part of the Phase 2 truck rules. "The letters obtained via open records request show that the principal investigator at Tenn Tech who conducted study funded by Fitzgerald, the company that makes the so-called glider trucks, disavowed the work, saying that it had been distorted in a fraudulent way," Lipton tweeted.

BY THE NUMBERS: The federal government spent \$13.2 billion across 19 agencies during fiscal 2017 on programs related to climate change, a report from the Government Accountability Office says. That's an overall \$1.5 billion increase across the federal government over fiscal 2016, Pro's Anthony Adragna reports. And it's an increase of \$4.4 billion since fiscal 2010, according to the report, which was request by House Science Chairman Lamar Smith. Read more.

CALIFORNIA GETS CHARGED UP FOR EVs: The California Public Utilities Commission is expected to approve a \$589 million program for its four investor-owned utilities to build out their electric vehicle charging infrastructure. The plan is part of the implementation of California's aggressive greenhouse gas law passed in 2015. Most of the money — which will ultimately come from ratepayers — will go toward setting up electric vehicle charging stations and related infrastructure. California leads the nation by far in electric vehicle sales and adoption.

NO MAJOR FLAWS IN FERC PROCESS: Auditors in the DOE inspector general's office said they found no major flaws in FERC's process for reviewing interstate natural gas pipelines, according to a new report. But they also flagged concerns about FERC's transparency and how it handles public comments. The auditors said that "nothing came to our attention to indicate that FERC had not performed its due diligence" in how it balanced public benefits of a proposed project with its adverse impacts. But the report also said regulators' "had not fully ensured" that the certification process was transparent to those who want to participate, and it hit the agency's eLibrary documentation system as difficult to use, Pro's Darius Dixon reports.

**** A message from America's Pledge:** America's Pledge is flipping the script on climate action. One year after the federal government announced it would pull out of the Paris Agreement, 2,700+ U.S. cities, states, and businesses are saying, "We Are Still In." See how far we've come: <https://politi.co/2koAHZb> **

FERC DENIES PENNEAST REHEARING: FERC on Wednesday denied a rehearing sought by the Delaware Riverkeeper Network and Sourland Conservancy on the controversial PennEast pipeline. Commissioner Richard Glick issued a separate statement on the agency's use of tolling orders. "This proceeding, in particular, illustrates the need for prompt action on rehearing requests," Glick wrote. " ... I also have serious concerns regarding the Commission's practice of issuing conditional certificates — which, notwithstanding their name, vest the pipeline developer with full eminent domain authority — in cases where the record does not contain adequate evidence to conclude definitively that the pipeline is in the public interest."

GREENS ENDORSE DE LEON OVER FEINSTEIN: 350.org co-founder Bill McKibben and 350 Action said Wednesday it is backing Kevin de León in his bid to challenge California Sen. Dianne Feinstein. McKibben said de León, a current California state senator, "has been a strong champion of clean energy — and an effective one, using his power in Sacramento to make change happen against the strong opposition of the fossil fuel industry." Read De León's candidate questionnaire answers here.

SELC SUES OMB OVER REORG: The Southern Environmental Law Center sued the Office of Management and Budget Wednesday for its failure to release information under FOIA on the reorganization at federal agencies that manage public lands. SELC says OMB has not provided requested information under a November 2017 FOIA request, nor has it made a determination or otherwise responded to the request, and has subsequently stopped communicating with SELC. The center is seeking "all records in the custody or control of OMB submitted in connection with Executive Order 13781 by any agency responsible for the management of federal public lands," including the Forest Service, National Park Service, BLM and the Fish and Wildlife Service. The EO in question directed each agency head to submit a report to OMB outlining proposed changes to their agency. Read the lawsuit.

CRES BACKS McMASTER IN SOUTH CAROLINA: Citizens for Responsible Energy Solutions will announce a \$175,000 television and digital ad buy today highlighting South Carolina Gov. Henry McMaster's record on clean energy. "First as lieutenant governor and now as governor, his commitment to the development of advanced energy technologies like natural gas and solar power is helping the state's economy and job market thrive," CRES Chairman and Executive Director James Dozier said.

McCARTHY NAMED DIRECTOR OF HARVARD CENTER: Harvard T.H. Chan School of Public Health announced former EPA Administrator Gina McCarthy will lead its newly launched Center for Climate, Health,

and the Global Environment. Under McCarthy, C-CHANGE announced a collaboration between Harvard University and Google to reduce the use of harmful chemicals in construction and renovation projects. "C-CHANGE will ensure that cutting-edge science produced by Harvard Chan School is actionable — that the public understands it, and that it gets into the hands of decision-makers so that science drives decisions," McCarthy said in a statement.

MOVER, SHAKER: Mitch Schwartz started this week as communications director for Jason Crow's campaign in Colorado's 6th Congressional District. Schwartz previously worked for SKDKnickerbocker.

— **PUSH Buffalo, a sustainable housing group**, announced Rahwa Ghirmatzion as its new executive director as of August 2018. Ghirmatzion has served as the organization's deputy director since 2017.

Stories from POLITICO Pro

EPA boosts industry membership on key advisory boards [Back](#)

By Alex Guillén | 11/03/2017 01:41 PM EDT

EPA officially announced the new line ups for several key advisory boards today, bolstering their membership with employees of energy companies and state agencies just days after Administrator Scott Pruitt ordered scientists who have received agency grant money to give up their EPA funding or their seat.

As POLITICO [reported](#) on Tuesday, the [Science Advisory Board's](#) new additions include representatives from Phillips 66, Total, Southern Co., the American Chemistry Council and NERA Economic Consulting, a firm frequently hired by industry interests. Their additions boost the industry membership of SAB, although the panel had previously included members from Dow Chemical and other industries or companies.

The [Clean Air Scientific Advisory Committee](#), which provides health advice for air quality standards, also has three new members. Aside from new Chairman Tony Cox, an independent consultant, the new members are Larry Wolk of the Colorado Department of Public Health and Environment and James Boylan of the Georgia Department of Natural Resources.

EPA also announced a slate of new additions to the [Board of Scientific Counselors](#), which advises on research issues. The former chairwoman, Deborah Swackhamer of the University of Minnesota, is now listed as member, while Paul Gilman of waste-to-energy company Covanta has taken over as chair.

Other new BOSC members include representatives from the North Dakota Petroleum Council, Eli Lilly and Co., the Defense Threat Reduction Agency, the Arkansas Department of Environmental Quality, the California Energy Commission and the consulting firm Ramboll Environ.

EPA's science advisers turn eyes on Pruitt's rollbacks [Back](#)

By Alex Guillén | 05/31/2018 05:00 AM EDT

EPA's influential Science Advisory Board will meet on Thursday for its first time since Administrator Scott Pruitt filled it with a slate of industry representatives — and it's got a long list of controversial rule rollbacks to review.

The SAB plans to pore over the science EPA is using to justify rollbacks on emissions regulators for cars, trucks, power plants and oil and gas wells — as well as Pruitt's proposed "transparency" rule for scientific studies.

Several current and former SAB members told POLITICO that it was unprecedented for the board to consider diving into so many regulatory actions, but the heightened scrutiny from the outside experts came about because the agency stonewalled the scientists' questions about Pruitt's deregulatory decisions. That echoes the complaints from environmentalists and public advocacy groups who say EPA has declined to share information about how it was justifying easing the regulations put in place during the Obama administration.

"The agency has not been forthcoming about how they're developing the relevant science work products," said Chris Frey, a professor of environmental engineering at North Carolina State University and a SAB member since 2012.

In a move critics derided as an attempt to stack the 44-member board with industry-friendly voices, Pruitt last year broke with the tradition of reappointing first-term SAB members for second three-year stints by removing several advisers who received grants from the agency. In their places, he installed scientists from the fossil fuel and chemicals sectors and several Republican environmental officials. Among the new members are representatives from Phillips 66, Total, Southern Co., the American Chemistry Council and NERA Economic Consulting.

In addition to studying Pruitt's proposal to bar EPA from using studies that don't make public all their data, the SAB's working groups suggested the full group take a closer look at the repeal of the Clean Power Plan and EPA's reconsideration of its related rule limiting carbon emissions from future power plants. Also up for review are Pruitt's decision to relax 2022-2025 auto emissions standards, changes to the 2016 methane rule for new oil and gas wells, and EPA's effort to repeal a rule regulating emissions from "glider" trucks.

The working groups also deferred decisions on two other rulemakings: the Waters of the U.S. rewrite and rules on a special class of "persistent, bioaccumulative and toxic chemicals" under the Toxic Substances Control Act. SAB can decide whether to conduct a deeper review into those once EPA has reviewable regulatory language available, the groups said.

Frey, who has been a SAB member for six years, said having multiple rules up for review was very unusual for the board.

"It's very rare that we've recommended to the full Science Advisory Board that there should be an SAB action," he said.

SAB has been conducting twice-yearly reviews of EPA's planned regulatory actions since 2012, members said, an effort designed to enable the advisory board to help guide EPA before its rules are finalized.

In the early days, getting information from EPA was "like pulling teeth," said Kimberly Jones, a SAB member from 2011 through 2017 and the chair of environmental engineering at Howard University. But that quickly improved once EPA knew the scope of SAB inquiries, she added.

The SAB's working groups review how EPA uses scientific studies in its rulemakings, including whether and how a study was peer-reviewed and if EPA has properly accounted for uncertainties in the scientific findings. The groups typically find that further reviews aren't needed.

But this time around, the working groups said EPA didn't respond to their questions about many of Pruitt's highest-profile rollbacks.

"Basically, they just didn't provide us with any answers," Frey said. "That kind of put us in a position where all we can really do is say EPA has not identified the science or any plan to review it, and clearly there are science issues that are in the proposed rule."

Frey pointed to lengthy memos from the working groups that included multiple pages of questions that had been posed to EPA for each rulemaking. EPA responded with short statements promising to keep the issues in mind as it develops the final rules.

"The response from the agency was basically a non-response," Frey said.

An agency spokesman said in a statement that SAB "plays an important role" advising EPA.

"We value the Board's expertise, and we welcome feedback from the chartered panel on areas in which they are interested in getting additional scientific information that is relevant to the rulemaking process," the spokesman said.

It was not clear whether the full SAB will vote on Thursday to advance the reviews.

Frey noted that some of the members appointed by Pruitt had been on the working groups, giving him hope that the full board will back the recommendations to look deeper into the regulatory rollbacks.

Should SAB adopt them, it likely would mean setting up special subcommittees that include current members plus outside experts to question EPA further.

The board can advise EPA only on scientific matters, not policy or legal issues. In several cases, like with the repeals of the Clean Power Plan and the glider rule, EPA says it has a legal argument about statutory authority that does not rely on scientific issues.

But even then, Frey said, EPA must keep the science in mind.

"It's in the best interest of the agency to make sure that it's using appropriately developed and reviewed science in its rules," Frey said. "And the flip side of that is if the agency's not doing that, it could open itself up to legal challenges for not following appropriate procedures to develop the science."

GOP sweats Trump's Heitkamp flirtation [Back](#)

By Alex Isenstadt and Burgess Everett | 05/30/2018 05:08 AM EDT

When a small group of alarmed White House aides caught wind that Sen. Heidi Heitkamp — one of the most endangered Democrats up for reelection in 2018 — would be attending President Donald Trump's bill signing last week, they raced to stop it.

Word eventually reached Senate Majority Leader Mitch McConnell, who has made unseating Heitkamp a top priority. He opted not to intervene, and the invitation stood: As the president signed a banking deregulation bill into law before a national audience, Heitkamp was right next to him, the only Democrat in the room.

As the election year kicks into high gear, Republicans have grown increasingly frustrated with Trump's ongoing flirtation with the freshman senator. At a time when many in the GOP fear that the president's unpredictable style will undercut their best-laid midterm plans, the relationship has given Heitkamp — who is seeking reelection in a state where Trump won nearly two-thirds of the vote — fodder to portray herself as a presidential ally.

Her office keeps a running list of the dozen-plus meetings Heitkamp has had with Trump and his top advisers since the 2016 election. And the senator is fond of noting that she forged close ties with Trump's former top economist, Gary Cohn. The president met with Heitkamp in Trump Tower after the 2016 election to discuss a

possible Cabinet position, asked her to join him on Air Force One, and invited her onstage to join him and her Republican opponent, Rep. Kevin Cramer, during an appearance in North Dakota.

"Everyone is saying, 'What's she doing up here?'" the president said at the September event to sell his tax reform plan, which Heitkamp eventually opposed. "But I'll tell you what. Good woman, and I think we'll have your support, I hope we'll have your support. And thank you very much, senator, thank you for coming up."

After last week's bill signing, Heitkamp's allies raced to capitalize. The North Dakota Democratic Party sent out a tweet with an image of Cramer looking on uncomfortably as the president stood next to Heitkamp.

"At a bill signing today, @HeidiHeitkamp got a shout out and all @kevincramer got was a photo op next to a chair," the state party boasted.

"We will see footage of this on every platform," said Doug Heye, a former top Republican National Committee official. "It's a huge gift for her campaign."

Trump aggressively recruited Cramer to give up his House seat to take on Heitkamp, and his actions since have left some of Cramer's closest allies feeling snubbed. They note that while Trump has savaged Democratic incumbents Joe Donnelly of Indiana and Jon Tester of Montana and visited a growing list of states to pump up Republican Senate hopefuls — most recently Tennessee, where he appeared Tuesday on behalf of Rep. Marsha Blackburn — he has yet to make a campaign appearance with Cramer. Nor has the attack dog-in-chief attacked Heitkamp.

After Cramer learned last year that Heitkamp would be accompanying the president on Air Force One to North Dakota, he complained bitterly to the White House, according to two people with direct knowledge of the discussions. Heitkamp, Cramer predicted at the time, would try to use it to her political advantage. (A Cramer adviser, Pat Finken, denied that the congressman had complained about the senator riding on Air Force One.)

The administration has taken steps to assure Cramer that he has the president's full support. The congressman has been regularly in touch with White House political director Bill Stepien, and the two met earlier this month. Trump has agreed to hold a rally for Cramer later this year.

In an interview, Cramer shrugged off Heitkamp's attendance at the bill signing and said there would soon be "clarity" on who Trump supports in the race.

Yet the congressman declined to predict whether the president would go after Heitkamp aggressively, as Trump has done with other Democratic incumbents. Cramer seemed aware of the warmth between the president and the senator. Trump has asked Cramer whether he likes Heitkamp, and when the congressman responds yes, the president seems to be "relieved," Cramer said.

"Politically, North Dakota's a pretty nice state. So I don't know that turning it on her is necessarily politically helpful to me," Cramer said. "They may just be concerned that she's a woman and maybe that has an impact. I just don't know."

Heitkamp said she's proud of her ability to work with the president.

"I have a friendly relationship. I have a very important working relationship," she said in an interview, "not just with him but other members of the administration."

Trump's reluctance to go after Heitkamp stems in part from the simple fact that he needs her vote. With Republicans clinging to a narrow Senate majority, the White House has pushed for her support on several

contentious votes, including the recent confirmations of CIA Director Gina Haspel and Secretary of State Mike Pompeo. She also backed Trump's nominations of Supreme Court Justice Neil Gorsuch and Environmental Protection Agency Administrator Scott Pruitt.

Last week's signing ceremony was organized by White House Office of Legislative Affairs Director Marc Short. He said he extended an invitation to Heitkamp because she played a central role in passing the banking deregulation law.

"She was an original cosponsor of the bill," Short said. "But she's also someone who opposed tax relief, who opposed repeal of Obamacare, and someone who will always support Chuck Schumer. So you can be sure the president will be actively campaigning in North Dakota this cycle."

Cramer's February entry into the race followed an intense pursuit from Trump and top White House officials. After Cramer initially said in January that he wouldn't run for Senate, he received overtures from Trump, White House counselor Kellyanne Conway, and energy executive and Trump donor Harold Hamm within a three-day period. Trump also met with Cramer's wife, Kris.

Cramer said Trump told him at the time that he'll "be out there campaigning more than you are." Trump's entreaties, Republicans contend, helped to push Cramer into the contest. Cramer won his statewide, at-large House seat in 2012, the same year Heitkamp entered the Senate.

"The president leaned on him very hard. The president wanted the best candidate, and everyone in the state thought Kevin was the best candidate to beat Heidi," said Gary Emineth, a former North Dakota GOP chairman who is close with the congressman. "You know how the president is. He just doesn't quit."

Heitkamp predicted that Trump would attack her eventually. While she has maintained a positive working relationship with the president, she said it pales in comparison to Cramer's staunch loyalty.

"I don't think anyone can match his Trump credentials," Heitkamp said. "He is somebody who will always do what the president asks him to do, regardless of whether it's good for North Dakota."

As of late, the senator has been airing commercials that highlight her balancing act. "When I agree with the president I vote with him — and that's over half my votes," she says in a spot that began airing this month. "And if his policies hurt North Dakota, he knows I'll speak up."

Cramer accused Heitkamp of acting like a "Republican wannabe" with her occasional support for key Trump nominees.

"Her trying to cozy up to Donald Trump has resulted in good votes," Cramer said. "But every time she tries to become more like me, it's more flattering to me than it is to her."

Democrats, however, couldn't be happier to portray Cramer as a jilted lover.

Last week, the North Dakota Democratic Party released a video featuring a montage of clips of the president praising Heitkamp and shaking her hand as Cramer looks on — set to the sad sounds of R.E.M.'s "Everybody Hurts."

GOP Senate candidate lashes out at Trump's legislative director [Back](#)

By Burgess Everett | 05/30/2018 06:27 PM EDT

Rep. Kevin Cramer, one of the GOP's top Senate recruits, launched an unusual attack on the White House's legislative director Wednesday, blaming him explicitly for the party's legislative failures in the Senate.

The comments from Cramer (R-N.D.) come amid rising GOP angst over President Donald Trump's close relationship with his opponent in the North Dakota Senate race, Democratic Sen. Heidi Heitkamp.

Heitkamp was the only Democrat invited to the White House last week for a bank deregulation bill signing, alarming some White House aides and Republicans. After POLITICO published a [story](#) on Wednesday outlining the awkward dynamic between Heitkamp, Cramer and the White House, Cramer [told](#) North Dakota radio host Rob Port that he had done some digging and believes that there "are some people in the White House that think, you know, the president's too friendly too her."

Then Cramer laid into White House legislative affairs director Marc Short for two prominent failed GOP efforts in the Senate: Repeal of Obamacare and the rollback of an Obama-era regulation that would limit flaring and venting from oil and gas wells. Heitkamp voted against both and Cramer has criticized her in particular over the flaring vote.

"If Marc Short was very good at his job, you know, we'd have a repeal and replacement of Obamacare, we'd have a replacement of the venting and flaring rule," Cramer said.

In an interview last week with POLITICO, Cramer insisted he is not angry over Trump's political flirtations with Heitkamp: "Not the case at all. I've been fine with it. I just don't think it hurts me." And on Wednesday on Port's show, Cramer said the spat over Heitkamp's attendance at the banking bill signing "just seems to be an argument between Marc Short and other people in the White House."

Short extended an invitation to Heitkamp to the bill signing, but also has knocked Heitkamp for opposing the GOP's tax law. He did not respond to a request for comment for this story.

Heitkamp has tried to stay out of the back and forth, though she is playing up her collaborations with a president that won her state in 2016 by more than 35 points.

"The president has got bigger fish to fry and bigger problems to solve than whether Kevin likes him more than I do," Heitkamp said.

DOE report: U.S. generally 'well prepared' for grid hacking, but gaps remain [Back](#)

By Eric Geller | 05/30/2018 06:05 PM EDT

Senior government officials and electric sector executives don't know enough about how energy companies could recover from a disruptive cyberattack, and those companies don't consider cyber threats enough when building out their supply chains, according to a new Energy Department [report](#).

Grid resilience efforts also suffer because of "gaps in incorporating cybersecurity concerns, including planning for long-term disruption events, into state emergency response and energy assurance planning," said the report.

"The United States is, in general, well prepared to manage most electricity disruptions," the Energy Department said in its report. But gaps still exist in areas like situational awareness, workforce development, separation of roles and responsibilities and the coordinated use of resources like digital defense tools.

DOE completed the report last August as part of President Donald Trump's May 2017 cyber executive order but did not publish it until today.

The report mostly hammered home long-understood problems with protecting the power grid from hackers, including the challenges of sharing cyber threat data between partners

"The variation in infrastructure ownership and operation and the jurisdictional overlap add complexity to sharing actionable information in a timely manner," the report said. "These complexities are compounded when information is classified or sensitive due to the limited options and access to facilitate sharing."

It also warned of compounding problems in the event of a major power outage. For example, "as cyber incidents may impact disparate systems across the country, the impacted owner-operators may not be familiar with each other's systems and procedures."

DOE working to stand up new cyber unit in fiscal 2018 [Back](#)

By Darius Dixon | 03/01/2018 01:11 PM EDT

The Energy Department is aiming to have its new cybersecurity office fired up before the end of the fiscal year, Bruce Walker, the agency's top electricity official, said today.

"We're working with Congress because we put it into the FY 2019 budget proposal ... and we're looking to stand it up earlier because of the importance and our sector-specific agency authority [for cyber incidents]," he told reporters after testifying before the Senate Energy and Natural Resources Committee.

Walker has previously noted that DOE wouldn't need additional congressional authority to create the office or a new assistant secretary job to lead it. Today, he also said that the design change is meant to elevate cyber issues as well as to divide up the agency's infrastructure work into short-term and long-term operations.

Creating the Office of Cybersecurity, Energy Security and Emergency Response is a reaction to a range of issues, including Congress giving DOE more emergency authorities in the 2015 FAST Act ([H.R. 22 \(114\)](#)), the relentless need to improve cyber defenses, and the deepening marriage between the natural gas and electric sectors.

Walker would still lead the electricity office, which would focus on long-term infrastructure plans and set research-and-development goals, including for cybersecurity. Meanwhile, the new CESER office would be "actionable, near-term and highly responsive" recovery work like the devastation in Puerto Rico or the immediate response to a cyberattack, he said.

"One basically feeds the other," Walker said. "[CESER] responds to the incidents, OE will design them out of the system on a going-forward basis."

GAO: Government spent \$13.2B on climate change last year [Back](#)

By Anthony Adragna | 05/30/2018 04:34 PM EDT

The federal government spent \$13.2 billion across 19 agencies during fiscal 2017 for various programs related to climate change, according to [a report](#) from the Government Accountability Office released today.

Overall, climate change-related spending across the federal government rose \$1.5 billion between fiscal 2016 and 2017 and grew \$4.4 billion since fiscal 2010, according to the report.

GAO examined the budget justifications for six agencies accounting for 89 percent of all climate change spending and found just 18 of 533 programs within those agencies whose primary purpose is to address climate change. It further concluded that those programs primarily dedicated to addressing the problem "serve different purposes, target different audiences, or operate at different time periods and scales, which minimizes potential overlap or duplication." The other programs had multiple purposes beyond addressing climate change.

The White House Office of Management and Budget reports the government has spent over \$154 billion since 1993 to understand and address climate change.

House Science Chairman [Lamar Smith](#) (R-Texas) requested the report.

DOE IG: No big flaws in FERC pipeline review process, but transparency should improve [Back](#)

By Darius Dixon | 05/30/2018 03:21 PM EDT

Federal watchdogs said they found no major flaws in FERC's process for reviewing interstate natural gas pipelines, but they flagged concerns about its transparency and how it handles public comments, according to [new report](#).

Auditors in the Energy Department inspector general's office who reviewed FERC's pipeline certification process said that "nothing came to our attention to indicate that FERC had not performed its due diligence" in how it balanced public benefits of a proposed project with its adverse impacts.

But the report said regulators' "had not fully ensured" that the certification process was transparent to those who want to participate and that its eLibrary documentation system was difficult to use. And it said FERC lacked a consistent method for tracking and addressing comments submitted on a proposed project.

"FERC had not specifically designed its public-facing systems for use by the general public," the IG report said, noting that "although available to the general public, eLibrary had been designed for use by practitioners, the legal community, and other stakeholders."

The report also said parts of the eLibrary website "did not contain a sufficient explanation of the entire process" and that a document for landowners who could be affected by a project was not clear about key aspects of the certification process.

"While nothing came to our attention to indicate that natural gas certification applications had been inappropriately approved or disapproved," watchdogs wrote, "FERC can take steps to improve aspects of the natural gas certification process."

WHAT'S NEXT: FERC is in the process of a broad review of its natural gas pipeline certification process but there's no established deadline.

Subject: Morning Energy, presented by America's Pledge: Battle in the Bakken state? — Groups sue over EPA waiver exemptions — Deja vu on formaldehyde

By Kelsey Tamborrino | 05/30/2018 05:41 AM EDT

With help from Annie Snider and Ben Lefebvre

BATTLE IN THE BAKKEN STATE? As the election year kicks into high gear, President Donald Trump's friendly relationship with Democratic Sen. [Heidi Heitkamp](#) is worrying some within the Republican party, POLITICO's Alex Isenstadt and Burgess Everett report. Republicans have grown increasingly frustrated with Trump's ongoing flirtation with the freshman senator from the No. 2 oil-producing state, especially at a time when many in the GOP fear that the president's unpredictable style will undercut their midterm plans. Heitkamp, who is seeking reelection in a state where Trump won nearly two-thirds of the vote, has a friendly relationship with the president, even after Trump aggressively recruited Rep. [Kevin Cramer](#) — who advised his campaign on energy issues — to give up his House seat and enter that race, leaving some of Cramer's closest allies feeling snubbed.

In an interview, Cramer said there would soon be "clarity" on who Trump supports in the race. But the congressman declined to predict whether the president would go after Heitkamp aggressively, as Trump has done with other Democratic incumbents. Cramer seemed aware of the warmth between the president and the senator, Alex and Burgess report. Trump has asked Cramer if he likes Heitkamp, and when the congressman responds yes, the president seems to be "relieved," Cramer said. "Politically, North Dakota's a pretty nice state. So I don't know that turning it on her is necessarily politically helpful to me," Cramer said. "They may just be concerned that she's a woman and maybe that has an impact. I just don't know."

For her part, Heitkamp said she's proud of her ability to work with the president. "I have a friendly relationship, I have a very important working relationship," she said in an interview, "not just with him but other members of the administration." Read the story [here](#).

WELCOME TO WEDNESDAY! I'm your host Kelsey Tamborrino, and Peter Robertson of the Pebble Partnership was the first to correctly identify California and Ohio as the two states that don't have an avenue named after them in D.C. Instead, there's a California Street and Ohio Drive. For today: Which president was the first to see a major league baseball game in his hometown, and which town was it? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

GROUPS SUE ON WAIVER EXEMPTIONS: Ethanol and farm groups say they've filed a lawsuit against EPA over some of the waivers granted to small refineries allowing them to shed their Renewable Fuel Standard requirements on blending biofuels, Pro's Eric Wolff reports. The Renewable Fuels Association, National Corn Growers Association, American Coalition for Ethanol and National Farmers Union are challenging the waivers granted to CVR Refining's Wynnewood, Okla., refinery and the HollyFrontier refineries at Cheyenne, Wyo. and

Woods Cross, Utah. Those refineries have collectively saved \$170 million in compliance costs, the coalition said.

Those waivers, which ethanol backers say violate the volume mandates under the RFS, are also the subject of some horse-trading in the discussions between EPA Administrator Scott Pruitt and USDA Secretary Sonny Perdue. The two are trying to put the final touches on a compromise deal over EPA's rules for biofuels. Read [more](#).

CHEVRON SHAREHOLDERS VOTE: Shareholders at Chevron's annual meeting today will vote on a pair of climate change-related provisions. First up is a proposal that the oil giant report to investors how it will change its business model to account for any decreased demand for oil and gas resulting from greater development of renewable energy sources. Another proposal is that Chevron start providing reports on steps it is taking to minimize methane emissions from its fracking operations. Chevron's board of directors have advised against both proposals, saying the company is already making sufficient efforts on both matters.

Exxon, which also holds its annual meeting today, is getting a break this year from the sort of environmental proposals its shareholders considered in 2017.

**** A message from America's Pledge:** America's Pledge is flipping the script on climate action. One year after the federal government announced it would pull out of the Paris Agreement, 2,700+ U.S. cities, states, and businesses are saying, "We Are Still In." See how far we've come: <https://politi.co/2koAHZb> **

DEJA VU? Already under fire for their handling of a controversial assessment of nonstick chemicals in drinking water, a newly uncovered EPA email suggests that public relations strategy was also front-of-mind for EPA staffers as the agency contemplated reevaluating the risks of formaldehyde. Reuters reported last week that EPA delayed release of a new assessment of the chemical that is expected to for the first time link formaldehyde with leukemia after meeting with the American Chemistry Council in January.

"They reiterated the concern you have raised about information leaking before it's been vetted and asked that the Agency have appropriate communication materials ready to use if needed," Jennifer Orme-Zavaleta, who heads EPA's Office of Research and Development, wrote in a Jan. 24 email to EPA chief of staff Ryan Jackson and Richard Yamada, deputy assistant administrator for research and development. The email was released to the Union of Concerned Scientists under the Freedom of Information Act.

Yogin Kothari, a lobbyist of UCS, said the email "sounds eerily similar" to concerns that EPA and White House officials expressed about a HHS assessment of the chemicals PFOA and PFOS. "It's not surprising that the ACC is attempting to wield its influence over EPA when its former staff are basically running the place," Kothari said by email.

WE'RE CLOSED: The Environmental Council of the States' upcoming fall meeting will close to the public certain sessions attended by EPA officials, according to the group's draft agenda for the August meeting. The draft shows ECOS will hold closed sessions on several issues, including a state-EPA roundtable on "cooperative federalism" and joint PFAS activities. (h/t E&E News' Sean Reilly)

NAFTA TALKS STILL STALLED: Recent NAFTA talks between the U.S., Mexico and Canada have not resulted in progress on the thorniest issues because the U.S. remains unwilling to offer important concessions, two sources close to the talks told Pro's Sabrina Rodriguez. Negotiators from the Office of the U.S. Trade Representative continue to demand that "they want everything, and there's no possible way they'll get everything they want," one of the sources said. "Conversations have stalled entirely." Read [more](#).

WE'LL ALWAYS HAVE PARIS: This week marks the one-year anniversary of Trump's decision to pull the U.S. out of the Paris climate agreement. The United States still technically remains in the 2015 pact for the next

two-and-a-half years, but the action to implement it is playing out in the rest of the world. To mark the occasion, the World Resources Institute will host a [discussion](#) today on whether other nations have moved on since Trump's decision to exit the agreement. Among those participating is Todd Stern, the former State Department special envoy for climate change who helped seal the deal. In the lead-up to the event, WRI's Eliza Northrop laid out the seven signs of progress since Trump's announcement [here](#), including a timeline of events over the last year. If you go: The discussion kicks off at 2:30 p.m. at 10 G Street NW. Watch the livestream [here](#).

— **And the National League of Cities**, as well as mayors from across the country, will release today their latest "State of the Cities" report that will look into the trend of cities taking on clean energy goals, despite the federal government.

OFFSHORE DRILLER FINED \$4M: Oil and gas company Energy Resource Technology was fined \$4 million Tuesday by the U.S. Attorney's Office for the Eastern District of Louisiana for fabricating data about the readiness of a key piece equipment used to prevent oil spills, Interior said. The fine comes as a result of an [investigation](#) by Interior's Office of Inspector General that found that ERT management directed an employee on its rig in the Gulf of Mexico to create a fake blowout preventer pressure test chart to conceal a failed test result, Pro's Ben Lefebvre reports. Read [more](#).

EPA, KILDEE SPAR OVER SUMMIT: EPA defended its move to only allow federal agency and state representatives on the second day of last week's summit on toxic chemicals in drinking water, dismissing Democratic Rep. [Dan Kildee's](#) complaint that members of his staff had been barred from attending as a mischaracterization. EPA Associate Administrator Troy Lyons wrote in a letter Tuesday to Kildee and obtained by POLITICO that the agency worked with Kildee's office ahead of time to allow a staffer to attend the first day of the summit.

"**I trust you understand our disappointment** when we discovered that no one from your office attended the summit on May 22, particularly in light of the subsequent events on May 23," Lyons wrote. In a statement, Mitchell Rivard, Kildee's chief of staff, said that "it is hard to mischaracterize the EPA's actions — it had been widely reported that the EPA blocked both journalists and a congressional office from the taxpayer-funded PFAS summit." Read the letter [here](#).

MAIL CALL! 45Q AND YOU: Rep. Cramer shared [a letter](#) Tuesday from the Treasury Department in response to [his request](#) for direction on the expanded 45Q tax credit for capturing and storing carbon dioxide. In the letter, Assistant Secretary for Legislative Affairs Drew Maloney said Treasury is developing published guidance to provide clarity to taxpayers for the purpose of using the credit.

— **A coalition of 12 state and city attorneys general** and attorneys sent a letter to National Academy of Sciences President Marcia McNutt saying EPA's so-called secret science proposal to ban the use of studies that don't publicly disclose all data is "too vague and rushed to allow for meaningful public review." And they pressed for the group to weigh in, saying "the National Academy's input on this extremely consequential proposal." Read it [here](#).

API WRITES TO TRUMP ON SECTION 232: The American Petroleum Institute [sent a letter](#) to Trump last week requesting that the list of countries currently exempt from Section 232 tariffs on steel and aluminum be expanded "without imposing alternative measures such as quotas," and that the president remove any associated import quotas that have already been imposed. In his letter, API President and CEO Jack Gerard writes that additional import restrictions "will have a negative effect on our industry just as we have achieved the highest level of domestic hydrocarbon (oil and natural gas and natural gas liquids, or NGLs) production since 1949," according to EIA.

TRUDEAU COMMENTS ON PIPELINE: Canadian Prime Minister Justin Trudeau defended the Canadian government's plan to buy and complete the expansion of Kinder Morgan's Trans Mountain pipeline. "The

project became too risky for a commercial entity to go forward with it; that's what Kinder Morgan told us," Trudeau said during a Bloomberg Businessweek event. "We are going to ensure that it gets built so that we can get our resources to new markets." More [here](#).

WHITE HOUSE TALKS PUERTO RICO: Aboard an Air Force One flight, press secretary Sarah Huckabee Sanders was asked whether the president — despite his [previous comments](#) — now thinks Puerto Rico constitutes a "real catastrophe" following [the release](#) of a Harvard University study that found at least 4,645 people died from the September 2017 storm rather than the 64 deaths federal authorities counted. The White House continues to be supportive of the governor of Puerto Rico, Sanders said according to pool reports, and of "transparency and accountability." The people of Puerto Rico "deserve nothing less than that, and were going to continue to be focused on helping in every way we can," she said. "FEMA has already done the largest response ever in history to any natural disaster. They're in Puerto Rico, and we're going to continue to give as much assistance as possible."

RBS COMMITS TO NEW ENERGY FINANCING: Ahead of its shareholder meeting today, the Royal Bank of Scotland [announced](#) Tuesday new energy financing policies to support a transition to low carbon. The bank said it would no longer provide "project-specific finance" to new coal-fired power plants, thermal coal mines or oil sands projects, among other projects. Additionally, RBS said it is tightening restrictions on general lending to mining and power companies generating more than 40 percent of their revenues from thermal coal and of electricity from coal, respectively. In response, Rainforest Action Network Executive Director Lindsey Allen said the announcement "comes as a result of groups like us pressuring banks to defund fossil fuels and deforestation," but said the "policy is only half a step forward because it leaves loopholes in place."

REPORT: COOK TAPPED FOR SUPERFUND JOB: EPA has named Steven Cook — a former senior counsel at chemical giant LyondellBasell — to the agency's Superfund Task Force in the position left vacant by Albert "Kell" Kelly, Bloomberg BNA [reported](#). Cook has been serving as deputy assistant administrator for the agency's land and waste office, prior to his move to the Superfund spot.

ZINKE DEFENDS 'KONICHIWA' GREETING: In a wide-ranging radio interview with Breitbart Radio, Interior Secretary Ryan Zinke defended his use of the greeting "konichiwa" in response to a question from Rep. [Colleen Hanabusa](#) on preserving internment sites during a March Natural Resources hearing. "I grew up in a little logging, timber town, railroad town in Montana and a lot of my family lived through the years of the internment camps. I've long since had friends that were Japanese families that went through that," Zinke said, calling it an "appropriate salute." Listen to the full interview [here](#).

AD WARS: Club for Growth Action said Tuesday that it would spend \$250,000 on new ads attacking Russ Fagg, a former judge and Republican candidate for Senate in Montana. Campaign Pro's James Arkin [reports](#) the new ad campaign attacks Fagg over his record during his two decades as a district judge, including the time he called a judge who "undercut" Trump's rollback of environmental rules a "thoughtful moderate." Watch the TV ad [here](#).

MOVER, SHAKER: Stuart Siffring joined the Western Energy Alliance as a regulatory analyst, the trade group announced Tuesday. Siffring previously worked as a permit engineer at EPA and the Colorado Department of Public Health and Environment.

The one Democrat Trump can't help but like [Back](#)

By Alex Isenstadt and Burgess Everett | 05/30/2018 05:08 AM EDT

When a small group of alarmed White House aides caught wind that Sen. Heidi Heitkamp — one of the most endangered Democrats up for reelection in 2018 — would be attending President Donald Trump's bill signing last week, they raced to stop it.

Word eventually reached Senate Majority Leader Mitch McConnell, who has made unseating Heitkamp a top priority. He opted not to intervene, and the invitation stood: As the president signed a banking deregulation bill into law before a national audience, Heitkamp was right next to him, the only Democrat in the room.

As the election year kicks into high gear, Republicans have grown increasingly frustrated with Trump's ongoing flirtation with the freshman senator. At a time when many in the GOP fear that the president's unpredictable

style will undercut their best-laid midterm plans, the relationship has given Heitkamp — who is seeking reelection in a state where Trump won nearly two-thirds of the vote — fodder to portray herself as a presidential ally.

Her office keeps a running list of the dozen-plus meetings Heitkamp has had with Trump and his top advisers since the 2016 election. And the senator is fond of noting that she forged close ties with Trump's former top economist, Gary Cohn. The president met with Heitkamp in Trump Tower after the 2016 election to discuss a possible Cabinet position, asked her to join him on Air Force One, and invited her onstage to join him and her Republican opponent, Rep. Kevin Cramer, during an appearance in North Dakota.

"Everyone is saying, 'What's she doing up here?'" the president said at the September event to sell his tax reform plan, which Heitkamp eventually opposed. "But I'll tell you what. Good woman, and I think we'll have your support, I hope we'll have your support. And thank you very much, senator, thank you for coming up."

After last week's bill signing, Heitkamp's allies raced to capitalize. The North Dakota Democratic Party sent out a tweet with an image of Cramer looking on uncomfortably as the president stood next to Heitkamp.

"At a bill signing today, @HeidiHeitkamp got a shout out and all @kevincramer got was a photo op next to a chair," the state party boasted.

"We will see footage of this on every platform," said Doug Heye, a former top Republican National Committee official. "It's a huge gift for her campaign."

Trump aggressively recruited Cramer to give up his House seat to take on Heitkamp, and his actions since have left some of Cramer's closest allies feeling snubbed. They note that while Trump has savaged Democratic incumbents Joe Donnelly of Indiana and Jon Tester of Montana and visited a growing list of states to pump up Republican Senate hopefuls — most recently Tennessee, where he appeared Tuesday on behalf of Rep. Marsha Blackburn — he has yet to make a campaign appearance with Cramer. Nor has the attack dog-in-chief attacked Heitkamp.

After Cramer learned last year that Heitkamp would be accompanying the president on Air Force One to North Dakota, he complained bitterly to the White House, according to two people with direct knowledge of the discussions. Heitkamp, Cramer predicted at the time, would try to use it to her political advantage. (A Cramer adviser, Pat Finken, denied that the congressman had complained about the senator riding on Air Force One.)

The administration has taken steps to assure Cramer that he has the president's full support. The congressman has been regularly in touch with White House political director Bill Stepien, and the two met earlier this month. Trump has agreed to hold a rally for Cramer later this year.

In an interview, Cramer shrugged off Heitkamp's attendance at the bill signing and said there would soon be "clarity" on who Trump supports in the race.

Yet the congressman declined to predict whether the president would go after Heitkamp aggressively, as Trump has done with other Democratic incumbents. Cramer seemed aware of the warmth between the president and the senator. Trump has asked Cramer whether he likes Heitkamp, and when the congressman responds yes, the president seems to be "relieved," Cramer said.

"Politically, North Dakota's a pretty nice state. So I don't know that turning it on her is necessarily politically helpful to me," Cramer said. "They may just be concerned that she's a woman and maybe that has an impact. I just don't know."

Heitkamp said she's proud of her ability to work with the president.

"I have a friendly relationship. I have a very important working relationship," she said in an interview, "not just with him but other members of the administration."

Trump's reluctance to go after Heitkamp stems in part from the simple fact that he needs her vote. With Republicans clinging to a narrow Senate majority, the White House has pushed for her support on several contentious votes, including the recent confirmations of CIA Director Gina Haspel and Secretary of State Mike Pompeo. She also backed Trump's nominations of Supreme Court Justice Neil Gorsuch and Environmental Protection Agency Administrator Scott Pruitt.

Last week's signing ceremony was organized by White House Office of Legislative Affairs Director Marc Short. He said he extended an invitation to Heitkamp because she played a central role in passing the banking deregulation law.

"She was an original cosponsor of the bill," Short said. "But she's also someone who opposed tax relief, who opposed repeal of Obamacare, and someone who will always support Chuck Schumer. So you can be sure the president will be actively campaigning in North Dakota this cycle."

Cramer's February entry into the race followed an intense pursuit from Trump and top White House officials. After Cramer initially said in January that he wouldn't run for Senate, he received overtures from Trump, White House counselor Kellyanne Conway, and energy executive and Trump donor Harold Hamm within a three-day period. Trump also met with Cramer's wife, Kris.

Cramer said Trump told him at the time that he'll "be out there campaigning more than you are." Trump's entreaties, Republicans contend, helped to push Cramer into the contest. Cramer won his statewide, at-large House seat in 2012, the same year Heitkamp entered the Senate.

"The president leaned on him very hard. The president wanted the best candidate, and everyone in the state thought Kevin was the best candidate to beat Heidi," said Gary Emineth, a former North Dakota GOP chairman who is close with the congressman. "You know how the president is. He just doesn't quit."

Heitkamp predicted that Trump would attack her eventually. While she has maintained a positive working relationship with the president, she said it pales in comparison to Cramer's staunch loyalty.

"I don't think anyone can match his Trump credentials," Heitkamp said. "He is somebody who will always do what the president asks him to do, regardless of whether it's good for North Dakota."

As of late, the senator has been airing commercials that highlight her balancing act. "When I agree with the president I vote with him — and that's over half my votes," she says in a spot that began airing this month. "And if his policies hurt North Dakota, he knows I'll speak up."

Cramer accused Heitkamp of acting like a "Republican wannabe" with her occasional support for key Trump nominees.

"Her trying to cozy up to Donald Trump has resulted in good votes," Cramer said. "But every time she tries to become more like me, it's more flattering to me than it is to her."

Democrats, however, couldn't be happier to portray Cramer as a jilted lover.

Last week, the North Dakota Democratic Party released a video featuring a montage of clips of the president praising Heitkamp and shaking her hand as Cramer looks on — set to the sad sounds of R.E.M.'s "Everybody Hurts."

Ethanol, farm groups sue EPA over exemptions [Back](#)

By Eric Wolff | 05/29/2018 07:13 PM EDT

A coalition of ethanol and farmers groups said they filed a lawsuit in federal court today against EPA seeking to overturn some of the waivers the agency has granted to small refineries allowing them to shed their Renewable Fuel Standard requirements on blending biofuels.

The Renewable Fuels Association, National Corn Growers Association, American Coalition for Ethanol and National Farmers Union are challenging the waivers granted to CVR Refining's Wynnewood, Okla., refinery and the HollyFrontier refineries at Cheyenne, Wyo. and Woods Cross, Utah. Those refineries have collectively saved \$170 million in compliance costs, the coalition said.

The groups, along with their allies in Congress, have criticized EPA's frequent use of the waivers, which they say undermines the RFS mandates on the amount of biofuel that must be sold into the U.S. fuel market.

"EPA is trying to undermine the RFS program under the cover of night," RFA CEO Bob Dinneen said in a statement. "And there's a reason it has been done in secret — it's because EPA is acting in contravention of the statute and its own regulations, methodically destroying the demand for renewable fuels."

The Advanced Biofuels Association challenged the waivers May 1.

WHAT'S NEXT: The complaint will be heard in the U.S. Court of Appeals for the 10th Circuit.

Exxon shareholders win vote to build Paris climate pact into plans [Back](#)

By Ben Lefebvre | 05/31/2017 02:37 PM EDT

The Trump administration may be preparing to [withdraw the U.S.](#) from the Paris climate change accords, but shareholders at Exxon Mobil and at least one other U.S. oil company are demanding the companies incorporate the international deal in their business models.

Nearly two-thirds of Exxon's shareholders backed a proposal on Wednesday calling for the company to assess how climate change and global efforts to limit temperature increases will affect its business. The vote is non-binding, but the results show that the once-fringe idea of linking climate change to big oil's operations has gained momentum.

The vote at the Exxon annual shareholder meeting in Dallas came after investors in its smaller rival Occidental Petroleum earlier this month cast more than two-thirds of their votes for a measure calling for the company to

assess how its business would be affected by the Paris climate change accord's target of holding global warming to 2-degrees. Company credit rating agency Moody's said last year it would start to use the Paris pledge to assess financial risk for corporations.

"Shareholders have spoken clearly on climate," said Danielle Fugere, president and chief counsel for As You Sow, a group that helps shareholders introduce environmental proposals. "If there's less demand for oil and the world is awash in oil, there's going to be more competition among these companies. Shareholders are trying to figure out who is the best bet."

Not all of these climate-related investor proposals succeeded, however. Chevron shareholders Wednesday morning rejected a motion that the company issue a report on how limiting global temperature increase to 2 degrees Celsius (3.6 degrees Fahrenheit) would affect its business. Only 27 percent of voting shareholders approved the proposal, down from more than 40 percent who voted for a similar proposal last year.

Exxon, Chevron and other energy companies facing such proposals argue that they are already taking the Paris agreement seriously and incorporating it into their business plans. Exxon in particular pointed out that it was developing technology that would capture the carbon emitted at natural gas power plants and then either store it or use it to produce more electricity.

"We believe the goal of carbon policy is to reduce emissions at the lowest cost to society," Exxon Chief Executive Darren Woods said at the shareholder meeting. "These goals led us to support the Paris Agreement." Woods sent President Donald Trump a letter earlier this month urging the U.S. to stay in the Paris deal.

For Exxon, the votes also illustrate how entangled the company has become in New York state climate change politics. The climate change proposal shareholders approved was partly sponsored by the New York State Common Retirement Fund, which is run by the State's comptroller. Meanwhile, the company is embroiled in a lawsuit with the New York and Massachusetts attorneys general over whether it withheld its own research on climate change from shareholders.

"The burden is now on Exxon Mobil to respond swiftly and demonstrate that it takes shareholder concerns about climate risk seriously," New York State Comptroller Thomas P. DiNapoli said in a prepared statement after the vote.

NAFTA talks stall amid apparent refusal of U.S. to make concessions [Back](#)

By Sabrina Rodriguez | 05/29/2018 07:41 PM EDT

Recent high-level NAFTA talks between the U.S., Mexico and Canada have not resulted in progress on the thorniest issues because the U.S. remains unwilling to offer important concessions, two sources close to the talks said on Tuesday.

Negotiators from the Office of the U.S. Trade Representative continue to demand that "they want everything, and there's no possible way they'll get everything they want," one of the sources told POLITICO.

"Conversations have stalled entirely."

As the U.S. and Canada resumed talks in Washington on Tuesday, the sources confirmed that Mexican Trade Undersecretary Juan Carlos Baker met with officials from USTR last week to present a counterproposal that would see Mexico make concessions on wages in the automotive sector in return for U.S. concessions on other flashpoint issues.

Under the offer, Mexico reportedly would accept language on automotive rules of origin that would require that 20 percent of cars produced within North America be made by workers earning at least \$16 an hour.

In exchange, Mexico reportedly asked that the U.S. back off some of its thorniest proposals, like placing limits on government procurement as well as a so-called sunset clause, which would allow for the deal to be terminated if all three countries don't agree to renew it after five years. News of the counterproposal was first reported by Bloomberg.

Mexico's counterproposal was not well received by USTR, the sources said.

"USTR did not take a close look at their proposal before rejecting it," one of the sources said. "As soon as it included [the U.S.] giving in on something, it was a 'no' from USTR."

That leaves it up to U.S. Trade Representative Robert Lighthizer to decide if the U.S. will offer any concessions to Mexico and Canada, the sources added.

USTR did not immediately respond to a request for comment on Tuesday evening.

The latest deadlock comes as Mexico and Canada face a looming deadline in their effort to secure a permanent exemption from the U.S. steel and aluminum tariffs. Mexico and Canada were temporarily exempted from the duties, but to win a permanent reprieve each country must reach a separate agreement to satisfy U.S. national security concerns by June 1.

Mexican President Enrique Peña Nieto and Canadian Prime Minister Justin Trudeau have both emphasized in recent days that they will not be pressured into accepting a NAFTA deal that is bad for their respective countries.

"No NAFTA is better than a bad deal, and we've made that very clear to [President Donald Trump]," Trudeau said Tuesday in an interview with Bloomberg. "We are not going to move ahead just for the sake of moving ahead."

Trudeau discussed the NAFTA talks during a call with Vice President Mike Pence on Tuesday, the White House said in a readout that provided no details of the conversation.

Negotiators have made some gains, despite the continued difficulties over the hot-button topics. Canadian Foreign Minister Chrystia Freeland, Canada's top NAFTA official, said she had a "very substantive" conversation with her U.S. counterpart in Washington on Tuesday.

The NAFTA nations' top trade officials have been in consistent contact over the phone since they last met in Washington two weeks ago.

Lighthizer had acknowledged at that point that the three countries still faced "gaping differences" on a number of issues, such as market access for agricultural products and automotive rules of origin. "The NAFTA countries are nowhere near close to a deal," Lighthizer said then.

Talks have continued to move forward on the NAFTA modernization chapters, like e-commerce, "but as long as USTR keeps the thorny issues on the table, there won't be movement," one of the sources said.

Negotiators have so far closed nine chapters and six sectoral annexes, Mexico's chief negotiator, Kenneth Smith Ramos, said last week. Those chapters include: telecommunications, small- and medium-sized enterprises, competition, and technical barriers to trade.

Gulf of Mexico rig operator fined \$4M after Interior Department investigation [Back](#)

By Ben Lefebvre | 05/29/2018 04:36 PM EDT

The U.S. Attorney's Office for the Eastern District of Louisiana fined offshore oil and gas company Energy Resource Technology \$4 million for fabricating data about readiness of a key piece equipment used to prevent oil spills, the Interior Department said today.

The fine was a result of an [investigation](#) by Interior's Office of Inspector General that found that ERT management directed an employee on its rig in the Gulf of Mexico to create a fake blowout preventer pressure test chart to conceal a failed test result. The failure by a blowout preventer was one of the main causes of Deepwater Horizon rig accident that killed 11 people in 2010.

An ERT supervisor on the same rig had employees perform welding near an active well in violation of Interior safety regulations.

Interior had fined ERT \$4 million in 2012 for earlier violations on its rigs, and an accident [killed](#) a contract worker on an ERT rig in February.

ERT is a subsidiary of Houston-based Talos Energy.

WHAT'S NEXT: In addition to the fine, ERT was sentenced to 36 months' probation and ordered to pay \$200,000 in restitution.

Study: 4,645 people died after Hurricane Maria, far more than official estimate [Back](#)

By Mel Leonor | 05/29/2018 11:40 AM EDT

At least 4,645 people died amid the devastation wrought by Hurricane Maria in Puerto Rico — more than 70 times the official government death toll of 64, according to a new study from Harvard University.

Locals, journalists and public health experts have for months questioned the government estimate of deaths from the storm, which caused more than \$90 billion in damage.

President Donald Trump, however, said in October that Puerto Rico officials should be "very proud" of the low death toll.

The study, published Tuesday in the *New England Journal of Medicine*, is based on household surveys of more than 3,000 homes in the territory, where researchers found a boom in the mortality rate between late September and late December 2017.

The authors of the study, which was largely funded by the Harvard T.H. Chan School of Public Health, described the official death count as a "substantial underestimate" and called it evidence of the "inattention of the U.S. government to the frail infrastructure of Puerto Rico."

"The timely estimation of the death toll after a natural disaster is critical to defining the scale and severity of the crisis and to targeting interventions for recovery," they wrote.

Researchers found that "interruption of medical care was the primary cause" of the high mortality rate that came after the storm made landfall.

With the 2018 hurricane season in swing, the authors also urged chronically ill patients, communities and health care providers to develop contingency plans for future disasters.

Carlos R. Mercader, executive director of the Puerto Rico Federal Affairs Administration, said in a statement that officials would analyze the report, adding, "We have always expected the number to be higher than what was previously reported."

He said the Puerto Rico government has commissioned a report from George Washington University, which he said would be released "soon."

Trump said in October that the storm had been less devastating than Hurricane Katrina in 2005, but the new study indicates that may not be true. Hurricane Katrina resulted in the deaths of 1,833 people, according to FEMA.

"Every death is a horror," Trump said at the time, "but if you look at a real catastrophe like Katrina and you look at the tremendous — hundreds and hundreds of people that died — and you look at what happened here with, really, a storm that was just totally overpowering ... no one has ever seen anything like this."

Rep. Nydia Velázquez (D-N.Y.) said after the report was released Tuesday that the apparent undercounting of deaths "concealed" the impact of Hurricane Maria on the territory.

"By obscuring this, many were left to believe the Trump Administration's mythology that Puerto Rico was not hit hard by Maria," Velázquez said in a statement. "We must get to the bottom of this discrepancy."

The White House did not respond to a request for comment.

Last year, Velázquez and Rep. Bennie Thompson (D-Miss.) asked a government watchdog to investigate how Puerto Rican officials "originally arrived at such a low number."

New Club for Growth ads attack Fagg in Montana [Back](#)

By James Arkin | 05/29/2018 03:48 PM EDT

Club for Growth Action, the super PAC arm of the Club for Growth, announced today that it would spend \$250,000 on new ads attacking Russ Fagg, a former judge and Republican candidate for Senate in Montana.

The Club is backing state auditor Matt Rosendale in the race in the race to face Democratic Sen. Jon Tester, and its PACs have spent more than \$1 million on ads backing Rosendale and attacking Fagg, one of his top challengers in the June 5 primary.

The new ad campaign attacks Fagg over his record during his two decades as a district judge. The TV ad makes three claims against Fagg: that he defended another judge who suggested a rape victim was to blame for her own attack; that he called a judge who "undercut" President Donald Trump's rollback of environmental rules a "thoughtful moderate"; and that he "praised a liberal federal judge who ruled against speeding up deportations."

"Russ Fagg's values are not Montana values," the narrator says.

The radio version of the ad features a woman and a man having a conversation about Fagg's record and pointing listeners to a website, factsformontana.com, funded by Club for Growth Action.

You can watch the TV ad [here](#) and listen to the radio ad [here](#).

Subject: Morning Energy: Where do biofuels stand? — This week: Pruitt faces the Hill — Macron heads to Washington

By Kelsey Tamborrino | 04/23/2018 05:42 AM EDT

With help from Eric Wolff and Annie Snider

YOU CAN'T ALWAYS GET WHAT YOU WANT: Despite efforts by President Donald Trump to settle a long-running dispute between ethanol backers and the refining industry, progress on a biofuels deal has stalled. Instead, the administration has taken a piecemeal approach to the policy, pushing for an expanded market for higher blends of ethanol, while handing out exemptions to the Renewable Fuels Standard to small refiners.

Trump, for his part, has huddled multiple times with members of his Cabinet, industry and lawmakers from both corn belt and oil states, Pro's Eric Wolff reports. But so far, there's been little progress in striking a grand deal. At odds are the independent refiners, who say they feel financial stress from the RFS, and the agriculture sector, which is anxious to expand the market for corn ethanol.

Trump has promised to allow year-round sales of 15 percent ethanol blends of gasoline, while EPA Administrator Scott Pruitt has so far granted more than two dozen temporary waivers to small refineries that exempt them from the mandate requiring them to blend ethanol with gasoline. "After 18 months of pursuing various regulatory forms of relief and a handful of Oval Office confabs, the merchant refiners ended up with [an increase in E15] taking even more market share away from them in return for some small refiner hardship waivers — and some of them did not even get that," one oil refining source told Eric.

And Pruitt's controversies stemming from his first-class flights, security spending and condo rental from a lobbyist, have left the EPA chief unable to make an aggressive case for instituting price caps many refiners want on the biofuel credits, according to an administration source. Read more [here](#).

Democrats weigh in: House Energy and Commerce ranking member [Frank Pallone](#) and Agriculture ranking member [Collin Peterson](#) sent this [letter](#) to the president on Friday, expressing concern with the waivers issued by Pruitt to small refineries, writing it "undermines the goal of the RFS program, creates uncertainty and economic hardship in the agricultural community, and gives unfair advantage to specific facilities within the refining sector."

GOOD MONDAY MORNING! I'm your host Kelsey Tamborrino, and Entergy's Rob Hall was first to correctly answer that former Senate Majority Leader Robert Taft's father served as a Supreme Court chief justice. For today: Who was the first woman to be awarded the Medal of Honor? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

POLITICO Space is our new weekly briefing on the policies and personalities shaping the second space age. [Sign up today](#).

ICYMI: Check out the [event videos and highlights](#) from last Tuesday's event on how private businesses can address clean energy and build a more sustainable future.

PRUITT HEADS TO THE HILL: Thursday's the day: Pruitt is scheduled to face questions from two House committees for the first time since his swirling scandals emerged in March. He'll appear before both the House Appropriations [Committee](#) and the Energy and Commerce [Committee](#) to discuss his agency's budget request for fiscal 2019, but of course lawmakers are planning to take Pruitt to task over his ethics and spending issues. "Members are going to have questions about how things are going at the EPA and how the money is being spent," E&C Chairman [Greg Walden](#) told POLITICO last week. "And we will. We should. He'll have to answer those."

Not least on the list of questions: POLITICO's Theo Meyer and Eliana Johnson were first to report this weekend that the lobbyist, J. Steven Hart, whose wife rented a \$50-per-night condo to Pruitt, also lobbied the agency while Pruitt was leading it, according to a Friday [filing](#) by his firm. That news comes despite the denials from both Hart and Pruitt that the lobbyist did not have any business before the agency. Hart announced his resignation from his lobbying firm Williams & Jensen hours before the disclosure was published. He was already planning to retire in November, but moved up his departure in the wake of the revelation that his wife had been Pruitt's landlord.

An EPA official acknowledged on Saturday that Pruitt had met with Hart, who attended a meeting with a former meat-processing executive concerned about Trump's proposal to cut spending on a Chesapeake Bay cleanup program. But the official argued that the meeting didn't meet the definition of lobbying. The disclosure, meanwhile, says Hart lobbied the EPA on issues "relating to support for EPA Chesapeake Bay Programs." A spokeswoman for House Oversight Chairman [Trey Gowdy](#), who is already probing the administrator, told POLITICO that "the Committee has already been looking into this matter." [Read more.](#)

The hits keep coming: The Associated Press reported on Friday [that state records](#) show how, as Oklahoma's attorney general, Pruitt ordered investigations agents from his office to work as his driver and bodyguard. And a separate [report from The New York Times](#) probed how Pruitt bought a historic house in Oklahoma from a top lobbyist with the help of a shell company.

— **Another Republican called on Pruitt to resign** this weekend, marking [at least four](#) current Republican lawmakers to do so. "Yes EPA Administrator Scott Pruitt should resign. Wrong fit from start for agency dedicated to protecting our environment," New Jersey Rep. [Frank LoBiondo](#) [tweeted](#). "#EarthDay2018 reinforces our need to promote pristine planet via clean air & water, leaving it better for future generations. Requires leadership & balance."

NOW THAT'S A MISTAKE: Three days after releasing a raft of communications between top EPA personnel to the Union of Concerned Scientists under the Freedom of Information Act, the agency removed them from its electronic library Friday. Among the documents were emails POLITICO [cited](#) on Thursday that show political officials developing a new scientific transparency policy were more concerned with the impact it could have on the agency's ability to consider industry data when reviewing pesticides and toxic chemicals for safety than they were about potentially excluding studies on the effect of pollution on public health, as many scientists have warned. EPA sent the policy, based on legislation from House Science Chairman [Lamar Smith](#) (R-Texas), to the White House for interagency review Thursday.

EPA did not respond to requests for comment over the weekend, but Yogin Kothari with UCS said the agency [told](#) him it accidentally released documents with private information and privileged attorney-client communications. His group removed emails it considered to fit that description and [posted](#) the rest on its website.

XCEL NOT SO INTO MARKETS AFTER ALL: Colorado utility Xcel Energy blew a hole in Southwest Power Pool's plans for a western power market when the company announced late Friday it had dropped out of the Mountain West Transmission Group. SPP had been working with the informal group of power providers for months to try and join the power market — and SPP had advanced the effort as recently as last month. Xcel

didn't respond to a request for comment, but the press release said there were "limited benefits" in the effort and "increasingly uncertain costs."

Perhaps most intriguing to ME is the company's point that "Xcel now sees few opportunities for westward expansion of the RTO which might have added to the value proposition." SPP faces competition from both California's already established energy-imbalance market that includes utilities in the Pacific Northwest and Nevada, and a nascent joint project between eastern market operator PJM Interconnection and western reliability manager PEAK. Xcel's press release did not say if it had engaged with either of these other projects.

MR. MACRON HEADS TO WASHINGTON: French President Emmanuel Macron makes his first official visit to Washington this week, where he'll meet with the president and deliver an address to a joint meeting of Congress. Macron and his wife will be hosted by the president and first lady at a private dinner tonight and the two leaders will participate in a bilateral meeting on Tuesday.

Officially, the two heads of state are set to discuss ongoing issues in Syria, the Iran deal and trade tensions. But keep an ear out for climate mentions, too. Macron has been critical of Trump's announcement that he would remove the U.S. from the Paris climate agreement.

Ahead of his meeting with Trump, Macron appeared on "Fox News Sunday," where he was asked whether he believes Trump will serve his full term. "I never wonder that," Macron said. "I mean, I work with him because both of us are very much at the service of our country in both side. And for me, that's why — even when we have some disagreements on climate and on some issues, I think the most important thing is to — I mean, just to remind that we are at the service of our people, that's our legitimacy."

FROM BLOOMBERG WITH LOVE: Special envoy to the U.N. for climate action Michael Bloomberg pledged to help cover the U.S. financial commitment to the Paris climate accord on Sunday. Appearing on CBS, the former New York City mayor announced he would foot the \$4.5 million bill to the U.N. Climate Change Secretariat under the 2015 agreement that was struck by former President Barack Obama.

"America made a commitment. And as an American, if the government's not going to do it, we all have a responsibility, and I'm able to do it," he said on CBS. "So yes, I'm going to send them a check for the monies that America had promised to the organization." Bloomberg will also make more funding available should the U.S. government fail to produce funds for its share of the U.N. climate budget in 2019, according to a press release announcing the action.

READY FOR TAKEOFF: Rep. Jim Bridenstine will be sworn-in at 2:30 p.m. today as the new NASA administrator. After the swearing-in ceremony, Vice President Mike Pence and Bridenstine will speak live with three NASA astronauts currently living on the International Space Station.

MAIL CALL! Senate Democrats sent a series of letters Friday, calling on the administration and agency heads to share documents related to the Koch brothers' role in influencing policy in the Trump era. The letters cite specific actions for which the Koch network has taken credit, including shrinking national monuments, exiting the Paris climate change agreement and streamlining of infrastructure permitting. "Americans have a right to know if special interests are unduly influencing public policy decisions that have profound implications for public health, the environment, and the economy," the senators write. The letters, led by Sen. Sheldon Whitehouse, come before Senate floor speeches this week from Democrats that are expected to detail the influence of the Koch brothers network. Read the letter to the White House here, EPA here and Interior here.

IN CELEBRATION OF EARTH DAY: The president touted his administration's rollback of "unnecessary and harmful regulations," and pointed toward a "market-driven economy" as an essential tool in environmental protection. "A healthy environment and a strong economy go hand in hand," a White House presidential message said. "We know that it is impossible for humans to flourish without clean air, land, and water. We also

know that a strong, market-driven economy is essential to protecting these resources." Trump said for that reason, his administration is "dedicated to removing unnecessary and harmful regulations that restrain economic growth and make it more difficult for local communities to prosper and to choose the best solutions for their environment."

REPORT OUT ON DOE BUDGET: The Information Technology and Innovation Foundation is out with a new report today analyzing the Energy Department's budget for research, development and demonstration. The report details how the administration's current budget proposal for fiscal 2019 would "impose the largest single-year decrease" in DOE history. "R&D spending as a share of sales in the U.S. energy industry is only 0.4 percent, compared with 8.5 percent in aerospace and defense, 9.8 percent in computers and electronics, and 2.4 percent in the automotive industry," the report finds. Read it [here](#).

MOVER, SHAKER: Holly Burke last week joined the League of Conservation Voters as communications coordinator. She previously worked for American Bridge.

— **Jennifer Talhelm**, formerly communications director for Sen. [Tom Udall](#), is moving to the Western Resource Advocates and will be based in Santa Fe.

HAPPENING THIS WEEK

MONDAY

11:30 a.m. — Verizon [discussion](#) on "Celebrating Earth Day: The Power of Next-Gen Networks to Advance Environmental Sustainability," 1300 I Street NW

TUESDAY

8:00 a.m. — American Fuel & Petrochemical Manufacturers holds [security conference](#), New Orleans

10:00 a.m. — Senate Energy and Natural Resources Committee [hearing](#) on the president's proposed budget request for FY 2019 for the Forest Service, 366 Dirksen

10:00 a.m. — Senate Foreign Relations Committee [hearing](#) on nominations, including Jackie Wolcott to be representative to the International Atomic Energy Agency, 419 Dirksen

10:00 a.m. — The Bipartisan Policy Center [webcast](#) "Can America's Infrastructure Withstand the Next Natural Disasters? Lessons Learned from Previous Disasters."

3:00 p.m. — Woodrow Wilson Center book launch discussion with author Barry Rabe on pricing carbon, 1300 Pennsylvania Ave NW

5:00 p.m. — Johns Hopkins University's Energy, Resources and Environment presentation on "Cities as Innovation Centers: Investing in Resilient Infrastructure," 1619 Massachusetts Avenue NW

WEDNESDAY

10:00 a.m. — Senate Commerce Committee hearing on "Enhancing the Marine Mammal Protection Act," 253 Russell

11:30 a.m. — The World Resources Institute forum on "activism for energy," 10 G Street NE

12:30 p.m. — Olympians brief Congress about impact of climate change on winter sports, hosted by Sens. Michael Bennet and Susan Collins, 538 Dirksen

2:00 p.m. — Resources for the Future webinar on "What Research Says on Key Fracking Debate Issues."

2:00 p.m. — House Natural Resources Committee hearing on "The Weaponization of the National Environmental Policy Act and the Implications of Environmental Lawfare," 1324 Longworth

3:30 p.m. — Bloomberg Government and the Norwegian-American Chamber of Commerce conversation on "Investing In A Sustainable Energy Future," New York City

6:30 p.m. — The Carnegie Institution for Science lecture on the sustainable use of the ocean, 1530 P Street NW

THURSDAY

8:00 a.m. — Water Leaders summit on "Building an Innovative Future for Water Policy and Technology in America," 215 Capitol Visitors Center

8:30 a.m. — George Mason University's Center for Energy Science and Policy symposium on "Energy-Water Nexus," Fairfax, Va.

9:00 a.m. — Colorado State University hosts symposium on "Water in the West," Denver

10:00 a.m. — The U.S. Energy Association forum on "fostering the deployment of CCUS technologies," 1300 Pennsylvania Ave NW

10:00 a.m. — The House Energy and Commerce Committee hearing on EPA's budget request, 2323 Rayburn

10:00 a.m. — House Natural Resources Oversight Subcommittee hearing on "Examining the Critical Importance of Offshore Energy Revenue Sharing for Gulf Producing States," 1324 Longworth

10:00 a.m. — The Center for Strategic and International Studies' Energy and National Security Program discussion on "Challenges to Ukrainian Energy Reform and European Energy Security," 1616 Rhode Island Avenue NW

11:30 a.m. — The Atlantic Council discussion on "From an Oil Company to an Energy Company," 1030 15th Street NW

1:30 p.m. — Information Technology and Innovation Foundation release on "Closing the Innovation Gap in Grid-Scale Energy Storage," 1101 K Street NW

2:00 p.m. — House Appropriations Interior, Environment, and Related Agencies Subcommittee hearing on EPA's fiscal 2019 budget, 2007 Rayburn

2:00 p.m. — House Natural Resources Committee hearing on H.R. 5317 (115) and H.R. 211 (115), 1324 Longworth

2:00 p.m. — Senate Appropriations Energy and Water Development Subcommittee hearing on the Nuclear Regulatory Commission's proposed budget for FY 2019, 430 Dirksen

2:30 p.m. — The Center for a New American Security event on how lower oil prices have reshaped geopolitical calculations for U.S. policymakers, 1152 15th St NW

FRIDAY

12:00 p.m. — Women's Council on Energy and the Environment discussion on wholesale electricity pricing, 888 First Street NE

12:00 p.m. — The Nuclear Information and Resource Service, and U.S. Climate Action Network discussion on "Climate Justice and Nuclear Power in South Africa," 1200 G Street NW

Stories from POLITICO Pro

Failure to strike biofuels deal opens door for smaller ethanol moves Back

By Eric Wolff | 04/23/2018 05:01 AM EDT

President Donald Trump's long-sought biofuels deal between the agricultural and refining industries appears to be turning into a piecemeal policy cobbled together through EPA that expands the market for corn ethanol while granting exemptions from the program to many small oil processors.

Trump has huddled several times with members of his Cabinet, refining and ethanol industry players, and lawmakers from both corn-belt and oil states. But so far, there's been little progress in striking a grand deal that would relieve the financial pain that some independent refiners say the Renewable Fuel Standard is causing them while acceding to agriculture-sector pressure to expand the market for corn ethanol.

Instead, Trump has promised to allow year-round sales of 15 percent ethanol blends of gasoline while EPA Administrator Scott Pruitt has handed out more than two dozen temporary waivers to small refineries that exempt them from the mandate requiring them to blend ethanol with gasoline.

"After 18 months of pursuing various regulatory forms of relief and a handful of Oval Office confabs, the merchant refiners ended up with [an increase in E15] taking even more market share away from them in return for some small refiner hardship waivers — and some of them did not even get that," said a source with an oil refining company.

For over a year, refiners have urged the administration to put a cap on the price of the biofuel credits that refiners must buy to meet their RFS compliance levels. But the move has been sharply opposed by ethanol and corn interests, as well as Sen. Chuck Grassley (R-Iowa), who as recently as last month called a potential cap "CATASTROPHIC to ethanol."

But the prices for biofuel credits, called Renewable Identification Numbers, have fallen since Pruitt's EPA began issuing at least 25 compliance waivers. Although that's angered biofuels supporters who complain it has sapped demand for ethanol, they see the administration's plan to drop the Clean Air Act rules that have barred E15 sales in the summer in some states as a boon.

"Right now we're going to have anywhere from a billion- to a billion and a half-[gallon] reduction in [ethanol] demand because of [RFS] waivers given so far," Sen. Mike Rounds (R-S.D.) told POLITICO. "I think we're moving in the right direction, but we want to make sure we get the [E15] waiver in place."

At a meeting with Midwestern senators and governors April 12, Trump announced his plan to expand E15 sales. But Trump also said there were efforts to set a transition period for the two years "where we will have a little bit of complexity," an apparent reference to refiners' worries that an increase in the number of RINs from higher E15 sales won't help push down prices for the credits in the near term.

The expansion of E15 sales came after an early April meeting at the White House, where Agriculture Secretary Sonny Perdue urged Trump to give corn farmers something to offset the ethanol demand drop they were seeing from the refinery compliance waivers, as well as the decline expected because of China's retaliatory import tariffs put in place after Trump announced his trade penalties, according to an administration source. The Washington Post reported Trump spent much of the meeting discussing the controversies around Pruitt's condo rental from a lobbyist and heavy spending on first-class travel and round-the-clock security.

Trump's discussion of Pruitt's controversies left the EPA chief unable to make an aggressive case for instituting price caps on RINs, according to an administration source, and have put him in a generally weakened position inside the White House.

And that may have killed the effort to establish RIN price caps, and given traction to the piecemeal EPA actions on E15 and the temporary compliance waivers, according to both administration and industry sources.

"[The oil industry] got what they wanted with the small refinery waivers, so we should get what we want," said Rob Walther, vice president of federal affairs for the ethanol producer POET.

Refiners, who over the last several months have sought and received RFS waivers for the 2016 and 2017 compliance years, are now expected to be pushing for the same exemptions for 2018 before they even know what their final liability for the year is.

Separately, a debate has grown over how EPA has been able to issue so many waivers to refiners this year. Though an EPA spokeswoman says the agency continued to use the same process it had under the Obama EPA to grant those exceptions, oil and ethanol industry sources acknowledge it has made crucial changes that make it far easier to get out from under the biofuel mandates.

In particular, EPA is relying on report language congressional appropriators added to 2016 and 2017 government funding bills that called on EPA to loosen its requirements for determining if a refinery should be awarded a waiver. EPA has also softened its definition of what constitutes economic hardship for a refinery as a result of a ruling from the U.S. Court of Appeals for the 10th Circuit last year.

That decision, in the case of *Sinclair Wyoming Refining v. EPA*, said the agency's test for defining economic hardship as whether a refiner was about to be pushed into bankruptcy had been too severe.

EPA has also taken a more aggressive interpretation of the law, saying it would no longer grant only partial waivers. Instead, the agency is now granting full-volume waivers to qualifying small refineries, according to an industry attorney.

The American Petroleum Institute, which represents the biggest oil companies, has opposed the waivers, and ethanol producers are furious at the use of the congressional report language to loosen the standards for receiving them. Monte Shaw, executive director of the Iowa Renewable Fuels Association, said his group has asked allies on the Appropriations Committee to consider writing their own language into future appropriations reports reversing the previous guidance.

Other groups think EPA is relying too much on that congressional guidance that is not included in the law.

"The report language does not override the plain reading of the statute," said Bob Dinneen, CEO of the Renewable Fuels Association. "While the court's decision in *Sinclair* might suggest EPA views these waivers differently, EPA has turned 180 degrees in its interpretation of the statute, and essentially now requires no demonstration of economic hardship. That's not what either the statute or the court required."

EPA staff has begun work trying to figure out how to best implement the expansion of E15 sales, which corn growers see as pivotal for the program's near future. But ethanol producers and their allies are looking ahead to the long term, in which E25 and E30 provide the octane for smaller, high-efficiency engines that get far higher fuel efficiency than current models.

"We have to move to the point to emphasize the need for octane, for these small engines that become more important in meeting CAFE standards in coming years," Rounds said. "That's where ethanol really shines."

Lobbyist whose wife rented to Pruitt lobbied EPA despite denials [Back](#)

By Theodoric Meyer and Eliana Johnson | 04/20/2018 06:43 PM EDT

The prominent lobbyist whose wife rented a condominium to Environmental Protection Agency Administrator Scott Pruitt lobbied the agency while Pruitt was leading it, contrary to his and Pruitt's public denials that he had any business before the agency, according to a Friday filing by his firm.

The [disclosure](#) from the lobbying firm Williams & Jensen contradicts Pruitt's public statement last month that the lobbyist, J. Steven Hart, had no clients with business before the EPA, and came hours after Hart's resignation from the firm.

An EPA official acknowledged on Saturday that Pruitt had met with Hart, who attended a meeting with a former meat processing executive concerned about President Donald Trump's proposal to cut spending on a Chesapeake Bay cleanup program. But the official argued that the meeting didn't meet the definition of lobbying.

A second EPA official, agency spokesman Jahan Wilcox, told POLITICO: "We have no knowledge of any facts that precipitated Williams & Jensen electing to make this filing."

The disclosure is the latest sign of one-time allies distancing themselves from Pruitt, whose job is in jeopardy because of multiple investigations into his stewardship of the agency, ranging from spending on a 20-person security team and first-class travel to the installation of costly office furniture and a soundproof phone booth. The Government Accountability Office said earlier this week that the purchase of the booth, which cost \$43,000, violated federal law. And the staff of House Oversight Chairman Trey Gowdy (R-S.C.) has interviewed a former EPA political appointee who alleges that Pruitt lied about not knowing about steep raises given to two of his top aides.

When asked late Friday about Hart's lobbying activities, a Gowdy spokeswoman told POLITICO that 'the Committee has already been looking into this matter.'

Sen. Sheldon Whitehouse (D-R.I.) said in a statement Saturday that any evidence of deception about Pruitt's relationship with the lobbyist-turned-landlord would bode ill for the EPA administrator.

"It doesn't get much swampier than an agency head getting a sweetheart deal on rent from a lobbyist with business before his agency, but someone lying about it afterwards does make it worse," Whitehouse said. "The laundry list of Pruitt scandals grows."

Hart announced he would resign from Williams & Jensen hours before the firm filed a disclosure showing that he lobbied the EPA for Smithfield Foods in the first quarter of 2017. While Hart, the chairman and former chief executive of the firm, has disputed that the contact he had with Pruitt and Pruitt's chief of staff, Ryan Jackson, constituted lobbying activity, the disclosure indicates otherwise.

Hart lobbied the EPA on issues "relating to support for EPA Chesapeake Bay Programs," according to the disclosure.

Pruitt told Fox News earlier this month that "Hart has no clients that have business before this agency."

Smithfield paid Williams & Jensen, which has lobbied for the company for years, \$70,000 to lobby on a variety of matters in the first quarter, according to the disclosure filing. Hart also lobbied Congress on trade, agriculture and food safety issues on Smithfield's behalf during the first quarter, alongside other Williams & Jensen lobbyists.

But Smithfield said Hart's lobbying of the EPA "was not undertaken at the direction of or on behalf of Smithfield Foods."

"These activities were conducted at the request of a then former executive and current Smithfield Foundation board member, Dennis Treacy, in his personal capacity," the company said in a statement. "Mr. Treacy is associated with several environmental organizations and is a member of the Chesapeake Bay Commission."

Treacy had been Smithfield's chief sustainability officer, as well as president of the nonprofit Smithfield Foundation, and before that had led Virginia's Department of Environmental Quality.

The first EPA official, who spoke on condition of anonymity, said Pruitt and Jackson, his chief of staff, met with Treacy and Hart on July 11 for 20 minutes in Pruitt's office. That's backed up by a chain of agency emails obtained by POLITICO, which show Treacy requesting a meeting in May to discuss his "focused and unique view of environmental protection" with Pruitt, and one finally being scheduled for July 11.

On July 10, Hart wrote to Jackson that he wanted to attend the meeting at Treacy's request. Hart added that Treacy "is a good guy and can be trusted. He is coming in as the business rep on the Chesapeake Bay Foundation — another of your controversies."

But the disclosure filed by Williams & Jensen indicates that Hart's lobbying work took place in the first three months of this year, not in 2017.

The official said Hart set up the meeting as a "personal introduction" but that Treacy used a Smithfield email address, which may have prompted Williams & Jensen to consider the meeting lobbying activity on behalf of Smithfield. Treacy wanted to talk about the president's proposed budget cuts to EPA's spending on Chesapeake Bay, the subject of one of the nation's premier ecosystem restoration projects, the official said.

The official said Pruitt discussed his meeting with Hart with EPA staff before going on Fox News for an interview this month, where Pruitt maintained that Hart had no clients with business before the agency. But "it has been clear in [Pruitt's] mind for months now this was a personal introduction of an individual who was supportive of the administration, who wanted to meet the administrator."

Smithfield Foods has had a tangled history with Chesapeake Bay: In 1997, a federal judge slapped the company with a record \$12.6 million fine for violating the Clean Water Act by dumping hog waste into a bay tributary. But Smithfield is now listed as a corporate partner of the nonprofit Alliance for the Chesapeake Bay.

Pruitt's rental of the Capitol Hill condo — a relative bargain at \$50 a night — had attracted criticism even before the filing because Hart has lobbied on energy issues in the past. Hart is also a past political donor to Pruitt, contributing a total of \$4,366 in cash and in-kind services to the former Oklahoma attorney general's campaigns and leadership PAC.

Pruitt's lease originally had J. Steven Hart's name printed on it as the landlord, but someone crossed it out and wrote in the name of his wife, Vicki. Public records show Vicki Hart's name on both the mortgage and deed. (Vicki Hart is also a lobbyist but works primarily on health care issues.)

Hart was already planning to retire in November but moved up his departure in the wake of the revelation that his wife has been Pruitt's landlord.

"Considering the last couple of weeks, I think it is easier on my family and the firm to expedite my departure," Hart wrote on Friday afternoon in an email to family and friends that was obtained by POLITICO.

Williams & Jensen confirmed Hart's departure.

"Mr. Hart informed the firm of his decision to resign today," the firm said in a statement on Friday. "We are grateful to Steve for his 35 years of service and we wish him and his family well in all of their future endeavors."

Hart did not respond to a request for comment. But he was sharply critical of the news coverage of the Pruitt scandal in the email he sent on Friday.

"As you know, these days I am no more an energy lobbyist than I am an astronaut," Hart wrote. "But, why let the facts get in the way of a good story?"

After leaving the firm, Hart wrote that he was "looking forward to devoting myself to an independent legal practice, some strategic business counseling for a few clients, golf, and shooting (not in that order)."

Alex Guillén and Emily Holden contributed to this report.

Third Republican calls on Pruitt to resign [Back](#)

By Alex Guillén | 04/05/2018 03:34 PM EDT

Rep. [Elise Stefanik](#) (R-N.Y.) today called on EPA Administrator Scott Pruitt to resign, becoming at least the third Republican to do so even as more conservative lawmakers come to Pruitt's defense.

"I'm going to make news today," Stefanik said at a town hall meeting in South Glens Falls, about 45 miles north of Albany, according to [The Saratogian](#). "I think Scott Pruitt should resign. I fundamentally disagree with how Pruitt has handled the EPA."

Reps. [Carlos Curbelo](#) and [Ileana Ros-Lehtinen](#), both Florida Republicans, earlier this week called for Pruitt's ouster, as have a number of Democrats. Pruitt is facing increased scrutiny for ethics issues including the \$50-per-night rent he paid to rent space in a condo from a lobbyist last year.

Meanwhile, conservative Republicans like Sens. [Rand Paul](#) (R-Ky.) and [Ted Cruz](#) (R-Texas) have come to Pruitt's defense today.

"Why do Obama and his media cronies want so badly to drive @EPAScottPruitt out of office?" [tweeted](#) Cruz.

Pruitt "is likely the bravest and most conservative member of Trump's cabinet," [tweeted](#) Paul. "We need him to help @realDonaldTrump drain the regulatory swamp."

EPA emails show industry worries slowed new science policy [Back](#)

By Annie Snider | 04/19/2018 05:01 PM EDT

EPA's rollout of a controversial new transparency policy that would severely restrict the scientific research the agency can rely on when drafting new regulations has been slowed down by political officials' fears that it could have major unintended consequences for chemical makers, according to newly released EPA documents.

The issue of scientific transparency has been high on the agenda of House Science Chairman [Lamar Smith](#) (R-Texas), who has found strong support from EPA Administrator Scott Pruitt — much to the consternation of public health advocates and green groups, who view the effort as backdoor attack on the agency's ability to enact environmental regulations.

Since Pruitt announced plans for the new policy last month, researchers and public health proponents have raised alarms that it could restrict the agency's ability to consider a broad swath of data about the effects of pollution on human health. But documents released under the Freedom of Information Act show that top EPA officials are more worried the new restrictions would prevent the agency from considering industry studies that frequently support their efforts to justify less stringent regulations.

Emails between EPA officials obtained by the Union of Concerned Scientists show that Nancy Beck, the top political official in the agency's chemicals office who came to the agency after serving as a key expert for the chemical industry's lead lobbying group, voiced major concerns after she received a draft of the not-yet-released policy on Jan. 31.

The new scientific transparency directive is expected to require that the raw data for all studies EPA relies on be publicly available, and that the studies be peer-reviewed. But Beck said these requirements would exclude a great deal of industry data about pesticides and toxic chemicals that her office considers when determining whether a substance is safe or must be restricted.

It costs companies "millions of dollars to do these studies," Beck wrote in an email to Richard Yamada, the political official in EPA's office of research and development who is spearheading work on the new scientific policy and is also a former staffer for the House Science Committee chairman.

"These data will be extremely valuable, extremely high quality, and NOT published," Beck wrote. "The directive needs to be revised."

Moreover, much of this data, Beck noted, is considered proprietary by companies. It is dubbed confidential business information, and even though EPA can consider it as part of its regulatory review, the data cannot legally be made public.

Yamada replied to thank Beck for the heads up. "Yes, thanks this is helpful - didn't know about the intricacies of CBI," he wrote. "We will need to thread this one real tight!"

The term "confidential business information" primarily applies to industry information. That data is separate from the personal medical information that public health researchers worry could block consideration of their work.

Yogin Kothari, a lobbyist for the Union of Concerned Scientists, said the emails show the Trump administration's EPA has been "trying to stack the deck in favor of the industries they're supposed to be regulating."

"They want to potentially create exemptions for industry, but if you look at this entire set of documents ... you will see that there's not a single consideration for the impacts on public health data, on long-term health studies, on studies that EPA does after public health disasters like the BP oil spill," he said.

EPA spokeswoman Liz Bowman emphasized the policy is not yet finalized.

"These discussions are part of the deliberative process; the policy is still being developed. It's important to understand; however, that any standards for protecting [confidential business information] would be the same for all stakeholders," she said in a statement.

The emails indicate Pruitt wanted the new science policy rolled out at the end of February, and teased his plans in an interview with conservative outlet The Daily Caller in mid-March. But the agency has yet to finalize the policy.

The transparency directive has its origins in legislation introduced by Smith during the Obama administration, that had the backing of a number of industry groups, including the American Chemistry Council. The House Science Committee chairman frequently charged that the Obama EPA used "secret science" to justify "costly new regulations."

Although versions of the measure were approved by the House multiple times, the Senate never took it up. CBO estimated that one version of Smith's legislation would cost EPA \$250 million a year, at least in the initial years, and a leaked staff response to questions from the budget office said a later version would be even more costly, would endanger confidential medical and business information, and "would prevent EPA from using the best available science."

But Smith found an ally in Pruitt. The emails indicate that Smith met with Pruitt in early January and show that Pruitt's staff quickly began working on a directive to "internally implement" the legislation.

Industry's backing for the new scientific approach began to waiver under the Trump administration, though. When a top American Chemistry Council scientist testified before Smith's committee in February 2017, she emphasized the need to protect industry information if the transparency initiative moved forward.

"One of the things that we do need to take into consideration as making that data publicly available is that there are adequate protections for confidential business information to ensure that we keep innovation and competitiveness available for the marketplace," Kimberly White told the committee.

Industry has historically claimed that a wide range of information about chemicals, ranging from the processes by which they are produced, to the locations of manufacturing plants, to their very identities, must be kept confidential in order to keep competitors from learning trade secrets. Environmental and public health advocates argue that industry claims this exemption in many cases where it's not necessary and that it often keeps important health and safety information from public view.

The issue was a key point of debate when Congress considered a major overhaul of the nation's primary chemical safety law passed 2016 and has reemerged as Pruitt's EPA sets about implementing the law.

Asked for comment on EPA's new effort to implement the scientific transparency approach internally, American Chemistry Council spokesman Scott Openshaw said the group looks forward to reviewing the directive once it's finalized.

"It is critical that any final directive properly protect confidential business information and competitive intelligence," he said in a statement.

The internal emails show that EPA political staff were particularly attuned to this concern. In a Feb. 23 email to colleagues, Beck forwarded language from a 2005 White House document that laid out narrow exemptions from its requirement that all "important scientific information" disseminated by the federal government go through peer review.

"[Y]ou may need to tweak but hopefully there is something helpful here that can be borrowed/adopted," she wrote.

Richard Denison, lead senior scientist for the Environmental Defense Fund, said that EPA's access to industry data is indeed important to its ability to review the safety of new chemicals and pesticides, but said the internal EPA communications show that Pruitt's EPA wants to "have their cake and eat it too" with the new directive.

"They're trying to force peer review studies done by academic scientists to disclose every last detail, while at the same time allowing industry studies to be kept private or aspects of those to still be kept private," he said.

He pointed out that the concerns Beck raised about the burden the new policy would place on industry are the very same ones that the CBO report said the policy would place on EPA.

France's Macron arrives for 'celebration' of unlikely friendship with Trump [Back](#)

By Nicholas Vinocur and Michael Crowley | 04/22/2018 09:45 PM EDT

PARIS — French President Emmanuel Macron will receive full state honors in Washington this week, nine months after he rolled out a literal red carpet for Donald Trump on Paris' Avenue des Champs Elysées.

The three-day visit is likely to feature more displays of public affection between two leaders who talk on the phone constantly and closely coordinated recent airstrikes against Syria. Despite the U.S president's enormous unpopularity in his country, Macron virtually never criticizes Trump in public and calls him a "friend." Trump in turn reportedly even scribbled a [love note](#) to the 40-year-old French president last July.

This week's visit will be "something of a celebration of the relationship," a senior Trump administration official said.

Few would have predicted such talk just after Macron's May 2017 election defeat of the nationalist insurgent Marine LePen, whom Trump [implied](#) he supported. Macron's dark-horse win was seen as a rebuke to the western nationalist movement of which Trump has become a symbol. And while the French [adored](#) President Barack Obama as a suave intellectual, Trump is seen as the embodiment of a gauche American.

But rather than denounce Trump as many French politicians have, Macron has sought to win Trump over with flattering words. In an interview with "Fox News Sunday," Macron stressed his similarities with Trump, saying both he and the president could be called a "maverick" whose election had been unexpected.

The two men hardly see eye to eye on policy, and are expected to debate the Iran nuclear deal, Syria and trade policy, among other sensitive topics.

But Macron and Trump have worked closely together as Paris takes a larger leadership role on international issues — at a time when Britain is sidelined by political chaos and a weakened German Chancellor Angela Merkel's relationship with Trump is cool at best.

"Macron has become Trump's main European interlocutor when it comes to addressing international crises," Alexandra de Hoop Scheffer, senior transatlantic fellow at the German Marshall Fund, [wrote](#) in a recent policy paper.

Macron and Trump will share a private dinner Monday evening, followed by a bilateral meeting early Tuesday. They'll then meet with Cabinet members before a state dinner at the White House. On Wednesday, Macron will address a joint session of Congress.

In their private talks, the two men are likely to focus on security issues, including a fast-approaching decision point for the Iran nuclear deal. French officials say they share some of Trump's concerns about the July 2015 pact brokered by President Barack Obama, but are urging Trump not to abandon the agreement in mid-May, when Trump has threatened to reimpose sanctions on Tehran.

Macron has sought common ground with Trump by saying the current deal is flawed and that he might be willing to crack down on Iran's ballistic missile program. But Trump wants much stronger measures that French officials worry could abrogate the deal entirely. A Trump official said the deal would be "a major topic of discussion" during Macron's visit.

The official also said the two leaders "will discuss, probably in some detail, the way ahead in Syria."

In a televised debate last week, Macron said he had changed Trump's mind on the U.S. presence in war-torn Syria: "President Trump said the USA's will is to disengage from Syria. We convinced him that it was necessary to stay," the French leader said.

The White House quickly denied that characterization, and Macron later said he never meant the countries should maintain an indefinite military presence in the country.

But on Sunday, Macron told Fox News that he would urge international cooperation during his address to Congress, warning that Iran would benefit from a U.S. and European abandonment of Syria. "We are very much attached to the same values, and especially liberty and peace," Macron said of America and France.

Trade will also be on the agenda, after Macron and Merkel — who's due to fly into Washington on April 27, a few days after Macron leaves — both vowed to tell the U.S. president that Europe would not stand for his recent steel tariffs. U.S. officials may in turn complain to Macron's entourage about a French-led proposal to slap a 3-percent tax on U.S. internet giants.

Despite the menu of issue differences, officials on both sides sought to lower expectations for specific results from the meeting.

"It's largely symbolic," an aide to Macron said.

"I think what the President would like to hear from President Macron is his counsel and his point of view and his perspective," said the Trump official. "Whether we will actually solve, or come to closure, or a full detailed agreement on some of the issues that we've touched on is difficult to say at this remove."

As they work together internationally, Trump and Macron are both fending off political threats at home. A year into his presidency, the French president's sheen as a political prodigy and savior of European liberalism has been dulled by grinding rail strikes and sagging poll numbers.

Macron wants Trump to stand at his side as the European Union's soon-to-be sole military power with a permanent seat on the United Nations Security Council, nuclear capability and the will to intervene where others will not.

The April 14 strike on Syria's chemical facilities bolstered the burgeoning Franco-American relationship, French officials say. Macron and Trump spoke repeatedly during the crisis — and no fewer than seven times over the past month, according to accounts from the Elysée presidential palace.

While Britain also joined the strikes, Merkel barely featured in the Syrian discussions. Characteristically for intervention-averse Germany, she did not order participation in the strikes, commenting on them after the fact as "necessary and appropriate."

Once the missiles had hit their targets, Macron seized on a chance to drive home his point: While others may waver, France remains a red-blooded beacon of Western power. Paris had intervened in Syria for the "honor of the international community," he told the European Parliament in Strasbourg

One outstanding question about the Macron-Trump relationship that fascinates commentators in Europe: Does the French president really like Trump, or is he just "playing him"?

European commentators suggested as much last summer when, during Trump's visit to Paris, Macron mimicked his guest's signature thumbs-up move to TV cameras.

There may be no definitive answer. Macron is a one-time stage actor who loves to quote classical French playwrights from memory and, as he told a pair of French interviewers last weekend, has "no friends."

Quizzed about Macron's apparent affection for Trump, the French president's aides say he has concluded that befriending Trump and avoiding any direct criticism of the U.S. president that could inflame his temper are the best ways of keeping Trump — and the United States — on his nation's side.

Subject: Morning Energy: Interior rejected staff advice on casino, docs show — Pruitt's science directive slowed by industry concerns — Francis Brooke: Rookie of the year

By Kelsey Tamborrino | 04/20/2018 05:43 AM EDT

With help from Anthony Adragna

YOU NEVER KNOW WHAT YOU'RE GONNA GET: Interior officials reversed course on plans from two American Indian tribes to build a casino last year, new documents show. The heavily redacted documents released via FOIA show officials rejected recommendations from federal experts on Indian gaming, Pro's Nick Juliano reports, raising further questions about whether Interior Secretary Ryan Zinke and his political appointees caved to lobbying pressure from MGM Resorts International.

The tribes' treatment is now the subject of an Interior inspector general investigation, a spokeswoman told Nick. And while the documents don't reveal the contents of the internal deliberations by the staff of the Bureau of Indian Affairs' Office of Indian Gaming, they do show that the career staffers were circulating what they labeled as "approval" letters just 48 hours before their bosses refused to either OK or reject the tribes' application, leaving the casino in legal limbo.

No direct effort by MGM to lobby experts in BIA's Indian gaming office can be seen in the docs, but they show a timeline that indicates Interior officials closest to gaming issues were ready to side with the tribes after about six weeks of internal review. The department arrived at the opposite conclusion less than 48 hours after their recommendations went to Associate Deputy Secretary James Cason, a veteran of three Republican administrations, who was one of President Donald Trump's first hires at the department.

The emails also indicate even Interior career staff were unsure how they would explain the sudden about-face from higher-ups. "As for why we didn't approve the Mohegan compact amendment, you say the letter speaks for itself," Troy Woodward, a senior policy adviser in the Office of Indian Gaming, wrote to a colleague who wondered how he should answer questions. And "like Forrest Gump, say: 'that's all I've got to say about that.'" Read more.

WELCOME TO FRIDAY! I'm your host Kelsey Tamborrino, and NRECA's Kirk Johnson knew all the states with just one representative in the House: Alaska, Delaware, North Dakota, South Dakota, Montana, Vermont and Wyoming. For today: Who was the Senate majority leader whose father served as chief justice? POLITICO Space is our new weekly briefing on the policies and personalities shaping the second space age. Sign up today.

CONCERN ON ALL FRONTS: Scientists aren't the only ones expressing concern with EPA Administrator Scott Pruitt's plans to revise how the agency considers outside research, emails show. As the administrator weighs next steps on a scientific transparency directive announced earlier this year — which is expected to require that the raw data for all studies be publicly available and peer-reviewed — members of Pruitt's staff expressed concern it could block their own use of industry data, Pro's Annie Snider reports.

Emails between EPA officials obtained by the Union of Concerned Scientists show that Nancy Beck, the top political official in the agency's chemicals office, voiced concerns after she received a draft of the not-yet-released policy on Jan. 31. The directive in question has origins in legislation introduced by Rep. Lamar Smith during the Obama administration, but its requirements would exclude a great deal of data about pesticides and toxic chemicals that Beck's office considers when determining whether a substance is safe or must be restricted. "These data will be extremely valuable, extremely high quality, and NOT published," Beck wrote in an email to an official in EPA's office of research and development. "The directive needs to be revised." Read more here.

THE ROOKIE: The energy industry is unsure what to make of the relatively unknown Francis Brooke, who will soon replace Mike Catanzaro as the top White House energy aide. A 28-year-old former baseball pitcher, Brooke spent the last year in Vice President Mike Pence's office serving in a junior role to Catanzaro and George David Banks. But Pro's Ben Lefebvre and Eric Wolff report energy lobbyists worry his promotion could leave them without steady hands to steer the White House as big decisions on the coal industry, biofuels and energy trade pile up — especially in the crucial run-up to the midterm elections. "It shows you this administration doesn't care about these issues," said one lobbyist who works extensively with the administration on energy policy. "I expect agencies are now going to have to play a bigger role. There's not going to be a lot of policy issues that will be determined over the next eight months or so." Read more.

WHAT'S THE HOLD UP? House Natural Resources Chairman Rob Bishop says a comprehensive GOP energy bill is "being held up" until the Pentagon weighs how offshore drilling near Florida could affect national security, following backlash from the offshore proposal that led two Florida Republicans to pursue a permanent moratorium. A pending energy bill, H.R. 4239 (115), is one potential vehicle to extend that moratorium. Bishop told Anthony he is waiting for a Defense Department report on how expanded drilling near Florida would affect "mission compatibility." A committee spokeswoman said the results of the study would help determine next steps on the moratorium.

— **On the anniversary of the Deepwater Horizon oil spill**, New Jersey Gov. Phil Murphy is expected to sign into law today a bill that bans offshore drilling in state waters. The Center for American Progress, in anticipation of the legislation, cheered the move. Florida Sen. Bill Nelson, meanwhile, marked the anniversary by joining legislation Thursday intended to block the oil industry from rolling back Interior drilling safety rules adopted in response to the spill.

TRAVEL COMPANIONS: In preparation for a planned trip that was later canceled because of Hurricane Harvey, Pruitt spent nearly \$45,000 to fly five people to Australia, according to Reuters. While not a violation of government policy, Reuters reports two of Pruitt's aides and three security agents flew on business-class tickets costing roughly \$9,000 to set up advance meetings for the administrator. Pruitt was scheduled to participate in environment-related meetings with Australian officials.

Agency officials did not dispute the figures. EPA spokesman Jahan Wilcox told Reuters Hurricane Harvey, which caused major flooding in Texas, caused him to cancel the trip and instead go to Corpus Christi to assess the agency's relief efforts. "This is not news," he said, adding Pruitt's team was "adhering to the federal government's travel policy."

WHAT ABOUT HIS EMAILS? EPA told Senate Environment and Public Works Chairman John Barrasso that all of Pruitt's four emails were searched whenever there was a FOIA records request, but that a "full review" is being conducted just to make sure. "As long as EPA Administrators have had secondary email accounts, EPA staff have routinely searched requested accounts in response to FOIA and Congressional inquiries," Steve Fine, EPA's deputy chief information officer, wrote in a letter released by Barrasso.

DEMS WADE INTO WEST VIRGINIA PRIMARY: Republicans aren't the only ones trying to meddle in West Virginia's Senate primary. National Democrats are also jumping into the game, POLITICO's Alex Isenstadt reports, with an effort launched Thursday that could be designed to help coal baron Don Blankenship

win the Republican nomination. Washington-based super PAC Duty and Country has begun airing ads hitting the other two GOP contenders in the field: Rep. [Evan Jenkins](#) and state Attorney General Patrick Morrisey, ahead of the state's May 8 primary. But Blankenship was notably omitted from their target list, Alex writes. [Read more.](#)

— **Fox News Channel announced Thursday** its "America's Election Headquarters 2018" midterm election series would kick-off in West Virginia, with a GOP Senate primary debate on May 1. Candidates will need to reach a 10 percent threshold in a Fox poll next week to be invited to the debate.

ABOUT THAT CRA THREAT: Sen. [Lisa Murkowski](#) doesn't sound super gung-ho about using the Congressional Review Act on a 2016 plan from the Bureau of Land Management (that GAO [concluded](#) last year met the definition of a federal rule). "Obviously, we've got some issues that need to be resolved in the Tongass and whether this is the best way to do it is something we've been analyzing," she told reporters. Of course, floor time in the Senate is a valuable commodity so carving out time for the Alaska-centric issue may be a heavier lift. [Background here](#) on the Senate Republicans' new novel push to undo federal rules.

IT'S ALMOST EARTH DAY: Sunday marks Earth Day, where the Earth Day Network is using the date to promote its goal of [ending plastic pollution](#). The organization says more than 1 billion people from 192 countries will take part in the event on April 22. For its part, EPA promotes a list of Earth Day events [here](#).

CFA FLAGS FUNDRAISER AT PRUITT CONDO: Washington-based watchdog group Campaign for Accountability filed a complaint Thursday with the FEC against GOP Sen. [Mike Crapo](#) and Vicki Hart, the lobbyist co-owner of the controversial condo where Pruitt lived. The complaint alleges Crapo and Hart violated the Federal Election Campaign Act and FEC regulations when they failed to disclose improper in-kind contributions. [Read it here.](#)

GOING PUBLIC: The Sierra Club filed a lawsuit for documents related to EPA's Office of Public Affairs after EPA failed to respond to its FOIA requests concerning whether the agency improperly — and potentially illegally — used the Office of Public Affairs' staff time to promote topics outside the scope of the office. [Read it here.](#)

MAIL CALL! BIRD IS THE WORD: Sixty-two Democrats, led by Rep. [Alan Lowenthal](#), sent a letter to Zinke on Thursday regarding Interior's interpretation of the Migratory Bird Treaty Act. "We ask that you continue to enforce this foundational bird conservation law as every administration from across the political spectrum has done for more than forty years," the [letter](#) says.

— **Thirty-one outdoor businesses** will send [this letter](#) to Zinke today, calling on DOI to acknowledge the role of the outdoor recreation industry in its proposal to reverse the Methane Waste Prevention Rule. They request best practices are implemented to improve air quality in oil fields across the country, among other issues.

SPEAKING OF METHANE: Earlier this week BP released its "[advancing the energy transition](#)" report, [committing](#) to near-term carbon reductions and setting a target methane intensity of 0.2 percent and holding it below 0.3 percent. The Environmental Defense Fund [highlights](#) the report Thursday in a post arguing on the next frontier of methane targets, as annual shareholder resolution meetings are on the horizon.

SOLAR BILL SPOTLIGHT: Democratic Rep. [Jacky Rosen](#) introduced the bipartisan "Protecting American Solar Jobs Act," [H.R. 5571 \(115\)](#) this week, which would repeal tariffs introduced by the Trump administration on imported solar panels. It would undo increases in duty and a tariff-rate quota on certain crystalline silicon photovoltaic cells.

Stories from POLITICO Pro

Zinke's agency held up Indians' casino after MGM lobbying [Back](#)

By Nick Juliano | 02/01/2018 05:00 AM EDT

Two casino-owning American Indian tribes are accusing Interior Secretary Ryan Zinke of illegally blocking their plans to expand operations in Connecticut — a delay that stands to benefit politically connected gambling giant MGM Resorts International.

The Interior Department's refusal to sign off on the tribes' plans for a third Connecticut casino came after Zinke and other senior department officials held numerous meetings and phone calls with MGM lobbyists and the company's Republican supporters in Congress, according to a POLITICO review of Zinke's schedule, lobbying registrations and other documents. The documents don't indicate whether they discussed the tribes' casino project.

Federal law gives Interior just 45 days to issue a yes-or-no verdict after a tribe submits proposed changes to its gaming compact with a state, as the Mohegan and Mashantucket Pequot tribes note in a suit they filed against Zinke and the department. But the department declined to make any decision in this case, an inaction that raises questions about whether an intensive lobbying campaign by one of the gambling industry's biggest players muscled aside the interests of both the tribes and the state of Connecticut.

"I think the Department of Interior has been derelict in failing to give approval" to the tribes' request, Sen. Richard Blumenthal (D-Conn.) told POLITICO. "We asked for a meeting, but they were unresponsive. They never even responded."

Meanwhile, MGM and its allies had direct access to Interior. Zinke had multiple conversations last year with Sen. Dean Heller and Rep. Mark Amodei — two Nevada Republicans whose state is a major center of employment for MGM, and who have each tried to impede the tribes' casino plans. The company also doubled its lobbying spending and assembled a team that includes Bush-era Interior Secretary Gale Norton and Florida-based Trump fundraiser Brian Ballard.

The proposed Connecticut casino would sit on non-tribal land just across the border from a billion-dollar casino that MGM is planning in Springfield, Massachusetts. The Pequot tribe's Foxwoods Casino in Connecticut previously provoked the ire of former New Jersey casino owner Donald Trump, who complained during a 1993 congressional hearing that "they don't look like Indians to me."

An Interior spokeswoman did not respond to requests for comment, but the department is due to respond by next week to the suit the tribes filed in November. MGM has sought to join the suit on Interior's side.

MGM and its supporters say the tribes are trying to circumvent restrictions on "off-reservation" gambling while still maintaining their exclusive access to Connecticut's lucrative casino market, and that the new property would provide unfair competition to its Springfield project.

Interior officials sent the tribes encouraging signals as recently as May. But by mid-September the department reversed course, saying it would be premature to either approve or reject the plans.

"It's 100 percent about delaying us for as long as they possibly can," said Andrew Doba, a spokesman for the joint enterprise the tribes created for their new project.

The case is far from the first legal dispute to arise from Interior's role as the overseer of Indian tribes' gambling agreements with the states. Clinton-era Secretary Bruce Babbitt faced a special prosecutors' investigation after Interior rejected three Wisconsin tribes' plans for a casino that other, Democrat-supporting tribes opposed — though he ultimately was cleared. Indian gambling also played a key role in the George W. Bush-era Jack Abramoff scandal.

In the Connecticut case, the tribes have been operating two casinos — the Pequot tribe's Foxwoods and the Mohegan Sun — since the early 1990s. Their success in the market between Boston and New York provided competition to casinos in Atlantic City, including the formerly Trump-owned Taj Mahal.

As gambling spread across the U.S. in recent decades, MGM and other casino developers — including Trump — pursued projects in Connecticut but were ultimately unsuccessful. State law there limits casino ownership to the two in-state tribes and their new joint venture.

The tribes say they are fully complying with state law and the federal Indian Gaming Regulatory Act, which allows federally recognized tribes to operate casinos on their reservations or lands held in trust by the federal government. The casino they want to open is technically a commercial project that would be operated by MMCT Venture, a company jointly owned by the tribes that owns the casino site in East Windsor and entered into a development agreement with the town.

Connecticut Gov. Dannel Malloy and the state legislature signed off on that arrangement last year, so long as the tribes agreed to amend their gaming compacts that guaranteed a certain share of slot revenues would go to the state. The Indian Gaming Regulatory Act requires Interior to approve such compact amendments after a brief review window, unless the amendments violate the terms of the federal law.

The lawsuit seeks to force approval of the contract, arguing that the law does not allow Interior to refuse to render a verdict.

"IGRA and its implementing regulations leave the Secretary with no discretion to proceed in any other manner," Connecticut and the tribes argue in their lawsuit, filed in U.S. District Court for the District of Columbia on Nov. 29.

At one point, Interior seemed inclined to agree with the tribes' interpretation of the law. In a May 12 technical guidance letter to the tribes, Associate Deputy Interior Secretary James Cason acknowledged that the Indian Gaming Regulatory Act provides for a 45-day review period for compact amendments and that the department may disapprove them only for violating the act, other federal laws or trust obligations to the tribes.

While Cason stressed that his advice was nonbinding and did not constitute a preliminary decision, he endorsed earlier guidance from the Obama administration that the Connecticut amendment reflected the "unique circumstances" at play and that opening a new casino would not affect the tribes' exclusivity agreement with the state.

But the tribes' request drew opposition from out-of-state lawmakers like Heller and Amodei.

"Under that framework, the tribes seek to expand off-reservation gaming without going through the procedures mandated by" the Indian Gaming Regulatory Act, Amodei wrote in a July 28 letter to Cason, following up on a discussion earlier that day. Amodei asked whether Interior planned to allow the 45-day review period to lapse, which would allow the amendments to be "deemed approved."

Ultimately, Interior decided against approval. Acting Assistant Secretary for Indian Affairs Michael Black told the tribes in a Sept. 15 letter that approving or disapproving the amendment to their gaming compact was "premature and likely unnecessary," and said Interior had "insufficient information" to make a decision. However, he did not cite any legal justification for that move, nor did he outline what additional information the department would need.

Interior has on at least one occasion returned a gaming compact amendment rather than make a yes-or-no decision, although the circumstances were slightly different at the time. In 2013, the department told the Cheyenne-Arapaho tribes in Oklahoma that it could not process their amendments because of incomplete information. But in that case, the department replied in less than 30 days rather than wait for the entire review period to elapse, and it cited specific regulations and outlined what additional information it needed from the tribes.

Black copied Amodei and Heller on his letter but did not include any Connecticut lawmakers. (He did say a separate letter was going to Malloy, the Connecticut governor.) Zinke and Heller also spoke on the phone on Sept. 15, according to an entry on Zinke's calendar. And the day before Black sent the letter, Zinke and Cason were scheduled to meet at the White House with deputy chief of staff Rick Dearborn, although Zinke's calendar does not list the subject of the meeting.

Ahead of the decision, MGM "participated in Interior's review" through meetings and correspondence in which the company urged Interior to either return the amendments without making a decision or to disapprove them for violating the Indian Gaming Regulatory Act, according to a statement filed in court by Uri Clinton, MGM's senior vice president and legal counsel.

MGM brought on heavyweights including Norton — who disclosed her work for the company just last month — as well as Ballard, a lobbyist who has helped raise millions for Trump's campaign. MGM's spending on lobbyists for all issues more than doubled last year, to \$1.5 million spread across five outside firms and its own newly formed in-house team.

An affiliated company, MGM Public Policy LLC, also paid \$270,000 last year to hire a team of lobbyists from Brownstein Hyatt Farber Schreck LLP to work on issues including gaming. That's the firm at which Deputy Interior Secretary David Bernhardt worked until he joined the administration last year, though he has agreed to recuse himself from matters involving former clients of his firm without prior authorization.

"MGM Resorts last year established a public policy office in Washington to engage more directly on Federal legislative and policy issues," an MGM spokesman said in a statement. "Our advocacy activity reflected that increased engagement. As the largest employer in Nevada, part of that advocacy is routinely engaging our elected representatives."

Heller and Amodei each had multiple meetings and phone calls with Zinke last year, according to the secretary's calendar, although it's unclear whether they discussed the Connecticut casinos. On one occasion, Zinke joined Heller for dinner at a Las Vegas steakhouse on July 30, when he was in the state touring national monuments, one of several pieces of Interior's portfolio of interest to Nevada.

A Heller spokeswoman did not respond to a request for comment. But the senator has tried to advance MGM's interests in the past: In 2016, he offered an amendment to a defense bill that would have prevented Indian tribes from operating commercial casinos in the same state where they operate casinos on the reservation — precisely what the Connecticut tribes are trying to do. The amendment never came to a vote, and Heller does not appear to have ever discussed it publicly.

MGM employees and the company's political action committee have given \$96,000 this cycle to Heller's reelection campaign and leadership PAC, making the company his largest single source of contributions, according to the Center for Responsive Politics. Amodei has received no donations from company employees or its PAC.

Interior's Sept. 15 decision came two weeks after Zinke invited several lobbyists for MGM to join him and other guests for a social visit on his office balcony, which overlooks the National Mall. They included, according to Zinke's calendar, Ballard and other lobbyists from his firm Florida-based firm Ballard Partners, which opened its first Washington, D.C., office in 2017. Also present were Zinke's former family attorney and a major GOP fundraiser, according to copies of the secretary's calendar.

MGM hired Ballard in March and paid the firm \$270,000 last year, according to disclosure filings. Ballard was Florida finance chairman for Trump's 2016 campaign and helped organize a fundraiser at the Trump International Hotel in Washington last summer at which donors gave \$35,000 to attend or \$100,000 to join the host committee.

Ballard declined to discuss his work for MGM or any other client and said he could not recall the details of that particular meeting, which took place Aug. 29, according to Zinke's calendar. But Ballard said he had met Zinke and thinks "the world of him."

In October, MGM brought on Norton, who served as Interior secretary from 2001 to 2006, to lobby on issues related to the Connecticut tribes. Norton began lobbying for MGM on Oct. 25, according to disclosures filed Jan. 19.

The next day, Oct. 26, Interior officials spoke to the tribes and asked them to explain why the department was obligated to weigh in on their casino since it was being built by a commercial entity and not on tribal land.

In a brief interview last week, Norton said she did not know why her disclosure form was filed so late — lobbyists are required to file disclosures within 45 days — and she did not respond to follow-up inquiries.

Meanwhile, a new state legislative session begins in February in Connecticut. MGM plans to ask legislators there to allow an open bidding process for new casinos in the state, arguing that Interior's refusal to act shows that the state's attempt to limit casino ownership to the tribes would not work.

Interior rejected staff advice when scuttling tribes' casino, documents suggest [Back](#)

By Nick Juliano | 04/20/2018 05:02 AM EDT

Trump administration officials rejected recommendations from federal experts on Indian gaming policy when they blocked two American Indian tribes from opening a casino last year, documents obtained by POLITICO indicate.

The heavily blacked-out documents add to questions about whether Interior Secretary Ryan Zinke and his political appointees buckled to lobbying pressure from MGM Resorts International, a gambling industry giant that is planning its own casino just 12 miles from the project proposed by the Mohegan and Mashantucket Pequot tribes.

Interior's inspector general is investigating the department's handling of the tribes' casino application, a spokeswoman told POLITICO, after Connecticut lawmakers asked the internal watchdog to look into the matter.

The documents, released under the Freedom of Information Act, don't reveal the contents of the internal deliberations by the staff of the Bureau of Indian Affairs' Office of Indian Gaming. But they show that the career staffers were circulating what they labeled "approval" letters just 48 hours before their political bosses reversed course and refused to either OK or reject the tribes' application — a nondecision that left the Indians' East Windsor project in legal limbo.

To fight off the potential competition, MGM [spent heavily on lobbyists](#), including George W. Bush-era Interior Secretary Gale Norton and firms with ties to the Trump administration, while enlisting the assistance of friendly lawmakers such as Sen. [Dean Heller](#) and Rep. [Mark Amodei](#). MGM lobbyists and the two Nevada Republicans

held a handful of meetings and conversations with Associate Deputy Secretary James Cason in the months and days before he edited Interior's letter holding up the tribes' plans.

A spokesman for the tribes' casino project said they were caught off guard by Interior's about-face and are glad to see the department's internal watchdog probing the matter.

"We are grateful there's an IG investigation into this issue because since last fall, none of the department's actions have passed the smell test," said Andrew Doba, a spokesman for MMCT Venture, the company the tribes formed to own and operate the new casino. "Something clearly happened to pollute the process, which should be problematic for an administration that promised to drain the swamp."

The tribes have also sued, arguing that Zinke ignored his responsibilities under the Indian Gaming Regulatory Act to either approve or reject their application in a timely manner and to act to protect the tribes' interests.

Cason and spokespeople for Interior and the Bureau of Indian Affairs did not respond to requests for comment this week.

But the emails show that even Interior's career staff was unsure how they would explain the sudden about-face.

"As for why we didn't approve the Mohegan compact amendment, you say the letter speaks for itself," Troy Woodward, a senior policy adviser in the Office of Indian Gaming, wrote in a [Sept. 26 email](#) to a colleague who anticipated having to answer questions about it at a gaming industry conference. And "like Forrest Gump, say: 'that's all I've got to say about that.'"

The dispute is complicated by the peculiarities of federal law on Indian gaming, which seeks to promote tribes' economic development but also discourages the spread of off-reservation gambling. The two Connecticut tribes, which already operate two lucrative casinos on their reservations, are exploring a gray area with their proposed third casino, which a jointly owned private company would operate on nonreservation land.

MGM, which plans to open a casino later this year in nearby Springfield, Mass., says the tribes' approach would set a worrisome precedent for other states.

"This is an unusual situation, and we're kind of pushing the bounds on IGRA," says Kathryn Rand, dean of the University of North Dakota School of Law and a co-director of its Institute for the Study of Tribal Gaming Law and Policy. Rand is not affiliated with MGM or the Connecticut tribes.

The newly released documents do not show any effort by MGM to make its case to experts in BIA's Indian gaming office. They also indicate that Interior officials closest to Indian gaming issues were ready to side with the tribes after about six weeks of internal review.

Instead, Interior reversed course with little official explanation less than 48 hours after their recommendations went to Cason, a veteran of the previous three Republican administrations who was one of President Donald Trump's first hires at the department.

On Sept. 11, Woodward [emailed](#) around copies of "the edited letters for Pequot and Mohegan," which he said had "been through the surname process," a system for internal review. The contents of the letters were redacted, but each was about two pages long, and file names referred to both as "draft approval" letters.

The following day, Woodward alerted colleagues that "[Jim wants some changes](#)," referring to Cason. But on Sept. 13, Woodward still sent "approval" letters "for Mike Black's signature," referring to the then-acting

assistant secretary for Indian affairs, along with a notice the department was required to publish in the Federal Register. Again, the attachments were redacted, but each was two pages long.

A day later, "Jim's edits" came back, and the documents were no longer referred to as "approval" letters.

Instead, Black signed a one-page letter on Sept. 15 informing the tribes that it would be "premature and likely unnecessary" to weigh in on their gaming applications at all.

Returning the applications without approving or disapproving them appears to be an option Interior officials did not consider until earlier that day. A pair of redacted memos circulated that morning, including one "regarding Secretarial Authority to not act on a compact," according to its title.

It is unclear precisely what happened over those days, but by then Cason had received ample input from MGM and its allies. As early as June, Cason met with a senior adviser to Zinke and a lobbyist from Ballard Partners, a Trump-connected firm MGM hired last year, to discuss issues related to the company, according to his calendars. And he was in touch with MGM supporters several more times over the intervening months up to the days before Interior's response was being finished.

On Sept. 13, Cason met with Amodei, and the following day he had a teleconference with Heller, according to Cason's calendar. MGM is a major employer in Nevada, and both lawmakers had previously raised concerns about the Connecticut tribes' proposals and the potential expansion of off-reservation gambling.

Cason's Sept. 14 meeting with Heller included some officials who were working on the Connecticut case, according to his calendar and the BIA emails. Later that day, Cason joined Zinke at a meeting at the White House with Rick Dearborn, Trump's deputy chief of staff for policy.

The president has his own history of clashes with the Mashantucket Pequot, whose Foxwoods Casino competed with his Atlantic City properties to draw gamblers from New York City. "They don't look like Indians to me," Trump infamously declared in a 1993 congressional hearing.

Several weeks after Interior released its decision, Norton sent Zinke a 24-page memo outlining legal arguments in support of the decision on behalf of MGM. Among the evidence she cited was Trump's congressional testimony, though not that particular phrase.

"Supreme Court precedent and President Trump's testimony counsel against approving Connecticut's discriminatory framework, the sole function of which is to grant MMCT, a private corporation, a monopoly over commercial, off-reservation, state-regulated gaming," the former Interior secretary wrote in her Oct. 30 memo to Zinke.

Black's ambiguous Sept. 15 letter, which Cason had edited, left the tribes unable to proceed with their planned casino.

The tribes' lawsuit is pending in U.S. District Court for the District of Columbia, and MGM has asked to intervene in the case, although both Interior and the tribes say it does not have standing to do so.

The case hinges on dueling interpretations of the goals of the Indian gaming law — essentially, whether more weight should be given to IGRA's goal of supporting tribes' economic prospects or its prohibitions on off-reservation gaming in most circumstances.

In court filings, Interior has also stressed the importance of procedural differences between the two tribes' prior gaming agreements, which it says should prevent the Mashantucket Pequot from participating in the case at all.

While the Mohegan tribe was operating under a state gaming compact, the Mashantucket were never able to reach an agreement with Connecticut officials back in the 1980s — so Foxwoods has been operating under the terms of "secretarial procedures" authorized under a different section of the law.

The law says amendments to gaming compacts, such as the Mohegan's, must be approved within 45 days unless Interior can demonstrate that their terms violate federal law or the department's trust responsibilities to the tribe. But it contains no such deadline for secretarial procedures such as the Mashantucket Pequot's.

Interior and MGM say that because the department has no obligation to act on the Pequot's proposed amendment, the entire case is effectively moot. However, the newly disclosed emails suggest that career officials were aware of that distinction throughout their review and did not see it as a reason to deny the tribes' request.

Rand, the law school dean, said courts have not previously grappled with the issue. "That I think is a real interesting and open question that we wouldn't have a whole lot to go on," she said.

This case is also unusual because of the nature of the two tribes at issue and the lucrative market the two sides are battling over.

"That might be a bit implicit in MGM's arguments — that the Mohegans and the Pequots aren't acting like tribal governments in this enterprise, they're operating like competitors. And because of their status ... they don't need the protection that other tribes do," Rand said in an interview this week. "The counterargument, of course, is that tribal sovereignty doesn't depend on whether the tribe needs the federal government's help. Tribal sovereignty is just a fact."

Black's Sept. 15 letter also does not mention the procedural difference between the tribes as a factor in deciding to return the applications without acting on them.

EPA emails show industry worries slowed new science policy [Back](#)

By Annie Snider | 04/19/2018 05:01 PM EDT

EPA's rollout of a controversial new transparency policy that would severely restrict the scientific research the agency can rely on when drafting new regulations has been slowed down by political officials' fears that it could have major unintended consequences for chemical makers, according to newly released EPA documents.

The issue of scientific transparency has been high on the agenda of House Science Chairman Lamar Smith (R-Texas), who has found strong support from EPA Administrator Scott Pruitt — much to the consternation of public health advocates and green groups, who view the effort as backdoor attack on the agency's ability to enact environmental regulations.

Since Pruitt announced plans for the new policy last month, researchers and public health proponents have raised alarms that it could restrict the agency's ability to consider a broad swath of data about the effects of pollution on human health. But documents released under the Freedom of Information Act show that top EPA

officials are more worried the new restrictions would prevent the agency from considering industry studies that frequently support their efforts to justify less stringent regulations.

Emails between EPA officials obtained by the Union of Concerned Scientists show that Nancy Beck, the top political official in the agency's chemicals office who came to the agency after serving as a key expert for the chemical industry's lead lobbying group, voiced major concerns after she received a draft of the not-yet-released policy on Jan. 31.

The new scientific transparency directive is expected to require that the raw data for all studies EPA relies on be publicly available, and that the studies be peer-reviewed. But Beck said these requirements would exclude a great deal of industry data about pesticides and toxic chemicals that her office considers when determining whether a substance is safe or must be restricted.

It costs companies "millions of dollars to do these studies," Beck wrote in an email to Richard Yamada, the political official in EPA's office of research and development who is spearheading work on the new scientific policy and is also a former staffer for the House Science Committee chairman.

"These data will be extremely valuable, extremely high quality, and NOT published," Beck wrote. "The directive needs to be revised."

Moreover, much of this data, Beck noted, is considered proprietary by companies. It is dubbed confidential business information, and even though EPA can consider it as part of its regulatory review, the data cannot legally be made public.

Yamada replied to thank Beck for the heads up. "Yes, thanks this is helpful - didn't know about the intricacies of CBI," he wrote. "We will need to thread this one real tight!"

The term "confidential business information" primarily applies to industry information. That data is separate from the personal medical information that public health researchers worry could block consideration of their work.

Yogin Kothari, a lobbyist for the Union of Concerned Scientists, said the emails show the Trump administration's EPA has been "trying to stack the deck in favor of the industries they're supposed to be regulating."

"They want to potentially create exemptions for industry, but if you look at this entire set of documents ... you will see that there's not a single consideration for the impacts on public health data, on long-term health studies, on studies that EPA does after public health disasters like the BP oil spill," he said.

EPA spokeswoman Liz Bowman emphasized the policy is not yet finalized.

"These discussions are part of the deliberative process; the policy is still being developed. It's important to understand; however, that any standards for protecting [confidential business information] would be the same for all stakeholders," she said in a statement.

The emails indicate Pruitt wanted the new science policy rolled out at the end of February, and teased his plans in an interview with conservative outlet The Daily Caller in mid-March. But the agency has yet to finalize the policy.

The transparency directive has its origins in legislation introduced by Smith during the Obama administration, that had the backing of a number of industry groups, including the American Chemistry Council. The House

Science Committee chairman frequently charged that the Obama EPA used "secret science" to justify "costly new regulations."

Although versions of the measure were approved by the House multiple times, the Senate never took it up. CBO estimated that one version of Smith's legislation would cost EPA \$250 million a year, at least in the initial years, and a leaked staff response to questions from the budget office said a later version would be even more costly, would endanger confidential medical and business information, and "would prevent EPA from using the best available science."

But Smith found an ally in Pruitt. The emails indicate that Smith met with Pruitt in early January and show that Pruitt's staff quickly began working on a directive to "internally implement" the legislation.

Industry's backing for the new scientific approach began to waiver under the Trump administration, though. When a top American Chemistry Council scientist testified before Smith's committee in February 2017, she emphasized the need to protect industry information if the transparency initiative moved forward.

"One of the things that we do need to take into consideration as making that data publicly available is that there are adequate protections for confidential business information to ensure that we keep innovation and competitiveness available for the marketplace," Kimberly White told the committee.

Industry has historically claimed that a wide range of information about chemicals, ranging from the processes by which they are produced, to the locations of manufacturing plants, to their very identities, must be kept confidential in order to keep competitors from learning trade secrets. Environmental and public health advocates argue that industry claims this exemption in many cases where it's not necessary and that it often keeps important health and safety information from public view.

The issue was a key point of debate when Congress considered a major overhaul of the nation's primary chemical safety law passed 2016 and has reemerged as Pruitt's EPA sets about implementing the law.

Asked for comment on EPA's new effort to implement the scientific transparency approach internally, American Chemistry Council spokesman Scott Openshaw said the group looks forward to reviewing the directive once it's finalized.

"It is critical that any final directive properly protect confidential business information and competitive intelligence," he said in a statement.

The internal emails show that EPA political staff were particularly attuned to this concern. In a Feb. 23 email to colleagues, Beck forwarded language from a 2005 White House document that laid out narrow exemptions from its requirement that all "important scientific information" disseminated by the federal government go through peer review.

"[Y]ou may need to tweak but hopefully there is something helpful here that can be borrowed/adopted," she wrote.

Richard Denison, lead senior scientist for the Environmental Defense Fund, said that EPA's access to industry data is indeed important to its ability to review the safety of new chemicals and pesticides, but said the internal EPA communications show that Pruitt's EPA wants to "have their cake and eat it too" with the new directive.

"They're trying to force peer review studies done by academic scientists to disclose every last detail, while at the same time allowing industry studies to be kept private or aspects of those to still be kept private," he said.

He pointed out that the concerns Beck raised about the burden the new policy would place on industry are the very same ones that the CBO report said the policy would place on EPA.

Energy industry puzzles over new White House adviser [Back](#)

By Ben Lefebvre and Eric Wolff | 04/19/2018 07:14 PM EDT

The appointment of a 28-year-old former congressional staffer as the top White House energy aide left many industry lobbyists scratching their heads — and nervous that the new hire may have trouble filling the shoes of the more experienced adviser he's replacing.

The relatively unknown [Francis Brooke](#) will step into the role as replacement for Mike Catanzaro, who will exit the White House next week. Catanzaro and NSC energy adviser George David Banks, another energy adviser who departed earlier this year, have been the top two energy experts in the White House, and they'll take with them decades of experience.

Brooke spent the last year in Vice President Mike Pence's office serving in a junior role to Catanzaro and Banks. But energy lobbyists worry his elevation will leave them without steady hands in the White House just as the administration confronts big decisions on the coal industry, an intra-party biofuels fight and thorny energy trade issues. Putting a relative rookie into the role also shows that the administration may not devote as much attention to energy issues in the run-up to the 2018 elections, sources said.

"It shows you this administration doesn't care about these issues," said one lobbyist who works extensively with the administration on energy policy, but who requested anonymity to discuss people he expects to work with. "I expect agencies are now going to have to play a bigger role. There's not going to be a lot of policy issues that will be determined over the next eight months or so."

Brooke joins the White House with far less energy-sector experience than Banks and Catanzaro, who came to their jobs with long histories in industry and government. He started his career as an intern for Mick Mulvaney in October 2012 when the White House budget director was a South Carolina congressman. After that, he had stints as a staff assistant for Rep. [Andy Barr](#) (R-Ky.) and legislative aide for Senate Majority Leader [Mitch McConnell](#) (R-Ky.). Pence's office tapped him to be associate director of policy in February 2017.

His family was involved in international politics in the previous decade. His father, [Francis Brooke Sr.](#), helped foster the relationship between officials in the George W. Bush administration and Ahmed Chalabi, the controversial Iraqi exile who helped convince the U.S. to invade his country.

Pence's office confirmed Brooke's biographical information but did not offer further details about his time working with the vice president.

McConnell's office did not respond to questions about Brooke. A spokeswoman for Barr said Brooke had been "one of the Congressman's most trusted legislative assistants and handled a wide variety of issues including energy, environment, and health care."

Previous to that, Brooke's biggest notice came from pitching 97 innings in the 2012 season with Northwestern University, making 13 starts and ending with a 2.51 earned run average. He would later serve as a coach to the Republicans' congressional baseball team, and he was on the Arlington, Va., practice field when a gunman shot Rep. Steve Scalise of Louisiana.

Lobbyists say they worry that with the departures of Catanzaro and Banks, Brooke will not be able to help the White House navigate complex energy issues with technical details that can be headache-inducing.

"There is angst downtown that without Mike there, no one knows who is going to make the trains run on time," said Andeavor's Stephen Brown said before Brooke was officially named to the position. "Mike was always the adult in the room on energy issues with substantive knowledge, not just a political perspective."

Brooke, along with Wells Griffith, an Energy Department official on a three-month loan to the White House, will have almost no time to get acclimated to their jobs. The Department of Energy is grappling with whether to try to use emergency authority to keep economically distressed coal-fired power plants running. And the two new staffers may need to help Trump navigate the dispute between refiners seeking changes to the Renewable Fuel Standard and corn farmers who are counting on the president to live up to his promise to protect ethanol.

They will also have to cope with White House officials on trade issues, such as the steel tariffs that oil and gas companies have complained could hamper the construction of new pipelines.

But some current and former administration officials say they have confidence Brooke is up to the job. They say he worked closely with Banks and Catanzaro on all their key issues, including traveling with Banks to the U.N. climate conference at Bonn, Germany, as a key adviser.

"He knows all the players, he's been in all the meetings," said one administration source. "He has the right temperament, the right judgment. People get into these jobs and they use them for vanity tours. Brooke doesn't do that. He's going to be great."

Banks, who left the White House in February, agreed.

"I think that he's ready for the role," said Banks, former adviser to Trump on the NSC. "Francis has been deeply engaged in all of the major energy environment [initiatives]. Some people wouldn't have the experience he's had in working these issues for over a year in the White House. He's incredibly bright, disciplined person."

Critics of the administration's energy policy rollbacks hoped Brooke's lack of experience would depoliticize some of the big decisions before the administration.

"Of course it's weird that there's no senior person covering energy issues," said John Morton, former senior director for energy and climate change on the NSC during the Obama administration. "Though with this administration, it's often a blessing in disguise when a policy area gets neglected by Trump appointees, as it allows more talented career staff to manage affairs."

Bishop: Drilling moratorium holding up energy bill vote in House [Back](#)

By Anthony Adragna | 04/19/2018 05:32 PM EDT

House Natural Resources Chairman [Rob Bishop](#) says a wide-ranging GOP energy bill is "being held up" until the Pentagon weighs in on how offshore drilling near Florida could affect national security.

The Trump administration earlier this year proposed allowing drilling in the Eastern Gulf of Mexico after an existing moratorium expires in 2022. Although Interior Secretary Ryan Zinke [quickly backed away](#) from the idea, the resulting firestorm led two Florida Republicans to pursue [a permanent moratorium](#), which they said has the backing of Speaker [Paul Ryan](#).

A pending energy bill, [H.R. 4239 \(115\)](#), is one potential vehicle to extend the moratorium. But Bishop, a strong supporter of the oil industry, did not include any limits on offshore drilling when the bill passed out of his committee last year.

The Utah Republican told POLITICO this week he is waiting for the Defense Department report on how expanded drilling near Florida would affect "mission compatibility." A committee spokeswoman said the report's findings would influence "how to move forward on a potential agreement regarding the future of the Eastern Gulf once the moratorium expires in 2022."

Oil and gas leasing within 125 miles off the Florida coastline and areas of the Gulf of Mexico is currently off limits until 2022.

Bishop said in the interview Wednesday that the absence of House Majority Whip [Steve Scalise \(R-La.\)](#), lead sponsor of the legislation, for surgery is an additional factor in getting the bill floor time.

WHAT'S NEXT: When the measure will get floor consideration remains unclear.

Report: EPA spent \$45,000 on Australia trip Pruitt canceled [Back](#)

By Emily Holden | 04/19/2018 05:34 PM EDT

Five EPA employees spent \$45,000 traveling to Australia last year to prepare for a trip by EPA Administrator Scott Pruitt that was ultimately canceled, Reuters [reported](#) today.

The two advance team aides and three security agents spent about \$9,000 each on business-class tickets to fly to Australia in August, an expense that is permitted under government rules on flights lasting 14 hours or more. The two EPA staffers were advance director Millan Hupp, the Oklahoma aide who followed Pruitt to Washington and has drawn scrutiny for receiving a large raise, and Kevin Chmielewski, the former deputy chief of staff for operations who was dismissed and is now acting as a whistleblower to lawmakers about Pruitt's spending habits.

Agency officials did not dispute the figures. EPA spokesman Jahan Wilcox said Pruitt did not go to Australia because of Hurricane Harvey. Pruitt traveled from his home in Tulsa, Okla. to Corpus Christi, Texas, to assess relief efforts on Aug. 30, according to his schedule and flight records.

Pruitt spent at least \$105,000 on first class flights and at least \$3 million on a round-the-clock [security detail](#). Records show about one-quarter of the \$120,000 costs for a trip to Italy in June for a G-7 environment meeting was to cover Pruitt's security. EPA's inspector general and various other government officials are investigating Pruitt's travel and spending.

Flight vouchers EPA has shared with lawmakers show Pruitt originally intended to travel to Sydney and Melbourne from Aug. 31 through Sept. 8 to "discuss best practices regarding the environmental operations" within the country.

EPA tells Barrasso all Pruitt's emails searched for FOIA [Back](#)

By Alex Guillén | 04/19/2018 05:24 PM EDT

EPA today told Senate Environment and Public Works Chairman [John Barrasso](#) (R-Wyo.) that all four of Administrator Scott Pruitt's emails were searched whenever there was a Freedom of Information Act records request, but that a "full review" is being conducted just to make sure.

"As long as EPA Administrators have had secondary email accounts, EPA staff have routinely searched requested accounts in response to FOIA and Congressional inquiries. That practice has not changed under Administrator Pruitt's leadership," Steve Fine, EPA's deputy chief information officer, wrote in a [letter](#) released today by Barrasso.

Fine added: "However, in response to your concern, my office is conducting a full review of the searches conducted regarding FOIA requests seeking Administrator Pruitt's records. If additional documents exist, we will contact the relevant requesters, and we will update you once our review is complete."

"I look forward to receiving the findings of the agency's full review that's being conducted in response to my letter," Barrasso said in a statement.

WHAT'S NEXT: Fine did not say how long EPA's review of FOIA request fulfillment will take.

Democrats meddle in West Virginia's GOP Senate primary [Back](#)

By Alex Isenstadt | 04/19/2018 04:23 PM EDT

National Democrats launched a campaign Thursday to intervene in the upcoming West Virginia Senate GOP primary — an effort that could be designed to help recently imprisoned coal baron Don Blankenship win the Republican nomination.

Duty and Country, a Washington-based Super PAC, began airing TV and web ads savaging the two mainstream Republican candidates, Rep. Evan Jenkins and state Attorney General Patrick Morrisey, who are competing in the May 8 primary. Left off the group's target list, however, was Blankenship, who spent one year in prison following the 2010 explosion at his Upper Big Branch Mine that killed 29 workers.

In propping up Blankenship, the Democratic Party is wading into an intensifying GOP civil war. Republicans are growing increasingly worried about Blankenship, who has been gaining traction in the primary. GOP officials in Washington are concerned that if Blankenship wins the nomination, he'll ruin the party's prospects of defeating Democratic Sen. Joe Manchin in November.

Last week, national Republicans launched a super PAC named Mountain Families PAC aimed at stopping Blankenship. The organization, which is staffed by consultants who've previously worked for a political group aligned with Senate Majority Leader Mitch McConnell, has begun airing TV commercials accusing Blankenship of contaminating drinking water by pumping toxic slurry while setting up a separate piping system to his mansion.

The Democratic group is spending over \$380,000 to air the commercials. One of the TV spots says that as the former head of West Virginia State Medical Association, Jenkins pushed doctors to use an insurance company that overcharged, allowing his organization to profit. Another ad describes Morrisey as a carpetbagger, calling him a "millionaire New Yorker and former lobbyist who came down here and ran for office with no idea of the real challenges West Virginians face."

The Democratic group has also begun sending out mailers describing Jenkins as "part of the swamp, part of the problem."

A Duty and Country spokesman, Mike Plante, said the group had no plans to go after Blankenship and was instead focused on his two rivals.

"We made the strategic decision based on data that shows that either Patrick Morrisey or Evan Jenkins is more likely to be the nominee, so that's where we're focusing our attention," he said.

Duty and Country appears to have close ties to the national Democratic Party. In its federal filings, it lists the same downtown Washington address as other major party groups, including Senate Majority PAC, the main Democratic super PAC devoted to electing Senate Democrats.

In another twist, West Virginia attorney Booth Goodwin, who served as U.S. attorney in the case against Blankenship, is listed as the group's treasurer.

[GOP maneuver could roll back decades of regulation](#) [Back](#)

By Zachary Warmbrodt | 04/17/2018 10:16 AM EDT

Republicans are preparing to open a new front in their push to roll back regulations across the government, using a maneuver that could enable them to strike down decisions by federal agencies that reach back decades.

As soon as Tuesday, GOP senators, backed by President Donald Trump, will use the Congressional Review Act to topple safeguards issued by the CFPB in 2013 that were intended to discourage discrimination in auto lending.

While Republicans in the Trump era have already taken advantage of the 1996 law to remove more than a dozen recently issued rules, this would be the first time that Congress will have used it to kill a regulatory policy that is several years old.

Now, actions going back to President Bill Clinton's administration could be in play under the procedure GOP lawmakers are undertaking, forcing numerous agencies to reconsider how they roll out new regulations.

"It's a hugely important precedent," Sen. Pat Toomey (R-Pa.), the architect of the effort, said in an interview. "It's potentially a big, big opening."

While conservatives are applauding the effort as a way to rein in rogue bureaucrats and boost the economy, consumer advocates are warning that the consequences could be dire.

"This takes an already incredibly dangerous law and cranks it up to 11," said James Goodwin, senior policy analyst at the Center for Progressive Reform.

Republicans are leveraging two key provisions of the Congressional Review Act.

They're again taking advantage of fast-track authority that allows a simple majority of the Senate to pass a resolution rolling back a rule if the vote occurs within a window that's open for no more than a few months. The provision enables senators to avoid a filibuster.

But the more novel use lies in the law's requirement that federal agencies submit rules to Congress for their potential disapproval. Republicans have landed on a way to target a wide array of decisions — including regulatory guidance — that haven't typically been implemented as formal rules under the Administrative Procedure Act.

"You have this unimaginably large universe of stuff that is now eligible for repeal under the CRA," Goodwin said, citing a hypothetical Occupational Safety and Health Administration workplace safety poster as a potential example. "Agencies don't submit all this stuff because it would be an administrative nightmare."

In the case of the auto-lending policy, the CFPB released it as a guidance document rather than a formal rule governed by the notice-and-comment requirements of the APA. As such, it wasn't technically submitted to lawmakers for the purposes of the Congressional Review Act. That means the clock for congressional review never started.

That changed last year. For advocates of deregulation, the stars had aligned thanks to the ascendance of a Republican president eager to roll back rules and the Republicans retaining control of Congress.

Toomey, the former president of the conservative Club for Growth, went on the hunt for ways the GOP could take advantage of its congressional majority to eliminate federal rules.

He found a way to wield the power that the Congressional Review Act gives a majority of the Senate to sidestep obstruction via filibuster when it comes to years-old regulatory actions.

To do so, he asked the Government Accountability Office to determine whether the CFPB auto-lending guidance qualified as a rule for the purposes of the Congressional Review Act. In December, GAO told him that

it did in fact satisfy the legal definition of a rule, starting the clock for Republicans to undo it without having to seek any help from Democrats.

"When regulators regulate by guidance rather than through the process they're supposed to use, which is the Administrative Procedure Act and do a proper rulemaking, they shouldn't be able to get away with that," Toomey said. "If we can get a determination that the guidance rises to the significance of being a rule, then from that moment the clock starts on the CRA opportunity."

Amit Narang, regulatory policy advocate at Public Citizen, said it "is really going to open up a Pandora's box." Public Citizen and 60 other advocacy groups covering the gamut of finance, the environment, labor and gay rights are calling on Congress to oppose the CFPB rollback, saying it would set a dangerous precedent.

They warned it would put at risk not only protections for workers, consumers, minorities and the environment, but also regulatory certainty for businesses.

"Expanding the power of the CRA to overturn guidance from decades ago will threaten protections hardworking families rely on, making it harder for middle class Americans to get ahead and responsible businesses to follow the law," Sen. Sherrod Brown (D-Ohio) said.

Critics have also questioned the need to undo the CFPB auto-lending guidance because the bureau is now led by a Trump appointee, acting Director Mick Mulvaney, who could eliminate it himself. Mulvaney told lawmakers last week he was reviewing the policy. The National Automobile Dealers Association and the American Financial Services Association are supporting the rollback of the anti-discrimination measure, arguing that the way the CFPB crafted the guidance was flawed.

The Senate opened debate on the bill Tuesday following a 50-47 procedural vote. Sen. Joe Manchin (D-W.Va.) was the only Democrat to support moving forward with the legislation.

Other lawmakers have begun to test the waters. In November, GAO in a response to a request from Sen. Lisa Murkowski (R-Alaska) confirmed that a 2016 plan from the Bureau of Land Management was a rule for the purposes of review under the CRA. A spokeswoman for Murkowski did not respond to a request for comment.

Paul Larkin, a senior legal research fellow at the Heritage Foundation, has been advocating for Congress to take advantage of this deregulatory pathway in the Congressional Review Act, saying it could force agencies to comply with formal rulemaking requirements and help the economy by cutting red tape.

"This would indicate that Congress believes it can reach back beyond what the conventional wisdom was," he said.

Subject: Morning Energy: Emails from the land down under — Poll: Voters respond to Pruitt — Sommers tapped for API

By Kelsey Tamborrino | 05/03/2018 05:40 AM EDT

SCENES FROM THE SWAMP: Congress may be out this week, but congressional committees are still hard at work on probes around EPA Administrator Scott Pruitt. Ongoing investigations into Pruitt's travel spending and security arrangements were playing out behind closed doors as a trove of new documents circulated among the Republican and Democratic staffers on the Hill.

Staff of the House Energy and Commerce Committee, which oversees EPA, began receiving new paperwork from the agency this week, Anthony Adragna [reports](#). That follows Pruitt's promise to Chairman [Greg Walden](#) that EPA would provide the panel with "all the documents and information EPA produces" for a host of ongoing inquiries into his conduct. And Pruitt's now-former security guard Pasquale "Nino" Perrotta — who [reports](#) suggest was a willing partner in Pruitt's spending on travel and security — sat down with staff from the House Oversight Committee on Wednesday for several hours. Staffers declined to comment on the substance of that interview, but an aide said Democratic staffers took part in the transcribed session and have access to the documents EPA has shared with the committee.

The administrator has maintained a low profile this week. He was not sighted at a swearing-in of Secretary of State Mike Pompeo, which several of Pruitt's fellow Cabinet members — like Interior Secretary Ryan Zinke — attended. Still, other newly issued documents offered a fresh look into his lobbyist and industry ties. The emails, which were released via a public records request from the Sierra Club, showed consultant and Global Impact Inc. CEO Matthew C. Freedman helped to set the itinerary for a planned trip to Australia for Pruitt, though it was eventually canceled when Hurricane Harvey hit Texas.

In the emails, Freedman warned EPA officials that Pruitt could get an angry reception from Australian officials who disagreed with the Trump administration on climate change. "I think that the trip will be more hostile than what the Administrator may be expecting," [wrote](#) Freedman, who now runs an advisory firm and is treasurer of the American Australian Council, a nonprofit whose members include Chevron, BHP and ConocoPhillips. POLITICO's Alex Guillén [reports](#) more on the details of the documents [here](#). A draft schedule for the trip also included a visit and public appearance at the Australian parliament, though it noted such a stop raised "potential for protests, negative reaction." Trips to the Great Barrier Reef and Tasmania were also planned, dubbed a "[bridge too far](#)."

More to come? Democratic Sens. [Tom Carper](#) and [Sheldon Whitehouse](#) contended on Wednesday there were at least 3,100 pages of communications between Pruitt and special interest groups during his time as Oklahoma's AG that now have business before the agency and have yet to be released. In [a letter](#) to Pruitt and federal ethics officials, the pair says, the records, disclosed in state court proceedings, include 1,122 pages of "emails containing documents, amicus briefs, and legal strategy which are part of litigation files."

Grain of salt: Of course, Pruitt still has the support of the president, who has yet to weigh in publicly since Pruitt's testimony last week. And Sen. [Jim Inhofe](#), a vocal ally of Pruitt, told a reporter from The Oklahoman that he believes Pruitt still has President Donald Trump's support. "That's the way President Trump is. He makes up his mind," Inhofe [told Justin Wingerter](#). "It's kind of like Jeff Sessions ... about five different times I thought he was going to fire him and he never did."

GOOD THURSDAY MORNING! I'm your host Kelsey Tamborrino, and Bracewell's Frank Maisano was the first to correctly identify the eight countries the Prime Meridian passes through: The U.K., Spain, France, Algeria, Mali, Burkina Faso, Togo and Ghana. For today: Who was the first ever Cabinet nominee to be formally rejected by the Senate? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

SIGNED, SEALED, DELIVERED: The FEC is asking the SEAL PAC, a leadership PAC previously affiliated with Zinke, to give it more information about its donors. Pro's Ben Lefebvre reports that the PAC raised more than \$42,000 in increments above \$200 from donors in February who failed to adequately disclose their occupations, according to a FEC [letter](#) dated May 1. The FEC also dinged the PAC for waiting more than a month to provide missing donor information in previous filings. Read [more](#).

POLL: VOTERS TURN ON PRUITT: Respondents in a new POLITICO/Morning Consult poll turned more sharply negative on Pruitt after being told that he "is under investigation for ethical infractions related to the amount of taxpayer money he has spent while in office, specifically on travel, his security detail and pay raises for his personal aides." Respondents were also informed that Pruitt testified before Congress that "he delegated authority to make spending decisions to members of his staff." POLITICO's Steven Shepard [breaks down](#) how after being told that information, 59 percent of respondents said Pruitt had not conducted himself appropriately. Far fewer, 11 percent, said Pruitt had acted appropriately.

Also in the poll: A slight majority — 53 percent — said Pruitt should be removed from his position as EPA administrator, while 12 percent said he shouldn't be removed. More than one-third, 35 percent, had no opinion. "Although Republicans are dissatisfied with Scott Pruitt's behavior, they do not necessarily want him out as EPA administrator," said Kyle Dropp, Morning Consult's co-founder and chief research officer. "While 48 percent of Republicans say Scott Pruitt has conducted himself inappropriately as EPA administrator, only 38 percent say he should be removed from his position." See the poll toplines [here](#) and the crosstabs [here](#).

SHALL I COMPARE THEE TO A SOMMER'S DAY: The American Petroleum Institute officially announced Wednesday Mike Sommers will replace Jack Gerard at the helm of the powerful oil and gas trade group. Sommers, who will take over for Gerard later this summer, was [reported](#) to be API's pick. He previously led the [American Investment Council](#) for two years, where he worked closely with firms invested in energy projects, and before that was chief of staff for former House Speaker John Boehner. National Association of Manufacturers President and CEO Jay Timmons applauded the news in a statement, calling Sommers "absolutely the perfect person to lead the oil and gas industry and the American Petroleum Institute to the next historic chapter." More from your host [here](#).

BISHOP TO TRAVEL TO PUERTO RICO: House Natural Resources Chairman [Rob Bishop](#) is traveling to Puerto Rico this week to survey the island's recovery in the aftermath of Hurricanes Maria and Irma, he said Wednesday. "This trip will help me better understand the continuing challenges and what disaster relief is still needed," the chairman said in a statement. Bishop is set to meet with Resident Commissioner [Jenniffer González](#) while there.

Separately, Democratic Rep. [Don Beyer](#) requested a hearing on the status of the territory's recovery in a brief [letter](#) to Bishop, writing the "committee has been silent," on a host of issues including the island-wide blackout and the privatization of PREPA, among other topics. A spokeswoman for Bishop called Beyer's claim that the committee had been silent "absolutely baseless, half-baked and politically motivated," noting that the committee has held multiple hearings, forums and sent letters on the topic.

MAIL CALL! THE ISDS OF MAY: API, NAM, the Business Roundtable and U.S. Chamber of Commerce joined together in a letter to President Donald Trump and other Cabinet officials on Wednesday on NAFTA, noting that though they support "efforts to modernize NAFTA to grow the U.S. economy and support American

jobs" they want the administration to retain the investment protections and the investor-state dispute settlement. Read it [here](#).

— **Congressional Western Caucus Chairman [Paul Gosar](#)** led a letter on Wednesday with fellow lawmakers calling on the president and agency heads to review all mineral withdrawals implemented by the Obama administration and to scrap any that were determined "without merit." Read the letter [here](#).

FOR YOUR RADAR: BLM on Wednesday released draft environmental impact statements for proposed changes to greater sage-grouse conservation plans in [Wyoming](#), [Colorado](#), [Idaho](#), [Nevada](#), [Utah](#) and [Oregon](#). Conservation groups say the amendments largely ignore the hundreds of thousands of public comments that were submitted to BLM asking the Obama-era plans be left alone. But a spokesperson for Interior told the Associated Press the proposed changes are largely technical in nature and arrived via feedback the agency received about the 2015 plans from governors in sage grouse states. Read [more](#).

FREEZE FRAME: The administration's plan to freeze CAFE standards at 2020 levels through 2025 would have an impact on fuel economy, oil consumption and GHG emissions, according to a new report today from Rhodium's U.S. Climate Service. The report found that freezing CAFE standards at 2020 levels would increase oil consumption in the U.S. by between 126,000 and 283,000 barrels per day in 2025, depending on oil prices. By 2030, the report finds, that impact would be 221,000-644,000, when assuming no change in post-2025 standards. Read the report [here](#).

HAPPY SMALL BUSINESS WEEK: The Citizens for Responsible Energy Solutions Forum will launch a video series today on U.S. clean energy companies that have benefited from ARPA-E funding. CRES Forum will begin the series with a video featuring Rita Hansen, CEO of Bend, Ore.-based Onboard Dynamics, a compressed natural gas refueling company. CRES Forum will roll out additional videos in the coming months. See today's video [here](#).

CUSTOMERS ONLY: While many discussions on grid reliability and resiliency focus on the bulk power system, a new paper out Wednesday explored a "customer-focused" approach, recommending a broader framework focused on customers' experiences. The paper, which was prepared for the Natural Resources Defense Council and the Environmental Defense Fund, discusses how when viewed from a customer-centric framework, the power system should be seen end-to-end, reaching from the customer "through distribution and transmission up to power generation and fuel supply." See it [here](#).

HIGH WIND MARKS: American Wind Energy Association's recently released market report found that utility and non-utility customers signed contracts for 3,500 megawatts of U.S. wind capacity in the first quarter of 2018, a "high water mark" in recent years. See the report [here](#).

GREENS SUPPORT STABENOW: Environmental groups, The League of Conservation Voters Action Fund and the NRDC Action Fund, [announced](#) Wednesday that they are endorsing Michigan's [Debbie Stabenow](#) in her bid for Senate reelection.

Stories from POLITICO Pro

More congressional panels digging through Pruitt records [Back](#)

By Anthony Adragna | 05/02/2018 08:12 PM EDT

Scrutiny into Scott Pruitt's ethics woes intensified Wednesday as a growing group of lawmakers' staff dug through reams of documents connected to the Environmental Protection Agency administrator's pricey travel and extensive security team.

Staff of the House Oversight Committee met for several hours with Pruitt's former security chief, Pasquale "Nino" Perrotta, who oversaw much of EPA's spending on perks such as first-class flights, a \$43,000 soundproof booth and round-the-clock bodyguards. Democratic staffers took part in the transcribed session and have access to the documents EPA has shared with the committee led by Chairman Trey Gowdy (R-S.C.), a Democratic aide said.

Staffers declined to comment on the substance of the interview with Perrotta, who has cited personal reasons for resigning from the agency Monday. Sources told [POLITICO](#) last month that Perrotta, a former Secret Service agent who worked in various capacities at EPA since 2004, was a willing partner in Pruitt's lavish spending on travel and security.

Separately, staff of the House Energy and Commerce Committee, which has jurisdiction over EPA, has begun receiving new paperwork from the agency this week. This came after Pruitt promised Chairman Greg Walden (R-Ore.) last week that the agency would provide the panel with "all the documents and information EPA produces" for a host of ongoing inquiries into his conduct.

"I can confirm that EPA has begun to share additional documents with the committee," a spokesman for the panel said.

Pruitt, meanwhile, has kept a low public profile since testifying Thursday before two House subcommittees — even as more questions emerged this week about his dealings with lobbyists. He did not attend Wednesday's swearing-in of Secretary of State Mike Pompeo, which several of Pruitt's fellow Cabinet members attended.

The New York Times and The Washington Post reported Wednesday that a former lobbyist for foreign governments had helped arrange a planned trip by Pruitt last year to Australia — a trek that EPA spent \$45,000 planning before he canceled it to deal with Hurricane Harvey relief efforts in Texas. The ex-lobbyist, Matthew Freedman, is a former Donald Trump transition team member who worked in the 1980s for Paul Manafort, who was briefly Trump's campaign manager in 2016.

A Republican aide to the House Oversight panel said EPA continues to cooperate with their information requests, offering five document productions to date. That includes more than 1,000 pages of records the agency turned over last week.

Separately Wednesday, two Senate Environment and Public Works Committee members — ranking member Tom Carper (D-Del.) and Sheldon Whitehouse (D-R.I.) — sent a letter to Pruitt and federal ethics officials alerting them to about 3,100 pages of unreleased communications between Pruitt and groups with business before EPA while he served as Oklahoma attorney general.

The senators said the records, disclosed in state court proceedings, include 1,122 pages of "emails containing documents, amicus briefs, and legal strategy which are part of litigation files," 1,754 pages of "emails containing documents, drafts of proposed rules, pleadings and drafts, legal strategy and data from investigations for cases in litigation," and 196 pages of "emails regarding personal matters not related to the transaction of public business."

"Each of these categories of documents may contain information directly relevant to your ability to do your job impartially," Carper and Whitehouse wrote. They did not release copies of the documents in question.

Pruitt's security chief goaded spending, employees say [Back](#)

By Emily Holden and Alex Guillén | 04/12/2018 08:13 PM EDT

Environmental Protection Agency Administrator Scott Pruitt has had a willing partner in pushing for his massive spending on bodyguards and first-class flights, current and former EPA officials say — the Secret Service veteran who heads his security detail.

Pasquale "Nino" Perrotta played a key role in the investigation into mobster John "Junior" Gotti in the 1990s, and he's boasted of his exploits with women, firearms and luxury watches in a self-published autobiography. Now he's running security for the nation's top environmental regulator like a lavishly funded SWAT team, according to interviews with seven people who have worked with him under both the Trump and Obama administrations.

The current and former staffers say that rather than acting as a restraint on Pruitt, who came into the agency a year ago demanding round-the-clock bodyguards, Perrotta has instead egged him on — indulging his requests for a 19-person security detail, high-performance SUV, \$43,000 soundproof booth and bug-sweep of his offices, as well as first-class flights to limit his exposure to potential threats from fellow passengers. Perrotta has even barred all but a select group of agency employees from entering rooms and corridors near Pruitt's offices, according to Ron Slotkin, a career official who recently retired as director of the EPA's multimedia office.

Perrotta has also accompanied Pruitt on flights and offered him advice on environmental policy and other agency matters, according to two of the sources.

Slotkin said Perrotta and others around Pruitt strained repeatedly against any restrictions on their activity, including longstanding federal limits on spending and conduct.

"They would object to anything when we said, 'No, you can't do that' or 'That would be wrong,'" Slotkin said. He added: "We'd say, 'It's not a matter of legality, it's ethics, it's the way things look.' But they went out of their way to do something different."

Now Perrotta's own ethics are drawing scrutiny from members of Congress looking into Pruitt's actions. Five Democratic lawmakers alleged in a letter sent to President Donald Trump on Thursday that EPA issued at least one contract to an employee of Perrotta's private security firm, and that other contracts may have gone to Perrotta's "friends or associates," based on allegations from former agency deputy chief of staff Kevin Chmielewski.

Chmielewski, a former Trump campaign aide, has told lawmakers EPA fired him after he refused to retroactively approve first-class travel for one of Pruitt's closest aides, former agency policy chief Samantha Dravis, according to the letter from Democrats including Sens. Tom Carper of Delaware and Sheldon Whitehouse of Rhode Island. He also told the lawmakers that Perrotta threatened to go to his home to seize his EPA parking pass — adding that he "didn't give a f---" who might be listening to their phone call.

Perrotta did not respond to multiple requests for comment.

Agency spokesman Jahan Wilcox defended EPA's decisions on Pruitt's security arrangements, calling them "similar to security protocol across the federal government." He added that the agency had done similar security sweeps for former President Barack Obama's two EPA administrators, Lisa Jackson and Gina McCarthy.

"According to EPA's Assistant Inspector General, Scott Pruitt has faced an unprecedented amount of death threats against him and security decisions are made by EPA's Protective Service Detail," Wilcox said in a statement. "Americans should all agree that members of the President's cabinet should be kept safe from these violent threats."

Pruitt's spending, relationships with industry lobbyists and reputation for excessive secrecy have generated calls for his firing from Democratic lawmakers, some Republicans and even White House staff. But he still has at least a public champion in Trump, who tweeted last weekend that "Scott is doing a great job!"

To the contrary, the current and former agency employees say Pruitt has fostered an atmosphere of chaos, mistrust and disregard for optics — and that Perrotta has been a crucial part of it.

Several said Perrotta's personality and Pruitt's expectations are both probably driving EPA's security spending, adding that other key aides have signed off on the administrator's expenses either willingly or begrudgingly.

"He'll do anything to satisfy his boss," said one departed career staffer.

Perrotta was born to Italian immigrants in New York and has spent his life in law enforcement, including in the Secret Service, where he said he protected presidents and dignitaries and investigated financial and organized crimes, according to "Dual Mission," the autobiography he self-published in 2016.

In the book, he calls himself "completely misunderstood by most," including family, friends and coworkers, in large part because of his "high level of energy." Former and current colleagues have described Perrotta as rigidly loyal but also enthusiastic to push boundaries to get what he wants — an impression his book supports.

He recalls "creatively" finding ways to show probable cause to get warrants, providing financial incentives to police, and making sources of female "friends," "showering them with gifts that I was easily able to afford."

Perrotta said he also let women hold his government-issued firearm in romantic situations. "It was, in some ways, like a dangerous, forbidden sex toy to some, and I played right along," he recalled.

He said he liked the finer things, including a Rolex Submariner watch that he wore in his youth. When working for the Secret Service in Bulgaria, he wrote, he dressed "more like a gangster than law enforcement," clad in square-toed, black biker boots and a black, Italian-made turtleneck sweater with a ".380 Sig" gun tucked underneath.

He joined EPA in 2004. That eventually brought him into Pruitt's orbit.

Pruitt, a former Oklahoma attorney general, had built a reputation in conservative Republican circles for his frequent lawsuits against the EPA's Obama-era regulations, putting him at odds with much of the agency's workforce. And his penchant for lavish spending was documented even before he arrived in Washington: An audit in Oklahoma showed that expenses at the attorney general's office surged during his tenure compared with his predecessor's, The Intercept reported Thursday.

When Pruitt arrived at EPA after his confirmation in February 2017, his transition team had already made it clear that he expected around-the-clock security, a former agency employee who was there at the time said.

A week after Pruitt's first day at the agency, top staffers had a meeting on "24/7 security," according to calendars obtained by the watchdog group American Oversight. Chief of staff Ryan Jackson met for half an hour with security officials including Henry Barnet, the director of the criminal enforcement office where Pruitt's security detail is housed.

Perrotta was soon promoted to replace a career staffer who had pushed back on the administrator's desire to use sirens to navigate D.C. traffic. He quickly developed a close relationship with Pruitt.

As head of Pruitt's security detail, Perrotta has been instrumental in decisions for him to fly only first-class, upgrade to a souped-up SUV and have his office swept for bugs, a former Trump administration official said. Perrotta has also overseen Pruitt's 19-person crew of bodyguards, which is three times the size of the team that protected McCarthy — and offers 24/7 protection that exceeds what most Cabinet members receive.

"Mr. Pruitt thinks he's the president of the United States," said the first former career staffer. "He's big on image."

The office sweep for listening devices — which was conducted by a company linked to Perrotta — rankled some career staffers and led to a scuffle between Perrotta and a member of the agency's homeland security office at a meeting last summer, The New York Times reported Thursday.

Despite EPA's argument that Pruitt has received a record number of death threats, an internal report from the agency's Office of Homeland Security suggests that the threats mainly consist of letters and criticism on social media that don't warrant such blanket protection. (On Tuesday, the agency dismissed a staffer who had signed off on the memo and argued with Perrotta, for what it insists were issues dating back several years.)

But several current and former EPA staffers say they also consider the security fears overblown.

"We never saw any threat, never heard any threat," said Slotkin, the former multimedia director. "If anything, it came from Pruitt, we would hear him speak about it. But there was no evidence that anybody could even get near him."

That included many EPA employees: Slotkin said Perrotta cordoned off Pruitt's suite of offices inside EPA's headquarters at Federal Triangle, posting security guards to keep out anyone who wasn't on an approved list. One restricted area was a chandelier-decorated conference room named after environmentalist Rachel Carson where agency employees had previously been allowed to hold events, Slotkin said.

"He didn't want anybody near him," Slotkin said.

Soon Perrotta was flying with Pruitt and discussing matters that went beyond security, two former employees said.

"It wasn't uncommon that given travel and Nino's proximity, he would always weigh in on matters beyond his scope as security, leveraging his institutional knowledge," one said. "He often would say what he recalled prior administrators doing."

By the spring of last year, Perrotta was regularly attending travel planning meetings with top political staff, including a March 30 international scheduling discussion and an April 10 talk on international travel, according to EPA records.

He and other security agents were closely involved in planning in May for a trip the following month to Italy, where Pruitt visited the Vatican and then attended G-7 environment meetings in Bologna. Perrotta had lived for two years in Rome on Secret Service assignment, where he made many connections, according to his book.

Wilcox said the security arrangements on the Italy trip were not novel. "EPA's Protective Service Detail tried to replicate the same security measures taken when EPA Administrator Gina McCarthy traveled to Italy in 2015," he wrote.

Thursday's congressional letter offered a new detail about Perrotta: The Democratic senators said Chmielewski reported that Perrotta entered into a \$30,000 contract with private Italian security personnel for that trip. Records have revealed that expense but did not disclose whether it was for a private detail.

One of the former EPA staffers said Perrotta was friends with those guards. That source described Pruitt's protection while in Italy as extensive, with security agents from EPA and the U.S. Embassy, in addition to a large group of local agents.

News reports have revealed Pruitt also had a soundproof booth constructed for his office and considered having bulletproof desks installed.

And the spending isn't over. EPA also appears to be planning to purchase bulletproof vests specially designed to blend in underneath regular clothing for his security detail, according to a solicitation issued on Friday. The solicitation calls for 16 white-colored vests of varying sizes manufactured by Velocity Systems, along with

corresponding armor made of "special threat enhanced steel" and cummerbunds that provide enhanced protection.

The armor requested is just over a quarter-inch thick and can protect against the type of bullets shot from AK-47 rifles and some AR-15 semi-automatics, according to Velocity Systems' [website](#).

EPA would not confirm to POLITICO whether the armor is for Pruitt's protective detail or for other agents, saying only that all agents in EPA's criminal enforcement division, which includes Pruitt's detail, "are assigned bulletproof vests" and that the effectiveness of the vests expires every five years. But a source familiar with EPA's security operations said the vests are likely for Pruitt's bodyguards because of their unusual specifications and the number requested. Other enforcement agents wouldn't need their vests to be concealed, that source said.

Lobbyist warned Pruitt of 'angry group of Aussies' [Back](#)

By Alex Guillén | 05/02/2018 09:17 PM EDT

A former lobbyist who helped organize a planned Australian trip for Scott Pruitt warned agency staff last year that the EPA administrator might get an angry reception from officials there who disagreed with the Trump administration on climate change, according to emails obtained Wednesday.

"I think that the trip will be more hostile than what the Administrator may be expecting," [wrote](#) Matthew Freedman, who now runs an advisory firm and is treasurer of the American Australian Council, a nonprofit whose members include Chevron, BHP and ConocoPhillips. Freedman was also a former Donald Trump transition team member who worked in the 1980s for Paul Manafort, the former Trump campaign manager who has been indicted in connection with his work in Ukraine.

Freedman's emails to Millan Hupp, an EPA scheduler and advance staffer who has worked for Pruitt since he was Oklahoma attorney general, show his close participation in planning Pruitt's visit to Australia, which EPA ultimately canceled after Hurricane Harvey hit the U.S. Gulf Coast.

Freedman wrote in July last year to Hupp that "the outright hostility may come to the surface more frequently than you might expect. He needs to be prepared for a more confused and angry group of Aussies."

The emails about the trip, obtained by POLITICO after being first reported by The New York Times, add to a growing list of questions about lobbyists' roles in arranging overseas travel for Pruitt as he pursued industry-friendly environmental policies for Trump. The release followed the Times' previous report about the role a lobbyist and close conservative ally played in setting the travel agendas for Pruitt in his controversial trips to Morocco and Rome last year.

Freedman also suggested a meeting with regional officials from the state of Victoria, but cautioned that the "outcome may be no different than if the Administrator met with Bernie Sanders." State leaders, Freedman said, "will be hostile to any Trump appointee," particularly on climate change issues and the Paris climate agreement, which Pruitt convinced Trump to pull out of.

Pruitt "will not find the local government meeting particularly useful or insightful for him," Freedman wrote.

However, Freedman did recommend sitting Pruitt down with Bill Shorten, the leader of the center-left Labor Party. Shorten is likely the next prime minister, Freedman wrote, "who is also a good friend."

What would be most useful, Freedman argued, are meetings set up through the Institute of Public Affairs, a conservative Australian think tank.

"They are aligned with the Trump vision on various issues, including coal, the challenge to businesses given the environmental approvals required, the unprecedented [government] control related to gas exploration/development, gas/fracking challenges," Freedman wrote. "These are the inputs/meetings that he should be focused on."

Freedman later wrote that he had contacted several companies for meetings, including aluminum maker Alcoa and ConocoPhillips.

Freedman also said he had spoken to Frank Fannon, then the head of government affairs for mining giant BHP Billiton in Washington. "Looks like their only interest at this point is a private meeting with the CEO in Melbourne," Freedman wrote.

Trump in January nominated Fannon to be assistant secretary of State for energy resources. He has not yet been confirmed by the Senate.

Other emails between EPA's Hupp and U.S. coal miner Peabody Energy that did not include Freedman indicated that Pruitt had considered a visit to the company's Wambo mine in New South Wales. The mine was too far from Sydney to drive, and a company executive noted no commercial flight would work out on the date in question. A charter plane would cost \$10,000, he told Hupp, who noted that EPA could not accept a "complimentary" plane ride.

They later changed the destination to another Peabody facility, the underground Metropolitan mine, which is less than an hour's drive from Sydney.

A draft itinerary for the trip also included a visit and public appearance at the Australian parliament, though it noted such a stop raised "potential for protests, negative reaction." That same day would also have included a stop at an event with lawmakers and fossil fuel leaders hosted by the Minerals Council of Australia.

Other planned stops for the trip included a meeting with a sports and environmental alliance on the "greening of sports," a tour of Sydney Harbor and a visit to Taronga Zoo complete with a "visit with koalas," per the draft itinerary.

The emails were released to the Sierra Club following a lawsuit.

Anthony Adragna contributed to this report.

FEC seeks more info from Zinke's former PAC [Back](#)

By Ben Lefebvre | 05/02/2018 06:52 PM EDT

The Federal Election Commission is asking a leadership PAC previously affiliated with Interior Secretary Ryan Zinke to give it more information about its donors.

The committee, known as SEAL PAC, raised more than \$42,000 in increments above \$200 from donors in February who failed to adequately disclose their occupations, the FEC said in a [letter](#) to PAC Treasurer Paul Kilgore dated May 1. Donations of more than \$200 must include the contributor's employment, according to FEC rules.

"You must provide the missing information, or if you are unable to do so, you must demonstrate that 'best efforts' have been used to obtain the information," the FEC wrote in the letter.

Kilgore could not be immediately reached.

The FEC also dinged the PAC for waiting more than a month to provide missing donor information in previous filings. "These procedures were deemed incomplete," the FEC said.

The FEC's scrutiny of SEAL PAC has [increased](#) in recent months. The commission has questioned the PAC regarding all but one of the campaign finance reports it has made since the beginning of 2017.

Zinke launched SEAL PAC when he was elected to Congress in 2014 and separated himself from the group after being selected to join President Donald Trump's Cabinet.

WHAT'S NEXT: SEAL PAC has until June to respond to the FEC inquiry.

Poll: Majority of voters say Trump White House running chaotically [Back](#)

By Steven Shepard | 05/02/2018 05:53 AM EDT

A strong majority of voters say President Donald Trump's administration is running chaotically after Trump's pick for veterans affairs secretary, White House physician Ronny Jackson, withdrew his name from consideration last week, according to a new POLITICO/Morning Consult poll.

More than 3 in 5 voters, 62 percent, say Trump's administration is running very or somewhat chaotically — nearly twice as many as the 32 percent who say it's running very or somewhat well.

A majority of Republicans, 68 percent, say the Trump administration is running well. But that sentiment is shared by few Democrats (9 percent) and independents (25 percent).

Moreover, the percentage of voters who see chaos in Trump's White House has increased modestly, but steadily, in recent weeks. In early April, 61 percent of voters said the Trump administration was running chaotically. In mid-March it was 57 percent, and in early March it was 54 percent.

Nearly half of voters, 49 percent, say the Trump administration has done a poor job when it comes to hiring and retaining qualified people — roughly twice as many who say the Trump administration has done an excellent or good job combined.

The new survey was conducted April 26-May 1 — in the wake of Jackson's withdrawal from consideration to head the Veterans Affairs Department, and as questions continued to swirl around a handful of other Cabinet members, including Attorney General Jeff Sessions and Environmental Protection Agency Administrator Scott Pruitt.

Of Trump's Cabinet officials, Sessions has the greatest name identification — and some of the highest negatives. Slightly more than a quarter of voters, 26 percent, have a favorable opinion of Sessions, while 41 percent view him unfavorably. (That ties Education Secretary Betsy DeVos, who also has a 41 percent unfavorable rating.)

Pruitt — embattled over what critics call profligate spending on personal items at EPA, including first-class airfare — is lesser known. Only 19 percent view Pruitt favorably, compared with 32 percent who view him unfavorably. Roughly half say they have never heard of him, or have heard of him but don't have an opinion.

But poll respondents turn more sharply negative on Pruitt after being told that Pruitt "is under investigation for ethical infractions related to the amount of taxpayer money he has spent while in office, specifically on travel, his security detail and pay raises for his personal aides." (Respondents were also informed that Pruitt has testified before Congress that "he delegated authority to make spending decisions to members of his staff.")

After receiving that information, a majority of respondents, 59 percent, say Pruitt has not conducted himself appropriately. Far fewer, 11 percent, say Pruitt has acted appropriately.

A slight majority, 53 percent, say Pruitt should be removed from his position as EPA administrator, while only 12 percent say he should not be removed. More than a third, 35 percent, have no opinion.

Pruitt isn't getting much backup from Republicans, the poll shows — though there isn't a loud drumbeat to remove him.

"Although Republicans are dissatisfied with Scott Pruitt's behavior, they do not necessarily want him out as EPA administrator," said Kyle Dropp, Morning Consult's co-founder and chief research officer. "While 48 percent of Republicans say Scott Pruitt has conducted himself inappropriately as EPA administrator, only 38 percent say he should be removed from his position."

Overall, voters want the Trump administration to do more to protect the environment. A 54 percent majority say the federal government should do more to strengthen environmental protections, even if it hurts some businesses. That's more than twice the 23 percent who say the U.S. should do more to help businesses, even if it weakens environmental protections.

A majority of voters, 59 percent, say the U.S. should be a part of the Paris Agreement, the deal reached between 195 countries to reduce global greenhouse gas emissions. Only 18 percent of voters say the U.S. should not be part of the Paris accord.

But a 43 percent plurality says the U.S. should not provide aid to help developing countries reduce carbon emissions in their own countries, compared with 31 percent who think the U.S. should provide that aid to developing countries.

Half of voters, 50 percent, say EPA is not doing enough to address the issue of climate change — roughly two times the 26 percent who say the EPA is doing enough to address climate change.

Trump's approval rating in the poll is 42 percent, unchanged from last week. And Democrats retain their 9-point lead on the generic congressional ballot, equaling the party's 2018 high water mark from last week.

The POLITICO/Morning Consult poll surveyed 1,991 registered voters and has a margin of sampling error of plus or minus 2 percentage points.

Morning Consult is a nonpartisan media and technology company that provides data-driven research and insights on politics, policy and business strategy.

More details on the poll and its methodology can be found in these two documents — Toplines: <https://politi.co/2HHsg55> | Crosstabs: <https://politi.co/2jj1BB4>

Sources: API expected to tap Sommers as new chief [Back](#)

By Emily Holden and Eric Wolff | 04/30/2018 04:33 PM EDT

The American Petroleum Institute is expected to tap Mike Sommers, the head of a private equity trade group who worked as a top aide to former House Speaker John Boehner, to replace Jack Gerard at the helm of the powerful oil and gas industry lobby group, according to two sources.

Gerard announced his retirement earlier this year after a decade at the helm of the API, where he notched up a long list of achievements including overturning the decades-old ban on crude oil exports. He will step down in August.

API did not reply to a request for comment.

The oil and gas industry has so far gotten strong support from the Trump administration, which has moved to open the Arctic National Wildlife Refuge to exploration, is considering making wide swathes of coastal waters available to the industry, and last week said it would roll back some Obama offshore drilling rules.

But API has urged the White House to scrap its steel and aluminum tariffs, and to keep core provisions of NAFTA in place as it negotiates an update to the trade agreement.

Sommers, who was Boehner's chief of staff, has led the American Investment Council for two years, a position that kept him close to Arclight Capital Partners, The Blackstone Group, EnCap Investments and other firms that have invested heavily in energy projects. He also served as an aide to former President George W. Bush in 2005 at the National Economic Council working on agriculture, trade and food policy.

Barry Worthington, CEO of the United States Energy Association, which brings together public and private organizations, corporations and government agencies, said he'd been told Sommers would succeed Gerard.

"Jack Gerard is going to be a tough act to follow," he said.

Gerard was also one of the best-paid lobbyists in Washington, D.C. He received \$5 million in direct compensation from API, plus another \$1.2 million in perks in 2015, according to the group's latest IRS forms.

Marianne Levine and Ben Lefebvre contributed to this report.

API announces Sommers as new CEO [Back](#)

By Kelsey Tamborrino | 05/02/2018 04:35 PM EDT

The American Petroleum Institute officially announced it would hire Mike Sommers today to replace Jack Gerard as president and CEO of the powerful oil and gas trade group.

Sommers has led the [American Investment Council](#) for two years, where he worked closely with firms invested in energy projects. He also was chief of staff for former House Speaker John Boehner and served as an aide to former President George W. Bush in 2005 at the National Economic Council working on agriculture, trade and food policy. Sources [told POLITICO](#) earlier this week that the group was readying to tap Sommers.

"At a time of transformational progress when natural gas and oil are pioneering groundbreaking innovation, delivering tremendous environmental benefits and leading long-term economic solutions, I look forward to continuing the work of API's talented team and representing an industry that is directly enhancing the lives and improving opportunities for Americans and people around the world," Sommers said in a statement.

API's board of directors held an election this afternoon confirming Sommers atop the group, API said.

Gerard previously [announced](#) he'd step down in August.

To: Wehrum, Bill [/o=ExchangeLabs/ou=Exchange Administrative Group (FYDIBOHF23SPDLT)/cn=Recipients/cn=33d96ae800cf43a3911d94a7130b6c41-Wehrum, Wil]
Subject: Morning Energy: Spotlight on FERC at Pro summit — Hitching a ride on the 'minibus' — 'Secret science' out in the open

By Kelsey Tamborrino | 07/17/2018 05:43 AM EDT

With help from Emily Holden, Anthony Adragna, Colin Wilhelm and Darius Dixon

SEE YOU THERE: Today's the day — POLITICO Pro is hosting its second annual Pro summit, featuring one-on-one conversations with newsmakers across the policy landscape, including two sessions on energy.

FERC Commissioner Cheryl LaFleur will sit down this afternoon with our own Darius Dixon, before the regulatory body is deadlocked next month following the exit of GOP Commissioner Rob Powelson. LaFleur, a Democrat, has served under presidents from both parties and experienced the agency in almost every configuration — whether it has all five commissioners in place, or just one. There's no shortage of topics to chew over: the potential impact of an Energy Department coal and nuclear rescue plan, the heated rhetoric against states that stand in the way of pipelines, and whether FERC is "on the wrong side of history" when it comes to climate change. Darius' interview with LaFleur starts around 2 p.m.

Also on tap: California Air Resources Board Chairwoman Mary Nichols, Murray Energy CEO Bob Murray and the Council on Foreign Relations' Amy Myers Jaffe will participate in a panel this morning on America's "energy future." Nichols, for one, has been heavily involved in discussions with the Trump administration over car rules that the White House is considering rolling back. Expect questions related to the administration's efforts to pare back regulations and increase oil, gas and coal production — and an in-depth conversation on what that means for free market forces and renewables.

See the full agenda [here](#) and watch the livestream [here](#).

WELCOME TO TUESDAY! I'm your host, Kelsey Tamborrino. Citizens' Climate Lobby's Brett Cease was first to correctly identify the two presidents who threw out the first pitch at an All-Star game in D.C.: Franklin D. Roosevelt in 1937 and John F. Kennedy in 1962. For today: Which state or states have just one consonant in its spelling? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

JUST RELEASED: [View the latest POLITICO/AARP poll](#) to better understand Arizona voters over 50, a voting bloc poised to shape the midterm election outcome. Get up to speed on priority issues for Hispanic voters age 50+, who will help determine whether Arizona turns blue or stays red.

HITCHING A RIDE ON THE 'MINIBUS': The House Rules Committee late Monday made 70 amendments to the EPA and Interior title of the spending minibuss, [H.R. 6147 \(115\)](#). The amendments focus on blocking a host of Obama-era environmental regulations even as the Trump administration is in the process of rolling back many of those. Some of the amendments that caught ME's eye:

— **Diesel emissions grants:** Rep. [Gary Palmer's amendment](#) would eliminate the popular bipartisan Diesel Emissions Reduction Grant program used to retrofit diesel engines like those in school buses,

— **WOTUS:** Rep. Don Beyer's amendment would remove language blocking the Obama administration's Waters of the U.S. regulation,

— **Obama-era methane rule:** Rep. Markwayne Mullin's amendment would block enforcement of the Obama-era regulation aimed at curbing methane emissions from new oil and gas sources, which the Trump administration is already reconsidering,

— **Social cost of carbon:** Another amendment from conservatives would bar the use of the social cost of carbon in rulemakings,

— **Trailer efficiency:** Reps. Barry Loudermilk and Morgan Griffith's amendment would bar EPA from applying stricter fuel efficiency and greenhouse gas emissions standards to certain truck trailers,

— **Chesapeake Bay:** Rep. Bob Goodlatte's effort would limit EPA's ability to go after states that miss Chesapeake Bay cleanup milestones,

— **Ozone:** Rep. Glenn Grothman's amendment would block implementation of EPA's 2015 tightened ozone standard,

— **Coal ash:** A Democratic amendment would block the Trump EPA from revisiting an Obama-era coal ash regulation,

— **Endangered Species Act riders:** Several measures would bar the administration from issuing or enforcing Endangered Species Act rules relating to species like the lesser prairie chicken and Preble's meadow jumping mouse,

— **Attorney fees:** An amendment from Reps. Jason Smith and Greg Gianforte would block attorney fees from being awarded in any Clean Air Act, Clean Water Act or Endangered Species Act settlement, and,

— **Inspectors general:** Nothing related to former Administrator Scott Pruitt was made in order, but the House will consider an amendment from Rep. Raúl Grijalva that would increase the budget of the Interior Department's inspector general by \$2.5 million.

Read the full list of amendments made in order to the measure here.

'SECRET SCIENCE' OUT IN THE OPEN: EPA's controversial proposal to consider only research with publicly available data gets a public hearing at agency headquarters today starting at 8 a.m. Nearly 70 health, medical, academic and science groups — including the American Lung Association, American Heart Association, American Medical Association and American Academy of Pediatrics — oppose the plan, which they say could hamstring public health and environment protections.

EPA's Science Advisory Board voted unanimously to review the proposal, which Pruitt said was meant to bolster transparency. Paul Billings, national senior vice president of advocacy at the American Lung Association, called the rule a "coordinated effort to ignore the science that is inconvenient to the EPA's agenda," and compared it to lobbying efforts by the tobacco industry in the 1990s to exclude studies that showed secondhand smoke could kill.

What's at stake? The proposal could move forward quickly enough to allow EPA to roll back certain air quality standards currently under review. According to the Natural Resources Defense Council, the plan could undercut computer models meant to test chemicals under the new Toxic Substances Control Act and could toss

out landmark studies that relied on personal health records following extraordinary events, including when Hiroshima and Nagasaki victims were tested over time to find out the effects of radiation on humans.

The meeting will run until 8 p.m. or an hour after the last of more than 100 registered speakers has commented. Speakers, aside from many environment and public health groups, include the American Petroleum Institute, the U.S. Chamber of Commerce, the American Chemistry Council, FreedomWorks Foundation and climate science critic Steve Milloy. Dan Byers of the Chamber of Commerce's Global Energy Institute is expected to applaud the agency's efforts and commend EPA for going through the formal public comment and rulemaking process. "It is one thing to be cavalier about transparency principles when their application has little or no import to public policy, but federal rules that impact millions of people and billions of dollars should be held to a higher standard," he is expected to say. Also registered are Reps. Paul Tonko, Suzanne Bonamici and Dan Lipinski. Comments can be submitted until Aug. 16.

Related reading: Competitive Enterprise Institute senior fellow Angela Logomasini looks at the science transparency rule in analysis published today. "The rule is actually far more modest and flexible than depicted by its critics, and its goals are in fact achievable," Logomasini writes. Read it here.

FOR THE RECORD: The House Rules Committee meets at 3 p.m. this afternoon to formulate a rule on an anti-carbon tax resolution, H. Con. Res. 119 (115), that calls a tax on carbon released from fossil fuels "detrimental to the United States economy." The Rules panel will tee up a vote later this week on the resolution, which is led by Majority Whip Steve Scalise and would put a range of lawmakers — most notably the Climate Solutions Caucus — on the record on the issue.

WHERE'S ZINKE? Interior Secretary Ryan Zinke will deliver remarks this morning at the first meeting of the "Made in America" Outdoor Recreation Advisory Committee. The committee is tasked with advising the secretary on "public-private partnerships across all public lands, with the goal of expanding access to and improving infrastructure on public lands and waterways." See the meeting agenda.

AMERICA'S PLEDGE STILL WORKING ON PLEDGES: Michael Bloomberg and California Gov. Jerry Brown, the co-chairs of climate organization "America's Pledge," have unveiled a preview of the report they will release at the Global Climate Action Summit in San Francisco in September, detailing "bottom-up" opportunities for climate action sans federal leadership. The list is familiar: boosting renewables, accelerating coal retirements, retrofitting buildings for energy efficiency, electrifying building energy use, accelerating electric vehicle adoption, phasing out HFCs, preventing methane leaks at the wellhead, reducing methane leaks in cities, reducing emissions from land and starting carbon markets.

Vice Chairman Carl Pope said the group still plans to debut a quantitative analysis outlining what state and local governments are already doing, what they have committed to and what they are keying up. "We have every reason to believe the rest of the world is watching this very closely," Pope said, noting that the U.N.'s top climate official, Patricia Espinosa, mentioned the group and summit by name at the Vatican earlier this month. Read it here.

ESA GETS ITS DAY: Proposed tweaks to the Endangered Species Act will be front and center at a Senate Environment and Public Works hearing this morning. The hearing will feature testimony from Wyoming Gov. Matt Mead, Colorado Parks and Wildlife's Bob Broscheid and Virginia's Secretary of Natural Resources Matthew J. Strickler, and will focus on a discussion draft released by Chairman John Barrasso earlier this month aimed at changing the statute. **If you go:** The hearing kicks off at 9:45 a.m. in 406 Dirksen. Livestream here.

TAKEN BY STORMWATER: The House on Monday passed by voice vote H.R. 3906 (115), the Innovative Stormwater Infrastructure Act of 2017, which would "establish centers of excellence" for stormwater control infrastructure. The legislation, introduced last year by Democratic Rep. Denny Heck, directs EPA to create a

stormwater infrastructure funding task force to make recommendations on the availability of public and private funding for stormwater infrastructure.

DOE ISSUES FIRST TRIBAL LOAN GUARANTEE: The Energy Department will issue its first solicitation for the Tribal Energy Loan Guarantee Program today. The program provides up to \$2 billion in partial loan guarantees to support energy development in Native American and Alaska Native communities. According to DOE, today's solicitation marks more than \$40 billion in energy infrastructure loans and loan guarantees from DOE's Loan Programs Office in five areas.

HOUSE PANEL TO HOLD GRID HEARING: House Natural Resources will hold a hearing on July 25 on Puerto Rico's electric grid recovery and possible improvements to make it more efficient and resilient to future hurricanes. On top of the devastation caused by Hurricane Maria last year, Puerto Rico's electric utility owes bondholders \$9 billion, and most of its leadership departed last week after clashes with Gov. Ricardo Rosselló over executive compensation and political control of the utility, which is quasi-governmental.

MAKING THE GRADE: The Environment America Research & Policy Center is out today with its state-by-state report card, "Renewables on the Rise," which details increases in solar, wind, energy efficiency, electric vehicles and battery storage. The report says the U.S. now produces almost six times as much renewable electricity from wind and solar than it did in 2008. It also found that in March of last year, wind and solar produced 10 percent of the United States' electricity — marking a first. On the state level, the report said California, Arizona, North Carolina, Nevada and Texas saw the greatest total increases from 2008 until 2017 in solar energy generation. See the report [here](#) and a state-by-state interactive map [here](#).

YOU DOWN WITH TIP? A bipartisan group of four senators [wrote to](#) Energy Secretary Rick Perry on Monday in support of the Western Area Power Administration's Transmission Infrastructure Program, which was axed under the Trump administration's fiscal 2019 budget proposal. "TIP is one of the few federal programs that directly supports new and upgraded electric transmission," according to the letter, signed by Sens. [Catherine Cortez Masto](#), [Martin Heinrich](#), [Dean Heller](#) and [Cory Gardner](#).

HOUSE PLANS FLOOD INSURANCE VOTE: The House is planning to vote next week to extend the National Flood Insurance Program, ahead of its July 31 expiration, sources familiar with the matter tell Pro Financial Services' Zachary Warmbrodt. There are already a few options on the table for the program: one from Financial Services Chairman [Jeb Hensarling](#), who has been trying to put together an extension bill that includes reforms, and a new bill introduced by Scalise and Rep. [Tom MacArthur](#) that would reauthorize the program through Nov. 30. Read [more](#).

FOR YOUR RADAR: Republican Sen. [Chuck Grassley](#) introduced bipartisan legislation on Monday targeting price fixing by OPEC. The bill would amend the Sherman Act to make oil-producing and exporting cartels illegal, and was co-sponsored by Sens. [Amy Klobuchar](#), [Mike Lee](#) and [Patrick Leahy](#). "It's long past time to put an end to illegal price fixing by OPEC," Grassley said in a statement. Read the legislation [here](#).

MAIL CALL! National Rural Electric Cooperative Association CEO Jim Matheson [sent a letter](#) to the leadership of the Energy and Commerce Environment Subcommittee on Monday in support of legislation to reform the New Source Review permitting program.

— **More than 100 Democrats** signed onto a letter to members of both House and Senate Armed Services committees today to urge them to oppose any provisions to the National Defense Authorization Act that would "have widespread, negative consequences for the conservation of our imperiled wildlife and public lands." Read the letter [here](#).

— **Iowa's congressional delegation** invited acting EPA Administrator Andrew Wheeler to their state to discuss the Renewable Fuel Standard. Read it [here](#).

What role will Hispanic voters over 50 play in Arizona this Fall? Read POLITICO Magazine's new series "The Deciders" which focuses on this powerful voting bloc that could be the determining factor in turning Arizona blue.

House plans vote to keep flood insurance program going Back

By Zachary Warmbrodt | 07/16/2018 06:49 PM EDT

The House is planning to vote next week to extend the National Flood Insurance Program before leaving town ahead of the program's July 31 expiration, sources familiar with the matter said.

House Financial Services Chairman Jeb Hensarling (R-Texas) has been trying to put together an extension bill that includes reforms, sources said. Another option is a new bill introduced by House Majority Whip Steve Scalise (R-La.) and Rep. Tom MacArthur (R-N.J.) that would reauthorize the program through Nov. 30.

In a statement, Scalise said it was important to keep working on a long-term flood insurance reauthorization but that his bill would take concerns about a lapse off the table for the remainder of hurricane season.

While the House has passed a five-year reauthorization and overhaul, the Senate hasn't reached agreement on its own bill amid disputes over how to retool the program. It's unclear if the Senate would be able to pass anything other than a clean, short-term reauthorization at this stage. Sources said Sen. John Kennedy (R-La.) was planning to try to hotline an extension through January.

Subject: Morning Energy: What's happening with WOTUS — Keystone fight far from over — Wheeler to Michigan

By Kelsey Tamborrino | 08/17/2018 05:44 AM EDT

With help from Annie Snider, Ben Lefebvre and Alex Guillén

A COUNTRY DIVIDED: Which streams and wetlands are protected under the Clean Water Act? As of Thursday, the answer depends on where you're standing. After a South Carolina District Court [ruling](#) overturning the Trump administration's attempted delay of the Obama administration's Waters of the U.S. rule for failing to offer the public a proper opportunity to comment, the 2015 rule is now officially on the books in 26 states — but not in the other 24 states where other district court injunctions are in place.

"**The agencies refused to engage** in a substantive reevaluation of the definition of the 'waters of the United States' even though the legal effect of the Suspension Rule is that the definition of 'waters of the United States' ceases to be the definition under the WOTUS rule and reverts to the definition under the 1980s regulation," Judge David Norton wrote in Thursday's ruling. "An illusory opportunity to comment is no opportunity at all."

Environmental groups hailed the decision, with Jon Devine of the Natural Resources Defense Council calling it a "sharp rebuke to the Trump administration." Meanwhile, Zippy Duvall, president of the American Farm Bureau Federation, one of the fiercest critics of the Obama-era rule, called on the Trump administration to "to take immediate steps to limit the impact of this dangerous court decision."

But will it hold? The Justice Department is reviewing the decision, a spokesman said, and players on both sides broadly expect an appeal. Separately, EPA said in a statement it and the Army Corps of Engineers "will review the order as the agencies work to determine next steps." But the fate of the delay rule could ultimately become moot if the federal district judge in Texas grants a nationwide injunction request.

And don't forget, this is just the warm-up fight. The battle royale will be over the Trump administration's rule to repeal the 2015 rule, which the agency has not finalized. Geoff Gisler, the Southern Environmental Law Center attorney who brought yesterday's case on behalf of local environmental groups, argued that Thursday's South Carolina court decision has implications for that fight and "should give the agencies pause" as they move forward. "The agencies just aren't telling the public what they're doing," he argued. "What this decision said was you can't just have a comment period, it has to be a meaningful comment period."

WE MADE IT TO FRIDAY! I'm your host, Kelsey Tamborrino. Simon and Company's Jen Covino named the eight senators who formerly served as mayors: [Dianne Feinstein](#), [Cory Booker](#), [Jim Inhofe](#), [Bob Corker](#), [Bernie Sanders](#), [Tim Kaine](#), [Mike Enzi](#) and [Bob Menendez](#). For today: Who are the three current House lawmakers who previously served as ambassadors? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

FAR FROM OVER: A federal judge's order directing the State Department to conduct a supplemental environmental review for the Keystone XL pipeline's updated path through Nebraska is another setback in nearly a decade full of them for TransCanada. The order is sure to stall construction of the pipeline for months, Pro's Ben Lefebvre [reports](#). Plaintiffs in the case said the review would involve public hearings in Nebraska and consultations with Native American tribes whose land the pipeline would traverse.

Pipeline opponents are hoping to use the new review to push for a broader study of the project, Ben reports. Doug Hayes, a lawyer for the Sierra Club and one of the plaintiffs in the case, said the judge's ruling that the "entire pipeline remains interrelated and requires one [environmental review] to understand the functioning of the entire unit" could open the door for them to seek a new review for the pipeline's entire route. "If they are going back to do a supplemental environmental impact statement, our position is they would need to evaluate all the new impacts of the pipeline," Hayes said. "That would take definitely months."

WHERE'S WHEELER? Acting EPA Administrator Andrew Wheeler travels to Michigan today to discuss issues plaguing the Great Lakes and meet with GOP Rep. Tim Walberg, a member of the Energy and Commerce Committee, and officials from the Michigan Department of Natural Resources and Department of Environmental Quality.

WHEELER DELIVERS MESSAGE ON HARASSMENT: Wheeler reaffirmed EPA's policy against harassment in a memorandum sent to staff Thursday. Wheeler wrote that he expects "all individuals working at the EPA — employees, supervisors and non-employees — will not engage in or be subjected to unlawful and prohibited harassment."

MURKOWSKI: FERC NOMINEE SHOULD GO LITMUS TEST-FREE: Senate Energy Chairman Lisa Murkowski wouldn't comment on POLITICO's report that DOE's Bernard McNamee will be nominated to FERC. But the Alaska Republican said she believes that the next nominee shouldn't face a litmus test over their view of the Trump administration's efforts to prop up coal and nuclear power plants, Pro's Darius Dixon reports. "I worry that this is going to be viewed as, 'If you don't commit to voting against or voting for, then you're not going to have my support,'" Murkowski said. "That's not the way that we should be selecting commissioners for the FERC."

GET YOUR COMMENTS IN: American Petroleum Institute's Frank Macchiarola reiterated the need for Renewable Fuel Standard reform on a call with reporters Thursday outlining the group's comments for EPA's proposed biofuel blending requirements for the coming year under the RFS. "Very simply what we want is an end to this program by 2022," he said. Macchiarola said API is "willing to compromise" on certain policies like a waiver for summertime sales of E15, but only if the program will sunset by 2022. "The problem again is that the ethanol industry has been dug in to not doing anything," Macchiarola said. He added legislation is being drafted to reform the program in both chambers, but noted challenges and lengthy debate are likely ahead. Comments are due today on EPA's proposed volumes, with the final rule due to be released by Nov. 30.

— **API is also looking at the proposed plan** by EPA and the Department of Transportation to freeze fuel efficiency standards for cars and trucks. "It is a very complex proposal to a very complex program," Macchiarola said. "We will say that we appreciate the administration's relooking at CAFE in the light of changing energy market realities."

SECRET'S OUT: Thursday was the last day for comments on EPA's proposed "secret science" rule, which would ban the use of studies that don't publicly disclose all their data. Getting their thoughts in under the wire, Sens. Sheldon Whitehouse, Brian Schatz, Maggie Hassan, Jeff Merkley, Ed Markey, Tammy Duckworth, Kirsten Gillibrand, Tom Carper and Kamala Harris banded together to make their opposition known. "The proposed rule is illegal because it is arbitrary and capricious," they write, adding that "the proposed rule is illegal because it is the result of an effective delegation of rulemaking authority to private interests."

The American Chemistry Council, meanwhile, applauded the proposal in its comment Thursday. "EPA's proposal codifies an important good governance principle — that government agencies should be as transparent as possible, within the bounds of the law, about scientific information relied upon and the justifications for the significant regulatory decisions they make." Still, the trade association also highlighted that implementation of the plan would benefit from better historical context and applicability, and that greater clarity is required on key definitions and regulatory text, among other recommendations.

FIGHTING FIRE WITH A FEDERAL PLAN: The Agriculture Department released a new, aggressive approach to fighting wildfires Thursday, with proactive steps. During a bipartisan press conference, Secretary Sonny Perdue unveiled [a plan](#) that emphasizes increased collaboration with states, implementation of mapping and remote sensing tools, and management practices such as prescribed burns and timber sales, Pro's Liz Crampton [reports](#). Though Perdue brushed aside specific questions on climate change's role, he said Interior Secretary Ryan Zinke is on board with the plan and noted further details and costs will be forthcoming from the U.S. Forest Service. "Really a lot of people ... when you talk about climate change, they want to talk about what the causes are," Perdue said. "[What] we're trying to talk about is the impact."

FERC RESTARTS PART OF PIPELINE: FERC modified a stop work order for the Mountain Valley Pipeline this week, allowing construction to restart for around 77 miles of the pipeline's West Virginia route with the exception of a 7-mile area surrounding the Weston and Gauley Bridge Turnpike Bridge Trail, MVP said Thursday. However, the company said about half of its construction workforce has been released due to continued delays. MVP said that it "remains committed to the earliest possible in-service date," though it noted that is now expected to arrive during the fourth quarter of 2019.

GREENS CALL FOR FERC REVIEW: The Southern Environmental Law Center and Appalachian Mountain Advocates [petitioned](#) the 4th U.S. Circuit Court of Appeals on Thursday to review FERC's approval of the Atlantic Coast Pipeline. The suit was filed on behalf of 13 other conservation groups. "FERC ordered the ACP construction stopped because the 4th Circuit determined that permits were issued without proper scrutiny," SELC attorney Greg Buppert said in a statement. "On the very same day, FERC rejected a rehearing request in which the conservation groups asserted that it also rushed through its decision to permit a pipeline that we don't need." The 4th Circuit last week vacated two permits issued for the project by the U.S. Fish and Wildlife Service and the National Park Service.

GREENS FILE FOIA SUIT: Environmental group Friends of the Earth filed a [lawsuit](#) Thursday against the Interior Department for lack of response to a Freedom of Information Act request. The lawsuit seeks to compel DOI to produce documents related to senior members of the department and the industries they regulate. The suit points to David Bernhardt's work as a lawyer and lobbyist for oil and gas companies and Vincent DeVito's time working as an energy industry representative. Friends of the Earth is being represented by the law firm Meyer Glitzenstein & Eubanks LLP.

AD-ING IT UP: Ahead of Wyoming's gubernatorial primaries Tuesday, a partnership between the Wyoming Wildlife Federation and Rocky Mountain Farmers Union, dubbed the Wyoming Conservation Legacy, will launch a five-figure ad campaign asking candidates to support conservation. The campaign will begin on Saturday and run through Aug. 21 with full-page print ads in the Casper Star Tribune and the Wyoming Tribune Eagle, separate radio buys on Wyoming Public Media programs, and digital ads across the state. See the ads [here](#).

MAIL CALL! ON THE FARM: The National Biodiesel Board sent [a letter](#) to farm bill conference committee lawmakers reiterating its support for the inclusion of biodiesel programs in the five-year bill.

STAR-STUDED SUMMIT: Attendees of the [Global Climate Action Summit](#) in San Francisco in September will hear from former White House officials, including former Vice President Al Gore and Secretary of State John Kerry. The summit announced Thursday night that new delegates will join the event, including Executive Secretary of the United Nations Framework Convention on Climate Change Patricia Espinosa and U.N. Special Envoy for Climate Action Michael Bloomberg. Actor Alec Baldwin and chimpanzee expert Jane Goodall will also attend.

GO NUCLEAR: The American Nuclear Society this week launched a nuclear science educational program for middle schoolers that covers topics like fission and fusion, and detecting radiation. The "[Navigating Nuclear](#):"

Energizing Our World" program is aligned with the Next Generation Science Standards framework, which provides an evidence-based foundation for scientific research.

MOVER, SHAKERS: Jack Cramton, policy adviser for Sen. Bill Cassidy (R-La.), will start Monday as a legislative affairs adviser at the Department of Energy's Congressional and Intergovernmental Affairs Office.

QUICK HITS

Judge restores WOTUS rule in 26 states Back

By Alex Guillén | 08/16/2018 03:20 PM EDT

A federal judge today ruled that the Trump administration violated administrative legal requirements when it delayed the start of the Obama administration's Waters of the U.S. rule by two years — a move that means the rule will now go into effect for about half the country.

The judge said EPA and the Army Corps of Engineers had unlawfully declined to consider any comments addressing substantive issues related to WOTUS or an earlier 1982 version when it proposed delaying the rule to give the agencies more time to repeal and replace it.

That was a fatal flaw, ruled Judge David Norton of the U.S. District Court for South Carolina, a George H.W. Bush appointee. Delaying the WOTUS rule has the effect of reverting to the 1982 rule, he wrote.

Norton's injunction means the Obama-era rule will take effect in 26 states. The other 24 are covered by two different injunctions, one issued to 13 states in 2013 and one issued to another 11 states in June.

However, WOTUS may be blocked nationwide again if the rule's opponents get their way. In another WOTUS lawsuit in a federal court in Texas, three states in February asked for a nationwide injunction of WOTUS. That court has yet to decide on the matter.

WHAT'S NEXT: The Trump administration is working to finalize its repeal of the Obama WOTUS rule. And EPA and the Corps are expected to propose a replacement rule in the near future.

Montana ruling could set back Keystone XL for months [Back](#)

By Ben Lefebvre | 08/16/2018 04:37 PM EDT

The fight over the Keystone XL pipeline isn't over yet.

District Court Judge Brian Morris' partial order that the State Department must conduct a supplemental environmental review to account for the pipeline's new path through Nebraska is another setback for developer TransCanada that's likely to delay construction of the nearly decade-old project by at least several months.

The order was a response to Nebraska regulators' approval in November 2017 of a route for the 830,000 barrel-a-day pipeline through the state that TransCanada had not proposed. The original environmental assessment the Trump administration used to approve Keystone XL earlier that year — a review conducted during the Obama administration — only considered a different route that TransCanada had planned for the pipeline.

The new route through Nebraska would cross through five counties that weren't included in the State Department's original environmental review, Morris noted in his order, meaning it would cross different waterways and require an additional pump station, .

Pipeline opponents say they hope to use Wednesday's ruling to push for a new broader study of the project.

Doug Hayes, a lawyer for the Sierra Club, one of the plaintiffs in the case, told POLITICO that Judge Morris' statement in his ruling that the "entire pipeline remains interrelated and requires one [environmental review] to understand the functioning of the entire unit" could open the door for them to seek a new review for the pipeline's entire route through the U.S.

"If they are going back to do a supplemental environmental impact statement, our position is they would need to evaluate all the new impacts of the pipeline," Hayes said. "That would take definitely months."

Jane Kleeb, who has long fought the pipeline and is now chairwoman of the Nebraska Democratic Party, said she thought process would drag out even longer.

"We think it buys us a year," she told POLITICO. "We just think there's a lot of significant hurdles in front of them."

Plaintiffs in the case said a new review would entail holding public hearings in Nebraska and consulting with Native American tribes whose land the pipeline would traverse.

Environmental groups have argued the pipeline posed a special risk because of the nature of the heavy oil it would transport, and that it would increase global carbon emissions. The Obama administration quashed the project in 2015, only to see their decision reversed when President Donald Trump took office a year and a half later.

A TransCanada spokesman declined to comment pending the company's review of the judge's decision.

Russ Girling, the company's chief executive officer, said during a call with investors earlier this month that the company hoped to make a final decision on whether to build the pipeline later this year or in early 2019. If approved, construction could start during the first quarter of 2019, Girling added.

A State Department official was not immediately available to comment.

Keystone XL also faces a test in Nebraska Supreme Court, where a lawsuit filed by environmental groups and state landowners challenges Nebraska regulators' approval of a route that TransCanada never formally requested. Hearings in that case are expected to start in October.

TransCanada is also waiting for several permits from federal agencies. Interior's Bureau of Land Management must issue right-of-way permits to cross federal land in Montana, and the Army Corp of Engineers must approve the pipeline's path over several waterways across the country.

Sources: DOE's McNamee to get FERC nod [Back](#)

By Eric Wolff and Darius Dixon | 08/08/2018 04:07 PM EDT

The White House plans to nominate Energy Department official Bernard McNamee to fill the FERC leadership seat being vacated by departing Commissioner Rob Powelson, three sources familiar with discussions tell POLITICO.

McNamee helped roll out Energy Secretary Rick Perry's proposal last year to save struggling coal and nuclear power plants — an issue that sources have said served as a key litmus test for Trump administration officials evaluating a replacement for Powelson, who is [set to resign](#) Friday.

FERC in January unanimously voted down that plan, which sought to create special payments for power plants capable of holding 90 days of fuel on-site. But the administration has been considering additional options such as invoking rarely used emergency powers to force power plants to run, which would potentially give McNamee a chance to provide the pivotal vote on the subsequent rates and rules as a commissioner.

It is unclear when President Donald Trump would formally nominate McNamee, and the vetting process still seems to be underway. It would likely take the Senate several months to confirm him, a process that would start with hearings at the Energy and Natural Resources Committee.

Neither the White House nor DOE immediately responded to requests for comment Wednesday.

McNamee, who runs the DOE's Office of Policy, has been in and out of the agency under Trump. He was deputy general counsel for energy policy last year when he worked on Perry's ill-fated proposal to FERC. In February, he left DOE for a senior post with the Texas Public Policy Foundation, a conservative think tank [with ties to Perry](#), before returning to DOE in May.

Before joining the Trump administration, McNamee previously worked at McGuireWoods, as chief of staff to Texas Attorney General Ken Paxton and as an aide to Sen. [Ted Cruz](#) (R-Texas).

Murkowski: Next FERC nominee should be free of litmus tests [Back](#)

By Darius Dixon | 08/16/2018 05:38 PM EDT

Alaska GOP Sen. [Lisa Murkowski](#) today declined to comment on POLITICO's [report](#) that DOE's Bernard McNamee would be nominated to FERC, but said she believes that the next nominee shouldn't face a litmus test over their view of the Trump administration's efforts to prop up coal and nuclear power plants.

"I worry that this is going to be viewed as 'If you don't commit to voting against or voting for, then you're not going to have my support,'" Murkowski, who chairs the Senate Energy and Natural Resources Committee, told POLITICO, referring to the administration's efforts to stave off coal retirements by potentially issuing emergency orders. "That's not the way that we should be selecting commissioners for the FERC."

Trump will want someone fairly aligned with the administration, she said, though she added that FERC came to the "right decision" in rejecting the Energy Department's controversial push to create special market payments for coal and nuclear plants last year. Still, she hoped that FERC's independence would be respected and that Democrats won't be reflexively opposed to the White House nominee in the way that they have been for Supreme Court nominee Brett Kavanaugh.

"A seat on the FERC is different than being a deputy secretary of Energy or Labor or whatever. Again, this is an independent regulatory agency that has a very different mission," she said. "The mission is not whatever the White House says it is. It is a very specific, statutory mission and so you want somebody who is going to be true to that. My hope is that the White House picks somebody who can demonstrate that they will be true to that."

USDA unveils plan for fighting wildfires [Back](#)

By Liz Crampton | 08/16/2018 03:00 PM EDT

USDA said today it's embarking on a new, aggressive approach to combat wildfires by taking preventative steps like working more with states and upping use of forest management tools.

Department officials at a press conference unveiled a 22-page plan that emphasizes increased collaboration with states, implementation of mapping and remote sensing tools, and management practices such as prescribed burns and timber sales.

Further details and costs of the initiative will be forthcoming after the U.S. Forest Service and other agencies hold discussions with state partners, USDA Secretary Sonny Perdue said. He added that Interior Secretary Ryan Zinke is on board, although he was not in attendance.

The plan comes as the West is enduring yet another brutal wildfire season after 2017 ranked as the most expensive year for wildfires. Federal agencies last year spent \$2.9 billion to suppress wildfires across the country, according to USDA.

"Today to truly protect our forest and communities, we must increase the size of our projects and access larger landscapes across boundaries," Perdue said. "Frankly we cannot do it ourselves. It's got to be done in the shared stewardship of state and local communities."

Perdue was joined by interim Chief of the U.S. Forest Service Vicki Christiansen and Sens. [Maria Cantwell](#) (D-Wash.), [Lisa Murkowski](#) (R-Alaska), [Ron Wyden](#) (D-Ore.) and [Steve Daines](#) (D-Mont.).

Subject: Morning Energy: How Trump favored Texas over Puerto Rico — EPA holds final 'listening session' on climate rule repeal — DOE gets pushback on 'market-based' efficiency rules

By Kelsey Tamborrino | 03/27/2018 05:45 AM EDT

With help from Nick Juliano and Eric Wolff

HOW TRUMP FAVORED TEXAS OVER PUERTO RICO: A double standard has emerged in President Donald Trump's handling of disaster relief efforts in Texas versus in Puerto Rico, POLITICO's Danny Vinik found in a new investigation out today. A review of public documents, never-before-published FEMA records and interviews with more than 50 people involved with disaster response show an imbalance that tracks with one core person's attention: the president.

Behind the scenes, people with direct knowledge of Trump's comments said the president was focused less on the details of the relief effort than on public appearances, repeatedly using conference calls and meetings to direct FEMA Administrator Brock Long to spend more time on television touting his agency's progress. And as the administration moves to rebuild Texas and Puerto Rico, the contrast in the Trump administration's responses are taking on new dimensions, Danny writes.

During the first nine days after Hurricane Harvey, FEMA provided 5.1 million meals, 4.5 million liters of water and over 20,000 tarps to Houston; but in the same period, it delivered just 1.6 million meals, 2.8 million liters of water and roughly 5,000 tarps to Puerto Rico.

The federal government has already begun funding projects to help make permanent repairs to Texas infrastructure. But in Puerto Rico, that funding has yet to begin, as details of an experimental funding system are negotiated with Trump's Office of Management and Budget — an experimental formula that multiple congressional staffers and people with knowledge said White House officials told Puerto Rico Gov. Ricardo Rosselló to agree to if wanted money for his island. Read it [here](#).

GOOD TUESDAY MORNING! I'm your host Kelsey Tamborrino. Andrew Fasoli of the American Chemistry Council was fastest in identifying former first lady Helen Herron Taft as the first to plant the saplings of the Japanese cherry trees in D.C., which now surround the Tidal Basin and Capitol grounds. For today: Who is the only former Cabinet member to be selected as "designated survivor" twice during past State of the Union addresses? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

POLITICO Space is our new, free weekly briefing on the policies and personalities shaping the second space age in Washington and beyond. **Sign up today to start receiving the newsletter right at launch on April 6.** *Presented by Boeing.*

OFFSHORE ORCHESTRATION: Interior Secretary Ryan Zinke's meeting with Florida Gov. Rick Scott at the Tallahassee airport back in January — after which Zinke declared the state "off the table" for expanded offshore drilling — wasn't as spontaneous as it first seemed, POLITICO Florida's Matt Dixon reports. Scott's office cast the announcement as a hastily arranged example of the governor's ability to influence Trump administration policy, all while dismissing any suggestion that the move had anything to do with his expected

entrance into this year's Senate race. But Matt got ahold of 1,200 documents — including emails, text messages and phone records — that show Interior officials and Scott aides had been coordinating days ahead of the meeting. More from Matt [here](#).

ONE LAST TIME: EPA will hold its final "[listening session](#)" today in Gillette, Wyo., on the proposed repeal of the Clean Power Plan. A preliminary list of speakers shows a range of voices will attend the session — including various speakers from Cloud Peak Energy, a firm headquartered in Gillette that mines coal in the Powder River Basin, and the Rocky Mountain Coal Mining Institute. Sens. [John Barrasso](#) and [Mike Enzi](#) — who have previously [applauded](#) the proposed repeal — are also scheduled to speak. Barrasso plans to emphasize how the rule would hurt energy workers in his state, an aide tells ME, and will highlight bipartisan [efforts](#) in Congress to promote carbon capture technologies.

On the other side, advocates from the American Lung Association, Moms Clean Air Force and National Wildlife Federation will speak. Moms Clean Air Force will highlight EPA's "legal and moral obligation" to action on greenhouse gas emissions, according to the group's talking points. Administrator Scott Pruitt won't be there today, but he is set to [make a separate trip](#) to Wyoming this week to visit the state's coal-mining operations.

WHERE'S PERRY? Energy Secretary Rick Perry is in California today, where he'll tour the Lawrence Berkeley National Laboratory and hold an all-hands meeting with the facility's employees at 3 p.m. The trip follows Perry's [visit](#) to the Lawrence Livermore National Lab on Monday.

REFINERS: MORE THAN EPA'S PES WAIVER IS NEEDED TO SURVIVE THE RFS : Two Philadelphia-area refiners said a consent decree between EPA and Philadelphia Energy Services was an acknowledgment by the government that the Renewable Fuel Standard is broken and needs significant reform. PBF told DOJ, which took comments on the agreement until Monday, that "one-time forgiveness of RIN obligations fails to remedy the root cause for the bankruptcy and provides the wrong incentives to the [Renewable Identification Number] market." Monroe said the agreement "is a reflection, an acknowledgment, of the economic harm caused by the RFS program." Both of them were joined by refining giant Valero in arguing that the program needs to be changed more radically than just the one-time waiver offered by EPA. Ethanol producers said in their own earlier comments that they oppose the consent decree and reject the idea that PES' bankruptcy could be blamed on the RFS.

Read Monroe's comments [here](#), PBF's [here](#) and Valero's [here](#).

JUDGE LEAVES SOLAR TARIFFS IN PLACE: A judge in the U.S. Court of International Trade on Monday rejected requests for a stay of U.S. solar tariffs pending an appeal. Silfab Solar, Heliene, Canadian Solar (USA) and Canadian Solar Solutions had been hoping the court would block the 30 percent tariff the Trump administration imposed on imported solar panel and solar cells last month. The court had rejected their motions for a temporary restraining order and preliminary injunction earlier in March.

TRADE DEADLINE: Can appliances be regulated like automobiles? That's the question the Energy Department posed last year in an effort to apply Trump's regulatory reform goals to its efficiency standards program, and responses were due by Monday. DOE asked for input on several potential reforms, including enforcing efficiency rules similar to the Corporate Average Fuel Economy program, which averages performance across an automakers' entire vehicle fleet. DOE's request for information also pointed to state-level renewable portfolio standards or California's cap-and-trade program as examples of the ideas it was considering.

But those "market based" approaches probably won't work, numerous commenters told DOE. The main barrier is "anti-backsliding" provisions in the Energy Policy and Conservation Act, which prevents DOE from weakening existing requirements. Current law "precludes the use of averaging, credit-trading, or providing feebates as an alternative to minimum energy-efficiency requirements," the Alliance to Save Energy, a pro-

efficiency group, wrote in its [comments](#). A coalition of industry trade associations agreed that such mechanisms would be unlikely to work; in their [comments](#), the groups, including the Air-Conditioning, Heating and Refrigeration Institute and the Association of Home Appliance Manufacturers, urged DOE "to focus its limited resources on reforming the existing program" through changes to a separate process improvement rule. Read additional comments from [AHRI](#), the [Natural Resources Defense Council](#), [Lennox International](#), [E2](#), [Whirlpool](#), the [Edison Electric Institute](#), [Dow](#), [Southern Company](#) and the [California Energy Commission](#).

DEFENDING EPA'S SCIENCE: Former EPA Administrator Gina McCarthy and Janet McCabe, the former acting assistant administrator of the Office of Air and Radiation, [wrote an op-ed](#) in The New York Times Monday defending EPA's use of scientific studies to support its regulations. Conservatives have long accused the agency of relying on "secret science," and Pruitt says he plans to start relying only on publicly available data. But McCarthy and McCabe say that would deprive EPA of valuable research based on individuals' private health records or proprietary information that businesses want to protect. "Opponents of the agency and of mainstream climate science call these studies 'secret science,'" the pair writes. "But that's simply not true."

BSEE: WE COULD USE YOUR HELP: Interior is calling on its career staff to come up with ways to speed up the offshore drilling permitting process, Pro's Ben Lefebvre [reports](#). The Bureau of Safety and Environmental Enforcement will assemble teams of employees across departments to periodically review the process and look for ways to improve its efficiency across the agency, BSEE said Monday.

MAIL CALL! CALLING OUT WEAK LEASE SALES: House Natural Resources ranking member [Raúl Grijalva](#) sent a [letter](#) to Zinke Monday, requesting additional information on his agency's budget priorities. Grijalva also asked Zinke to keep royalty rates for offshore drilling development stable, in light of [weak demand](#) for lease sales.

— **Sens. [Sheldon Whitehouse](#) and [Brian Schatz](#)** wrote to the CEOs of [BlackRock](#) and [JP Morgan Chase](#) questioning the firms' investment in companies active in the Amazon rainforest.

NEW JERSEY TO BLOCK DRILLING: New Jersey Gov. Phil Murphy is expected sign a bill that would prohibit state regulators from approving permits for pipelines or related infrastructure to facilitate expanded offshore drilling in federal waters. Pro New Jersey's Danielle Muoio [has more](#).

MOVER, SHAKER: Friends of the Earth announced Monday that Liz Butler will become vice president of organizing and strategic alliances. Butler will lead a staff of five organizers and 13 organizing fellows in grassroots environmental campaigns.

— **Michael Pratt is joining the American Enterprise Institute's** press office as director of media relations and marketing. Pratt previously served in several other roles at AEI in the digital and media relations departments.

How Trump favored Texas over Puerto Rico [Back](#)

By Danny Vinik | 03/27/2018 05:00 AM EDT

SAN JUAN, Puerto Rico — As Hurricane Maria unleashed its fury on Puerto Rico in mid-September, knocking out the island's electrical system and damaging hundreds of thousands of homes, disaster recovery experts expected that only one man could handle the enormity of the task ahead: Mike Byrne.

But Byrne, a widely acknowledged star of the Federal Emergency Management Agency, remained in Houston, which had been ravaged by Hurricane Harvey less than a month earlier.

Today, disaster recovery experts still express shock that FEMA kept Byrne in an already-stabilizing Texas and didn't send him to Puerto Rico for three more weeks. But now, the decision strikes many as emblematic of a

double standard within the Trump administration. A POLITICO review of public documents, newly obtained FEMA records and interviews with more than 50 people involved with disaster response indicates that the Trump administration — and the president himself — responded far more aggressively to Texas than to Puerto Rico.

"We have the U.S. Army and Marine Corps. We go anywhere, anytime we want in the world," bemoaned retired Army Lt. Gen. Russel Honoré, who led the military's relief efforts after Hurricane Katrina. "And [in Puerto Rico] we didn't use those assets the way they should have been used."

No two hurricanes are alike, and Harvey and Maria were vastly different storms that struck areas with vastly different financial, geographic and political situations. But a comparison of government statistics relating to the two recovery efforts strongly supports the views of disaster-recovery experts that FEMA and the Trump administration exerted a faster, and initially greater, effort in Texas, even though the damage in Puerto Rico exceeded that in Houston.

Within six days of Hurricane Harvey, U.S. Northern Command had deployed 73 helicopters over Houston, which are critical for saving victims and delivering emergency supplies. It took at least three weeks after Maria before it had more than 70 helicopters flying above Puerto Rico.

Nine days after the respective hurricanes, FEMA had approved \$141.8 million in individual assistance to Harvey victims, versus just \$6.2 million for Maria victims.

During the first nine days after Harvey, FEMA provided 5.1 million meals, 4.5 million liters of water and over 20,000 tarps to Houston; but in the same period, it delivered just 1.6 million meals, 2.8 million liters of water and roughly 5,000 tarps to Puerto Rico.

Nine days after Harvey, the federal government had 30,000 personnel in the Houston region, compared with 10,000 at the same point after Maria.

It took just 10 days for FEMA to approve permanent disaster work for Texas, compared with 43 days for Puerto Rico.

Seventy-eight days after each hurricane, FEMA had approved 39 percent of federal applications for relief from victims of Harvey, versus 28 percent for Maria.

Those imbalances track with another one: the attention of President Donald Trump. In public, Trump appeared much more concerned with the victims of Harvey than Maria. He visited Houston twice during the first eight days after the hurricane, but didn't visit Puerto Rico for 13 days. In the first week after the disasters, Trump sent three times as many tweets about Harvey as Maria — 24 about the plight of Texas and eight about Puerto Rico, including a series of comments about Puerto Rico's debt level and quality of infrastructure that local officials considered insulting and enraging while lives were still in jeopardy.

"Wow - Now experts are calling #Harvey a once in 500 year flood! We have an all out effort going, and going well!" he crowed about Texas on Aug. 27, two days after the storm made landfall.

On Sept. 30, 10 days after Maria, and while fielding criticism from Puerto Rican officials, Trump testily tweeted: "[They] want everything to be done for them and it should be a community effort. 10,000 Federal workers now on island doing a fantastic job."

Behind the scenes, according to people with direct knowledge of his comments, Trump was focused less on the details of the relief effort than on public appearances, repeatedly using conference calls and meetings designed

to update him on the relief effort to direct FEMA Administrator Brock Long to spend more time on television touting his agency's progress.

In addition, Trump spent the first weekend after the Puerto Rico crisis tweeting repeatedly about NFL players kneeling for the national anthem. Those messages, experts said, send a subtle, yet important signal to the federal bureaucracy.

"On Texas and Florida [during Hurricane Irma], the president was very vocal and engaged in the run-up to the storm. His messaging was frankly pretty good," said Jeremy Konyndyk, the former top disaster response official at USAID under former President Barack Obama. "If you look at his public messaging on a comparable timeline around Puerto Rico, there's virtually nothing. ... That sends a signal to the whole federal bureaucracy about how they should prioritize."

FEMA and administration officials defend the response to the storm, saying it posed unprecedented logistical challenges as the agency faced perhaps the most demanding stretch in its 39-year history. Hurricane Maria was the third major hurricane to strike the United States in less than a month. Combine that with an overwhelmed local government and nonexistent communications and it created a fog-of-war atmosphere that made it difficult to determine what resources were needed when and how to get them to an island whose ports and airports were heavily damaged.

In a statement to POLITICO, Long defended FEMA's efforts, arguing that, unlike in Texas, the agency was forced to take on a greater role in the post-disaster response. "We provided Puerto Rico the same, if not more support, as we have for all presidentially declared disasters across the nation," he said, "but an optimal response cannot rely on FEMA's efforts alone."

A spokesperson for the National Security Council said Trump was "personally engaged" on the response and his "primary directive" to Long was to oversee a unified and effective federal response.

But in that situation, former FEMA officials say, extra political pressure and impetus can make a difference. Puerto Rico, as a U.S. territory rather than a state, has just a single, nonvoting delegate in Congress, compared with the 36 representatives and two senators from Texas who loudly demanded proper resources for their state. Likewise, victims of Superstorm Sandy had six senators and dozens of U.S. representatives in the states of New York, New Jersey and Connecticut to demand extra disaster relief, including powerful lawmakers like Chuck Schumer, then the No. 3 Democrat in the Senate.

"After Sandy, [Rep.] Peter King was all over FEMA continuously. So was Schumer," said Michael Balboni, a former New York state legislator and an expert on disaster response. That constant pressure on senior federal officials, he added, is critical to getting the proper resources after a disaster.

In that vacuum, presidential leadership plays a larger role. But as the administration moves to rebuild Texas and Puerto Rico, the contrast in the Trump administration's responses to Harvey and Maria is taking on new dimensions. The federal government has already begun funding projects to help make permanent repairs to Texas infrastructure. But in Puerto Rico, that funding has yet to start, as local officials continue to negotiate the details of an experimental funding system that the island agreed to adopt after a long, contentious discussion with Trump's Office of Management and Budget.

Multiple congressional staffers and people with direct knowledge of the arrangement said White House officials told Puerto Rico's governor, Ricardo Rosselló, that if he didn't agree to the experimental formula, the island wouldn't get the money, effectively forcing the island to take a huge gamble since it would be responsible for any cost overruns, a requirement that doesn't exist for Texas. The White House denies making that demand.

"There is no doubt that Puerto Rico gets treated differently to a state. And there is no doubt that it has been true for the disaster response as well," Rosselló said in an interview at the governor's mansion in Old San Juan. He added, "Our objective is to eradicate this notion of second-class citizenship in the United States, so that whenever a disaster hits — whether it's Texas, Florida, New York or Puerto Rico — the federal government responds equally in all cases."

After Hurricane Harvey hit the Houston region on Aug. 25, dropping over 50 inches of rain and flooding whole swaths of the metropolitan region, FEMA quickly mobilized, sending out mission assignments to a long list of federal agencies. In less than a week, U.S. Northern Command deployed 73 helicopters and the Coast Guard sent an additional 18. Within nine days, a whopping 30,000 federal personnel were helping an army of state and local authorities with the response, conducting search-and-rescue missions, removing debris and helping victims apply for disaster assistance, among many other assignments.

The response was effective enough that by Sept. 14, Texas Gov. Greg Abbott reported that "The risk to lives has now been reduced, if not completely eliminated."

On Sept. 20, after four days of increasingly dire forecasts, Hurricane Maria made landfall in a Puerto Rico already reeling from Hurricane Irma two weeks earlier.

POLITICO's analysis of data on Harvey and Maria, pieced together through news releases, internal FEMA documents, revealed for the first time, and numbers supplied by the agency, indicates that FEMA's response to Maria was much slower than it was to Harvey. Helicopters, which are crucial to rescue people from remote, flooded areas, were slow to arrive. In the initial days, Northern Command had, at most, just a few dozen helicopters on the island and the U.S. Virgin Islands while the Coast Guard deployed just six. By Day 9, just 10,000 federal personnel were on the island, about a third as many as were dealing with Harvey at the same point. Those figures increased over time — Northern Command eventually supplied over 70 helicopters and the government deployed more than 20,000 personnel — but the ramp-up took more than three weeks.

The increase in personnel coincided with the arrival of Byrne. A former New York City firefighter, Byrne has spent his career working in emergency management, serving as a senior regional FEMA officer after 9/11 and as a private sector consultant, helping manage a \$10 billion recovery program after hurricanes Katrina and Rita. After Superstorm Sandy in 2013, he led FEMA's recovery operations, a position known as the federal coordinating officer, or FCO. Last September, he was promoted to assistant administrator for field operations, overseeing the entire disaster workforce.

Despite his promotion, Byrne still often goes out into the field to oversee the most important assignments. So it came as no surprise to disaster-recovery experts when Long, the FEMA administrator, announced on Sept. 1, a week after Harvey hit Houston, that Byrne was heading down to Houston to help with the recovery efforts.

The surprise came on Sept. 20, the day that Hurricane Maria hit Puerto Rico, when FEMA named Alejandro De La Campa the FCO, while it kept Byrne in Texas.

De La Campa, a Puerto Rican native who runs FEMA's local office on the island, has strong relationships with Puerto Rican officials but is not considered one of FEMA's top disaster response leaders, much less the best person for one of the most complicated and challenging disasters in FEMA's history. Even at the time, the decision shocked former FEMA officials, many of whom thought well of De La Campa, who goes by Alex, but were expecting Long to deploy a much more experienced official for such a critical job.

"When I started hearing things, I was thinking there are a lot of heavy hitters sitting on the bench," said Craig Fugate, the head of FEMA during the Obama administration. Fugate acknowledged that it's difficult to second-guess the decision-making without being in the meetings at the time. But he said, "I would have put my heavy hitters in there."

The storm impacted every part of the island, wiping out the electricity system and leaving even the local first responders as victims, many of whom lost power and first had to protect their families. Even today, more than 5 percent of the island remains without power. While the Houston region has about twice as many people as Puerto Rico, the severity and nature of the damage caused by Maria overshadowed that of Harvey. As such, FEMA eventually both received and approved more applications for individual assistance from victims of Hurricane Maria than of Hurricane Harvey.

"You had almost a perfect storm," said Jeff Parks, who worked for Honoré on the Katrina recovery effort and traveled to Puerto Rico in a private capacity soon after Maria.

Byrne said he wasn't involved in the FCO decision for Puerto Rico but that he wasn't surprised with the selection of De La Campa, explaining that he has a "stellar reputation." FEMA declined to make De La Campa available for an interview. Asked for further information on why De La Campa was initially selected to serve as the FCO, a FEMA spokesperson said the "question has been answered and addressed."

FEMA also deployed Justo "Tito" Hernandez, an experienced first responder who previously had served as an FCO on the island, as De La Campa's deputy. Hernandez, also a Puerto Rico native, did not comment directly on the selection, instead stressing that FEMA's personnel in Puerto Rico were a team.

Still, he added, "Mike [Byrne] is the best person for the job."

The best person for the job, though, was nearly 2,000 miles away during the first three weeks after Hurricane Maria made landfall, and he was quickly missed. On Oct. 10, in a five-sentence news release, billed as an expansion of the leadership team, FEMA announced it was replacing De La Campa with Byrne.

Former FEMA officials and disaster response experts said the slow ramp-up in force — from the delay in deploying Byrne to the limited number of helicopters — in Puerto Rico and the U.S. Virgin Islands is evidence that the agency underestimated the ferocity of the storm and failed to properly pre-position assets.

"That says that they didn't have the right footprint in place," said Konyndyk. "It's one thing if that's happening over a week or two. It's very different if that's taking a month."

Federal officials caution against comparing Harvey and Maria, arguing that Texas' and Puerto Rico's very different geographic, financial and political situations make comparisons misleading. After POLITICO requested data from U.S. Northern Command on helicopters deployed on certain dates after Maria and Harvey, a spokesperson declined to provide any figures, saying that the only overlap between Florida, Texas and Puerto Rico was that all three experienced hurricanes.

"That's where the comparison stops for us," he said.

Byrne and Hernandez offered two main explanations for the limited number of military assets, particularly helicopters, in the first week after Hurricane Maria. They said it was much easier to deploy helicopters to Houston than to Puerto Rico and the U.S. Virgin Islands, which were 1,000 miles from the United States and had no working ports or airports immediately after the disaster. And even if FEMA could get more responders to Puerto Rico, they said, it had no place to house them.

But it still took weeks for FEMA and the Department of Defense to increase their forces in Puerto Rico and the U.S. Virgin Islands, even though the main airports and ports were opened within a few days. Disaster-recovery experts also faulted the government for failing to direct the aircraft carrier USS Abraham Lincoln and other ships, which have their own fleets of helicopters and were deployed off the coast for Florida to help with Hurricane Irma in early September, to help with the response efforts to Hurricane Maria. The Lincoln began to position itself to help with Irma two days before the storm hit Florida. FEMA never requested that the Department of Defense send the Lincoln to Puerto Rico and the U.S. Virgin Islands.

The USNS Comfort, a hospital ship, didn't even embark from Norfolk, Virginia, to reach Puerto Rico and the U.S. Virgin Islands until nine days after the storm, despite the fact that few hospitals in the region had consistent power, leaving thousands of patients in dire medical condition.

FEMA directed questions about the Comfort and Lincoln to the Department of Defense, which said that during Irma, the Lincoln was also not requested by FEMA for help with civil authorities but instead helped secure military installations in Florida. A spokesperson for NORTHCOM also said that an agreement between DOD and FEMA to send the Comfort was reached "on/about Sept. 25," five days after the storm. It then takes the ship roughly four days to assemble its crew, add necessary supplies and start the ship's engine before it can embark, the spokesperson said.

Other data raise questions about FEMA's claim that a lack of housing prevented a quicker ramp-up in federal personnel on the island.

According to internal FEMA documents given to POLITICO by a person involved in the response efforts, a week after Hurricane Maria, FEMA had filled only 150 of 250 beds that were set aside for first responders at the Puerto Rico Convention Center. Two weeks after Maria, FEMA had filled only 1,258 of 2,250 beds allotted for its first responders at the convention center and aboard two training vessels from the U.S. Maritime Service.

A FEMA spokesperson did not say why the beds weren't used but explained that the numbers were fluid during those days as FEMA staff frequently moved to different parts of the island. "During an emergency, deployed staff comes in and out and depending on where they are needed, they are moved around to support federal and state partners," the spokesperson said.

Nonetheless, Byrne and Hernandez said in separate interviews that FEMA had enough resources to complete its missions, whether conducting search-and-rescue operations or providing food and water to the victims.

"The fact that we ramped up to about 20,000 people in the first month, month-and-a-half, that's impressive to me," said Hernandez. "Whoever says it was slow, I ask them where were you. Where were you when we were moving as fast as we could with the resources that we had?"

Byrne added: "We didn't have any deaths from starving on this. We didn't have any deaths from dehydration. We got plenty of water and food out to people."

People on the ground, however, describe a different scene, one defined by mass confusion and little coordination among the dozens of different nonprofit groups and federal, state and local officials involved in the response, most of whom had little ability to communicate with one another. They said FEMA was mostly absent during the initial days after the storm.

"For the first couple weeks, right after the hurricane, we were the only thing moving out there," said Mike Soto, a founder of a Puerto Rican think tank who became a leader in the response effort after the storm hit Puerto

Rico. "The government was definitely catatonic. FEMA wasn't around and when they were finally here, it took them awhile."

Bernardo Márquez, the mayor of Toa Baja, a municipality of less than 100,000 people in northern Puerto Rico, said just two pallets of water and one pallet of food arrived from FEMA in the first week, forcing local officials to rely on donations from local supermarkets and nonprofits like the Red Cross. "It was slow," he said.

FEMA did deliver some supplies during the first few weeks: In the first nine days after Hurricane Maria, the agency provided 1.6 million meals, 2.8 million liters of water and roughly 5,000 tarps to the island. But that was only a third as many meals and half as much water as it provided to Texas in the same time period after Harvey. Within three days of Harvey's landfall, FEMA had delivered over 20,000 tarps to Texas.

The agency argued that any comparison of the delivery of assistance between Puerto Rico and Texas is effectively impossible. Texas is accessible by roads, making it easy for FEMA to truck food, water and other emergency supplies into Houston while Puerto Rico is 1,000 miles away from the mainland U.S. "We moved stuff. We moved stuff pretty efficiently," said Byrne. "And the challenge here was getting it by ship."

According to a document obtained by POLITICO through the person involved in the response efforts, federal officials were also slow to begin installing "blue roofs" on the island, the hard, plastic covering that allows victims to return and live in their homes before permanent repairs begin.

Twenty-five days after the storm, the Army Corps of Engineers, the federal agency responsible for installing the roofs, had completed just 260 installations in Puerto Rico out of an estimated 60,000 that were needed, equal to 0.4 percent.

There's no similar data for Harvey because Texas didn't request any blue roofs and instead handled temporary housing relief in the first weeks after the storm by itself. But 25 days after Hurricane Irma struck Florida, the Army Corps had installed 1,600 blue roofs, out of 15,000 estimated, or 10.7 percent. A week later, the Army Corps had completed more than a third of the installations in Florida, compared with just 2.8 percent during the same period in Puerto Rico.

Jacqueline Tate, a spokeswoman for the Army Corps, wrote in an email that the agency faced multiple challenges with its blue roof program in Puerto Rico, including locating where victims lived based on their provided address and road closures resulting from landslides and debris.

Experts said it's difficult to pinpoint the exact costs of all these delays.

The official death toll as a result of Hurricane Maria currently stands at 64, compared with 103 from Hurricane Harvey, but a New York Times report in December, using a statistical analysis to compare deaths in the weeks after the storm with a similar period in 2015 and 2016, put the number as high as 1,052. According to the report, deaths from sepsis, pneumonia and breathing disorders jumped considerably. Local officials and experts are suspicious of FEMA's official death count and also said the delays, if not causing deaths, significantly aggravated the pain and stress felt by many Puerto Ricans.

Eventually, officials agree, FEMA's distribution of food and water accelerated; since the storm, FEMA has distributed more than 64 million meals and 72 million liters of water, both records for the agency. But the initial delays represented lost time that can never be recovered.

For FEMA, the response to Hurricane Maria put the agency in an unfamiliar position, forcing it to take on the lead role in the response when it typically acts as a support agency, fulfilling requests from state and local officials. In Puerto Rico, the state and local governments didn't always know what they needed or what they could even request. But after FEMA struggled under similar conditions after Hurricane Katrina, Congress gave

the agency additional authorities to send commodities and help with the emergency response even before it receives official requests from local officials. Many disaster response experts suggested that FEMA failed to use those authorities effectively after Hurricane Maria.

"My big mantra is I never get time back," said Fugate, the former FEMA administrator from the Obama administration, adding that he always erred on the side of sending relief supplies rather than waiting for an official request.

As hurricane victims look to start rebuilding their lives in the aftermath of a storm, many first turn to FEMA to apply for federal assistance. Applicants can receive a quick infusion of cash — up to \$34,000, depending on their needs and the severity of the damage — to start fixing their homes, money that also helps jump-start the local economy. But that money was slow to arrive in Puerto Rico.

According to FEMA data on its individual assistance program, the agency processed applications more slowly for victims of Hurricane Maria than victims of Hurricane Harvey. Nine days after Harvey, FEMA had already approved more than \$141.8 million in federal assistance, compared with just \$6 million during the same period after Maria. In fact, from Oct. 2 to Oct. 9, FEMA approved just \$6,008 in individual assistance for Puerto Rico.

A FEMA spokesperson explained that communications were a challenge in the first days after the storm, preventing Puerto Ricans from using the online application and making it difficult for federal officials to follow up with survivors. Many victims also had trouble proving their residency with a deed or title, the spokesperson said.

Still, Puerto Ricans found a way to register in the first two weeks. By Oct. 5, the agency had received 248,281 registrations for individual assistance, rising to 496,418 by Oct. 13.

Seventy-eight days after the two hurricanes, FEMA had received 18 percent more applications from victims of Maria than from victims of Harvey but had approved 13 percent more applicants from Harvey than from Maria. At the time, 39 percent of applicants from Harvey had been approved compared with just 28 percent of applicants from Maria.

"People are grateful for what FEMA was done. Mayors won't openly say we hate FEMA," said Sen. Eduardo Bhatia, the minority leader of the Puerto Rico Senate. "But if you talk to them enough, they will say it was totally frustrating. It was an absolute mess. No communication, no coordination, no chain of command and certainly no reasonable plans given the magnitude of the problem."

A little before noon on Oct. 3, Air Force One landed at the Luis Muñiz Air National Guard Base in Carolina, Puerto Rico, where Trump was scheduled to get a first-hand look at the devastation wrought by Hurricane Maria, his first trip to the island since the storm hit 13 days earlier. He visited Texas twice in the first eight days after Harvey but was slower to visit Puerto Rico, the NSC spokesperson said, so that his trip "didn't have a negative impact on ongoing response operations."

Nonetheless, Puerto Ricans were grateful for the chance for national attention, given what they considered the still-daunting magnitude of the crisis.

Quickly, however, they realized that Trump's visit wasn't going to include the worst-hit areas, and that Trump didn't have patience for any complaints.

Instead, the carefully scripted trip appeared to be something of a victory tour, as Trump praised FEMA's response and gave an "A+" to Long, the FEMA administrator, and touted the fact that the death count at the time stood at 16, compared with nearly 2,000 after Hurricane Katrina.

At a briefing on the base, he indirectly alluded to Puerto Rico's financial woes, suggesting that the federal response to the storm was creating new challenges for Mick Mulvaney, the White House budget director. "Now, I hate to tell you, Puerto Rico," Trump said, "but you've thrown our budget a little out of whack because we've spent a lot of money on Puerto Rico, and that's fine."

On a walking tour during the afternoon, Trump visited a neighborhood in nearby Guaynabo, an effort to show the president the damage on the ground. But the area had been one of the least-affected neighborhoods in Puerto Rico, according to multiple Puerto Rican officials, because most of the houses were constructed with cement.

"Nothing happened. Everything was perfect," said Sandra Rodriguez, a communications consultant who lives eight minutes away from the neighborhood. "The only thing was, it didn't have any electric power."

At a church, Trump handed out bags of rice to local residents before taking paper towels and impersonating a basketball player as he shot them into the crowd, whose members scrambled to grab the free supplies. To many Puerto Rican residents, that image — Trump's arms arched as if shooting a three-pointer — illustrated the president's cavalier attitude toward the island.

"The president's visit made it very clear that he did not think this was a big deal," said Bhatia, the Senate minority leader. "The whole paper towel incident was silly. He was making a joke out of it."

The NSC spokesperson defended the location chosen for Trump's walking tour, saying the president was fully aware of the challenges facing Puerto Rico. "Had the president visited areas that were severely impacted by the Hurricane, security measures would have required that rescue and relief efforts be temporarily redirected, which is not what the president wanted," the spokesperson said.

James Norton, a senior official in the Department of Homeland Security under former President George W. Bush, said public appearances and visits to storm-wrecked regions play an important role in establishing priorities within the federal government — as Bush learned the hard way when he was criticized for not getting more personally involved in the Katrina recovery effort.

"Bush made every effort to correct [the mistakes made after Hurricane Katrina] given how many visits he made to the region," he said. "Compare that to Trump: He made one visit. That type of executive attention drives the bureaucracy. While there might be people working behind the scenes, not having that constant attention and trips to region does have an impact on the level of effort."

To some aides, Trump didn't seem to approach Hurricane Maria any differently than Hurricane Harvey. In both cases, he lauded the efforts of FEMA and the military, heaping praise on officials who he believed were reflecting positively on his administration. "He came across as a coach, like Mickey in those Rocky movies," one person familiar with his comments said. "'You're killing them, go get 'em.'"

But in Trump's Twitter feed, a proxy for his daily attention, he didn't seem particularly concerned with the fate of Puerto Rico after Hurricane Maria. According to a POLITICO tally, he tweeted just eight times about the island in the week after the storm, often to criticize Puerto Rico. In a three-part tweet on Sept. 25, he said Puerto Rico "is in deep trouble," due to its debt and infrastructure; during that same week, he tweeted 18 times about NFL players not standing for the national anthem. In comparison, in the week after Harvey, he was laser focused on the storm, tweeting 24 times about the relief efforts in Texas and repeatedly praising the first responders.

Trump also got into verbal disputes with local Puerto Rican officials, including the mayor of San Juan, Carmen Yulín Cruz, who criticized the federal response at a Sept. 29 news conference, saying that "We are dying and you are killing us with the inefficiency."

A day later, Trump struck back, slamming Cruz for her "poor leadership" and tweeting that she and "others in Puerto Rico ... want everything to be done for them."

"It was a little disheartening to see the exchange between the president and the mayor," said Michael Coen, former chief of staff of FEMA during the Obama administration. "It doesn't help morale at FEMA and the staff who are working hard."

On Oct. 12, more than three weeks after Hurricane Maria hit Puerto Rico, the president suggested that the federal government wasn't prepared to help the island indefinitely. "We cannot keep FEMA, the Military & the First Responders, who have been amazing (under the most difficult circumstances) in P.R. forever!" The next day, he walked back that tweet in another tweet, saying about Puerto Ricans, "I will always be with them!"

To many Puerto Rican officials and disaster experts, Trump's public comments about Puerto Rico, a territory with no voting representation in Congress, exacerbated the challenges it faces with the federal bureaucracy due to its political status. "There is certainly a different treatment and many of these things, in order to get some reaction, there has to be some pushing," said Rosselló.

The NSC spokesperson said in a statement that the idea that Trump's public comments negatively affected the federal response was a "ridiculous insinuation" and "an insult to the thousands of FEMA and other federal employees who were in Puerto Rico before, during and after the storms." The official added that such criticisms were "partisan political shots."

But there is a lot of evidence that political pressure can lead to a stepped-up disaster response.

In Texas, Senate Majority Whip John Cornyn (R-Texas) held up the nomination of the deputy director of the White House budget office for months over concerns about inadequate support for his state in the wake of Harvey. He finally allowed the nomination to move forward in February after Congress passed a bill with \$90 billion of disaster relief funding and Trump signed it.

Rep. Dan Donovan (R-N.Y.), who leads the House Homeland Security subcommittee on emergency preparedness, told POLITICO that even today, more than five years after Superstorm Sandy, he still has to keep lobbying FEMA to support his constituents on different issues resulting from the storm, such as flood insurance mitigation measures. "We are always putting pressure on them," he said.

Puerto Rico, with a single, nonvoting delegate in the House, can't hold up White House nominations. The territory doesn't have a full delegation of lawmakers — or congressional staffers — to put pressure on FEMA. "Unless you are God, you can't do the job of six people just yourself and without a vote," said Kenneth McClintock, the former secretary of state of Puerto Rico.

As of March 20, six months after Hurricane Harvey, Texas was already receiving federal dollars from FEMA for more than a dozen permanent projects to repair schools, roads and other public infrastructure that were damaged by the storm.

But for Puerto Rico, FEMA has so far not funded a single dollar for similar permanent work projects.

The gap is a result of Puerto Rico's decision to use an experimental formula for calculating the federal funds allocated to rebuild its public infrastructure. The new formula gives Puerto Rico significant flexibility during the rebuilding process, but it also requires the island to pay for any cost overruns, a burden that doesn't apply to Texas, where FEMA will pay for any excess costs. For a cash-strapped territory like Puerto Rico, which is more than \$70 billion in debt, the potential for cost overruns is a huge risk, making the decision to use the new formula across all rebuilding projects a somewhat surprising gamble.

But according to multiple congressional officials and people with direct knowledge of the arrangement, the island was forced to take that gamble. According to those people, White House officials, led by Mulvaney and Homeland Security Adviser Tom Bossert, told Puerto Rico that in order to receive money for permanent work projects, it had to adopt the experimental funding formula for all its projects.

That formula, which dates to Hurricane Katrina and was used on a major housing project after Superstorm Sandy, has never been tried on this scale and Puerto Rican officials weren't interested in being the guinea pig. But in a series of contentious meetings and conversations in late October, White House officials told Puerto Rico it had no choice, according to the congressional staffers and people with direct knowledge of the meetings.

On Nov. 2, with almost no media attention, FEMA published an amendment to its disaster declaration for Puerto Rico that required the use of the experimental funding formula across all projects. It had never been included in a disaster declaration before.

"This is unusual and when it came out, I had lots of phone calls from people," said Elizabeth Zimmerman, a former senior FEMA official who helped create the program when she was in the Obama administration.

Byrne defended the process, arguing that the administration did not force Puerto Rico to adopt the new formula.

"We made a strong case. We showed them all the pluses to it because of the flexibility you'd have, the increased use of mitigation," he said. "It speaks for itself. And at the end of the day, the governor put it in writing that that's how he wanted it done."

A senior administration official said it was "absolutely false" that FEMA forced Puerto Rico's hand.

Rosselló said the administration was "not explicit" in ordering Puerto Rico to adopt the experimental formula, which is known as 428 for its section in the Stafford Act, but he added that "they were very adamant about 428."

Rosselló also argued that the process has slowed down Puerto Rico's ability to rebuild its infrastructure. The process for authorizing permanent funding for Puerto Rico took 43 days, compared with 10 days for Texas. The U.S. Virgin Islands received that authorization within 15 days.

The senior administration official acknowledged that projects might get rebuilt quicker under the traditional payment method but said the delay reflects the time necessary to build back the island's infrastructure in a smarter, more effective way. "It does take a little more time to plan that out," the official said, adding that many emergency projects, including some road repairs and electricity generation, are ongoing. FEMA has already spent more than \$1.3 billion on such emergency projects.

Still, today, more than six months after Hurricane Maria, FEMA still hasn't funded any permanent work projects on the island as Puerto Rico and federal officials negotiate an agreement under 428. The most important piece of those negotiations is the cost estimate. Puerto Rico is on the hook for any overruns, so state officials are very concerned about who is conducting the estimate. According to Rosselló, FEMA agreed in November that Puerto Rico and FEMA would jointly be in charge of the estimate. "We had this explicitly written down in order for us to agree to 428," he said.

Byrne, however, suggested that FEMA would ultimately determine the estimate. "We're more than happy to have Puerto Rico engineers and engineering firms be part of this, and they can help us with the estimates," he said, citing an inspector general's report after Sandy that faulted FEMA for weaknesses in its financial controls in using the new formula. "At the end of the day, we're going to do the estimate." Any disagreements would go to a third-party panel for review, he added. "This is going to be fair."

Bryan Koon, who served as the director for Florida's emergency management agency from 2011 to last October, said he supports 428 and thinks it could help Puerto Rico. But if he were in charge, he said, he would object to FEMA conducting the cost estimate itself. "As a state guy, I would be opposed to that."

The senior administration official conceded that there is "tension" around the cost estimate but said it should reflect a collaborative approach. "We recognize that you don't want to take the number we're giving you and you have to recognize that we're not going to just take the number you give us," the official said. "That's the way this works."

The official also argued that the Trump administration has put Puerto Rico in a better position to use 428 by requesting and receiving from Congress an exemption from the requirement that the cost estimate be based upon the pre-disaster conditions of Puerto Rico's infrastructure. "That's a big deal," the official said. The exemption could prove lucrative to Puerto Rico, since FEMA now can now fund permanent work projects without deducting for any pre-existing damage that was not caused by Maria.

Experts on the formula said it could have additional benefits. It is, effectively, a block grant, allowing the island to more efficiently allocate resources to rebuild its roads, bridges and power system. Under the formula, FEMA also distributes the money up front, instead of reimbursing the island for individual projects, an important benefit for the cash-strapped territory that also cuts down on burdensome paperwork.

Rosselló said he was examining the formula before the White House approached him, realizing that it would be a mistake to rebuild Puerto Rico's outdated infrastructure to its previous condition. "Puerto Rico is in hurricane alley," he said. "It's going to come again."

But Rosselló and other Puerto Rican officials worry that the administration's position on 428 is representative of a broader White House strategy to limit funding toward Puerto Rico. The governor particularly pointed to the Treasury Department's decision to withhold more than half of a \$4.7 billion loan that Congress authorized for Puerto Rico in an October spending bill. Treasury said Puerto Rico didn't need the money, which was earmarked to help the island pay for essential services, since it had a cash balance of \$1.7 billion at the end of 2017. The two sides reached an agreement over the loan last week.

Rosselló believes the president is committed to funding Puerto Rico's recovery, but he's worried that it will not be a priority as the administration moves on to other issues. "When we asked for him a certain set of things ... [Trump] has responded," he said. "My concern is that somewhere along the way, it has sort of fizzled."

"I don't know who it is, but there certainly is evidence that they are trying to penny-pinch," the governor added.

The senior administration official rejected that accusation, saying, "I'm not sure where he is getting that impression" and noting that the federal government has already committed more than \$10 billion in funding to Puerto Rico. "Our No. 1 concern is to make sure we deliver for the people of Puerto Rico," the official said, adding, "Things take longer than anyone would like them to."

Puerto Rico's recovery will take many years and will continue to put pressure on the federal budget. The historic 2017 hurricane season and California wildfires have already forced Congress to pass three disaster spending bills, totaling more than \$140 billion, and another disaster spending bill could be needed later this year. The Trump administration, led by Mulvaney, has attempted to keep costs down, sending a [funding request](#) to

Congress in November that Democrats and Republicans both derided as too low. The White House budget office included in that request a list of spending cuts that Congress could use to offset the extra hurricane-related costs, which lawmakers also ignored in February's disaster spending bill.

Many Puerto Rican officials and disaster-recovery experts fear that the contentious battles over 428 and the Treasury Department loan are just the first of many future fights between Puerto Rico and the federal government. It's a fear shared by many in Puerto Rico, who, now more than ever, feel like second-class citizens.

"There is a lingering lack of knowledge about Puerto Rico and a lingering tendency to want to treat Puerto Rico differently," said McClintock, the former Puerto Rico secretary of state, "and always for the worst."

POLITICO Florida: Records, Zinke's office refute Scott framing of impromptu oil-drilling reversal [Back](#)

By Matt Dixon | 03/27/2018 05:05 AM EDT

TALLAHASSEE — When Gov. Rick Scott and U.S. Interior Secretary Ryan Zinke announced Jan. 9 Florida was "off the table" for offshore oil drilling, the governor cast the hastily arranged news conference at the Tallahassee airport as unplanned and the Trump administration's decision as something Scott had influenced at the eleventh hour.

In fact, Zinke's top advance staffer, whose job it is to plan ahead for such events, was in Tallahassee the previous day. And top officials from the offices of both Scott and the secretary were in regular contact for several days leading up to the announcement, according to more than 1,200 documents reviewed by POLITICO Florida as part of a public records request.

The documents, which include phone records, text messages, and emails, contradict the supposed spontaneous event that portrayed Scott as single-handedly securing a politically popular win for Florida's environmental future only days after the administration had spelled out a controversial new national five-year plan to boost offshore oil drilling. The event left Scott, at least for the moment, with a big victory to hold over Sen. [Bill Nelson](#) (D-Fla.), whom the term-limited Scott is almost assuredly challenging in 2018.

The records reaffirm the perception at the time that the Trump administration's decision to reverse course and remove Florida from the list was carefully choreographed to give Scott a political win in his widely expected challenge this year to unseat Nelson.

"Whatever Rick needs, they [Trump administration] will do. There will be net more offshore drilling, but the governor will get what he needs," one Republican who spoke directly with Zinke [told POLITICO Florida](#) at the time, a prediction that came true.

It will "be a big win, and it won't be Bill Nelson bringing it home," the Republican added.

Turns out all the optics were orchestrated long before that January day.

Zinke press secretary Heather Swift told POLITICO Florida Monday that "the governor's staff was certainly aware that the secretary was traveling to Florida at the governor's request," but Scott's office — at the time — gave no indication the meeting and oil drilling deal had been hashed out prior to the Jan. 9 airport meeting.

Scott's office did not include the meeting on his original public schedule, which is released each morning. The event was sent out as part of an amended calendar around 4:50 p.m. on January 9, about an hour before the event. Around the same time, Scott's office began telling reporters to get to the airport, but there was no notice prior to the amended statement and calls from staff. There was an absolute feeling in Florida political circles at the time that the announcement came out of nowhere.

The decision to give no public notice was done despite Zinke's staff being already in Tallahassee to help coordinate the event: "Even the shortest trips require a lot of coordination and planning," Swift said.

Scott spokesman McKinley Lewis said Monday Scott wanted the meeting with Zinke to "express his strong opposition to drilling off Florida's coast," but did not discuss the public perception that the meeting was not planned.

"Governor Scott was glad to have the opportunity to quickly meet with Secretary Zinke and get commitment from him in that meeting to take Florida off the table for future off shore drilling," Lewis said.

He did not return follow up questions about why the meeting was kept off Scott's original public Jan. 9 calendar.

Records clearly show Rusty Roddy, Zinke's former advance staffer, was in Tallahassee ahead of the Jan. 9 event helping coordinate with Scott's staff.

"Head's up. Secretary having issues with flight out of Atlanta," wrote Roddy in a text message the day of the event to Scott deputy chief of staff Craig Carbone. "Arrival here TBD but looks like it will be later than planned for sure."

Roddy, who is no longer with Zinke's office, acknowledged that the event was "planned" and that he was in Tallahassee prior to the airport meeting. Additional records further confirm the "off the table" airport event was not as hastily thrown together as it then seemed publicly. In emails, Roddy indicated he was planning to be in Florida before the event as early as Friday, Jan. 5, a day after Zinke announced Florida was on the oil drilling list, and days before the Jan. 9 airport event, which officials said was not planned.

"Look forward to seeing you guys Monday," he said in a Jan. 5 email to Jackie Schutz Zeckman, Scott's former chief of staff. She resigned Monday and is likely to join Scott's Senate campaign.

The way Scott's office framed the Zinke trip helped downplay the perception of political gamesmanship from the announcement. Scott's office maintains that 2018 politics had no role in the process, a sentiment they stressed in January.

"This is not about politics," John Tupps, Scott's communications director, told POLITICO Florida at the time. "This is good policy for Florida."

Records show that between the Jan. 4 announcement that Florida could see additional oil drilling rigs off its shore and the Jan. 9 meeting where the state was taken "off the table," Carbone spoke with Roddy, the Zinke advance staffer, 17 times, while Schutz Zeckman spoke with Kate MacGregor, who at the time was acting assistant secretary of Land and Minerals Management, seven times. MacGregor was the point person for much of the discussions, and traveled with Zinke for the Tallahassee rollout, records show.

The records show a general uptick in Scott administration contact with the Interior Department officials in the months leading up to the oil drilling announcements. Those increased conversations were something Scott talked about at the time, as he said he was lobbying to keep Florida off any oil drilling lists.

There were at least 60 calls Carbone and Schutz Zeckman had over the last three months of October with Interior officials. Prior to October, Scott's office and the Interior Department had discussions about various policy issues, but the discussions became much more frequent as the oil drilling announcements approached.

Nelson, Democrats and other Scott opponents always saw political motivations in the quick about-face by the Trump administration toward Florida. Scott was one of Trump's earliest political supporters, and is the current chairman of a pro-Trump super PAC.

"I have spent my entire life fighting to keep oil rigs away from our coasts. But now, suddenly, Secretary Zinke announces plans to drill off Florida's coast and four days later agrees to 'take Florida off the table?' I don't believe," Nelson said in a statement at the time. "This is a political stunt orchestrated by the Trump administration to help Rick Scott, who has wanted to drill off Florida's coast his entire career."

That last point has been one of debate. Nelson's camp has tied Scott to oil drilling, pointing to the fact that in 2010 when first running for office, Scott said that there must be "sound policies in place" when working to "explore the expansion of domestic drilling in the U.S."

Scott now opposes offshore oil drilling, and he immediately tweeted opposition to Trump's oil drilling plan when it was first announced in early January. That garnered him a "full flop" from PolitiFact Florida earlier this year.

His stance also opened a brief rift between the two political pals, but his past statements are not likely to go away headed into the mid-term elections.

"Just like Donald Trump," the Florida Democratic Party responded in January, "Governor Scott is trying to rewrite his long anti-environment record with a tweet."

This article first appeared on POLITICO Florida on March 26, 2018.

BSEE to review offshore safety permitting process for efficiency [Back](#)

By Ben Lefebvre | 03/26/2018 03:49 PM EDT

The Interior Department is asking career staff to come up with new ways to speed up permitting for offshore energy development.

Interior's Bureau of Safety and Environmental Enforcement will soon assemble teams of employees from various departments to periodically review the permitting process and look for ways to make it more efficient and consistent across the agency, BSEE announced today.

BSEE's regional directors and deputy regional directors will nominate employees to the teams, agency spokesman Greg Julian said.

"In the coming weeks, BSEE plans to identify permit types to be assessed and nominate team members for assessments to take place this year," Julian said.

The move comes as Interior tries to roll back regulations and otherwise speed the permitting process across all its agencies. BSEE earlier proposed to roll back Obama-era rules on offshore oil and gas well safety.

WHAT'S NEXT: Interior is still trying to decide whether to merge BSEE with the Bureau of Ocean Energy Management, which is in charge of offering offshore oil and gas drilling leases.

'Bellwether' auction shows weak demand for offshore oil leases [Back](#)

By Ben Lefebvre | 03/21/2018 01:22 PM EDT

An Interior Department auction for offshore drilling leases generated \$124.7 million, a relatively low amount that shows little industry interest as of yet in a key part of the Trump administration's offshore energy policy.

The Trump administration has promoted offshore drilling as part of its policy to increase oil and gas production, advertising this lease sale as the largest ever in the Gulf of Mexico. Interior for the second auction in a row put its entire Gulf holdings up for lease, breaking previous practice of only offering parts of the Gulf up for auction at a time. And it again offered reduced rates for less attractive, shallow water parcels as it did at its August 2017 lease sale in the Gulf.

Interior Secretary Ryan Zinke, who has proposed opening virtually the entire U.S. coastline to oil and gas exploration, recently pointed to the auction as a "bellwether" of industry interest in expanded offshore drilling, compared to surging onshore production in states like Texas and North Dakota.

But the auction brought in about the same amount of money as an August lease sale, which raised just \$121 million — about 40 percent below the government's initial forecast. As recently as March 2017, Interior raised over \$274 million with a single lease sale.

Interior has actively promoted coastal drilling as a way to boost oil and gas production, but so far hasn't been able to buck market trends that work against companies investing billions of dollars in deepwater projects that take years to start producing.

Michael Celata, regional director for the Gulf of Mexico region at Interior's Bureau of Ocean Energy Management, argued it was unfair to compare Wednesday's sale to results before Interior started offering leases in the entire Gulf up for sale last August.

"It's difficult to compare this sale to sales from years past," Celata told reporters on a conference call Wednesday. "The best comparison is directly to the last previous sale."

Celata did not have the numbers for how much BOEM had forecast this latest lease sale would generate. Celata also said that lowering the royalty rates for shallow water tracts may have helped increase interest in the area. Data released after the sale showed companies had bid for 43 tracts in shallow water regions, nearly double the number from the March 2017 lease sale when shallow water royalty rates had been higher.

Oil production coming from projects started in years past has helped bring oil production in the U.S. Gulf of Mexico to record highs, according to the Energy Information Administration. But more recently, Exxon, Chevron and other companies have hesitated to add more area to their operations in federal waters, preferring to drill in North Dakota, Texas and other onshore shale plays that have proven much cheaper to set up and much faster in producing new oil.

But the area is also facing new competition for industry attention as Mexico has become more open to allowing foreign companies to drill in its part of the Gulf. Mexico for decades only allowed its national oil company Pemex to drill in those waters, meaning the area is much less developed than on the U.S. side.

Shell and other international oil companies participated in a January auction of Mexican offshore oil leases, bidding aggressively despite fears that a change of government later this year could roll back the country's energy policy reforms.

In a time of low oil prices and strict limits on capital spending, companies have to decide whether to gamble on buying space in a less developed area or sticking to known territory on the U.S. side, said Bernadette Johnson, VP of market intelligence for Drillinginfo, an industry research organization.

"You may do both, but many won't," Johnson said. "Companies are going to be much choosier because margins are tight and are going to stay tight."

Subject: Morning Energy: Trump's not-so simple math — Judge orders update of Keystone XL study — States' rights get tricky over water

By Kelsey Tamborrino | 08/16/2018 05:43 AM EDT

With help from Ben Lefebvre and Annie Snider

A NUMBERS GAME: The White House's plan to rewrite the Obama administration's cornerstone climate rule for power plants may be based on some fuzzy math, setting up a potentially brutal court battle for the Justice Department. The legally risky strategy, POLITICO's Alex Guillén and Emily Holden report, calls for redoing the calculations of how much the rule would cost and who would benefit.

EPA's proposed replacement plan is expected to be unveiled any day now and will likely downplay a key feature of the Obama-era greenhouse rule: the money saved by using less electricity. Some expect EPA will also count only a fraction of the improvements in public health from reduced smog and soot pollution, Alex and Emily report, and it won't consider any benefits from slowing climate change outside the U.S.

In doing so, President Donald Trump's EPA will argue that the Obama-era rule had higher costs and fewer benefits than previously stated, a change to help improve the comparison when it unveils its own proposal. The Obama administration had estimated that the benefits from its rule would outstrip the costs by \$26 billion to \$45 billion by 2030, though supporters of that version say those net benefits could be even higher now.

In fact, math could become vital to the success or failure of several of Trump's rules. Critics say similarly fuzzy math underlies other Trump administration proposals to reverse or stymie action on climate change, such as a recent plan by EPA and the Department of Transportation to halt a planned tightening of fuel efficiency standards for cars and trucks. "They are cooking the books on technical analysis to try to justify preconceived conclusions that these regulations are bad," said David Doniger, senior strategic director of the Natural Resources Defense Council's climate program who was influential in the Obama EPA's crafting of the original rule. Read more.

GOOD THURSDAY MORNING! I'm your host, Kelsey Tamborrino. Many of you knew, but ClearView Energy Partners' Mitch Huber was the first to correctly answer that it's Loretta and Linda Sanchez who were the first and only sisters to serve simultaneously in Congress. For today: How many current senators are also former mayors? Bonus points if you can name them. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

DO THAT AGAIN: The Trump administration was ordered Wednesday to update an environmental study of the Keystone XL pipeline despite its contention the alternative route picked last year by Nebraska regulators didn't require an updated environmental impact statement. Instead, Judge Brian Morris of the U.S. District Court for Montana ordered the State Department to go back to its 2014 EIS to take into account the new route, Alex reports for Pros. Morris said the State Department still has a "meaningful opportunity to evaluate" the alternative route that was picked in Nebraska. However, he declined environmentalists' request that Trump's permit be vacated.

STATES' RIGHTS GET TRICKY OVER WATER: The roiling debate over states' right to halt development projects over their water quality effects heads to the Senate Environment and Public Works Committee today. The panel will hold a legislative hearing on a bill from Chairman [John Barrasso, S. 3303 \(115\)](#), the Water Quality Certification Improvement Act of 2018. The measure would limit states' authority under Section 401 of the Clean Water Act, which requires states to certify that projects won't harm their water quality standards before the federal government issues a permit. In recent years a handful of Democratic-led states have used that authority to block natural gas pipelines. Republican Maryland Gov. Larry Hogan is also using the authority to try to force Exelon Corp. to clean up nutrient pollution flowing through one of its dams that harms the Chesapeake Bay.

GOP lawmakers have backed earlier efforts to limit or remove the authority, including in this year's House Appropriations bill, House and Senate energy legislation and standalone bills. But the Western Governors Association, which represents a number of Republican governors, has come out in opposition to reining in states' authority, and the Environmental Council of the States warned Wednesday that such moves could have unintended consequences. **If you go:** The [hearing](#) begins at 10 a.m. in 406 Dirksen.

NOMINATIONS ON TAP: Two nominees to the Energy Department will testify before the Senate Energy and Natural Resources Committee this morning: Bill Cooper to be general counsel and Lane Genatowski for director of the Advanced Research Projects Agency-Energy, which the Trump administration has sought to eliminate.

Who are they? Cooper serves as senior counsel and director of the McConnell Valdés law firm. Prior to that he was a subcommittee staff director for House Natural Resources, with a particular policy focus on the National Environmental Policy Act that the White House has sought to change up. Cooper also previously was president of the Center for Liquefied Natural Gas and counsel to the House Energy and Commerce Committee. His credentials have earned him the backing of industry groups, including the [Air-Conditioning, Heating, and Refrigeration Institute](#), the [Interstate National Gas Association of America](#), and the [Electric Reliability Coordinating Council](#).

— **Genatowski hails from** a banking background. He's managing partner in investments at Dividend Advisors, a firm he founded in 2012. Genatowski before that was an energy investment banker at JPMorgan Chase and other Wall Street giants. His résumé lines up with others in Rick Perry's Energy Department, which has focused more on businessmen with energy-sector experience. **If you go:** The [hearing](#) kicks off at 10 a.m. in 366 Dirksen.

RESCISSIONS — TAKE TWO: The Trump administration is once again weighing a so-called rescissions package to force Congress to roll back federal spending, with just weeks to go until the next budget deadline, Pro's Sarah Ferris and John Bresnahan [report](#). Senate Appropriations Chairman [Richard Shelby](#) said Wednesday he was told about the idea: "I heard they were thinking about one, but I haven't seen it." But a Senate leadership source said OMB chief Mick Mulvaney has already begun moving ahead on the effort.

FLORIDA DRILLING BITS: To drill or not to drill off the Florida coast is a question once again heating up the state's election campaigns. Gwen Graham, the current front-runner in the Democratic gubernatorial primary field, sent out a message titled "Drilling 75 Miles off Florida's Beaches is Insane" after a POLITICO [report](#) highlighted the idea as one that oil industry lobbyists are pushing to have included in the Interior Department's upcoming offshore drilling plan. Sunshine State Democratic Sen. [Bill Nelson](#) took the story [to the Senate floor](#) to try to whack current Gov. Rick Scott, who is running to replace him and earlier this year got [help](#) from Trump on the drilling issue.

REMEMBRANCE OF TARBALLS PAST: Former Florida Lt. Gov. Jeff Kottkamp is catching heat for his statement at a pro-drilling rally in Tallahassee that oil from the Deepwater Horizon spill "didn't even reach the shores of Florida." The remark, as first [reported](#) in the Florida Phoenix, may have surprised those who

remember former Gov. Charlie Crist squatting over oil-stained beaches in Pensacola. Kottkamp, who was speaking as co-chair of Explore Offshore Florida, went on to say "tarballs are naturally occurring." Earthjustice staff attorney Bradley Marshall called it "absurd to claim the Deepwater Horizon spill did not reach Florida" given the damage the state experienced. "That's why so many of Florida's leaders, regardless of what political party they belong to, have been so protective of our coasts all these years," he said in a statement.

WHAT'S THE RISK? EPA acting Administrator Andrew Wheeler delivered a video address at the National Environmental Justice Advisory Council's public meeting in Boston on Wednesday where he acknowledged the need for improvement in risk communication and noted the agency owes it to the American public to improve. "How well or how poorly we communicate risk disproportionately impacts those on the lower end of the socioeconomic ladder," he said. "We have fallen short in the past from our response to the Gold King Mine in Colorado, to the Kanawha River in West Virginia, to Flint, Mich." Watch it here.

CASE CLOSED: Interior's Office of Inspector General has closed its investigation into an allegation made against National Park Service officials. The claim centered around references to human-caused climate change in a report on sea-level rise and storm surge projections that officials allegedly sought to remove. The watchdog office said Wednesday that shortly after it opened the investigation, the NPS "published the report with all original references to human-caused climate change," thus prompting it to close its probe.

'SECRET' AGENTS: Comments are due today on EPA's proposed "scientific transparency" rule, which would ban the use of studies that don't publicly disclose all their data. Experts have said that plan could prohibit the use of vital studies on how pollutants affect human health because researchers typically promise to keep subjects' health information confidential. But conservatives have long accused the agency of relying on "secret science," prompting former Administrator Scott Pruitt to unveil the proposal in the name of transparency.

Under the wire: With the comment deadline approaching, nearly 80 groups, including the Union of Concerned Scientists, Sierra Club and Moms Clean Air Force, signed onto a letter Wednesday calling on Wheeler to withdraw the so-called secret science proposal. Separately, 66 health and medical organizations sent comments to Wheeler in opposition to the proposed rule. That's not to say there isn't support for the proposal; several comments posted Wednesday echoed the refrain that scientists should be required to "show your work."

AFTER THE STORM: The nonprofit Environmental Integrity Project released a new report today leading up to the one-year anniversary of Hurricane Harvey's widespread destruction in Texas. Using records from the Texas Commission on Environmental Quality, the report looks at air pollution during and after the storm as well as the government's and industries' response, and makes recommendations for the future. The "Preparing for the Next Storm" report found that all five of the largest industrial air pollution releases during Harvey were in the Houston area — with the Magellan Galena Park Terminal the biggest polluter, releasing 2,472,402 pounds of air pollution.

Harvey also triggered the release of at least 8.3 million pounds of unpermitted air pollution from petrochemical plants, according to the EIP report. And in the nine months after Harvey, "18 companies revised their air pollution reports to the state to erase 1.7 million pounds of unpermitted emissions during Hurricane Harvey," the report found.

LET'S MAKE A DEAL: Trump might soon strike a deal with Mexico on NAFTA, even as a trade war plays out with the rest of the world, POLITICO's Megan Cassella reports. The apparent turnaround after months of stalemate arrives as Mexican Secretary of Economy Ildefonso Guajardo visited Washington on Wednesday to hammer out some of the most contentious issues on NAFTA. "Both U.S. and Mexican officials now say they could be on the verge of announcing a preliminary agreement on everything from complicated automotive rules to environmental regulations by the end of August," Megan reports.

CATCHING FIRE: Agriculture Secretary Sonny Perdue will join Senate Energy ranking member [Maria Cantwell](#) and Sens. [Steve Daines](#) and [Ron Wyden](#) to unveil a new federal plan for addressing wildfires. Earlier this year, Perdue and Cantwell [worked together](#) on a commitment to use unmanned aircraft technology this fire season, and the Washington Democrat will likely highlight similar tools and technology today. Watch the [livestream here](#).

POLL: CLIMATE A FACTOR FOR MOST: Slightly more than half (53 percent) of U.S. voters believe climate change is a factor in making the ongoing California wildfires more extreme, while 39 percent say it's not, according to a new poll from Quinnipiac University [released](#) Wednesday. Sixty-four percent of voters said they think the country is not doing enough to address climate change, the national poll found. Eighteen percent of voters say the U.S. is doing enough to address the issue, while 10 percent say the U.S. is doing too much.

— **On a related note**, the Natural Resources Defense Council launched [a tracker](#) this week to see where every state's lawmakers stand on offshore drilling.

QUICK HITS

— "A coal company and Interior teamed up to save a power plant," [E&E News](#).

— "FirstEnergy Solutions takes next step toward closure of nuclear power plants," [Akron Business Journal](#).

— "A rising concern? After straws, balloons get more scrutiny," [The Associated Press](#).

— "Will Washington State Voters Make History on Climate Change?" [The Atlantic](#).

HAPPENING TODAY

10 a.m. — Senate Environment and Public Works Committee [hearing](#) on clean water, 406 Dirksen.

10 a.m. — Senate Energy and Natural Resources Committee [hearing](#) to consider DOE nominees, 366 Dirksen.

10 a.m. — American Petroleum Institute conference call briefing on efforts "to reform the broken Renewable Fuel Standard that threatens to reverse America's energy progress."

12:45 p.m. — Senate Energy and Natural Resources ranking member [Maria Cantwell](#) and Agriculture Secretary Sonny Perdue [unveil](#) a federal plan for addressing wildfire, Senate Room S-115.

THAT'S ALL FOR ME!

Stories from POLITICO Pro

Exclusive: Draft details Trump's plan for reversing Obama climate rule [Back](#)

By Emily Holden | 08/14/2018 07:46 PM EDT

The Trump administration is preparing to unveil its plan for undoing Barack Obama's most ambitious climate regulation — offering a replacement that would do far less to reduce the greenhouse gas emissions that are warming the planet, according to POLITICO's review of a portion of the unpublished draft.

The new climate proposal for coal-burning power plants, expected to be released in the coming days, would give states wide latitude to write their own modest regulations for coal plants or even seek permission to opt out, according to the document and a source who has read other sections of the draft.

That's a sharp contrast from the aims of Obama's Clean Power Plan, a 2015 regulation that would have sped a shift away from coal use and toward less-polluting sources such as natural gas, wind and solar. That plan was the centerpiece of Obama's pledge for the U.S. to cut carbon dioxide emissions as part of the Paris climate agreement, which President Donald Trump has said he plans to exit.

The Environmental Protection Agency acknowledges that both carbon emissions and pollutants such as soot and smog would be higher under its new proposal than under the Clean Power Plan. And Trump's critics call it a recipe for abandoning the effort to take on one of the world's most urgent problems.

The proposal would be "another, more official, sign that the government of the United States is not committed to climate policy," said Janet McCabe, EPA's air chief under Obama.

McCabe said based on a description of the proposal, it would offer "a significant amount of discretion to states to decide that nothing at all needs to be done."

Many red states and several companies sued over the Clean Power Plan, and a federal appeals court was nearing a decision when Trump's EPA asked for time to rewrite the rule. McCabe said the proposal could be meant to eat up time and stall a future president from quickly regulating greenhouse gases.

EPA was widely expected to write a far less stringent replacement rule. Trump promised to nix the Clean Power Plan and exit the Paris deal during his campaign. But the draft offers the first look at the specifics since the agency released a broader notice that it would reconsider the rule in April.

The White House Office of Management and Budget has finished reviewing the draft and sent it back to EPA this week.

The rule would allow states to write rules to make coal plants more efficient, enabling them to burn less coal to produce the same amount of electricity. But that could be bad for the planet, people familiar with state air programs say, by making it cost-effective for power companies to run those plants more often.

EPA looked at the outcomes of various scenarios that could be possible from state-proposed plans in 2025, 2030 and 2035, implying that the plans could be in place before 2025.

Obama's plan was meant to see greenhouse gas emissions from the U.S. power sector fall to 32 percent below 2005 levels by 2030. The nation has already achieved much of that reduction because of trends such as the closures of dozens of older coal plants.

EPA intends to argue that the Obama administration rule illegally sought to regulate the broader power sector, beyond coal plants, and that the compliance costs would have been big and the climate benefits negligible, according to the draft POLITICO reviewed.

Environmental advocates and blue states plan to wage war on the proposal once it is final. But while the legal fights play out, the regulation will be a placeholder that could stall a future president from regulating power plants.

States will be able to present reasons for why they don't want to regulate coal plants, including considering how many more years they have left before they would probably shut down, according to a source who reviewed a different section of the document.

In another contentious portion of the proposal, EPA is looking at letting states decide whether they want to adopt changes to pollution reviews that kick in when a plant makes upgrades. Existing rules are meant to keep plants from making changes that cause more pollution.

Conservatives and industry groups have long argued that the review process, called New Source Review, makes it too expensive for operators to make improvements to plants.

The key to Trump's climate reversal? New math [Back](#)

By Alex Guillén and Emily Holden | 08/16/2018 05:06 AM EDT

The Trump administration's attempt to reverse Barack Obama's most sweeping climate regulation rests on a legally risky strategy — redoing the calculations of how much the rule would cost and who would benefit.

The EPA's proposed replacement is expected to downplay the money that people and businesses would save from using less electricity, a key feature of the Obama-era greenhouse rule for power plants. People tracking the issue also expect that the agency will count only a fraction of the improvements in public health from reduced smog and soot pollution, and won't consider any benefits from slowing climate change outside the U.S.

The upshot: President Donald Trump's Environmental Protection Agency will argue that the Obama administration's rule had more costs and fewer benefits than previously stated, a change to help improve the comparison when it unveils its own, much less ambitious power plant proposal as soon as next week.

The Obama administration had estimated that the benefits from its 2015 rule would outstrip the costs by \$26 billion to \$45 billion by 2030.

Supporters of the Obama version say those net benefits could be even higher now, because states are on track to meet the climate goals and the costs of clean energy have continued to plummet. And they warn that repealing the regulation could keep older, more expensive coal-fired power plants in operation, adding to consumers' costs.

The math could be crucial to the success or failure of a number of Trump rules. That could make the rollbacks legally vulnerable when environmental advocates and states sue to overturn Trump's action, critics of the new proposals say.

"They are cooking the books on technical analysis to try to justify preconceived conclusions that these regulations are bad," said David Doniger, the senior strategic director of the Natural Resources Defense Council's climate program who was influential in the Obama EPA's crafting of the original rule.

EPA did not respond to a request for comment on Wednesday.

Trump administration lawyers reviewing the replacement are already struggling with how to defend a rule that could cost electricity users money but would not do much to address climate change or air pollution, according to a person aware of conversations between the White House and the Justice Department. DOJ would be charged with defending the rule in court.

POLITICO has examined a portion of the agency's unpublished draft of the new rule, which would allow states to write their own modest regulations for coal plants or even let plant operators seek to opt out entirely, according to a source with knowledge of the broader proposal.

The proposed rewrite of the power plant rule is part of a pattern: Critics say similarly fuzzy math underlies other Trump administration proposals to reverse or stymie action on climate change, such as a recent plan by EPA and the Department of Transportation to halt a planned tightening of fuel efficiency standards for cars and trucks.

Sean Donahue, an environmental lawyer who has represented groups like the Environmental Defense Fund, said he would expect a court to be "very skeptical" of any effort that looks as though EPA is trying to evade its obligation to regulate greenhouse gases. But he conceded that will depend on the details of EPA's power plant proposal.

"If it were one or two technical judgments where there's a difference between this administration and the last one, or this administration and prior consistent practice, that would be one thing," Donahue said. "But it's many, many things, all pointing the same way, all pointing toward rolling back greenhouse gas mitigation efforts."

Trump has repeatedly expressed doubts about man-made climate change, and much of his Cabinet shares a similar view. In contrast, the federal government's own scientific assessment finds that human-caused climate change will not only raise temperatures but also make extreme weather more dangerous and lift sea levels by 1 to 4 feet by the end of the century.

Kate Larsen, director of economic research firm Rhodium Group, said the Trump administration's justifications for unraveling climate change policies are symptomatic of its broader governing principles.

"A decision we make today is narrowly focused on the impacts to myself and my immediate neighbor in the next week, but you're not taking into account impacts next year and the following year to yourself, your neighbor, the entire community," she said.

Environmental experts are also scrutinizing the auto rule proposal, released earlier this month, which would freeze the Obama administration's aggressive fuel economy standards after 2020 and dial back EPA greenhouse gas rules to match.

EPA and DOT's National Highway Traffic Safety Administration argued that the freeze would save billions of dollars in costs. Critics say the administration overestimated compliance costs of the Obama-era auto targets by as much as fourfold, which could significantly tip the cost-benefit analysis in their favor. Another claim that the Trump rollback would save more than 1,000 lives per year — yielding benefits of \$77 billion — has also drawn skepticism.

On Tuesday, EPA released a June memo that showed agency staff criticizing a number of "unrealistic" aspects of NHTSA's modeling. They disagreed with the proposal's fatality figures, with EPA staff estimating deaths would increase slightly under the freeze. And they thought the rule overestimated compliance costs and the time needed to recoup those costs in fuel savings, all factors that boosted benefits and lowered costs for the proposed freeze. Both EPA and NHTSA dismissed the memo as only one part of a complex review process.

The administration and industry groups have blasted the Obama administration's use of "co-benefits" — the benefits in improved health or reduced pollution that arise even when they're not the primary aim of a regulation. (One example: Cutting coal plants' carbon dioxide pollution under the power plant regulation would't do much directly to improve people's health, but it would reduce smog.) But Donahue argued that Trump's regulators sometimes lean on co-benefits to help build the case for their rollbacks.

For example, NHTSA's modeling credits changes in consumer behavior as the overwhelming factor behind all the lives that the Trump administration contends its auto rollback would save. The agencies argue that under the previous Obama rule, drivers would be more likely to remain in older, more dangerous cars than purchase more expensive, safer ones.

That "would seem to be a co-benefits argument, since the EPA doesn't have, and NHTSA doesn't have, the authority to regulate used cars," said Donahue, who called the paradox "sort of entertaining."

Counting co-benefits is a long-standing practice for federal regulators, but energy industry groups and Republican state officials grew incensed by the Obama administration's use of it to justify major regulations.

"The co-benefits thing has ballooned into the biggest scandal in environmental regulation," said the conservative Competitive Enterprise Institute's Myron Ebell, who led Trump's post-election transition team at EPA. "You get very small direct benefits, but you make up, essentially, a lot of co-benefits."

Still, he contended that EPA's withdrawal of Obama's power plant rule would eliminate a huge amount of costs in the coming years, saying Obama's regulation represented "just the first emissions cuts."

"There were going to be more beyond that if the Obama administration had been succeeded by the Clinton administration," Ebell said. He added: "By cutting it off in the way that they're doing, we're avoiding immense future costs."

Keystone XL pipeline wins green light in Nebraska — but may face new hurdles [Back](#)

By Ben Lefebvre | 11/20/2017 11:25 AM EDT

Nebraska regulators approved the Keystone XL pipeline Monday, but only if it is built along a new path that may force the project developer to jump through a new set of regulatory hoops.

The 3-2 vote by the Nebraska Public Service Commission gave the green light to a different route than the one preferred by Keystone developer TransCanada, moving it east to run partially alongside the original Keystone pipeline and through a portion of the state's ecologically sensitive Sandhills area as well across the Ogallala Aquifer.

The Trump administration is evaluating whether it would have to re-approve the controversial pipeline to account for the new route. But activists who have spent the better part of a decade fighting to block Keystone said the decision throws the whole project into jeopardy, while TransCanada, the company seeking to build the project, said only that it is evaluating its next steps.

"This decision today throws the entire project into a huge legal question mark," said Jane Kleeb, the activist who led the opposition to the pipeline and who is now Nebraska Democratic Party chair. "TransCanada will have to go back to the State Department because that route has never been reviewed by the feds."

The State Department said it is reviewing the PSC decision for just such a possibility.

"We won't know about any impacts until we learn precisely the extent of any changes, something we are currently engaged in," State Department spokesman Vincent Campos said.

TransCanada President and CEO Russ Girling said the company "will conduct a careful review of the Public Service Commission's ruling while assessing how the decision would impact the cost and schedule of the project."

Former President Barack Obama had blocked the permits for the pipeline in 2015, citing the oil sands' impact on climate change, but President Donald Trump quickly reversed that decision after taking office. Keystone XL is designed to transport up to 830,000 barrels per day of crude from Canada's oil sands and North Dakota's shale fields to oil refineries on the Gulf Coast.

The Nebraska PSC vote comes as TransCanada adds new crews to its cleanup operations in South Dakota, where the original Keystone Pipeline ruptured last week and released 210,000 gallons of oil. But Nebraska law bars the regulators from considering spills or pipeline safety in its decision-making process.

Environmentalists and landowners who opposed Keystone XL's construction have promised to try to overturn the commission's decision.

"We will appeal," Kleeb said. "We will challenge a foreign corporation being given eminent domain in the county courts, with every intent to bring it to the Supreme Court if needed."

Even with the approval, the project, whose costs to build the nearly 1,200 mile artery have ballooned to \$8 billion, is still not ready to be built since TransCanada is gauging the economics of the huge investment. Though prices for oil have rebounded moderately in recent months, and while TransCanada has said demand for space on the pipeline is strong, it's not yet clear that enough companies will commit to the 20-year contracts required to reserve space on it.

The opposition to Keystone XL had been a rallying cry for green activists who have long said mining Canada's oil sands would be a disaster for global climate change, releasing vast amounts of carbon dioxide into the atmosphere.

But supporters have said tapping the oil fields in Alberta is no worse than the oil production in Venezuela, where much of the heavy sour crude that is shipped to U.S. refineries comes from now.

Many in the oil industry, however, no longer see the Keystone XL pipeline as crucial to the U.S. refineries as they once did, especially since the railroad sector stepped in to offer a more flexible — though more expensive — way to ship the oil.

"There's not going to be a parade thrown, although everyone in the industry is going to be grateful," said Tyler Nelson, an energy lobbyist for Cornerstone Government Affairs. "It should have been done years ago. But now a lot of people want it to be over with and done and move on."

The pipeline may struggle to succeed in the oil business. Energy markets have made the Alberta oil sands less attractive, with ExxonMobil, ConocoPhillips and others pulling out of the region to concentrate on U.S. oil

shale development in Texas. Meanwhile, rival pipeline company Enbridge has expanded its pipeline system delivering Canadian crude to the U.S.

Critics have pointed to the recent shale oil boom as a reason that supply from the Canadian and North Dakota fields is in less demand, and they argue that much of the oil from Keystone XL could end up on tankers bound for export. U.S. oil production is on target to average more than 9 million barrels a day this year, nearly double what it was when TransCanada first proposed the massive pipeline.

If TransCanada gives its final approval to go ahead, construction would not start until 2019 at the earliest, Paul Miller, TransCanada's president of liquids pipelines, said during a conference call earlier this month.

The pipeline already is the focus of a court challenge stemming from Trump's State Department approving the project. A coalition of groups is arguing the State Department did not do due diligence before approving the cross-border pipeline in March. The case is still in the beginning stages, with a decision pending from the U.S. District Court of Montana on a Trump administration motion to dismiss.

Judge orders Trump administration to update Keystone XL environmental study [Back](#)

By Alex Guillén | 08/15/2018 08:17 PM EDT

A federal judge today ordered the Trump administration to update its environmental study of the Keystone XL pipeline.

Nebraska regulators last year picked an alternative route through the state after the pipeline was approved by President Donald Trump. Now the State Department must update its previous 2014 environmental impact statement to take that route into account, ruled Judge Brian Morris of the U.S. District Court for Montana.

The Trump administration argued that it did not need to update the EIS, despite Nebraska regulators' decision to pick the alternate route.

But Morris concluded that the State Department still has a "meaningful opportunity to evaluate" the alternative route that was picked in Nebraska. "Federal Defendants cannot escape their responsibility under NEPA to evaluate the Mainline Alternative route," he ruled.

The approved route differs from the one studied in the 2014 EIS by crossing different counties and bodies of water and requiring an extra pump station and electric infrastructure, Morris noted.

However, Morris declined environmentalists' request that Trump's permit be vacated, at least for now.

TransCanada does not plan to start construction before the second quarter of 2019, he said, giving the Trump administration sufficient time "to supplement the EIS in a manner that allows appropriate review before TransCanada's planned construction activities." Morris said he would revisit the issue if "circumstances change" and he is unable to review the new supplemental EIS before TransCanada begins construction.

WHAT'S NEXT: Morris ordered the State Department to propose a schedule to supplement the EIS.

Trump administration to make a second try on spending cutbacks [Back](#)

By Sarah Ferris and John Bresnahan | 08/15/2018 07:15 PM EDT

The Trump administration is eyeing a second attempt to force Congress to roll back federal spending, after its last attempt collapsed in the GOP-led Senate, according to the chairman of the Senate Appropriations Committee as well as a Senate leadership source.

The Office of Management and Budget is said to be considering a second package of so-called rescissions, with just weeks to go until Congress' next budget deadline.

OMB officials did not return a request for comment and it's not known yet what spending the White House might try to cut or eliminate this time around.

Senate Appropriations Chairman [Richard Shelby](#) said today he was told about the idea. "I heard they were thinking about one, but I haven't seen it," Shelby (R-Ala.) told POLITICO.

OMB chief Mick Mulvaney has already begun moving ahead, according to the Senate leadership source.

Budget hawks, led by Mulvaney, fought hard for the last package, [H.R. 3 \(115\)](#), which would have pulled back \$15 billion in already-approved federal dollars. That bill ultimately tanked in the Senate, coming up just one vote shy on a procedural vote.

If the White House moves quickly, its next rescissions package could arrive in the middle of a separate major funding fight on Capitol Hill. Lawmakers have until Sept. 30 to send roughly \$1.4 trillion in fiscal 2019 funding to President Donald Trump's desk or risk a funding lapse.

Oil companies ask Florida lawmakers to unlock offshore drilling [Back](#)

By Ben Lefebvre | 08/15/2018 05:01 AM EDT

Oil and gas companies are aggressively lobbying Florida lawmakers to agree to allow offshore drilling in the eastern Gulf of Mexico — seeking to break decades of bipartisan opposition in a state that has long viewed oil spills as an existential threat to its tourist economy.

The effort, which would potentially bring oil rigs as close as 75 miles to Florida beaches, comes just seven months after Interior Secretary Ryan Zinke promised that the state was "off the table" for offshore drilling. And it could complicate Republican Gov. Rick Scott's campaign to unseat Democratic Sen. Bill Nelson, whose opposition to drilling off the coast has been a main theme of his decades in Congress.

But the expansion would aid President Donald Trump's effort to increase U.S. oil and gas production, in what he calls a bid for American "energy dominance."

Gaining access to the millions of barrels of oil and natural gas off Florida's west coast is a top priority for Exxon Mobil, Chevron, Shell and other companies.

Energy lobbyists and trade associations believe Zinke left some wiggle room in his comments, and they are trying to persuade Florida lawmakers to sign on to possible compromises, including allowing drill rigs to operate up to 75 miles off the state's Gulf coast, lawmakers and industry sources said. That would be down from more than 200 miles under an existing drilling moratorium.

Zinke's tweet exempting Florida — which critics charge was simply a political gift for Scott's Senate campaign — and his subsequent statement that he was "removing Florida from consideration for any new oil and gas platforms" shouldn't be read as official Interior policy, said Randall Luthi, president of the trade group National Offshore Industry Association, which is pressing for access to the waters.

"Secretarial tweets and statements to Congress are outside the administrative process, but certainly are indicators of where the Secretary and evidently the White House might end up," Luthi said in a statement to POLITICO. "The Eastern Gulf of Mexico is ripe for some kind of a reasonable compromise."

The Gulf of Mexico Energy Security Act of 2006 put a moratorium on oil and gas exploration in the eastern Gulf until June 2022. Department of Defense offshore training zones put another large part of those waters out of contention for drilling.

Interior's first draft plan included opening up every acre of federal water to oil and gas companies, however. Zinke has implied in later conversations with coastal state governors, senators and trade associations that the final plan wouldn't necessarily include drilling off the coasts of New Jersey, Delaware, Maine, but his plan to announce a final decision this fall could delay unpopular decisions — including possibly opening up the waters off southern California and the Mid-Atlantic region — until after the midterm elections, sources said.

The most aggressive plan industry lobbyists have brought to lawmakers calls for allowing drilling platforms within 75 miles of Florida's Gulf coast, an idea that Interior itself floated in its draft plan. Buffer zones going out as far as 125 miles have also been discussed, sources said. Either could technically adhere to Zinke's promise not to open Florida's waters, since the state's jurisdiction only extends nine nautical miles from the shoreline. Interior proposed the use of so-called exclusion zones for the eastern Gulf of Mexico and the Atlantic coast in its draft plan.

One lobbyist working the issue told POLITICO that Zinke and Scott were careful to "not say the entire Eastern Gulf," was off the table during their press conference at the Tallahassee airport in January.

"There are some Republicans who are prepared to make a deal. Seventy-five miles is the expected buffer, but folks might be willing to throw it a little further," said the lobbyist, speaking anonymously to frankly discuss ongoing negotiations.

That reduced buffer zone would please the oil industry because most of the oil and gas reserves in the eastern Gulf are believed to be in the waters south of Alabama and the Florida Panhandle, said a person at one oil and gas company who was not authorized to discuss the draft plan.

"I think we could live with 75 miles," the person said. "I think that wouldn't hurt anyone."

The idea so far has failed to gain much traction with at least two Florida Republicans who said they have been inundated with industry requests to open the area to drilling.

Florida Republican Rep. Matt Gaetz said he opposes the idea on national security grounds, given that the Defense Department uses a large part of the eastern Gulf for training exercises.

"It seems every week the oil and gas industry is working to obtain permission to crack the Destin Dome," Gaetz said in an interview with POLITICO, referring to one offshore site believed to hold large amounts of natural gas. "That would be devastating to our national security. I don't have a nuanced view on this. I am opposed."

Gaetz said he has raised his concerns on several occasions with Zinke, who he said has not pushed for a specific policy but has espoused an expansion of oil and gas drilling in general.

"I've had meetings with the secretary on this," Gaetz said. "I've had spirited conversations with him. I would not say he was wedded to any particular plan. He was trying to advance the cause of energy exploration."

An Interior spokeswoman did not answer questions about Zinke's meetings with Florida lawmakers or the possibility of establishing a 75-mile buffer zone.

"Secretary Zinke regularly meets with and communicates with many members on both sides of the aisle, coastal and non-coastal," the spokeswoman said in a written statement. "Members often discuss relevant issues pertaining to their districts and states as appropriate."

Republican Rep. Francis Rooney, who opposed drilling off the Florida coast during his 2016 campaign, said the industry has also been reaching out to him. Industry representatives have suggested several compromises, including a 100-mile buffer zone, he said, though he has rejected that plan, saying currents could carry any spilled oil from that part of the Gulf onto state beaches.

Instead, Rooney, who had served on the board of the oil and gas company Laredo Petroleum, offered to allow drilling 200 miles off the coast, west of the area where the military conducts training.

"The oil people have brought up several different things and I have been pretty much recalcitrant in negotiating with them," Rooney told POLITICO. "I think we need a clear delineation of where they will drill and not drill, and we don't need them drilling east of that military mission line."

Environmentalists also oppose any drilling, saying a buffer zone wouldn't protect Florida's beaches and tourism economy.

"The Deepwater Horizon disaster that spoiled Florida's coastline was 200 miles from its shore," said Diane Hoskins, director of environmental group Oceana, referring to the 2010 deepwater gusher that took months to plug. "A 75-mile buffer would be a cold comfort for Floridians."

Alexandra Glorioso contributed to this report.

Trump delivers a Senate race sweetener to Scott [Back](#)

By Marc Caputo, Ben Lefebvre, Matt Dixon and Bruce Ritchie | 01/09/2018 11:24 PM EDT

Donald Trump delivered a big political contribution to Rick Scott on Tuesday as the Florida governor contemplates a bid for U.S. Senate: a pledge to spare Florida from administration plans to expand offshore oil drilling nationwide.

The surprise announcement from Secretary of Interior Ryan Zinke — who went to the trouble of flying to Tallahassee to stand beside Scott — outraged environmentalists and Democrats who insist the decision was a political ploy that unlawfully gave preferential treatment to Florida, a swing state that voted for Trump and that's home to his so-called "Winter White House" escape at Mar-a-Lago in Palm Beach.

Zinke made sure that the term-limited governor got all the credit. In response to a question about what was the final determining factor in his decision, Zinke said: "The governor."

"You have a tremendous governor that is straightforward, easy to work for, says exactly what he means. And I can tell you Florida is well-served," Zinke said.

Zinke's glowing endorsement of Scott has become de facto policy for Trump, who has tried for more than a year to woo Scott publicly and privately to run for U.S. Senate against Democratic incumbent Bill Nelson. The veteran senator is one of the most vocal opponents of offshore oil-drilling in Florida, an issue that typically enjoys broad bipartisan support in a state whose economy depends heavily on tourism and development along 1,300 miles of coastline.

Scott used to be an exception to the blanket opposition to offshore oil drilling. In 2010, the then-political newcomer voiced more support for oil exploration, but the position became a political liability in the state after the Deepwater Horizon oil spill coated some Florida beaches with tar balls and damaged tourism in parts of the Gulf.

A 2016 University of South Florida-Nelson poll found that 47 percent of state residents see offshore drilling as a move in the "wrong direction," a distinction that makes it one of the most unpopular policy proposals in the state.

So when Zinke announced last Thursday that the administration wanted to open vast new stretches of federal waters to oil and gas drilling, opposition was united in Florida — from liberal environmentalists to conservative lawmakers and even Scott, who issued a rare public denunciation of the policy.

At the time, Democrats and Nelson supporters highlighted the unpopular policy announcement by a president who's flagging in the polls. Nelson's campaign began fundraising off of the initial announcement to expand oil exploration.

One Republican insider, however, told POLITICO shortly after the initial announcement that the administration would scale the plan back somewhat to give Scott a political boost that would "be a big win, and it won't be Bill Nelson bringing it home."

As late as Tuesday, Nelson was still fundraising off the drilling announcement. "President Trump is about to hand a huge victory to the oil industry and put Florida's entire economy at risk," Nelson's campaign wrote. "He just announced plans to rollback offshore drilling regulations that were put in place after the 2010 Deepwater Horizon disaster, and open up nearly all federal waters to offshore oil drilling — including the eastern Gulf of Mexico."

But just before that email solicitation was sent out, Zinke was unexpectedly standing in Tallahassee's regional airport with Scott announcing the reversal to the Florida capital press corps.

Nelson said he was incredulous.

"I have spent my entire life fighting to keep oil rigs away from our coasts. But now, suddenly, Secretary Zinke announces plans to drill off Florida's coast and four days later agrees to 'take Florida off the table'? I don't believe it," Nelson said in a written statement. "This is a political stunt orchestrated by the Trump administration to help Rick Scott, who has wanted to drill off Florida's coast his entire career. We shouldn't be playing politics with the future of Florida."

Similarly, the Sierra Club of Florida said the decision was "a purely political move to aid the ambitions of Rick Scott." And the League of Conservation Voters called it a "publicity stunt."

Scott's spokesman, Jonathan Tupps, said oil-drilling opponents should not be upset.

"Senator Nelson and anyone else who opposes oil drilling off of Florida's coast should be happy that the governor was able to secure this commitment," he said. "This isn't about politics. This is good policy for Florida."

Tupps said that, contrary to claims by Scott's opponents, the governor and staff have frequently discussed Florida's opposition to more offshore oil drilling with the Interior Department. Scott personally raised the issue with Zinke in an October meeting in Washington, Tupps said.

Why Zinke suddenly reversed months of planning four days after announcing the new oil and gas exploration policy are unclear. Zinke also made his announcement via Twitter after a brief question-and-answer session with reporters in Tallahassee.

In reversing the policy for Florida, however, Zinke may have run afoul of the Administrative Procedure Act, critics said. That could give ammunition to California and Atlantic Coast states wanting to get on the same no-drill list -- the opposite of what President Donald Trump intended when he directed Zinke to expand oil companies' access to federal waters to boost U.S. energy production.

The American Petroleum Institute President Jack Gerard earlier in the day had applauded the Trump administration's plan to make all available federal waters available for drilling, saying "It represents a bold acknowledgement of the industry's advancements in technology to safely access U.S. energy resources."

Almost immediately after Zinke's announcement, lawmakers from other states took to Twitter to raise the specter of lawsuits, which could lead to courtroom entanglements for Interior's offshore drilling plan. The proposal was supposed to go into effect in 2019 and offer acres off the coast of Florida in late 2022 when a drilling moratorium officially ends.

"Under the Administrative Procedure Act, an agency can't act in an arbitrary and capricious manner. In this case, exempting Florida but not California (which has an even larger coastal economy) is arbitrary and capricious," Rep. Ted Lieu, a California Democrat and attorney, told POLITICO.

"So the agency would either have to not exempt Florida, or in the alternative, exempt Florida, California and any other state that can show the coasts are important to the state's tourism and economy."

California Attorney General Xavier Becerra also hammered that point on Twitter, echoing Scott's argument against drilling off the Florida coast to say "California is also 'unique' & our 'coasts are heavily reliant on tourism as an economic driver.' Our 'local and state voice' is firmly opposed to any and all offshore drilling. If that's your standard, we, too, should be removed from your list. Immediately."

In Virginia, U.S. Sen. Tim Kaine took a more low key approach. "Virginia's governor (and governor-elect) have made this same request [as Florida], but we have not received the same commitment. Wonder why..." he tweeted.

Pruitt touts science policy as transparency as Democrats slam him for secrecy [Back](#)

By Emily Holden and Annie Snider | 04/26/2018 03:17 PM EDT

Embattled EPA Administrator Scott Pruitt sought to fend off criticisms he had clouded his activities within the agency in secrecy, pointing during Thursday's congressional hearing to the new science policy rolled out this week that he said is boosting transparency around new rules.

But that new policy, long a conservative priority, had Democrats howling that Pruitt had effectively given himself carte blanche to conceal studies that would not support his rollback of Obama EPA rules.

"The type of studies you want to exclude are the same kind of scientific studies that were used to prove that lead in pipes and paints harm children and that secondhand smoke is a dangerous carcinogen," said Rep. [Raul Ruiz](#) (D-Calif.). "You have demonstrated a disregard of true science [and] the scientific process," he said.

The discussion was one of the most substantive policy issues at [the hearing](#) of the Energy and Commerce subcommittee that focused largely on the scandals that have erupted around Pruitt in recent weeks.

The draft rule, which was announced at a closed event at agency headquarters on Tuesday, could have far-reaching effects that limit EPA's ability to rely on studies that don't have publicly available raw data when making decisions about air and water regulations. Scientists and public health advocates have argued the change could keep the agency from updating health protections based on new science since those studies typically redact subjects' personal information.

Pruitt's GOP supporters on the panel praised the move as a way to ensure that scientific data used to support new regulations was available for everyone to review.

"I've had a lot of constituents over the years who've been very concerned about decisions ... that get made by administrators or the bureaucracy and in some cases they can't get access to the underlying data that underpins the decisions," said Rep. [Greg Walden](#) (R-Ore.), chairman of the Energy and Commerce Committee.

Rep. [Paul Tonko](#) (D-N.Y.) called Pruitt "hypocritical" because the proposed rule gives broad authority Pruitt to grant exemptions from the new requirements, which he said Pruitt could use "without any transparency or accountability" for his decisions.

Tonko pointed to internal emails between top EPA officials initially released under the Freedom of Information Act that show the agency's top chemicals official, a former leading chemicals industry expert, expressing concerns about the impact the policy could have on companies' confidential business information.

"If EPA was assessing the safety of a chemical, you alone would have the power to selectively block public health studies that do not support your political priorities and allow ones that favor your friends in industry. Not only does this open the door to special treatment for industry over the public health, but you could also pick winners and losers among the industry types," Tonko said.

Pruitt argued the restrictions will apply equally to "all third party studies." He said both business and personal health information could be redacted, which experts have argued would be time-consuming and expensive.

Yogin Kothari, a Washington representative for the Union of Concerned Scientists, which has opposed the change, said Democrats were right to highlight the hypocrisy of the policy that he said was really about restricting science.

"What it highlights is a lack of transparency at the agency because he hasn't really talked about this or explained this or explained his thinking about this," Kothari said.

Frank Maisano, a spokesman for the lobbying firm Bracewell who attended the hearing, said Republicans on the committee appeared to be interested in hearing more about the policy.

"It's a topic that is different from what Democrats are talking about, it's a topic that's substantive," Maisano said. "It's a topic that many in the business community and many in the conservative community have been focused on for years."

EPA's proposal, based on long-sought legislation from House Science Chairman Lamar Smith (R-Texas), also drew support from Rep. Kevin Cramer (R-N.D.) who said it undercut Democrats who attacked Pruitt for secrecy while defending the agency previous use of "secret science."

"You've also been accused of hypocrisy, a lack of transparency, by people who are in the same breath defending secret science as a means of carrying out their political philosophy ... the irony is rich beyond rich with me," he said.

Quint Forgey contributed to this report.

Mexico, U.S. may be heading toward NAFTA deal amid Trump's global trade war [Back](#)

By Megan Cassella | 08/15/2018 05:32 PM EDT

President Donald Trump could be poised to make a deal with Mexico on NAFTA even as he engages in a trade war with the rest of the world.

Mexican Economy Secretary Ildefonso Guajardo arrived in Washington on Wednesday — as he has every week for the past month — to hammer out some of the most contentious issues on NAFTA. U.S. and Mexican officials now say they could be on the verge of announcing a preliminary agreement on everything from complicated automotive rules to environmental regulations by the end of August.

The apparent turnaround after months of stalemate is a surprise outcome of discussions reaching their year anniversary on Thursday. And while the two sides have yet to bring Canada, the third partner in NAFTA, into the latest round, the negotiators' optimistic tone could signal that Trump may be ready to extinguish at least one trade conflagration before the midterms. That would placate Republicans who have been calling for a return to stability as the U.S. and China have been slapping tariffs on each other's exports, roiling international markets and burdening American farmers.

"We're settling in for the long haul with China, so we really need to release the pressure in our backyard," said Dan Ujcz, an international trade lawyer who specializes in Canada-U.S. matters. "I think that's a driving force for the U.S.' desire to get a deal right now."

To be sure, some major controversial issues remain unresolved, including the U.S. proposal to automatically terminate the pact after five years unless all three countries agree to renew it — an idea that Canada and Mexico have both rejected outright. And for the time being, at least, Canada still remains on the outside of the current talks.

But reaching even a bare-bones agreement on NAFTA before November's elections would hand a concrete victory to Trump, who would likely point to the revamped pact as a symbol that his strong-arm tactics have worked, industry sources and experts closely following the talks say. It would also allow U.S. trade officials to clear a major task off their agenda and dedicate more time to areas where U.S. Trade Representative Robert Lighthizer in particular has wanted to focus, primarily trade issues with China.

At the same time, Mexican negotiators are also under renewed pressure to get a deal after the country elected a new leader who takes office in December and who badly wants NAFTA to be signed and off his plate before then. Mexico has pointed to Aug. 25 as the date by which it must wrap up at least a preliminary agreement for outgoing President Enrique Peña Nieto to be able to sign the deal before he leaves office.

Those domestic politics have put Guajardo in a tough position, as he tries to appease the incoming Mexican administration and quickly wrap up a deal while still standing up firmly against some U.S. proposals that Mexico has repeatedly derided as unworkable.

"They're under a lot of pressure to just come up with anything, whatever it is," one source close to the talks said, requesting anonymity to speak freely about internal deliberations. "What I've been hearing from other Mexican parties is that Ildefonso was sort of distraught and frazzled by the fact that he's being asked to wrap it up, and that of course means making concessions that he wasn't ready to make. It lowers his negotiating potential."

Against that backdrop, sources close to the talks say Mexico appears to be poised to accept large swaths of a U.S. proposal involving the rules that govern North American-produced automobiles and dictate what percentage of each car must be sourced from within a NAFTA country to qualify for reduced duties under the agreement.

At the U.S.' urging, Mexico looks likely to agree to an increase in the overall amount of North American-sourced content that must be included in each automobile, and will accept a requirement that a certain percentage of each car must be produced by workers earning at least \$16 an hour, sources say. Mexico is also poised to accept mandates that a certain percentage of the steel, aluminum and plastic included in each vehicle is also sourced from a NAFTA country.

In exchange, the United States would be prepared to give up a controversial proposal that would have made it easier for American fruit and vegetable growers to make the case that Mexico is selling produce at unfairly low prices when crops are in season in a particular region, two sources with knowledge of the trade-off told POLITICO. The U.S. would also submit to Mexico's demand to leave a chapter largely untouched that contains rules on disputes between governments, one of the sources said.

"Essentially, there is a deal," one of the sources said.

At the same time, however, other major aspects of the renegotiation remain unfinished. Chief among them is the so-called sunset clause that the U.S. wants, which would end the pact after five years unless the parties opt to continue it. Several sources close to the talks say the sunset clause has hardly been discussed during the latest set of meetings between the U.S. and Mexico, and the two countries still remain on opposite sides.

And Canada will need to come to the table for a deal to be finalized. Officials from all three countries have sought to emphasize that the U.S.-Mexico engagement is not a sign of ill will toward Canada but is instead an attempt to work out bilateral issues before bringing Ottawa back into the fold.

But negotiators had expected that Washington and Mexico City would have made enough progress by now for Canadian Foreign Minister Chrystia Freeland to have joined the meetings in Washington. The more time that passes, the more likely it is that the strategy to put off a trilateral meeting could backfire, a source close to the talks said.

"Yes, there's U.S.-Mexico momentum — that's a positive message and great from Mexico's point of view," the source said. "But the longer it takes to bring in Canada, the less likely this is going to get done in the short term."

Still, any incremental progress, or even the fact that the U.S. and Mexico are continuing to engage in good-faith negotiations and regular meetings, has offered a signal of some hope to U.S. farmers, consumers and industry groups who have been worn out by months of uncertainty and pummeled by retaliatory tariffs imposed over the past few months.

Retailers and business groups are reluctant to throw their support at this point behind a deal that is still unfinished, particularly when a number of proposals that some have termed poison pills remain on the table.

But at the same time, "I think what all of our members want, what the business industry at large wants, is certainty," said Vanessa Sciarra, a former U.S. trade negotiator who now works as a vice president at the National Foreign Trade Council. "Anything that provides for greater clarity on trade relationships, particularly with Mexico and Canada ... would be helpful."

Adam Behsudi contributed to this report.

States Go to Forefront as EPA Chips Away at Backlog of Decisions

By Amena H. Saiyid

Posted March 29, 2018, 8:55 AM

Shifting the burden of environmental protection to states could speed approvals of air and water permits that businesses need to operate, as the EPA tries to halve its backlog of overdue decisions.

EPA's Reason for Easing Auto Rules Will Set Up Next Policy Fight

Posted March 29, 2018, 7:41 AM

California Adopts Federal HFC Rules After Court Gutted EPA SNAP Program

The California Air Resources Board (CARB) has adopted strong controls on hydrofluorocarbons (HFCs) -- the potent climate warming chemicals -- in refrigerants and air-conditioning systems that echo requirements under EPA's Significant New Alternatives Policy (SNAP) program that were gutted by a court ruling last year.

- Conservative groups urge EPA to revoke California air act waiver
The groups' push for Pruitt to revoke California's waiver comes on the eve of EPA's expected proposal to weaken existing GHG rules for 2022-25 model year vehicles.

Utilities, Northeast States Clash Over Proof For EPA Interstate Air Petitions

Electric utilities and Northeastern states are clashing over the standard of proof states must meet in order to succeed with Clean Air Act petitions asking for direct federal regulation of air pollution sources in one state that are hindering another state's ability to attain national ambient air quality standards (NAAQS) such as the ozone NAAQS.

Intra-urban spatial variability of surface ozone in Riverside, CA: viability and validation of low-cost sensors by Kira Sadighi, Evan Coffey, Andrea Polidori, Brandon Feenstra, Qin Lv, Daven K. Henze, and Michael Hammigan

<https://www.atmos-meas-tech.net/11/1777/2018/>

Short Summary: Ground-level ozone has negative human health impacts. In the summer of 2015, 13 low-cost sensor monitors were deployed to several neighborhoods around Riverside, California. There were significant spatial differences between monitors. This is important because it means that ozone in certain places may be higher than what EPA monitors report for an area, which is pertinent for residents of those communities. This research helps inform the limitations and advantages of low-cost sensor networks.

Subject: Morning Energy, presented by Chevron: Pruitt makes his Senate return — Emails: Pruitt pushed 'red team-blue team' climate debate — The WIFIA balancing act

By Kelsey Tamborrino | 05/16/2018 05:40 AM EDT

With help from Anthony Adragna

TIME TO FACE THE MUSIC: Scott Pruitt hits the Hill again today, and on top of the questions he can expect on his lavish spending and ethical quandaries, the EPA administrator will be asked to explain why EPA helped to bury a federal study that would have increased warnings about toxic chemicals found in hundreds of water supplies across the country. As POLITICO reported this week, emails released under the Freedom of Information Act indicate the study was being prepared for release in January, before EPA intervened. It has not been made public more than three months later and the agency producing it says it has no timeline for doing so.

Now lawmakers are looking for answers, including Republicans whose districts suffered contamination from the chemicals PFOA and PFOS, which are linked with certain cancers, thyroid problems and life-threatening pregnancy complications. Annie Snider, who broke the story, has more on the fallout [here](#).

Plus, today's hearing in front of a Senate Appropriations panel comes less than 24 hours after yet [another probe](#) was launched by the agency's inspector general into the handling of Pruitt's emails. That brings the number of probes and investigations into his behavior to an even dozen.

Sparks flying: When Pruitt last appeared on the Hill in April before two House committees, he played the [blame game](#), in part pushing the burden of some of his ethical decisions onto his staff. And since today's appearance will be his first before the Senate since the steady drip of news stories began earlier this year, he'll face a range of inquiries from Democrats, some of whom have been leading the charge against him. The subpanel's ranking Democrat, [Tom Udall](#), has been critical of Pruitt in the past and plans to question him on his spending and ethical issues. "Administrator Pruitt, it's hard to know where to begin this morning. Every day there seems to be a new scandal ... with you at the dead center," Udall will say.

Expect the New Mexico Democrat to discuss the [range of investigations](#) that currently eye Pruitt. "I can only wonder if more investigations will start based on your fast-tracking a new Superfund site at the behest of a conservative media personality and other reports that EPA has taken quick actions to help political donors and lobbyists," he'll say, referencing another [POLITICO story](#).

Both Democrats and Republicans on the subcommittee tell ME they want to discuss the policy at hand. Republican [Shelley Moore Capito](#) said she wants to ask Pruitt about a number of different things, but added she wanted to "just concentrate on the policy." Still, Democrat [Chris Van Hollen](#) said he has a long list of questions for the administrator that involve policy as well as a "betrayal of the public trust." And, fellow subpanel Democrat [Jeff Merkley](#) told ME: "[I] certainly want to get a better understanding of why he feels that he's so comfortable using government funds in all kinds of inappropriate ways, but also the policy."

Separately, EPW Chairman John Barrasso, who is not on the Appropriations committee, suggested [in a letter](#) Tuesday he'll also be watching to see what comes out of today's hearing. That letter comes in response to a request from six Democratic EPW members, who [demanded](#) Barrasso bring Pruitt before the panel. Barrasso

said EPA provided Pruitt's responses to previous questions from the panel earlier this week and added that he intends to call Pruitt for another hearing but will wait to see what comes out of the ongoing probes already looking into Pruitt's activities.

In the crowd: Environmental groups in the audience today will look for senators to ask the tough questions. Moms Clean Air Force will be bringing in local moms and their children, and the group will hand out their Pruitt "report card." Similarly, the Environmental Defense Fund will be watching to see if Pruitt dodges on questions that aim to hold him accountable. EDF will again hand out its "Non-Trivial Pruitt Questions" cards and dropped off hard copies of its "101 Questions" document to committee members' offices. **If you go:** The hearing kicks off at 9:30 a.m. in 124 Dirksen.

GONE QUIET: Sen. Jim Inhofe told reporters he hasn't talked with his buddy Pruitt in "about a month" but said the former Oklahoma attorney general is "weathering the storm" fine. But, he predicted, the tempest was not done yet. "Storms are never over," he said. "They always come back — you know that — in Washington."

WELCOME TO WEDNESDAY! I'm your host Kelsey Tamborrino. Clean Energy Business Network's Andy Barnes was the first to guess that two bathtubs remain in the Senate after they were uncovered in 1936 — although six were first installed in the chamber. Today's question: Who was the first sitting member of Congress sentenced to prison? Bonus points if you can guess the charge. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

THIS MIGHT COME UP: New communications reveal additional details about how the controversial red team-blue team debate over climate science would have played out at EPA and who was influencing Pruitt. Pro's Alex Guillén and Anthony Adragna report on a draft press release that circulated on Nov. 4 among top EPA officials, which laid out the line of attack. "EPA is standing up a Red Team peer review of the report," they wrote, rebuffing the Fourth National Climate Assessment, which countered many Trump administration political appointees who have questioned the connection between greenhouse gas pollution and global warming. The "blue team" would essentially be the federal assessment and its authors. Read more on that here.

THE WIFIA BALANCING ACT: A battle is brewing between small and rural communities and the larger ones whose infrastructure projects can be costly — and it could upend a bipartisan effort to pass the first major infrastructure bill during the Trump era. Annie reports on the measure at hand, called the Securing Required Funding for Water Infrastructure Now, or SRF WIN Act. The provision would expand the WIFIA program that loans federal money for water infrastructure projects at Treasury's attractive long-term interest rates, but also includes changes to make the WIFIA program more accessible to small and mid-sized communities. Now the measure has sparked opposition from the groups that originally conceived of the WIFIA program, who say the new proposal tilts too far toward the small communities. Read more here.

**** A message from Chevron:** Chevron and local partners are helping to provide DOERS with the hands-on technical training needed for today's jobs in the manufacturing and energy industries. Watch the video: <https://politi.co/2rBPIuI> **

CANCEL THOSE VACATIONS: Senate Appropriations Chairman Richard Shelby told reporters he's been in talks with Majority Leader Mitch McConnell about shelving the chamber's planned August recess unless they make more progress in the appropriations process. "We might not have an August recess," he said. Asked if it would be realistic to do so in an election year, Shelby quipped: "Might not be realistic for the Democrats — they have a lot more seats." Put ME down as skeptical on this one. Never underestimate the power of late July jet fumes.

INTERIOR-EPA PACKAGE MOVES AHEAD: The House Appropriations Committee's Interior-Environment panel cleared a \$35.25 billion spending package on Tuesday, setting the measure up for committee consideration as early as next week. The [bill](#) cleared on a voice vote, Alex reports, and is likely to face contentious amendments before the full committee. Alex breaks down the bill further [here](#).

FOR YOUR RADAR: The full House Appropriations Committee will [mark up](#) the fiscal 2019 Energy-Water bill this morning. Read the bill text [here](#).

ENERGY NOM ON TAP: The Senate Foreign Relations Committee will hold a markup on the nomination of Frank Fannon to be an assistant secretary of State for energy resources. Fannon was a former staffer to Inhofe, who released a statement ahead of the vote that called the nominee a "good friend." Inhofe pointed out expanding U.S. energy exports to Eastern Europe, and said Fannon "can use his leadership and expertise effectively to advance American energy dominance and enforce energy sanctions, like those against Russia and Iran."

LISTEN IN: EPA [announced](#) Tuesday its Office of Enforcement and Compliance Assurance will host a series of "web-based listening sessions" beginning May 21, on specific recommendations from the agency's [Superfund Task Force Recommendations Report](#).

NEW FOSSIL FUEL ALLIANCE COMING? The Trump administration is weighing the creation of "a new, central institution" that would advocate for natural gas and coal technology and exports, according to draft document obtained and reported on by E&E News. The draft "Clean and Advanced Fossil Fuel Alliance" talking points, though "pre-decisional," lay out a previously described loose affiliation of countries the United States is courting. Read the story [here](#).

MONIZ UNVEILS ENERGY EMPLOYMENT REPORT: Former Energy Secretary Ernest Moniz will unveil the third installment of the 2018 U.S. Energy & Employment Report this morning. The report arrives via Energy Futures Initiative — where Moniz is CEO and president — and the National Association of State Energy Officials. It was originally established during Moniz' time at the DOE, and offers insight into the employment trends of four energy sectors. Moniz will be joined by NASEO head David Terry and author David Foster, as well as Senate Energy ranking member [Maria Cantwell](#). The event will be livestreamed on both the [NASEO](#) and [EFI](#) websites.

JUDGES HALT ATLANTIC COAST: A federal appeals court [ordered](#) the construction of the Atlantic Coast pipeline be halted, following a legal challenge by environmental opponents who argued a review by the U.S. Fish and Wildlife Service was inadequate, the Richmond Times-Dispatch [reports](#). The order vacates FWS' Incidental Take Statement. In a research notice sent by ClearView Energy Partners, the group said there was "a high probability that FERC will direct suspension of construction operations in these areas while the FWS revises the ITS."

NSR PERMITTING FOCUS OF HEARING: The House Energy and Commerce Environment Subcommittee holds a [hearing](#) on new source review permitting reform this morning. EPA air chief Bill Wehrum will testify, as well as Bracewell's Jeff Holmstead, NRECA's Kirk Johnson and NAM's Ross Eisenberg, among others. Although the administration doesn't have an official position on the [discussion draft](#) that is the focus of the hearing, Wehrum [will say](#) the current "program is unnecessarily complicated and confusing," and should be improved.

Eisenberg will say that NAM supports the bill and the need to reform NSR, more so now than ever. "One of our members estimates that there are over a hundred million tons of CO2 that could be reduced by deploying the full suite of available turbine upgrades at power plants," he'll say, adding that many such upgrades "have been impeded because they may potentially trigger NSR." **If you go:** It begins at 10:15 a.m. in 2322 Rayburn.

NWF MEETS WITH ZINKE: The National Wildlife Federation will meet today with Interior Secretary Ryan Zinke, where the group will discuss conservation issues. Ahead of the meeting, the group submitted five of its priorities, including concerns about some of the locations of upcoming lease sales and mining proposals and Zinke's broader conservation agenda.

Heads up! Zinke will deliver the keynote speech at next week's annual Williston Basin Petroleum Conference, in Bismarck, N.D., local KFYZ-TV [reports](#).

IT'S A BIRD, IT'S A DRONE: Interior is for the first time investing in small-unmanned aircraft systems services, or drones, to help tackle wildfires. DOI [awarded](#) a "Call When Needed" contract to four U.S. companies, which will allow the agency to employ the drones when needed to support wildland fire operations, search and rescue and emergency management.

MAIL CALL! A group of 20 Democratic senators called on Pruitt Tuesday to extend the comment deadline until July 30 for the agency's "secret science" proposal to ban the use of studies that don't publicly disclose all their data, and to hold more public hearings on the topic. Read [the letter](#).

— **Ahead of the House's vote on the farm bill**, 114 state legislators signed a letter in opposition to a provision they say would exempt EPA from key requirements under the Endangered Species Act that protect pollinators. Read it [here](#).

STUDY: BUSINESSES TAKING THE LEAD: Deloitte is out with two new reports today — one on global battery storage markets and another on energy management and consumption views from businesses and consumers. The latter report found that businesses are taking the lead to address climate change. They are reviewing or changing their energy management policies in response to the U.S. pulling out of the Paris climate agreement, the report found. According to the report, the number of companies with carbon footprint goals increased to 61 percent in 2018, from slightly more than half the year before. Read that report [here](#) and the energy storage report [here](#).

REPORT OUT ON MANUFACTURING AT DOE: The Information Technology and Innovation Foundation will release its new report today reviewing DOE's "Manufacturing USA" institutes, looking at areas of progress and stability. Given the potential ITIF says the institutes have to bridge gaps in private sector investment, the report lays out national goals at stake at the nexus of manufacturing and energy, and outlines why federal action is necessary. Read the report [here](#).

Stories from POLITICO Pro

EPA move on chemical study may trip up Pruitt [Back](#)

By Annie Snider | 05/16/2018 05:02 AM EDT

EPA Administrator Scott Pruitt is facing a new controversy over chemical contamination that could prove even more damaging than his spate of recent ethics scandals.

When Pruitt returns to Capitol Hill Wednesday, he will likely be asked to explain why EPA helped to bury a federal study that would have increased warnings about toxic chemicals found in hundreds of water supplies across the country. A handful of Republicans were quick to demand answers after POLITICO reported Monday that senior aides to Pruitt intervened after the White House warned of a "public relations nightmare" from the impending Health and Human Services Department assessment.

While Pruitt has said partisan witch hunts are to blame for the controversies around his first-class travel, extensive security spending and friendliness with lobbyists, he will struggle to make the same case this time. Emails released under the Freedom of Information Act indicate the HHS study was being prepared for release in January, before EPA intervened. It has not been made public more than three months later, and the agency producing it says it has no timeline for doing so.

Long used in Teflon and firefighting foam, the chemicals PFOA and PFOS are linked with certain cancers, thyroid problems and life-threatening pregnancy complications. Studies have found them in 98 percent of Americans' blood, and communities from West Virginia to Michigan to New York have been in an uproar after discovering that their drinking water has been contaminated with the chemicals.

Tristan Brown, who served as the Obama administration's liaison between EPA and members of Congress when the agency issued a health advisory for PFOA and PFOS in 2016, said that lawmakers on both sides of the aisle are deeply concerned about the issue. He said anger over the Trump administration's interference could snowball if powerful Republicans who have experienced contamination in their states speak out strongly.

"That could be the beginning of a breach of the dam," Brown said.

Already, key Senate Republicans have shown their willingness to break with the Trump administration when it comes to chemical contamination. In December, North Carolina's two Republican senators came out in opposition to the administration's nominee to head EPA's chemical safety office, industry consultant Michael Dourson, in part because of a crisis in their home state with a chemical similar to PFOA and PFOS, called GenX.

At least three Republican lawmakers have joined a host of Democrats in demanding answers from the Trump administration about the HHS study.

Sen. Shelley Moore Capito of West Virginia, which experienced a major chemical spill a few years ago and has a major PFOA and PFOS problem, said she wants to see the study made public.

"It's important that the findings of the study are released so we can determine the health impacts and any potential threats our communities may face as a result of exposure to perfluorinated chemicals. I would encourage the administration to look into this matter," Capito, a member of the Appropriations subcommittee with EPA jurisdiction, where Pruitt will testify Wednesday, said in a statement to POLITICO.

Rep. Mike Turner (R-Ohio), who chairs a House Armed Services subcommittee, chimed in as well.

"This is not an issue of public relations — this is an issue of public health and safety," he said in a statement Tuesday after writing to Pruitt on the matter.

"It would be unacceptable if the political considerations of those at the highest levels of the EPA led to the suppression of information concerning the public health of Americans," Rep. Brian Fitzpatrick (R-Pa.) said in a statement. "The EPA must provide my constituents with answers to these allegations immediately."

"It is vital that there are proper measures in place to perform accurate, expeditious, scientific assessments for chemicals that pose a threat to public health," he said in a statement to POLITICO, citing his state's "tragic history" with chemical contamination.

Pruitt says he is taking the chemicals issue seriously. Not long after the North Carolina senators torpedoed the chemicals nominee, Pruitt announced a "leadership summit" on PFOA, PFOS and related chemicals that is scheduled to be held at EPA headquarters next week.

But few are expecting his response to include any new regulatory action.

EPA has not regulated a single new contaminant under the Safe Drinking Water Act in more than two decades. The agency's 2016 drinking water advisory only provided advice to the states and local water managers — it set no mandatory limits.

And Pruitt's EPA doesn't even plan to go that far for other chemicals. The agency's No. 2 water official, Dennis Lee Forsgren, has told drinking water groups that under Pruitt, the agency won't issue any new health advisories for GenX or other chemicals.

Betsy Southerland, a career staffer who led work on the 2016 health advisory as director of science and technology at EPA's water office before resigning last year, said states would have to translate the information provided by EPA about the chemicals into health advisory levels or drinking water limits on their own, something few are equipped to do.

Pruitt's "not allowing EPA to provide the state with that expertise," she said.

EPA spokesman Jahan Wilcox, defending the agency's approach, said officials are "stressing that all options — not just health advisories — are on the table as we move into the National Leadership Summit and taking additional steps to address PFAS."

EPA watchdog launches new probe into Pruitt's email habits [Back](#)

By Anthony Adragna | 05/15/2018 06:18 PM EDT

EPA's inspector general said Tuesday it would look into Scott Pruitt's use of nonpublic email accounts, bringing the number of federal probes into the EPA administrator's behavior to an even dozen.

Specifically, the inspector general said it would look into whether Pruitt is properly preserving email records as required under federal law and whether the agency is properly searching all of his accounts in response to public records requests.

Two senior Senate Environment and Public Works Committee Democrats — ranking member Tom Carper of Delaware and Jeff Merkley of Oregon — released [the letter](#), dated May 2, confirming the probe.

EPW Chairman John Barrasso (R-Wyo.) has previously raised concerns about Pruitt's use of nonpublic email accounts. In response, the agency said it searches all of his accounts when responding to public records

requests. Previous EPA administrators also routinely used nonpublic accounts for day-to-day email communications.

The new probe comes as Pruitt faces a litany of questions surrounding his spending and ethical woes. EPA's inspector general, the Government Accountability Office and the House Oversight Committee are all looking into aspects of his conduct.

Those probes involve Pruitt's first-class travel, use of security on personal trips, pay for top political aides and a sweetheart condo deal with an energy lobbyist who later met with him, among others.

In the letter, EPA Inspector General Arthur Elkins warned that a stretched budget and staff meant he could not say when the probe would begin.

"The fact is that the OIG has been funded at less than the levels we deem adequate to do all of the work that should be done, and we therefore have to make difficult decisions about whether to accept any given potential undertaking," he said. "However, despite these constraints, we have determined that the issues raised in your letter are within the authority of the OIG to review, and we will do so."

Pruitt is set to appear before a Senate Appropriations subpanel Wednesday.

EPA staff in 'despair' after Pruitt blame game [Back](#)

By Emily Holden | 04/27/2018 05:33 PM EDT

Scott Pruitt may have survived his testimony on Capitol Hill, but he's coming back to a further enraged and demoralized Environmental Protection Agency staff.

Several current and former EPA officials and other people close to the agency said Pruitt did himself no favors with his congressional testimony Thursday, in which he blamed his aides for installing a \$43,000 privacy booth in his office and approving more than \$100,000 in first-class flights that he took last year. Pruitt also denied knowing key details about raises that his top staff received last year. And he declined to defend his former policy chief against Democrats' accusations that she had failed to show up for work for three months, even though she and Pruitt had been photographed attending the same meeting during the period in question.

In conversations with 11 people who know the atmosphere inside EPA, including Republican political appointees, a handful said his refusal to grovel may have pleased President Donald Trump. But others said his strategy was appalling to the current and former staffers who found themselves thrown under the bus.

"I think his credibility is damaged, and whether or not he gets fired by a tweet isn't going to diminish the fact that his credibility has been seriously damaged by all of this," one person close to the administration told POLITICO. "It shows a real lack of leadership that he did not defend, or blame, his staff. These are the people that he's asking for loyalty from. These are the people that are defending him. He's not returning the favor. That's not leadership."

A current EPA official said Friday that employees are veering between "despair" and "embarrassment," and Pruitt's televised performance did not help.

"I will tell you, it did not go unnoticed from people who watched the hearing that he did not take responsibility on the policy pieces" of the testimony, the official said. "It was not lost on us on the stuff we know about that he used very careful language, he was parsing his words, that some might say he did not speak the whole truth."

One former EPA official said even political aides are "sick of Pruitt constantly putting himself first," and "putting himself before the president's agenda."

"He's rarely been interested in selling regulatory reform as improving Americans' lives, and is far more interested in saving his political career," the former official said.

But Trump has shown no signs of abandoning his EPA chief, who has won the strong backing of conservative groups with his efforts to erase Obama-era environmental regulations. So far, that has outweighed the anger of White House staff members and exasperation of key Republican lawmakers at Pruitt's series of controversies over luxe travel, extensive security, a below-market D.C. condo rental from a lobbyist and history of questionable real estate deals in his native Oklahoma.

A senior EPA official said Pruitt's strategy of fighting the allegations was designed to appeal to Trump, who disdains members of his team who appear weak on television.

"They like fighters no matter what," the official said. "No matter what, fight. That's what we've been conditioned to."

The official predicted that the White House takeaway from the hours of hearings would be that Republican lawmakers stood with Pruitt, while Democrats squandered their opportunity by spending too much time criticizing Pruitt's deregulatory agenda — which Trump supports — rather than hitting him for the ethics issues.

"Any audience would say the White House saw a Republican bench entirely supportive of him," the EPA source said. "On the Democrat side, the White House also saw Democrats who used half their time to criticize policies he's doing that the White House likes. If they wanted to land punches, why do you ask about these policies? That's not going to do it for you."

Pruitt ally Sen. Jim Inhofe (R-Okla.) took that message from Thursday's hearings, despite saying earlier in the week that he was troubled by some recent allegations about the EPA leader's past dealings in Oklahoma. "After a full day of mudslinging and partisan questioning from the Democratic members of the committees, it is clear that the only fault they could find with Scott Pruitt is that he's successfully ending the EPA's history of overreach and over-regulation," Inhofe said in a statement Friday.

Still, the senior EPA official said, Pruitt's relatively good day in Congress could be "washed away" if his inconsistencies about what he knew about the raises generates a steady narrative that he lied to the White House, as at least one CNN pundit alleged.

And until Trump weighs in, the tension around Pruitt at EPA will remain high.

"There needs to be a halt to this because it's exhausting," the same official said.

Pruitt also still faces multiple investigations inside the executive branch and on Capitol Hill. On Friday, for example, the agency was due to deliver a "batch of documents" to the staff of House Oversight Chairman Trey Gowdy (R-S.C.), who is leading one of the probes.

Departed EPA aides who have said Pruitt didn't tolerate internal criticism of his spending and secrecy say current staffers still fear they'll be similarly swept up in the scandals — but won't be able to find jobs if they quit now and gain a reputation for disloyalty.

"They're trying to do the best they can in a toxic environment," one former staffer said. "You cannot express any idea that might be misconstrued as a political attack on Pruitt or any policy issues, so people just do what they're told. They're professional. ... They don't want to get caught in an undertow."

Another former EPA official has been getting phone calls from staffers who are frustrated by the controversies but keeping their heads down.

"Everyone in the building wants to come out and say something ... but as soon as they say something, they're out of a job," that person said.

Not everyone in the agency was upset that Pruitt pinned many of his controversies on his staff Thursday, after giving an opening statement in the House in which he confessed that his first year on the job had been "a learning process."

"When he was putting it on staff, that's the reality of it," one current EPA political appointee said. "Sure, he's the administrator; sure, he's the head of the agency. That doesn't mean he was aware of the \$40,000. He asked for a secure phone line and the next thing you know it turned into a secure phone booth. ... Overall, I think his staff continue to stand beside him today and will continue to do that."

In his testimony, Pruitt said he had never asked for a \$43,000 secure phone booth — only "access to secure communication" — or biometric locks for his office, and he said his security staffers made the call for him to fly first-class to avoid possible threats from other passengers. He said he had authorized his chief of staff, Ryan Jackson, to give raises to his top staff but had no idea that they were circumventing disapproval from the White House. And he chose not to defend his former policy chief against allegations from Democratic lawmakers that she was not in the office for months, even though an EPA spokesman had dismissed the accusations as "baseless and absurd."

A second political appointee said Pruitt didn't break any new ground with his defenses and that controversies dogging him had been "all blown out of context."

The person called Pruitt a "disruptor" and said "folks don't like that aggressive style."

"Administrator Pruitt speaks for a certain aspect of the Trump administration conservative movement," the appointee said.

Eric Wolff and Anthony Adragna contributed to this report.

Pruitt fast-tracked California cleanup after Hugh Hewitt brokered meeting [Back](#)

By Emily Holden and Anthony Adragna | 05/07/2018 10:12 PM EDT

EPA Administrator Scott Pruitt placed a polluted California area on his personal priority list of Superfund sites targeted for "immediate and intense" action after conservative radio and television host Hugh Hewitt brokered a meeting between him and lawyers for the water district that was seeking federal help to clean up the polluted Orange County site.

The previously unreported meeting, which was documented in emails released by EPA under a Freedom of Information Act lawsuit by the Sierra Club, showed Pruitt's staff reacting quickly to the request last September by Hewitt, who has been one of Pruitt's staunchest defenders amid a raft of ethics controversies around his expensive travel, security team spending and a cheap Washington condo rental from a lobbyist.

Pruitt has drawn criticism from environmentalists and other critics for letting prominent GOP backers and industry groups influence the agency's agenda — even as he has kicked scientists off of EPA's advisory panels and moved to limit the kinds of peer-reviewed research it will consider when making decisions.

In many cases, the people whose advice Pruitt is heeding could be useful supporters for him in a future race for U.S. senator or president. They include GOP megadonor Sheldon Adelson, who — as POLITICO reported in March — persuaded Pruitt last year to take a meeting with an Israeli water purification company called Water-Gen that later won a research deal with the EPA.

Hewitt, a resident of Orange County whose son James works in EPA's press office, emailed Pruitt in September to set up a meeting between the administrator and the law firm Larson O'Brien, which employs Hewitt and represents the Orange County Water District. Pruitt had been planning to meet with the lawyers in California a month earlier, but cancelled the trip to undergo knee surgery.

"I'll join if the Administrator would like me too or can catch up later at a dinner," Hewitt wrote in his Sept. 18 message. Hewitt added that the issues surrounding the Superfund site were "Greek to me but a big deal in my home county."

Pruitt's aides responded within minutes and quickly confirmed an Oct. 18 meeting for the lawyers and a project director.

Six weeks after that meeting, on Dec. 8, the Orange County North Basin site appeared on Pruitt's list of 21 contaminated areas to address. A month later, Pruitt proposed listing the site on EPA's National Priorities List, a move that could make it eligible for long-term federal cleanup funding from the federal government if the responsible polluters cannot be identified and forced to pay for its remediation.

Since then, Hewitt has been a robust defender of Pruitt, dismissing his recent controversies as "nonsense scandals" on MSNBC in early April and saying his detractors were "just trying to stop the deregulation effort."

Pruitt has touted the agency's Superfund work as one of his key priorities, setting up a task force to seek to speed up the clean-up of the nation's worst contaminated sites. That task force had been headed by Albert "Kell" Kelly, a former banker and longtime friend, who departed the agency last week after news about loans he provided to Pruitt in Oklahoma, including the mortgage provided to Pruitt for a house he bought from a lobbyist when he was a state senator.

Environmental advocates have worried Pruitt's efforts to identify Superfund priority sites would bypass the process set up by Congress to ensure cleanup resources are divided fairly, and that he could focus on sites seen as important to his political supporters. And environmentalists have said Pruitt's rush to claim that contaminated properties have been remediated could risk turning them over to local governments and businesses that might pursue cheaper, inadequate solutions.

Elgie Holstein, senior director for strategic planning at the Environmental Defense Fund who has been tracking EPA's Superfund actions, said the connection to Hewitt is "not a surprise."

"The biggest fear we have is that No. 1, the administrator's political priorities and personal ambitions, political ambitions become the primary criteria for action under this program instead of science and health," Holstein said.

EPA never disclosed the meeting with Hewitt's contacts. It was listed on Pruitt's public calendar as a staff briefing. But on his private Outlook schedule, which the agency has released in response to lawsuits, it appeared as an "Orange County Superfund Site" meeting with Kelly and two other staffers. The records did not list the Californians in attendance at the meeting at EPA headquarters in Washington.

But EPA spokesman Jahan Wilcox confirmed that two lawyers representing the water district, Robert O'Brien and Scott Sommer, and the water district director of special projects, Bill Hunt, were there. A third lawyer, former federal Judge Stephen G. Larson, was forced to cancel his trip due to wildfires in California, according to emails.

"Hugh Hewitt helped arrange the meeting at the request of the water district but did not attend," Wilcox said.

Wilcox said the meeting was for the water district to "brief EPA on the Superfund site's cleanup efforts and request expedited cleanup," following a 2016 agreement with the agency to conduct a remedial investigation and feasibility study, at a cost of \$4 million over two years. Hunt did not immediately respond to a request for comment.

Hewitt in an email to POLITICO called Pruitt a friend and said he does not have a working relationship with him. He said that his firm has represented the water district and worked on the site with EPA's regional office for years but that he had not participated in that work.

Hewitt said he requested a meeting because the water district wanted to brief the new EPA team, he said, adding that he was an Orange County resident until 2016 as well as an Orange County Children and Families Commission member. He said that he "very much" wanted the Superfund site remediated as soon as possible.

According to an EPA fact sheet, the Orange County site has more than five square miles of polluted groundwater containing chlorinated solvents and other contaminants across the cities of Anaheim, Fullerton, and Placentia. It includes the Orange County Groundwater Basin, which provides drinking water to more than 2.4 million residents across 22 cities, according to the agency. Those pollutants can damage humans' nervous systems, kidneys and livers, and some are considered carcinogenic.

EPA has just begun its process of studying the contamination and it has not determined which companies caused the pollution in the area. But an administrative settlement with the EPA in 2016 says the area was home to "electronics manufacturing, metals processing, aerospace manufacturing, musical instrument manufacturing, rubber and plastics manufacturing, and dry cleaning."

Hewitt also thanked EPA schedulers for working to arrange a meeting between Pruitt and the California Lincoln Clubs, which describe themselves as in favor of "limited government, fiscal discipline and personal responsibility." After some rescheduling Pruitt eventually met with representatives of the group on a trip to California in March of this year, according to his public calendar. Prominent Orange County businessman John Warner also helped to connect that group with staffers.

Pruitt and his scheduling staff have frequently sought to set up meetings with or for influential Republican figures, according to the internal EPA emails.

His team accepted an invitation for him to address The Philanthropy Roundtable at an invitation-only event at the White House for "conservative and free-market foundation CEOs and individual wealth creators to discuss the greatest opportunities for foundations to protect and strengthen free society" and "what [Pruitt] views as unique opportunities for philanthropic action.

As POLITICO [reported](#) in March, Pruitt also met with an Indiana coal executive and Trump fundraiser who was seeking to soften a pollution rule.

Pruitt also crafted his travel schedule — including a tour of states in August — to meet with big business much like a member of Congress would during the annual recess.

In July, EPA's associate administrator of public engagement Tate Bennett was working with Pruitt to "essentially create an August recess for the EPA to be out in the states talking with individual companies & doing listening sessions within sectors," said Leah Curtsinger, the federal policy director for the Colorado Association of Commerce & Industry, in an email introducing Bennett to her husband, public affairs director at coal company Cloud Peak Energy and a fellow alum of Senate Majority Leader Mitch McConnell's office.

Annie Snider contributed to this report.

Emails show Pruitt pushing 'red team-blue team' climate debate [Back](#)

By Alex Guillén and Anthony Adragna | 05/15/2018 06:39 PM EDT

EPA Administrator Scott Pruitt had hoped at least twice last year to announce his plans for a controversial red team-blue team debate that would take aim at a federal assessment supporting climate change science, according to newly released emails.

Pruitt's contentious review was abandoned because of the White House's objections, but the [communications](#) reveal new details about how the process would have worked and who was influencing Pruitt.

Many scientists have complained that a red team-blue team style debate was a poor way to examine the scientific evidence that overwhelmingly supports the findings that humans are the primary driver behind climate change. But for Pruitt, who had once suggested the event might be televised, [the debate](#) appeared to be directed at rebuffing the Fourth National Climate Assessment.

That government-wide report issued on Nov. 3 [contradicted](#) many Trump administration political appointees who have questioned the connection between greenhouse gas pollution and global warming.

A [draft press release](#) that circulated on Nov. 4 among top EPA officials, and which was shared with Pruitt on Nov. 5, laid out the line of attack, according to the documents made public on Tuesday by EPA following a records request from the Natural Resources Defense Council.

"EPA is standing up a Red Team peer review of the report," they wrote, while the "blue team" would essentially be the federal assessment and its authors.

"A robust, transparent public peer review evaluation of climate change is something everyone should support," Pruitt said in the unreleased November statement. "Now is a perfect opportunity for the formation of a 'Red Team' exercise."

The draft release also included space for quotes from two prominent climate science critics: Steve Koonin, an Obama-era Energy Department official, and William Happer, a Princeton physicist who argues that increased carbon dioxide would benefit the planet.

The duo appear to have been tapped to help guide the red-team review together.

"Your contributions even in a small way to the validity of the red team blue team approach would be appreciated," Ryan Jackson, Pruitt's chief of staff, wrote to Koonin and Happer on Nov. 4.

In an email to POLITICO, Happer said the exercise was "badly needed," while Koonin, now the director of the Center for Urban Science and Progress at New York University, told POLITICO the National Climate Assessment was "demonstrably deficient on a number of points."

EPA did not return a request for comment.

Pruitt has previously said a Wall Street Journal piece written by Koonin in April 2017 calling for a similar EPA review of climate science was his inspiration for instigating the "red team" review.

The emails, however, show that Koonin and his allies began wooing Pruitt even before that. In an email more than a week before Koonin's WSJ piece ran, Dan Yergin, the Pulitzer-winning oil historian and vice chairman of IHS Markit who joined a board advising President Donald Trump, introduced Koonin by email to Jackson.

Pruitt and Koonin met April 28, and the emails show Koonin was closely involved in the process afterward.

Koonin sent EPA a "prospectus" outlining the exercise, and though much of it was redacted by EPA before its release, Koonin suggested timing the red team review to the National Climate Assessment, which was due out six months later. Doing so would "ensure that certainties and uncertainties in projections of future climates are accurately presented to the public and decision makers," he wrote.

A revised version of the prospectus was circulated by EPA to White House officials in July after news of Pruitt's plans had leaked.

"There are a lot of press reports about EPA's planning on this. None of it is being run by us. This seems to be getting out of control," wrote Michael Catanzaro, a top energy adviser to Trump who has since left the administration, a few days after receiving Koonin's proposal.

In late June, Liz Bowman, then a top EPA spokeswoman, questioned whether the exercise could be announced as early as July 5 or 6. But it wasn't until November that top Pruitt staffers begin circulating a draft press release on the announcement.

A draft of the announcement on Nov. 5 inspired a lengthy email chain, which EPA redacted, that involved direct messages from Trump chief of staff John Kelly, strategic communications director Mercedes Schlapp, and former White House staff secretary Rob Porter.

Pruitt was touting his plans to launch the red team review as late as December. Emails early in that month indicate the agency's air chief, Bill Wehrum, would make the announcement on Dec. 12 while Pruitt traveled in

Morocco. One message that included Jackson had the subject line of "Red Team/Blue Team Announcement Planned for Tuesday, Dec. 12."

The [New York Times](#) reported in March that Kelly and other top officials stopped the announcement in the fall, and Kelly's deputy Rick Dearborn met with Pruitt in mid-December to declare the plan dead.

WRDA faces stumbling block over small community projects [Back](#)

By Annie Snider | 05/15/2018 04:48 PM EDT

A battle over boosting funding for drinking water and wastewater projects in small communities is threatening a bipartisan effort to pass the first major infrastructure bill under the Trump administration.

The measure at issue, Securing Required Funding for Water Infrastructure Now, or SRF WIN Act, would expand the popular WIFIA program that loans federal money for water infrastructure projects at Treasury's attractive long-term interest rates. The bill includes a number of changes seeking to make the WIFIA program more accessible to small and mid-sized communities.

Senate Environment and Public Works Chairman [John Barrasso](#) (R-Wyo.) said last week that he supported adding it to this year's Water Resources Development Act, [S. 2800 \(115\)](#), through a manager's amendment. But he said attaching the measure, which was introduced by Sens. [John Boozman](#) (R-Ark.), [Cory Booker](#) (D-N.J.) and nine others, wasn't a done deal. "We're working to try and get to that," he told reporters.

The SRF measure has sparked fierce opposition from the groups that originally conceived of the WIFIA program that say the new proposal tilts too far toward the small communities, and they are now threatening to revoke their support from the overall infrastructure bill if it gets added.

"We believe that SRF WIN Act is a fundamentally flawed proposal that, if enacted, would pose a severe threat to the future viability of the WIFIA program," the American Water Works Association, the Association of Metropolitan Water Agencies and the Water Environment Federation wrote in a [letter](#) to Senate EPW leaders last week.

The fight pits small and rural communities against larger communities whose projects can often run into the billions of dollars.

The WIFIA program, authorized as part of the 2014 WRDA bill, targets those larger-scale projects, in part because they have a harder time competing for money from the State Revolving Funds, the main federal funding mechanism for municipal water projects. Those funds prioritize spending in areas with public health problems, and some states have capped the amount that can go to larger projects so they don't drain the funds.

The groups opposing the new measure argue that small and rural communities already have access to a carve-out that gives them 15 percent of WIFIA funding. The proposed changes, they say, would put larger communities at an unfair disadvantage and could ultimately lead to the demise of EPA's State Revolving Funds program.

EPA estimates that \$472.6 billion will be needed over the next two decades to improve drinking water infrastructure, alone. The federal government funds just a fraction of that — most years Congress appropriates less than \$3 billion.

Beyond the rural carve-out under WIFIA, states can also bundle smaller projects together to reach the \$20 million minimum funding requirement, and EPA recently conditionally approved one such application from the Indiana Finance Authority.

The changes being proposed in the SRF WIN Act seek to make this option more accessible, including by waiving the \$100,000 application fee for states filing such applications and authorizing \$200 million annually to go toward such projects.

"This legislation is an innovative approach to helping communities of all sizes, in every state secure loans so they can improve their crumbling infrastructure," Boozman said in a statement introducing the legislation.

Dozens of groups have endorsed including the SRF WIN Act in the Senate's WRDA bill, called America's Water Infrastructure Act, including the Chamber of Commerce, the American Society of Civil Engineers and the Vinyl Institute.

"We believe the inclusion of the SRF WIN Act in the America's Water Infrastructure Act will make a really good bill even better," more than 25 groups wrote in a [letter](#) to Senate EPW leaders on Tuesday.

But the opposing groups argue that Boozman's bill would decrease the program's leveraging rate — an aspect that has been wildly popular with lawmakers since it allows small appropriations to fund much larger infrastructure investments. EPA expects that the \$25 million it got for WIFIA in fiscal 2017 will result in \$2.3 billion worth of loans, the groups said.

"These robust rates enable the federal government to get a tremendous 'bang for the buck' when appropriating funds for water and wastewater infrastructure," AWWA, AMWA and WEF wrote.

The Senate Environment and Public Works Committee is seeking to move its WRDA bill swiftly. It will hold its second legislative [hearing](#) on the measure Thursday, with the assistant secretary of the Army for Civil Works due to testify. Barrasso said a markup will be held shortly thereafter.

Panel moves \$35B Interior-EPA spending bill to full committee [Back](#)

By Alex Guillén | 05/15/2018 06:18 PM EDT

The House Appropriations Committee's Interior-Environment panel today cleared its \$35.25 billion spending package, teeing it up for consideration by the full committee as early as next week.

The [bill](#) cleared on a voice vote. It is likely to face contentious amendments before the full committee.

Before the bill advanced, ranking member Betty McCollum (D-Minn.) criticized the policy riders and complained that EPA has not yet reported to Congress regarding the GAO's April conclusion that EPA's construction of a soundproof booth for Administrator Scott Pruitt violated spending laws.

The bill provided \$7.96 billion for EPA, a \$100 million overall reduction from 2018 levels. Along with language repealing the Waters of the U.S. rule, the bill provided \$2.6 billion for the Clean Water and Drinking Water State Revolving Loans and \$75 million for the Water Infrastructure Finance and Innovation Act program.

Among the Interior Department's major agencies, the bill includes a \$55 million increase for the Bureau of Land Management to \$1.4 billion, a \$19 million hike for the U.S. Geological Survey to \$1.2 billion and another \$53 million to boost the National Park Service to \$3.25 billion.

The Office of Surface Mining would get \$229 million, including \$90 million for another year of a pilot program aimed at cleaning up abandoned Appalachian mines. The Fish and Wildlife Service's budget would drop by \$11 million to \$1.6 billion.

The bill also provided \$6.1 billion for the Agriculture Department's Forest Service, including \$3 billion for wildfire work.

WHAT'S NEXT: The full package will be considered by the full House Appropriations Committee at an unspecified later date.

Holly,

Please see the attached document entitled “OCFO_May 2018 Hearing TPs_Draft (V1)” which includes the requested and concise talking points on Fairbanks, residential wood heaters, RVOs, small remote incinerators, May 9 NAAQS Memo, and the EPA/NIH side-by-side.

Although you likely will not need as these are a bit more in the weeds, for reference I’ve also included:

- RFS TPs - the doc I previously sent you with info on several RFS issues
- Fairbanks PM Nonattainment Area – more extensive background on the topic
- HEC Special OAR TPs – more extensive background on NAAQS memo, April 30 science transparency proposed rule, and PM2.5 health effects
- Small Remote Incinerators – more extensive background on the issue

Please let us know if you need anything else.

Thanks,
Alex

Hi Alex,

In hearing prep, a side by side of NIH vs. EPA’s proposed rule was requested during our discussion of the NAAQs memo. I don’t think I see this in this document. If it’s there, please point me to it.

The other items I requested were updates on “new” topics since the House hearing – wood heaters, small remote incinerators, and Fairbanks. Do you have a few points on those?

Thanks,
Holly

How Bad Is the Government's Science?

Policy makers often cite research to justify their rules, but many of those studies wouldn't replicate.

By

Peter Wood and

David Randall

April 16, 2018 5:56 p.m. ET

[70 COMMENTS](#)

Half the results published in peer-reviewed scientific journals are probably wrong. John Ioannidis, now a professor of medicine at Stanford, made headlines with that claim in 2005. Since then, researchers have confirmed his skepticism by trying—and often failing—to reproduce many influential journal articles. Slowly, scientists are internalizing the lessons of this irreproducibility crisis. But what about government, which has been

making policy for generations without confirming that the science behind it is valid?

The biggest newsmakers in the crisis have involved psychology. Consider three findings: Striking a “power pose” can improve a person’s hormone balance and increase tolerance for risk. Invoking a negative stereotype, such as by telling black test-takers that an exam measures intelligence, can measurably degrade performance. Playing a sorting game that involves quickly pairing faces (black or white) with bad and good words (“happy” or “death”) can reveal “implicit bias” and predict discrimination.

All three of these results received massive media attention, but independent researchers haven’t been able to reproduce any of them properly. It seems as if there’s no end of “scientific truths” that just aren’t so. For a 2015 article in *Science*, independent researchers tried to replicate 100 prominent psychology studies and succeeded with only 39% of them.

Further from the spotlight is a lot of equally flawed research that is often more consequential. In 2012 the biotechnology firm Amgen tried to reproduce 53 “landmark” studies in hematology and oncology. The company could only replicate six. Are doctors basing serious decisions about medical treatment on the rest? Consider the financial costs, too. A 2015 study estimated that American researchers spend \$28 billion a year on irreproducible preclinical research.

The chief cause of irreproducibility may be that scientists, whether wittingly or not, are fishing fake statistical significance out of noisy data. If a researcher looks long enough, he can turn any fluke correlation into a seemingly positive result. But other factors compound the problem: Scientists can make arbitrary decisions about research techniques, even changing procedures partway through an experiment. They are susceptible to groupthink and aren’t as skeptical of results that fit their biases. Negative results typically go into the file drawer. Exciting new findings are a route to tenure and fame, and there’s little reward for replication studies.

PHOTO: DAVID KLEIN

American science has begun to face up to these problems. The National Institutes of Health has strengthened its reproducibility standards. Scientific journals have reduced the incentives and opportunities to publish bad research. Private philanthropies have put serious money behind groups like the Meta-Research Innovation Center at Stanford, led in part by Dr. Ioannidis, and the Center for Open Science in Charlottesville, Va.

There's more to be done, and the National Association of Scholars has made some recommendations. Before conducting a study, scientists should "preregister" their research protocols by posting the intended methodology online, which eliminates opportunities for changing the rules in the middle of the experiment. High schools, colleges and graduate schools need to improve science education, particularly in statistics. Universities and journals should create incentives for researchers to publish negative results. Scientific associations should seek to disrupt disciplinary groupthink by putting their favored ideas up for review by experts in other sciences.

A deeper issue is that the irreproducibility crisis has remained largely invisible to the general public and policy makers. That's a problem given how often the government relies on supposed scientific findings to inform its decisions. Every year the U.S. adds more laws and regulations that could be based on nothing more than statistical manipulations.

All government agencies should review the scientific justifications for their policies and regulations to ensure they meet strict reproducibility standards. The economics research that steers decisions at the Federal Reserve and the Treasury Department needs to be rechecked. The social psychology that informs education policy could be entirely irreproducible. The whole discipline of climate science is a farrago of unreliable statistics, arbitrary research techniques and politicized groupthink.

The process of policy-making also needs to be overhauled. Federal agencies that give out research grants should immediately adopt the NIH's new standards for funding reproducible research. Congress should pass a law—call it the Reproducible Science Reform Act—to ensure that all future regulations are based on similar high standards.

Each scientific discipline needs to accept responsibility for its share of the irreproducibility crisis and incorporate strict standards into its procedures. The goal must be to reinvigorate the tradition of scientific inquiry. What the crisis teaches is that the scientific spirit lies with those who constantly test for that fundamental requirement of truth—that a result can be reproduced.

Mr. Wood is president of the National Association of Scholars. Mr. Randall is the NAS's director of research and a co-author of its new report, "The Irreproducibility Crisis of Modern Science."

Energy Primaries • 'Secret Science' • Fire Retardant Explained

By [Chuck McCutcheon](#)

Energy-producing giants Alaska and Wyoming hold primaries today, with large fields of candidates for governor in both states.

In Alaska, incumbent Gov. Bill Walker, an independent, is seeking re-election. His recent restructuring of the Permanent Fund—the annual payout that Alaskans get from the state's oil wealth—dramatically reduced the budget deficit and restored the state's credit rating, he says.

Seven Republicans are seeking the state chief executive's job, with ex-Lt. Gov. Mead Treadwell—a former chairman of the U.S. Arctic Research Commission—and former state Sen. Mike Dunleavy seen as the leading candidates. Both have spoken out against future cutting of Permanent Fund dividends, and each has promised to promote new oil exploration.

Former U.S. Sen. Mark Begich is running in the Democratic primary for governor, vowing to market Alaska as “a global leader” in addressing climate change.

In Wyoming, six Republicans are running to replace term-limited GOP Gov. Matt Mead. Several—including businessman Sam Galeotos, state Treasurer Mark Gordon, and natural-resources lawyer Harriet Hageman—have drawn oil and gas industry support.

One of the GOP candidates, party megadonor Foster Friess, has come out against transferring federal public lands to the state—a hot-button issue in the rural West. He argues it will be easier for special interests to lobby the state to turn public-access lands into privately controlled ones.

Wyoming’s lone House member, GOP Rep. Liz Cheney, faces two primary challengers but is strongly favored. Likewise, Republican Sen. John Barrasso, who heads the Senate’s environment committee, has five token opponents. Bloomberg Government’s [Greg Giroux](#) is monitoring.

SECRET SCIENCE: The EPA’s controversial plan to limit the types of science it uses to back up regulations has won plaudits from industry and states—but even some of them say the idea needs work.

Then-EPA Administrator Scott Pruitt unveiled the proposal in April to bar the use of scientific research including data that isn’t or can’t be made public. Pruitt called it an effort to remove “secret science” from the agency’s decision-making.

The Texas Commission on Environmental Quality, which backs the proposal’s intention, says the EPA should create a work group or review panel of experts to help develop crucial details about the plan. Two steel associations supporting the proposal also are calling for the EPA’s rulemaking process to be “vetted through a rigorous analytical process.”

[Sylvia Carignan](#) has more details in a [story](#) out today.

OTHER STORIES WE’RE COVERING

- EPA Acting Administrator Andrew Wheeler at 10 a.m. holds a press briefing to unveil the administration’s replacement for the Clean Power Plan. [Abby Smith](#) and Bloomberg News are tracking.
- CVS’s infamously long receipts have been the butt of jokes, but the pharmacy giant also is being held up as a poster child for an issue

spanning the entire retail sector: toxic chemicals used on cash-register paper, [Adam Allington](#) says in a [story](#) out today.

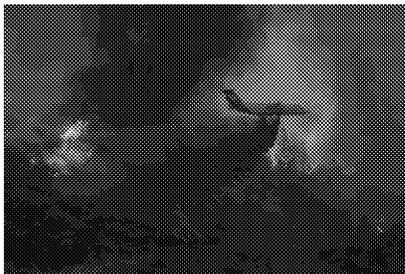

- The Senate’s energy committee [explores](#) the energy efficiency of blockchain and similar technologies and the cybersecurity possibilities for energy industry applications. [Rebecca Kern](#) is covering.
- Heavy hitters in the air pollution and climate change fields meet in Baltimore for an Air & Waste Management Association [conference](#). Steven Winberg, assistant secretary of fossil fuel programs at the Energy Department, and Mandy Gunasekara, a top official at the EPA’s air office (and one of the Trump administration’s first appointees to the agency early last year), are expected to speak. [David Schultz](#) is tracking.

QUOTE OF THE DAY

“Unless Andrew Wheeler significantly changes the way EPA has been doing business in this administration, he can expect more of the same from the courts.”

ALL ABOUT: FIRE RETARDANT

A firefighting plane drops retardant at the Holy Fire near Lake Elsinore, Calif., on Aug. 7.
Photographer: David McNew/AP/Getty Images

Soot and ash aren’t the only things California’s wildfires are leaving behind—the red fire retardant dropped from planes is coating homes and cars.

The retardant affects a wildfire’s progress by coating vegetation and lowering the temperature of plants that could become fuel, reducing the fire’s intensity and speed. The color makes the retardant more visible to firefighters.

A widely used retardant, known by the brand name Phos-Chek, washes off vehicles and isn’t known to cause long-term health effects, according to the manufacturer, Perimeter Solutions of St. Louis. The ingredients can irritate eyes and skin and be fatal to some aquatic life. The EPA has rated the retardant

“practically non-toxic” for humans and other mammals.

The main ingredient in one of Phos-Chek’s retardants, diammonium phosphate, is also the world’s most widely used phosphorus fertilizer, according to potash and fertilizer producer Mosaic Co.

The U.S. Forest Service maps out environmentally sensitive areas—including waterways, reservoirs, and endangered species habitats—that firefighters must avoid when dropping fire retardant from aircraft. Certain concentrations of ammonia can create algae blooms and disfigure or kill fish, according to a 2011 Forest Service report. —*Sylvia Carignan*

Subject: Morning Energy: Did Pruitt skate by? — EPA prepping Oversight docs — McConnell tries for West Virginia redemption

By Kelsey Tamborrino | 04/27/2018 06:01 AM EDT

With help from Anthony Adragna

DID PRUITT SKATE BY? EPA Administrator Scott Pruitt had a simple task Thursday: Keep his conservative backers happy — and in turn, keep the president happy. And he may have managed to do just that. While Democrats and environmentalists panned Pruitt's performance, the EPA chief, who is facing a heavy stack of ethical and spending quandaries, left most Republicans pleased enough with his performance that he's probably salvaged his job for now.

But of course, President Donald Trump has yet to weigh in on Pruitt's performance. And on a day that saw Trump's nominee for Veterans Affairs withdraw, triggering a long Trump rant on "Fox & Friends," that could be good news for the EPA chief, POLITICO's Nancy Cook reports. "As long as [Pruitt's] explanations hold and there are no crazy discrepancies or smoking gun or anything like that, I don't think that creates any red flags for Pruitt," said one Republican close to the White House, who predicted Pruitt would survive the scrutiny.

Still, Pruitt's shifting answers about what he knew about controversial raises for two close aides raised a lot of concerns that he hadn't been completely forthright during his interview with Fox News earlier this month. Under lawmakers' questioning, he acknowledged that he had authorized his chief of staff to award pay increases to his aides — but said he did not know how high they would be or that they would circumvent the White House's disapproval. That's different than what he told Fox's Ed Henry when he said he hadn't known about the raises until after the fact and that he did not know who authorized them.

Pruitt used the two hearings to blame his torrent of scandals on career staff, as POLITICO's Anthony Adragna, Annie Snider and Alex Guillén reported, while maintaining the headlines surrounding him aren't painting an accurate picture. "Let me be very clear: I have nothing to hide as it relates to how I've run the agency for the past 16 months," Pruitt said. (In case you missed it, POLITICO's Energy team has the full recap of the key moments here.)

But all in all, his critical audience of House Republicans exited two separate hearings Thursday believing that Pruitt fared well. "I found his responses credible," said Rep. Mike Simpson, a House appropriator. Meanwhile, Rep. Ken Calvert, the chairman of the House Appropriations Interior-Environment subcommittee, said Pruitt did "fine." "He answered our questions," he said. "... He's doing well, he's very professional, he's doing his job." And Illinois' John Shimkus, who chaired Pruitt's first hearing, said he thought Pruitt handled himself well and that Republican members were tough in their questions, Anthony recaps. "Some of it was accountability for policy, so I don't know what more [critics] want," Shimkus said. "I think that he answered the questions in the best way that he could answer them."

Of course, Pruitt's performance did not please everyone. "I think the opprobrium that you've generated on some of these spending decisions is actually warranted," GOP Rep. Ryan Costello, who is retiring from Congress, told Pruitt. Ana Unruh Cohen, managing director of government affairs at the Natural Resources Defense Council said the EPA administrator "demonstrated beyond any doubt that he is unqualified" to lead his

agency. "He should be fired before sundown," she said. And Rep. [Marcy Kaptur](#), ranking member of the Appropriations subcommittee that questioned Pruitt, used the term "evasive" to describe the performance. "For someone who has been in the job a year and a half, he didn't seem to command a lot of the details," she said. "... I don't think we know the full extent of what he's done yet."

WHAT COMES NEXT? Keep in mind: Pruitt's under multiple investigations that have yet to fully play out. "We have a committee that's looking into these charges and we'll have a resolution," Calvert said of Pruitt's ongoing scandals. "We'll see what comes of it." Today, for one, marks the deadline set by House Oversight Chairman [Trey Gowdy](#) in his [expanded probe](#) into the embattled EPA chief's activities. He's called for a host of documents to be delivered and interviews to be scheduled by today. An EPA official said the agency is currently in the process of providing the documents, [Anthony reports](#). The official said the documents will respond to the allegations of lavish spending and unethical conduct and may negate the need for several aides to appear for interviews.

WELCOME TO FRIDAY! I'm your host Kelsey Tamborrino, and no one guessed Alabama — the home state of the first officially designated Democratic floor leader, Oscar Underwood. For today: Name the only senator to be preceded by both of his or her parents. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

POLITICO's Ben White is bringing Morning Money to the Milken Institute Global Conference to provide coverage of the day's events and evening happenings. The newsletter will run April 29 - May 2. [Sign up to keep up with your daily conference coverage.](#)

PRUITT RAISES UNDONE AFTER FOX INTERVIEW: Amid the deluge of news coming out of the hearings, Pro's Emily Holden and Nick Juliano reported via [documents](#) released by EPA that the agency reversed raises for the two top aides to Pruitt the day after his interview with Fox News. Pruitt [told Fox](#) he had "corrected them" after finding out about them. A day later, on April 5, Pruitt's chief of staff Ryan Jackson signed personnel forms reverting the aides to their previous pay grades, according to copies of the forms reviewed by POLITICO. Read more [here](#).

McCONNELL'S WEST VIRGINIA REDEMPTION: Amid an increasingly tense GOP primary battle for Democratic Sen. [Joe Manchin's](#) seat, coal baron Don Blankenship has focused his efforts into a relentless slash-and-burn campaign targeting Majority Leader [Mitch McConnell](#). Blankenship — who spent a year in prison following the deadly 2010 Upper Big Branch mine disaster — compared his current battle against the McConnell-led Republican establishment to his past legal fight against the federal government, POLITICO's Alex Isenstadt writes. But as the May 8 primary inches closer, McConnell is fighting back with an avalanche of attacks from a super PAC aligned with the Senate leader, among other efforts.

Blankenship's attacks have grown intensely personal. During an interview with POLITICO, Blankenship said that McConnell "has a lot of connections in China," adding that the GOP leader's wife is Transportation Secretary Elaine Chao. And during an [appearance](#) on a local radio show, Blankenship described Chao's father as a "wealthy Chinaperson," who was "well-connected in China." Read [more](#).

DOE TO ANNOUNCE FUNDS FOR ADVANCED NUCLEAR: Energy Secretary Rick Perry will announce today the selection of 13 projects that will receive about \$60 million in funding to support cost-shared research and development in advanced nuclear technologies. The selections — broken down into categories pertaining to nuclear demonstration readiness, advanced reactor development, and regulatory assistance grants — are the first under the Office of Nuclear Energy's "U.S. Industry Opportunities for Advanced Nuclear Technology Development" funding opportunity announcement. "Making these new investments is an important step to reviving and revitalizing nuclear energy, and ensuring that our nation continues to benefit from this clean, reliable, resilient source of electricity," Perry said in a statement.

ALL IN THE TIMING: The Office of Management and Budget completed its review of EPA's proposed "secret science" rule Wednesday, E&E News' Sean Reilly reports, even though Pruitt had already signed it by then. The policy that bars the agency from relying on studies that don't publicly disclose all their data got Pruitt's signature on Tuesday, but the Reginfo.gov site showed the review completion date as Wednesday. "While OMB is sometimes slow to update the site, it was unclear why Pruitt would have signed a rule before the review was completed," Reilly writes. EPA spokeswoman Liz Bowman suggested to E&E the fault lay with OMB. "Interagency review concluded before this proposal was signed," she said in a statement. Reilly later tweeted: "@OMBPress has now changed the date on the http://Reginfo.gov site to show that the review of this proposed #EPA rule was completed on April 23, not April 25. A #OMB spokesman won't discuss the reason for the change on the record."

TESTER TESTS TRUMP: The president is coming after Democratic Sen. Jon Tester, in what could be a problematic move for the Montanan as he fights to win reelection. Trump was enraged over Tester's work documenting allegations of malfeasance by Rear Adm. Ronny Jackson, provoking a series of inquiries that ultimately led to Jackson withdrawing his nomination to be VA secretary. POLITICO's Burgess Everett reports Tester is now at a turning point in his relationship with Trump, who railed against him on Thursday morning. "The incident and its fallout underscores how the burly, plain-spoken Tester hasn't exactly tacked to the center in an election year," Burgess writes. "Perhaps he feels emboldened after dodging a big-name opponent; after Ryan Zinke was drafted into the Trump administration and the state attorney general passed on the race, Tester's opposition is made up of lesser known opponents that will compete in a June primary." Read more.

SENATE MAKES POMPEO OFFICIAL: The Senate narrowly confirmed Mike Pompeo on Thursday, shifting him from CIA director to secretary of State. Pompeo was confirmed 57-42, ultimately winning support from Democrats Heidi Heitkamp, Manchin, Joe Donnelly, Bill Nelson, Claire McCaskill and Doug Jones. Supreme Court Justice Samuel Alito swore in Pompeo shortly after the vote Thursday, formally installing Pompeo, who has previously doubted climate science — a point greens jumped onto ahead of the vote. "There's some who think we're warming, there's some who think we're cooling," Pompeo said in 2013.

"Democrats that jumped ship to support this dangerous climate denier must and will be held accountable by the people," Food & Water Watch Executive Director Wenonah Hauter said in a statement. But others cheered the move: Competitive Enterprise Institute director of the Center for Energy and Environment, Myron Ebell, said in a statement he was "pleased." Pompeo, he said, "understands the importance of affordable, reliable energy to Americans' health and ability to provide for our families." Pompeo will be a "forceful advocate" of Trump's decision to remove the U.S. from the Paris climate agreement, Ebell said.

MANCHIN TRIES AGAIN: Manchin sent another letter this week urging Perry and Defense Secretary Jim Mattis to examine use of the Defense Production Act to protect coal-fired power plants. "The ability to produce reliable electricity and to recover from disruptions to our grid are critical to ensuring our nation's security against the various threats facing our nation today — whether those threats be extreme weather events or adversarial foreign actors," he writes. Earlier this month, Manchin similarly wrote to the president on the issue, although, as Pro's Eric Wolff reported, it faces an uphill battle on many fronts. Read the letter.

WATCH: House Speaker Paul Ryan was asked about climate change Thursday — by the 7-year-old daughter of E&E News' Scott Walden. See it here.

PRUITT FOCUS OF NEW AD: The opposition research firm American Bridge is scheduled to air an ad this morning on "Fox and Friends" focusing on Pruitt's swirling scandals and his previous criticism of the president. Watch it here.

DEMOCRATS COME OUT IN FULL FORCE FOR CPP: Ahead of the comment deadline, eight Democratic senators signed onto a letter led by EPW ranking member Tom Carper opposing EPA's proposal to repeal the Clean Power Plan. The senators write that the law is instrumental in fighting climate change and say

that rescinding it "ignores scientific evidence on the risks of climate change and puts generations of Americans at grave health and economic risk."

— **A coalition of 16 attorneys general and municipalities** submitted a supplemental comment letter to EPA with evidence of what they say are due process violations and ethical issues due to Pruitt's involvement. The group previously wrote to EPA, claiming Pruitt had not had an open mind on CPP. "Since then, the evidence continues to grow that Administrator Pruitt should have been disqualified from participating in this rulemaking before it began," they write. "His involvement has irreparably tainted the current administrative process, and as a result, EPA must withdraw the proposed CPP repeal." Read it [here](#).

MAIL CALL! WE NEED AN EXTENSION: Sens. [Ron Wyden](#) and [Jeff Merkley](#) and Reps. [Peter DeFazio](#) and [Jared Huffman](#) wrote to Interior Secretary Ryan Zinke and Agriculture Secretary Sonny Perdue on Thursday, urging an extension on interim mineral withdrawal protections for the Chetco River in southwest Oregon. Read it [here](#).

— **Sixteen senators, led by Democratic Sen. Tom Udall**, sent [this letter](#) to Zinke asking him to pause any plans for the management of Bears Ears and Grand Staircase-Escalante national monuments until legal challenges related to the president are resolved.

— **The House Biofuel Caucus sent a letter** to Pruitt objecting to Renewable Fuel Standard waivers issued by EPA, demanding Pruitt "immediately cease all waiver activity" and provide lawmakers a "full list" with further details. Read it [here](#).

CSB TO INVESTIGATE HUSKY EXPLOSION: The Chemical Safety Board said Thursday it is sending a four-person investigative team to Superior, Wis., to the scene of the Husky Energy explosion that injured several Thursday morning. The refinery was shutting down in preparation for a five-week turnaround, CSB said, when the explosion occurred. The Superior Police Department [evacuated](#) areas within miles of the explosion, including a small hospital nearby as a precaution. As of the latest count, at least 11 people were injured in the explosion, the Associated Press [reports](#).

CHA-CHING: Following a House Natural Resources hearing Thursday on offshore energy revenue sharing for Gulf-producing states, Interior announced it would disburse nearly \$188 million to four states: Alabama, Louisiana, Mississippi and Texas, as well as their coastal political subdivisions. It is the first disbursement of funds under Phase II of the Gulf of Mexico Energy Security Act of 2006, which comes from oil and gas leasing revenues on the Outer Continental Shelf, according to DOI. See the **massive** check [here](#).

Stories from POLITICO Pro

Ronny Jackson drama overshadows Pompeo success for White House Back

By Nancy Cook | 04/26/2018 06:05 PM EDT

White House aides were reveling in the pomp of French President Emmanuel Macron's state visit, viewing it as a welcome reprieve from the chaos of Cabinet confirmations, an intensifying Russia probe and a boss with a short fuse. Then reality hit.

President Donald Trump's pick for Veterans Affairs Secretary Ronny Jackson finally withdrew from the confirmation process amid escalating allegations of misconduct, and Trump called into the TV show *Fox and Friends* to deliver an unscripted interview touching on everything from the Russia probe and the investigation of his personal attorney Michael Cohen to fan-tweets from Kanye West—all before 10 a.m.

The day also included the confirmation of Mike Pompeo, previously Trump's CIA director, as secretary of state—an unexpectedly hard-fought victory that was overshadowed by routine House hearings featuring testimony from EPA Administrator Scott Pruitt, who has been accused of a string of ethics violations.

"The state visit was cool for folks in the White House and fun distraction for one hour from stories about Scott Pruitt or Michael Cohen before everyone got back to the shitshow," said one former White House official.

The president often publicly frames these hectic junctures as a White House unduly under siege from the press or other opponents. About Jackson's nomination, Trump said on Thursday: "He's a great man, and he got treated very, very unfairly. He got treated really unfairly. And he's a hell of a man."

The lack of vetting and Trump's tendency to name top-level nominees with little scrutiny dates back to the presidential transition in the fall of 2016. It's a pattern that surprises few insiders, even as it creates headaches for the White House and the nominees.

"Generally, White House aides are blaming the president from shooting from the hip and without giving it any thought, but this is how every decision he has made has gone," said the former White House official.

On Wednesday, the night before Jackson dropped out of consideration, a number of administration aides and Republicans close to the White House gathered at the Trump International Hotel for after-work drinks—and a few aides kept hoping aloud that Jackson would announce he was dropping out on TV, so no one would have to run back to the White House and everyone could keep drinking, according to one attendee.

The biggest beneficiary of this week's chaos was Pruitt, who started out the week under great scrutiny and disdain from several disparate circles of White House staffers and then ultimately skated through his two Capitol Hill hearings with little incident. Earlier in the week, those hearings were seen as a make-or-break moment for the EPA Administrator and ones that the president would pay attention to.

"As long as his explanations hold and there are no crazy discrepancies or smoking gun or anything like that, I don't think that creates any red flags for Pruitt," said one Republican close to the White House, who predicted Pruitt would survive the scrutiny.

What helps Pruitt and other Cabinet nominees who frustrate the White House or Trump is the math in the Senate. The Republicans do not have a large or cohesive enough majority to easily confirm new Cabinet secretaries, and the drama surrounding Jackson's departure puts a damper on creating any new vacancies to fill.

"In the ideal situation, the only headlines coming out of the agencies are the policy decisions advancing the president's agenda," said one senior administration aide, speaking about the spate of bad headlines surrounding Pruitt's leadership at the EPA. "That is the clear direction from the top, and we've communicated that."

But many White House officials—and the president himself—have adopted the view that the administration is unfairly maligned, no matter what it does.

Many aides were surprised that Pompeo's confirmation process seemed so shaky at certain points, given the White House's huge, upcoming foreign policy decisions on meeting with North Korea, keeping troops in Syria, and deciding the fate of the U.S.'s role in the Iran deal. The White House's Director of Legislative Affairs Marc Short devoted most of his time over the past few weeks to ensuring Pompeo got confirmed.

"We can only pick so many battles, and Pompeo has got to get done as quickly as possible," said one White House official.

Pruitt dodges blame [Back](#)

By Anthony Adragna, Annie Snider and Alex Guillén | 04/26/2018 10:46 AM EDT

Scott Pruitt may have handled his daylong congressional grilling well enough to salvage his job for now — but only after he blamed his torrent of scandals on staff, disavowed one of his top advisers and raised new questions about what he knew about massive raises awarded to some of his closest aides.

The Environmental Protection Agency administrator shrugged off responsibility Thursday for a \$43,000 privacy booth and more than \$100,000 in first-class flights, and even said he has no idea whether his chief policy adviser showed up for work at all during a three-month stretch.

But the former Oklahoma attorney general stayed calm throughout the nearly six hours of questioning. And his televised performance brought no immediate complaints from the one person whose opinion matters — the media-obsessed president who has so far stuck with Pruitt despite a multitude of investigations and the exasperation of key White House staff.

"Let me be very clear: I have nothing to hide as it relates to how I've run the agency for the past 16 months," Pruitt told a House Energy and Commerce subcommittee, the first of two panels to subject him to hours of questioning Thursday.

But he also didn't offer enough specifics to satisfy Democratic lawmakers — and a few Republicans — who criticized the lavish spending, cozy relations with lobbyists and other controversies that have taken root on his watch. He pointedly refused to apologize, instead accusing his critics of trying to "derail" President Donald Trump's policies.

Several Republican lawmakers who defended him during the hearings said he'd held his own against a barrage of Democratic complaints.

"I think he did well," said Rep. Tom Cole (R-Okla.), adding, "I know him well enough to not believe that he's deliberately done anything wrong or that he's made decisions in an inappropriate or unethical manner."

Still, Cole admitted any decision on Pruitt's fate is in Trump's hands.

Rep. Betty McCollum (D-Minn.) said Pruitt merely tried to dodge accountability for actions such as a massive expansion of his personal security team, while sidestepping accusations that he had punished staffers who questioned whether he faces serious threats to his safety.

"He could have taken personal responsibility and really meant it," McCollum told reporters after an afternoon hearing by a House Appropriations subcommittee, where she had told Pruitt he should resign. "Instead he messed up in that he got caught up in thinking he needed more security than he needed, and that when employees pushed back on him, he did retaliate."

One aspect of Thursday's testimony drew a notable amount of attention — Pruitt's shifting explanations for what he knew, and when, about raises as high as 72 percent that went to some of his key aides.

Weeks ago, Pruitt told [Fox News](#) that he hadn't known about the raises until after the fact, that he did not know who authorized them and that the aides should not have received them. But under lawmakers' questioning Thursday, he acknowledged that he had authorized his chief of staff to award pay increases to the aides — but said he did not know how high they would be or that they would circumvent the White House's disapproval.

"I was not aware of the amount, nor was I aware of the bypassing or the [Presidential Personnel Office] process not being respected," Pruitt said, responding to a question from Rep. [Paul Tonko](#) of New York, the top Democrat on the Energy and Commerce Environment Subcommittee.

An EPA spokesman later said Pruitt had given his chief of staff, Ryan Jackson, blanket authorization to handle hiring and raises using the EPA's power under a water law that didn't require the White House's sign-off.

Lawmakers didn't ask — and Pruitt didn't say — whether he would discipline Jackson for his handling of the raises.

A preliminary [report](#) from EPA's inspector general has found that Jackson signed off on the pay hikes to Sarah Greenwalt, a Pruitt adviser who previously worked as his general counsel in the Oklahoma attorney general's

office, and Millan Hupp, a former "Team Pruitt Operations Director" who is now his director of scheduling and advance.

Pruitt also said he didn't know whether one of his top aides, Samantha Dravis, had failed to show up for work for much or all of November through January, as Sen. Tom Carper (D-Del.) has alleged. His answer essentially abandoned a past statement by an EPA spokesman, who called the accusations "baseless and absurd."

"I'm not aware that she did or did not appear for work. So that's something that is being reviewed at this point," Pruitt told lawmakers Thursday, referring to an inspector general decision to review her attendance.

Dravis, EPA's associate administrator in charge of EPA's Office of Policy until last week, was such a senior aide that she had traveled with Pruitt on official business in Morocco as recently as December. She also appears with him in a meeting photo that Pruitt's EPA Twitter account tweeted Dec. 6.

Pruitt also blamed his staff for the controversial purchase and installation of the privacy booth in his office, and said he would have stopped it if he knew the cost. He said the installation came after he'd received a phone call "of a sensitive nature" and requested "access to secure communication."

"I gave direction to my staff to address that, and out of that came a \$43,000 expenditure that I did not approve," he said. "If I'd known about it, I would have refused it."

Pruitt did not single out the staff members he was blaming for the phone booth installation, but agency staffers have told POLITICO that those and other pricey expenditures were overseen by Pasquale "Nino" Perrotta, the career employee who heads his security detail.

Even after surviving Thursday's gauntlet, Pruitt is still facing numerous investigations from Congress, the White House and government watchdogs into his taxpayer-funded first-class travel; unprecedented, 24-hour security detail; and sweetheart rental deal with the wife of a lobbyist who sought to influence his agency. A senior EPA official said Thursday that high-level staffers including Jackson, Greenwalt and Perrotta are willing to sit for interviews with staff of the House Oversight Committee, which is carrying out one of the probes of Pruitt's actions.

Ahead of Thursday's hearing, EPA distributed a 23-page document responding to various allegations.

Democrats ripped into him from the start, charging that Pruitt had put his own interests and political ambitions over the job of protecting the environment and human health, and he had shown he didn't deserve the public trust.

"I think your actions are an embarrassment to President Trump and distract from the EPA's ability to effectively carry out the president's mission, and if I were the president I wouldn't want your help," said Frank Pallone (D-N.J.). "I'd get rid of you."

Sitting in front of protesters wearing "Impeach Pruitt" T-shirts and a sign calling him "Mr. Corruption" on Thursday morning, Pruitt dismissed the wave of criticism as an attempt to undercut "transformational change" happening at the agency.

"Let's have no illusions about what's really going on here: Those who have attacked the EPA and attacked me are doing so because they want to attack and derail the president's agenda and undermine this administration's priorities," he said. "I'm simply not going to let that happen."

Rep. John Shimkus (R-Ill.), who chaired the morning hearing, said afterward that he thought Pruitt had acquitted himself well.

"I think that he answered the questions in the best way that he could answer them," Shimkus said.

Shimkus wouldn't speculate about potential next steps by the Energy and Commerce panel, saying the decision was up to full committee Chairman Greg Walden (R-Ore.). He also declined say whether he thought questions remain unanswered.

"I'm just glad he showed up," Shimkus said.

Pruitt's defenders, like Rep. David McKinley (R-W.Va.), who has praised Pruitt's rollback of climate change and water regulations, dismissed the Democrats' complaints as political posturing.

"To the public, I think this has been a lot of classic display of innuendo and McCarthyism that we're seeing too often here in Washington that I think unfortunately works against civility and respect for people in public office," he said. "Some can't resist the limelight, the opportunity to grandstand."

Rep. Joe Barton (R-Texas) said the focus on the controversies was an attempt to undermine Pruitt's, and Trump's, policies.

"If you can't debate the policies in Washington, you attack the personality, and that's what's happening to you," Barton told Pruitt. "Republicans do it when it's a Democratic president. Democrats do it when it's a Republican president. And in my opinion, it's just my opinion, that's what's happening to you."

Not every Republican came to Pruitt's defense, though. Rep. Ryan Costello of Pennsylvania offered the harshest criticism from the GOP, saying his activities deserved the anger they had provoked.

"I think the opprobrium that you've generated on some of these spending decisions is actually warranted," Costello, who is retiring from Congress, told Pruitt. "I've reviewed your answers, and I find some of them lacking or insufficient. And I believe you've not demonstrated the requisite good judgment required of an appointed executive branch official on some of these spending items."

Trump has so far stood by Pruitt, praising his work to pare back environmental rules and remaining wary of upsetting conservatives who strongly support the administrator.

The administration's desire to avoid another tough confirmation fight also appears to be weighing in Pruitt's favor. While new Secretary of State Mike Pompeo narrowly won Senate confirmation and was sworn in Thursday, Rear Adm. Ronny Jackson's nomination to head the Department of Veterans Affairs crashed and burned, and Trump also needs to win approval for a controversial pick to head the CIA.

Democrats suggested that Pruitt's controversies were the result of his penchant for abusing the perks of his position and rewarding his political backers.

"Only in recent weeks have we come to understand the extent of your political ambitions, your tendency to abuse your position for personal gain and to advance the agendas of your political benefactors in what appears to be a propensity for grift," Tonko said.

Under questioning from Rep. Anna Eshoo (D-Calif.), Pruitt declined multiple times to answer whether he felt any remorse for wasteful spending at the agency,

"I think there are changes I've made already," he said. But he deflected several questions about his first-class flights, saying his security detail decides where he sits on airplanes, and that he now plans to fly coach.

Eshoo didn't buy it.

"With all due respect, I may be elected, but I'm not a fool," she said. "That's really a lousy answer from someone that has a high position in the federal government."

Emily Holden contributed to this report.

'Embarrassment' or 'McCarthyism': Key moments as Pruitt faces lawmakers [Back](#)

By Quint Forgey, Anthony Adragna, Alex Guillén and Annie Snider | 04/26/2018 01:40 PM EDT

Scott Pruitt, the scandal-ridden administrator of the Environmental Protection Agency, appeared on Capitol Hill on Thursday for back-to-back House committee hearings on his agency's budget request.

But the only spending most lawmakers wanted to discuss were reports of Pruitt's taxpayer-funded air travel, the sweetheart condo lease he secured from a lobbyist, and the numerous other allegations of misappropriating funds and unethical management that have tarred his tenure at the EPA.

Here are key moments from the contentious hearings, held by subcommittees of the House Energy and Commerce and House Appropriations committees:

A defiant Pruitt says he has nothing to hide. The former Oklahoma attorney general argued his critics were simply attempting to undercut the "transformational change" he's making at the agency on behalf of President Donald Trump. "Let's have no illusions about what's really going on here: Those who have attacked the EPA and attacked me are doing so because they want to attack and derail the president's agenda and undermine this administration's priorities," he said at the outside of the day's first hearing, in front of a House Energy and Commerce subcommittee. "I'm simply not going to let that happen." Pruitt maintained had "nothing to hide," and suggested some of the reports regarding his behavior were inaccurate. "Facts are facts and fiction are fiction," he said. "And a lie doesn't become truth just because it appears on the front page of a newspaper."

Pruitt acknowledged he authorized pay raises for his key aides. But he said he didn't know how much they were, or that his chief of staff — who took the blame for signing off on the salary hikes — circumvented the White House to award them. "I was not aware of the amount, nor was I aware of the bypassing or the [Presidential Personnel Office] process not being respected," Pruitt told lawmakers. Pruitt had earlier said on Fox News that he hadn't known about the raises and that the aides should not have received them. A preliminary report from EPA's inspector general found that chief of staff Ryan Jackson signed off on multiple large raises using Safe Drinking Water Act authority, which allows the agency to move forward without White House sign-off. The raises totaled as much as 72.3 percent.

But he blamed EPA's career staff for his \$43,000 privacy booth. He said career employees signed off on the expensive soundproof phone booth installed in his office — and maintained he would have refused it if he'd known about the cost. "I did have a phone call that came in of a sensitive nature and I did not have access to

secure communication," he said. "I gave direction to my staff to address that and out of that came a \$43,000 expenditure that I did not approve." The Government Accountability Office has said the agency violated spending laws by not informing Congress about the booth beforehand. To Pruitt's critics, the booth has come a prominent symbol of his reputation for high-spending and extreme secrecy. Pruitt later said he uses the booth only "rarely," and that "it depends on the nature of the call and how urgent the call is."

Pruitt also had trouble explaining the expensive biometric locks recently installed in his office. They require a code for him to enter, but he wouldn't say whether the locks feature fingerprint scanners or some other type of identification system. When Pruitt said career staffers made the decision to install the locks, Rep. Peter Welch (D-Vt.) wasn't impressed. "It's really starting to seem like there's something on the desk with a motto, 'The buck stops nowhere,'" he quipped.

It's still not clear whether one of Pruitt's top aides came to work for three months. "I'm not aware that she did or did not appear for work. So that's something that is being reviewed at this point," Pruitt said of Samantha Dravis, the associate administrator in charge of EPA's Office of Policy. Sen. Tom Carper (D-Del.) has alleged that Dravis largely did not work the months of November through January, and EPA's inspector general has agreed to review her attendance. Dravis said several weeks ago that she planned to resign, and her last day was reportedly April 20. Pruitt's comments Thursday were a shift from EPA's past statements that the no-show accusation is "completely baseless and absurd."

Democrats pounded him early and often. Those included top Energy and Commerce Democrat Frank Pallone of New Jersey, who said the scandals enveloping Pruitt are "an embarrassment to President Trump and distract from the EPA's ability to effectively carry out the president's mission. And if I were the president, I wouldn't want your help. I'd get rid of you."

Some Republicans also warned Pruitt he needs to answer questions. Environment subcommittee Chairman John Shimkus (R-Ill.) said he considered much of the media narrative surrounding the EPA chief's scandals to be "a distraction," but the committee "cannot ignore" reports of Pruitt's impropriety. "As public servants, our jobs are not based solely on the things we do, or the things we have done, but also on the way we conduct our business," Shimkus said in his opening statement. "It is no secret that there have been many stories in the press about the management and operations of the agency and your dealings with potentially regulated sectors." And full Energy and Commerce Chairman Greg Walden (R-Ore.) expressed concerns that Pruitt's progress on policy is being "undercut" by the allegations. "These issues are too persistent to ignore," said Walden, a member of House Republican leadership.

But other GOP lawmakers came to his rescue, and one likened the criticism to "McCarthyism." Rep. Joe Barton, a former Energy and Commerce chairman, and Rep. David McKinley (R-W. Va.), a staunch Pruitt ally, blamed Democrats and toxic partisanship for Pruitt's precarious professional standing. "If you can't debate the policies in Washington, you attack the personality, and that's what's happening to you," Barton lamented. McKinley accused Democrats on the panel of not being able to "resist the limelight" and said Pruitt's detractors were simply grandstanding. "I think this has been a lot of classic display of innuendo and McCarthyism that we're seeing too often here in Washington, that I think unfortunately works against civility and respect for people in public office," McKinley said.

Rep. Bill Johnson (R-Ohio) also jumped to shield Pruitt. "I think it's shameful today that this hearing has turned into a personal attack hearing and a shameful attempt to denigrate the work that's being done at the EPA and with this administration," he said. Public officials should have ethical standards "beyond reproach," Johnson said, "but so should members of Congress."

Staffers moved or dismissed under Pruitt weren't being punished, he said. "There's no truth to the assertion that decisions have been made about reassignments or otherwise as far as employment status based upon the things you reference. I'm not aware of that ever happening, and it's something I want to make very, very clear,"

Pruitt said, vowing he would not retaliate against civil servants who flag wrongdoing. The New York Times reported this month that several top staffers were reassigned or demoted after questioning Pruitt, and POLITICO reported that the agency's deputy homeland security chief was dismissed after signing off on a report questioning Pruitt's security spending.

One Republican ripped into Pruitt with particular gusto. "I think the opprobrium that you've generated on some of these spending decisions is actually warranted," Ryan Costello (R-Pa.), who is retiring from Congress, told the EPA chief. "I've reviewed your answers and I find some of them lacking or insufficient. And I believe you've not demonstrated the requisite good judgment required of an appointed executive branch official on some of these spending items." He went on to ask specifically about reports of retaliation against employees who questioned Pruitt, as well as whether security threats against him were "warranted or credible."

Pruitt: I only took that controversial trip to Morocco because the country's ambassador invited me. "There was a free trade agreement that is in existence with Morocco and the ambassador of Morocco invited me to Morocco to negotiate the environmental chapter on that free trade agreement," Pruitt told lawmakers. The EPA administrator's December jaunt to the North African nation came under intense scrutiny when the agency, in a news release after the fact, described the trip as dual-purpose: to discuss updates to a U.S.-Morocco Free Trade Agreement "and the potential benefit of liquified [sic] natural gas (LNG) imports on Morocco's economy." Later on Thursday, Pruitt attempted to downplay his role in promoting American natural gas exports. "There was a lot of reference made to LNG only because the ambassador [of Morocco] asked me to share that with individuals when I was in country," he said.

Pruitt the leaker? After facing questions about the severity of the threats the EPA chief has faced in office — which the agency has cited to justify his pricey security budget — Pruitt read part of a report from the inspector general's office that documented threats directed at him and his family. Asked whether EPA Inspector General Arthur Elkins Jr. had written the report he cited, Pruitt replied, "I'm looking at the document that says inspector general." But a spokeswoman for the IG's office said Thursday that it came from another official, not Elkins himself. "It was an internal memo from Assistant IG for Investigations Patrick Sullivan," OIG spokeswoman Tia Elbaum said in an email. "It was leaked without authorization. It will be released in the near future as part of an OIG FOIA response."

By the time Pruitt was finished, Shimkus was "just glad he showed up." The Illinois Republican, who chaired Pruitt's first hearing, said he thought the administrator handled himself well and that GOP members were suitably tough in their questioning. "Some of it was accountability for policy, so I don't know what more [critics] want," Shimkus told POLITICO of Pruitt's performance. "I think that he answered the questions in the best way that he could answer them." Shimkus declined to speculate about potential next steps the House Energy and Commerce Committee or the Environment subcommittee would take, and didn't specifically state whether he thought questions remain unanswered after today's grilling. "I knew it would be painful," he said.

Shimkus praises Pruitt performance in first hearing [Back](#)

By Anthony Adragna | 04/26/2018 02:39 PM EDT

Rep. [John Shimkus](#) (R-Ill.), who chaired EPA Administrator Scott Pruitt's first hearing today, said he thought Pruitt handled himself well and that Republican members were tough in their questions.

Shimkus pointed to questions from Reps. [Ryan Costello \(R-Pa.\)](#), [Leonard Lance \(R-N.J.\)](#) and [Billy Long \(R-Mo.\)](#) at the Energy and Commerce environment subcommittee hearing this morning.

"Some of it was accountability for policy, so I don't know what more [critics] want," Shimkus told POLITICO of Pruitt's performance. "I think that he answered the questions in the best way that he could answer them."

Shimkus declined to speculate about potential next steps, saying that decision was up to full committee Chairman [Greg Walden \(R-Ore.\)](#). And he declined to specifically state whether he thought questions remain unanswered.

"I'm just glad he showed up," he said. "I knew it would be painful. There would be policy and politics."

Gowdy expands probe into EPA's Pruitt [Back](#)

By Anthony Adragna and Alex Guillén | 04/13/2018 05:45 PM EDT

House Oversight Chairman Trey Gowdy (R-S.C.) said Friday he's expanding his probe into the alleged ethical and spending abuses by EPA Administrator Scott Pruitt one day after his staff met for several hours with a former EPA aide who was pushed out of the agency.

Gowdy's latest [letter](#) is a further sign of the deepening bipartisan scrutiny facing President Donald Trump's environmental chief, whose critics accuse him of excessive spending on travel, vehicles, staff raises and luxe security features such as a \$43,000 soundproof phone booth.

The committee's new request focuses on the decision to increase Pruitt's security to round-the-clock protection, contracts to sweep Pruitt's office for electronic surveillance, his trips to Italy and Morocco, the hiring of an Italian security firm, and travel by Pruitt's security chief, Pasquale "Nino" Perrotta.

The letter comes after the committee interviewed ousted EPA employee and former Trump campaign aide Kevin Chmielewski, who is being treated as a whistleblower. A committee spokeswoman said the information he provided is consistent with allegations laid out in [a letter](#) released Thursday by House and Senate Democrats who had also spoken to him.

The committee also asked for sit-down interviews with four senior EPA officials: Perrotta; Ryan Jackson, Pruitt's chief of staff; Millan Hupp, a scheduling and advance aide; and Sarah Greenwalt, a senior counsel to Pruitt. Gowdy requested the agency schedule those interviews and provide a litany of documents by April 27. Gowdy also requested an on-the-record interview with Chmielewski, who spoke more informally with lawmakers this week.

Hupp and Greenwalt, both of whom have worked for Pruitt since he was Oklahoma's attorney general, are the two staffers who received raises via a special authority granted Pruitt under the Safe Drinking Water Act. Pruitt told Fox News last week he was not aware of the raises, although Chmielewski told Democrats this week that the raises were "100 percent Pruitt himself."

EPA spokesman Jahan Wilcox said the agency had "responded to Chairman Gowdy's inquiries and we will continue to work with him."

EPA's inspector general is also investigating complaints about Pruitt's travel spending and other practices. The inspector general's office said it will release an interim report Monday afternoon on one of its probes, which involves whether Pruitt misused special hiring authority provided by the Safe Drinking Water Act to bring some key aides into the agency.

It's unclear whether the IG has expanded that probe to include a recent controversy around EPA's use of the same water law to grant raises to the two Pruitt aides despite the White House's disapproval.

Chmielewski told Democrats this week that EPA fired him after he refused to sign off retroactively on first-class travel for one of Pruitt's closest aides, Samantha Dravis. Gowdy's letter does not request an interview with Dravis, who has announced her intent to leave the agency.

During congressional interviews earlier this week, Chmielewski outlined a detailed litany of seemingly unethical behavior against Pruitt. He said the EPA chief insisted on staying at expensive hotels while traveling even if they exceeded permissible federal spending limits, directed staff to book him on Delta Air Lines so he could accrue frequent flier miles, made a close aide "act as a personal real estate representative" and then retaliated against staff who questioned his behavior, among other allegations.

EPA has previously dismissed Chmielewski as one of a "group of disgruntled employees who have either been dismissed or reassigned." The agency did not immediately comment on the latest letter.

Gowdy's probe into Pruitt's activities has been in contrast to his GOP colleagues, who have adopted a "wait and see" approach toward the EPA chief's ethical woes. Lawmakers this week expressed discomfort with Pruitt's spending when asked and vowed to press him about it at future hearings. But they've stopped short of demanding documents or issuing subpoenas to investigate the alleged ethics lapses.

Pruitt last appeared before Congress in late January before the Senate Environment and Public Works Committee. Unlike his fellow Cabinet members, he has yet to appear before any congressional committees to defend his fiscal 2019 budget request. And he's not scheduled to return to Capitol Hill for another two weeks, when he is scheduled to attend an April 26 session with the House Energy and Commerce Committee.

"The Republicans are absolving themselves of all oversight responsibility even in the face of the most egregious conduct. They may as well stop calling committees oversight," Melanie Sloan, senior adviser at American Oversight, told POLITICO. "What would it take? Would he literally have to kill somebody before they say it's a problem?"

GOP lawmakers were less patient with Obama EPA officials. Senate and House lawmakers questioned former Administrators Lisa Jackson and Gina McCarthy, as well as other senior brass, on issues ranging from the use of nonofficial email accounts, whether they used texting to avoid record-keeping requirements, whether they allowed a senior staffer to commit time fraud and why they hadn't fired employees who spent hours watching pornography at work more quickly.

EPW Chairman John Barrasso (R-Wyo.) has said he planned to await the results of a White House review of Pruitt's conduct and would not comment on multiple occasions this week on when the administrator would return to his committee.

"He was just here earlier this year and answered questions for 2½ hours, but I expect him to come back again," Barrasso told reporters.

EPA prepping documents in response to Oversight probe [Back](#)

By Anthony Adragna | 04/26/2018 08:11 PM EDT

EPA staff is in the process of providing documents to the House Oversight Committee that it believes will respond to allegations of lavish spending and unethical conduct by Administrator Scott Pruitt and may negate the need for several aides to appear for interviews, according to a senior EPA official.

The agency staffers believe the documents will show former Trump campaign aide Kevin Chmielewski, who served as a senior aide to Pruitt, made a number of "exaggerations" when he spoke with Democratic and Republican lawmakers, according to the official.

Senior staffers at the agency are also willing to sit for interviews with Oversight staff if desired, the official said. Those officials include: Pasquale "Nino" Perrotta, Pruitt's security chief; Ryan Jackson, Pruitt's chief of staff; Millan Hupp, a scheduling and advance aide; and Sarah Greenwalt, a senior counsel to Pruitt.

House Oversight Chairman [Trey Gowdy](#) (R-S.C.) [expanded his probe](#) into the embattled EPA chief's activities one day after his staff sat down with Chmielewski. In an April 13 letter, Gowdy requested a host of documents and that the interviews be scheduled by April 27.

In addition, an Oversight Committee aide said earlier this week the committee had informally requested on April 16 that Samantha Dravis, formerly one of Pruitt's closest aides, appear for a transcribed interview with committee staff. Dravis had not been included in Gowdy's original letter because it was thought she left the agency, but her resignation was actually effective April 20, according to the aide.

A spokeswoman for the Oversight Committee did not respond to request for comment today.

Documents: EPA reversed raises one day after Pruitt's Fox interview [Back](#)

By Emily Holden and Nick Juliano | 04/26/2018 06:45 PM EDT

EPA reversed raises for two top aides to Administrator Scott Pruitt the day after his interview with Fox News, according to [documents](#) shared by the agency today.

Pruitt [told Fox](#) his staff had authorized the raises and he had "corrected them." A day later, on April 5, Pruitt's chief of staff, Ryan Jackson, signed personnel forms reverting the aides to their previous pay grades, according to copies of the forms reviewed by POLITICO. Jackson signed the documents "for Scott Pruitt," as he had on forms authorizing the initial pay bumps a few days earlier, according to documents [previously released](#) by EPA's inspector general.

Sarah Greenwalt, senior counsel to Pruitt, received a \$56,765 increase in her annual salary on April 1, and Millan Hupp, director of scheduling and advance, saw a \$28,130 increase that same day, according to the earlier IG documents.

Jackson reversed those moves on April 5, bumping Greenwalt's salary back to \$109,900 per year, and Hupp's to \$88,450, according to the new documents.

Pruitt signed a memo in March 2017 delegating to Jackson the ability to make hiring and salary decisions using a special section of the Safe Drinking Water Act.

"Administrator Pruitt has consistently said he was not aware of the amount of the raises or the process that was used, as he said both today and in prior interviews," EPA spokesman Jahan Wilcox said in a statement. "He was aware one of the individuals was receiving changes to job responsibilities and might be asking for a raise, but had no further involvement in the discussions, negotiations or approvals, because he had authorized his Chief of Staff and other EPA officials to handle all personnel matters."

McConnell seeks redemption in ugly West Virginia primary [Back](#)

By Alex Isenstadt | 04/26/2018 04:48 PM EDT

HUNTINGTON, W. Va. — Don Blankenship walked into the Guyan Golf & Country Club on Tuesday afternoon and bluntly laid out his plan for the final two-week stretch of the GOP Senate primary: a relentless slash-and-burn campaign targeting Mitch McConnell.

As the assembled local GOP women's group munched on chocolate chip cookies, the coal baron who spent a year behind bars after a deadly 2010 mine explosion compared his current battle against the McConnell-led Republican establishment to his past legal fight against the federal government.

"When you've been falsely charged, when you've had seven of 10 bill of rights flagrantly violated, you tend to fight back. ... I make no apologies for that," he said, adding that when he sees people like McConnell "leading us to the left, I will speak out about it, because I know bad people join good organizations."

As the dramatic May 8 primary campaign hurtles to a close, it's taking on an all-too familiar outline. For the second time in a matter of months, an insurgent outsider is taking aim at McConnell, looking to capitalize on the broiling anti-establishment unrest that's dominating Republican politics. And just like last time, McConnell is fighting back.

In the fall, the leader's aggressive campaign to defeat Alabama Republican Roy Moore backfired spectacularly. This time, his attempt to stop the 68-year-old Blankenship seems to be faring better. Amid an avalanche of attacks from a McConnell-aligned super PAC, two new polls out this week show Blankenship, once seen as an early front-runner, plunging into third place.

Crisscrossing the state this week, Blankenship savaged the Kentucky Republican as weak-kneed, accused him of failing to stand up for the coal industry, and said he'd long ago lost touch with Republican voters.

Blankenship vowed to oppose McConnell as Senate GOP leader if he won and began airing a TV ad — which he personally composed — envisioning McConnell as a bog-enveloped "swamp captain."

At times, the attacks grew intensely personal. During an interview with POLITICO on Sunday, Blankenship said McConnell "has a lot of connections in China," adding that the GOP leader's wife, Transportation Secretary Elaine Chao, is "from China, so we have to be really concerned that we are in truth" putting America's interests first. Blankenship's girlfriend was born in China.

During an appearance on a local radio show the following day, Blankenship repeated the jab, describing Chao's father as a "wealthy Chinaperson," who was "well-connected in China."

Asked about the remarks, Josh Holmes, a longtime McConnell political adviser, charged that Blankenship is "mentally ill," noting that Blankenship had once spoken of moving to China and becoming a Chinese citizen. Holmes also said Blankenship had used a "racial blast" against the Taiwan-born Chao, whom he described as "the dictionary definition of the American dream."

"The one consistency we've seen over the last decade is that the death rattle of a primary candidate is always a tendency to attack other Republicans because they know reporters will report it," Holmes added. "At this point what's clear is that voters are writing him off and so he knows that by attacking McConnell he'll get attention."

Driving the McConnell team's offensive is a belief that Blankenship cannot defeat Democratic Sen. Joe Manchin in November.

This spring, Steven Law, president of the McConnell-aligned Senate Leadership Fund super PAC, wrote a memo to top Republican Party donors that stated Manchin was beatable — but not if Blankenship wins the primary.

"We would forfeit any chance of beating Manchin if Blankenship becomes the nominee," wrote Law, underlining the sentence for emphasis.

Republican strategists spent weeks deliberating how to take down Blankenship, concerned that an overtly Washington-led effort would only strengthen him - just as it did when Senate Leadership Fund spent millions of dollars against Moore.

Finally, a group of Republican strategists who've previously worked with Senate Leadership Fund mobilized and earlier this month launched the generically-titled Mountain Families PAC. Over the span of a little more than a week, the super PAC pummeled Blankenship with over \$700,000 in TV ads accusing him of contaminating drinking water with coal slurry.

The creative force behind the commercials was a GOP consulting firm spearheaded by Larry McCarthy, a McConnell ally who is widely viewed as the master of the political attack ad. Among his credits: the 1988 Willie Horton spot that helped to sink Democrat Michael Dukakis' presidential bid.

Apparently not finished with Blankenship, Mountain Families PAC on Thursday began purchasing additional commercial airtime.

With Blankenship cratering in polls, many Republicans are convinced that Blankenship has been effectively neutralized and that the contest has emerged as a two-person race between GOP Rep. Evan Jenkins and state Attorney General Patrick Morrisey. The coal baron has derided both as pawns of the establishment.

As he hit the trail this week, Blankenship bristled over the effort to upend his candidacy. Each time, he pointed to the super PAC's connection to the GOP leader.

"As you know," he said at the GOP women's luncheon in Huntington, "I've even been beat up by the Republican Mitch McConnell."

During a news conference on Monday afternoon, Blankenship fired back at Washington Republicans who called him unelectable, saying even his dog could beat Manchin.

At one point, he was asked point-blank whether he had a message for McConnell.

"He needs to understand that if I'm there I will not vote for him for majority leader, and so the rest of the senators should understand that they should not put him up if they need my vote," Blankenship responded.

In an interview, Blankenship recounted a personal history with McConnell, a fellow coal country pol, that he said dated back nearly three decades. He said he first met McConnell during the late 1980s while visiting the home of a GOP donor in Kentucky, and that their paths occasionally crossed over the years after. The coal company that Blankenship formerly presided over, Massey Energy, has mines in Kentucky.

Massey, Blankenship said, had been helpful to McConnell early in his political career. In 1999, Blankenship, a longtime GOP donor who for years bankrolled West Virginia campaigns, contributed \$1,000 to McConnell's reelection campaign, according to federal filings.

Over time, though, Blankenship said he came to see the Republican leader as insufficiently supportive of the mining industry. He said they haven't spoken in about a decade.

"I never felt that he fought very hard for coal. He seemed to be too willing to compromise on climate change legislation," said Blankenship, adding that West Virginians felt that McConnell didn't put up enough of a fight against President Barack Obama's push to regulate carbon emissions.

McConnell advisers dispute the criticism. "People have accused Mitch McConnell of a lot of things over the years, but I've never heard anyone say he's insufficiently pro-coal," said Holmes.

After being released from prison last year, Blankenship launched his campaign with an eye toward clearing his name and pushing back against the allegations the federal government leveled against him. As the race has progressed, he has come to see his war with McConnell as intertwined with the central theme of his candidacy: that the Washington establishment is out to get him.

At Blankenship campaign events, he hands out copies of "An American Political Prisoner," the manifesto he wrote while in jail.

The anti-McConnell campaign has a decidedly homemade flavor. Blankenship, who's staffed his campaign with West Virginia-based operatives rather than ones from Washington, personally wrote the "swamp captain" ad, an amateur-style spot that lacks the slick production of typical political commercials. After producing the concept and the script, his small group of advisers made some edits before releasing it to TV stations.

But as the race enters its final days, Blankenship finds himself playing catch-up against his more establishment-friendly rivals.

During his closing remarks in a Tuesday afternoon debate, he chose to go after one of his opponents with a familiar weapon.

"Will Evan Jenkins stand up when Mitch McConnell looks at him?" Blankenship asked as the congressman looked on. "That's the question."

Pruitt scales back EPA's use of science [Back](#)

By Emily Holden and Annie Snider | 04/24/2018 03:17 PM EDT

Environmental Protection Agency chief Scott Pruitt announced Tuesday he would seek to bar the agency from relying on studies that don't publicly disclose all their data, a major policy change that has long been sought by conservatives that will sharply reduce the research the agency can rely on when crafting new regulations.

The unveiling of the proposed rule delivers a win to Republicans like House Science Chairman [Lamar Smith](#) (R-Texas), who unsuccessfully pushed legislation to impose the same type of change. The move also demonstrates Pruitt's persistence in pursuing President Donald Trump's anti-regulation agenda just two days before the embattled EPA chief is due to face fierce questioning from lawmakers about his hefty spending, expanded security detail and cheap condominium rental from the wife of an energy lobbyist.

At an invitation-only meeting at EPA headquarters with Smith, Sen. [Mike Rounds](#) (R-S.D.) and other supporters of the policy, Pruitt said the proposed rule was critical in ensuring that the agency was transparent about how it is making decisions to justify costly new regulations. It is the latest step Pruitt has taken to fundamentally shift the agency's approach to science.

"It is a codification of an approach that says as we do our business at the agency the science that we use is going to be transparent, it's going to be reproducible, it's going to be able to be analyzed by those in the marketplace. And those who watch what we do can make informed decisions about whether we've drawn the proper conclusions or not," Pruitt said.

Text of the proposed rule was not immediately available.

The proposal, based on legislation pushed by Smith, is intensely controversial, and scientists and public health groups say it will prevent federal regulators from enacting health and safety protections. Nearly 1,000 scientists, including former EPA career staffers, signed a [letter](#) opposing the policy sent by the Union of Concerned Scientists to Pruitt on Monday.

Their primary concern was that many of the country's bedrock air and water quality regulations are based on research that cannot disclose raw data because it includes the personal health information.

But industry has its own version of the same problem. EPA often relies on industry studies that are considered by companies to be confidential business information when determining whether new pesticides and toxic chemicals are safe to use. Internal EPA emails obtained under the Freedom of Information Act show that EPA political officials, including Nancy Beck, who became the chief of the agency's chemical safety office last year after working for years at a chemical industry lobbying group, worried that the new policy would limit the agency's ability to consider industry data or would force companies to make this proprietary data public.

"We will need to thread this one real tight!" Richard Yamada, political official who led work on the new policy wrote to Beck after she raised the concerns.

It was not immediately clear if the new proposed rule included measures to address those concerns.

Rush Holt, CEO of the American Association for the Advancement of Science, said Pruitt's changes could keep the agency from revising public health regulations as problems arise or new data comes to light.

"On the surface it sounds so innocuous or even beneficial. What could be wrong with transparency? Well it's clear to me that this is not based on an effort to be transparent. It is rather based on an effort to be just the opposite," he said.

"EPA is particularly important because when science is misused, people die," he added.

Pruitt has been discussing the new scientific policy publicly for weeks, but it only went to the White House for interagency review last week. Such swift review is very rare for the Office of Management and Budget, which often takes months to vet a new policy. At least one group, the Environmental Defense Fund, has requested a meeting with OMB officials to discuss the rule, but OMB's website shows that no meetings have been scheduled with interested groups.

Many public health studies can't be replicated without exposing people to contaminants, and environmental disasters such as the Deepwater Horizon oil spill cannot be recreated, the group said, raising intellectual property, proprietary and privacy concerns.

Pruitt's predecessor Gina McCarthy, and her air chief Janet McCabe, in an op-ed in The New York Times in March said concerns about studies are dealt with through the existing peer-review process, which ensures scientific integrity.

"[Pruitt] and some conservative members of Congress are setting up a nonexistent problem in order to prevent the E.P.A. from using the best available science," they said.

'Jon poked the bear': Tester braces for Trump's revenge [Back](#)

By Burgess Everett | 04/26/2018 05:47 PM EDT

Jon Tester didn't intend to play a central role in taking down President Donald Trump's pick to lead the Veterans Affairs Department. Yet that's exactly what the Montana Democrat ended up doing

And now, Trump is coming after him.

The president is enraged over Tester's work documenting allegations of malfeasance by Rear Adm. Ronny Jackson, which quickly unraveled Jackson's nomination to be VA secretary and marks a turning point in the relationship between the moderate Democrat and Trump.

As Tester's reelection campaign kicks into high gear, Trump is more motivated than ever to campaign against him in the ruby-red state — accusing the senator of irresponsibly leaking the damaging information to undermine the president's nominee.

Trump said Thursday that Tester will have a "big price to pay" for his part in working to sink Jackson's nomination. But Tester is sanguine about his decision to go public with accusations about Jackson's workplace misconduct, poor prescription practices and drinking on the job.

"If he thinks it's my job to sweep his stuff under the table and ignore our military folks, he's wrong. If he thinks I should not be sticking up for veterans, he's wrong," Tester said Thursday of the president. "I look forward to working with President Trump. I've worked with him many times in the past, but we disagree."

Tester has repeatedly tried to emphasize points of agreement with Trump in his nascent reelection campaign, including sending Trump 13 of his bills to sign. But Trump and other Republicans are taking it personally that as ranking member of the Senate Veterans Affairs Committee, Tester and his staff compiled interviews with more than two dozen current and former military members describing Jackson's alleged wrongdoing and then released them this week.

Senate Majority Whip John Cornyn (R-Texas) said Tester "painted a big target on himself" this fall in Montana, which Trump won by 20 points. And a Republican senator, granted anonymity to speak candidly about a colleague, said a "livid" Trump is now set to prioritize the campaign to knock off Tester this fall.

"Jon poked the bear. Did you see the bear today? The bear was mad," the senator said. "If there was any doubt he was coming to Montana it was removed today. He overreached."

The allegations, sourced anonymously, were the death knell of Jackson's nomination.

"That was not Jon's best time with regards to his Senate career," said Sen. Pat Roberts (R-Kan.). "Man, they aim low. They really aim low. And they brought him down."

Democrats strongly reject that argument. They say Tester did the right thing by speaking up about a crucial post and that Trump and Republican are deflecting blame for the Jackson debacle.

"Sen. Tester released profoundly serious, credible allegations from military men and women who put their careers on the line," said Sen. Richard Blumenthal (D-Conn.). "The administration bungled this nomination from the start. And then it fumbled the defense of its nominee. So the blame really lies with the administration."

Former Secretary of Defense Chuck Hagel also defended Tester from partisan attacks.

"I've always admired Jon Tester's commitment to helping veterans — not using veterans for political purposes. Veterans know who their champions are, and Jon Tester is one of them," said Hagel, who also served as a Republican senator from Nebraska.

Still, in interviews this week, Tester acknowledged it was "risky" for him to release the information about Jackson. The allegations could turn out to be false, he acknowledged, and take on a more partisan tinge by coming from the Democratic minority.

Tester felt compelled to move given the circumstances and received no criticism for doing so from Senate Veterans' Affairs Chairman Johnny Isakson (R-Ga.) on Thursday. In fact, until about a week ago, Jackson's nomination appeared to be going relatively smoothly, save for concerns about his lack of experience. But then Tester's staff started getting calls. Lots of calls.

By Wednesday, 23 people had contacted the committee about Jackson's history of misconduct, according to Democratic aides. Tester spoke to some of them, while his staff handled most of the work.

And as inquiries poured in from the press, Tester felt he had no choice but to go forward publicly. Each allegation in the two-page document, including that Jackson drunkenly crashed a government vehicle and wrote his own prescriptions, was verified by at least two sources, Democratic aides said. Two more people buttressing the claims contacted the committee after the summary was released.

"I don't want to be in this situation. But the truth is. We got the information. It's our obligation to follow up," Tester said. "We did not initiate any of this. None of it. It was news to us."

Tester gradually ramped up his role in challenging Jackson's beleaguered nomination as the week wore on. After allegations about Jackson's history dangled anonymously for two days, Tester confirmed them in an NPR interview on Tuesday night then did several cable news hits before releasing the two-page summary of Jackson's alleged misconduct on Wednesday.

Sen. Dan Sullivan (R-Alaska) said Tester's move "poisons the well" in a committee that generally operates outside partisan politics, but allies said Tester had no choice and that Republicans were disingenuously claiming they wouldn't have done the same.

"Do you think if the shoe was on the other foot it would have been released? It would be irresponsible if it wasn't. Military members came forward wanting to talk about the doctor," said Sen. Claire McCaskill (D-Mo.).

But Tester is under heavy attack from Trump, the White House and Republicans for the move. Trump said Thursday that Tester's work "is going to cause him a lot of problems in his state."

"I find it outrageous for a senator for political gain to take uncorroborated allegations that have not been investigated and to throw them out in a way to besmirch somebody's character," said Marc Short, Trump's legislative director. "Very irresponsible to go on national TV and make those allegations knowing that that would besmirch that person's character."

The incident and its fallout underscores how the burly, plain-spoken Tester hasn't exactly tacked to the center in an election year. Perhaps he feels emboldened after dodging a big-name opponent; after former Rep. Ryan Zinke was drafted into the Trump administration and the state attorney general passed on the race, Tester's opposition is made up of lesser known opponents who will compete in a June primary.

And since Trump became president, Tester often votes in a different manner than his fellow red state incumbents, seemingly unworried about his state's GOP lean. He was the lone red state Democrat to oppose Mike Pompeo to be secretary of state on Thursday and voted twice against a government funding bill in January.

But Tester has also positioned himself as someone who sends Trump bills to sign, including eight on veterans issues, and is open to working with the president. And he seems to genuinely believe that if he sticks to his guns and does not try to pander to conservative voters, the politics will work out this fall.

"It was going to be difficult anyway," Tester said of his campaign. "Look, if I made decisions around here based on the election, I wouldn't be a very good senator."

Tester's decision to aggressively take on Trump is rare among at-risk senators. Now, Tester is credited with helping bring down the confirmation prospects of a man whom Trump counts as a confidant, friend and personal doctor.

And Trump is plainly angry about it, to almost no one's surprise.

"I can understand that, if [Trump] thinks it's a personal attack. If you have a friend and someone personally attacks your friend, you're going to have to fight back," said Sen. Joe Manchin (D-W.Va.). "But Jon is also going to have to do his job, too."

Pompeo confirmed as secretary of state [Back](#)

By Nolan D. McCaskill | 04/26/2018 12:35 PM EDT

The Senate confirmed Mike Pompeo to be President Donald Trump's secretary of state on Thursday, after a handful of Democrats facing difficult reelection challenges joined every Republican in backing the CIA director.

Pompeo's hawkish foreign policy views drew strong opposition from the left, but he ultimately won over Democratic Sens. Heidi Heitkamp of North Dakota, Joe Manchin of West Virginia, Joe Donnelly of Indiana, Bill Nelson of Florida, Claire McCaskill of Missouri and Doug Jones of Alabama.

Pompeo, who was confirmed on a 57-42 vote, was sworn in early Thursday afternoon by Supreme Court Justice Samuel Alito, according to State Department spokesperson Heather Nauert.

He's wasting little time. Almost immediately after being sworn in, Pompeo was to fly to Brussels for a meeting of foreign ministers, followed by stops in Riyadh, Jerusalem and Amman over the next four days. The newly minted secretary of state is expected to discuss a range of hot issues with counterparts in Europe and the Middle East, including the fate of the Iran nuclear deal.

Pompeo ultimately received more Democratic votes for secretary of state than Rex Tillerson. And unlike Tillerson, who repeatedly clashed with and was undercut by Trump, Pompeo enjoys a positive relationship with the president. Trump applauded Pompeo's confirmation, hailing him as a "patriot" with "immense talent, energy and intellect" who will be an asset for the United States.

"He will always put the interests of America first," Trump said in a statement. "He has my trust. He has my support."

Pompeo is also expected to play a major role in talks with North Korea. He met with dictator Kim Jong Un over Easter weekend in a private trip to Pyongyang. The secret summit came ahead of an expected meeting between Trump and Kim.

The Trump administration had little margin for error in confirming Pompeo. With Sen. John McCain (R-Ariz.) out recovering from cancer treatment, Republicans' majority had slimmed to 50-49. Libertarian-leaning Sen. Rand Paul (R-Ky.), a member of the Senate Foreign Relations Committee, had also initially announced his opposition to Pompeo.

The former Kansas congressman was poised just days ago to get an unfavorable recommendation from the Senate Foreign Relations Committee until Paul flipped, citing assurances from the president and incoming secretary that the war in Iraq was a "mistake" and that the U.S. should wind down its presence in Afghanistan.

Republican leaders were determined to bring Pompeo's nomination to the floor regardless of the committee vote. But had Paul remained opposed, he and Democrats could have killed the nomination outright.

Paul's shifting position, however, all but assured Pompeo would breeze through Thursday's confirmation. Republicans maintained that he is well-qualified to be America's top diplomat and criticized Democrats for playing politics with his nomination. Fourteen Senate Democrats had voted to confirm him as CIA director in January 2017.

"From the founding of the republic until 2017, the Senate has never required a cloture vote to confirm a secretary of state nominee. Now we're at two," Senate Majority Leader Mitch McConnell complained earlier Thursday. "I guess Senate Democrats are in a history-making mood. Because over the past 15 months, they've embarked on a partisan campaign to block, obstruct and delay President Trump's nominees that is quite simply without precedent in American history."

Senate Minority Leader Chuck Schumer (D-N.Y.) said Wednesday he was troubled by Pompeo's past rhetoric and argued that he was too hawkish to be secretary of state. He also indicated that Pompeo's confirmation hearing did nothing to convince him that he would serve as a check on the president.

"This is not about denying the president his team just for the sake of it," Schumer said. "This is about the role of the Congress and, frankly, the Cabinet to provide a check on the president, who might go off the rails and undo the respect for rule of law, the tradition of rule of law that we have had in this country for so long."

Aside from concerns about his foreign policy views, many Democrats also opposed Pompeo because of past comments he's made denigrating Muslims and members of the LGBT community.

Pompeo was among a trio of controversial Cabinet and Cabinet-level nominees the president named in recent weeks, and he is expected to have the easiest time getting confirmed.

Pompeo's deputy at the CIA, Gina Haspel, is expected to have her confirmation hearing to succeed him as CIA director next month. Department of Veterans Affairs secretary nominee Ronny Jackson withdrew from consideration Thursday morning following allegations that he drank on the job and loosely dispensed pills on foreign trips.

The Senate also confirmed Richard Grenell to be the ambassador to Germany on Thursday on a 56-42 vote.

Nahal Toosi contributed to this report.

Perry's latest bid to help coal faces uphill battle [Back](#)

By Eric Wolff | 04/25/2018 05:08 AM EDT

Energy Secretary Rick Perry's latest idea to protect coal-fired and nuclear power plants may not fare much better than his previous efforts, according to energy experts.

Perry is considering invoking the 1950 Defense Production Act to keep money-losing power plants running by designating them as crucial for national security. But that would stretch the definition of the law and almost certainly draw legal challenges — and it would hit a big hurdle in Congress, which would need to approve perhaps billions of dollars in funding to keep the plants afloat, the experts said.

At the urging of President Donald Trump, Perry has sought to keep open coal and nuclear power plants that are threatened with shutdowns amid the stagnant demand for power — and even as natural gas and renewable power sources grab a growing share of the market.

So far, Perry's had no luck. FERC earlier this year rejected his proposal to give the plants financial support, and Energy Department lawyers stymied a push last year to invoke the agency's authority under the Federal Power Act to force the plants to run.

Some experts said any attempt to use the DPA is likely to meet the same fate.

"To me, it's a tough argument to make. It's a specious argument on its surface that seems like a perversion of the intended use of the Defense Production Act," said Tom Hicks, a former acting undersecretary of the Navy under former President Barack Obama and now a principal at the advisory firm The Mabus Group. "Defense Production Act is on the vanguard of the need for resources, not on the back end for an industry being challenged by economic forces."

But the effort has been a priority for Trump and Perry, who sees saving coal-fired power generation as vital to U.S. security, according to a source familiar with the conversations on the issue.

The Cold War-era law grants the federal government powerful authorities to inject cash into companies essential for national defense in order to preserve domestic supplies of key products. But DOE will have to make the case that electricity produced specifically from coal and nuclear power plants, and not other types of power, is a critical resource.

Using the act to protect the plants when there appeared to be no immediate shortage of power supplies would be a novel application that would almost certainly face legal challenge.

"If the administration uses DPA, they're going to be using it very creatively," said Ari Peskoe, director of the Electricity Law Initiative at the Harvard Law School Environmental and Energy Law Program. "They may come up with reasoning for higher rates and who's going to pay for it. Whether that will hold up, I don't know."

Perry and his staff appear to have very few viable options for bailing out coal and nuclear power, a major energy priority for Trump, who has promised to revive the coal industry. DOE has opened a [comments process](#) for interested parties to weigh in on its use of the Federal Power Act's 202(c) emergency provisions, though that would require the agency to go through FERC, which unanimously rejected a similar Perry effort in January.

The 202(c) effort has been pushed by coal magnate Bob Murray, owner of Murray Energy, and by FirstEnergy Solutions, the unit of FirstEnergy Corp. that is in bankruptcy proceedings and which expects to shut down four coal and nuclear power plants. That company asked DOE to use the emergency authority to save not only its plants, but all 85 coal and nuclear power plants in the PJM Interconnection power market.

The DPA was last used by the Obama administration starting in 2012 to help spur the biofuels industry to develop the kind of advanced biofuels that could power ships and aircraft. The government can purchase capital equipment for the cause of national security, and it can fund advertising to support the effort.

And it allows the government to become the buyer of last resort, which could put Washington on the hook to buy excess power generated by coal and nuclear plants. Technically, this electricity could only be purchased at the "cost of production," a level that in the past has been determined by a team within the Defense Department.

While no hard estimate for the cost of a DPA subsidy exists, consultants analyzing Perry's previous bailout proposal estimated costs between \$4 billion and \$10.6 billion annually.

That's a far higher level than Congress typically allocates for the DPA. It provided \$67.4 million in the omnibus passed in March, H.R. 1625 (115), down slightly from the \$76 million it provided for all projects in 2017, according to a report submitted to Congress.

And Congress — and the Republican Party — is deeply divided on using government subsidies to save these plants. Rep. David McKinley (R-W.Va.) has some allies from other coal districts for the effort, but other free market-oriented lawmakers like Rep. Pete Olson (R-Texas) say they want to see markets function unimpeded.

McKinley's staff has been in touch with DOE and the White House, as has West Virginia Sen. Joe Manchin (D).

"I think it's an emergency national concern for the national defense of our country. I think Rick Perry agrees with it, and I think the president does also," Manchin told POLITICO.

PJM has itself said the retirement of FirstEnergy's coal plants did not pose a threat to the region's power supplies, and that it had ample generation to meet demand. It has opposed any effort to mandate to require the plants to stay online.

"We believe that a market-oriented approach consistent with the American free-enterprise system offers better results than government-mandated subsidies," said PJM spokesman Jeff Shields.

Anthony Adragna contributed to this report.

Subject: Morning Energy: How Trump favored Texas over Puerto Rico — EPA holds final 'listening session' on climate rule repeal — DOE gets pushback on 'market-based' efficiency rules

By Kelsey Tamborrino | 03/27/2018 05:45 AM EDT

With help from Nick Juliano and Eric Wolff

HOW TRUMP FAVORED TEXAS OVER PUERTO RICO: A double standard has emerged in President Donald Trump's handling of disaster relief efforts in Texas versus in Puerto Rico, POLITICO's Danny Vinik found in a new investigation out today. A review of public documents, never-before-published FEMA records and interviews with more than 50 people involved with disaster response show an imbalance that tracks with one core person's attention: the president.

Behind the scenes, people with direct knowledge of Trump's comments said the president was focused less on the details of the relief effort than on public appearances, repeatedly using conference calls and meetings to direct FEMA Administrator Brock Long to spend more time on television touting his agency's progress. And as the administration moves to rebuild Texas and Puerto Rico, the contrast in the Trump administration's responses are taking on new dimensions, Danny writes.

During the first nine days after Hurricane Harvey, FEMA provided 5.1 million meals, 4.5 million liters of water and over 20,000 tarps to Houston; but in the same period, it delivered just 1.6 million meals, 2.8 million liters of water and roughly 5,000 tarps to Puerto Rico.

The federal government has already begun funding projects to help make permanent repairs to Texas infrastructure. But in Puerto Rico, that funding has yet to begin, as details of an experimental funding system are negotiated with Trump's Office of Management and Budget — an experimental formula that multiple congressional staffers and people with knowledge said White House officials told Puerto Rico Gov. Ricardo Rosselló to agree to if wanted money for his island. Read it [here](#).

GOOD TUESDAY MORNING! I'm your host Kelsey Tamborrino. Andrew Fasoli of the American Chemistry Council was fastest in identifying former first lady Helen Herron Taft as the first to plant the saplings of the Japanese cherry trees in D.C., which now surround the Tidal Basin and Capitol grounds. For today: Who is the only former Cabinet member to be selected as "designated survivor" twice during past State of the Union addresses? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

POLITICO Space is our new, free weekly briefing on the policies and personalities shaping the second space age in Washington and beyond. **Sign up today to start receiving the newsletter right at launch on April 6.** *Presented by Boeing.*

OFFSHORE ORCHESTRATION: Interior Secretary Ryan Zinke's meeting with Florida Gov. Rick Scott at the Tallahassee airport back in January — after which Zinke declared the state "off the table" for expanded offshore drilling — wasn't as spontaneous as it first seemed, POLITICO Florida's Matt Dixon reports. Scott's office cast the announcement as a hastily arranged example of the governor's ability to influence Trump administration policy, all while dismissing any suggestion that the move had anything to do with his expected

entrance into this year's Senate race. But Matt got ahold of 1,200 documents — including emails, text messages and phone records — that show Interior officials and Scott aides had been coordinating days ahead of the meeting. More from Matt [here](#).

ONE LAST TIME: EPA will hold its final "[listening session](#)" today in Gillette, Wyo., on the proposed repeal of the Clean Power Plan. A preliminary list of speakers shows a range of voices will attend the session — including various speakers from Cloud Peak Energy, a firm headquartered in Gillette that mines coal in the Powder River Basin, and the Rocky Mountain Coal Mining Institute. Sens. [John Barrasso](#) and [Mike Enzi](#) — who have previously [applauded](#) the proposed repeal — are also scheduled to speak. Barrasso plans to emphasize how the rule would hurt energy workers in his state, an aide tells ME, and will highlight bipartisan [efforts](#) in Congress to promote carbon capture technologies.

On the other side, advocates from the American Lung Association, Moms Clean Air Force and National Wildlife Federation will speak. Moms Clean Air Force will highlight EPA's "legal and moral obligation" to action on greenhouse gas emissions, according to the group's talking points. Administrator Scott Pruitt won't be there today, but he is set to [make a separate trip](#) to Wyoming this week to visit the state's coal-mining operations.

WHERE'S PERRY? Energy Secretary Rick Perry is in California today, where he'll tour the Lawrence Berkeley National Laboratory and hold an all-hands meeting with the facility's employees at 3 p.m. The trip follows Perry's [visit](#) to the Lawrence Livermore National Lab on Monday.

REFINERS: MORE THAN EPA'S PES WAIVER IS NEEDED TO SURVIVE THE RFS : Two Philadelphia-area refiners said a consent decree between EPA and Philadelphia Energy Services was an acknowledgment by the government that the Renewable Fuel Standard is broken and needs significant reform. PBF told DOJ, which took comments on the agreement until Monday, that "one-time forgiveness of RIN obligations fails to remedy the root cause for the bankruptcy and provides the wrong incentives to the [Renewable Identification Number] market." Monroe said the agreement "is a reflection, an acknowledgment, of the economic harm caused by the RFS program." Both of them were joined by refining giant Valero in arguing that the program needs to be changed more radically than just the one-time waiver offered by EPA. Ethanol producers said in their own earlier comments that they oppose the consent decree and reject the idea that PES' bankruptcy could be blamed on the RFS.

Read Monroe's comments [here](#), PBF's [here](#) and Valero's [here](#).

JUDGE LEAVES SOLAR TARIFFS IN PLACE: A judge in the U.S. Court of International Trade on Monday rejected requests for a stay of U.S. solar tariffs pending an appeal. Silfab Solar, Heliene, Canadian Solar (USA) and Canadian Solar Solutions had been hoping the court would block the 30 percent tariff the Trump administration imposed on imported solar panel and solar cells last month. The court had rejected their motions for a temporary restraining order and preliminary injunction earlier in March.

TRADE DEADLINE: Can appliances be regulated like automobiles? That's the question the Energy Department posed last year in an effort to apply Trump's regulatory reform goals to its efficiency standards program, and responses were due by Monday. DOE asked for input on several potential reforms, including enforcing efficiency rules similar to the Corporate Average Fuel Economy program, which averages performance across an automakers' entire vehicle fleet. DOE's request for information also pointed to state-level renewable portfolio standards or California's cap-and-trade program as examples of the ideas it was considering.

But those "market based" approaches probably won't work, numerous commenters told DOE. The main barrier is "anti-backsliding" provisions in the Energy Policy and Conservation Act, which prevents DOE from weakening existing requirements. Current law "precludes the use of averaging, credit-trading, or providing feebates as an alternative to minimum energy-efficiency requirements," the Alliance to Save Energy, a pro-

efficiency group, wrote in its [comments](#). A coalition of industry trade associations agreed that such mechanisms would be unlikely to work; in their [comments](#), the groups, including the Air-Conditioning, Heating and Refrigeration Institute and the Association of Home Appliance Manufacturers, urged DOE "to focus its limited resources on reforming the existing program" through changes to a separate process improvement rule. Read additional comments from [AHRI](#), the [Natural Resources Defense Council](#), [Lennox International](#), [E2](#), [Whirlpool](#), the [Edison Electric Institute](#), [Dow](#), [Southern Company](#) and the [California Energy Commission](#).

DEFENDING EPA'S SCIENCE: Former EPA Administrator Gina McCarthy and Janet McCabe, the former acting assistant administrator of the Office of Air and Radiation, [wrote an op-ed](#) in The New York Times Monday defending EPA's use of scientific studies to support its regulations. Conservatives have long accused the agency of relying on "secret science," and Pruitt says he plans to start relying only on publicly available data. But McCarthy and McCabe say that would deprive EPA of valuable research based on individuals' private health records or proprietary information that businesses want to protect. "Opponents of the agency and of mainstream climate science call these studies 'secret science,'" the pair writes. "But that's simply not true."

BSEE: WE COULD USE YOUR HELP: Interior is calling on its career staff to come up with ways to speed up the offshore drilling permitting process, Pro's Ben Lefebvre [reports](#). The Bureau of Safety and Environmental Enforcement will assemble teams of employees across departments to periodically review the process and look for ways to improve its efficiency across the agency, BSEE said Monday.

MAIL CALL! CALLING OUT WEAK LEASE SALES: House Natural Resources ranking member [Raúl Grijalva](#) sent a [letter](#) to Zinke Monday, requesting additional information on his agency's budget priorities. Grijalva also asked Zinke to keep royalty rates for offshore drilling development stable, in light of [weak demand](#) for lease sales.

— **Sens. [Sheldon Whitehouse](#) and [Brian Schatz](#)** wrote to the CEOs of [BlackRock](#) and [JP Morgan Chase](#) questioning the firms' investment in companies active in the Amazon rainforest.

NEW JERSEY TO BLOCK DRILLING: New Jersey Gov. Phil Murphy is expected sign a bill that would prohibit state regulators from approving permits for pipelines or related infrastructure to facilitate expanded offshore drilling in federal waters. Pro New Jersey's Danielle Muoio [has more](#).

MOVER, SHAKER: Friends of the Earth announced Monday that Liz Butler will become vice president of organizing and strategic alliances. Butler will lead a staff of five organizers and 13 organizing fellows in grassroots environmental campaigns.

— **Michael Pratt is joining the American Enterprise Institute's** press office as director of media relations and marketing. Pratt previously served in several other roles at AEI in the digital and media relations departments.

Stories from POLITICO Pro

How Trump favored Texas over Puerto Rico [Back](#)

By Danny Vinik | 03/27/2018 05:00 AM EDT

SAN JUAN, Puerto Rico — As Hurricane Maria unleashed its fury on Puerto Rico in mid-September, knocking out the island's electrical system and damaging hundreds of thousands of homes, disaster recovery experts expected that only one man could handle the enormity of the task ahead: Mike Byrne.

But Byrne, a widely acknowledged star of the Federal Emergency Management Agency, remained in Houston, which had been ravaged by Hurricane Harvey less than a month earlier.

Today, disaster recovery experts still express shock that FEMA kept Byrne in an already-stabilizing Texas and didn't send him to Puerto Rico for three more weeks. But now, the decision strikes many as emblematic of a

double standard within the Trump administration. A POLITICO review of public documents, newly obtained FEMA records and interviews with more than 50 people involved with disaster response indicates that the Trump administration — and the president himself — responded far more aggressively to Texas than to Puerto Rico.

"We have the U.S. Army and Marine Corps. We go anywhere, anytime we want in the world," bemoaned retired Army Lt. Gen. Russel Honoré, who led the military's relief efforts after Hurricane Katrina. "And [in Puerto Rico] we didn't use those assets the way they should have been used."

No two hurricanes are alike, and Harvey and Maria were vastly different storms that struck areas with vastly different financial, geographic and political situations. But a comparison of government statistics relating to the two recovery efforts strongly supports the views of disaster-recovery experts that FEMA and the Trump administration exerted a faster, and initially greater, effort in Texas, even though the damage in Puerto Rico exceeded that in Houston.

Within six days of Hurricane Harvey, U.S. Northern Command had deployed 73 helicopters over Houston, which are critical for saving victims and delivering emergency supplies. It took at least three weeks after Maria before it had more than 70 helicopters flying above Puerto Rico.

Nine days after the respective hurricanes, FEMA had approved \$141.8 million in individual assistance to Harvey victims, versus just \$6.2 million for Maria victims.

During the first nine days after Harvey, FEMA provided 5.1 million meals, 4.5 million liters of water and over 20,000 tarps to Houston; but in the same period, it delivered just 1.6 million meals, 2.8 million liters of water and roughly 5,000 tarps to Puerto Rico.

Nine days after Harvey, the federal government had 30,000 personnel in the Houston region, compared with 10,000 at the same point after Maria.

It took just 10 days for FEMA to approve permanent disaster work for Texas, compared with 43 days for Puerto Rico.

Seventy-eight days after each hurricane, FEMA had approved 39 percent of federal applications for relief from victims of Harvey, versus 28 percent for Maria.

Those imbalances track with another one: the attention of President Donald Trump. In public, Trump appeared much more concerned with the victims of Harvey than Maria. He visited Houston twice during the first eight days after the hurricane, but didn't visit Puerto Rico for 13 days. In the first week after the disasters, Trump sent three times as many tweets about Harvey as Maria — 24 about the plight of Texas and eight about Puerto Rico, including a series of comments about Puerto Rico's debt level and quality of infrastructure that local officials considered insulting and enraging while lives were still in jeopardy.

"Wow - Now experts are calling #Harvey a once in 500 year flood! We have an all out effort going, and going well!" he crowed about Texas on Aug. 27, two days after the storm made landfall.

On Sept. 30, 10 days after Maria, and while fielding criticism from Puerto Rican officials, Trump testily tweeted: "[They] want everything to be done for them and it should be a community effort. 10,000 Federal workers now on island doing a fantastic job."

Behind the scenes, according to people with direct knowledge of his comments, Trump was focused less on the details of the relief effort than on public appearances, repeatedly using conference calls and meetings designed

to update him on the relief effort to direct FEMA Administrator Brock Long to spend more time on television touting his agency's progress.

In addition, Trump spent the first weekend after the Puerto Rico crisis tweeting repeatedly about NFL players kneeling for the national anthem. Those messages, experts said, send a subtle, yet important signal to the federal bureaucracy.

"On Texas and Florida [during Hurricane Irma], the president was very vocal and engaged in the run-up to the storm. His messaging was frankly pretty good," said Jeremy Konyndyk, the former top disaster response official at USAID under former President Barack Obama. "If you look at his public messaging on a comparable timeline around Puerto Rico, there's virtually nothing. ... That sends a signal to the whole federal bureaucracy about how they should prioritize."

FEMA and administration officials defend the response to the storm, saying it posed unprecedented logistical challenges as the agency faced perhaps the most demanding stretch in its 39-year history. Hurricane Maria was the third major hurricane to strike the United States in less than a month. Combine that with an overwhelmed local government and nonexistent communications and it created a fog-of-war atmosphere that made it difficult to determine what resources were needed when and how to get them to an island whose ports and airports were heavily damaged.

In a statement to POLITICO, Long defended FEMA's efforts, arguing that, unlike in Texas, the agency was forced to take on a greater role in the post-disaster response. "We provided Puerto Rico the same, if not more support, as we have for all presidentially declared disasters across the nation," he said, "but an optimal response cannot rely on FEMA's efforts alone."

A spokesperson for the National Security Council said Trump was "personally engaged" on the response and his "primary directive" to Long was to oversee a unified and effective federal response.

But in that situation, former FEMA officials say, extra political pressure and impetus can make a difference. Puerto Rico, as a U.S. territory rather than a state, has just a single, nonvoting delegate in Congress, compared with the 36 representatives and two senators from Texas who loudly demanded proper resources for their state. Likewise, victims of Superstorm Sandy had six senators and dozens of U.S. representatives in the states of New York, New Jersey and Connecticut to demand extra disaster relief, including powerful lawmakers like Chuck Schumer, then the No. 3 Democrat in the Senate.

"After Sandy, [Rep.] Peter King was all over FEMA continuously. So was Schumer," said Michael Balboni, a former New York state legislator and an expert on disaster response. That constant pressure on senior federal officials, he added, is critical to getting the proper resources after a disaster.

In that vacuum, presidential leadership plays a larger role. But as the administration moves to rebuild Texas and Puerto Rico, the contrast in the Trump administration's responses to Harvey and Maria is taking on new dimensions. The federal government has already begun funding projects to help make permanent repairs to Texas infrastructure. But in Puerto Rico, that funding has yet to start, as local officials continue to negotiate the details of an experimental funding system that the island agreed to adopt after a long, contentious discussion with Trump's Office of Management and Budget.

Multiple congressional staffers and people with direct knowledge of the arrangement said White House officials told Puerto Rico's governor, Ricardo Rosselló, that if he didn't agree to the experimental formula, the island wouldn't get the money, effectively forcing the island to take a huge gamble since it would be responsible for any cost overruns, a requirement that doesn't exist for Texas. The White House denies making that demand.

"There is no doubt that Puerto Rico gets treated differently to a state. And there is no doubt that it has been true for the disaster response as well," Rosselló said in an interview at the governor's mansion in Old San Juan. He added, "Our objective is to eradicate this notion of second-class citizenship in the United States, so that whenever a disaster hits — whether it's Texas, Florida, New York or Puerto Rico — the federal government responds equally in all cases."

After Hurricane Harvey hit the Houston region on Aug. 25, dropping over 50 inches of rain and flooding whole swaths of the metropolitan region, FEMA quickly mobilized, sending out mission assignments to a long list of federal agencies. In less than a week, U.S. Northern Command deployed 73 helicopters and the Coast Guard sent an additional 18. Within nine days, a whopping 30,000 federal personnel were helping an army of state and local authorities with the response, conducting search-and-rescue missions, removing debris and helping victims apply for disaster assistance, among many other assignments.

The response was effective enough that by Sept. 14, Texas Gov. Greg Abbott reported that "The risk to lives has now been reduced, if not completely eliminated."

On Sept. 20, after four days of increasingly dire forecasts, Hurricane Maria made landfall in a Puerto Rico already reeling from Hurricane Irma two weeks earlier.

POLITICO's analysis of data on Harvey and Maria, pieced together through news releases, internal FEMA documents, revealed for the first time, and numbers supplied by the agency, indicates that FEMA's response to Maria was much slower than it was to Harvey. Helicopters, which are crucial to rescue people from remote, flooded areas, were slow to arrive. In the initial days, Northern Command had, at most, just a few dozen helicopters on the island and the U.S. Virgin Islands while the Coast Guard deployed just six. By Day 9, just 10,000 federal personnel were on the island, about a third as many as were dealing with Harvey at the same point. Those figures increased over time — Northern Command eventually supplied over 70 helicopters and the government deployed more than 20,000 personnel — but the ramp-up took more than three weeks.

The increase in personnel coincided with the arrival of Byrne. A former New York City firefighter, Byrne has spent his career working in emergency management, serving as a senior regional FEMA officer after 9/11 and as a private sector consultant, helping manage a \$10 billion recovery program after hurricanes Katrina and Rita. After Superstorm Sandy in 2013, he led FEMA's recovery operations, a position known as the federal coordinating officer, or FCO. Last September, he was promoted to assistant administrator for field operations, overseeing the entire disaster workforce.

Despite his promotion, Byrne still often goes out into the field to oversee the most important assignments. So it came as no surprise to disaster-recovery experts when Long, the FEMA administrator, announced on Sept. 1, a week after Harvey hit Houston, that Byrne was heading down to Houston to help with the recovery efforts.

The surprise came on Sept. 20, the day that Hurricane Maria hit Puerto Rico, when FEMA named Alejandro De La Campa the FCO, while it kept Byrne in Texas.

De La Campa, a Puerto Rican native who runs FEMA's local office on the island, has strong relationships with Puerto Rican officials but is not considered one of FEMA's top disaster response leaders, much less the best person for one of the most complicated and challenging disasters in FEMA's history. Even at the time, the decision shocked former FEMA officials, many of whom thought well of De La Campa, who goes by Alex, but were expecting Long to deploy a much more experienced official for such a critical job.

"When I started hearing things, I was thinking there are a lot of heavy hitters sitting on the bench," said Craig Fugate, the head of FEMA during the Obama administration. Fugate acknowledged that it's difficult to second-guess the decision-making without being in the meetings at the time. But he said, "I would have put my heavy hitters in there."

The storm impacted every part of the island, wiping out the electricity system and leaving even the local first responders as victims, many of whom lost power and first had to protect their families. Even today, more than 5 percent of the island remains without power. While the Houston region has about twice as many people as Puerto Rico, the severity and nature of the damage caused by Maria overshadowed that of Harvey. As such, FEMA eventually both received and approved more applications for individual assistance from victims of Hurricane Maria than of Hurricane Harvey.

"You had almost a perfect storm," said Jeff Parks, who worked for Honoré on the Katrina recovery effort and traveled to Puerto Rico in a private capacity soon after Maria.

Byrne said he wasn't involved in the FCO decision for Puerto Rico but that he wasn't surprised with the selection of De La Campa, explaining that he has a "stellar reputation." FEMA declined to make De La Campa available for an interview. Asked for further information on why De La Campa was initially selected to serve as the FCO, a FEMA spokesperson said the "question has been answered and addressed."

FEMA also deployed Justo "Tito" Hernandez, an experienced first responder who previously had served as an FCO on the island, as De La Campa's deputy. Hernandez, also a Puerto Rico native, did not comment directly on the selection, instead stressing that FEMA's personnel in Puerto Rico were a team.

Still, he added, "Mike [Byrne] is the best person for the job."

The best person for the job, though, was nearly 2,000 miles away during the first three weeks after Hurricane Maria made landfall, and he was quickly missed. On Oct. 10, in a five-sentence news release, billed as an expansion of the leadership team, FEMA announced it was replacing De La Campa with Byrne.

Former FEMA officials and disaster response experts said the slow ramp-up in force — from the delay in deploying Byrne to the limited number of helicopters — in Puerto Rico and the U.S. Virgin Islands is evidence that the agency underestimated the ferocity of the storm and failed to properly pre-position assets.

"That says that they didn't have the right footprint in place," said Konyndyk. "It's one thing if that's happening over a week or two. It's very different if that's taking a month."

Federal officials caution against comparing Harvey and Maria, arguing that Texas' and Puerto Rico's very different geographic, financial and political situations make comparisons misleading. After POLITICO requested data from U.S. Northern Command on helicopters deployed on certain dates after Maria and Harvey, a spokesperson declined to provide any figures, saying that the only overlap between Florida, Texas and Puerto Rico was that all three experienced hurricanes.

"That's where the comparison stops for us," he said.

Byrne and Hernandez offered two main explanations for the limited number of military assets, particularly helicopters, in the first week after Hurricane Maria. They said it was much easier to deploy helicopters to Houston than to Puerto Rico and the U.S. Virgin Islands, which were 1,000 miles from the United States and had no working ports or airports immediately after the disaster. And even if FEMA could get more responders to Puerto Rico, they said, it had no place to house them.

But it still took weeks for FEMA and the Department of Defense to increase their forces in Puerto Rico and the U.S. Virgin Islands, even though the main airports and ports were opened within a few days. Disaster-recovery experts also faulted the government for failing to direct the aircraft carrier USS Abraham Lincoln and other ships, which have their own fleets of helicopters and were deployed off the coast for Florida to help with Hurricane Irma in early September, to help with the response efforts to Hurricane Maria. The Lincoln began to position itself to help with Irma two days before the storm hit Florida. FEMA never requested that the Department of Defense send the Lincoln to Puerto Rico and the U.S. Virgin Islands.

The USNS Comfort, a hospital ship, didn't even embark from Norfolk, Virginia, to reach Puerto Rico and the U.S. Virgin Islands until nine days after the storm, despite the fact that few hospitals in the region had consistent power, leaving thousands of patients in dire medical condition.

FEMA directed questions about the Comfort and Lincoln to the Department of Defense, which said that during Irma, the Lincoln was also not requested by FEMA for help with civil authorities but instead helped secure military installations in Florida. A spokesperson for NORTHCOM also said that an agreement between DOD and FEMA to send the Comfort was reached "on/about Sept. 25," five days after the storm. It then takes the ship roughly four days to assemble its crew, add necessary supplies and start the ship's engine before it can embark, the spokesperson said.

Other data raise questions about FEMA's claim that a lack of housing prevented a quicker ramp-up in federal personnel on the island.

According to internal FEMA documents given to POLITICO by a person involved in the response efforts, a week after Hurricane Maria, FEMA had filled only 150 of 250 beds that were set aside for first responders at the Puerto Rico Convention Center. Two weeks after Maria, FEMA had filled only 1,258 of 2,250 beds allotted for its first responders at the convention center and aboard two training vessels from the U.S. Maritime Service.

A FEMA spokesperson did not say why the beds weren't used but explained that the numbers were fluid during those days as FEMA staff frequently moved to different parts of the island. "During an emergency, deployed staff comes in and out and depending on where they are needed, they are moved around to support federal and state partners," the spokesperson said.

Nonetheless, Byrne and Hernandez said in separate interviews that FEMA had enough resources to complete its missions, whether conducting search-and-rescue operations or providing food and water to the victims.

"The fact that we ramped up to about 20,000 people in the first month, month-and-a-half, that's impressive to me," said Hernandez. "Whoever says it was slow, I ask them where were you. Where were you when we were moving as fast as we could with the resources that we had?"

Byrne added: "We didn't have any deaths from starving on this. We didn't have any deaths from dehydration. We got plenty of water and food out to people."

People on the ground, however, describe a different scene, one defined by mass confusion and little coordination among the dozens of different nonprofit groups and federal, state and local officials involved in the response, most of whom had little ability to communicate with one another. They said FEMA was mostly absent during the initial days after the storm.

"For the first couple weeks, right after the hurricane, we were the only thing moving out there," said Mike Soto, a founder of a Puerto Rican think tank who became a leader in the response effort after the storm hit Puerto

Rico. "The government was definitely catatonic. FEMA wasn't around and when they were finally here, it took them awhile."

Bernardo Márquez, the mayor of Toa Baja, a municipality of less than 100,000 people in northern Puerto Rico, said just two pallets of water and one pallet of food arrived from FEMA in the first week, forcing local officials to rely on donations from local supermarkets and nonprofits like the Red Cross. "It was slow," he said.

FEMA did deliver some supplies during the first few weeks: In the first nine days after Hurricane Maria, the agency provided 1.6 million meals, 2.8 million liters of water and roughly 5,000 tarps to the island. But that was only a third as many meals and half as much water as it provided to Texas in the same time period after Harvey. Within three days of Harvey's landfall, FEMA had delivered over 20,000 tarps to Texas.

The agency argued that any comparison of the delivery of assistance between Puerto Rico and Texas is effectively impossible. Texas is accessible by roads, making it easy for FEMA to truck food, water and other emergency supplies into Houston while Puerto Rico is 1,000 miles away from the mainland U.S. "We moved stuff. We moved stuff pretty efficiently," said Byrne. "And the challenge here was getting it by ship."

According to a document obtained by POLITICO through the person involved in the response efforts, federal officials were also slow to begin installing "blue roofs" on the island, the hard, plastic covering that allows victims to return and live in their homes before permanent repairs begin.

Twenty-five days after the storm, the Army Corps of Engineers, the federal agency responsible for installing the roofs, had completed just 260 installations in Puerto Rico out of an estimated 60,000 that were needed, equal to 0.4 percent.

There's no similar data for Harvey because Texas didn't request any blue roofs and instead handled temporary housing relief in the first weeks after the storm by itself. But 25 days after Hurricane Irma struck Florida, the Army Corps had installed 1,600 blue roofs, out of 15,000 estimated, or 10.7 percent. A week later, the Army Corps had completed more than a third of the installations in Florida, compared with just 2.8 percent during the same period in Puerto Rico.

Jacqueline Tate, a spokeswoman for the Army Corps, wrote in an email that the agency faced multiple challenges with its blue roof program in Puerto Rico, including locating where victims lived based on their provided address and road closures resulting from landslides and debris.

Experts said it's difficult to pinpoint the exact costs of all these delays.

The official death toll as a result of Hurricane Maria currently stands at 64, compared with 103 from Hurricane Harvey, but a New York Times report in December, using a statistical analysis to compare deaths in the weeks after the storm with a similar period in 2015 and 2016, put the number as high as 1,052. According to the report, deaths from sepsis, pneumonia and breathing disorders jumped considerably. Local officials and experts are suspicious of FEMA's official death count and also said the delays, if not causing deaths, significantly aggravated the pain and stress felt by many Puerto Ricans.

Eventually, officials agree, FEMA's distribution of food and water accelerated; since the storm, FEMA has distributed more than 64 million meals and 72 million liters of water, both records for the agency. But the initial delays represented lost time that can never be recovered.

For FEMA, the response to Hurricane Maria put the agency in an unfamiliar position, forcing it to take on the lead role in the response when it typically acts as a support agency, fulfilling requests from state and local officials. In Puerto Rico, the state and local governments didn't always know what they needed or what they could even request. But after FEMA struggled under similar conditions after Hurricane Katrina, Congress gave

the agency additional authorities to send commodities and help with the emergency response even before it receives official requests from local officials. Many disaster response experts suggested that FEMA failed to use those authorities effectively after Hurricane Maria.

"My big mantra is I never get time back," said Fugate, the former FEMA administrator from the Obama administration, adding that he always erred on the side of sending relief supplies rather than waiting for an official request.

As hurricane victims look to start rebuilding their lives in the aftermath of a storm, many first turn to FEMA to apply for federal assistance. Applicants can receive a quick infusion of cash — up to \$34,000, depending on their needs and the severity of the damage — to start fixing their homes, money that also helps jump-start the local economy. But that money was slow to arrive in Puerto Rico.

According to FEMA data on its individual assistance program, the agency processed applications more slowly for victims of Hurricane Maria than victims of Hurricane Harvey. Nine days after Harvey, FEMA had already approved more than \$141.8 million in federal assistance, compared with just \$6 million during the same period after Maria. In fact, from Oct. 2 to Oct. 9, FEMA approved just \$6,008 in individual assistance for Puerto Rico.

A FEMA spokesperson explained that communications were a challenge in the first days after the storm, preventing Puerto Ricans from using the online application and making it difficult for federal officials to follow up with survivors. Many victims also had trouble proving their residency with a deed or title, the spokesperson said.

Still, Puerto Ricans found a way to register in the first two weeks. By Oct. 5, the agency had received 248,281 registrations for individual assistance, rising to 496,418 by Oct. 13.

Seventy-eight days after the two hurricanes, FEMA had received 18 percent more applications from victims of Maria than from victims of Harvey but had approved 13 percent more applicants from Harvey than from Maria. At the time, 39 percent of applicants from Harvey had been approved compared with just 28 percent of applicants from Maria.

"People are grateful for what FEMA was done. Mayors won't openly say we hate FEMA," said Sen. Eduardo Bhatia, the minority leader of the Puerto Rico Senate. "But if you talk to them enough, they will say it was totally frustrating. It was an absolute mess. No communication, no coordination, no chain of command and certainly no reasonable plans given the magnitude of the problem."

A little before noon on Oct. 3, Air Force One landed at the Luis Muñiz Air National Guard Base in Carolina, Puerto Rico, where Trump was scheduled to get a first-hand look at the devastation wrought by Hurricane Maria, his first trip to the island since the storm hit 13 days earlier. He visited Texas twice in the first eight days after Harvey but was slower to visit Puerto Rico, the NSC spokesperson said, so that his trip "didn't have a negative impact on ongoing response operations."

Nonetheless, Puerto Ricans were grateful for the chance for national attention, given what they considered the still-daunting magnitude of the crisis.

Quickly, however, they realized that Trump's visit wasn't going to include the worst-hit areas, and that Trump didn't have patience for any complaints.

Instead, the carefully scripted trip appeared to be something of a victory tour, as Trump praised FEMA's response and gave an "A+" to Long, the FEMA administrator, and touted the fact that the death count at the time stood at 16, compared with nearly 2,000 after Hurricane Katrina.

At a briefing on the base, he indirectly alluded to Puerto Rico's financial woes, suggesting that the federal response to the storm was creating new challenges for Mick Mulvaney, the White House budget director. "Now, I hate to tell you, Puerto Rico," Trump said, "but you've thrown our budget a little out of whack because we've spent a lot of money on Puerto Rico, and that's fine."

On a walking tour during the afternoon, Trump visited a neighborhood in nearby Guaynabo, an effort to show the president the damage on the ground. But the area had been one of the least-affected neighborhoods in Puerto Rico, according to multiple Puerto Rican officials, because most of the houses were constructed with cement.

"Nothing happened. Everything was perfect," said Sandra Rodriguez, a communications consultant who lives eight minutes away from the neighborhood. "The only thing was, it didn't have any electric power."

At a church, Trump handed out bags of rice to local residents before taking paper towels and impersonating a basketball player as he shot them into the crowd, whose members scrambled to grab the free supplies. To many Puerto Rican residents, that image — Trump's arms arched as if shooting a three-pointer — illustrated the president's cavalier attitude toward the island.

"The president's visit made it very clear that he did not think this was a big deal," said Bhatia, the Senate minority leader. "The whole paper towel incident was silly. He was making a joke out of it."

The NSC spokesperson defended the location chosen for Trump's walking tour, saying the president was fully aware of the challenges facing Puerto Rico. "Had the president visited areas that were severely impacted by the Hurricane, security measures would have required that rescue and relief efforts be temporarily redirected, which is not what the president wanted," the spokesperson said.

James Norton, a senior official in the Department of Homeland Security under former President George W. Bush, said public appearances and visits to storm-wrecked regions play an important role in establishing priorities within the federal government — as Bush learned the hard way when he was criticized for not getting more personally involved in the Katrina recovery effort.

"Bush made every effort to correct [the mistakes made after Hurricane Katrina] given how many visits he made to the region," he said. "Compare that to Trump: He made one visit. That type of executive attention drives the bureaucracy. While there might be people working behind the scenes, not having that constant attention and trips to region does have an impact on the level of effort."

To some aides, Trump didn't seem to approach Hurricane Maria any differently than Hurricane Harvey. In both cases, he lauded the efforts of FEMA and the military, heaping praise on officials who he believed were reflecting positively on his administration. "He came across as a coach, like Mickey in those Rocky movies," one person familiar with his comments said. "'You're killing them, go get 'em.'"

But in Trump's Twitter feed, a proxy for his daily attention, he didn't seem particularly concerned with the fate of Puerto Rico after Hurricane Maria. According to a POLITICO tally, he tweeted just eight times about the island in the week after the storm, often to criticize Puerto Rico. In a three-part tweet on Sept. 25, he said Puerto Rico "is in deep trouble," due to its debt and infrastructure; during that same week, he tweeted 18 times about NFL players not standing for the national anthem. In comparison, in the week after Harvey, he was laser focused on the storm, tweeting 24 times about the relief efforts in Texas and repeatedly praising the first responders.

Trump also got into verbal disputes with local Puerto Rican officials, including the mayor of San Juan, Carmen Yulín Cruz, who criticized the federal response at a Sept. 29 news conference, saying that "We are dying and you are killing us with the inefficiency."

A day later, Trump struck back, slamming Cruz for her "poor leadership" and tweeting that she and "others in Puerto Rico ... want everything to be done for them."

"It was a little disheartening to see the exchange between the president and the mayor," said Michael Coen, former chief of staff of FEMA during the Obama administration. "It doesn't help morale at FEMA and the staff who are working hard."

On Oct. 12, more than three weeks after Hurricane Maria hit Puerto Rico, the president suggested that the federal government wasn't prepared to help the island indefinitely. "We cannot keep FEMA, the Military & the First Responders, who have been amazing (under the most difficult circumstances) in P.R. forever!" The next day, he walked back that tweet in another tweet, saying about Puerto Ricans, "I will always be with them!"

To many Puerto Rican officials and disaster experts, Trump's public comments about Puerto Rico, a territory with no voting representation in Congress, exacerbated the challenges it faces with the federal bureaucracy due to its political status. "There is certainly a different treatment and many of these things, in order to get some reaction, there has to be some pushing," said Rosselló.

The NSC spokesperson said in a statement that the idea that Trump's public comments negatively affected the federal response was a "ridiculous insinuation" and "an insult to the thousands of FEMA and other federal employees who were in Puerto Rico before, during and after the storms." The official added that such criticisms were "partisan political shots."

But there is a lot of evidence that political pressure can lead to a stepped-up disaster response.

In Texas, Senate Majority Whip John Cornyn (R-Texas) held up the nomination of the deputy director of the White House budget office for months over concerns about inadequate support for his state in the wake of Harvey. He finally allowed the nomination to move forward in February after Congress passed a bill with \$90 billion of disaster relief funding and Trump signed it.

Rep. Dan Donovan (R-N.Y.), who leads the House Homeland Security subcommittee on emergency preparedness, told POLITICO that even today, more than five years after Superstorm Sandy, he still has to keep lobbying FEMA to support his constituents on different issues resulting from the storm, such as flood insurance mitigation measures. "We are always putting pressure on them," he said.

Puerto Rico, with a single, nonvoting delegate in the House, can't hold up White House nominations. The territory doesn't have a full delegation of lawmakers — or congressional staffers — to put pressure on FEMA. "Unless you are God, you can't do the job of six people just yourself and without a vote," said Kenneth McClintock, the former secretary of state of Puerto Rico.

As of March 20, six months after Hurricane Harvey, Texas was already receiving federal dollars from FEMA for more than a dozen permanent projects to repair schools, roads and other public infrastructure that were damaged by the storm.

But for Puerto Rico, FEMA has so far not funded a single dollar for similar permanent work projects.

The gap is a result of Puerto Rico's decision to use an experimental formula for calculating the federal funds allocated to rebuild its public infrastructure. The new formula gives Puerto Rico significant flexibility during the rebuilding process, but it also requires the island to pay for any cost overruns, a burden that doesn't apply to Texas, where FEMA will pay for any excess costs. For a cash-strapped territory like Puerto Rico, which is more than \$70 billion in debt, the potential for cost overruns is a huge risk, making the decision to use the new formula across all rebuilding projects a somewhat surprising gamble.

But according to multiple congressional officials and people with direct knowledge of the arrangement, the island was forced to take that gamble. According to those people, White House officials, led by Mulvaney and Homeland Security Adviser Tom Bossert, told Puerto Rico that in order to receive money for permanent work projects, it had to adopt the experimental funding formula for all its projects.

That formula, which dates to Hurricane Katrina and was used on a major housing project after Superstorm Sandy, has never been tried on this scale and Puerto Rican officials weren't interested in being the guinea pig. But in a series of contentious meetings and conversations in late October, White House officials told Puerto Rico it had no choice, according to the congressional staffers and people with direct knowledge of the meetings.

On Nov. 2, with almost no media attention, FEMA published an amendment to its disaster declaration for Puerto Rico that required the use of the experimental funding formula across all projects. It had never been included in a disaster declaration before.

"This is unusual and when it came out, I had lots of phone calls from people," said Elizabeth Zimmerman, a former senior FEMA official who helped create the program when she was in the Obama administration.

Byrne defended the process, arguing that the administration did not force Puerto Rico to adopt the new formula.

"We made a strong case. We showed them all the pluses to it because of the flexibility you'd have, the increased use of mitigation," he said. "It speaks for itself. And at the end of the day, the governor put it in writing that that's how he wanted it done."

A senior administration official said it was "absolutely false" that FEMA forced Puerto Rico's hand.

Rosselló said the administration was "not explicit" in ordering Puerto Rico to adopt the experimental formula, which is known as 428 for its section in the Stafford Act, but he added that "they were very adamant about 428."

Rosselló also argued that the process has slowed down Puerto Rico's ability to rebuild its infrastructure. The process for authorizing permanent funding for Puerto Rico took 43 days, compared with 10 days for Texas. The U.S. Virgin Islands received that authorization within 15 days.

The senior administration official acknowledged that projects might get rebuilt quicker under the traditional payment method but said the delay reflects the time necessary to build back the island's infrastructure in a smarter, more effective way. "It does take a little more time to plan that out," the official said, adding that many emergency projects, including some road repairs and electricity generation, are ongoing. FEMA has already spent more than \$1.3 billion on such emergency projects.

Still, today, more than six months after Hurricane Maria, FEMA still hasn't funded any permanent work projects on the island as Puerto Rico and federal officials negotiate an agreement under 428. The most important piece of those negotiations is the cost estimate. Puerto Rico is on the hook for any overruns, so state officials are very concerned about who is conducting the estimate. According to Rosselló, FEMA agreed in November that Puerto Rico and FEMA would jointly be in charge of the estimate. "We had this explicitly written down in order for us to agree to 428," he said.

Byrne, however, suggested that FEMA would ultimately determine the estimate. "We're more than happy to have Puerto Rico engineers and engineering firms be part of this, and they can help us with the estimates," he said, citing an inspector general's report after Sandy that faulted FEMA for weaknesses in its financial controls in using the new formula. "At the end of the day, we're going to do the estimate." Any disagreements would go to a third-party panel for review, he added. "This is going to be fair."

Bryan Koon, who served as the director for Florida's emergency management agency from 2011 to last October, said he supports 428 and thinks it could help Puerto Rico. But if he were in charge, he said, he would object to FEMA conducting the cost estimate itself. "As a state guy, I would be opposed to that."

The senior administration official conceded that there is "tension" around the cost estimate but said it should reflect a collaborative approach. "We recognize that you don't want to take the number we're giving you and you have to recognize that we're not going to just take the number you give us," the official said. "That's the way this works."

The official also argued that the Trump administration has put Puerto Rico in a better position to use 428 by requesting and receiving from Congress an exemption from the requirement that the cost estimate be based upon the pre-disaster conditions of Puerto Rico's infrastructure. "That's a big deal," the official said. The exemption could prove lucrative to Puerto Rico, since FEMA now can now fund permanent work projects without deducting for any pre-existing damage that was not caused by Maria.

Experts on the formula said it could have additional benefits. It is, effectively, a block grant, allowing the island to more efficiently allocate resources to rebuild its roads, bridges and power system. Under the formula, FEMA also distributes the money up front, instead of reimbursing the island for individual projects, an important benefit for the cash-strapped territory that also cuts down on burdensome paperwork.

Rosselló said he was examining the formula before the White House approached him, realizing that it would be a mistake to rebuild Puerto Rico's outdated infrastructure to its previous condition. "Puerto Rico is in hurricane alley," he said. "It's going to come again."

But Rosselló and other Puerto Rican officials worry that the administration's position on 428 is representative of a broader White House strategy to limit funding toward Puerto Rico. The governor particularly pointed to the Treasury Department's decision to withhold more than half of a \$4.7 billion loan that Congress authorized for Puerto Rico in an October spending bill. Treasury said Puerto Rico didn't need the money, which was earmarked to help the island pay for essential services, since it had a cash balance of \$1.7 billion at the end of 2017. The two sides reached an agreement over the loan last week.

Rosselló believes the president is committed to funding Puerto Rico's recovery, but he's worried that it will not be a priority as the administration moves on to other issues. "When we asked for him a certain set of things ... [Trump] has responded," he said. "My concern is that somewhere along the way, it has sort of fizzled."

"I don't know who it is, but there certainly is evidence that they are trying to penny-pinch," the governor added.

The senior administration official rejected that accusation, saying, "I'm not sure where he is getting that impression" and noting that the federal government has already committed more than \$10 billion in funding to Puerto Rico. "Our No. 1 concern is to make sure we deliver for the people of Puerto Rico," the official said, adding, "Things take longer than anyone would like them to."

Puerto Rico's recovery will take many years and will continue to put pressure on the federal budget. The historic 2017 hurricane season and California wildfires have already forced Congress to pass three disaster spending bills, totaling more than \$140 billion, and another disaster spending bill could be needed later this year. The Trump administration, led by Mulvaney, has attempted to keep costs down, sending a [funding request](#) to

Congress in November that Democrats and Republicans both derided as too low. The White House budget office included in that request a list of spending cuts that Congress could use to offset the extra hurricane-related costs, which lawmakers also ignored in February's disaster spending bill.

Many Puerto Rican officials and disaster-recovery experts fear that the contentious battles over 428 and the Treasury Department loan are just the first of many future fights between Puerto Rico and the federal government. It's a fear shared by many in Puerto Rico, who, now more than ever, feel like second-class citizens.

"There is a lingering lack of knowledge about Puerto Rico and a lingering tendency to want to treat Puerto Rico differently," said McClintock, the former Puerto Rico secretary of state, "and always for the worst."

POLITICO Florida: Records, Zinke's office refute Scott framing of impromptu oil-drilling reversal [Back](#)

By Matt Dixon | 03/27/2018 05:05 AM EDT

TALLAHASSEE — When Gov. Rick Scott and U.S. Interior Secretary Ryan Zinke announced Jan. 9 Florida was "off the table" for offshore oil drilling, the governor cast the hastily arranged news conference at the Tallahassee airport as unplanned and the Trump administration's decision as something Scott had influenced at the eleventh hour.

In fact, Zinke's top advance staffer, whose job it is to plan ahead for such events, was in Tallahassee the previous day. And top officials from the offices of both Scott and the secretary were in regular contact for several days leading up to the announcement, according to more than 1,200 documents reviewed by POLITICO Florida as part of a public records request.

The documents, which include phone records, text messages, and emails, contradict the supposed spontaneous event that portrayed Scott as single-handedly securing a politically popular win for Florida's environmental future only days after the administration had spelled out a controversial new national five-year plan to boost offshore oil drilling. The event left Scott, at least for the moment, with a big victory to hold over Sen. [Bill Nelson](#) (D-Fla.), whom the term-limited Scott is almost assuredly challenging in 2018.

The records reaffirm the perception at the time that the Trump administration's decision to reverse course and remove Florida from the list was carefully choreographed to give Scott a political win in his widely expected challenge this year to unseat Nelson.

"Whatever Rick needs, they [Trump administration] will do. There will be net more offshore drilling, but the governor will get what he needs," one Republican who spoke directly with Zinke [told POLITICO Florida](#) at the time, a prediction that came true.

It will "be a big win, and it won't be Bill Nelson bringing it home," the Republican added.

Turns out all the optics were orchestrated long before that January day.

Zinke press secretary Heather Swift told POLITICO Florida Monday that "the governor's staff was certainly aware that the secretary was traveling to Florida at the governor's request," but Scott's office — at the time — gave no indication the meeting and oil drilling deal had been hashed out prior to the Jan. 9 airport meeting.

Scott's office did not include the meeting on his original public schedule, which is released each morning. The event was sent out as part of an amended calendar around 4:50 p.m. on January 9, about an hour before the event. Around the same time, Scott's office began telling reporters to get to the airport, but there was no notice prior to the amended statement and calls from staff. There was an absolute feeling in Florida political circles at the time that the announcement came out of nowhere.

The decision to give no public notice was done despite Zinke's staff being already in Tallahassee to help coordinate the event: "Even the shortest trips require a lot of coordination and planning," Swift said.

Scott spokesman McKinley Lewis said Monday Scott wanted the meeting with Zinke to "express his strong opposition to drilling off Florida's coast," but did not discuss the public perception that the meeting was not planned.

"Governor Scott was glad to have the opportunity to quickly meet with Secretary Zinke and get commitment from him in that meeting to take Florida off the table for future off shore drilling," Lewis said.

He did not return follow up questions about why the meeting was kept off Scott's original public Jan. 9 calendar.

Records clearly show Rusty Roddy, Zinke's former advance staffer, was in Tallahassee ahead of the Jan. 9 event helping coordinate with Scott's staff.

"Head's up. Secretary having issues with flight out of Atlanta," wrote Roddy in a text message the day of the event to Scott deputy chief of staff Craig Carbone. "Arrival here TBD but looks like it will be later than planned for sure."

Roddy, who is no longer with Zinke's office, acknowledged that the event was "planned" and that he was in Tallahassee prior to the airport meeting. Additional records further confirm the "off the table" airport event was not as hastily thrown together as it then seemed publicly. In emails, Roddy indicated he was planning to be in Florida before the event as early as Friday, Jan. 5, a day after Zinke announced Florida was on the oil drilling list, and days before the Jan. 9 airport event, which officials said was not planned.

"Look forward to seeing you guys Monday," he said in a Jan. 5 email to Jackie Schutz Zeckman, Scott's former chief of staff. She resigned Monday and is likely to join Scott's Senate campaign.

The way Scott's office framed the Zinke trip helped downplay the perception of political gamesmanship from the announcement. Scott's office maintains that 2018 politics had no role in the process, a sentiment they stressed in January.

"This is not about politics," John Tupps, Scott's communications director, told POLITICO Florida at the time. "This is good policy for Florida."

Records show that between the Jan. 4 announcement that Florida could see additional oil drilling rigs off its shore and the Jan. 9 meeting where the state was taken "off the table," Carbone spoke with Roddy, the Zinke advance staffer, 17 times, while Schutz Zeckman spoke with Kate MacGregor, who at the time was acting assistant secretary of Land and Minerals Management, seven times. MacGregor was the point person for much of the discussions, and traveled with Zinke for the Tallahassee rollout, records show.

The records show a general uptick in Scott administration contact with the Interior Department officials in the months leading up to the oil drilling announcements. Those increased conversations were something Scott talked about at the time, as he said he was lobbying to keep Florida off any oil drilling lists.

There were at least 60 calls Carbone and Schutz Zeckman had over the last three months of October with Interior officials. Prior to October, Scott's office and the Interior Department had discussions about various policy issues, but the discussions became much more frequent as the oil drilling announcements approached.

Nelson, Democrats and other Scott opponents always saw political motivations in the quick about-face by the Trump administration toward Florida. Scott was one of Trump's earliest political supporters, and is the current chairman of a pro-Trump super PAC.

"I have spent my entire life fighting to keep oil rigs away from our coasts. But now, suddenly, Secretary Zinke announces plans to drill off Florida's coast and four days later agrees to 'take Florida off the table?' I don't believe," Nelson said in a statement at the time. "This is a political stunt orchestrated by the Trump administration to help Rick Scott, who has wanted to drill off Florida's coast his entire career."

That last point has been one of debate. Nelson's camp has tied Scott to oil drilling, pointing to the fact that in 2010 when first running for office, Scott said that there must be "sound policies in place" when working to "explore the expansion of domestic drilling in the U.S."

Scott now opposes offshore oil drilling, and he immediately tweeted opposition to Trump's oil drilling plan when it was first announced in early January. That garnered him a "full flop" from PolitiFact Florida earlier this year.

His stance also opened a brief rift between the two political pals, but his past statements are not likely to go away headed into the mid-term elections.

"Just like Donald Trump," the Florida Democratic Party responded in January, "Governor Scott is trying to rewrite his long anti-environment record with a tweet."

BSEE to review offshore safety permitting process for efficiency [Back](#)

By Ben Lefebvre | 03/26/2018 03:49 PM EDT

The Interior Department is asking career staff to come up with new ways to speed up permitting for offshore energy development.

Interior's Bureau of Safety and Environmental Enforcement will soon assemble teams of employees from various departments to periodically review the permitting process and look for ways to make it more efficient and consistent across the agency, BSEE announced today.

BSEE's regional directors and deputy regional directors will nominate employees to the teams, agency spokesman Greg Julian said.

"In the coming weeks, BSEE plans to identify permit types to be assessed and nominate team members for assessments to take place this year," Julian said.

The move comes as Interior tries to roll back regulations and otherwise speed the permitting process across all its agencies. BSEE earlier proposed to roll back Obama-era rules on offshore oil and gas well safety.

WHAT'S NEXT: Interior is still trying to decide whether to merge BSEE with the Bureau of Ocean Energy Management, which is in charge of offering offshore oil and gas drilling leases.

'Bellwether' auction shows weak demand for offshore oil leases [Back](#)

By Ben Lefebvre | 03/21/2018 01:22 PM EDT

An Interior Department auction for offshore drilling leases generated \$124.7 million, a relatively low amount that shows little industry interest as of yet in a key part of the Trump administration's offshore energy policy.

The Trump administration has promoted offshore drilling as part of its policy to increase oil and gas production, advertising this lease sale as the largest ever in the Gulf of Mexico. Interior for the second auction in a row put its entire Gulf holdings up for lease, breaking previous practice of only offering parts of the Gulf up for auction at a time. And it again offered reduced rates for less attractive, shallow water parcels as it did at its August 2017 lease sale in the Gulf.

Interior Secretary Ryan Zinke, who has proposed opening virtually the entire U.S. coastline to oil and gas exploration, recently pointed to the auction as a "bellwether" of industry interest in expanded offshore drilling, compared to surging onshore production in states like Texas and North Dakota.

But the auction brought in about the same amount of money as an August lease sale, which raised just \$121 million — about 40 percent below the government's initial forecast. As recently as March 2017, Interior raised over \$274 million with a single lease sale.

Interior has actively promoted coastal drilling as a way to boost oil and gas production, but so far hasn't been able to buck market trends that work against companies investing billions of dollars in deepwater projects that take years to start producing.

Michael Celata, regional director for the Gulf of Mexico region at Interior's Bureau of Ocean Energy Management, argued it was unfair to compare Wednesday's sale to results before Interior started offering leases in the entire Gulf up for sale last August.

"It's difficult to compare this sale to sales from years past," Celata told reporters on a conference call Wednesday. "The best comparison is directly to the last previous sale."

Celata did not have the numbers for how much BOEM had forecast this latest lease sale would generate. Celata also said that lowering the royalty rates for shallow water tracts may have helped increase interest in the area. Data released after the sale showed companies had bid for 43 tracts in shallow water regions, nearly double the number from the March 2017 lease sale when shallow water royalty rates had been higher.

Oil production coming from projects started in years past has helped bring oil production in the U.S. Gulf of Mexico to record highs, according to the Energy Information Administration. But more recently, Exxon, Chevron and other companies have hesitated to add more area to their operations in federal waters, preferring to drill in North Dakota, Texas and other onshore shale plays that have proven much cheaper to set up and much faster in producing new oil.

But the area is also facing new competition for industry attention as Mexico has become more open to allowing foreign companies to drill in its part of the Gulf. Mexico for decades only allowed its national oil company Pemex to drill in those waters, meaning the area is much less developed than on the U.S. side.

Shell and other international oil companies participated in a January auction of Mexican offshore oil leases, bidding aggressively despite fears that a change of government later this year could roll back the country's energy policy reforms.

In a time of low oil prices and strict limits on capital spending, companies have to decide whether to gamble on buying space in a less developed area or sticking to known territory on the U.S. side, said Bernadette Johnson, VP of market intelligence for Drillinginfo, an industry research organization.

"You may do both, but many won't," Johnson said. "Companies are going to be much choosier because margins are tight and are going to stay tight."

DTE, Consumers Energy Promise Clean Power to Dodge Ballot Measure

By Alex Ebert

DTE Energy and Consumers Energy, Michigan's two largest utilities, must file plans over the next year to massively increase renewable energy and efficiency as part of a deal to stave off a 30 percent renewable energy ballot initiative.

World Trade, Safety at Risk from New Ship Fuel Rule, Shippers Say

By Alaric Nightingale

A group representing the vast majority of the world's ship owners said world trade is at risk if issues surrounding new fuel rules aren't resolved quickly, providing the starkest warning yet as to the potential impact of regulations that are due to enter into force in less than two years' time.

New York Ports Need Upgrades to Handle Offshore Wind Industry

By Bobby Magill

New York will have to modify some of its ports from Albany to eastern Long Island and create a new wind turbine manufacturing industry for the state to meet its 2030 offshore wind power targets.

Efficient Cars, Not Electric Cars, Will Be Worse for Oil

By Heesu Lee

Oil demand is set to face an even bigger threat from fuel-efficient engines than from electric vehicles over the next two decades, according to Bloomberg New Energy Finance.

Threat of Cobalt Supply Shock Is Top Risk for Electric Vehicles

By David Stringer and Martin Ritchie

A burgeoning risk of a supply crunch in cobalt—a critical battery metal that's more than tripled in price in two years—poses one of the biggest threats to forecasts for rising electric vehicle adoption.

Cambridge University Urged to Divest Most Polluting Fossil Fuels

By Anna Hirtenstein

An official Cambridge University panel urged the school's 6.3 billion-pound (\$8.45 billion) endowment fund to divest itself from the most polluting fossil fuels.

Clothes May Be Caught in UK Curbs on Ocean-Polluting Plastics

By Jessica Shankleman

U.K. Chancellor Philip Hammond is being urged to start taxing clothes made from polyester and nylon as he seeks to stop harmful plastics filling the world's oceans.

Gas Guzzlers Set to Fade as China Sparks Surge for Electric Cars

By Bloomberg News

The century-long dominance of gasoline-engine cars will sputter in coming decades as incentivized Chinese buyers and more-efficient manufacturers combine to put electric vehicles atop the sales leader board.

Zombie Companies Funding Toxic Cleanups

By Peter Hayes

The cleanup of contaminated properties can become much more expensive when companies responsible for some, if not most, of the pollution have long since been dissolved.

PRACTITIONER INSIGHTS

Practitioner Insights: EPA's Flawed 'Secret Science' Plan Puts Good Science at Risk

On April 30, EPA proposed a far-reaching set of restrictions on its use of scientific data to support regulatory action to protect human health. The EPA proposal is flawed and misconceived. In the name of "transparency," it will burden EPA scientists with unnecessary and costly procedures that run counter to the Agency's long-standing obligation to base public health

decisions on the best available science, according to Bob Sussman, a former EPA attorney now with Safer Chemicals Healthy Families.

FRIDAY NIGHT WRAPUP

Relief From Emissions Limits Could Mean More Agency Spending

By Abby Smith and Rebecca Kern

Federal agencies no longer have to meet comprehensive Obama-era greenhouse gas, energy conservation, and renewable electricity targets—and that could mean fewer dollars saved, efficiency advocates said.

Uranium Contamination Found in Washington State Wells

By Paul Shukovsky

Domestic wells showing high levels of uranium in a rural corner of Washington state highlight the need for broader testing to protect public health, a U.S. Geological Survey study said.

Water Bill Could Flow Quickly Through the House

By David Schultz

The House's biennial water resources bill is designed to move quickly through the chamber, with lawmakers omitting controversial provisions that could have held it up, according to water industry observers.

Norway Looking for Carbon Capture Storage Site, Outside Investors

By Marcus Hoy

Norway has named its preferred location for what could become the world's first full-scale carbon capture and storage site, but this may be irrelevant in the long term if funding issues aren't first resolved.

Trump Taps Advanced Energy Agency Head to Lead Office of Science

By Rebecca Kern

The Trump administration named Christopher Fall, now head of the Energy Department's Advanced Research Projects Agency-Energy, to be the director of the agency's Office of Science, according to a May 18 announcement.

In the Pipeline

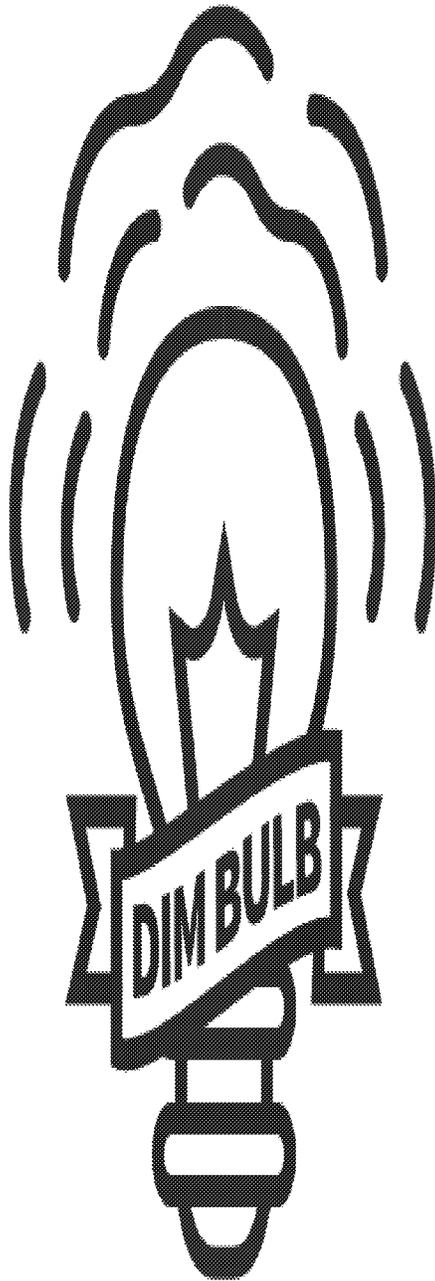

MORNING ENERGY NEWS | 8.17.2018

Subscribe Now

If at first you don't succeed, sue, sue again.

The Hill (8/16/18) reports: "A federal judge has ordered the government to conduct a full environmental review of a new route for the Keystone XL pipeline in a blow for the Trump administration. Reuters reported that U.S. District Court Judge Brian Morris in Montana made the ruling late Wednesday in favor of the Indigenous Environmental Network and other groups challenging the pipeline. The decision is likely to delay the project, which was proposed more than 10 years ago."

"A different approach might stand a better chance in Congress — one that would focus on building more clean energy, rather than taxing emissions. This could be accomplished by setting a national clean-energy standard. This policy would require the share of American electricity from low-emitting sources to increase steadily over time."

– Justin Gillis and Jameson McBride,
NYT Opinion

WOTUS hits a rocky shore.

E&E News (8/16/18) reports: "The Obama-era Clean Water Rule became the law in 26 states today as a federal judge in South Carolina issued a nationwide injunction on the Trump administration's delay of the regulation that defines what wetlands and waterways get federal protection. The injunction targets the Trump administration's February order suspending the rule while EPA and the Army Corps of Engineers worked up a new version."

As they teach in elementary school math: show your work.

Washington Examiner (8/16/18) reports: "The Environmental Protection Agency is set to take a big step forward Thursday toward implementing a contentious 'secret science' rule, a move that critics fear will undermine the scientific process in favor of cherry-picking research that supports specific outcomes. The 'Strengthening Transparency in Regulatory Science' rulemaking, as it is formally titled, would require EPA's scientific studies to be independently verified through a peer-reviewed process outside the agency...The rule would help the industry contain the cost of new regulation by giving them the ability to

question the basis of new pollution standards, especially if the “public is likely to bear the cost of compliance” with those regulations, according to the EPA.”

Who'd a thunk it: solar panel mandates make homes more expensive

Inside Sources (8/14/18) reports: "California, with its temperate weather and sunny skies, has been America's poster child for solar energy. The bulk of the panels installed in the past year have been placed in California and the state's government is happy to use legislation to try to push the state further into its green energy future. Unfortunately for state residents, these mandates are likely to increase the cost of living in one of America's most expensive states. A new solar mandate is likely to dramatically increase the cost of housing in the Golden State."

If you oppose a carbon tax, please contact us and take a stand.

Subject: The Morning Headlines from InsideEPA.com -- June 20, 2018

REDEFINING EPA: Overhauling an agency and its mission -- Complete coverage

June 20, 2018

Latest News

EPA Raises Early Defenses Against Likely Suit Over Ash Program Approval

EPA is raising early legal defenses against environmentalists' promised legal challenge to the agency's approval of Oklahoma's first-of-its-kind coal ash disposal permit program, with EPA downplaying as irrelevant

environmentalists' claims that the Sooner State lacks the resources to adequately implement its new permitting regime.

Observers Brace For Trump Reorganization Plan With EPA Impact Unclear

The Trump administration is expected to release as soon as June 21 a broad plan for reorganizing the federal government, though some observers doubt the plan will spur broad proposed changes at EPA, such as closing of regional offices, despite calls from some to do so.

CEQ Issues Advance Notice For Sweeping Update Of NEPA Regulations

The White House Council on Environmental Quality (CEQ) is publishing an advance notice of proposed rulemaking (ANPR) on a long-anticipated and potentially sweeping update of its National Environmental Policy Act (NEPA) implementing rules, opening the door to just the second amendment to the rules in 40 years.

Court Rejects Coal Lease NEPA Review Suit But Outlines Paths Forward

A federal appeals court panel is rejecting a long-running lawsuit seeking to force the Bureau of Land Management (BLM) to conduct a broad National Environmental Policy Act (NEPA) review to consider the climate impacts of its coal leasing program, but two of the three judges are outlining other options environmentalists can use to force such analysis.

'Secret Science' Policy's Impact On Pending NAAQS Review May Be Muted

EPA Administrator Scott Pruitt's proposed rule barring the agency from using confidential data in rulemakings might not have as dramatic an impact on pending national ambient air quality standards (NAAQS) as many fear because some of the most influential air pollution studies relevant to those reviews rely on publicly available data, sources say.

Inspector General Details Broad Review Of EPA Programs In Annual Plan

EPA's Office of Inspector General (OIG) is laying out a broad agenda for the remainder of fiscal year 2018 that ranges from reviews of the agency's regulatory oversight on key media and research programs to internal staffing and management as well as previously announced inquiries into Administrator Scott Pruitt's controversial security, spending and hiring.

Daily Feed

Top EPA union official announces retirement

John O'Grady is a long-time union representative of EPA employees who has been a public spokesman for many career staff concerned about the Trump administration.

Colorado to join backers of California vehicle GHG rules

Colorado will join a dozen states that have embraced California's vehicle GHG limits, just as the Trump administration is readying a plan roll back current standards and target states' ability to enforce their own rules.

Environmentalists detail issues in Superfund financial rule suit

Environmental groups suing over EPA's decision to drop a planned Superfund rule are questioning whether the agency's action is contrary to the administrative record and the law.

Ewire: EPA shifts grant reviews from public affairs office

In today's Ewire: As of last month, EPA requires regional administrators or assistant administrators of program offices to sign off on grants, replacing its old policy of reviews by a political aide in the public affairs office.

Auto industry-focused publication calls for Pruitt to resign

A "serious industry deserves a serious regulator, a public servant of proven integrity who lives by at least a baseline standard of propriety. Scott Pruitt is none of those things," *Automotive News* says in an editorial.

D.C. Circuit schedules argument in SO2 NAAQS designations suit

The U.S. Court of Appeals for the District of Columbia Circuit will hear oral argument Sept. 11 in consolidated litigation over EPA's 2010 sulfur dioxide air standard attainment designations.

Subject: Morning Consult Energy: Toyota Recalls 1 Million Hybrid Vehicles Over Electrical Defect That Poses Fire Risk

By [Jacqueline Toth](#)

Top Stories

- Toyota Motor Corp. said it is recalling more than 1 million 2016-18 model-year Prius and C-HR crossover vehicles because of problems with the cars' electrical systems that subject them to wear, posing a fire risk. The recall impacts about 192,000 Prius vehicles in the United States, and Toyota said it will contact U.S. owners of affected cars by mail late this month. ([The Wall Street Journal](#))

- The Environmental Protection Agency made last-minute deletions of over 500 words highlighting the consequences of climate change from the regulatory impact analysis for its Affordable Clean Energy rule proposal, which would replace the Clean Power Plan, according to internal government documents recently released online. Agency spokeswoman Molly Block acknowledged the revisions but did not explain the rationale. ([Bloomberg](#))
- Vincent DeVito, who stepped down as Interior Secretary Ryan Zinke's energy counselor in mid-August, will join independent oil and gas company Cox Oil Offshore LLC as executive vice president and general counsel. At Interior, DeVito worked to update federal royalty rates and federal permitting rules and was involved in endangered species regulation. ([The Hill](#))

CSR & Political Activism in the Trump Era

How to avoid a firestorm and improve your brand's reputation.

General

Climate skeptic to join NSC, advise Trump on emerging technologies

Miranda Green, The Hill

President Trump is appointing William Happer, a well-known climate skeptic, to his National Security Council (NSC).

FEMA Was Overwhelmed by Hurricanes and Wildfires in 2017, GAO Says

Erin Ailworth, The Wall Street Journal

The back-to-back devastation of hurricanes Harvey, Irma and Maria, followed by catastrophic wildfires in California, overwhelmed federal disaster responders in 2017, according to a government report released Tuesday.

Wildlife advocates fear Trump administration is de-clawing Endangered Species Act

David Goldstein, McClatchy DC

Currently, species listed as "threatened" via the ESA - such as the murrelet and the pond turtle - are granted the same safeguards as those that are considered "endangered." The Trump administration has signaled it wants to prohibit that practice.

Court walks back order, won't immediately require EPA to enforce chemical plant safety rule

Timothy Cama, The Hill

A federal court on Tuesday walked back its previous order that sought to force the Environmental Protection Agency (EPA) to immediately start enforcing a major Obama administration regulation on the safety of chemical plants and similar facilities.

Oil drops toward \$77 as U.S. storm threat eases

Alex Lawler, Reuters

Oil extended losses on Wednesday, falling toward \$77 a barrel, as a tropical storm hitting the U.S. Gulf coast weakened, offsetting support from forecasts of lower U.S. inventories and sanctions against Iran.

Oil and Natural Gas

PE-Backed Flywheel Buys Southwestern Shale Biz For \$1.9B
Adam Rhodes, Law360

Natural gas exploration and production company Southwestern Energy Co. on Tuesday said it inked a roughly \$1.87 billion cash deal to sell its Fayetteville, Arkansas, shale business, along with some midstream gathering assets, to private equity-backed Flywheel Energy LLC.

Mexico's CRE approves first permit for private oil products pipeline
Daniel Rodriguez, Platts

Mexico's Energy Regulatory Commission or CRE has granted the country's first permit to a private company to transport refined products via pipeline, a key step towards enhancing efficiency in the domestic fuel market.

Exxon reasserts its methane position as EPA preps rollback
Amy Harder, Axios

The comments, posted Tuesday by the CEO of XTO Energy, an Exxon subsidiary with large U.S. natural-gas operations, illustrate an awkward predicament facing industry under President Trump.

Energy Transfer, Magellan and more team up for Permian pipeline project
Jordan Blum, Houston Chronicle

Pipeline giants Energy Transfer Partners, Magellan Midstream Partners and others are teaming up on a new, 600-mile Permian pipeline system to Houston.

NextDecade hits snag over contractor for LNG export project in Texas
Harry Weber, Platts

NextDecade will take another year to secure a contractor to build its Rio Grande LNG export terminal in Texas after deciding not to move forward with an agreement with McDermott International.

Southwestern Energy selling Arkansas shale for \$1.9B
Jordan Blum, Houston Chronicle

The Spring natural gas producer Southwestern Energy said Tuesday it is selling its core Fayetteville shale assets in Arkansas for nearly \$1.9 billion in cash to a private equity-backed startup.

Dirty secrets: tainted shipping fuel sparks calls for tighter quality control

Roslan Khasawneh, Reuters

A wave of contaminated fuel that has clogged and damaged engines on hundreds of oil tankers and container vessels in the past months has pushed shippers to demand stricter quality controls around the world.

Utilities and Infrastructure

ISO-NE proposes market bridge to valuing fuel security

Gavin Bade, Utility Dive

ISO-New England filed proposed interim revisions to its capacity market rules with the Federal Energy Regulatory Commission on Friday, seeking to preserve market operations as it designs new compensation mechanisms for fuel secure resources.

California Utility Frets on Fire Costs as State Dodges Action

Romy Varghese, Bloomberg

As California's lawmakers debated late Friday night under the statehouse capitol dome in Sacramento, the city's utility district kept the lights on for them. But the legislators fell short for the electricity provider.

Renewables

Mercedes Unveils First Tesla Rival in \$12 Billion Attack

Christoph Rauwald, Bloomberg

Mercedes-Benz, the world's largest maker of luxury cars, is rolling out its first in a series of battery-powered models, adding to a growing array of high-end brands targeting Tesla Inc.

Residential Energy Storage Surging, No Longer Just a 'Cool Toy'

Brian Eckhouse, Bloomberg

Consumers installed home batteries with 57.5 megawatt-hours of storage capacity last quarter, according to a report Wednesday from the Energy Storage Association and Wood Mackenzie Power & Renewables.

AAA's big move into electric vehicles

David Ferris, E&E News

One of the country's biggest experiments in electric vehicles is about to be launched, not by Uber or Tesla, but by AAA, the straight-laced organization best known for its auto insurance and roadside mechanics.

Coal

Georgia Power to excavate two more coal ash ponds

Catherine Morehouse, Utility Dive

Georgia Power is "completely excavating" and closing two coal ash ponds at its Branch and Bowen coal plants, the utility announced Thursday, part of its larger plan to close 29 such facilities across the state.

Nuclear

SCANA sale clears another hurdle, shifting focus to SC regulators

John McDermott, The Post and Courier

The proposed sale of SCANA Corp. cleared its last hurdle at the federal level, placing the fate of the deal with Dominion Energy Inc. in the hands of state regulators.

Climate

Greener growth could add \$26 trillion to world economy by 2030: study

Alister Doyle and Nina Chestney, Reuters

Strong action to combat climate change could cumulatively add at least \$26 trillion to the world economy by 2030, according to a study on Wednesday which seeks to dispel fears that a shift from fossil fuels will undermine growth.

Climate Envoys Seek Successor to \$33 Billion UN Carbon Market

Mathew Carr, Bloomberg

After the United Nations's first attempt to build a global carbon market fizzled from \$33 billion to almost nothing, climate envoys from nearly 200 countries are meeting in Bangkok this week to give it another go.

The Country's First Climate Change Casualties?

Elaina Plott, Pacific Standard Magazine

Back in 2015, the science journal Nature ran a study warning of Tangier's demise at the hands of sea-level rise due to climate change. The dire findings caught the attention of climate scientists and, of course, the island's residents themselves, most of whom were skeptical.

Opinions, Editorials and Perspectives

Cyberthreats require strengthened standards, increased government collaboration

Brien J. Sheahan and Robert F. Powelson, Utility Dive

Recent confirmation by the U.S. Department of Homeland Security that Russian hackers targeted the control rooms of the nation's public utilities underscores the vulnerability of our critical infrastructure and the urgency to address this susceptibility in a coordinated and comprehensive way.

Reverse EPA proposal based on trumped-up 'secret science' claim

Sherwood Boehlert, The Hill

Scott Pruitt has been ousted as head of the Environmental Protection Agency, but what may be the most damaging aspect of his legacy still looms. EPA is still considering Pruitt's proposed rule to limit what science the agency can take into account when deciding whether and how to protect the public from pollution.

Using Wildfires as an Excuse to Plunder Forests

Chad T. Hanson and Michael Brune, The New York Times

President Trump recently blamed environmental protections for the loss of homes and lives in wildfires in California, and followed up that groundless suggestion by strongly implying that increased logging could protect rural towns from these conflagrations.

Research Reports

2017 Hurricanes and Wildfires: Initial Observations on the Federal Response and Key Recovery Challenges

U.S. Government Accountability Office

The federal government provided significant support to Puerto Rico and the U.S. Virgin Islands in response to Hurricanes Irma and Maria, but faced numerous challenges that complicated response efforts. FEMA efforts in Puerto Rico alone were the largest and longest single response in the agency's history.

Setting with the Sun: The Impacts of Renewable Energy on Wholesale Power Markets

James Bushnell, Kevin Novan, The National Bureau of Economic Research

While previous empirical work explores the economic and environmental impacts of renewable production, the focus has exclusively been on the short-run impacts of expanding renewable supply. In this paper, we shed light on the longer run impacts of renewable expansions.

Subject: Quick SAB Work Group Question

John,

Deliberative Process / Ex. 5 would you remind me of the timeline of questions/responses to the work group's fact finding efforts in lead up to this meeting? Thanks!

PRUITT'S SAB STORY: EPA's independent Science Advisory Board will meet today and Friday for the first time since Administrator Scott Pruitt barred scientists on the committee from receiving EPA grants and boosted its ranks with industry representatives — and the group's agenda is packed. The SAB will look at Pruitt's "secret science" proposal to bar EPA from using studies that don't make public all their data, as well as the Clean Power Plan repeal, Pruitt's decision to relax 2022-25 auto emissions standards, changes to the 2016 methane rule for new oil and gas wells and effort to repeal a rule regulating emissions from "glider" trucks — and that's not all.

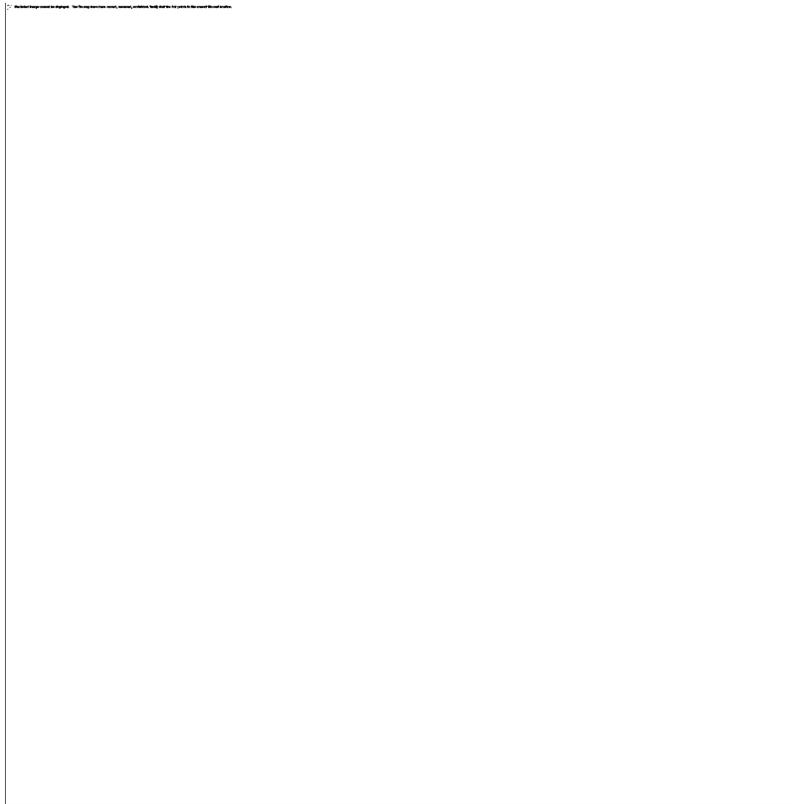

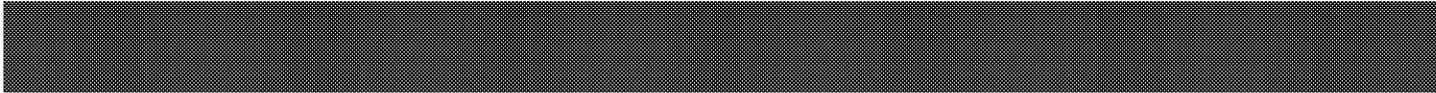

A lot to dive into: The heavy slate of issues is unusual for the advisory board, Pro's Alex Guillén reports. Several current and former SAB members say it's unprecedented for the board to consider reviewing so many regulatory actions. But like green groups and critics of Pruitt, the SAB scientists say EPA has declined to share information about its regulatory rollbacks. "The agency has not been forthcoming about how they're developing the relevant science work products," said Chris Frey, a professor of environmental engineering at North Carolina State University and a SAB member since 2012.

EPA keeps quiet: SAB has been conducting twice-yearly reviews of EPA's planned regulatory actions since 2012, members said. It's an effort designed to enable the advisory board to help guide EPA before its rules are finalized. But this time around, the SAB's working groups say EPA wasn't being forthcoming with information. "Basically they just didn't provide us with any answers," said Frey. "That kind of put us in a position where all we can really do is say EPA has not identified the science or any plan to review it, and clearly there are science issues that are in the proposed rule."

What to expect: It's not immediately clear whether the full SAB will vote today to advance the reviews. But Frey noted that some of the members appointed by Pruitt had been on the working groups, giving him hope that the full board will back the recommendations to look deeper into the regulatory rollbacks. Should SAB adopt them, Alex reports, it likely would mean setting up special subcommittees that include current members plus outside experts to question EPA further. Read more [here](#).

Subject: Morning Consult Energy, Presented by Wells Fargo: Pruitt Expected to Face GOP Questions Over Ethics, Spending at Hearings

By [Jacqueline Toth](#)

Top Stories

- When Environmental Protection Agency Administrator Scott Pruitt testifies before two House committees today, he is likely to face at least some critical questions from Republicans about allegations of ethical lapses and excessive spending. House Energy and Commerce Environment Subcommittee Chairman John Shimkus (R-Ill.) said Pruitt can expect a "cool" reception from his party, though committee member Joe Barton (R-Texas) said

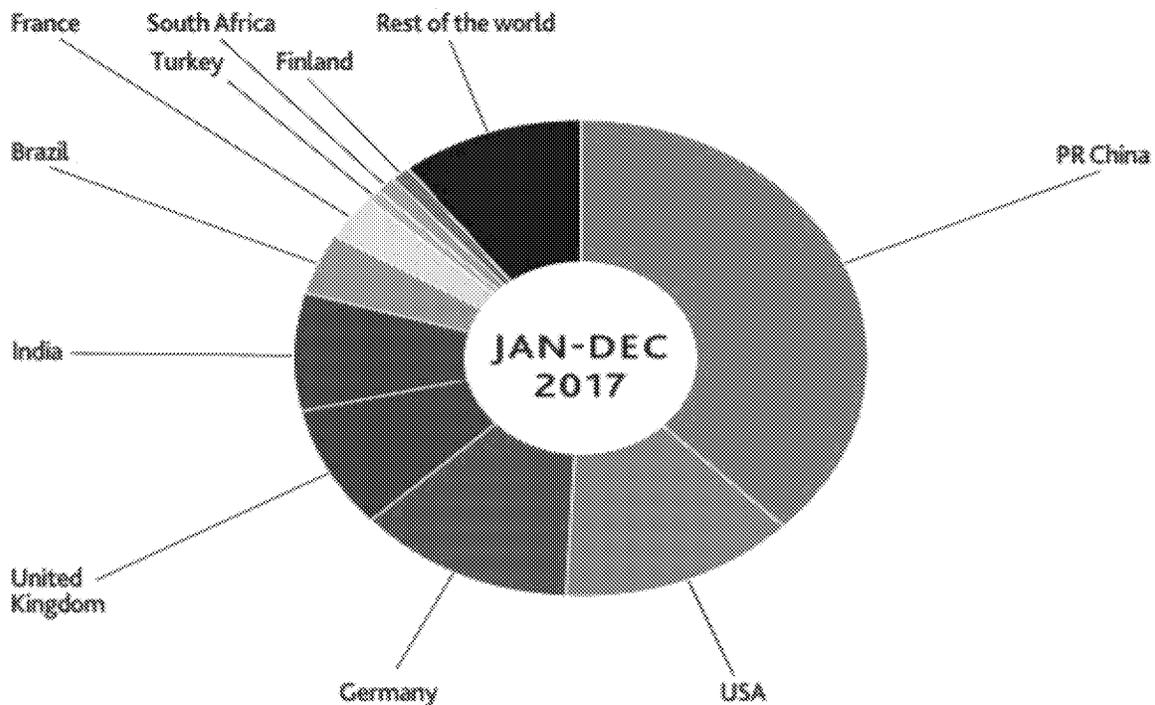

scrutinizing Pruitt's ethics is "not the purpose of the hearing" and suggested that many Republicans would defend Pruitt. ([Politico](#))

- ConocoPhillips Co. won a long-running legal battle against Venezuela's state oil company Petróleos de Venezuela S.A., entitling ConocoPhillips to over \$2 billion from Pdvsa after Venezuela expropriated multiple oil projects over 10 years ago. But collecting the money may be difficult after Pdvsa and Venezuela defaulted on over \$50 billion in bonds last fall. ([The New York Times](#))
- Royal Dutch Shell Plc reported its first-quarter profit rose 42 percent to \$5.3 billion, thanks to stronger oil prices and production. But Shell's shares fell as its cash flow was below analysts' forecasts. ([Reuters](#))

Wells Fargo: Transitioning to a lower-carbon economy

Did you know more than nine percent of all wind and solar photovoltaic energy generated in the U.S. in 2016 came from projects owned by Wells Fargo?

Growing sustainable environmental solutions is critical to the future of our planet. That's why we've pledged to provide \$200 billion in financing for clean technology, renewable energy, land conservation, sustainable agriculture and recycling projects through 2030. [Learn more.](#)

General

'It could be pretty painful' when Pruitt faces Congress **Anthony Adragna et al., Politico**

When Scott Pruitt returns to Capitol Hill on Thursday, he will find few friends ready to greet him - and an audience of one waiting to determine his fate.

What to Watch as Scott Pruitt, the E.P.A. Chief, Goes Before Congress **Coral Davenport, The New York Times**

Scott Pruitt, the embattled head of the Environmental Protection Agency, will face two congressional panels on Thursday, in what is expected to be a daylong grilling over recent allegations of ethical infractions and lavish spending.

Support for Pruitt wanes as he takes the hot seat on Capitol Hill **Leigh Ann Caldwell et al., NBC**

Supporters of embattled Environmental Protection Agency Administrator Scott Pruitt are starting to raise questions about his alleged ethical lapses, a shift in tone that could spell trouble as he appears before Congress Thursday.

Pruitt's Friends Became Lobbyists. And Then Handed Their Clients an EPA Biomass Win. **Marianne Lavelle, InsideClimate News**

When Environmental Protection Agency Administrator Scott Pruitt declared this week that tree burning was inherently a carbon-neutral way to produce electricity, it was a victory for some Oklahoma friends of Scott Pruitt.

'You can't abuse taxpayer money': GOP's Kennedy on Pruitt **John Verhovek, ABC News**

Republican Sen. John Kennedy of Louisiana criticized Environmental Protection Agency Administrator Scott Pruitt for his spending habits and other behavior during his time leading the agency but said the decision whether to fire him should be left up to President Donald Trump.

Scientists denounce Pruitt's effort to block 'secret science' at EPA

Joel Achenbach, The Washington Post

In the annals of science there aren't many reports that had as much impact as Harvard's Six Cities Study of 1993. It showed a dramatic association between long-term exposure to air pollution and higher risk of an early death.

Behind the scenes of Pruitt's Nevada trip

Kevin Bogardus, E&E News

Pam Robinson, policy director for Nevada Gov. Brian Sandoval (R), had been working feverishly to help set up EPA Administrator Scott Pruitt's Feb. 5 trip to the Silver State.

Oil gains as concern heats up over Iran sanctions, Venezuelan output

Amanda Cooper, Reuters

Oil rose on Thursday, supported by expectations of renewed U.S. sanctions on Iran, declining output in Venezuela and ongoing strong demand.

Oil and Natural Gas

ConocoPhillips Wins \$2 Billion Ruling Over Venezuelan Seizure

Clifford Krauss, The New York Times

ConocoPhillips won a ruling on Wednesday that says it is entitled to more than \$2 billion from Venezuela's state oil company over the country's expropriation of several oil projects more than a decade ago.

Shell profit soars on higher oil prices, cash flow disappoints

Ron Bousso, Reuters

Royal Dutch Shell reported on Thursday a 42 percent rise in first-quarter profit to its highest in more than three years on stronger oil prices and production, but its shares fell as the oil major's cash flow missed forecasts.

High Oil Prices Boost Industry Earnings, but Investors Remain Wary

Sarah Kent, The Wall Street Journal

Rising crude prices are supercharging earnings at the world's major oil firms, but investors may need more convincing that Big Oil is back.

Skinny and sweet: U.S. refiner earnings depend on the oil diet

Devika Krishna Kumar, Reuters

Smaller independent refiners with less complex facilities are surging in the stock market of late, as investors expect strong earnings growth thanks to the recent fall in price of their primary cost - light, sweet crude oil coming out of West Texas.

Shell pushes ahead with US Gulf of Mexico Vito development

Starr Spencer, Platts

Shell Tuesday said it would push ahead with the Vito deepwater development in the US Gulf of Mexico, signaling confidence in both crude prices above \$60/b and that region's future after sluggish activity over the last few years.

BP Names Oil Industry Veteran Helge Lund as Chairman

Carlo Martuscelli, The Wall Street Journal

BP PLC has appointed energy industry veteran Helge Lund as its next chairman as the oil giant seeks to move past the Deepwater Horizon disaster and get to grips with a fast-changing industry.

Utilities and Infrastructure

Trump Tax Revamp Threatens to Make Gas Pipelines Pay \$18.5 Billion

Naureen S. Malik, Bloomberg

Pipeline owners led by Enbridge Inc. and Williams Cos. could be forced to refund as much as \$18.5 billion to drillers, utilities and even United Airlines Inc. for upfront payments they charged customers before new U.S. tax rules cut the corporate rate.

Can Puerto Rico Recover From Maria Before the Next Storm Hits?

Vann R. Newkirk II, The Atlantic

Puerto Rico still doesn't know how many people died from Hurricane Maria. The official death toll of people drowned in floods, killed by landslides, caught in collapsed houses, or who perished from environmental or health problems in the immediate aftermath of the storm seven months ago sits at 64.

Renewables

Tesla fan: Autopilot glitches brought peril to road trip
Will Evans, The Center for Investigative Reporting

As You You Xue completed a whirlwind cross-country trip in his brand-new Tesla Model 3 earlier this year, the 20-year-old Californian racked up some impressive statistics.

Coal

Kentucky jury awards \$67.5 million to miners who used defective dust masks
Bill Estep, Lexington Herald Leader

A Knott County jury has awarded \$67.5 million in damages to two former coal miners who claimed defective dust masks led to their debilitating black-lung disease.

Don't Gut Coal Ash Rules, Communities Beg EPA at Hearing
Georgina Gustin, InsideClimate News

It took decades for the Environmental Protection Agency to craft public safeguards for the disposal of coal ash, the toxic byproduct that coal-burning power plants generate more than 100 million tons of every year.

Nuclear

FirstEnergy Solutions definitely to close its nuclear power plants
John Funk, Cleveland.com

FirstEnergy's power plant subsidiary announced this morning that it has certified to federal regulators the definite shut down of its three nuclear power plants.

US officials slam Washington state nuke waste site problems
The Associated Press

Problems first identified six years ago at a Washington state plant where deadly nuclear waste is supposed to be treated in the future continue to plague the multi-billion dollar facility, U.S. investigators have said.

Climate

Macron: The US will come back to the Paris climate pact
Timothy Cama, The Hill

French President Emmanuel Macron on Wednesday predicted that the United States will come back to the Paris climate change agreement.

Profit slips at Volkswagen after accounting change
David McHugh, The Associated Press

Profits have slipped at automaker Volkswagen in the first quarter due to a change in accounting rules, but sales increased and the company recorded no significant additional losses from its diesel emissions scandal.

Ford to kill Fusion, Taurus and Fiesta cars to make way for more SUVs
J.C. Reindl, Detroit Free Press

Ford, backing up its promise to double-down on trucks and SUVs, is killing the Fiesta subcompact, Fusion midsize sedan, Taurus large sedan and C-Max van in the U.S., it announced Wednesday.

A Message from Wells Fargo:

Wells Fargo: Committed to the environment

How can a bank help the world transition to a lower-carbon economy? By setting goals and meeting them. Last year, Wells Fargo began meeting 100% of its global electricity needs with renewable energy. We remain committed to protecting the environment and leading by action through our businesses, our operations and our philanthropy. [Learn more.](#)

Opinions, Editorials and Perspectives

Who's afraid of global warming?

Robert J. Samuelson, The Washington Post

As we mark Earth Day this week, it's natural to ask: What do Americans think of global warming? Is it a big worry?

Scott Pruitt's New Rule Could Completely Transform the EPA

Robinson Meyer, The Atlantic

Do you think the Environmental Protection Agency should completely overhaul how it uses science in its work? Do you think it should adopt new guidelines that totally undermine at least the last three decades of clean air and water rules?

Climate Activists Are Lousy Salesmen

Stewart Easterby, The Wall Street Journal

Politicians, bureaucrats, activists, scientists and the media have warned Americans for decades that the Earth is headed toward climate catastrophe. Yet surveys consistently show that less than half of U.S. adults are "deeply concerned" or "very worried" about climate issues.

The Carbon Tax Could Come Soon To A State Near You

Ryan Maness, Law360

Lawmakers in Washington state thought that this was going to be the year that they would pass a carbon tax.

The EPA Is Acting Like Big Tobacco

Emily Atkin, The New Republic

"This is really evil," Professor Stan Glantz said after I sent him an article about the Environmental Protection Agency's new science policy.

Research Reports

Most atolls will be uninhabitable by the mid-21st century because of sea-level rise exacerbating wave-driven flooding

Curt D. Storlazzi et al., Science Advances

Sea levels are rising, with the highest rates in the tropics, where thousands of low-lying coral atoll islands are located. Most studies on the

resilience of these islands to sea-level rise have projected that they will experience minimal inundation impacts until at least the end of the 21st century.

April 26, 2018

Latest News

Expecting New TSCA Resources, OPPT Proposes New Reorganization Plan

Responding to staff concerns, EPA's Office of Pollution Prevention and Toxics (OPPT) has delayed its ongoing reorganization effort to propose a revised plan that relies on OPPT leadership being able to hire sufficient

number of new scientists to fill a second risk analysis division to bolster chemical assessments required by the reformed Toxic Substances Control Act (TSCA).

EPA Faulted For Justifying Oil & Gas CTG Repeal By Citing Methane NSPS

Environmentalists are criticizing EPA for justifying its proposed withdrawal of oil and gas sector volatile organic compound (VOC) reduction guidelines by saying the CTG are “fundamentally linked” to methane and VOC standards for new oil and gas drilling that EPA is reconsidering, previewing possible lawsuit arguments if EPA finalizes the withdrawal.

House Lawmakers Seek Expedited EPA Rulemaking For PFAS Standard

A bipartisan group of House lawmakers, whose districts are affected by drinking water contaminants such as perfluorinated chemicals, is urging appropriators to adopt report language that requires EPA to conduct an expedited rulemaking to craft a standard for the substances, pushing back on agency concerns that such an effort could drag on for years.

Pruitt's Backing For High-Octane Standard May Boost GOP Bid For RFS Fix

EPA Administrator Scott Pruitt says creating a national standard for higher octane in motor fuel is a “tremendous idea” that would benefit ethanol, farm, and auto industries, support that could bolster a push by some House GOP lawmakers to use the standard as a fix for what they see as problems with the agency's renewable fuel standard (RFS).

Pruitt's Testimony Focuses On FY19 Cuts But He Also Plans Ethics Defense

EPA Administrator Scott Pruitt's testimony for a high-profile April 26 hearing makes the case for the Trump administration's fiscal year 2019 budget request that seeks to cut EPA's budget by 25 percent, while ignoring the litany of Pruitt's spending and ethics scandals, but a leaked document shows he is planning to defend his actions by blaming political and career staff.

'Cooperative' Policy Might Spur EPA To Send Enforcement Cases To States

ORLANDO, FL -- EPA might send some enforcement cases already in its pipeline back to states to prosecute or otherwise resolve due to Administrator Scott Pruitt's “cooperative federalism” policy of giving greater deference to states on environmental protection, but is finding that some cases are too advanced for EPA to drop its participation.

Sent: 5/31/2018 9:45:16 AM
To: Woods, Clint [/o=ExchangeLabs/ou=Exchange Administrative Group (FYDIBOHF23SPDLT)/cn=Recipients/cn=bc65010f5c2e48f4bc2aa050db50d198-Woods, Clin]
Subject: Morning Energy, presented by America's Pledge: First SAB meeting to eye EPA reg rollbacks — Cramer hits Trump's legislative director — DOE: U.S. generally 'well prepared' for grid hacks

By Kelsey Tamborrino | 05/31/2018 05:43 AM EDT

With help from Eric Wolff

PRUITT'S SAB STORY: EPA's independent Science Advisory Board will meet today and Friday for the first time since Administrator Scott Pruitt barred scientists on the committee from receiving EPA grants and boosted its ranks with industry representatives — and the group's agenda is packed. The SAB will look at Pruitt's "secret science" proposal to bar EPA from using studies that don't make public all their data, as well as the Clean Power Plan repeal, Pruitt's decision to relax 2022-25 auto emissions standards, changes to the 2016 methane rule for new oil and gas wells and effort to repeal a rule regulating emissions from "glider" trucks — and that's not all.

A lot to dive into: The heavy slate of issues is unusual for the advisory board, Pro's Alex Guillén reports. Several current and former SAB members say it's unprecedented for the board to consider reviewing so many regulatory actions. But like green groups and critics of Pruitt, the SAB scientists say EPA has declined to share information about its regulatory rollbacks. "The agency has not been forthcoming about how they're developing the relevant science work products," said Chris Frey, a professor of environmental engineering at North Carolina State University and a SAB member since 2012.

EPA keeps quiet: SAB has been conducting twice-yearly reviews of EPA's planned regulatory actions since 2012, members said. It's an effort designed to enable the advisory board to help guide EPA before its rules are finalized. But this time around, the SAB's working groups say EPA wasn't being forthcoming with information. "Basically they just didn't provide us with any answers," said Frey. "That kind of put us in a position where all we can really do is say EPA has not identified the science or any plan to review it, and clearly there are science issues that are in the proposed rule."

What to expect: It's not immediately clear whether the full SAB will vote today to advance the reviews. But Frey noted that some of the members appointed by Pruitt had been on the working groups, giving him hope that the full board will back the recommendations to look deeper into the regulatory rollbacks. Should SAB adopt them, Alex reports, it likely would mean setting up special subcommittees that include current members plus outside experts to question EPA further. Read more [here](#).

IT'S THURSDAY! Register for the Pro Summit: Join Pro subscribers, expert reporters and key decision-makers from the executive branch, federal agencies and Congress for a full day of incisive policy conversations on July 17. [Learn more](#).

THE LONG AND SHORT OF IT: In an unusual attack on the White House's legislative affairs director, North Dakota Rep. Kevin Cramer blamed Marc Short explicitly for the party's legislative failures in the Senate, including ending the Obama rule on flaring and venting from oil and gas wells. After POLITICO published a story outlining the awkward dynamic between Heidi Heitkamp, Cramer and the White House, Cramer told North Dakota radio host Rob Port that he had done some digging and believes that there "are some people in the White House that think, you know, the president's too friendly too her," Burgess Everett recaps.

Moreover, Cramer laid specific blame at Short's feet for failed GOP efforts in the Senate to roll back an Obama-era regulation limiting flaring and venting, as well as repealing Obamacare. Heitkamp voted against gutting that flaring rule, something Cramer has criticized her for, in particular. "If Marc Short was very good at his job, you know, we'd have a repeal and replacement of Obamacare, we'd have a replacement of the venting and flaring rule," Cramer said. Read that story here.

PRUITT'S MEDIA BLITZ: The EPA administrator visited Rosslyn, Va., on Wednesday to sit for interviews with two conservative media outlets. One was conducted by Boris Epshteyn for his Sinclair Broadcasting segment, "Bottom Line with Boris." (Watch that here.) The other was with the Washington Free Beacon, where Pruitt repeated familiar talking points in defense of the ongoing scandals and investigations that have surrounded him over the past few months. Pruitt said he still has President Donald Trump's backing, noting that Trump has "spoken very strongly and consistently" about their working relationship. "It's been intense the last couple of months, but he's been very encouraging, very empathetic and very supportive rather consistently," Pruitt said. The administrator also discusses the Paris climate agreement, "The Bachelorette" and, of course, baseball in the 13-minute segment, which you can listen to here.

GRID AND BEAR IT: In response to an executive order signed last year, the Energy Department released a new report Wednesday that said senior government officials and electric sector executives don't know enough about how energy companies could recover from a disruptive cyberattack, and those companies aren't thinking about cyber threats enough when building out their supply chains. While the report mainly hammered home some long-known problems with the grid, DOE highlighted how grid resilience efforts suffer because of "gaps in incorporating cybersecurity concerns, including planning for long-term disruption events, into state emergency response and energy assurance planning." Generally, however, the report said the U.S. is "well prepared to manage most electricity disruptions." Read more from Pro's Eric Geller here.

WHERE'S PERRY? Energy Secretary Rick Perry delivers remarks this morning on critical infrastructure at DOE's Texas-Israel Cyber Security Conference in Dallas. The department also announced that Perry would address the DOE's annual Cyber Conference in Austin on Monday. During both events Perry is expected to discuss DOE's new Cybersecurity, Energy Security and Emergency Response office, as well as efforts at DOE to address cyber vulnerabilities in the energy sector.

ABOUT THAT GLIDER RULE: The New York Times' Eric Lipton tweeted out new documents late Wednesday that give new details into the controversial Tennessee Technological University study on truck emissions that Pruitt used to consider rewriting part of the Phase 2 truck rules. "The letters obtained via open records request show that the principal investigator at Tenn Tech who conducted study funded by Fitzgerald, the company that makes the so-called glider trucks, disavowed the work, saying that it had been distorted in a fraudulent way," Lipton tweeted.

BY THE NUMBERS: The federal government spent \$13.2 billion across 19 agencies during fiscal 2017 on programs related to climate change, a report from the Government Accountability Office says. That's an overall \$1.5 billion increase across the federal government over fiscal 2016, Pro's Anthony Adragna reports. And it's an increase of \$4.4 billion since fiscal 2010, according to the report, which was request by House Science Chairman Lamar Smith. Read more.

CALIFORNIA GETS CHARGED UP FOR EVs: The California Public Utilities Commission is expected to approve a \$589 million program for its four investor-owned utilities to build out their electric vehicle charging infrastructure. The plan is part of the implementation of California's aggressive greenhouse gas law passed in 2015. Most of the money — which will ultimately come from ratepayers — will go toward setting up electric vehicle charging stations and related infrastructure. California leads the nation by far in electric vehicle sales and adoption.

NO MAJOR FLAWS IN FERC PROCESS: Auditors in the DOE inspector general's office said they found no major flaws in FERC's process for reviewing interstate natural gas pipelines, according to a new report. But they also flagged concerns about FERC's transparency and how it handles public comments. The auditors said that "nothing came to our attention to indicate that FERC had not performed its due diligence" in how it balanced public benefits of a proposed project with its adverse impacts. But the report also said regulators' "had not fully ensured" that the certification process was transparent to those who want to participate, and it hit the agency's eLibrary documentation system as difficult to use, Pro's Darius Dixon reports.

**** A message from America's Pledge:** America's Pledge is flipping the script on climate action. One year after the federal government announced it would pull out of the Paris Agreement, 2,700+ U.S. cities, states, and businesses are saying, "We Are Still In." See how far we've come: <https://politi.co/2koAHZb> **

FERC DENIES PENNEAST REHEARING: FERC on Wednesday denied a rehearing sought by the Delaware Riverkeeper Network and Sourland Conservancy on the controversial PennEast pipeline. Commissioner Richard Glick issued a separate statement on the agency's use of tolling orders. "This proceeding, in particular, illustrates the need for prompt action on rehearing requests," Glick wrote. " ... I also have serious concerns regarding the Commission's practice of issuing conditional certificates — which, notwithstanding their name, vest the pipeline developer with full eminent domain authority — in cases where the record does not contain adequate evidence to conclude definitively that the pipeline is in the public interest."

GREENS ENDORSE DE LEON OVER FEINSTEIN: 350.org co-founder Bill McKibben and 350 Action said Wednesday it is backing Kevin de León in his bid to challenge California Sen. Dianne Feinstein. McKibben said de León, a current California state senator, "has been a strong champion of clean energy — and an effective one, using his power in Sacramento to make change happen against the strong opposition of the fossil fuel industry." Read De León's candidate questionnaire answers here.

SELC SUES OMB OVER REORG: The Southern Environmental Law Center sued the Office of Management and Budget Wednesday for its failure to release information under FOIA on the reorganization at federal agencies that manage public lands. SELC says OMB has not provided requested information under a November 2017 FOIA request, nor has it made a determination or otherwise responded to the request, and has subsequently stopped communicating with SELC. The center is seeking "all records in the custody or control of OMB submitted in connection with Executive Order 13781 by any agency responsible for the management of federal public lands," including the Forest Service, National Park Service, BLM and the Fish and Wildlife Service. The EO in question directed each agency head to submit a report to OMB outlining proposed changes to their agency. Read the lawsuit.

CRES BACKS McMASTER IN SOUTH CAROLINA: Citizens for Responsible Energy Solutions will announce a \$175,000 television and digital ad buy today highlighting South Carolina Gov. Henry McMaster's record on clean energy. "First as lieutenant governor and now as governor, his commitment to the development of advanced energy technologies like natural gas and solar power is helping the state's economy and job market thrive," CRES Chairman and Executive Director James Dozier said.

McCARTHY NAMED DIRECTOR OF HARVARD CENTER: Harvard T.H. Chan School of Public Health announced former EPA Administrator Gina McCarthy will lead its newly launched Center for Climate, Health,

and the Global Environment. Under McCarthy, C-CHANGE announced a collaboration between Harvard University and Google to reduce the use of harmful chemicals in construction and renovation projects. "C-CHANGE will ensure that cutting-edge science produced by Harvard Chan School is actionable — that the public understands it, and that it gets into the hands of decision-makers so that science drives decisions," McCarthy said in a statement.

MOVER, SHAKER: Mitch Schwartz started this week as communications director for Jason Crow's campaign in Colorado's 6th Congressional District. Schwartz previously worked for SKDKnickerbocker.

— **PUSH Buffalo, a sustainable housing group**, announced Rahwa Ghirmatzion as its new executive director as of August 2018. Ghirmatzion has served as the organization's deputy director since 2017.

EPA boosts industry membership on key advisory boards [Back](#)

By Alex Guillén | 11/03/2017 01:41 PM EDT

EPA officially announced the new line ups for several key advisory boards today, bolstering their membership with employees of energy companies and state agencies just days after Administrator Scott Pruitt ordered scientists who have received agency grant money to give up their EPA funding or their seat.

As POLITICO [reported](#) on Tuesday, the [Science Advisory Board's](#) new additions include representatives from Phillips 66, Total, Southern Co., the American Chemistry Council and NERA Economic Consulting, a firm frequently hired by industry interests. Their additions boost the industry membership of SAB, although the panel had previously included members from Dow Chemical and other industries or companies.

The [Clean Air Scientific Advisory Committee](#), which provides health advice for air quality standards, also has three new members. Aside from new Chairman Tony Cox, an independent consultant, the new members are Larry Wolk of the Colorado Department of Public Health and Environment and James Boylan of the Georgia Department of Natural Resources.

EPA also announced a slate of new additions to the [Board of Scientific Counselors](#), which advises on research issues. The former chairwoman, Deborah Swackhamer of the University of Minnesota, is now listed as member, while Paul Gilman of waste-to-energy company Covanta has taken over as chair.

Other new BOSC members include representatives from the North Dakota Petroleum Council, Eli Lilly and Co., the Defense Threat Reduction Agency, the Arkansas Department of Environmental Quality, the California Energy Commission and the consulting firm Ramboll Environ.

EPA's science advisers turn eyes on Pruitt's rollbacks [Back](#)

By Alex Guillén | 05/31/2018 05:00 AM EDT

EPA's influential Science Advisory Board will meet on Thursday for its first time since Administrator Scott Pruitt filled it with a slate of industry representatives — and it's got a long list of controversial rule rollbacks to review.

The SAB plans to pore over the science EPA is using to justify rollbacks on emissions regulators for cars, trucks, power plants and oil and gas wells — as well as Pruitt's proposed "transparency" rule for scientific studies.

Several current and former SAB members told POLITICO that it was unprecedented for the board to consider diving into so many regulatory actions, but the heightened scrutiny from the outside experts came about because the agency stonewalled the scientists' questions about Pruitt's deregulatory decisions. That echoes the complaints from environmentalists and public advocacy groups who say EPA has declined to share information about how it was justifying easing the regulations put in place during the Obama administration.

"The agency has not been forthcoming about how they're developing the relevant science work products," said Chris Frey, a professor of environmental engineering at North Carolina State University and a SAB member since 2012.

In a move critics derided as an attempt to stack the 44-member board with industry-friendly voices, Pruitt last year broke with the tradition of reappointing first-term SAB members for second three-year stints by removing several advisers who received grants from the agency. In their places, he installed scientists from the fossil fuel and chemicals sectors and several Republican environmental officials. Among the new members are representatives from Phillips 66, Total, Southern Co., the American Chemistry Council and NERA Economic Consulting.

In addition to studying Pruitt's proposal to bar EPA from using studies that don't make public all their data, the SAB's working groups suggested the full group take a closer look at the repeal of the Clean Power Plan and EPA's reconsideration of its related rule limiting carbon emissions from future power plants. Also up for review are Pruitt's decision to relax 2022-2025 auto emissions standards, changes to the 2016 methane rule for new oil and gas wells, and EPA's effort to repeal a rule regulating emissions from "glider" trucks.

The working groups also deferred decisions on two other rulemakings: the Waters of the U.S. rewrite and rules on a special class of "persistent, bioaccumulative and toxic chemicals" under the Toxic Substances Control Act. SAB can decide whether to conduct a deeper review into those once EPA has reviewable regulatory language available, the groups said.

Frey, who has been a SAB member for six years, said having multiple rules up for review was very unusual for the board.

"It's very rare that we've recommended to the full Science Advisory Board that there should be an SAB action," he said.

SAB has been conducting twice-yearly reviews of EPA's planned regulatory actions since 2012, members said, an effort designed to enable the advisory board to help guide EPA before its rules are finalized.

In the early days, getting information from EPA was "like pulling teeth," said Kimberly Jones, a SAB member from 2011 through 2017 and the chair of environmental engineering at Howard University. But that quickly improved once EPA knew the scope of SAB inquiries, she added.

The SAB's working groups review how EPA uses scientific studies in its rulemakings, including whether and how a study was peer-reviewed and if EPA has properly accounted for uncertainties in the scientific findings. The groups typically find that further reviews aren't needed.

But this time around, the working groups said EPA didn't respond to their questions about many of Pruitt's highest-profile rollbacks.

"Basically, they just didn't provide us with any answers," Frey said. "That kind of put us in a position where all we can really do is say EPA has not identified the science or any plan to review it, and clearly there are science issues that are in the proposed rule."

Frey pointed to lengthy memos from the working groups that included multiple pages of questions that had been posed to EPA for each rulemaking. EPA responded with short statements promising to keep the issues in mind as it develops the final rules.

"The response from the agency was basically a non-response," Frey said.

An agency spokesman said in a statement that SAB "plays an important role" advising EPA.

"We value the Board's expertise, and we welcome feedback from the chartered panel on areas in which they are interested in getting additional scientific information that is relevant to the rulemaking process," the spokesman said.

It was not clear whether the full SAB will vote on Thursday to advance the reviews.

Frey noted that some of the members appointed by Pruitt had been on the working groups, giving him hope that the full board will back the recommendations to look deeper into the regulatory rollbacks.

Should SAB adopt them, it likely would mean setting up special subcommittees that include current members plus outside experts to question EPA further.

The board can advise EPA only on scientific matters, not policy or legal issues. In several cases, like with the repeals of the Clean Power Plan and the glider rule, EPA says it has a legal argument about statutory authority that does not rely on scientific issues.

But even then, Frey said, EPA must keep the science in mind.

"It's in the best interest of the agency to make sure that it's using appropriately developed and reviewed science in its rules," Frey said. "And the flip side of that is if the agency's not doing that, it could open itself up to legal challenges for not following appropriate procedures to develop the science."

GOP sweats Trump's Heitkamp flirtation [Back](#)

By Alex Isenstadt and Burgess Everett | 05/30/2018 05:08 AM EDT

When a small group of alarmed White House aides caught wind that Sen. Heidi Heitkamp — one of the most endangered Democrats up for reelection in 2018 — would be attending President Donald Trump's bill signing last week, they raced to stop it.

Word eventually reached Senate Majority Leader Mitch McConnell, who has made unseating Heitkamp a top priority. He opted not to intervene, and the invitation stood: As the president signed a banking deregulation bill into law before a national audience, Heitkamp was right next to him, the only Democrat in the room.

As the election year kicks into high gear, Republicans have grown increasingly frustrated with Trump's ongoing flirtation with the freshman senator. At a time when many in the GOP fear that the president's unpredictable style will undercut their best-laid midterm plans, the relationship has given Heitkamp — who is seeking reelection in a state where Trump won nearly two-thirds of the vote — fodder to portray herself as a presidential ally.

Her office keeps a running list of the dozen-plus meetings Heitkamp has had with Trump and his top advisers since the 2016 election. And the senator is fond of noting that she forged close ties with Trump's former top economist, Gary Cohn. The president met with Heitkamp in Trump Tower after the 2016 election to discuss a

possible Cabinet position, asked her to join him on Air Force One, and invited her onstage to join him and her Republican opponent, Rep. Kevin Cramer, during an appearance in North Dakota.

"Everyone is saying, 'What's she doing up here?'" the president said at the September event to sell his tax reform plan, which Heitkamp eventually opposed. "But I'll tell you what. Good woman, and I think we'll have your support, I hope we'll have your support. And thank you very much, senator, thank you for coming up."

After last week's bill signing, Heitkamp's allies raced to capitalize. The North Dakota Democratic Party sent out a tweet with an image of Cramer looking on uncomfortably as the president stood next to Heitkamp.

"At a bill signing today, @HeidiHeitkamp got a shout out and all @kevincramer got was a photo op next to a chair," the state party boasted.

"We will see footage of this on every platform," said Doug Heye, a former top Republican National Committee official. "It's a huge gift for her campaign."

Trump aggressively recruited Cramer to give up his House seat to take on Heitkamp, and his actions since have left some of Cramer's closest allies feeling snubbed. They note that while Trump has savaged Democratic incumbents Joe Donnelly of Indiana and Jon Tester of Montana and visited a growing list of states to pump up Republican Senate hopefuls — most recently Tennessee, where he appeared Tuesday on behalf of Rep. Marsha Blackburn — he has yet to make a campaign appearance with Cramer. Nor has the attack dog-in-chief attacked Heitkamp.

After Cramer learned last year that Heitkamp would be accompanying the president on Air Force One to North Dakota, he complained bitterly to the White House, according to two people with direct knowledge of the discussions. Heitkamp, Cramer predicted at the time, would try to use it to her political advantage. (A Cramer adviser, Pat Finken, denied that the congressman had complained about the senator riding on Air Force One.)

The administration has taken steps to assure Cramer that he has the president's full support. The congressman has been regularly in touch with White House political director Bill Stepien, and the two met earlier this month. Trump has agreed to hold a rally for Cramer later this year.

In an interview, Cramer shrugged off Heitkamp's attendance at the bill signing and said there would soon be "clarity" on who Trump supports in the race.

Yet the congressman declined to predict whether the president would go after Heitkamp aggressively, as Trump has done with other Democratic incumbents. Cramer seemed aware of the warmth between the president and the senator. Trump has asked Cramer whether he likes Heitkamp, and when the congressman responds yes, the president seems to be "relieved," Cramer said.

"Politically, North Dakota's a pretty nice state. So I don't know that turning it on her is necessarily politically helpful to me," Cramer said. "They may just be concerned that she's a woman and maybe that has an impact. I just don't know."

Heitkamp said she's proud of her ability to work with the president.

"I have a friendly relationship. I have a very important working relationship," she said in an interview, "not just with him but other members of the administration."

Trump's reluctance to go after Heitkamp stems in part from the simple fact that he needs her vote. With Republicans clinging to a narrow Senate majority, the White House has pushed for her support on several

contentious votes, including the recent confirmations of CIA Director Gina Haspel and Secretary of State Mike Pompeo. She also backed Trump's nominations of Supreme Court Justice Neil Gorsuch and Environmental Protection Agency Administrator Scott Pruitt.

Last week's signing ceremony was organized by White House Office of Legislative Affairs Director Marc Short. He said he extended an invitation to Heitkamp because she played a central role in passing the banking deregulation law.

"She was an original cosponsor of the bill," Short said. "But she's also someone who opposed tax relief, who opposed repeal of Obamacare, and someone who will always support Chuck Schumer. So you can be sure the president will be actively campaigning in North Dakota this cycle."

Cramer's February entry into the race followed an intense pursuit from Trump and top White House officials. After Cramer initially said in January that he wouldn't run for Senate, he received overtures from Trump, White House counselor Kellyanne Conway, and energy executive and Trump donor Harold Hamm within a three-day period. Trump also met with Cramer's wife, Kris.

Cramer said Trump told him at the time that he'll "be out there campaigning more than you are." Trump's entreaties, Republicans contend, helped to push Cramer into the contest. Cramer won his statewide, at-large House seat in 2012, the same year Heitkamp entered the Senate.

"The president leaned on him very hard. The president wanted the best candidate, and everyone in the state thought Kevin was the best candidate to beat Heidi," said Gary Emineth, a former North Dakota GOP chairman who is close with the congressman. "You know how the president is. He just doesn't quit."

Heitkamp predicted that Trump would attack her eventually. While she has maintained a positive working relationship with the president, she said it pales in comparison to Cramer's staunch loyalty.

"I don't think anyone can match his Trump credentials," Heitkamp said. "He is somebody who will always do what the president asks him to do, regardless of whether it's good for North Dakota."

As of late, the senator has been airing commercials that highlight her balancing act. "When I agree with the president I vote with him — and that's over half my votes," she says in a spot that began airing this month. "And if his policies hurt North Dakota, he knows I'll speak up."

Cramer accused Heitkamp of acting like a "Republican wannabe" with her occasional support for key Trump nominees.

"Her trying to cozy up to Donald Trump has resulted in good votes," Cramer said. "But every time she tries to become more like me, it's more flattering to me than it is to her."

Democrats, however, couldn't be happier to portray Cramer as a jilted lover.

Last week, the North Dakota Democratic Party released a video featuring a montage of clips of the president praising Heitkamp and shaking her hand as Cramer looks on — set to the sad sounds of R.E.M.'s "Everybody Hurts."

GOP Senate candidate lashes out at Trump's legislative director [Back](#)

By Burgess Everett | 05/30/2018 06:27 PM EDT

Rep. Kevin Cramer, one of the GOP's top Senate recruits, launched an unusual attack on the White House's legislative director Wednesday, blaming him explicitly for the party's legislative failures in the Senate.

The comments from Cramer (R-N.D.) come amid rising GOP angst over President Donald Trump's close relationship with his opponent in the North Dakota Senate race, Democratic Sen. Heidi Heitkamp.

Heitkamp was the only Democrat invited to the White House last week for a bank deregulation bill signing, alarming some White House aides and Republicans. After POLITICO published a [story](#) on Wednesday outlining the awkward dynamic between Heitkamp, Cramer and the White House, Cramer [told](#) North Dakota radio host Rob Port that he had done some digging and believes that there "are some people in the White House that think, you know, the president's too friendly too her."

Then Cramer laid into White House legislative affairs director Marc Short for two prominent failed GOP efforts in the Senate: Repeal of Obamacare and the rollback of an Obama-era regulation that would limit flaring and venting from oil and gas wells. Heitkamp voted against both and Cramer has criticized her in particular over the flaring vote.

"If Marc Short was very good at his job, you know, we'd have a repeal and replacement of Obamacare, we'd have a replacement of the venting and flaring rule," Cramer said.

In an interview last week with POLITICO, Cramer insisted he is not angry over Trump's political flirtations with Heitkamp: "Not the case at all. I've been fine with it. I just don't think it hurts me." And on Wednesday on Port's show, Cramer said the spat over Heitkamp's attendance at the banking bill signing "just seems to be an argument between Marc Short and other people in the White House."

Short extended an invitation to Heitkamp to the bill signing, but also has knocked Heitkamp for opposing the GOP's tax law. He did not respond to a request for comment for this story.

Heitkamp has tried to stay out of the back and forth, though she is playing up her collaborations with a president that won her state in 2016 by more than 35 points.

"The president has got bigger fish to fry and bigger problems to solve than whether Kevin likes him more than I do," Heitkamp said.

DOE report: U.S. generally 'well prepared' for grid hacking, but gaps remain [Back](#)

By Eric Geller | 05/30/2018 06:05 PM EDT

Senior government officials and electric sector executives don't know enough about how energy companies could recover from a disruptive cyberattack, and those companies don't consider cyber threats enough when building out their supply chains, according to a new Energy Department [report](#).

Grid resilience efforts also suffer because of "gaps in incorporating cybersecurity concerns, including planning for long-term disruption events, into state emergency response and energy assurance planning," said the report.

"The United States is, in general, well prepared to manage most electricity disruptions," the Energy Department said in its report. But gaps still exist in areas like situational awareness, workforce development, separation of roles and responsibilities and the coordinated use of resources like digital defense tools.

DOE completed the report last August as part of President Donald Trump's May 2017 cyber executive order but did not publish it until today.

The report mostly hammered home long-understood problems with protecting the power grid from hackers, including the challenges of sharing cyber threat data between partners

"The variation in infrastructure ownership and operation and the jurisdictional overlap add complexity to sharing actionable information in a timely manner," the report said. "These complexities are compounded when information is classified or sensitive due to the limited options and access to facilitate sharing."

It also warned of compounding problems in the event of a major power outage. For example, "as cyber incidents may impact disparate systems across the country, the impacted owner-operators may not be familiar with each other's systems and procedures."

DOE working to stand up new cyber unit in fiscal 2018 [Back](#)

By Darius Dixon | 03/01/2018 01:11 PM EDT

The Energy Department is aiming to have its new cybersecurity office fired up before the end of the fiscal year, Bruce Walker, the agency's top electricity official, said today.

"We're working with Congress because we put it into the FY 2019 budget proposal ... and we're looking to stand it up earlier because of the importance and our sector-specific agency authority [for cyber incidents]," he told reporters after testifying before the Senate Energy and Natural Resources Committee.

Walker has previously noted that DOE wouldn't need additional congressional authority to create the office or a new assistant secretary job to lead it. Today, he also said that the design change is meant to elevate cyber issues as well as to divide up the agency's infrastructure work into short-term and long-term operations.

Creating the Office of Cybersecurity, Energy Security and Emergency Response is a reaction to a range of issues, including Congress giving DOE more emergency authorities in the 2015 FAST Act ([H.R. 22 \(114\)](#)), the relentless need to improve cyber defenses, and the deepening marriage between the natural gas and electric sectors.

Walker would still lead the electricity office, which would focus on long-term infrastructure plans and set research-and-development goals, including for cybersecurity. Meanwhile, the new CESER office would be "actionable, near-term and highly responsive" recovery work like the devastation in Puerto Rico or the immediate response to a cyberattack, he said.

"One basically feeds the other," Walker said. "[CESER] responds to the incidents, OE will design them out of the system on a going-forward basis."

GAO: Government spent \$13.2B on climate change last year [Back](#)

By Anthony Adragna | 05/30/2018 04:34 PM EDT

The federal government spent \$13.2 billion across 19 agencies during fiscal 2017 for various programs related to climate change, according to [a report](#) from the Government Accountability Office released today.

Overall, climate change-related spending across the federal government rose \$1.5 billion between fiscal 2016 and 2017 and grew \$4.4 billion since fiscal 2010, according to the report.

GAO examined the budget justifications for six agencies accounting for 89 percent of all climate change spending and found just 18 of 533 programs within those agencies whose primary purpose is to address climate change. It further concluded that those programs primarily dedicated to addressing the problem "serve different purposes, target different audiences, or operate at different time periods and scales, which minimizes potential overlap or duplication." The other programs had multiple purposes beyond addressing climate change.

The White House Office of Management and Budget reports the government has spent over \$154 billion since 1993 to understand and address climate change.

House Science Chairman [Lamar Smith](#) (R-Texas) requested the report.

DOE IG: No big flaws in FERC pipeline review process, but transparency should improve [Back](#)

By Darius Dixon | 05/30/2018 03:21 PM EDT

Federal watchdogs said they found no major flaws in FERC's process for reviewing interstate natural gas pipelines, but they flagged concerns about its transparency and how it handles public comments, according to [new report](#).

Auditors in the Energy Department inspector general's office who reviewed FERC's pipeline certification process said that "nothing came to our attention to indicate that FERC had not performed its due diligence" in how it balanced public benefits of a proposed project with its adverse impacts.

But the report said regulators' "had not fully ensured" that the certification process was transparent to those who want to participate and that its eLibrary documentation system was difficult to use. And it said FERC lacked a consistent method for tracking and addressing comments submitted on a proposed project.

"FERC had not specifically designed its public-facing systems for use by the general public," the IG report said, noting that "although available to the general public, eLibrary had been designed for use by practitioners, the legal community, and other stakeholders."

The report also said parts of the eLibrary website "did not contain a sufficient explanation of the entire process" and that a document for landowners who could be affected by a project was not clear about key aspects of the certification process.

"While nothing came to our attention to indicate that natural gas certification applications had been inappropriately approved or disapproved," watchdogs wrote, "FERC can take steps to improve aspects of the natural gas certification process."

WHAT'S NEXT: FERC is in the process of a broad review of its natural gas pipeline certification process but there's no established deadline.

With help from Anthony Adragna

PRUITT STEPS UP TO THE PLATE: Scott Pruitt makes his eagerly anticipated trip to the Hill this morning, and the stakes couldn't be higher for the embattled EPA administrator. His appearances before the House E&C Committee in the morning and Appropriations panel in the afternoon — ostensibly to defend the Trump administration's proposed cuts to EPA's budget — will give lawmakers their first opportunity to directly question Pruitt since the news broke about his heavy spending, sweetheart condo rental, VIP security and first-class flights. And while both Democrats and Republicans are expected to pull no punches as they weigh Pruitt's behavior, the real audience will be sitting in 1600 Pennsylvania Ave.

Check out this [graphic breakdown](#) of Pruitt's problems by POLITICO's Emily Holden, Alex Guillén and your ME host.

— **The administrator has kept a low profile** in the lead-up to today's events — even leaving press out of a Tuesday announcement on his plan to ban [secret science](#) — but expect the cameras to be out in force this morning. ME breaks down what to expect today as Pruitt heads for the batter's box. (ME is also taking suggestions for an appropriate walk-up song. One option [here](#).)

THE GAME PLAN: Pruitt will point out he now flies coach when he travels, and shift the blame to staffers for the raises given to two of his close aides, according to a talking points [document](#) — dubbed "hot topics" — obtained by The New York Times. He will likely also say officials who were reassigned or demoted after challenging his spending all had performance issues.

— **EPA [did not dispute the authenticity](#)** of the Times document, but spokesman Jahan Wilcox said Pruitt would tout "the accomplishments of President Trump's EPA," including "working to repeal Obama's Clean Power Plan and Waters of the United States, providing regulatory certainty, and declaring a war on lead — all while returning to Reagan-era staffing levels." You can read Pruitt's full opening statement for the E&C hearing [here](#).

DEMOCRATS WILL SEARCH FOR ANSWERS: The afternoon session is expected to dive into Pruitt's proposed deep cuts to the agency's budget and his deregulatory actions, but that doesn't mean Democrats will ignore the ethics woes dogging the embattled chief. "Administrator Pruitt, you are letting the American people and your agency down," Rep. [Betty McCollum](#), ranking member of the Appropriations subpanel, plans to say. Democrat [Nita Lowey](#), the ranking House appropriator, will question Pruitt on the Antideficiency Act after the Government Accountability Office found EPA illegally failed to notify Congress about the cost of his secure phone booth. Meanwhile, E&C's top Democrat [Frank Pallone](#) wouldn't tip his hand: "I just hope he shows up," he said when ME asked for his plan of attack.

— **House Energy and Commerce Democrats** will hold a news conference at 9 a.m. to [once again](#) call for Pruitt's ouster. [Kathy Castor](#) and [Paul Tonko](#) will attend, alongside representatives from numerous green groups.

REPUBLICANS OFFER SOME ADVICE: "Answer the questions and stay calm," John Shimkus said. "And the time will eventually end." The Illinois Republican didn't let on about his line of questions to Pruitt, but added: "It's not going to all be addressing stewardship issues. There are going to be policy questions."

— **Fellow Oklahoman and member of the Approps committee** Tom Cole expects the "highly charged" hearing to contain some "pretty much straight budget questions" — at least from the Republican side. Cole said he recently spoke to Pruitt on the upcoming hearing and warned him it would be "rugged."

Keep in mind: None of the committee Republicans said they'd been in contact with the White House ahead of the session. Shimkus said the Republicans hadn't huddled ahead of time to develop a game plan as they sometimes do with high-profile hearings. And Democrats are expected to turn out in force — E&C members not on the Environment subpanel will "waive in" to the hearing. They don't need GOP permission to do so, but will have to wait until all subcommittee members participate before asking questions. ME would look here for especially fiery questions or any surprises.

STRIKE 3? Pruitt's critical audience, of course, will be President Donald Trump, who has so far stuck by him, but is expected to judge how Pruitt fares in front of the cameras, POLITICO's Anthony Adragna and Nancy Cook report. So far, Pruitt's support among Trump's conservative backers has kept him on solid ground, despite the growing resentment of a "high maintenance" EPA chief among White House officials. "The president is always nervous about offending his base, and Pruitt has real support in the base," said one Republican close to the White House. "If that base diminishes, he does not have a chance of being reelected. He generally likes what Pruitt is doing over there, but he has no relationship with Pruitt of any note. He could get someone else."

IN THE OUTFIELD: Environmental group Defend Our Future will hand out first-class boarding passes today at the Pruitt hearing, while Moms Clean Air Force will deliver these report cards. And the League of Conservation Voters and its state partners will launch television ads today urging Sens. Dean Heller and Cory Gardner to hold Pruitt accountable. Watch them here and here.

If you go: The E&C hearing will begin at 10 a.m. in 2323 Rayburn, and the Appropriations hearing at 2 p.m. in 2007 Rayburn. Watch the livestreams here and here.

IT'S THURSDAY! I'm your host Kelsey Tamborrino, and the American Petroleum Institute's Jeff Stein was the first to name Khartoum, Sudan — the capital city where the Blue and White Niles meet to form the Nile. For today: Name the state where the first officially designated Democratic floor leader hailed. POLITICO's Ben White is bringing Morning Money to the Milken Institute Global Conference to provide coverage of the day's events and evening happenings. The newsletter will run April 29 - May 2. Sign up to keep up with your daily conference coverage.

PUBLIC LANDS CRUCIAL FOR TESTER: Democratic Sen. Jon Tester's bid for reelection could come down to how he handles public lands issues, Pro's Kevin Robillard reports. Close to one-third of the land in Tester's home state of Montana is under federal government ownership, and the Democratic senator hopes to use it to keep on board those who voted Trump — including hunters, hikers, snowmobilers and ranchers. "Public lands is one of the great equalizers. It's part of who we are," Democratic Gov. Steve Bullock told Kevin. "It doesn't matter what our political beliefs are, it's a core part of our lives."

Tester's strategy is part of a larger effort by Democrats in the West to emphasize lands. Bullock emphasized it in his reelection bid in 2016 and New Mexico Sen. Martin Heinrich, who is expected to easily win reelection in 2018, started his reelection bid with a video focused heavily on public lands issues. And Democratic strategists think it can help them in states throughout the interior west. "There a lot of people here who are

single-issue voters, and that issue is public lands," said Nick Gevock, the conservation director at the Montana Wildlife Federation. [Read more.](#)

DEMOCRATS CALL FOR SPECIAL COUNSEL: In a letter Wednesday to the U.S. Office of Special Counsel, Pallone and Oversight ranking member [Elijah Cummings](#) requested an investigation into whether there is a pattern of problematic personnel practices at EPA. The Democrats point to recent reports of agency officials being reassigned, demoted or requesting new roles, after voicing concerns on Pruitt. "The reassignment or dismissal of employees who questioned Administrator Pruitt's wasteful and potentially unlawful expenditures suggests a troubling pattern of retaliation against EPA employees that may be illegal," they write. [Read the letter here.](#)

BISHOP STILL TALKING NEPA: House Natural Resources Chairman [Rob Bishop](#) told ME he's been in contact with administration officials "over the last few weeks" about a series of modifications to NEPA that he says "run the gamut." His two overarching goals are to speed the permitting process and to enact categorical exclusions that will limit litigation to allow projects to advance more quickly. "It's one of the consistent problems they recognize," he said of the administration's engagement on NEPA.

Apples to oranges: Controversy over [\\$139,000 spent on doors](#) at Interior is not comparable to spending woes engulfing Pruitt, according to Bishop. "There are some real issues and there are some issues that we play around with," he said. "This is one I think people are playing with." Interior officials said previously that career facilities and security officials recommended the work and that Secretary Ryan Zinke was not aware of it.

THAT DAM BILL: The House passed a heavily watched measure, [H.R. 3144 \(115\)](#), Wednesday that would override a court decision requiring changes in the operations of major hydropower dams in the Pacific Northwest to help protect endangered salmon. The measure, from Washington Rep. [Cathy McMorris Rodgers](#), passed by a nearly party-line vote of 225-189, and now heads to the Senate, where some of the region's Democratic senators have [made known](#) their opposition. Pro's Annie Snider breaks down [more here.](#)

REFINERY WORKERS HIT THE HILL: Close to 100 workers from refineries Monroe Energy, Philadelphia Energy Solutions and PBF Energy will rally for their jobs and Renewable Fuel Standard reform on the Hill today, the United Steelworkers said. The rally begins at 1 p.m. in the "Senate Swamp" — the grass across the drive from the east Senate steps. Texas Sen. [Ted Cruz](#) will participate in a press conference with the workers at the same time. Watch the livestream [here.](#)

OFF-SHORE UP SUPPORT: While it didn't have quite the same build-up as Pruitt's hearings this morning, the House Natural Resources energy and mineral resources subcommittee will hold a hearing today on offshore energy revenue sharing for Gulf-producing states, with a focus on the Gulf of Mexico Energy Security Act. Democrats intend to call out the oil and gas industry and demand they take responsibility for their role in causing the destruction of Louisiana wetlands, according to a release. Former Sen. Mary Landrieu (D-La.), now a senior policy adviser at Van Ness Feldman, and John Barry, former board member of the Southeast Louisiana Flood Protection Authority — East, will testify, among others. **If you go:** The [hearing](#) begins at 10 a.m. in 1324 Longworth.

GET YOUR COMMENTS IN: [Comments](#) are due today on EPA's proposed repeal of the Clean Power Plan. The Competitive Enterprise Institute, for one, will file a comment today in support of the proposed repeal, calling the CPP "unlawful." Close to 20 other individuals from free-market groups signed onto the joint comment. Google, meanwhile, submitted its own comment Wednesday "respectfully" urging EPA to forgo the repeal. "Google continues to believe that the Clean Power Plan aligns with overall electricity sector trends and the specific goals of our company," [it says.](#) The Natural Resources Defense Council and NRDC Action Fund said it generated 208,000 comments in support of keeping the CPP.

MAIL CALL! IN THE AIR TONIGHT: California Sen. [Dianne Feinstein](#) wrote to Transportation Secretary Elaine Chao Wednesday, calling on her to maintain national fuel economy standards set by California under the Clean Air Act. "I ask for your commitment to maintain the Corporate Average Fuel Economy standards at the maximum feasible level, as required by law, and to seek consensus with California so that we can continue to enjoy the success of a coordinated national program to improve fuel economy," Feinstein wrote. Read the letter [here](#).

— **Eighty-seven lawmakers signed onto a letter Wednesday** that calls on Pruitt to reinstate the "once in, always in" [policy](#) to "safeguard" from harmful air pollutants. "This is a matter of critical human health and safety," the lawmakers write. Read it [here](#).

GoT RENEWABLES? Rapper Kanye West [tweeted](#) about his connection to Trump and their "dragon energy" on Wednesday. "We are both dragon energy. He is my brother. I love everyone. I don't agree with everything anyone does." Spoiler: It's not an energy company we forgot to tell you about. Bloomberg breaks it down [here](#), but earlier in the day, West described dragon energy as, "Natural born leaders Very instinctive Great foresight." The House Natural Resources [account tweeted](#) the exchange telling West to "have your people call our people."

Stories from POLITICO Pro

Pruitt scales back EPA's use of science [Back](#)

By Emily Holden and Annie Snider | 04/24/2018 03:17 PM EDT

Environmental Protection Agency chief Scott Pruitt announced Tuesday he would seek to bar the agency from relying on studies that don't publicly disclose all their data, a major policy change that has long been sought by conservatives that will sharply reduce the research the agency can rely on when crafting new regulations.

The unveiling of the proposed rule delivers a win to Republicans like House Science Chairman Lamar Smith (R-Texas), who unsuccessfully pushed legislation to impose the same type of change. The move also demonstrates Pruitt's persistence in pursuing President Donald Trump's anti-regulation agenda just two days before the embattled EPA chief is due to face fierce questioning from lawmakers about his hefty spending, expanded security detail and cheap condominium rental from the wife of an energy lobbyist.

At an invitation-only meeting at EPA headquarters with Smith, Sen. Mike Rounds (R-S.D.) and other supporters of the policy, Pruitt said the proposed rule was critical in ensuring that the agency was transparent about how it is making decisions to justify costly new regulations. It is the latest step Pruitt has taken to fundamentally shift the agency's approach to science.

"It is a codification of an approach that says as we do our business at the agency the science that we use is going to be transparent, it's going to be reproducible, it's going to be able to be analyzed by those in the marketplace. And those who watch what we do can make informed decisions about whether we've drawn the proper conclusions or not," Pruitt said.

Text of the proposed rule was not immediately available.

The proposal, based on legislation pushed by Smith, is intensely controversial, and scientists and public health groups say it will prevent federal regulators from enacting health and safety protections. Nearly 1,000 scientists, including former EPA career staffers, signed a letter opposing the policy sent by the Union of Concerned Scientists to Pruitt on Monday.

Their primary concern was that many of the country's bedrock air and water quality regulations are based on research that cannot disclose raw data because it includes the personal health information.

But industry has its own version of the same problem. EPA often relies on industry studies that are considered by companies to be confidential business information when determining whether new pesticides and toxic chemicals are safe to use. Internal EPA emails obtained under the Freedom of Information Act show that EPA political officials, including Nancy Beck, who became the chief of the agency's chemical safety office last year after working for years at a chemical industry lobbying group, worried that the new policy would limit the agency's ability to consider industry data or would force companies to make this proprietary data public.

"We will need to thread this one real tight!" Richard Yamada, political official who led work on the new policy wrote to Beck after she raised the concerns.

It was not immediately clear if the new proposed rule included measures to address those concerns.

Rush Holt, CEO of the American Association for the Advancement of Science, said Pruitt's changes could keep the agency from revising public health regulations as problems arise or new data comes to light.

"On the surface it sounds so innocuous or even beneficial. What could be wrong with transparency? Well it's clear to me that this is not based on an effort to be transparent. It is rather based on an effort to be just the opposite," he said.

"EPA is particularly important because when science is misused, people die," he added.

Pruitt has been discussing the new scientific policy publicly for weeks, but it only went to the White House for interagency review last week. Such swift review is very rare for the Office of Management and Budget, which often takes months to vet a new policy. At least one group, the Environmental Defense Fund, has requested a meeting with OMB officials to discuss the rule, but OMB's website shows that no meetings have been scheduled with interested groups.

Many public health studies can't be replicated without exposing people to contaminants, and environmental disasters such as the Deepwater Horizon oil spill cannot be recreated, the group said, raising intellectual property, proprietary and privacy concerns.

Pruitt's predecessor Gina McCarthy, and her air chief Janet McCabe, in an [op-ed](#) in The New York Times in March said concerns about studies are dealt with through the existing peer-review process, which ensures scientific integrity.

"[Pruitt] and some conservative members of Congress are setting up a nonexistent problem in order to prevent the E.P.A. from using the best available science," they said.

Report: Pruitt plans to shift blame for scandals [Back](#)

By Emily Holden | 04/25/2018 01:55 PM EDT

EPA chief Scott Pruitt will seek to shift the blame for some of his ethics controversies by blaming his staff when he testifies at two House hearings Thursday, according to an internal EPA document reviewed by [The New York Times](#).

Pruitt is prepared to say that he now flies coach rather than first-class, that staffers were responsible for large raises given to close aides without White House sign-off and that officials who were reportedly sidelined for questioning his behavior had performance issues, according to the Times.

The defenses are in line with what Pruitt and EPA spokespeople have said in recent months.

EPA did not dispute the authenticity of the document, but spokesman Jahan Wilcox said Pruitt would tout "the accomplishments of President [Donald] Trump's EPA," including "working to repeal Obama's Clean Power Plan and Waters of the United States, providing regulatory certainty, and declaring a war on lead — all while returning to Reagan-era staffing levels."

Pruitt is expected to face questions about his bargain condo rental from the wife of a lobbyist who has since resigned from his firm, his spending on a round-the-clock security detail and his previous refusal to fly coach. He is under investigation by three congressional committees, the EPA's inspector general and the GAO, among other oversight bodies. White House deputy press secretary Hogan Gidley told NPR today that Pruitt will have to answer questions about the potential ethics violations "in short order."

'It could be pretty painful' when Pruitt faces Congress [Back](#)

By Anthony Adragna and Nancy Cook | 04/25/2018 06:00 PM EDT

When Scott Pruitt returns to Capitol Hill on Thursday, he will find few friends ready to greet him — and an audience of one waiting to determine his fate.

Republicans say they aren't going to give the Environmental Protection Agency chief a free pass on accusations of lavish spending, a sweetheart condo lease and luxe air travel during a pair of high-stakes hearings. Since Pruitt's previous appearance on Capitol Hill in January, he has faced an avalanche of damaging headlines and investigations that have alienated much of the White House and raised questions about his future leading the agency.

President Donald Trump has so far stuck by Pruitt. But the biggest test for the media-obsessed president may be how Pruitt fares in front of the cameras — only three weeks after he drew poor reviews for a combative interview with Fox News' Ed Henry.

House Energy and Commerce Chairman Greg Walden (R-Ore.) said Pruitt will receive a "cordial reception, but he's got some tough questions to answer."

Rep. John Shimkus (R-Ill.), whose subcommittee will be Pruitt's first stop Thursday, said the administrator should expect a "cool" reception from Republicans — who still strongly support his work to pare back EPA rules.

"It could be pretty painful, but when you accept the position of a senior administrator in a federal agency you've got to expect [that]," Shimkus, who chairs the Energy and Commerce Environment Subcommittee, told Politico. "You've just to grin and bear it and get through it."

Pruitt has few allies left in the White House, apart from the president himself. Senior administration aides characterized the hearings as potential make-or-break moments for Pruitt but said it's ultimately up to the president as to whether the White House wants to tolerate Pruitt's bad press.

Trump is largely keeping Pruitt around because he appreciates Pruitt's hard-charging agenda and because the White House does not want to go through another bruising confirmation battle over another Republican to lead EPA, according to senior administration officials and Republicans close to the White House. Already the White House expended great political energy this week on its pick for secretary of state, Mike Pompeo, a former congressman whom the White House views as eminently qualified but who is barely expected to squeak through the Senate confirmation process.

Most important, the president fears that dumping Pruitt would anger conservatives.

"The president is always nervous about offending his base, and Pruitt has real support in the base," said one Republican close to the White House. "If that base diminishes, he does not have a chance of being reelected. He generally likes what Pruitt is doing over there, but he has no relationship with Pruitt of any note. He could get someone else."

When asked at the White House briefing on Wednesday about Pruitt's spending and potential ethical violations, press secretary Sarah Huckabee Sanders would only say: "We are evaluating these concerns, and we expect the EPA administrator to answer for them."

Pruitt's waning support among White House aides has been months in the making. And at this point, many administration officials say they are tired of the terrible headlines and consider the allegations about Pruitt a nonstop swirl of distractions. It's not just Pruitt's handling of the questions that has irked White House officials but the facts themselves about the way he's led the EPA and run his own staff.

Over the past year, Pruitt has also alienated members of the communications team, National Economic Council, and Cabinet Affairs in various fights over policy like the Paris climate deal, messaging over policy rollouts, and spending decisions at the EPA. Another Republican close to the White House said Pruitt has earned a reputation among White House aides as "high maintenance."

The White House was not involved in helping to prepare Pruitt for the two Hill hearings on Thursday.

Shimkus predicted the toughest questions would come from the other side of the aisle.

"We need to make sure that we understand and recognize the valid, valid concerns that are out there on policy and administrative activity," he said. "But I don't think we'll be gouging his eyes out either — I think we'll have other folks that'll do that."

Some Pruitt supporters say he should be judged on his overall tenure.

"It should be based on his past performance, not necessarily standing in front of a microphone," House Natural Resources Chairman Rob Bishop (R-Utah) said. Bishop's committee does not have jurisdiction over EPA, but he has been a strong supporter of Pruitt's policy goals.

In his opening statement released ahead of the hearing, Pruitt will sidestep any discussion of the latest controversies, instead focusing on policy goals like Superfund cleanups and working more closely with states. "I will focus on key objectives to improve air quality, provide for clean and safe water, revitalize land and prevent contamination, ensure the safety of chemicals in the marketplace, assure compliance with the law, and improve efficiency and effectiveness," Pruitt will say in his prepared remarks.

Democrats are expected to tie the scandals facing Pruitt to his aggressive deregulatory push and proposal to slash EPA's budget by more than a quarter — which they see as just as worrisome as his alleged ethical improprieties. Multiple aides said there's such strong interest in the session that committee Democrats not on the Environment Subcommittee plan to participate, which does not require signoff from the majority.

"There's a confluence of concerns here that I think the Democrats are going to want to get answers to," Rep. Paul Tonko of New York, top Democrat on the panel, told POLITICO. "We were concerned yesterday, we're concerned today and we'll be concerned tomorrow if he's there."

There will be no shortage of things to ask him about, including the more than \$105,000 the agency has spent on his first-class flights, lavish spending on a \$43,000 soundproof phone booth and round-the-clock security, a cushy \$50-per-night condo lease from a Washington lobbyist who personally met with Pruitt to discuss the agency's Chesapeake Bay work, and a trip to Morocco in December on which he spent time promoting liquefied natural gas exports — a topic that isn't part of his agency's portfolio. Pruitt is also facing scrutiny over the significant pay raises the agency gave to a handful of his longtime aides from Oklahoma despite the White House's objections.

Federal watchdogs, the agency's inspector general, congressional investigators and the White House have launched more than a dozen investigations into various aspects of Pruitt's conduct.

But Rep. Joe Barton (R-Texas), the longest-serving member of Energy and Commerce, said Pruitt's ethics issues are "not the purpose of the hearing" and suggested many Republicans would come to the administrator's defense. However, he said the panel's GOP members have not met in advance to plot strategy.

"He's had a lot of death threats. I don't have a problem with his security costs," Barton said Wednesday. "I don't really have a major problem with his telecommunications setup. It's a difficult job to be the EPA administrator when you're a Republican."

Still, signs are increasing of weariness toward Pruitt among congressional Republicans. Three senior Senate Environment and Public Works Committee Republicans, including his staunch ally Sen. Jim Inhofe (R-Okla.), called for hearings into Pruitt's behavior earlier this week. Four House Republicans have called for his resignation. And EPW Chairman John Barrasso (R-Wyo.) said he has "serious questions" about Pruitt's spending and pledged to send additional oversight letters.

"He'll need to acquit himself well," Sen. John Thune, the No. 3 Republican in the Senate, said when asked about how important the sessions will be for Pruitt's future in the administration.

An aide to Rep. Betty McCollum of Minnesota, top Democrat on the House Appropriations Interior and Environment Subcommittee, where Pruitt will appear Thursday afternoon, told POLITICO their hearing would likely focus more on Pruitt's proposed cuts to nearly a quarter of the agency's budget and regulatory rollbacks.

"I expect the E&C hearing will have a greater focus on the ethical concerns surrounding Pruitt," the aide said.

Some Democrats on Energy and Commerce acknowledge Pruitt has in the past performed well in congressional hearings, which they said could allow him to respond to some of the charges.

"If Mr. Trump is going to look for a good performance, I bet he'll put up a great performance," said Rep. Scott Peters (D-Calif.), another member of the subpanel. "But if he doesn't address the substance of the ethical and environmental challenges, I hope that they would think about finding someone else."

Other Democrats think Pruitt's main goal will be to avoid a major gaffe but they don't see any way he will emerge from the hearing in a significantly strengthened position.

"One or two of these transgressions would be survivable but there are so many scandals that it's really hard for me to imagine that Republicans want to lower the bar this much," said Sen. Brian Schatz (D-Hawaii), an outspoken Pruitt critic. "It is actually beyond me why they're sticking by him."

Tester leans on public lands as key reelection issue [Back](#)

By Kevin Robillard | 04/26/2018 05:05 AM EDT

HELENA, Mont. — The issue that could prove key to Democratic Sen. [Jon Tester](#)'s reelection bid is under the radar in Washington politics but practically ever-present in Montana life.

Nearly a third of the land in Montana is under federal government ownership, and Tester wants to keep it that way. It's a way the Democratic senator, who is running for a third term, hopes to keep voters who pulled the lever for President Donald Trump — including hunters, hikers, snowmobilers and ranchers — on his side in 2018.

"Public lands is one of the great equalizers. It's part of who we are," Democratic Gov. Steve Bullock said in a phone interview. "It doesn't what matter what our political beliefs are, it's a core part of our lives."

Tester's strategy is part of a larger effort by Democrats in the West to emphasize the issue. Bullock emphasized it in his reelection bid in 2016 as he defeated Republican Greg Gianforte (now Montana's congressman) by 4 percentage points after hammering the Republican billionaire over stream access. New Mexico Sen. Martin Heinrich, who is expected to easily win reelection in 2018, started his reelection bid with a video focused heavily on public lands issues. And Democratic strategists think it can help them in states throughout the interior West.

"There are a lot of people here who are single-issue voters, and that issue is public lands," said Nick Gevock, the conservation director at the Montana Wildlife Federation.

Outdoor recreation is now Montana's largest industry, surpassing agriculture, and contributes \$7 billion and 71,000 jobs to the state's economy.

"They like to go hunting, they like to go fishing, they like to go hiking, they just like to get in the mountains where their cellphone doesn't work," Tester said in an interview. "I want to make sure there's not a mine put at the head of the Yellowstone River, or at the borders of Glacier Park."

A Montana Republican on the national stage is also raising the profile of the issue in-state. Conservationists had high hopes for Interior Secretary Ryan Zinke when he was first named to the job, but his decision to shrink the size of two national monuments has left them dismayed and disappointed.

"We were hopeful that, being a Montanan, he was going to live Montana values and be the Teddy Roosevelt conservationist he said he was," Gevock said, but noting Zinke's Interior Department was "putting the oil and gas industry above every other use."

Tester introduced Zinke at his confirmation hearing and had similar hopes, but is heavily critical of him today.

"It was because I thought he understood conversation. I haven't seen that over the last 14 months," Tester said, adding: "He has time to redeem himself."

The strategy is a proven vote-winner in Montana. Throughout the 2016 gubernatorial campaign, and in his earlier bids for governor and attorney general, Bullock emphasized stream access laws for fishermen. And he hammered Gianforte for fighting stream access laws in multiple television ads last cycle.

The state and national GOP platforms both support selling federal public lands to the states, where many environmentalists feel they would be exposed to oil and gas interests. Tester's opponents don't endorse those views.

"The people of Montana do not want the public lands transferred," state Auditor Matt Rosendale said in an interview, echoing the views of businessman Troy Downing and former judge Russ Fagg. (Rosendale supported selling the land during a 2014 bid for Congress but has changed his position.)

All three said they would like localities to have more say in how lands are managed and how federal authorities balance multiple uses. Rosendale, for instance, criticized the Forest Service for shutting down too many roads in the state.

But while Democrats in Montana have aggressively used the issue, public lands haven't become a top-tier issue in Colorado, Arizona or elsewhere in the interior West, which some Democratic strategists believe is a missed opportunity.

The Western Values Project, a Colorado-based nonprofit, ran ads late last year pressuring three potentially vulnerable Republicans — Arizona Rep. Martha McSally, who is now running for Senate, along with Oregon Rep. Greg Walden and Washington Rep. Jaime Herrera Beutler — over their support for Zinke's decision to shrink the national monuments.

And the attacks had an impact: In Arizona, McSally held a 3-point lead against a generic Democrat in her congressional district in a poll conducted by Global Strategy Group. But when "asked to consider a scenario where she votes to reduce the size of the Bears Ears and Grand Staircase-Escalante national monuments," her support dropped to 38 percent, with a generic Democrat winning 50 percent of the vote.

Interior spent \$139K on Zinke office doors Back

By Anthony Adragna | 03/08/2018 05:58 PM EDT

The Interior Department is spending \$139,000 for new doors for Secretary Ryan Zinke's office suite, according to records posted online.

The work was recommended by Interior career facilities and security officials, an agency spokeswoman said, not by Zinke.

"The secretary was not aware of this contract but agrees that this is a lot of money for demo, install, materials, and labor," Heather Swift, the spokeswoman, said in a statement.

The award to Maryland-based Conquest Solutions LLC was first reported by the Associated Press. The work involves replacing three sets of double doors, including two that open onto a balcony and leak during rain storms, the AP reported. An existing set of doors to Zinke's office from a hallway do not have a lock, so the security will be upgraded with the new doors.

Swift said the work is part of a "decade-long modernization of the historic FDR-era building."

"Between regulations that require historic preservation and outdated government procurement rules, the costs for everything from pencils to printing to doors is astronomical. This is a perfect example of why the Secretary believes we need to reform procurement processes."

Housing and Urban Development Secretary Ben Carson drew criticism recently over news that HUD would spend \$31,000 on a dining set. That order was subsequently canceled.

House passes controversial dam bill Back

By Annie Snider | 04/25/2018 04:45 PM EDT

The House passed a controversial measure to override a court decision that required changes in the operations of major hydropower dams in the Pacific Northwest to help protect endangered salmon.

The measure, H.R. 3144 (115), from Rep. Cathy McMorris Rodgers (R-Wash.), was passed by a nearly party-line vote of 225-189.

The 9th Circuit Court of Appeals earlier this month upheld a lower court decision requiring that water be spilled over the tops of dams along the Columbia and Snake rivers, including the powerhouse Grand Coulee Dam, the largest power station in the U.S., during periods when young salmon and steelhead migrate to the ocean. The suit was brought by the state of Washington, tribes and conservation groups.

McMorris Rodgers and other Republicans in the region have fought the decision because it would reduce the dams' hydropower output. Their legislation would override the courts and require that dam operations continue as they have historically to maximize power production until an environmental review of the system can be completed.

The legislation is the latest front in a yearslong battle over the nearly 100-year-old hydropower system on the rivers. Conservation groups and tribes with treaty fishing rights want it altered and operated to benefit wildlife, including calling for the removal of four dams along the Snake River.

WHAT'S NEXT: The legislation moves to the Senate, where some of the region's Democratic senators have registered their opposition.

EPA drops 'once in, always in' policy from key Clean Air Act requirements [Back](#)

By Alex Guillén | 01/25/2018 06:11 PM EDT

EPA today withdrew a Clinton-era policy that was designed to prevent major emitters like power plants and factories from getting out of tough requirements to limit their toxic air emissions.

In a new memo, EPA air chief Bill Wehrum wrote that the "once in, always in" policy "is contrary to the plain language" of the Clean Air Act. Wehrum revoked a 1995 guidance memo outlining the policy and said EPA would consider new regulations to clarify its interpretation of the law.

Under the now-revoked guidance, any emitter that qualified as a "major" source of hazardous air pollutants would forever be subject to that tougher standard to comply with MACT rules, even if its emissions dropped low enough to be considered an "area" source subject to fewer or no requirements. Wehrum's memo said the law does not specify that such classifications are permanent.

"EPA has now determined that a major source which takes an enforceable limit on its [potential emissions] and takes measures to bring its HAP emissions below the applicable threshold becomes an area source, no matter when the source may choose to take measures to limit its" potential pollution emissions, Wehrum wrote.

Wehrum argued that the policy shift will actually encourage sources that hesitated to install emission reduction projects to move forward. Environmentalists, however, quickly blasted the change on social media.

The Bush administration twice attempted to change the OIAI policy but never succeeded.

WHAT'S NEXT: Wehrum's memo says EPA will "soon publish a Federal Register notice to take comment on adding regulatory text that will reflect EPA's plain language reading of the statute."

Subject: Morning Energy: What's happening with WOTUS — Keystone fight far from over — Wheeler to Michigan

By Kelsey Tamborrino | 08/17/2018 05:44 AM EDT

With help from Annie Snider, Ben Lefebvre and Alex Guillén

A COUNTRY DIVIDED: Which streams and wetlands are protected under the Clean Water Act? As of Thursday, the answer depends on where you're standing. After a South Carolina District Court [ruling](#) overturning the Trump administration's attempted delay of the Obama administration's Waters of the U.S. rule for failing to offer the public a proper opportunity to comment, the 2015 rule is now officially on the books in 26 states — but not in the other 24 states where other district court injunctions are in place.

"**The agencies refused to engage** in a substantive reevaluation of the definition of the 'waters of the United States' even though the legal effect of the Suspension Rule is that the definition of 'waters of the United States' ceases to be the definition under the WOTUS rule and reverts to the definition under the 1980s regulation," Judge David Norton wrote in Thursday's ruling. "An illusory opportunity to comment is no opportunity at all."

Environmental groups hailed the decision, with Jon Devine of the Natural Resources Defense Council calling it a "sharp rebuke to the Trump administration." Meanwhile, Zippy Duvall, president of the American Farm Bureau Federation, one of the fiercest critics of the Obama-era rule, called on the Trump administration to "to take immediate steps to limit the impact of this dangerous court decision."

But will it hold? The Justice Department is reviewing the decision, a spokesman said, and players on both sides broadly expect an appeal. Separately, EPA said in a statement it and the Army Corps of Engineers "will review the order as the agencies work to determine next steps." But the fate of the delay rule could ultimately become moot if the federal district judge in Texas grants a nationwide injunction request.

And don't forget, this is just the warm-up fight. The battle royale will be over the Trump administration's rule to repeal the 2015 rule, which the agency has not finalized. Geoff Gisler, the Southern Environmental Law Center attorney who brought yesterday's case on behalf of local environmental groups, argued that Thursday's South Carolina court decision has implications for that fight and "should give the agencies pause" as they move forward. "The agencies just aren't telling the public what they're doing," he argued. "What this decision said was you can't just have a comment period, it has to be a meaningful comment period."

WE MADE IT TO FRIDAY! I'm your host, Kelsey Tamborrino. Simon and Company's Jen Covino named the eight senators who formerly served as mayors: [Dianne Feinstein](#), [Cory Booker](#), [Jim Inhofe](#), [Bob Corker](#), [Bernie Sanders](#), [Tim Kaine](#), [Mike Enzi](#) and [Bob Menendez](#). For today: Who are the three current House lawmakers who previously served as ambassadors? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

FAR FROM OVER: A federal judge's order directing the State Department to conduct a supplemental environmental review for the Keystone XL pipeline's updated path through Nebraska is another setback in nearly a decade full of them for TransCanada. The order is sure to stall construction of the pipeline for months, Pro's Ben Lefebvre [reports](#). Plaintiffs in the case said the review would involve public hearings in Nebraska and consultations with Native American tribes whose land the pipeline would traverse.

Pipeline opponents are hoping to use the new review to push for a broader study of the project, Ben reports. Doug Hayes, a lawyer for the Sierra Club and one of the plaintiffs in the case, said the judge's ruling that the "entire pipeline remains interrelated and requires one [environmental review] to understand the functioning of the entire unit" could open the door for them to seek a new review for the pipeline's entire route. "If they are going back to do a supplemental environmental impact statement, our position is they would need to evaluate all the new impacts of the pipeline," Hayes said. "That would take definitely months."

WHERE'S WHEELER? Acting EPA Administrator Andrew Wheeler travels to Michigan today to discuss issues plaguing the Great Lakes and meet with GOP Rep. Tim Walberg, a member of the Energy and Commerce Committee, and officials from the Michigan Department of Natural Resources and Department of Environmental Quality.

WHEELER DELIVERS MESSAGE ON HARASSMENT: Wheeler reaffirmed EPA's policy against harassment in a memorandum sent to staff Thursday. Wheeler wrote that he expects "all individuals working at the EPA — employees, supervisors and non-employees — will not engage in or be subjected to unlawful and prohibited harassment."

MURKOWSKI: FERC NOMINEE SHOULD GO LITMUS TEST-FREE: Senate Energy Chairman Lisa Murkowski wouldn't comment on POLITICO's report that DOE's Bernard McNamee will be nominated to FERC. But the Alaska Republican said she believes that the next nominee shouldn't face a litmus test over their view of the Trump administration's efforts to prop up coal and nuclear power plants, Pro's Darius Dixon reports. "I worry that this is going to be viewed as, 'If you don't commit to voting against or voting for, then you're not going to have my support,'" Murkowski said. "That's not the way that we should be selecting commissioners for the FERC."

GET YOUR COMMENTS IN: American Petroleum Institute's Frank Macchiarola reiterated the need for Renewable Fuel Standard reform on a call with reporters Thursday outlining the group's comments for EPA's proposed biofuel blending requirements for the coming year under the RFS. "Very simply what we want is an end to this program by 2022," he said. Macchiarola said API is "willing to compromise" on certain policies like a waiver for summertime sales of E15, but only if the program will sunset by 2022. "The problem again is that the ethanol industry has been dug in to not doing anything," Macchiarola said. He added legislation is being drafted to reform the program in both chambers, but noted challenges and lengthy debate are likely ahead. Comments are due today on EPA's proposed volumes, with the final rule due to be released by Nov. 30.

— **API is also looking at the proposed plan** by EPA and the Department of Transportation to freeze fuel efficiency standards for cars and trucks. "It is a very complex proposal to a very complex program," Macchiarola said. "We will say that we appreciate the administration's relooking at CAFE in the light of changing energy market realities."

SECRET'S OUT: Thursday was the last day for comments on EPA's proposed "secret science" rule, which would ban the use of studies that don't publicly disclose all their data. Getting their thoughts in under the wire, Sens. Sheldon Whitehouse, Brian Schatz, Maggie Hassan, Jeff Merkley, Ed Markey, Tammy Duckworth, Kirsten Gillibrand, Tom Carper and Kamala Harris banded together to make their opposition known. "The proposed rule is illegal because it is arbitrary and capricious," they write, adding that "the proposed rule is illegal because it is the result of an effective delegation of rulemaking authority to private interests."

The American Chemistry Council, meanwhile, applauded the proposal in its comment Thursday. "EPA's proposal codifies an important good governance principle — that government agencies should be as transparent as possible, within the bounds of the law, about scientific information relied upon and the justifications for the significant regulatory decisions they make." Still, the trade association also highlighted that implementation of the plan would benefit from better historical context and applicability, and that greater clarity is required on key definitions and regulatory text, among other recommendations.

FIGHTING FIRE WITH A FEDERAL PLAN: The Agriculture Department released a new, aggressive approach to fighting wildfires Thursday, with proactive steps. During a bipartisan press conference, Secretary Sonny Perdue unveiled [a plan](#) that emphasizes increased collaboration with states, implementation of mapping and remote sensing tools, and management practices such as prescribed burns and timber sales, Pro's Liz Crampton [reports](#). Though Perdue brushed aside specific questions on climate change's role, he said Interior Secretary Ryan Zinke is on board with the plan and noted further details and costs will be forthcoming from the U.S. Forest Service. "Really a lot of people ... when you talk about climate change, they want to talk about what the causes are," Perdue said. "[What] we're trying to talk about is the impact."

FERC RESTARTS PART OF PIPELINE: FERC modified a stop work order for the Mountain Valley Pipeline this week, allowing construction to restart for around 77 miles of the pipeline's West Virginia route with the exception of a 7-mile area surrounding the Weston and Gauley Bridge Turnpike Bridge Trail, MVP said Thursday. However, the company said about half of its construction workforce has been released due to continued delays. MVP said that it "remains committed to the earliest possible in-service date," though it noted that is now expected to arrive during the fourth quarter of 2019.

GREENS CALL FOR FERC REVIEW: The Southern Environmental Law Center and Appalachian Mountain Advocates [petitioned](#) the 4th U.S. Circuit Court of Appeals on Thursday to review FERC's approval of the Atlantic Coast Pipeline. The suit was filed on behalf of 13 other conservation groups. "FERC ordered the ACP construction stopped because the 4th Circuit determined that permits were issued without proper scrutiny," SELC attorney Greg Buppert said in a statement. "On the very same day, FERC rejected a rehearing request in which the conservation groups asserted that it also rushed through its decision to permit a pipeline that we don't need." The 4th Circuit last week vacated two permits issued for the project by the U.S. Fish and Wildlife Service and the National Park Service.

GREENS FILE FOIA SUIT: Environmental group Friends of the Earth filed a [lawsuit](#) Thursday against the Interior Department for lack of response to a Freedom of Information Act request. The lawsuit seeks to compel DOI to produce documents related to senior members of the department and the industries they regulate. The suit points to David Bernhardt's work as a lawyer and lobbyist for oil and gas companies and Vincent DeVito's time working as an energy industry representative. Friends of the Earth is being represented by the law firm Meyer Glitzenstein & Eubanks LLP.

AD-ING IT UP: Ahead of Wyoming's gubernatorial primaries Tuesday, a partnership between the Wyoming Wildlife Federation and Rocky Mountain Farmers Union, dubbed the Wyoming Conservation Legacy, will launch a five-figure ad campaign asking candidates to support conservation. The campaign will begin on Saturday and run through Aug. 21 with full-page print ads in the Casper Star Tribune and the Wyoming Tribune Eagle, separate radio buys on Wyoming Public Media programs, and digital ads across the state. See the ads [here](#).

MAIL CALL! ON THE FARM: The National Biodiesel Board sent [a letter](#) to farm bill conference committee lawmakers reiterating its support for the inclusion of biodiesel programs in the five-year bill.

STAR-STUDED SUMMIT: Attendees of the [Global Climate Action Summit](#) in San Francisco in September will hear from former White House officials, including former Vice President Al Gore and Secretary of State John Kerry. The summit announced Thursday night that new delegates will join the event, including Executive Secretary of the United Nations Framework Convention on Climate Change Patricia Espinosa and U.N. Special Envoy for Climate Action Michael Bloomberg. Actor Alec Baldwin and chimpanzee expert Jane Goodall will also attend.

GO NUCLEAR: The American Nuclear Society this week launched a nuclear science educational program for middle schoolers that covers topics like fission and fusion, and detecting radiation. The "[Navigating Nuclear](#):"

Energizing Our World" program is aligned with the Next Generation Science Standards framework, which provides an evidence-based foundation for scientific research.

MOVER, SHAKERS: Jack Cramton, policy adviser for Sen. Bill Cassidy (R-La.), will start Monday as a legislative affairs adviser at the Department of Energy's Congressional and Intergovernmental Affairs Office.

Judge restores WOTUS rule in 26 states Back

By Alex Guillén | 08/16/2018 03:20 PM EDT

A federal judge today ruled that the Trump administration violated administrative legal requirements when it delayed the start of the Obama administration's Waters of the U.S. rule by two years — a move that means the rule will now go into effect for about half the country.

The judge said EPA and the Army Corps of Engineers had unlawfully declined to consider any comments addressing substantive issues related to WOTUS or an earlier 1982 version when it proposed delaying the rule to give the agencies more time to repeal and replace it.

That was a fatal flaw, ruled Judge David Norton of the U.S. District Court for South Carolina, a George H.W. Bush appointee. Delaying the WOTUS rule has the effect of reverting to the 1982 rule, he wrote.

Norton's injunction means the Obama-era rule will take effect in 26 states. The other 24 are covered by two different injunctions, one issued to 13 states in 2013 and one issued to another 11 states in June.

However, WOTUS may be blocked nationwide again if the rule's opponents get their way. In another WOTUS lawsuit in a federal court in Texas, three states in February asked for a nationwide injunction of WOTUS. That court has yet to decide on the matter.

WHAT'S NEXT: The Trump administration is working to finalize its repeal of the Obama WOTUS rule. And EPA and the Corps are expected to propose a replacement rule in the near future.

Montana ruling could set back Keystone XL for months [Back](#)

By Ben Lefebvre | 08/16/2018 04:37 PM EDT

The fight over the Keystone XL pipeline isn't over yet.

District Court Judge Brian Morris' partial order that the State Department must conduct a supplemental environmental review to account for the pipeline's new path through Nebraska is another setback for developer TransCanada that's likely to delay construction of the nearly decade-old project by at least several months.

The order was a response to Nebraska regulators' approval in November 2017 of a route for the 830,000 barrel-a-day pipeline through the state that TransCanada had not proposed. The original environmental assessment the Trump administration used to approve Keystone XL earlier that year — a review conducted during the Obama administration — only considered a different route that TransCanada had planned for the pipeline.

The new route through Nebraska would cross through five counties that weren't included in the State Department's original environmental review, Morris noted in his order, meaning it would cross different waterways and require an additional pump station, .

Pipeline opponents say they hope to use Wednesday's ruling to push for a new broader study of the project.

Doug Hayes, a lawyer for the Sierra Club, one of the plaintiffs in the case, told POLITICO that Judge Morris' statement in his ruling that the "entire pipeline remains interrelated and requires one [environmental review] to understand the functioning of the entire unit" could open the door for them to seek a new review for the pipeline's entire route through the U.S.

"If they are going back to do a supplemental environmental impact statement, our position is they would need to evaluate all the new impacts of the pipeline," Hayes said. "That would take definitely months."

Jane Kleeb, who has long fought the pipeline and is now chairwoman of the Nebraska Democratic Party, said she thought process would drag out even longer.

"We think it buys us a year," she told POLITICO. "We just think there's a lot of significant hurdles in front of them."

Plaintiffs in the case said a new review would entail holding public hearings in Nebraska and consulting with Native American tribes whose land the pipeline would traverse.

Environmental groups have argued the pipeline posed a special risk because of the nature of the heavy oil it would transport, and that it would increase global carbon emissions. The Obama administration quashed the project in 2015, only to see their decision reversed when President Donald Trump took office a year and a half later.

A TransCanada spokesman declined to comment pending the company's review of the judge's decision.

Russ Girling, the company's chief executive officer, said during a call with investors earlier this month that the company hoped to make a final decision on whether to build the pipeline later this year or in early 2019. If approved, construction could start during the first quarter of 2019, Girling added.

A State Department official was not immediately available to comment.

Keystone XL also faces a test in Nebraska Supreme Court, where a lawsuit filed by environmental groups and state landowners challenges Nebraska regulators' approval of a route that TransCanada never formally requested. Hearings in that case are expected to start in October.

TransCanada is also waiting for several permits from federal agencies. Interior's Bureau of Land Management must issue right-of-way permits to cross federal land in Montana, and the Army Corp of Engineers must approve the pipeline's path over several waterways across the country.

Sources: DOE's McNamee to get FERC nod [Back](#)

By Eric Wolff and Darius Dixon | 08/08/2018 04:07 PM EDT

The White House plans to nominate Energy Department official Bernard McNamee to fill the FERC leadership seat being vacated by departing Commissioner Rob Powelson, three sources familiar with discussions tell POLITICO.

McNamee helped roll out Energy Secretary Rick Perry's proposal last year to save struggling coal and nuclear power plants — an issue that sources have said served as a key litmus test for Trump administration officials evaluating a replacement for Powelson, who is [set to resign](#) Friday.

FERC in January unanimously voted down that plan, which sought to create special payments for power plants capable of holding 90 days of fuel on-site. But the administration has been considering additional options such as invoking rarely used emergency powers to force power plants to run, which would potentially give McNamee a chance to provide the pivotal vote on the subsequent rates and rules as a commissioner.

It is unclear when President Donald Trump would formally nominate McNamee, and the vetting process still seems to be underway. It would likely take the Senate several months to confirm him, a process that would start with hearings at the Energy and Natural Resources Committee.

Neither the White House nor DOE immediately responded to requests for comment Wednesday.

McNamee, who runs the DOE's Office of Policy, has been in and out of the agency under Trump. He was deputy general counsel for energy policy last year when he worked on Perry's ill-fated proposal to FERC. In February, he left DOE for a senior post with the Texas Public Policy Foundation, a conservative think tank [with ties to Perry](#), before returning to DOE in May.

Before joining the Trump administration, McNamee previously worked at McGuireWoods, as chief of staff to Texas Attorney General Ken Paxton and as an aide to Sen. [Ted Cruz](#) (R-Texas).

Murkowski: Next FERC nominee should be free of litmus tests [Back](#)

By Darius Dixon | 08/16/2018 05:38 PM EDT

Alaska GOP Sen. [Lisa Murkowski](#) today declined to comment on POLITICO's [report](#) that DOE's Bernard McNamee would be nominated to FERC, but said she believes that the next nominee shouldn't face a litmus test over their view of the Trump administration's efforts to prop up coal and nuclear power plants.

"I worry that this is going to be viewed as 'If you don't commit to voting against or voting for, then you're not going to have my support,'" Murkowski, who chairs the Senate Energy and Natural Resources Committee, told POLITICO, referring to the administration's efforts to stave off coal retirements by potentially issuing emergency orders. "That's not the way that we should be selecting commissioners for the FERC."

Trump will want someone fairly aligned with the administration, she said, though she added that FERC came to the "right decision" in rejecting the Energy Department's controversial push to create special market payments for coal and nuclear plants last year. Still, she hoped that FERC's independence would be respected and that Democrats won't be reflexively opposed to the White House nominee in the way that they have been for Supreme Court nominee Brett Kavanaugh.

"A seat on the FERC is different than being a deputy secretary of Energy or Labor or whatever. Again, this is an independent regulatory agency that has a very different mission," she said. "The mission is not whatever the White House says it is. It is a very specific, statutory mission and so you want somebody who is going to be true to that. My hope is that the White House picks somebody who can demonstrate that they will be true to that."

USDA unveils plan for fighting wildfires [Back](#)

By Liz Crampton | 08/16/2018 03:00 PM EDT

USDA said today it's embarking on a new, aggressive approach to combat wildfires by taking preventative steps like working more with states and upping use of forest management tools.

Department officials at a press conference unveiled a 22-page plan that emphasizes increased collaboration with states, implementation of mapping and remote sensing tools, and management practices such as prescribed burns and timber sales.

Further details and costs of the initiative will be forthcoming after the U.S. Forest Service and other agencies hold discussions with state partners, USDA Secretary Sonny Perdue said. He added that Interior Secretary Ryan Zinke is on board, although he was not in attendance.

The plan comes as the West is enduring yet another brutal wildfire season after 2017 ranked as the most expensive year for wildfires. Federal agencies last year spent \$2.9 billion to suppress wildfires across the country, according to USDA.

"Today to truly protect our forest and communities, we must increase the size of our projects and access larger landscapes across boundaries," Perdue said. "Frankly we cannot do it ourselves. It's got to be done in the shared stewardship of state and local communities."

Perdue was joined by interim Chief of the U.S. Forest Service Vicki Christiansen and Sens. [Maria Cantwell](#) (D-Wash.), [Lisa Murkowski](#) (R-Alaska), [Ron Wyden](#) (D-Ore.) and [Steve Daines](#) (D-Mont.).

Highlights

LEADING THE NEWS

'No Planet B,' Macron Tells Congress, Defending Climate Deal

By Dean Scott

French President Emmanuel Macron urged Congress April 25 to reconsider having the U.S. walk away from the Paris climate pact and work with other nations to build a low-carbon economy.

EPA Plan to Limit Science Use May Undercut Air, Climate Programs

By Jennifer Lu and Abby Smith

New EPA plans to limit "secret science" in policy making could unravel the agency's decades-old approach to crafting environmental protections, both supporters and critics of the proposal said.

TODAY'S NEWS

House Takes Up Fish, Science, Pacific Northwest Electricity Bill

By Alan Kovski

House lawmakers are scheduled to vote April 25 whether to override a federal judge's opinion on protections for salmon and steelhead fish at hydroelectric dams on the Columbia River system in Washington state.

Fight Grows Over Who Owns Real Estate Drowned by Climate Change

By Christopher Flavelle

As seas rise and coasts wash away, who owns the land that goes underwater? A debate on that issue is taking place in courtrooms, legislatures, and government offices, raising the question of whether and when climate change justifies seizing private property. The stakes are enormous, affecting not just ownership of offshore mineral and fishing rights but also potentially trillions of dollars of coastal real estate.

Williams Companies to Try Again for New York's Pipeline Approval

By Gerald B. Silverman

The Williams Companies Inc. will press forward to get New York approval of an expansion of its Transco natural gas pipeline through three states, despite a permitting setback from state environmental regulators.

PG&E, Edison Could Gain Shield from Some Wildfire Liability in California

By Mark Chediak

Utility giants PG&E Corp. and Edison International could gain at least some protection against future wildfire damages under a bill that's advancing in California's legislature.

Congress to Seek VW Chief's Testimony in New Cheating Probe (Corrected)

By Ari Natter and Ryan Beene

A U.S. House committee has begun investigating allegations of overseas emissions cheating by Volkswagen AG and seeks testimony from the automaker's chief executive officer Herbert Diess.

Bosch Says Breakthrough Can Save Diesel Engines

By Christoph Rauwald

Robert Bosch GmbH said its engineers have developed a new diesel-exhaust system that cuts emissions far below legal limits taking effect in 2020 and can help automakers avoid potential driving bans in Europe that threaten to doom the engine technology.

Air Pollution Monitors, Not Tighter Rules, Next Step for Indian Cities

By Madhur Singh

India wants to extend air quality monitoring to 100 of its cities, but industrial polluters needn't worry about tighter regulations. At least not yet.

Asia-Pacific Fight for Forests Hitting Fiscal Realities

By Murray Griffin

Asia-Pacific countries see efforts to reduce deforestation and forest degradation as crucial to meeting their climate goals, but still lack the money needed to adequately address the issue, a top official from Fiji said.

Ruling Tosses Green Group Claims Over N.M. Fracking

By Steven M. Sellers

Proposed fracking wells in New Mexico's San Juan Basin, one the largest oil and gas fields in the U.S., may proceed because the U.S. Bureau of Land Management followed federal requirements in assessing and issuing permits for those wells, a federal court in New Mexico ruled.

Federal Circuit Reignites Oil Drilling Equipment Case

By Brian Flood

Imports of oil drilling equipment partially made in China were improperly exempted from anti-dumping and anti-subsidy duties, a Federal Circuit Court of Appeals panel ruled.

TUESDAY NIGHT WRAPUP

Retailers' Costs May Rise Under California Pesticide Label Proposal

By Ayanna Alexander

Retailers could face increased costs from lawsuits if California revises pesticide labeling requirements, an industry group said.

EPA's Ethanol Waivers Reduced Sales, Biofuel Group's Study Says

By Mario Parker

The EPA's hardship exemptions for small refiners "effectively erased" at least 1.6 billion gallons of federally mandated biofuel demand, according to an analysis by the Renewable Fuels Association.

MarkWest Agrees to Spend \$5.6M to Settle Clean Air Act Claims

By Leslie A. Pappas

Two MarkWest Energy Partners LP subsidiaries will pay more than \$5.6 million and cut annual emissions by more than 700 tons to settle allegations of Clean Air Act violations in Pennsylvania and Ohio.

Canada Pushes for Caribou Protection as Alaska Prepares to Drill

By James Munson

Canada will urge the U.S. not to allow oil and gas drilling where Alaskan caribou give birth, during a study of the environmental impacts of new petroleum development.

Divest Automakers That Relax Fuel Standards: California Democrats

By Kate Smith

A group of congressional Democrats representing California urged the state's pension system to divest from any car manufacturer that follows the Trump administration's plan to relax emission standards.

Brazil Lawsuit Seeks to Suspend Sale of Genetically Modified Seeds

By Michael Kepp

Brazil has moved to suspend the sale of three of its most widely planted, genetically modified seeds as scientists evaluate the toxicity of the herbicide that they are bioengineered to resist.

Subject: LRM [HWM-115-162] DUE 05/31 @ 12:00 PM OMB Questions for the Record on Examining the Office of Information and Regulatory Affairs' Role in Reviewing Agency Rulemaking

DEADLINE: 12:00 PM Thursday, May 31, 2018

Attached please find draft QFRs from OMB (Rao) from a Thursday, April 12th hearing entitled "Examining the Office of Information and Regulatory Affairs' Role in Reviewing Agency Rulemaking" before the HSGAC subcommittee on Regulatory Affairs and Federal Management. OMB testimony for the hearing was cleared under LRM SS-115-113.

Among other topics, the QFRs discuss recent regulatory actions by EPA and OIRA input on those actions; a DOL proposed rule; deregulatory actions related to tax regulations; Executive Order 13771; and race and ethnicity standards for Federal information collections.

Please review the draft 16-page QFRs and respond by the deadline.

Subject: Morning Energy: Interior rejected staff advice on casino, docs show — Pruitt's science directive slowed by industry concerns — Francis Brooke: Rookie of the year

By Kelsey Tamborrino | 04/20/2018 05:43 AM EDT

With help from Anthony Adragna

YOU NEVER KNOW WHAT YOU'RE GONNA GET: Interior officials reversed course on plans from two American Indian tribes to build a casino last year, new documents show. The heavily redacted documents released via FOIA show officials rejected recommendations from federal experts on Indian gaming, Pro's Nick Juliano reports, raising further questions about whether Interior Secretary Ryan Zinke and his political appointees caved to lobbying pressure from MGM Resorts International.

The tribes' treatment is now the subject of an Interior inspector general investigation, a spokeswoman told Nick. And while the documents don't reveal the contents of the internal deliberations by the staff of the Bureau of Indian Affairs' Office of Indian Gaming, they do show that the career staffers were circulating what they labeled as "approval" letters just 48 hours before their bosses refused to either OK or reject the tribes' application, leaving the casino in legal limbo.

No direct effort by MGM to lobby experts in BIA's Indian gaming office can be seen in the docs, but they show a timeline that indicates Interior officials closest to gaming issues were ready to side with the tribes after about six weeks of internal review. The department arrived at the opposite conclusion less than 48 hours after their recommendations went to Associate Deputy Secretary James Cason, a veteran of three Republican administrations, who was one of President Donald Trump's first hires at the department.

The emails also indicate even Interior career staff were unsure how they would explain the sudden about-face from higher-ups. "As for why we didn't approve the Mohegan compact amendment, you say the letter speaks for itself," Troy Woodward, a senior policy adviser in the Office of Indian Gaming, wrote to a colleague who wondered how he should answer questions. And "like Forrest Gump, say: 'that's all I've got to say about that.'" Read more.

WELCOME TO FRIDAY! I'm your host Kelsey Tamborrino, and NRECA's Kirk Johnson knew all the states with just one representative in the House: Alaska, Delaware, North Dakota, South Dakota, Montana, Vermont and Wyoming. For today: Who was the Senate majority leader whose father served as chief justice? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

POLITICO Space is our new weekly briefing on the policies and personalities shaping the second space age. Sign up today.

CONCERN ON ALL FRONTS: Scientists aren't the only ones expressing concern with EPA Administrator Scott Pruitt's plans to revise how the agency considers outside research, emails show. As the administrator weighs next steps on a scientific transparency directive announced earlier this year — which is expected to require that the raw data for all studies be publicly available and peer-reviewed — members of Pruitt's staff expressed concern it could block their own use of industry data, Pro's Annie Snider reports.

Emails between EPA officials obtained by the Union of Concerned Scientists show that Nancy Beck, the top political official in the agency's chemicals office, voiced concerns after she received a draft of the not-yet-released policy on Jan. 31. The directive in question has origins in legislation introduced by Rep. Lamar Smith during the Obama administration, but its requirements would exclude a great deal of data about pesticides and toxic chemicals that Beck's office considers when determining whether a substance is safe or must be restricted. "These data will be extremely valuable, extremely high quality, and NOT published," Beck wrote in an email to an official in EPA's office of research and development. "The directive needs to be revised." Read more here.

THE ROOKIE: The energy industry is unsure what to make of the relatively unknown Francis Brooke, who will soon replace Mike Catanzaro as the top White House energy aide. A 28-year-old former baseball pitcher, Brooke spent the last year in Vice President Mike Pence's office serving in a junior role to Catanzaro and George David Banks. But Pro's Ben Lefebvre and Eric Wolff report energy lobbyists worry his promotion could leave them without steady hands to steer the White House as big decisions on the coal industry, biofuels and energy trade pile up — especially in the crucial run-up to the midterm elections. "It shows you this administration doesn't care about these issues," said one lobbyist who works extensively with the administration on energy policy. "I expect agencies are now going to have to play a bigger role. There's not going to be a lot of policy issues that will be determined over the next eight months or so." Read more.

WHAT'S THE HOLD UP? House Natural Resources Chairman Rob Bishop says a comprehensive GOP energy bill is "being held up" until the Pentagon weighs how offshore drilling near Florida could affect national security, following backlash from the offshore proposal that led two Florida Republicans to pursue a permanent moratorium. A pending energy bill, H.R. 4239 (115), is one potential vehicle to extend that moratorium. Bishop told Anthony he is waiting for a Defense Department report on how expanded drilling near Florida would affect "mission compatibility." A committee spokeswoman said the results of the study would help determine next steps on the moratorium.

— **On the anniversary of the Deepwater Horizon oil spill**, New Jersey Gov. Phil Murphy is expected to sign into law today a bill that bans offshore drilling in state waters. The Center for American Progress, in anticipation of the legislation, cheered the move. Florida Sen. Bill Nelson, meanwhile, marked the anniversary by joining legislation Thursday intended to block the oil industry from rolling back Interior drilling safety rules adopted in response to the spill.

TRAVEL COMPANIONS: In preparation for a planned trip that was later canceled because of Hurricane Harvey, Pruitt spent nearly \$45,000 to fly five people to Australia, according to Reuters. While not a violation of government policy, Reuters reports two of Pruitt's aides and three security agents flew on business-class tickets costing roughly \$9,000 to set up advance meetings for the administrator. Pruitt was scheduled to participate in environment-related meetings with Australian officials.

Agency officials did not dispute the figures. EPA spokesman Jahan Wilcox told Reuters Hurricane Harvey, which caused major flooding in Texas, caused him to cancel the trip and instead go to Corpus Christi to assess the agency's relief efforts. "This is not news," he said, adding Pruitt's team was "adhering to the federal government's travel policy."

WHAT ABOUT HIS EMAILS? EPA told Senate Environment and Public Works Chairman John Barrasso that all of Pruitt's four emails were searched whenever there was a FOIA records request, but that a "full review" is being conducted just to make sure. "As long as EPA Administrators have had secondary email accounts, EPA staff have routinely searched requested accounts in response to FOIA and Congressional inquiries," Steve Fine, EPA's deputy chief information officer, wrote in a letter released by Barrasso.

DEMS WADE INTO WEST VIRGINIA PRIMARY: Republicans aren't the only ones trying to meddle in West Virginia's Senate primary. National Democrats are also jumping into the game, POLITICO's Alex Isenstadt reports, with an effort launched Thursday that could be designed to help coal baron Don Blankenship

win the Republican nomination. Washington-based super PAC Duty and Country has begun airing ads hitting the other two GOP contenders in the field: Rep. [Evan Jenkins](#) and state Attorney General Patrick Morrisey, ahead of the state's May 8 primary. But Blankenship was notably omitted from their target list, Alex writes. [Read more.](#)

— **Fox News Channel announced Thursday** its "America's Election Headquarters 2018" midterm election series would kick-off in West Virginia, with a GOP Senate primary debate on May 1. Candidates will need to reach a 10 percent threshold in a Fox poll next week to be invited to the debate.

ABOUT THAT CRA THREAT: Sen. [Lisa Murkowski](#) doesn't sound super gung-ho about using the Congressional Review Act on a 2016 plan from the Bureau of Land Management (that GAO [concluded](#) last year met the definition of a federal rule). "Obviously, we've got some issues that need to be resolved in the Tongass and whether this is the best way to do it is something we've been analyzing," she told reporters. Of course, floor time in the Senate is a valuable commodity so carving out time for the Alaska-centric issue may be a heavier lift. [Background here](#) on the Senate Republicans' new novel push to undo federal rules.

IT'S ALMOST EARTH DAY: Sunday marks Earth Day, where the Earth Day Network is using the date to promote its goal of [ending plastic pollution](#). The organization says more than 1 billion people from 192 countries will take part in the event on April 22. For its part, EPA promotes a list of Earth Day events [here](#).

CFA FLAGS FUNDRAISER AT PRUITT CONDO: Washington-based watchdog group Campaign for Accountability filed a complaint Thursday with the FEC against GOP Sen. [Mike Crapo](#) and Vicki Hart, the lobbyist co-owner of the controversial condo where Pruitt lived. The complaint alleges Crapo and Hart violated the Federal Election Campaign Act and FEC regulations when they failed to disclose improper in-kind contributions. [Read it here.](#)

GOING PUBLIC: The Sierra Club filed a lawsuit for documents related to EPA's Office of Public Affairs after EPA failed to respond to its FOIA requests concerning whether the agency improperly — and potentially illegally — used the Office of Public Affairs' staff time to promote topics outside the scope of the office. [Read it here.](#)

MAIL CALL! BIRD IS THE WORD: Sixty-two Democrats, led by Rep. [Alan Lowenthal](#), sent a letter to Zinke on Thursday regarding Interior's interpretation of the Migratory Bird Treaty Act. "We ask that you continue to enforce this foundational bird conservation law as every administration from across the political spectrum has done for more than forty years," the [letter](#) says.

— **Thirty-one outdoor businesses** will send [this letter](#) to Zinke today, calling on DOI to acknowledge the role of the outdoor recreation industry in its proposal to reverse the Methane Waste Prevention Rule. They request best practices are implemented to improve air quality in oil fields across the country, among other issues.

SPEAKING OF METHANE: Earlier this week BP released its "[advancing the energy transition](#)" report, [committing](#) to near-term carbon reductions and setting a target methane intensity of 0.2 percent and holding it below 0.3 percent. The Environmental Defense Fund [highlights](#) the report Thursday in a post arguing on the next frontier of methane targets, as annual shareholder resolution meetings are on the horizon.

SOLAR BILL SPOTLIGHT: Democratic Rep. [Jacky Rosen](#) introduced the bipartisan "Protecting American Solar Jobs Act," [H.R. 5571 \(115\)](#) this week, which would repeal tariffs introduced by the Trump administration on imported solar panels. It would undo increases in duty and a tariff-rate quota on certain crystalline silicon photovoltaic cells.

Stories from POLITICO Pro

Zinke's agency held up Indians' casino after MGM lobbying [Back](#)

By Nick Juliano | 02/01/2018 05:00 AM EDT

Two casino-owning American Indian tribes are accusing Interior Secretary Ryan Zinke of illegally blocking their plans to expand operations in Connecticut — a delay that stands to benefit politically connected gambling giant MGM Resorts International.

The Interior Department's refusal to sign off on the tribes' plans for a third Connecticut casino came after Zinke and other senior department officials held numerous meetings and phone calls with MGM lobbyists and the company's Republican supporters in Congress, according to a POLITICO review of Zinke's schedule, lobbying registrations and other documents. The documents don't indicate whether they discussed the tribes' casino project.

Federal law gives Interior just 45 days to issue a yes-or-no verdict after a tribe submits proposed changes to its gaming compact with a state, as the Mohegan and Mashantucket Pequot tribes note in a suit they filed against Zinke and the department. But the department declined to make any decision in this case, an inaction that raises questions about whether an intensive lobbying campaign by one of the gambling industry's biggest players muscled aside the interests of both the tribes and the state of Connecticut.

"I think the Department of Interior has been derelict in failing to give approval" to the tribes' request, Sen. Richard Blumenthal (D-Conn.) told POLITICO. "We asked for a meeting, but they were unresponsive. They never even responded."

Meanwhile, MGM and its allies had direct access to Interior. Zinke had multiple conversations last year with Sen. Dean Heller and Rep. Mark Amodei — two Nevada Republicans whose state is a major center of employment for MGM, and who have each tried to impede the tribes' casino plans. The company also doubled its lobbying spending and assembled a team that includes Bush-era Interior Secretary Gale Norton and Florida-based Trump fundraiser Brian Ballard.

The proposed Connecticut casino would sit on non-tribal land just across the border from a billion-dollar casino that MGM is planning in Springfield, Massachusetts. The Pequot tribe's Foxwoods Casino in Connecticut previously provoked the ire of former New Jersey casino owner Donald Trump, who complained during a 1993 congressional hearing that "they don't look like Indians to me."

An Interior spokeswoman did not respond to requests for comment, but the department is due to respond by next week to the suit the tribes filed in November. MGM has sought to join the suit on Interior's side.

MGM and its supporters say the tribes are trying to circumvent restrictions on "off-reservation" gambling while still maintaining their exclusive access to Connecticut's lucrative casino market, and that the new property would provide unfair competition to its Springfield project.

Interior officials sent the tribes encouraging signals as recently as May. But by mid-September the department reversed course, saying it would be premature to either approve or reject the plans.

"It's 100 percent about delaying us for as long as they possibly can," said Andrew Doba, a spokesman for the joint enterprise the tribes created for their new project.

The case is far from the first legal dispute to arise from Interior's role as the overseer of Indian tribes' gambling agreements with the states. Clinton-era Secretary Bruce Babbitt faced a special prosecutors' investigation after Interior rejected three Wisconsin tribes' plans for a casino that other, Democrat-supporting tribes opposed — though he ultimately was cleared. Indian gambling also played a key role in the George W. Bush-era Jack Abramoff scandal.

In the Connecticut case, the tribes have been operating two casinos — the Pequot tribe's Foxwoods and the Mohegan Sun — since the early 1990s. Their success in the market between Boston and New York provided competition to casinos in Atlantic City, including the formerly Trump-owned Taj Mahal.

As gambling spread across the U.S. in recent decades, MGM and other casino developers — including Trump — pursued projects in Connecticut but were ultimately unsuccessful. State law there limits casino ownership to the two in-state tribes and their new joint venture.

The tribes say they are fully complying with state law and the federal Indian Gaming Regulatory Act, which allows federally recognized tribes to operate casinos on their reservations or lands held in trust by the federal government. The casino they want to open is technically a commercial project that would be operated by MMCT Venture, a company jointly owned by the tribes that owns the casino site in East Windsor and entered into a development agreement with the town.

Connecticut Gov. Dannel Malloy and the state legislature signed off on that arrangement last year, so long as the tribes agreed to amend their gaming compacts that guaranteed a certain share of slot revenues would go to the state. The Indian Gaming Regulatory Act requires Interior to approve such compact amendments after a brief review window, unless the amendments violate the terms of the federal law.

The lawsuit seeks to force approval of the contract, arguing that the law does not allow Interior to refuse to render a verdict.

"IGRA and its implementing regulations leave the Secretary with no discretion to proceed in any other manner," Connecticut and the tribes argue in their lawsuit, filed in U.S. District Court for the District of Columbia on Nov. 29.

At one point, Interior seemed inclined to agree with the tribes' interpretation of the law. In a May 12 technical guidance letter to the tribes, Associate Deputy Interior Secretary James Cason acknowledged that the Indian Gaming Regulatory Act provides for a 45-day review period for compact amendments and that the department may disapprove them only for violating the act, other federal laws or trust obligations to the tribes.

While Cason stressed that his advice was nonbinding and did not constitute a preliminary decision, he endorsed earlier guidance from the Obama administration that the Connecticut amendment reflected the "unique circumstances" at play and that opening a new casino would not affect the tribes' exclusivity agreement with the state.

But the tribes' request drew opposition from out-of-state lawmakers like Heller and Amodei.

"Under that framework, the tribes seek to expand off-reservation gaming without going through the procedures mandated by" the Indian Gaming Regulatory Act, Amodei wrote in a July 28 letter to Cason, following up on a discussion earlier that day. Amodei asked whether Interior planned to allow the 45-day review period to lapse, which would allow the amendments to be "deemed approved."

Ultimately, Interior decided against approval. Acting Assistant Secretary for Indian Affairs Michael Black told the tribes in a Sept. 15 letter that approving or disapproving the amendment to their gaming compact was "premature and likely unnecessary," and said Interior had "insufficient information" to make a decision. However, he did not cite any legal justification for that move, nor did he outline what additional information the department would need.

Interior has on at least one occasion returned a gaming compact amendment rather than make a yes-or-no decision, although the circumstances were slightly different at the time. In 2013, the department told the Cheyenne-Arapaho tribes in Oklahoma that it could not process their amendments because of incomplete information. But in that case, the department replied in less than 30 days rather than wait for the entire review period to elapse, and it cited specific regulations and outlined what additional information it needed from the tribes.

Black copied Amodei and Heller on his letter but did not include any Connecticut lawmakers. (He did say a separate letter was going to Malloy, the Connecticut governor.) Zinke and Heller also spoke on the phone on Sept. 15, according to an entry on Zinke's calendar. And the day before Black sent the letter, Zinke and Cason were scheduled to meet at the White House with deputy chief of staff Rick Dearborn, although Zinke's calendar does not list the subject of the meeting.

Ahead of the decision, MGM "participated in Interior's review" through meetings and correspondence in which the company urged Interior to either return the amendments without making a decision or to disapprove them for violating the Indian Gaming Regulatory Act, according to a statement filed in court by Uri Clinton, MGM's senior vice president and legal counsel.

MGM brought on heavyweights including Norton — who disclosed her work for the company just last month — as well as Ballard, a lobbyist who has helped raise millions for Trump's campaign. MGM's spending on lobbyists for all issues more than doubled last year, to \$1.5 million spread across five outside firms and its own newly formed in-house team.

An affiliated company, MGM Public Policy LLC, also paid \$270,000 last year to hire a team of lobbyists from Brownstein Hyatt Farber Schreck LLP to work on issues including gaming. That's the firm at which Deputy Interior Secretary David Bernhardt worked until he joined the administration last year, though he has agreed to recuse himself from matters involving former clients of his firm without prior authorization.

"MGM Resorts last year established a public policy office in Washington to engage more directly on Federal legislative and policy issues," an MGM spokesman said in a statement. "Our advocacy activity reflected that increased engagement. As the largest employer in Nevada, part of that advocacy is routinely engaging our elected representatives."

Heller and Amodei each had multiple meetings and phone calls with Zinke last year, according to the secretary's calendar, although it's unclear whether they discussed the Connecticut casinos. On one occasion, Zinke joined Heller for dinner at a Las Vegas steakhouse on July 30, when he was in the state touring national monuments, one of several pieces of Interior's portfolio of interest to Nevada.

A Heller spokeswoman did not respond to a request for comment. But the senator has tried to advance MGM's interests in the past: In 2016, he offered an amendment to a defense bill that would have prevented Indian tribes from operating commercial casinos in the same state where they operate casinos on the reservation — precisely what the Connecticut tribes are trying to do. The amendment never came to a vote, and Heller does not appear to have ever discussed it publicly.

MGM employees and the company's political action committee have given \$96,000 this cycle to Heller's reelection campaign and leadership PAC, making the company his largest single source of contributions, according to the Center for Responsive Politics. Amodei has received no donations from company employees or its PAC.

Interior's Sept. 15 decision came two weeks after Zinke invited several lobbyists for MGM to join him and other guests for a social visit on his office balcony, which overlooks the National Mall. They included, according to Zinke's calendar, Ballard and other lobbyists from his firm Florida-based firm Ballard Partners, which opened its first Washington, D.C., office in 2017. Also present were Zinke's former family attorney and a major GOP fundraiser, according to copies of the secretary's calendar.

MGM hired Ballard in March and paid the firm \$270,000 last year, according to disclosure filings. Ballard was Florida finance chairman for Trump's 2016 campaign and helped organize a fundraiser at the Trump International Hotel in Washington last summer at which donors gave \$35,000 to attend or \$100,000 to join the host committee.

Ballard declined to discuss his work for MGM or any other client and said he could not recall the details of that particular meeting, which took place Aug. 29, according to Zinke's calendar. But Ballard said he had met Zinke and thinks "the world of him."

In October, MGM brought on Norton, who served as Interior secretary from 2001 to 2006, to lobby on issues related to the Connecticut tribes. Norton began lobbying for MGM on Oct. 25, according to disclosures filed Jan. 19.

The next day, Oct. 26, Interior officials spoke to the tribes and asked them to explain why the department was obligated to weigh in on their casino since it was being built by a commercial entity and not on tribal land.

In a brief interview last week, Norton said she did not know why her disclosure form was filed so late — lobbyists are required to file disclosures within 45 days — and she did not respond to follow-up inquiries.

Meanwhile, a new state legislative session begins in February in Connecticut. MGM plans to ask legislators there to allow an open bidding process for new casinos in the state, arguing that Interior's refusal to act shows that the state's attempt to limit casino ownership to the tribes would not work.

Interior rejected staff advice when scuttling tribes' casino, documents suggest [Back](#)

By Nick Juliano | 04/20/2018 05:02 AM EDT

Trump administration officials rejected recommendations from federal experts on Indian gaming policy when they blocked two American Indian tribes from opening a casino last year, documents obtained by POLITICO indicate.

The heavily blacked-out documents add to questions about whether Interior Secretary Ryan Zinke and his political appointees buckled to lobbying pressure from MGM Resorts International, a gambling industry giant that is planning its own casino just 12 miles from the project proposed by the Mohegan and Mashantucket Pequot tribes.

Interior's inspector general is investigating the department's handling of the tribes' casino application, a spokeswoman told POLITICO, after Connecticut lawmakers asked the internal watchdog to look into the matter.

The documents, released under the Freedom of Information Act, don't reveal the contents of the internal deliberations by the staff of the Bureau of Indian Affairs' Office of Indian Gaming. But they show that the career staffers were circulating what they labeled "approval" letters just 48 hours before their political bosses reversed course and refused to either OK or reject the tribes' application — a nondecision that left the Indians' East Windsor project in legal limbo.

To fight off the potential competition, MGM [spent heavily on lobbyists](#), including George W. Bush-era Interior Secretary Gale Norton and firms with ties to the Trump administration, while enlisting the assistance of friendly lawmakers such as Sen. [Dean Heller](#) and Rep. [Mark Amodei](#). MGM lobbyists and the two Nevada Republicans

held a handful of meetings and conversations with Associate Deputy Secretary James Cason in the months and days before he edited Interior's letter holding up the tribes' plans.

A spokesman for the tribes' casino project said they were caught off guard by Interior's about-face and are glad to see the department's internal watchdog probing the matter.

"We are grateful there's an IG investigation into this issue because since last fall, none of the department's actions have passed the smell test," said Andrew Doba, a spokesman for MMCT Venture, the company the tribes formed to own and operate the new casino. "Something clearly happened to pollute the process, which should be problematic for an administration that promised to drain the swamp."

The tribes have also sued, arguing that Zinke ignored his responsibilities under the Indian Gaming Regulatory Act to either approve or reject their application in a timely manner and to act to protect the tribes' interests.

Cason and spokespeople for Interior and the Bureau of Indian Affairs did not respond to requests for comment this week.

But the emails show that even Interior's career staff was unsure how they would explain the sudden about-face.

"As for why we didn't approve the Mohegan compact amendment, you say the letter speaks for itself," Troy Woodward, a senior policy adviser in the Office of Indian Gaming, wrote in a [Sept. 26 email](#) to a colleague who anticipated having to answer questions about it at a gaming industry conference. And "like Forrest Gump, say: 'that's all I've got to say about that.'"

The dispute is complicated by the peculiarities of federal law on Indian gaming, which seeks to promote tribes' economic development but also discourages the spread of off-reservation gambling. The two Connecticut tribes, which already operate two lucrative casinos on their reservations, are exploring a gray area with their proposed third casino, which a jointly owned private company would operate on nonreservation land.

MGM, which plans to open a casino later this year in nearby Springfield, Mass., says the tribes' approach would set a worrisome precedent for other states.

"This is an unusual situation, and we're kind of pushing the bounds on IGRA," says Kathryn Rand, dean of the University of North Dakota School of Law and a co-director of its Institute for the Study of Tribal Gaming Law and Policy. Rand is not affiliated with MGM or the Connecticut tribes.

The newly released documents do not show any effort by MGM to make its case to experts in BIA's Indian gaming office. They also indicate that Interior officials closest to Indian gaming issues were ready to side with the tribes after about six weeks of internal review.

Instead, Interior reversed course with little official explanation less than 48 hours after their recommendations went to Cason, a veteran of the previous three Republican administrations who was one of President Donald Trump's first hires at the department.

On Sept. 11, Woodward [emailed](#) around copies of "the edited letters for Pequot and Mohegan," which he said had "been through the surname process," a system for internal review. The contents of the letters were redacted, but each was about two pages long, and file names referred to both as "draft approval" letters.

The following day, Woodward alerted colleagues that "[Jim wants some changes](#)," referring to Cason. But on Sept. 13, Woodward still sent "approval" letters "for Mike Black's signature," referring to the then-acting

assistant secretary for Indian affairs, along with a notice the department was required to publish in the Federal Register. Again, the attachments were redacted, but each was two pages long.

A day later, "Jim's edits" came back, and the documents were no longer referred to as "approval" letters.

Instead, Black signed a one-page letter on Sept. 15 informing the tribes that it would be "premature and likely unnecessary" to weigh in on their gaming applications at all.

Returning the applications without approving or disapproving them appears to be an option Interior officials did not consider until earlier that day. A pair of redacted memos circulated that morning, including one "regarding Secretarial Authority to not act on a compact," according to its title.

It is unclear precisely what happened over those days, but by then Cason had received ample input from MGM and its allies. As early as June, Cason met with a senior adviser to Zinke and a lobbyist from Ballard Partners, a Trump-connected firm MGM hired last year, to discuss issues related to the company, according to his calendars. And he was in touch with MGM supporters several more times over the intervening months up to the days before Interior's response was being finished.

On Sept. 13, Cason met with Amodei, and the following day he had a teleconference with Heller, according to Cason's calendar. MGM is a major employer in Nevada, and both lawmakers had previously raised concerns about the Connecticut tribes' proposals and the potential expansion of off-reservation gambling.

Cason's Sept. 14 meeting with Heller included some officials who were working on the Connecticut case, according to his calendar and the BIA emails. Later that day, Cason joined Zinke at a meeting at the White House with Rick Dearborn, Trump's deputy chief of staff for policy.

The president has his own history of clashes with the Mashantucket Pequot, whose Foxwoods Casino competed with his Atlantic City properties to draw gamblers from New York City. "They don't look like Indians to me," Trump infamously declared in a 1993 congressional hearing.

Several weeks after Interior released its decision, Norton sent Zinke a 24-page memo outlining legal arguments in support of the decision on behalf of MGM. Among the evidence she cited was Trump's congressional testimony, though not that particular phrase.

"Supreme Court precedent and President Trump's testimony counsel against approving Connecticut's discriminatory framework, the sole function of which is to grant MMCT, a private corporation, a monopoly over commercial, off-reservation, state-regulated gaming," the former Interior secretary wrote in her Oct. 30 memo to Zinke.

Black's ambiguous Sept. 15 letter, which Cason had edited, left the tribes unable to proceed with their planned casino.

The tribes' lawsuit is pending in U.S. District Court for the District of Columbia, and MGM has asked to intervene in the case, although both Interior and the tribes say it does not have standing to do so.

The case hinges on dueling interpretations of the goals of the Indian gaming law — essentially, whether more weight should be given to IGRA's goal of supporting tribes' economic prospects or its prohibitions on off-reservation gaming in most circumstances.

In court filings, Interior has also stressed the importance of procedural differences between the two tribes' prior gaming agreements, which it says should prevent the Mashantucket Pequot from participating in the case at all.

While the Mohegan tribe was operating under a state gaming compact, the Mashantucket were never able to reach an agreement with Connecticut officials back in the 1980s — so Foxwoods has been operating under the terms of "secretarial procedures" authorized under a different section of the law.

The law says amendments to gaming compacts, such as the Mohegan's, must be approved within 45 days unless Interior can demonstrate that their terms violate federal law or the department's trust responsibilities to the tribe. But it contains no such deadline for secretarial procedures such as the Mashantucket Pequot's.

Interior and MGM say that because the department has no obligation to act on the Pequot's proposed amendment, the entire case is effectively moot. However, the newly disclosed emails suggest that career officials were aware of that distinction throughout their review and did not see it as a reason to deny the tribes' request.

Rand, the law school dean, said courts have not previously grappled with the issue. "That I think is a real interesting and open question that we wouldn't have a whole lot to go on," she said.

This case is also unusual because of the nature of the two tribes at issue and the lucrative market the two sides are battling over.

"That might be a bit implicit in MGM's arguments — that the Mohegans and the Pequots aren't acting like tribal governments in this enterprise, they're operating like competitors. And because of their status ... they don't need the protection that other tribes do," Rand said in an interview this week. "The counterargument, of course, is that tribal sovereignty doesn't depend on whether the tribe needs the federal government's help. Tribal sovereignty is just a fact."

Black's Sept. 15 letter also does not mention the procedural difference between the tribes as a factor in deciding to return the applications without acting on them.

EPA emails show industry worries slowed new science policy [Back](#)

By Annie Snider | 04/19/2018 05:01 PM EDT

EPA's rollout of a controversial new transparency policy that would severely restrict the scientific research the agency can rely on when drafting new regulations has been slowed down by political officials' fears that it could have major unintended consequences for chemical makers, according to newly released EPA documents.

The issue of scientific transparency has been high on the agenda of House Science Chairman Lamar Smith (R-Texas), who has found strong support from EPA Administrator Scott Pruitt — much to the consternation of public health advocates and green groups, who view the effort as backdoor attack on the agency's ability to enact environmental regulations.

Since Pruitt announced plans for the new policy last month, researchers and public health proponents have raised alarms that it could restrict the agency's ability to consider a broad swath of data about the effects of pollution on human health. But documents released under the Freedom of Information Act show that top EPA

officials are more worried the new restrictions would prevent the agency from considering industry studies that frequently support their efforts to justify less stringent regulations.

Emails between EPA officials obtained by the Union of Concerned Scientists show that Nancy Beck, the top political official in the agency's chemicals office who came to the agency after serving as a key expert for the chemical industry's lead lobbying group, voiced major concerns after she received a draft of the not-yet-released policy on Jan. 31.

The new scientific transparency directive is expected to require that the raw data for all studies EPA relies on be publicly available, and that the studies be peer-reviewed. But Beck said these requirements would exclude a great deal of industry data about pesticides and toxic chemicals that her office considers when determining whether a substance is safe or must be restricted.

It costs companies "millions of dollars to do these studies," Beck wrote in an email to Richard Yamada, the political official in EPA's office of research and development who is spearheading work on the new scientific policy and is also a former staffer for the House Science Committee chairman.

"These data will be extremely valuable, extremely high quality, and NOT published," Beck wrote. "The directive needs to be revised."

Moreover, much of this data, Beck noted, is considered proprietary by companies. It is dubbed confidential business information, and even though EPA can consider it as part of its regulatory review, the data cannot legally be made public.

Yamada replied to thank Beck for the heads up. "Yes, thanks this is helpful - didn't know about the intricacies of CBI," he wrote. "We will need to thread this one real tight!"

The term "confidential business information" primarily applies to industry information. That data is separate from the personal medical information that public health researchers worry could block consideration of their work.

Yogin Kothari, a lobbyist for the Union of Concerned Scientists, said the emails show the Trump administration's EPA has been "trying to stack the deck in favor of the industries they're supposed to be regulating."

"They want to potentially create exemptions for industry, but if you look at this entire set of documents ... you will see that there's not a single consideration for the impacts on public health data, on long-term health studies, on studies that EPA does after public health disasters like the BP oil spill," he said.

EPA spokeswoman Liz Bowman emphasized the policy is not yet finalized.

"These discussions are part of the deliberative process; the policy is still being developed. It's important to understand; however, that any standards for protecting [confidential business information] would be the same for all stakeholders," she said in a statement.

The emails indicate Pruitt wanted the new science policy rolled out at the end of February, and teased his plans in an interview with conservative outlet The Daily Caller in mid-March. But the agency has yet to finalize the policy.

The transparency directive has its origins in legislation introduced by Smith during the Obama administration, that had the backing of a number of industry groups, including the American Chemistry Council. The House

Science Committee chairman frequently charged that the Obama EPA used "secret science" to justify "costly new regulations."

Although versions of the measure were approved by the House multiple times, the Senate never took it up. CBO estimated that one version of Smith's legislation would cost EPA \$250 million a year, at least in the initial years, and a leaked staff response to questions from the budget office said a later version would be even more costly, would endanger confidential medical and business information, and "would prevent EPA from using the best available science."

But Smith found an ally in Pruitt. The emails indicate that Smith met with Pruitt in early January and show that Pruitt's staff quickly began working on a directive to "internally implement" the legislation.

Industry's backing for the new scientific approach began to waiver under the Trump administration, though. When a top American Chemistry Council scientist testified before Smith's committee in February 2017, she emphasized the need to protect industry information if the transparency initiative moved forward.

"One of the things that we do need to take into consideration as making that data publicly available is that there are adequate protections for confidential business information to ensure that we keep innovation and competitiveness available for the marketplace," Kimberly White told the committee.

Industry has historically claimed that a wide range of information about chemicals, ranging from the processes by which they are produced, to the locations of manufacturing plants, to their very identities, must be kept confidential in order to keep competitors from learning trade secrets. Environmental and public health advocates argue that industry claims this exemption in many cases where it's not necessary and that it often keeps important health and safety information from public view.

The issue was a key point of debate when Congress considered a major overhaul of the nation's primary chemical safety law passed 2016 and has reemerged as Pruitt's EPA sets about implementing the law.

Asked for comment on EPA's new effort to implement the scientific transparency approach internally, American Chemistry Council spokesman Scott Openshaw said the group looks forward to reviewing the directive once it's finalized.

"It is critical that any final directive properly protect confidential business information and competitive intelligence," he said in a statement.

The internal emails show that EPA political staff were particularly attuned to this concern. In a Feb. 23 email to colleagues, Beck forwarded language from a 2005 White House document that laid out narrow exemptions from its requirement that all "important scientific information" disseminated by the federal government go through peer review.

"[Y]ou may need to tweak but hopefully there is something helpful here that can be borrowed/adopted," she wrote.

Richard Denison, lead senior scientist for the Environmental Defense Fund, said that EPA's access to industry data is indeed important to its ability to review the safety of new chemicals and pesticides, but said the internal EPA communications show that Pruitt's EPA wants to "have their cake and eat it too" with the new directive.

"They're trying to force peer review studies done by academic scientists to disclose every last detail, while at the same time allowing industry studies to be kept private or aspects of those to still be kept private," he said.

He pointed out that the concerns Beck raised about the burden the new policy would place on industry are the very same ones that the CBO report said the policy would place on EPA.

Energy industry puzzles over new White House adviser [Back](#)

By Ben Lefebvre and Eric Wolff | 04/19/2018 07:14 PM EDT

The appointment of a 28-year-old former congressional staffer as the top White House energy aide left many industry lobbyists scratching their heads — and nervous that the new hire may have trouble filling the shoes of the more experienced adviser he's replacing.

The relatively unknown [Francis Brooke](#) will step into the role as replacement for Mike Catanzaro, who will exit the White House next week. Catanzaro and NSC energy adviser George David Banks, another energy adviser who departed earlier this year, have been the top two energy experts in the White House, and they'll take with them decades of experience.

Brooke spent the last year in Vice President Mike Pence's office serving in a junior role to Catanzaro and Banks. But energy lobbyists worry his elevation will leave them without steady hands in the White House just as the administration confronts big decisions on the coal industry, an intra-party biofuels fight and thorny energy trade issues. Putting a relative rookie into the role also shows that the administration may not devote as much attention to energy issues in the run-up to the 2018 elections, sources said.

"It shows you this administration doesn't care about these issues," said one lobbyist who works extensively with the administration on energy policy, but who requested anonymity to discuss people he expects to work with. "I expect agencies are now going to have to play a bigger role. There's not going to be a lot of policy issues that will be determined over the next eight months or so."

Brooke joins the White House with far less energy-sector experience than Banks and Catanzaro, who came to their jobs with long histories in industry and government. He started his career as an intern for Mick Mulvaney in October 2012 when the White House budget director was a South Carolina congressman. After that, he had stints as a staff assistant for Rep. [Andy Barr](#) (R-Ky.) and legislative aide for Senate Majority Leader [Mitch McConnell](#) (R-Ky.). Pence's office tapped him to be associate director of policy in February 2017.

His family was involved in international politics in the previous decade. His father, [Francis Brooke Sr.](#), helped foster the relationship between officials in the George W. Bush administration and Ahmed Chalabi, the controversial Iraqi exile who helped convince the U.S. to invade his country.

Pence's office confirmed Brooke's biographical information but did not offer further details about his time working with the vice president.

McConnell's office did not respond to questions about Brooke. A spokeswoman for Barr said Brooke had been "one of the Congressman's most trusted legislative assistants and handled a wide variety of issues including energy, environment, and health care."

Previous to that, Brooke's biggest notice came from pitching 97 innings in the 2012 season with Northwestern University, making 13 starts and ending with a 2.51 earned run average. He would later serve as a coach to the Republicans' congressional baseball team, and he was on the Arlington, Va., practice field when a gunman shot Rep. Steve Scalise of Louisiana.

Lobbyists say they worry that with the departures of Catanzaro and Banks, Brooke will not be able to help the White House navigate complex energy issues with technical details that can be headache-inducing.

"There is angst downtown that without Mike there, no one knows who is going to make the trains run on time," said Andeavor's Stephen Brown said before Brooke was officially named to the position. "Mike was always the adult in the room on energy issues with substantive knowledge, not just a political perspective."

Brooke, along with Wells Griffith, an Energy Department official on a three-month loan to the White House, will have almost no time to get acclimated to their jobs. The Department of Energy is grappling with whether to try to use emergency authority to keep economically distressed coal-fired power plants running. And the two new staffers may need to help Trump navigate the dispute between refiners seeking changes to the Renewable Fuel Standard and corn farmers who are counting on the president to live up to his promise to protect ethanol.

They will also have to cope with White House officials on trade issues, such as the steel tariffs that oil and gas companies have complained could hamper the construction of new pipelines.

But some current and former administration officials say they have confidence Brooke is up to the job. They say he worked closely with Banks and Catanzaro on all their key issues, including traveling with Banks to the U.N. climate conference at Bonn, Germany, as a key adviser.

"He knows all the players, he's been in all the meetings," said one administration source. "He has the right temperament, the right judgment. People get into these jobs and they use them for vanity tours. Brooke doesn't do that. He's going to be great."

Banks, who left the White House in February, agreed.

"I think that he's ready for the role," said Banks, former adviser to Trump on the NSC. "Francis has been deeply engaged in all of the major energy environment [initiatives]. Some people wouldn't have the experience he's had in working these issues for over a year in the White House. He's incredibly bright, disciplined person."

Critics of the administration's energy policy rollbacks hoped Brooke's lack of experience would depoliticize some of the big decisions before the administration.

"Of course it's weird that there's no senior person covering energy issues," said John Morton, former senior director for energy and climate change on the NSC during the Obama administration. "Though with this administration, it's often a blessing in disguise when a policy area gets neglected by Trump appointees, as it allows more talented career staff to manage affairs."

Bishop: Drilling moratorium holding up energy bill vote in House [Back](#)

By Anthony Adragna | 04/19/2018 05:32 PM EDT

House Natural Resources Chairman [Rob Bishop](#) says a wide-ranging GOP energy bill is "being held up" until the Pentagon weighs in on how offshore drilling near Florida could affect national security.

The Trump administration earlier this year proposed allowing drilling in the Eastern Gulf of Mexico after an existing moratorium expires in 2022. Although Interior Secretary Ryan Zinke [quickly backed away](#) from the idea, the resulting firestorm led two Florida Republicans to pursue [a permanent moratorium](#), which they said has the backing of Speaker [Paul Ryan](#).

A pending energy bill, [H.R. 4239 \(115\)](#), is one potential vehicle to extend the moratorium. But Bishop, a strong supporter of the oil industry, did not include any limits on offshore drilling when the bill passed out of his committee last year.

The Utah Republican told POLITICO this week he is waiting for the Defense Department report on how expanded drilling near Florida would affect "mission compatibility." A committee spokeswoman said the report's findings would influence "how to move forward on a potential agreement regarding the future of the Eastern Gulf once the moratorium expires in 2022."

Oil and gas leasing within 125 miles off the Florida coastline and areas of the Gulf of Mexico is currently off limits until 2022.

Bishop said in the interview Wednesday that the absence of House Majority Whip [Steve Scalise \(R-La.\)](#), lead sponsor of the legislation, for surgery is an additional factor in getting the bill floor time.

WHAT'S NEXT: When the measure will get floor consideration remains unclear.

Report: EPA spent \$45,000 on Australia trip Pruitt canceled [Back](#)

By Emily Holden | 04/19/2018 05:34 PM EDT

Five EPA employees spent \$45,000 traveling to Australia last year to prepare for a trip by EPA Administrator Scott Pruitt that was ultimately canceled, Reuters [reported](#) today.

The two advance team aides and three security agents spent about \$9,000 each on business-class tickets to fly to Australia in August, an expense that is permitted under government rules on flights lasting 14 hours or more. The two EPA staffers were advance director Millan Hupp, the Oklahoma aide who followed Pruitt to Washington and has drawn scrutiny for receiving a large raise, and Kevin Chmielewski, the former deputy chief of staff for operations who was dismissed and is now acting as a whistleblower to lawmakers about Pruitt's spending habits.

Agency officials did not dispute the figures. EPA spokesman Jahan Wilcox said Pruitt did not go to Australia because of Hurricane Harvey. Pruitt traveled from his home in Tulsa, Okla. to Corpus Christi, Texas, to assess relief efforts on Aug. 30, according to his schedule and flight records.

Pruitt spent at least \$105,000 on first class flights and at least \$3 million on a round-the-clock [security detail](#). Records show about one-quarter of the \$120,000 costs for a trip to Italy in June for a G-7 environment meeting was to cover Pruitt's security. EPA's inspector general and various other government officials are investigating Pruitt's travel and spending.

Flight vouchers EPA has shared with lawmakers show Pruitt originally intended to travel to Sydney and Melbourne from Aug. 31 through Sept. 8 to "discuss best practices regarding the environmental operations" within the country.

EPA tells Barrasso all Pruitt's emails searched for FOIA [Back](#)

By Alex Guillén | 04/19/2018 05:24 PM EDT

EPA today told Senate Environment and Public Works Chairman [John Barrasso](#) (R-Wyo.) that all four of Administrator Scott Pruitt's emails were searched whenever there was a Freedom of Information Act records request, but that a "full review" is being conducted just to make sure.

"As long as EPA Administrators have had secondary email accounts, EPA staff have routinely searched requested accounts in response to FOIA and Congressional inquiries. That practice has not changed under Administrator Pruitt's leadership," Steve Fine, EPA's deputy chief information officer, wrote in a [letter](#) released today by Barrasso.

Fine added: "However, in response to your concern, my office is conducting a full review of the searches conducted regarding FOIA requests seeking Administrator Pruitt's records. If additional documents exist, we will contact the relevant requesters, and we will update you once our review is complete."

"I look forward to receiving the findings of the agency's full review that's being conducted in response to my letter," Barrasso said in a statement.

WHAT'S NEXT: Fine did not say how long EPA's review of FOIA request fulfillment will take.

Democrats meddle in West Virginia's GOP Senate primary [Back](#)

By Alex Isenstadt | 04/19/2018 04:23 PM EDT

National Democrats launched a campaign Thursday to intervene in the upcoming West Virginia Senate GOP primary — an effort that could be designed to help recently imprisoned coal baron Don Blankenship win the Republican nomination.

Duty and Country, a Washington-based Super PAC, began airing TV and web ads savaging the two mainstream Republican candidates, Rep. Evan Jenkins and state Attorney General Patrick Morrisey, who are competing in the May 8 primary. Left off the group's target list, however, was Blankenship, who spent one year in prison following the 2010 explosion at his Upper Big Branch Mine that killed 29 workers.

In propping up Blankenship, the Democratic Party is wading into an intensifying GOP civil war. Republicans are growing increasingly worried about Blankenship, who has been gaining traction in the primary. GOP officials in Washington are concerned that if Blankenship wins the nomination, he'll ruin the party's prospects of defeating Democratic Sen. Joe Manchin in November.

Last week, national Republicans launched a super PAC named Mountain Families PAC aimed at stopping Blankenship. The organization, which is staffed by consultants who've previously worked for a political group aligned with Senate Majority Leader Mitch McConnell, has begun airing TV commercials accusing Blankenship of contaminating drinking water by pumping toxic slurry while setting up a separate piping system to his mansion.

The Democratic group is spending over \$380,000 to air the commercials. One of the TV spots says that as the former head of West Virginia State Medical Association, Jenkins pushed doctors to use an insurance company that overcharged, allowing his organization to profit. Another ad describes Morrisey as a carpetbagger, calling him a "millionaire New Yorker and former lobbyist who came down here and ran for office with no idea of the real challenges West Virginians face."

The Democratic group has also begun sending out mailers describing Jenkins as "part of the swamp, part of the problem."

A Duty and Country spokesman, Mike Plante, said the group had no plans to go after Blankenship and was instead focused on his two rivals.

"We made the strategic decision based on data that shows that either Patrick Morrisey or Evan Jenkins is more likely to be the nominee, so that's where we're focusing our attention," he said.

Duty and Country appears to have close ties to the national Democratic Party. In its federal filings, it lists the same downtown Washington address as other major party groups, including Senate Majority PAC, the main Democratic super PAC devoted to electing Senate Democrats.

In another twist, West Virginia attorney Booth Goodwin, who served as U.S. attorney in the case against Blankenship, is listed as the group's treasurer.

GOP maneuver could roll back decades of regulation [Back](#)

By Zachary Warmbrodt | 04/17/2018 10:16 AM EDT

Republicans are preparing to open a new front in their push to roll back regulations across the government, using a maneuver that could enable them to strike down decisions by federal agencies that reach back decades.

As soon as Tuesday, GOP senators, backed by President Donald Trump, will use the Congressional Review Act to topple safeguards issued by the CFPB in 2013 that were intended to discourage discrimination in auto lending.

While Republicans in the Trump era have already taken advantage of the 1996 law to remove more than a dozen recently issued rules, this would be the first time that Congress will have used it to kill a regulatory policy that is several years old.

Now, actions going back to President Bill Clinton's administration could be in play under the procedure GOP lawmakers are undertaking, forcing numerous agencies to reconsider how they roll out new regulations.

"It's a hugely important precedent," Sen. Pat Toomey (R-Pa.), the architect of the effort, said in an interview. "It's potentially a big, big opening."

While conservatives are applauding the effort as a way to rein in rogue bureaucrats and boost the economy, consumer advocates are warning that the consequences could be dire.

"This takes an already incredibly dangerous law and cranks it up to 11," said James Goodwin, senior policy analyst at the Center for Progressive Reform.

Republicans are leveraging two key provisions of the Congressional Review Act.

They're again taking advantage of fast-track authority that allows a simple majority of the Senate to pass a resolution rolling back a rule if the vote occurs within a window that's open for no more than a few months. The provision enables senators to avoid a filibuster.

But the more novel use lies in the law's requirement that federal agencies submit rules to Congress for their potential disapproval. Republicans have landed on a way to target a wide array of decisions — including regulatory guidance — that haven't typically been implemented as formal rules under the Administrative Procedure Act.

"You have this unimaginably large universe of stuff that is now eligible for repeal under the CRA," Goodwin said, citing a hypothetical Occupational Safety and Health Administration workplace safety poster as a potential example. "Agencies don't submit all this stuff because it would be an administrative nightmare."

In the case of the auto-lending policy, the CFPB released it as a guidance document rather than a formal rule governed by the notice-and-comment requirements of the APA. As such, it wasn't technically submitted to lawmakers for the purposes of the Congressional Review Act. That means the clock for congressional review never started.

That changed last year. For advocates of deregulation, the stars had aligned thanks to the ascendance of a Republican president eager to roll back rules and the Republicans retaining control of Congress.

Toomey, the former president of the conservative Club for Growth, went on the hunt for ways the GOP could take advantage of its congressional majority to eliminate federal rules.

He found a way to wield the power that the Congressional Review Act gives a majority of the Senate to sidestep obstruction via filibuster when it comes to years-old regulatory actions.

To do so, he asked the Government Accountability Office to determine whether the CFPB auto-lending guidance qualified as a rule for the purposes of the Congressional Review Act. In December, GAO told him that

it did in fact satisfy the legal definition of a rule, starting the clock for Republicans to undo it without having to seek any help from Democrats.

"When regulators regulate by guidance rather than through the process they're supposed to use, which is the Administrative Procedure Act and do a proper rulemaking, they shouldn't be able to get away with that," Toomey said. "If we can get a determination that the guidance rises to the significance of being a rule, then from that moment the clock starts on the CRA opportunity."

Amit Narang, regulatory policy advocate at Public Citizen, said it "is really going to open up a Pandora's box." Public Citizen and 60 other advocacy groups covering the gamut of finance, the environment, labor and gay rights are calling on Congress to oppose the CFPB rollback, saying it would set a dangerous precedent.

They warned it would put at risk not only protections for workers, consumers, minorities and the environment, but also regulatory certainty for businesses.

"Expanding the power of the CRA to overturn guidance from decades ago will threaten protections hardworking families rely on, making it harder for middle class Americans to get ahead and responsible businesses to follow the law," Sen. Sherrod Brown (D-Ohio) said.

Critics have also questioned the need to undo the CFPB auto-lending guidance because the bureau is now led by a Trump appointee, acting Director Mick Mulvaney, who could eliminate it himself. Mulvaney told lawmakers last week he was reviewing the policy. The National Automobile Dealers Association and the American Financial Services Association are supporting the rollback of the anti-discrimination measure, arguing that the way the CFPB crafted the guidance was flawed.

The Senate opened debate on the bill Tuesday following a 50-47 procedural vote. Sen. Joe Manchin (D-W.Va.) was the only Democrat to support moving forward with the legislation.

Other lawmakers have begun to test the waters. In November, GAO in a response to a request from Sen. Lisa Murkowski (R-Alaska) confirmed that a 2016 plan from the Bureau of Land Management was a rule for the purposes of review under the CRA. A spokeswoman for Murkowski did not respond to a request for comment.

Paul Larkin, a senior legal research fellow at the Heritage Foundation, has been advocating for Congress to take advantage of this deregulatory pathway in the Congressional Review Act, saying it could force agencies to comply with formal rulemaking requirements and help the economy by cutting red tape.

"This would indicate that Congress believes it can reach back beyond what the conventional wisdom was," he said.

Subject: Morning Energy, presented by America's Pledge: Battle in the Bakken state? — Groups sue over EPA waiver exemptions — Deja vu on formaldehyde

By Kelsey Tamborrino | 05/30/2018 05:41 AM EDT

With help from Annie Snider and Ben Lefebvre

BATTLE IN THE BAKKEN STATE? As the election year kicks into high gear, President Donald Trump's friendly relationship with Democratic Sen. [Heidi Heitkamp](#) is worrying some within the Republican party, POLITICO's Alex Isenstadt and Burgess Everett report. Republicans have grown increasingly frustrated with Trump's ongoing flirtation with the freshman senator from the No. 2 oil-producing state, especially at a time when many in the GOP fear that the president's unpredictable style will undercut their midterm plans. Heitkamp, who is seeking reelection in a state where Trump won nearly two-thirds of the vote, has a friendly relationship with the president, even after Trump aggressively recruited Rep. [Kevin Cramer](#) — who advised his campaign on energy issues — to give up his House seat and enter that race, leaving some of Cramer's closest allies feeling snubbed.

In an interview, Cramer said there would soon be "clarity" on who Trump supports in the race. But the congressman declined to predict whether the president would go after Heitkamp aggressively, as Trump has done with other Democratic incumbents. Cramer seemed aware of the warmth between the president and the senator, Alex and Burgess report. Trump has asked Cramer if he likes Heitkamp, and when the congressman responds yes, the president seems to be "relieved," Cramer said. "Politically, North Dakota's a pretty nice state. So I don't know that turning it on her is necessarily politically helpful to me," Cramer said. "They may just be concerned that she's a woman and maybe that has an impact. I just don't know."

For her part, Heitkamp said she's proud of her ability to work with the president. "I have a friendly relationship, I have a very important working relationship," she said in an interview, "not just with him but other members of the administration." Read the story [here](#).

WELCOME TO WEDNESDAY! I'm your host Kelsey Tamborrino, and Peter Robertson of the Pebble Partnership was the first to correctly identify California and Ohio as the two states that don't have an avenue named after them in D.C. Instead, there's a California Street and Ohio Drive. For today: Which president was the first to see a major league baseball game in his hometown, and which town was it? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

GROUPS SUE ON WAIVER EXEMPTIONS: Ethanol and farm groups say they've filed a lawsuit against EPA over some of the waivers granted to small refineries allowing them to shed their Renewable Fuel Standard requirements on blending biofuels, Pro's Eric Wolff reports. The Renewable Fuels Association, National Corn Growers Association, American Coalition for Ethanol and National Farmers Union are challenging the waivers granted to CVR Refining's Wynnewood, Okla., refinery and the HollyFrontier refineries at Cheyenne, Wyo. and

Woods Cross, Utah. Those refineries have collectively saved \$170 million in compliance costs, the coalition said.

Those waivers, which ethanol backers say violate the volume mandates under the RFS, are also the subject of some horse-trading in the discussions between EPA Administrator Scott Pruitt and USDA Secretary Sonny Perdue. The two are trying to put the final touches on a compromise deal over EPA's rules for biofuels. Read [more](#).

CHEVRON SHAREHOLDERS VOTE: Shareholders at Chevron's annual meeting today will vote on a pair of climate change-related provisions. First up is a proposal that the oil giant report to investors how it will change its business model to account for any decreased demand for oil and gas resulting from greater development of renewable energy sources. Another proposal is that Chevron start providing reports on steps it is taking to minimize methane emissions from its fracking operations. Chevron's board of directors have advised against both proposals, saying the company is already making sufficient efforts on both matters.

Exxon, which also holds its annual meeting today, is getting a break this year from the sort of environmental proposals its shareholders considered in 2017.

**** A message from America's Pledge:** America's Pledge is flipping the script on climate action. One year after the federal government announced it would pull out of the Paris Agreement, 2,700+ U.S. cities, states, and businesses are saying, "We Are Still In." See how far we've come: <https://politi.co/2koAHZb> **

DEJA VU? Already under fire for their handling of a controversial assessment of nonstick chemicals in drinking water, a newly uncovered EPA email suggests that public relations strategy was also front-of-mind for EPA staffers as the agency contemplated reevaluating the risks of formaldehyde. Reuters reported last week that EPA delayed release of a new assessment of the chemical that is expected to for the first time link formaldehyde with leukemia after meeting with the American Chemistry Council in January.

"They reiterated the concern you have raised about information leaking before it's been vetted and asked that the Agency have appropriate communication materials ready to use if needed," Jennifer Orme-Zavaleta, who heads EPA's Office of Research and Development, wrote in a Jan. 24 email to EPA chief of staff Ryan Jackson and Richard Yamada, deputy assistant administrator for research and development. The email was released to the Union of Concerned Scientists under the Freedom of Information Act.

Yogin Kothari, a lobbyist of UCS, said the email "sounds eerily similar" to concerns that EPA and White House officials expressed about a HHS assessment of the chemicals PFOA and PFOS. "It's not surprising that the ACC is attempting to wield its influence over EPA when its former staff are basically running the place," Kothari said by email.

WE'RE CLOSED: The Environmental Council of the States' upcoming fall meeting will close to the public certain sessions attended by EPA officials, according to the group's draft agenda for the August meeting. The draft shows ECOS will hold closed sessions on several issues, including a state-EPA roundtable on "cooperative federalism" and joint PFAS activities. (h/t E&E News' Sean Reilly)

NAFTA TALKS STILL STALLED: Recent NAFTA talks between the U.S., Mexico and Canada have not resulted in progress on the thorniest issues because the U.S. remains unwilling to offer important concessions, two sources close to the talks told Pro's Sabrina Rodriguez. Negotiators from the Office of the U.S. Trade Representative continue to demand that "they want everything, and there's no possible way they'll get everything they want," one of the sources said. "Conversations have stalled entirely." Read [more](#).

WE'LL ALWAYS HAVE PARIS: This week marks the one-year anniversary of Trump's decision to pull the U.S. out of the Paris climate agreement. The United States still technically remains in the 2015 pact for the next

two-and-a-half years, but the action to implement it is playing out in the rest of the world. To mark the occasion, the World Resources Institute will host a [discussion](#) today on whether other nations have moved on since Trump's decision to exit the agreement. Among those participating is Todd Stern, the former State Department special envoy for climate change who helped seal the deal. In the lead-up to the event, WRI's Eliza Northrop laid out the seven signs of progress since Trump's announcement [here](#), including a timeline of events over the last year. If you go: The discussion kicks off at 2:30 p.m. at 10 G Street NW. Watch the livestream [here](#).

— **And the National League of Cities**, as well as mayors from across the country, will release today their latest "State of the Cities" report that will look into the trend of cities taking on clean energy goals, despite the federal government.

OFFSHORE DRILLER FINED \$4M: Oil and gas company Energy Resource Technology was fined \$4 million Tuesday by the U.S. Attorney's Office for the Eastern District of Louisiana for fabricating data about the readiness of a key piece equipment used to prevent oil spills, Interior said. The fine comes as a result of an [investigation](#) by Interior's Office of Inspector General that found that ERT management directed an employee on its rig in the Gulf of Mexico to create a fake blowout preventer pressure test chart to conceal a failed test result, Pro's Ben Lefebvre reports. Read [more](#).

EPA, KILDEE SPAR OVER SUMMIT: EPA defended its move to only allow federal agency and state representatives on the second day of last week's summit on toxic chemicals in drinking water, dismissing Democratic Rep. [Dan Kildee's](#) complaint that members of his staff had been barred from attending as a mischaracterization. EPA Associate Administrator Troy Lyons wrote in a letter Tuesday to Kildee and obtained by POLITICO that the agency worked with Kildee's office ahead of time to allow a staffer to attend the first day of the summit.

"**I trust you understand our disappointment** when we discovered that no one from your office attended the summit on May 22, particularly in light of the subsequent events on May 23," Lyons wrote. In a statement, Mitchell Rivard, Kildee's chief of staff, said that "it is hard to mischaracterize the EPA's actions — it had been widely reported that the EPA blocked both journalists and a congressional office from the taxpayer-funded PFAS summit." Read the letter [here](#).

MAIL CALL! 45Q AND YOU: Rep. Cramer shared [a letter](#) Tuesday from the Treasury Department in response to [his request](#) for direction on the expanded 45Q tax credit for capturing and storing carbon dioxide. In the letter, Assistant Secretary for Legislative Affairs Drew Maloney said Treasury is developing published guidance to provide clarity to taxpayers for the purpose of using the credit.

— **A coalition of 12 state and city attorneys general** and attorneys sent a letter to National Academy of Sciences President Marcia McNutt saying EPA's so-called secret science proposal to ban the use of studies that don't publicly disclose all data is "too vague and rushed to allow for meaningful public review." And they pressed for the group to weigh in, saying "the National Academy's input on this extremely consequential proposal." Read it [here](#).

API WRITES TO TRUMP ON SECTION 232: The American Petroleum Institute [sent a letter](#) to Trump last week requesting that the list of countries currently exempt from Section 232 tariffs on steel and aluminum be expanded "without imposing alternative measures such as quotas," and that the president remove any associated import quotas that have already been imposed. In his letter, API President and CEO Jack Gerard writes that additional import restrictions "will have a negative effect on our industry just as we have achieved the highest level of domestic hydrocarbon (oil and natural gas and natural gas liquids, or NGLs) production since 1949," according to EIA.

TRUDEAU COMMENTS ON PIPELINE: Canadian Prime Minister Justin Trudeau defended the Canadian government's plan to buy and complete the expansion of Kinder Morgan's Trans Mountain pipeline. "The

project became too risky for a commercial entity to go forward with it; that's what Kinder Morgan told us," Trudeau said during a Bloomberg Businessweek event. "We are going to ensure that it gets built so that we can get our resources to new markets." More [here](#).

WHITE HOUSE TALKS PUERTO RICO: Aboard an Air Force One flight, press secretary Sarah Huckabee Sanders was asked whether the president — despite his [previous comments](#) — now thinks Puerto Rico constitutes a "real catastrophe" following [the release](#) of a Harvard University study that found at least 4,645 people died from the September 2017 storm rather than the 64 deaths federal authorities counted. The White House continues to be supportive of the governor of Puerto Rico, Sanders said according to pool reports, and of "transparency and accountability." The people of Puerto Rico "deserve nothing less than that, and were going to continue to be focused on helping in every way we can," she said. "FEMA has already done the largest response ever in history to any natural disaster. They're in Puerto Rico, and we're going to continue to give as much assistance as possible."

RBS COMMITS TO NEW ENERGY FINANCING: Ahead of its shareholder meeting today, the Royal Bank of Scotland [announced](#) Tuesday new energy financing policies to support a transition to low carbon. The bank said it would no longer provide "project-specific finance" to new coal-fired power plants, thermal coal mines or oil sands projects, among other projects. Additionally, RBS said it is tightening restrictions on general lending to mining and power companies generating more than 40 percent of their revenues from thermal coal and of electricity from coal, respectively. In response, Rainforest Action Network Executive Director Lindsey Allen said the announcement "comes as a result of groups like us pressuring banks to defund fossil fuels and deforestation," but said the "policy is only half a step forward because it leaves loopholes in place."

REPORT: COOK TAPPED FOR SUPERFUND JOB: EPA has named Steven Cook — a former senior counsel at chemical giant LyondellBasell — to the agency's Superfund Task Force in the position left vacant by Albert "Kell" Kelly, Bloomberg BNA [reported](#). Cook has been serving as deputy assistant administrator for the agency's land and waste office, prior to his move to the Superfund spot.

ZINKE DEFENDS 'KONICHIWA' GREETING: In a wide-ranging radio interview with Breitbart Radio, Interior Secretary Ryan Zinke defended his use of the greeting "konichiwa" in response to a question from Rep. [Colleen Hanabusa](#) on preserving internment sites during a March Natural Resources hearing. "I grew up in a little logging, timber town, railroad town in Montana and a lot of my family lived through the years of the internment camps. I've long since had friends that were Japanese families that went through that," Zinke said, calling it an "appropriate salute." Listen to the full interview [here](#).

AD WARS: Club for Growth Action said Tuesday that it would spend \$250,000 on new ads attacking Russ Fagg, a former judge and Republican candidate for Senate in Montana. Campaign Pro's James Arkin [reports](#) the new ad campaign attacks Fagg over his record during his two decades as a district judge, including the time he called a judge who "undercut" Trump's rollback of environmental rules a "thoughtful moderate." Watch the TV ad [here](#).

MOVER, SHAKER: Stuart Siffring joined the Western Energy Alliance as a regulatory analyst, the trade group announced Tuesday. Siffring previously worked as a permit engineer at EPA and the Colorado Department of Public Health and Environment.

Stories from POLITICO Pro

The one Democrat Trump can't help but like [Back](#)

By Alex Isenstadt and Burgess Everett | 05/30/2018 05:08 AM EDT

When a small group of alarmed White House aides caught wind that Sen. Heidi Heitkamp — one of the most endangered Democrats up for reelection in 2018 — would be attending President Donald Trump's bill signing last week, they raced to stop it.

Word eventually reached Senate Majority Leader Mitch McConnell, who has made unseating Heitkamp a top priority. He opted not to intervene, and the invitation stood: As the president signed a banking deregulation bill into law before a national audience, Heitkamp was right next to him, the only Democrat in the room.

As the election year kicks into high gear, Republicans have grown increasingly frustrated with Trump's ongoing flirtation with the freshman senator. At a time when many in the GOP fear that the president's unpredictable

style will undercut their best-laid midterm plans, the relationship has given Heitkamp — who is seeking reelection in a state where Trump won nearly two-thirds of the vote — fodder to portray herself as a presidential ally.

Her office keeps a running list of the dozen-plus meetings Heitkamp has had with Trump and his top advisers since the 2016 election. And the senator is fond of noting that she forged close ties with Trump's former top economist, Gary Cohn. The president met with Heitkamp in Trump Tower after the 2016 election to discuss a possible Cabinet position, asked her to join him on Air Force One, and invited her onstage to join him and her Republican opponent, Rep. Kevin Cramer, during an appearance in North Dakota.

"Everyone is saying, 'What's she doing up here?'" the president said at the September event to sell his tax reform plan, which Heitkamp eventually opposed. "But I'll tell you what. Good woman, and I think we'll have your support, I hope we'll have your support. And thank you very much, senator, thank you for coming up."

After last week's bill signing, Heitkamp's allies raced to capitalize. The North Dakota Democratic Party sent out a tweet with an image of Cramer looking on uncomfortably as the president stood next to Heitkamp.

"At a bill signing today, @HeidiHeitkamp got a shout out and all @kevincramer got was a photo op next to a chair," the state party boasted.

"We will see footage of this on every platform," said Doug Heye, a former top Republican National Committee official. "It's a huge gift for her campaign."

Trump aggressively recruited Cramer to give up his House seat to take on Heitkamp, and his actions since have left some of Cramer's closest allies feeling snubbed. They note that while Trump has savaged Democratic incumbents Joe Donnelly of Indiana and Jon Tester of Montana and visited a growing list of states to pump up Republican Senate hopefuls — most recently Tennessee, where he appeared Tuesday on behalf of Rep. Marsha Blackburn — he has yet to make a campaign appearance with Cramer. Nor has the attack dog-in-chief attacked Heitkamp.

After Cramer learned last year that Heitkamp would be accompanying the president on Air Force One to North Dakota, he complained bitterly to the White House, according to two people with direct knowledge of the discussions. Heitkamp, Cramer predicted at the time, would try to use it to her political advantage. (A Cramer adviser, Pat Finken, denied that the congressman had complained about the senator riding on Air Force One.)

The administration has taken steps to assure Cramer that he has the president's full support. The congressman has been regularly in touch with White House political director Bill Stepien, and the two met earlier this month. Trump has agreed to hold a rally for Cramer later this year.

In an interview, Cramer shrugged off Heitkamp's attendance at the bill signing and said there would soon be "clarity" on who Trump supports in the race.

Yet the congressman declined to predict whether the president would go after Heitkamp aggressively, as Trump has done with other Democratic incumbents. Cramer seemed aware of the warmth between the president and the senator. Trump has asked Cramer whether he likes Heitkamp, and when the congressman responds yes, the president seems to be "relieved," Cramer said.

"Politically, North Dakota's a pretty nice state. So I don't know that turning it on her is necessarily politically helpful to me," Cramer said. "They may just be concerned that she's a woman and maybe that has an impact. I just don't know."

Heitkamp said she's proud of her ability to work with the president.

"I have a friendly relationship. I have a very important working relationship," she said in an interview, "not just with him but other members of the administration."

Trump's reluctance to go after Heitkamp stems in part from the simple fact that he needs her vote. With Republicans clinging to a narrow Senate majority, the White House has pushed for her support on several contentious votes, including the recent confirmations of CIA Director Gina Haspel and Secretary of State Mike Pompeo. She also backed Trump's nominations of Supreme Court Justice Neil Gorsuch and Environmental Protection Agency Administrator Scott Pruitt.

Last week's signing ceremony was organized by White House Office of Legislative Affairs Director Marc Short. He said he extended an invitation to Heitkamp because she played a central role in passing the banking deregulation law.

"She was an original cosponsor of the bill," Short said. "But she's also someone who opposed tax relief, who opposed repeal of Obamacare, and someone who will always support Chuck Schumer. So you can be sure the president will be actively campaigning in North Dakota this cycle."

Cramer's February entry into the race followed an intense pursuit from Trump and top White House officials. After Cramer initially said in January that he wouldn't run for Senate, he received overtures from Trump, White House counselor Kellyanne Conway, and energy executive and Trump donor Harold Hamm within a three-day period. Trump also met with Cramer's wife, Kris.

Cramer said Trump told him at the time that he'll "be out there campaigning more than you are." Trump's entreaties, Republicans contend, helped to push Cramer into the contest. Cramer won his statewide, at-large House seat in 2012, the same year Heitkamp entered the Senate.

"The president leaned on him very hard. The president wanted the best candidate, and everyone in the state thought Kevin was the best candidate to beat Heidi," said Gary Emineth, a former North Dakota GOP chairman who is close with the congressman. "You know how the president is. He just doesn't quit."

Heitkamp predicted that Trump would attack her eventually. While she has maintained a positive working relationship with the president, she said it pales in comparison to Cramer's staunch loyalty.

"I don't think anyone can match his Trump credentials," Heitkamp said. "He is somebody who will always do what the president asks him to do, regardless of whether it's good for North Dakota."

As of late, the senator has been airing commercials that highlight her balancing act. "When I agree with the president I vote with him — and that's over half my votes," she says in a spot that began airing this month. "And if his policies hurt North Dakota, he knows I'll speak up."

Cramer accused Heitkamp of acting like a "Republican wannabe" with her occasional support for key Trump nominees.

"Her trying to cozy up to Donald Trump has resulted in good votes," Cramer said. "But every time she tries to become more like me, it's more flattering to me than it is to her."

Democrats, however, couldn't be happier to portray Cramer as a jilted lover.

Last week, the North Dakota Democratic Party released a video featuring a montage of clips of the president praising Heitkamp and shaking her hand as Cramer looks on — set to the sad sounds of R.E.M.'s "Everybody Hurts."

Ethanol, farm groups sue EPA over exemptions [Back](#)

By Eric Wolff | 05/29/2018 07:13 PM EDT

A coalition of ethanol and farmers groups said they filed a lawsuit in federal court today against EPA seeking to overturn some of the waivers the agency has granted to small refineries allowing them to shed their Renewable Fuel Standard requirements on blending biofuels.

The Renewable Fuels Association, National Corn Growers Association, American Coalition for Ethanol and National Farmers Union are challenging the waivers granted to CVR Refining's Wynnewood, Okla., refinery and the HollyFrontier refineries at Cheyenne, Wyo. and Woods Cross, Utah. Those refineries have collectively saved \$170 million in compliance costs, the coalition said.

The groups, along with their allies in Congress, have criticized EPA's frequent use of the waivers, which they say undermines the RFS mandates on the amount of biofuel that must be sold into the U.S. fuel market.

"EPA is trying to undermine the RFS program under the cover of night," RFA CEO Bob Dinneen said in a statement. "And there's a reason it has been done in secret — it's because EPA is acting in contravention of the statute and its own regulations, methodically destroying the demand for renewable fuels."

The Advanced Biofuels Association challenged the waivers May 1.

WHAT'S NEXT: The complaint will be heard in the U.S. Court of Appeals for the 10th Circuit.

Exxon shareholders win vote to build Paris climate pact into plans [Back](#)

By Ben Lefebvre | 05/31/2017 02:37 PM EDT

The Trump administration may be preparing to [withdraw the U.S.](#) from the Paris climate change accords, but shareholders at Exxon Mobil and at least one other U.S. oil company are demanding the companies incorporate the international deal in their business models.

Nearly two-thirds of Exxon's shareholders backed a proposal on Wednesday calling for the company to assess how climate change and global efforts to limit temperature increases will affect its business. The vote is non-binding, but the results show that the once-fringe idea of linking climate change to big oil's operations has gained momentum.

The vote at the Exxon annual shareholder meeting in Dallas came after investors in its smaller rival Occidental Petroleum earlier this month cast more than two-thirds of their votes for a measure calling for the company to

assess how its business would be affected by the Paris climate change accord's target of holding global warming to 2-degrees. Company credit rating agency Moody's said last year it would start to use the Paris pledge to assess financial risk for corporations.

"Shareholders have spoken clearly on climate," said Danielle Fugere, president and chief counsel for As You Sow, a group that helps shareholders introduce environmental proposals. "If there's less demand for oil and the world is awash in oil, there's going to be more competition among these companies. Shareholders are trying to figure out who is the best bet."

Not all of these climate-related investor proposals succeeded, however. Chevron shareholders Wednesday morning rejected a motion that the company issue a report on how limiting global temperature increase to 2 degrees Celsius (3.6 degrees Fahrenheit) would affect its business. Only 27 percent of voting shareholders approved the proposal, down from more than 40 percent who voted for a similar proposal last year.

Exxon, Chevron and other energy companies facing such proposals argue that they are already taking the Paris agreement seriously and incorporating it into their business plans. Exxon in particular pointed out that it was developing technology that would capture the carbon emitted at natural gas power plants and then either store it or use it to produce more electricity.

"We believe the goal of carbon policy is to reduce emissions at the lowest cost to society," Exxon Chief Executive Darren Woods said at the shareholder meeting. "These goals led us to support the Paris Agreement." Woods sent President Donald Trump a letter earlier this month urging the U.S. to stay in the Paris deal.

For Exxon, the votes also illustrate how entangled the company has become in New York state climate change politics. The climate change proposal shareholders approved was partly sponsored by the New York State Common Retirement Fund, which is run by the State's comptroller. Meanwhile, the company is embroiled in a lawsuit with the New York and Massachusetts attorneys general over whether it withheld its own research on climate change from shareholders.

"The burden is now on Exxon Mobil to respond swiftly and demonstrate that it takes shareholder concerns about climate risk seriously," New York State Comptroller Thomas P. DiNapoli said in a prepared statement after the vote.

NAFTA talks stall amid apparent refusal of U.S. to make concessions [Back](#)

By Sabrina Rodriguez | 05/29/2018 07:41 PM EDT

Recent high-level NAFTA talks between the U.S., Mexico and Canada have not resulted in progress on the thorniest issues because the U.S. remains unwilling to offer important concessions, two sources close to the talks said on Tuesday.

Negotiators from the Office of the U.S. Trade Representative continue to demand that "they want everything, and there's no possible way they'll get everything they want," one of the sources told POLITICO.

"Conversations have stalled entirely."

As the U.S. and Canada resumed talks in Washington on Tuesday, the sources confirmed that Mexican Trade Undersecretary Juan Carlos Baker met with officials from USTR last week to present a counterproposal that would see Mexico make concessions on wages in the automotive sector in return for U.S. concessions on other flashpoint issues.

Under the offer, Mexico reportedly would accept language on automotive rules of origin that would require that 20 percent of cars produced within North America be made by workers earning at least \$16 an hour.

In exchange, Mexico reportedly asked that the U.S. back off some of its thorniest proposals, like placing limits on government procurement as well as a so-called sunset clause, which would allow for the deal to be terminated if all three countries don't agree to renew it after five years. News of the counterproposal was first reported by Bloomberg.

Mexico's counterproposal was not well received by USTR, the sources said.

"USTR did not take a close look at their proposal before rejecting it," one of the sources said. "As soon as it included [the U.S.] giving in on something, it was a 'no' from USTR."

That leaves it up to U.S. Trade Representative Robert Lighthizer to decide if the U.S. will offer any concessions to Mexico and Canada, the sources added.

USTR did not immediately respond to a request for comment on Tuesday evening.

The latest deadlock comes as Mexico and Canada face a looming deadline in their effort to secure a permanent exemption from the U.S. steel and aluminum tariffs. Mexico and Canada were temporarily exempted from the duties, but to win a permanent reprieve each country must reach a separate agreement to satisfy U.S. national security concerns by June 1.

Mexican President Enrique Peña Nieto and Canadian Prime Minister Justin Trudeau have both emphasized in recent days that they will not be pressured into accepting a NAFTA deal that is bad for their respective countries.

"No NAFTA is better than a bad deal, and we've made that very clear to [President Donald Trump]," Trudeau said Tuesday in an interview with Bloomberg. "We are not going to move ahead just for the sake of moving ahead."

Trudeau discussed the NAFTA talks during a call with Vice President Mike Pence on Tuesday, the White House said in a readout that provided no details of the conversation.

Negotiators have made some gains, despite the continued difficulties over the hot-button topics. Canadian Foreign Minister Chrystia Freeland, Canada's top NAFTA official, said she had a "very substantive" conversation with her U.S. counterpart in Washington on Tuesday.

The NAFTA nations' top trade officials have been in consistent contact over the phone since they last met in Washington two weeks ago.

Lighthizer had acknowledged at that point that the three countries still faced "gaping differences" on a number of issues, such as market access for agricultural products and automotive rules of origin. "The NAFTA countries are nowhere near close to a deal," Lighthizer said then.

Talks have continued to move forward on the NAFTA modernization chapters, like e-commerce, "but as long as USTR keeps the thorny issues on the table, there won't be movement," one of the sources said.

Negotiators have so far closed nine chapters and six sectoral annexes, Mexico's chief negotiator, Kenneth Smith Ramos, said last week. Those chapters include: telecommunications, small- and medium-sized enterprises, competition, and technical barriers to trade.

Gulf of Mexico rig operator fined \$4M after Interior Department investigation [Back](#)

By Ben Lefebvre | 05/29/2018 04:36 PM EDT

The U.S. Attorney's Office for the Eastern District of Louisiana fined offshore oil and gas company Energy Resource Technology \$4 million for fabricating data about readiness of a key piece equipment used to prevent oil spills, the Interior Department said today.

The fine was a result of an [investigation](#) by Interior's Office of Inspector General that found that ERT management directed an employee on its rig in the Gulf of Mexico to create a fake blowout preventer pressure test chart to conceal a failed test result. The failure by a blowout preventer was one of the main causes of Deepwater Horizon rig accident that killed 11 people in 2010.

An ERT supervisor on the same rig had employees perform welding near an active well in violation of Interior safety regulations.

Interior had fined ERT \$4 million in 2012 for earlier violations on its rigs, and an accident [killed](#) a contract worker on an ERT rig in February.

ERT is a subsidiary of Houston-based Talos Energy.

WHAT'S NEXT: In addition to the fine, ERT was sentenced to 36 months' probation and ordered to pay \$200,000 in restitution.

Study: 4,645 people died after Hurricane Maria, far more than official estimate [Back](#)

By Mel Leonor | 05/29/2018 11:40 AM EDT

At least 4,645 people died amid the devastation wrought by Hurricane Maria in Puerto Rico — more than 70 times the official government death toll of 64, according to a new study from Harvard University.

Locals, journalists and public health experts have for months questioned the government estimate of deaths from the storm, which caused more than \$90 billion in damage.

President Donald Trump, however, said in October that Puerto Rico officials should be "very proud" of the low death toll.

The study, published Tuesday in the *New England Journal of Medicine*, is based on household surveys of more than 3,000 homes in the territory, where researchers found a boom in the mortality rate between late September and late December 2017.

The authors of the study, which was largely funded by the Harvard T.H. Chan School of Public Health, described the official death count as a "substantial underestimate" and called it evidence of the "inattention of the U.S. government to the frail infrastructure of Puerto Rico."

"The timely estimation of the death toll after a natural disaster is critical to defining the scale and severity of the crisis and to targeting interventions for recovery," they wrote.

Researchers found that "interruption of medical care was the primary cause" of the high mortality rate that came after the storm made landfall.

With the 2018 hurricane season in swing, the authors also urged chronically ill patients, communities and health care providers to develop contingency plans for future disasters.

Carlos R. Mercader, executive director of the Puerto Rico Federal Affairs Administration, said in a statement that officials would analyze the report, adding, "We have always expected the number to be higher than what was previously reported."

He said the Puerto Rico government has commissioned a report from George Washington University, which he said would be released "soon."

Trump said in October that the storm had been less devastating than Hurricane Katrina in 2005, but the new study indicates that may not be true. Hurricane Katrina resulted in the deaths of 1,833 people, according to FEMA.

"Every death is a horror," Trump said at the time, "but if you look at a real catastrophe like Katrina and you look at the tremendous — hundreds and hundreds of people that died — and you look at what happened here with, really, a storm that was just totally overpowering ... no one has ever seen anything like this."

Rep. Nydia Velázquez (D-N.Y.) said after the report was released Tuesday that the apparent undercounting of deaths "concealed" the impact of Hurricane Maria on the territory.

"By obscuring this, many were left to believe the Trump Administration's mythology that Puerto Rico was not hit hard by Maria," Velázquez said in a statement. "We must get to the bottom of this discrepancy."

The White House did not respond to a request for comment.

Last year, Velázquez and Rep. Bennie Thompson (D-Miss.) asked a government watchdog to investigate how Puerto Rican officials "originally arrived at such a low number."

New Club for Growth ads attack Fagg in Montana [Back](#)

By James Arkin | 05/29/2018 03:48 PM EDT

Club for Growth Action, the super PAC arm of the Club for Growth, announced today that it would spend \$250,000 on new ads attacking Russ Fagg, a former judge and Republican candidate for Senate in Montana.

The Club is backing state auditor Matt Rosendale in the race in the race to face Democratic Sen. Jon Tester, and its PACs have spent more than \$1 million on ads backing Rosendale and attacking Fagg, one of his top challengers in the June 5 primary.

The new ad campaign attacks Fagg over his record during his two decades as a district judge. The TV ad makes three claims against Fagg: that he defended another judge who suggested a rape victim was to blame for her own attack; that he called a judge who "undercut" President Donald Trump's rollback of environmental rules a "thoughtful moderate"; and that he "praised a liberal federal judge who ruled against speeding up deportations."

"Russ Fagg's values are not Montana values," the narrator says.

The radio version of the ad features a woman and a man having a conversation about Fagg's record and pointing listeners to a website, factsformontana.com, funded by Club for Growth Action.

You can watch the TV ad [here](#) and listen to the radio ad [here](#).

Despite Scandals, Observers See Little Chance Of Pruitt's Ouster At EPA

Former EPA officials and others say there is little possibility that Administrator Scott Pruitt's array of ethics and spending scandals will be enough to turn the GOP against him absent a damning investigators' report, but

instead see greater odds for Pruitt to leave the agency voluntarily as soon as the end of the year, likely to run for office.

EPA's Plan To Wait On OSHA Could Stall Facility Safety Update For Years

The Trump administration plan to scrap the Obama-era rule strengthening EPA's facility accident prevention program and wait for the Occupational Safety and Health Administration (OSHA) to advance a similar rulemaking could stall changes to facility oversight for the foreseeable future, as OSHA has shelved plans to update its companion rule.

States Aim To Revive 2015 Ozone NAAQS Suit, Fearing No Reconsideration

States opposed to the Obama EPA's 2015 rule tightening the ozone air standard are asking a federal appeals court to revive currently stayed litigation over the standard, saying the Trump administration appears to have backed off possible plans to reconsider the standard and instead proceed with a regular Clean Air Act-mandated review of the limit.

In Rare Loss For EPA, D.C. Circuit Rejects Indiana Site's Superfund Listing

In an unusual loss for EPA, the U.S. Court of Appeals for the District of Columbia Circuit has vacated the agency's decision to place an Indiana waste site on the Superfund National Priorities List (NPL), finding that EPA ignored evidence that a contaminated aquifer is not connected to other groundwater.

Suppliers Seek 'Robust' Vehicle GHG Standards With Additional 'Flexibility'

Auto industry suppliers are detailing their call for the Trump administration to embrace "robust" vehicle greenhouse gas and fuel economy standards with more flexibility for automakers, urging agencies to formally seek comment on an "advanced technologies flexibility option" that would recognize California's "critical role" in limiting emissions and possibly prevent years of litigation over the program.

Shimkus Pushes RFS Reform Bill Despite Trump Deal On EPA-Led Changes

Rep. John Shimkus (R-IL), chairman of the energy committee's environment panel, says he is pushing ahead with long-running efforts to craft legislation overhauling EPA's renewable fuel standard (RFS) despite a deal brokered by the White House that will see the agency make several immediate administrative changes to the program.

Narrow CWA test fails to make the cut as Farm Bill amendment

While the House Rules Committee did not allow a floor vote on the proposed Farm Bill amendment, the language limiting which waters are regulated could still serve as a marker for EPA's upcoming rule.

EPA touts 'renewed emphasis' on self-audit policies

EPA is promoting "opportunities to increase compliance through use of existing self-disclosure policies or tailored programs."

Wehrum sidesteps queries on SAB review of science rule

The EPA air chief's responses to a Democratic lawmaker's questions suggest the agency may urge its science advisors to avoid a review of its controversial rule seeking to block the use of 'secret science.'

Ewire: Amid scandals, Pruitt lawyers up

In today's Ewire: The EPA chief has hired a white-collar defense attorney to advise him as he faces more than a dozen official investigations, and hired another attorney to set up a legal defense fund.

Wehrum strongly hints EPA will not scrap GHG risk finding

EPA's air chief said Administrator Scott Pruitt is trying to find a way to allow critics of the finding have "some voice," but he said there is no "process" to solicit those views and there is no "schedule" to do so.

Subject: Morning Energy: Trump's not-so simple math — Judge orders update of Keystone XL study — States' rights get tricky over water

By Kelsey Tamborrino | 08/16/2018 05:43 AM EDT

With help from Ben Lefebvre and Annie Snider

A NUMBERS GAME: The White House's plan to rewrite the Obama administration's cornerstone climate rule for power plants may be based on some fuzzy math, setting up a potentially brutal court battle for the Justice Department. The legally risky strategy, POLITICO's Alex Guillén and Emily Holden report, calls for redoing the calculations of how much the rule would cost and who would benefit.

EPA's proposed replacement plan is expected to be unveiled any day now and will likely downplay a key feature of the Obama-era greenhouse rule: the money saved by using less electricity. Some expect EPA will also count only a fraction of the improvements in public health from reduced smog and soot pollution, Alex and Emily report, and it won't consider any benefits from slowing climate change outside the U.S.

In doing so, President Donald Trump's EPA will argue that the Obama-era rule had higher costs and fewer benefits than previously stated, a change to help improve the comparison when it unveils its own proposal. The Obama administration had estimated that the benefits from its rule would outstrip the costs by \$26 billion to \$45 billion by 2030, though supporters of that version say those net benefits could be even higher now.

In fact, math could become vital to the success or failure of several of Trump's rules. Critics say similarly fuzzy math underlies other Trump administration proposals to reverse or stymie action on climate change, such as a recent plan by EPA and the Department of Transportation to halt a planned tightening of fuel efficiency standards for cars and trucks. "They are cooking the books on technical analysis to try to justify preconceived conclusions that these regulations are bad," said David Doniger, senior strategic director of the Natural Resources Defense Council's climate program who was influential in the Obama EPA's crafting of the original rule. Read more.

GOOD THURSDAY MORNING! I'm your host, Kelsey Tamborrino. Many of you knew, but ClearView Energy Partners' Mitch Huber was the first to correctly answer that it's Loretta and Linda Sanchez who were the first and only sisters to serve simultaneously in Congress. For today: How many current senators are also former mayors? Bonus points if you can name them. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

DO THAT AGAIN: The Trump administration was ordered Wednesday to update an environmental study of the Keystone XL pipeline despite its contention the alternative route picked last year by Nebraska regulators didn't require an updated environmental impact statement. Instead, Judge Brian Morris of the U.S. District Court for Montana ordered the State Department to go back to its 2014 EIS to take into account the new route, Alex reports for Pros. Morris said the State Department still has a "meaningful opportunity to evaluate" the alternative route that was picked in Nebraska. However, he declined environmentalists' request that Trump's permit be vacated.

STATES' RIGHTS GET TRICKY OVER WATER: The roiling debate over states' right to halt development projects over their water quality effects heads to the Senate Environment and Public Works Committee today. The panel will hold a legislative hearing on a bill from Chairman [John Barrasso, S. 3303 \(115\)](#), the Water Quality Certification Improvement Act of 2018. The measure would limit states' authority under Section 401 of the Clean Water Act, which requires states to certify that projects won't harm their water quality standards before the federal government issues a permit. In recent years a handful of Democratic-led states have used that authority to block natural gas pipelines. Republican Maryland Gov. Larry Hogan is also using the authority to try to force Exelon Corp. to clean up nutrient pollution flowing through one of its dams that harms the Chesapeake Bay.

GOP lawmakers have backed earlier efforts to limit or remove the authority, including in this year's House Appropriations bill, House and Senate energy legislation and standalone bills. But the Western Governors Association, which represents a number of Republican governors, has come out in opposition to reining in states' authority, and the Environmental Council of the States warned Wednesday that such moves could have unintended consequences. **If you go:** The [hearing](#) begins at 10 a.m. in 406 Dirksen.

NOMINATIONS ON TAP: Two nominees to the Energy Department will testify before the Senate Energy and Natural Resources Committee this morning: Bill Cooper to be general counsel and Lane Genatowski for director of the Advanced Research Projects Agency-Energy, which the Trump administration has sought to eliminate.

Who are they? Cooper serves as senior counsel and director of the McConnell Valdés law firm. Prior to that he was a subcommittee staff director for House Natural Resources, with a particular policy focus on the National Environmental Policy Act that the White House has sought to change up. Cooper also previously was president of the Center for Liquefied Natural Gas and counsel to the House Energy and Commerce Committee. His credentials have earned him the backing of industry groups, including the [Air-Conditioning, Heating, and Refrigeration Institute](#), the [Interstate National Gas Association of America](#), and the [Electric Reliability Coordinating Council](#).

— **Genatowski hails from** a banking background. He's managing partner in investments at Dividend Advisors, a firm he founded in 2012. Genatowski before that was an energy investment banker at JPMorgan Chase and other Wall Street giants. His résumé lines up with others in Rick Perry's Energy Department, which has focused more on businessmen with energy-sector experience. **If you go:** The [hearing](#) kicks off at 10 a.m. in 366 Dirksen.

RESCISSIONS — TAKE TWO: The Trump administration is once again weighing a so-called rescissions package to force Congress to roll back federal spending, with just weeks to go until the next budget deadline, Pro's Sarah Ferris and John Bresnahan [report](#). Senate Appropriations Chairman [Richard Shelby](#) said Wednesday he was told about the idea: "I heard they were thinking about one, but I haven't seen it." But a Senate leadership source said OMB chief Mick Mulvaney has already begun moving ahead on the effort.

FLORIDA DRILLING BITS: To drill or not to drill off the Florida coast is a question once again heating up the state's election campaigns. Gwen Graham, the current front-runner in the Democratic gubernatorial primary field, sent out a message titled "Drilling 75 Miles off Florida's Beaches is Insane" after a POLITICO [report](#) highlighted the idea as one that oil industry lobbyists are pushing to have included in the Interior Department's upcoming offshore drilling plan. Sunshine State Democratic Sen. [Bill Nelson](#) took the story [to the Senate floor](#) to try to whack current Gov. Rick Scott, who is running to replace him and earlier this year got [help](#) from Trump on the drilling issue.

REMEMBRANCE OF TARBALLS PAST: Former Florida Lt. Gov. Jeff Kottkamp is catching heat for his statement at a pro-drilling rally in Tallahassee that oil from the Deepwater Horizon spill "didn't even reach the shores of Florida." The remark, as first [reported](#) in the Florida Phoenix, may have surprised those who

remember former Gov. Charlie Crist squatting over oil-stained beaches in Pensacola. Kottkamp, who was speaking as co-chair of Explore Offshore Florida, went on to say "tarballs are naturally occurring." Earthjustice staff attorney Bradley Marshall called it "absurd to claim the Deepwater Horizon spill did not reach Florida" given the damage the state experienced. "That's why so many of Florida's leaders, regardless of what political party they belong to, have been so protective of our coasts all these years," he said in a statement.

WHAT'S THE RISK? EPA acting Administrator Andrew Wheeler delivered a video address at the National Environmental Justice Advisory Council's public meeting in Boston on Wednesday where he acknowledged the need for improvement in risk communication and noted the agency owes it to the American public to improve. "How well or how poorly we communicate risk disproportionately impacts those on the lower end of the socioeconomic ladder," he said. "We have fallen short in the past from our response to the Gold King Mine in Colorado, to the Kanawha River in West Virginia, to Flint, Mich." Watch it here.

CASE CLOSED: Interior's Office of Inspector General has closed its investigation into an allegation made against National Park Service officials. The claim centered around references to human-caused climate change in a report on sea-level rise and storm surge projections that officials allegedly sought to remove. The watchdog office said Wednesday that shortly after it opened the investigation, the NPS "published the report with all original references to human-caused climate change," thus prompting it to close its probe.

'SECRET' AGENTS: Comments are due today on EPA's proposed "scientific transparency" rule, which would ban the use of studies that don't publicly disclose all their data. Experts have said that plan could prohibit the use of vital studies on how pollutants affect human health because researchers typically promise to keep subjects' health information confidential. But conservatives have long accused the agency of relying on "secret science," prompting former Administrator Scott Pruitt to unveil the proposal in the name of transparency.

Under the wire: With the comment deadline approaching, nearly 80 groups, including the Union of Concerned Scientists, Sierra Club and Moms Clean Air Force, signed onto a letter Wednesday calling on Wheeler to withdraw the so-called secret science proposal. Separately, 66 health and medical organizations sent comments to Wheeler in opposition to the proposed rule. That's not to say there isn't support for the proposal; several comments posted Wednesday echoed the refrain that scientists should be required to "show your work."

AFTER THE STORM: The nonprofit Environmental Integrity Project released a new report today leading up to the one-year anniversary of Hurricane Harvey's widespread destruction in Texas. Using records from the Texas Commission on Environmental Quality, the report looks at air pollution during and after the storm as well as the government's and industries' response, and makes recommendations for the future. The "Preparing for the Next Storm" report found that all five of the largest industrial air pollution releases during Harvey were in the Houston area — with the Magellan Galena Park Terminal the biggest polluter, releasing 2,472,402 pounds of air pollution.

Harvey also triggered the release of at least 8.3 million pounds of unpermitted air pollution from petrochemical plants, according to the EIP report. And in the nine months after Harvey, "18 companies revised their air pollution reports to the state to erase 1.7 million pounds of unpermitted emissions during Hurricane Harvey," the report found.

LET'S MAKE A DEAL: Trump might soon strike a deal with Mexico on NAFTA, even as a trade war plays out with the rest of the world, POLITICO's Megan Cassella reports. The apparent turnaround after months of stalemate arrives as Mexican Secretary of Economy Ildefonso Guajardo visited Washington on Wednesday to hammer out some of the most contentious issues on NAFTA. "Both U.S. and Mexican officials now say they could be on the verge of announcing a preliminary agreement on everything from complicated automotive rules to environmental regulations by the end of August," Megan reports.

CATCHING FIRE: Agriculture Secretary Sonny Perdue will join Senate Energy ranking member [Maria Cantwell](#) and Sens. [Steve Daines](#) and [Ron Wyden](#) to unveil a new federal plan for addressing wildfires. Earlier this year, Perdue and Cantwell [worked together](#) on a commitment to use unmanned aircraft technology this fire season, and the Washington Democrat will likely highlight similar tools and technology today. Watch the [livestream here](#).

POLL: CLIMATE A FACTOR FOR MOST: Slightly more than half (53 percent) of U.S. voters believe climate change is a factor in making the ongoing California wildfires more extreme, while 39 percent say it's not, according to a new poll from Quinnipiac University [released](#) Wednesday. Sixty-four percent of voters said they think the country is not doing enough to address climate change, the national poll found. Eighteen percent of voters say the U.S. is doing enough to address the issue, while 10 percent say the U.S. is doing too much.

Stories from POLITICO Pro

Exclusive: Draft details Trump's plan for reversing Obama climate rule [Back](#)

By Emily Holden | 08/14/2018 07:46 PM EDT

The Trump administration is preparing to unveil its plan for undoing Barack Obama's most ambitious climate regulation — offering a replacement that would do far less to reduce the greenhouse gas emissions that are warming the planet, according to POLITICO's review of a portion of the unpublished draft.

The new climate proposal for coal-burning power plants, expected to be released in the coming days, would give states wide latitude to write their own modest regulations for coal plants or even seek permission to opt out, according to the document and a source who has read other sections of the draft.

That's a sharp contrast from the aims of Obama's Clean Power Plan, a 2015 regulation that would have sped a shift away from coal use and toward less-polluting sources such as natural gas, wind and solar. That plan was the centerpiece of Obama's pledge for the U.S. to cut carbon dioxide emissions as part of the Paris climate agreement, which President Donald Trump has said he plans to exit.

The Environmental Protection Agency acknowledges that both carbon emissions and pollutants such as soot and smog would be higher under its new proposal than under the Clean Power Plan. And Trump's critics call it a recipe for abandoning the effort to take on one of the world's most urgent problems.

The proposal would be "another, more official, sign that the government of the United States is not committed to climate policy," said Janet McCabe, EPA's air chief under Obama.

McCabe said based on a description of the proposal, it would offer "a significant amount of discretion to states to decide that nothing at all needs to be done."

Many red states and several companies sued over the Clean Power Plan, and a federal appeals court was nearing a decision when Trump's EPA asked for time to rewrite the rule. McCabe said the proposal could be meant to eat up time and stall a future president from quickly regulating greenhouse gases.

EPA was widely expected to write a far less stringent replacement rule. Trump promised to nix the Clean Power Plan and exit the Paris deal during his campaign. But the draft offers the first look at the specifics since the agency released a broader notice that it would reconsider the rule in April.

The White House Office of Management and Budget has finished reviewing the draft and sent it back to EPA this week.

The rule would allow states to write rules to make coal plants more efficient, enabling them to burn less coal to produce the same amount of electricity. But that could be bad for the planet, people familiar with state air programs say, by making it cost-effective for power companies to run those plants more often.

EPA looked at the outcomes of various scenarios that could be possible from state-proposed plans in 2025, 2030 and 2035, implying that the plans could be in place before 2025.

Obama's plan was meant to see greenhouse gas emissions from the U.S. power sector fall to 32 percent below 2005 levels by 2030. The nation has already achieved much of that reduction because of trends such as the closures of dozens of older coal plants.

EPA intends to argue that the Obama administration rule illegally sought to regulate the broader power sector, beyond coal plants, and that the compliance costs would have been big and the climate benefits negligible, according to the draft POLITICO reviewed.

Environmental advocates and blue states plan to wage war on the proposal once it is final. But while the legal fights play out, the regulation will be a placeholder that could stall a future president from regulating power plants.

States will be able to present reasons for why they don't want to regulate coal plants, including considering how many more years they have left before they would probably shut down, according to a source who reviewed a different section of the document.

In another contentious portion of the proposal, EPA is looking at letting states decide whether they want to adopt changes to pollution reviews that kick in when a plant makes upgrades. Existing rules are meant to keep plants from making changes that cause more pollution.

Conservatives and industry groups have long argued that the review process, called New Source Review, makes it too expensive for operators to make improvements to plants.

The key to Trump's climate reversal? New math [Back](#)

By Alex Guillén and Emily Holden | 08/16/2018 05:06 AM EDT

The Trump administration's attempt to reverse Barack Obama's most sweeping climate regulation rests on a legally risky strategy — redoing the calculations of how much the rule would cost and who would benefit.

The EPA's proposed replacement is expected to downplay the money that people and businesses would save from using less electricity, a key feature of the Obama-era greenhouse rule for power plants. People tracking the issue also expect that the agency will count only a fraction of the improvements in public health from reduced smog and soot pollution, and won't consider any benefits from slowing climate change outside the U.S.

The upshot: President Donald Trump's Environmental Protection Agency will argue that the Obama administration's rule had more costs and fewer benefits than previously stated, a change to help improve the comparison when it unveils its own, much less ambitious power plant proposal as soon as next week.

The Obama administration had estimated that the benefits from its 2015 rule would outstrip the costs by \$26 billion to \$45 billion by 2030.

Supporters of the Obama version say those net benefits could be even higher now, because states are on track to meet the climate goals and the costs of clean energy have continued to plummet. And they warn that repealing the regulation could keep older, more expensive coal-fired power plants in operation, adding to consumers' costs.

The math could be crucial to the success or failure of a number of Trump rules. That could make the rollbacks legally vulnerable when environmental advocates and states sue to overturn Trump's action, critics of the new proposals say.

"They are cooking the books on technical analysis to try to justify preconceived conclusions that these regulations are bad," said David Doniger, the senior strategic director of the Natural Resources Defense Council's climate program who was influential in the Obama EPA's crafting of the original rule.

EPA did not respond to a request for comment on Wednesday.

Trump administration lawyers reviewing the replacement are already struggling with how to defend a rule that could cost electricity users money but would not do much to address climate change or air pollution, according to a person aware of conversations between the White House and the Justice Department. DOJ would be charged with defending the rule in court.

POLITICO has examined a portion of the agency's unpublished draft of the new rule, which would allow states to write their own modest regulations for coal plants or even let plant operators seek to opt out entirely, according to a source with knowledge of the broader proposal.

The proposed rewrite of the power plant rule is part of a pattern: Critics say similarly fuzzy math underlies other Trump administration proposals to reverse or stymie action on climate change, such as a recent plan by EPA and the Department of Transportation to halt a planned tightening of fuel efficiency standards for cars and trucks.

Sean Donahue, an environmental lawyer who has represented groups like the Environmental Defense Fund, said he would expect a court to be "very skeptical" of any effort that looks as though EPA is trying to evade its obligation to regulate greenhouse gases. But he conceded that will depend on the details of EPA's power plant proposal.

"If it were one or two technical judgments where there's a difference between this administration and the last one, or this administration and prior consistent practice, that would be one thing," Donahue said. "But it's many, many things, all pointing the same way, all pointing toward rolling back greenhouse gas mitigation efforts."

Trump has repeatedly expressed doubts about man-made climate change, and much of his Cabinet shares a similar view. In contrast, the federal government's own scientific assessment finds that human-caused climate change will not only raise temperatures but also make extreme weather more dangerous and lift sea levels by 1 to 4 feet by the end of the century.

Kate Larsen, director of economic research firm Rhodium Group, said the Trump administration's justifications for unraveling climate change policies are symptomatic of its broader governing principles.

"A decision we make today is narrowly focused on the impacts to myself and my immediate neighbor in the next week, but you're not taking into account impacts next year and the following year to yourself, your neighbor, the entire community," she said.

Environmental experts are also scrutinizing the auto rule proposal, released earlier this month, which would freeze the Obama administration's aggressive fuel economy standards after 2020 and dial back EPA greenhouse gas rules to match.

EPA and DOT's National Highway Traffic Safety Administration argued that the freeze would save billions of dollars in costs. Critics say the administration overestimated compliance costs of the Obama-era auto targets by as much as fourfold, which could significantly tip the cost-benefit analysis in their favor. Another claim that the Trump rollback would save more than 1,000 lives per year — yielding benefits of \$77 billion — has also drawn skepticism.

On Tuesday, EPA released a June memo that showed agency staff criticizing a number of "unrealistic" aspects of NHTSA's modeling. They disagreed with the proposal's fatality figures, with EPA staff estimating deaths would increase slightly under the freeze. And they thought the rule overestimated compliance costs and the time needed to recoup those costs in fuel savings, all factors that boosted benefits and lowered costs for the proposed freeze. Both EPA and NHTSA dismissed the memo as only one part of a complex review process.

The administration and industry groups have blasted the Obama administration's use of "co-benefits" — the benefits in improved health or reduced pollution that arise even when they're not the primary aim of a regulation. (One example: Cutting coal plants' carbon dioxide pollution under the power plant regulation would't do much directly to improve people's health, but it would reduce smog.) But Donahue argued that Trump's regulators sometimes lean on co-benefits to help build the case for their rollbacks.

For example, NHTSA's modeling credits changes in consumer behavior as the overwhelming factor behind all the lives that the Trump administration contends its auto rollback would save. The agencies argue that under the previous Obama rule, drivers would be more likely to remain in older, more dangerous cars than purchase more expensive, safer ones.

That "would seem to be a co-benefits argument, since the EPA doesn't have, and NHTSA doesn't have, the authority to regulate used cars," said Donahue, who called the paradox "sort of entertaining."

Counting co-benefits is a long-standing practice for federal regulators, but energy industry groups and Republican state officials grew incensed by the Obama administration's use of it to justify major regulations.

"The co-benefits thing has ballooned into the biggest scandal in environmental regulation," said the conservative Competitive Enterprise Institute's Myron Ebell, who led Trump's post-election transition team at EPA. "You get very small direct benefits, but you make up, essentially, a lot of co-benefits."

Still, he contended that EPA's withdrawal of Obama's power plant rule would eliminate a huge amount of costs in the coming years, saying Obama's regulation represented "just the first emissions cuts."

"There were going to be more beyond that if the Obama administration had been succeeded by the Clinton administration," Ebell said. He added: "By cutting it off in the way that they're doing, we're avoiding immense future costs."

Keystone XL pipeline wins green light in Nebraska — but may face new hurdles [Back](#)

By Ben Lefebvre | 11/20/2017 11:25 AM EDT

Nebraska regulators approved the Keystone XL pipeline Monday, but only if it is built along a new path that may force the project developer to jump through a new set of regulatory hoops.

The 3-2 vote by the Nebraska Public Service Commission gave the green light to a different route than the one preferred by Keystone developer TransCanada, moving it east to run partially alongside the original Keystone pipeline and through a portion of the state's ecologically sensitive Sandhills area as well across the Ogallala Aquifer.

The Trump administration is evaluating whether it would have to re-approve the controversial pipeline to account for the new route. But activists who have spent the better part of a decade fighting to block Keystone said the decision throws the whole project into jeopardy, while TransCanada, the company seeking to build the project, said only that it is evaluating its next steps.

"This decision today throws the entire project into a huge legal question mark," said Jane Kleeb, the activist who led the opposition to the pipeline and who is now Nebraska Democratic Party chair. "TransCanada will have to go back to the State Department because that route has never been reviewed by the feds."

The State Department said it is reviewing the PSC decision for just such a possibility.

"We won't know about any impacts until we learn precisely the extent of any changes, something we are currently engaged in," State Department spokesman Vincent Campos said.

TransCanada President and CEO Russ Girling said the company "will conduct a careful review of the Public Service Commission's ruling while assessing how the decision would impact the cost and schedule of the project."

Former President Barack Obama had blocked the permits for the pipeline in 2015, citing the oil sands' impact on climate change, but President Donald Trump quickly reversed that decision after taking office. Keystone XL is designed to transport up to 830,000 barrels per day of crude from Canada's oil sands and North Dakota's shale fields to oil refineries on the Gulf Coast.

The Nebraska PSC vote comes as TransCanada adds new crews to its cleanup operations in South Dakota, where the original Keystone Pipeline ruptured last week and released 210,000 gallons of oil. But Nebraska law bars the regulators from considering spills or pipeline safety in its decision-making process.

Environmentalists and landowners who opposed Keystone XL's construction have promised to try to overturn the commission's decision.

"We will appeal," Kleeb said. "We will challenge a foreign corporation being given eminent domain in the county courts, with every intent to bring it to the Supreme Court if needed."

Even with the approval, the project, whose costs to build the nearly 1,200 mile artery have ballooned to \$8 billion, is still not ready to be built since TransCanada is gauging the economics of the huge investment. Though prices for oil have rebounded moderately in recent months, and while TransCanada has said demand for space on the pipeline is strong, it's not yet clear that enough companies will commit to the 20-year contracts required to reserve space on it.

The opposition to Keystone XL had been a rallying cry for green activists who have long said mining Canada's oil sands would be a disaster for global climate change, releasing vast amounts of carbon dioxide into the atmosphere.

But supporters have said tapping the oil fields in Alberta is no worse than the oil production in Venezuela, where much of the heavy sour crude that is shipped to U.S. refineries comes from now.

Many in the oil industry, however, no longer see the Keystone XL pipeline as crucial to the U.S. refineries as they once did, especially since the railroad sector stepped in to offer a more flexible — though more expensive — way to ship the oil.

"There's not going to be a parade thrown, although everyone in the industry is going to be grateful," said Tyler Nelson, an energy lobbyist for Cornerstone Government Affairs. "It should have been done years ago. But now a lot of people want it to be over with and done and move on."

The pipeline may struggle to succeed in the oil business. Energy markets have made the Alberta oil sands less attractive, with ExxonMobil, ConocoPhillips and others pulling out of the region to concentrate on U.S. oil

shale development in Texas. Meanwhile, rival pipeline company Enbridge has expanded its pipeline system delivering Canadian crude to the U.S.

Critics have pointed to the recent shale oil boom as a reason that supply from the Canadian and North Dakota fields is in less demand, and they argue that much of the oil from Keystone XL could end up on tankers bound for export. U.S. oil production is on target to average more than 9 million barrels a day this year, nearly double what it was when TransCanada first proposed the massive pipeline.

If TransCanada gives its final approval to go ahead, construction would not start until 2019 at the earliest, Paul Miller, TransCanada's president of liquids pipelines, said during a conference call earlier this month.

The pipeline already is the focus of a court challenge stemming from Trump's State Department approving the project. A coalition of groups is arguing the State Department did not do due diligence before approving the cross-border pipeline in March. The case is still in the beginning stages, with a decision pending from the U.S. District Court of Montana on a Trump administration motion to dismiss.

Judge orders Trump administration to update Keystone XL environmental study [Back](#)

By Alex Guillén | 08/15/2018 08:17 PM EDT

A federal judge today ordered the Trump administration to update its environmental study of the Keystone XL pipeline.

Nebraska regulators last year picked an alternative route through the state after the pipeline was approved by President Donald Trump. Now the State Department must update its previous 2014 environmental impact statement to take that route into account, ruled Judge Brian Morris of the U.S. District Court for Montana.

The Trump administration argued that it did not need to update the EIS, despite Nebraska regulators' decision to pick the alternate route.

But Morris concluded that the State Department still has a "meaningful opportunity to evaluate" the alternative route that was picked in Nebraska. "Federal Defendants cannot escape their responsibility under NEPA to evaluate the Mainline Alternative route," he ruled.

The approved route differs from the one studied in the 2014 EIS by crossing different counties and bodies of water and requiring an extra pump station and electric infrastructure, Morris noted.

However, Morris declined environmentalists' request that Trump's permit be vacated, at least for now.

TransCanada does not plan to start construction before the second quarter of 2019, he said, giving the Trump administration sufficient time "to supplement the EIS in a manner that allows appropriate review before TransCanada's planned construction activities." Morris said he would revisit the issue if "circumstances change" and he is unable to review the new supplemental EIS before TransCanada begins construction.

WHAT'S NEXT: Morris ordered the State Department to propose a schedule to supplement the EIS.

Trump administration to make a second try on spending cutbacks [Back](#)

By Sarah Ferris and John Bresnahan | 08/15/2018 07:15 PM EDT

The Trump administration is eyeing a second attempt to force Congress to roll back federal spending, after its last attempt collapsed in the GOP-led Senate, according to the chairman of the Senate Appropriations Committee as well as a Senate leadership source.

The Office of Management and Budget is said to be considering a second package of so-called rescissions, with just weeks to go until Congress' next budget deadline.

OMB officials did not return a request for comment and it's not known yet what spending the White House might try to cut or eliminate this time around.

Senate Appropriations Chairman Richard Shelby said today he was told about the idea. "I heard they were thinking about one, but I haven't seen it," Shelby (R-Ala.) told POLITICO.

OMB chief Mick Mulvaney has already begun moving ahead, according to the Senate leadership source.

Budget hawks, led by Mulvaney, fought hard for the last package, H.R. 3 (115), which would have pulled back \$15 billion in already-approved federal dollars. That bill ultimately tanked in the Senate, coming up just one vote shy on a procedural vote.

If the White House moves quickly, its next rescissions package could arrive in the middle of a separate major funding fight on Capitol Hill. Lawmakers have until Sept. 30 to send roughly \$1.4 trillion in fiscal 2019 funding to President Donald Trump's desk or risk a funding lapse.

Oil companies ask Florida lawmakers to unlock offshore drilling [Back](#)

By Ben Lefebvre | 08/15/2018 05:01 AM EDT

Oil and gas companies are aggressively lobbying Florida lawmakers to agree to allow offshore drilling in the eastern Gulf of Mexico — seeking to break decades of bipartisan opposition in a state that has long viewed oil spills as an existential threat to its tourist economy.

The effort, which would potentially bring oil rigs as close as 75 miles to Florida beaches, comes just seven months after Interior Secretary Ryan Zinke promised that the state was "off the table" for offshore drilling. And it could complicate Republican Gov. Rick Scott's campaign to unseat Democratic Sen. Bill Nelson, whose opposition to drilling off the coast has been a main theme of his decades in Congress.

But the expansion would aid President Donald Trump's effort to increase U.S. oil and gas production, in what he calls a bid for American "energy dominance."

Gaining access to the millions of barrels of oil and natural gas off Florida's west coast is a top priority for Exxon Mobil, Chevron, Shell and other companies.

Energy lobbyists and trade associations believe Zinke left some wiggle room in his comments, and they are trying to persuade Florida lawmakers to sign on to possible compromises, including allowing drill rigs to operate up to 75 miles off the state's Gulf coast, lawmakers and industry sources said. That would be down from more than 200 miles under an existing drilling moratorium.

Zinke's tweet exempting Florida — which critics charge was simply a political gift for Scott's Senate campaign — and his subsequent statement that he was "removing Florida from consideration for any new oil and gas platforms" shouldn't be read as official Interior policy, said Randall Luthi, president of the trade group National Offshore Industry Association, which is pressing for access to the waters.

"Secretarial tweets and statements to Congress are outside the administrative process, but certainly are indicators of where the Secretary and evidently the White House might end up," Luthi said in a statement to POLITICO. "The Eastern Gulf of Mexico is ripe for some kind of a reasonable compromise."

The Gulf of Mexico Energy Security Act of 2006 put a moratorium on oil and gas exploration in the eastern Gulf until June 2022. Department of Defense offshore training zones put another large part of those waters out of contention for drilling.

Interior's first draft plan included opening up every acre of federal water to oil and gas companies, however. Zinke has implied in later conversations with coastal state governors, senators and trade associations that the final plan wouldn't necessarily include drilling off the coasts of New Jersey, Delaware, Maine, but his plan to announce a final decision this fall could delay unpopular decisions — including possibly opening up the waters off southern California and the Mid-Atlantic region — until after the midterm elections, sources said.

The most aggressive plan industry lobbyists have brought to lawmakers calls for allowing drilling platforms within 75 miles of Florida's Gulf coast, an idea that Interior itself floated in its draft plan. Buffer zones going out as far as 125 miles have also been discussed, sources said. Either could technically adhere to Zinke's promise not to open Florida's waters, since the state's jurisdiction only extends nine nautical miles from the shoreline. Interior proposed the use of so-called exclusion zones for the eastern Gulf of Mexico and the Atlantic coast in its draft plan.

One lobbyist working the issue told POLITICO that Zinke and Scott were careful to "not say the entire Eastern Gulf," was off the table during their press conference at the Tallahassee airport in January.

"There are some Republicans who are prepared to make a deal. Seventy-five miles is the expected buffer, but folks might be willing to throw it a little further," said the lobbyist, speaking anonymously to frankly discuss ongoing negotiations.

That reduced buffer zone would please the oil industry because most of the oil and gas reserves in the eastern Gulf are believed to be in the waters south of Alabama and the Florida Panhandle, said a person at one oil and gas company who was not authorized to discuss the draft plan.

"I think we could live with 75 miles," the person said. "I think that wouldn't hurt anyone."

The idea so far has failed to gain much traction with at least two Florida Republicans who said they have been inundated with industry requests to open the area to drilling.

Florida Republican Rep. Matt Gaetz said he opposes the idea on national security grounds, given that the Defense Department uses a large part of the eastern Gulf for training exercises.

"It seems every week the oil and gas industry is working to obtain permission to crack the Destin Dome," Gaetz said in an interview with POLITICO, referring to one offshore site believed to hold large amounts of natural gas. "That would be devastating to our national security. I don't have a nuanced view on this. I am opposed."

Gaetz said he has raised his concerns on several occasions with Zinke, who he said has not pushed for a specific policy but has espoused an expansion of oil and gas drilling in general.

"I've had meetings with the secretary on this," Gaetz said. "I've had spirited conversations with him. I would not say he was wedded to any particular plan. He was trying to advance the cause of energy exploration."

An Interior spokeswoman did not answer questions about Zinke's meetings with Florida lawmakers or the possibility of establishing a 75-mile buffer zone.

"Secretary Zinke regularly meets with and communicates with many members on both sides of the aisle, coastal and non-coastal," the spokeswoman said in a written statement. "Members often discuss relevant issues pertaining to their districts and states as appropriate."

Republican Rep. Francis Rooney, who opposed drilling off the Florida coast during his 2016 campaign, said the industry has also been reaching out to him. Industry representatives have suggested several compromises, including a 100-mile buffer zone, he said, though he has rejected that plan, saying currents could carry any spilled oil from that part of the Gulf onto state beaches.

Instead, Rooney, who had served on the board of the oil and gas company Laredo Petroleum, offered to allow drilling 200 miles off the coast, west of the area where the military conducts training.

"The oil people have brought up several different things and I have been pretty much recalcitrant in negotiating with them," Rooney told POLITICO. "I think we need a clear delineation of where they will drill and not drill, and we don't need them drilling east of that military mission line."

Environmentalists also oppose any drilling, saying a buffer zone wouldn't protect Florida's beaches and tourism economy.

"The Deepwater Horizon disaster that spoiled Florida's coastline was 200 miles from its shore," said Diane Hoskins, director of environmental group Oceana, referring to the 2010 deepwater gusher that took months to plug. "A 75-mile buffer would be a cold comfort for Floridians."

Alexandra Glorioso contributed to this report.

Trump delivers a Senate race sweetener to Scott [Back](#)

By Marc Caputo, Ben Lefebvre, Matt Dixon and Bruce Ritchie | 01/09/2018 11:24 PM EDT

Donald Trump delivered a big political contribution to Rick Scott on Tuesday as the Florida governor contemplates a bid for U.S. Senate: a pledge to spare Florida from administration plans to expand offshore oil drilling nationwide.

The surprise announcement from Secretary of Interior Ryan Zinke — who went to the trouble of flying to Tallahassee to stand beside Scott — outraged environmentalists and Democrats who insist the decision was a political ploy that unlawfully gave preferential treatment to Florida, a swing state that voted for Trump and that's home to his so-called "Winter White House" escape at Mar-a-Lago in Palm Beach.

Zinke made sure that the term-limited governor got all the credit. In response to a question about what was the final determining factor in his decision, Zinke said: "The governor."

"You have a tremendous governor that is straightforward, easy to work for, says exactly what he means. And I can tell you Florida is well-served," Zinke said.

Zinke's glowing endorsement of Scott has become de facto policy for Trump, who has tried for more than a year to woo Scott publicly and privately to run for U.S. Senate against Democratic incumbent Bill Nelson. The veteran senator is one of the most vocal opponents of offshore oil-drilling in Florida, an issue that typically enjoys broad bipartisan support in a state whose economy depends heavily on tourism and development along 1,300 miles of coastline.

Scott used to be an exception to the blanket opposition to offshore oil drilling. In 2010, the then-political newcomer voiced more support for oil exploration, but the position became a political liability in the state after the Deepwater Horizon oil spill coated some Florida beaches with tar balls and damaged tourism in parts of the Gulf.

A 2016 University of South Florida-Nielson poll found that 47 percent of state residents see offshore drilling as a move in the "wrong direction," a distinction that makes it one of the most unpopular policy proposals in the state.

So when Zinke announced last Thursday that the administration wanted to open vast new stretches of federal waters to oil and gas drilling, opposition was united in Florida — from liberal environmentalists to conservative lawmakers and even Scott, who issued a rare public denunciation of the policy.

At the time, Democrats and Nelson supporters highlighted the unpopular policy announcement by a president who's flagging in the polls. Nelson's campaign began fundraising off of the initial announcement to expand oil exploration.

One Republican insider, however, told POLITICO shortly after the initial announcement that the administration would scale the plan back somewhat to give Scott a political boost that would "be a big win, and it won't be Bill Nelson bringing it home."

As late as Tuesday, Nelson was still fundraising off the drilling announcement. "President Trump is about to hand a huge victory to the oil industry and put Florida's entire economy at risk," Nelson's campaign wrote. "He just announced plans to rollback offshore drilling regulations that were put in place after the 2010 Deepwater Horizon disaster, and open up nearly all federal waters to offshore oil drilling — including the eastern Gulf of Mexico."

But just before that email solicitation was sent out, Zinke was unexpectedly standing in Tallahassee's regional airport with Scott announcing the reversal to the Florida capital press corps.

Nelson said he was incredulous.

"I have spent my entire life fighting to keep oil rigs away from our coasts. But now, suddenly, Secretary Zinke announces plans to drill off Florida's coast and four days later agrees to 'take Florida off the table'? I don't believe it," Nelson said in a written statement. "This is a political stunt orchestrated by the Trump administration to help Rick Scott, who has wanted to drill off Florida's coast his entire career. We shouldn't be playing politics with the future of Florida."

Similarly, the Sierra Club of Florida said the decision was "a purely political move to aid the ambitions of Rick Scott." And the League of Conservation Voters called it a "publicity stunt."

Scott's spokesman, Jonathan Tupps, said oil-drilling opponents should not be upset.

"Senator Nelson and anyone else who opposes oil drilling off of Florida's coast should be happy that the governor was able to secure this commitment," he said. "This isn't about politics. This is good policy for Florida."

Tupps said that, contrary to claims by Scott's opponents, the governor and staff have frequently discussed Florida's opposition to more offshore oil drilling with the Interior Department. Scott personally raised the issue with Zinke in an October meeting in Washington, Tupps said.

Why Zinke suddenly reversed months of planning four days after announcing the new oil and gas exploration policy are unclear. Zinke also made his announcement via Twitter after a brief question-and-answer session with reporters in Tallahassee.

In reversing the policy for Florida, however, Zinke may have run afoul of the Administrative Procedure Act, critics said. That could give ammunition to California and Atlantic Coast states wanting to get on the same no-drill list -- the opposite of what President Donald Trump intended when he directed Zinke to expand oil companies' access to federal waters to boost U.S. energy production.

The American Petroleum Institute President Jack Gerard earlier in the day had applauded the Trump administration's plan to make all available federal waters available for drilling, saying "It represents a bold acknowledgement of the industry's advancements in technology to safely access U.S. energy resources."

Almost immediately after Zinke's announcement, lawmakers from other states took to Twitter to raise the specter of lawsuits, which could lead to courtroom entanglements for Interior's offshore drilling plan. The proposal was supposed to go into effect in 2019 and offer acres off the coast of Florida in late 2022 when a drilling moratorium officially ends.

"Under the Administrative Procedure Act, an agency can't act in an arbitrary and capricious manner. In this case, exempting Florida but not California (which has an even larger coastal economy) is arbitrary and capricious," Rep. Ted Lieu, a California Democrat and attorney, told POLITICO.

"So the agency would either have to not exempt Florida, or in the alternative, exempt Florida, California and any other state that can show the coasts are important to the state's tourism and economy."

California Attorney General Xavier Becerra also hammered that point on Twitter, echoing Scott's argument against drilling off the Florida coast to say "California is also 'unique' & our 'coasts are heavily reliant on tourism as an economic driver.' Our 'local and state voice' is firmly opposed to any and all offshore drilling. If that's your standard, we, too, should be removed from your list. Immediately."

In Virginia, U.S. Sen. Tim Kaine took a more low key approach. "Virginia's governor (and governor-elect) have made this same request [as Florida], but we have not received the same commitment. Wonder why..." he tweeted.

Pruitt touts science policy as transparency as Democrats slam him for secrecy [Back](#)

By Emily Holden and Annie Snider | 04/26/2018 03:17 PM EDT

Embattled EPA Administrator Scott Pruitt sought to fend off criticisms he had clouded his activities within the agency in secrecy, pointing during Thursday's congressional hearing to the new science policy rolled out this week that he said is boosting transparency around new rules.

But that new policy, long a conservative priority, had Democrats howling that Pruitt had effectively given himself carte blanche to conceal studies that would not support his rollback of Obama EPA rules.

"The type of studies you want to exclude are the same kind of scientific studies that were used to prove that lead in pipes and paints harm children and that secondhand smoke is a dangerous carcinogen," said Rep. [Raul Ruiz](#) (D-Calif.). "You have demonstrated a disregard of true science [and] the scientific process," he said.

The discussion was one of the most substantive policy issues at [the hearing](#) of the Energy and Commerce subcommittee that focused largely on the scandals that have erupted around Pruitt in recent weeks.

The draft rule, which was announced at a closed event at agency headquarters on Tuesday, could have far-reaching effects that limit EPA's ability to rely on studies that don't have publicly available raw data when making decisions about air and water regulations. Scientists and public health advocates have argued the change could keep the agency from updating health protections based on new science since those studies typically redact subjects' personal information.

Pruitt's GOP supporters on the panel praised the move as a way to ensure that scientific data used to support new regulations was available for everyone to review.

"I've had a lot of constituents over the years who've been very concerned about decisions ... that get made by administrators or the bureaucracy and in some cases they can't get access to the underlying data that underpins the decisions," said Rep. [Greg Walden](#) (R-Ore.), chairman of the Energy and Commerce Committee.

Rep. [Paul Tonko](#) (D-N.Y.) called Pruitt "hypocritical" because the proposed rule gives broad authority Pruitt to grant exemptions from the new requirements, which he said Pruitt could use "without any transparency or accountability" for his decisions.

Tonko pointed to internal emails between top EPA officials initially released under the Freedom of Information Act that show the agency's top chemicals official, a former leading chemicals industry expert, expressing concerns about the impact the policy could have on companies' confidential business information.

"If EPA was assessing the safety of a chemical, you alone would have the power to selectively block public health studies that do not support your political priorities and allow ones that favor your friends in industry. Not only does this open the door to special treatment for industry over the public health, but you could also pick winners and losers among the industry types," Tonko said.

Pruitt argued the restrictions will apply equally to "all third party studies." He said both business and personal health information could be redacted, which experts have argued would be time-consuming and expensive.

Yogin Kothari, a Washington representative for the Union of Concerned Scientists, which has opposed the change, said Democrats were right to highlight the hypocrisy of the policy that he said was really about restricting science.

"What it highlights is a lack of transparency at the agency because he hasn't really talked about this or explained this or explained his thinking about this," Kothari said.

Frank Maisano, a spokesman for the lobbying firm Bracewell who attended the hearing, said Republicans on the committee appeared to be interested in hearing more about the policy.

"It's a topic that is different from what Democrats are talking about, it's a topic that's substantive," Maisano said. "It's a topic that many in the business community and many in the conservative community have been focused on for years."

EPA's proposal, based on long-sought legislation from House Science Chairman Lamar Smith (R-Texas), also drew support from Rep. Kevin Cramer (R-N.D.) who said it undercut Democrats who attacked Pruitt for secrecy while defending the agency previous use of "secret science."

"You've also been accused of hypocrisy, a lack of transparency, by people who are in the same breath defending secret science as a means of carrying out their political philosophy ... the irony is rich beyond rich with me," he said.

Mexico, U.S. may be heading toward NAFTA deal amid Trump's global trade war [Back](#)

By Megan Cassella | 08/15/2018 05:32 PM EDT

President Donald Trump could be poised to make a deal with Mexico on NAFTA even as he engages in a trade war with the rest of the world.

Mexican Economy Secretary Ildefonso Guajardo arrived in Washington on Wednesday — as he has every week for the past month — to hammer out some of the most contentious issues on NAFTA. U.S. and Mexican officials now say they could be on the verge of announcing a preliminary agreement on everything from complicated automotive rules to environmental regulations by the end of August.

The apparent turnaround after months of stalemate is a surprise outcome of discussions reaching their year anniversary on Thursday. And while the two sides have yet to bring Canada, the third partner in NAFTA, into the latest round, the negotiators' optimistic tone could signal that Trump may be ready to extinguish at least one trade conflagration before the midterms. That would placate Republicans who have been calling for a return to stability as the U.S. and China have been slapping tariffs on each other's exports, roiling international markets and burdening American farmers.

"We're settling in for the long haul with China, so we really need to release the pressure in our backyard," said Dan Ujcz, an international trade lawyer who specializes in Canada-U.S. matters. "I think that's a driving force for the U.S.' desire to get a deal right now."

To be sure, some major controversial issues remain unresolved, including the U.S. proposal to automatically terminate the pact after five years unless all three countries agree to renew it — an idea that Canada and Mexico have both rejected outright. And for the time being, at least, Canada still remains on the outside of the current talks.

But reaching even a bare-bones agreement on NAFTA before November's elections would hand a concrete victory to Trump, who would likely point to the revamped pact as a symbol that his strong-arm tactics have worked, industry sources and experts closely following the talks say. It would also allow U.S. trade officials to clear a major task off their agenda and dedicate more time to areas where U.S. Trade Representative Robert Lighthizer in particular has wanted to focus, primarily trade issues with China.

At the same time, Mexican negotiators are also under renewed pressure to get a deal after the country elected a new leader who takes office in December and who badly wants NAFTA to be signed and off his plate before then. Mexico has pointed to Aug. 25 as the date by which it must wrap up at least a preliminary agreement for outgoing President Enrique Peña Nieto to be able to sign the deal before he leaves office.

Those domestic politics have put Guajardo in a tough position, as he tries to appease the incoming Mexican administration and quickly wrap up a deal while still standing up firmly against some U.S. proposals that Mexico has repeatedly derided as unworkable.

"They're under a lot of pressure to just come up with anything, whatever it is," one source close to the talks said, requesting anonymity to speak freely about internal deliberations. "What I've been hearing from other Mexican parties is that Ildefonso was sort of distraught and frazzled by the fact that he's being asked to wrap it up, and that of course means making concessions that he wasn't ready to make. It lowers his negotiating potential."

Against that backdrop, sources close to the talks say Mexico appears to be poised to accept large swaths of a U.S. proposal involving the rules that govern North American-produced automobiles and dictate what percentage of each car must be sourced from within a NAFTA country to qualify for reduced duties under the agreement.

At the U.S.' urging, Mexico looks likely to agree to an increase in the overall amount of North American-sourced content that must be included in each automobile, and will accept a requirement that a certain percentage of each car must be produced by workers earning at least \$16 an hour, sources say. Mexico is also poised to accept mandates that a certain percentage of the steel, aluminum and plastic included in each vehicle is also sourced from a NAFTA country.

In exchange, the United States would be prepared to give up a controversial proposal that would have made it easier for American fruit and vegetable growers to make the case that Mexico is selling produce at unfairly low prices when crops are in season in a particular region, two sources with knowledge of the trade-off told POLITICO. The U.S. would also submit to Mexico's demand to leave a chapter largely untouched that contains rules on disputes between governments, one of the sources said.

"Essentially, there is a deal," one of the sources said.

At the same time, however, other major aspects of the renegotiation remain unfinished. Chief among them is the so-called sunset clause that the U.S. wants, which would end the pact after five years unless the parties opt to continue it. Several sources close to the talks say the sunset clause has hardly been discussed during the latest set of meetings between the U.S. and Mexico, and the two countries still remain on opposite sides.

And Canada will need to come to the table for a deal to be finalized. Officials from all three countries have sought to emphasize that the U.S.-Mexico engagement is not a sign of ill will toward Canada but is instead an attempt to work out bilateral issues before bringing Ottawa back into the fold.

But negotiators had expected that Washington and Mexico City would have made enough progress by now for Canadian Foreign Minister Chrystia Freeland to have joined the meetings in Washington. The more time that passes, the more likely it is that the strategy to put off a trilateral meeting could backfire, a source close to the talks said.

"Yes, there's U.S.-Mexico momentum — that's a positive message and great from Mexico's point of view," the source said. "But the longer it takes to bring in Canada, the less likely this is going to get done in the short term."

Still, any incremental progress, or even the fact that the U.S. and Mexico are continuing to engage in good-faith negotiations and regular meetings, has offered a signal of some hope to U.S. farmers, consumers and industry groups who have been worn out by months of uncertainty and pummeled by retaliatory tariffs imposed over the past few months.

Retailers and business groups are reluctant to throw their support at this point behind a deal that is still unfinished, particularly when a number of proposals that some have termed poison pills remain on the table.

But at the same time, "I think what all of our members want, what the business industry at large wants, is certainty," said Vanessa Sciarra, a former U.S. trade negotiator who now works as a vice president at the National Foreign Trade Council. "Anything that provides for greater clarity on trade relationships, particularly with Mexico and Canada ... would be helpful."

Adam Behsudi contributed to this report.

Subject: Morning Consult Energy: Week in Review & What's Ahead

By Sei Chong

Week in Review

Tariffs and budget

- President Donald Trump unveiled a \$60 billion package of tariffs on Chinese-made goods, including electric and other "new-energy" vehicles. The Trump administration is expected to present a list of specific products subject to the duties in the next two weeks, which will be followed by a public comment period.

- Robert Lighthizer, the U.S. trade representative, told the Senate Finance Committee that the European Union, Argentina, Australia, Brazil and South Korea would be excluded from the Trump administration's tariffs on steel and aluminum imports.
- A government shutdown was averted when Trump signed into law an omnibus spending bill, which rejected the Trump administration's proposed cuts for the Environmental Protection Agency's funding.

Scrutiny over travel costs

- EPA documents requested by House Oversight and Government Reform Committee Chairman Trey Gowdy (R-S.C.) revealed \$68,000 in previously undisclosed travel costs for Administrator Scott Pruitt from August to February, which included first-class flights. The EPA said the higher costs were related to increased security for Pruitt because of the threats he has received.
- Interior Secretary Ryan Zinke and his wife took a security contingent with them when they went on vacation in Greece and Turkey last year, according to documents the agency made public via a Freedom of Information Act request. Zinke did not handle government business during the two-week vacation, but Interior spokeswoman Heather Swift said U.S. Park Police officers accompanied Zinke because of concerns about security threats in the region.

Oil

- Trump's decision to replace Lt. Gen. H.R. McMaster with John Bolton, former U.S. ambassador to the United Nations, as his new national security adviser has increased the chances that the United States will abandon the Iran nuclear deal as it nears a May 12 deadline to waive oil-related sanctions on Tehran, according to analysts.
- Oil and gas drillers bid on 1 percent of Gulf of Mexico leases offered in what the Interior Department billed as the largest offshore oil and natural gas lease sale in U.S. history. Winning bids averaged \$153 an acre, 35 percent below levels last year, according to the data.
- The Bureau of Land Management sold all 43 plots in Utah, including areas near the original boundaries of Bears Ears National Monument, that were available in an online auction for

oil and gas leases. The auction of more than 51,000 acres, which generated more than \$1.5 million in projected revenues, didn't include any of the land that recently lost monument status at Bears Ears.

- Saudi Arabian Energy Minister Khalid al-Falih said in an interview that members of the Organization of the Petroleum Exporting Countries will need to continue to work with Russia and other non-OPEC allies on supply cuts in 2019 to push down global oil inventories to desired levels.
- Saudi Arabia is looking to list the state-run oil giant Aramco at home next year while weighing a decision whether to move forward with an international offering, according to government officials and others close to the process.

Climate change

- An increase in global energy demand, driven by greater consumption in China and India, led to a 1.4 percent increase in carbon dioxide emissions last year, the International Energy Agency said. The growth in carbon dioxide emissions in 2017 "tells us that current efforts to combat climate change are far from sufficient," said Fatih Birol, IEA executive director.
- The United Nations' World Meteorological Organization said in its annual report on the global climate that the last three years were the hottest on record and that heat waves in Australia, unusual warmth in the Arctic and water shortages in Cape Town, South Africa, are extending harmful weather extremes in 2018.
- The nation's first court hearing on the science of climate change was held in a San Francisco federal court, where U.S. District Judge William Alsup listened to lawyers for the cities of San Francisco and Oakland and for five of the world's largest oil and gas companies present a tutorial on global warming science. The cities are suing the oil companies, contending that they are liable for damages linked to climate change.

What's Ahead

- Both the House and Senate are in recess. The two chambers will return the week of April 9.
- Energy Secretary Rick Perry is scheduled to testify before the House Energy and Commerce's Energy Subcommittee on April 12. The subcommittee is also expected to hear from all Federal Energy Regulatory Commission members on April 17.
- The House Energy and Commerce's Environment Subcommittee will hear from Pruitt on the EPA's budget request on April 26.
- The EPA is scheduled to hold a listening session for its proposed repeal of the Clean Power Plan in Gillette, Wyo., on March 27.

Good Morning Mr. Woods,

My colleague, Dr. Robert (Bob) Golden and I knew that this Transparency Rule was coming and cheer its arrival – Bravo!

Nonetheless, I am haunted when I read the Administrator's urging: that the rule **be lasting!** There is *only one way* for this important tectonic change to meet and that is it **be mandated** by a newly formulated, independent Committee of the National Academy of Sciences (NAS). When undertaking their literature review, the NAS Committee Members and Staff will uncover a recently released, peer reviewed, highly credentialed, science-based Report that makes plain that there is a wealth of

toxicological and epidemiology data for chemicals and radiation that will readily yield reproducible as well as transparent regulations.

Administrator Pruitt is unique in recognizing that the mathematical construct that the EPA uses for assessing risk, the linear no-threshold (LNT) methodology, is of **MOST** questionable scientific validity. The LNT model was originally adopted by the National Academy of Sciences (NAS) in 1956 for radiation and in 1977 for chemicals. Because LNT-driven regulations, whether for chemicals or radiation, have, for many years, been claimed to be science-based (see <https://science.house.gov/sites/republicans.science.house.gov/files/documents/HHRG-113-SY-20131114-SD001%20.pdf> as well as <http://www.c-span.org/video/?327016-1/epa-administrator-gina-mccarthy-testimony-proposed-regulations>), the underlying scientific foundation for such regulations, particularly the LNT model itself, should also, by definition, reflect empirical data. If such scientific data are lacking, as they are for the LNT model, science-based regulatory methodologies (including benefit-cost analyses) for both chemicals and radiation should be updated to reflect significant advancements in scientific knowledge.

Besides introducing you to the fact that the *CTC Foundation* has empaneled a prestigious Science Committee that comprised of 15 individuals in the fields of toxicology, radiation biology, evolutionary biology, epidemiology, risk assessment, and economics; the Committee is preparing its FINAL Report that will demonstrate that there is no scientific support for the LNT model

and that ample modern data (NOT threshold models) should be the bases for regulations. In particular, the abundant data generated as part of the Department of Energy's 10 year, \$200 million Low Dose Radiation Research Program (LDRRP) will be a central element of the anticipated publication. Collectively, these and other complementary data have elucidated the cellular defense mechanisms by which humans can withstand exposure to low dose radiation without adverse effects.

I have begun to encourage the "doctors in the US Senate" (Barrasso [R-WY] and Cassidy [R-LA]) to introduce and progress legislation in the Senate that would be a companion bill to H.R. 4675, pertaining to the low dose radiation research that Doctor and US Congressman Roger Marshall (R-KS) championed. There are some modifications that Dr. Robert (Bob) Golden and I would advocate, given our respective professional experiences working at NAS, but more on that later. Our overarching Goal is shared: a paradigm shift whereby a **lasting**, scientifically valid approach for radiation and chemical risk assessment as well as for economic benefit-cost analyses be achieved.

Thank you for your time and interest.

Most sincerely yours,

Howard

Pruitt unveils controversial 'transparency' rule limiting what research EPA can use

Environmental Protection Agency chief Scott Pruitt listens to President Trump address reporters before a meeting at the White House this month. (EPA-EFE/Shutterstock)

This post has been updated.

Environmental Protection Agency Administrator Scott Pruitt moved Tuesday to limit what science can be used in writing agency regulations, a change long sought by conservatives.

The proposed rule would only allow the EPA to consider studies where the underlying data is made available publicly. Such restrictions could affect how the agency protects Americans from toxic chemicals, air pollution and other health risks.

Pruitt and proponents describe the new approach as an advance for transparency, one that will increase Americans' trust and

confidence in the research on which EPA decisions are based. “Today is a red-letter day,” he told a group of supporters at agency headquarters. “The science that we use is going to be transparent. It’s going to be **reproducible.**”

But a chorus of scientists and public health groups warn that the rule would effectively block the EPA from relying on long-standing, landmark studies on the harmful effects of air pollution and pesticide exposure. Such research often involves confidential personal or medical histories or proprietary information.

The move reflects a broader effort already underway to shift how the EPA conducts and uses science to guide its work. Pruitt has upended the standards for who can serve on its advisory committees, barring scientists who received agency grants for their research while still allowing those funded by industry.

His announcement Tuesday came as the administrator faces increasing heat for ethics and management decisions — from both sides of the political aisle, with even President Trump privately voicing more concern over the growing number of allegations. Pruitt only focused on the proposed rule during his remarks, saying his agency was “taking responsibility for how we do our work and respecting process.”

He made clear he intends the new requirements to be lasting ones. “This is not a policy,” he said. “This is not a memo.”

The proposal will be subject to a 30-day comment period, EPA officials said. Scientific organizations are already campaigning to

block the rule from being finalized. Based on previous court cases, it could prompt legal challenges if implemented.

Former EPA administrator Gina McCarthy said that requiring the kind of disclosure Pruitt envisions would have disqualified the federal government from tapping groundbreaking research, such as studies linking exposure to leaded gasoline to neurological damage or a major 1993 study by Harvard University that established the link between fine-particle air pollution and premature deaths.

Scientists often collect personal data from subjects but pledge to keep it confidential. Researchers will have trouble recruiting study participants if the rule is enacted, she predicted, even if they pledge to redact private information before handing it over to the government.

“The best studies follow individuals over time, so that you can control all the factors except for the ones you’re measuring,” said McCarthy, who now directs the Center for Health and the Global Environment at Harvard’s public health school. “But it means following people’s personal history, their medical history. And nobody would want somebody to expose all of their private information.”

House Science Committee Chairman Rep. Lamar Smith (R-Tex.), who was with Pruitt during his announcement Tuesday, has for years sought to establish a similar requirement. His 2017 legislation, titled the Honest and Open New EPA Science Treatment Act, failed to pass both chambers.

Pruitt and Smith met at EPA headquarters on Jan. 9, according to Pruitt's public calendar, and an email obtained under the Freedom of Information Act indicates that the lawmaker pressed the administrator to adopt the legislation's goal as his own.

Smith made "his pitch that EPA internally implement the HONEST Act [so that] no regulation can go into effect unless the scientific data is publicly available for review," Aaron Ringel, deputy associate administrator for congressional affairs at the EPA, wrote other agency staffers. His email was obtained by the Union of Concerned Scientists, a scientific advocacy organization.

Conservatives, such as Trump EPA transition team member Steve Milloy, have long tried to discredit independent research the agency used to justify limiting air pollution from burning coal and other fossil fuels. A series of studies has shown that fine particulate matter, often referred to as soot, enters the lungs and bloodstream and can cause illnesses such as asthma and even premature death.

"During the Obama administration, the EPA wantonly destroyed 94 percent of the market value of the coal industry, killed thousands of coal mining jobs and wreaked havoc on coal mining families and communities," Milloy said in a statement, "all based on data the EPA and its taxpayer-funded university researchers have been hiding from the public and Congress for more than 20 years."

While the administration presses ahead, legal experts warn that the rule may be vulnerable to a court challenge. In unanimous decisions in 2002 and 2010, the U.S. Court of Appeals for the

District of Columbia Circuit said the EPA is not legally obligated to obtain and publicize the data underlying the research it considers in crafting regulations.

In the 2002 case, brought by the American Trucking Associations, two judges appointed by Ronald Reagan and one named by Bill Clinton wrote that they agreed with the agency that such a requirement “would be impractical and unnecessary.” The government’s defense had noted that “EPA’s reliance on published scientific studies without obtaining and reviewing the underlying data is not only reasonable, it is the only workable approach.”

A range of scientific organizations are already campaigning to block the rule from being finalized. On Monday, 985 scientists signed a letter organized by the Union of Concerned Scientists, urging Pruitt not to forge ahead with the policy change.

“There are ways to improve transparency in the decision-making process, but restricting the use of science would improve neither transparency nor the quality of EPA decision-making,” they wrote. “If fully implemented, this proposal would greatly weaken EPA’s ability to comprehensively consider the scientific evidence across the full array of health studies.”

Under the proposed rule, third parties would be able to test and try to replicate the findings of studies submitted to the EPA. But, the scientists wrote, “many public health studies cannot be replicated, as doing so would require intentionally and unethically exposing people and the environment to harmful contaminants or recreating one-time events.”

Gretchen Goldman, an expert on air pollution and research director for the organization's Center for Science and Democracy, said the rule could put some scientists in a quandary: Keeping personal health data or propriety information private would mean having their work ignored by the EPA.

"We have this incredible science-based process that works, and it has worked, by and large, even in the face of tremendous political pressures to not go with a science-based decision," Goldman said.

The Environmental Protection Network, a group of former EPA employees, issued a report Tuesday stating that many older studies — in which the original data sets were either not maintained or stored in outdated formats — would be eliminated under the proposed rule.

And while there is no estimate yet for how much it would cost EPA to obtain and disseminate studies' underlying data, the Congressional Budget Office has projected that Smith's measure, if enacted, would cost the agency \$250 million for initial compliance and then between \$1 million and \$100 million annually. A 2015 CBO analysis estimated that EPA would cut the number of studies it relies on by half because of the bill's requirements.

Geophysicist Marcia McNutt, who is president of the National Academy of Sciences, said Tuesday that she is concerned the rule would prevent the EPA from relying on the best available scientific evidence.

“This decision seems hasty,” she wrote in an email. “I would be fearful that the very foundations of clean air and clean water could be undermined.”

Yet the American Chemistry Council praised Pruitt’s effort. “Our industry is committed to working with EPA to help ensure the final rule increases transparency and public confidence in the agency’s regulations,” its statement said, “while protecting personal privacy, confidential business information, proprietary interest and intellectual property rights.”

Joel Achenbach and Dino Grandoni contributed to this report.

Subject: Today on Climate Beat

May 18, 2018

In today's coverage . . .

. . . Michigan's two largest electric utilities, DTE Energy and Consumers Energy, are accelerating their transition to clean energy in an agreement reached with NextGen America so the group will drop its pursuit of a mandatory clean energy ballot initiative in the state.

Speaking of states, California officials are considering backing the launch of a satellite in part to track methane emission hot spots around the world in response to Trump administration proposals to defund such carbon monitoring efforts by NASA.

Staying in California, EPA appointed long-time California agriculture industry attorney Mike Stoker as the administrator of Region 9, which covers the Golden State, Arizona, Hawaii and Nevada, though he is already attracting controversy over his reported refusal to work out of the region's San Francisco headquarters. We rounded up some of our must-read coverage from the past week, including the latest on EPA's vehicle greenhouse gas standards, as well as a look at how one utility is curbing biomass power, efforts to save coal plants and EPA's "secret science" rule.

And our daily news roundup looked at a sharp criticism of the Trump administration's environmental deregulatory agenda from a libertarian think tank, which charges that federal officials are protecting "ill-gotten gains" for favored industries while foisting costs on the public.

National Ambient Air Quality Standards

**As EPA Goes Back to Basics, State and Regional
Agencies Strive to Continue NAAQS Successes**

AIR EMISSIONS? WE HAVE 4 SOLUTIONS!

1 Inorganic Gases, Odors, Fumes

Packed Tower Scrubbers for extreme pH gas streams

- Systems accommodate PM control, gas quench
- Ideal for applications involving inorganic compounds with high solubility or high chemical reactivity.
- Highly effective for odor control.

E-mail: gworthington@tri-mer.com, (989) 723-7838

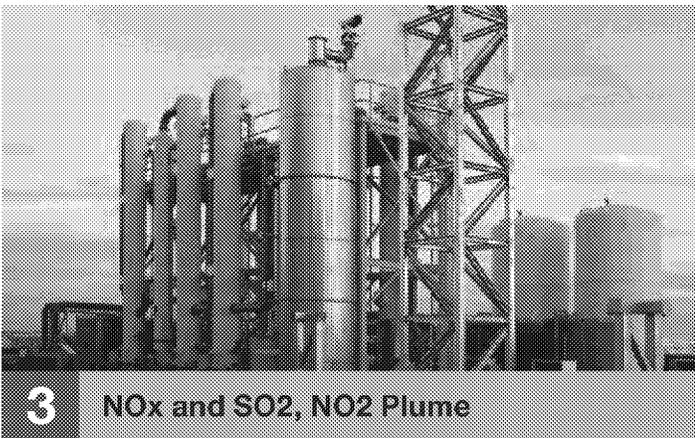

2 Dusts from Grinding, Mixing, Bag Filling

Whirl Wet® collects 99% of particulate over 3 microns

- Low water use, low maintenance; ideal for explosive dusts
- Advanced dust and particulate collector has no internal moving parts.
- 99%+ efficient for a wide range of micron sizes.
- Will not clog under any operating condition.

E-mail: tainsworth@tri-mer.com, (989) 723-7838

3 NOx and SO2, NO2 Plume

Tri-NOx® Multi-Chem® Wet Scrubber meets any stack output

- Handles any NO/NO2 ratio, assures a clear stack, free of NO2 plume.
- Wet destruct technology removes SO2 and other acid gases.
- System is designed for low temperature NOx sources.
- Reduces loads in excess of 100,000 ppm to below 5 ppm.

E-mail: dhaley@tri-mer.com, (989) 723-7838

4 PM, NOx, SOx, SO2, SO3, HCl, HF, Chrome

Tri-Mer High Temperature Ceramic Filter System uses nanobits of SCR catalyst to destroy NOx at 90%+

- Also destroys organic HAPs, CO, VOCs, dioxins and mercury
- Particulate (PM) is removed to ultralow levels (<2 mg/Nm3, 0.001 grains/dscf) at temperatures up to 1650°F.

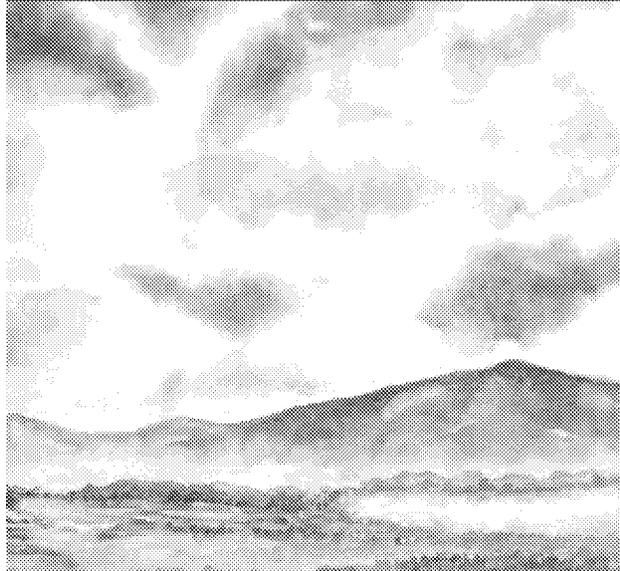

E-mail: kevin.moss@tri-mer.com, (989) 321-2991

Leveraging Technology to Better Serve Members

by Chris Nelson, P.E. » president@awma.org

This month's *EM* provides policy and technical updates related to the U.S. National Ambient Air Quality Standards (NAAQS). The ozone NAAQS typically receives the most attention, but standards for particulate matter, sulfur dioxide, and nitrogen oxides are also important for public health and can create compliance challenges during permitting or State Implementation Plan development. The U.S. Environmental Protection Agency (EPA) regularly reviews the science supporting the various NAAQS and updates them when appropriate.

In practice, the updates lead to ongoing changes in both implementation guidance from regulatory agencies and compliance strategies for communities and permitted facilities. I hope this issue of *EM* provides useful information for members as you navigate NAAQS attainment issues.

Last month, I discussed mentoring, one of my long-term focus areas for our Association. This month, I want to delve into a second focus area: the use of modern media for content delivery.

A&WMA has adopted some new practices for delivering programs, including basic elements (e.g., LinkedIn groups and email news updates) and effective current practices (e.g., webinars). We have a minimal social media presence, though our Young Professionals Advisory Committee (YPAC) is active on Twitter and adds value. A key challenge is to match our capabilities with the needs of our members and customers. I have a few ideas and hope you, our members, can provide feedback and help innovate at the local level.

My kids spend a ridiculous amount of time watching YouTube videos. We can't emulate the business model of the YouTubers they follow though. I don't think A&WMA members are clamoring for videos of me adopting a silly voice and providing commentary as I navigate AP-42 or AERMOD input files. However, we could potentially cooperate with

member companies or other partners to provide "how does it work?"-style videos for educational purposes. YPAC has been executing similar sessions at our Annual Conference & Exhibition for several years. In 2018, they added live demonstrations at the Young Professional Hub on the exhibit floor in Hartford. An accessible library that explains the fundamentals of stack testing or the operations of a baghouse may be useful for professional development.

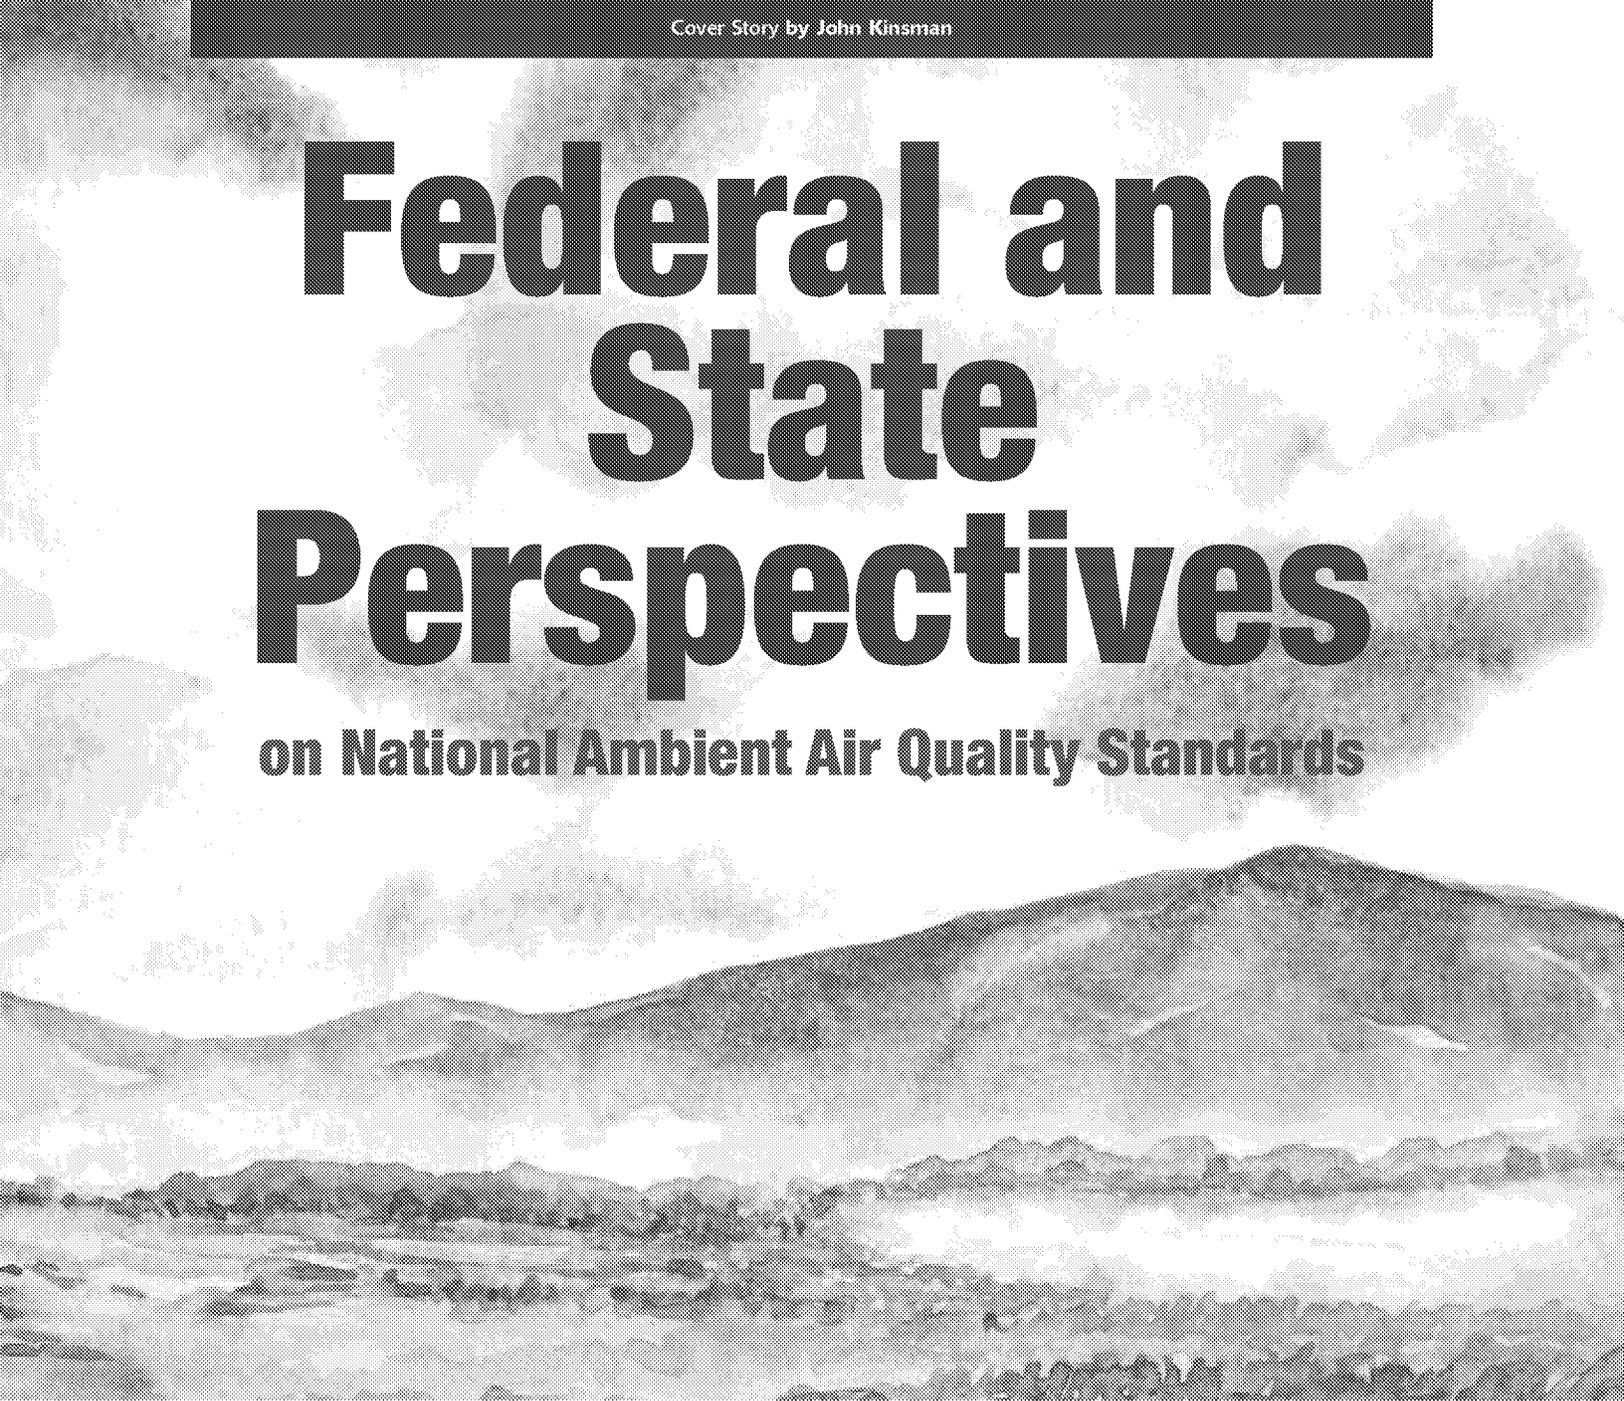

While educational videos would be relatively static over time, A&WMA members are also looking for real-time updates on policy or technology changes. At our 2018 A&WMA Leadership Training Academy in April, our incoming YPAC Chair, Paul Algu, asked me to record a short interview on a professional development topic. He planned to post it online for Association YPs. I think these types of updates may be useful on technical topics as well. Our Association will not be able to produce podcasts with the production value of Freakonomics (<http://freakonomics.com/archive/>) or Revisionist History (<http://revisionisthistory.com/>) (two of my personal favorites), but could produce something simple with real value. A series of short updates on key priorities from state or local air directors would be topical for many of us. Similarly, sharing of compliance best practices or innovations from companies and consultants may be one way to stay current with technical trends.

I am not as tech savvy as many of our A&WMA members. If you have ideas on ways the Association could leverage technology to better serve our members and a drive to execute those ideas, please drop an A&WMA Board member a note or call. If you have successful examples from your Section or Chapter, please share them.

Thanks for your service as environmental professionals and A&WMA members. **em**

Federal and State Perspectives

on National Ambient Air Quality Standards

This issue of *EM* focuses on the U.S. Clean Air Act (CAA) National Ambient Air Quality Standards (NAAQS) program. Authors from the federal government (U.S. Environmental Protection Agency, or EPA) and three state associations—Association of Air Pollution Control Agencies (AAPCA); National Association of Clean Air Agencies (NACAA); and Western States Air Resources Council (WESTAR)/Western Regional Air Partnership (WRAP)—discuss various NAAQS science and policy topics.

This issue presents federal and state perspectives on NAAQS issues. In the first article, Alexander Dominguez and Clint Woods of EPA discuss the agency's efforts to review and reform the NAAQS program, including a "back-to-basics" approach for NAAQS standard setting, designations, and implementation. An April 2018 Presidential memorandum is reviewed, which set forth nine primary directives intended to ensure EPA's efficient and cost-effective implementation of air quality standards and regional haze programs. Timeliness, cooperative federalism (working with state co-regulators), and recognition of international and background sources of pollution are critical issues the agency is directed to address.

The authors also discuss EPA's May 2018 memorandum, *Back-to-Basics Process for Reviewing National Ambient Air Quality Standards*, which directs the agency and its independent science advisors to follow five principles for a transparent, timely, and efficient process in reviewing and revising future public health- and welfare-based NAAQS. The authors present important milestones in implementing NAAQS, such as goals for reducing the number of non-attainment areas, reducing the backlog in state plan submissions, and actions related to exceptional events, international sources, interstate transport, state plans, etc.

In the next article, Jason Sloan, Stuart Spencer, and Nancy Vehr of AAPCA (a national organization of more than 20 state environmental agencies and additional local air agencies) focus on air quality improvements in the United States, and the role of states and local air agencies responsible for implementing the NAAQS through the CAA's framework of cooperative federalism. In April 2017, AAPCA published the inaugural edition of *The Greatest Story Seldom Told: Profiles and Success Stories in Air Pollution Control*, an annual report that highlights air quality trends, and underscores the critical role of state and local air agencies in making complex regulatory decisions impacting their communities. The 2018 edition of AAPCA's report, published in July, includes updated trends for criteria pollutant concentrations and emissions that show continued progress.

The authors discuss opportunities for continued air quality success as state and local agencies continue to work toward attaining national standards and characterizing air quality. AAPCA-conducted surveys of state environmental agency comments recognized several common concerns when it comes to establishing compliance with new NAAQS. For example, of 44 state environmental agencies that filed individual comments, 26 state agencies raised background ozone (O_3) as an achievability or implementation challenge, including both naturally occurring and internationally transported contributions to ground-level O_3 . The authors state that continued success is dependent on informed collaboration at the federal, state, and local levels.

Next, Miles Keogh of NACAA (a national association of 156 state and local air pollution control agencies in 41 states, the

District of Columbia, and four territories) observes that since 1970, the United States has made tremendous strides in reducing levels of the criteria pollutants for which NAAQS are established, driven by the scientific evidence that there are serious health consequences associated with exposure to these pollutants.

The article then focuses on EPA's April 30 proposed rule, "Strengthening Transparency in Regulatory Science." While EPA has stated that its intent with the proposed rule is to increase the quality and transparency of the agency's decision-making, the author says that it is possible that the provisions of the science proposal would weaken both, and many unknowns remain that should be fleshed out. Further, while there is a laudable long-term trend toward increased transparency in science, complete public access to underlying data is not always possible, especially in the case of epidemiological studies based on private health data that must remain confidential. The author concludes by observing that the NAAQS remain a key component of the hard-won clean air gains of recent decades, and diminishing the science used to understand the health implications that drive these standards would harm the health of Americans.

The final article by Mary Uhl of WESTAR and Tom Moore of WRAP (a forum of 15 western states and federal land management partners, and a partnership of states, tribes, federal land managers, local air agencies, and EPA, respectively) addresses NAAQS implementation issues in the Western United States, especially background O_3 and O_3 transport issues. As the O_3 NAAQS have changed in form and stringency over the past two decades, rural areas with high concentrations of O_3 and low numbers of local sources likely responsible for elevated O_3 concentrations have brought a new focus on the analysis of transport, uncontrollable sources of O_3 precursors and background O_3 . Western planning needs also include identification of O_3 exceptional events, and clarification of the application of planning mechanisms offered in the CAA (i.e., international transport in Sec. 179B Demonstrations and Sec. 182 Rural Transport Areas).

The authors observe that EPA's funding support in the East has advanced understanding by eastern states of the origin of O_3 precursors, O_3 formation and the fate of O_3 , which helped with the development and implementation of meaningful and effective regulatory programs to improve air quality. Western states need a better understanding of the origin of O_3 precursors, photochemical activity, and fate of transported O_3 to develop and implement effective regulatory programs.

Some NAAQS Observations

Since soon after the CAA's NAAQS provisions were established in 1970, improving air quality and declining emissions have been a constant. For example, according to EPA, from 1990 to 2017 electric power sulfur dioxide (SO_2) and nitrogen oxides

emissions have been reduced consistently over time, by 92 and 84 percent, respectively, supporting the nation's progress in meeting the SO₂, nitrogen dioxide (NO₂), O₃, and fine particle (PM_{2.5}) NAAQS.

Another constant is that the NAAQS process is a never-ending cycle of reviewing and often revising standards; updating implementation rules and guidance; improving air quality models and related tools; updating state plans and industry requirements; and litigation. This process delivers air quality improvements, but further process refinements to reduce time and increase efficiency could benefit federal and state regulatory agencies, regulated industry, and the public.

A final constant is that the NAAQS field is broad. Therefore, numerous important activities could not be addressed in this issue of *EM*; these include:

- Implementation of the 2015 O₃ NAAQS (including addressing the controversial court decision regarding implementation of the 2008 NAAQS) and litigation of the level of the 2015 O₃ NAAQS;
- Retention of the 2010 1-hr NO₂ NAAQS in 2018 and proposed retention of the 2010 1-hr SO₂ NAAQS to be finalized by early 2019;

- Updated reviews of the O₃ and PM_{2.5} NAAQS to be completed in 2020;
- Final designations in 2020 for the 2010 1-hr SO₂ NAAQS;
- Evaluation of secondary NAAQS for SO₂, NO₂, and PM_{2.5};
- Improvements in air quality models, modeling guidelines, and tools to streamline and make air quality permitting more accurate and efficient;
- Addressing interstate transport, including litigation of the "CSAPR Update" rule, EPA responses to state CAA Sec. 126 and 176 petitions and related litigation, addressing state plans for full compliance with Good Neighbor provisions for the 2008 O₃ NAAQS, and the new approach to state plans to address Good Neighbor state plans for the 2015 O₃ NAAQS, through state-by-state plan submissions instead of EPA regional rulemaking;
- Advance notice of proposed rulemaking on increasing consistency and transparency in considering costs and benefits of the rulemaking process; and
- Congressional consideration of legislation addressing the NAAQS review process, permitting and international emissions.

Look for the December issue of *EM* to continue the discussion of NAAQS issues. **em**

2019 Specialty Conference Call for Abstracts

Guideline on Air Quality Models

March 18-20, 2019 • Durham, NC

Become a presenter at A&WMA's 8th Specialty Conference on issues related to the Guideline on Air Quality Models (40CFR Part 51 Appendix W). Share your recent experience and research since the Appendix W promulgation in 2016.

Abstracts are being solicited on the following topics: AERMOD • Long-range Transport Modeling • Modeling of Secondary Pollutant Formation, PM_{2.5}, and Ozone • Background Concentrations • Meteorological Data Issues • Wind Tunnel and Computational Fluid Dynamics • and Revisions of the Guideline and Regulatory Application of Models.

Please see the website at www.awma.org/aqmodels for complete submittal details. Abstracts due **October 8, 2018**.

Air Quality Measurement Methods and Technology

April 9-11, 2019 • Raleigh, NC

Explore advances in measurement technology, data quality assurance, and data uses at this popular specialty conference covering air quality issues related to emerging pollutants, stationary source compliance, ambient monitoring, fugitive and area source air emissions, and quality assurance, and how they can be used to improve models, emission inventories, and policy decisions.

Suggested topics: Ambient Air Monitoring • Coarse and Fine Particulate Matter • Stationary Sources • Data Quality • Mobile Monitoring Platforms • Optical and Optical Remote Monitoring • Low-cost Sensors • Passive Measurements and Fence Line Monitoring • Air Toxics Measurement Methods • Continuous HAP Monitoring, and more.

Abstracts are due **October 15, 2018**. Find complete details online at www.awma.org/measurements.

Share your work, advance the industry, learn the latest, and make new connections.

EPA's 'Back-to-Basics'

Process for Review of the National Ambient Air Quality Standards

A primer of EPA's process for reviewing the National Ambient Air Quality Standards.

Consistent with the Administration's commitment to regulatory reform, cooperative federalism, and domestic manufacturing, the U.S. Environmental Protection Agency (EPA) is working to review and reform the National Ambient Air Quality Standards (NAAQS) program of the U.S. Clean Air Act (CAA). These efforts include a focus on getting "back-to-basics" for NAAQS setting, designations, and implementation. The United States has experienced tremendous progress in reducing the emission of criteria pollutants and their precursors. Still, challenges remain, both in implementing a number of increasingly stringent NAAQS and in undertaking several upcoming NAAQS reviews. This presents the agency with a unique opportunity, given the direction it has received from the President, to make meaningful changes to the program that, while consistent with EPA's responsibility under the CAA to support public health and the environment, will also ensure a timely, efficient, and transparent process that both respects state agency resources and facilitates robust economic activity.

Background

As readers of *EM* likely know, EPA sets primary and secondary NAAQS for criteria air pollutants that include ozone, nitrogen dioxide, sulfur dioxide, coarse and fine particulate matter, carbon monoxide, and lead. Primary NAAQS are set, based on the judgment of the EPA Administrator and allowing for an adequate margin of safety, at a level to protect the public health. Secondary NAAQS are set at a level to protect the public welfare, which may include effects on soils, water, crops, vegetation, and visibility from the presence of the pollutant in the ambient air. These standards are to reflect the best current scientific information. Under the CAA, EPA is required to review each NAAQS every five years. However, EPA has often failed to do so, sometimes taking twice that amount of time before finalizing a review and any accompanying revision. These delays result in uncertainty as

well as lost opportunities for implementing the NAAQS to protect health and the environment in a manner compatible with a vibrant U.S. economy.

In setting the NAAQS, the EPA Administrator receives advice from a critical federal advisory committee established by the CAA, the Clean Air Scientific Advisory Committee (CASAC). EPA staff in the Offices of Research and Development and Air and Radiation develop a comprehensive scientific and technical assessment, which CASAC then reviews in the process of providing advice to the Administrator. Having received this expert advice, EPA publishes a notice of proposed rulemaking and solicits public comment on the Administrator's proposal. After taking into consideration all of the significant public comments received, the Administrator reaches a final decision and issues a final rule either to maintain the current NAAQS or to set a revised standard. Where EPA sets a new NAAQS or revises an existing standard, then the Agency is required within two years, after taking into consideration the recommendations of governors, to designate areas as either attaining or not attaining the standard.

Each NAAQS revision requires significant new planning and permitting for states and regulated entities. In particular, a nonattainment designation can create challenges for the construction or expansion of industrial facilities. Under the NAAQS program, EPA and states cooperate as co-regulators to carry out the CAA's mission of protecting human health and the environment. Implementation of the standards must be accomplished in a manner that is both consistent with the principles of cooperative federalism and which also complies with statutory requirements.

Back-to-Basics

In April 2018, the President issued a memorandum, Promoting Domestic Manufacturing and Job Creation –

The themes of timeliness, cooperative federalism, and recognition of international and background sources of pollution are critical issues EPA is directed to address to ensure states can successfully implement the standards.

Table 1. April 2018 Presidential Memorandum Topics

Timely Processing of State Implementation Plans
Cooperative Engagement with States to Review Regional Haze Plans
Timely Processing of Preconstruction Permit Applications
Demonstrations or Petitions Submitted Pursuant to Sections 319 and 179B of the CAA Relating to Emissions
Beyond the Control of State and Local Air Agencies
Monitoring and Modeling Data
Offsets
Future NAAQS Reviews
Timely Issuance of Implementing Regulations and Guidance
Review of Rules, Guidance, Memoranda, and Procedures Relating to State Implementation Plans and Permitting

Policies and Procedures Relating to Implementation of Air Quality Standards (<https://www.gpo.gov/fdsys/pkg/DCPD-201800239/pdf/DCPD-201800239.pdf>). This memorandum set forth nine primary directives intended to ensure EPA's efficient and cost-effective implementation of air quality standards under the NAAQS and regional haze programs. These directives are outlined in Table 1. The themes of timeliness, cooperative federalism, and recognition of international and background sources of pollution are critical issues the Agency is directed to address to ensure states can successfully implement the standards.

To advance the initiatives set out in the presidential memorandum, EPA has issued its own memorandum, *Back-to-Basics Process for Reviewing National Ambient Air Quality Standards*, (<https://www.epa.gov/sites/production/files/2018-05/documents/image2018-05-09-173219.pdf>). In May 2018, EPA's memorandum directs the agency and its independent science advisors to follow five principles for a transparent, timely, and efficient process in reviewing and revising future public health- and welfare-based NAAQS.

Principle 1: Meet Statutory Deadlines

As noted above, EPA routinely fails to meet the CAA requirements to review each NAAQS every five years. These delays result in uncertainty as well as lost opportunities for implementing the NAAQS to protect health and the environment in a manner compatible with a growing American economy. EPA and CASAC are encouraged to look for efficiencies and opportunities to streamline the NAAQS review process to ensure that it is completed within the statutorily-mandated five-year period. EPA's Back-to-Basics memorandum also directs the agency and CASAC to ensure that any potential revisions

to the NAAQS for ozone or particulate matter, last set in 2015 and 2012 respectively, be finalized by late 2020.

Principle 2: Address CAA Provisions for NAAQS Reviews

While the CAA clearly identifies the roles and responsibilities of CASAC in providing important advice in the review of air quality criteria, EPA has frequently failed to request that the committee provide advice with respect to all of the CASAC duties to which the statute specifically speaks. For example, Section 109(d)(2)(C) requires CASAC to advise the Administrator on the "relative contribution to air pollution concentrations of natural as well as anthropogenic activity," as well as "any adverse public health, welfare, social, economic, or energy effects which may result from various strategies for attainment and maintenance of such" NAAQS. To address these past failures, EPA intends to provide CASAC with a standardized set of key charge questions so that the entirety of the NAAQS review process is properly framed. While certain of these charge questions may elicit information which is outside the scope of the Administrator's standard-setting authority itself, such information, by providing important contextual insights, should nevertheless prove valuable to the public, co-regulators, EPA, and other policymakers.

Principle 3: Streamline and Standardize the Process for Development and Review of Key Policy-Relevant Information

CASAC has frequently identified reducing the length and complexity of the scientific assessments as a key process improvement for streamlining NAAQS reviews and ensuring the Agency adheres to the statutory deadlines. To help bridge the gap between the scientific assessments and the

judgments required of the Administrator, the memorandum recommends incorporating policy-relevant science earlier into the review process. EPA is also directed to ensure that the initial drafts of all technical and policy assessments are high quality and ready for robust review from CASAC and the public.

Principle 4: Differentiate Science and Policy Considerations in NAAQS Review Process

The Back-to-Basics memo directs EPA to establish a clearer distinction between its scientific findings (contained in the Integrated Science Assessment) and the wider range of policy concerns that the Administrator may consider in judgments about the level of the NAAQS. CASAC and EPA should seek to find consensus, but should allow for individual advisors to share their individual perspectives.

Principle 5: Issue Timely Implementation Regulations and Guidance

When a NAAQS is revised, EPA should strive for expedition in the release of implementation tools for co-regulators, including regulations, guidance, and technical information to assist state agencies in developing approvable plans. In the past, EPA implementation regulations and guidance have often trailed NAAQS revisions by years, which may hinder co-regulators from completing the required steps to administer the NAAQS at the state level. Failure to issue timely implementation regulations and guidance may contribute to nonattainment areas not attaining the NAAQS as quickly as practicable, as well as to the misallocation of state planning resources.

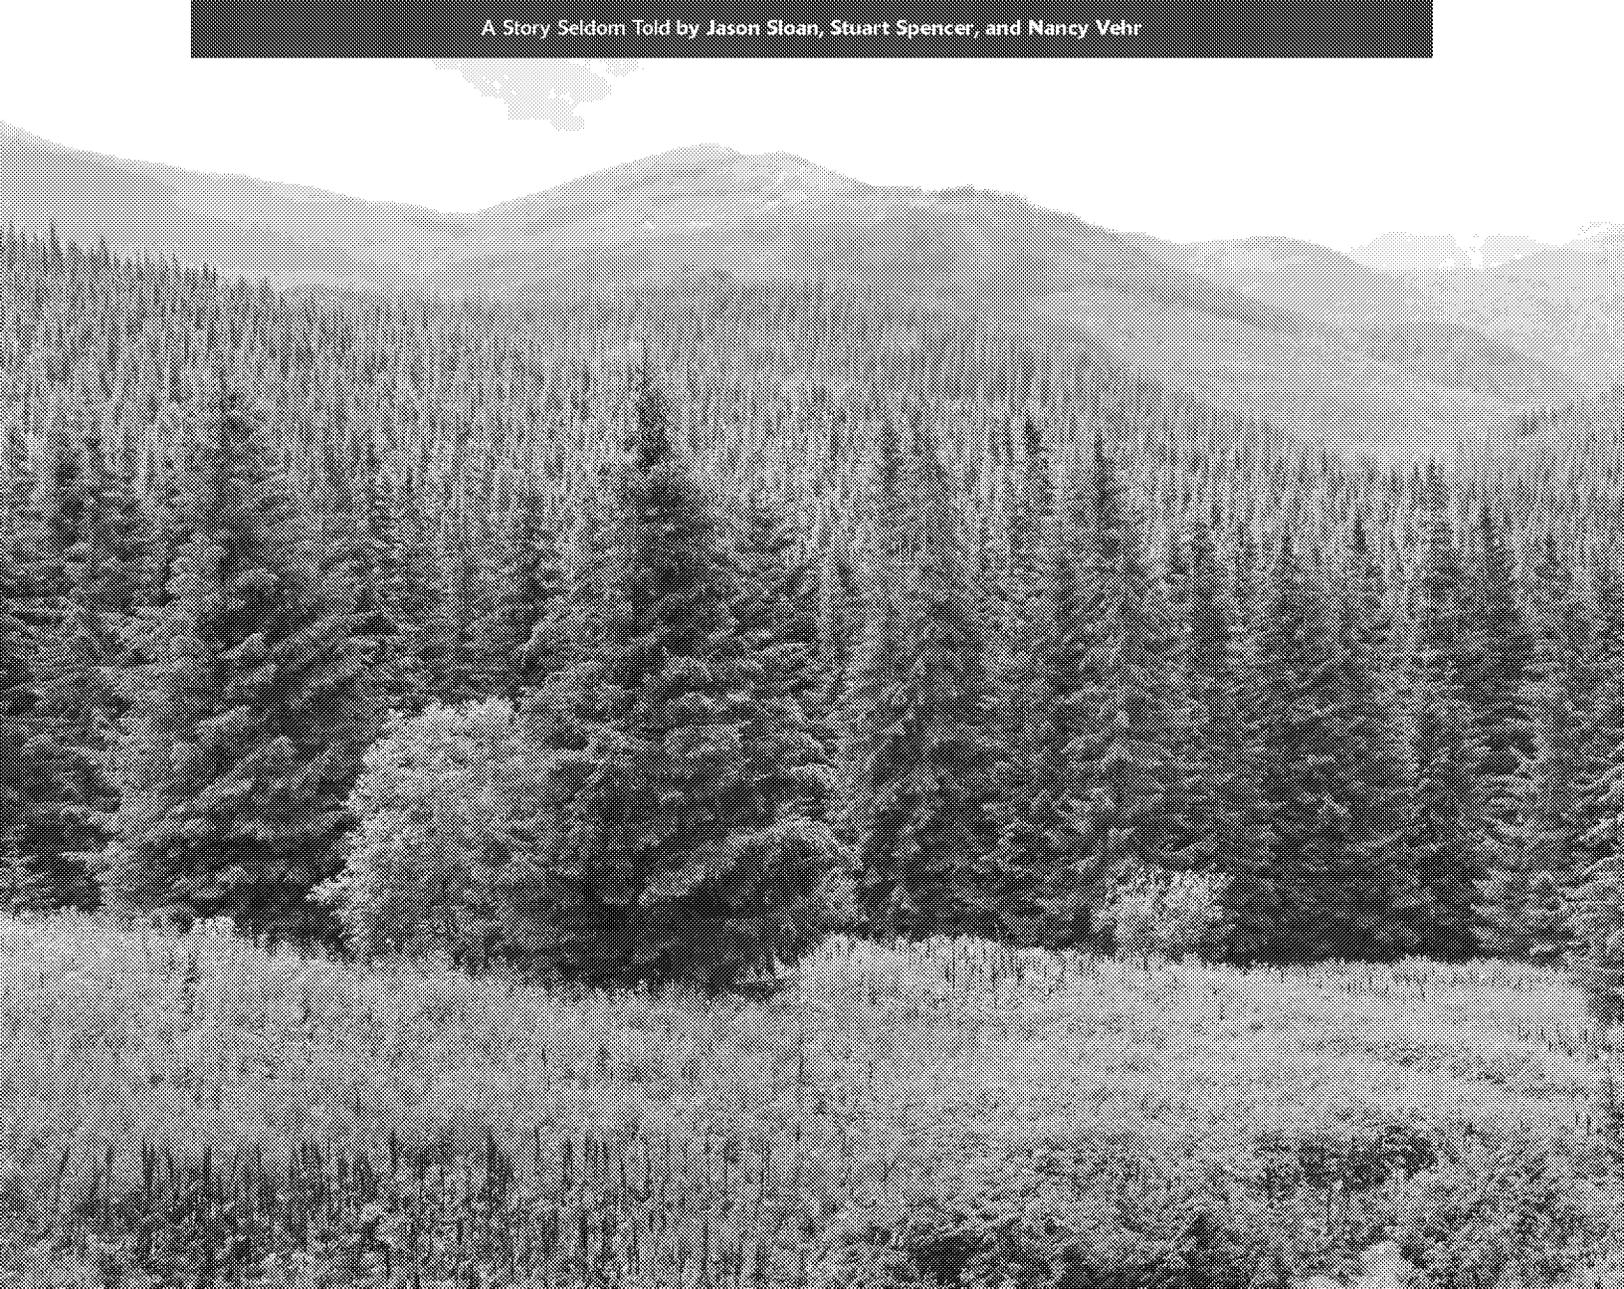

Flexibilities

Based on requirements in the CAA and the President's April 2018 memorandum, EPA has also committed to a number of important milestones in implementing NAAQS collaboratively

with the states. Many of these critical measures have been incorporated in the agency's FY2018–FY2022 strategic plan, as well as other EPA priority documents. These efforts include:

- As an agency priority goal, reducing the number of NAAQS nonattainment areas, including a 20-per cent reduction in these areas in the next few years.
- Addressing the backlog in state implementation plan revision submissions, which the CAA directs EPA to act upon within 18 months of submission.
- Pursuant to Section 319B of the CAA, releasing and communicating a number of tools related to the exclusion of air quality data exceeding the NAAQS when such data result from "exceptional events" outside the control of state, local, or tribal air agencies. Since 2016, EPA has acted upon more than 20 "exceptional event" demonstrations, nearly all of which concurred with state recommendations and thus provided the state with regulatory relief.
- Maximizing states' flexibility to use other tools enabling regulatory relief for appropriate reasons, including CAA provisions to address emissions caused by international sources.
- Working closely with states to facilitate the submission of "Good Neighbor" state implementation plans for the 2015 ozone NAAQS. Under Section 110 of the CAA, states must address in their plans emissions that contribute significantly to nonattainment or interfere with maintenance of the NAAQS in other states.
- Revisiting aspects of the previous Administration's regional haze rule, including identifying flexibilities and technical tools for state plans due in 2021.
- Simplifying the New Source Review process and, by October 2019, reducing by 50 percent the number of permitting-related decisions that exceed six months. [em](#)

A Story Seldom Told

National Ambient Air Quality Standards and Success in Air Pollution Control

The Association of Air Pollution Control Agencies reports on trends in U.S. air quality control.

As a cornerstone of the U.S. Clean Air Act, the National Ambient Air Quality Standards (NAAQS) program has been a vital component in the significant progress that has been achieved in reducing air pollution in the United States. State and local air agencies, responsible for implementing the NAAQS through the Clean Air Act's framework of cooperative federalism, have helped lead this success by developing sensible, localized strategies that address air pollution and respond to unique social and economic factors. In April 2017, the Association of Air Pollution Control Agencies (AAPCA) published the inaugural edition of *The Greatest Story Seldom Told: Profiles and Success Stories in Air Pollution Control*,¹ an annual report that highlights air quality trends, both in the AAPCA footprint and nationally, and underscores the critical role of state and local air agencies in making complex regulatory decisions impacting their communities.

Seeking to catalogue long-term air quality trends through publicly available data from the U.S. Environmental Protection Agency (EPA) and other agencies, AAPCA's annual report includes key metrics on the emissions and ambient concentrations of the six criteria air pollutants for which EPA has set NAAQS: carbon monoxide (CO), sulfur dioxide (SO₂), ground-level ozone (O₃), fine particulate matter (PM_{2.5}), lead (Pb), and nitrogen dioxide (NO₂).² Annual reports and data analyses that are made available to the public by EPA provide important information on long-term air quality and criteria pollutant trends. These include:

- An analysis (<https://www.epa.gov/air-trends>) of the ambient air pollution data provided to the national air quality system from thousands of monitors across the United States, collected by EPA, state, local, and tribal air pollution control agencies;

- Air pollutant emissions trends data (<https://www.epa.gov/air-emissions-inventories/air-pollutantemissions-trends-data>), which provide nationwide estimates of emissions of criteria air pollutants based on the National Emissions Inventory (NEI);³ and
- Air quality design values (<https://www.epa.gov/air-trends/air-quality-design-values>), which EPA defines as "a statistic that describes the air quality status of a given location relative to the level of the NAAQS ... typically used to designate and classify nonattainment areas, as well as to assess progress towards meeting the NAAQS."⁴

Relying on these reports and analyses, AAPCA's *The Greatest Story Seldom Told* is able to spotlight some of the nation's important air quality successes. The 2018 edition of AAPCA's report, published July 2018, includes updated trends for criteria pollutant concentrations and emissions that show continued progress.

Air Quality Trends

Over the course of the past several decades, ambient concentrations of the six criteria air pollutants have declined substantially. According to EPA's analysis of 2017 monitoring data,⁵ there has been at least a 32-percent reduction in the ambient levels of CO, Pb, NO₂, O₃, and SO₂ since 1980, and available monitoring data for fine and coarse particulate matter (PM_{2.5} and PM₁₀) show similar trends. A decade-over-decade comparison demonstrates consistent and consequential changes in ambient air quality since 1980, 1990, and 2000 (see Table 1).

Emissions Trends

Reductions in the emissions of criteria pollutants or criteria

Table 1. A decade-over-decade comparison of ambient air quality since 1980.

Pollutant	1980 vs. 2017 (% change)	1990 vs. 2017 (% change)	2000 vs. 2017 (% change)
Carbon monoxide (CO)	-84	-77	-61
Lead (Pb)	-99	-98	-94
Nitrogen dioxide (NO ₂ ; annual)	-63	-56	-49
Nitrogen dioxide (NO ₂ ; 1-hr)	-60	-50	-35
Ozone (O ₃ ; 8-hr)	-32	-22	-17
PM ₁₀ (24-hr)	n/a	-34	-30
PM _{2.5} (annual)	n/a	n/a	-41
PM _{2.5} (24-hr)	n/a	n/a	-40
Sulfur dioxide (SO ₂ ; 1-hr)	-90	-885	-79

pollutant precursors have contributed to the considerable progress in air quality. Utilizing the NEI, EPA publishes air pollutant emissions trends data that provide annual estimates of criteria pollutant emissions and precursors, distinguished by major sources.

The trends data on emissions published by EPA for 2017 show that, nationally, criteria pollutant emissions and precursors continue to decline.⁶ When comparing 1990 to 2017, there has been at least a 29-percent reduction in the emissions of all criteria pollutants or precursors (see Table 2). EPA's 2018 air quality report, entitled *Our Nation's Air: Status and Trends Through 2017*, (<https://gispub.epa.gov/air/trendsreport/2018/>) and published as an interactive website, further highlights a 73-percent decrease overall in the combined emissions of criteria pollutants or precursors since 1970.

Social and Economic Growth

Planning for, implementing, and enforcing the NAAQS require that state and local air pollution control agencies not only find ways to reduce emissions and improve air quality, but accommodate the social and economic growth characteristics of their jurisdictions. A more complete profile of air quality nationally can be seen when accounting for the tremendous gains in population, gross domestic product, and other factors—all of which have the potential to impact pollution levels.

Importantly, the trend lines for these social and economic growth indicators are in sharp contrast to the trends of the criteria air pollutants. Using data from the U.S. Census Bureau, U.S. Bureau of Economic Analysis, and U.S. Energy Information Administration, AAPCA's 2017 report charted the significant increases since 1960 in U.S. Gross Domestic

Table 2. Emissions Trends, 1990–2017

Pollutant	1990 Emissions (in thousands of tons)	2017 Emissions (in thousands of tons)	% Reduction
Carbon monoxide (CO)	154,188	60,109	-61
Oxides of nitrogen (NO _x)	25,527	10,776	-58
PM _{2.5}	7,560	5,345	-29
Sulfur dioxide (SO ₂)	23,077	2,815	-88
Volatile organic compounds (VOCs)	24,108	16,232	-33

Product (436 percent from 1960 to 2016), population (72 percent from 1960 to 2010), and energy production (105 percent from 1960 to 2014). EPA's 2018 air quality report details similar trends since 1970: U.S. Gross Domestic Product has increased by 262 percent, population has grown 59 percent, vehicle miles traveled are up 189 percent, and energy consumption has risen 44 percent.

Opportunities for Continued Air Quality Success

While significant progress has been achieved in controlling air pollution at both the state and national level, challenges still exist as state and local agencies work toward attaining national standards and seek to appropriately characterize air quality in their areas.

For example, AAPCA-conducted surveys of state environmental agency comments on EPA's proposed 2015 O₃ standard—the most recent standard to be revised downward—recognized several common concerns when it comes to establishing compliance with new NAAQS.⁷

Of the 44 state environmental agencies that filed individual comments, AAPCA found that:

- 26 state agencies raised background O₃ as an achievability or implementation challenge, including both naturally occurring and internationally transported contributions to ground-level O₃;
- Roughly three-quarters of state agencies raised concerns about the need for timely implementation rules and guidance from EPA under a revised standard; and
- 22 states commented on limitations to activating Clean Air Act tools for excluding data effected by "exceptional events."

Recognizing these vital on-the-ground issues, which are outside of state and local air agency control, highlights the need to establish methods that provide regulatory and other assistance for attaining air quality standards.

On April 12, 2018, a Presidential Memorandum was issued on “Promoting Domestic Manufacturing and Job Creation—Policies and Procedures Relating to Implementation of Air Quality Standards.”⁸ This memorandum included directives for EPA that may accommodate some of these environmental agency concerns, as well as better characterize air quality in terms of background concentrations and exceptional events. Other recent policies, such as EPA’s October 2017 directive on “Strengthening and Improving Membership on EPA Federal Advisory Committees,”⁹ have sought to broaden input earlier in scientific and regulatory processes by increasing state, tribal, and local membership, as well as enhancing geographic diversity. Engaging state and local air agencies is critical as these policies are carried out, especially as EPA begins to implement recently announced policy changes to the NAAQS standard-setting process and works to complete reviews of the current O₃ and PM_{2.5} standards by 2020.¹⁰

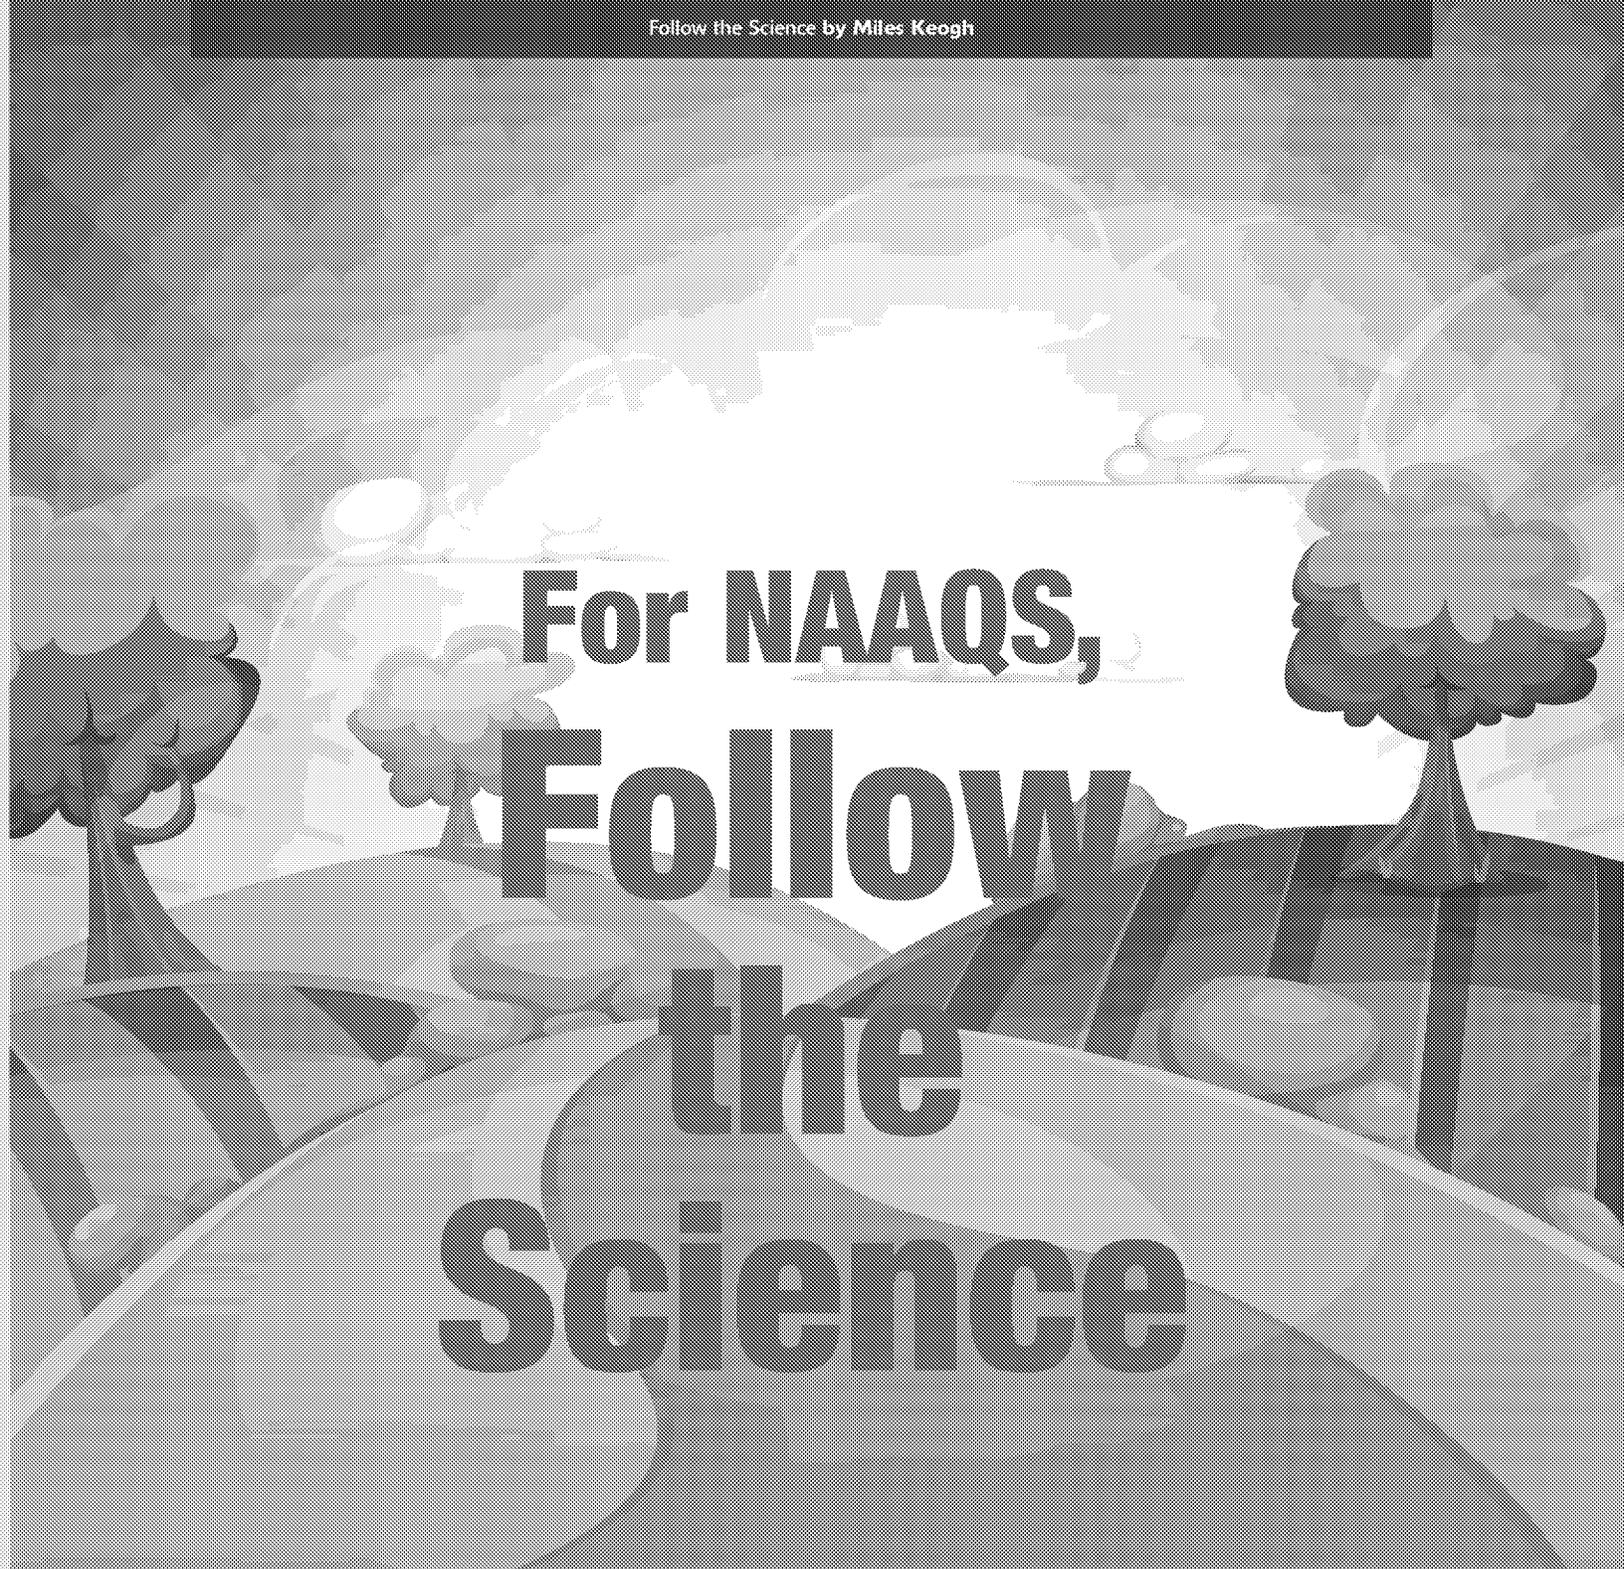

Continued success reflective of the long-term trend in air quality is dependent on informed collaboration at the federal, state, and local levels. As the Environmental Council of States indicates in its Cooperative Federalism 2.0 paper, “States are a critical part of achieving our nation’s environmental and public health goals and mandated responsibilities in an effective and efficient way.”¹¹ Further, as AAPCA indicated in comments on EPA’s *Draft FY 2018–2022 EPA Strategic Plan*, “State and local agencies are often the first point of contact for community air quality concerns.”¹² Involving the agencies directly responsible for implementing air quality standards and responding to public concerns early in the regulatory and decision-making process can provide opportunities to better define, understand, and, ultimately, find solutions to the complex issues facing the nation’s air quality—and continue the positive trends the nation has witnessed in air quality over the past 40 years. **em**

Jason Sloan is the Executive Director for the Association of Air Pollution Control Agencies (AAPCA). **Stuart Spencer** is an Associate Director at the Arkansas Department of Environmental Quality and 2018 AAPCA President. **Nancy Vehr** is the Air Quality Division Administrator for the Wyoming Department of Environmental Quality and 2019 AAPCA President-Elect. E-mail: jsloan@csg.org.

AAPCA is a national, nonprofit, consensus-driven organization focused on assisting state and local air quality agencies and personnel with implementation and technical issues associated with the U.S. Clean Air Act. AAPCA represents more than 40 state and local air agencies, and senior officials from 20 state environmental agencies currently sit on the AAPCA Board of Directors. AAPCA is housed in Lexington, KY, as an affiliate of The Council of State Governments.

For NAAQS, Follow the Science

The National Association of Clean Air Agencies comments on EPA's April 30, 2018 regulatory proposal, "Strengthening Transparency in the Regulatory Science."

In an April 2018 regulatory proposal, the U.S. Environmental Protection Agency (EPA) wrote that “the best available science must serve as the foundation of EPA’s regulatory actions.”¹ Indeed, reliance on best-available science is a fundamental requirement of the U.S. Clean Air Act and other environmental statutes that EPA administers in partnership with state and local governments. Science-based decision-making is at the very core of our shared mission as air regulators to protect public health and the environment from the harmful effects of air pollution.

The National Ambient Air Quality Standards (NAAQS) are a central example of sound science-driven policy. The Clean Air Act requires EPA to establish NAAQS at levels “requisite to protect the public health” with “an adequate margin of safety.” In meeting this obligation, EPA is required to develop air quality criteria that “*accurately reflect the latest scientific knowledge* useful in indicating the kind and extent of all identifiable effects on public health or welfare which may be expected from the presence of such pollutant in the ambient air, in varying quantities.”²

EPA’s own research from 2011 showed that the science-driven implementation of pollution control programs for ozone and particulates under the NAAQS will prevent over 230,000 premature deaths in adults and infants in 2020.³ Since 1970, the United States has made tremendous strides in reducing levels of the “criteria pollutants” for which NAAQS are established; those improvements have been driven by the scientific evidence that there are serious health consequences associated with exposure to these pollutants.

On April 30, 2018, EPA published a proposed rule, Strengthening Transparency in Regulatory Science,⁴ that could change the way that science is used by the agency to set and implement air pollution prevention programs like the NAAQS. State and local clean air agencies depend on EPA to use the best scientific information to set health-based standards, which are then implemented in the first instance by state and local agencies for the health and wellbeing of Americans. The NAAQS are directly implicated in this proposal.⁵

EPA has stated that its intent with the proposed rule is to increase the quality and transparency of the agency’s decision-making. However, it is possible that the provisions of the science proposal would weaken both, and many unknowns remain that should have been fleshed out before the rule was proposed. The proposal includes three main components. First, it would require EPA to ensure that the data and models underlying the scientific studies on which its regulatory actions are based are “publicly available in a manner sufficient for independent validation.”⁶ Second, it would impose upon the agency requirements for the analysis of dose—response models used in scientific studies upon which it relies.⁷ Third, it would require EPA itself to conduct “independent peer review” of scientific studies used to justify its regulatory decisions.⁸

There is a laudable long-term trend toward increased transparency in science—in particular, toward providing greater public access to underlying data and analytical techniques after scientific studies are published.⁹ But complete public access to underlying data is not always possible, especially in the case of epidemiological studies based on private health data that must remain confidential. To the extent that techniques are available to anonymize such data, efforts to support and further develop those techniques should be encouraged. In the meantime, however, insistence that every datum must be universally available must not override EPA’s legal and moral obligation to consider the full range of peer-reviewed, sound scientific research that is available and relevant to its regulatory decisions.

Full public access to underlying data and models is not necessary to assure the validity of scientific studies.¹⁰ Rather, the most effective assurance of scientific validity and accuracy is the process of peer review itself, a process to which the vast majority of scientific information on which EPA relies has already been subject. There are many steps involved in this process. Scientists collect data, analyze them, create a model to test theories, compare the model to the data, and then adjust the model. When the results of a scientific study are submitted for publication, the uncertainties, assumptions,

The most effective assurance of scientific validity and accuracy is the process of peer review itself.

parameters, and theories utilized by the scientists are laid out in the publication. Peer review analyzes all these components to establish validity. This process of peer review has been rigorously developed over centuries. If EPA believes the peer review process is flawed, it is incumbent on the agency to explain exactly why it believes the process is inadequate and how its proposal specifically addresses those inadequacies.

The proposal fails to acknowledge that EPA already has the institutional mechanisms to review and vet scientific information through panels of scientific experts. The primary function of EPA's Science Advisory Board (SAB) is to review the quality and relevance of scientific and technical information being used by EPA or proposed as the basis for EPA regulations. EPA's Clean Air Scientific Advisory Committee (CASAC) provides independent advice to the EPA Administrator on the technical bases for the NAAQS. Similarly, the Federal Insecticide, Fungicide, and Rodenticide Act Scientific Advisory Panel provides independent scientific advice on the health and safety issues related to pesticides. By ignoring the existence of these bodies in the proposed rule, EPA suggests that it does not trust its own scientific advisors. This tends to undermine public confidence in EPA decision-making, rather than to bolster it.

Of critical concern to air regulators, the proposal could serve to preclude EPA's consideration of relevant scientific literature in the establishment of air regulations designed to protect human health and the environment. Taking one key example, a broad range of concerns has been raised that the landmark Harvard School of Public Health "Six Cities" epidemiological study, which established the strong association between fine particulate matter pollution and mortality, could potentially be excluded for failing to meet the stringent transparency requirements of the proposed rule because it relies on human health data subject to patient confidentiality agreements that were entered into decades ago.

The proposal would also allow the EPA Administrator to grant exemptions to the rule's requirements on a case-by-case basis if he or she determines it is "not feasible" to make underlying data publicly available or to conduct independent peer review of scientific studies. However, this provision does not alleviate concerns about the potential exclusion of relevant data, because the proposal does not include any criteria for how the Administrator would make such a determination. The provision would thus have the unwelcome effect of interjecting the appearance of politics into what should be a fair and unbiased assessment. It is an opportunity for arbitrary decision-making and is wholly insufficient to protect against the exclusion of relevant, valid scientific studies.

The proposed rule would require EPA to conduct "*independent peer review*" [*emphasis added*] of scientific studies

underlying its significant regulatory decisions, such as the establishment of health-based air quality standards. Unfortunately, EPA has included no details about how this element of the proposal would be implemented. With respect to the NAAQS in particular, what relationship would this review process have to the role played by the CASAC? More fundamentally, why should scientific literature that has already undergone peer review and been vetted by EPA's science advisory panels be subjected to an additional layer of "independent" review? These are key questions that should have been considered, and the answers made public, prior to the science rule's proposal.

The proposal offers that the direction suggested by EPA is consistent with the Administrative Procedure Act, the guidance of the Office of Management and Budget, and other federal transparency and data laws. However, it outlines requirements that are actually out of sync with these laws, which could possibly result in the exclusion of the best data to inform the most appropriate policy. Even the U.S. Food and Drug Administration does not require this level of disclosure and data exclusion—no other federal agency does. Numerous public health experts have raised concerns that confidential personal information would be at risk—or perceived by study participants to be at risk—if the proposal were to be implemented. EPA offers that concerns about information disclosure can be addressed using tools available through other federal programs, but such tools have not been enumerated, which raises issues about the easy identification of study participants and the negative impact on the quality of research and its potential to be included in the setting of public policy.

EPA implies that the rule would be implemented "over time" and prospectively, but also requests comment on whether there would be value to applying requirements of the science proposal retrospectively. The agency asks whether for regulatory programs like the NAAQS, in which future significant regulatory actions may be based on the administrative records from previous reviews, the final rule should apply to that previous administrative record. Existing programs should not be opened to retrospective review under this rule. To do so would create significant regulatory uncertainty by calling into question existing regulatory standards, as well as the permits, state implementation plans, and other decisions that are based on those standards. Applying these rules to data and models in underlying studies that have already been completed or are currently underway would be detrimental to the certainty on which businesses and citizens alike depend. Moreover, in the case of the NAAQS, iterative five-year reviews provide an opportunity for ongoing and comprehensive review of the literature. This already allows EPA to evaluate the veracity and any uncertainties in past studies in relation to current ones.

NACAA has a long history of supporting EPA actions that rely on the most recent scientific evidence to establish any primary and secondary NAAQS to protect public health and welfare, respectively, and the agency's reliance on advice from its own science advisory committees like CASAC.¹¹ Regulations with such significant ramifications for EPA's science-based decision-making and for weighing the benefits of wide-ranging programs must be thoroughly vetted *prior to proposal* by the scientific community, industry, consumer advocates, and other key stakeholders, including the state

and local air agencies that rely on the quality of EPA's regulations to protect public health and the environment from the harmful effects of air pollution. The NAAQS remain a key component of the hard-won clean air gains of recent decades, and diminishing the science used to understand the health implications that drive these standards would harm the health of Americans. The proposal should be withdrawn and any future similar proposal should be fully informed through a transparent, pre-proposal process, and better considered by decision-makers at EPA. **em**

Miles Keogh is the Executive Director of the National Association of Clean Air Agencies (NACAA; www.4cleanair.org), a national, non-partisan, non-profit association of 156 state and local air pollution control agencies in 41 states, the District of Columbia, and four territories.

Disclaimer: This article is based on NACAA's July 2018 comments to the U.S. Environmental Protection Agency (EPA) on the agency's April 30, 2018, regulatory proposal, "Strengthening Transparency in the Regulatory Science," but includes additional perspectives that are the author's alone.

Vapor Intrusion, Remediation, and Site Closure

A Decade of Progress and New Challenges

December 5-6, 2018 • Phoenix, AZ

With nearly half of US states recently releasing new guidance on VI, this conference comes at the perfect time to bring together scientists, engineers, regulators and attorneys to address the new guidance, new technology, and best practices in remediation and mitigation solutions as well as toxicology, risk assessment, real estate transactions, and communication.

Building off the momentum gathered during the eight previous vapor intrusion specialty conferences sponsored by A&WMA, this event will present solutions from experts with experience in bringing sites to closure in a technically defensible way, while balancing key elements such as risk, sustainability and cost. Presentations will demonstrate innovative, scientific approaches to the investigation and mitigation of the vapor intrusion pathway.

High level panels will discuss short-term TCE exposure and site closure solutions.

Platform presentations will cover:

- New regulatory perspectives on VI
- Sampling and analysis
- Assessment and data evaluation
- VI mitigation and case studies

Introductory and advanced courses on December 4.

The featured keynote speaker is John Morris, Global Remediation Director at Honeywell.

The conference will include a site tour of the Honeywell facility in Tempe, AZ.

Western Ozone NAAQS Implementation Issues: Addressing Background and Transport

As the National Ambient Air Quality Standards (NAAQS) for ozone (O_3) have changed in form and stringency over the past two decades in order to protect health and welfare, western states have had to move quickly to understand and respond to non-urban areas with O_3 concentrations nearing the federal NAAQS, as well as the background and transported O_3 affecting existing nonattainment areas from beyond those areas' boundaries.

Rural areas with high concentrations of O₃ and low numbers of local sources likely responsible for elevated O₃ concentrations have brought a new focus on the analysis of transport, uncontrollable sources of O₃ precursors, and background O₃. More stringent O₃ NAAQS have also necessarily led to further analysis of background and transported O₃ affecting existing nonattainment areas. Other western planning needs such as identification of both controllable and uncontrollable sources contributing to O₃ transport, identification of O₃ exceptional events (EEs), and clarification of the application of planning mechanisms offered in the U.S. Clean Air Act (international transport §179B demonstrations and §182 Rural Transport Areas) all depend on accurately quantifying background O₃. Western states need detailed O₃ analyses focusing on the western United States to gain a better understanding of the origin of O₃ precursors, photochemical activity, and fate of transported O₃ with a level of confidence that will lead to the development and implementation of effective regulatory programs for the West.

The U.S. Environmental Protection Agency (EPA) defines U.S. background (USB) O₃ to be any O₃ formed from sources or processes other than U.S. manmade emissions of nitrogen oxides (NO_x), volatile organic compounds (VOCs), methane (CH₄), and carbon monoxide (CO).¹ In the West, USB sources may include international transport of O₃ precursors, stratospheric intrusion, lightning, biogenic emissions, and wildfire. Along the West Coast, seasonal USB O₃ mean concentrations are in the range of 30–50 parts per billion (ppb).² Levels of USB O₃ in remote intermountain west high-altitude locations, including many intermountain national parks, significantly contribute to the overall O₃ concentrations measured.

Table 1 shows O₃ design values (ODV) at paired monitoring sites for the maximum daily 8-hr average (MDA8) value, the compliance statistic for the O₃ NAAQS. Note that for these paired nearby locations within each state, higher elevation sites have higher design values attributable to higher USB O₃. In each state, the lower elevation site is in a small urban or rural location, while the elevated site is more remote. The large USB O₃ signal relative to the compliance level of the O₃ NAAQS (0.070 parts per million, ppm) for rural and remote sites, which are typical of large areas of the West, complicates the task of western air regulatory agencies to meet federal air quality requirements, including attainment and maintenance of the O₃ NAAQS and issues with determination of O₃ transport into the United States and/or between states. The accurate identification and quantification of USB O₃, as well as a correct representation of atmospheric chemistry and transport, are necessary to determine what control measures for local sources will be effective in reducing ambient O₃. As discussed below, quantifying USB O₃ is challenging.

Characterizing Ozone for Air Quality Planning Decisions in the West

Primary tools used by states and EPA to manage air quality are the State Implementation Plans (SIPs)³ or Federal Implementation Plans (FIPs). These documents are federally-enforceable plans developed by and/or for states that identify how the state will attain and/or maintain the air quality standards. A key component of each SIP is the maintenance of a network of regulatory O₃ monitors operated by the state that use standardized sampling methodologies, quality assurance, and siting requirements established by EPA, along with complementary monitors operated by other federal,

Table 1. Comparison of O₃ ODVs for adjacent sites with differences in elevations >1,000 m (2013–2015).^a

State	Site	Coordinates	Meters ASL	O ₃ Design Value (ppb) ^b
Oregon	Bend	44.02°N, 121.26°W	1,135	59
Oregon	Mt. Bachelor	43.98°N, 121.69°W	2,763	77
Wyoming	Carbon	41.78°N, 107.12°W	2,015	55
Wyoming	Centennia	41.36°N, 106.24°W	3,178	66

Notes:

a Data are from EPA Air Quality System (AQS) database (<https://www.epa.gov/aqs>) except for the non-regulatory Mt. Bachelor measurements, which are from the University of Washington data archive (<https://digital.lib.washington.edu/researchworks>).

b The MDA8 values used in the ODV calculations are only the data acquired with start hours between 0700 and 2300 local standard time. The ODV is the three-year average of the 4th highest annual MDA8, calculated after approved EE data have been excluded from AQS. For all sites listed here, no EE days were identified or excluded from the ODV calculation. Note that EEs have not been formally evaluated for the Mt. Bachelor data, since it is not a regulatory monitor.

tribal, and local agencies. Knowledge of the sources contributing to the ambient levels on the highest O_3 days is important because controlling the domestic contribution to O_3 production affects the estimates of both the health benefits and the economic costs and benefits associated with achieving the NAAQS.⁴ This knowledge is also important for SIP development because it helps states identify the most effective emission control strategies.

Quantifying USB O_3 requires a complicated mix of modeling and evaluation using observational data; however, missing pieces of scientific understanding of some sources of O_3 precursors such as wildfire, stratospheric intrusion, and international/interstate transport hinder the use of these data for air quality planning and affects the accuracy of results. Most O_3 monitoring in the United States is accomplished in urban areas or in those rural areas with significant influence from nearby, O_3 precursor sources such as oil and gas production areas in the Intermountain West. There are few monitors along the West Coast in remote locations that might be considered representative of the USB O_3 entering the western United States.

Air quality computer models require accurate emissions, comprehensive representation of physical and chemical processes in the atmosphere, and the ability to replicate plume dispersion to yield useful results. There are several modeling approaches that have been employed to quantify USB O_3 , and each approach has strengths and weaknesses. The resolution of O_3 NAAQS compliance planning issues becomes difficult due to two major factors: (1) USB O_3 contributes substantially to monitored concentrations, quantification methodologies are lacking necessary analytical capabilities, and have substantial uncertainties; and (2) air regulators are able to evaluate and further control the relatively small fractions of controllable local precursors contributing to monitored O_3 levels in their plans to reduce O_3 levels. Figure 1 demonstrates this complexity with conceptual models for O_3 sources (a) in the United States and (b) at a single location.

The trend in the annual fourth highest daily average 8-hr O_3 concentration for 2000–2017 for nine urban U.S. locations—San Bernardino, Chicago, Atlanta, Boston, Albuquerque, Sacramento, Salt Lake City, Denver, and Reno—is presented

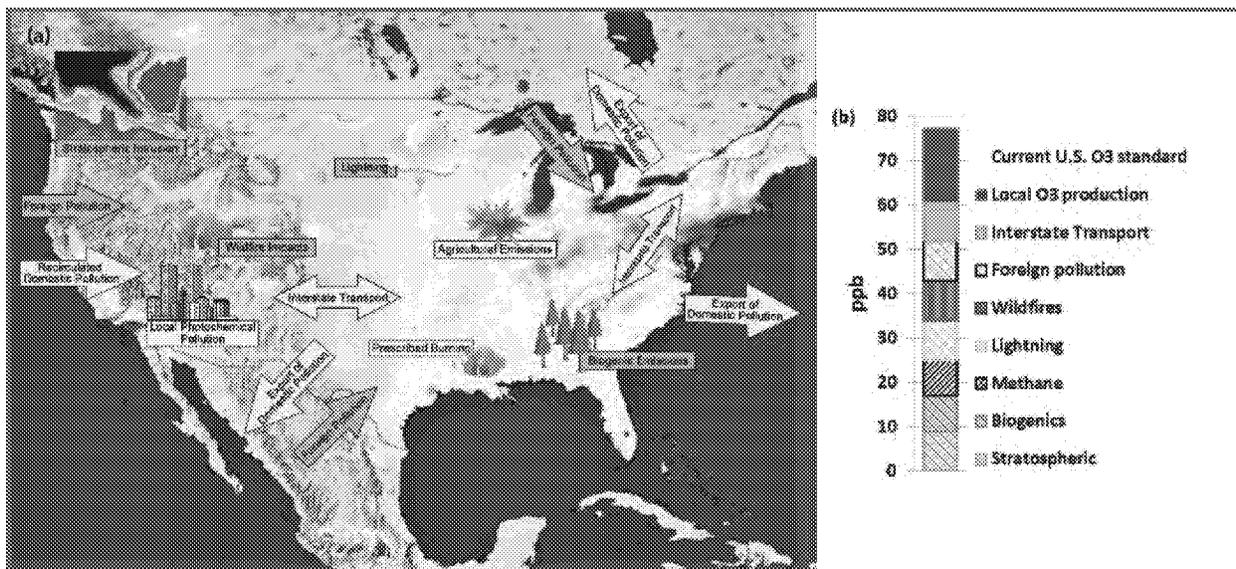

Figure 1. Conceptual models for O_3 sources (a) in the United States and (b) at a single location.

Notes:

(a) The U.S. O_3 sources shown with yellow boxes or arrows represent domestic/controllable anthropogenic sources. Sources shown with blue boxes or arrows represent USB/uncontrollable sources. Note that locations for each process are not specific to any one region. The base map shows satellite-observed tropospheric nitrogen dioxide (NO_2) column concentrations for 2014 from the Ozone Monitoring Instrument (OMI) onboard the NASA Aura satellite (Credit: NASA Goddard's Scientific Visualization Studio/T. Schindler). NO_2 column amounts are relative with red colors showing highest values, followed by yellow then blue. OMI NO_2 is a proxy to show local O_3 precursor emission sources.

(b) The bar chart shows a theoretical example of how both domestic anthropogenic and USB O_3 sources combine to produce elevated O_3 at a specific location on any given day. Each source varies daily and there are also nonlinear interactions between USB O_3 sources and domestic anthropogenic sources that can further add to O_3 formation (e.g., forest fires and urban emissions).⁵

in Figure 2. In each location, a single monitoring site with one of the highest ozone design values in that urban area was chosen. San Bernardino, Atlanta, Boston, Albuquerque, and Sacramento all show statistically significant downward trends in the fourth highest 8-hr ozone concentration whereas the non-coastal western cities, Salt Lake City, Denver, and Reno, plus Chicago show no significant trend since 2000. Overall, the significant reductions in the urban areas are generally consistent with the rural O_3 trends. The downward trends in fourth highest MDA8 O_3 concentrations are linked to significant reductions in emissions of O_3 precursors,

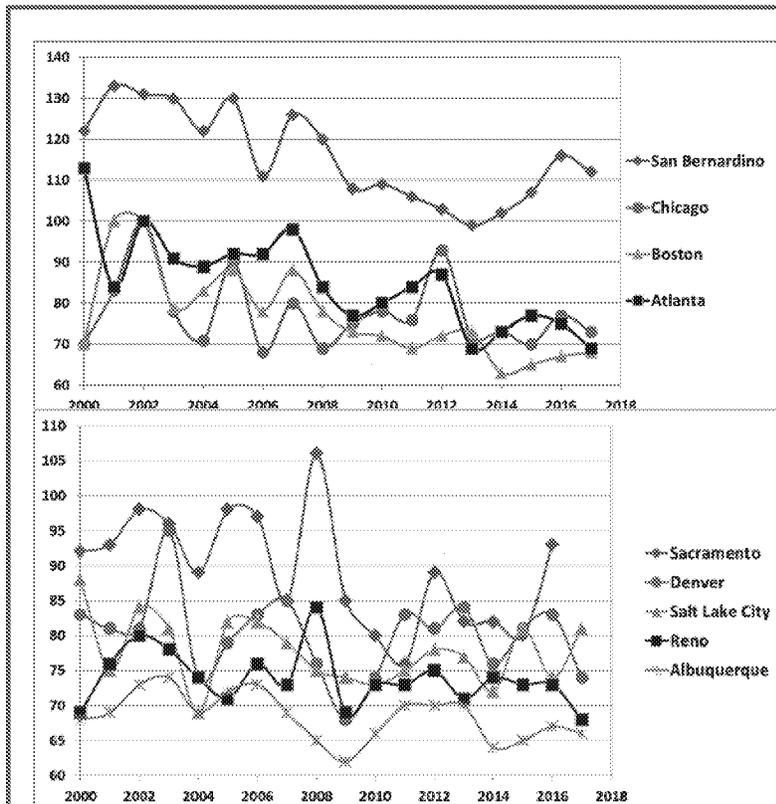

Figure 2. Annual fourth highest MDA8 O_3 (ppb) for one site in each urban area.

Note:

Data shown include any exceptional event days that may have been excluded from the ODV calculation.

while at the same time there can be important regional differences in such precursor emission trends (e.g., emissions related to oil and gas extraction in some parts of the western states) that can help explain some of the weaker trends. Three of the four locations with no significant trend are high elevation sites (Salt Lake City, Denver, and Reno). Trends in O_3 at these western sites might also be influenced by increasing wildfire activity.

Quantification of USB O_3 is essential for air quality management in general, and for state and local efforts to meet the

NAAQS, in particular. This is especially true given the recent lowering of the O_3 NAAQS levels and the associated increasing relative importance of USB O_3 as domestic precursor emissions decrease. Quantification of USB O_3 requires a chemical transport model (CTM), since it cannot be measured directly, but these models must be informed and evaluated using observations. Most estimates of USB O_3 have been made using regional CTMs such as the Community Multiscale Air Quality Modeling System (CMAQ)⁶ and the Comprehensive Air Quality Model with Extensions (CAMx)⁷ that are initialized using lateral boundary conditions derived from global models. The model approaches used to estimate USB O_3 have different merits, limitations, and best uses. Different methods of employing CTMs may be best suited (scientifically or computationally) to a specific policy or research question.

USB Ozone Influence on Regional Air Quality Modeling: A Western Case Study

SIPs and FIPs require models to accurately simulate O_3 sources so that the models can be used to examine emission control scenarios to demonstrate future attainment of the NAAQS. Presented here is a case study illustrating results of comparative regulatory applications of the regional modeling platforms. The regulatory analysis excludes identified exceptional days and focuses on the top 10 monitored O_3 days. While this case study compares only two models, it adds to the weight of evidence of the need for further western analyses, as it provides insights into the relationships between regional model estimates of USB O_3 and observations.

The EPA Transport Assessment⁸ and the Western Air Quality Study⁹ both independently performed model simulations of USB O_3 at 12-km resolution in Colorado for 2011. This is an ideal case study for USB

O_3 relevant to state planning because the western states typically have high USB O_3 contributions, and because the Northern Colorado Front Range often experiences high O_3 levels that exceed the NAAQS. The modeling systems in both assessments used global simulations to provide high-time-resolution, varying boundary conditions; EPA used the GEOS-Chem modeling while WAQS used MOZARTv4. USB O_3 contributions were determined as the sum of boundary and natural sources tagged with tracers in the modeling systems, of O_3 from May 1 through Sept. 29. Simulation results were compared for contributions of local, regional, and USB

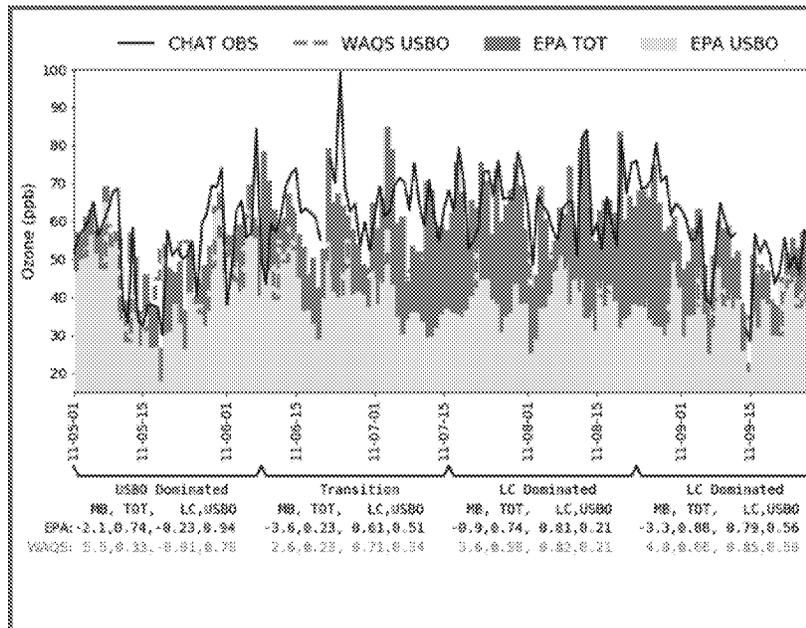

Figure 3. Observed and modeled MDA8 O₃ with USB O₃ from EPA model and WAQS for Chatfield. Observed O₃ (black lines), EPA model MDA8 O₃ (top of dark grey), EPA model USB O₃ (top of light grey), and WAQS USB O₃ (dashed green lines). For four simulation segments, the values below the axis give (for both models) the mean bias (MB), correlation (r) of total prediction with observations (TOT), correlation of local contribution (LC) with observations, and correlation of USB O₃ contribution with observations (USBO). DOI: <https://doi.org/10.1525/elementa.309.f6>

O₃ sources at a suburban monitor southwest of Denver (Chatfield) and at Rocky Mountain National Park.

EPA and WAQS 2011 modeling for Chatfield and Rocky Mountain National Park highlights similarities between the GEOS-Chem and the MOZARTv4 models, but also confirms the need to improve modeling of USB O₃. Jaffe et al.¹⁰ provide correlations between observations and source contributions at Chatfield over the whole period are generally consistent with previous studies,¹¹⁻¹³ showing that:

1. as illustrated in Figure 1b and Figure 3, USB O₃ and natural/uncontrollable O₃ sources within the United States are significant fractions of total monitored O₃;
2. the monitored and predicted O₃ levels are most strongly correlated with the local contribution; and
3. boundary conditions are anti-correlated with the local contribution of O₃ sources.

Conclusions

Concentrations of O₃ in rural areas of the West originate from a mix of locally controllable and uncontrollable USB sources. Because of this and the fact that, historically, O₃ nonattainment planning policies have focused on resolution of urban O₃ exceedances, a greater emphasis on the identification and

quantification of USB O₃ sources is also now necessary for effective regulatory decision-making. While O₃ modeling in the eastern United States has been accomplished through federally-funded efforts under the Ozone Transport Commission, no similar effort with federal funding have ever been initiated in the West. Western states have long commented that EPA should provide funding to help states better understand O₃ background, uncontrollable sources of O₃ precursors and transport in the West.

As a result of the EPA's extraordinary funding support in the East, eastern states have been able to develop a better understanding of the origin of O₃ precursors, O₃ formation, and the fate of O₃ with a level of confidence that helped with the development and implementation of meaningful and effective regulatory programs to improve air quality. The slim differences in the West between the seasonal mean USB O₃ level and the 2015 O₃ NAAQS alone drives a need for increased precision in model accuracy. Western states need detailed O₃ analyses focusing on the western United States to gain a better understanding of the origin of O₃ precursors, photochemical activity, and fate of transported O₃ with a level of confidence that will lead to the development and implementation of effective regulatory programs for the West. **em**

In Next Month's Issue...

Air Quality Modeling

The U.S. Environmental Protection Agency (EPA) has completed its modeling guideline updates, but new advances in air quality modeling may spur additional changes. The October issue will consider renewed interest in effectively modeling low wind; improved treatment of porous structures and more complex buildings; incorporating scientifically credible, reduced-form chemical mechanisms into dispersion modeling to assess secondary formation; and formulation of next-generation modeling systems for chemical transport models that are driving air quality modeling in new directions.

ORGANIZED BY

Regional Action, Global Impact

BORNEO CONVENTION CENTRE KUCHING, SARAWAK, MALAYSIA

Clean Air Asia, the Clean Air Forum Society of Malaysia (MyCAS), Malaysia's Ministry of Natural Resources and Environment, and the Natural Resources and Environment Board of Sarawak are organizing the **10th Better Air Quality (BAQ) Conference**, with the theme Regional Action, Global Impact, which is focused on the urgent need for action on air pollution at all levels and across all sectors.

Now in its 10th year, BAQ is Asia's leading air quality event. Building on the success of previous conferences, we're expecting more than 700 participants this year, with representatives from more than 50 countries throughout Asia and other regions, 25 cities, international organizations, development agencies, the private sector, NGOs, and academic and research institutions.

Register now
www.baq2018.org
baq@cleanairasia.org

Be part of the largest air quality conference in Asia:

- Engage with leading decision-makers and stakeholders in the fields of air quality and climate change, sustainable urban transport, and urban air quality management
- Network and build partnerships among the hundreds of delegates from around the world
- Take part in discussions, dialogues and debates during high-level plenary forums and thematic and special sessions focused on different stakeholder roles in the adoption of multi-sectoral, multi-pronged approaches to air pollution mitigation
- Learn about the latest advancements in air-quality science, current issues, and trends and policies that are shaping governance and business approaches
- Engage with the visionary changemakers in Sarawak who are leading Malaysia's clean energy transition and helping guide the country towards a sustainable, clean energy future.

Minding Business

by David Elam

PM File reminds us to practice mindfulness and avoid the pitfalls of media multitasking.

A day rarely passes without a message about the importance of being mindful. We're encouraged to be mindful in our exercise, our eating, our relationships, and our work. Although there are many ways to practice mindfulness, the consistent theme is that we remain present in the moment, turning our full attention to the activity at hand. It isn't easy to practice mindfulness, and in the project manager's world of changing priorities and deadlines, it can seem impractical. As a result, we tend to turn to "multitasking" in an attempt to work on various tasks simultaneously. Technology has made multitasking seem easy—we can e-mail, talk, instant message, text, search the Web, and write a report all at the same time because we have tools that allow us to do so. But does the fact that we can do something mean that we are doing any of it well?

Research consistently shows that multitasking is ineffective, and in the case of media multitasking—the concurrent

consumption of multiple media forms—the process can impair cognitive processes and induce socio-emotional difficulties. Research by Kep Kee Loh and Ryota Kanai, shows that media multitasking reduces gray matter density, resulting in structural brain changes that decrease cognitive control performance and socio-emotional regulation.¹ Effective cognitive processing, responsible social interactions, and emotional intelligence are vital environment, health, and safety (EH&S) project manager attributes that can't be compromised in pursuit of the hollow productivity gains of multitasking. Clearly, multimedia consumption isn't in the best interest of the EH&S project manager.

If we are to preserve the attributes that determine our success as EH&S project managers, we must manage our relationship with technology, recognizing that it exists to serve, not control, us.

To that end, I invite you to consider the following actions that can help you remain present:

1. **Create a weekly action list.** Take time alone and create a list of tasks that you want to complete for the week. To disconnect from technology, consider creating your list in handwritten form in a notebook. Prioritize the list of tasks based on deadlines and urgency. When you are free from distractions, you will be free to develop an action list that reflects your highest priorities.
2. **Create a daily action list.** Draw from your weekly action list to identify the tasks that you want to or must complete for each given day. I've found most success by creating the list for the next day at the close of the preceding day. Estimate the time for each task, allowing some time each day for unplanned activities. Again, consider creating this list in handwritten form in a notebook, free from technology distractions.
3. **Prepare for every meeting.** You will either chair or participate in several meetings or conference calls during the week. Prepare for each one of them. Whether you are the leader or a participant, consider the guidance offered in a previous column "Meeting Challenges."² If you lead the meeting, you are obligated to ensure that it is productive. If you participate in a meeting, you are obligated to contribute productively.
4. **Give your full attention to the task at hand.** When you are in a group meeting, meeting one-on-one with a colleague, or participating in a conference call or Skype meeting, eliminate the distractions of technology

by silencing notifications or closing applications. If someone visits you for a discussion, make a point of silencing your phone and closing your e-mail. If the person you are meeting with doesn't take the cue from your actions, politely close the conversation if they allow the meeting to be de-railed by their technology interruptions. If the pressures of a competing deadline keeps you from focusing on the meeting, reschedule the meeting. There is no financial return in making marginal investments in competing interests.

5. **Value the time of others.** We have limited time for interpersonal interaction. Commit to making the most of opportunities that allow it. Plan formal meetings to remain so engaging that no one wants to check their phone for e-mails, texts, or social media posts. And when it comes to social time with friends and family, put them at the forefront, encouraging them to tell their story, a much more interesting proposition than them considering the fleeting posts on their social media network.

Our responsibility as EH&S project managers is to use technology to improve environmental and economic outcomes. We're not likely to achieve those objectives if we are mindless slaves to technology—technology that improperly applied has been shown to reduce our cognitive and socio-emotional skills. Instead, we have the opportunity to be mindful stewards of our responsibilities by setting priorities and following through on those priorities that respect the importance of engagement. **em**

George R. Offen

(1939–2018)

Emeritus Member, **George R. Offen, Ph.D.**, passed away on August 5, 2018. He was 79.

Dr. Offen was a native of London, UK, having been born there after his parents escaped from Nazi Germany in 1938. The family emigrated to the United States via Uruguay, in a perilous wartime ocean journey, finally settling in San Francisco, CA. As a naturalized U.S. citizen, Dr. Offen attended Stanford University, where he earned bachelor's and doctorate degrees in mechanical engineering. He also earned a master's degree from the Massachusetts Institute of Technology. He was fluent in French and German.

As a senior technical executive at the Electric Power Research Institute in Palo Alto, CA, Dr. Offen's research focused on the reduction of air pollutants from coal-fired power plants, specifically mercury emissions. He and his team also researched low-cost enhancements for particulate (fly ash) controls on difficult-to-collect fly ash, methods to reduce the operational costs and improve the availability of sulfur dioxide controls, and multipollutant controls. Other responsibilities included the development of continuous emission monitors for mercury.

Dr. Offen joined EPRI in 1985 as a project manager, focus-

ing on low-cost sulfur dioxide controls and nitrogen oxides reduction by selective catalytic reduction systems. Before joining EPRI, he was manager of energy engineering at Acurex Corporation. Earlier positions included teaching at Stanford and Santa Clara Universities, research assignments at Chevron Research and the French Institute of Petroleum, and three years as an officer and test engineer with the U.S. Air Force.

Dr. Offen is considered the creator and champion of the highly popular MEGA Symposium series, which is co-hosted by A&WMA. In part as a result of his efforts with the MEGA Symposium, he was awarded the Richard C. Scherr Award of Industrial Environmental Excellence in 2014. The Award is presented annually to an individual who works in the business community, recognizing his/her contributions to the Association and accomplishments in the field of environmental protection.

In his leisure time, Dr. Offen enjoyed hiking, running, and travel. He and his wife traveled extensively, the latest trip to five national parks in Utah.

Dr. Offen is survived by his wife Karen; daughters Catherine and Stephanie; and four grandchildren. **em**

Getting to Know A&WMA's Organizational Members

On this page you will find the company profiles of a randomly selected grouping of Organizational Members. A&WMA thanks you—and all of our current Organization Members—for your continued support of this Association.

Babst Calland Attorneys at Law

Babst Calland's Environmental Practice Group (www.babstcalland.com) is one of the most respected environmental law practices in the United States. For more than three decades, Babst Calland has been unsurpassed when it comes to addressing new or legacy problems, or anticipating impending regulatory developments or other complications that may be on the horizon.

Babst Calland environmental attorneys provide a nationwide clientele with sophisticated and practical representation in all aspects of environmental law. With the nation's largest staff of regulatory attorneys who focus their practices exclusively in this field, our environmental attorneys are able to focus their practices on specific environmental areas, such as air pollution, industrial and municipal wastewater management, hazardous and solid waste, complex site remediation, natural resource damages, chemical regulation, and occupational safety and health.

Babst Calland offers a team of seasoned practitioners with varied and extensive degrees and experience in the environment, health, and safety fields. Babst Calland attorneys not only understand the law, they also understand the underlying science that so often is the center of environmental regulatory issues. In addition, Babst Calland attorneys appreciate the value of knowing our clients' processes and facilities, and routinely spend time in the field so that practical solutions to often complex environmental problems are not missed because of a lack of understanding of the framework in which an environmental problem arises.

In addition to extensive experience, Babst Calland also offers a very competitive rate structure. With environmental attorneys with varying levels of environmental experience from one year to more than 40 years, Babst Calland can perform work at the most cost-efficient level.

Through an integrated, multidisciplinary approach and preventative law philosophy, Babst Calland environmental attorneys collaborate with attorneys in the firm's other legal practices, including construction, corporate and commercial, creditors' rights and insolvency, employment and labor, energy and natural resources, land use, litigation, public sector, real estate, and transportation safety. This collaboration creates a synergy not typically found in today's legal market and enables us to comprehensively advise our clients, by taking into account relevant legal considerations from multiple disciplines.

comerstone A TETRA TECH COMPANY

Comerstone Environmental (www.comerstoneeg.com), a Tetra Tech Company, is an engineering consulting and field service firm dedicated to providing services to the solid waste industry and commercial, industrial, and agricultural clients throughout the United States. Comerstone provides a range of specialized services spanning multiple markets, including Air Quality, Biogas & Landfill Gas, Environmental Planning and Compliance, Hydrogeology, Landfill Engineering & Design, O & M, Organics Management, Remediation, Site & Civil Design, and Transfer, Recycling, and Processing Facilities.

Comerstone's air quality services practice includes a diverse mix of mechanical, chemical, civil, and environmental engineers, working alongside air pollution scientists with a depth of experience in all areas of air quality services, including New Source Review and Title V Air Permitting, atmospheric dispersion modeling, NSPS & NESHAP permit compliance support, compliance assessments and emission source inventories, ambient air monitoring and monitoring plan development, point source emissions testing review and oversight, community awareness and public relations support, mobile data collection and mapping, and spatial information management. Many of Comerstone's air quality personnel have both consulting and regulatory experience. The firm's approach includes extensive hands-on experience in examining production processes from the perspective of emissions and regulatory compliance.

To advance the state-of-practice and provide forward-looking sustainable projects, Comerstone implements new technology and reaches for the next innovation. For example, the company developed BioCNG (www.biocng.us), an alternative vehicle fuel system that uses a patented biogas conditioning system to economically produce biogas-based fuel to power compressed natural gas vehicles. BioCNG uses biogas from organic and agricultural digesters, landfills, and wastewater treatment plants to produce renewable fuel.

BINGHAM GREENEBAUM DOLL

For more than a century, the business law firm of Bingham Greenebaum Doll (BGD) LLP (www.bgdlegal.com) has provided environmental legal services to clients across a wide array of industries and sectors. Clients served include manufacturers, public and private utilities, energy and mining businesses, real estate developers, financial institutions, and agribusinesses. BGD's attorneys use their industry knowledge and understanding of federal and state regulatory programs to provide innovative solutions to complex issues and, if necessary, are able to draw on a broad experience in environmental litigation.

Capabilities span a broad spectrum of environmental and natural resource law matters, including air, water, remediation and voluntary cleanups, waste management, energy resources, and brownfield and real estate development. Services include permitting, compliance counseling, legislative and regulatory negotiations, transactional due diligence, enforcement defense, and litigation. BGD serves its clients from six offices located in Indiana, Kentucky, and Ohio. **em**

Send Us Your Information

If you are a current Organizational Member and would like your company profile to be included in a future issue of *EM*, please contact Lisa Bucher, Managing Editor at lbucher@awma.org.

Consider Upgrading to Organizational Membership

Organizational Membership is the perfect solution for companies and organizations with six or more environmental professionals on staff who want to reduce membership costs and increase their participation in A&WMA. For more information, go to www.awma.org/join.

The views expressed are those of the individual organizations and do not necessarily represent an official position of the Association. A&WMA does not endorse any company, product, or service appearing on this page.

Honda Details Proposed Vehicle GHG 'Flexibilities' While Retaining Goals

American Honda Motor Co. says regulators should extend until 2025 several flexibilities under EPA's current greenhouse gas standards for model year 2022-2025 passenger vehicles that expire after 2021, while retaining the overall emissions standards in order to preserve a national set of rules that is joined by California.

Facing Legal Hurdles, EPA's 'Secret Science' Plan Punts On Key Issues

EPA Administrator Scott Pruitt has signed a long-promised plan barring the agency's use of any information in decision-making that is not publicly available, but the proposed rule punts on a host of tricky legal and implementation issues, including statutory mandates to use the best available science and how to address confidential trade secrets and medically protected data.

EPA Urges Local Officials To Adopt Pre-Disaster Climate Adaptation Plans

EPA is urging local government officials to adopt "worst-case" climate adaptation plans to limit damage from future natural disasters, a stance that appears to be at odds with the Trump administration's general resistance to acknowledging and addressing climate change and its adverse impacts.

Climate Beat

Technology: Oil, electricity firms join new CCS lobbying group

The new Energy Advance Center includes oil and gas majors BP and Chevron, as well as utility giant Southern Company and other companies with interest in the climate mitigation technology.

Loose Change: Inhofe, other GOP senators call for Pruitt hearing

In today's news roundup: Sen. Jim Inhofe (R-OK) says "a couple of us on the committee think it's appropriate to have a hearing in so far as any accusation having to do with his office is concerned."

Subject: Morning Consult Energy, Presented by Wells Fargo: Exxon Sees Lowest 1st-Quarter Output Since 1999

By [Jacqueline Toth](#)

Top Stories

- Exxon Mobil Corp. said in its earnings report that output fell to 3.889 million barrels a day in the first quarter, the first time since the 1999 merger between Exxon and Mobil Corp. that the company has pumped less than 4 million barrels a day in that quarter. The output figure, along with the company's profit of \$1.09 a share, fell short of analysts' expectations. ([Bloomberg](#))

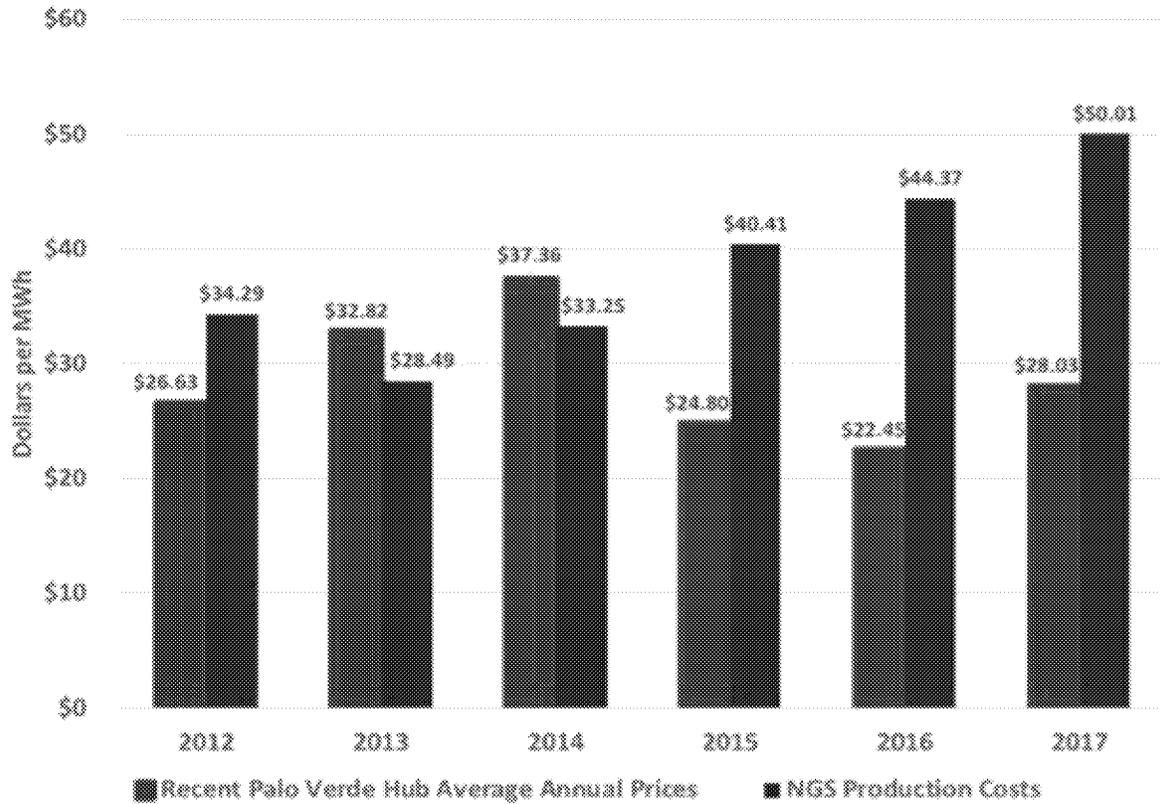

- The Environmental Protection Agency Office of Inspector General disputed that the "threat assessment" Administrator Scott Pruitt cited in two House hearings, which he used to justify his spending on security, came from EPA Inspector General Arthur Elkins as Pruitt had said. The EPA clarified that the document was instead an internal memo from Patrick Sullivan, an assistant inspector general, and was leaked without authorization from the office. ([The Hill](#))
- Dangerous volatile organic compounds and other air contaminants emanating from an explosion at the Husky Energy Inc. oil refinery in Wisconsin will pose a health risk to people downwind of the facility, according to pollution experts. Officials ordered people to evacuate from the area to reduce public exposure, and government agencies plan to test the air in the region, refinery manager Kollin Schade said at a news conference. ([The Associated Press](#))
- Al Monaco, chief executive of Enbridge Inc., said the pipeline company will continue with its efforts to chart a new route to replace the Line 3 pipeline in Minnesota, despite a recommendation on Monday from an administrative law judge that the project is only of comparative benefit if construction tracks along Line 3's current route. Monaco said the recommendation, which may be taken into account by state regulators, "ignores the extensive record" the state has compiled "that incorporates input from thousands of Minnesotans who are in favor of our proposed route." EPA Embraces Automaker Claims In Bid To Weaken Vehicle GHG Standards

EPA's determination that its vehicle greenhouse gas standards are too stringent and needs to be eased broadly embraces a suite of auto industry arguments on cost, consumer tastes and technology challenges, setting the stage for a formal process to fill in the details of proposed changes to model year 2022-2025 limits that promises to be highly contentious.

Pruitt's Bid To End 'Secret Science' Faces Legal, Implementation Hurdles

EPA Administrator Scott Pruitt's pending plan to apply a sweeping new data transparency requirement at EPA is expected to face legal and implementation controversies likely as soon as it is released, agency watchers say, including potential violations of medical privacy protections, trade secret information and other data that form the basis for air quality standards, pesticide and chemical approvals and climate rules.

California Officials Reject Calls To Tighten 2035 Transportation GHG Targets

The California Air Resources Board (CARB) has adopted controversial 2035 transportation-related greenhouse gas targets for major metropolitan areas in the state, rejecting calls by environmentalists and civil rights groups to make the goals more stringent.

Climate Beat

Regulation: EPA announces plan to ease vehicle GHG standards

But California's waiver -- which allows the state to retain its standards -- is still being "reexamined," EPA says.

Biofuels: Group blames EPA waivers for falling ethanol demand

A new biofuels industry analysis of the effects of EPA's RFS waivers suggests the agency might not have to take short-term measures to curb compliance costs.

Loose Change: On condo scandal, Christie not sure if Pruitt can 'survive'

In today's news roundup: Former New Jersey Gov. Chris Christie (R) says he is not sure how Scott Pruitt can "survive" as EPA chief after he secured a \$50-per-night lease on a Capitol Hill condo connected to an energy lobbyist.

Subject: Morning Energy, presented by Anheuser-Busch: Returning to the battlefield over California car rules — Pruitt screens friendly questions — Art of the RFS deal

By Kelsey Tamborrino | 05/09/2018 05:42 AM EDT

With help from Anthony Adragna

IF AT FIRST YOU DON'T SUCCEED: The looming fight between the Trump administration and the state of California over climate change rules for cars will cover some familiar terrain — where the liberal state and its environmentalist allies have won major legal battles in the past, Pro's Alex Guillén reports. The White House strategy appears to mirror the approach that automakers and dealers unsuccessfully pursued more than a decade ago in an attempt to reverse California's strict limits on vehicles' greenhouse gas emissions.

This again? California — which has a waiver under the Clean Air Act to enact stricter standards — is hoping things play out the same way it did the last time around, when two federal district courts upheld its rules, which other states also can choose to follow. "It's sort of déjà vu because it's going to be basically round two," said Kevin Leske, who was an assistant attorney general in Vermont in 2007 when the state fought off an industry lawsuit seeking to block the greenhouse gas rules for cars.

The details: At issue is the interplay between the long-standing Corporate Average Fuel Economy standards that were established under the 1975 Energy Policy and Conservation Act, and the relatively new emissions standards enforced nationally for the first time under the Obama administration. The Trump administration is expected to nullify the waiver granted to California and then try to circumvent any questions by arguing that EPCA preempts California from enforcing its auto emissions standards — essentially the same argument automakers and dealers deployed in multiple lawsuits over a decade ago.

But keep in mind: That strategy fell short the first time around. A U.S. district court judge in California concluded that greenhouse gas standards are too different from fuel economy regulations to fall under EPCA's "related to" preemption language. However, the cases were never appealed after a larger political deal was reached on the car rules, but advocates of the Trump administration's approach say they hope to take the issue to a higher court this time around. Read [more](#).

GOOD WEDNESDAY MORNING! I'm your host Kelsey Tamborrino. Andrew Fasoli of the American Chemistry Council was the first to correctly guess that former President Ronald Reagan was first to watch a major league baseball game from the dugout, at a Baltimore Orioles game. For today: In what city did the nation's first paved roadway appear? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

Download. Edit. Present. DataPoint has ready-made slide presentations to help you translate complex policy issues in the simplest terms. [Learn more](#).

BEGS THE QUESTION: EPA Administrator Scott Pruitt and his staff sought extensive control over questions that could be asked to the administrator when he toured the country speaking to industry groups, POLITICO's Anthony Adragna and Emily Holden report. Even seemingly friendly questions got axed by the agency, like, "How often do you get back to Oklahoma?" That question was crossed off a proposed list of questions without

an explanation ahead of Pruitt's appearance in December at an event in Iowa, internal emails made public by the Sierra Club through a public records lawsuit show. (At the time, EPA's inspector general was already investigating Pruitt's frequent trips back home.) The emails offer new insight into EPA staff's desires to limit access by independent journalists, pre-screen questions from friendly interviewers and coordinate Pruitt's message with lobbyists ahead of gatherings with conservative or industry groups. Read the details [here](#).

WHAT HAPPENED AT THAT BIOFUELS POWWOW: President Donald Trump appears to have brokered a deal in the long-running fight between ethanol producers and oil refiners over federal biofuels mandates. At a White House meeting Tuesday with Pruitt, Agriculture Secretary Sonny Perdue and a few Republican senators. Trump reiterated his pledge to allow 15 percent ethanol fuels year-round and rejected a price cap on biofuel credits, called Renewable Identification Numbers. Those are both big wins for the corn crowd, Pro's Eric Wolff [reports](#). But ethanol producers groused about another proposed aspect of the deal that would lower compliance costs for refiners: allowing ethanol exports to qualify for RINs. Refiners, meanwhile, were wary of a separate proposal for EPA to require large refiners to take on the ethanol-blending requirements for which it issued dozens of waivers to smaller refiners.

IT'S KIND OF INFRASTRUCTURE WEEK: Close to none of Trump's big-ticket [proposals](#) to streamline environmental rules made it into the first major bill infrastructure bill introduced in Congress since his election. America's Water Infrastructure Act of 2018, as the Senate bill is called, is so far the "most significant step lawmakers have taken to help fulfill the president's marquee campaign promise to revitalize the country's transportation arteries," Pro's Annie Snider writes. The bill's authors purposefully set their sights on bipartisanship in light of the fast-approaching midterm elections. "We focus on the 80 percent where we have general agreement, and we're going to get something done," said Sen. [Tom Carper](#) (D-Del.), the top Democrat on the panel and a cosponsor of the measure. Read [more](#).

MORRISEY WINS: West Virginia Attorney General Patrick Morrisey came out on top Tuesday, clinching the Republican nomination to take on Democratic Sen. [Joe Manchin](#) come November. Coal baron Don Blankenship, who was running a controversial campaign against the Republican establishment and Mitch McConnell, ended up in third place in the most-watched race of the night. Blankenship, who was convicted in 2015 of conspiring to skirt mine standards after 29 miners were killed at Massey Energy's Upper Big Branch facility, only [received](#) 19.9 percent of the vote to Morrisey's 34.9 percent, and 29.3 percent for Rep. [Evan Jenkins](#), the other major candidate in the race. Read more on all of Tuesday's primaries [here](#).

NEW DETAILS IN PRUITT SAGA: EPA worked closely with groups such as the Heartland Institute and the CO2 Coalition — both of which dispute the scientific consensus on climate change — when planning Pruitt's proposed "red team, blue team" debate over climate science, The New York Times [reports](#) via new documents released by the NRDC. The emails show that EPA scientists were not involved in the discussion, and that political aides continued to work on the idea even after White House chief of staff John Kelly tried to squelch the plan, according to the Times. In a separate report, the Times got a hold of documents that shed new light on the day security officers, fearing for Pruitt's safety, smashed down his condo door. Read it [here](#).

— **Pruitt's former security chief** Pasquale "Nino" Perrotta told the House Oversight Committee that Pruitt and his staff missed a connecting flight on a trip to Morocco because his security detail's weapons and gear couldn't be transferred between the planes in time, the Associated Press reports, citing anonymous committee aides. The delay forced Pruitt to spend more than 24 hours in Paris, and Perrotta's version of events calls into question the official rationale given by EPA. Read that story [here](#).

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks. The zero-emission trucks will be able to travel between 500 and 1,200 miles. Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025. [Learn more](#). **

BARRASSO: 'CLOSELY MONITORING' PRUITT SITUATION: EPW Chairman [John Barrasso](#) told ME he's "closely monitoring" the ongoing ethical woes of Pruitt and continuing with unspecified "oversight" of the agency. "The job that he's doing — in terms of the job assigned by the president to roll back regulations and overreach by the federal government — he continues to do well," Barrasso said. "We want to make sure taxpayer money is being well spent and appropriately spent." But Barrasso wouldn't specify if he'd sent additional letters to the agency, again deferring to the White House's vague, ongoing review of the situation.

Wait and see: Senior House Republicans overseeing the EPA also appeared to be publicly sticking with Pruitt as well. Rep. [John Shimkus](#), who oversees the EPA on the House Energy and Commerce Committee, told ME he didn't have plans for additional oversight on his subcommittee but deferred to Chairman [Greg Walden](#) on whether it was appropriate. Shimkus acknowledged his lack of oversight plans "might disappoint some of my colleagues," including some Republicans who questioned Pruitt's spending at a hearing several weeks ago. A spokesman for the committee didn't respond to requests for comments on its oversight plans.

HEWITT KNEW IT: Conservative radio host Hugh Hewitt responded Tuesday on his radio show to a POLITICO [report](#) about a meeting set up by Hewitt between Pruitt and a water utility that sought a Superfund distinction in his hometown — which it ultimately received. "I knew it was going to show up in the FOIA request," Hewitt said of the meeting request. "I just didn't think it was a story." Separately, the liberal media watchdog group Media Matters [reported](#) Tuesday, that The Washington Post's Editorial Page Editor Fred Hiatt had not known of ties between EPA and Hewitt's law firm. "Hewitt, who has not written about Pruitt since September, has agreed not to write about him going forward and has assured us that similar incidents won't occur in the future," Hiatt said in an email to the group.

PERRY PULLS UP: Energy Secretary Rick Perry will testify this morning before the House Science Committee on his department's overall budget for fiscal 2019. Members will likely discuss funding for Advanced Research Projects Agency-Energy and Department's Loan Programs, which are terminated under the budget, as well as Perry's recent moves on coal plants. "Termination of these programs will save over \$300 million in FY 2019 alone while significantly reducing financial risk to the taxpayer moving forward," Perry is expected to say. **If you go:** The hearing kicks off at 9 a.m. in 2318 Rayburn. Watch the livestream [here](#).

AT THE SAME TIME: The House Energy and Commerce Committee is slated to hold a [markup](#) on five cybersecurity, small-scale LNG bills this morning. Included in the docket: The bipartisan [H.R. 5175 \(115\)](#), the "Pipeline and LNG Facility Cybersecurity Preparedness Act." The slate of bills — which also includes [H.R. 4606 \(115\)](#), [H.R. 5174 \(115\)](#), [H.R. 5239 \(115\)](#), [H.R. 5240 \(115\)](#) — were approved by the subpanel in April. [H.R. 4606](#) — which would allow the expedited approval of small-scale shipments of liquefied natural gas — [got a vote](#) of 19-14 over the objections of most Democrats.

CHATTERJEE SEES CHALLENGES: FERC Commissioner Neil Chatterjee called out natural gas pipeline permitting in New York Tuesday, while speaking at the at the Independent Power Producers of New York conference. "The gravest threat we face to resilience and fuel security is in New England and that's not the result of coal and nuke retirements but because of gas constraints due to a lack of adequate infrastructure," Chatterjee told reporters. Read more from Pro New York's Marie French [here](#).

INTERIOR FACES FOIA SUIT: The Wilderness Society will file a lawsuit today to compel Interior to release documents related to the administration's environmental protection plans on public lands. The group says it filed 21 requests under the Freedom of Information Act for documents related to orders issued by Trump and DOI in March 2017 aimed at removing "potential burdens" to energy development on public lands. TWS says it only received responses to two of those requests.

MAIL CALL! The Environmental Protection Network sent [this letter](#) to EPA requesting a public hearing and an extension of the 30-day public comment period on the agency's "secret science" proposal to ban the use of

studies that don't publicly disclose all their data. "The proposal is far too complex, with effects too broad and indeterminate, and requests comment on far too many issues, for a thirty-day response period," the letter says.

WATCH IT: The American Council for Capital Formation released a new ad on Tuesday calling on the president to uphold the investor-state dispute settlement mechanism in any negotiation of NAFTA. Watch it [here](#).

E2 LAUNCHES CLEAN JOBS CAMPAIGN: Environmental Entrepreneurs launched a nationwide campaign Tuesday, dubbed [Clean Jobs Count](#), "to advance awareness and support of America's fastest-growing energy sector." The campaign includes digital ads in Michigan, Ohio, Illinois and Colorado, and additional ad campaigns are planned throughout the rest of the year in at least half a dozen more states.

MOVER, SHAKER: Exelon [announced](#) Constellation CEO Joseph Nigro was promoted to Exelon senior executive vice president and CFO, succeeding Jack Thayer, who becomes senior executive vice president and chief transformation officer. ComEd President and CEO Anne Pramaggiore was promoted to CEO of Exelon Utilities, succeeding Denis O'Brien. And Joseph Dominguez, the executive vice president of governmental and regulatory affairs and public policy, was promoted to CEO of ComEd Chicago.

— **Power Ledger**, a blockchain-powered renewable energy trading platform, announced Dante Disparte was appointed its strategic adviser and ambassador.
