

ADVANCING OPEN SCIENCE TO ACCELERATE
RESEARCH, DEVELOPMENT, AND
INNOVATION FOR AMERICAN PROSPERITY

A Report by the
Interagency Working Group on Open Science
Committee on Science
NATIONAL SCIENCE AND TECHNOLOGY COUNCIL

May 2018

About the National Science and Technology Council

The National Science and Technology Council (NSTC) is the principal means by which the Executive Branch coordinates science and technology policy across the diverse entities that make up the Federal research and development enterprise. A primary objective of the NSTC is to ensure science and technology policy decisions and programs are consistent with the President's stated goals. The NSTC prepares research and development strategies that are coordinated across Federal agencies aimed at accomplishing multiple national goals. The work of the NSTC is organized under committees that oversee subcommittees and working groups focused on different aspects of science and technology. More information is available at <http://www.whitehouse.gov/ostp/nstc>.

About the Office of Science and Technology Policy

The Office of Science and Technology Policy (OSTP) was established by the National Science and Technology Policy, Organization, and Priorities Act of 1976 to provide the President and others within the Executive Office of the President with advice on the scientific, engineering, and technological aspects of the economy, national security, homeland security, health, foreign relations, the environment, and the technological recovery and use of resources, among other topics. OSTP leads interagency science and technology policy coordination efforts, assists the Office of Management and Budget with an annual review and analysis of Federal research and development in budgets, and serves as a source of scientific and technological analysis and judgment for the President with respect to major policies, plans, and programs of the Federal Government. More information is available at <http://www.whitehouse.gov/ostp>

About the Interagency Working Group on Open Science

The Interagency Working Group on Open Science (IWGOS) advances Federal efforts to support open science by increasing access to and use of the results of federally-funded research and development, including but not limited to scholarly publications and digital data. Among its responsibilities, the IWGOS aims to improve implementation of policies to increase access to the results of federally-funded scientific research and to identify additional steps that Federal departments and agencies can take to enhance the preservation, discoverability, accessibility, quality, and utility of the outputs of federally-funded scientific research.¹

Executive Summary

Open science is the principle and practice of making the results of scientific research available, accessible, and usable. By removing barriers to the access and use of scientific information, open science can accelerate scientific progress, improve research rigor and reproducibility, spur innovation, and strengthen the economy, increasing the return on investments in research and development.

In recent years, Federal departments and agencies have made considerable progress in advancing open science through policies to increase public access to scientific publications and digital data resulting from federally-funded research. This work has highlighted two key lessons that can apply more generally to efforts to advance open science: First, implementation needs to be tailored to the specific missions, organizations, and fields of science that individual agencies support. While agencies can pursue common objectives, the specific ways they achieve them may differ. Second, interagency cooperation can significantly improve the efficiency and effectiveness of open science implementation, through the sharing of knowledge, infrastructure, best practices, solutions to common challenges, and more.

This report was prepared by the Interagency Working Group on Open Science (IWGOS), which was established to advance Federal efforts to support open science by increasing access to, and use of the results of, federally-funded research and development, including but not limited to scholarly publications and digital data.

The IWGOS identified several opportunities for advancing open science, taking into account agency missions, operational contexts, and resources. These include:

1. Increasing the availability and timeliness of narrative research products;
2. Improving the availability and timeliness of access to scientific data;
3. Increasing access to other products resulting from federally-funded research, such as software and scientific collections;
4. Improving systems for making research products public and more usable;
5. Lowering barriers to effective use of open science content; and
6. Developing better metrics for measuring advances in open science and its impacts.

To realize the benefits of open science, the IWGOS recommends that Federal agencies take steps to incentivize open science; facilitate interagency development of best practices, guidance, and standards for open science, with a focus on data access; and promote interagency and public-private collaborations to further realize the benefits of open science. Such collaboration would include partnerships with other Federal working groups; public, nonprofit, and academic partners; and international partners, many of which are also pursuing the objective of advancing open science.

I. Introduction

Open science is the principle and practice that makes the results of scientific research available, accessible, and usable. It accelerates progress in science, improves research rigor and reproducibility, spurs innovation, and strengthens the economy. By making the results of scientific research accessible to the largest possible audience – including other scientists, business innovators, entrepreneurs, students, and American citizens – open science can boost the returns from Federal investments in research and development (R&D). It can drive advances in areas as diverse as agriculture, energy, health, and national security, and catalyze innovation that drives economic growth and prosperity.

The goals of open science are reflected in the public access plans developed by federal agencies.² Open science is essential to achieving the compelling R&D priorities outlined by the Director of the Office of Management and Budget, Mick Mulvaney, and Deputy Assistant to the President, Office of Science and Technology Policy, Michael Kratsios, in Memorandum M-17-30 entitled “FY 2019 Administration Research and Development Budget Priorities.” Specifically, open science can further administration priorities by advancing American Security, American Prosperity, American Energy Dominance, and American Health.³

Accelerating dissemination of research results advances knowledge and leads to broader application of American scientific contributions. Fundamentally, communicating research results is central to scientific progress, allowing others to test the validity of findings and to build upon these results. Open science allows research to be more easily applied to a range of national priorities, including:

- *Protecting American interests.* Making federally-supported science more open and accessible helps to establish American leadership in scientific research and in areas such as international data standards, which can directly impact American scientific and economic interests.
- *Advancing American health.* Making medical research accessible in real time improves patient diagnoses and treatment. Providing access to literature search through clinical decision support systems affords statistically significant improvements in the accuracy of making evidence-based clinical decisions in a physician’s everyday clinical practice. In one study, access to online literature was found to boost the accuracy of clinical decision making from 45 percent to 72 percent.⁴
- *Protecting American security.* The Departments of Defense (DOD) and Homeland Security (DHS) maintain robust research portfolios to keep Americans safe, both at home and abroad. Public access to the unclassified results of this research helps to encourage and focus innovation on technologies that, in time, will become integral to our nation’s security.

² Agency public access plans are available online at: <https://www.science.gov/publicAccess.html>

³ OMB Memorandum M-17-30, *FY 2019 Administration Research and Development Budget Priorities* (Aug. 17, 2017), available at <https://www.whitehouse.gov/sites/whitehouse.gov/files/omb/memoranda/2017/m-17-30.pdf>.

⁴ Tennant, J. P., Waldner, F., Jacques, D. C., Masuzzo, P., Collister, L. B., & Hartgerink, C. H. J. (2016). The academic, economic and societal impacts of Open Access: an evidence-based review. *F1000Research*, 5, 632. <http://doi.org/10.12688/f1000research.8460.3>.

- *Ensuring American energy dominance.* Making the latest scientific evidence available to private sector energy pioneers helps bring Department of Energy (DOE) research to the market faster. For example, through the Gateway for Accelerated Innovation in Nuclear, DOE makes information, data, and R&D infrastructure available to public and private sector stakeholders to speed the development of innovative nuclear energy technologies toward commercial readiness.⁵
- *Increasing government accountability and efficiency.* Making the results of federally-funded research easily available to researchers avoids unnecessary duplication of research, facilitates measurement of the return-on-investment in research, enables needed replication of experiments to improve reliability of results, and permits collected data to be reused for further experimentation and analysis.
- *Maximizing interagency coordination.* By working together, federal agencies have been able to improve the efficiency and effectiveness of their public access policies. For example, eleven agencies use the National Institutes of Health’s (NIH) PubMed Central (PMC) to provide public access to scholarly publications, and DOE has partnered with three other agencies further leverage and customize its Public Access Gateway for Energy and Science (PAGES).
- *Supporting Innovative Early Stage Research.* Effective management of early stage research products, including making these products more accessible, has the potential to increase the pace of scientific discovery, accelerate innovation, and promote more efficient and effective use of government and private-sector funding and resources.

Advancing American prosperity through open science. Open science grows the American economy and creates American jobs. Science has more impact, and Federal investments yield better returns, when results are easily accessible and reusable.

- The open flow of ideas, technologies, and people between the U.S. academic sector (funded by Federal investments) and industry have introduced entirely new categories of products and services that have ultimately become billion-dollar industries. In the area of information technology, the “tire tracks diagram”⁶ illustrates how companies that create products using the open ideas that result from federally-sponsored research “repay the nation in jobs, taxes, productivity increases and world leadership.”
- Sharing data from new technologies in a common format can create a whole new economic sector. Data from the U.S.-developed Global Positioning System (GPS) provide positioning, navigation, and timing information to all parts of the economy, and serve as

⁵ For additional information, see <https://gain.inl.gov/SitePages/Home.aspx>.

a time and frequency standard for the world.⁷ Without such a standard, companies would have to use multiple systems, and the world's economy would be less efficient.

- For every \$1 invested by the Federal government, the Human Genome Project's open research data have resulted in the return of \$141 to the U.S. economy. Between 1988 and 2010, human genomics generated an economic output of \$796 billion, personal income exceeding \$244 billion, and 310,000 jobs. The benefits of the Human Genome Project have been widespread and continue to increase over time.⁸
- Publicly available genomic data has also been used to minimize the economic damage from invasive species and support the rapid identification of invasive species.⁹ In one example, locating key genes involved in insecticide resistance, mating behavior, and sterility of the Mediterranean Fruit Fly, a highly invasive, economically disastrous crop pest.¹⁰
- The use of freely available government satellite imagery from the Landsat satellite missions of the U.S. Geological Survey (USGS) generated annual economic activity more than double the agency's annual budget.¹¹
- The National Animal Nutrition Program makes data on more than 1.5 million feed ingredients openly accessible online. Previously isolated information is now routinely used by researchers, extension staff, producers, regulators, and industry professionals in more than 30 countries to improve livestock feeding strategies.¹²

Barriers to scientific information decrease scientific impact and increase costs. Closed science can inhibit creative and entrepreneurial reuse of research results, reducing the return on investment. This is especially true of interdisciplinary research or research that requires knowledge from beyond a single discipline. Sharing scientific advances broadly across disciplines can lead to novel applications. For example, the National Aeronautics and Space Administration (NASA) has a long history of analyzing weak radio signals to identify seismic activity or minor alterations in a satellite's trajectory around another planet. NASA technology was adapted for use in picking out the faint heart beat and breathing of victims trapped under a

pile of rubble and spun off into the FINDER device that is being used by the Federal Emergency Management Agency and DHS to locate victims of natural disasters, such as the earthquake in Nepal in 2015.¹³

The United States is particularly well positioned to reap the benefits of open science. While open science is a global phenomenon,¹⁴ the strong connections between American industry, universities, and government enable the United States to be at the forefront of innovation with its ability to translate new scientific knowledge into products and services. Open science strengthens these relationships by providing another channel for industry to access the latest research findings and data stemming from both, U.S. universities and Federal government laboratories.

=====

The IWGOS was charged to prepare a report that recommends “additional objectives for Federal open science policies that further enhance access to a broad range of results of federally-funded scientific research, consistent with agency capabilities and missions” and outlines “effective strategies for improving preservation, discoverability, and accessibility of scientific data, taking into account the capabilities and activities of Federal departments and agencies, as well as the private sector.”¹⁵

The IWGOS views open science as a principle and practice that can help guide Federal investment in science. If Federal research results in publications, those publications should be as easy to access as possible. If the Federal government invests in data production, those data should be shared as broadly as possible. Investments in openness amplifies the value of research investment. The IWGOS recognizes that important practical considerations must inform the degree of openness for any research product. These include, but may not be limited to: law; agency mission; resource constraints; U.S. national, homeland, and economic security; research participant privacy; and proprietary interests.

This report provides appropriate next steps the Federal government can take to further open science, incorporating these important considerations.

The report is structured as follows:

- Section II reviews U.S. Federal government activities taken to date to promote access to the results of federally-funded research and identifies the most important lessons learned.

¹⁴ For example, see OECD (2017), “Business models for sustainable research data repositories”, *OECD Science, Technology and Industry Policy Papers*, No. 47, OECD, Paris. <http://dx.doi.org/10.1787/302b12bb-en>.

¹⁵ National Science and Technology Council, “Charter of the Interagency Working Group on Open Science,” October 2016. See https://www.whitehouse.gov/sites/whitehouse.gov/files/ostp/IWGOS_Charter.pdf.

- Section III identifies opportunities for further increasing access to publications and data resulting from federally-funded research and options for expanding the reach of open science to include other research products.
- Section IV recommends steps that the Federal Government might consider in pursuit of the identified opportunities, consistent with agency missions, capabilities, and resources.

II. Accomplishments and Lessons Learned

The U.S. government is making considerable progress in increasing public access to scientific publications and data. As of May 2018, twenty-two Federal departments and agencies (accounting for 99% of the Federal R&D budget) had completed development of public access plans for publications and data resulting from funded research: U.S. Department of Agriculture (USDA), DOD, DOE, DHS, Department of Transportation (DOT), Department of Education (ED), Department of Veterans Affairs (VA), Environmental Protection Agency (EPA), NASA, National Institute of Standards and Technology (NIST), National Oceanic and Atmospheric Administration (NOAA), National Science Foundation (NSF), Office of the Director of National Intelligence (ODNI), Smithsonian Institution (SI), USGS, U.S. Agency for International Development (USAID), and five operating divisions within the Department of Health and Human Services (DHHS): Administration for Community Living (ACL), Agency for Healthcare Research and Quality (AHRQ), Office of the Assistant Secretary for Preparedness and Response (ASPR), Centers for Disease Control and Prevention (CDC), Food and Drug Administration (FDA), and National Institutes of Health (NIH).¹⁶

Agency public access plans describe how the agencies will implement policies to ensure that publications are freely available not more than 12 months after publication and that data management plans are prepared and evaluated for new research projects. The policies aim to maximize the sharing of data while respecting privacy, security, and other legal limits. Development of these plans and implementation of resulting policies was informed by numerous public consultations.

The benefits associated with public access policies are already coming to fruition. As of May 2018, agency systems were making more than 5 million research articles and 250,000 agency data sets publicly available, including research data that are available on Data.gov.¹⁷ Millions of Americans were making use of these resources every day.

Federal agencies continue to improve upon their public access efforts.

- DOE, for example, added scientific software to its public access efforts with the November 2017 launch of [DOE CODE](#), an open source platform that makes it easy for DOE-funded researchers and scientific software developers to share scientific software and for the public to discover DOE-funded code. The alpha release contained roughly 700 open source

¹⁶ See department and agency public access plans at <https://www.science.gov/publicAccess.html> 2017

¹⁷ Estimates based on information available at designated agency public access repositories and at Data.gov.

software projects, a volume which is expected to increase significantly over the next 12 months.

- USGS put in place a process for certifying USGS Public Access data servers as Trusted Digital Repositories for data, and three USGS repositories have been so certified. Additional USGS systems providing public access to scholarly publications and data have initiated or are exploring the possibility of certification under this process.
- NIH launched in autumn 2017 its Data Commons Pilot Phase, an initiative to test the feasibility of, and develop best practices for, making NIH-funded data sets and computational tools available through communal, collaborative platforms on public clouds. The Data Commons Pilot Phase made nine awards using a special type of funding mechanisms.

Federal agencies continue to gain considerable experience through the development and implementation of their public access plans – lessons that inform future Federal efforts to advance open science. Two of these experiences transcend efforts to increase access to both publications and data:

- **Agencies need flexibility in implementing policy solutions.** Flexibility is necessary because of differences in agency missions, capabilities, and authorities, as well as the mechanisms they use to support R&D, the balance of intramural versus extramural research, and the different types of publications and data that result from their funded research. While they can adhere to common principles, they should also be able to tailor the specific details of implementation in a way that is relevant to their agencies.
- **Interagency cooperation has broadened the understanding of the challenges involved in developing public access policies and continues to improve the efficiency and effectiveness of public access implementations.** Through shared knowledge and services departments and agencies continue to overcome challenges. A number of agencies are using shared infrastructure and common procedures for providing public access to publications and, consistent with the M-17-30 R&D priorities memo, which notes that “agencies should maximize the coordination, promotion, and planning of their R&D programs through the National Science and Technology Council (NSTC).”

Increasing Access to Publications

In terms of increasing public access to scholarly publications resulting from federally-funded research, agency efforts to date demonstrate the following:

- **Interagency collaboration can improve implementation.** Collaboration allows agencies to establish joint solutions (see sidebar “Implementing Public Access to Publications: The Value of Interagency Collaboration”). Although agencies and scientific communities have different needs with regard to the necessary infrastructure, there is enough commonality that a relatively small set of platforms is being used to preserve and provide access to publications, maintaining simplicity and usability for researchers and end users.

- **Successful implementation of public access policies leverages public–private partnerships.**

Private sector publishers are actively supporting public access policies in a number of ways:

- DOE PAGES complements author and institutional deposits of metadata and accepted manuscripts with publisher-supplied metadata and links to full text publications on publisher websites.
- NIH’s PMC has agreements with more than 2,000 journals to submit all of their final published content, or in some cases only NIH-funded content, directly to PMC. More than 70% of papers collected are submitted with active support from the publisher.
- SI developed blanket contract addenda with its major publishers for all published journal articles that are authored by one or more SI employees, expediting review and execution of publishing agreements for a large portion of articles.

- **Public access can be accomplished without disrupting existing avenues for scientific communication.**

For example, in May 2008, NIH’s Public Access Policy began to require peer-reviewed scientific papers to be available without charge on the Internet 12 not later than months after publication. Concerns that this policy would undermine scientific publishing proved unfounded – from 2007 to 2011, the number of biological sciences and agriculture journals as well as medicine and health journals grew by 15% and 19%, respectively.¹⁸ Instead, publishers created new services around public access, such as a system that aggregates article metadata from participating publishers. This system is used by several agencies, including DOD, DOE, IARPA, NIST, NSF, SI, USDA, and USGS.

- **Interoperability with existing systems can streamline procedures and minimize burden.** A number of agencies (e.g., NIH, NSF, SI) have successfully tied deposition of publications into a public access repository with their existing award management and other systems. In some cases, integrating a public access repository with existing systems can reduce data entry and tracking burdens for investigators, and oversight burdens for agencies. Many functions can even be automated.

Implementing Public Access to Publications: The Value of Interagency Collaboration

While more than 22 Federal agencies have developed public access plans, agencies are sharing infrastructure where possible and collaborating on a handful of systems. For example, 11 agencies make use of the NIH’s PubMed Central (PMC).¹⁸ DOE has partnered with the NSF, ODNI’s Intelligence Advanced Research Projects Activity (IARPA), and DOD to further leverage and customize its Public Access Gateway for Energy and Science (PAGES) infrastructure for use by those agencies. These agencies are developing a multi-agency portal for submitting articles to their systems. Both NOAA and DOT are making use of CDC’s Stacks system. This experience indicates that a small set of platforms can support a large number of agencies with common approaches and needs.

¹⁸ Those making use of PMC include six agencies and offices within DHHS--ACL, AHRQ, ASPR, CDC, FDA, and NIH—and five other departments and agencies--DHS, VA, EPA, NASA, and NIST

¹⁹ National Institutes of Health, “The NIH Public Access Policy,” April 2012. Available online at: https://publicaccess.nih.gov/public_access_policy_implications_2012.pdf

- **Public access to publications can be achieved without major costs.** Agencies are implementing public access within “existing budgetary resources.” For example, DOE, USGS, and SI rely on existing infrastructures that collect other forms of scientific and technical information and made the incremental change of collecting final accepted manuscripts. In other cases, (e.g., NSF) public access implementation costs were minimized by leveraging existing infrastructure at DOE (see sidebar). While there are costs involved, for some agencies, those costs have not been large, especially when measured against the investment in research.
- **Researchers can comply with agency policies.** NSF requires the deposit of journal and juried conference publications as part of a Principal Investigator’s annual/final report, making compliance follow naturally from existing business processes. The NIH experience with public access to publications, wherein publications are required to be publicly available on the internet within 12 months, has a compliance rate of 88% over its more than 10-year history, suggesting that post-award compliance is a reasonable expectation. One reason for this behavior is that compliance is public, and scientists must cite these works in applications for new NIH funding.

Increasing Access to Data

With respect to data and the preparation of data management plans, agency experience to date demonstrates that:

- **Data management plans are an important tool for agency stewardship of data resulting from Federal research funding.** Agencies that began receiving data management plans for new research projects²⁰ have found that researchers are starting to submit stronger data management and sharing plans over time. Additionally, those agencies are finding that the plans improve communication between the researcher and the Federal funding agency about the disposition, planning, and support for data arising from a project. A plan that includes components for both management and sharing of data requires investigators to think through issues such as long-term preservation of data, data distribution, and limitations (if any) on data access and use.
- **Data management plans must balance common elements against discipline-specific needs.** Expectations for the specific content of data management plans vary across disciplines and across agencies. The NSF and DOE experience with data management plans, dating back to 2011 and 2015, respectively, demonstrates that practices of the various scientific disciplines differ considerably. Specifically, plan evaluation by scientific domain experts during the proposal review process is critically important. Nevertheless, agencies identify similar categories of content to be included in data management plans and make use of good practices and materials developed by other agencies to improve consistency across agencies. Some, such as the NSF, developed agency-wide guidance that individual directorates and divisions (within directorates) then interpret and implement, while adding their own discipline-specific guidance, to meet the specific needs of their research communities.

²⁰ For information on the implementation dates of Federal agency policies for data management plans, see <https://www.science.gov/publicAccess.html#AwardDates>

- **Sharing interim data is beneficial in some circumstances.** Accessible, quality interim data, in addition to final data, are essential to rapid response in emergencies. Particularly in health crises where time is a valuable resource, the sharing of interim-data can save the lives of Americans and people globally. Two examples from the CDC are the outbreak of *Elizabethkingia anopheles*,²¹ and the sharing of provisional of data on the Zika outbreak.²² Similarly, preliminary, near-real time data from the USGS associated with earthquake intensity, location of volcanic ash plumes, and flooding of rivers and streams are essential to public health and safety when associated natural disasters occur.
- **Privacy and confidentiality can be protected, while allowing for meaningful sharing of data.** Even in situations involving personally identifiable data where privacy and confidentiality must be protected, meaningful sharing of data is still possible. For example, NIH developed effective approaches for allowing researchers to reuse individual level genomic data while protecting patient privacy.²³ Likewise, in 2005, CDC developed an early warning system for potential tuberculosis outbreaks based on research from actual case reports. This system is useful in identifying outbreaks and tracking trends, while maintaining privacy and confidentiality.²⁴
- **A combination of public and private-sector repositories can support data preservation and access.** Data preservation and access makes use of a diverse set of publicly- and privately- supported data repositories. Many Federal agencies created or contracted with (or externally funded the creation of) effective data repositories that store data resulting from their funded research. Many private sector solutions (institutional, for-profit and nonprofit; discipline-specific and multidisciplinary) also exist and can provide long-term data preservation, access, and discovery capabilities. Given the diversity of data types generated by federally-funded research, a combination of public and private-sector repositories will likely become part of the solution to data preservation and access needs.
- **Data can be preserved and made accessible over the long-term with time-limited funding.** Many repositories ensure long-term preservation with a one-time deposit fee, which is reimbursable from a Federal research grant. Nevertheless, there is still great diversity among agencies about how researchers should address the need to provide for long-term data preservation and which repositories are most suitable. Some agencies offer explicit guidance about particular repositories to be used, while others provide more general guidance to assist awardees in selecting repositories. Federal agencies should consider offering guidance to awardees for including provisions in data management

plans regarding necessary standards for repositories and addressing compliance challenges associated with data meant to be long-lived.

- **Public access to data is more challenging than for publications.** Digital data sets are much more heterogeneous than publications, and therefore more technically difficult to curate and share. A number of important remaining challenges are noted here:
 - *Appropriate incentives are needed to promote culture change.* Datasets are standalone research products that are valuable in their own right and which researchers are accustomed to retaining. Federal agencies are encouraging a new norm, that this scientific data should be shared as consistent with agency mission. This cultural change requires incentives that help credit and reward investigators for sharing their data. Clear incentives will simplify implementation, improve compliance, and reduce oversight efforts.
 - *Cost-effective approaches are needed to provide long-term preservation of, and access to, data.* Most successful models for data repositories depend directly or indirectly on Federal funding. The ability of agencies to document, clean, preserve, and curate research data is therefore limited by agency budgets. Implementing long-term preservation, discovery, access, and curation for data is likely to be costlier than for publications and will demand cost-effective approaches to identify valuable data and support its preservation and accessibility.
 - *Standards must be developed and widely adopted to improve the consistency of data collection, description, and preservation.* Data sharing could become much easier with the development of consistent common data elements for data collection, standard formats for representing specific data types, standard metadata to improve discoverability of data. Standards are also needed to assist with quality assurance and quality control, and protect against misuse of published data (i.e., intentional falsification or fabrication).
 - *Data sharing and usage expertise vary among disciplines.* Disciplines vary in their experience with data sharing, and not all disciplines are yet prepared to manage or share their data effectively. Departments and agencies may need to facilitate resource and tool development, training, interdisciplinary collaboration, and other efforts to foster a culture change and bridge the expertise gap.
 - *Data discoverability remains a challenge.* Even as agencies and non-Federal entities establish data repositories, tools for data discovery are lacking in many scientific disciplines. A number of disciplines have capable tools for data discovery, while others are actively engaged in improving resources in this area.

III. Opportunities to Advance Open Science

Federal agencies are making significant strides with public access. Despite this, open science continues to offer new opportunities to increase the impact of Federal investments in research. While it is essential that Federal agencies work together, individual agencies need to determine which specific objectives to pursue, taking into account their different missions, operational contexts, available resources, and stakeholders' needs. Additionally, there are opportunities for coordinating efforts among Federal agencies and collaborating with the private sector.

1. **Increase the Availability and Timeliness of Narrative Research Products**

Recent efforts to provide public access to peer-reviewed publications resulting from federally-funded research, not more than 12 months after the date of publication, are making considerable contributions to the scientific community. Agencies can build upon these efforts by accelerating the timetable for making publications available to the public and by enhancing access to a wider range of written, narrative research products resulting from federally-funded research. Opportunities to consider include:

- Reducing the embargo period for peer-reviewed publications authored solely by Federal employees to be less than 12 months.
- Identifying scenarios where publications may warrant shorter embargo periods (e.g., to facilitate responsiveness to public health epidemics or other national emergencies).
- Identifying opportunities to increase public access to peer-reviewed publications that were published before Federal agency public access policies went into effect.
- Enhancing access to Federal agencies' technical reports and narrative research products other than peer-reviewed publications.
- Exploring opportunities for the responsible sharing of preprints to speed research dissemination, recognizing that preprints are not been peer reviewed, that their use varies considerably across scientific disciplines, and that they may need internal agency clearance before being made publicly available.²⁵

2. **Increase the Availability and Timeliness of Access to Scientific Data**

Agencies continue to make progress in implementing policies for data management plans. Many opportunities remain to improve the availability and timeliness of access to scientific data, including:

- Working together and with non-Federal partners (in the public and private sectors) to develop the infrastructure needed to provide long-term preservation of, discoverability of, and access to scientific data.

²⁵ Preprints are complete drafts of written research reports in the format of articles which have not yet been peer reviewed, increasingly made publicly available through established preprint repositories. See <https://www.nature.com/search?q=preprints> and <http://search.sciencemag.org/?q=preprints> for additional information.

- Strengthening incentives--and removing disincentives--for effective data management practices to help instill a culture that rewards and recognizes broader use of scientific data. Agency mandates to researchers regarding data management and sharing are a necessary, but not sufficient, condition for success.
- Developing and promulgating methods for mitigating risks associated with privacy, security, and confidentiality when sharing scientific data.
- Assisting researchers in identifying suitable repositories for storing data arising from their work (e.g., by identifying best practices for repositories that store data resulting from federally-funded research).
- Continuing to improve access to Federal data sets that can be used in research (in addition to those resulting from research), such as data from Federal statistical agencies, scientific collections, and monitoring and instrument programs.
- Promoting the release of interim data during national emergencies to spur collaborations and innovative solutions (e.g., releasing interim public health data to advance American health).

3. Increase Access to Other Research Products

Open science efforts to date have focused largely on increasing access to scholarly publications and scientific data. Other research outputs could also be made more accessible, such as:

- Providing access to research protocols (i.e., documents that describe the methods to be used in specific research studies, such as clinical trials) before studies are completed can reduce unintended duplication of research and increase rigor. Access to protocols after the studies are completed can enable further interpretation of the results, provide contexts for secondary use of the scientific data resulting from the studies, and enable systematic replication.
- Increasing access to software and code developed through federally-funded research, and/or other outputs that are necessary to use, analyze, or interpret shared data.

4. Improve the Systems for Making Research Products Public

Federal agencies have developed a number of systems to provide access to publications and data resulting from its funded research. By improving those systems, agencies could simplify procedures for researchers to make their publications, data, and other research outputs more accessible, while also allowing users to more easily find, access, and use those materials. Efforts could include:

- Identifying and implementing technical and administrative approaches to simplify procedures for researchers to provide public access to manuscripts/articles and to scientific data in different systems and under different Federal agency policies.

- Improving user interfaces and providing documentation that will enable better understanding and use/re-use of research products.
- Using effective approaches to link narrative research products and associated data sets, as well as different data repositories, in order to: facilitate search, access, and citation of data; improve research reproducibility; and assess the success and value of data openness.
- Improving both machine- and human-driven discovery across agency-designated publication and data repositories via application programming interfaces (APIs), federated search tools (e.g., Data.gov, Science.gov), and other innovative approaches.
- Creating metadata more efficiently to enable faster throughput in processing materials and better discovery. Robust metadata are essential for discovery and usability of the product, especially for non-textual materials, such as data sets, software, and artifacts.
- Offering guidance to researchers on how make their research products easier to use through techniques such as documentation standards, repository selection criteria, and use of persistent identifiers.

5. Lower Barriers to Effective Use of Open Science Content

Federal agencies can take steps, individually, collectively, and in collaboration with other stakeholders, to make open science content more usable and to unlock its full potential to contribute to economic and societal objectives. Agencies could consider:

- Identifying innovative strategies to fuel open science initiatives, including approaches like crowdsourcing, citizen science, and challenge and prize mechanisms, as well as partnerships with the scientific community, publishers, libraries, and other organizations.
- Supporting community-based efforts to develop standards for data and metadata, adopting community-based standards in Federal systems, and promoting their use by funded researchers.
- Encouraging use of unique persistent identifiers for publications, data, scientific collections, specialized equipment, labs, and facilities, and other resources utilized for research projects to enhance metadata, enable linking, and provide history of studies and analyses.
- Converting narrative research products into machine-readable formats so that computers can help facilitate dissemination of science and increase the impact of federally-funded science.
- Broadening access to peer-reviewed publications through different licensing approaches, investigator incentives, and/or partnership with publishers.

- Promoting approaches to improve data quality and data documentation (e.g., community standards, open metadata, training, and workforce development).
- Encouraging the private sector to leverage open science content and their downstream application in science and other sectors of the economy. Federal agencies could open opportunities for the private sector to apply new technologies to research outputs and develop value-added services to build on existing Federal resources.

6. **Develop Better Metrics and Measures**

Agencies are working to improve ways to measure the impacts of Federal public access efforts. Opportunities to enhance these efforts include:

- Identifying approaches to measure progress in increasing access to narrative research products, scientific data, and other research products.
- Identifying approaches to enable, encourage, and characterize compliance with agency public access requirements for peer-reviewed publications and data.
- Supporting research to improve evaluation of open science across Federal agencies and the institutions and infrastructure that they fund, as well as on the research enterprise, entrepreneurship, and the economy.
- Identifying approaches to use persistent identifiers to enable measurement of the use and impact of research outputs.

IV. Recommendations

Many opportunities exist to advance open science in ways that support the missions of Federal agencies and national R&D priorities. The IWGOS recommends that priority be given to three areas: (1) creating incentives to foster a culture change that recognizes and rewards open science practice; (2) developing interagency best practices, guidance and standards for open science, with a particular focus on data access; and (3) facilitating interagency and public-private collaborations to further realize the benefits of open science. More specific approaches for addressing these priorities are outlined below.

1. **Agencies should help incentivize open science practices.** Open science is a relatively new concept for the Federal government and many of the scientists it funds and supports. Federal agencies should collaborate with other stakeholders to identify and strengthen incentives for practicing open science and making the results of federally-funded scientific research more easily accessible and usable. The IWGOS recommends that Federal agencies:

- *Identify ways to incentivize culture change for open science among federally-funded researchers (e.g., requiring data management and sharing plans, incentivizing the research community to understand the benefits of open science and receive credit/attribution for open science activities).* Incentivizing a culture change that promotes open science practices may include recognizing data sets as

important, standalone scientific products and as evidence of scientific excellence; rewarding openness in the evaluation of individual scientists' performance; and identifying metrics to measure the impact of shared data on work by other scientists.

- *Identify ways to incentivize the private sector to develop tools that support open science.* Such tools could improve data discoverability and sharing, facilitate text mining, and provide information infrastructure for data storage and access. The private sector is making tremendous strides in data science and agencies can help focus some of that effort on scientific research data. Incentives like public-private partnerships, prizes, and challenges may help publishers, innovators in machine learning and artificial intelligence, and research funders to contribute toward more effective and open science. These incentives could promote the use of, for example, common APIs to publications, data, and software collections. These interoperable APIs could then be used to create virtual, compatible, aggregated collections amenable to large-scale text and data mining applications.

2. **Agencies should facilitate the interagency development of best practices, guidance and standards on open science, with a particular focus on data access.** Agencies are making substantial progress in advancing open science by enabling public access to both publications and data. There are still numerous opportunities ahead to improve public access to publications and other types of research outputs (e.g., software and protocols), but the primary near- and medium-term challenges lie in sharing data.

Agencies have many opportunities to work together to increase the benefits and reduce the burden of data preservation and access. Agencies should continue to work together to: 1) refine expectations and guidance for data management and the selection of data repositories; 2) improve and refine approaches to protecting privacy; and 3) improve consistency of policies and practices across Federal funding agencies, philanthropic organizations, and international funders. In addition, agencies should encourage continued improvement in the quality, documentation, versioning, and provenance of shared data. The IWGOS recommends that Federal agencies:

- *Accelerate efforts to create joint solutions for common data sharing challenges.* By connecting agencies working on same or similar research areas or disciplines, seeking consistent approaches to the development of data repositories, discovery tools, and compliance monitoring public access becomes more uniform and thereby easier to navigate and use by both investigators and the end user.
- *Coordinate their efforts to provide guidance to researchers for selecting suitable repositories for federally-funded research data.*
- *Recognize the importance of data standards and coordinate efforts to work with relevant communities to identify, develop, promulgate, and encourage the use of standards for data and metadata that facilitate data connectivity, interoperability, and reuse across agencies.*

- *Improve efforts to make digital data more discoverable and accessible via the use of persistent identifiers for research objects, researchers, and research organizations.* Such identifiers are key to interlinking related research objects and to supporting open science and reproducibility.

3. Agencies should facilitate interagency and public-private collaborations to further realize the benefits of open science.

- *Federal agencies should continue to formally meet to discuss open science.* To bolster efforts toward open science, Federal agencies must address issues of research culture, incentives, infrastructure, policy, and more. IWGOS agencies are addressing these challenges through their open science policies, while pursuing common objectives tailored to their specific missions and research communities. Some challenges are common to all disciplines and shared approaches can reduce training and administrative burden. IWGOS recommends Federal agencies continue to meet regularly to address issues such as policy harmonization, burden reduction, implementation, measurement, infrastructure, and emerging opportunities to promote open science. IWGOS also recommends stronger collaboration with other Federal working groups addressing related topics. These include working groups that coordinate Federal-wide research initiatives in specific domains of science (e.g., materials science, microbiome research, and arctic research) and working groups on cross-disciplinary topics such as open data, data science, scientific collections, and technology transfer.
- *Engage all stakeholders to fully realize economic and social benefits of open science.* Successful implementation of open science policies and practices will require close collaboration with stakeholders outside the Federal government. Important partners include the academic and non-profit sectors, businesses and entrepreneurs, and international partners.
 - *Public, nonprofit, and academic partners.* Federal agencies should work closely with the academic community to ensure that open science policies and practices are understood by the research community and practical to implement. Universities also have ambitions related to open science and are developing supporting infrastructure and policies. Such efforts should be coordinated as much as possible with Federal efforts. Federal agencies will need to partner with universities, scientific societies, and other stakeholders in the scientific community to help establish incentives for open science that recognize and reward the practice of open science.
 - *Businesses and entrepreneurs.* Realizing the full economic and societal potential of open science requires participation beyond the scientific research community. Other sectors of the economy have made great strides in pushing knowledge to targeted audiences, data mining, and collaboration and networking tools. Commercial investment in these areas often dwarfs Federal investment. Federal science agencies could enhance their impact by engaging knowledge management solutions, and their associated private investment, to focus on

research products. Agencies could also work on the standards, infrastructure, and other technical details to ensure federally-funded open science products are attractive resources for the private sector.

- *International partners.* Because scientific communities span national borders, international engagement can advance open science. Open science in other countries can help U.S.-based researchers gain better access to global knowledge. Many countries are seeking innovative solutions for data preservation and access, incentive systems that reward open science practices, and approaches for developing needed skills in the scientific workforce. Federal agencies can promote the international adoption of open science practices that support American interests. Federal agencies should continue to participate in international fora to help identify good practices, standards, and opportunities to align initiatives around American policies, and leverage the solutions (e.g., technical, operational) that emerge from these efforts.

Steps such as those outlined above can help achieve the promise open science offers to accelerate research, development, and innovation for American prosperity.

Subject: CONFIRMED: EPA PRE-INTERNAL CALL : HONEST ACT IMPLEMENTATION
Attachments: BILLS-115hr1430rfs.pdf
Location: DIAL IN: 1-202-991-0477 CONFERENCE ID: 2720374
Start: 1/26/2018 7:00:00 PM
End: 1/26/2018 8:30:00 PM
Show Time As: Tentative

Purpose: To internally discuss EPA implementation of HR 1430 (ATTACHED)

This is an internal call in preparation for a briefing with Committee on House Science, Space and Technology (HSST). DAA Ringel (OCIR) will lead a discussion with respective program offices regarding the agency's implementation efforts of the HONEST ACT.

115TH CONGRESS
1ST SESSION

H. R. 1430

IN THE SENATE OF THE UNITED STATES

MARCH 30, 2017

Received; read twice and referred to the Committee on Environment and
Public Works

AN ACT

To prohibit the Environmental Protection Agency from proposing, finalizing, or disseminating regulations or assessments based upon science that is not transparent or reproducible.

1 *Be it enacted by the Senate and House of Representa-*
2 *tives of the United States of America in Congress assembled,*

1 **SECTION 1. SHORT TITLE.**

2 This Act may be cited as the “Honest and Open New
3 EPA Science Treatment Act of 2017” or the “HONEST
4 Act”.

5 **SEC. 2. DATA TRANSPARENCY.**

6 Section 6(b) of the Environmental Research, Devel-
7 opment, and Demonstration Authorization Act of 1978
8 (42 U.S.C. 4363 note) is amended to read as follows:

9 “(b)(1) The Administrator shall not propose, finalize,
10 or disseminate a covered action unless all scientific and
11 technical information relied on to support such covered ac-
12 tion is—

13 “(A) the best available science;

14 “(B) specifically identified; and

15 “(C) publicly available online in a manner that
16 is sufficient for independent analysis and substantial
17 reproduction of research results, except that any
18 personally identifiable information, trade secrets, or
19 commercial or financial information obtained from a
20 person and privileged or confidential, shall be re-
21 dacted prior to public availability.

22 “(2) The redacted information described in para-
23 graph (1)(C) shall be disclosed to a person only after such
24 person signs a written confidentiality agreement with the
25 Administrator, subject to guidance to be developed by the
26 Administrator.

1 “(3) Nothing in the subsection shall be construed
2 as—

3 “(A) requiring the Administrator to disseminate
4 scientific and technical information;

5 “(B) superseding any nondiscretionary statu-
6 tory requirement; or

7 “(C) requiring the Administrator to repeal, re-
8 issue, or modify a regulation in effect on the date of
9 enactment of the Honest and Open New EPA
10 Science Treatment Act of 2017.

11 “(4) In this subsection—

12 “(A) the term ‘covered action’ means a risk, ex-
13 posure, or hazard assessment, criteria document,
14 standard, limitation, regulation, regulatory impact
15 analysis, or guidance; and

16 “(B) the term ‘scientific and technical informa-
17 tion’ includes—

18 “(i) materials, data, and associated proto-
19 cols necessary to understand, assess, and ex-
20 tend conclusions;

21 “(ii) computer codes and models involved
22 in the creation and analysis of such informa-
23 tion;

24 “(iii) recorded factual materials; and

1 “(iv) detailed descriptions of how to access
2 and use such information.

3 “(5) The Administrator shall carry out this sub-
4 section in a manner that does not exceed \$1,000,000 per
5 fiscal year, to be derived from amounts otherwise author-
6 ized to be appropriated.”.

 Passed the House of Representatives March 29,
2017.

Attest:

KAREN L. HAAS,
Clerk.

ADVANCING OPEN SCIENCE TO ACCELERATE
RESEARCH, DEVELOPMENT, AND
INNOVATION FOR AMERICAN PROSPERITY

A Report by the
Interagency Working Group on Open Science
Committee on Science
NATIONAL SCIENCE AND TECHNOLOGY COUNCIL

April 2018

About the National Science and Technology Council

The National Science and Technology Council (NSTC) is the principal means by which the Executive Branch coordinates science and technology policy across the diverse entities that make up the Federal research and development enterprise. A primary objective of the NSTC is to ensure science and technology policy decisions and programs are consistent with the President's stated goals. The NSTC prepares research and development strategies that are coordinated across Federal agencies aimed at accomplishing multiple national goals. The work of the NSTC is organized under committees that oversee subcommittees and working groups focused on different aspects of science and technology. More information is available at <http://www.whitehouse.gov/ostp/nstc>.

About the Office of Science and Technology Policy

The Office of Science and Technology Policy (OSTP) was established by the National Science and Technology Policy, Organization, and Priorities Act of 1976 to provide the President and others within the Executive Office of the President with advice on the scientific, engineering, and technological aspects of the economy, national security, homeland security, health, foreign relations, the environment, and the technological recovery and use of resources, among other topics. OSTP leads interagency science and technology policy coordination efforts, assists the Office of Management and Budget with an annual review and analysis of Federal research and development in budgets, and serves as a source of scientific and technological analysis and judgment for the President with respect to major policies, plans, and programs of the Federal Government. More information is available at <http://www.whitehouse.gov/ostp>

About the Interagency Working Group on Open Science

The Interagency Working Group on Open Science (IWGOS) advances Federal efforts to support open science by increasing access to and use of the results of federally-funded research and development, including but not limited to scholarly publications and digital data. Among its responsibilities, the IWGOS aims to improve implementation of policies to increase access to the results of federally-funded scientific research and to identify additional steps that Federal departments and agencies can take to enhance the preservation, discoverability, accessibility, quality, and utility of the outputs of federally-funded scientific research.¹

Executive Summary

Open science is the principle and practice of making the results of scientific research available, accessible, and usable. By removing barriers to the access and use of scientific information, open science can accelerate scientific progress, improve research rigor and reproducibility, spur innovation, and strengthen the economy, increasing the return on investments in research and development.

In recent years, Federal departments and agencies have made considerable progress in advancing open science through policies to increase public access to scientific publications and digital data resulting from federally-funded research. This work has highlighted two key lessons that can apply more generally to efforts to advance open science: First, implementation needs to be tailored to the specific missions, organizations, and fields of science that individual agencies support. While agencies can pursue common objectives, the specific ways they achieve them may differ. Second, interagency cooperation can significantly improve the efficiency and effectiveness of open science implementation, through the sharing of knowledge, infrastructure, best practices, solutions to common challenges, and more.

This report was prepared by the Interagency Working Group on Open Science (IWGOS), which was established to advance Federal efforts to support open science by increasing access to, and use of the results of, federally-funded research and development, including but not limited to scholarly publications and digital data.

The IWGOS identified several opportunities for advancing open science, taking into account agency missions, operational contexts, and resources. These include:

1. Increasing the availability and timeliness of narrative research products;
2. Improving the availability and timeliness of access to scientific data;
3. Increasing access to other products resulting from federally-funded research, such as software and scientific collections;
4. Improving systems for making research products public and more usable;
5. Lowering barriers to effective use of open science content; and
6. Developing better metrics for measuring advances in open science and its impacts.

To realize the benefits of open science, the IWGOS recommends that Federal agencies take steps to incentivize open science; facilitate interagency development of best practices, guidance, and standards for open science, with a focus on data access; and promote interagency and public-private collaborations to further realize the benefits of open science. Such collaboration would include partnerships with other Federal working groups; public, nonprofit, and academic partners; and international partners, many of which are also pursuing the objective of advancing open science.

I. Introduction

Open science is the principle and practice that makes the results of scientific research available, accessible, and usable. It accelerates progress in science, improves research rigor and reproducibility, spurs innovation, and strengthens the economy. By making the results of scientific research accessible to the largest possible audience – other scientists, business innovators, entrepreneurs, students, and American citizens – open science can boost the returns from Federal investments in research and development (R&D). It can drive advances in areas as diverse as agriculture, energy, health, and national security, and catalyze innovation that drives economic growth and prosperity.

The goals of open science are reflected in the public access plans developed by federal agencies.² Open science is essential to achieving the compelling R&D priorities outlined by the Director of the Office of Management and Budget, Mick Mulvaney, and Deputy Assistant to the President, Office of Science and Technology Policy, Michael Kratsios, in the M-17-30 Memorandum entitled “FY 2019 Administration Research and Development Budget Priorities.” Specifically, open science can further administration priorities by advancing American Security, American Prosperity, American Energy Dominance, and American Health.³

Accelerating dissemination of research results advances knowledge and leads to broader application of American scientific contributions. Fundamentally, communicating research results is central to scientific progress, allowing others to test the validity of findings and to build upon these results. Open science allows research to be more easily applied to a range of national priorities, including:

- *Protecting American interests.* Making federally-supported science more open and accessible helps to establish American leadership in scientific research and in areas such as international data standards, which can directly impact American scientific and economic interests.
- *Advancing American health.* Making medical research accessible in real time improves patient diagnoses and treatment. Six out of ten physicians report having changed an initial diagnosis based on new information accessed via online resources/support tools. Nearly nine in ten physicians feel that improved access to online medical information and resources has improved the quality of care at their practices.⁴
- *Protecting American security.* The Departments of Defense (DOD) and Homeland Security (DHS) maintain robust research portfolios to keep Americans safe, both at home and abroad. Public access to the unclassified results of this research helps to encourage and focus innovation on technologies that, in time, will become integral to our nation’s security.

⁴ Wolters Kluwer Health 2011 Point-of-Care Survey, 2011. [UPDATE REFERENCE]

- *Ensuring American energy dominance.* Making the latest scientific evidence available to private sector energy pioneers helps bring Department of Energy (DOE) research to the market faster. For example, through the Gateway for Accelerated Innovation in Nuclear, DOE makes information, data, and R&D infrastructure available to public and private sector stakeholders to speed the development of innovative nuclear energy technologies toward commercial readiness.⁵
- *Increasing government accountability and efficiency.* Making the results of federally-funded research easily available to researchers avoids unnecessary duplication of research, facilitates measurement of the return-on-investment in research, enables needed replication of experiments to improve reliability of results, and permits collected data to be reused for further experimentation and analysis.
- *Maximizing interagency coordination.* By working together, federal agencies have been able to improve the efficiency and effectiveness of their public access policies. For example, eleven agencies use the National Institutes of Health's (NIH) PubMed Central (PMC) to provide public access to scholarly publications, and DOE has partnered with three other agencies further leverage and customize its Public Access Gateway for Energy and Science (PAGES).
- *Supporting Innovative Early Stage Research.* Effective management of early stage research products, including making these products more accessible, has the potential to increase the pace of scientific discovery, accelerate innovation, and promote more efficient and effective use of government and private-sector funding and resources.

Advancing American prosperity through open science. Open science grows the American economy and creates American jobs. Science has more impact, and Federal investments yield better returns, when results are easily accessible and reusable.

- The open flow of ideas, technologies, and people between the U.S. academic sector (funded by Federal investments) and industry have introduced entirely new categories of products and services that have ultimately become billion-dollar industries. In the area of information technology, the “tire tracks diagram”⁶ illustrates how companies that create products using the open ideas that result from federally-sponsored research “repay the nation in jobs, taxes, productivity increases and world leadership.”

⁵ <https://gain.inl.gov/SitePages/Home.aspx>.

⁶ Computer Science and Telecommunications Board, National Research Council, *Continuing Innovation in Information Technology*, National Academies Press, 2016.

- Sharing data from new technologies in a common format can create a whole new economic sector. Data from the U.S.-developed Global Positioning System (GPS) provide positioning, navigation, and timing information to all parts of the economy, and serve as a time and frequency standard for the world.⁷ Without such a standard, companies would have to use multiple systems, and the world's economy would be less efficient.
- For every \$1 invested by the Federal government, the Human Genome Project's open research data have resulted in the return of \$141 to the U.S. economy. Between 1988 and 2010, human genomics generated an economic output of \$796 billion, personal income exceeding \$244 billion, and 310,000 jobs.⁸
- Another example is the U.S. Geological Survey (USGS). The budget for the entire USGS in fiscal year 2011 was \$1.1 billion. Meanwhile, for the same fiscal year, the use of freely available government satellite imagery from its Landsat satellite missions generated \$2.19 billion in economic activity.⁹

Barriers to scientific information decrease scientific impact and increase costs. Closed science can inhibit creative and entrepreneurial reuse of research results, reducing the return on investment. This is especially true of interdisciplinary research or research that requires knowledge from beyond a single discipline. Sharing scientific advances broadly across disciplines can lead to novel applications. For example, image-processing technology first used to improve images from the Hubble Space Telescope was later used to help advance digital mammography.¹⁰

The United States is particularly well positioned to reap the benefits of open science. While open science is a global phenomenon,¹¹ the strong connections between American industry, universities, and government enable the United States to be at the forefront of innovation with its ability to translate new scientific knowledge into products and services. Open science strengthens these relationships by providing another channel for industry to access the latest research findings and data stemming from both, U.S. universities and Federal government laboratories.

The IWGOS was charged to prepare a report that recommends “additional objectives for Federal open science policies that further enhance access to a broad range of results of federally-funded scientific research, consistent with agency capabilities and missions” and

outlines “effective strategies for improving preservation, discoverability, and accessibility of scientific data, taking into account the capabilities and activities of Federal departments and agencies, as well as the private sector.”¹²

The IWGOS views open science as a principle and practice that can help guide Federal investment in science. If Federal research results in publications, those publications should be as easy to access as possible. If the Federal government invests in data production, those data should be shared as broadly as possible. Investments in openness amplifies the value of research investment.

The IWGOS recognizes that important practical considerations must inform the degree of openness for any research product. These include, but may not be limited to: law; agency mission; resource constraints; U.S. national, homeland, and economic security; research participant privacy; and proprietary interests. This report provides appropriate next steps the Federal government can take to further open science, incorporating these important considerations.

The report is structured as follows:

- Section II reviews U.S. Federal government activities taken to date to promote access to the results of federally-funded research and identifies the most important lessons learned.
- Section III identifies opportunities for further increasing access to publications and data resulting from federally-funded research and options for expanding the reach of open science to include other research products.
- Section IV recommends steps that the Federal Government might consider in pursuit of the identified opportunities, consistent with agency missions, capabilities, and resources.

II. Accomplishments and Lessons Learned

The U.S. government is making considerable progress in increasing public access to scientific publications and data. As of early 2018, twenty-two Federal departments and agencies (accounting for 99% of the Federal R&D budget) had completed development of public access plans for publications and data resulting from funded research.¹³ The plans describe how agencies will implement policies to ensure that publications are freely available not more than 12 months after publication and that data management plans are prepared and evaluated for new research projects. The policies aim to maximize the sharing of data while respecting privacy, security, and other legal limits. Development of these plans and implementation of resulting policies was informed by numerous public consultations.

¹² National Science and Technology Council, “Charter of the Interagency Working Group on Open Science,” October 2016. See https://www.whitehouse.gov/sites/whitehouse.gov/files/ostp/IWGOS_Charter.pdf

¹³ See department and agency public access plans at <https://www.science.gov/publicAccess.html> 2017

The benefits associated with public access policies are already coming to fruition. As of early 2018, agency systems were making more than 4.7 million research articles and 200,000 agency data sets publicly available, including research data that are available on Data.gov.¹⁴ Millions of Americans were making use of these resources every day.

In addition, federal agencies continue to improve upon their public access efforts. The DOE, for example, added scientific software to its public access efforts with the November 2017 launch of DOE CODE, an open source platform that makes it easy for DOE-funded researchers and scientific software developers to share scientific software and for the public to discover DOE-funded code. The alpha release contained roughly 700 open source software projects, a volume which is expected to increase significantly over the next 12 months. The U.S. Geological Survey put in place a process for certifying USGS Public Access data servers as Trusted Digital Repositories for data, and three USGS repositories have been so certified. Additional USGS systems providing public access to scholarly publications and data have initiated or are exploring the possibility of TDR certification under this process. The NIH launched in autumn 2017 its Data Commons Pilot Phase, an initiative to test the feasibility of, and develop best practices for, making NIH-funded data sets and computational tools available through communal, collaborative platforms on public clouds. The Data Commons Pilot Phase made nine awards using a special type of funding mechanisms.

Federal agencies continue to gain considerable experience through the development and implementation of their public access plans – lessons that inform future Federal efforts to advance open science. Two of these experiences transcend efforts to increase access to both publications and data:

- **Agencies need flexibility in implementing policy solutions.** Flexibility is necessary because of differences in agency missions, capabilities, and authorities, as well as the mechanisms they use to support R&D, the balance of intramural versus extramural research, and the different types of publications and data that result from their funded research. While they can adhere to common principles, they should also be able to tailor the specific details of implementation in a way that is relevant to their agencies.
- **Interagency cooperation has broadened the understanding of the challenges involved in developing public access policies and continues to improve the efficiency and effectiveness of public access implementations.** Through shared knowledge and services departments and agencies continue to overcome challenges. A number of agencies are using shared infrastructure and common procedures for providing public access to publications and, consistent with the M-17-30 R&D priorities memo, which notes that “agencies should maximize the coordination, promotion, and planning of their R&D programs through the National Science and Technology Council (NSTC).”

Increasing Access to Publications

¹⁴ ADD CITATION

In terms of increasing public access to scholarly publications resulting from federally-funded research, agency efforts to date demonstrate the following:

- **Interagency collaboration can improve implementation.** Collaboration allows agencies to establish joint solutions (see sidebar “Implementing Public Access to Publications: The Value of Interagency Collaboration”). Although agencies and scientific communities have different needs with regard to the necessary infrastructure, there is enough commonality that a relatively small set of platforms is being used to preserve and provide access to publications, maintaining simplicity and usability for researchers and end users.
- **Successful implementation of public access policies leverages public-private partnerships.** Private sector publishers are actively supporting public access policies in a number of ways:
 - DOE PAGES complements author and institutional deposits of metadata and accepted manuscripts with publisher-supplied metadata and links to full text publications on publisher websites.
 - NIH’s PMC has agreements with more than 2,000 journals to submit all of their final published content, or in some cases only NIH-funded content, directly to PMC. More than 70% of papers collected are done with active support from the publisher.
 - The Smithsonian Institution (SI) developed blanket contract addenda with its major publishers for all published journal articles that are authored by one or more SI employees, expediting review and execution of publishing agreements for a large portion of articles.
- **Public access can be accomplished without disrupting existing avenues for scientific communication.** For example, in May 2008, NIH’s Public Access Policy began to require peer-reviewed scientific papers to be available without charge on the Internet 12 months after publication. Concerns that this policy would undermine scientific publishing proved unfounded – from 2007 to 2011, the number of biological sciences and agriculture journals as well as medicine and health journals grew by 15% and 19%, respectively.¹⁵ Instead, publishers created new services around public access, such as a system that aggregates article metadata from participating publishers -- this system is used by several agencies, including DOD, DOE, IARPA, the National Institute

Implementing Public Access to Publications: The Value of Interagency Collaboration

While more than 22 Federal agencies have developed public access plans, agencies are sharing infrastructure where possible and collaborating on a handful of systems. For example, 11 agencies make use of the National Institutes of Health’s (NIH) PubMed Central (PMC). DOE has partnered with the National Science Foundation (NSF), Intelligence Advanced Research Projects Activity (IARPA), and DOD to further leverage and customize its Public Access Gateway for Energy and Science (PAGES) infrastructure for use by those agencies. These agencies are developing a multi-agency portal for submitting articles to their systems. Both the National Oceanic and Atmospheric Administration (NOAA) and the Department of Transportation (DOT) are making use of the Centers for Disease Control and Prevention’s (CDC) Stacks system. This experience indicates that a small set of platforms can support a large number of agencies with common approaches and needs.

¹⁵ NIH Public Access Policy, 2012.

for Standards and Technology (NIST), NSF, SI, United States Department of Agriculture (USDA), and USGS.

- **Interoperability with existing systems can streamline procedures and minimize burden.** A number of agencies (e.g., NIH, NSF, SI) have successfully tied deposition of publications into a public access repository with their existing award management and other systems. In some cases, integrating a public access repository with existing systems can reduce data entry and tracking burdens for investigators, and oversight burdens for agencies. Many functions can even be automated.
- **Public access to publications can be achieved without major costs.** Agencies are implementing public access within “existing budgetary resources.” For example, DOE, USGS, and SI rely on existing infrastructures that collect other forms of scientific and technical information and made the incremental change of collecting final accepted manuscripts. In other cases, (e.g., NSF) public access implementation costs were minimized by leveraging existing infrastructure at DOE (see sidebar). While there are costs involved, for some agencies, those costs have not been large, especially when measured against the investment in research.
- **Researchers can comply with agency policies.** NSF requires the deposit of journal and juried conference publications as part of a Principal Investigator’s annual/final report, making compliance follow naturally from existing business processes. The NIH experience with public access to publications, wherein publications are required to be publicly available on the internet within 12 months, has a compliance rate of 88% over its more than 10-year history, suggesting that post-award compliance is a reasonable expectation. One reason for this behavior is that compliance is public, and scientists must cite these works in applications for new NIH funding.

Increasing Access to Data

With respect to data and the preparation of data management plans, agency experience to date demonstrates that:

- **Data management plans are an important tool for agency stewardship of data resulting from Federal research funding.** Agencies that began receiving data management plans for new research projects¹⁶ have found that researchers are starting to submit stronger data management and sharing plans over time. Additionally, those agencies are finding that the plans improve communication between the researcher and the Federal funding agency about the disposition, planning, and support for data arising from a project. A plan that includes components for both management and sharing of data requires investigators to think through issues such as long-term preservation of data, data distribution, and limitations (if any) on data access and use.
- **Data management plans must balance common elements against discipline-specific needs.** Expectations for the specific content of data management plans vary across

¹⁶ For information on the implementation dates of Federal agency policies for data management plans, see <https://www.science.gov/publicAccess.html#AwardDates>

disciplines and across agencies. The NSF and DOE experience with data management plans, dating back to 2011 and 2015, respectively, demonstrates that practices of the various scientific disciplines differ considerably. Specifically, plan evaluation by scientific domain experts during the proposal review process is critically important. Nevertheless, agencies identify similar categories of content to be included in data management plans and make use of good practices and materials developed by other agencies to improve consistency across agencies. Some, such as the NSF, developed agency-wide guidance that individual directorates and divisions (within directorates) then interpret and implement, while adding their own discipline-specific guidance, to meet the specific needs of their research communities.

- **Sharing interim data is beneficial in some circumstances.** Accessible, quality interim data, in addition to final data, are essential to rapid response in emergencies. Particularly in health crises where time is a valuable resource, the sharing of interim-data can save the lives of Americans and people globally. Two examples from the CDC are the outbreak of *Elizabethkingia anopheles*,¹⁷ and the sharing of provisional of data on the Zika outbreak.¹⁸ Similarly, preliminary, near-real time data from the USGS associated with earthquake intensity, location of volcanic ash plumes, and flooding of rivers and streams are essential to public health and safety when associated natural disasters occur.
- **Privacy and confidentiality can be protected, while allowing for meaningful sharing of data.** Even in situations involving personally identifiable data where privacy and confidentiality must be protected, meaningful sharing of data is still possible. For example, NIH developed effective approaches for allowing researchers to reuse individual level genomic data while protecting patient privacy.¹⁹ Likewise, in 2005, CDC developed an early warning system for potential tuberculosis outbreaks based on research from actual case reports. This system is useful in identifying outbreaks and tracking trends, while maintaining privacy and confidentiality.²⁰
- **A combination of public and private-sector repositories can support data preservation and access.** Data preservation and access makes use of a diverse set of publicly- and privately- supported data repositories. Many Federal agencies created or contracted with (or externally funded the creation of) effective data repositories that store data resulting from their funded research. Many private sector solutions (institutional, for-profit and nonprofit; discipline-specific and multidisciplinary) also exist and can provide long-term data preservation, access, and discovery capabilities. Given the diversity of data types generated by federally-funded research, a combination of public and private-sector repositories will likely become part of the solution to data preservation and access needs.

²⁰ GMindra, JM Wortham, MB Haddad, and KM Powell, "Tuberculosis outbreaks in the United States, 2009-2015," *Public Health Reports*. 2017:132(2),157-163.

- **Data can be preserved and made accessible over the long-term with time-limited funding.** Many repositories ensure long-term preservation with a one-time deposit fee, which is reimbursable from a Federal research grant. Nevertheless, there is still great diversity among agencies about how researchers should address the need to provide for long-term data preservation and which repositories are most suitable. Some agencies offer explicit guidance about particular repositories to be used, while others provide more general guidance to assist awardees in selecting repositories. Federal agencies should consider offering guidance to awardees for including provisions in data management plans regarding necessary standards for repositories and addressing compliance challenges associated with data meant to be long-lived.
- **Public access to data is more challenging than for publications.** Digital data sets are much more heterogeneous than publications, and therefore more technically difficult to curate and share. A number of important remaining challenges are noted here:
 - *Appropriate incentives are needed to promote culture change.* Datasets are standalone research products that are valuable in their own right and which researchers are accustomed to retaining. Federal agencies are encouraging a new norm, that this scientific data should be shared as consistent with agency mission. This cultural change requires incentives that help credit and reward investigators for sharing their data. Clear incentives will simplify implementation, improve compliance, and reduce oversight efforts.
 - *Cost-effective approaches are needed to provide long-term preservation of, and access to, data.* Most successful models for data repositories depend directly or indirectly on Federal funding. The ability of agencies to document, clean, preserve, and curate research data is therefore limited by agency budgets. Implementing long-term preservation, discovery, access, and curation for data is likely to be costlier than for publications and will demand cost-effective approaches to identify valuable data and support its preservation and accessibility.
 - *standards must be developed and widely adopted to improve the consistency of data collection, description, and preservation.* Data sharing could become much easier with the development of consistent common data elements for data collection, standard formats for representing specific data types, standard metadata to improve discoverability of data. Standards are also needed to assist with quality assurance and quality control, and protect against misuse of published data (i.e., intentional falsification or fabrication).
 - *Data sharing and usage expertise vary among disciplines.* Disciplines vary in their experience with data sharing, and not all disciplines are yet prepared to manage or share their data effectively. Departments and agencies may need to facilitate resource and tool development, training, interdisciplinary collaboration, and other efforts to foster a culture change and bridge the expertise gap.

- *Data discoverability remains a challenge.* Even as agencies and non-Federal entities establish data repositories, tools for data discovery are lacking in many scientific disciplines. A number of disciplines have capable tools for data discovery, while others are actively engaged in improving resources in this area.

III. Opportunities to Advance Open Science

Federal agencies are making significant strides with public access. Despite this, open science continues to offer new opportunities to increase the impact of Federal investments in research. While it is essential that Federal agencies work together, individual agencies need to determine which specific objectives to pursue, taking into account their different missions, operational contexts, available resources, and stakeholders' needs. Additionally, there are opportunities for coordinating efforts among Federal agencies and collaborating with the private sector.

1. **Increase the Availability and Timeliness of Narrative Research Products**

Recent efforts to provide public access to peer-reviewed publications resulting from federally-funded research, not more than 12 months after the date of publication, are making considerable contributions to the scientific community. Agencies can build upon these efforts by accelerating the timetable for making publications available to the public and by enhancing access to a wider range of written, narrative research products resulting from federally-funded research. Opportunities to consider include:

- Reducing the embargo period for peer-reviewed publications authored solely by Federal employees to be less than 12 months.
- Identifying scenarios where publications may warrant shorter embargo periods (e.g., to facilitate responsiveness to public health epidemics or other national emergencies).
- Identifying opportunities to increase public access to peer-reviewed publications that were published before Federal agency public access policies went into effect.
- Enhancing access to Federal agencies' technical reports and narrative research products other than peer-reviewed publications.
- Exploring opportunities for the responsible sharing of preprints to speed research dissemination, recognizing that preprints are not been peer reviewed, that their use varies considerably across scientific disciplines, and that they may need internal agency clearance before being made publicly available.²¹

2. **Increase the Availability and Timeliness of Access to Scientific Data**

²¹ Preprints are complete drafts of written research reports in the format of articles which have not yet been peer reviewed, increasingly made publicly available through established preprint repositories. See <https://www.nature.com/search?q=preprints> and <http://search.sciencemag.org/?q=preprints> for additional information.

Agencies continue to make progress in implementing policies for data management plans. Many opportunities remain to improve the availability and timeliness of access to scientific data, including:

- Working together and with non-Federal partners (in the public and private sectors) to develop the infrastructure needed to provide long-term preservation of, discoverability of, and access to scientific data.
- Strengthening incentives-and removing disincentives-for effective data management practices to help instill a culture that rewards and recognizes broader use of scientific data. Agency mandates to researchers regarding data management and sharing are a necessary, but insufficient, condition for success.
- Developing and promulgating methods for mitigating risks associated with privacy, security, and confidentiality when sharing scientific data.
- Assisting researchers in identifying suitable repositories for storing data arising from their work (e.g., by identifying best practices for repositories that store data resulting from federally-funded research).
- Continuing to improve access to Federal data sets that can be used in research (in addition to those resulting from research), such as data from Federal statistical agencies, scientific collections, and monitoring and instrument programs.

3. Increase Access to Other Research Products

Open science efforts to date have focused largely on increasing access to scholarly publications and scientific data. Other research outputs could also be made more accessible, such as:

- Providing access to research protocols (i.e., documents that describe the methods to be used in specific research studies, such as clinical trials) before studies are completed can reduce unintended duplication of research and increase rigor. Access to protocols after the studies are completed can enable further interpretation of the results, provide contexts for secondary use of the scientific data resulting from the studies, and enable systematic replication.
- Increasing access to software and code developed through federally-funded research, and/or other outputs that are necessary to use, analyze, or interpret shared data.

4. Improve the Systems for Making Research Products Public

Federal agencies have developed a number of systems to provide access to publications and data resulting from its funded research. By improving those systems, agencies could simplify procedures for researchers to make their publications, data, and other research outputs more accessible, while also allowing users to more easily find, access, and use those materials. Efforts could include:

- Identifying and implementing technical and administrative approaches to simplify procedures for researchers to provide public access to manuscripts/articles and to scientific data in different systems and under different Federal agency policies.
- Improving user interfaces and providing documentation that will enable better understanding and use/re-use of research products.
- Using effective approaches to link narrative research products and associated data sets, as well as different data repositories, in order to: facilitate search, access, and citation of data; improve research reproducibility; and assess the success and value of data openness.
- Improving both machine- and human-driven discovery across agency-designated publication and data repositories via application programming interfaces (APIs), federated search tools (e.g., Data.gov, Science.gov), and other innovative approaches.
- Creating metadata more efficiently to enable faster throughput in processing materials and better discovery. Robust metadata are essential for discovery and usability of the product, especially for non-textual materials, such as data sets, software, and artifacts.
- Offering guidance to researchers on how make their research products easier to use through techniques such as documentation standards, repository selection criteria, and use of persistent identifiers.

5. Lower Barriers to Effective Use of Open Science Content

Federal agencies can take steps, individually, collectively, and in collaboration with other stakeholders, to make open science content more usable and to unlock its full potential to contribute to economic and societal objectives. Agencies could consider:

- Identifying innovative strategies to fuel open science initiatives, including approaches like crowdsourcing, citizen science, and challenge and prize mechanisms, as well as partnerships with the scientific community, publishers, libraries, and other organizations.
- Supporting community-based efforts to develop standards for data and metadata, adopting community-based standards in Federal systems, and promoting their use by funded researchers.
- Encouraging use of persistent identifiers for publications, data, scientific collections, specialized equipment, labs, and facilities, and other resources utilized for research projects to enhance metadata, enable linking, and provide history of studies and analyses. Converting narrative research products into machine-readable formats so that computers can help facilitate dissemination of science and increase the impact of federally-funded science.
- Broadening access to peer-reviewed publications through different licensing approaches, investigator incentives, and/or partnership with publishers.

- Promoting approaches to improve data quality and data documentation (e.g., community standards, open metadata, training, and workforce development).
- Promoting the release of interim data during national emergencies to spur collaborations and innovative solutions (e.g., releasing interim public health data to advance American health).
- Encouraging the private sector to leverage open science content and their downstream application in science and other sectors of the economy. Federal agencies could open opportunities for the private sector to apply new technologies to research outputs and develop value-added services to build on existing Federal resources.

6. Develop Better Metrics and Measures

Agencies are working to improve ways to measure the impacts of Federal public access efforts. Opportunities to enhance these efforts include:

- Identifying approaches to measure progress in increasing access to narrative research products, scientific data, and other research products.
- Identifying approaches to enable, encourage, and characterize compliance with agency public access requirements for peer-reviewed publications and data.
- Supporting research to improve evaluation of open science across Federal agencies and the institutions and infrastructure that they fund, as well as on the research enterprise, entrepreneurship, and the economy.
- Identifying approaches to use persistent identifiers to enable measurement of the use and impact of research outputs.

IV. Recommendations

Many opportunities exist to advance open science in ways that support the missions of Federal agencies and national R&D priorities. The IWGOS recommends that priority be given to three areas: (1) creating incentives to foster a culture change that recognizes and rewards open science practice; (2) developing interagency best practices, guidance and standards for open science, with a particular focus on data access; and (3) facilitating interagency and public-private collaborations to further realize the benefits of open science. More specific approaches for addressing these priorities are outlined below.

- 1. Agencies should help incentivize open science practices.** Open science is a relatively new concept for the Federal government and many of the scientists it funds and supports. Federal agencies should collaborate with other stakeholders to identify and strengthen incentives for practicing open science and making the results of federally-funded scientific research more easily accessible and usable. The IWGOS recommends that Federal agencies:

- *Identify ways to incentivize culture change for open science among federally-funded researchers (e.g., requiring data management and sharing plans, incentivizing the research community to understand the benefits of open science and receive credit/attribution for open science activities).* Incentivizing a culture change that promotes open science practices may include recognizing data sets as important, standalone scientific products and as evidence of scientific excellence; rewarding openness in the evaluation of individual scientists' performance; and identifying metrics to measure the impact of shared data on work by other scientists.
- *Identify ways to incentivize the private sector to develop tools that support open science.* Such tools could improve data discoverability and sharing, facilitate text mining, and provide information infrastructure for data storage and access. The private sector is making tremendous strides in data science and agencies can help focus some of that effort on scientific research data. Incentives like public-private partnerships, prizes, and challenges may help publishers, innovators in machine learning and artificial intelligence, and research funders to contribute toward more effective and open science. These incentives could promote the use of, for example, common APIs to publications, data, and software collections. These interoperable APIs could then be used to create virtual, compatible, aggregated collections amenable to large-scale text and data mining applications.

2. Agencies should facilitate the interagency development of best practices, guidance and standards on open science, with a particular focus on data access. Agencies are making substantial progress in advancing open science by enabling public access to both publications and data. There are still numerous opportunities ahead to improve public access to publications and other types of research outputs (e.g., software and protocols), but the primary near- and medium-term challenges lie in sharing data.

Agencies have many opportunities to work together to increase the benefits and reduce the burden of data preservation and access. Agencies should continue to work together to: 1) refine expectations and guidance for data management and the selection of data repositories; 2) improve and refine approaches to protecting privacy; and 3) improve consistency of policies and practices across Federal funding agencies, philanthropic organizations, and international funders. In addition, agencies should encourage continued improvement in the quality, documentation, versioning, and provenance of shared data. The IWGOS recommends that Federal agencies:

- *Accelerate efforts to create joint solutions for common data sharing challenges.* By connecting agencies working on same or similar research areas or disciplines, seeking consistent approaches to the development of data repositories, discovery tools, and compliance monitoring public access becomes more uniform and thereby easier to navigate and use by both investigators and the end user.
- *Coordinate their efforts to provide guidance to researchers for selecting suitable repositories for federally-funded research data.*

- *Recognize the importance of data standards and coordinate efforts to work with relevant communities to identify, develop, promulgate, and encourage the use of standards for data and metadata that facilitate data connectivity, interoperability, and reuse across agencies.*
- *Improve efforts to make digital data more discoverable and accessible via the use of persistent identifiers for research objects, researchers, and research organizations. Such identifiers are key to interlinking related research objects and to supporting open science and reproducibility.*

3. Agencies should facilitate interagency and public-private collaborations to further realize the benefits of open science.

- *Federal agencies should continue to formally meet to discuss open science. To bolster efforts toward open science, Federal agencies must address issues of research culture, incentives, infrastructure, policy, and more. IWGOS agencies are addressing these challenges through their open science policies, while pursuing common objectives tailored to their specific missions and research communities. Some challenges are common to all disciplines and shared approaches can reduce training and administrative burden. IWGOS recommends Federal agencies continue to meet regularly to address issues such as policy harmonization, burden reduction, implementation, measurement, infrastructure, and emerging opportunities to promote open science. IWGOS also recommends stronger collaboration with other Federal working groups addressing related topics. These include working groups that coordinate Federal-wide research initiatives in specific domains of science (e.g., materials science, microbiome research, and arctic research) and working groups on cross-disciplinary topics such as open data, data science, scientific collections, and technology transfer.*
- *Engage all stakeholders to fully realize economic and social benefits of open science. Successful implementation of open science policies and practices will require close collaboration with stakeholders outside the Federal government. Important partners include the academic and non-profit sectors, businesses and entrepreneurs, and international partners.*
 - *Public, nonprofit, and academic partners.* Federal agencies should work closely with the academic community to ensure that open science policies and practices are understood by the research community and practical to implement. Universities also have ambitions related to open science and are developing supporting infrastructure and policies. Such efforts should be coordinated as much as possible with Federal efforts. Federal agencies will need to partner with universities, scientific societies, and other stakeholders in the scientific community to help establish incentives for open science that recognize and reward the practice of open science.
 - *Businesses and entrepreneurs.* Realizing the full economic and societal potential of open science requires participation beyond the scientific research community.

Other sectors of the economy have made great strides in pushing knowledge to targeted audiences, data mining, and collaboration and networking tools. Commercial investment in these areas often dwarfs Federal investment. Federal science agencies could enhance their impact by engaging knowledge management solutions, and their associated private investment, to focus on research products. Agencies could also work on the standards, infrastructure, and other technical details to ensure federally-funded open science products are attractive resources for the private sector.

- *International partners.* Because scientific communities span national borders, international engagement can advance open science. Open science in other countries can help U.S.-based researchers gain better access to global knowledge. Many countries are seeking innovative solutions for data preservation and access, incentive systems that reward open science practices, and approaches for developing needed skills in the scientific workforce. Federal agencies can promote the international adoption of open science practices that support American interests. Federal agencies should continue to participate in international fora to help identify good practices, standards, and opportunities to align initiatives around American policies, and leverage the solutions (e.g., technical, operational) that emerge from these efforts.

Steps such as those outlined above can help achieve the promise open science offers to accelerate research, development, and innovation for American prosperity.

APPENDIX I. CROSSWALK OF E-GOV ACT REPORTING REQUIREMENTS..... 36

INTRODUCTION

Since the passage of the E-Government Act of 2002 (E-Gov Act) 44 U.S.C. § 3601, Federal agencies have made significant progress in using the internet and other technologies to enhance citizen access to Government information and services, thereby improving Government transparency, data-driven decision making and the customer experience. The E-Gov Act requires Federal agencies and the Office of Management and Budget (OMB) to report annually on their progress implementing the various provisions of the E-Gov Act, as described in more detail below.

OMB developed this report in accordance with 44 U.S.C. § 3606, which requires OMB to provide a summary of the information reported by Federal agencies and a description of compliance by the Federal Government with the provisions of the E-Gov Act. The E-Gov Act includes numerous requirements for OMB and Federal agencies to ensure effective implementation. For example, the E-Gov Act requires agencies to provide OMB links to various websites including the agency's Freedom of Information Act (FOIA) information and agency activities on www.USA.gov. This report provides a summary of OMB and agency compliance with these requirements. Additionally, in an effort to streamline this year's report, OMB has utilized the Federal IT Dashboard (IT Dashboard) to provide agency implementation data. The information on the IT Dashboard reflects agency submissions provided to OMB.

Additionally, consistent with previous E-Gov Act reports, this report includes information required under the Federal Funding Accountability and Transparency Act of 2006 (Pub. L. No. 109-282, codified at 31 U.S.C. § 6101 note). Under this Act, OMB is required to oversee and report to Congress on the development of a website through which the public can readily access information about grants and contracts provided by the Federal agencies.¹

This report is structured in numerical order according to the required sections of the E-Gov Act. For a description of reporting requirements and the corresponding report sections, please see Appendix I. This report is organized as follows:

- **Section I – Office of E-Government Initiatives**

In accordance with Section 101 of the E-Gov Act (44 U.S.C. §§ 3604 and 3606), this section describes the status of the E-Government Fund (E-Gov Fund) in Fiscal Year (FY) 2017. Since FY 2015, appropriations for the E-Gov Fund have been appropriated to the General Services Administration's (GSA) Federal Citizen Services Fund (FCSF). Any remaining balances in the E-Gov Fund were authorized to be transferred to the FCSF. This section describes some of the initiatives that the Office of the Federal Chief Information Officer (OFCIO) (formerly the Office of Electronic Government and IT)

¹ Federal Funding Accountability and Transparency Act of 2006, 31 U.S.C. § 6101 note provides:

REPORT.— (1) IN GENERAL.—The Director of the Office of Management and Budget shall submit to the Committee on Homeland Security and Governmental Affairs of the Senate and the Committee on Government Reform of the House of Representatives an annual report regarding the implementation of the website established under this section. (2) CONTENTS.—Each report submitted under paragraph (1) shall include—(A) data regarding the usage and public feedback on the utility of the site (including recommendations for improving data quality and collection); (B) an assessment of the reporting burden placed on Federal award and subaward recipients; and (C) an explanation of any extension of the subaward reporting deadline under subsection (d)(2)(B), if applicable. (3) PUBLICATION.—The Director of the Office of Management and Budget shall make each report submitted under paragraph (1) publicly available on the website established under this section.

leads to improve the transparency, efficiency, and effectiveness of Federal operations, and increase citizen participation in Government.

- **Section II – Government-wide Information Technology (IT) Workforce and Training Policies**

In accordance with Section 209 of the E-Gov Act (44 U.S.C. § 3501 note), this section provides a summary of activities related to IT workforce policies, evaluation, training, and competency assessments.

- **Section III – Disaster Preparedness**

In accordance with Section 214 of the E-Gov Act (44 U.S.C. § 3501 note), this section provides a summary of how IT is used to further the goal of maximizing the utility of IT in disaster management.

- **Section IV – Geospatial**

In accordance with Section 216 of the E-Gov Act (44 U.S.C. § 3501 note), this section provides a summary of activities on geospatial information systems and initiatives and an overview of the Geospatial Platform.

- **Appendices – Compliance with Other Goals and Provisions of the E-Gov Act**

The appendices contain broad overviews of activities agencies are undertaking to comply with the goals of the E-Gov Act, including highlights of some agency-specific efforts. Full agency descriptions of compliance with each provision of the Act can be found on the IT Dashboard. As part of the broader OMB effort to eliminate duplicative data collections and reduce reporting burden placed on Federal agencies, OMB did not request information for several appendices in its annual E-Gov Act implementation data collection this year. Specifically, information was not collected from agencies that in past reports would have been included in Appendix D, Appendix E, Appendix F, and Appendix G. Please read explanations in each of these sections noting primary sources where this information can be found.

- *Appendix A - Enhanced Delivery of Information and Services to the Public:* In accordance with Section 101 of the E-Gov Act, (44 U.S.C. § 3602(f)(9)), this appendix describes agency activities that enhance delivery of information and services to the public.
- *Appendix B - Performance Integration:* In accordance with Section 202(b) of the E-Gov Act (44 U.S.C. § 3501 note), this appendix describes performance metrics being used and tracked for IT investments, and how these metrics support agencies' strategic goals and statutory mandates.
- *Appendix C - Government-Public Collaboration:* In accordance with Section 202(e) of the E-Gov Act (44 U.S.C. § 3501 note), this appendix describes how agencies utilize technology to initiate Government-public collaboration in the development and implementation of policies and programs.

- *Appendix D - Credentialing:* In accordance with Section 203 of the E-Gov Act (44 U.S.C. § 3501 note), this appendix describes current activities agencies are undertaking to achieve interoperable implementation of electronic credential authentication for Federal Government transactions. In an effort to eliminate duplicative data collections and reduce reporting burden on agencies, information for this appendix was not collected this year. For information on agency initiatives in implementing security standards, including the adoption of PIV cards, please see OMB's [FY17 FISMA Report](#).
- *Appendix E - E-Rulemaking:* In accordance with Section 206 of the E-Gov Act (44 U.S.C. § 3501 note), this appendix describes agencies' online electronic regulatory submission capabilities, specifically the usage of www.Regulations.gov and the Federal Docket Management System. In an effort to eliminate duplicative data collections and reduce reporting burden on agencies, information for this appendix was not collected this year. To view proposed rules, requests for information, or other documents that Federal agencies have issued for public feedback, please view the Regulations.gov or FDMS websites.
- *Appendix F - National Archives Records Administration Recordkeeping:* In accordance with Section 207(d) and (e) of the E-Gov Act (44 U.S.C. § 3501 note), this appendix describes agencies' adherence to the National Archives and Records Administration's recordkeeping policies and procedures for electronic information online and other electronic records. In an effort to eliminate duplicative data collections and reduce reporting burden on agencies, information for this appendix was not collected this year. To view NARA's record of agency inspections, records management program reviews, surveys and assessments, and annual reporting, please review the [Records Management Oversight and Reporting Program](#)'s website.
- *Appendix G – Privacy Policy and Privacy Impact Assessments:* In accordance with Section 208(b) of the E-Gov Act (44 U.S.C. § 3501 note), this appendix provides information regarding agencies' privacy impact assessments and privacy policies. In an effort to eliminate duplicative data collections and reduce reporting burden on agencies, information for this appendix was not collected this year. For information on agency privacy initiatives, please see OMB's [FY17 FISMA Report](#).
- *Appendix H - Agency Information Technology Training Programs:* In accordance with Section 209(b) of the E-Gov Act (44 U.S.C. § 3501 note), the appendix describes agency training programs for the IT workforce.
- *Appendix I - Description of E-Gov Act Reporting Requirements and Corresponding Report Sections.*

Commented [MZTE(1)]: Link once the FY17 report is released.

Commented [MZTE(2)]: Link once the FY17 report is released.

SECTION I: OFFICE OF E-GOVERNMENT INITIATIVES**The E-Government Fund**

The E-Gov Act established an E-Gov Fund to provide financial support for the innovative use of IT in the Federal Government (44 U.S.C. § 3604). Projects supported by the E-Gov Fund included efforts to:

- Make Federal Government information and services more readily available to members of the public;
- Make it easier for the public to apply for benefits, receive services, pursue business opportunities, submit information, and otherwise conduct transactions with the Federal Government; and
- Enable Federal agencies to take advantage of IT in sharing information and conducting transactions with each other and with state and local governments.

Pursuant to the Act, OMB was required to report annually to Congress on the operation of the Fund, including which projects the Director of OMB approved for funding from the Fund, and the results those funded projects that achieved.

Since FY 2015, as first specified in the Consolidated and Further Continuing Appropriations Act 2015, Pub. L. No. 113-235, funding for E-Gov Act projects has been appropriated to the GSA Federal Citizen Services Fund (FCSF) rather than to the E-Gov Fund. Therefore, GSA's FCSF now manages the allocation of funds to support E-Gov Act IT initiatives. The 2015 Appropriations Act also permitted transfer of any funds in the E-Gov Fund from fiscal years prior to FY 2015 that remained unobligated as of September 30, 2014, to the FCSF.²

² Consolidated and Further Continuing Appropriations Act 2015, Pub. L. No. 113-235
<https://www.gpo.gov/fdsys/pkg/PLAW-113publ235/html/PLAW-113publ235.htm>

Select Highlights of OFCIO Initiatives for FY 17

The Office of E-Gov (OFCIO) at OMB continues to drive innovation in Government operations, using IT to improve the transparency, efficiency and effectiveness of Federal operations, and increase citizen participation in Government.

Data Center Optimization Initiative & Cloud Strategy

In 2010, OMB launched the Federal Data Center Consolidation Initiative (FDCCI) to reduce the number of Federal data centers and associated costs. Even with those initial efforts, by 2014 more than 9,000 data centers remained in the Federal inventory. As a result, Congress passed the Federal Information Technology Acquisition Reform Act (FITARA) in 2014, which required OMB to release updated guidance for agencies on data center optimization. OMB issued FITARA implementation guidance for agencies in OMB memorandum M-15-14: *Management and Oversight of Federal Information Technology* (listed on management.cio.gov). OMB also released a new data center strategy, M-16-19: *Data Center Optimization Initiative* (DCOI) on August 1, 2016, which set a goal of closing approximately 52% of the remaining 9,000 data centers in the Federal inventory. The initiative also seeks to optimize remaining data centers across five metrics, develop a shared services marketplace in conjunction with the General Services Administration (GSA), and reduce data center spending by \$2.7 billion by the end of FY 2018. OMB then worked with the CIO Council to set up a management.cio.gov page to provide additional information to assist agencies in meeting their closure goals. Since implementation of DCOI, agencies have closed an additional 2,926 data centers, resulting in more than \$3 billion in report cost savings and avoidances across the Federal Government. OMB continues to assist agencies with oversight and implementation support for the DCOI goals. The latest DCOI cost-savings, closures, and optimization figures are all available on the IT Dashboard.

DCOI will sunset at the end of the FY 2018, thus requiring a new policy to update agency metrics, milestones, and reporting requirements. The IT Modernization Report, a document created in response to Executive Order (EO) 13,800 also includes a milestone to update OMB's Cloud First policy. More information will be included in the next annual report to describe progress made towards this initiative.

Cybersecurity Efforts

In accordance with the Federal Information Security Modernization Act of 2014 (FISMA), OMB is responsible for overseeing Federal agencies' information security practices and developing and implementing related policies and guidelines. The Federal Chief Information Security Officer (CISO) leads the OMB Cyber and National Security Unit (OMB Cyber), which serves as the dedicated team within OFCIO that works with Federal agency leadership to address information security priorities. OMB Cyber collaborates with partners across the Government to develop cybersecurity policies, conduct data-driven oversight of agency cybersecurity programs, and coordinate the Federal response to cyber incidents.

During FY 2017, Federal agencies made considerable progress in strengthening their

defenses and enhancing their workforces to combat cyber threats. In particular, agencies worked to enforce the use of multi-factor Personal Identity Verification (PIV) cards, with 88% of Government users now using this credential to access Federal networks. Additionally, all civilian CFO Act agencies now meet Federal anti-phishing targets, with 19 also meeting Federal malware defense targets. Agencies have also made significant progress toward safeguarding their high value IT assets and employing capabilities to identify, detect, and protect hardware and software assets on their networks.

OMB also worked to implement Executive Order 13800, *Strengthening the Cybersecurity of Federal Networks and Critical Infrastructure*. Pursuant to this effort, OMB assessed 96 agencies to determine the level to which they were actively managing their cybersecurity risk. Not only was this the largest assessment of Federal agencies to have been undertaken, the use of over 70 metrics also marks the most in-depth assessment of Federal cybersecurity thus far carried out. This information informed the Federal Cybersecurity Risk Determination Report and Action Plan to the President of the United States, which set forth OMB's findings and provided recommendations to the President for improving the state of Federal cybersecurity.

The Executive Order 13800 also tasked the Director of the American Technology Council (ATC) to coordinate a report to the President regarding the modernization of Federal IT. The resulting Report to the President on Federal IT Modernization describes the need to embrace the broader use of cloud and shared services, while collecting agency data to help inform the actions described in the report.

Additional information about these efforts can be found in the FY 2017 Annual FISMA Report³

Commented [OMB3]: We can update with a link once we have one.

Open Government and Federal Source Code

In FY 2017, the Interagency Open Data Working Group continued to responsibly present the power of data for the benefit of the American public and maximize the nation's return on its investment in data. Led by OMB and the Data.gov team at the GSA, this community of practice hosts monthly implementation meetings on Project Open Data for Federal employees and contractors. It connects over 900 Federal data professionals who develop open data tools share best practices, and ensure the adoption of best practices related to data governance, data policy, and the hiring and training of data science professionals. These U.S. Government Open Data meetings are open to public stakeholders on a quarterly basis.

Also in FY 2017, OFCIO led OMB initiatives to prioritize agile development with users and emerging technologies to further facilitate the release of open data. OMB, GSA Data.gov, and GSA DigitalGov teams worked with Federal agencies to promote consistent, customer-friendly feedback mechanisms on opening new datasets and improving existing datasets to fuel innovation and real-world impact through data-driven government. Data.gov is home to the Federal Government's open data, where the public can search nearly 200,000 Government

³ Link to FY17 FISMA Report

datasets, tools, and resources to conduct research, develop web and mobile applications, design data visualizations, which helps fuel American innovation, entrepreneurship, businesses, and more. [Project Open Data](#) provides agencies with tools and best practices to make their data publicly available. [Project Open Data Dashboard](#) provides publicly accessible evaluations of agency progress in implementation of [OMB memorandum M-13-13: Open Data Policy—Managing Information as an Asset](#). OMB continues to update the agency evaluations on a quarterly basis.

In May 2017 the Treasury Department, in a collaboration with OMB to advance Open Government/Data, released the new version of the [USA Spending.gov](#) site in accordance with the Digital Accountability and Transparency Act (DATA Act) requirements. The “Beta” site will run concurrently with the previous version of the [Beta.USA Spending.gov](#) website over the summer to minimize disruptions to users' data access and provide more time to add user-centered enhancements. The new [Beta.USA Spending.gov](#) site tracks agency expenditures and for the first time, links relevant agency expenditure data with awards distributed by the Government.

In the FY16 E-Gov Act Report, OMB first described its successful release of OMB memorandum M-16-21: *Federal Source Code Policy: Achieving Efficiency, Transparency, and Innovation through Reusable and Open Source Software*. This policy aimed to mitigate wasteful spending associated with duplicative software acquisitions, ultimately reducing the \$6 billion that the Federal Government spends each year on new software transactions. Following this policy, new custom software developed specifically for or by the Federal Government must be made available for sharing and reuse across all Federal agencies. This has the potential to save significant taxpayer dollars by trimming duplicative acquisitions and avoiding vendor lock-in. In addition, agencies are required to take part in an open source pilot program. Agencies will share 20 percent of new federally funded custom code as open source software as part of a three-year pilot program designed to maximize the economic benefits associated with code sharing and reuse. This portion of the policy will sunset after three years.

In November 2016, OMB launched [Code.gov](#) to facilitate the effective implementation of the Federal Source Code Policy. This platform enables agencies to identify whether their software needs can be satisfied via an existing Federal Government solution prior to procuring new software, thereby cutting wasteful spending and avoiding duplicative acquisitions. When the platform was launched in 2016, it represented 45 software projects. Today, the platform represents over 3,000 projects across the federal government.

Growth and engagement across [Code.gov](#) has been steadily increasing throughout FY17. Many projects that are represented on the platform have been reused several times, enabling agencies to realize substantial time and cost savings by avoiding duplicative software development. For example, [analytics.usa.gov](#) – a website built by GSA that tracks real-time traffic to government websites – has seen reuse not only by other federal agencies, but also by several city and state governments. [Code.gov](#) continues to engage with federal agencies to facilitate effective code sharing and collaboration across the government. By emphasizing code reuse, the government will continue fulfilling its objective to cut wasteful spending, save taxpayer dollars, and improve the fidelity of government source code across the country.

SECTION II: GOVERNMENTWIDE IT WORKFORCE AND TRAINING POLICIES

Section 209 of the E-Gov Act (44 U.S.C. § 3501 note) requires OPM, in coordination with OMB, the Chief Information Officers (CIO) Council, and GSA to analyze the personnel needs of the Federal Government related to IT and information resource management. The E-Gov Act further states that this group must identify where current training does not satisfy current personnel needs, and that it must issue policies to promote development of performance standards for training. In accordance with Section 209 of the E-Gov Act, this section provides a summary of FY 2017 activities related to IT workforce policies, evaluation, training, and competency assessments. Appendix H of this report provides examples of agency-specific training initiatives.

OPM continues to be actively engaged in Government-wide cybersecurity work. In 2015, Congress passed the Cybersecurity Workforce Assessment Act, which focused on improving cybersecurity in the U.S. through enhanced sharing of information about cybersecurity threats and other purposes. It covered four components, including the development of a Federal Cybersecurity Workforce Assessment, which included, among other things, common definitions, a national cybersecurity workforce measurement initiative, identification of cyber-related roles of critical need through the NICE framework, and Government Accountability Office (GAO) status reports.

In February 2016, the Cybersecurity National Action Plan (CNAP) was published, which identified near-term actions and puts in place a long-term strategy to enhance cybersecurity awareness and protections, protect privacy, maintain public safety as well as economic and national security, and empower Americans to take better control of their digital security. In July 2016, OPM and OMB issued the Federal Cybersecurity Workforce Strategy. This strategy, as required by CNAP, was the result of hundreds of federal and private sector inputs. OPM, in partnership with OMB, has achieved the following implementation goals since the release of the Federal Cybersecurity Workforce Strategy:

- **Goal 1: Workforce Needs/Workforce Planning**
OPM is leading the Government-wide adoption of a new coding structure aligned to the National Initiative for Cybersecurity Education (NICE) Cybersecurity Workforce Framework and will continue to actively provide guidance, training, and technical assistance to all agencies. By April 2018, agencies will complete coding all cybersecurity positions under the NICE Framework as required by the Federal Cybersecurity Assessment Act of 2015.
- **Goal 2: Expand the Federal Pipeline through Education and Training**
OPM briefed students from 146 (68% of the total 214) Centers of Academic Excellence, as well as 60 of the 69 Scholarships for Service schools, and students from 116 other colleges and universities with cybersecurity programs. Briefings included: “Pathways Programs for Students and Recent Graduates,” “Finding and Applying for Federal Jobs/Navigating USAJOBS,” and “Writing Your Federal Resume.”

- **Goal 3: Recruit and Hire Highly-Skilled Talent**
OPM established a Government-wide Cybersecurity Human Resources (HR) Cadre comprised of representatives from each Chief Financial Officer (CFO) Act agencies to improve HR delivery to Chief Information Officers (CIOs). OPM released a Strategic Recruitment for Cybersecurity Model on July 25, 2017, which provides guidance to agencies on how to secure top cybersecurity talent through building talent pipelines, cultivating and maintaining partnerships, monitoring recruitment activities, and sharing accountability. OPM issued Direct Hire authority for Information Technology (Information Security) GS-2210 positions and is exploring Direct Hire for additional Qualifying Cybersecurity Occupations.
- **Goal 4: Retain and Develop Highly Skilled Talent**
On July 12, 2017, OPM hosted the 2nd Government-wide Cybersecurity Orientation with over 200 participants. OPM also drafted legislation on Cybersecurity Skills and Education Incentives to obtain and retain credentials. Cybercareers.gov was launched as a Government portal aimed to support a “one stop shop” for Hiring Managers and Job Seekers. The site is being further tailored to for students and universities, as well as current Federal employees. OPM expanded the Presidential Management Council (PMC) Rotation program to include a dedicated participant from each agency’s CIO community. OPM coordinated a cybersecurity training for non-cyber professionals to increase foundational cybersecurity knowledge to career fields outside of the cyber workforce. The training, Federal Executive Cybersecurity Seminar, was offered September 12, 2017 at Department of Homeland Security.

In May 2017, the President signed Executive Order (EO) 13800: *Strengthening the Cybersecurity of Federal Networks and Critical Infrastructure*. The E.O. sets forth policy for management of cybersecurity risk executive-branch-wide and requires agency heads to lead integrated teams of senior executives with expertise in IT, security, budgeting, acquisition, law, privacy, and human resources. Specifically, the E.O. requires the Department of Commerce (DOC), the Department of Homeland Security (DHS), the Department of Defense (DOD), the Department of Labor (DOL), and OPM to assess the scope and adequacy of efforts to educate and train the American cybersecurity workforce of the future. These agency partners have drafted the IT Modernization Report to the President summarizing their findings and providing in-depth recommendations aimed at supporting the growth of the Nation’s public and private sector cybersecurity workforce.

SECTION III: DISASTER PREPAREDNESS

Consistent with Section 214 of the E-Gov Act (44 U.S.C. § 3501 note), this section was developed in consultation with DHS and the Federal Emergency Management Agency (FEMA) to provide a summary of activities that maximize the use of IT for disaster management, including use of IT to enhance and support crisis preparedness and response.

The Disaster Assistance Improvement Program

The Disaster Assistance Improvement Program (DAIP) maintains a Government-wide, single portal for disaster survivors to submit electronic applications for assistance. DAIP's mission is to ease the burden on disaster survivors by providing them with a mechanism to request and access disaster assistance through the collaborative efforts of Federal, state, local, tribal, and nonprofit partners.

Following a presidentially declared disaster for individual assistance, survivors in need of assistance can register online at DAIP's DisasterAssistance.gov. The *DisasterAssistance.gov* portal provides disaster survivors with a single source for potential assistance programs, easy access to the application, application updates, and disaster-related information. The secure portal ensures that disaster survivors, who may be displaced or otherwise out of contact, have access all Federal agencies that offer forms of disaster assistance, and continue to receive benefits from non-disaster related assistance programs.

In FY 2017, DAIP provided Registration Intake (RI) for 54 presidentially declared Individual Assistance (IA) disasters. It hosted 33,182,231 *DisasterAssistance.gov* site visits. It also registered 3,125,579 registrations for disaster assistance via call center support and internet transactions (1,676,127 using Desktops, 1,180,486 using Mobile Devices, 268,966 using FEMA Call Centers). The program continues to receive high customer satisfaction scores from survivors using the site. The program achieved "green" ratings from the DHS Office of Accessible Systems and Technology and the DHS Office of the Chief Information Officer Program Health Assessment.

[OpenFEMA](#) is the vehicle used to share high level DAIP metrics. Through OpenFEMA, Housing Assistance and Registration information statistics are shared at the zip code level along with over 30 other datasets. This information provides a detailed recovery snapshot to Government, non-profits and other community partners. Overall, the OpenFEMA API received approximately 2 million hits per week and continues to be a central source for public FEMA data.

SECTION IV: GEOSPATIAL

In accordance with Section 216 of the E-Gov Act (44 U.S.C. § 3501 note) this section provides a summary of activities related to the development, acquisition, maintenance, distribution, and application of geographic information. This includes common protocols that improve the compatibility and accessibility of unclassified geographic information and promote the development of interoperable information systems technologies that allow widespread, low-cost use, and sharing of geographic data by Federal agencies, state, local, and tribal Governments, and the public.

The Department of the Interior (DOI), as the managing partner, plays an important role in helping to facilitate the Government's efforts for the Geospatial Platform Shared Services initiative, which is led by the Executive Secretariat for the Federal Geographic Data Committee. In its third full year of development and operations under a technical development team, DOI made important improvements to enhance the [National Geospatial Platform](#) ([GeoPlatform.gov](#), also known as GeoPlatform). DOI greatly improved productivity, integration, interoperability, lifecycle management, availability, utility, robustness, reliability, efficiency, and mission effectiveness. Improvements focused on geospatial data and service search, discovery, access, and use across the GeoPlatform's well-integrated, yet diverse ecosystem of Federal geospatial assets. In keeping with the NSDI and Open Data visions, these efforts greatly lowered the barrier for government, public, and commercial users to share and exploit national data and service assets through a common, harmonized framework. The GeoPlatform also made substantial progress advancing digital community experiences, improving the means for Federal agencies and partners to better collaborate on national challenges, while enhancing productivity in building new communities, and enhancing end-user functional and content experiences.

In 2017, the [GeoPlatform.gov](#) also served as a collaboration and information delivery resource for DOI, DHS, and the National Geospatial Agency during critical response efforts for national disasters. In response to Hurricane Harvey, Irma, and Maria, [Homeland Infrastructure Foundation-Level Data](#) (HIFLD) inter-agency members developed a common centralized open site on the GeoPlatform to host and publish unclassified publicly available geospatial data. Both HIFLD4Harvey and HIFLD4Irma, which were also used to support Hurricane Maria, registered over 12,850 users with over 2,920 downloads in a little over 30 days. This first-of-its-kind operational response was received with great enthusiasm and garnered direct positive feedback from Federal agencies and on-the-ground first responders.

FEMA and the Civil Air Patrol (CAP) also used the GeoPlatform shared service to launch a new [CAP image browser](#). The tool allows aircrews to identify the aerial image collection for the day and to focus on particular areas in Puerto Rico and the neighboring U.S. Virgin Islands. This new tool will help expedite the aerial damage assessment process for aircrews, ensuring that each photo taken is processed, tabulated, and tagged as quickly as possible and ready for a timely review by FEMA, the US Air Force, and other Government entities involved in the response to Hurricane Maria. CAP aircrews flew over 131 sorties and provided more than 36,000 images in support of the response to Hurricane Maria.

Additionally, the GeoPlatform continued to evolve in the DOI cloud environment, as a cohesive national geospatial system-of-systems that provides a seamless, secure gateway to national geospatial assets. The GeoPlatform continued to improve the ability for stakeholders to manage their diverse portfolios through enhanced data, metadata, and service lifecycle management. This improvement in the platform and its toolsets supported improved transparency, cost avoidance, and Open Data sharing. In addition, these platform enhancements support the implementation of OMB Circular A-16, "Supplemental Guidance," which directs Federal agencies to manage their National Geospatial Digital Archive (NGDA) as a single portfolio for use across Federal agencies, their partners and the public, while making it available through the GeoPlatform.

CONCLUSION

In 2002, Congress passed the E-Gov Act in response to the growing use of computers and the internet by the public, rapidly transforming societal interactions and the relationships between citizens, private business, and all levels of Government. In an effort to provide effective leadership and streamline Federal initiatives, OMB was tasked to spearhead efforts to develop and promote electronic Government services across the Federal Government. One of the key initiatives of this legislation was to improve the ability of the Government to achieve agency missions and program performance goals by promoting the use of emerging technologies across the Federal agencies to provide citizen-centric services and increase public access to Government information and data. Building on the objectives of this legislation, the OFCIO within OMB has undertaken three broad goals for IT in the Federal Government: (1) to reduce waste and duplication, and ensure that IT investments stay within their budgets and deliver on time; (2) to help agencies deliver IT investments that maximize the Government's productivity and customer satisfaction; and (3) to expand the use of data and analytics to support agency IT portfolio management.

Since the passage of the E-Gov Act, Federal agencies have made significant progress in using emerging technologies to enhance citizen-facing services and grow citizens' access to Government information. This report highlights many of these innovative activities that will improve Government efficiency and delivery of services to the public, as required by the E-Gov Act.

APPENDICES: COMPLIANCE WITH OTHER GOALS AND PROVISIONS OF THE E-GOV ACT

This section provides a description of highlights of Federal agency compliance with other goals and provisions of the E-Gov Act. The subsections below are listed in order according to the corresponding sections of the E-Gov Act. The information contains broad overviews of what agencies are doing to comply with the goals of the E-Gov Act, and also includes some agency-specific illustrations of approaches to complying with the provisions of the Act. To view additional agency descriptions of compliance with provisions of the E-Gov Act, please visit the [IT Dashboard E-Gov Act Reports Page](#).

As part of the broader OMB effort to eliminate duplicative data collections and reduce reporting burden placed on Federal agencies, OMB did not request information for several appendices in its annual E-Gov Act implementation data collection this year. Specifically, information was not collected from agencies that in past reports would have been included in Appendix D, Appendix E, Appendix F, and Appendix G. Please read explanations in each of these sections noting primary sources where this information can be found.

Furthermore, several of the requirements set forth in the E-Gov Act require the provision of web addresses to specific content on agency websites. Due to the nature of these requirements, summaries of the following submissions are not included in the appendices but are included on the [IT Dashboard](#):

- Accessibility: In accordance with Section 202(d) of the E-Gov Act, this section provides URLs for agency websites describing the actions taken by agencies in accordance with section 508 of the Rehabilitation Act of 1973, as amended by the Workforce Investment Act of 1998, Pub. L. No. 105-220.
- Internet-Based Government Services: In accordance with Section 204 of the E-Gov Act, [www.U.S.A.gov](#) serves as an integrated internet-based system for providing the public with access to Government information and services. In accordance with Section 207(f)(3), this section provides URLs for agency activities on [www.U.S.A.gov](#).
- Freedom of Information Act: In accordance with Section 207(f)(1)(A)(ii) of the E-Gov Act, this section provides the URLs for agencies' FOIA websites.
- Information Resources Management Strategic Plan: In accordance with Section 207(f)(1)(A)(iv) of the E-Gov Act, this section provides the URLs for agencies' Information Resources Management strategic plans.
- Public Access to Electronic Information: In accordance with Section 207(f)(1)(B) of the E-Gov Act, this section provides URLs that contain agency customer service goals and describe activities that assist public users in providing improved access to agency websites and information, aid in the speed of retrieval and relevance of search results, and use of innovative technologies to improve customer service at lower costs.

- Research and Development (R&D): In accordance with Section 207(g) of the E-Gov Act, this section provides URLs for publicly accessible information related to R&D activities and/the results of Federal research.

APPENDIX A: ENHANCED DELIVERY OF INFORMATION AND SERVICES TO THE PUBLIC

The E-Gov Act requires OMB to oversee the implementation of a number of programs relating to capital planning and investment control for information technology; the development of enterprise architectures; information security; privacy; access to, dissemination of, and preservation of Government information; accessibility of information technology for persons with disabilities; and other areas of electronic Government.⁴ The Act requires OMB to sponsor ongoing dialogue to encourage collaboration and enhance understanding of best practices and innovative approaches in acquiring, managing, and using information resources to improve the delivery of Government information and services to the public.⁵ This appendix describes agency activities that enhance delivery of information and services to the public, improve or enable more data-driven decision-making in Government operations, and enhance interoperability between different public and private sector entities. The full list of activities can be found on the [IT Dashboard](#).

Agencies are undertaking numerous initiatives to provide the public with increased transparency and availability to Government data. In May 2017 the Treasury Department in collaboration with OMB, released an innovative new public display of Federal financial information on [Beta.USAspending.gov](#). A crucial element of the new website is a standardization of key data elements promoting transparency and enabling the agencies, Congress, and taxpayers to track spending from appropriations all the way to final recipient. OMB and partner agencies continue to seek feedback from key stakeholders driving continuous iterations and improvement to ensure a transparent and open government approach. The “beta” site will continue to run concurrently with the previous version of *USAspending.gov* to minimize disruptions to users’ data access and provide more time to add user-centered enhancements until the beta site is production ready.

Similarly, NASA made improvements to its [Open NASA.gov](#) platform, which serves as a gateway to NASA’s Open Government activities, providing interactivity for users inside and outside NASA who want to engage with NASA’s data, code, application program interfaces (APIs) and tools. At the heart of the site is the main NASA data registry that allows users to search metadata records of NASA data that exist on NASA authoritative sources, view and interact with hosted data through APIs, gain insight and developer details on NASA API’s, and collaborate and create visualizations with NASA data. In addition, the site allows users to maintain profiles, which enable the creation of data communities. The newly created Research Access page provides citizens and researchers access to NASA’s Data Management Plan with instructions for NASA-funded researchers receiving grants, cooperative agreements, and contracts for research.

At the Department of Education (ED), the InformedED platform was established to increase the availability of ED’s public data, ensuring universal access, and catalyzing the data’s reuse. In

⁴ See 44 U.S.C. § 3602(e).

⁵ See 44 U.S.C. § 3602(f)(9).

FY 2017, InformED invested in new technologies and approaches that simplified access to information and empowered citizen innovators, including acquiring autoAPI, an open source CSV-to-API engine used to create several APIs on top of the Civil Rights Data Collection. In addition, InformED awarded a contract for an open data investment feasibility study, which has brought in critical expertise to assess the agency's barriers to open data. InformED also developed and applied a mobile-friendly data story template that strengthens the Department's ability to deliver rich and accessible data narratives. Every new data story expands a code base that ED can return to repeatedly to build effective data visualizations. Finally, ED launched its first [developer hub](#) and an official account on GitHub to increase engagement with developers.

The Department of Health and Human Services (HHS) continued to utilize [HealthData.gov](#) to make appropriate datasets available to the public to fuel solutions in health and human services. After remodeling the website in FY 2016, stronger administrative services are in place for data curators, as well as an enhanced facilitation data cataloging and management process that builds catalog integrity and supports better metadata management. In FY 2017, the HHS Office of the Chief Information Officer (CTO) is creating a comprehensive dataset of HHS, state, private, and Federal data in reference to the opioid epidemic.

Similarly, in FY 2017 the National Archives and Records Administration (NARA) implemented enhancements to the [National Archives Catalog API](#) to improve the delivery of Catalog data to the public, making access to the large volumes of data in the Catalog more efficient for the user. In addition, these enhancements improved the ability of NARA staff to develop a more robust web search engine and web pages using Catalog data, which will become a more effective presentation of Catalog data. The enhancements include deep paging, exact search, with/without field value search, and including comment IDs in the data.

The US Agency for International Development (USAID) in FY 2017 continued to expand the breadth of data it makes available to the public via its [Development Data Library](#) (DDL). For example, in April of 2017, USAID Colombia hosted a data jam to challenge participants to analyze data sets and devise solutions to problems affecting rural development in the country. Participants used advanced statistical and machine learning methods to create new approaches to increase supply chain productivity, generate employment, and encourage youth participation in rural economies. In August of 2017 the [International Food Policy Research Institute](#) (IFPRI), an USAID partner, hosted a data-thon showcasing findings from the Feed the Future Initiative based on data generated in Bangladesh. The data spanned four key food security-relevant domains (climate, agriculture, nutrition, and gender) which enabled analysts and visualization specialists to generate new insights related to climate shocks and female empowerment in the agricultural sector.

Agencies are furthermore addressing public needs through targeted services, like those that connect recipients and providers of services. For example, the DHS Digital Service team partnered with the US Customs and Border Protection (CBP) to launch a new online application for [Global Entry](#), and other CBP [Trusted Traveler](#) programs. The new system, with a focus on usability, created a simpler interface for users to quickly join and renew their Trusted Traveler membership, integrating [Login.gov](#) to provide a secure, two-factor login and authentication process. This was also the first major application CBP has moved to the cloud, and it is serving

as the template for future cloud adoption. The new application launched on October 1st, 2017 after about nine months of development – half the amount of time originally projected—and has already had over 500,000 accounts created.

Another initiative is DOI's Recreation One Stop (RIS) which is an interagency partnership that provides reservation services, sharable data, and recreation trip-planning tools for people who wish to visit federal lands and waters across the United States. Currently, Recreation.gov provides information regarding more than 3,400 individual facilities, with more than 90,000 campsites, 46 ticketed tours or events, and 54 high-demand locations accessed by permit or lottery. In 2017, there were more than 37 million sessions, 19 million visitors, and 344 million page views to *Recreation.gov*, which represents a 26 percent increase in visitation to the website, compared to 2016.

Working with industry partners, the Department of Transportation (DOT) and the Federal Aviation Administration (FAA) created a simple online tool that enables operators to register their Unmanned Aircraft Systems (UAS). As of October of 2017, 923,443 people have registered online to fly. In addition, the FAA is currently developing the "FAA DroneZone" to make a "one-stop-shop" for all things UAS in the FAA – registration, accident reporting, waiver and authorization requests, training, and special alerts or notifications. Currently the FAA is developing the modules and expects the DroneZone be available to the public by March of 2018.

The Department of State's (State) ForeignAssistance.gov (FA.gov) application enhances the delivery of information and services to the public. *ForeignAssistance.gov* specifically tracks U.S. Government assistance provided to more than 100 countries around the world. In addition to raising public awareness for U.S. foreign assistance around the world, *FA.gov* will help recipient governments manage aid and inform budgeting and planning decisions, empower citizens to hold their governments accountable for the aid they receive, and support data-driven development. The site currently contains data on planning, obligations, and disbursements on a transactional level, with performance data and descriptive narrative data also available for State and USAID. In addition, *FA.gov* recently launched the "Analyze" feature, a custom data visualization tool that enables users to overlay foreign assistance data with other open data and development indicators to investigate trends over time or across countries, regions, and income groups. Soon all 22 agencies with foreign assistance funding in their portfolio will be reporting to *FA.gov*.

The Social Security Administration (SSA) has made significant improvements to its "my Social Security" program, an online portal that provides the public the ability to access personalized services and perform online transactions via a secure account. Originally launched in 2012, the site was expanded in 2015 to include non-beneficiary services and to include the ability to request a replacement SSN card and retrieve a machine-readable version of the Social Security Statement. As of October 2017, over 32.4 million customers have registered for a mySocialSecurity account. In FY 2017, customers conducted over 155 million online transactions. In addition, the internet Social Security Number Replacement Card (iSSNRC) application became available in 10 new states in FY 2017 including California, Texas, and Florida. Over 600,000 cards have been issued via iSSNRC, with the application now available in

24 states and Washington, DC. SSA plans in 2018 to further enhance its new wage reporting tool (myWageReport) and expand access to SSI recipients.

Government-wide, agencies are also diversifying their information resource capabilities, with some providing data in both navigator formats and in Application Program Interfaces (APIs), and working to improve the usability of data and websites by leveraging public feedback mechanisms. For example, the Department of Justice (DOJ) is improving the user experience of FOIA.gov through the introduction of augmented and enhanced functionality aimed at public users and federal agencies. With an average of over 730,000 FOIA requests submitted annually over the last four years, it is essential that the system for collecting requests be user friendly and the underlying processes efficient. The new iteration of FOIA.gov will assist public users in identifying agencies of interest through a series of controlled questions, as well as, allow the user to submit a structured FOIA request without navigating to another site or launching an email application. As a part of this effort, DOJ solicited public input and research, as well as, collaborated with multiple federal agencies in order to deliver functionality with the greatest benefit to all. DOJ is planning to launch this new functionality for public use in early 2018 with additional features further improving the user experience provided in the future.

In FY 2017, the USA.gov platform connected people more than 200 million times with Government information through its websites, social media, publications, email, and phone calls through the USA.gov Contact Center. Managed by GSA, the site has the goal to make it easier for the public to find and consume U.S. Government information and services on the web. USA.gov makes content accessible to the broadest audience possible, and recently implemented a responsive design approach on its websites to ensure consistent user experience on any device, leading to 25 percent growth in both mobile and tablet usage. The landing page and navigation features of USA.gov were also redesigned to improve user engagement. Additionally, USA.gov integrated BusinessUSA content and developed a unique faceted search tool to help small businesses find business opportunities and grants.

In FY 2017, OPM worked to transform USAJOBS from a job board to a Federal career portal through the implementation of seven production releases. A number of enhancements were made to the site, including: (1) enhancement of the collection of demographics collected at the time of application, (2) redesign of the Agency Talent Portal resume mining feature, (3) upgrades to the search architecture, (4) implementation of a new search user interface that introduced hiring paths to address eligibility, as well as, assisted authoring to address keyword nomenclature issues, (5) redesign of the job announcement (6) implementation of campaigns and events in the Agency Talent Portal and (7) development of new structural changes to the Staffing Integration Framework to improve job announcement fields that are submitted by Talent Acquisition System providers to display on USAJOBS. The program office conducted extensive user research and usability testing throughout the design and implementation phases to ensure the products meet user needs. Lastly, the program acquired a new product, Open Opportunities, a platform originally built by GSA to provide an opportunity board for short-term, micro-detail tasks. This product will expand USAJOBS' offering for the federal workforce to find and apply to developmental opportunities.

APPENDIX B: PERFORMANCE INTEGRATION

In accordance with Section 202(b) of the E-Gov Act (44 U.S.C. § 3501 note), this appendix describes what performance metrics are used and tracked for IT investments, and how these metrics support agency strategic goals and statutory mandates. Agencies provide a variety of performance metrics, including those that focus on cost and schedule of projects, risk factors, customer service, and innovative technology adoption and best practices. Select efforts are described in further detail below. The full list of activities and many of the aforementioned OMB metrics can be found on the [IT Dashboard](#).

Performance metrics are an essential tool for determining the health, risks, and future needs of agencies' IT projects. These metrics are a product of both the project teams and agency CIOs designing and tracking performance metrics that support the strategic goals and statutory mandates of the agency. To strengthen links to departmental priorities, major IT investments are mapped to specific elements of the agencies' strategic plans and performance measures are required elements of each Business Case. Particular focus is paid to FITARA implementation requirements, as outline in OMB memorandum [M-15-14: Management and Oversight of Federal Information Technology](#). OMB is responsible for ensuring FITARA's many IT governance, transparency, and risk-management provisions are successfully implemented by agencies. One useful tool OMB utilizes is the [FITARA Scorecard](#), which assigns 24 agencies grades from A to F in several implementation categories. The Government Accountability Office (GAO) and House Oversight and Government Reform Committee issue scorecards twice a year, with grades released in June and November for 2017. The November 2017 scorecard saw three agencies increase their overall scores from the June 2017 report (ED, OPM, SBA), with six agencies receiving a decrease in rating, and fifteen agencies with no change.

Agencies continue to develop and utilize IT governance and management processes, ensuring that senior agency officials, including the agency CIO, play an active role in reviewing performance metrics for agency IT portfolios. For example DOC has its own Commerce IT Review Board (CITRB), which periodically evaluate agency IT investments during its program/project lifecycle. The CITRB is co-chaired by DOC's CIO and CFO, and holistically evaluates IT Project/Program and Portfolio performance, progress risk and health. Finally, ED uses a similar department entity, the Planning and Investment Review Working Group (PIRWG) to select, control and evaluate the IT investments that go into the Department's IT portfolio.

Effective IT governance involves a holistic approach, where the agency updates its strategic plans (such as IRM & TBM strategic plans) focusing on deliverable defined in its business cases and programs, outcome metrics and an effective governance process with the right level of executives with authority to come to the table. Many agencies have created their own multi-year strategic plans for management of their IT portfolios. For example, DOJ performance goals for enterprise IT are set forth in the [DOJ Strategic Plan for Information Services and Technology 2015-2018](#). This plan defines key goals, strategies and objectives for the department's IT organization. DOJ is in the process of updating its Strategic Plan for Information Services and Technology early in FY 2018, identifying goals and objectives for the 2018-2020 timeframe. Likewise, Treasury in FY 2017 refined its own investment risk rating process and

algorithm to apply more rigors in its review of the IT investment portfolio toward agency objectives, strategic goals, and statutory mandates to complement existing operations and performance metrics.

In a similar effort, the Small Business Administration (SBA) took steps to link performance goals to key stakeholders, private sector, Federal agencies, and international operations through strategic goals and objectives. The SBA 2014-2018 Strategic Plan, includes IT investment management in its strategic objective 3.1 (Program Operations). The SBA tracks IT performance through a customer satisfaction survey and security incidents reported through US CERT (United States Computer Emergency Readiness Team). As the SBA develops its FY 2018-2022 Strategic Plan, a strategic objective for information technology has been established with a new performance goal that tracks IT costs savings. Finally, Department of State (DOS) has its own IT Strategic Plan for FY 2017 – 2019, which defines goals, objectives, and performance measures for enterprise IT in support of the State's missions and strategies, and will be updated based on specific recommendations and objectives from the Department of State's Redesign Initiative.

Many Federal agencies have used these performance metrics and oversight activities to identify initiatives ripe for improvement and modernization. For example, the Federal Motor Carrier Safety Administration (FMCSA) within DOT implemented the first two phases of a multi-year program to modernize the registration process for commercial motor vehicles. This initiative provides a new streamlined online system that simplified the FMCSA registration process. Phase I helped clean more than 360,000 inactive carriers from the registration system. This effort also saves time, money, and lives by allowing inspectors to focus on the most dangerous carriers. An estimated 11,500 hours of annual investigation time will be saved each year, resulting in 547 additional investigations that can be performed; potentially preventing up to 65 crashes, 40 injuries, and saving 2 lives. Phase II launched a single, online application system for all new applicants, replacing multiple forms. New applicants only include those never assigned a USDOT or MC number. This effort saves applicants and industry service providers over one hour per application, with cost savings of \$1.6M realized in just the first 6 months. In addition, this new online application system, utilizing the Utility for Risk Based Screening and Assessment (URSA) tool, facilitates vetting operations by automatically screening applications for carriers attempting to become a "reincarnated" version of a previous or existing high-risk operator. The URSA tool, to date, has screened over 75,000 new applications for operating authority, flagged over 7,000 of them for further investigation, resulting in 175 carriers being rejected due to high risk behavior. These rejections are projected to prevent 12 crashes and save 4 lives per year. The final phase will combine multiple registration processes, consolidate information technology systems, and consolidate as many as 15 forms into a single registration online platform.

OMB IT Efforts on Performance Integration--TBM

Since the passage of the Clinger-Cohen Act in 1996, OMB has been tasked with conducting oversight around Agency IT spending and ensuring the effective application of Congressional funding for IT. Each year, OMB requires agencies to manually report IT budget formulation and execution data to be captured, analyzed, and displayed to the public on the IT

Dashboard. In addition, agencies provide performance, risk, and project management data for each major IT Investment in their respective portfolios to be displayed as well. To address persisting data quality concerns and achieve burden reduction for agency reporting, OMB is actively collaborating with agencies to leverage all available authoritative data and implement automation wherever possible.

Agencies develop unique performance measures for each project in their respective IT portfolios, focusing on mission and business results, customer service, and improvements to business processes and technical goals for operational IT systems. Every major IT investment must contain results-specific metrics to measure their effectiveness in delivering the desired service or support level required to enable successful mission outcomes. OMB's Capital Planning and Investment Control (CPIC) establishes the processes and tools for selecting, controlling, and evaluating IT projects that comprise the IT portfolio.

In FY 2017, OMB began implementation of a long-term strategic paradigm shift and made a significant update to the annual CPIC reporting process for FY 2019 agency budget submissions through introducing the Technology Business Management (TBM) Framework to categorize IT spending. Leveraging a taxonomy that is proactively managed by a non-profit organization alleviates some of the need for the Federal Government to identify, define, and achieve consensus on the standards and terms used to report IT costs, thereby ensuring the viability and long-term sustainability of this system. In the future, Federal IT budget data aligned with the taxonomy will become the basis for the IT CPIC process and OMB oversight of agency's IT portfolios.

As OMB continues its implementation plan through the FY 2020 guidance, it is partnering with Agencies to promote maturation in reporting processes and data quality while introducing the last remaining Part 3 Infrastructure Standard Investment Reports. Simultaneously, OMB is introducing a new Standard Investment Report for Part 2 Support Services Standard Investment Reports to support the gradual implementation of the TBM taxonomy's Services layer. Long-term implementation remains on schedule to complete the CPIC transition to TBM reporting by the FY 2021 reporting cycle.

Aligning Federal IT management with TBM industry standards will allow more effective management and oversight of agency IT investments. Full implementation of the TBM taxonomy will enable the Federal Government to 1) benchmark its IT performance and cost data against industry to more effectively identify and leverage best practices; 2) locate instances of over or under-funding for IT services and infrastructure to more efficiently allocate funding across Agencies; and 3) enable Government decision-makers to tie Agency mission priorities to specific IT funding decisions by providing unprecedented transparency into their organizations' spending on technology and innovation. This granularity will help gradually align the categorization of costs with policies around IT modernization, CIO authorities, commodity IT management, category management, and data center optimization, among others.

APPENDIX C. GOVERNMENT-PUBLIC COLLABORATION

In accordance with Section 202(e) of the E-Gov Act (44 U.S.C. § 3501 note), this appendix describes how agencies utilize technology to initiate Government-public collaboration in the development and implementation of policies and programs. They do so through a variety of approaches, including using public meetings on agency websites, engaging with the public through website comments and email lists, and using online portals to facilitate public participation in regular agency processes. Select efforts are described in further detail below. The full list of activities can be found on the [IT Dashboard](#).

Federal agencies continue to leverage technology to initiate Government-public collaboration in the development and implementation of policies and programs. For instance, the DOD used the Federal eRulemaking portal (discussed more in Appendix E) to facilitate public participation in its regulatory process. During FY 2017, DOD used this portal to elicit comments from the public on which of its existing regulations should be considered for repeal, replacement, or modification. The identification and elimination of unnecessary, outdated, or ineffective regulations will alleviate unnecessary burden on the public and ensure the Department continues to meet its fiduciary responsibilities to the American people.

In a similar effort, DHS sought to solicit input and foster an online conversation revolving around the [2018 Quadrennial Homeland Security Review \(QHSR\)](#). To accomplish this, DHS utilized Ideascale, a crowd-sourcing collaboration platform. During FY 2017, DHS posted topics related to its strategic development work, moderated and contributed to discussions, and incorporated key ideas into its strategy review process, as appropriate. Some of the many topics that were posted and discussed on Ideascale include border and aviation security, terrorism, immigration, and cyber security. DHS will present their Quadrennial Homeland Security Review to Congress at the end of 2017 as required by law.

In FY 2017 NARA also sought input from the public on its draft [2018-2022 Strategic Plan](#), making the draft available to the public on GitHub. NARA sought feedback through posting issues on GitHub or sending comments by email. By publishing the Draft Strategic Plan on GitHub, NARA offered a transparent way for stakeholders to comment and to view revisions. The open source approach also makes it easy for other organizations to reuse the framework for their own plans. The code and all contributions to this project will be released in the public domain under the [CC0 dedication](#). A revised plan was published on September 15.

Finally, DOJ also sought public comments on regulatory matters. In February 2017, the President issued [Executive Order 13771: Enforcing the Regulatory Reform Agenda](#), which set forth principles and requirements for each agency to evaluate and implement measures to lessen the regulatory burden on the American people. In response, the DOJ established a Regulatory Reform Task Force that sought [public comments](#) on the various kinds of actions taken by DOJ components that the public perceives to be regulatory in nature. The DOJ Regulatory Reform Task Force is considering these public comments as it conducts its own evaluation of the Department's regulations, in order to identify candidate regulations for repeal, replacement, or modification.

Many agencies also developed online hubs to better provide information to the public and foster public engagement on various agency initiatives. For example, in FY 2017 [Benefits.gov](#), managed by DOL, received almost 9.4 million site visits and reached a record of more than 1.2 million site visits in August. *Benefits.gov* is the official benefits website of the U.S. Government, providing citizens with information and eligibility pre-screening services for more than 1,200 Federal and State benefit programs across 17 Federal agencies. In addition, *Benefits.gov* completed the procurement of Microsoft Azure in FY 2017, a commercial cloud-hosting provider which will better position *Benefits.gov* to shift to emerging technologies in the future. To mark the 15th anniversary of the site, there was an increased focus on customer engagement and outreach, resulting in 3,100 new followers on its Facebook and Twitter pages, a 191% increase in referral traffic to the [benefits.gov](#) website, and a 48% increase in Compass eNewsletter subscribers.

In addition, State also rebranded its Virtual Student Foreign Service program to the [Virtual Student Federal Service \(VSFS\)](#) program to recognize the advancement of the program as it now supports over 30 Federal agencies. The VSFS is supported by an innovative, cloud-based information technology application that facilitates all aspects of the initiative, including project submission by agencies, as well as the student application and selection processes. The program had a record year in FY 2017 with more than 4,600 U.S. college undergraduate and graduate students applying for 1,300 position available this cycle to work on 525 projects for various Federal agencies.

Similarly, in March 2017 the Nuclear Regulatory Commission's (NRC) Office of Administration deployed a centralized rulemaking tracking and reporting [tool](#). The web-based system provides internal and external stakeholders with consistent, accurate, and up-to-date information on all of the agency's planned rulemaking and petition for rulemaking (PRM) activities. The information from this system is available to the public on NRC's public website, under the "Public Meetings & Involvement" tab.

Finally, the Intelligence Advanced Research Projects Activity (IARPA), an office within the Office of the Director of National Intelligence (ODNI), continued to utilize the [Federal Business Opportunities \(FBO\)](#) portal as its primary vehicle to initiate collaboration with the public for research. During FY 2017, IARPA posted more than 24 announcements on FBO for new program Broad Agency Announcements (BAA) and Requests for Information (RFI). More than 230 abstracts and proposals were received from industry and academia in response to the announcements, and more than 500 people attended the resulting 8 public collaboration events IARPA hosted.

One final way many agencies worked to increased Government-public collaboration was by funding research projects. For example, in FY 2017 USAID's [U.S. Global Development Lab](#) announced \$10 million for 49 new research projects to address evidence gaps and advance technical capacity in critical areas of development. The 49 new projects span 23 USAID partner countries and are funded through the Partnerships for Enhanced Engagement in Research (PEER) program, an initiative designed to foster collaborative global research. These new

awards will allow Government-public collaboration on a variety of crucial research areas, such as wildlife protection, biodiversity conservation, water resource sustainability, satellite monitoring of natural resources, fisheries management, food security, disaster mitigation, and others.

APPENDIX D. CREDENTIALING

Section 203 of the E-Gov Act (44 U.S.C. § 3501 note) requires the Federal Government to describe current activities agencies are undertaking to achieve the interoperable implementation of electronic credential authentication for transactions with the Federal Government.

An important part of the Federal Government's information security standards is Identity, Credential, and Access Management (ICAM). The goal of ICAM is to implement a set of capabilities that ensure network users use strong authentication to access Federal IT resources and to limit users' access to the resources and data required for their job functions. Mature ICAM programs enable agencies to monitor users' access and implement secure capabilities such as single sign-on, which provide trusted users with efficient access to applications and data.

The Federal Government has sought to implement these security standards through the issuance of Personal Identity Verification (PIV) cards. The establishment of the PIV credential as part of a broader enterprise solution enables common service capabilities in secure and reliable transactions. The ICAM goal consists of PIV enforcement targets for privileged users (100%) and unprivileged users (85%). Many Federal agencies have made significant progress in implementing and adopting the use of PIV cards, with agency implementation progress collected and monitored as part of the annual Federal Information Security Management Act (FISMA) metrics. For FY17, civilian CFO Act agencies reported 87% for unprivileged users (up from 81% reported in FY16) and 98% for privilege users (up from 89% reported in FY16).

As part of the broader OMB effort to reduce reporting burden places on Federal agencies, OMB did not request this information in its annual E-Gov Act implementation data collection this year. For information on agency initiatives in implementing security standards, including the adoption of PIV cards, please see OMB's [FY17 FISMA Report](#).

Commented [MZTE(4)]: Link once the FY 17 report is released.

APPENDIX E. E-RULEMAKING

One of the goals of the E-Gov Act (44 U.S.C. § 3501 note) is to assist the public, including the regulatory community, in obtaining access and electronically submitting comments on rulemakings by Federal agencies. Specifically, Section 206 of the E-Gov Act lays out requirements designed to not only increase engagement with the public, but to increase collaboration between Government agencies. This appendix describes the general efforts being undertaken by the Federal Government to utilize online electronic regulatory docket capabilities, specifically the usage of www.Regulations.gov (Regulations.gov) and the Federal Docket Management System (FDMS) at www.FDMS.gov.

The central eRulemaking tool for Federal agencies is Regulations.gov. Launched in 2003, the website provides agencies with a platform to post final rules, proposed rules, requests for information, and other public documents in order to give the public an opportunity to review and comment on regulatory actions. There is a commenting feature on FederalRegister.gov which is integrated with existing [MyFR](#) and social media capabilities on the website to allow for more public interaction with the agency. The eRulemaking Program Management Office is hosted by the Department of Environmental Protection (EPA). The eRulemaking program offers an application programming interface (API) which connects outside applications to FDMS so interested individuals can both read regulatory information and write comments to be processed through FDMS. FDMS is the Government-wide system that provides agencies the ability to search, view, download, and review comments on rulemaking and non-rulemaking initiatives. FDMS also enables agency users to manage docket materials through the use of role-based access controls, workflow and collaboration processes, and comment management tools. Many departments and agencies have extensively used these tools to facilitate their regulatory activities. Many Federal agencies have used the system to great effect, posting large amounts of content and receiving tremendous input from the public on proposed regulatory action.

As part of the broader OMB effort to reduce reporting burden places on Federal agencies, OMB did not request this information in its annual E-Gov Act implementation data collection this year. To view proposed rules, requests for information, or other documents that Federal agencies have issued for public feedback, please view the Regulations.gov or FDMS websites.

APPENDIX F. NATIONAL ARCHIVES AND RECORDS ADMINISTRATION (NARA) RECORDKEEPING

Sections 207 (e) of the E-Gov Act (44 U.S.C. § 3501 note) requires agencies to adopt policies and procedures to ensure that chapters 21, 25, 27, 29, and 31 of title 44, United States Code, are applied effectively and comprehensively to Government information on the Internet and to other electronic records. NARA coordinates with OMB to implement OMB memorandum M-12-18: *Management Government Records Directive*, which requires that to the fullest extent possible, agencies eliminate paper and use electronic recordkeeping. Senior Agency Officials for Records Management are required by M-12-18 to report to NARA on agency progress in meeting the Directive goals, as well as on other significant records and information initiatives as defined by NARA.

NARA's process for overseeing agency compliance with recordkeeping procedures is through its the Records Management Oversight and Reporting Program, under the Office of the Chief Records Officer for the Federal Government. This program is responsible for monitoring compliance with records management regulations and implementation of NARA policies, guidance and other records management best practices by federal agencies. Under 44 U.S.C. 2904(c)(7) and 2906, NARA has the authority to conduct inspections or surveys of the records and records management practices of Federal agencies for the purpose of providing recommendations for improvements. The criteria for selecting agencies for inspection or records management program review include, but are not limited to, the results of an agency's annual records management self-assessment, the significance of certain records and the related business processes, the risk of improper management of records, and the presence of important issues that are relevant to management of Federal records in general.

As part of the broader OMB effort to reduce reporting burden places on Federal agencies, OMB did not request this information in its annual E-Gov Act implementation data collection this year. To view NARA's record of agency inspections, records management program reviews, surveys and assessments, and annual reporting, please view the program's website.

APPENDIX G. PRIVACY POLICY AND PRIVACY IMPACT ASSESSMENTS

Section 208(b) of the E-Gov Act (44 U.S.C. § 3501 note) requires agencies to conduct a privacy impact assessment before (1) developing or procuring IT systems or projects that collect, maintain or disseminate information in identifiable form from or about members of the public, or (2) initiating, consistent with the Paperwork Reduction Act, a new electronic collection of information in identifiable form for 10 or more persons. In addition, and if practicable the E-Gov Act requires that agencies make the privacy impact assessment publicly available through the website of the agency, publication in the Federal Register, or other means. Individuals interested in reviewing agencies' compliance with the privacy provisions of the E-Gov Act should reference the privacy section of the annual FISMA report.

APPENDIX H. AGENCY IT TRAINING PROGRAMS

Section 209(b)(2) of the E-Gov Act (44 U.S.C. § 3501 note) requires agencies to establish and operate IT training programs. The Act states that such programs shall have curricula covering a broad range of information technology disciplines corresponding to the specific information technology and information resource management needs of the agency involved; be developed and applied according to rigorous standards; and be designed to maximize efficiency, through the use of self-paced courses, online courses, on-the-job training, and the use of remote instructors, wherever such features can be applied without reducing the effectiveness of the training or negatively impacting academic standards. This appendix describes select agency training programs for IT workforce. Agency IT workforce training is described below, with one paragraph highlighting a specific agency's accomplishments. The full list of activities can be found on the [IT Dashboard](#).

DOD, DHS, and NIST collaborated to create the NIST Special Publication 800-18: *National Initiative for Cybersecurity Education Cybersecurity Workforce Framework*, which was published in August 2017. The document includes core elements of the DOD Cyber Workforce Framework (DCWF). DCWF qualification standards were internally matured and defined for the majority of the 53 cyber work roles. The remaining research will be completed in 2018. DCWF will enhance current cyber training and education in Military and Agency technical schoolhouses and online offerings. DCWF will also improve training effectiveness and cyber personnel readiness through innovative performance assessments.

DOC also focused on enhancing its cybersecurity awareness and training program in FY 2017. DOC implemented role-based Cyber Security Assessment and Management (CSAM) training to help standardize and increase CSAM usage within the agency. As part of DOC's goal to be a leader in cybersecurity training across the Federal Government, the agency hosted three quarterly cybersecurity technical workshops, which were attended by representatives of over 44 Governmental agencies. DOC also enhanced the authorizing official and system owner-training curriculum, and updated its cybersecurity workforce development policy to integrate training concepts identified in NIST SP 800-16. Finally, DOC expanded its security awareness campaign by delivering 21 cybersecurity instructor-led awareness training sessions addressing techniques to prevent phishing, social engineering and identity theft.

The National Science Foundation (NSF) required all staff to complete the 2017 Security and Privacy Awareness Training, which was developed internally to address IT security threats specific to NSF. The content includes relevant topics such as phishing prevention, personally identifiable information (PII) protection and safe file storage and transfer. The completion rate in 2017 was 99.97%. Additionally, all employees and managers who have elevated cyber security roles are assigned Insider Threat Awareness Training, utilizing content provided by the Defense Security Service.

In FY 2017, NARA offered its revamped Tier I Computer Based Training to better address emerging threats. As other emergent threats are recognized, the agency reviews and updates its multi-level Tier II training program for users with elevated security responsibilities

and other staff involved in Risk Management activities. Classroom instructions, along with on-site delivery of awareness training, were offered in the FY 2017 training cycle. Finally, FISMA-compliant IT security training is required at the time of on boarding and annually for all NARA staff (employees and contractors), along with training on protections for privacy-related information.

DOJ utilized its IT workforce training in FY 2017 to bring together IT professionals from across divisions to break down organizational silos and share knowledge. DOJ also successfully implemented standard frameworks, such as the NICE framework for cybersecurity, to better benchmark and coordinate IT employee development, and continued to implement the requirements of the Federal Cybersecurity Workforce Assessment Act. In addition, DOJ passed a 2017 GAO audit and created a Department-wide working group to identify and code all of its employee positions against the NICE 2.0 standard. The DOJ IT Flash Mentoring series continued to grow providing development and networking opportunities for the Department IT Community. Finally, DOJ's Office of the CIO continued to pilot a Skills Incentive Program that maps desired certifications and competencies to specific job functions and General Schedule grades. The objective is to regularly review and iterate the framework so that it evolves with the changing skill-type demands within the IT field. The end goal is for this to serve as a model for DOJ-wide IT workforce development.

ED on the other hand, in FY 2017 continued its efforts to deliver training and development opportunities to a more mobile workforce. Employees were provided access to virtual books through ED's learning management system. The books included a wide range of IT related training topics, including: IT security, project management, databases, operating systems, and networking. To enhance training efforts with remote staff, ED continued to use WebEx and remote presence software (video/audio broadcast). In addition, the agency modified its IT Security Role Base Training to encourage IT professionals to take training courses related to obtaining cyber security certifications. IT Security Role Based Training was assigned to 771 employees and 100% of the employees completed it. Cybersecurity and Privacy Awareness training was required of all ED employees and 100% of employees completed this training.

In FY 2017, the Department of Housing and Urban Development (HUD) completed its Enterprise-Wide Information Security Workforce Training Program Plan. This plan serves as HUD's solution to meet the advanced training needs of its security staff. HUD also conducted Information Security Continuous Monitoring training for all Information System Security Officer's (ISSO's). In addition, HUD administered an IT Specialist Skills Assessment as part of a Department-wide initiative to evaluate the skills of HUD's workforce. Also in 2017, the results of the FY 2016 Skills Assessment were published, which identified the skills that are considered to be most important and have the largest proficiency gaps. The objectives of the assessment included: (a) identifying skill gaps within the HUD IT workforce; (b) identifying training needs and providing recommendations on future trainings to be included in the HUD LEARN curriculum; and (c) comparing the results of the FY 2014 and FY 2016 IT Skills Assessment results to assess progress toward gap closure and the success of existing training.

The Environmental Protection Agency's (EPA) IT training program hosted 295 Instructor-led trainings in FY 2017. EPA has also partnered with an eLearning service provider

to provide 24/7 access to state-of-the art IT, project management, contracts management, leadership, compliance, and core competency learning assets across the enterprise. The eLearning provider recently added live simulations, real-time coaching and other enhancements to their learning programs for IT professionals. The EPA Office of Environmental Information also provided IT training programs that are delivered in both classroom settings and via virtual delivery methods. Finally, the EPA provided access to mandatory IT training for all contractors, grantees and students who have access to the Agency systems

The Office of the CIO at GSA (now GSA IT) provides in-person and online enterprise-wide training to GSA's 17,000+ staff to help improve their technical skills. In FY 2017, GSA held 80 instructor-led IT training courses. GSA also overhauled its privacy training offerings this year. Its mandatory privacy awareness training was designed for adult learning and focused on the concept of Controlled Unclassified Information (CUI) and the categories of personally identifiable information (PII) commonly collected, maintained or disseminated by GSA; three key aspects of the Privacy Act; five ways that employees can protect PII; and instructions on how to report a breach. In addition, GSA IT conducted an organization-wide introductory agile training and established a Leadership & Development steering committee to provide oversight for all training-related policies and processes. GSA IT also created in-house development opportunities by establishing an IT-specific rotational program, formalized a governance process for participating in external leadership programs and conferences, and began piloting different Massive Open Online Courses (MOOCs) for enterprise-wide use. Other agencies have consulted GSA to learn about migrating their e-mail to the cloud and implementing Software as a Service (SaaS) collaboration tools. GSA holds quarterly Interagency Center of Excellence meetings about these tools to discuss topics across agencies, including new features, demonstrations of applications, and upcoming conferences/events.

In FY 2017, employees at OPM took a wide range of IT courses via the OPM Learning Connection, which makes over 300 IT-related courses available to employees. Of these, 272 unique IT courses were completed throughout FY 2017. OPM's Office of the CIO acquired IT Infrastructure Library (ITIL) Foundation framework training classes, which were attended by OPM staff in FY 2017. The ITIL framework is designed to standardize the selection, planning, delivery, and support of IT services within OPM, which aligns IT services with agency needs. Class attendees were required to pass an ITIL Foundation certification test in order demonstrate their understanding of ITIL Foundation concepts. OPM's Office of the CIO also acquired Agile training classes "Agile and Scrum in a Day" and "Certified Scrum Product Owner." OPM staff attended these Agile and Scrum classes in FY 2017, which provide the foundation for OPM staff in understanding and putting into practice the Agile Scrum process from the perspective of the OPM Program Office organization responsibilities.

APPENDIX I. CROSSWALK OF E-GOV ACT REPORTING REQUIREMENTS

E-Government Act of 2002 Requirement	Location in E-Government Act Report to Congress
Sec. 101 (44 U.S.C. § 3606) – Provide a description of projects receiving E-Gov Funds in FY 2016, including funding allocations and results achieved.	Section I – E-Government Fund
Sec. 209 (44 U.S.C. § 3501 note) – Provide a summary of activities related to IT workforce policies, evaluation, training, and competency assessments.	Section II – Government-wide IT Workforce and Training Policies
Sec. 214 (44 U.S.C. § 3501 note) – Provide a summary of how IT is used to further the goal of maximizing the utility of IT in disaster management.	Section III – Disaster Preparedness
Sec. 216 (44 U.S.C. § 3501 note) – Provide a summary of activities on geographic information systems and initiatives, and an overview of the Geospatial Platform.	Section IV – Geospatial
Sec. 101 (44 U.S.C. § 3602(f)(9)) – Sponsor ongoing dialogue to encourage collaboration and enhance understanding of best practices and innovative approaches in acquiring, managing, and using information resources to improve the delivery of Government information and services to the public.	Appendix A - Enhanced Delivery of Information and Services to the Public
Sec. 202(b) (44 U.S.C. § 3501 note) – Develop performance measures.	Appendix B – Performance Integration
Sec. 202(d) (44 U.S.C. § 3501 note) – Ensure comparable accessibility to people with disabilities.	<u>IT Dashboard</u>
Sec. 202(e) (44 U.S.C. § 3501 note) – Engage the public in development and implementation of policies.	Appendix C – Government-Public Collaboration

E-Government Act of 2002 Requirement	Location in E-Government Act Report to Congress
Sec. 203 (44 U.S.C. § 3501 note) – Implement electronic signatures.	Appendix D – Credentialing Note: In an effort to reduce reporting burden on agencies, information for this appendix was not collected this year.
Sec. 204 (44 U.S.C. § 3501 note) – Oversee the development of a Federal Internet Portal.	IT Dashboard
Sec. 206 (44 U.S.C. § 3501 note) – Report to Congress agency compliance with electronic docketing for regulatory agencies. Ensure public websites contain electronic docketing for rulemaking.	Appendix E – E-Rulemaking Note: In an effort to reduce reporting burden on agencies, information for this appendix was not collected this year.
Sec. 207 (e) (44 U.S.C. § 3501 note) – Report on agency compliance with policies pertain to the organization and categorization of Government information, and agency compliance with establishing policies and procedures regarding recordkeeping.	Appendix F – National Archives Records Administration Recordkeeping Note: In an effort to reduce reporting burden on agencies, information for this appendix was not collected this year.
Sec. 207(f)(1)A(ii) (44 U.S.C. § 3501 note) – Report on agency compliance with requirements to make information available to the public under the Freedom of Information Act.	IT Dashboard
Sec. 207(f)(1)(A)(iv) (44 U.S.C. § 3501 note) – Report on agency compliance with requirements to provide an information resources strategic plan.	IT Dashboard
Sec. 207(f)(1)(B) (44 U.S.C. § 3501 note) – Report on agency compliance with developing goals to assist the public with navigating agency websites.	IT Dashboard

E-Government Act of 2002 Requirement	Location in E-Government Act Report to Congress
Sec. 207(g) (44 U.S.C. § 3501 note) – Develop a Government-wide repository and website for all Federally funded research and development.	<u>IT Dashboard</u>
Sec. 208(b) (44 U.S.C. § 3501 note) – Report on agency compliance with developing a privacy policy and conducting privacy impact assessments.	Appendix G – Privacy Policy and Privacy Impact Assessments Note: In an effort to reduce reporting burden on agencies, information for this appendix was not collected this year.
Sec. 209(b)(2) (44 U.S.C. § 3501 note) – Report on agency compliance with establishing information technology training programs.	Appendix H – Agency Information Technology Training Programs

Thanks Jerry.

Hi David and Glenda,

We are still pulling the team together. Once we get everyone, I will follow up with the group.

I am looking forward to working with you on this.

-Maria

Maria,

Good folks from OSIM for this are:

David Updike, my deputy – very knowledgeable and expert on infrastructure issues
Glenda Noel – knowledgeable on data public access, especially the ORD process and status.

They can back each other up.

Thanks,

Jerry

Subject: strengthening transparency in science rulemaking

Hi Jerry,

As I mentioned on Friday on the call on the impacts to ORD of the science transparency rule, we are pulling together an internal team to address public comments submitted in response to the science issues raised in the proposed rule. One of the areas we need support on is the infrastructure for housing and accessing the raw data for studies considered to

be “pivotal regulatory science”. Could we get someone from OSIM to participate on this group? It would be helpful to have someone with a broad view.

This internal team will help us identify issues and draft responses to comments. This would be a collaborative effort with us in OSP and to some extent OGC. We would ask that if needed they participate in one or more Agency workgroup meetings. We are conscious of their time and would only ask them to participate in these meetings when necessary. The participation would start in mid-August and would continue for about 7 months.

Please let me know if you have any questions or need additional information.

Location: DC Location - Ronald Reagan Building Room 41213

Start: 9/12/2018 6:00:00 PM

End: 9/12/2018 8:00:00 PM

Show Time As: Busy

AGENDA

SCIENCE & TECHNOLOGY POLICY COUNCIL MEETING

Wednesday, September 12, 2018

2:00 – 4:00 PM ET

Conference Room (DC): Ronald Reagan Building 4th Floor Room 41213

Personal Phone / Ex. 6

1. Introductory Remarks and Roll Call (10 minutes, to 2:10)

Lead: Jennifer Orme-Zavaleta (Science Advisor)
Roll Call: Anand Mudambi, STPC Coordinator (OSA)

2. Updates: (40 minutes, to 2:50)

- a. Strengthening Transparency Rule (Response to comment and rulemaking): Maria Doa (ORD)
- b. PFAS Coordination : OW
- c. Pb Coordination : Hayley Hughes and Valerie Zartarian (ORD)
- d. Contaminants of Emerging Concern Project : Jeff Frithsen (ORD)
- e. Standing Groups Status : Anand Mudambi (OSA)

3. Voluntary Consensus Standard (VCS) Development - Draft EPA Guidance (20 minutes to 3:10)

Lead: Elise Owen (EPA Standards Executive, housed in OCSPP)
Purpose: Brief the STPC on the development of Agency guidance regarding EPA personnel participation in private sector Voluntary Consensus Standards (VCS) development
Outcome: Inform STPC input on the draft guidance

4. Citizen Science (25 minutes, to 3:35)

Lead: Jay Benforado (OSA)
Purpose: Discussion of Draft Charge to Implement NACEPT and OIG Recommendations
Outcome: Get STPC input on the charge activities

5. RAF Cumulative Risk Assessment (CRA) Technical Panel Products (20 minutes, to 3:55)

Lead: Lawrence Martin (OSA)
Purpose: Inform STPC about the CRA Guidelines on Planning and Problem Formulation, and the Document updating Chemical Mixtures Additivity
Outcome: Preparation for STPC concurrence on the RAF's CRA products for external peer review

6. Summary of Action Items (5 minutes, to 4:00)

Report: Anand Mudambi (OSA)

Next STPC Meeting: Wednesday, December 5, 2018

CLIMATE RESEARCH ELIMINATION

BACKGROUND: Per the President’s FY 2019 budget, the Agency is eliminating climate change research within its Research and Development Program. EPA’s Research and Development Program will continue to support clean air and energy research, and will be prioritizing limited resources to focus on these issues.

KEY POINTS:

- States, local governments, and communities actively request information and tools to prepare for the impacts of climate change. Researchers in the Air and Energy (A&E) research program answered the public need by developing user-friendly tools for communities.
- This research focused on adaptation and community resiliency.
 - *Assessing impacts* – assess human and ecosystem exposures and effects associated with air pollutants and climate change.
 - *Preventing and reducing emissions* – provide data and innovative tools to prevent and reduce air pollution emissions in environmentally sustainable and cost-effective ways.
 - *Responding to changes in climate and air quality* – provide modeling, monitoring, metrics, and information needed to prepare for climate change and make public health decisions regarding air quality.

TALKING POINTS:

- The President’s FY19 budget eliminates climate change research.
- EPA’s climate research focused on adaptation and community resiliency.
- Going forward EPA’s Air & Energy research program will continue to support clean air and energy research.

TALKING POINTS RE CLIMATE WEBSITE:

- We are constantly updating our website to reflect new initiatives and projects of the Agency.
- Of course, the website will be reflective of the current administration’s priorities.
- With that said, all the content from the previous administration is still easily accessible and publicly available. It’s right at the top of the main page of the site.

RESOURCES (Dollars in Millions):

Approp.	FY 2017 Enacted		FY 2018 Enacted		FY 2019 Pres Bud		Delta FY 2018ENA v. FY 2019 Pres Bud	
	\$	FTE	\$	FTE	\$	FTE	\$	FTE
S&T	\$18.9M	48.5	\$19.0M	47.3	\$0.0M	0.0	-\$19.0M	-47.3
Total	\$18.9M	48.5	\$19.0M	47.3	\$0.0M	0.0	-\$19.0M	-47.3

EPA'S INTEGRATED RISK INFORMATION SYSTEM (IRIS)

BACKGROUND:

IRIS was created in 1985 to provide high quality, publicly available information on the toxicity of chemicals to which the public might be exposed. The goal of IRIS is to foster consistency in the evaluation of chemical toxicity across the Agency.

KEY POINTS:

- House Science members recently proposed a bill to move the functions of IRIS, which supports the ORD Human Health Risk Assessment Research Program, into the EPA program offices.
- Over the past 1.5 years, ORD has been responding to NAS and GAO comments and recommendations about the IRIS program. These actions were presented to the NAS this past winter. NAS concluded that EPA made substantial progress. GAO has noted significant improvement in their high-risk criteria ratings.
- EPA's FY 2019 budget request supports IRIS with \$11.9M and 47.0 FTE. This is a reduction of \$10.0M and 36.7 FTE from FY 2018 Enacted levels.

TALKING POINTS:

- I recognize the importance of conducting assessments on sound science – and of conducting them in a timely and transparent manner.
- That's why I'm happy with the improvements in the IRIS program, and it's on a good track for future assessments.
- Since January 2017, IRIS has introduced a number of changes to improve the program.
- Some of these are in response to comments by the National Academy of Science and the GAO. Both NAS and GAO have commended IRIS for these changes.
- For example, IRIS increased transparency by engaging with stakeholders earlier in assessment development, and by fully implementing the principles of systematic review, which creates a clearer evaluation of the underlying science.
- We are also instituting a process where EPA programs and regions will request specific assessments - outlining exactly what they need and why, plus a timeline.
- This is because IRIS assessments are expensive and take a lot of time to do. So, we need to know exactly why the assessment is needed, who the end-user is, and when they need the assessment by. This will ensure greater accountability from both ORD and program and regional offices.
- These changes will bring further stability, confidence, and accountability to the IRIS program in the long term.

FORMALDEHYDE IRIS ASSESSMENT

BACKGROUND: EPA is conducting an IRIS assessment on formaldehyde. There has been congressional interest in the assessment's status.

TALKING POINTS OPTION 1:

- The IRIS assessment of formaldehyde will soon be ready to proceed to Agency review.
- After this, it will undergo the 7-step process negotiated with OMB that all IRIS assessments must go through.
- This process includes engagement across the Agency, the federal government, with the public, and through independent, scientific peer review.
- Both the NAS and SAB will be reviewing the formaldehyde assessment.

TALKING POINTS OPTION 2:

- ORD is currently developing a new approach of soliciting program and regional office input on current and future IRIS assessments, to ensure IRIS assessment activities are focused on the highest priority needs of the Agency.
- The formaldehyde assessment will be included in this activity, and inform our next steps.

ORD SUPPORTS TSCA

BACKGROUND:

In June 2016, Congress passed the Frank R. Lautenberg Chemical Safety for the 21st Century Act. The Lautenberg Act amends TSCA, which is the Nation's primary chemical management law. The new law, which received bipartisan Congressional support, includes much needed improvements to protect American families from the potential health effects of chemicals, including: mandatory requirements for EPA to evaluate existing chemicals with clear and enforceable deadlines, risk-based chemical assessments, increased public transparency for chemical information, and a consistent source of funding for EPA to carry out the responsibilities of the new law. EPA's research is providing critical chemical data, information, tools, and approaches to support the agency's implementation of the amended TSCA.

KEY POINTS:

- TSCA section 6 describes a new approach for evaluating the safety of existing chemicals, which includes chemical prioritization, risk evaluation, and risk management. EPA researchers are developing innovative ways to prioritize chemical substances and complete timely risk evaluations, including:
 - Creating tools to generate, compile and manage data associated with approximately 40,000 chemical substances on the TSCA Active Inventory;
 - Developing approaches for prioritizing chemicals and completing detailed chemical evaluations of existing chemicals; and
 - Providing technical support and expertise for chemical-specific risk evaluations.
- EPA researchers have responded to requests from Congress regarding the Lautenberg Act. Rising to the challenge of reducing the use of vertebrate animals in chemical testing, EPA scientists developed a Strategic Plan for promoting the development of new approach methodologies (TSCA section 4) and strategies to reduce, refine or replace vertebrate animal testing. The Strategic Plan was released on June 22, 2018 (the second anniversary of the signing of the Lautenberg Act), and is now being implemented to develop, test, and adopt chemical testing approaches that broaden understanding of chemical impacts on biological systems, expedite testing, decrease overall testing costs, and provide support for risk evaluations

TALKING POINTS:

- EPA's research is providing critical chemical data, information, tools, and approaches to support the agency's implementation of the amended TSCA.
- Our scientists developed a Strategic Plan that will help reduce animal testing.
- They have also provided the tools for EPA regulators to meet each of the deadlines outlined in the Lautenberg Act.
- EPA science is leading the world in the development of new approaches for improving and expediting chemical testing and evaluation, saving money for industry, and protecting consumers.

HARMFUL ALGAL BLOOMS (HABS) RESEARCH

BACKGROUND: HABs are overgrowths of toxin-producing algae (including cyanobacteria) in fresh or marine waters that can cause a variety of negative ecological, economic, and health impacts. Excessive concentrations of nutrients exacerbate the frequency and severity of blooms. The frequency, intensity, and duration of HABs can negatively impact drinking and recreational waters.

KEY POINTS:

- EPA research is focused on providing decision makers, including states, municipalities, water treatment facilities, and tribes, with improved scientific information and tools to more effectively identify and predict HABs events, and to manage the health and ecological risks associated with them.
- Research also focuses on developing methods to predict and characterize blooms with innovative technology.
- An example of a recent accomplishment is the *Cyanobacteria Assessment Network (CyAN) mobile application*.
 - The CyAN app is the first platform for immediate HABs decision support for U.S. freshwater systems.
 - CyAN is operational and providing weekly data to collaborators. It is currently available to any state regulatory agency or health department for beta testing.
- EPA develops drinking water methods for use in monitoring hazardous algal blooms. EPA was a key player in the Toledo, OH drinking water crisis a few years ago.

TALKING POINTS:

- Harmful algal blooms, or HABs, can impact American's drinking water and recreational water, such as lakes, rivers, and beaches.
- This can negatively affect the ecosystem, the local economy, and, most importantly, our citizens' health.
- That's why EPA researchers are working closely with states and communities, including water treatment facilities and tribes, to provide the tools and scientific information they need to identify and predict HABs events, and to manage the health and ecological risks associated with them.
- Our research also focuses on developing methods to predict and characterize blooms with innovative technology.
- For example, we recently developed an app, called CyAN, that provides weekly data that our federal, state, and local partners can use to monitor their efforts to assess water quality.
- If a community is affected by a harmful bloom, EPA researchers can work directly with the community to manage potentially negative effects, such as helping treat drinking water.

ANIMAL TESTING AT EPA

BACKGROUND: EPA has taken many steps to drastically reduce animal testing. However, currently there are no good cellular or computational models that can accurately represent all the effects of pollutants on all organs. Studies on the health effects of pollutants using animals are critical to provide biological plausibility to observations of human health impacts of pollutants. These studies are needed to achieve EPA's core mission of protecting human health.

KEY POINTS:

- In June, the Agency released a "Strategic Plan to Promote the Development and Implementation of Alternative Test Methods Within the TSCA Program." EPA is working hard on developing these alternative testing methods.
- As a federal research institution, EPA adheres to the US Government Principles for the Utilization and Care of Vertebrate Animals Used in Testing, Research, and Training. EPA is accredited by the Association for Assessment and Accreditation of Laboratory Animal Care International and assured by the Public Health Service. All of EPA's animal studies are carefully reviewed to ensure they meet the highest standards of the Institutional Animal Care and Use Committee.
- A recent article in the Daily Caller highlighted a letter sent to EPA by six members (3 Republican, 3 Democrat) about the money spent on animal testing in Research Triangle Park.

TALKING POINTS:

- Animal testing is a wide-spread practice used by industry, academia and government scientists.
- Prior to and consistent with direction in the Lautenberg legislation, EPA has taken many steps to drastically reduce animal testing.
- However, animal testing is still needed to help us protect human health.
- This is because there are currently no adequate cellular or computational models that can accurately represent all the effects of pollutants on all organs.
- When we do have to use animal studies, EPA follows the highest possible ethical standards.
- We adhere to the US Government Principles for the Utilization and Care of Vertebrate Animals Used in Testing, Research, and Training.
- EPA is also accredited by the Association for Assessment and Accreditation of Laboratory Animal Care International.
- EPA has certified animal care facilities, and all animal testing protocols are reviewed and approved by an Institutional Animal Care and Use Committee.

PROPOSED RULE TO STRENGTHENING TRANSPARENCY IN REGULATORY SCIENCE

BACKGROUND: On April 30, 2018, EPA announced a proposed rule to strengthen transparency in regulatory science. The comment period on the proposed rule is currently open and will close on August 16, 2018.

KEY POINTS:

- This action seeks to ensure that the regulatory science underlying EPA's actions is publicly available in a manner sufficient for independent validation. Where available and appropriate, EPA will use peer-reviewed information, standardized test methods, consistent data evaluation procedures, and good laboratory practices to ensure transparent, understandable, and reproducible scientific assessments.
- The public comment period originally closed on May 30, but after requests from the public and from House and Senate Democrats (including Sens. Carper and Whitehouse), the comment period was extended to August 16, and EPA decided to hold a public hearing.
- On July 17, EPA held a public hearing on the proposed rule. Congress Members Tonko, Bonamici, and Lipinski testified.

TALKING POINTS:

- I am here to protect two competing interests - access to science and data, while at the same time protecting confidential and personal information.
- These two interests are not mutually exclusive. I am committed to ensuring both and by doing so will strengthen the confidence in the work that EPA produces.
- The proposed rule to Strengthen Transparency in Regulatory Science seeks to ensure that the regulatory science underlying EPA's actions is publicly available in a manner sufficient for independent validation.
- The comment period for the proposed rule is open until August 16, 2018. We encourage people to submit their comments at [regulations.gov](https://www.regulations.gov).
- We also recently held a public hearing to get feedback on the proposed rule.
- As of July 25, 2018, EPA has received over 217,000 public comments.
- EPA will address all public comments before moving forward with the final rule. An Action Development Workgroup will handle this process.
- In implementing this rule, we will ensure that all private data is protected.
- EPA supports increasing access to scientific information and has made strides in making its federally-funded data available to the public. You can see EPA's plan to do this at [epa.gov/open](https://www.epa.gov/open).

SCIENCE BOARDS

BACKGROUND: EPA has 22 advisory committees that fall under the Federal Advisory Committee Act (FACA). These committees provide advice to the agency on issues that range from science and economics to air quality. Earlier this year, Former Administrator Pruitt appointed new leadership and several new members to three important and independent advisory committees: the Clean Air Scientific Advisory Committee (CASAC), the Science Advisory Board (SAB), and the Board of Scientific Counselors (BOSC – this happened in 2017). The Former Administrator also issued a new directive to ensure that any advisors serving on an EPA Federal Advisory Committee (FAC) are independent and free from any real, apparent, or potential interference with their ability to fairly and objectively serve as a committee member.

TALKING POINTS:

- These committees help ensure that we are doing our best as an Agency by giving independent scientific advice to inform sound decision-making.
- Each year the Agency has the opportunity to appoint new members to these committees. In a fair and transparent fashion, EPA reviews the qualifications of hundreds of new individuals nominated for these committees.
- Currently there are 36 nominations for membership to the Clean Air Scientific Advisory Committee (CASAC). The Agency expects to have final decisions on who will be serving on the CASAC by October 1, 2018.
- The Science Advisory Board (SAB) is currently in the process of soliciting membership for the Board and four of its Standing Committees. Decisions are expected in the Fall of 2018.
- Last year, EPA appointed 43 new members to the Board of Scientific Counselors.
- Opening the competitive nomination process to ensure fair consideration of nominees has resulted in appointments that increase diversity of scientific views and increase membership from different geographic areas, states, tribes, and other sectors.
- Members include those from the entire environmental stakeholder community – NGOs, academia, industry, and state, tribal and local officials. The makeup of the membership speaks to my commitment to science and willingness to listen to thoughtful expertise from all perspectives.
- Consistent with the directive on strengthening and improving membership on EPA's federal advisory committees, moving forward, non-governmental and non-tribal members will be independent from EPA, meaning that members of EPA's federal advisory committees should not be currently in receipt of EPA grants, or in a position that otherwise would reap substantial direct benefit from an EPA grant.
- As is stated in the directive, I reserve my right to exercise my discretion to look at appointments on a case by case basis.
- I look forward to working with these impressive committee members, who will bring their expertise and varied perspectives as they work and advise the Agency on complex science issues that EPA and our state, tribal, local and community partners face every day.

VIEQUES, PUERTO RICO

BACKGROUND: The former Vieques Naval installation is a 23,000-acre facility located on Vieques Island, Puerto Rico. From the mid-1940s until 2003, significant amounts of munitions items were fired during military training. In 2005, large portions of Vieques and the surrounding waters were placed on the National Priorities List (NPL). The site has unique challenges such as unexploded ordnance across thousands of acres of land and sea floor, abundant ecologically and culturally sensitive resources, and the sometimes-differing viewpoints and objectives of numerous stakeholders.

KEY POINTS:

- Senator Wicker recently spoke with former Administrator Pruitt about the issue in Vieques, and if EPA could give a grant to Mississippi State University to assist.
- EPA does not have block-grant authority, and ORD's grant authority does not allow for non-competitive research grants as described in the request from the Mayor of Vieques.
- ORD supports the goal and has been working with OCFO on funding and to determine the best legally-available avenue for assisting Vieques and coordinating with Mississippi State University.
- The best approach appears to be providing technical assistance via an EPA support contract. ORD is working to gather additional information and identify a contract that could be used for this effort. However, given contracting requirements, it is highly unlikely the work under the contract could be sole-sourced to Mississippi State University.

TALKING POINTS:

- Providing assistance to Vieques is a priority for EPA.
- Our research grant authority does not allow for non-competitive research grants, as requested for Mississippi State University.
- However, we are currently exploring options to determine the best legally-available avenue for assisting Vieques and coordinating with Mississippi State University.
- This could be a competitive research grant, but we are still working on figuring out the best way to help.
- We hope to have this assistance mechanism in place as soon as possible.

TITLE 42

BACKGROUND: The Title 42 authority provides EPA with an important tool to make the critical workforce investments needed to accomplish its mission to protect human health and the environment. It allows EPA's Office of Research and Development (ORD) to nimbly respond to changing priorities and organizational needs of EPA programs and regions, as well as its state partners.

KEY POINTS:

- Representative Burgess recently sent EPA a letter criticizing EPA's use of Title 42.

TALKING POINTS:

- The Title 42 authority allows EPA to make the critical workforce investments needed to accomplish its mission to protect human health and the environment.
- It allows EPA's Office of Research and Development (ORD) to nimbly respond to changing priorities and organizational needs of EPA programs and regions, as well as its state partners.
- These needs include areas such as TSCA reform and lead and water infrastructure.
- Without Title 42, ORD would have trouble competing for pre-eminent talent, would likely lose essential scientific experts to other organizations, and would lose the flexibility in the workforce needed to quickly address the nation's most pressing environmental concerns.
- EPA's use of the Title 42 authority allows flexibility in EPA's scientific workforce to address the nation's various pressing environmental problems.
- It also increases EPA's ability to provide state, tribal, and local partners with the high quality scientific tools and information needed to protect air, land, and water.

TIRE CRUMB

BACKGROUND: On February 12, 2016, the U.S. Environmental Protection Agency (EPA), the Centers for Disease Control and Prevention/Agency for Toxic Substances and Disease Registry (ATSDR), and the Consumer Product Safety Commission (CPSC) launched a multi-agency Federal Research Action Plan on Recycled Tire Crumb Used on Playing Fields and Playgrounds to study key environmental and human health questions.

KEY POINTS:

- Staffers from House, particularly HEC, regularly ask for updated on the report.

TALKING POINTS:

- Concerns have been raised by the public about the safety of recycled rubber tire crumb used in synthetic turf fields and playgrounds in the United States.
- We know people are concerned and players and their families want answers.
- Limited studies have not shown an elevated health risk from playing on fields with tire crumb, but the existing studies do not comprehensively evaluate the concerns about health risks from exposure to tire crumb.
- We are committed to supporting more comprehensive efforts to assess risks from tire crumb, and are working with the Centers for Disease Control and the Consumer Product Safety Commission.
- We are currently working on a report that fills important data and knowledge gaps, characterizes constituents of recycled tire crumb, and identifies ways in which people may be exposed to tire crumb based on their activities on fields.
- The report will provide a better understanding of potential exposures that athletes and others may experience and will help answer some of the key questions that have been raised.
- While this effort won't provide all the answers about whether synthetic turf fields are safe, it represents the first time that such a large study is being conducted across the U.S.
- The draft report was sent for external peer review in May 2018. EPA and CDC continue to work together on this report. We have received peer review comments and are currently reviewing them. We expect to release the report for public comment in late summer/early fall.

ADDITIONAL INFORMATION

EPA RESEARCH SUPPORT FOR STATES

BACKGROUND: ORD provides vital scientific and technical resources to states and their communities, including technical support and training, science-based tools, and innovative approaches and methods, which helps them meet environmental and public health challenges.

KEY POINTS:

- Examples of ORD work to support states include: algal toxin management support (Ohio); technical assistance in chemical facility (LaPlace, LA) and water distribution (Corpus Christi, TX) matters, and technical and data support in making PFAS management decisions for drinking water issues in multiple regions and states (NC, NH, NJ, WV, etc.)
- Example activities to strengthen ORD's partnership with states include:
 - Providing regular calls and monthly public webinars on topics of interest to states, including bimonthly calls with ECOS/states to share information on PFAS toxicity, methods and treatment work. This will make EPA research and applied science tools more accessible to states.
 - Inviting state environmental agency leaders and staff to ORD laboratories to discuss topics of interest and connect them with EPA research and expertise, and for ORD to learn more about environmental challenges states are confronting in the field. Recent meetings include: Region 4 Southeastern and neighboring states' visit to EPA RTP (August 2017); R5 Midwest and neighboring states' visit to EPA Cincinnati (February 2018); and R1 New England states' visit to ORD's Narragansett, RI lab (June 2018).
 - Increasing interactions with state media associations, including air (AAPCA and NACAA), water (ACWA and ASDWA) and waste (ASTSWMO) to ensure EPA research addresses state needs.
- ORD collaborates with the Interstate Technology & Regulatory Council on stormwater, per- and poly-fluorinated alkyl substances (PFAS) and remediation technical issues.
- ORD sponsors the Regional Applied Research Effort (RARE) program to respond to the high priority applied research needs of EPA regions, state and local governments, and tribes.

TALKING POINTS:

- ORD has a strong partnership with the states and works closely with state associations like ECOS and ASTHO.
- ORD provides important science and technical information to states to help meet their immediate and long-term needs so that they can protect their health and environment.
- EPA ORD has developed critical partnerships with state environmental and health agencies to ensure its work is relevant to real-world environmental challenges, and that ORD's scientific findings and tools are delivered and translated to decision makers.
- ORD has partnered with the Environmental Council of the States (ECOS) to ensure EPA research is useful and practical for states to help address their on-the-ground problems.

ADDITIONAL INFORMATION

SCIENCE TO ACHIEVE RESULTS (STAR) GRANTS PROGRAM ELIMINATION

BACKGROUND: Beginning in 1995, the STAR program has funded research grants in numerous environmental science and engineering disciplines through a competitive solicitation process and independent peer review. More than 100 institutions utilized this program in recent years.

KEY POINTS:

- Per the FY 2019 President’s Budget, EPA is eliminating the STAR grants program. EPA’s Research and Development Program is focused on EPA’s core mission of supporting human health and environment.
- Two House members (Ellison and Grijalva) recently sent a letter criticizing plans to eliminate the STAR program.
- STAR grants were offered through 4 of EPA’s national research programs:
 - Sustainable and Healthy Communities Program - Provided funding for the NIEHS/EPA Children’s Centers, advanced knowledge of how children’s health is impacted by the environment, genetics and other factors.
 - Chemical Safety and Sustainability Program - Advanced scientific understanding of the impacts of manufactured chemicals on ecosystem health.
 - Air and Energy (A&E) Program - Provided funding for A&E centers to inform state and local policy makers regarding effective air pollution control strategies to reduce air pollution exposure.
 - Safe and Sustainable Water Resources Program - Provided funding for Green Infrastructure research which identified solutions for stormwater runoff prevention and contamination of local waterways.

TALKING POINTS:

- STAR is EPA’s primary competitive, peer-reviewed, extramural grants program.
- Since its inception, the program has awarded more than 7,600 research grants throughout the nation.
- STAR stimulates and supports scientific and engineering research that advances the agency’s mission to protect human health and the environment. It also provides access to the nation’s best scientists and engineers in academic and other nonprofit research institutions.

ADDITIONAL INFORMATION
HOMELAND SECURITY RESEARCH PROGRAM

BACKGROUND: EPA’s Homeland Security Research Program provides critical science to fulfill statutory emergency response and bioterrorism responsibilities, and supports EPA’s efforts to help communities prepare for and respond to disasters.

KEY POINTS:

- The Homeland Security Research Program sustained reductions in FY 19 in the following areas:
 - o Strategies and methods for cleanup of chemical and radiological agents;
 - o Computational tools and contamination sensors to enhance water systems’ ability to prepare for and respond to environmental disasters; and
 - o Research to inform voluntary standards and guidelines to reduce cyber risks to water infrastructure.
- Homeland Security Research Program will continue to strive to protect human health and the environment by prioritizing the following research activities:
 - o Developing higher-throughput sampling approaches and analytical methods, decontamination technologies, and decision support tools for expedient and effective bio-agent remediation; and
 - o Developing methods to decontaminate water infrastructure to bring water systems back online quickly, including cleanup of household plumbing and management of the associated contaminated water.

TALKING POINTS:

- EPA has responsibilities for protection of the Nation’s drinking water infrastructure and supply, and for coordinating remediation of nationally-significant environmental incidents.
- EPA’s Homeland Security Research Program provides critical science to fulfill these statutory emergency response and bioterrorism responsibilities.
- Our Homeland Security Research Program also supports EPA’s efforts to help communities prepare for and respond to disasters.
- For example, the homeland security researchers are advancing wide-area decontamination approaches such as those needed for large-scale incidents like the Fukushima Daiichi Nuclear Power Plant Accident.
- EPA’s Homeland Security Research Program works collaboratively with internal and external stakeholders to improve drinking water utilities’ ability to respond to contamination, as demonstrated during water emergencies in Charleston, WV, and Corpus Christi, TX.

ADDITIONAL INFORMATION
EPA's COMPUTATIONAL TOXICOLOGY RESEARCH

BACKGROUND: EPA's Computational Toxicology Research Center develops methods to efficiently screen large numbers of chemicals in a short amount of time, using fewer research dollars than conventional toxicity testing and exposure methods.

KEY POINTS:

- EPA's FY 2019 budget request supports the computational toxicology and exposure research (CompTox) program with \$17.2M and 46.3 FTE. This represents a reduction of \$4.2M and 6.1 FTE from FY 2018 Enacted levels.
- In FY 2019, The Program will provide essential support to the Agency in:
 - Fulfilling requirements for chemical prioritization under the revised Toxic Substances Control Act (TSCA).
 - Implementation of the Strategic Plan for Alternative Test Methods and Strategies to Reduce Vertebrate Animal Testing under TSCA.
 - Developing screening-level risk assessments for data-poor chemicals (e.g., per- and polyfluoroalkyl substances, or PFAS).
 - Releasing on-line dashboards to disseminate integrated, publicly available chemical safety data (<https://comptox.epa.gov/dashboard>).
 - Developing decision support tools that help program offices and states with chemical safety decisions (e.g., prioritization).
- One of EPA's main contributions to Tox21 collaboration is ToxCast – a state-of-the-art screening tool for environmental chemicals.

TALKING POINTS:

- EPA's CompTox research is making chemical screening faster and cheaper than traditional methods.
- The CompTox research is also developing methods that reduce animal testing.
- EPA's CompTox research supports TSCA by providing critical chemical safety data.

Ban On “Secret Science” In EPA Regulation Makes Sense

Editorial

March 26, 2018

<http://newsok.com/article/5588210/ban-on-secret-science-in-epa-regulation-makes-sense>

The Environmental Protection Agency has announced it will now base new regulations only on the findings of scientific studies whose data and methodology are made public so they can be subjected to independent review. That’s a sound move in line with basic scientific transparency and professionalism.

Yet it's being treated as a sign of impending apocalypse by some on the left, which says much about the questionable validity of that group's policy prescriptions.

In an interview with The Daily Caller News Foundation, Administrator Scott Pruitt said the EPA will end its use of studies that do not publish underlying data, only conclusions. “Otherwise, it’s not transparent. It’s not objectively measured, and that’s important,” Pruitt said.

In the past, the EPA has advanced air-quality regulations that imposed massive costs based primarily on the findings of two studies done in the 1990s that linked fine particulate pollution to premature death. Neither study made associated data public.

U.S. Rep. Lamar Smith, R-Texas and chairman of the House Committee on Science, Space and Technology, has long criticized the use of “secret science” and authored legislation to curtail its use by regulators. Last year, Smith said the EPA had “routinely relied on questionable science based on nonpublic information that could not be reproduced, a basic requirement of the scientific method.”

“Americans deserve to see the science for themselves,” Smith said. “If the EPA has nothing to hide, why not make the scientific data it uses for its regulations publicly available? What was the EPA hiding?”

That will strike most people as a fair question. But to some activists, the idea that science should involve review and scrutiny is apparently anathema. In response to a prior effort to ban “secret science” at the EPA, Andrew Rosenberg, director of the Union of Concerned Scientists’ Center for Science and Democracy, said transparency would “gut the EPA at the expense of public health and safety.”

That same group has claimed release of data would require publicizing the confidential patient data of individuals. But Steve Milloy, publisher of JunkScience.com and a senior fellow at the Energy and Environmental Legal Institute, notes that California already makes similar data available in its “Public Use Death Files,” and that has been accomplished without violating patient privacy.

Other critics object that there are costs involved in scrubbing data sets so patient privacy is protected. Perhaps, but that doesn’t mean the public should be kept in the dark about the data and methods used to justify literally billions in new regulatory burden.

Scientific studies are as susceptible to human error and even outright fraud as any other endeavor – particularly when such studies are used in the political realm. Facilitating transparency and independent review will reduce the chances of bad science harming Americans with half-baked regulations, and should enhance the case for regulations when the underlying science has withstood independent scrutiny.

Given the stakes for public health and the national economy, Americans must be assured government regulations are based on sound science, not someone’s “trust me” assurances.

THE WALL STREET JOURNAL

The EPA Cleans Up Its Science

Now Congress Should Act To Lock In Place Data Transparency

Steve Milloy

March 26, 2018

The Environmental Protection Agency will no longer rely on “secret” scientific data to justify regulations, Administrator Scott Pruitt announced last week. EPA regulators and agency-funded researchers have become accustomed to producing unaccountable, dodgy science to advance a political agenda.

The saga began in the early 1990s, when the EPA sought to regulate fine particulate matter known as PM_{2.5}—dust and soot smaller than 2.5 microns in diameter. PM_{2.5} was not known to cause death, but by 1994 EPA-supported scientists had developed two lines of research purporting to show that it did. When the studies were run past the EPA’s Clean Air Science Advisory Committee, it balked. It believed the studies relied on dubious statistical analysis and asked for the underlying data. The EPA ignored the request.

As the EPA prepared to issue its proposal for PM_{2.5} regulation in 1996, Congress stepped in. Rep. Thomas Bliley, chairman of the House Commerce Committee, sent a sharply written letter to Administrator Carol Browner asking for the data underlying studies. Ms. Browner delegated the response to a subordinate, who told Mr. Bliley the EPA saw “no useful purpose” in obtaining the data. Congress responded by inserting a provision in a 1998 bill requiring that data used to support federal regulation must be made available to the public via the Freedom of Information Act. But it was hastily written, and a federal appellate court held the law unenforceable in 2003.

The controversy went dormant until 2011, when a newly Republican Congress took exception to the Obama EPA’s antioal rules, which relied on the same PM_{2.5} studies. Again the EPA was defiant. Administrator Gina McCarthy refused requests for the data sets and defied a congressional subpoena.

Bills to resolve the problem died in the Senate. Democrats argued that requiring data for study replication is a threat to intellectual property and an invasion of medical privacy. In fact, the legislation would protect property by requiring a confidentiality agreement, and no personal medical data or information would have been released.

This sort of data is already routinely made public for research use. In 2012 I was desperate for a way around the Obama EPA’s secrecy on the PM_{2.5} issue, I found out in 2012 that I could get California death-certificate data in electronic form. The state’s Health Department calls this sort of data “Death Public Use Files.” They are scrubbed of

all personal identifying and private medical information. Some of my colleagues used this data to prepare a 2017 study, which found PM2.5 was not associated with death.

The best part is that if you don't believe the result, you can get the same data for yourself from California and run your own analysis. Then we'll compare, contrast and debate. That's how science is supposed to work.

It would be better if Congress would pass a law requiring data transparency. A future administrator may backslide on the steps Mr. Pruitt is taking. In the meantime, we have science in the sunshine.

EPA Cites Studies That Might Run Afoul of Pruitt's Proposed Rule

Posted May 2, 2018, 8:07 AM

By Eric Roston

- Air Quality Awareness Week outreach may cause conflict
- Rule proposal would aim for more 'transparency' in science

It's [Air Quality Awareness Week](#) and the Environmental Protection Agency is taking the opportunity to share some important medical advice.

In a series of tweets and elsewhere online, the agency is drawing attention to the impact of air pollution on health by citing scientific studies and other material.

But critics were quick to point out that some of the very studies being highlighted might not be allowed under proposed guidelines to restrict studies used in policy making.

On April 24, EPA Administrator Scott Pruitt proposed the "Strengthening Transparency in Regulatory Science" rule that would break with decades of federal practice by limiting the science available to regulators. Pruitt said the proposal was designed to enhance transparency in rulemaking, but critics say it could preclude the use of studies that rely on data that has been anonymized, with information that could identify the participants removed.

That's why otherwise innocuous Twitter posts from several EPA accounts—including the [EPA Office of Research and Development](#); [EPA Region 6](#), which covers the south-central U.S.; and [EPA Indoor Air Plus](#)—on air quality have become noteworthy.

Air Pollution and Lead Exposure

The posts link to a range of materials, from news articles, such as an April 17 Reuters [story](#) about links between heart disease and air pollution, to a peer-reviewed article about [child lead exposure](#) science and policy making. The latter

study was published in the September issue of Environmental Health Perspectives, a journal supported by the National Institute of Environmental Health Sciences.

John Walke, a senior attorney and clean-air director at the Natural Resources Defense Council, said some of those studies wouldn't pass muster under Pruitt's proposal.

"If enacted, Pruitt's plan could bar the agency from relying on important studies like these when setting health standards," Walke said by email.

The administration and conservative activists commonly label the practice of granting confidentiality to people included in some of those studies "secret science." Environmentalists say Pruitt's move is censoring science.

"The administrator is absolutely right to want to make sure the basis for federal policy is strong and relies on research that is reproducible," said Michael Greenstone, the Milton Friedman professor of economics at the University of Chicago. "Where I find it difficult to follow the logic is assigning zero weight to research that has been peer-reviewed and complies with the disclosure regulations of federal agencies that have collected the data,"

The EPA press office did not respond to emails requesting comment.

Science Reforms Talkers

- New rule will end to the era of secret science at EPA by requiring the agency to ensure that the regulatory science underlying its actions is fully transparent. EPA will only rely on science that is publicly available. This allows for third-parties to test, authenticate, and reproduce scientific findings.
- This proposed rule is part of a larger effort to reform how EPA conducts its own science.
 - Last October, Scott Pruitt issued a new directive today to ensure that any advisors serving on an EPA Federal Advisory Committee (FAC) are independent and free from any real, apparent, or potential interference with their ability to objectively serve as a committee member.
 - The directive explains that: members shall be independent from EPA, which shall include a requirement that no member of any of EPA's federal advisory committees be currently in receipt of EPA grants, either as principal investigator or co-investigator, or in a position that otherwise would reap substantial direct benefit from an EPA grant. This principle would not apply to state, tribal or local government agency recipients of EPA grants. An accompanying memorandum issued by EPA Administrator Pruitt explains the directives to improve the independence and integrity of EPA's FACs in ways that advance the Agency's mission.
 - More here:
<https://www.epa.gov/newsreleases/administrator-pruitt-issues-directive-ensure-independence-geographic-diversity>
- EPA Scientific Integrity Policy, February 2012: "Scientific research and analysis comprise the foundation of all major EPA policy decisions. Therefore, the Agency should maintain vigilance toward ensuring that scientific research and results are presented openly and with integrity, accuracy, timeliness, and the full public scrutiny demanded when developing sound, high-quality environmental science."
- This proposed rule is in line with the scientific community's moves toward increased data sharing to address the "replication crisis," in which a significant proportion of published research may be false or not reproducible. Examples of the current data access provisions for authors publishing in major scientific journals:
 - Science: "All data used in the analysis must be available to any researcher for purposes of reproducing or extending the analysis."
 - Nature: "This policy builds upon our long-standing policy on data availability, which requires that authors make materials, data, code, and associated protocols promptly available to readers without undue qualifications. The preferred way to share large data sets is via public repositories."
 - Proceedings of the National Academy of Sciences: "To allow others to replicate and build on work published in PNAS, authors must make materials, data, and associated protocols, including code and scripts, available to readers."

Nancy,

I'm writing to reiterate my invitation to Jennifer Orme-Zavaleta to participate in the panel discussion about science in the Trump administration? The panel is scheduled for 2pm on Friday Oct. 5 during the Society for Environmental Journalists conference.

I have a deadline to provide names of participants by Aug. 15, so I would be grateful for a reply by then. Of course if she would like to participate but needs more time to confirm, I can definitely tell conference organizers that.

The conference will be in Flint Michigan. Each panelist will be asked to give a brief opening statement and then we will field questions from the audience.

Perhaps Orme-Zavaleta could speak briefly about why the Trump administration proposed its secret science rule: <https://www.epa.gov/newsreleases/epa-administrator-pruitt-proposes-rule-strengthen-science-used-epa-regulations>.

Sincerely,
Elizabeth Shogren

On Fri, Aug 3, 2018 at 11:13 AM, Elizabeth Shogren <eshogren@revealnews.org> wrote:

Hi Nancy,
I hope this email finds you well and enjoying your summer.
Tomas Carpenter tells me you are the contact person who can help me secure participation in my SEJ panel about the Trump administration's approach to science.
Please let me know if there's something else I should do to property invite Ms. Orme-Zavaleta to participate.
Sincerely,
Elizabeth Shogren

On Tue, Jul 31, 2018 at 9:44 AM, Carpenter, Thomas <Carpenter.Thomas@epa.gov> wrote:

Ms. Shogren,

I forwarded your request to our staff in the Office of Public Affairs as well as the staff you mentioned in your email. I understand there are several SEJ requests and the OPA staff are the point of contact. Ms. Grantham's staff are the best point of contact for your panel request.

Best Regards,

Thomas Carpenter

Subject: invitation to SEJ panel

Mr. Carpenter.

Thank you for speaking with me.

I'm moderating a panel on October 5 about science in Trump administration as part of the Society of Environmental Journalism's annual conference, which this year will be in Flint, Michigan.

I would greatly appreciate if Jennifer Orme-Zavaleta would participate in the panel.

The conference will be in Flint Michigan. Each panelist will be asked to give a brief opening statement and then we will field questions from the audience and I will likely ask some questions as well. Panelists will be encouraged to engage each other as well. Perhaps Orme-Zavaleta could speak briefly about why the Trump administration proposed its secret science rule: <https://www.epa.gov/newsreleases/epa-administrator-pruitt-proposes-rule-strengthen-science-used-epa-regulations>.

I would be very grateful if you would relay the invitation.

Thank you.

Best wishes,

Elizabeth Shogren

Subject: More groups demand wider scrutiny of Pruitt's science rule

More groups demand wider scrutiny of Pruitt's science rule

Sean Reilly, E&E News reporter

Published: Tuesday, May 8, 2018

EPA is legally bound to run its "secret science" proposal before the Clean Air Scientific Advisory Committee, according to former agency employees. Robin Bravender/E&E News

Not only must EPA hold a public hearing on a controversial proposal to overhaul its handling of scientific research, but it must also run the plan past two key advisory committees, an advocacy group made up mainly of former agency employees argues in newly filed comments.

Under a 1978 law that applies to any proposed "criteria document," EPA must submit the draft rule to the Science Advisory Board for review, according to the [filing](#) released late yesterday by the Environmental Protection Network.

And because the [proposed rule](#) would amend air quality criteria for lead and particulate matter, EPA must also give the Clean Air Scientific Advisory Committee the opportunity to weigh in, two of the group's leaders said in the comments.

If the committee recommends any changes, EPA Administrator Scott Pruitt must consider those recommendations and offer "a reasonable explanation" if he opts against adopting them.

"EPA cannot proceed with this action until these requirements are satisfied," they added in citing the need for the committee's review.

EPA press aides did not reply to an emailed request for comment this morning on that score.

The draft rule, published early last week in the *Federal Register*, would effectively bar EPA from using scientific studies in crafting significant new regulations unless the underlying data and models are "publicly available in a manner sufficient for validation and analysis."

While Pruitt has touted the proposal as a means of boosting public confidence in EPA regulatory decisions, critics say it's intended to block the agency from tapping valid research that might justify the need for stronger rules to protect public health and the environment.

Dozens of advocacy groups and Democratic elected officials have also called for an extension of the current 30-day public comment period by anywhere from two to five months.

The existing timetable will make it difficult to fully analyze and address "these far-reaching and long-lasting adverse impacts of this rule on the nation's air quality," the American Lung Association said in one such request last week.

In its own missive, the Environmental Protection Network sought a 90-day comment period, adding that EPA must also hold a public hearing in light of the potential ramifications for the Clean Air Act.

The group, founded early last year, is made primarily of ex-EPA staffers but also includes former state government employees, a spokeswoman said this morning. It has already released two critical analyses of the draft rule.

In arguing that two prominent EPA advisory panels also have a statutory role to play in evaluating the proposal, it has added to a growing chorus of objections.

The Clean Air Scientific Advisory Committee is a seven-member panel that provides outside expertise to EPA during statutorily required reviews of the air quality standards for a half-dozen "criteria" pollutants named in the Clean Air Act.

Its input is needed in the case because EPA wants to bypass two court rulings that previously upheld the agency's prerogative to tap "non-public data" in setting standards for airborne lead and particulate matter.

The agency is now "proposing to exercise its discretionary authority to establish a policy that would preclude it from using such data in future regulatory actions," according to a footnote in the proposed rule that cites those two rulings, both by the U.S. Court of Appeals for the District of Columbia Circuit.

The Science Advisory Board, which currently has 44 members, offers advice to EPA on a variety of topics. Under the 1978 law, known as the Environmental Research, Development and Demonstration Authorization Act, Pruitt must give the board the chance to assess "any proposed criteria document, standard, limitation, or regulation," the Environmental Protection Network said in its comments.

While the board can provide feedback on the proposal, however, Pruitt doesn't need its approval to move forward, the network said.

Subject: Pruitt science rule seen undermining EPA's 'war on lead'

Pruitt science rule seen undermining EPA's 'war on lead'

[Ariel Wittenberg](#), E&E News reporter

Published: Tuesday, May 8, 2018

EPA Administrator Scott Pruitt may be the biggest deterrent to his "war on lead." Evan Vucci/Associated Press

EPA Administrator Scott Pruitt has declared a "war on lead," and is also leading an assault on so-called "secret science."

His critics say the two initiatives are at war with each other.

Last month, Pruitt proposed a science transparency rule that would effectively bar EPA from using studies in crafting significant regulations unless the underlying data "are publicly available in a manner sufficient for independent validation."

If that rule is finalized, health advocates say, it could bar EPA from considering many studies that prove threats posed by lead.

"This is waging war on the war on lead," said Erik Olson, who directs the Natural Resources Defense Council's health program.

Advertisement

Pruitt proposed the science proposal as EPA is working to rewrite standards for lead in dust, paint and drinking water. It's unclear whether the proposed "transparency" rule would be finalized in time to be in effect for current lead rewrites, but it could still come into play for future decisions about Superfund sites contaminated with lead, as well as future lead air standards that must be rewritten every five years.

Lead is a potent neurotoxin that can be especially harmful to children. Long-term exposure can damage brain development, impair muscle coordination, and affect nervous systems, kidneys and hearing.

But much of the research on lead's health effects is decades old and involved studying children with extremely high lead levels in their blood. Independently validating those studies would be unethical and therefore impossible, advocates say, because it would require exposing kids to higher doses of the toxin than they currently encounter.

"If this is retrospective, it would be a disaster," said Ronnie Levin, a former EPA staffer who manages the water and health program at Harvard University's T.H. Chan School of Public Health.

"They could end up saying, 'We don't have to eliminate exposure because we don't have evidence that lead is bad.'"

Bruce Lanphear, a researcher at Simon Fraser University who authored many pivotal lead studies in the 1990s, called the science rule "insane."

"If this is retroactive," he said, "it would be a clear attempt to roll back regulations by knocking out the vast majority of research."

EPA failed to respond to requests for comment. But Pruitt has made reducing lead risk a priority for his agency in 2018, telling Congress multiple times he wants to wage a "war on lead."

Erik Olson, Natural Resources Defense Council

The science proposal asks the public to weigh in on whether older studies should be grandfathered in, and whether certain types of regulations should be exempt from the requirements.

NRDC's Olson said he's skeptical EPA would exempt lead regulations or older studies from the rule, noting that the Trump administration is industry-friendly.

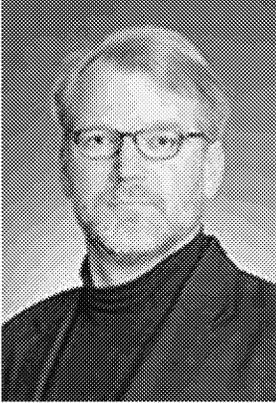

"A lot of these studies about the health effects of lead, the chemical industry has been targeting for a long time," he said. "Pruitt continues to do the bidding of industry in other actions, so I'm skeptical that this would be any different."

Even if older studies could still be considered under the "transparency" rule, proposed data-sharing requirements in the rule also raise questions about how many researchers could comply.

Epidemiological studies about lead often rely on personal data that researchers might be uncomfortable sharing with the public or might be prohibited from sharing under the Health Insurance Portability and Accountability Act.

In its proposal, EPA asks for comment about how it could implement a final rule that would be "consistent with statutory requirements for protection of privacy and confidentiality of research participants."

Lanphear said there is nothing wrong, on its face, with increasing data transparency. The National Institutes of Health already requires recipients of grants larger than \$500,000 to share data with the agency.

Bruce Lanphear, Simon Fraser University

But, he notes, researchers know going into those grants that they'll need to set aside time and funds to go through data and remove any identifying information about study subjects. EPA's proposal, by contrast, would amount to an unfunded mandate targeting any number of studies, he said.

He also said he is skeptical of EPA's intentions, in part because the agency is not considering requiring similar transparency from chemical companies about, for example, the science proving pesticides are safe to use.

"In a less insane world, there is nothing wrong with data sharing," he said. "As it is, I can only see the reasoning behind this as meaning to gum up the system so you can't write new regulations and might have to undo old ones."

Could computer models be trashed?

The proposed science rule wouldn't just have the potential to remove studies from EPA consideration; it could also eliminate computer models the agency uses to determine childhood lead exposure.

Computer models integrate multiple studies at one time, and if any individual study did not comply with the regulation, the whole model could be thrown out, warned Doreen Cantor Paster, former branch chief for EPA's lead paint program.

Models determining how much lead dust toddlers typically ingest are based on studies of how many hours toddlers are awake, how much of that time they would be crawling, how often they stick a hand in their mouth, how much lead dust might be on their hands and how that might affect their health.

The entire model would be "interrupted," Paster said, "if any given study for any given step was ruled out of bounds."

"These models are important for almost everything EPA does on lead," she said.

While those studying the health impacts of lead might be willing to comply with new transparency standards to allow EPA to use their data, the same might not be the case for those working in other fields, like behavioral science, said Betsy Southerland, who resigned in protest last year from her post leading EPA's Office of Water's Office of Science and Technology.

Researchers from other countries or working in other fields may not be aware of new EPA requirements or willing to tailor their work to them.

"There are researchers that wouldn't be dependent on EPA to use their science that wouldn't want to take the added time and effort," she said.

Ultimately, the proposed transparency rule could result in different federal standards for lead at different agencies.

A few years ago, the Centers for Disease Control and Prevention lowered its "reference level" for when lead in blood is considered elevated to 5 micrograms per deciliter.

In response, the Department of Housing and Urban Development rewrote its regulation for lead paint in public housing to bring it in line with the CDC's recommendation.

But EPA is still catching up. The agency is working to rewrite its standard for lead paint in private homes, which has not yet been proposed. If the science transparency rule is finalized first, Paster said, EPA and HUD might rely on completely different data to regulate the same kind of lead exposure.

"You could conceivably get different hazard levels for two different types of housing," she said

Subject: RE: Prep for IRIS meeting

All,
Some definitions you may want at hand for discussion today or for tomorrow.

Risk eval rule is [here](#).

SR definition from preamble is:

11. Systematic Review. EPA requested comment on the need for regulatory text prescribing a specific systematic review approach for hazard identification, including the appropriateness of elements that might be included or concerns about codifying an approach. Commenters both supported and opposed the inclusion of systematic review in the rule text. Those opposing the codification of systematic review argued that EPA should retain flexibility and the ability to change the process as improved methods for systematic review are developed. Some commenters did encourage a description of the intended approach in the preamble, but suggested that EPA reserve the specific process for guidance. Those in support of codifying a description of systematic review in the rule text stated that inclusion would increase transparency and would provide the public with an indication of how the statutory requirement of weight of the scientific evidence, requirements of sections 6 and 26, and an integral component of systematic review, will be applied. EPA intends to use the systematic review approach, described in the proposed rule, but is not codifying a definition in the regulatory text. To be clear, although EPA asked for comment on the need for regulatory text for systematic review on hazard identification specifically, EPA will not limit the use of this approach solely to the hazard assessment, but will use it throughout the risk evaluation process. The inclusion of a description of systematic 33 review in the preamble is the most appropriate approach in light of public comment and the requirements of the statute. First, systematic review is not required under the statute, only a weight of the scientific evidence analysis. The definition the Agency is adopting for “weight of the scientific evidence” uses the phrase “systematic review,” which addresses to some extent the commenters who favored including the concept in this regulation. EPA sees weight of the scientific evidence approach as an interrelated part of systematic review, and further believes that integrating systematic review into the TSCA risk evaluations is critical to meet the statutory requirements of TSCA. Although, as EPA discusses elsewhere in this preamble, there are universal components of systematic review that EPA intends to apply in conducting risk evaluations, this is one area where EPA concluded it would be premature to codify specific methods and criteria that may change as the Agency gains more experience conducting TSCA risk evaluations. As requested by commenters, EPA does believe the addition of discussion of the systematic review approach the Agency intends on utilizing is necessary for transparency, and so provides the description herein. Section 26(l) also requires EPA to develop and revise Agency guidance. The Agency intends to provide further details on systematic review and weight of scientific evidence approaches under TSCA in future guidance documents. As defined by the Institute of Medicine (Ref. 11) systematic review “is a scientific investigation that focuses on a specific question and uses explicit, pre-specified scientific methods to identify, select, assess, and summarize the findings of similar but separate studies. The goal of systematic review methods is to ensure that the review is complete, unbiased, reproducible, and transparent” (Ref. 11). The principles of systematic review have been well developed in the context of 34 evidence-based medicine (e.g., evaluating efficacy of medical interventions tested in multiple clinical trials) (Ref. 12) and are being adapted for use across a more diverse array of systematic review questions, through the use of a variety of computational tools. For instance, the National Academies’ National Research

Council (NRC) has encouraged EPA to move towards systematic review processes to enhance the transparency of scientific literature review that support chemical-specific risk assessments to inform regulatory decision making (Ref. 13). Key elements of systematic review include: - A clearly stated set of objectives (defining the question); - Developing a protocol which describes the specific criteria and approaches that will be used throughout the process; - Applying the search strategy criteria in a literature search; - Selecting the relevant papers using predefined criteria; - Assessing the quality of the studies using predefined criteria; - Analyzing and synthesizing the data using the predefined methodology; - Interpreting the results and presenting a summary of findings (Ref. 14)

And taken from the draft TSCA SR approach document, other key definitions:

1 SCIENTIFIC STANDARDS FOR TSCA RISK EVALUATIONS

TSCA requires that, to the extent that EPA makes a decision based on science under TSCA sections 4, 5, or 6, EPA must use certain scientific standards and make those decisions consistent with the best available science and based on the weight of the scientific evidence [15 U.S.C. 2625(h) and (i)]. In addition, TSCA section 6(b)(4) establishes specific substantive requirements for EPA-conducted risk evaluations [15 U.S.C 2605 (b)(4)].

1.1 Best Available Science

EPA will prepare TSCA risk evaluations using the best available science as described in TSCA [15 U.S.C. 2625(h)] and the final rule establishing the procedures for chemical risk evaluation (40 CFR Part 702.33).

In determining that best available science is an integral component of section 6 risk evaluations, EPA defined, by rulemaking, best available science as “*science that is reliable and unbiased. Use of best available science involves the use of supporting studies conducted in accordance with sound and objective science practices, including, when available, peer reviewed science and supporting studies and data collected by accepted methods or best available methods (if the reliability of the method and the nature of the decision justifies use of the data).*”

As defined in 40 CFR Part 702.33, implementing the best available science also means “*...to consider, as applicable:*

- *The extent to which the scientific information, technical procedures, measures, methods, protocols, methodologies, or models employed to generate the information are reasonable for and consistent with the intended use of the information;*
- *The extent to which the information is relevant for the Administrator’s use in making a decision about a chemical substance or mixture;*
- *The degree of clarity and completeness with which the data, assumptions, methods, quality assurance, and analyses employed to generate the information are documented;*
- *The extent to which the variability and uncertainty in the information, or in the procedures, measures, methods, protocols, methodologies, or models, are evaluated and characterized; and*
- *The extent of independent verification or peer review of the information or of the procedures, measures, methods, protocols, methodologies or models.”*

1.2 .Weight of the Scientific Evidence

TSCA risk evaluations are required to rely on the weight of the scientific evidence [15 U.S.C. 2625 (i)]. In accordance with the final rule (40 CFR Part 702.33), the weight of the scientific evidence is defined as “*a systematic review method, applied in a fit-for-purpose manner, that uses a pre-established protocol to comprehensively, objectively, transparently, and consistently, identify and evaluate each stream of evidence,*

including strengths, limitations, and relevance of each study and to integrate evidence as necessary and appropriate based upon strengths, limitations, and relevance.”

1.3 Data Quality

EPA will implement a data quality system that ensures that the TSCA risk evaluation uses quality data intended for risk assessment purposes consistent with the requirements of TSCA [15 U.S.C. 2625(h) and (i); 2605 (b)(4)]. EPA will use the approaches set forth in the rule at 40 CFR Part 702 and the accompanying preamble to prepare the various sections of TSCA risk evaluations. Moreover, EPA will disclose and make publicly available raw data used to support the draft risk evaluation, if not previously reported in the literature, with the exception of confidential business information (CBI) that may be considered in the preparation of the risk evaluation.

Subject: HEI Comments Submitted On Proposed Rule on Regulatory Science...
Attachments: Health Effects Institute Comments on the EPA Transparency Rule Docket Number EPA-HQ-OA-2018-0259.pdf

Dear HEI Sponsors:

We write to let you know that HEI last week submitted the attached comments on the EPA Proposed "Transparency in Regulatory Science" rule. As many of you know, HEI has a longstanding commitment to producing science of the highest integrity, quality, and transparency, built on a foundation of: rigorous research and statistical design – subject to continuous oversight, data quality assurance audits, and more; extensive efforts to test all findings against a wide range of different statistical techniques and assumptions; intensive independent peer review, with *all* results published; and an active *Data Access Policy* for over 20 years to facilitate access to underlying data for all HEI-funded studies. In that spirit we have submitted these comments to suggest ways in which transparency and data access can be enhanced, without in the process compromising the privacy of study subjects.

Please let us know if you have any comments or questions...

And thanks again for your interest and support of the work of HEI!

Best
Dan

**Comments of the Health Effects Institute
on
“Strengthening Transparency in Regulatory Science”
(Proposed Rule Docket Number: EPA–HQ–OA–2018–0259]**

August 16, 2018

The Health Effects Institute (HEI) is pleased to present these comments on Proposed Rule “Strengthening Transparency in Regulatory Science.” (Docket No: EPA–HQ–OA–2018–0259)

HEI has a longstanding commitment to producing science of the highest integrity, quality, and transparency, built on a foundation of:

- Rigorous research and statistical design – subject to continuous oversight, data quality assurance audits, and more;
- Extensive efforts to test all findings against a wide range of different statistical techniques and assumptions,
- Intensive independent peer review, with *all* results published, and
- An active *Data Access Policy* for over 20 years to ensure access to underlying data for all HEI-funded studies.

Based on our extensive experience in producing, reviewing, reanalyzing, and interpreting science, we submit the following specific comments for your consideration:

Action to improve transparency should begin with review of the many existing efforts already in place.

In HEI’s work to provide the highest quality, impartial and relevant science to inform decisions, we have seen reproducibility as a critical challenge for science: *can the results of important studies be reproduced?* But we would note that these issues are not new, and have been addressed now for over 15 years by administrations from both parties and by the scientific community. This has included the Guidelines for the Information Quality Act adopted by the Office of Information and Regulatory Affairs (OIRA) in 2002 (Federal Register / Vol. 67, No. 36 / Friday, February 22, 2002); numerous actions by the scientific community and journals to

enhance access to data and methods; and most recently the requirements for enhanced data access across the Federal Government promulgated by the Office of Science and Technology Policy (OSTP) in February 2013.

We would recommend that EPA carefully review the progress already made under these major initiatives prior to determining what if any additional action is needed to enhance transparency.

EPA should have the broadest possible range of science available for making decisions on risk, causality, and other important policy.

Based on our detailed knowledge of the underlying science, and our experience conducting rigorous systematic reviews of the scientific literature, HEI would recommend that EPA reconsider and not go forward with the provision in the proposed rule that would appear to in effect prohibit the use of otherwise high-quality and rigorously peer-reviewed studies if the data and models are not “publicly available in a manner sufficient for independent validation.” Although HEI strongly supports making data and models available as widely as possible, and EPA can and has in the past made efforts to access data for important studies, there are several reasons why a blanket prohibition may interfere with EPA’s ability to draw on and interpret the fullest range of scientific evidence for important decisions.

- First, EPA already has the ability and duty to assess the quality and robustness of results of a study even in cases where the data are not available, both by careful review of all of the methods and supplemental information presented, and by expert review by EPA scientific staff and scientific advisors. These steps can identify both the strengths and weaknesses of any such study in a manner that allows the proper weighing of that study in consideration of the weight of evidence for or against a specific health effect. To arbitrarily prevent the use of any such study has the potential to significantly weaken EPA’s ability to make high quality judgments based on the full range of the available science.
- Second, in HEI’s view the most effective way to test the reproducibility and validity of scientific results is not necessarily to simply reproduce the same results in the same data sets but rather to answer the question: Can the original results hold up when tested in new studies:
 - that use new and separate data bases not affiliated with the original studies?
 - have different investigators applying the same and/or different statistical techniques?
 - and test the sensitivity of the results against a wide range of possible other explanation, e.g. smoking behavior, socioeconomic status, and more?

This broader assessment of the literature allows for an open and rigorous evaluation of an original study without the need for the data necessarily being available.

As there are multiple paths to assessing the integrity and validity of a study, we would recommend that EPA continue to fully evaluate *all available studies* for their strengths and weaknesses as it considers the weight of evidence for or against a specific health or policy decision.

Detailed and rigorous reanalysis may be appropriate in some cases, but it is costly if done correctly and reduces resources available for new, better-designed studies.

In a limited number of cases there may not be comparable studies available in other datasets, and it could be useful to gain access to the original study data and statistical approaches to allow for independent reanalysis that asks: Can the original results be replicated? And are they robust to a wide range of alternative assumptions, models and potential confounders? If such detailed, independent reanalysis has already been undertaken, it can significantly reduce the need for further independent validation of a specific study.

This is of course the approach that HEI applied in its independent, rigorous reanalysis of the Harvard Six Cities and American Cancer Society Studies. We have attached a summary description of the Reanalysis; the full reanalysis – which involved data audits, replication of the original results, and extensive testing of those results against a wide variety of alternate data, assumptions, and models, can be found at: <https://www.healtheffects.org/publication/reanalysis-harvard-six-cities-study-and-american-cancer-society-study-particulate-air>.

While this approach can – and did – provide comprehensive assurance of the integrity and validity of the original results, it is also a highly cost-intensive undertaking and should be considered only in those cases where there is not an ability to otherwise evaluate the results of a study.

“Depersonalized” data sets can be created, but in many instances they will not allow for full replication and reanalysis.

HEI has extensive experience with the careful and protected use of private medical information, which is critical to conducting high quality and reproducible air quality and health research. There are of course longstanding federal rules for protecting the privacy of individual medical information of the subjects of studies (e.g. the “Common Rule” mandating Institutional Review Board review of any use of personal data; confidentiality assurances provided to study participants; non-disclosure of personal information through HIPPA, and others) and it is important to adhere to these even as the valuable information contained in such records is applied in scientific research.

Fortunately, there *are* means available through a number of government agencies to make some such data available in detail to qualified researchers, conditional on their agreeing to a data use agreement that enables access to the data – but prohibits public disclosure of individual data. Many investigators have for example accessed the Medicare data set through application to the Center for Medicare Services (CMS). Alternatively, many agencies make the data available

through Federal Research Data Centers. While each of these options – and others – do contain some restrictions on the public disclosures, and will result in the incurring of costs, they can and have been used for an increasing number of air pollution and health studies. HEI does believe that there are improvements that could be made to those access options, e.g. easier access provisions for Federal Research Data Centers, and would urge EPA to work with its federal agency counterparts to accomplish that.

Some have argued that it should be possible to create a “depersonalized” data set by stripping all personal identifiers such as address, date of birth, etc. and making such a data set widely available. However, it is not possible to conduct a high-quality air pollution and health study without knowing the locations of those being studied, i.e. where they live, and what are the sources and levels of their air pollution exposure. And unfortunately, once that information is available at smaller spatial scale, it is possible to disclose extensive medical information for individual study subjects.

Since the goal should be to find ways to share data which enables full replication and sensitivity analysis of original studies, it is valuable to consider several aspects of large population air pollution studies that have moved them towards using data at smaller spatial scales:

- First, in response to valid criticisms that the earlier air pollution studies relied only on central air quality monitoring data to estimate exposure, investigators have increasingly sought to better estimate exposure employing land use regression models and other methods that can account for the distance of a subject’s home from roadways, industrial facilities, and other sources of air pollution. They have also applied increasingly finer-grained community-level covariates (e.g. at the zip code level). While in the largest locations the application of these finer-grained data would likely not allow for identification of individual subjects, the national analyses in some of these studies include subjects from a wide range of community sizes, including smaller communities where identification could be possible.
- Second, as these types of studies have been reviewed intensively by the HEI Review Committee, the Committee has identified two potentially significant sources of uncertainty in their results: so-called “ecological confounding”¹ and “spatial autocorrelation.”² To address both of these issues, one of the first steps that investigators have taken has been to use data at smaller scales which, while enhancing their ability to test for these two sources of uncertainties, also poses the potential in smaller communities for individuals and their personal information to be identified.

¹ Ecological confounding arises when some community-level variables, which are themselves risk factors for mortality, are also associated with air pollution levels

² Spatial autocorrelation is the tendency for variables to have similar values for people or areas that are geographically close, which can suggest that there are other mortality causes which are unaccounted for in the analysis or can distort the precision of risk estimates.

Taken together, these characteristics – which have in general enhanced the quality and the sensitivity of the studies – increase the difficulty of providing a fully “de-identified” data set while *also* enabling a different investigator to conduct a full replication and sensitivity analysis of the original study results. The other mechanisms discussed above – e.g. data use agreements, research data centers – fortunately would allow access to the more detailed data necessary to conduct such full new analyses while protecting the confidentiality of study subjects.

In closing we appreciate the opportunity to present these comments. We firmly believe that there is ample opportunity to enhance transparency and reproducibility in science to inform decisions, in many respects taking advantage of existing rules and methods and would welcome the opportunity to assist EPA in making these improvements. Should the Agency have any further questions, please feel free to contact Dan Greenbaum, President, Health Effects Institute, dgreenbaum@healtheffects.org, (617) 488-2331.

HEALTH
EFFECTS

STATEMENT

Synopsis of the Particle Epidemiology Reanalysis Project

BACKGROUND

Epidemiologic work conducted over several decades has suggested that long-term residence in cities with elevated ambient levels of air pollution from combustion sources is associated with increased mortality. Subsequently, two prospective cohort studies, the Six Cities Study (as reported in Dockery et al 1993) and the American Cancer Society (ACS) Study (as reported in Pope et al 1995) estimated that annual average all-cause mortality increased in association with an increase in fine particles (all particles less than 2.5 μm in median aerodynamic diameter [$\text{PM}_{2.5}$]).

As part of the Six Cities Study, Dockery and colleagues (1993) had prospectively followed a cohort of 8,111 adult subjects in northeast and midwest United States for 14 to 16 years beginning in the mid-1970s. The authors found that higher ambient levels of fine particles and sulfate (SO_4^{2-}) were associated with a 26% increase in mortality from all causes when comparing the most polluted to the least polluted city, and that an increase in fine particles was also associated with increased mortality from cardiopulmonary disease. The relative risks in all-cause mortality were associated with a difference (or range) in ambient fine particle concentrations of 18.6 $\mu\text{g}/\text{m}^3$ and a difference of ambient sulfate concentrations of 8.0 $\mu\text{g}/\text{m}^3$, comparing the least polluted city to the most polluted city.

In the much larger ACS Study, Pope and colleagues (1995) followed 552,138 adult subjects in 154 US cities beginning in 1982 and ending in 1989 (3 cities did not overlap between the 151 and 50 cities studied, resulting in a total of 154 cities). Again, higher ambient levels of fine particles were associated with increased mortality from all causes and from cardiopulmonary disease in the 50 cities for which fine particle data were available (sampled from 1979 to 1983). Higher ambient sulfate levels were associated with increased mortality

from all causes, cardiopulmonary disease, and lung cancer in the 151 cities for which sulfate data were available (sampled from 1980 to 1982). The difference between all-cause mortality in the most-polluted city and the least-polluted city was 17% and 15% for fine particles and sulfate, respectively (with a range of 24.5 $\mu\text{g}/\text{m}^3$ for fine particles and of 19.9 $\mu\text{g}/\text{m}^3$ for sulfate).

Both of these studies came under intense scrutiny in 1997 when the EPA used the results to support new National Ambient Air Quality Standards for fine particles and to maintain the standards for particles less than 10 μm in median aerodynamic diameter (PM_{10}) already in effect. Members of Congress and industry, the scientific community and others interested in regulation of air quality scrutinized the studies' methods and their results. Some insisted that any data generated using federal funding should be made public. Others argued that these data had been gathered with assurances of confidentiality for the individuals who had agreed to participate and that the concept of public access to federally funded data did not take into account the intellectual property rights of the investigators and their supporting institutions. To address the public controversy, Harvard University and the ACS requested that the Health Effects Institute organize an independent reanalysis of the data from these studies. Both institutions agreed to provide access to their data to a team of analysts to be selected by HEI through a competitive process.

APPROACH

To conduct the reanalysis, the HEI Board of Directors, with support from the EPA, industry, Congress, and other stakeholders, appointed an Expert Panel chaired by Dr Arthur Upton from the University of Medicine and Dentistry of New Jersey and former Director of the National Cancer

This Statement, prepared by the Health Effects Institute, is a summary of a research project conducted by the Reanalysis Team, led by Dr Daniel Krewski at the University of Ottawa. The following special report contains the detailed Investigators' Report (Summary, Introduction, and Parts I and II), Commentary on the project prepared by a special panel of the Institute's Health Review Committee, and Comments on the Reanalysis Project by the Original Investigators (Drs Douglas W Dockery, C Arden Pope III et al).

Particle Epidemiology Reanalysis Project

Institute. The Expert Panel selected competitively a Reanalysis Team—led by Dr Daniel Krewski of the University of Ottawa—and oversaw all aspects of the team's work. They were assisted in their oversight efforts by a broad-based Advisory Board of knowledgeable stakeholders and scientists who, in the project's early stages, provided extensive advice to the Expert Panel on the key questions to be analyzed. The final results of the Reanalysis Team were intensively and independently peer reviewed by a Special Panel of the HEI Health Review Committee, which was chaired by Dr Millicent Higgins of the University of Michigan.

The overall objective of what became the Particle Epidemiology Reanalysis Project was to conduct a rigorous and independent assessment of the findings of the Six Cities and ACS Studies of air pollution and mortality. This objective was met in two parts. In *Part I: Replication and Validation*, the Reanalysis Team sought to replicate the original studies via a quality assurance audit of a sample of the original data and to validate the original numeric results. In *Part II: Sensitivity Analyses*, they tested the robustness of the original analyses to alternate risk models and analytic approaches.

RESULTS AND IMPLICATIONS

PART I: REPLICATION AND VALIDATION

- An extensive audit of the study population data for both the Six Cities and ACS Studies and of the air quality data in the Six Cities Study revealed the data to be of generally high quality with a few exceptions. In both studies, a few errors were found in the coding and inclusion of certain subjects; when those subjects were included in the analyses, they did not materially change the results as originally reported. Because the air quality data used in the ACS Study could not be audited, a separate air quality database was constructed for the sensitivity analyses described in Part II.
- The Reanalysis Team was able to replicate the original results in both studies using the same data and statistical methods as used by the Original Investigators. The Reanalysis Team confirmed the original point estimates: For the Six

Cities Study, they reported the relative risk of mortality from all causes associated with an increase in fine particles of 18.6 $\mu\text{g}/\text{m}^3$ as 1.28, close to the 1.26 reported by the Original Investigators. For the ACS Study, the relative risk of mortality from all causes associated with an increase in fine particles of 24.5 $\mu\text{g}/\text{m}^3$ was 1.18 in the reanalysis, close to the 1.17 reported by the Original Investigators.

PART II: SENSITIVITY ANALYSES

Once the original results of the studies had been validated, the Reanalysis Team sought to test an array of different models and variables to determine whether the original results would remain robust to different analytic assumptions.

- First, the Reanalysis Team used the standard Cox model used by the Original Investigators and included variables in the model for which data were available from both original studies but had not been used in the published analyses (eg, physical activity, lung function, marital status). The Reanalysis Team also designed models to include interactions between variables. None of these alternative models produced results that materially altered the original findings.
- Next, for both the Six Cities and ACS Studies, the Reanalysis Team sought to test the possible effects of fine particles and sulfate on a range of potentially susceptible subgroups of the population. Although different subgroups did show some variation in their estimated effects, the results were not statistically significant with one exception. The estimated effects of fine particles did appear to vary with educational level; the association between an increase in fine particles and mortality tended to be higher for individuals without a high school education than for those who had completed high school or for those with more than a high school education.
- In the ACS study, the Reanalysis Team tested whether the relationship between ambient concentrations and mortality was linear. They found some indications of both linear and nonlinear relationships, depending upon the analytic technique used, suggesting that the

Particle Epidemiology Reanalysis Project

issue of concentration-response relationships deserves additional analysis.

- In the Six Cities Study where data were available, the Reanalysis Team tested whether effect estimates changed when certain key risk factors (smoking, body mass index, and air pollution) were allowed to vary over time. One of the criticisms of both original studies has been that neither analyzed the effects of change in pollutant levels over time. In general, the reanalysis results did not change when smoking and body mass index were allowed to vary over time. The Reanalysis Team did find for the Six Cities Study, however, that when the general decline in fine particle levels over the monitoring period was included as a time-dependent variable, the association between fine particles and all-cause mortality dropped substantially, but the effect continued to be positive and statistically significant.
- Using its own air quality dataset constructed from historical data to test the validity of the original ACS air quality data, the Reanalysis Team found essentially the same results.
- Any future analyses using the sulfate data should take into account the impact of artifactual sulfate. Sulfate levels with and without adjustment differed by about 10% for the Six Cities Study. Both the original ACS Study air quality data and the newly constructed dataset contained sulfate levels inflated by approximately 50% due to artifactual sulfate. For the Six Cities Study, the relative risks of mortality were essentially unchanged with adjusted or unadjusted sulfate. For the ACS Study, adjusting for artifactual sulfate resulted in slightly higher relative risks of mortality from all causes and cardiopulmonary disease compared with unadjusted data. The relative risk of mortality from lung cancer was lower after the data had been adjusted.
- Because of the limited statistical power to conduct most sensitivity analyses for the Six Cities Study, the Reanalysis Team conducted the majority of its sensitivity analyses using only the ACS Study dataset with 154 cities. In that dataset, when a range of city-level (ecologic) variables (eg, population change, measures of income, maximum temperature, number of hospital beds, water hardness) were included in the analyses, the results generally did not change. Two exceptions were that associations for both fine particles and sulfate were reduced when city-level measures of population change or sulfur dioxide were included in the model.
- A major contribution of the Reanalysis Project is the recognition that both pollutant variables and mortality appear to be spatially correlated in the ACS Study dataset. If not identified and modeled correctly, spatial correlation could cause substantial errors in both the regression coefficients and their standard errors. The Reanalysis Team identified several methods for dealing with this, all of which resulted in some reduction in the estimated regression coefficients. The full implications and interpretations of spatial correlations in these analyses have not been resolved and appear to be an important subject for future research.
- When the Reanalysis Team sought to take into account both the underlying variation from city to city (random effects) and the spatial correlation between cities, only sulfur dioxide as a city-level variable continued to decrease the originally reported associations between mortality and fine particles or sulfate. This effect was more pronounced for sulfate.
- When the Reanalysis Team conducted spatial analyses of sulfur dioxide, the association between sulfur dioxide and mortality persisted after adjusting for sulfate, fine particles, and other variables.
- As a result of these extensive analyses, the Reanalysis Team was able to explain much of the variation between cities, but some unexplained city-to-city variation remained.

CONCLUSIONS

The Reanalysis Team designed and implemented an extensive and sophisticated series of analyses that included a set of new variables, all the gaseous copollutants, and the first attempts to apply spatial analytic methods to test the validity of the data and the results from the Six Cities Study and the ACS Study. Overall, the reanalyses assured the quality of the original data, replicated

Particle Epidemiology Reanalysis Project

the original results, and tested those results against alternative risk models and analytic approaches without substantively altering the original findings of an association between indicators of particulate matter air pollution and mortality.

At the same time, the reanalyses did extend and challenge our understanding of the original results in several important ways.

- The Reanalysis Team identified a possible modifying effect of education on the relation between air quality and mortality in that estimated mortality effects increased in the subgroup with less than high school education.
- The use of spatial analytic methods suggested that, when the analyses controlled for correlations among cities located near one another, the associations between mortality and fine particles or sulfate remained but were diminished.
- An association between sulfur dioxide and mortality was observed and persisted when other possible confounding variables were included; furthermore, when sulfur dioxide was included in models with fine particles or sulfate, the associations between these pollutants (fine particles and sulfate) and mortality diminished.

In reviewing these results, the Special Panel of the HEI Health Review Committee identified the following factors to consider when interpreting the results from the Reanalysis Team.

- The inherent limitations of using only six cities, understood by the Original Investigators, should be taken into account when interpreting results of the Six Cities Study.
- The Reanalysis Team did not use data adjusted for artifactual sulfate for most alternative analyses. When they did use adjusted

sulfate data, relative risks of mortality from all causes and cardiopulmonary disease increased. This result suggests that more analyses with adjusted sulfate might result in somewhat higher relative risks associated with sulfate.

- Findings from spatial analyses applied to the ACS Study data need to be interpreted with caution; the spatial adjustment may have overadjusted the estimated effect for regional pollutants such as fine particles and sulfate compared with the effect estimates for more local pollutants such as sulfur dioxide.
- After the Reanalysis Team completed its spatial analyses, residual spatial variation was still noticeable; this finding suggests that additional studies might further refine our understanding of the spatial patterns in both air pollution and mortality.
- No single epidemiologic study can be the basis for determining a causal relation between air pollution and mortality.

In conclusion, the Reanalysis Team interpreted their findings to suggest that increased relative risk of “mortality may be attributed to more than one component of the complex mix of ambient air pollutants in urban areas in the United States”. The Review Panel concurs. In the alternative analyses of the ACS Study cohort data, the Reanalysis Team identified relatively robust associations of mortality with fine particles, sulfate, and sulfur dioxide, and they tested these associations in nearly every possible manner within the limitations of the datasets. Future investigations of these issues will enhance our understanding of the effect of combustion-source air pollutants (eg, fine particles, sulfates, and sulfur dioxide) on public health.

Subject: CBO questions on H.R. 6468
Attachments: CBO Questions on H.R. 6468 2602 7.25.2018.docx

All,

Please see attached questions and starting CBO assumptions about the draft "Improving Science in Chemical Assessment Act". As discussed, Jennifer, Richard, and Sam are currently scheduled to discuss this with OCIR staff (Aaron Ringel, Christian Rodrick, Thea Williams, and Christina Moody) on Thursday from 2:30 – 3. OCIR wants to speak with ORD before reaching out to the programs.

Subject: ORD's Fall 2018 Regulatory Agenda: Submission to OP
Attachments: Fall 2018 Reg Agenda Submission 1-pager FINAL 071218.docx

Fred,

I have read and am OK with the attached Regulatory Agenda submission of two ORD actions: 1. Common Rule alignment and 2. Science Transparency. Since the clearance is to be: "approved through each AAsip's senior management," I hereby clear and cc. ORD's leadership for their awareness.

Bruce Rodan
Associate Director for Science
EPA Office of Research and Development

Purpose: To request IOAA approval to send ORD's Fall 2018 Regulatory Agenda submission to OP.

Background

- The Unified Agenda of Federal Regulatory and Deregulatory Actions, or Regulatory Agenda, is a semiannual compilation of information about regulations under development by federal agencies.
- Under Executive Order 12866, all agencies are required to publish their regulatory agendas, and EPA publishes its agenda as part of the Unified Agenda in both the spring and fall.
- OP is collecting EPA's entries for the Fall 2018 Regulatory Agenda. Entries are due to OP on July 13.
 - Regulatory Agenda entries include an external abstract and estimated dates for proposed and final rules.

ORD Regulatory Actions

- ORD has two regulatory actions that are responsive to this request:
 - "Harmonize 40 CFR Part 26 Subparts C, D and K with Subpart A (the Common Rule)" (SAN 5935, Tier 3)
 - ORD lead: Tom Sinks
 - "Strengthening Transparency in Regulatory Science" (SAN 6781, Tier 1)
 - ORD lead: Maria Doa
- To be responsive to OP's request, OSP:
 - Worked with the ORD leads for the actions to review and revise the estimated schedules and external abstracts for each action, and
 - Shared the revised external abstracts with OP and OGC for policy and legal review, respectively, and incorporated their comments.
- The draft final submissions for IOAA review are attached.

OSP Recommendation

- **Deliberative Process / Ex. 5**

Attachment: “Harmonize 40 CFR Part 26 Subparts C, D and K with Subpart A (the Common Rule)” (SAN 5935, Tier 3)Estimated Milestones

NPRM (notice of proposed rulemaking): September 2018

FRM (final rulemaking): January 2019

External Abstract

In 1991, several federal departments and agencies that conduct or support research involving human subjects adopted a common “Federal Policy for Protection of Human Subjects” into each of their own respective regulations. This policy is known as the “Common Rule,” by virtue of being shared currently by all these departments and agencies. The Common Rule was revised through the Federal rulemaking process and a final revised rule was jointly published in the Federal Register on January 19, 2017. Implementation of the Common Rule will occur on January 21, 2019.

The Common Rule was codified by EPA in 40 CFR 26. Beyond the Common Rule language, which is located in subpart A of part 26, 40 CFR 26 also contains several additional subparts that are unique to EPA, added in 2006 in response to a Congressional mandate. In particular, EPA created subparts K through Q to regulate third-party pesticide research. Subpart K borrowed heavily from the provisions of the Common Rule. In this rulemaking, EPA is updating subpart K for consistency with the recent updates to the Common Rule. Without appropriate updates, once the new Common Rule becomes effective, there will be a disconnect between policies and procedures in subpart K, which will be based on the previous version of the Common Rule, and the revised version of the Common Rule. In addition to the textual issues in subpart K, subparts C and D contain minor numerical citations (i.e., regulatory reference numbers) that are no longer accurate and should also be updated. Failure to resolve these internal discrepancies will create confusion and, more seriously, potential compliance and/or legal liabilities for researchers, institutions and sponsors who must follow EPA regulations. These updates are solely intended to resolve discrepancies created by the recent revision to the Common Rule, and will not alter the fundamental protections for human subjects, including vulnerable populations.

Attachment: “Strengthening Transparency in Regulatory Science” (SAN 6781, Tier 1)Estimated Milestones

FRM (final rulemaking): January 2020

External Abstract

This action is intended to strengthen the transparency of EPA regulatory science. As a result of this action, EPA would ensure that the data underlying the final significant regulations it promulgates are publicly available in a manner sufficient for independent validation. This action would increase transparency of the assumptions underlying dose-response data and models that support these EPA regulatory decisions. The Agency proposes to take this action under authority of the statutes it administers, including provisions providing general authority to promulgate regulations necessary to carry out the Agency's functions.

Dr. Sinks:

I have attached comments submitted today on behalf of the American Chemistry Council to the docket for the Strengthening Transparency in Regulatory Science proposed rule. I know it often takes a number of days before comments filed are accessible in the docket and we wanted the comments to be readily available to you and your staff.

Please let us know if you have any questions regarding our comments.

Regards,

Christina Franz

Sensitivity: Confidential

Hello all,

We received the email below from OCFO regarding the attached question related to Censored Science. OPARM would happy to usher the final draft to OCFO once it is completed if that would be helpful.

If not, please send us the final version for our records.

Thanks!

Jamie

Subject: Smith pitched Pruitt on 'secret science.' Now it's happening

EPA

Smith pitched Pruitt on 'secret science.' Now it's happening

Scott Waldman and Niina Heikkinen, E&E News reporters

Published: Friday, April 20, 2018

Rep. Lamar Smith (R-Texas) has been slamming EPA's use of "secret science" for years. @LamarSmithTX21/Twitter

EPA coordinated with House Republicans about their plans to restrict the science used in crafting regulations, newly released emails show.

In early January, EPA chief Scott Pruitt met with Rep. Lamar Smith (R-Texas), chairman of the House Science, Space and Technology Committee, to discuss one of Smith's pet projects — overhauling how EPA uses science. Smith hasn't been able to get legislation to do so through Congress, so he pitched Pruitt to do so internally, according to **emails** obtained through a Freedom of Information Act request. The emails were obtained by the Union of Concerned Scientists and shared with E&E News.

In March, Pruitt announced that he would follow through. He said EPA plans to require that data and methodology from studies used to craft regulations be made public (*Climatewire*, March 16). The topic has long been contentious. Smith and others describe the effort as a way to ensure science used to craft regulations can

be properly scrutinized. Critics have said it is an effort to limit air pollution research and other studies that have been cited as reasons for regulations.

EPA has said little about its plans to make science more transparent, other than Pruitt's brief interview with a conservative news outlet to say the plan was coming at some point.

The new emails reveal how Pruitt's staffers have worked behind the scenes with Smith's office.

On Jan. 16, a few days after Pruitt met with Smith at EPA headquarters, a Smith staffer followed up with Pruitt's shop.

"It was great to see you last week and appreciate the Administrator's time. Chairman Smith is very keen for our staff to get together to discuss further transparent science-based regulations at the EPA," Smith's aide Joe Brazauskas wrote to EPA congressional affairs staffer Aaron Ringel. "We can meet at your earliest convenience with the appropriate EPA staff to discuss this matter further."

Within an hour of receiving Brazauskas' email, Ringel circulated the message to colleagues at EPA.

"All, see below follow up from Chairman Smith's meeting with the administrator," he wrote. "Want to check on who would be the most appropriate [for] them to speak to. In short, this is in regards to his pitch that EPA internally implement the HONEST Act (no regulation can go into effect unless the scientific data is publicly available for review)."

One of the aides copied on Ringel's email was Richard Yamada, the deputy assistant administrator of EPA's Office of Research and Development. Yamada previously worked for years on the Republican staff of the House Science Committee led by Smith.

The emails also show that EPA staffers wanted to have the program rolled out by the end of February.

Brittany Bolen, who works in EPA's policy office, sent an email dated Feb. 12 saying that Pruitt's chief of staff Ryan Jackson "asked to have this rolled out by the end of the month."

Timing for the rollout of the policy is still unclear.

EPA spokeswoman Liz Bowman said yesterday, "These discussions are part of the deliberative process; the policy is still being developed."

The Union of Concerned Scientists said the emails show the plan was crafted by political staff with little input from scientists. They also show that EPA's political appointees are mostly concerned about industry, rather than environmental or health protections, said USC spokesman Yogin Kothari.

"This idea to restrict the use of science at EPA was hatched solely and worked on almost exclusively by political appointees who are doing everything they can to ensure that independent science doesn't get in the way of policy decisions at the agency," he said. "It's an effort to stack the deck in favor of industry that EPA is supposed to regulate."

'This directive needs to be revised'

The emails also reveal that an EPA political appointee — a former chemical industry executive — raised concerns about the science overhaul.

Nancy Beck, deputy assistant administrator of EPA's chemicals office, raised pointed concerns about what a secret science policy would mean for both pesticide registration and for chemical companies and regulating chemicals under the Toxic Substances Control Act (TSCA).

In an email sent on Jan. 31, Beck warned Yamada; Erik Baptist, EPA's senior deputy general counsel; and Justin Schwab, deputy general counsel, that requiring underlying data to be public would affect pesticide registrations and TSCA implementation.

"This directive needs to be revised. Without change it will jeopardize our entire pesticide registration/re-registration review process and likely all TSCA risk evaluations," she wrote. "Let me know what more you may need from me to facilitate a change."

Beck noted that under EPA regulations, pesticide registration requires companies to submit studies that include a "huge amount of data" and cost the companies millions of dollars to conduct. "Guideline studies of this type are never put in journal publications — there is no audience for them, thus in IARC's eyes they are not published," she wrote.

The World Health Organization's International Agency for Research on Cancer, or IARC, develops an international database of chemicals that could potentially cause cancer. Beck notes that most of the data in this process are considered confidential business information, but the "CBI" tag can be waived to make the data available in many instances.

"Making data available is very different than requiring a publication requirement. Such a requirement would be incredibly burdensome, not practical and you would need to create a whole new arm of the publishing industry to publish these types of studies that nobody is interested in," she wrote.

Beck added that there would be a similar problem under TSCA, where data for many existing chemicals aren't published because there is "no incentive for anyone, anywhere to publish them."

"Yes, thanks this is helpful — didn't know about the intricacies of CBI — ok, we will need to thread this one real tight! Thanks Nancy!" Yamada wrote in response to Beck's warning.

Richard Denison, a senior scientist at the Environmental Defense Fund, noted that EPA staff and members of Congress had previously objected to Smith's "Honest and Open New EPA Science Treatment Act" — the basis for the potential EPA policy — for the data collection burden it would put on researchers, who would have to go back and identify which data could be made public.

Critics also warned at the time that the impact would be to significantly reduce the number of studies that could be used to develop research, and many suspected this was the real purpose of the bill.

"What Nancy Beck is ironically pointing to is the same set of issues would fall on the industry, because it is not only whether the information would be made public or not, it's the cost and burden associated with doing so," Denison said.

EPA spokeswoman Bowman did not comment on whether EPA planned to follow Beck's suggestion to revise its proposal. "It's important to understand, however, that any standards for protecting CBI would be the same for all stakeholders," she said.

At least one "secret science" policy proponent said he was open to requiring researchers and companies to make data available when they are requested by "legitimate researchers" rather than publishing all underlying data.

"This data has to be somewhere, and if someone needs to see it then arrangements have to be made," said Steve Milloy, former EPA transition team member. "You can't attack this stuff with a broad brush."

In another email from March, months after the process had started, Beck found a passage from documents the agency's pesticide program released in December 2016 saying EPA "does not believe that it is appropriate to refuse to consider published studies in the absence of the underlying data."

The document Beck referred to also said, "The EPA frequently relies on peer reviewed studies in the public literature across agency programs without possessing underlying data and the federal courts have made clear that the EPA is not required to obtain or analyze the raw data in order to rely on such studies."

Beck wrote in the email, "I'm sharing for awareness, particularly regarding court cases that are cited."

Re: Strengthening Transparency in Regulatory Science

To Whom it May Concern:

The Association of State Drinking Water Administrators (ASDWA) appreciates the opportunity to offer comments on the notice for “Strengthening Transparency in Regulatory Science” as published in the April 30th *Federal Register* (Volume 83 Number 83). ASDWA is the independent, nonpartisan, national organization representing the collective interests of the drinking water program administrators in the 50 states, five territories, the District of Columbia, and the Navajo Nation who implement the Safe Drinking Water Act (SDWA) every day to ensure the protection of public health and the economy. ASDWA supports and represents the collective interests of the states, territories, and the Navajo Nation in their administration of national drinking water program requirements within their states or territories. The following ASDWA comments are intended to broadly address the proposed rule, but they do not necessarily reflect the concerns of individual states.

Federal regulations are the basis for the actions of state drinking water programs in protecting public health. These regulations must be based on sound science to appropriately protect public health. The Safe Drinking Water Act (SDWA) has clear statutory language on the use of sound science, and states support the use of sound science in the SDWA regulatory development process. While states may disagree at times with details of the final regulations, states are generally comfortable with the transparency of the regulatory development process as practiced by the Office of Ground Water and Drinking Water (OGWDW). ASDWA does not recommend making significant changes in that process. In fact, if other environmental programs do not currently have a robust science-based regulatory development process, the process used by OGWDW would be a good model.

The SDWA statutory language in Section §1412(b)(3) requires the use of “best peer reviewed science and supporting studies conducted in accordance with sound and objective scientific practices”. Therefore, a statutory requirement that the drinking water regulations have a strong scientific basis already exists. This section of the SDWA also outlines the way this information must be shared with the public, so the process is currently transparent. EPA has followed this statutory mandate since the 1996 SDWA Amendments and has relied not only on peer reviewed scientific studies but has also directly involved the scientific community in supporting rule

development. States have also been active participants in this science-based process. The rule development currently underway for perchlorate is a good example of the process at work. Recommendations from the Science Advisory Board (SAB) helped guide the methodology to develop the Maximum Contaminant Level Goal (MCLG). EPA has held two peer reviews to help refine the models and determine how best to apply the modeling to determine the appropriate MCLG. The SAB and the peer review process are all open and the recommendations are public, providing full transparency to the deliberations and decisions.

The references listed at the end of the preamble of any proposed drinking water regulation, and any other supporting documentation, is currently shared on the Water Docket, and the Docket provides open access and transparency now for states to examine the basis for new rules. States can review what scientific studies were used in the preparation of the proposed rule and enough detail is provided to judge whether these studies support EPA's conclusions. Since only peer reviewed studies are used, states already have assurances that the results are valid.

Regardless of the pivotal regulatory science used to support a proposed rule, states can openly question the validity of these studies during the comment period for the proposed rule. During this time, states can also recommend additional studies that they believe EPA should consider in developing the final regulations. In the future, EPA can enhance the opportunity for input by consistently allowing a minimum 90-day comment period for new/revised rules. Early involvement by states, as co-regulators, in the early stages of the regulatory development process (pre-proposal) will allow states even more opportunity to provide input on the science used to support the new rules. Beyond the science, involving states as early as possible in the regulatory development process means the resulting regulations can be effectively implemented and public health protection enhanced.

Thank you for considering these comments. As always, ASDWA is willing to continue to work with EPA to develop the best possible drinking water regulations. We encourage EPA to continue the current open and science-based development process and continue to actively involve states. While ASDWA's comments are intended to capture the diverse perspectives of states and state drinking water programs, EPA should also consider the comments/recommendations that may come directly from individual states and territories.

If you have questions or would like to discuss these comments in more detail, please contact me at ldaniels@pa.gov or contact Alan Roberson, ASDWA's Executive Director at aroberson@asdwa.org.

Sincerely,

A handwritten signature in black ink, appearing to read "Lisa Daniels". The signature is fluid and cursive, with the first name "Lisa" and last name "Daniels" clearly distinguishable.

Lisa Daniels, ASDWA President and Director, Bureau of Safe Drinking Water Director, Pennsylvania Department of Environmental Protection

RE: Comments of Natural Resources Defense Council on “Strengthening
Transparency in Regulatory Science,” 83 Fed. Reg. 18,768 (April 30, 2018),
Docket ID No. EPA-HQ-OA-2018-0259

I. Introduction

Natural Resources Defense Council (NRDC) is a national, not-for-profit public-health and environmental advocacy organization whose purpose is to safeguard the Earth: its people, its plants and animals, and the natural systems on which all life depends. NRDC has hundreds of thousands of members, all of whom depend on the U.S. Environmental Protection Agency (EPA) to protect them from the harms of pollution. EPA’s proposed rule, “Strengthening Transparency in Regulatory Science,” 83 Fed. Reg. 18,768 (Apr. 30, 2018) (the “Proposal”) would harm these members by limiting the types of science that EPA could use to protect the environment and public health. As described in detail below, the Proposal is an attack on science and violates the law. EPA should withdraw it immediately.

The Proposal would bar EPA from considering science based on dose response data and models that could not be made “publicly available in a manner sufficient for independent validation.” 83 Fed. Reg. at 18,773. EPA asserts that “[e]nhancing the transparency and validity of the scientific information relied upon by EPA strengthens the integrity of EPA’s regulatory actions and its obligation to ensure the Agency is not arbitrary in its conclusions.” 83 Fed. Reg. at 18,769. Notably, as described in detail below, neither the Proposal nor docket contains any factual, scientific, technical, logical, or legal support for the suggestion that science and data that are “publicly available in a manner sufficient for independent validation” are necessary elements for the “validity,” “reliability,” or “transparency” of scientific information. *Id.* EPA provides no basis for its assumption that science or studies for which data are publicly available yield more valid or reliable results than the best available, peer-reviewed, independent, credible science, for

NATURAL RESOURCES DEFENSE COUNCIL

ED_002389_00015391-00001

which the underlying data are not publicly available. Similarly, the Proposal arbitrarily fails to address, much less explain, why prior EPA regulatory actions that relied upon studies, data, or other information did not reflect the “best available science” or why they were otherwise unreliable, despite failing to meet the Proposal’s standards.

To the contrary, EPA, other federal agencies, EPA scientific advisory bodies, the National Academy of Science (NAS), and EPA’s Science Advisory Board (SAB) have repeatedly and consistently relied upon the best available, peer-reviewed, independent, credible scientific studies—for which the underlying data are not publicly available—and found that science to be valid, reliable, trustworthy, and a reflection of the “best available science” that EPA claims as its concern in the Proposal. The Proposal arbitrarily excludes prior research, studies, and data that do not meet its applicability criteria based on concerns that were never announced to researchers or the public, or deemed necessary by any government agency, at the time the research, studies, or data-gathering were undertaken. The Proposal is strikingly at odds with those scientific practices and their history, with *nothing* in the rulemaking docket to support casting aspersions on the practices or history sufficient to prohibit EPA from considering such science.

EPA has unsurprisingly failed to cite a single statute that provides any basis for the Proposal. What statutes EPA does cite conflict with the Proposal, because they require EPA either to consider the best available science (which may be based on data that cannot be made public) or to regulate to protect public health and the environment (which cannot be done if critical science is ignored simply because the underlying data cannot be made public). Similarly, none of the other sources EPA cites provide legal or logical support for the Proposal.

The Proposal also suffers from a host of other problems: its definitions are vague; it is an unexplained reversal from prior agency policy; it handles confidential business information in a capricious manner; it treats other types of agency actions inconsistently; it applies retroactively to studies completed before the rule goes into effect; it fails to analyze the disproportionate effect of the rule on people of color, low-income people, and children; and it contains a cryptic peer review provision.

As explained throughout these comments, EPA’s agenda, as reflected in the Proposal, is not greater public trust or understanding; rather, the Proposal’s goal is censorship of science and studies whose underlying data are not publicly available and may not be made publicly available as a matter of law or other agreement. The Proposal should be withdrawn.

II. The Proposal is a flawed solution in search of a problem

The Proposal represents an unworkable, ill-explained, unjustified, and thoroughly unlawful approach to address a problem that does not exist. EPA does not explain why the data sharing requirements outlined in the Proposal are suddenly so urgent. This missing argument is especially significant given the decades of peer-reviewed data and models that EPA has justifiably relied on for regulatory actions. There is no “crisis in replicability” for the types of data and models that the Proposal purports to address; as an indication of this, EPA has not cited *any* sources for its assumptions presented in the Proposal.

The governing, harmful conceit of the Proposal—to censor the best available, peer-reviewed health science that EPA may consider, in order to prevent adoption of protective health and environmental safeguards—is a thinly disguised version of anti-science legislation that Republican members of Congress have introduced, repeatedly, but have been unable to enact into federal law, repeatedly.¹ NRDC opposed those bills strongly, and still does. We raised many of the identical objections to those bills that we raise to the Proposal in these comments.² Indeed, it is striking that one of the primary EPA co-authors of the Proposal was a Committee staff person for the leading congressional co-sponsor of the legislation in question when the failed bill was being shepherded through the House of Representatives.³

Members of Congress understood that new legislation was required to censor EPA consideration of high quality, peer-reviewed science, and yet EPA barreled ahead with a Proposal based on the same legislative approach while pretending, suddenly, that multiple federal laws have authorized that approach, magically, all along. For the reasons discussed in these comments, the Proposal is not authorized by any federal laws. Moreover, the Proposal violates numerous federal laws entrusted to EPA, in addition to being arbitrary and capricious and an abuse of EPA’s discretion.

A leading medical researcher notes that, if the Proposal is approved, “science will be practically eliminated from all decision-making processes” at the agency because so few studies meet (or could be expected to meet, on time scales appropriate for regulatory actions and associated public comment periods) the Proposal’s requirements for data availability.⁴ Instead of restricting the pool of available science by instituting an unworkable requirement for a broad category of scientific inquiry, EPA should focus on identifying particular weaknesses in the available evidence and targeting future investigations towards addressing specific deficiencies.

Moreover, assessing whether any particular study is reliable is not contingent on whether the underlying data can be made public, a fundamental point made clear in a report that EPA itself cited in the Proposal.⁵ The assessment of study credibility depends on a number of factors, including “how large and rigorous studies are, how well researchers have contained conflicts of interest (financial or other), and how successfully the study design and analysis have limited bias, properly accounting for the complexity inherent in each scientific question.”⁶

(Hereinafter “OMB Guidance”).

⁶ See All Science, *supra*, n. 4.

With respect to one area of dose response data and models considered by EPA, decades of quantitative, peer-reviewed investigation into the premature mortality risks caused by PM_{2.5} have replicated study findings across different geographic settings and time periods. EPA's own 2009 Integrated Science Assessment (ISA) for PM_{2.5} considered many scientific studies that do not meet the data transparency requirements of the proposed rule. The ISA concluded, based on a wealth of epidemiologic evidence, that a causal relationship exists between short-term PM_{2.5} exposures and cardiovascular effects and mortality, and is likely to exist for respiratory effects. The ISA also found that the scientific evidence is sufficient to conclude that the relationship between long-term PM_{2.5} exposure and respiratory effects is likely to be causal, and is causal for mortality. The Agency has not explained why the scientific evidence underlying these determinations is now insufficient for regulatory decision making. Its proposal to exclude scientific data based on questionable transparency requirements is arbitrary and in direct contradiction with prior Agency determinations.

As the ISA demonstrates, no Agency regulatory action is predicated on the results of any single scientific study; rather, the continual accumulation of quantitative evidence with respect to the dose-response relationships for particular environmental contaminants informs decision making. The causal criteria outlined in the ISA demonstrate the iterative process by which dose-response relationships are assessed over time as evidence is gathered and published in peer-reviewed journals. In assessing the reliability of scientific findings, "it is essential to examine evidence in its totality, recognize its relative strengths and weaknesses, and make the best judgment based on what is available."⁷

A. According to information cited in the Proposal, publicly available data is not needed to ensure reproducibility

Importantly, one of the documents that EPA relies upon in the Proposal in footnote 6 fatally undermines the Proposal's pretense that underlying data protected by confidentiality concerns must be made publicly available in order to be considered valid and reliable, and meet the "reproducibility standard." 83 Fed. Reg. at 18,769. A 2002 Office of Management and Budget report, "Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by Federal Agencies," (OMB Guidance)⁸ notes that data need not be publicly available in order to meet the reproducibility standard:

Even in a situation where the original and supporting data are protected by confidentiality concerns, or the analytic computer models or other research methods may be kept confidential to protect intellectual property, it may still be feasible to have the analytic results subject to the reproducibility standard. For example, a qualified party, operating under the same confidentiality protections as the original analysts, may be asked to use the same data, computer model or statistical methods to replicate the analytic results reported in the original study.⁹

⁷ *Id.*

⁸ *See supra*, n. 5, OMB Guidance.

⁹ *Id.* (citing Krewski, D., Burnett, R. T., Goldberg, M. S., Hoover, K., Siemiatycki, J., Abrahamowicz, M., & White, W. H., Reanalysis of the Harvard Six Cities Study and the American Cancer Society Study of Particulate Air

The OMB Guidance directly undermines the notion that the only way for research to meet the reproducibility standard is by making all underlying data available for public inspection. As the document further notes,

[t]he primary benefit of public transparency is not necessarily that errors in analytic results will be detected, although error correction is clearly valuable. The more important benefit of transparency is that the public will be able to assess how much an agency's analytic result hinges on the specific analytic choices made by the agency. Concreteness about analytic choices allows, for example, the implications of alternative technical choices to be readily assessed. This type of sensitivity analysis is widely regarded as an essential feature of high quality analysis, yet sensitivity analysis cannot be undertaken by outside parties unless a high degree of transparency is achieved. The OMB guidelines do not compel such sensitivity analysis as a necessary dimension of quality, but the transparency achieved by reproducibility will allow the public to undertake sensitivity studies of interest.¹⁰

Lastly, the OMB Guidance indicates that publicly accessible data is an unworkable requirement in some situations due to sensitive data that cannot be legally or ethically released to the public: "We acknowledge that confidentiality concerns will sometimes preclude public access as an approach to reproducibility."¹¹

The Proposal is arbitrary and capricious and an abuse of EPA discretion by creating a framework in which it is very clear its real concerns are not "actual verification" of studies and data or "best available science," but prohibiting EPA from considering and basing protective regulations on relevant, peer-reviewed science whose underlying data or elements *may not* be made publicly available, due to various legal obligations such as confidentiality agreements, laws, or regulations. The Proposal's real aims are not verification or "best available science"; instead, its aims are censoring science and obstructing evidence of the need for greater health and environmental safeguards.

B. Independent validation is already occurring

The Proposal does not require that any information *actually* be *independently validated* before EPA may consider it or base regulatory decisions on such verification. Accordingly, there is an irrational disconnect between EPA's insistence that information be "publicly available for independent validation" and the Proposal's claim that this ensures EPA will consider and use the "best available science." *See* 83 Fed. Reg. at 18,769. EPA itself has not outlined a process by which "dose response data and models" would be validated, and the Proposal does not seriously consider the methodological complications of partial redaction of underlying study data.

Pollution and Mortality,' A Special Report of the Health Effects Institute's Particle Epidemiology Reanalysis Project, Cambridge, MA, Health Effects Institute (2000). (Hereinafter "Reanalysis of Harvard Six Cities Study").

¹⁰ *Id.* at 8456.

¹¹ *Id.*

The Proposal claims that its data release requirements are vital for “independent validation,” but the truth is that independent validation is happening now. As an example, consider the independent validation of the Harvard Six Cities study by the Health Effects Institute (HEI), which is characteristic of the types of complex epidemiologic investigations that could be subject to the unworkable provisions of this Proposal.¹² The Clean Air Act requires EPA to consider the best available evidence in setting and revising the National Ambient Air Quality Standards (NAAQS) to protect health within an adequate margin of safety. 42 U.S.C. § 7409(b)(1). Fine particulate matter, an air pollution category encompassing solid particles and condensed liquid droplets with a diameter of 2.5 microns or smaller (PM_{2.5}), is by far the most dangerous type of air pollution because it can penetrate deep into the lung and enter the bloodstream.¹³ The 1993 Harvard Six Cities Study, a groundbreaking study into the link between air pollution exposures and health, examined the health effects of PM_{2.5} air pollution over 16 years on more than 8,000 adults and 14,000 children relying on private medical records and air pollution monitors deployed near study volunteers.¹⁴ The study found a significant relationship between air pollution exposure and risk of early death, but the raw data could not be released publicly because researchers were obligated to ensure study participant confidentiality.

Still, relying on that data, more than 100 peer-reviewed studies have confirmed the basic results of that initial study. Because the study and others like it advanced through the rigorous peer-review process characteristic of the world’s leading scientific journals (whose editors have rejected the proposed rule¹⁵), EPA relied on the results of this study and others in 1997 when it promulgated the first-ever NAAQS for fine particulate matter.¹⁶ Since then, hundreds of additional studies into the health effects of air pollution (conducted across the country¹⁷ and internationally,¹⁸ for both short-¹⁹ and long-term²⁰ impacts of exposure) and independent re-analyses of existing datasets have affirmed the air pollution-mortality and morbidity links with increasing precision. In 2000, the Health Effects Institute published

its independent re-analysis²¹ of the Harvard Six Cities study, which confirmed the original findings. When HEI was tasked with re-analyzing the study data in February 1997, it required a major investment of time and analytical resources on a scale far beyond that envisioned by the Proposal. In fact, the HEI re-analysis, which validated the original study findings, took three years to complete.²² The fact that the original Six Cities study stood up strongly to the scrutiny of independent researchers and sensitivity analyses speaks to the methodological rigor that the peer-review system demands. Indeed, the field of air pollution epidemiology in particular already has a high reproducibility standard.²³

Clearly, the Proposal arbitrarily ignores the significant amounts of time, effort and expense associated with “independent verification” of studies and data, especially given the wide scope of peer-reviewed science that would be subject to data sharing requirements. 83 Fed. Reg. at 18,774.²⁴ Given how long it took a team of researchers to independently re-analyze a single study, and the relatively short public comment periods associated with EPA regulatory actions,²⁵ the Proposal is doubly arbitrary: it ignores the significant amounts of time, effort and expense associated with “independent verification” of studies and data. Moreover, it is possible (even likely) that studies or data submitted by the public during comment periods would need to be independently assessed before consideration by EPA. Against the backdrop of EPA rulemakings with public comment periods and open rulemaking time periods and the voluminous amounts of data that would need to be de-identified, shared, and re-analyzed, it would be impossible to achieve independent verification of relevant dose-response information.

EPA has rightly continued to rely on the robust peer-reviewed literature to inform the air quality standard-setting process year after year, incorporating the best available scientific evidence in epidemiology, toxicology, and exposure assessment to set the outdoor air quality standards at levels that protect public health and the environment. It has also (until recently) agreed with leading scientists who have spent their careers studying air pollution and health that no safe threshold of fine particulate air pollution exists. The National Ambient Air Quality Standards and Clean Air Act’s designations process have helped to clean up our nation’s air in

²¹ Reanalysis of Harvard Six Cities Study, *supra* n.9.

²² Elaine Appleton Grant, “Prevailing Winds: A decades-long fight to bring clean air standards in line with environmental health science offers lessons for today,” Harvard Public Health Magazine, Fall 2012 *available at* <https://www.hsph.harvard.edu/news/magazine/f12-six-cities-environmental-health-air-pollution/>. (Hereinafter “Prevailing Winds”).

²³ *See All Science, supra*, n. 4.

²⁴ Regarding proposed § 30.7, the Proposal states that “EPA shall conduct independent peer review on *all* pivotal regulatory science used to justify regulatory decisions” (emphasis added). EPA, in its Proposal and accompanying administrative record, does not begin to grapple with the impossible, burdensome obligation the Proposal creates to conduct new and independent peer review of “all pivotal regulatory science,” especially against the backdrop of the real-world experience with the three-year, costly, resource-intensive HEI re-analysis of just *one* study. *See supra*, Prevailing Winds, at n. 22.

²⁵ Environmental statutes and the Administrative Procedure Act sometimes allow public comment periods to be as short as 30 days. This period of time is wildly out of sync with the Proposal’s conceits that making data or models underlying regulatory science publicly available will allow for independent validation. *See, e.g.*, 83 Fed. Reg. at 18,773 (proposed § 30.1). EPA has no response to this disconnect in the Proposal or the administrative record accompanying the Proposal.

substantial ways since 1970, and have protected millions of Americans, young and old, from breathing polluted air that would harm their health.

When analyzing the HONEST Act, the previously introduced legislation aimed at achieving the same end as the Proposal, the Congressional Budget Office predicted that the yearly tab could top \$100 million to upgrade the format and availability of those studies' data to the level required if EPA continues to rely on the same volume of scientific research as in the recent past.²⁶ In part, the money would go toward obtaining all of the underlying data for specific studies, formatting the information for public use, and providing access to the needed computer codes and models, the analysis said.

The Proposal also fundamentally ignores the real-world constraints, as well as moral barriers in some cases, to replicating studies due to the impossibility or offensiveness of reproducing conditions that underlay the studies. For example, researchers cannot replicate the poor air quality conditions experienced in the past and, correspondingly, the peer-reviewed investigations of the health effects cannot be reproduced. As one leading researcher notes, “researchers cannot ethically randomize people to harmful exposures in order to tackle confounding, nor violate informed consent agreements that prohibit open sharing of private data from past studies.”²⁷

Finally, the EPA chemical assessment program, called the Integration Risk Information System (IRIS) already uses credible transparent methods to provide the public with reliable, transparent, credible chemical hazard assessments and toxicity values. The program received high praise from its last two reviews by the National Academies of Sciences (NAS 2014 and NAS 2018), as well as from the Scientific Advisory Board (SAB 2017) for its continuous improvements and successes in its methods for evaluating and integrating scientific evidence from various streams including human studies, animal studies, and mechanistic studies. This Proposal would undermine decades of expert work to advance successful data evaluation methods described in the systematic review approach now underway in the EPA IRIS program.

C. Health Insurance Portability and Accountability Act

Many of the studies that EPA has relied on to set and revise the NAAQS are epidemiological prospective cohort investigations encompassing thousands of individuals over several decades. The Proposal's provisions concerning the public sharing of underlying data from these studies directly contradict both the legal protections for private medical data under the Health Insurance Portability and Accountability Act (HIPAA)²⁸ and the requirements researchers adhere to under the purview of Institutional Review Boards (IRBs),²⁹ which typically require

²⁶ Congressional Budget Office, Cost Estimate, Honest and Open New EPA Science Treatment Act of 2017, March 29, 2017 *available at* <https://www.cbo.gov/system/files/115th-congress-2017-2018/costestimate/hr1430.pdf>.

investigators to ensure study participant confidentiality and data security. The foundational research in air pollution epidemiology demonstrating a causal link between pollution exposures and adverse health outcomes (including early death,³⁰ heart disease,³¹ lung cancer,³² stroke,³³ and asthma exacerbations³⁴) would be put at risk if the Proposal were finalized. Underlying sensitive health data cannot be released without obtaining individual patient consent, or consent from the next responsible party³⁵ for study participants who have died.

Importantly, the Proposal does not consider the negative effects it would have on recruitment for future epidemiological studies if members of the public had to permit access to sensitive personal and health information as a condition for study participation. Many of the peer-reviewed studies EPA uses to set and revise National Ambient Air Quality Standards through the Clean Air Act analyze the relationship between exposure to polluted air over many years and a range of adverse health effects. These comprehensive studies have enrolled thousands of American volunteers over periods ranging from several years to decades, in order to understand exactly how pollution harms us. The Proposal would have a chilling effect on the study recruitment process because of the onerous data release requirements. EPA's actual creation of these harmful consequences, and failure to consider and account for these harmful consequences, render the Proposal arbitrary and capricious and an abuse of agency discretion.

The Proposal would stand in stark contrast to the protective, guiding principles of the Health Insurance Portability and Accountability Act,³⁶ known as HIPAA. HIPAA was enacted nationally in 1996 as Public Law 104-191 and has served as a foundation for the protection of individual patients' privacy in research and in healthcare settings, setting boundaries on the appropriate use and release of health records.

According to the Department of Health and Human Services, HIPAA "establishes appropriate safeguards that health care providers and others must achieve to protect the privacy of health information; . . . holds violators accountable, with civil and criminal penalties that can be imposed if they violate patients' privacy rights; and it strikes a balance when public

responsibility supports disclosure of some forms of data – for example, to protect public health.”³⁷

With the shift away from paper to electronic medical records in recent decades, “the potential for individuals to access, use, and disclose sensitive personal health data” has increased.³⁸ While protecting individual patient privacy is a long-standing tradition among health-care and public health practitioners, previous legal protections were afforded by a patchwork of inconsistent and often inadequate laws and regulations. In 2003, pursuant to HIPAA, rules were enacted to expressly protect the privacy of certain individually identifiable health data, or “protected health information” (PHI). The HIPAA Privacy Rule (Standards for Privacy of Individually Identifiable Health Information) offered the first national standards for protecting the privacy of health information.³⁹

For researchers at American universities and teaching hospitals, HIPAA and the Privacy Rule are part of life, especially in the health sciences. Any proposed research project must submit a complete description of its planned use, protection, and storage of PHI before the university’s Institutional Review Boards (IRB), before any research project may proceed. Each researcher needs to annually renew their familiarity and expertise with the terms of HIPAA and the Privacy Rule, by taking a test to certify compliance. It is eminently obvious to those involved in research that protecting study subjects’ personal data is of the utmost importance, from an ethical and a legal viewpoint.

The Proposal, on the other hand, would disallow use of an enormous body of carefully-protected, de-identified health data from epidemiological studies large and small, for which IRBs have approved collection because patient privacy has been protected. The rule would effectively demand that study subjects’ private health information be made publicly available, or else not be usable in regulatory efforts. This measure would hamstring the research community’s ability to continue to produce foundational, health-protective research. Not only would the rule destroy society’s collective ability to benefit from studies of the causes of and potential cures for ill health, it also would veer dangerously toward compromised privacy during an era in which electronic data security is a nationwide crisis. In short, the Proposal flies in the face of decades of statutory, regulatory and institutional progress to simultaneously protect public health and privacy.

D. Anonymization or partial redaction of data is unworkable

Proponents of the Proposal have suggested that privacy concerns surrounding the sharing of health data can be mitigated by anonymizing the individual-level health data that researchers collect. This overlooks the serious problem that anonymizing data (through techniques such as data masking, coding, and de-identification techniques) might not adequately protect confidentiality or privacy. Various studies have documented that de-identification techniques to

³⁷ *Id.*

³⁹ *Id.*

render data anonymous is not “simple,” despite what the Proposal suggests, and can lead to the publication of protected confidential or private data. One study explained that “[b]y linking demographics to public records such as voter lists, and mining for names hidden in attached documents, we correctly identified 84 to 97 percent of the profiles for which we provided names.”⁴⁰ Another explained “87% (216 million of 248 million) of the population in the United States had reported characteristics that likely made them unique based only on [5-digit ZIP, gender, date of birth].”⁴¹ Finally, another explains that “any data that is even minutely useful can never be perfectly anonymous.”⁴² The Proposal does not acknowledge these issues.

The claim that publicly available dose response data and models would allow for independent validation stands in direct contradiction to the legal privacy protections that apply to key data necessary for re-analysis. The proposed partial redaction of sensitive information poses a cascading set of problems, because the statistical models characteristic of epidemiologic investigations rely on the inclusion of potentially confounding variables (*e.g.*, age, sex, home address, health status, diet and alcohol consumption, smoking history) in order to properly isolate the pollution-health relationship with precision.⁴³ To understand the dose-response connection, these studies analyze detailed health, demographic, spatial, and behavioral information from thousands of people. This information is extremely sensitive and collected at the individual level. As such, our nation’s health privacy laws and Institutional Review Board (IRB) protocols require researchers to keep the data secure and confidential to prevent misuse. Collectively, these data points help researchers understand and isolate the cause-effect relationship between exposure to air pollution and risks for various health problems. It would be extremely difficult if not impossible for anyone using partially-redacted data sets derived from epidemiologic cohort studies to “validate” the results of the original studies, because such investigators would not be working with complete data sets.

As further demonstration, the 2009 Integrated Science Assessment for PM_{2.5} notes that “[a]ppropriate statistical adjustment for confounders requires identifying and measuring all reasonably expected confounders.”⁴⁴ Therefore, exclusion of some potentially sensitive confounding variables from an underlying dataset likely would lead a different team of investigators to a different result. Causing this wrongheaded and indefensible outcome results from the core approach and conceit in the Proposal, revealing it to be yet again, arbitrary and capricious and an abuse of EPA discretion. Put another way, the quantitative findings of dose-response relationships would almost certainly differ—not as a result of any true difference in the quantitative exposure-effect relationship, but because the original work relied on complete data

sets and the new analyses would not—due to the Proposal. The resulting discrepancies in quantitative findings could serve as motivation to call the original study results into question due to faulty and incomplete re-analyses.

In any case, such an undertaking would be immensely costly, complicated, and slow—and deliver no net benefit to EPA or the American public. The cost projections are staggering: when EPA staffers in 2017 considered the potential effects of the failed HONEST Act⁴⁵ that mirrors the approach of the Proposal, they calculated⁴⁶ that efforts to anonymize health data and confidential business information could top \$250 million annually⁴⁷ (and potentially up to \$1 million **per study**) for the already strained agency workforce—huge amounts of taxpayer money and staff time that would be much better spent on implementing our nation’s environmental laws.

Despite this significant cost estimate, EPA does not confront the financial dimensions or the need for financial incentives to support the unprecedented data release requirements in the rule.⁴⁸ It also does not consider the fact that scientists do not typically receive funding to make the data underlying peer-reviewed studies available for public inspection. The Proposal would likely “significantly reduce” the evidence base that the EPA considers for air quality/health analyses (according to a Congressional Budget Office evaluation of the HONEST Act⁴⁹), a dramatic reduction that excludes the best available scientific studies that the agency has relied on for more than 20 years to set and revise the NAAQS.

Under the Proposal, EPA would not be able to rely on the best available science for its Integrated Science Assessments of air pollution that inform the NAAQS-setting process. Meanwhile, industry-funded research calling into question the air pollution-health link would not be subject to similar data release requirements, or even peer-review and independent reevaluation. This approach is asymmetric and favors selective, opaque, and questionable research methods over the consensus of robust peer-reviewed scientific investigation. Transparency in scientific data is an important topic, but one that needs to be balanced against the privacy concerns of study participants and legal and ethical restrictions on the sharing of sensitive data.

EPA identifies no indication under federal laws that Congress intended to create or authorize a lose-lose dynamic, in which EPA could exercise its authority either by excluding the best available, peer-reviewed science to inform health and environmental protections, *or* force researchers or ordinary Americans to cast aside privacy concerns, as well as legal and ethical

restrictions on the sharing of sensitive data. That false choice is entirely a creation of the agency's misguided policy preferences in the Proposal. The rule is arbitrary and capricious and an abuse of EPA discretion, with its selective application of data release requirements and disregard for the quantitative complexities of epidemiologic research.

E. EPA misrepresents data sharing policies at scientific journals

The Proposal identifies data sharing policies at a number of peer-reviewed scientific journals and claims that these policies support the Proposal's underlying public access requirements for dose response data and models. This is false. In fact, these various journal policies are more flexible in their terms for data sharing and nuanced in their practical approaches than what EPA fundamentally misrepresents in the Proposal. *See, e.g.*, 83 Fed. Reg. at 18,771/1, nn.20–22. An examination of these sources indicates, in fact, that the language of the Proposal is not consistent with best practices and is unworkable in practice.

The Proposal is not, as it claims, “consistent with requirements for many scientific journals.” 83 Fed. Reg. at 18,771. Specifically, the Taylor and Francis journal policy for data transparency⁵⁰ is much more nuanced than EPA claims and offers a range of options for data submission, demonstrating the need for flexibility and discipline-specific concerns with respect to the public sharing of sensitive data. The Springer Nature Research Data Policy⁵¹ cited in the proposed rule is similarly flexible, describing requirements across a spectrum for four types of underlying research data. For only one of four types of research data is data sharing required as a condition for publication. The frequently asked questions document for the Springer Nature Data Policy⁵² notes that “[t]he policies apply to all research that support publications but *reasonable restrictions on data availability are permitted to protect human privacy, biosafety or respect reasonable terms of use for data obtained under license from third parties.*”⁵³ The Proposal's categorical exclusion and prohibition are thus flatly inconsistent with the Springer Nature Research Data policy cited in the Proposal. *See* 83 Fed. Reg. at 18,771/1, n.20.

Furthermore, Elsevier's corresponding policy⁵⁴ is optional for authors, and states that the journal: “will . . . [e]ncourage and support researchers to share research data *where appropriate* and at the earliest opportunity, for example by enhancing our submission processes to make this easier.”⁵⁵ A frequently asked questions page further explaining this policy says that the “policy is clear in that *we encourage and support authors to share their research data rather than mandating them to do so* and provide tools and services to enable them to do this effectively.

⁵⁵ *Id.* (emphasis added); *see also* Elsevier, “Research Data FAQs,” *available at* <https://www.elsevier.com/about/policies/research-data/research-data-faqs>.

Where there is community support for (often discipline-specific) mandates regarding data deposit, submission and sharing, some of our journals may reflect this with their own mandatory data sharing policies.”⁵⁶ This same supporting frequently asked questions resource from Elsevier says that Elsevier “respect[s] authors who need to keep research data under embargo.”⁵⁷ The Proposal, by contrast, does not allow researchers to keep their research data under embargo. Nor does the Proposal offer such discipline-specific flexibility and, as a result, is neither practically workable nor consistent with the policies of the world’s leading scientific journals.

The Elsevier policy does not apply strict data release requirements to include publicly accessible information. It says that “[r]esearch data should be made available free of charge to all researchers *wherever possible* and with minimal reuse restrictions.”⁵⁸ It further states that “[r]esearchers should remain in control of how and when their research data is accessed and used, and should be recognised and valued for the investments they make in creating their research data and making it available.”⁵⁹ Under the Proposal, researchers retain no such control over their data; the Proposal ignores these harmful ramifications.

The PLOS Data Availability policy notes that, for studies involving human participants, “data must be handled so as to not compromise study participants’ privacy.”⁶⁰ The PLOS Policy itself links to the National Institutes of Health Data Sharing Workbook, which states that:

It is rarely sufficient to simply remove names, addresses, telephone numbers, Social Security Numbers, and the like. Deductive disclosure of individual subjects becomes more likely when there are unusual characteristics or the joint occurrence of several unusual variables. Samples drawn from small geographic areas, rare populations, and linked datasets can present particular challenges to the protection of subjects’ identities.⁶¹

Similarly, the NIH Data Sharing Workbook specifies that “[s]ome investigators withhold parts of the sample; others block access to specific variables, especially items with low prevalence rates that make it easier to identify participants with unusual characteristics.”⁶² Within this policy, the “measures used to minimize the risk of breaching the confidentiality of data” are unworkable given the depth and breadth of peer-reviewed research that would fall under the rule.⁶³ The Proposal identifies no plan for EPA to manage mandatory agreements to maintain confidentiality, data encryption, electronic firewalls and locked storage facilities, password authentication of users, audit trails, disaster prevention and recovery plans, or security measures for backup tapes.

⁵⁶ *Id.* (See “Is it compulsory to share my research data?”) (emphasis added).

⁶² *Id.*

⁶³ *Id.*

To the extent data availability, even broadly defined, is contemplated in the Proposal, it is done so prospectively, not retroactively. Unlike the Proposal, the PLOS policy does not apply retroactively to all relevant studies: “[t]he data policy was implemented on March 3, 2014. Any paper submitted before that date will not have a data availability statement. However, for all manuscripts submitted or published before this date, data must be available upon reasonable request.”⁶⁴ Similarly, the Springer Nature policies began during the first quarter of 2016 but did not apply retroactively, as the Proposal would.⁶⁵

The NIH policy cited in footnote 21 of the Proposal also states that “[t]he investigator must be a tenure-track professor, senior scientist, or equivalent, to be able to submit” a data access request.⁶⁶ This fatally undermines the notion in the Proposal that data must be available to all members of the public in order to meet the reproducibility threshold. Furthermore, the Census Bureau resource,⁶⁷ also cited in footnote 21 of the Proposal, describes the Federal Research Data Centers. These centers restrict access to certain individuals, who “must obtain Census Bureau Special Sworn Status – passing a moderate risk background check and swearing to protect respondent confidentiality for life, facing significant financial and legal penalties under Title 13 and Title 26 for failure to do so.”⁶⁸ Again, this fatally undermines the notion in the Proposal that data must be available to all members of the public. While the Proposal simply says that members of the “public” can access these centers, the reality is that access to such controlled spaces is carefully restricted and *not* accessible to all members of the public. EPA does not seriously confront the significant challenges involved in enabling access.

Finally, there is no evidence in the record that the Federal Statistical Research Data Centers have the capacity to handle the substantial amounts of data that would be required to be submitted under the Proposal. But the massive increase in data-handling responsibilities propelled by the Proposal indicates strongly that EPA must first investigate and document what those resource capacities are, and whether the Centers believe they can handle increased responsibilities. If EPA fails to undertake such investigations and fails to demonstrate adequate resources and data-handling capacities, finalizing any rule based on the Proposal would be arbitrary and capricious and an abuse of EPA discretion.

The report cited in footnote 22 of the Proposal⁶⁹ suggests that strategies for data transparency “should be cost-effective,” yet no consideration of the cost repercussions of the Proposal is given in the Proposal or accompanying administrative record. This is extraordinary,

⁶⁴ See *supra*, n. 60.

⁶⁵ See *supra*, n. 52, Question 7: “Is data sharing mandatory for every article?”

⁶⁶ National Institutes of Health, Office of Science Policy, “Requesting Access to Controlled-Access Data Maintained in NIH-Designated Data Repositories,” available at <https://osp.od.nih.gov/scientific-sharing/requesting-access-to-controlled-access-data-maintained-in-nih-designated-data-repositories-e-g-dbgap/>.

⁶⁷ United States Census Bureau, “Federal Statistical Research Data Centers,” available at <https://www.census.gov/fsrdc>.

and independent evidence that the Proposal and supporting materials are arbitrary and capricious and an abuse of EPA discretion. As just one example of the costs associated with data transparency requirements of this nature, the report cited by EPA itself quantified cost of compliance at \$46 million.⁷⁰ This amount represents more than two-thirds of the *entire* annual budget of the EPA office responsible for writing all clean air safeguards and standards under the Clean Air Act, the Office of Air Quality Planning and Standards.⁷¹ This amount equals over 90% of the budgeted amount for *every* EPA employee working in OAQPS.⁷² Neither the Proposal nor the accompanying administrative record remotely addresses, much less explains, how these data transparency compliance costs will be met. Moreover, the options for data sharing listed within footnote 22 are more expansive than those listed in the Proposal. They include requiring applications for access; restricting access to data for the purposes of replication, validation, and sensitivity evaluation; establishing physical controls on data storage; online training for researchers; and nondisclosure agreements.

F. The Proposal will not enhance public understanding

The Proposal claims that it “will help ensure that EPA is pursuing its mission of protecting public health and the environment in a manner that the public can trust and understand.” 83 Fed. Reg. at 18,769/1. This is false and unsupported in multiple respects. As these comments explain, the Proposal would prohibit EPA from considering information that will be the best available, peer-reviewed, independent, credible science—on the arbitrary and irrelevant grounds that underlying data are not publicly available. In this fashion, as these comments discuss, the Proposal would obstruct and thwart EPA from its mission and responsibility to protect public health and the environment.

Moreover, the Proposal would do so in a manner that the public cannot and would not trust and understand: the Proposal utterly fails to demonstrate or even support the claim that its approach ensures the information relied upon by EPA would be more trustworthy. EPA establishes no logical nexus or evidence-based link between the Proposal and its insinuations that studies or information lacking publicly available data are unreliable, invalid, irrelevant or untrustworthy. Additionally, the Proposal utterly fails to demonstrate or even support the claim that its approach ensures the information relied upon by EPA would be more understandable to the public.

First, EPA fails to establish or even support the premise of its wrongheaded belief: that the best available, peer-reviewed, independent, credible science is not understandable already to the public, or the informed, knowledgeable members of the public versed in the scientific, technical, legal, economic or policy matters relevant to EPA’s regulations, actions and mission.

⁷⁰ *Id.* at 25.

⁷¹ U.S. EPA, Fiscal Year 2019: Justification of Appropriation Estimates for the Committee on Appropriations, 837, available at <https://www.epa.gov/sites/production/files/2018-02/documents/fy-2019-congressional-justification-all-tabs.pdf>.

⁷² *Id.*

Second, the Proposal's claim about enhanced public understanding suffers from a fundamental internal contradiction and logical failing inherent to its approach: nothing in the Proposal requires that (1) publicly available data be actually considered, addressed, verified or replicated by EPA prior to the agency being allowed to consider the study based on that data; (2) publicly available data be actually considered, addressed, verified or replicated by any other person or party prior to EPA being allowed to consider the study based on that data; and (3) publicly available data be actually considered, addressed, verified or replicated by EPA, any person, or any party *ever*, before or after EPA is allowed to consider the study based on that data. Accordingly, it is false and unsupported to suggest that the Proposal ensures greater public "understanding" than the longstanding regulatory landscape where the Proposal's prescriptions and proscriptions do not exist.

III. The Proposal would devastate EPA's ability to protect people from hazardous substances with well-known harmful effects

A. Lead in drinking water, soil, and paint

The damaging effects of early childhood lead exposure can last a lifetime, so prevention is the only effective and meaningful solution. Lead-contaminated soil, food, drinking water, and dust from leaded paint can all be inhaled or ingested by children, and from there be circulated through the bloodstream into all the organs, bones, and brain. Adverse effects include brain damage, kidney damage and disease, infertility in men and women, elevated blood pressure and strokes in adults, and neurological damage that can cause pain in the muscles and joints.⁷³ Exposures during pre-natal and early life development are especially devastating.

The lead regulations and reduction measures resulting from the implementation of science-based EPA regulations are essential for reducing lead poisoning effects in the U.S. population. Since 2001, life-saving EPA standards under the Toxic Substances Control Act (TSCA) have protected children and families from exposure to lead in paint, dust, and soil, in and around homes and childcare facilities.⁷⁴ This regulation supports existing regulations regarding worker training and certification, lead hazard disclosure in real estate transactions, requirements for lead cleanup under state authorities, and lead hazard evaluation and control in Federally-owned housing. In addition, it establishes authority under TSCA to set residential lead dust cleanup levels.

The EPA Lead and Copper Rule (LCR) of 1991 established drinking water protections by requiring tap water monitoring and triggering a public alert and some protective action such as corrosion prevention measures or service line replacement if lead levels exceed 15 ppb. 40 C.F.R. Part 141 Subpart I. Revisions to the LCR in the 2007 rule update requirements for monitoring, treatment, and customer notification.⁷⁵ The LCR rule applies to water utilities, and

⁷³ U.S. Department of Health and Human Services, Agency for Toxic Substances and Disease Registry, Toxicological profile for lead, August 2007, available at <https://www.atsdr.cdc.gov/toxprofiles/tp13.pdf>.

the companion Reduction of Lead in Drinking Water Act sets standards for pipes, solder, and other plumbing fittings.

The lead rules are based on risk analyses conducted by EPA using epidemiology studies published in the 1990s that correlate childhood blood lead levels with impaired brain function and adverse behavioral effects.⁷⁶ Many of the published studies are longitudinal cohort studies that include measurements of lead in blood from children decades ago, and then follow them out over time to observe lasting effects. Thanks to important EPA regulations and effective lead-reduction measures in gasoline and paint, overall blood lead levels have been reduced in many people. This makes it impossible to replicate the exposure conditions at the time the original children in the study cohort had their blood lead levels measured, such as the Port Pirie cohort study population living near a lead smelter in the 1980s.⁷⁷ Studies like these—longitudinal cohort studies, particularly those that capture exposures that may no longer occur—are not reproducible.

B. Vinyl chloride

Vinyl chloride (VC) is an industrial chemical that is manufactured as a monomer, and then polymerized into polyvinyl chloride (PVC) plastic, used in a wide variety of industrial and consumer plastic products including home siding, pipes, wire and cable coatings, packaging, furniture, household products, and automotive parts.⁷⁸ The VC monomer was first reported to cause cancer in 1969 based on animal laboratory studies.⁷⁹ This was followed almost immediately by evidence in VC workers of cancer. In addition, workplace epidemiology studies identified a link between VC exposure and a very rare degenerative bone disease called acroosteolysis that was cripplingly painful; it was not identified in the rodent studies.^{80, 81}

Vinyl chloride is regulated in workplaces, and in drinking water, food, and air:⁸²

- OSHA issued workplace regulations in 1974, forcing a reduction in the allowable level of the VC monomer by 500-times, from 500 ppm to 1 ppm averaged over an 8-hour workday.⁸³ Despite predictions of dire job losses, virtually all U.S. manufacturing

⁸¹ *Supra* n.78.

⁸² *Id.*

⁸³ United States Department of Labor, Occupational Safety and Health Administration, Regulations for Vinyl Chloride, available at

facilities met the new standard within a few years while reducing costs, largely through better containment of the unpolymerized monomer and improved exposure monitoring.⁸⁴

- EPA regulates VC pollution under the Safe Drinking Water Act (MCL=0.02 mg/L based on increased risk of cancer), and under EPA's Ambient Water Quality Criteria (0.025 ug/L).^{85, 86}
- FDA regulations limit vinyl chloride in food contact materials and packaging.⁸⁷

The studies that support these EPA safeguards, and particularly the identification of diseases in workers like acroosteolysis that were not identified in rodent studies, are critical to protecting human health and preventing adverse environmental impacts. Thanks to effective health-protective regulatory actions by EPA, OSHA and other federal agencies the elevated exposure conditions suffered by industrial workers in the 1970s and earlier are no longer the industry norm. Thus, these studies cannot meet the standards of transparency and replicability set out in the Proposal.

C. Pyrethroids

Pyrethroids are a class of insecticides that includes deltamethrin and permethrin, used on food crops including vegetables, fruit, and corn.⁸⁸ Permethrin is also used as a spray in homes and public spaces like hotels, theaters, restaurants, and hospitals.⁸⁹ It is also used to impregnate clothing, shoes, bed nets, and camping gear advertised to repel mosquitoes and ticks.⁹⁰ Pyrethroid pesticides are classified by EPA as a "likely human carcinogen," and is linked in

published studies to Parkinson’s Disease and adverse behavioral problems in prenatally exposed children.^{91, 92}

EPA convened a FIFRA Scientific Advisory Panel in October 2017 to assess its use of a Physiologically Based Pharmacokinetic Model (PBPK) used in its risk assessment for the pyrethroid pesticides. The PBPK model was sponsored and submitted to EPA by the Council for the Advancement of Pyrethroid Human Risk Assessment, L.L.C. (CAPHRA).⁹³ CAPHRA identifies its participating parties as chemical and agrochemical manufacturers.^{94, 95} CAPHRA describes its intentions as follows: “The general area of CAPHRA’s planned activity is to generate and submit to the [U.S. EPA] studies necessary to address EPA’s concerns for the potential for age-dependent sensitivity to Pyrethroids.”⁹⁶

Despite the central role of the pyrethroid PBPK model in EPA’s regulatory approval for pyrethroid pesticides, it appears that scientific peer reviewers on the FIFRA Scientific Advisory Panel were unable to obtain the raw data necessary to provide a robust peer review of the model. SAP Panelist Dr. Dale Hattis requested these data from EPA on September 6 and September 12 without receiving them, including “key data” for “evaluating the uncertainty in the modeling” and “data needed for assessment of the calibration of the PBPK models.”⁹⁷

At this point, the EPA Scientific Advisory Panel meeting is postponed indefinitely.⁹⁸ The stated reason is “due to the unavailability of experts,” but the more likely reason is to bias the

panel with the addition of industry experts, as EPA has done recently with its Scientific Advisory Boards.⁹⁹ A model that underestimates exposures and health risks will lead to regulations that fail to protect Americans from harmful exposures to pyrethroid pesticides.

D. Organophosphates, including chlorpyrifos

Congress recognized that pesticides are designed to be poisonous, and thus requires them to be registered by EPA, under the Federal Insecticide, Fungicide, and Rodenticide Act. FIFRA requires that when used according to the label, a pesticide will not cause unreasonable adverse effects on the environment or human health, which is commonly referred to as FIFRA's safety standard. FIFRA was amended by the Food Quality Protection Act, which passed Congress unanimously in 1996. Under FQPA, the agency must prohibit any pesticide use for which the registrant has failed to demonstrate that there is a reasonable certainty of no harm to vulnerable populations including infants and children from cumulative and aggregate exposure (from the diet and all other sources).

Organophosphate pesticides like chlorpyrifos are widely used in agriculture, with over 5 million pounds of the insecticide applied annually across the U.S. to a variety of crops including apples, oranges, broccoli, and berries.¹⁰⁰ Symptoms of acute poisoning include nausea and vomiting, headaches, dizziness, seizures, paralysis, and, in extreme cases, even death.

Due to risks to children's health, in 2000 EPA banned household use of chlorpyrifos and most other organophosphate pesticides.¹⁰¹ Residential uses prior to the ban were causing very high exposures to pregnant women and young children. Scientists have since learned that even much lower levels may be harmful to children.

However, scientists have since shown in longitudinal cohort epidemiologic studies, that even low levels of exposure—too low to poison a pregnant mother—can disrupt brain development in their prenatally exposed children, leading to developmental delays, lower IQ, learning disabilities, and ADHD-like behaviors.¹⁰²

To protect these children, in October 2015, the Obama Administration EPA proposed to ban chlorpyrifos because agency scientists found contamination of drinking water. A year later, EPA found that chlorpyrifos residues on food, including fruits and vegetables, are unsafe for

pregnant women and children; residue levels were far above their target risk level—in some cases, by up to 140 times.¹⁰³

These epidemiologic studies can no longer be reproduced because—thanks to FQPA and the ban on residential uses—pregnant women and young children are no longer poisoned by indoor use of organophosphate pesticides at such high levels. Banning the use of chlorpyrifos would reduce human risk, leading to a healthier future for our children.

E. Mercury

Mercury is a powerful neurotoxic agent capable of adversely affecting fetus and childhood development in low concentrations. EPA maintains a series of web pages describing the health effects of mercury.¹⁰⁴ EPA has also summarized the health and environmental effects of mercury in previous TSCA rulemakings.¹⁰⁵ Mercury is a highly neurotoxic contaminant that is most toxic when methylated. Biological processes in the watershed convert the mercury to methylmercury which accumulates in the food chain resulting in elevated levels in fish, other wildlife, and ultimately in humans.¹⁰⁶ Commonly consumed fish may have methylmercury levels 100,000 times that of the ambient water.¹⁰⁷ Mercury contamination of fish stocks is widespread in the United States.^{108, 109} Studies of mercury levels in fish in rivers, lakes, and streams across the United States found mercury levels exceeding the level for human health concern for a significant portion of the sites sampled.¹¹⁰

Newly deposited mercury has been shown to be more bioavailable and more rapidly converted to methylmercury and represents a greater fraction of the methylmercury which is

incorporated into food chains and ultimately into fish.¹¹¹ Local sources have been implicated in elevated levels of mercury measured in ambient air,¹¹² precipitation,^{113, 114} soils,¹¹⁵ and methylmercury levels in biota, including fish.¹¹⁶ Reductions in local mercury emissions levels have been tied to decreasing levels measured in the environment and biota.^{117, 118, 119} Therefore, to achieve the National Academy of Sciences' public-health goal of reducing mercury concentrations in fish,¹²⁰ current mercury emissions should be ratcheted down, thereby decreasing the amount of mercury cycling through aquatic systems and reducing contamination of fish and people.

Some populations may face even greater risks: Asians, Pacific Islanders, and Native Americans are all more likely to have elevated blood mercury levels, as are women living in the Northeast and other coastal areas, or consuming a lot of fish.^{121, 122} A 2011 study of 1,465 newborns in Minnesota's Lake Superior Basin found eight percent of the newborns had blood mercury levels above 5.8 µg/l.¹²³

¹²³ Patricia McCann, Minnesota Department of Health, Mercury Levels in Blood from Newborns in the Lake Superior Basin, GLNPO ID 2007-942, Final Report, November 30, 2011.

Researchers have estimated that in the United States methylmercury toxicity is associated with between 376 and 14,293 excess cases per year of a level of cognitive impairment that would be considered mental retardation. The cost of caring for these children has been estimated between \$500 million and \$17.9 billion annually, and this cost will be incurred every year until mercury emissions are reduced.^{124, 125} Mercury releases associated with mercury uses in products and processes contribute “significantly” to this mercury pollution.¹²⁶

EPA’s activities to protect from and minimize exposure to mercury begins with its fish advisories, since the consumption of fish is the largest exposure pathway for the general population.¹²⁷ EPA also promotes state and local fish advisories. As of 2011, all 50 states have fish advisories for mercury, and mercury accounted for 81% of all state and local fish advisories, in whole or in part.¹²⁸

This concern about mercury exposure has led EPA to restrict intentional uses of mercury in products. For example, EPA promulgated a Significant New Use Rule (SNUR) under TSCA section 5(a) for elemental mercury used in certain “convenience light switches, anti-lock braking system (ABS) switches, and active ride control system switches.”¹²⁹ Similarly, EPA promulgated a SNUR covering mercury-added flow meters, natural gas manometers, and pyrometers, because of the risk of human exposure to mercury during the products’ manufacture, use, and disposal at the products’ end of life.¹³⁰ About two years later, EPA promulgated a SNUR covering mercury-added barometers, manometers, hygrometers, and psychrometers, essentially for the same reasons.¹³¹

EPA also regulates mercury dischargers to surface waters under the Clean Water Act. This Administration recently finalized effluent guidelines for dental offices.¹³² In addition to the Clean Water Act, other environmental laws that limit mercury exposures include the Clean Air Act (CAA), Safe Drinking Water Act (SDWA), Resource Conservation and Recovery Act (RCRA), and the Emergency Planning and Community Right to Know Act (EPCRA).¹³³

¹³³ U.S. EPA, Environmental Laws that Apply to Mercury, available at <https://www.epa.gov/mercury/environmental-laws-apply-mercury>.

EPA very conservatively estimates that more than 75,000 newborns each year may have increased risk of learning disabilities associated with in-utero exposure to methylmercury, based on maternal blood levels exceeding the EPA Reference Dose (RfD) of 5.8 µg/L.¹³⁴ Even the EPA RfD likely underestimates the extent of risks to newborns due to bio-concentration of methylmercury across the placenta.¹³⁵ Three times more women of childbearing age—7.3%—have blood mercury levels exceeding 3.5 µg/L, indicating that up to 265,000 or more infants are born each year facing cognitive impacts from mercury exposure based on maternal blood levels.¹³⁶

The RfD is based on recommendations of the National Research Council (NRC) of the National Academy of Sciences (NAS), that conducted an extensive analysis and calculations derived from three longitudinal epidemiologic studies: the Seychelles Islands, the Faroe Islands, and the New Zealand studies.¹³⁷ The studies measured neuropsychological effects in children that were exposed prenatally to methylmercury as a result of pregnant mother's consuming contaminated seafood. The use of these studies to set EPA exposure limits was the result of a years-long transparent process of expert scrutiny, public engagement, inter-agency cooperation, and publication in scientific journals.

However, the studies can no longer be reproduced, particularly the Faroe Islands study in which the exposure to the community was a result of eating whales, a practice that has since declined due to public alerts about the hazards of eating the mercury-tainted meat particularly for children and pregnant and breastfeeding women. In addition, it would take decades to repeat the studies, which took decades to conduct in the first place.

F. Air pollution

Since the Clean Air Act became law in 1970, it has helped to dramatically improve air quality across the country and deliver substantial, measurable health gains. A peer-reviewed EPA study issued in 2011 found that the Clean Air Act Amendments of 1990 achieved enormous health benefits (including avoidance of 160,000 premature deaths in adults by 2010) that will increase as programs take full effect.¹³⁸ In 2009, leading air pollution epidemiologists published

a study demonstrating that, from 1980 to 2000, reductions in exposure to PM_{2.5} pollution had increased the average American life span by 1.6 years (more than 19 months).¹³⁹

The Clean Air Act requires EPA to consider the best available evidence in setting and revising the National Ambient Air Quality Standards (NAAQS) to protect health within an adequate margin of safety. 42 U.S.C. § 7409. Fine particulate matter, an air pollution category encompassing solid particles and condensed liquid droplets with a diameter of 2.5 microns or smaller (PM_{2.5}), is one of the most dangerous types of air pollution because it can penetrate deep into the lung and enter the bloodstream.¹⁴⁰ Groundbreaking studies into the link between air pollution exposures and health like the 1993 Harvard Six Cities Study¹⁴¹ examined the health effects of PM_{2.5} air pollution over 16 years on more than 8,000 adults and 14,000 children relying on private medical records and air pollution monitors deployed near study volunteers. The study found a significant relationship between air pollution exposure and risk of early death, but the raw data could not be released publicly because researchers were obligated to ensure study participant confidentiality.

As explained in section II.B., more than 100 peer-reviewed studies have confirmed the basic results of that initial study relying on that data. Because the study and others like it went through the rigorous peer-review process characteristic of the world's leading scientific journals (whose editors have rejected the Proposal¹⁴²), EPA relied on the results of the Harvard Six Cities study and others in 1997 when it promulgated the NAAQS for fine particulate matter.¹⁴³ Hundreds of additional studies into the health effects of air pollution have been conducted since then across the country¹⁴⁴ and internationally,¹⁴⁵ for both short-¹⁴⁶ and long-term¹⁴⁷ impacts of exposure, and independent re-analyses of existing datasets have affirmed the air pollution-

mortality and morbidity links with increasing precision. In 2000, the Health Effects Institute published its independent re-analysis¹⁴⁸ of the study, which confirmed the original findings.

As explained in section II.C., many of the studies that EPA has relied on to set and revise the NAAQS are epidemiological prospective cohort investigations encompassing thousands of individuals over several decades. The Proposal's requirement for the public sharing of underlying data of these studies contradicts HIPAA's legal protections for private medical data¹⁴⁹ and requirements researchers adhere to under Institutional Review Boards (IRBs),¹⁵⁰ which typically require investigators to ensure participant confidentiality and data security. Underlying sensitive health data cannot be released without obtaining individual patient consent, or consent from the next responsible party for study participants who have died. The foundational research in air pollution epidemiology demonstrating a causal link between pollution exposures and adverse health outcomes—including early death,¹⁵¹ heart disease,¹⁵² lung cancer,¹⁵³ stroke,¹⁵⁴ and asthma exacerbations¹⁵⁵—is therefore at risk if the Proposal is finalized.

While the NAAQS have strengthened over time, epidemiologic evidence indicates that even greater health gains could be achieved if our nation's air quality standards were stronger.¹⁵⁶ The unprecedented requirements of the Proposal threaten to undermine this progress by allowing EPA to rely on weaker science that could stall or reverse historical strengthening of the NAAQS. Under the Proposal, EPA would not be able to rely on the best available science for its Integrated Science Assessments of air pollution which inform the NAAQS-setting process, while industry-funded research calling into question the air pollution-health link, would not be subject to similar data release requirements, or even peer-review and independent reevaluation. This approach is asymmetric and favors selective, opaque, and questionable research methods over the consensus of robust peer-reviewed scientific investigation. Transparency in scientific data is an important topic, but one that needs to also balance the privacy concerns of study participants and legal and ethical restrictions on the sharing of sensitive data. The rule is arbitrary in its selective

application of data release requirements and disregard for the quantitative complexities of epidemiologic research.

The Proposal also has clear adverse consequences for cost-benefit analyses that consider the substantial costs of health effects caused by exposure to air pollution. This area of work includes efforts to address carbon dioxide (CO₂) pollution and climate change, such as the Clean Power Plan. Health and air quality-related monetized benefits from reducing PM_{2.5} pollution, a co-benefit of CO₂ reductions, would be substantially reduced if EPA is unable to rely on the best available science for pollution-health impacts. In its proposed rule repealing the Clean Power Plan, EPA signaled this approach: the economic health benefits of PM_{2.5} reduction were zeroed-out¹⁵⁷ by EPA after levels reached the current annual NAAQS (12 µg/m³) or the lowest measured level (LML) of PM_{2.5} in two key peer-reviewed studies that EPA has historically relied on, including an expanded re-analysis of the Harvard Six Cities data.^{158, 159} This approach of using the NAAQS or LML as a safe threshold directly contradicts the best available science^{160, 161} and EPA's own stance on the pollution threshold issue as recently as 2012.¹⁶² The Proposal is designed to support the indefensible notion that a safe threshold of air pollution like PM_{2.5} could exist, despite the opinions of the world's leading experts on this issue and emerging evidence indicating that relatively low levels of exposure to air pollution may actually confer *more* risk¹⁶³ than even the current EPA dose-response approach for PM_{2.5} exposure assumes.

G. Radiation

1. EPA's Radiation Standards

Three federal agencies have overlapping and differing responsibilities to protect the public from radiation. The Department of Energy (DOE), which among other tasks runs the U.S. nuclear weapons program, has for decades been attempting to clean up dozens of nuclear

weapons production sites around the country in an essentially self-regulating fashion (with respect to radioactivity). The Nuclear Regulatory Commission (NRC) regulates the nation's commercial nuclear power industry of approximately 100 commercial nuclear reactors located in 31 states. The NRC implements standards as part of its regulation of civilian sources of nuclear radiation, and it oversees the decommissioning of commercial nuclear facilities. EPA, via authority granted under the Atomic Energy Act, 42 U.S.C. §§ 2011-2296; Reorganization Plan No. 3. of 1970, 5 U.S.C. app. 1; the Nuclear Waste Policy Act of 1982, as amended, 42 U.S.C. §§ 10101-10270; and the Waste Isolation Pilot Plant Land Withdrawal Act, Pub. L. 102-579, 106 Stat. 4777., issues generally applicable radiation standards for protection of the public, as well as standards for nuclear power operations, protection from radon, administering radiation cleanup standards under Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (Superfund) which governs aspects of a host of cleanups of federal and nonfederal facilities, health, and environmental standards for uranium and thorium mill tailings, and for the Waste Isolation Pilot Plant in New Mexico and the proposed Yucca Mountain nuclear waste repository in Nevada.

Specifically,

In forming EPA, the authors of Reorganization Plan No. 3 created a new national approach for protecting the general public from the harmful exposure to radiation. Two key radiation protection functions would now be housed in a single agency – the promulgation of generally applicable environmental standards to limit man-made radioactive materials in the environment, and the development of national radiation protection guidance for Federal and State agencies to follow in the development of their radiation protection programs and regulations. Along with these responsibilities, EPA was provided extensive research and surveillance capabilities to support the development of national guidance and standards, as well as the authority to provide technical assistance to the States.¹⁶⁴

Essentially, the radiation standard-setting functions for protection of the general public (not at the weapons production sites) of the Atomic Energy Commission, administered through its Division of Radiation Protection Standards, were transferred to EPA to the extent that such functions “consist of establishing generally applicable environmental standards for the protection of the general environment from radioactive material.”¹⁶⁵ Under the authority of the Atomic Energy Act, these standards were defined as “limits on radiation exposures or levels, or concentrations or quantities of radioactive material, in the general environment outside the boundaries of locations under the control of persons possessing or using radioactive material.”¹⁶⁶

And as is generally understood, EPA's and NRC's authorities are overlapping and, theoretically, work together to meet an objective of protecting the general public and radiation

¹⁶⁶ *Id.*

workers from exposures to ionizing radiation, EPA sets regulatory limits and guidelines on radionuclide concentration in air, water, and soil. *See* 40 C.F.R. §§ 190-197, *Subchapter F – Radiation Protection Programs* (*cf.*, EPA sets standards for “radiation doses received by members of the public in the general environment and to radioactive materials introduced into the general environment as the result of operations which are part of a nuclear fuel cycle.” 40 C.F.R. § 190.01.). NRC’s regulatory structures are supposed to be consistent with those set by EPA. Indeed, NRC rules, when addressing dose limits for individual members of the public, state that “[i]n addition to the requirements of this part, a licensee subject to the provisions of EPA’s generally applicable environmental radiation standards in 40 C.F.R. part 190 shall comply with those standards.” 10 C.F.R. § 20.1301(e).

2. The Linear No-Threshold (LNT) dose-response model

As it does in every other instance and under every other environmental statute, EPA relies on independent, authoritative scientific bodies to provide analyses and evaluations of scientific evidence in support of its radiation standard-setting policies. EPA bases its regulatory limits and nonregulatory guidelines for population exposures to low-level ionizing radiation on the linear no-threshold (LNT) dose-response model.¹⁶⁷ EPA’s radiation protection standards are based on the premise that any radiation dose carries some risk, and that risk increases directly with dose. This method of estimating risk is called the “linear no-threshold dose-response model (LNT).

This longstanding and well-supported assumption presumes that the risk of cancer due to a low dose exposure is proportional to dose, with no threshold. For over 40 years the LNT dose-response model has been commonly utilized when developing practical and prudent guidance on ways to protect workers and members of the public from the potential for harmful effects from radiation in balance with the commercially justified and optimized uses of radiation. EPA derives the LNT model from reports by authoritative scientific bodies including the U.S. National Academy of Sciences (NAS), the National Council on Radiation Protection and Measurements (NCRP), and the International Commission on Radiological Protection (ICRP). There is strong scientific consistency by these authoritative groups that an LNT model is the best at the current time (and has been for the past half century).^{168, 169} Indeed, EPA noted as recently as late 2015, “[o]ver the last half century, numerous authoritative national and international bodies have convened committees of experts to examine the issue of LNT as a tool for radiation regulation and risk assessment . . . Again and again, these bodies have endorsed LNT as a reasonable approach to regulating exposures to low dose radiation.”¹⁷⁰

3. Studies in support of the LNT dose-response model

The NAS Biological Effects of Ionizing Radiation (BEIR) VII committee has studied and published its report on risk models for estimating the relationship between exposure to low levels of ionizing radiation and harmful health effects.¹⁷¹ The data used in the BEIR VII study are: atomic bomb survivor studies, medical radiation studies, occupational radiation studies, and environmental radiation studies. The committee judged that the LNT model provided the most reasonable description of the relation between low dose exposure to ionizing radiation and the incidence of solid cancers that are induced by ionizing radiation.

The NCRP published its latest commentary on the LNT issue only months ago, in April 2018.¹⁷² The specific purpose of its commentary is to provide a review of recent epidemiologic data from studies with low doses or low dose rates and the Life Span Study (LSS) of atomic-bomb survivors to determine whether these epidemiologic studies broadly support the LNT dose-response model as a reasonable basis for radiation protection. Epidemiologic studies of humans provide evidence that is critically important in establishing potentially causal associations of environmental factors with the disease. The studies were selected by a consensus of experts who have a broad purview of the recent radiation epidemiology literature, and they ensured that the largest and most important eligible studies were included.

Examples of studies of radiation-exposed populations evaluated are:

1. Japanese atomic-bomb survivors

The LSS is a research program investigating life-long health effects based on epidemiologic studies. The study being conducted by the Radiation Effects Research Foundation (RERF)¹⁷³ is used by standard-setting bodies in establishing a recommendation for radiation protection. The LSS cohort¹⁷⁴ includes both a large proportion of survivors who were within 2.5 km of the hypocenters at the time of the bombings and a similar-sized sample of survivors who were between 3 and 10 km from the hypocenters whose radiation doses were negligible.

The major objective of the study is to investigate the long-term effects of atomic-bomb radiation on causes of death and incidence of cancer. The atomic-bomb survivors of Hiroshima and Nagasaki are subject to follow-up study^{175, 176} for their remaining lives, starting from 1950. The LSS cohort of atomic-bomb survivors has provided important data because it is a large cohort (~87,000 survivors of all ages) with relatively accurate dosimetry,

¹⁷⁵ Grant, Eric J., et al. "Solid cancer incidence among the Life Span Study of atomic bomb survivors: 1958–2009." *Radiation research* 187.5 (2017): 513–37.

¹⁷⁶ Ozasa, Kotaro, et al. "Studies of the mortality of atomic bomb survivors, Report 14, 1950–2003: an overview of cancer and noncancer diseases." *Radiation research* 177.3 (2012): 229–243.

a wide dose range over 60 years of high-quality follow-up for mortality and over 50 years of follow-up for cancer incidence, and nearly 1,000 excess solid-cancer cases, besides excess leukemias. The study provides strong indirect support for the use of an LNT model.

2. Worker exposure studies

Radiation worker studies assess risks in worker groups exposed largely to many low doses received at a low dose rate, providing direct evidence regarding the validity of the LNT model. INWORKS is an example of these studies.¹⁷⁷ INWORKS is the latest international collaboration for examining the health of workers in more than one country who were exposed occupationally to ionizing radiation. INWORKS included dosimetry for 20 different nuclear sites/organizations in three countries. Dosimetry was based on individual personal dosimeter readings at the start of the workers beginning their radiation work (at earliest, between 1944 and 1952) through 2005. The U.S. cohort of INWORKS consisted of 119,195 nuclear workers at four Department of Energy nuclear weapons facilities (Hanford site, Idaho National Laboratory, Oak Ridge National Laboratory, and Savannah River site) and at the Portsmouth Naval Shipyard. This large study¹⁷⁸ provides one of the strongest pieces of epidemiologic evidence that the LNT quantitative model is useful for radiation protection.

3. Environmental exposure studies

An example of environmental exposure studies for low doses and low dose rate is the Chernobyl resident cohorts.^{179, 180} The 1986 accident at the Chornobyl nuclear power plant in northern Ukraine resulted in the exposure of substantial proportion of Belarus, Ukraine, and the Russian Federation to radioactive fallout. The most notable apparent health consequence of the accident has been the large increase in thyroid cancer among those exposed as children or teenagers starting 4-5 years after the accident. Studies of cohorts of children in Ukraine and Belarus who had thyroid measurements of iodine activity shortly after the Chernobyl accident and systematic thyroid screenings were conducted. The data on exposure to radioactive iodine have added considerable information relative to the dose-response relationship. The thyroid cancer experienced by children in exposed areas of the Ukraine, Belarus, and Russia conforms to the LNT model.

4. Medical exposure studies

Patients treated with lung collapse for TB in the 1930s to 1960s are one of the few medically exposed populations that provide consistent evidence for dose-response relationships. Patients on average would receive on the order of 100 chest fluoroscopies over several years.

¹⁷⁷ Leuraud, Klervi, et al. "Ionising radiation and risk of death from leukaemia and lymphoma in radiation-monitored workers (INWORKS): an international cohort study." *The Lancet Haematology* 2.7 (2015): e276–e281.

¹⁷⁸ Schubauer-Berigan, Mary K., et al. "Cancer mortality through 2005 among a pooled cohort of US nuclear workers exposed to external ionizing radiation." *Radiation research* 183.6 (2015): 620–31.

¹⁷⁹ Brenner, Alina V., et al. "I-131 dose response for incident thyroid cancers in Ukraine related to the Chornobyl accident." *Environmental health perspectives* 119.7 (2011): 933.

¹⁸⁰ Tronko, Mykola D., et al. "A cohort study of thyroid cancer and other thyroid diseases after the Chornobyl accident: thyroid cancer in Ukraine detected during first screening." *Journal of the National Cancer Institute* 98.13 (2006): 897–903.

Since the 1970s, studies¹⁸¹ of TB patients who received repeated chest x-ray fluoroscopies to monitor lung collapse have provided valuable information relevant to the LNT hypothesis. The TB fluoroscopy studies provide strong support for the LNT model for breast cancer.

NCRP commentary in conclusion of its epidemiology studies states that, based on current epidemiologic data, the LNT model should continue to be used for radiation protection purposes, and “no alternative dose-response relationship appears more pragmatic or prudent for radiation protection purposes than the LNT model.”¹⁸²

4. How the Proposal jeopardizes health protections

Because it does not cite or even note the statutory sources of EPA’s radiation standard setting authority, EPA fails to reference to the proper legal authority to address radiation protection standards and the underlying science and dose estimations, and thus fails to present the terms or substance of the proposed action or a description of the subjects and issues involved. Thus, the public has been denied a reasonable and meaningful opportunity to participate in the rulemaking process.¹⁸³

Despite the failure to precisely name radiation standards or cite the EPA’s authority under the Atomic Energy Act, the Proposal is susceptible to a reading that EPA intends to attack the underlying science for radiation standards, and the LNT in particular, just as the agency is attacking standards for the air, water, and health protections. Indeed, Dr. Edward J. Calabrese of the University of Massachusetts, longtime promoter of the radiation hormesis idea that low doses of radiation are beneficial for humans, stated in support of this draft rule, “[t]he [P]roposal represents a major scientific step forward by recognizing the widespread occurrence of non-

¹⁸¹ Howe, Geoffrey R. “Lung cancer mortality between 1950 and 1987 after exposure to fractionated moderate-dose-rate ionizing radiation in the Canadian fluoroscopy cohort study and a comparison with lung cancer mortality in the atomic bomb survivors study.” *Radiation research* 142.3 (1995): 295–304.

¹⁸² NCRP Commentary 27. “Implications of Recent Epidemiologic Studies for the Linear-Nonthreshold Model and Radiation Protection.” NCRP, 2018, at 139.

¹⁸³ In order to preserve objections in the administrative record, we submit comments directed at any wrongheaded and unlawful attack on an LNT for radiation, notwithstanding EPA’s failure to mention radiation—or any other substance or pollutant—in the “non-linearity” section of the Proposal. 83 Fed. Reg. at 18,770. The Proposal’s cursory suggestion of “non-linearity in the concentration-response function for specific pollutants and health effects,” 83 Fed. Reg. at 18,770/3, fails to provide fair notice or any justification that would allow any final rule to assert “non-linearity in the concentration-response function” for *any* specific pollutants or *any* health effects. There is *no* information, evidence, or regulatory text in the Proposal or regulatory docket supporting or even addressing the suggestion of non-linearity in the concentration-response function for *any* specific pollutants or *any* health effects. Nor is there any discussion or material in the Proposal or accompanying docket supporting or even addressing EPA’s cursory suggestion of non-linearity. The Proposal conclusorily references “growing empirical evidence of non-linearity,” *id.*, but then fails to identify *any* such empirical evidence in the Proposal or docket. Before EPA may adopt any final rule addressing “non-linearity in the concentration-response function” for *any* specific pollutants or *any* health effects, EPA would be required to re-issue a new proposed rule with actual regulatory text and supporting legal, factual, scientific, and technical information providing fair notice to the public concerning any suggestion of “non-linearity in the concentration-response function” for *any* specific pollutants or *any* health effects.

linear dose responses in toxicology and epidemiology for chemicals and radiation and the need to incorporate such data in the risk assessment process.”¹⁸⁴

EPA’s Proposal states only that “this proposed regulation is designed to increase transparency of the assumptions underlying dose-response models. As a case in point, there is growing empirical evidence of non-linearity in the concentration response function for specific pollutants and health effects.” 83 Fed. Reg. at 18,770/3. The Proposal fails to provide a citation or single shred of empirical evidence to support the statement. By contrast, the science in radiation epidemiological studies has repeatedly demonstrated, over decades, *the precise opposite conclusion*—to wit, that the LNT dose-response model provides the most reasonable description of the relation between low dose exposure to ionizing radiation and the incidence of solid cancers that are induced by ionizing radiation.

The epidemiologic science and associated studies that are the basis of adherence to the LNT and decades of protective radiation standards are likely to be expressly excluded from consideration by EPA by the terms of this Proposal. NAS and other studies that EPA has long relied upon in the radiation standards setting process are epidemiological human cohort studies. EPA’s Proposal, if implemented, would limit EPA staff from basing regulatory actions on precisely these types of studies by requiring that the underlying data of these studies be publicly shared. This would be a nearly impossible task for the agency. Data for some of the radiation epidemiological studies are accessible to users^{185, 186} with a detailed description of how a user can access the information. However, public sharing of personally identifiable information (PII) is restricted because the studies rely on confidential health data. To become an authorized user of the data sets and to reduce misuse of that data, users are barred from linking data from the database with any other source of information that leads to PII of an individual with records in the database.

These are profoundly important studies that have been peer reviewed for decades and the science that has emerged from them has been validated multiple times. But these are not studies where the entirety of the public data can be shared or independently replicated. There are no other radiation epidemiologic studies of health and longevity on a large size population (example: more than 120,000 individuals in the atomic-bomb survivor studies) that have continued for more than 60 years. Thus, replication of the studies is impossible as this data comes from individuals exposed to significant acute and protracted dose of radiation. Implementation of the rule would effectively block the use of such key scientific studies and allow for radiation standards to be either wholly weakened or made functionally meaningless.

Specifically, EPA relied on the LNT dose-response model to develop the following reports and regulations to protect the general public and radiation workers from the potential for harmful effects from radiation:

¹⁸⁴ See <https://www.epa.gov/newsreleases/epa-administrator-pruitt-proposes-rule-strengthen-science-used-epa-regulations>.

¹⁸⁵ See <https://apps.orau.gov/cedr/#.Wv73Y-4vxEY>.

¹⁸⁶ See <http://rerf.or.jp/en>.

Federal guidance reports (FGRs) for radiation protection that provide technical information and policy recommendations for radiation dose and risk assessment:

- FGR 11 (1988)¹⁸⁷—Limiting Values of Radionuclide Intake and Air Concentration and Dose Conversion Factors for Inhalation, Submersion, and Ingestion
- FGR 12 (1993)¹⁸⁸—External Exposure to Radionuclides in Air, Water, and Soil
- FGR 13 (1999)¹⁸⁹—Cancer Risk Coefficients for Environmental Exposure to Radionuclides
- EPA Radiogenic Cancer Risk Models and Projections for the U.S. Population (the “Blue Book”)¹⁹⁰

Nuclear fuel cycle standards and regulations addressing environmental issues for all phases of the uranium fuel cycle, including uranium milling; chemical conversion; fuel fabrication and reprocessing; power plant operations; waste management, storage, and disposal; and site cleanup for milling operations.

- The Uranium Fuel Cycle (40 C.F.R. Part 190)¹⁹¹—a standard that sets generally applicable environmental limits for the entire uranium fuel cycle
- Uranium and Thorium Mill Tailings (40 C.F.R. Parts 192)¹⁹²—health and environmental standards for uranium and thorium mill tailings

Examples of areas that might be impacted by this rule include:

1. Maximum allowed concentrations of radionuclides in drinking water
2. Soil cleanup levels for Superfund sites
3. Monitoring around radiation-producing equipment used for medical purposes
4. Radioactive waste disposal
5. The concept of ALARA (As Low As Reasonably Achievable) in radiation protection

Abandoning the LNT dose-response model and replacing it with either a threshold model or a concept that low doses of radiation are safe will have an adverse effect on radiation workers and the general public by allowing radiation protection regulations to be relaxed, reinterpreted and then weakened.

IV. There is no statutory authority for the Proposal

The law is clear that EPA may adopt rules only if those rules are based on statutory authority delegated by Congress. EPA may not invent statutory authority where none exists, nor adopt regulations lacking statutory authority merely because EPA believes that to be better policy. *See, e.g., Massachusetts v. EPA*, 549 U.S. 497, 535, 127 S. Ct. 1438, 1463 (2007) (“EPA must ground its reasons for action or inaction in the statute.”); *La. Pub. Serv. Comm’n v. FCC*, 476 U.S. 355, 374 (1986) (stating “agency power to act” is shaped by how “Congress confers power upon it”). Agencies need especially clear congressional delegations of authority to create regulatory exemptions. *See New York v. U.S. EPA*, 413 F.3d 3, 41 (D.C. Cir. 2005) (stating that the agency needs “clear congressional delegation” to support an exemption). EPA identifies no such delegations, certainly not the clear delegations required by law, for the Proposal.

EPA lists seven statutes as the basis for the Proposal. But none of the various statutes cited provides support for the rule’s provisions, definitions, requirements, or exemptions. Rather, EPA invents statutory authority where none exists, and creates proposed regulatory text out of thin air. In most cases, EPA simply cites its general authority for rulemaking under the statutes. But that general authority alone cannot provide a basis for the rule, especially when, as explained in section V, the rule would *conflict* with the requirements of each of the statutes. *See New York v. U.S. EPA*, 413 F.3d 3, 40–42 (D.C. Cir. 2005). In other instances, it appears that EPA just searched the statutes for the word “research” and then cited those sections without any further analysis. The cited provisions do not support the proposed rule:

A. Clean Air Act sections 103, 301(a); 42 U.S.C. §§ 7403, 7601(a)

EPA cites 42 U.S.C. § 7601(a) of the Clean Air Act as one basis for the Proposal. But that section merely authorizes the Administrator to “prescribe such regulations as are necessary to carry out his functions under this chapter.” The courts have made clear that “EPA cannot rely on its gap-filling authority to supplement the Clean Air Act’s provisions when Congress has not left the agency a gap to fill.” *NRDC v. EPA*, 749 F.3d 1055, 1064 (D.C. Cir. 2014); *see also American Petroleum Institute v. EPA*, 52 F.3d 1113, 1119 (D.C. Cir. 1995) (“the general grant of rulemaking power to EPA cannot trump specific portions of the CAA”); *NRDC v. Reilly*, 976 F.2d 36, 41 (D.C. Cir. 1992) (EPA cannot use its general rulemaking authority as justification for adding to a statutorily specified list); *Sierra Club v. EPA*, 719 F.2d 436, 453 (D.C. Cir. 1983) (same); *Gonzales v. Oregon*, 546 U.S. 243, 264–65 (2006) (“It would go . . . against the plain language of the text to treat a delegation for the ‘execution’ of [the Attorney General’s] functions as a further delegation to define other functions well beyond the statute’s specific grants of authority.”). Here, not only is there no statutory gap to fill, as explained further below, the Proposal is in direct conflict with other provisions of the Act. EPA cannot rely on 42 U.S.C. § 7601(a) to support this rule.

EPA also cites 42 U.S.C. § 7403, which requires the Administrator to establish a national research and development program for air pollution, among other things. EPA does not state specifically which of the many subsections it believes authorizes this proposed rule. Thus, the citation fails to provide sufficient notice for the public to comment on the proposed rule.

Nothing in the Proposal establishes or even purports to establish the type of national research and development program for air pollution discussed in subsection (a). But that subsection is nonetheless revealing about congressional intent concerning “studies relating to the causes, effects (including health and welfare effects) extent, prevention, and control of air pollution.” 42 U.S.C. § 7403(a)(1). There is no indication that Congress intended to allow EPA to ignore or refuse to consider studies on the health and welfare effects of air pollution only if raw data or ‘regulatory science underlying EPA’s actions [were] publicly available in a manner sufficient for independent validation.’ See 83 Fed. Reg. at 18,773 (proposed §§ 30.1–30.3). Indeed, the absence of any such congressional conditions or criteria makes it all the more obvious that EPA invented and added those criteria and conditions as a matter of its own policy preferences, contrary to the Act. This EPA may not do.

Subsection (b) authorizes EPA to collect and make available information about such research, but nothing in that subsection allows EPA to *restrict* which types of data it considers in regulatory decisions. Nor does subsection (b) draw any distinction between dose-response data and other types of data. Again, the absence of any such congressional distinction makes it all the more obvious that EPA invented and added that distinction as a matter of its own policy preferences, contrary to the Act. This EPA may not do. None of the other subsections in 42 U.S.C. § 7403 address this issue either. There is no support in the Clean Air Act for the Proposal.

B. Clean Water Act sections 104, 501; 33 U.S.C. §§ 1254, 1361

EPA cites sections 104, 33 U.S.C. § 1254, and 501, 33 U.S.C. § 1361, of the Clean Water Act as putative authority for the Proposal. Nothing in these sections authorize the Proposal’s limitations on scientific evidence.

With respect to section 104, the Proposal tellingly fails to specify which of its 22 subsections supposedly supports the restrictions EPA has proposed. This deficiency reflects a lack of authority for the Proposal in section 104. And even if EPA thinks that it can cobble together language in section 104 to support the Proposal, the agency’s complete failure to identify in the Proposal how section 104 authorizes this rulemaking means that EPA did not provide sufficient notice for the public to comment on the Proposal.

None of the subsections in section 104 states or suggests that, in promulgating regulations under the Clean Water Act, EPA may limit its consideration of “regulatory science underlying its actions” only to studies or analyses “are publicly available in a manner sufficient for independent validation.” See 83 Fed. Reg. at 18,773 (proposed § 30.5). To the contrary, several subsections indicate that Congress intended EPA to consider available scientific evidence in order to carry out the Act.

First, subsection (b) authorizes EPA to collect and publicize results and information related to studies about water pollution but does not say anything about *limiting* consideration of science simply because data cannot be made public, either as part of rulemakings or otherwise. Nor does it draw any distinction between dose-response data and other types of data.

Second, subsection (c) directs EPA to “conduct research on, and survey the results of other scientific studies on, the harmful effects on the health or welfare of persons caused by pollutants.” It provides no authority whatsoever for *limiting* consideration of studies, models or data, dose-response or otherwise, during rulemakings; indeed, by directing EPA to “survey the *results of other scientific studies*,” rather than the publicly-available dose-response data underlying those results, this subsection contradicts the Proposal’s limitations and conditions.

Third, subsection (l)(1) indicates that EPA should be inclusive with respect to considering evidence, as it directs EPA to “develop and issue to the States for the purpose of carrying out this Act *the latest scientific knowledge available* in indicating the kind and extent of effects on health and welfare which may be expected from the presence of pesticides in the water in varying quantities. He shall revise and add to such information whenever necessary to reflect developing scientific knowledge.”

Fourth, subsection (n) directs EPA to cooperate with various entities to “conduct and promote, encourage contributions to, continuing comprehensive studies of the effects of pollution, including sedimentation, in the estuaries and estuarine zones of the United States on fish and wildlife, on sport and commercial fishing, on recreation, on water supply and water power, and on other beneficial purposes.” Importantly, subsection (n)(2) reveals Congress’s intention that EPA will consider information broadly, by instructing the agency to “assemble, coordinate, and organize *all existing pertinent information* on the Nation’s estuaries and estuarine zones”

EPA also cites 33 U.S.C. § 1361 as a basis for the Proposal, but it does not provide the agency with the authority it desires. Subsection (a) merely states that the “Administrator is authorized to prescribe such regulations as are necessary to carry out his functions under this chapter.” As explained above, that general grant of authority cannot support the rule, especially when the rule conflicts with the Act. Moreover, EPA casually invokes this provision, but does not make any effort to justify the proposed restrictions as necessary to any particular CWA statutory function, so it has not made the case that this provision provides authority to adopt the Proposal’s limits.

Finally, the Act contains other indications that Congress intended EPA’s consideration of science to be inclusive. In particular, section 304(a)(1) of the Act states:

The Administrator, after consultation with appropriate Federal and State agencies and other interested persons, shall develop and publish, within one year after the date of enactment of this title (and from time to time thereafter revise) criteria for water quality *accurately reflecting the latest scientific knowledge* (A) on the kind and extent of all identifiable effects on health and welfare including, but not limited to, plankton, fish, shellfish, wildlife, plant life, shorelines, beaches, esthetics, and recreation which may be expected from the presence of pollutants in any body of water, including ground water; (B) on the concentration and dispersal of pollutants, or their byproducts, through biological, physical, and chemical processes; and (C) on the effects of pollutants on biological community diversity, productivity, and stability, including information on the

factors affecting rates of eutrophication and rates of organic and inorganic sedimentation for varying types of receiving waters.

Although water quality criteria EPA develops are not issued as regulations, such that the Proposal as written would likely not apply to them, the salient point—illustrated by the italicized language above—is that Congress refused to limit EPA’s consideration of available evidence in discharging one of its core functions aimed at protecting the nation’s waters. EPA provides no reason in the Proposal why the regulations the Proposal targets should be any different.

Accordingly, the Clean Water Act does not authorize the Proposal.

C. Safe Drinking Water Act sections 1442, 1450(a)(1); 42 U.S.C. §§ 300j–1, 300j–9(a)(1)

EPA cites 42 U.S.C. § 300j–1 of the Safe Drinking Water Act as authority for the rule. Subsection (a) of that section allows EPA to conduct some types of research on drinking water contamination and requires it to conduct other studies. But it says nothing about which types of studies EPA may consider in rulemakings and does not distinguish between dose-response studies and other types of studies. The absence of any such congressional distinction or restriction makes it all the more obvious that EPA invented and added the distinction and restrictions in the Proposal as a matter of its own policy preferences, contrary to the Act. This EPA may not do. The remainder of the subsections have nothing to do with data or research. At any rate, EPA does not state specifically which of the subsections in 42 U.S.C. § 300j–1 it believes authorizes this proposed rule. Thus, the citation fails to provide sufficient notice for the public to comment on the proposed rule.

EPA also cites 42 U.S.C. § 300j–9(a)(1), but that says only that the “Administrator is authorized to prescribe such regulations as are necessary or appropriate to carry out his functions under this subchapter.” As explained above, that general grant of authority cannot support the rule, especially when the rule conflicts with the Act. The Safe Water Drinking Act does not authorize the proposed rule.

D. Resource Conservation and Recovery Act sections 2002(a)(1), 7009; 42 U.S.C. §§ 6912(a)(1), 6979

EPA also claims that 42 U.S.C. § 6912(a)(1) of the Resource Conservation and Recovery Act provides authority for the rule. But 42 U.S.C. § 6912(a)(1) merely states that the Administrator is authorized to “prescribe, in consultation with Federal, State, and regional authorities, such regulations as are necessary to carry out his functions under this chapter.” As explained above, that general grant of authority cannot support the rule, especially when the rule conflicts with the Act. There is no support in RCRA for the Proposal.

It appears that EPA’s citation to 42 U.S.C. § 6979 is a mistake. That section deals with labor standards for construction and says nothing about research, data, or science. At any rate, EPA does not state specifically which provision of 42 U.S.C. § 6979 it believes authorizes the

Proposal. Thus, the citation fails to provide sufficient notice for the public to comment on the proposed rule.

E. Comprehensive Environmental Response, Compensation, and Liability Act (as delegated to the Administrator via Executive Order 12580) sections 115, 311; 42 U.S.C. §§ 9616, 9660

Under the Comprehensive Environmental Response, Compensation, and Liability Act, EPA cites 42 U.S.C. § 9616 as authority, but that section merely provides a schedule for the assessment and remediation of Superfund sites. It is entirely unclear what this has to do with the subject matter of the Proposal. EPA does not state specifically which provision of 42 U.S.C. § 9616 it believes authorizes the Proposal, nor does the Proposal even explain the reference. Thus, the citation fails to provide sufficient notice for the public to comment on the proposed rule.

EPA also cites 42 U.S.C. § 9660, which has many subsections. This broad citation also fails to provide sufficient notice for the public to comment on the proposed rule. Subsections (a), (b), and (c) require the Secretary of Health and Human Services and the Administrator of EPA to establish research programs on the effects of hazardous substances on human health. But nothing in those sections limits EPA's consideration of studies in which the data can be made public or draws a line between dose-response data and other types of data. The absence of any such congressional distinction or restriction makes it all the more obvious that EPA invented and added the distinction and restrictions in the Proposal as a matter of its own policy preferences, contrary to the Act. This EPA may not do. CERCLA does not authorize the Proposal.

F. Emergency Planning and Community Right-To-Know Act section 328; 42 U.S.C. § 11048

The only authority EPA cites under the Emergency Planning and Community Right-To-Know Act is 42 U.S.C. § 11048, which states that the "Administrator may prescribe such regulations as may be necessary to carry out this chapter." The citation fails to provide sufficient notice for the public to comment on the Proposal. EPA does not identify any statutory authority for why the proposed rule is necessary to carry out the chapter. As explained above, that general grant of authority cannot support the rule, especially when the rule conflicts with the Act. EPCRA does not authorize the proposed rule.

G. Federal Insecticide, Fungicide, and Rodenticide Act sections 25(a)(1), 136r(a); 7 U.S.C. §§ 136r(a), 136w

Under the Federal Insecticide, Fungicide, and Rodenticide Act, EPA cites 7 U.S.C. § 136r(a), which authorizes the Administrator to "undertake research." That section does not allow the *restriction* of what types of research EPA may consider in rulemakings or otherwise. Nor does it draw any distinction between dose-response data and other types of data. The absence of any such congressional distinction or restriction makes it all the more obvious that EPA invented and added the distinction and restrictions in the Proposal as a matter of its own policy preferences, contrary to the Act. This EPA may not do.

EPA also cites 7 U.S.C. § 136w, which is the general rulemaking authority that allows the Administrator to carry out the provisions of FIFRA. As explained above, that general grant of authority cannot support the rule, especially when the rule conflicts with the Act. Moreover, the citation fails to provide sufficient notice for the public to comment on the Proposal. FIFRA does not authorize the proposed rule.

H. Toxic Substances Control Act, as amended, section 10; 15 U.S.C. § 2609

EPA cites 15 U.S.C. § 2609 under the Toxic Substances Control Act as support for this rule. But that section states only that the “Administrator shall, in consultation and cooperation with the Secretary of Health and Human Services and with other heads of appropriate departments and agencies, conduct such research, development, and monitoring as is necessary to carry out the purposes of this chapter.” It does not allow EPA to *limit* the type of data considered in regulatory decisions, nor does it draw a distinction between dose-response data and other types of data. TSCA does not support the proposed rule. The absence of any such congressional distinction or restriction makes it all the more obvious that EPA invented and added the distinction and restrictions in the Proposal as a matter of its own policy preferences, contrary to the Act. This EPA may not do.

I. No other federal statute supports the Proposal

As EPA is aware, when an agency drafts a proposed rule pursuant to congressionally delegated authority, the exercise of that authority is governed by the informal rulemaking procedures outlined in the Administrative Procedure Act (APA), 5 U.S.C. § 553.5. EPA is required to provide the public with adequate notice of a proposed rule, followed by a meaningful opportunity to comment on the rule’s content. 5 U.S.C. § 553 (b)-(c).

The requirement under § 553 to provide the public with adequate notice of a proposed rule is generally achieved through the publication of a notice of proposed rulemaking in the Federal Register, and the APA requires that the notice of proposed rulemaking include “(1) the time, place, and nature of public rulemaking proceedings; (2) reference to the legal authority under which the rule is proposed; and (3) either the terms or substance of the proposed rule or a description of the subjects and issues involved.” 5 U.S.C. § 553(b)1-3. Generally speaking, the notice requirement of § 553 is satisfied when the agency “affords interested persons a reasonable and meaningful opportunity to participate in the rulemaking process.” *Forester v. Consumer Prod. Safety Comm’n*, 559 F.2d 774, 787 (D.C. Cir. 1977).

The Proposal fails to reference any other legal authority to support its adoption. The agency claims its Proposal is “consistent with” Administrative Procedure Act provisions to ensure public participation in the rulemaking process, 83 Fed. Reg. at 18,769/2, but this faint “consistent with” falls far short of any legal authority for the Proposal, or even any claim of such authority. The Administrative Procedure Act provides no authority for the Proposal and, tellingly, EPA does not and cannot identify any authority therein. Even were this “consistent with” claim an attempt by EPA to claim any legal authority for the Proposal, the throw-away

statement fails to provide sufficient notice for the public to comment on the proposed rule or any asserted legal authority in the APA.

Finally, the Proposal's solicitation of comment—"on whether additional or alternative sources of authority are appropriate bases for this proposed regulation"—does not and cannot itself provide any justification for EPA finalizing a rule based on additional or alternative sources of legal authority. This fails to provide sufficient notice for the public to comment on the proposed rule or any other possible legal authorities. For all these reasons, EPA lacks any basis to finalize a rule invoking any other legal authorities to support its adoption.

J. No case law supports the Proposal

The Proposal "directs EPA to ensure that the regulatory science underlying its actions is publicly available in a manner sufficient for independent validation." 83 Fed. Reg. at 18,773. However, the Proposal fails to identify a single court decision supporting an agency's decision to bar itself from considering relevant studies or information on the grounds that underlying data are not "publicly available in a manner sufficient for independent validation," where such a requirement is not statutorily imposed. Indeed, EPA in the entire Proposal only cites two cases related to this question, and EPA admits, as it must, that *both* cases "upheld EPA's use (sic) non-public data in support of its regulatory actions." *Id.* at 18,769 n.3 (citing *Coal. of Battery Recyclers Ass'n v. EPA*, 604 F.3d 613, 623 (D.C. Cir. 2010) & *Am. Trucking Ass'ns v. EPA*, 283 F.3d 355, 372 (D.C. Cir. 2002)).

Footnote 3 in the Proposal contains two noteworthy, albeit unintended, indictments of the approach proposed by EPA. First, footnote 3 states that "[h]istorically, EPA has not consistently observed the policies underlying this proposal." Tellingly, EPA does not and cannot identify even *one* example in which EPA *has observed* the policies underlying the Proposal. Our research, to the contrary, has identified no instance in which EPA has followed the policies underlying the Proposal, to bar EPA from considering relevant studies or science submitted by the public or gathered by EPA, on the grounds that the underlying data are not "publicly available in a manner sufficient for independent validation."

Second, footnote 3 implies that there are instances where EPA's use of non-public data in support of its regulatory actions was rejected by a court. *See id.* ("courts have *at times* upheld EPA's use (sic) non-public data in support of its regulatory actions.") (emphasis added). Again, the Proposal does not and cannot cite a *single* court decision that failed to uphold use of non-public, relevant science or studies relied on by EPA or any other federal or state agency in support of its regulatory actions. *Id.* Our research also failed to identify a single instance in which a court failed to uphold an agency's use of non-public, relevant science or studies by an agency, after that practice was challenged by commenters or petitioners in court.

Of course, in both the cases that the Proposal cites in footnote 3, the D.C. Circuit Court of Appeals refused to prohibit EPA from considering non-public data. In *American Trucking*, the court declined to "impose a general requirement that EPA obtain and publicize the data underlying published studies on which the Agency relies," holding that the "Clean Air Act

imposes no such obligation.” 283 F.3d at 372.¹⁹³ The court agreed with EPA that “requiring agencies to obtain and publicize the data underlying all studies on which they rely would be impractical and unnecessary.” *Id.* (quoting EPA in Particulate Matter NAAQS, 62 Fed. Reg. at 38,689).

The D.C. Circuit reaffirmed this holding in its 2010 decision, *Coalition of Battery Recyclers*, in which the court reiterated that requiring publication of all data underlying studies would be impractical and unnecessary, and was not required by the Clean Air Act. 604 F.3d at 623. EPA in the Proposal utterly fails to explain or demonstrate why its proposed, self-imposed restriction would be any less impractical or unnecessary than those it previously opposed on these grounds. This failure to explain, failure to offer any convincing counter-proof, and failure to explain the agency’s reversal of its positions in *American Trucking* and *Coal. Of Battery Recyclers Ass’n* provide independent grounds for finding EPA’s Proposal arbitrary and capricious and an abuse of discretion.

Similarly, the Proposal does not identify *any* case law supporting EPA’s claimed ability to “exercise its discretionary authority to establish a policy that would preclude it from using such [non-public] data in future regulatory actions.” 83 Fed. Reg. at 18,769 n.3. Our research failed to identify any case in which the courts allowed an agency to categorically bind itself from considering relevant, peer-reviewed science, or otherwise valid studies or evidence, because the underlying data was not made publicly available. *Cf., e.g., Southwest Airlines Co. v. Tr. Sec. Admin.*, 554 F.3d 1065, 1074 (D.C. Cir. 2009) (holding TSA was not required to disclose to airline companies the underlying data file used in a GAO report that informed TSA’s calculation of security fees given the nature of the decision—which was industry-wide rather than an adjudicative decision—and the deference given to agency denials of discovery); *Pharm. Research and Mfrs. v. FTC*, 790 F.3d 198, 210–11 (D.C. Cir. 2015) (holding the FTC was not required to disclose the 66 individual filings underlying its decision to target only the pharmaceutical industry in a new rule because the filings were confidential, were used as a general source of background in the rulemaking process, and were exempted from disclosure by statute); *State Corp. Comm’n of Kan. v. FERC*, 876 F.3d 332, 335–36 (D.C. Cir. 2017) (holding FERC was justified in relying on a study used by the agency to assess the benefits of a power facilities merger, even though the study was objected to by Kansas on the grounds that the study was performed by a third party and its results could not be verified by Kansas. The court rejected Kansas’s objections to the study because Kansas had access to a redacted electronic version of the study, though not the underlying data; Kansas did not pinpoint a specific reason to question the study, and the study’s assumptions and results had been reviewed for reasonability.)

Under some circumstances, the D.C. Circuit has upheld an agency’s decision to exclude an individual piece of evidence from the decision-making process. In *API v. EPA*, the D.C. Circuit upheld the EPA’s decision to discount a published meta-analysis that ran counter to the rule ultimately adopted. 684 F.3d 1342, 1350 (D.C. Cir. 2012). There, EPA considered the study

¹⁹³ As we discuss elsewhere in these comments, *infra* sections IV.A. & V.A., the Clean Air Act also contains no *authorization* for EPA to refuse to consider published studies submitted by commenters, or gathered by the agency, unless the data underlying the studies have been published and made available. Certainly, there is no suggestion of any such authorization in the *American Trucking* decision or any other court opinion.

but discounted its results after “[finding] its methodology wanting.” The court found the EPA decision to *discount* the study was not arbitrary and capricious because EPA had not “entirely failed to consider an important aspect of the problem [or] offered an explanation for its decision that runs counter to the evidence before the agency.” *Id.* (quoting *North Carolina v. EPA*, 531 F.3d 896, 906 (D.C. Cir. 2008)). Critically, EPA *did* consider the study (unlike the censorship approach in the instant Proposal). Moreover, following consideration, the agency offered specific reasons for not relying on the study, including its disagreements with the methodology. *Id.*

Likewise, the D.C. Circuit found in *Intercollegiate Broadcasting System v. Copyright Royalty Board*, that the Copyright Royalty Board had “properly excluded” from evidence a reference to a survey because the survey itself was not entered into evidence and could not be verified. 796 F.3d 111, 129 (D.C. Cir. 2015). In both cases, the court yielded to an agency’s discretion to exclude a particular piece of information where the agency had made an individualized determination about the source. None of these cases support the Proposal’s categorical ban on EPA considering relevant data, science, or studies (where data are not “publicly available in a manner sufficient for independent validation”), that have been submitted to the agency and that have not been the subject of any individualized determination that the studies or information are flawed or erroneous.

In its Proposal, EPA proposed to *categorically* ignore and exclude all peer-reviewed research with non-public underlying data, without individually considering each study or offering specific reasons for not relying on that study. The Proposal, by barring consideration of foundational scientific research premised upon non-public data, would result in EPA “fail[ing] to consider an important aspect of the problem.” *API*, 684 F.3d at 1350. There is no evidence of a court supporting an agency’s decision to exclude entire categories of evidence, or studies or information based on categorical prohibitions like the ones in the Proposal, without considering the source and offering specific reasons for not relying on the study. Instead, both EPA and the Courts have indicated already in *API* and *Coalition of Battery Recyclers*, that a rule like the one EPA is currently proposing is not required by the Clean Air Act and would be both impractical and unnecessary. This Proposal runs counter to the D.C. Circuit’s decision in *API* and would render EPA’s regulatory actions based on the Proposal arbitrary and capricious and an abuse of EPA’s discretion. The Proposal’s blanket rule would represent a significant and unlawful departure from D.C. Circuit rulings on agencies’ limited discretion to choose the sources it will consider and ignore.

V. The Proposal conflicts with the statutes that EPA administers

The Proposal unlawfully restricts EPA’s consideration and use of “dose response data and models that underlie” what the Proposal calls “pivotal regulatory science.” 83 Fed. Reg. at 18,770/2. The Proposal goes on to state:

“Pivotal regulatory science” is the studies, models, and analyses that drive the magnitude of the benefit-cost calculation, the level of a standard, or point-of-departure from which a reference value is calculated. In other words, they are critical to the calculation of a final regulatory standard or level, or to the quantified costs, benefits, risks and other impacts on which a final regulation is based.

Id. By restricting EPA’s implementation of its federal organic statutes and the Administrative Procedures Act in this fashion, and by defining “pivotal regulatory science” in this manner, the Proposal violates federal laws. The Proposal does so by requiring EPA to implement federal laws based on the Proposal’s criteria and conception of “pivotal regulatory science,” rather than on the congressional criteria and requirements in federal statutes that contradict, disallow, or fail to include those criteria and concepts in the Proposal.

A. Clean Air Act

1. Clean Air Act section 101

In Clean Air Act section 101(b), Congress directs EPA “to protect and enhance the quality of the Nation’s air resources so as to promote the public health and welfare and the productive capacity of its population.” 42 U.S.C. § 7401(b). The Proposal prevents EPA from doing so by blocking the agency from considering information that also is the best available, peer-reviewed, independent, credible science that could persuade or cause the agency to better protect the “public health and welfare and the productive capacity of [the Nation’s] population.” In this way, the Proposal thwarts the leading purpose of the Clean Air Act. Clean Air Act section 101 shows the Proposal is arbitrary and capricious and an abuse of EPA’s discretion.

2. Clean Air Act section 103

Clean Air Act section 103(a)(1) directs EPA to “conduct, and promote the coordination and acceleration of, research, investigations, experiments, demonstrations, surveys, and studies relating to the causes, effects (including health and welfare effects), extent, prevention, and control of air pollution.” 42 U.S.C. § 7403(a)(1). There is nothing in these congressional directives restricting these tasks (“research, investigations, experiments, demonstrations, surveys, and studies”) to materials based only on data that are “publicly available in a manner sufficient for independent validation.” 83 Fed. Reg. at 18,773/2 (proposed § 30.1). Nor is there any authorization in these congressional directives to distinguish between “research, investigations, experiments, demonstrations, surveys, and studies” that involves “dose response data and models,” and science that does not, for imposing regulatory restrictions on what science EPA must consider. The absence of any such congressional restrictions, authorizations or distinctions makes it clear that EPA invented and added the Proposal’s limitations and conditions as a matter of its own policy preferences, contrary to the Act. This EPA may not do. Clean Air Act section 103(a)(1) shows that the Proposal is arbitrary and capricious and an abuse of EPA’s discretion.

Clean Air Act subsection 103(a)(4) directs EPA to “establish technical advisory committees composed of recognized experts in various aspects of air pollution to assist in the examination and evaluation of research progress and proposals and to avoid duplication of research.” 42 U.S.C. § 7403(a)(4). Clean Air Act section 103(a)(5) directs EPA to “conduct and promote coordination and acceleration of training for individuals relating to the causes, effects, extent, prevention, and control of air pollution.” *Id.* § 7403(a)(5). There is nothing in these congressional directives restricting these tasks to materials based only on data that are “publicly available in a manner sufficient for independent validation.” 83 Fed. Reg. at 18,773/2 (proposed § 30.1). Nor is there any authorization in these congressional directives to distinguish between

research or science that involves “dose response data and models” on the one hand, and science that does not, on the other hand, for imposing regulatory restrictions on what science EPA must consider. The absence of any such congressional restrictions, authorizations, or distinctions makes it clear that EPA invented and added the Proposal’s limitations and conditions as a matter of its own policy preferences, contrary to the Act. This EPA may not do. Clean Air Act subsections 103(a)(4) & (5) show that the Proposal is arbitrary and capricious and an abuse of EPA’s discretion.

Clean Air Act section 103(b) is significantly titled “*Authorized Activities of Administrator in Establishing Research and Development Program.*” 42 U.S.C. § 7403(b) (emphasis added). It states that:

In carrying out the provisions of the preceding subsection the Administrator is authorized to—

- (1) collect and make available, through publications and other appropriate means, the results of and other information, including appropriate recommendations by him in connection therewith, pertaining to such research and other activities;
- (2) cooperate with other Federal departments and agencies, with air pollution control agencies, with other public and private agencies, institutions, and organizations, and with any industries involved, in the preparation and conduct of such research and other activities;
- (3) make grants to air pollution control agencies, to other public or nonprofit private agencies, institutions, and organizations, and to individuals, for purposes stated in subsection (a)(1) of this section;
- (4) contract with public or private agencies, institutions, and organizations, and with individuals, without regard to section 3324(a) and (b) of title 31 and section 6101 of title 41;
- (5) establish and maintain research fellowships, in the Environmental Protection Agency and at public or nonprofit private educational institutions or research organizations;
- (6) collect and disseminate, in cooperation with other Federal departments and agencies, and with other public or private agencies, institutions, and organizations having related responsibilities, basic data on chemical, physical, and biological effects of varying air quality and other information pertaining to air pollution and the prevention and control thereof;
- (7) develop effective and practical processes, methods, and prototype devices for the prevention or control of air pollution; and
- (8)

construct facilities, provide equipment, and employ staff as necessary to carry out this chapter.

Id. There is nothing in these congressional directives restricting these tasks, research or data to materials based only on data that are “publicly available in a manner sufficient for independent validation.” 83 Fed. Reg. at 18,773/2 (proposed § 30.1). Nor is there any authorization in these congressional directives to distinguish between research, science, data, or models that involves “dose response data and models” on the one hand, and science that does not, on the other hand, for imposing regulatory restrictions on what science EPA must consider. The absence of any such congressional restrictions, authorizations or distinctions makes it clear that EPA invented and added the Proposal’s limitations and conditions as a matter of its own policy preferences, contrary to the Act. This EPA may not do. Clean Air Act subsection 103(b) shows that the Proposal is arbitrary and capricious and an abuse of EPA’s discretion.

Clean Air Act section 103(d) addresses Environmental Health Effects Research:

(1) The Administrator, in consultation with the Secretary of Health and Human Services, shall conduct a research program on the short-term and long-term effects of air pollutants, including wood smoke, on human health. In conducting such research program the Administrator—

(A)

shall conduct studies, including epidemiological, clinical, and laboratory and field studies, as necessary to identify and evaluate exposure to and effects of air pollutants on human health;

(B)

may utilize, on a reimbursable basis, the facilities of existing Federal scientific laboratories and research centers; and

(C)

shall consult with other Federal agencies to ensure that similar research being conducted in other agencies is coordinated to avoid duplication.

42 U.S.C. § 7403(d). There is nothing in these congressional directives restricting these tasks, research, studies or data to materials based only on data that are “publicly available in a manner sufficient for independent validation.” 83 Fed. Reg. at 18,773/2 (proposed § 30.1). Nor is there any authorization in these congressional directives to distinguish between research, science, data or models that involves “dose response data and models” on the one hand, and science that does not, on the other hand, for imposing regulatory restrictions on what science EPA must consider. The absence of any such congressional restrictions, authorizations, or distinctions makes it clear that EPA invented and added the Proposal’s limitations and conditions as a matter of its own policy preferences, contrary to the Act. This EPA may not do. Clean Air Act subsection 103(d) shows that the Proposal is arbitrary and capricious and an abuse of EPA’s discretion.

Clean Air Act subsection 103(d)(2) directs “[i]n conducting the research program under this subsection, the Administrator shall develop methods and techniques necessary to identify and assess the risks to human health from both routine and accidental exposures to individual air pollutants and combinations thereof.” 42 U.S.C. § 7403(d)(2). Subsection 103(d)(2) then says,

“such research program shall include the following elements,” listing subsections (A)-(C). *Id.* Subsection 103(d)(2)(B) & (C) are especially relevant and revealing:

(B) An evaluation, within 12 months after November 15, 1990, of each of the hazardous air pollutants listed under section 7412(b) of this title, to decide, *on the basis of available information*, their relative priority for preparation of environmental health assessments pursuant to subparagraph (C). The evaluation *shall be based on reasonably anticipated toxicity to humans and exposure factors* such as frequency of occurrence as an air pollutant and volume of emissions in populated areas. Such evaluation shall be reviewed by the Interagency Task Force established pursuant to subparagraph (A).

(C) Preparation of environmental health assessments for each of the hazardous air pollutants referred to in subparagraph (B), beginning 6 months after the first meeting of the Interagency Task Force and to be completed within 96 months thereafter. *No fewer than 24 assessments shall be completed and published annually.* The assessments shall be prepared in accordance with guidelines developed by the Administrator in consultation with the Interagency Task Force and the Science Advisory Board of the Environmental Protection Agency. Each such assessment shall include—

- (i) an examination, summary, and evaluation of *available toxicological and epidemiological information for the pollutant to ascertain the levels of human exposure which pose a significant threat to human health and the associated acute, subacute, and chronic adverse health effects*;
- (ii) a determination of gaps in *available information related to human health effects and exposure levels*; and
- (iii) where appropriate, an identification of additional activities, including toxicological and inhalation testing, needed to identify the types or levels of exposure which may present significant risk of adverse health effects in humans.

42 U.S.C. § 7403(d)(2)(B) & (C) (emphases added).

There is nothing in these congressional directives restricting these tasks, research, studies or data to materials based only on data that are “publicly available in a manner sufficient for independent validation.” 83 Fed. Reg. at 18,773/2 (proposed § 30.1). Nor is there any authorization in these congressional directives to distinguish between research, science, data, or models that involves “dose response data and models” on the one hand, and science that does not, on the other hand, for imposing regulatory restrictions on what science EPA must consider. The absence of any such congressional restrictions, authorizations, or distinctions makes it clear that EPA invented and added the Proposal’s limitations and conditions as a matter of its own policy preferences, contrary to the Act. This EPA may not do. Clean Air Act subsection 103(d)(2) shows that the Proposal is arbitrary and capricious and an abuse of EPA’s discretion.

Equally damning for the Proposal, when Congress directs EPA to evaluate pollutants and their health effects, Congress uses broad and capacious terms:

- “on the basis of available information” (§ 103(d)(2)(B), 42 U.S.C. § 7403(d)(2)(B));

- “available toxicological and epidemiological information for the pollutant to ascertain the levels of human exposure which pose a significant threat to human health and the associated acute, subacute, and chronic adverse health effects” (§ 103(d)(2)(C)(i), 42 U.S.C. § 7403(d)(2)(C)(i)); and
- “available information related to human health effects and exposure levels” (§ 103(d)(2)(C)(ii), 42 U.S.C. § 7403(d)(2)(C)(ii)).

These instructions to EPA are prefaced with the mandatory language, “[s]uch research program *shall include* the following elements.” (§ 103(d)(2), 42 U.S.C. § 7403(d)(2)). Congress went out of its way *not* to authorize EPA to ignore “available toxicological and epidemiological information” to ensure that the agency would be “ascertain[ing] the levels of human exposure which pose a significant threat to human health and the associated acute, subacute, and chronic adverse health effects.” (§ 103(d)(2)(C)(i), 42 U.S.C. § 7403(d)(2)(C)(i)).

This shows clear congressional concern with all available science related to human health effects from air pollution—not some restricted, politicized subset of science where underlying, confidential data are “publicly available in a manner sufficient for independent validation.” Clean Air Act subsection 103(d)(2) shows that the Proposal is arbitrary and capricious and an abuse of EPA’s discretion.

When Congress directs EPA to conduct an ecosystem research program in subsection 103(e), Congress says that such program “shall include” “[e]valuation of risks to ecosystems exposed to air pollutants, including characterization of the causes and effects of chronic and episodic exposures to air pollutants and determination of the reversibility of those effects.” 42 U.S.C. § 7403(e). Subsections (e)(3)-(e)(6) address other effects on water quality, crops, soils, and other elements of ecosystems.

There is nothing in these congressional directives restricting these tasks, research, studies, or data to materials based only on data that are “publicly available in a manner sufficient for independent validation.” 83 Fed. Reg. at 18,773/2 (proposed § 30.1). Nor is there any authorization in these congressional directives to distinguish between research, science, data, or models that involves “dose response data and models” on the one hand, and science that does not, on the other hand, for imposing regulatory restrictions on what science EPA must consider. The absence of any such congressional restrictions, authorizations, or distinctions makes it clear that EPA invented and added the Proposal’s limitations and conditions as a matter of its own policy preferences, contrary to the Act. This EPA may not do. Clean Air Act subsection 103(e) shows that the Proposal is arbitrary and capricious and an abuse of EPA’s discretion.

3. Clean Air Act section 108

In section 108(a)(2), Congress required air quality criteria for air pollutants to “*accurately reflect the latest scientific knowledge useful in indicating the kind and extent of all identifiable effects on public health or welfare which may be expected from the presence of such pollutant in the ambient air,*” CAA § 108(a)(2), 42 U.S.C. § 7408(a)(2) (emphases added). In *American Trucking v. Whitman*, 531 U.S. at 457, the Supreme Court said that NAAQS must be based on “published air quality criteria that reflect the latest scientific knowledge.”

The Proposal violates these statutory requirements by prohibiting EPA from considering available science to discharge the agency's statutory responsibility to "protect the public health," with "an adequate margin of safety." CAA § 109(b)(1), 42 U.S.C. § 7409(b)(1). The Proposal does this by subverting and supplanting the congressional criteria in CAA § 108(a)(2), 42 U.S.C. § 7408(a)(2) with a restrictive standard driven by whether raw data are "publicly available in a manner sufficient for independent validation," 83 Fed. Reg. at 18,773/2 (proposed § 30.1).

With this unlawful maneuver, the Proposal prevents EPA from adopting air quality criteria that "*accurately reflect the latest scientific knowledge useful in indicating the kind and extent of all identifiable effects on public health or welfare.*" CAA § 108(a)(2), 42 U.S.C. § 7408(a)(2) (emphases added). First, the Proposal thwarts the congressional directives for "accurate[] reflection" of the "latest scientific knowledge." It does so by compelling or allowing EPA to ignore the "latest scientific knowledge," and to fail to "accurately reflect" that science, if raw data are not "publicly available in a manner sufficient for independent validation." 83 Fed. Reg. at 18,773/2 (proposed § 30.1).

Moreover, the Proposal thwarts the congressional directives for science that is "*useful in indicating the kind and extent of all identifiable effects on public health or welfare which may be expected from the presence of such pollutant in the ambient air.*" CAA §108(a)(2), 42 U.S.C. § 7408(a)(2) (emphases added). It does so, again, by compelling or allowing EPA to ignore the "latest scientific knowledge," and to fail to accurately reflect that science, if raw data are not "publicly available in a manner sufficient for independent validation." 83 Fed. Reg. at 18,773/2 (proposed § 30.1).

Further, section 208 contains the mandatory term "shall"—which does not give the agency latitude. It does not matter if that "scientific knowledge" is "publicly available" in the way EPA contemplates in the Proposal, it must simply inform the effects of air pollution on public health or welfare. Further, *American Trucking* considered the requirements of this section and specifically concluded that "the Clean Air Act imposes no" "general requirement that EPA obtain and publicize the data underlying published studies on which the Agency relies." 283 F.3d at 372.

In these statutory provisions, obviously there is no mention of the necessity, or even relevance, of raw data being "publicly available in a manner sufficient for independent validation" before EPA must consider studies based on that data. Equally plain, there is no authorization for EPA to fail to "accurately reflect" that science when issuing air quality criteria.

There is nothing in these congressional directives restricting EPA's responsibilities, or the research, studies, or data it must consider, to materials based only on data that are "publicly available in a manner sufficient for independent validation." 83 Fed. Reg. at 18,773/2 (proposed § 30.1). Nor is there any authorization in these congressional directives to distinguish between research, science, data, or models that involve "dose response data and models" on the one hand, and science that does not, on the other hand, for imposing regulatory restrictions on what science EPA must consider. The absence of any such congressional restrictions, authorizations, or distinctions makes it clear that EPA invented and added the Proposal's limitations and conditions

as a matter of its own policy preferences, contrary to the Act. This EPA may not do. Clean Air Act subsection 108(a) shows that the Proposal is arbitrary and capricious and an abuse of EPA's discretion.

4. Clean Air Act section 109

The Proposal also violates section 109 of the Clean Air Act and contravenes the Supreme Court decision in *American Trucking v. Whitman*. The Proposal's conception of "pivotal regulatory science" turns on, among other things, "analyses that drive the magnitude of the benefit-cost calculation," and "studies, models and analyses" that are "critical to the calculation of a final regulatory standard or level, or to the quantified costs, benefits, risks and other impacts on which a final regulation is based." 83 Fed. Reg. at 18,770/2; *id.* at 18,773/2 (proposed § 30.2 (*dose response data and models*)). Clean Air Act section 109(b)(1) requires EPA to promulgate or revise health-based national ambient air quality standards that are "requisite to protect the public health," "allowing an adequate margin of safety." 42 U.S.C. § 7409(b)(1).

As noted, in *American Trucking v. Whitman*, a unanimous Supreme Court said that NAAQS must be based on "published air quality criteria that reflect the latest scientific knowledge." 531 U.S. at 457. Moreover, the Court held that Clean Air Act section "109(b), interpreted in its statutory and historical context and with appreciation for its importance to the CAA as a whole, unambiguously bars cost considerations from the NAAQS-setting process." 531 U.S. at 471. The Court also squarely rejected arguments appealing to statutory language concerning "adverse public health, welfare, social, economic, or energy effects which may result from various strategies for attainment and maintenance" of NAAQS. The justices made clear such language and concerns have "no bearing upon whether cost considerations are to be taken into account in formulating the standards." *Id.*

The Proposal violates Clean Air Act section 109(b)(1) and the governing Supreme Court interpretation in *American Trucking* by purporting to allow the "magnitude of a benefit-cost calculation" and "quantified costs and benefits" to impact or govern (1) EPA's consideration of peer-reviewed science relevant to reviewing, setting or revising health-based NAAQS; and (2) EPA's review, revision or establishment of health-based NAAQS. This is unlawful.

Clean Air Act sections 109(b)(1), (2), & (c) require EPA to protect Americans' "public health" with an adequate margin of safety, and America's "welfare" from "any known or anticipated adverse effect." 42 U.S.C. § 7409(b)(1), (2) & (c). The Proposal prevents EPA from doing so by blocking the agency from considering information that also is the best available, peer-reviewed, independent, credible science that could persuade or cause the agency to better protect Americans' public health and welfare, based on the statutory criteria in section 109. In this way, the Proposal thwarts the central role and fundamental right to health-based air quality standards under the Clean Air Act. Clean Air Act section 109 shows the Proposal is arbitrary and capricious and an abuse of EPA's discretion.

5. Clean Air Act section 111

Clean Air Act section 111(a)(1) defines a standard of performance as:

a standard for emissions of air pollutants which reflects the degree of emission limitation *achievable* through the application of the *best system of emission reduction* which (taking into account the cost of achieving such reduction and any nonair quality *health and environmental* impact and energy requirements) the Administrator determines has been *adequately demonstrated*.

42 U.S.C. 7411(a)(1) (emphases added). There is nothing in these congressional directives restricting EPA's establishment of "standards of performance," or its determinations of "achievability" or "best system of emission reduction" or "adequate demonstration," to information based only on data that are "publicly available in a manner sufficient for independent validation." 83 Fed. Reg. at 18,773/2 (proposed § 30.1). Nor is there any authorization in these congressional directives to distinguish between research, science, data, or models involving "dose response data and models" on one hand, and science that does not, on the other hand, for imposing regulatory restrictions on what science EPA must consider.

EPA cannot fulfill the congressional directive to establish the "best system of emission reduction" if EPA is artificially and unlawfully restricting its consideration of data and information to those that are "publicly available in a manner sufficient for independent validation." *Id.* Nor may EPA fulfill the "adequately demonstrated" directive if systems of emission reduction that have been adequately demonstrated require EPA to consider data, science, or information that are not "publicly available in a manner sufficient for independent validation." *Id.*

Clean Air Act section 111(b)(1)(A) requires EPA to establish a list of stationary sources to be subject to section 111 standards of performance:

[The Administrator] shall include a category of sources in such list if in his judgment it causes, or contributes significantly to, air pollution *which may reasonably be anticipated to endanger public health or welfare*.

42 U.S.C. 7411(b)(1)(A) (emphasis added). There is nothing in the Act restricting EPA's consideration of which categories of sources "may reasonably be anticipated to endanger public health or welfare" to information based only on data that are "publicly available in a manner sufficient for independent validation." 83 Fed. Reg. at 18,773/2 (proposed § 30.1). There is no indication of congressional intent that what "may reasonably be anticipated to endanger public health or welfare" may be modified or constrained by ignoring science and data concerning endangerment if that information is not "publicly available in a manner sufficient for independent validation."

The absence of any such congressional restrictions, authorizations, or distinctions concerning what EPA may consider makes it clear that EPA invented and added the Proposal's limitations and conditions as a matter of its own policy preferences, contrary to the Act. This EPA may not do. Clean Air Act subsections 111(a)(1) and 111(b)(1)(A) show that the Proposal is arbitrary and capricious and an abuse of EPA's discretion.

6. Clean Air Act Section 112

Clean Air Act Section 112(b) provides a list of toxic air pollutants for which industrial sources must limit their emissions. The statute then directs the Administrator to periodically review that list of hazardous air pollutants and, where appropriate, revise this list by rule. In particular, the Administrator is directed to add pollutants which:

present, or may present, through inhalation or other routes of exposure, a threat of adverse human health effects (including, but not limited to, substances which are known to be, or may reasonably be anticipated to be, carcinogenic, mutagenic, teratogenic, neurotoxic, which cause reproductive dysfunction, or which are acutely or chronically toxic) or adverse environmental effects whether through ambient concentrations, bioaccumulation, deposition, or otherwise, but not including releases subject to regulation under subsection (r) as a result of emissions to the air.

42 U.S.C. § 7412(b)(2). There is nothing in these congressional directives restricting EPA's establishment of this list nor of the pollutants that should be added to it based only on data that are "publicly available in a manner sufficient for independent validation." 83 Fed. Reg. at 18,773/2 (proposed § 30.1). Nor is there any authorization in these congressional directives to distinguish between research, science, data, or models involving "dose response data and models" on one hand, and science that does not, on the other hand, for imposing regulatory restrictions on what science EPA must consider.

EPA cannot fulfill the congressional directive to establish section 112(b)(2)'s pollutant list if the agency is artificially and unlawfully restricting its consideration of data and information to those that are "publicly available in a manner sufficient for independent validation." *Id.* Nor will EPA be able to fully analyze pollutants for inclusion on this list if determining inclusion would require EPA to consider data, science or information that are not "publicly available in a manner sufficient for independent validation." *Id.*

Similarly, Section 112(b)(3) lays out a petition process to add chemicals to the Section 112 list that similarly require the petitioner to submit to EPA proof that "the substance is an air pollutant and that emissions, ambient concentrations, bioaccumulation or deposition of the substance are known to cause or may reasonably be anticipated to cause adverse effects to human health or adverse environmental effects." 42 U.S.C. § 7412(b)(3)(B). Here, the straightjacket that the Proposal would place on this statutory language would similarly prevent the agency from carrying out its statutory directive.

Section 112(b)(3)(C) provides criteria for *delisting* pollutants from the list. This section would nonetheless be hamstrung if the agency were limited exclusively to data that are "publicly available in a manner sufficient for independent validation." 83 Fed. Reg. at 18,773/2 (proposed § 30.1). Nor is there any authorization in the section's congressional directives to distinguish between research, science, data, or models involving "dose response data and models" on one hand, and science that does not, on the other hand, for purposes of listing or delisting pollutants from section 112's hazardous pollutant list.

Nearly every subsection of Section 112, including standards for major and area sources, reporting requirements, and accidental release provisions, touch on protecting “public health,” weighing “risks,” or assessing how “hazardous” a “substance” or “pollutant” may be. EPA cannot fulfill the congressional directives of any of these sections if the agency is artificially and unlawfully restricting its consideration of data and information to those that are “publicly available in a manner sufficient for independent validation.” *Id.* Nor will EPA be able to fully analyze risks to or impacts on human health and set section 112 standards accordingly if making such determinations would require EPA to consider data, science, or information that are not “publicly available in a manner sufficient for independent validation.” *Id.*

The absence of any such congressional restrictions, authorizations, or distinctions concerning what EPA may consider makes it clear that EPA invented and added the Proposal’s limitations and conditions as a matter of its own policy preferences, contrary to the Act. This EPA may not do. Clean Air Act section 112 makes exceedingly clear that the Proposal is arbitrary and capricious and an abuse of EPA’s discretion.

The sections listed above merely represent a sampling of some examples in Title 1 of the Act that exemplify the extent to which the Proposal is arbitrary, capricious, an abuse of EPA’s discretion, and a violation of clear congressional directives. The Act’s five other Titles are no different, and the list provided here is not exhaustive—the Clean Air Act is rife with examples of statutory language that the Proposal would distort with its adherence to data that are “publicly available in a manner sufficient for independent validation” 83 Fed. Reg. at 18,773/2 (proposed § 30.1) and research, science, data, or models involving “dose response data and models.”

B. Clean Water Act

The Proposal, if adopted, would imperil the effective implementation of the Clean Water Act. Several provisions of the Act direct EPA to consider a range of data in promulgating regulations to effectuate its goals, and the development of these regulations would be hamstrung by the Proposal’s restrictions on considering valid scientific evidence. As discussed in these comments, identifying and excluding valid scientific evidence is time- and resource-intensive and has not been demonstrated to improve the quality of the science EPA considers or its science-based decisions. Accordingly, applying the proposed limitations to the myriad of regulatory decisions the agency is supposed to make would be a recipe for complete paralysis on multiple fronts under the Clean Water Act. Some examples of the water regulations that could be adversely affected by the far-reaching the Proposal follow.

Under sections 301 and 304, EPA must develop effluent limitation guidelines, setting out nationally-applicable pollution discharge standards for various industries. These ELGs “identify, in terms of amounts of constituents and chemical, physical, and biological characteristics of pollutants, the degree of effluent reduction attainable through the application of [particular levels of pollution control stringency] for classes and categories of point sources . . .” 33 U.S.C. § 1314(b)(1)(A). EPA is to specify the factors used to determine the controls to be used, including “the age of equipment and facilities involved, the process employed, the engineering aspects of the application of various types of control techniques, process changes, the cost of achieving such effluent reduction, non-water quality environmental impact (including energy

requirements), and such other factors as the Administrator deems appropriate” *Id.* § 1314(b)(1)(B). Making these judgments and formulating the proper control levels that industrial dischargers must meet will obviously depend on data collected about the processes used in a given industry, control technology performance, cost, and energy use, among other things.

Under section 303, the Act charges EPA with issuing initial water quality standards for states that fail to submit their own, and with developing such standards if EPA determines submitted standards are not consistent with the Act. *Id.* § 1313(b). Congress required these standards to take account of a wide range of evidence, and the Proposal would therefore curtail EPA’s actions pursuant to the Act. Specifically, standards:

shall be such as to protect the public health or welfare, enhance the quality of water and serve the purposes of this chapter. Such standards shall be established taking into consideration their use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes, and also taking into consideration their use and value for navigation.

Id. § 1313(c)(2)(A).

In addition, section 303’s water quality standards process illustrates a hypocritical element of the Proposal. When states develop water quality standards, they must submit to EPA “[g]eneral information which will aid the Agency in determining the adequacy of the scientific basis of the standards,” 40 C.F.R. § 131.6(f), and EPA’s review of such a submission considers “[w]hether the State standards . . . are based upon appropriate technical and scientific data and analyses,” *id.* § 131.5(a)(4), such that states can consider a wide range of information in establishing standards and EPA’s review of the states’ standards looks simply to whether the information on which they are based is “appropriate.” By contrast, if EPA were obliged to develop standards for a state (either because of a failure to submit or an inadequate submission), the Proposal would require EPA to consider a much more limited universe of information.

Pursuant to section 307 of the Act, EPA may issue category-wide effluent standards for listed toxic pollutants that go beyond the minimum level of control the Act mandates. These more stringent standards “shall take into account the toxicity of the pollutant, its persistence, degradability, the usual or potential presence of the affected organisms in any waters, the importance of the affected organisms, the nature and extent of the effect of the toxic pollutant on such organisms, and the extent to which effective control is being or may be achieved under other regulatory authority.” Further, “[a]ny effluent standard promulgated under this section shall be at that level which the Administrator determines provides an ample margin of safety.” 33 U.S.C. § 1317(a)(4). Obviously, it takes a substantial effort for EPA to assess these various factors and determine what level of pollution is acceptable, with an “ample margin of safety,” and to do so for numerous categories of dischargers (multiplied by numerous different toxic pollutants). If EPA adopts the Proposal, it would make each element of this analysis that much more cumbersome and difficult, and thus make it harder for EPA to effectively protect the public from toxic pollution.

Section 311 includes a further example of the kinds of regulatory analyses into which the Proposal would inject confusion and administrative burden. That section charges EPA with issuing “regulations designating as hazardous substances, other than oil as defined in this section, such elements and compounds which, when discharged in any quantity into . . . [various water resources] present an imminent and substantial danger to the public health or welfare, including, but not limited to, fish, shellfish, wildlife, shorelines, and beaches.” 33 U.S.C. § 1321(b)(2)(A). Indeed, answering these kinds of questions seems particularly likely to be undermined by the Proposal, as data relevant to determining the conditions under which hazardous substances may be an “imminent and substantial danger” could well come from prior accidental releases that could fail the Proposal’s “reproducibility” trigger.

The foregoing examples are merely illustrative. The Clean Water Act imposes numerous regulatory duties on EPA, and the Proposal threatens to make carrying out those obligations harder. The Act’s foundational purpose—“to restore and maintain the chemical, physical, and biological integrity of the Nation’s waters,” 33 U.S.C. § 1251(a)—would thus be ill-served by finalizing the Proposal.

C. Safe Drinking Water Act

The Safe Drinking Water Act (SDWA) protects the nation’s public drinking water supplies. The Act generally applies to “each public water system in each State,” 42 U.S.C. § 300g, and requires EPA to set standards for drinking water contaminants that may have an adverse effect on human health and are known or anticipated to occur in such systems, *id.* § 300g-1(b)(1)(A).

For a given contaminant, the SDWA requires that EPA first establish a Maximum Contaminant Level Goal (MCLG), which is “the level at which no known or anticipated adverse effects on the health of persons occur and which allows an adequate margin of safety.” *Id.* § 300g-1(b)(4)(A). EPA must then set a Maximum Contaminant Level (MCL) “as close to the [MCLG] as is feasible.” *Id.* § 300g-1(b)(4)(B).

EPA also must, every five years, “publish a list of contaminants” that “are not subject to any proposed or promulgated national primary drinking water regulation, which are known or anticipated to occur in public water systems, and which may require regulation” *Id.* § 300g-1(b)(1)(B)(i). The SDWA requires EPA to prioritize that list based on vulnerable subpopulations that are at risk and other factors. *Id.* § 300g-1(b)(1)(C). EPA must then decide whether to regulate at least five contaminants on the list based on the “best available public health information.” *Id.* § 300g-1(b)(1)(B)(ii).

In making these determinations, the SDWA requires EPA to use “the best available, peer-reviewed science and supporting studies conducted in accordance with sound and objective scientific practices,” and “data collected by accepted methods or best available methods (if the reliability of the method and the nature of the decision justifies use of the data).” *Id.* § 300g-1(b)(3)(A); *see also id.* § 300g-1(b)(12), (13) (similar); *id.* § 300j-19 (referring to best available science standard for risk assessment of algal toxins).

The Proposal would conflict with the SDWA by prohibiting EPA from using the “best available” science and “data collected by acceptable or best available methods” solely because that data could not be made public. Indeed, courts interpreting these requirements have already rejected this proposed limitation on dose-response studies, making clear that they can indeed be the “best available” science regardless of whether the underlying data are publicly available. In *City of Waukesha v. EPA*, the court approved EPA’s use of “studies of Hiroshima and Nagasaki atomic bomb survivors” in setting limits for radium and uranium in drinking water. 320 F.3d 228, 248, 252 (D.C. Cir. 2003). But of course, these and similar studies would likely be excluded under the Proposal because the underlying data are not available.¹⁹⁴ The court also upheld the agency’s use of the linear, non-threshold (LNT) model used by EPA for both radium and uranium, *id.* at 249–50, 252, which is precisely the model that EPA now implies—without citing any evidence—is not scientifically justified.

Additionally, in carrying out its obligations to establish drinking water standards, the Act directs the agency to discuss “peer-reviewed studies known to the Administrator that support, are directly relevant to, or fail to support any estimate of public health effects and the methodology used to reconcile inconsistencies in the scientific data.” 42 U.S.C. § 300g-1(b)(3)(b)(v). Moreover, the agency must identify the “[q]uantifiable and non-quantifiable benefits for which there is a factual basis in the rulemaking record” in establishing a drinking water standard. Thus, under the express provisions of the SDWA, the agency cannot simply ignore peer-reviewed studies or other factual information in the record that the Proposed Rule would disallow from consideration, simply because the underlying data may be unavailable. *Id.* § 300g-1(b)(3)(c)(i).

If Congress had intended for the data targeted by the Proposal to be excluded, it could have said so. Instead, Congress directed EPA to use “the best available, peer-reviewed science and supporting studies conducted in accordance with sound and objective scientific practices,” and “data collected by accepted methods or best available methods.” 42 U.S.C. § 300g-1(b)(3)(A). EPA cannot ignore these commands to achieve its political goal of rolling back public health protections.

D. Resource Conservation and Recovery Act

Under the Resource Conservation and Recovery Act (RCRA), EPA regulates the generation, transportation, treatment, storage, and disposal of hazardous waste. EPA must develop, and revise from time to time, “criteria for identifying the characteristics of hazardous waste” and “for listing hazardous waste” that should be subject to regulation, “taking into account toxicity, persistence, and degradability in nature, potential for accumulation in tissue, and other related factors such as flammability, corrosiveness, and other hazardous characteristics.” 42 U.S.C. § 6921(a). EPA also must, in cooperation with Agency for Toxic Substances and Disease Registry (ATSDR) and the National Toxicology Program, “identify or list those hazardous wastes” which must be subject to regulation because they contain “certain constituents (such as identified carcinogens, mutagens, or terat[o]gens) at levels in excess of

¹⁹⁴ For a description of the studies, see Kotaro Ozasa, *Epidemiological research on radiation-induced cancer in atomic bomb survivors*, *Journal of Radiation Research*, Volume 57, Issue S1, 1 August 2016, Pages i112–i117, <https://academic.oup.com/jrr/article/57/S1/i112/2580473>.

levels which endanger human health.” *Id.* § 6921(b)(1). Likewise, EPA must promulgate regulations establishing standards applicable to generators and transporters of hazardous waste, and owners and operators of hazardous waste treatment, storage, and disposal facilities, “as may be necessary to protect human health and the environment.” *Id.* §§ 6922(a), 6923(a), 6924(a); *see also id.* § 6924(b), (d), (g).

The Proposal conflicts with RCRA’s statutory mandate. RCRA requires EPA to evaluate and regulate hazardous waste based on whether it will endanger human health and the environment, while the Proposal allows EPA to disregard relevant science simply because the underlying data cannot be made public. Under RCRA, EPA cannot ignore studies for that reason. Thus, the Proposal violates RCRA.

E. Comprehensive Environmental Response, Compensation, and Liability Act

Under CERCLA, EPA has power to clean up sites that are contaminated with hazardous substances, and to assure that responsible parties pay for such clean up. CERCLA requires EPA to issue regulations that identify hazardous substances that “present substantial danger to the public health or welfare or the environment,” and that specify the quantities of such substances that trigger the Act’s notification requirements. 42 U.S.C. § 9602(a). The Proposal contradicts this statutory mandate because it allows EPA to arbitrarily exclude some studies solely because the underlying data cannot be made public. Under the statute, EPA is required to use *all* relevant studies in determining whether a substance presents a substantial danger to people or the environment.

CERCLA also requires the President to promulgate and revise the National Contingency Plan for the removal of hazardous substances. *Id.* § 9605(a), (b). The President has delegated that authority to EPA. Exec. Order No. 12580, 52 Fed. Reg. 2923 (1987); Exec. Order No. 12777, 56 Fed. Reg. 54757. The Plan must include criteria for determining priorities “based upon relative risk or danger to public health or welfare or the environment,” taking into account enumerated factors. 42 U.S.C. § 9605(a)(8)(A). The Proposal conflicts with this section because it would direct EPA to disregard relevant studies solely because the underlying data could not be made public, even if those studies shed light on the enumerated factors.

CERCLA’s non-rulemaking provisions also show that Congress did not intend for studies to be excluded from consideration simply because the underlying data cannot be made public. For example, CERCLA authorizes the President to address hazardous substance releases that pose an “imminent and substantial danger to the public health or welfare,” and to “undertake such investigations, monitoring, surveys, testing, and other information gathering” as necessary to determine “the extent of danger to the public health or welfare or to the environment.” *Id.* § 9604(a), (b). This shows that Congress’s purpose in enacting CERCLA was to address the serious public health and environmental threats of hazardous substance releases. That purpose would be undermined if EPA could refuse to consider relevant studies only because the underlying data cannot be made public.

EPA also has co-responsibility with the ATSDR to establish a registry of diseases relating to toxic substance exposure, as well as to create a list of hazardous substances found at

Superfund sites, prepare a toxicological profile of those substances, and determine whether adequate information on the health effects of those substances exists. *Id.* § 9604(i). The statute specifically lists the types of studies and data that should be considered in determining whether adequate information exists and assessing the need for further research. *Id.* § 9604(i)(5); *see also id.* § 9604(i)(13). The statute does not exclude studies whose underlying data cannot be made public. In short, the Proposal contradicts both the statutory language and the purpose of CERCLA.

F. Emergency Planning and Community Right-to-Know Act

EPCRA establishes requirements for state and local emergency planning and reporting on hazardous chemicals. It requires EPA to publish a list of extremely hazardous substances and set, by regulation, a threshold planning quantity for each substance on the list. 42 U.S.C. § 11002(a). “Any revisions to the list shall take into account the toxicity, reactivity, volatility, dispersability, combustability, or flammability of a substance.” *Id.* § 11002(a)(4). Notably, in defining the criteria that EPA must consider for the list, EPCRA affirmatively directs EPA to consider the toxicity of the substance, among other things, and says nothing about excluding relevant studies for the reasons stated in the Proposal.

EPCRA also contains reporting requirements for owners or operators who manufacture, process, or use hazardous chemicals. *Id.* § 11023. EPA “may by rule add or delete a chemical from the list” of covered chemicals if there is sufficient evidence that the “chemical is known to cause or can reasonably be anticipated to cause significant adverse acute human health effects” or if the “chemical is known to cause or can reasonably be anticipated to cause in humans . . . cancer or teratogenic effects, or . . . serious or irreversible . . . reproductive dysfunctions[,] neurological disorders[,] heritable genetic mutations[,] other chronic health effects.” *Id.* § 11023(d). A chemical can also be added if it “is known to cause or can reasonably be anticipated to cause . . . a significant adverse effect on the environment of sufficient seriousness” due to its toxicity. *Id.* Of critical importance here, this determination “shall be based on generally accepted scientific principles or laboratory tests, or appropriately designed and conducted epidemiological or other population studies, available to the Administrator.” *Id.*

The Proposal directly conflicts with EPCRA’s requirement to use “generally accepted scientific principles or laboratory tests,” or “appropriately designed and conducted epidemiological or other population studies.” *See id.* § 11023(d). As explained throughout these comments, there is no reason the underlying data must be public for these tests and studies to be “generally accepted” or “appropriated designed and conducted.” Thus, the Proposal is—on its face—contrary to EPCRA’s mandate that EPA use these tests and studies when making determinations under the statute.

G. Federal Insecticide, Fungicide, and Rodenticide Act

FIFRA requires that all pesticides distributed or sold in the United States be registered by EPA. EPA cannot register pesticides that would cause “unreasonable adverse effects on the environment.” 7 U.S.C. § 136a. Likewise it may “by regulation” limit the distribution, sale or use of a pesticide to prevent “unreasonable adverse effects on the environment,” *id.* § 136a(a), and

must cancel the registration of pesticides that cause such “unreasonable adverse effects.” *Id.* § 136d. The term “unreasonable adverse effects on the environment” is defined to include unreasonable risks to human health, and dietary risks that violate the standard for pesticide residues under the Food, Drug and Cosmetic Act. *Id.* § 136(bb). Given that registration decisions often depend heavily on dose-response data and models, EPA must clarify whether the Proposal will apply to registration and registration review decisions. If so, the Proposal conflicts with FIFRA’s requirement that EPA determine whether pesticides proposed for registration would have unreasonable adverse effects on the environment. In light of that language, EPA cannot exclude relevant studies bearing on a pesticide’s effect on human health or the environment simply because the underlying data cannot be made public.

The potential applicability of the Proposal to exclude consideration of epidemiological studies of the health impacts of pesticides where the underlying data cannot be made public also highlights the logical inconsistency and arbitrary approach in the embodied proposed rule. On the one hand, the Proposal appears to be intended to prohibit consideration of such public health studies, but on the other hand seems to envision that industry-conducted studies and models claimed to include confidential business information would be allowed to be considered. This highlights the arbitrary and one-sided nature of the Proposal, and the clear underlying intent, which is to undermine public health protections for the benefit of industry.

Regardless of whether the Proposal applies to registration decisions, it conflicts with FIFRA in other ways. FIFRA directs EPA, when promulgating rules, to “take into account the difference in concept and usage between various classes of pesticides, including public health pesticides, and differences in environmental risk and the *appropriate data for evaluating such risk between agricultural, nonagricultural, and public health pesticides.*” *Id.* § 136w(a) (emphasis added); *see also id.* § 136w(c) (setting forth some examples of rules EPA may promulgate under FIFRA). EPA may not exclude “appropriate data” in these regulatory decisions simply because those data cannot be made public. Thus, the Proposal conflicts with FIFRA.

Finally, EPA has violated FIFRA’s procedural requirements. FIFRA requires EPA to provide the Scientific Advisory Panel and the Secretary of Agriculture with a copy of the Proposal at least 60 days before publication in the Federal Register. *Id.* § 136w(a)(2), (d). Any notification to the Secretary must be published in the Federal Register. *Id.* § 136w(a)(2)(D). There is no evidence in the Proposal that EPA followed these procedural requirements. (EPA also must provide the Panel and the Secretary a copy of the final rule 30 days before publication in the Federal Register. *Id.* § 136w(a)(2), (d).) Similarly, EPA must furnish a copy of the proposed and final regulation to the Committee on Agriculture of the House of Representatives and the Committee on Agriculture, Nutrition, and Forestry of the Senate. *Id.* § 136w(a)(3). Again, there is no evidence this occurred.

H. Toxic Substances Control Act

Under TSCA, EPA has broad authority to protect the public from harm from chemical substances and mixtures. TSCA authorizes EPA to issue regulations designed to gather information on, require testing of, and control exposure to chemical substances and mixtures.

EPA must restrict or ban any chemical substance that presents an unreasonable risk of injury to human health or the environment. *See, e.g.*, 15 U.S.C. §§ 2603, 2604, 2605.

TSCA contains specific provisions regarding EPA's use and consideration of science in rulemakings. "In carrying out sections 2603, 2604, and 2605," EPA must "use scientific information, technical procedures, measures, methods, protocols, methodologies, or models, employed in a manner consistent with the best available science." *Id.* § 2625(h). EPA must further consider the following:

- (1) the extent to which the scientific information, technical procedures, measures, methods, protocols, methodologies, or models employed to generate the information are reasonable for and consistent with the intended use of the information;
- (2) the extent to which the information is relevant for the Administrator's use in making a decision about a chemical substance or mixture;
- (3) the degree of clarity and completeness with which the data, assumptions, methods, quality assurance, and analyses employed to generate the information are documented;
- (4) the extent to which the variability and uncertainty in the information, or in the procedures, measures, methods, protocols, methodologies, or models, are evaluated and characterized; and
- (5) the extent of independent verification or peer review of the information or of the procedures, measures, methods, protocols, methodologies, or models.

Id. After consideration of these matters, EPA must make decisions "based on the weight of the scientific evidence." *Id.*

In short, EPA must examine the reliability of a study on a case-by-case basis by weighing several indicators of scientific validity. Noticeably absent from Congress's enumerated factors in § 2625(h) is whether the underlying data can be made available to the public. While § 2625(h)(4) provides that EPA should take into account "the extent of independent verification or peer review" of scientific information, this language indicates that peer review of a study could provide sufficient assurance of its reliability even without additional verification.

TSCA further directs EPA to make available to the public, among other things, "a list of the studies considered by the Administrator in carrying out each such risk evaluation, along with the results of those studies" and "each designation of a chemical substance . . . along with an identification of the information, analysis, and basis used to make the designations." *Id.* § 2625(i). Again, the statute, despite calling out specific information to be made publicly available, does not state that the *underlying data* for these studies must be made publicly available. Thus, the rule is flatly inconsistent with TSCA.

Finally, even if it were not already clear from the above provisions that EPA cannot bar consideration of studies as provided in the Proposal, TSCA also states that EPA “shall take into consideration information relating to a chemical substance or mixture, including hazard and exposure information, under the conditions of use, that is reasonably available to the Administrator.” *Id.* § 2625(k). EPA has defined “reasonably available” to mean “information that EPA possesses or can reasonably generate, obtain and synthesize for use . . . for prioritization and risk evaluation. Information that meets such terms is reasonably available information whether or not the information is confidential business information that is protected from public disclosure under 15 U.S.C. 2613.” 40 C.F.R. § 702.3. Thus, if the studies covered by the rule are “reasonably available” to EPA, the agency must consider them, regardless of whether the raw data can be made public. EPA cannot create a double standard where studies withheld from the public as confidential business information must be considered but studies for which the underlying data cannot be made publicly available cannot be considered. *See infra* section X. The Proposal is unlawful under TSCA and cannot be promulgated.

I. Food Quality Protection Act (or Food, Drug, and Cosmetics Act)

The Food Quality Protection Act (also known as the Food, Drug, and Cosmetics Act or FFDCA) governs pesticide tolerances. Section 408 of the FFDCA requires EPA to set tolerances, which are maximum residue limits, for pesticide residues on foods. In setting tolerances, EPA must find that the tolerance is “safe.” 21 U.S.C. § 346a. Safe is defined as meaning that there is a “reasonable certainty that no harm will result from aggregate exposure to the pesticide residue.” *Id.* § 346a(b)(2)(a)(ii). To make this finding, EPA considers, among other things: the toxicity of the pesticide and its break-down products, aggregate exposure to the pesticide in foods and from other sources of exposure, and any special risks posed to infants and children. *Id.* § 346a(b). For threshold effects, EPA is required to add an additional tenfold margin of safety to protect infants and children, unless the administrator finds based on reliable data that a different safety factor will ensure the pesticide is safe. *Id.* § 346a(b)(2)(C)(ii). The statute contains specific provisions regarding the type and availability of data that must be considered. *Id.* § 346a(b)(2)(D), (E), (F).

The Proposal does not cite to the FFDCA, and apparently EPA never considered whether the Proposal is consistent with the law. It is not. First, the Act defines “safe” to mean that “there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.” *Id.* § 346a(b)(2)(A)(ii). As part of this determination, EPA must “ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure.” *Id.* § 346a(b)(2)(C). EPA cannot do this if it excludes relevant studies solely because the underlying data cannot be made public.

The FFDCA specifically speaks to how threshold and non-threshold effects shall be considered. *Id.* § 346a(b)(2)(B). The Proposal cannot override the specific Congressional mandates in the FFDCA for how to conduct a tolerance assessment. In determining whether there is a reasonable certainty of no harm to infants and children, EPA must consider “available information” on consumption patterns among infants and children, special susceptibility of infants and children (including for example neurological and in utero effects), cumulative effects on infants and children. *Id.* § 346a(b)(2)(C). Likewise, the Act specifies numerous scientific

factors that must be considered in evaluating safety, including considering “available data” on these factors. *Id.* § 346a(b)(2)(D). The Proposal plainly contradicts these mandates. Obviously, published, peer-reviewed literature is “available” and must be considered. As with studies considered under other statutes, EPA fails to explain the arbitrariness of excluding published peer-reviewed studies while allowing industry studies considered confidential business information to be considered.

Finally, the FFDCFA contains certain procedural requirements for “establishing general procedures and requirements to implement this section.” *Id.* § 346a(e). Yet EPA failed to cite the FFDCFA—either its substantive or procedural requirements—at all in its Proposal.

J. Atomic Energy Act

The AEA, 42 U.S.C. § 2011 *et seq.*, is not a typical environmental law, as the original act established the Atomic Energy Commission (AEC) just after World War II to promote the “utilization of atomic energy for peaceful purposes to the maximum extent consistent with the common defense and security and with the health and safety of the public.” The concern found in the final clause of its original organic act, “the health and safety of the public,” has at no point disappeared in subsequent iterations of the act and this Proposal runs contrary to its clearly stated intent.

The AEC was abolished in the 1970s, and since that then, most of the functions of the AEA are carried out by the Nuclear Regulatory Commission and the U.S. Department of Energy. However, when EPA was formed in the early 1970s, it assumed the AEC’s authority to issue generally applicable environmental radiation standards to protect the health and safety of the public. Other federal and state organizations must follow these standards when developing requirements for their areas of radiation protection. EPA also implements the Federal Radiation Council’s authority under the AEA, developing guidance for federal and state agencies containing recommendations for their use in developing radiation protection requirements and working with states that have radiation protection programs.

There are several specific statutory requirements that EPA executes under the AEA, which states that “the purpose of this [Act is] to effectuate the policies set forth above by providing for – (d) a program to encourage widespread participation in the development and utilization of atomic energy for peaceful purposes to the maximum extent consistent with the common defense and security *and with the health and safety of the public.*” 42 U.S.C. § 2013(d) (emphasis added).

The following regulations are health-based standards, and as we discuss *supra* section III.G., EPA bases its regulatory limits and nonregulatory guidelines for population exposures to low-level ionizing radiation on the linear no-threshold (LNT) dose-response model, which uses the premise that any radiation dose carries some risk, and that risk increases directly with dose. The viability of each of these longstanding health-based protections will be undercut by promulgation of a final rule that resembles this draft for the reasons discussed *supra* section III.G., and in direct conflict with the AEA’s requirement that the utilization of atomic

energy for peaceful purposes be “to the maximum extent consistent with the common defense and security *and with the health and safety of the public.*”

- Environmental Radiation Protection Standards for Nuclear Power Operations (40 C.F.R. Part 190); these standards limit radiation releases and doses to the public from the normal operation (non-emergency) of nuclear power plants and other uranium fuel cycle facilities.
- Environmental Radiation Protection Standards for Management and Disposal of Spent Fuel, High Level and Transuranic Wastes (40 C.F.R. Part 191); this regulation sets environmental standards for the disposal of highly radioactive spent nuclear fuel and certain kinds of highly toxic and radioactive wastes produced from the nuclear weapons program that must ultimately be disposed of in a deep geologic repository.
- Health and Environmental Protection Standards for Health and Environmental Protection Standards for Uranium and Thorium Mill Tailings (40 C.F.R. Part 192); this regulation sets standards for the protection of the public health, safety, and the environment from radiological and non-radiological hazards associated with uranium and thorium ore processing, and disposal of associated wastes. In May of 2015, EPA proposed revisions to 40 C.F.R. 192 that would establish groundwater restoration and monitoring requirements at in-situ recovery facilities, and then in January 2017, EPA re-proposed those revisions. We await final agency action on the matter.
- Criteria for the Certification and Recertification of the Waste Isolation Pilot Plant’s Compliance with the 40 C.F.R. Part 191 Disposal Regulations (40 C.F.R. 194); these criteria apply to the certification and recertification of compliance with the radioactive waste disposal standards at the Waste Isolation Pilot Plant (WIPP) in New Mexico, the world’s only deep geologic repository, which is operated by the U.S. Department of Energy (DOE) for permanent disposal of transuranic waste from the nation's nuclear defense program.
- Public Health and Environmental Radiation Protection Standards for Yucca Mountain, Nevada (40 C.F.R. Part 197); these regulations, last promulgated in 2008 (after a Federal Appeals Court found an earlier version unlawful, *see, e.g., Nuclear Energy Inst., Inc. v. EPA*, 373 F.3d 1251 (D.C. Cir. 2004)), establish public health and environmental standards for storage and disposal of spent nuclear fuel at the proposed repository at Yucca Mountain, Nevada. The U.S. Nuclear Regulatory Commission would implement these regulations at Yucca Mountain if a repository were to be established there.
- As discussed above, the Clean Air Act requires EPA to regulate airborne emissions of hazardous air pollutants (HAPs) from a specific list of industrial sources called “source categories.” Standards known as the “National Emission Standards for Hazardous Air Pollutants” (NESHAPs) dictate specific regulatory limits for source categories that emit radionuclides. In 40 C.F.R. Part 61: the *National Emission Standards For Hazardous Air Pollutants*, EPA sets health based standards in a number of settings, such as Subpart B: *Radon Emissions from Underground Uranium Mines*; Subpart H: *Emissions of Radionuclides Other than Radon from Department of Energy Facilities*; Subpart I: *Radionuclide Emissions from Federal Facilities Other than Nuclear Regulatory Commission Licensees and Not Covered by Subpart H*; Subpart K: *Radionuclide Emissions from Elemental Phosphorus Plants*; Q: *Radon Emissions from Department of Energy Facilities*; R: *Radon Emissions from Phosphogypsum Stacks*; Subpart T: *Radon*

Emissions from the Disposal of Uranium Mill Tailings; and Subpart W: *Radon Emissions from Operating Mill Tailings*.

- And last, under the Safe Drinking Water Act (SDWA), discussed above, EPA sets health-based standards on the levels of certain radionuclides in drinking water. After much litigation, in 2000 EPA revised an outdated set of standards that had been in place since the late 1970s and set new monitoring provisions for community water systems (CWS). The current standards are: Combined radium 226/228 of 5 pCi/L; a gross alpha standard for all alphas of 15 pCi/L (not including radon and uranium); a combined standard of 4 mrem/year for beta emitters; and a the MCL for uranium at 30 µg/L.

In short, the Proposal could seriously damage EPA’s ability to administer the AEA and protect the public from radiation. Yet the Proposal fails to cite the statute at all.

VI. The cited sources do not support—and in fact contradict—the Proposal

These comments have discussed the failure of statutory authorities cited by EPA to provide any legal support or authorization whatsoever for the Proposal and its approaches. The Proposal also cites various executive orders, memoranda, reports, guidelines and the like with the suggestion or implication that these materials somehow provide support for the Proposal. They do not, and thus the Proposal violates the law. *See, e.g., Public Citizen Health Research Group v. Tyson*, 796 F.2d 1479 (D.C. Cir. 1986) (reversing and remanding agency decision to carry out last-minute directive by White House Office of Management and Budget without any apparent justification in the administrative record).

First, of course, EPA’s proposed rulemakings must be authorized by federal statutes. Executive orders provide no legal authority for agency rulemakings. Nor may executive orders contradict or alter legal responsibilities an agency has under federal statutes or justify arbitrary and capricious agency action. Equally obvious, memoranda, reports, guidelines and the like provide no legal authority for agency rulemakings, nor may they justify arbitrary and capricious agency action. *See, e.g., Medellin v. Texas*, 552 U.S. 491, 524 (2008) (“The President’s authority to act, as with the exercise of any governmental power, ‘must stem either from an act of Congress or from the Constitution itself.’” (citation omitted)); *Chrysler Corp. v. Brown*, 441 U.S. 281, 302 (1979) (“The legislative power of the United States is vested in the Congress, and the exercise of quasi-legislative authority by governmental departments and agencies must be rooted in a grant of such power by the Congress and subject to limitations which that body imposes.”). Second, an agency’s proposed rulemaking may not be at odds with federal statutes, may not be creatures of the agency’s imagination or policy preferences, and may not be otherwise arbitrary, capricious or inconsistent with law. The Proposal fails on all of these scores.

This section of our comments explains how these additional materials cited by EPA in the Proposal (1) fail to provide any support for the Proposal, on scientific, technical, policy, logical or legal grounds; and (2) actually undermine the Proposal—contradicting its approaches and assumptions, directly or indirectly—and demonstrate further that the Proposal is unsupported, arbitrary, capricious and otherwise inconsistent with law.

A. Footnote 1

The Proposal states, “The best available science must serve as the foundation of EPA’s regulatory actions.” 83 Fed. Reg. at 18,769. It cites and quotes from Executive Order 13,563, 76 Fed. Reg. 3,821 (Jan. 21, 2011): “Our regulatory system must protect public health, welfare, safety, and our environment while promoting economic growth, innovation, competitiveness, and job creation. It must be based on the best available science.” 83 Fed. Reg. at 18,769 n.1.

The executive order, issued by President Obama, not only does not support the Proposal, it directly undermines the Proposal. There is no suggestion in the cited Obama Executive Order, or in any contemporaneous or subsequent actions by Obama administration federal agencies, that “best available science” means or meant that science underlying an agency’s actions must be publicly available in a manner sufficient for independent validation, nor that “pivotal regulatory science” has any meaning akin to the proposed uses in proposed § 30.3 *See* 83 Fed. Reg. at 18,773 (“dose response data and models” and “pivotal regulatory science”).

To the contrary, no previous administration has conditioned any notion of “best available science” on the public availability of underlying data, or on the concepts behind the invented term, “pivotal regulatory science.” EPA previously routinely used and considered science and studies for which the underlying data was not publicly available as examples of the “best available science.” EPA did so for proposed and final regulations, along with other final agency actions, reports, studies and the like. EPA’s use and consideration of such science was validated by EPA’s science advisory bodies, the National Academy of Science, the Science Advisory Board, and other scientific organizations. *See supra* II.B. And explained in section IX, the Proposal does not provide sufficient explanation for its departure from this past practice.

Moreover, the Executive Order also says that “before issuing a notice of proposed rulemaking,” the “agency shall seek the views of those who are likely to be affected.” 76 Fed. Reg. 3,821. This Proposal failed to do so, despite its wide-reaching effect. A May 12, 2018, Memorandum to Members of the Chartered Science Advisory Board (SAB) and SAB Liaisons from the Chair of SAB Work Group explains: “The proposed rule deals with issues of scientific practice and proposes constraints that the agency may apply to the use of scientific studies in particular contexts. As such, this rule deals with a myriad of scientific issues for which the Agency should seek expert advice from the Science Advisory Board.” *Preparations for Chartered Science Advisory Board (SAB) Discussions of Proposed Rule: Strengthening Transparency in Regulatory Science RIN (2080-AA14)*, May 12, 2018.¹⁹⁵ The Memorandum further explains that “the precise design of the rule appears to have been developed without a public process for soliciting input from the scientific community.”¹⁹⁶ This is contrary to Executive Order 13,563.

¹⁹⁵ Preparations for Chartered Science Advisory Board (SAB) Discussions of Proposed Rule: Strengthening Transparency in Regulatory Science RIN (2080-AA14), May 12, 2018, [https://yosemite.epa.gov/sab/sabproduct.nsf/E21FFAE956B548258525828C00808BB7/\\$File/WkGrp_memo_2080-AA14_final_05132018.pdf](https://yosemite.epa.gov/sab/sabproduct.nsf/E21FFAE956B548258525828C00808BB7/$File/WkGrp_memo_2080-AA14_final_05132018.pdf).

¹⁹⁶ *Id.* at 3.

A June 28, 2018, letter from the Chair of the SAB Board, Dr. Michael Honeycutt, on behalf of the SAB, furthers this point.¹⁹⁷ That letter explains that on May 31, 2018, “the full SAB agreed with the Work Group that the proposed rule merits review by the Board and discussed the scientific issues that should be considered.”¹⁹⁸ The letter reiterates that “the precise design of the proposed rule appears to have been developed without a public process for soliciting input specifically from the scientific community.”¹⁹⁹ This letter underscores that the Proposal is inconsistent with Executive Order 13,563.

B. Footnote 2

The Proposal cites the 2009 Presidential Memorandum for the Heads of Executive Departments and Agencies on Scientific Integrity in support of the proposition that “[e]nhancing the transparency and validity of the scientific information relied upon by EPA strengthens the integrity of EPA’s regulatory actions and its obligation to ensure the Agency is not arbitrary in its conclusions. By better informing the public, the Agency is enhancing the public’s ability to understand and meaningfully participate in the regulatory process.” 83 Fed. Reg. at 18,769 (citing Memorandum for the Heads of Executive Departments and Agencies, Mar. 9, 2009). The Proposal points to the section of the 2009 Memo that states, “If scientific and technological information is developed and used by the Federal Government, it should ordinarily be made available to the public. To the extent permitted by law, there should be transparency in the preparation, identification, and use of scientific and technological information in policymaking.” *Id.* n.2.

First, the cited sentence refers to information developed and used by the federal government, but EPA has long held that it may use published scientific studies without obtaining the underlying raw data. *See, e.g.*, Initial Brief of Respondent United States Environmental Protection Agency at 47–48, *Coalition of Battery Recyclers Ass’n v. EPA*, No. 09-1011 (D.C. Cir. January 19, 2010), ECF No. 1226234 (explaining that EPA does not have an obligation to obtain and docket raw data from scientific studies it uses). The Proposal has pointed to no instances where the EPA was not transparent in the preparation, identification, and use of scientific information, including published peer reviewed scientific studies. Second, the cited sentence takes a more nuanced approach than the Proposal and recognizes exceptions even for the information developed and used by the federal government.

Importantly, the 2009 Presidential Memo also states in the sentence immediately preceding the quotation singled out by EPA, “Political officials should not suppress or alter scientific or technological findings and conclusions.” Memorandum for the Heads of Executive Department and Agencies on Scientific Integrity, 74 Fed. Reg. 10,671 (Mar. 9, 2009). The

¹⁹⁷June 28, 2018, Letter to Scott Pruitt re Science Advisory Board (SAB) Consideration of EPA Proposed Rule: Strengthening Transparency in Regulatory Science, [https://yosemite.epa.gov/sab/sabproduct.nsf/LookupWebReportsLastMonthBOARD/4ECB44CA28936083852582B004ADE54/\\$File/EPA-SAB-18-003+Unsigned.pdf](https://yosemite.epa.gov/sab/sabproduct.nsf/LookupWebReportsLastMonthBOARD/4ECB44CA28936083852582B004ADE54/$File/EPA-SAB-18-003+Unsigned.pdf).

¹⁹⁸ *Id.* at 2.

¹⁹⁹ *Id.* at 3.

Proposal, far from preserving the integrity of science, attempts to suppress established scientific findings and conclusions in the name of transparency.

The Proposal's citation to the 2009 Presidential Memo misconstrues the Memo's aims by cherry-picking a single sentence and ignoring the remainder. While the Memo emphasizes the importance of transparency and validity of scientific information, it in no way supports the Proposal's use of transparency to justify the suppression of scientific findings. Unlike the Proposal, the 2009 Presidential Memo adopts a nuanced view of scientific integrity that balances transparency with other considerations, such as privacy and avoiding scientific censorship. To this end, several statements in the 2009 Presidential Memo on Scientific Integrity directly undercut the Proposal:

(c) When scientific or technological information is considered in policy decisions, the information should be subject to well-established scientific processes, including peer review where appropriate, and each agency should appropriately and accurately reflect that information in complying with and applying relevant statutory standards . . .

Id. The Proposal seeks to preclude scientific information that has been subject to well-established scientific processes, including peer review. The Proposal also seeks to upend compliance and application of the relevant statutory standards. *See* section III.

(d) Except for information that is properly restricted from disclosure under procedures established in accordance with statute, regulation, Executive Order, or Presidential Memorandum, each agency should make available to the public the scientific or technological findings or conclusions considered or relied on in policy decisions . . .

Id. The Memorandum requires agencies to make available the scientific findings or conclusions, and even that requirement has exceptions. The Proposal would arbitrarily exclude consideration of relevant scientific findings and conclusions if the underlying data is not publicly available.

The 2009 Presidential Memorandum for the Heads of Executive Departments and Agencies on Scientific Integrity does not support EPA's proposed actions. The Proposal does not enhance transparency and validity of scientific information relied upon by EPA. It requires the agency to ignore valid scientific studies in its decision making and thus will lead to arbitrary results and weaken the integrity of EPA's actions.

C. Footnote 3

The Proposal states that it is consistent "with the principles underlying the Administrative Procedure Act and programmatic statutes that EPA administers to disclose to the public the bases for agency rules and to rationally execute and adequately explain agency actions." 83 Fed. Reg. at 18,769. In a footnote to this sentence the Proposal states:

EPA has the authority to establish policies governing its reliance on science in the administration of its regulatory functions. Historically, EPA has not consistently observed the policies underlying this Proposal, and courts have at times upheld EPA's use non-public data in support of its regulatory actions. *See Coalition of Battery Recyclers Ass'n v. EPA*, 604 F.3d 613, 623 (D.C. Cir. 2010); *American Trucking Ass'ns v. EPA*, 283 F.3d

355, 372 (D.C. Cir. 2002). EPA is proposing to exercise its discretionary authority to establish a policy that would preclude it from using such data in future regulatory actions.

83 Fed. Reg. at 18,769 n.3.

EPA recognizes the cited cases contradict the proposed rule but attempts to waive them away and asserting it has discretionary authority to do the opposite of what the D.C. Circuit decided. EPA's consideration of peer reviewed scientific studies that do not have public data is the norm, required by the Administrative Procedure Act and the programmatic statutes that EPA administers. *See* sections II, IV, & V. The proposed departure from this norm to preclude the use of such data, which the Proposal makes explicit in this footnote, is not within EPA's discretion and would violate the programmatic statutes. As explained above, nothing the Proposal provides EPA with authority to do so. The Proposal's citations to two cases that contradict its proposed actions does not support the unexplained assertion of authority.

The court in *American Trucking* stated:

More generally, we agree with EPA that requiring agencies to obtain and publicize the data underlying all studies on which they rely “would be impractical and unnecessary.” Particulate Matter NAAQS, 62 Fed. Reg. at 38,689. As EPA persuasively stated in denying Petitioners' original request for the information:

If EPA and other governmental agencies could not rely on published studies without conducting an independent analysis of the enormous volume of raw data underlying them, then much plainly relevant scientific information would become unavailable to EPA for use in setting standards to protect public health and the environment.... [S]uch data are often the property of scientific investigators and are often not readily available because of ... proprietary interests ... or because of [confidentiality] arrangements [with study participants].

Am. Trucking Associations, Inc., 283 F.3d at 372.

In *Coalition of Battery Recyclers*, the D.C. Circuit cited *American Trucking*, explaining that the court had “rejected the notion that EPA had improperly failed to obtain and make public data underlying studies on which it had relied during a NAAQS rulemaking, holding that ‘[t]he Clean Air Act imposes no such obligation’ and that ‘requiring agencies to obtain and publicize the data underlying all studies on which they rely would be impractical and unnecessary.’” 604 F.3d at 623 (citations omitted). The court noted “that raw data often is unavailable due to proprietary interests of a study's scientific investigators or confidentiality agreements with study participants.” *Id.*

The Proposal at least concedes that D.C. Circuit law does not support its actions. Yet EPA not explain how the Proposal is consistent with the principles underlying the Administrative Procedure Act and programmatic statutes that EPA administers. To the extent EPA believes this to be true, it should withdraw the Proposal and explain its belief.

D. Footnotes 4 & 5

The Proposal states that it is consistent with Executive Orders 13,777 and 13,783. 83 Fed. Reg. at 18,769.

The Proposal states that “[r]egulatory reform efforts shall attempt to identify ‘those regulations that rely in whole or in part on data, information, or methods that are not publicly available or that are insufficiently transparent to meet the standard for reproducibility.’” 83 Fed. Reg. at 18,769 n.4 (quoting Exec. Order No. 13,777, 82 Fed. Reg. 12,285, 12,286 (Mar. 1, 2017)). President Trump’s Executive Order No. 13,777 requires Regulatory Reform Task Forces to evaluate existing regulations and “make recommendations to the agency head regarding their repeal, replacement, or modification, consistent with applicable law.” 82 Fed. Reg. at 12,286. The Executive Order requires the task force to identify regulations that, among other things, “impose costs that exceed benefits,” and “create a serious inconsistency or otherwise interfere with regulatory reform initiatives and policies.” *Id.* The Proposal does not identify any regulations that it believes should be repealed, replaced, or modified, consistent with applicable law. Instead, the Proposal creates a new burdensome regulation. Notwithstanding EPA’s unsupported assertion that it “believes the benefits of this proposed rule justify the costs,” 83 Fed. Reg. at 18,772, the proposed rule will impose costs that exceed benefits, *see* section II.D & E. The inconsistencies within the Proposal are overwhelming (for one of the many examples, the unexplained willingness to consider certain scientific studies in some contexts while excluding the consideration of those same studies in other contexts, *see* section XI). And the Proposal, as explained in sections IV. & V., is not consistent with applicable laws. Rather than being consistent with President Trump’s Executive Order, the proposed rule contradicts it.

Regarding President Trump’s Executive Order 13,783, the Proposal quotes, “It is also the policy of the United States that necessary and appropriate environmental regulations comply with the law, are of greater benefit than cost, when permissible, achieve environmental improvements for the American people, and are developed through transparent processes that employ the best available peer-reviewed science and economics.” 83 Fed. Reg. at 18,769 n.5 (quoting Exec. Order No. 13,783, 82 Fed. Reg. 16,093 (Mar. 31, 2017)). EPA presumably believes the proposed rule is consistent with the language “transparent processes that employ the best available peer-reviewed science and economics.” But that language, and the rest of the quotation, contradicts the Proposal. As explained throughout these comments, the Proposal would prevent EPA from promulgating regulations that comply with the law, would cost more than any benefit it could achieve, and would preclude the use of the best available peer-reviewed science.

E. Footnote 6 & 15

The Proposal cites to the 2002 OMB Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by Federal Agencies to justify the Proposal’s focus on transparency, 83 Fed. Reg. at 18,769 n.6, and to support its contention that the guidelines “require” that “regulators to ensure that key findings are valid and credible,” *id.* at 18,770 n.15. Despite these citations, the Guidelines do not support EPA’s proposal to preclude the consideration of peer-reviewed scientific studies. *See Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information*

Disseminated by Federal Agencies, 67 Fed. Reg. 8,452, 8,454 (Feb. 22, 2002). The Proposal points to no agency finding that it believes is invalid and not credible. Rather, the Proposal will cause EPA to reach findings that are invalid and not credible because the agency will make these findings without consideration of the best available science. The Proposal contradicts the Guidelines.

The 2002 OMB Guidelines contain many statements that undercut the Proposal on their face.

<p>Text of 2002 OMB Guidelines</p>
<p>“As a general matter, in the scientific and research context, we regard technical information that has been subjected to formal, independent, external peer review as presumptively objective. . . . An example of a formal, independent, external peer review is the review process used by scientific journals.” 67 Fed. Reg. at 8,454.²⁰⁰</p>
<p>Analysis</p>
<p>While the 2002 OMB Guidelines recognize technical information that has been subjected to formal, independent, external peer review as “presumptively objective,” the Proposal upends this idea and forces the EPA to regard such technical information as invalid and not worthy of consideration.</p>
<p>Text of 2002 OMB Guidelines</p>
<p>“‘Agencies may identify, in consultation with the relevant scientific and technical communities, those particular types of data that can practicably be subjected to a reproducibility requirement, given ethical, feasibility, or confidentiality constraints.’ Further, as we state in our expanded definition of ‘reproducibility’ . . . ‘If agencies apply the reproducibility test to specific types of original or supporting data, the associated guidelines shall provide relevant definitions of reproducibility (e.g., standards for replication of laboratory data).’ OMB urges caution in the treatment of original and supporting data because it may often be impractical or even impermissible or unethical to apply the reproducibility standard to such data. For example, it may not be ethical to repeat a ‘negative’ (ineffective) clinical (therapeutic) experiment and it may not be feasible to replicate the radiation exposures studied after the Chernobyl accident. When agencies submit their draft agency guidelines for OMB review, agencies should include a description of the extent to which the reproducibility standard is applicable and reflect consultations with relevant scientific and technical communities that</p>

²⁰⁰ This statement is qualified by a section on the sufficiency of peer review: “Some comments argued that journal peer review should be adequate to demonstrate quality, even for influential information that can be expected to have major effects on public policy. OMB believes that this position overstates the effectiveness of journal peer review as a quality-control mechanism. Although journal peer review is clearly valuable, there are cases where flawed science has been published in respected journals.” *Id.* at 8,455. Nonetheless, nothing in the guidelines suggest that peer-reviewed science can be wholesale ignored simply because the underlying data cannot be made public.

were used in developing guidelines related to applicability of the reproducibility standard to original and supporting data.” *Id.* at 8,456.

Analysis

The OMB Guidelines emphasize the ethical, feasibility, and confidentiality constraints associated with reproducing particular types of studies, and underscore the importance of consultation with relevant scientific and technical communities in the development of reproducibility requirements. The Proposal recklessly ignores these precautions, subjecting “regulatory science” to requirements that the underlying data be made publicly available in a manner sufficient for independent validation. The Proposal does so without consultation of relevant scientific communities and without concern as to whether such data can practicably be subjected to such requirements. As explained in section II, the data underlying many scientific studies affected by the Proposal cannot be made publicly available given the ethical, feasibility, and confidentiality concerns addressed by the OMB Guidelines.

Text of 2002 OMB Guidelines

“With regard to original and supporting data related thereto, agency guidelines shall not require that all disseminated data be subjected to a reproducibility requirement. Agencies may identify, in consultation with the relevant scientific and technical communities, those particular types of data that can practicable [sic] be subjected to a reproducibility requirement, given ethical, feasibility, or confidentiality constraints. It is understood that reproducibility of data is an indication of transparency about research design and methods and thus a replication exercise (i.e., a new experiment, test, or sample) shall not be required prior to each dissemination.” *Id.* at 8,460.

Analysis

The Guidelines state that reproducibility of data is one indication of transparency but does not suggest that reproducibility is the *only* indication of transparency, nor does it suggest that agencies should preclude non-reproducible, non-publicly available scientific studies from agency consideration, as the Proposal envisions. Contrary to the Proposal, the Guidelines state that agencies should not require data to be subjected to a reproducibility requirement.

Text of 2002 OMB Guidelines

“With regard to analysis of risks to human health, safety and the environment maintained or disseminated by the agencies, agencies shall either adopt or adapt the quality principles applied by Congress to risk information used and disseminated pursuant to the Safe Drinking Water Act Amendments of 1996 (42 U.S.C. 300g– 1(b)(3)(A) & (B)). Agencies responsible for dissemination of vital health and medical information shall interpret the reproducibility and peer-review standards in a manner appropriate to assuring the timely flow of vital information from agencies to medical providers, patients, health agencies, and the public. Information quality standards may be waived temporarily by agencies under urgent situations

(e.g., imminent threats to public health or homeland security) in accordance with the latitude specified in agency-specific guidelines.” <i>Id.</i>
Analysis
The Guidelines recognize the ethical, feasibility, and confidentiality constraints of reproducing certain types of data. The Proposal ignores these issues. Furthermore, the Guidelines recommends that risk assessments related to human health, safety, and the environment are subject to quality principle standards established by Congress through the SDWA, which differ from the Proposal.
Text of 2002 OMB Guidelines
“Even in a situation where the original and supporting data are protected by confidentiality concerns, or the analytic computer models or other research methods may be kept confidential to protect intellectual property, it may still be feasible to have the analytic results subject to the reproducibility standard. For example, a qualified party, operating under the same confidentiality protections as the original analysts, may be asked to use the same data, computer model or statistical methods to replicate the analytic results reported in the original study. <i>See, e.g., ‘Reanalysis of the Harvard Six Cities Study and the American Cancer Society Study of Particulate Air Pollution and Mortality,’ A Special Report of the Health Effects Institute’s Particle Epidemiology Reanalysis Project, Cambridge, MA, 2000.” Id. at 8,456.</i>
Analysis
Unlike the Proposal, the OMB Guidelines recognize that studies have been able to be reproduced even without publicly disclosing all their data. Although the OMB Guidelines positively discuss this option, the Proposal would preclude EPA from considering both the initial study and the reanalysis study from consideration in regulatory decision making.

The Proposal’s concerns about transparency are addressed by the Guidelines and do not justify precluding consideration of the best available science. The 2002 OMB Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by Federal Agencies does not support the Proposal. *See also* section II.A.

F. Footnote 7

The Proposal claims that it is consistent with the OMB Memorandum 13-13: Open Data Policy—Managing Information as an Asset, which

requires agencies to collect or create information in a way that supports downstream information processing dissemination activities. This includes using machine-readable and open formats, data standards, and common core and extensible metadata for all new information creation and collection efforts. It also includes agencies ensuring information stewardship through the use of open licenses and review of information for privacy, confidentiality, security, or other restrictions to release.

83 Fed. Reg. at 18,770 n.7. However, the Open Data Policy required that agencies balance the “value of openness against the cost of making those data public.” 2013 OMB Memorandum for the Heads of Executive Departments and Agencies on Open Data Policy at 6. Included in the costs of making those data public is an individual’s right to privacy, which the agencies are required to consider when releasing data. *Id.* at 10. The EPA’s Proposal does not balance these values, and instead pursues public availability of data in the realm of dose response data at all costs.

The Open Data Policy Memorandum contains a number of passages that conflict with, rather than support, the Proposal:

Nothing in this Memorandum shall be construed to affect existing requirements for review and clearance of pre-decisional information by OMB relating to legislative, budgetary, administrative, and regulatory materials. Moreover, nothing in this Memorandum shall be construed to reduce the protection of information whose release would threaten national security, invade personal privacy, breach confidentiality or contractual terms, violate the Trade Secrets Act, violate other statutory confidentiality requirements, or damage other compelling interests.

Id. at 12. The Open Data Policy Memorandum specifically called out the problem of exposing personally identifiable information:

As defined in OMB Memorandum M-1 0-23, ‘personally identifiable information’ (PII) refers to information that can be used to distinguish or trace an individual’s identity, either alone or when combined with other personal or identifying information that is linked or linkable to a specific individual. The definition of PII is not anchored to any single category of information or technology. Rather, it requires a case-by-case assessment of the specific risk that an individual can be identified. In performing this assessment, it is important for an agency to recognize that non-PII can become PII whenever additional information is made publicly available (in any medium and from any source) that, when combined with other available information, could be used to identify an individual.

Id. at 4. The Memorandum expresses concern for individual privacy and notes the ease with which non-personally identifiable information can be used to identify an individual when combined with other publicly available information. The Proposal attempts to wave away these concerns with assertions that confidential information can be de-identified. 83 Fed. Reg. at 18,770–71. The problems with the Proposal’s emphasis of such “de-identification” techniques are explored further in section II.D. Far from weighing considerations of privacy, the Proposal would simply bar the use of studies based on confidential information that could not be de-identified.

Again, while the Memorandum makes clear that agencies must consider privacy, it says nothing about barring agency consideration of documents based on that analysis. Rather, the thrust of the Memorandum is ensuring that private information is not inadvertently publicly disclosed, and balancing that obligation with the presumption of government openness:

Agencies must incorporate privacy analyses into each stage of the information's life cycle. In particular, agencies must review the information collected or created for valid restrictions to release to determine whether it can be made publicly available, consistent with the *Open Government Directive's* presumption in favor of openness, and to the extent permitted by law and subject to privacy, confidentiality pledge, security, trade secret, contractual, or other valid restrictions to release. If the agency determines that information should not be made publicly available on one of these grounds, the agency must document this determination in consultation with its Office of General Counsel or equivalent.

Id. at 9.

It is not clear to what extent EPA believes the Proposal is consistent with the Memorandum. But given the Memorandum's recognition of the various constraints on, and nuanced approach to, the release of data publicly, EPA's reliance on the Memorandum is misplaced. The Proposal's attempt to preclude consideration of peer reviewed science from regulatory review is not consistent with the Memorandum.

G. Footnotes 8 & 9

The Proposal states that it "builds upon prior EPA actions in response to government wide data access and sharing policies, as well as the experience of other federal agencies in this space." 83 Fed. Reg. at 18,770 (footnotes omitted). A footnote to this sentence generally lists the following, without any explanation of how the Proposal builds upon them:

Plan to Increase Access to Results of EPA-Funded Scientific Research; EPA Open Government Plan 4.0; Open Data Implementation Plan; EPA's Scientific Integrity Policy; Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by the Environmental Protection Agency.

83 Fed. Reg. at 18,769 n.8. Another footnote generally lists the following agencies, again without any explanation of how the Proposal builds upon their experience:

For example, see related policies from the National Science Foundation, National Institute of Science and Technology, the National Institutes of Health; and the U.S. Census Bureau, which provides secure access to data from several agencies in an environment that protects against unauthorized disclosure (<https://www.census.gov/fsrdc>).

Id. n.9. First, EPA does not explain what it means by "builds upon." The EPA's own Science Advisory Board Work Group states that the preamble to the rule does not "describe precisely how the [P]roposal builds on previous efforts to promote transparency such as the Information Quality Act and EPA's Information Quality Guidelines." May 12, 2018 Memorandum to Members of the Chartered Science Advisory Board (SAB). The citations are to large documents and policies and it is not clear what, if any, parts EPA believes the Proposal "builds upon." Second, none of these documents or agency policies bar, or recommend barring, the use of

studies in regulatory decision making, as the Proposal seeks to do. Third, many of these documents contradict, and support the withdrawal of, the Proposal.

The Proposal cites the 2016 EPA Plan to Increase Access to Results of EPA-Funded Scientific Research (“2016 EPA Plan”). 83 Fed. Reg. at 18,770 n.8. But the Proposal is a significant departure from the policy advanced in the 2016 EPA Plan. The Plan recognized that some data could not be made publicly available due to privacy and confidentiality concerns, acknowledged that peer-reviewed publications based on such data were no less scientifically valid, and specifically excluded this data from the purview of the plan to increase access. 2016 EPA Plan, at 4–6, 19. In contrast, the Proposal would prevent the EPA from considering a peer-reviewed publication related to dose response if its underlying data could not be made publicly available.

In fact, statements in the 2016 EPA Plan undercut the Proposal:

While the Agency strives to increase access to its research results, it recognizes, consistent with the OSTP Memo, that Federal agencies have a responsibility to protect confidentiality and personal privacy, respect proprietary interests and property rights, and balance between the value of providing long-term access and its associated costs. It is important to recognize that some research data cannot be made fully available to the public but instead may need to be made available in more limited ways, e.g., establishing data use agreements with researchers that respect necessary protections. *Whether research data are fully available to the public or available to researchers through other means does not affect the validity of the scientific conclusions from peer-reviewed research publications.*

Id. at 4–5 (emphasis added). The Proposal ignores the 2016 EPA Plan’s express acknowledgment that the validity of peer-reviewed scientific research does not depend on the public availability of the underlying data. Though the 2016 EPA Plan clearly states that research can be valid even if its data are not publicly available, the Proposal requires EPA to disregard this valid research.

The 2016 EPA Plan also makes clear that it does not restrict EPA’s ability to consider conclusions or data:

Nothing in this Plan shall be construed to impair or otherwise affect the authority granted by law to EPA. The validity of scientific conclusions drawn from research publications or their associated research data, or EPA’s ability to consider those conclusions and data in its actions, does not depend on compliance with this Plan.

Id. at 6. In contrast, the Proposal requires that EPA ignore certain conclusions or data that is not publicly available.

The 2016 EPA Plan also contains definitions that EPA claims to include in the Proposal, but, in reality, does not:

Scientific research data are defined, consistent with the OSTP Memo and 2 C.F.R. 200.315 as the digital recorded factual material commonly accepted in the scientific

community as necessary to validate research findings. *Research data* as used in this Plan are the digital scientific research data resulting from EPA-funded scientific research.

Id. at 19.

Consistent with the definition in 2 C.F.R. § 200.315(e)(3), research data does not include:

- Preliminary analyses, drafts of scientific papers, plans for future research, peer reviews, or communications with colleagues;
- Physical objects (e.g., laboratory samples);
- Trade secrets and commercial information;
- Materials necessary to be held confidential by a researcher until publication of results in a peer-reviewed journal; and
- *Personnel, medical, and similar files the disclosure of which would constitute a clearly unwarranted invasion of personal privacy, such as information that could be used to identify a particular person in a research study.*

The following specific examples of scientific research are excluded from this Plan:

- Interim results or other preliminary scientific research data not used to generate the results in the final peer-reviewed publication;
- Preliminary scientific research documentation beyond the article, supplementary materials, and metadata regarding preliminary research plans, including preliminary study protocols and other preliminary *a priori* decisions (recognizing that preliminary plans may have changed during the research project);
- Information that may disclose intellectual property rights;
- National security and other classified information.

2016 EPA Plan, at 19 n.8 (emphasis added).

The Proposal purports to define Research Data in the same way as the 2016 EPA Plan, as that term is defined in the Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards, or at 2 C.F.R. § 200.315(e)(3). 83 Fed. Reg. at 18,773 (to be codified at 40 C.F.R. § 30.2). As explained above, in the 2016 EPA Plan, Research Data does not include, among other things, personnel and medical information, and similar information which would constitute an unwarranted invasion of personal privacy, such as information that could be used to identify a particular person in a research study. *See* 2 C.F.R. § 200.315(e)(3); 2016 EPA Plan, at 19 n.8. But puzzlingly, the Proposal does not apply this definition in the Proposal's text, instead creating a new term "dose response data and models" and only excluding from that definition "physical objects (like laboratory samples), drafts, and preliminary analyses." 83

Fed. Reg. at 18,773 (to be codified at 40 C.F.R. § 30.2). Not only is the Proposal inconsistent with the 2016 EPA Plan, but its definitions and application of those definitions conflict with the regulations it purports to apply.

The Proposal also ignores an important distinction between future EPA-funded research, which the agency presumably has more control over, and research funded by other entities or generated in the past, which EPA cannot control:

This Plan prospectively covers peer-reviewed scientific research publications in scholarly journals and digital research data that result from EPA-funded research. The Plan does not apply to research publications or research data generated from scientific research conducted prior to the implementation of the Plan.

2016 EPA Plan at 5. The Proposal, which overlooks this distinction and creates a conflicting definition of research data to preclude consideration of peer reviewed science in regulatory decision making, does not “build upon” the 2016 EPA Plan.

In short, there are key differences between the 2016 EPA Plan and the Proposal:

- The Plan in no way restricts the materials the EPA can consider in its decision-making, *id.* at 5, whereas the Proposal categorically prohibits the EPA from considering certain scientific publications.
- The Plan focuses on making EPA-funded research publications and data available to the public, *id.*, whereas the Proposal applies to research used by the EPA, no matter how it is funded.
- The Plan is forward-looking and does not apply to research conducted prior to implementation, *id.*, whereas the Proposal will, in practice, apply retroactively.
- The Plan applies broadly to EPA-funded publications and data that could be made publicly available, *id.*, with exceptions for sensitive data, while the Proposal specifically targets “dose response data and models” underlying “pivotal regulatory science.”

The Proposal also cites the Open Data Implementation Plan, but again it is not clear how EPA believes the Proposal builds upon that plan. The Open Data Implementation Plan notes exceptions that the Proposal does not adequately address:

The Open Data Policy requires agencies to develop and strengthen policies and processes to ensure that only appropriate data are released to the public and made available online. EPA must designate one of three ‘access levels’ for each data asset (public, restricted public and non-public). Exceptions to publicizing data may result from law, regulation or policy, which address privacy, confidentiality, security or other valid restrictions.

Open Data Implementation Plan, February 11, 2015, at 4. The Open Data Policy recognizes not all data can be made publicly available; it does not suggest that EPA disregard studies based on such data.

The Proposal then cites the Scientific Integrity Policy, which similarly does not support the Proposal. First, the Scientific Integrity Policy “describes the scope and role of a standing committee of Agency-wide scientific integrity officials,” which would presumably include issues the Proposal seeks to address. U.S. Environmental Protection Agency Scientific Integrity Policy, at 1. The Proposal makes no mention of this committee and does not suggest the committee was consulted in developing the Proposal. The Policy states, “To operate an effective science and regulatory agency like the EPA, it is also essential that political or other officials not suppress or alter scientific findings,” *id.*, and “policy makers shall not knowingly misrepresent, exaggerate, or downplay areas of scientific uncertainty associated with policy decisions,” *id.* at 5. Yet this is precisely what political officials at EPA are doing—the Proposal seeks to suppress well-established and peer-reviewed science from consideration by the agency. As explained in section III.G.4, the Proposal’s assertion, without any citations or support, that “there is growing empirical evidence of non-linearity in the concentration-response function for specific pollutants and health effects,” 83 Fed. Reg. at 18,770, is precisely the type of activity the Policy warned against.

The Proposal also cites EPA’s 2002 Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by the EPA (OMB Guidance) to support its claim that the Proposal “builds upon prior EPA actions.” 83 Fed. Reg. at 18,770 n.8. Like many of the sources cited, the OMB Guidance does not support the Proposal and contradicts the Proposal’s aims:

When evaluating environmental problems or establishing standards, EPA must comply with statutory requirements and mandates set by Congress based on media (air, water, solid, and hazardous waste) or other environmental interests (pesticides and chemicals). Consistent with EPA’s current practices, application of these principles involves a “weight-of-evidence” approach that *considers all relevant information and its quality, consistent with the level of effort and complexity of detail appropriate to a particular risk assessment.*

OMB Guidance, at 21 (emphasis added). The Proposal’s categorical exclusion of non-publicly available “dose response data” is a departure from EPA’s previous practice, as described in the OMB Guidance, of weighing all relevant information. EPA reiterated this in exacting detail in other places in the OMB Guidance:

In the Agency’s development of “influential” scientific risk assessments, *we intend to use all relevant information*, including peer reviewed studies, studies that have not been peer reviewed, and incident information; evaluate that information based on sound scientific practices as described in our risk assessment guidelines and policies; and *reach a position based on careful consideration of all such information (i.e., a process typically referred to as the ‘weight-of-evidence’ approach).* In this approach, *a well-developed, peer-reviewed study would generally be accorded greater weight than information from a less well-developed study that had not been peer-reviewed, but both studies would be considered.* Thus the Agency uses a “weight-of-evidence” process when evaluating peer-reviewed studies along with all other information.

Id. at 26 (emphases added). The OMB Guidance consistently make clear that the agency will consider all scientific information (even non-peer reviewed science). Contrary to the OMB Guidance, the Proposal seeks to disseminate information that excludes consideration of relevant peer-reviewed science. The Proposal does not “build upon,” but rather directly conflicts with, the 2002 OMB Guidance.

H. Footnote 10

The Proposal states that it “takes into consideration the policies or recommendations of third party organizations who advocated for open science.” 83 Fed. Reg. at 18,770. It states that “These include policies and recommendations from: The Administrative Conference of the United States’ Science in the Administrative Process Project; National Academies’ reports on Improving Access to and Confidentiality of Research Data, Expanding Access to Research Data, and Access to Research Data in the 21st Century; the Health Effects Institute; Center for Open Science; members of the Risk Assessment Specialty Section of the Society of Toxicology, the Dose Response Section of the Society for Risk Analysis, and the International Society for Regulatory Toxicology and Pharmacology; and the Bipartisan Policy Center’s Science for Policy Project.” 83 Fed. Reg. at 18,770 n.10.

The Proposal does not explain what it means by “takes into consideration.” To the extent EPA is relying on these policies or recommendations, it has not provided enough information to evaluate that reliance and it must withdraw the Proposal. And consistent with the Proposal’s other citations, EPA points to nothing in the policies or recommendations from these third-party organizations that supports the Proposal’s preclusion of peer-reviewed science from consideration in regulatory decision making.

The Bipartisan Policy Center (BPC) states that “*the proposed rule is not consistent with the BPC report in substance or intent.*”²⁰¹ The BPC further explained that the Science for Policy Project “report never suggested excluding studies from consideration in developing regulation if data from those studies were not publicly available.”²⁰² The BPC concludes “EPA must use the best available science in the most effective way to truly fulfill its mission of protecting human health and the environment.”²⁰³

The Proposal’s “consideration” of these works can be summed up by the author of the Administrative Conference of the United States’ Science in the Administrative Process Project Report, and member of the seven-author panel that produced the Bipartisan Policy Center’s Science for Policy Project:

“I really don’t know what the problem is that they think they’re fixing,” she said, adding that many of her co-authors “would laugh and hoot” at some of the scientific ideas expressed in the rule.

²⁰¹ Grumet, J. 2018. Bipartisan Policy Center comments on “Strengthening Transparency in Regulatory Science,” Docket ID No. EPA-HQ-OA-2018-0259, May 22, <https://www.regulations.gov/document?D=EPA-HQ-OA-2018-0259-0670>.

²⁰² *Id.*

²⁰³ *Id.*

“They don’t adopt any of our recommendations, and they go in a direction that’s completely opposite, completely different,” she told me after reading the rule. “They don’t adopt any of the recommendations of any of the sources they cite. I’m not sure why they cited them.”²⁰⁴

The Proposal *rejects* the policies or recommendations of these third-party organizations. The policies and recommendations of these third-party organizations do not support the EPA’s proposal to preclude the consideration of peer-reviewed studies in regulatory decision making. *See also* section II.E.

I. Footnotes 11 & 12

The Proposal states, “These policies are informed by the policies recently adopted by some major scientific journals, spurred in some part by the ‘replication crisis.’” 83 Fed. Reg. at 18,770 (footnotes omitted). The Proposal cites, as examples “related policies from the Proceedings of the National Academy of Sciences, PLOS ONE, Science, and Nature,” *id.* n.11, as well as articles from three of those journals, plus the Economist, a magazine-format newspaper, *id.* n.12.

It’s not clear to what extent, if any, the Proposal considered or relied on the cited policies. The scientific journal policies appear to have been considered secondarily, to the extent they informed the other organizations’ policies. As explained throughout these comments, the third-party organizations’ policies offer no support for the Proposal. Importantly, all the cited scientific journal policies are for prospective publication, do not suggest disregarding consideration of studies without public data, and have exceptions to protect confidential or private information. *See also* section II & II.E.

The Editors-in-Chief of the Science family of journals and Nature, the Executive Editor of Public Library of Science (PLOS) Journals, the Interim Editor-in-Chief of Proceedings of the National Academy of Sciences, and the Vice President of Editorial/Acting Editor-in-Chief of Cell Press/Cell issued a joint statement on the Proposal:

We are writing in response to a proposed rule announced by the Environmental Protection Agency (EPA) in a 24 April 2018 press release (1). The release reads, “The rule will ensure that the regulatory science underlying Agency actions is fully transparent, and that underlying scientific information is publicly available in a manner sufficient for independent validation.”

Data sharing is a feature that contributes to the robustness of published scientific results. Many peer-reviewed scientific journals have recently adopted policies that support data sharing, consistent with the Transparency and Openness Promotion (TOP) standards. These standards, however, recognize the array of workflows across scientific fields and make the case for data sharing at different levels of stringency; in not every case can all

²⁰⁴ Robinson Meyer, *Scott Pruitt’s New Rule Could Completely Transform the EPA*, The Atlantic, April 25, 2018, <https://www.theatlantic.com/science/archive/2018/04/how-the-epas-new-secret-science-rule/558878/>.

data be fully shared. Exceptional circumstances, where data cannot be shared openly with all, include data sets featuring personal identifiers.

We support maintaining the rigor of research published in our journals and increasing transparency regarding the evidence on which conclusions are based. As part of these goals, we require that all data used in the analysis must be available to any researcher for purposes of reproducing or extending the analysis. Importantly, the merits of studies relying on data that cannot be made publicly available can still be judged. Reviewers can have confidential access to key data and as a core skill, scientists are trained in assessing research publications by judging the articulation and logic of the research design, the clarity of the description of the methods used for data collection and analysis, and appropriate citation of previous results.

*It does not strengthen policies based on scientific evidence to limit the scientific evidence that can inform them; rather, it is paramount that the full suite of relevant science vetted through peer review, which includes ever more rigorous features, inform the landscape of decision making. Excluding relevant studies simply because they do not meet rigid transparency standards will adversely affect decision-making processes.*²⁰⁵

And John P.A. Ioannidis, the author of one of the articles the Proposal cites regarding the alleged “replication crisis” that the Proposal mentions but does not explain, *see* section II., published an editorial in response to the Proposal.²⁰⁶ The article is informatively titled: “All science should inform policy and regulation,” and not surprisingly, it does not support the Proposal. Ioannidis states “[i]f the proposed rule is approved, science will be practically eliminated from all decision-making processes. Regulation would then depend uniquely on opinion and whim.” *Id.* Ioannidis explains that “we should recognize that most of the raw data from past studies are not publicly available,” and

[s]ome deficiencies may be unavoidable. For example, researchers cannot ethically randomize people to harmful exposures in order to tackle confounding, nor violate informed consent agreements that prohibit open sharing of private data from past studies.

*Id.*²⁰⁷ Ioannidis goes on to say that “simply ignoring science that has not yet attained such standards, is a nightmare,” and “we would see governments discarding science at massive scale because of perceived imperfections and impurities.” *Id.*

²⁰⁵ Jeremy Berg, et al., Letter, “Joint statement on EPA proposed rule and public availability of data,” *Science*, Vol. 360, Issue 6388, 4 May 2018, available at <http://science.sciencemag.org/content/360/6388/eaau0116> (emphasis added).

²⁰⁶ Ioannidis, J. P., “All science should inform policy and regulation,” *PLoS Medicine* 15(5) (May 3, 2018), <http://journals.plos.org/plosmedicine/article?id=10.1371/journal.pmed.1002576>.

²⁰⁷ As explained in section III., the Proposal would preclude the consideration of many past studies whose raw data are not and cannot be made available. This issue is also described in the May 12, 2018 SAB Memo discussed above: “For studies published many years ago, it may not be feasible to deliver public access to data and analytic methods.” Whatever strategies the Proposal suggests EPA consider in the future to address confidential and personal information (and the flaws with a proposed rule suggesting a key issue will be solved sometime in the future

Ioannidis also notes that “we have extremely strong evidence that the tobacco pandemic is devastating; that the MMR vaccine is generally safe; that climate change is happening; and that air pollution is a major health hazard,” in contrast to “most dietary advice one might hope to give about specific nutrients.” *Id.* The subjects that Ioannidis explains have strong evidence are the issues EPA is responsible for addressing that the Proposal seeks to discredit. Ioannidis further notes:

For example, the pivotal research on the health effects of air pollution is particularly strong. The Six Cities and American Cancer Society studies are exemplary large-scale investigations, with careful application of methods, detailed scrutiny of measurements, replication of findings, and, importantly, detailed re-analysis of results and assessment of their robustness by entirely independent investigators. The re-analysis and sensitivity analyses were conducted by the Health Effects Institute that was funded by stakeholders some of whom may have desired to see opposite conclusions. It would be wonderful, if in the future the same rigorous re-analysis and replication standards could become the standard for all important areas of research that can inform policy.

Id. (footnotes omitted).

The Proposal does not explain how it takes into consideration the sources cited in footnotes 10–12. Nevertheless, these major scientific journal policies and articles offer no support for EPA’s Proposal to preclude consideration of scientific studies from regulatory decision making.

J. Footnote 13

When seeking comment on how to ensure that more data is available over time for public validation, the Proposal states “EPA has not consistently followed previous EPA policy (e.g., EPA’s Scientific Integrity Guidance, referenced above) that encouraged the use of non-proprietary data and models.” 83 Fed. Reg. at 18,770 n.13. The Proposal provides no support for the idea that EPA has not consistently followed previous EPA policy that encouraged the use of non-proprietary data and models. To the extent EPA believes this is a problem, EPA should withdraw the Proposal and explain what policies it has not followed and how it has not followed those policies. EPA should present options to address those alleged shortcomings. At all events, this general reference to previous EPA policy, just like the references in Footnote 8 discussed above, does not support the Proposal. *See also* sections IV.J & VI.C.

K. Footnote 14

The Proposal states that “EPA’s regulatory science should be consistent with the Office of Management and Budget’s Final Information Quality Bulletin for Peer Review.” 83 Fed. Reg. at 18,770. For this proposition, the Proposal links to a one-page Memorandum on the “Issuance of OMB’s ‘Final Information Quality Bulletin for Peer Review.’” *Id.* n.14 (citing

described below), EPA does not present any strategies for dealing with past studies. This is another reason why the Proposal should be withdrawn.

<https://www.whitehouse.gov/wp-content/uploads/2017/11/2005-M-05-03-Issuance-of-OMBs-Final-Information-Quality-Bulletin-for-Peer-Review-December-16-2004.pdf>). This Memorandum does not contain enough information to determine whether or how the Proposal is consistent with it. The Memorandum merely states that the Bulletin “establishes government-wide guidance aimed at enhancing the practice of peer review of government science documents,” and that “[p]eer review is an important procedure used by the scientific community to ensure that the quality of published information. Peer review can increase the quality and credibility of the scientific information generated across the federal government.” Memorandum on the “Issuance of OMB’s ‘Final Information Quality Bulletin for Peer Review.’” Nothing in the Memorandum or EPA’s description of it supports the Proposal to exclude peer reviewed science from consideration in regulatory decision making.

Similarly, nothing in the Bulletin supports the Proposal either. The Proposal does not point to any peer-reviewed studies without publicly available data that reached incorrect conclusions. The Proposal also does not explain how the current peer review process EPA uses for disseminating information conflicts with the Bulletin. And the Bulletin says nothing about standardized test methods, consistent data evaluation procedures, or good laboratory practices, which the EPA proposes to use in the prior sentence. As explained in throughout these comments and in sections VII, VII, & XV, EPA does not provide enough information on what EPA’s regulatory science would look like under the Proposal to determine if it would be consistent with the Bulletin. If EPA has a plan for how it intends to make its regulatory science consistent with the Bulletin, the agency has not included it in the Proposal. The Proposal should be withdrawn.

The Proposal’s regulatory text states, “EPA shall conduct independent peer review on all pivotal regulatory science used to justify regulatory decisions, consistent with the requirements of the OMB Final Information Quality Bulletin for Peer Review (70 FR 2664) and the exemptions described therein.” 83 Fed. Reg. at 18,774. As explained in section XV, this section is far too vague for the reader to understand what EPA intends and the Proposal provides no justification for why this vague requirement is necessary. The Proposal fails to provide fair notice or justification for its “independent peer review” requirement and before EPA could adopt any final rule with this requirement, EPA must propose a new rule with regulatory text and supporting legal, factual, scientific, and technical information providing fair notice to the public.

L. Footnotes 16-22

The Proposal recognizes that there are concerns about access to confidential or private information. The Proposal cites to various agencies and documents to support its general and unexplained, belief “that concerns about access to confidential or private information can, in many cases, be addressed through the application of solutions commonly in use across some parts of the Federal government.” 83 Fed. Reg. at 18,770. Tellingly, EPA concedes that concerns about access to confidential or private information cannot always be addressed, but says nothing about these instances or how it intends to evaluate them. For the times that EPA believes concerns about access to confidential or private information can be addressed, the Proposal does not explain how it plans to do so nor address the costs. The Proposal merely directs readers to general and vague statements from different contexts. The Proposal fails to provide fair notice or justification of what EPA would do to address issues with confidential or private information.

The Proposal merely says to “See examples from the U.S. Department of Health and Human Services, National Institute of Standards and Technology, U.S. Department of Education, and the U.S. Census Bureau,” *id.* n.16, and points generally to Health and Human Services “Guidance Regarding Methods for De-identification of Protected Health Information in Accordance with the Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule,” *id.* n.17. The Proposal does not say what actions from these examples EPA proposes to use.

The Proposal states that the National Academies have noted that in the past, restricted data products were created by relatively simple data masking, coding, and de-identification techniques, and notes that “Nothing in the past suggests that increasing access to research data without damage to privacy and confidentiality rights is beyond scientific reach.” 83 Fed. Reg. at 18,771 (citing *Expanding Access to Research Data Reconciling Risks and Opportunities*, The National Academies Press, 2005, <https://www.nap.edu/catalog/11434/expanding-access-to-research-data-reconciling-risks-and-opportunities> at 27, 36). First, this is not fully supported as experience shows increasing access to data can damage privacy and confidentiality rights. See section II.D. Again, the Proposal does not say which, if any of these techniques the EPA will use, or how the EPA will use them. And while the National Academies may believe that increasing access to data without damage to privacy and confidentiality is not beyond scientific reach, the Proposal does not explain how this belief translates to past, present, and future scientific studies EPA considers in regulatory decision making. This document does not explain how EPA will address concerns about confidential or private information and does not support EPA’s Proposal to preclude consideration of those studies that do not make public underlying data for those, or other reasons.

The Proposal next cites to two National Academies documents and a document from the Bipartisan Commission on Evidence Based Policy. 83 Fed. Reg. at 18,771 & n.19. But the Proposal fails to explain how these documents support its proposed actions or explain how EPA intends to protect confidential information. The Proposal merely states that they “have discussed the challenges and opportunities for facilitating to secure access to confidential data for non-government analysts.” 83 Fed. Reg. at 18,771. The Proposal does not address those challenges or describe the opportunities it intends the EPA to use. Again, these documents do not support the vague Proposal.

The Proposal states that “the requirements for availability may differ,” and “may range from deposition in public data repositories, consistent with requirements for many scientific journals, to, for certain types of information, controlled access in federal research data centers that facilitate secondary research use by the public.” *Id.* (footnotes omitted). The Proposal again cites to journal policies or recommendations generally and the policies for access to data from National Institute of Health and Census Bureau. *Id.* nn.20 & 21. Section II.E. explains how the Proposal misrepresents these policies and that the Proposal is inconsistent with best practices and unworkable in reality.²⁰⁸ Importantly, the Proposal does not say how the requirements would

²⁰⁸ Contrary to the Proposal, the journals cited have exceptions to their data sharing policies and some do not require, but merely encourage, data sharing (<https://authorservices.taylorandfrancis.com/data-sharing-faqs/>, <https://www.elsevier.com/about/our-business/policies/research-data/research-data-faqs>, <http://journals.plos.org/plosone/s/data-availability>, <https://www.springernature.com/gp/authors/research-data->

differ, what studies would be required to deposit what data into what repositories, and what studies would be required to allow controlled access to what data in what federal research data centers. Moreover, the Proposal does not address the costs that these actions would entail. Again, if EPA intends to use these different ways to provide data that meet concerns about confidential and private information, the agency must withdraw the rule and issue a new proposed rule that explains the methods it proposes to use.

The Proposal generally wraps up this section with:

EPA should collaborate with other federal agencies to identify strategies to protect confidential and private information in any circumstance in which it is making information publicly available. These strategies should be cost-effective and may also include: Requiring applications for access; restricting access to data for the purposes of replication, validation, and sensitivity evaluation; establishing physical controls on data storage; online training for researchers; and nondisclosure agreements.

83 Fed. Reg. at 18,771 (footnote omitted). The Proposal's many flaws are clear in these sentences. EPA does not know what the Proposal entails. The Proposal suggests that EPA *should* identify strategies in the future and that these strategies *should be* cost-effective. The Proposal does not say what cost-effective means, nor what EPA should do if it does not identify any cost-effective strategies, yet it still seeks to alter legal obligations and regulatory decision making in reliance on this unexplained suggestion. The EPA also does not point to any authority for the proposition that the agency's consideration of peer reviewed scientific studies depends on the cost-effectiveness of some strategy the agency develops for publicizing and protecting the underlying data.

And listing options EPA can use does not help. The Proposal fails to explain why EPA has not already identified the strategies or options and in what circumstances it would use them. The Proposal suggests that it will exclude a large class of scientific studies from regulatory decision making but contains a vague assertion that it will look for "cost effective" ways in the future to exclude less them.

The corresponding footnote to these sentences offers no further explanation or support: "These recommendations are consistent with those of Lutter and Zorn (2016). <https://www.mercatus.org/system/files/Mercatus-Lutter-Public-Access-Data-v3.pdf>.we re." The document cited is a Working Paper from the Mercatus Center, which advertises itself as "world's premier university source for market-oriented ideas."²⁰⁹ The Working Paper does not provide concrete strategies or regulatory text. Nor does it analyze any strategies' application by EPA and

policy/faqs/12327154). And the National Institute of Health and Census Bureau repositories referenced do not provide access to the repositories to the public but a more limited subset of researchers (e.g., "tenure-track professor, senior scientist, or equivalent," for NIH access, <https://osp.od.nih.gov/scientific-sharing/requesting-access-to-controlled-access-data-maintained-in-nih-designated-data-repositories-e-g-dbgap/>). See also section II.V.

²⁰⁹ <https://www.mercatus.org/about>.

their cost-effectiveness. It similarly states, “the range of potential measures includes . . .” and lists thirteen options.²¹⁰ Contrary to the Proposal, the Working Paper recommends that:

In the event that authors do not supply their underlying data and an agency still believes that relying on the results of a study is warranted, the agency ought to explain why it has sufficient confidence to use the study. For example, the agency might note that other researchers have already reproduced the study results or that the data are available to third parties who sign nondisclosure agreements but that the data cannot be posted publicly.²¹¹

When discussing concerns about access to confidential or private information, the Proposal ignores an important aspect of the problem that it creates: the data masking, coding, and de-identification techniques might not adequately protect confidentiality or privacy. Research has documented that de-identification techniques to render data anonymous is not “simple” as the Proposal characterizes and can lead to the publication of protected confidential or private data. One study explained “[b]y linking demographics to public records such as voter lists, and mining for names hidden in attached documents, we correctly identified 84 to 97 percent of the profiles for which we provided names.”²¹² Another explained that “87% (216 million of 248 million) of the population in the United States had reported characteristics that likely made them unique based only on {5-digit ZIP, gender, date of birth}.”²¹³ Finally, another explains that “any data that is even minutely useful can never be perfectly anonymous.”²¹⁴ The Proposal does not address these difficulties and should be withdrawn. *See also* section II.D.

EPA’s belief that concerns about access to confidential or private information caused by the Proposal should be addressed in the future is problematic by itself. The cited materials—describing ways different organizations can address concerns in different contexts—do not support this belief. The Proposal does not propose or analyze any strategies it notes EPA should consider, even though it seeks to implement a binding legal change. The Proposal also does not consider important limitations of making underlying data publicly available. This is not surprising given that the Proposal sent for the Office of Information and Regulatory Affairs four-day Executive Order 12,866 review stated that “EPA believes that concerns about access to confidential or private information are without merit.”²¹⁵ While at least EPA recognized the merit to concerns about confidential or private information, in the four days since sending the

²¹⁵ EO 12866 Proposal 2080-AA14 OIRA Review Start Document, Docket ID No. EPA-HQ-OA-2018-0259, at 6, April 17, 2018, <https://www.regulations.gov/document?D=EPA-HQ-OA-2018-0259-0007>; OIRA Conclusion of EO 12866 Regulatory Review, <https://www.reginfo.gov/public/do/eoDetails?rrid=128014>.

version for review the agency clearly did not perform the analysis necessary to figure out how those concerns would be addressed.

The impact and costs of the Proposal are dependent on such strategies and cannot be measured or analyzed without proposed regulatory text. EPA cannot publish a final rule without first proposing what it will do about confidential and private information and analyzing the option it proposes. EPA should withdraw the Proposal.

M. Footnote 23

The Proposal states:

The benefits of EPA ensuring that dose response data and models underlying pivotal regulatory science are publicly available in a manner sufficient for independent validation are that it will improve the data and scientific quality of the Agency's actions and facilitate expanded data sharing and exploration of key data sets; *this is consistent with the conclusions of the National Academies.*

83 Fed. Reg. at 18,772 (emphasis added, footnote omitted). The last statement links to a 120-page document titled *Expanding Access to Research Data Reconciling Risks and Opportunities*, by the Panel on Data Access for Research Purposes, Committee on National Statistics, Division of Behavioral and Social Sciences and Education of the National Research Council of the National Academies Press. *Id.* (citing <https://www.nap.edu/catalog/11434/expanding-access-to-research-data-reconciling-risks-and-opportunities>).

The Proposal does not suggest that its plan to preclude the use of scientific studies from regulatory decision making is consistent or supported by the National Academies. Rather, the Proposal generally states that benefits of data availability the Proposal seeks is consistent with conclusions of the National Academies. The Proposal does not say what the conclusions of the National Academies are or how they support the Proposal. The charge to the Panel in the cited document was “to assess competing approaches to promoting exploitation of the research potential of microdata—particularly linked longitudinal microdata—while preserving respondent confidentiality.”²¹⁶ The panel was asked to consider the tradeoffs between the benefits and risks of data access and to make recommendations about “how microdata should optimally (from a societal standpoint) be made available to researchers.”²¹⁷ The panel offered various recommendations, focused on agencies that have data-collection responsibilities providing data to researchers. This is a different context than EPA's proposal to preclude the consideration scientific studies when undertaking its statutorily required decision making to protect human health and the environment. EPA's general citation to this 120-page document for consistent conclusions does not support the Proposal.

²¹⁶ *Expanding Access to Research Data Reconciling Risks and Opportunities*, The National Academies Press, 2005, at 1-2.

²¹⁷ *Id.*

N. Footnote 24

The cost-benefits analysis for the Proposal is non-existent, violates Executive Orders 12,866 and 13,563, and on its own requires that the Proposal be withdrawn. *See also* section II.D. Without support, the Proposal states that “EPA believes the benefits of this proposed rule justify the costs.” 83 Fed. Reg. at 18,772. The most discussion of costs occurs when the Proposal quotes the Mercatus Center free-market think-tank Working Paper discussed above:

One recent analysis found that: “Improvements in reproducibility can be thought of as increasing the net benefits of regulation because they would avoid situations in which costs or benefits are wrongly estimated to occur or in which regulatory costs are imposed without corresponding benefits. . . .” They concluded that “an increase in existing net benefits from greater reproducibility, which, if it occurred, would cover the costs of obtaining the data and making the data available.”

Id. (quoting Randall Lutter and David Zorn, *On the Benefits and Costs of Public Access to Data Used to Support Federal Policy Making*, Mercatus Working Paper, September 2016).

This quote is not close to a sufficient cost-benefit analysis. First, the Working Paper’s plausibility analysis is dubious. Among other problems, the analysis examines the time it takes for chemical manufactures, processors, and distributors to identify and provide *studies* in their possession related to a specific chemical and equates that to the time it would take EPA to obtain, review, process, redact, and publicly maintain *data* for any study it considers. Lutter and Zorn, at 21–22 (citing (40 C.F.R. pt. 716)). The chemical study Health and Safety Data Reporting Rule and the cost estimate the Working Paper’s analysis is based on does not require submission of underlying data unless requested by EPA. 40 C.F.R. § 716.10(a)(4). The analysis also does not include time or costs to the researchers outside of the agency. Lutter and Zorn, at 21–22. Further, the Working Paper assumes that EPA would only receive the underlying data for 20% of the requested scientific studies EPA relies on. *Id.* at 25. Therefore, the Working Paper lowers the already questionable cost estimate by eliminating costs associated with collecting and preparing data for the other 80% of studies. *Id.* The Working Paper does not explain what the authors expect EPA to do about 80% of studies EPA currently relies on for which it does not receive the underlying data, but the Proposal would require the agency to unlawfully ignore those studies in regulatory decision making.

Importantly, even the partial quote the Proposal presents does not provide results of a cost-benefit analysis nor conclude the costs outweigh the benefits. Instead it says that *if* an increase in benefits occurred, the costs would be covered. The same article states this point explicitly:

Of course, our estimates of the benefits of public access to data supporting federal regulatory decisions fall short of proving that the benefits outweigh the associated costs. They do show, however, the plausibility of such a claim.

Lutter and Zorn, at 29. The Proposal does nothing to address this or try to determine how plausible such a claim is. EPA has not provided a defined Proposal, nor done any cost analysis of its Proposal, that could be analyzed. The fact that this is the best support the EPA could provide

for its baseless belief that the Proposal's benefits justify its costs further shows that EPA must withdraw the Proposal.

The additional materials cited by EPA do not provide any support for the Proposal, on scientific, technical, policy, logical, or legal grounds, and in fact, the materials actually undermine the Proposal. The cited materials demonstrate that the Proposal is unsupported, arbitrary, capricious, and otherwise inconsistent with law. The fact that EPA cites many of these materials because they contain, from different contexts, options EPA could enact as part of the proposed rule further demonstrates that the Proposal must be withdrawn as it fails to provide fair notice to the public of what is being proposed.

VII. The proposed rule's definitions are vague, arbitrary, and capricious, and fail to provide fair notice to the public of how EPA would implement any final rule

The Administrative Procedure Act requires notices of proposed rulemakings to include "the terms or substance of the proposed rule or a description of the subjects and issues involved." 5 U.S.C. § 553(b)(3). Proposals must "provide sufficient factual detail and rationale for the rule to permit interested parties to comment meaningfully." *Honeywell International, Inc. v. EPA*, 372 F.3d 441, 445 (D.C. Cir. 2004).

The instant Proposal lacks any statutory authority for regulatory terms and text, concepts, and other inventions that make up its foundation. Moreover, many of these regulatory terms and text are vague, unexplained, internally inconsistent, and otherwise arbitrary and capricious.

A. "pivotal regulatory science" (§§ 30.2, 30.3)

The term "pivotal regulatory science" is perhaps the most vague, unexplained and internally inconsistent term used in the Proposal. The term has no statutory basis in any statute cited by EPA, or otherwise. Beyond having no statutory underpinning, the meaning of the phrase is neither self-evident nor adequately defined in the Proposal.

EPA's choice to modify "regulatory science" with the adjective "pivotal" does nothing to clarify the scope of scientific studies and information encompassed by the Proposal. "Pivotal regulatory science" is defined within the regulation as "the specific scientific studies or analyses that drive the requirements and/or quantitative analysis of EPA final significant regulatory decisions." 83 Fed. Reg. at 18,773/3 (proposed § 30.2). This definition is as unclear and unsupported as the term itself.

The use of the phrase "drive the requirements" within the C.F.R. definition is particularly incoherent. What does "drive the requirements" mean? The Proposal nowhere says. Does the definition apply only to scientific studies that were outcome determinative? Does it encompass any scientific study that was considered in making the requirements? What about studies that were useful but not determinative? Something else entirely? Can more than one study be "pivotal" to the regulatory decision, or does the term "drive the requirements" imply that only one study could be "pivotal" to a given decision? Furthermore, are most of the studies used by EPA considered to "drive the requirements" or is this term limited in some fashion, unrevealed to the public? Will EPA "know it when it sees it," making it up as the agency goes along?

It is arbitrarily, vague, and unexplained under the Proposal which science would be considered “pivotal,” and under what conditions. Because the term was created out of thin air to serve EPA’s purposes and has no statutory grounding or intuitive meaning, this ambiguity-ridden definition is woefully inadequate. It is also arbitrary and capricious and an abuse of EPA’s discretion. EPA is well aware of the insufficiency of the definition, as is evident in the agency’s solicitation of comments on the definitions of “pivotal regulatory science” and “dose response data and models” within the Proposal. *See* 83 Fed. Reg. at 18,771.

Notably, the proposed C.F.R. definition also differs substantially from a definition of “pivotal regulatory science” appearing earlier in the Proposal, which defines the term as “the studies, models, and analyses that drive the magnitude of the benefit-cost calculation, the level of a standard, or point-of departure from which a reference value is calculated. In other words, they are critical to the calculation of a final regulatory standard or level, or to the quantified costs, benefits, or risks and other impacts on which a final regulation is based.” 83 Fed. Reg. at 18,770.

Next, it bears repeating that EPA does not and cannot identify any statutory basis—in federal environmental statutes, the Administrative Procedures Act or otherwise—to apply the Proposal’s approach “to the calculation of a final regulatory standard or level, or to the quantified costs, benefits, or risks and other impacts on which a final regulation is based.” 83 Fed. Reg. at 18,770. EPA simply makes this up.

EPA’s separate explanation here suffers from additional defects, namely an internal inconsistency, incoherency and unbounded reach that do not accord with the proposed C.F.R. definition. EPA’s preambular explanation says that “pivotal regulatory science” is “critical to the calculation of a final regulatory standard or level, or to the quantified costs, benefits, or risks *and other impacts* on which a final regulation is based.” 83 Fed. Reg. at 18,770 (emphasis added) The Proposal nowhere explains what these “other impacts” are. Nor does the Proposal limit or bound these “other impacts,” nor link them to the sentence’s incoherent notion of what is “critical” and what is not. Moreover, the preambular gloss is inconsistent with the proposed C.F.R. definition. The former says “pivotal regulatory science” is critical to hopelessly vague “other impacts” on which a final rule is based. *Id.* The proposed C.F.R. definition, by contrast, says “pivotal regulatory science” “drive[s] the requirements and/or quantitative analysis of EPA final significant regulatory decisions.” 83 Fed. Reg. at 18,773/3 (proposed § 30.2). The Proposal does not square the contradictions between science that drives a final rule’s requirements and science that is “critical” to “other impacts” in a final rule.

Furthermore, EPA not only fails to provide a passable definition for its invented term, “pivotal regulatory science,” the agency fails to provide its rationale for limiting the scope of the rule to so-called “pivotal regulatory science.” Within the unlawful, arbitrary, and capricious worldview reflected in the Proposal, why is the “public availability of science and data in a manner sufficient for independent validation” any less important or necessary or justified when the science is not “pivotal” or “critical” to a regulatory decision? Why should not all science, studies, data and information considered by EPA meet the standards for transparency, verifiability, independent validation, and trustworthiness that are the abiding concerns of the Proposal? Why is it not arbitrary and capricious for EPA to continue to consider science and data

that are unavailable and insufficient for independent validation in areas outside the reach of the Proposal? EPA offers no explanation for this disparate treatment; the agency's reasoning, such as it is, is entirely conclusory.

By way of explanation for the limitation, EPA only suggests that the imposed standards “are of paramount importance when the government relies on science to inform its significant regulatory decisions.” 83 Fed. Reg. at 18,769. This explanation is hopelessly circular and ultimately incoherent. For starters, EPA does not explain why it believes this explanation to be true. Next, the Proposal just substitutes the word, ‘paramount,’ for the word, ‘critical,’ that it substitutes for the word, ‘pivotal.’ (The Proposal’s drafters evidently were just flipping through a thesaurus.) This failure to thoroughly explain both the term “pivotal regulatory science” in a way that meaningfully defines the scope of the regulation, and the rationale behind limiting the application only to pivotal (critical, paramount) science, makes it impossible for interested parties to comment fully and meaningfully on the Proposal. Should EPA intend to finalize this unlawful proposal, EPA first must withdraw the Proposal, then issue a supplemental proposal with the necessary definitions and explanations. Better yet, EPA should abandon this illegal and harmful proposal altogether.

B. “regulatory science” (§ 30.1)

Amazingly, the key regulatory purpose of the Proposal, addressed in proposed section 30.1, does not even use the term “pivotal regulatory science” (or critical or paramount regulatory science, for that matter). Instead, section 30.1 uses the altogether different term, “regulatory science.” 83 Fed. Reg. at 18,773/2.

The Proposal makes no attempt to clarify how “pivotal regulatory science” is distinct from the separately defined, “regulatory science,” a term integral to proposed section 30.1, which states the Proposal’s very purpose. “Regulatory science” is defined to mean “scientific information, including assessments, models, criteria documents, and regulatory impact analyses, that provide the basis for EPA final significant regulatory decisions.” *Id.* (proposed § 30.2). This definition is almost identical to that of pivotal regulatory science, with the exception that “regulatory science” encompasses information that “provide the basis for EPA final significant regulatory decisions,” while “pivotal regulatory science” “drives the requirements.”

The phrase “provides the basis” does nothing to illustrate the meaning of regulatory science, or to limit or particularize its scope, because it is equally vague and unexplained. *All* science, data, and information considered by EPA, and relied upon by EPA, “provides the basis” for final EPA regulatory decisions, insofar as EPA includes those materials in its administrative record, certifies that record for judicial review, and may cite and rely upon that information in explaining and defending its final regulatory decisions. Accordingly, the proposed “regulatory science” definition is capacious and unbounded, so long as EPA considered it, making the definition very far afield from the narrower, undefined, and no less incoherent, “pivotal regulatory science.”

Alternatively, the phrase “provides the basis” in the proposed “regulatory science” (§ 30.2) definition could mean that science was one of many studies considered, that it was the

bedrock study upon which regulation was grounded, that EPA relied on the study, or that the study was critical to EPA's determination. The Proposal nowhere addresses or explains whether or how these possible meanings are distinct from the possible meanings of the "drive the requirements" phrase of the "pivotal" definition. Therefore, it is entirely unclear from these definitions what makes science that "provides the basis" distinct from science that "drive the requirements." Neither of these terms meaningfully distinguishes "pivotal" regulatory science from ordinary regulatory science.

The Proposal goes on to exacerbate all of this internal confusion through the workings of its proposed regulatory text. There, EPA alternates between explaining the Proposal in terms of "regulatory science" and "pivotal regulatory science." For example, in proposed § 30.1, the Proposal "directs EPA to ensure that the *regulatory science* underlying its actions is publicly available . . ." 83 Fed. Reg. at 18,773/2 (emphasis added). Later, in proposed § 30.3, the Proposal indicates that the provisions apply "to dose response data and models underlying *pivotal regulatory science* that are used to justify significant regulatory decisions." *Id.* at 18,773/3 (emphasis added). In the subsequent section, proposed § 30.4, the Proposal references "all studies (or regulatory science) relied upon . . ." *Id.* The Proposal is arbitrarily vague and incoherent concerning whether "regulatory science" that is relied upon is the same as "pivotal regulatory science," or whether it is a new category of science entirely. Does this phrasing imply that the definition of "regulatory science" does not already include science that is "relied upon"? If so, does EPA mean that the phrase, "provides the basis," is not synonymous with "relied upon"? The Proposal provides no answers to these questions.

Taken together, this demonstrates that "regulatory science" and "pivotal regulatory science" are vague, even incoherent terms with definitions that lend no assistance to commenters in understanding the Proposal. The terms lack statutory authority, are vague, inconsistent, unexplained, and otherwise arbitrary and capricious.

C. "in a manner sufficient for independent validation" (§ 30.1)

Although the phrase, "in a manner sufficient for independent validation," is repeated frequently throughout the Proposal, and is integral to its very operation, the phrase is not defined in the proposed definitional section (§ 30.2). Later in proposed regulatory text, the Proposal does specify that "[i]nformation is considered 'publicly available in a manner sufficient for independent validation' when it includes the information necessary for the public to understand, assess, and replicate findings." 83 Fed. Reg. at 18,773–74 (proposed § 30.5). Proposed section 30.5 goes on to list categories of information that "may" be included in this concept. The explanation provided by proposed § 30.5 is a non-definition; it provides no additional clarification. How much information is sufficient for the public to understand, assess and replicate findings? Can this standard sometimes be met by releasing methodology but not raw data?

Critically, and fatally to the enterprise behind the Proposal, there is nothing in the proposed regulatory text or preambular language that requires information, science or data to be independently validated or replicated before EPA may consider it. EPA does not base the Proposal upon any requirement or expectation that the information, science or data be shown to

be accurate, trustworthy, reliable or correct before EPA may consider it. This portion of the Proposal reveals EPA's unlawful agenda to be one concerned with prohibiting EPA from considering relevant, peer-reviewed, quality science, *not* one concerned with actual replication or validation. The Proposal's condition that science and information be "publicly available in a manner sufficient for independent validation and replication" is revealed to be mere smokescreen for an EPA enterprise to censor the best available science that would support adoption of more protective health and environmental safeguards.

The Proposal fails to explain how the term, "in a manner sufficient for independent validation," and the proposed § 30.5 definition will increase transparency in science or why it is necessary to ensure that EPA will consider the best available science. To the contrary, as explained elsewhere in these comments, *supra* sections II. & III., the Proposal's approach would *preclude* EPA from considering the best available science that is relevant to EPA's responsibilities. EPA also fails to explain why data underlying peer-reviewed studies must be publicly available "in a manner sufficient for independent validation" when independent researchers can verify science without making the underlying data, which is often confidential, publicly available.

D. "all terms not defined herein shall have the meaning given them in the Act or in Subpart A" (§ 30.2)

Proposed § 30.2 specifies that "all terms not defined herein shall have the meaning given them in the Act or in subpart A." The Proposal nowhere says to what "Act" it is referring. The Proposal purports to implement multiple Acts administered by EPA, with different terms and definitions and court interpretations that may contradict one another. Nowhere does the Proposal square this factual and legal reality with structure of its unlawful approach, and the language in proposed § 30.2. It seems clear that the Proposal's drafters just cut-and-paste boilerplate language from other EPA regulations that do, in fact, implement just one of the federal environmental statutes that EPA administers; in those other regulations, such an approach makes sense. In the Proposal at issue here, it is incoherent and internally inconsistent across the different statutes that EPA administers.

It also is not clear to what "subpart A" EPA is referring, because there is no citation to the Code of Federal Regulations. If this is intended to reference 40 C.F.R. Part 30, Subpart A, that Subpart was removed from the C.F.R. in 2014. *See* 79 Fed. Reg. 75,871; *see also* 80 Fed. Reg. 61,087.

E. "dose response data and models" (§ 30.2)

Dose response data and models is defined as "the data and models used to characterize the quantitative relationship between the amount of dose or exposure to a pollutant, contaminant, or substance and the magnitude of a predicted health or environmental impact. Such functions typically underlie pivotal regulatory science that drives the size of benefit-cost calculations, the level of a standard and/or the points of departure from which reference values (reference doses or reference calculations) are calculated." (§ 30.2). Despite being an important phrase repeated through the Proposal and the proposed text, this compound definition is vague and arbitrary. It

also is circular—the very terms being defined are used in the definition. It’s unclear what data EPA is referring to in this phrase and definition. Moreover, it’s unclear what EPA means by “[s]uch functions typically under pivotal regulatory science . . .” And the problems with “pivotal regulatory science” have already been discussed. As explained in section XII, the definition does not adequately describe what the proposal covers. This definition, along with the rest of the Proposal, is arbitrary and capricious and must be withdrawn.

F. “case-by-case basis” (§ 30.6; § 30.9)

In proposed § 30.6, EPA proposes to “evaluate the appropriateness of using default assumptions, including assumptions of a linear, no-threshold dose response, on a case-by-case basis.” 83 Fed. Reg. at 18,774. In proposed § 30.9, the Proposal grants the Administrator the ability to “grant an exemption to this subpart on a case-by-case basis if he or she determines that compliance is impracticable” for a number of enumerated reasons. Both of these provisions inject additional arbitrariness into the rule, in that they ensure that the Proposal may be applied unevenly—for certain rulemakings the “rules” of the Proposal can be discarded or ignored where desired. This, in addition to and with other sections of the Proposal, underscores that it is arbitrary and capricious and must be withdrawn.

VIII. The Proposal is vague and misleading regarding which types of regulatory actions will be covered

EPA is proposing to apply the Proposal to regulatory actions defined by an unenforceable Executive Order that has few, if any, limiting principles. The Proposal states that it applies to “*dose response data and models underlying pivotal regulatory science* that are used to justify significant *regulatory decisions*.” 83 Fed. Reg. at 18,773. Section § 30.2 then defines “regulatory decisions” as “final regulations determined to be ‘significant regulatory actions’ by the Office of Management and Budget pursuant to Executive Order 12866.” 83 Fed. Reg. at 18,773. According to Executive Order 12866,

- (f) “Significant regulatory action” means any regulatory action that is likely to result in a rule that may:
- (1) Have an annual effect on the economy of \$100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities;
 - (2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;
 - (3) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or
 - (4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in this Executive order

Regulatory Planning and Review, 58 Fed. Reg. 51,735, 51,735 (Sept. 30, 1993).

EPA suggests in some places that the Proposal applies only to final rulemakings. *See* 83 Fed. Reg. at 18,771 (“EPA solicits comment on whether and to what extent these requirements, or other provisions and policies, should apply to other stages of the rulemaking process . . .”). However, OMB guidance on Executive Order 12,866 states that the definition is intended to cover “any policy document of general applicability and future effect, which the agency intends to have the force and effect of law, such as guidance, funding notices, manuals, implementation strategies, or other public announcements, designed to implement, interpret, or prescribe law or policy or to describe the procedure or practice requirements of an agency.” OMB, *Memorandum for Heads of Executive Departments and Agencies, and Independent Regulatory Agencies*, at 5 n.3 (Oct. 12, 1993). Therefore, there is an inconsistency between what EPA says it is doing, and what it is really proposing.

Indeed, under the OMB guidance and past agency practice, what qualifies as a “significant regulatory action” is a fluid and ad-hoc determination. It is impossible to truly know what effect—and how large an effect—the Proposal would have on rulemakings because it is impossible to know, at this point, what agency actions might be covered. Whether an action is deemed a “significant regulatory action” by OMB can only be determined after the regulation has been proposed and is subject to apparently unbridled discretion by OMB, and there is an infinite universe of rulemakings that EPA could propose in the future. Without knowing what types of agency actions would be covered, the public is left in the dark about the Proposal’s true impact. By using the amorphous definition of “significant regulatory actions,” EPA ensures that the Proposal would have sweeping effects.

IX. The proposed rule is a reversal of EPA’s position without sufficient justification

When an agency reverses course, it must “provide reasoned explanation for its action.” *FCC v. Fox Television Stations, Inc.*, 556 U.S. 502, 515 (2009); *Motor Vehicle Mfrs. Ass’n of U.S., v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 43 (1983). And when that reversal “rests upon factual findings that contradict those which underlay [the agency’s] prior policy,” a “more detailed justification” is needed. *Fox*, 556 U.S. at 515. Indeed, “an agency’s decision to change course may be arbitrary and capricious if the agency ignores or countermands its earlier factual findings without reasoned explanation for doing so.” *Id.* at 537 (Kennedy, J., concurring).

As the Supreme Court explained in its 2016 *Encino Motorcars* decision, an agency must supply “good reasons” for a policy revision, cannot leave “unexplained inconsistency,” and must address “serious reliance interests.” *Encino Motorcars, LLC v. Navarro*, 136 S. Ct. 2117, 2126 (2016). In *Encino*, the Department of Labor reversed its decades-long practice of treating service advisors at automobile dealerships as exempt from the Fair Labor Standards Act’s overtime provisions, offering minimal explanation for the policy change. *Id.* at 2123. The Court overturned the rule, holding that the Department had not met its obligation to offer a “reasoned explanation,” especially given the decades of reliance on the policy. *Id.* at 2126. It was not enough that the Department included conclusory statements declaring its new policy to be a reasonable interpretation of the statute because the Department failed to provide any good reasons for the new policy. *Id.* at 2127. As explained by the Court, “[t]his lack of reasoned explanation for a regulation that is inconsistent with the Department’s longstanding earlier position results in a rule that cannot carry the force of law.” *Id.*

In *Organized Village of Kake v. United States Department of Agriculture*, the Department of Agriculture, relying on a detailed factual record, decided not to exempt the Tongass National Forest from a rule that would limit road construction and timber harvesting in national forests, explaining that the benefits would outweigh the potential economic loss. 795 F.3d 956, 959–61, 967–68 (9th Cir. 2015) (*en banc*). Just two years later, on “precisely the same record,” the agency issued a new decision reversing course. *Id.* at 968. The court concluded that the “absence of a reasoned explanation for disregarding previous factual findings violate[d] the APA.” *Id.* at 969. The court also recognized that “[e]lections have policy consequences,” but even when reversing a policy after an election, “an agency may not simply discard prior factual findings without a reasoned explanation.” *Id.* at 968.

EPA previously routinely used and considered science and studies for which the underlying data was not publicly available in regulatory actions. As explained above, EPA has not identified even *one* example in which EPA *has observed* the policies underlying the Proposal, and our research has likewise uncovered no such instance. The Proposal essentially admits as much, stating:

Historically, EPA has not consistently observed the policies underlying this Proposal, and courts have at times upheld EPA’s use non-public data in support of its regulatory actions. *See Coalition of Battery Recyclers Ass’n v. EPA*, 604 F.3d 613, 623 (D.C. Cir. 2010); *American Trucking Ass’ns v. EPA*, 283 F.3d 355, 372 (D.C. Cir. 2002).

83 Fed. Reg. at 18,769, n.3. The Proposal then goes on to say that “EPA is proposing to exercise its discretionary authority to establish a policy that would preclude it from using such data in future regulatory actions.” *Id.* The Proposal’s categorical exclusion of non-publicly available “dose response data” is also departure from EPA’s previous practice, as described in the 2002 EPA Guidelines, of weighing all relevant information.

In short, EPA provide no basis for changing course on this issue, especially when EPA has enshrined the previous policy in agency guidelines and litigation. EPA’s failure to explain this change in course violates the law.

X. The proposed rule’s handling of Confidential Business Information (CBI) is unlawfully vague and arbitrary and capricious

EPA’s Proposal states that “where the Agency is making data or models publicly available, it shall do so in a fashion that is consistent with law, protects privacy, confidentiality, [and] confidential business information.” 83 Fed. Reg. at 18,773. In crafting the Proposal, EPA has created a vague, double-edged sword that favors industry in some situations, and in others, creates barriers for industry groups submitting CBI. In both situations, the public could be harmed by the Proposal.

In an April 26, 2018 House hearing, then-Administrator Scott Pruitt suggested that CBI may be redacted and submitted to EPA under the Proposal, much like confidential health information:

Rep. Cramer: Maybe you could elaborate a little bit, how personal data can be protected and is protected. Nobody's asking for the names of every victim of every, you know, of every pollution source that's ever happened in the world, or that's been sourced in any study. They're not asking for personal data. We're asking simply for the science to be revealed. You can protect the data, right?

Administrator Pruitt: Both the personal data, Congressman, as well as confidential business information, both CBI and personal information can be redacted and can be addressed and still serve the purposes of the proposed rule.

As others have noted, however, this is not always the case. "Industry-conducted studies could contain confidential business information required to be withheld by law. In addition, companies may have intellectual property rights that would be violated if access to underlying data allowed competitors to rely on a study without replicating it."²¹⁸ In certain cases, this will work to the detriment of regulated entities.

For example, industry stakeholders may submit studies, data or information for which CBI redactions would prevent EPA from considering those materials, because the information is not "publicly available in a manner sufficient for independent validation." 83 Fed. Reg. at 18,768. This could prevent EPA from adopting standards, exclusions, or other regulatory provisions informed by that information. Similarly, other industry stakeholders opposed to the appeals and demands sought by the first set of stakeholders, would be harmed if EPA nonetheless considers the latter industry's submissions, notwithstanding redacted CBI that is not "publicly available in a manner sufficient for independent validation"—while at the same time EPA refuses to consider confidential non-business information submitted by the opponent-stakeholders. *Id.*

In other cases, CBI exclusions will create a double standard, where the public, including adversarial industry stakeholders, will not have access to industry-funded studies or other information relevant to the rulemaking process, because EPA has designated that information CBI and refused to make it "publicly available in a manner sufficient for independent validation." *Id.* The Proposal nonetheless indicates that some or all of that CBI-redacted studies and information will be considered by EPA. This double standard, and unexplained, differential treatment of submissions relevant and even integral to EPA's rulemakings, is the essence of arbitrary and capricious action.

Industry groups themselves will be impacted by this double standard. During, or prior to, a rulemaking, industry groups sometimes appeal to EPA to loosen the rigor of agency regulations, accord industry operational flexibilities, extend compliance deadlines, or take other actions to reduce alleged regulatory burdens. Frequently industry accomplishes this by submitting information particular to a specific company or industry sector; a particular chemical or product formulation; or a particular process unit or manufacturing process. These submissions

²¹⁸ Bloomberg News, Energy & Environment Report, "Practitioner Insights: EPA's Flawed 'Secret Science' Plan Puts Good Science at Risk," May 21, 2018, *available at* <https://www.bna.com/practitioner-insights-epas-n57982092715/>.

frequently are accompanied by claims that information is CBI, due to the company-specific or industry-specific nature of information that may be proprietary, confidential or the subject of trade secrets. Industry parties may also submit health studies or risk assessments they have conducted that may contain confidential clinical data or other information that they do not wish to make publicly available, or that they are barred from making publicly available due to confidentiality agreements, the death of study participants or other reasons.

The Agency itself is aware that its misguided Proposal works at odds with CBI. In a recent email exchange, an EPA staffer working on the rule, Richard Yamada, was informed of industry concerns by a colleague. Yamada

included the concerns of the chemical industry when crafting the plan. Earlier this year, Nancy Beck, deputy assistant administrator of EPA's chemicals office, raised pointed concerns to Yamada and other EPA staffers about what a "secret science" policy would mean for regulating chemicals under the Toxic Substances Control Act (TSCA). Beck, a former senior director at the American Chemistry Council, wrote that requiring underlying data to be public would affect pesticide registrations and TSCA implementation, particularly if it did not account for confidential business information, or CBI.

"Yes, thanks this is helpful – didn't know about the intricacies of CBI – ok, we will need to thread this one real tight! Thanks Nancy!" Yamada wrote in response to Beck's warning.²¹⁹

Section 30.3, described below, may be the agency's attempt at such a "thread," but in attempting to carve out certain agency actions for special treatment, the Proposal again underscores just how arbitrary and capricious it is. The Proposal would create a dynamic in which EPA is unable to consider that CBI or otherwise confidential health or risk data in deciding whether to adopt regulations or issue guidance that grants industry the requested regulatory flexibilities.

When EPA exercises its regulatory authorities, the Proposal may constrain the agency's ability to be flexible or relieve regulatory obligations, precisely where and when it might be needed most: by being responsive to particular demonstrations made by specific companies based on persuasive information that also happens to be CBI. Former Administrator Pruitt appeared to sanction this outcome in his responses, above, to Rep. Cramer, where he suggested that any CBI could be redacted, much like health information.

The Proposal fails to address CBI in a coherent way, and in so doing furthers the problems inherent in its present use at the agency, while also creating a new set of obstacles for both industries and the public to deal with as it relates to business information and EPA's regulatory responsibilities.

²¹⁹ Scott Waldman, "Meet the man helping Pruitt reshape science," *Climatewire*, (May 23, 2018), <https://www.eenews.net/stories/1060082467>.

XI. The Proposal arbitrarily and capriciously allows EPA to treat individual party adjudications, enforcement activities, and permit proceedings differently than “significant regulatory actions”

The Proposal at section 30.3 states that:

Except where explicitly stated otherwise, the provisions of this subpart do not apply to any other type of agency action, including individual party adjudications, enforcement activities, or permit proceedings.

83 Fed. Reg. at 18,773. This provision most clearly highlights one of the arbitrary and capricious advantages that industry stakeholders enjoy under the Proposal: it exempts from its censoring coverage EPA activities where industry is the primary party likely to submit confidential information that EPA may consider and rely upon. This, notwithstanding that the submitted information is not “publicly available in a manner sufficient for independent validation,” while still being highly relevant and even integral to EPA’s legal responsibilities. *Id.* at 18,768.

Permitting activities are one key example. For permitting actions taken under the CAA, RCRA, CWA, etc., the Proposal arbitrarily and capriciously allows EPA to continue to rely on highly relevant regulatory science and other information supplied by industry that is not “publicly available in a manner sufficient for independent validation.” *Id.* at 18,771–73. A company seeking a permit or permit revision may submit regulatory science, confidential business information or other non-confidential information that is not “publicly available in a manner sufficient for independent validation.” *Id.* EPA could consider non-peer reviewed, non-transparent industry science or information to conclude that a non-transparent industry model demonstrates no adverse air quality impact on a neighboring national park or wilderness area. This, despite the inputs and assumptions behind the model being unavailable to the public. An applicant could assert that there are safe exposure levels for PM_{2.5} or lead, and therefore EPA need not require any mitigation measures at concentrations below NAAQS levels in attainment areas. Industry applicants could rely upon hidden CBI to project no emissions increases for purposes of NSR permitting under the so-called “demand growth” exclusion, notwithstanding the unavailability of information critical to industry’s claim and EPA’s acceptance of that claim. Considering this and other non-transparent information, EPA could conclude that permits or permit revisions may be granted in situations where they should not lawfully be granted, notwithstanding that the non-transparent, unavailable information is scientifically erroneous and even absurd.

A second example is public information submitted during enforcement proceedings. The Proposal arbitrarily and capriciously allows EPA to continue to rely on highly relevant regulatory science and other information supplied to the agency by industry during enforcement proceedings, even when that information is not “publicly available in a manner sufficient for independent validation.” *Id.* at 18,771–73. Consider, for example, a company that receives a notice of violation from EPA and meets with the agency to make the case that EPA and the Department of Justice should not file a complaint. The company may submit regulatory science, confidential business information, or other non-confidential information that is not “publicly available in a manner sufficient for independent validation.” *Id.* at 18,768. EPA could consider

non-peer reviewed, non-transparent, erroneous industry science to conclude that formaldehyde or asbestos are not carcinogens, or that PM_{2.5} or lead have safe exposure levels, or that CO₂ does not endanger public health or welfare. Considering this and other non-transparent information, EPA could conclude that prosecution is not warranted, or that the information represents mitigating factors for penalties or injunctive relief, notwithstanding that the non-transparent, unavailable information is scientifically erroneous and even absurd.

The third case is public information submitted during individual party adjudications. *Id.* at 18,771–73. The Proposal arbitrarily and capriciously allows EPA to continue to rely on highly relevant regulatory science and other information supplied to the agency by industry during individual party adjudications, even when that information is not “publicly available in a manner sufficient for independent validation.” *Id.* at 18,768. Consider, for example, a company facing an EPA order or applicability determination that qualifies as an adjudication under the APA or one of the federal statutes that the agency administers.

The company may submit regulatory science, confidential business information or other non-confidential information that is not “publicly available in a manner sufficient for independent validation.” EPA could consider non-peer reviewed, non-transparent industry science to conclude that formaldehyde or asbestos are not carcinogens, or that PM_{2.5} or lead have safe exposure levels, or that CO₂ does not endanger public health or welfare. Considering this and other non-transparent information during the individual party adjudication, EPA could conclude that adoption of the order is not warranted, or that agency regulations should be interpreted in a way that does not apply to that company’s actions. Indeed, EPA could conclude, after considering the non-transparent, unavailable information, that the regulations should not apply in ways that would affect an entire industrial sector favorably, while harming the public meant to be protected by those regulations. Under proposed section 30.3, EPA could consider the non-transparent, unavailable information to reach these objectionable outcomes, notwithstanding that the information is scientifically erroneous and even absurd.

The Proposal nowhere explains why it is valid and consistent with EPA’s statutory authorities and responsibilities to consider information that is not “publicly available in a manner sufficient for independent validation” under the situations allowed in proposed section 30.3 (individual party adjudications, enforcement activities, or permit proceedings), while prohibiting EPA consideration of that information in situations covered by the Proposal’s prohibitions. Indeed, it is striking that the Proposal does not even *attempt* any such explanation or justification. *Id.* at 18,771–73. This is undoubtedly because there is no coherent, lawful justification or explanation that the agency could muster; it is unsurprising that the Proposal cannot overcome this.

Indeed, it is a hallmark of the Proposal’s inherent arbitrariness and capriciousness that the Proposal prohibits EPA from considering the *identical regulatory science, studies, and information* in some regulatory situations, while allowing EPA to consider the *identical regulatory science, studies, and information* in other regulatory situations—based merely upon the *type of situation*, rather than any differences in availability, replicability, verifiability, or validation concerning the information. Proposed section 30.3 prohibits EPA from considering information that is not “publicly available in a manner sufficient for independent validation”

during so-called “significant regulatory decisions,” while prohibiting EPA from considering that *identical regulatory science, studies, or information* during “any other type of agency action, including individual party adjudications, enforcement activities, or permit proceedings.” 83 Fed. Reg. at 18,768, 18,771. The Proposal does not and cannot explain or justify this differential treatment, so the Proposal does not even try.²²⁰

Finally, proposed section 30.3 is unlawfully vague, open-ended and arbitrary due to the capacious and unlimited way that EPA has drafted the exclusion from the Proposal’s prohibitions. Section 30.3 indicates that “the provisions of this subpart do not apply to any other type of agency action.” This grants EPA capacious and effectively unlimited discretion and authority to decide what “any other type of agency action” is and is not, without providing the public or regulated entities any criteria, understanding or advance notice as to how EPA will exercise that discretion and authority. That is the essence of arbitrary and capricious agency action. Indeed, the Proposal is structured in such a way that EPA will be exercising that discretion and authority—to decide what “any other type of agency action” does and does not cover—in secret, with no public input and no public awareness, concerning the situations in which EPA will and will not consider non-transparent, unavailable information. In addition to this being perversely ironic, considering the “transparency” title of the Proposal, this fact renders the Proposal even more arbitrary and capricious and unlawful.

XII. The Proposal treats studies, models and analyses that are integral to the functioning of EPA regulatory programs and the implementation of statutes in an arbitrary and capricious manner

In the Proposal, EPA professes concern with transparency, clarity, and independence; using the best available information; making sure that information is replicable and verifiable, and ensuring the public is able to participate meaningfully in the regulatory process. The Proposal says this will help EPA carry out its mission in a manner the public can trust and understand:

The proposed regulation provides that, for the science pivotal to its significant regulatory actions, EPA will ensure that the data and models underlying the science is publicly available in a manner sufficient for validation and analysis.

83 Fed. Reg. at 18,769/1.

The best available science must serve as the foundation of EPA’s regulatory actions. Enhancing the transparency and validity of the scientific information relied upon by EPA strengthens the integrity of EPA’s regulatory actions and its obligation to ensure the Agency is not arbitrary in its conclusions. By better informing the public, the Agency in enhancing the public’s ability to understand and meaningfully participate in the regulatory process.

²²⁰ Should EPA realize and conclude that it must explain and justify this differential treatment in any final rule, EPA first must issue a supplemental proposal with these explanations and justifications for public review and opportunity for comment prior to issuing any final rule.

Id. at 18,769/2.

When EPA develops significant regulations using public resources, including regulations for which the public is likely to bear the cost of compliance, EPA should ensure that the data and models underlying scientific studies that are pivotal to the regulatory action are available to the public. This proposed rule is designed to increase transparency in the preparation, identification, and use of science in policymaking.

Id. at 18,769/3.

Regulatory determinations based on science should describe and document any assumptions and methods used, and should address variability and uncertainty.

Id. at 18,770/2.

“Pivotal regulatory science” is the studies, models, and analyses that drive the magnitude of the benefit-cost calculation, the level of a standard, or point-of-departure from which a reference value is calculated. In other words, they are critical to the calculation of a final regulatory standard or level, or to the quantified costs, benefits, risks and other impacts on which a final regulation is based.

Id.

This [P]roposal will help ensure that EPA is pursuing its mission of protecting public health and the environment in a manner that the public can trust and understand.

Id. at 18,769/1.

In this section of our comments, we make the following points opposing the Proposal and supporting its withdrawal:

- First, the Proposal as written sweeps broadly to capture—and thereby to prohibit EPA from considering—studies, models, and analyses that are integral to the functioning of EPA regulatory programs, implementation of statutes like the Clean Air Act, and protection of public health and the environment. It is both destructive and unlawful for EPA to refuse or fail to consider these additional studies, models, and analyses. We discuss numerous examples below.
- Second, to the extent that the Proposal does capture one or more of the studies, models, or analyses below, the Proposal would require EPA to conduct independent peer review of these materials before considering or using them, or before continuing to make them available for public use and awareness. *See* 83 Fed. Reg. at 18,774 (proposed § 30.7). This is objectionable and absurd. It is also unlawful for the same reasons that the Proposal is unlawful, as detailed in these comments and others.
- Third, to the extent that EPA disagrees that one or more of these studies, models, and analyses are captured by the Proposal, continuing to consider these materials while

prohibiting EPA from considering other materials would be arbitrary and capricious. This is because these studies, models and analyses have the same hallmarks as “pivotal regulatory science” that the Proposal would exclude, as discussed in greater detail below. We emphasize that we do not believe EPA *should* or that EPA *may* fail to consider these other studies, models, or data, for the reasons set forth in these comments. Rather, our point is that continuing to consider these materials demonstrates additionally that the Proposal is arbitrary, capricious, and an abuse of discretion.

The Proposal states that “[t]he provisions of this subpart apply to dose response data and models underlying pivotal regulatory science that are used to justify significant regulatory decisions regardless of the source of funding or identity of the party conducting the regulatory science.” 83 Fed. Reg. at 18,773/3 (proposed § 30.3). Next, the Proposal defines “dose response data and models” to mean:

the data and models used to characterize the quantitative relationship between the amount of dose or exposure to a pollutant, contaminant, or substance and the magnitude of a predicted health or environmental impact. Such functions typically underlie pivotal regulatory science that drives the size of benefit-cost calculations, the level of a standard, and/or the points of departure from which reference values (reference doses or reference concentrations) are calculated.

Id. at 18,773/2 (proposed § 30.2). Then, the Proposals defines “pivotal regulatory science” to mean “the specific scientific studies or analyses that drive the requirements and/or quantitative analysis of EPA final significant regulatory decisions.” *Id.* Finally, the Proposal defines “regulatory science” to mean “scientific information, including assessments, models, criteria documents, and regulatory impact analyses, that provide the basis for EPA final significant regulatory decisions.” *Id.*

The Proposal either covers on its face, or appears to cover, the following examples of studies, models, and analyses that are integral to the functioning of EPA regulatory programs, implementation of statutes like the Clean Air Act, and protection of public health and the environment. It would be harmful, unlawful, arbitrary and capricious, and an abuse of EPA’s discretion to include these materials within the sweep of the Proposal’s prohibitions.

Alternatively, if EPA disagrees that the following examples are covered by the Proposal, then continuing to consider these materials that have the same hallmarks as the prohibited materials, and that raise the same issues and concerns that cause EPA to prohibit their consideration, demonstrates that the Proposal is arbitrary and capricious, biased, and internally inconsistent and contradictory.²²¹ Moreover, in this case, the Proposal would suffer from fatal failures to explain why EPA may consider these materials, while the Proposal would prohibit EPA from considering other materials.

²²¹ See, e.g., *Air Transport Ass’n of Am. v. DOT*, 119 F.3d 38, 43 (D.C. Cir. 1997) (vacating regulation: “the most serious logical problem with [the] regulation—which we simply cannot accept,” is that the agency’s explanation “is internally inconsistent”).

A. Integrated Planning Model

EPA uses the Integrated Planning Model (IPM) to analyze the projected impact of environmental policies on the electric power sector in the lower 48 contiguous states and the District of Columbia. The IPM is a proprietary multi-regional, dynamic, deterministic linear programming model of the U.S. electricity sector developed by ICF International, and is used to support public and private sector clients

The IPM provides forecasts of least-cost capacity expansion, electricity dispatch, and emission control strategies for meeting energy demand and environmental, transmission, dispatch, and reliability constraints. The IPM can and has been used by the EPA to evaluate the costs and emissions impacts of policies to limit emissions of SO₂, NO_x, CO₂, HCl, and Hg from the electric power sector, including the following:

- the Clean Air Mercury Rule;
- Clean Air Interstate Rule;
- Clear Skies legislation;
- Mercury and Air Toxics Standards;
- Cross State Air Pollution Rule;
- Notice of Availability of the Environmental Protection Agency’s Preliminary Interstate Ozone Transport Modeling Data for the 2015 Ozone National Ambient Air Quality Standard, 82 Fed. Reg. 1733 (Jan. 6, 2017);
- EPA’s Power Sector Modeling in Support of the Notice of Data Availability – Preliminary Interstate Ozone Transport Modeling Data for the 2015 Ozone NAAQS;²²²
- New Source Performance Standards for the electric power sector;
- Clean Power Plan, Clean Power Plan repeal, and proposed Clean Power Plan replacement.

As a proprietary model, the IPM is not “publicly available in a manner sufficient for validation and analysis.” 83 Fed. Reg. at 18,769/1. The model’s inputs, assumptions, methodologies, and operation are not “transparent” in the manner described in the Proposal, notwithstanding the model being pivotal to EPA regulatory actions. *Id.* at 18,770/3. EPA has used the IPM regularly to “drive the magnitude of the benefit-cost calculation and the level of standards” in Clean Air Act regulations. *Id.* at 18,770/2. “The use of default models, without consideration of alternatives or model uncertainty, can obscure the scientific justification for EPA actions.” *Id.* at 18,770/3. The public lacks access to the IPM’s “[c]omputer codes and models involved in the creation and analysis of such information.” 83 Fed. Reg. at 18,774/1 (proposed § 30.5(c)).

²²² <https://www.epa.gov/airmarkets/epas-power-sector-modeling-support-notice-data-availability-preliminary-interstate-ozone>.

B. National Electric Energy Data System

The National Electric Energy Data System (NEEDS) database contains the generation unit records used to construct the model plants that represent existing and planned/committed units in EPA modeling applications of the IPM. The NEEDS includes geographic, operating, air emissions, pollution control, planned retirement dates, and other information on generating units. The NEEDS is customarily updated simultaneously with IPM updates. Data contained in NEEDS are taken from EIA forms, EIA AEO, NERC ES&D database, Ventyx new entrants' database (subscription required), EPA's emission tracking system (EPA Emissions Collection and Monitoring Plan System, ECMPS), and utility and regional EPA comments.

Similar to the IPM, with which NEEDS is integrated by EPA, NEEDS contains information that is not “publicly available in a manner sufficient for validation and analysis.” 83 Fed. Reg. at 18,769/1. The inputs, assumptions, methodologies, and operation are not “transparent” in the manner described in the Proposal, notwithstanding the database being pivotal to EPA regulatory actions. *Id.* at 18,770/3. The Ventyx database requires a paid subscription that prevents NEEDS data from being transparent and publicly available in a manner sufficient for validation and analysis. EPA has used the NEEDS regularly (with the IPM) to “drive the magnitude of the benefit-cost calculation and the level of standards” in Clean Air Act regulations. *Id.* at 18,770/2.

C. The National Energy Modeling System

The National Energy Modeling System (NEMS), developed by Energy Information Administration (EIA), generates the Annual Energy Outlook (AEO) forecasts. EPA relies on NEMS forecasts for power sector modeling inputs and assumptions in IPM, including electricity demand and fuel prices.

Similar to the IPM, with which NEMS is also integrated by EPA, NEMS contains information and assumptions that are not “publicly available in a manner sufficient for validation and analysis.” 83 Fed. Reg. at 18,769/1. The inputs, assumptions, methodologies, and operation are not “transparent” in the manner described in the Proposal, notwithstanding the database being pivotal to EPA regulatory actions. *Id.* at 18,770/3. EPA has used the NEMS regularly (with the IPM) to “drive the magnitude of the benefit-cost calculation and the level of standards” in Clean Air Act regulations. *Id.* at 18,770/2.

D. Co-Benefits Risk Assessment

COBRA is a tool available for download from EPA that helps state and local governments: (1) evaluate how changes in air pollution from clean energy policies and programs affect human health at the county, state, regional, or national levels; (2) estimate the economic value of health benefits associated with clean energy policies and programs to compare against program costs; (3) map and visually represent the air quality, human health, and health-related economic benefits from reductions in emissions of PM_{2.5}, SO₂, NO_x, NH₃, VOCs resulting from clean energy policies and programs.

COBRA is intended to be a preliminary screening tool that state and local policymakers can use to identify health benefits associated with clean energy policy approaches. It provides preliminary estimates of the impact of air pollution emission changes on ambient particulate matter (PM) air pollution concentrations, translates this into health effect impacts, and then monetizes these impacts. It was developed by Abt Associates and it is copyrighted. EPA's website lists multiple analyses that have used COBRA.²²³

COBRA contains information and assumptions that are not “publicly available in a manner sufficient for validation and analysis.” 83 Fed. Reg. at 18,769/1. The inputs, assumptions, methodologies and operation are not “transparent” in the manner described in the Proposal, notwithstanding the database being pivotal to EPA regulatory actions. *Id.* at 18,770/3. COBRA was developed by Abt based upon taking models from the very same epidemiological studies that the Proposal would prohibit EPA from considering and converting them into health impact functions.²²⁴ Accordingly, COBRA would be “tainted” and unusable by EPA or other parties based on the same (unlawful, arbitrary) prohibitions reflected in the Proposal. EPA and other parties have used the COBRA to “drive the magnitude of the benefit-cost calculation and the level of standards” in Clean Air Act regulations. 83 Fed. Reg. at 18,770/2.

E. Avoided Emissions and Generation Tool

The Avoided Emissions and Generation Tool, developed by Synapse, estimates the emissions benefits of energy efficiency and renewable energy policies and programs. The AVERT quantifies the particulate matter (PM_{2.5}), nitrogen oxides (NO_x), sulfur dioxide (SO₂), and carbon dioxide (CO₂) emissions benefits of state and multi-state EE/RE policies and programs. The target audience for this tool is state air quality planners evaluating county, state, and regional emissions displaced at electric power plants by energy efficiency and renewable energy programs. It enables state and local authorities to include AVERT-calculated emission impacts of EE/RE policies and programs in air quality modeling and Clean Air Act plans used to meet the National Ambient Air Quality Standards, with the concurrence of the appropriate EPA regional office.

²²³ See, e.g., Analysis of the Public Health Impacts of the Regional Greenhouse Gas Initiative (Abt Associates, 2017); Change is in the Air: How States Can Harness Energy Efficiency to Strengthen the Economy and Reduce Pollution (ACEEE, 2014); Comments on B21-0650 –Renewable Portfolio Standard Expansion Amendment Act of 2016 (Chesapeake Climate Action Network testimony to the DC Transportation and Environment Committee, 2016); Health Impact and Economic Costs of Volkswagen's Lack of Compliance with the United States' Emission Standards (International Journal of Environmental Resources and Public Health. 13(9): 891. 2016), <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5036724/>; Minneapolis Climate Action Plan: Public Health and Environmental Justice; Plug-In Vehicles in California (UC- Berkeley Transportation Sustainability Research Center, 2012); A Retrospective Analysis of the Benefits and Impacts of U.S. Renewable Portfolio Standards (National Renewable Energy Laboratory and Lawrence Berkeley National Laboratory, January 2016); Staff White Paper on Benefit-Cost Analysis in the Reforming Energy Vision Proceeding (New York Department of Public Service, July 2015); Standardized Regulatory Impact Assessment: Computers, Computer Monitors, and Signage Displays (Prepared for California Energy Commission, June 2016).

²²⁴ See U.S. EPA, User's Manual for the Co-Benefits Risk Assessment Health Impacts Screening and Mapping Tool (COBRA), Version 3.2 (May 2018), https://www.epa.gov/sites/production/files/2018-05/documents/cobra_user_manual_may2018_508.pdf.

The AVERT contains information and assumptions that are not “publicly available in a manner sufficient for validation and analysis.” 83 Fed. Reg. at 18,769/1. The inputs, assumptions, methodologies and operation are not “transparent” in the manner described in the Proposal, notwithstanding the database being pivotal to EPA regulatory actions. *Id.* at 18,770/3. AVERT was developed by Synapse based upon taking models from the very same epidemiological studies that the Proposal would prohibit EPA from considering.²²⁵ Accordingly, AVERT would be “tainted” and unusable by EPA or other parties based on the same (unlawful, arbitrary) prohibitions reflected in the Proposal. EPA and other parties have used AVERT to “drive the magnitude of the benefit-cost calculation and the level of standards” in Clean Air Act regulations, including State Implementation Plans for energy efficiency and renewable energy measures. 83 Fed. Reg. at 18,770/2.

F. Community Multi-scale Air Quality Modeling System

The Community Multi-scale Air Quality Modeling System simultaneously models multiple air pollutants, including ozone, PM, and air toxics, to help regulators determine the best air quality management scenarios for their communities, states and countries. Using data about land use, meteorology, and emissions, CMAQ provides detailed information about the concentrations of air pollutants in a given area for any specified emissions or climate scenario. It combines three types of models—meteorological models, emissions models, and air-chemistry transport models.

EPA and states have used CMAQ for more than a decade. The National Weather Service also uses CMAQ to produce daily U.S. forecasts for ozone air quality. States use CMAQ to develop and assess implementation actions needed to attain National Ambient Air Quality Standards. EPA has used CMAQ to support the development of NAAQS; provide guidance on NAAQS implementation to State environmental agencies and EPA Regional Offices; assess impacts of changing air pollution levels on human health by EPA and the Centers for Disease Control and Prevention; and assess impacts of polluted rainfall to sensitive ecosystems such as the Chesapeake Bay.²²⁶ EPA has said, bluntly, that “[t]he loss or stagnation of [CMAQ] would jeopardize protection of public health and adequate assessment of Clean Air Act compliance.” *Id.*

The CMAQ contains information and assumptions that are not “publicly available in a manner sufficient for validation and analysis.” 83 Fed. Reg. at 18,769/1. The inputs, assumptions, methodologies, and operation are not “transparent” in the manner described in the Proposal, notwithstanding the database being pivotal to EPA regulatory actions. *Id.* at 18,770/3. The CMAQ relies, in part, on the very same epidemiological studies that the Proposal would

²²⁵ See U.S. EPA, User’s Manual for the Co-Benefits Risk Assessment Health Impacts Screening and Mapping Tool (COBRA), Version 3.2 (May 2018), https://www.epa.gov/sites/production/files/2018-05/documents/cobra_user_manual_may2018_508.pdf.

²²⁶ U.S. EPA, Community Multiscale Air Quality (CMAQ) Model Impact Statement, https://www.epa.gov/sites/production/files/2017-08/documents/cmaq_impact_statement_29aug2017.pdf.

prohibit EPA from considering.²²⁷ Accordingly, CMAQ would be “tainted” and unusable by EPA or other parties based on the same (unlawful, arbitrary) prohibitions reflected in the Proposal. EPA and other parties have used CMAQ to “drive the magnitude of the benefit-cost calculation and the level of standards” in Clean Air Act regulations. *Id.* at 18,770/2.

G. EPA U.S. Nine-region MARKAL Database.

The EPA MARKet ALlocation (MARKAL) model is a data-driven, bottom-up energy systems economic optimization model. A census region representation of U.S. energy system, it was developed by EPA researchers for use with MARKAL model, an energy system optimization model used by local and federal governments and academic researchers. It is used in more than 35 countries. “The EPAUS9r is a distinct representation of the U.S. energy system designed to be used within the MARKAL model structure. The database characterizes the flow of energy associated with the extraction or import of resources, the conversion of these resources into useful energy, and the use of the energy in meeting end-use demands within and between the nine census regions of the United States.”²²⁸

The MARKAL contains information and assumptions, and is based on commercial software, that are not “publicly available in a manner sufficient for validation and analysis.” 83 Fed. Reg. at 18,769/1. The software is not open source.²²⁹ The inputs, assumptions, methodologies, and operation are not “transparent” in the manner described in the Proposal, notwithstanding the database being pivotal to EPA regulatory actions. *Id.* at 18,770/3. EPA and other parties have used MARKAL to “drive the magnitude of the benefit-cost calculation and the level of standards” in Clean Air Act regulations. *Id.* at 18,770/2.

H. Emissions & Generation Resource Integrated Database.

eGRID is a comprehensive source of data on the environmental characteristics, including emissions and resource mix data, for almost every power plant and company that generates electricity in the U.S. eGRID data can be used for: GHG registries and inventories, carbon footprints, consumer information disclosure, emission inventories and standards, power market changes, and avoided emission estimates. It was developed with Abt Associates.

eGRID data are used in the following applications and programs: “Power Profiler web application, Climate Leaders protocols, ENERGYSTAR’s Portfolio Manager and Target Finder, Waste Wise Office Carbon Footprint Tool, the Personal Greenhouse Gas Emissions Calculator, the Greenhouse Gas Equivalencies Calculator, and the Green Power Equivalency Calculator.”²³⁰

²²⁷ See U.S. EPA, User’s Manual for the Co-Benefits Risk Assessment Health Impacts Screening and Mapping Tool (COBRA), Version 3.2 (May 2018), https://www.epa.gov/sites/production/files/2018-05/documents/cobra_user_manual_may2018_508.pdf.

²²⁸ U.S. EPA, EPA U.S. Nine-region MARKAL DATABASE, Database Documentation, <https://nepis.epa.gov/Adobe/PDF/P100I4RX.pdf>.

²²⁹ Database Documentation, *supra* n.228.

²³⁰ U.S. EPA, The Emissions and Generation Resource Integrated Database: Technical Support Document for eGrid With Year 2016 Data, https://www.epa.gov/sites/production/files/2018-02/documents/egrid2016_technicalsupportdocument_0.pdf.

“eGRID is also used by other Federal Government agencies such as Oak Ridge National Laboratory (ORNL) for their Combined Heat and Power Calculator, the National Energy Technology Laboratory (NETL) for their sponsored distributed National Carbon Sequestration Database and Geographic Information System (NATCARB), and the National Renewable Energy Laboratory (NREL) for their micropower distributed generation optimization model named HOMER.”²³¹

eGRID contains information and assumptions that are not “publicly available in a manner sufficient for validation and analysis.” 83 Fed. Reg. at 18,769/1. The inputs, assumptions, methodologies, and operation are not “transparent” in the manner described in the Proposal, notwithstanding the database being pivotal to EPA regulatory actions. *Id.* at 18,770/3. eGRID relies, in part, on the very same epidemiological studies that the Proposal would prohibit EPA from considering.²³² Accordingly, eGRID would be “tainted” and unusable by EPA or other parties based on the same (unlawful, arbitrary) prohibitions reflected in the Proposal. EPA and other parties have used eGRID to “drive the magnitude of the benefit-cost calculation and the level of standards” in Clean Air Act regulations. *Id.* at 18,770/2.

I. National Emissions Inventory (NEI)

The National Emissions Inventory is a comprehensive and detailed estimates of air emissions of criteria pollutants, criteria precursors, and hazardous air pollutants from air emissions sources, released every three years and based on data provided by state, local, and tribal air agencies for sources in their jurisdictions and supplemented by data developed by EPA. There is data for point sources, nonpoint sources, onroad sources, nonroad sources, and “event” sources.

The NEI contains information and assumptions that are not “publicly available in a manner sufficient for validation and analysis.” 83 Fed. Reg. at 18,769/1. The inputs, assumptions, methodologies and operation are not “transparent” in the manner described in the Proposal, notwithstanding the database being pivotal to EPA regulatory actions. *Id.* at 18,770/3. “Raw input datasets” underlying the NEI, for example, are available to “all EPA staff, EIS data submitters (*i.e.*, the S/L/T air agency staff), Regional Planning Organization staff that support state, local and tribal agencies, and contractors working for the EPA on emissions related work”—but not available to the public.²³³ Facility-level identification is also hidden from the public, while only some supporting material is publicly available.²³⁴ EPA and other parties have used the NEI to “drive the magnitude of the benefit-cost calculation and the level of standards” in Clean Air Act regulations. *Id.* at 18,770/2.

²³¹ Technical Support Document for eGrid, *supra* n.230.

²³² See U.S. EPA, User’s Manual for the Co-Benefits Risk Assessment Health Impacts Screening and Mapping Tool (COBRA), Version 3.2 (May 2018), https://www.epa.gov/sites/production/files/2018-05/documents/cobra_user_manual_may2018_508.pdf.

²³³ U.S. EPA, 2014 National Emissions Inventory, version 2 Technical Support Document (July 2018), https://www.epa.gov/sites/production/files/2018-07/documents/nei2014v2_tsd_05jul2018.pdf.

²³⁴ 2014 National Emissions Inventory, version 2 Technical Support Document, *supra* n.233, at 1–2.

XIII. The Proposal’s retroactivity provisions are arbitrary and capricious

In the Proposal, EPA states that the proposed regulation “is intended to apply prospectively.” 83 Fed. Reg. at 18,771. However, a few pages later, the agency “solicits comments on how the prospective or retrospective application of the provisions for dose response data and models or pivotal regulatory science could inadvertently introduce bias regarding the timeliness and quality of the scientific information available.” Also, the Proposal states that “for regulatory programs . . . in which future significant regulatory actions may be based on the administrative record from previous reviews . . . , EPA seeks comment on the manner in which this proposed rule should apply to that previous record.” *Id.* at 18,772.

In short, despite its assertion that the rulemaking is “intended” to apply prospectively, the Proposal contemplates prohibiting EPA—or will prohibit EPA—from relying on studies generated *prior* to rulemakings that fail to meet the Proposal’s ill-defined criteria for “publicly available data.” This approach is arbitrary and capricious, runs counter to the specific language of many statutes the agency is tasked with administering, and would destroy the agency’s ability to promulgate health-based standards to protect the American public using the best available science.

The Proposal ignores an entire body of case law that has considered and roundly rejected both retroactivity in rulemakings and limiting data that underlies rulemakings to “publicly available data.” In so doing, the Proposal is arbitrary and capricious, and should be rejected.

The Supreme Court strongly disfavors retroactive application of rules. The Court has stated that:

Retroactivity is not favored in the law. Thus, congressional enactments and administrative rules will not be construed to have retroactive effect unless their language requires this result. [] By the same principle, a statutory grant of legislative rulemaking authority will not, as a general matter, be understood to encompass the power to promulgate retroactive rules unless that power is conveyed by Congress in express terms. [] Even where some substantial justification for retroactive rulemaking is presented, courts should be reluctant to find such authority absent an express statutory grant.

Bowen v. Georgetown Univ. Hosp., 488 U.S. 204, 208–09 (1988) (internal citations omitted). Notably, the Proposal does not identify a single provision in a single statute that EPA administers, or any other federal law, that requires or even authorizes any final rule based on the Proposal to have retroactive effect. *See generally* 83 Fed. Reg. at 18,768–74. There has been no power conveyed by Congress in express terms to promulgate retroactive rules related to any element of the Proposal; it is unsurprising that the Proposal does not and cannot identify *any* express or even implied grant of authority. *See Bowen*, 488 U.S. at 208–09.

The Proposal claims prospective application, while nonetheless noting that in some circumstances EPA may desire to apply the rule retroactively. 83 Fed. Reg. at 18,771. This, too, is unlawful and fails to meet the high burden in the Supreme Court’s *Bowen* decision and its progeny concerning retroactive application of agency rules. The suggestion in the Proposal, for

example, that EPA may invoke the Proposal’s approach to review all prior health and scientific studies underlying the NAAQS is illegitimate, arbitrary and capricious, and contrary to caselaw.²³⁵ *Bowen* and its progeny do not permit agency rules to have retroactive effect to disallow health studies and regulatory science generated prior to, or relied upon by EPA prior to, adoption of any final rule based on the Proposal. This caselaw does not entertain any such exception and accepting any such exception for these circumstances would circumvent the holdings and reasoning of this case law.

XIV. The Proposal fails to address environmental justice concerns and harms to children, as required by Executive Order 12,898 and Executive Order 13,045

EPA claims that it need not address Executive Order 12,898 (Environmental Justice in Minority Populations) nor Executive Order 13,045 (protecting children) because “this action does not concern an environmental health risk or safety risk” 83 Fed. Reg. at 18,773. This is an unsupported and inaccurate claim. The implementation of this rule would impact the rules and guidelines that are set to protect children, people of color, the elderly, low-income, and other underserved populations.

A. Executive Order 12,898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

Executive Order 12,898 applies to agency “programs, policies and activities” and directs agencies such as the EPA, “[t]o the greatest extent practicable and permitted by law” to “identify[] and address[], as appropriate, disproportionately high and adverse human health or environmental effects” of agency programs, policies and actions on minority populations and low-income populations.” Executive Order 12,898, Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations, 59 Fed. Reg. 7629 (Feb. 16, 1995). Because minority and low-income populations have historically been underrepresented in agency decision making, Executive Order 12,898 also aims to improve public participation of these populations in the decision-making process. *Id.* at 7630–32. Moreover, Executive Order 12898 aims to “improve research and data collection relating to the health of and environment of minority populations and low-income populations.” *Id.* at 7630.

In keeping with these and other principles, EPA created a Guidance document for determining when environmental justice should be considered when developing regulations titled “Guidance on Considering Environmental Justice During the Development of Regulatory Actions.” To achieve Executive Order 12,898’s goals, the Guidance directs rule-writers and decision-makers to respond to three core Environmental Justice questions throughout the process:

²³⁵ See 83 Fed. Reg. at 18,772/1 (“For regulatory programs, like the National Ambient Air Quality Standards program, in which future significant regulatory actions may be based on the administrative record from previous reviews—particularly where the governing statute requires repeated review on a fixed, date-certain cycle—EPA seeks comment on the manner in which this proposed rule should apply to that previous record.”)

1. How did the public participation process provide transparency and meaningful participation for minority populations, low-income populations, tribes, and indigenous peoples?
2. How did the rule-writers identify and address existing and/or new disproportionate environmental and public health impacts on minority populations, low-income populations, and/or indigenous peoples?
3. How did actions taken under #1 and #2 impact the outcome or final decision?

Guidance on Considering Environmental Justice During the Development of Regulatory Actions, May 2015, at ii, <https://www.epa.gov/sites/production/files/2015-06/documents/considering-ej-in-rulemaking-guide-final.pdf> (footnote omitted). It is important to note that a regulatory action may involve a potential environmental justice concern if it could:

- Create new disproportionate impacts on minority populations, low-income populations, and/or indigenous peoples;
- Exacerbate existing disproportionate impacts on minority populations, low-income populations, and/or indigenous peoples; or
- Present opportunities to address existing disproportionate impacts on minority populations, low-income populations, and/or indigenous peoples through the action under development.

Id. at 10. And “[i]n determining whether potential EJ concerns may be at issue in regulatory actions, some level of analysis is needed, be it qualitative, quantitative, or some combination of both.” *Id.* at 15.

The Proposal improperly ignores Executive Order 12,898 and the agency’s obligations to address Environmental Justice in minority and low-income populations. EPA does not appear to have considered the Proposals effect on minority and low-income populations at all or performed any analysis, let alone attempt to address the Environmental Justice concerns. Instead, the Proposal states “The EPA believes that this action is not subject to Executive Order 12898 (59 FR 7629, February 16, 1994) because it does not establish an environmental health or safety standard.” 83 Fed. Reg. at 18,773. But Executive Order 12,898 is not limited to actions that “establish an environmental health or safety standard,” and EPA does not explain the basis for its conclusion that the Proposal is exempt. This is arbitrary and capricious.

The Proposal makes no mention of the Guidance on Considering Environmental Justice During the Development of Regulatory Actions, and the Proposal directly conflicts with many of the Executive Order’s, and the Guidance document’s provisions. With the single English language hearing EPA held in Washington DC, EPA has not provided for meaningful participation of minority populations, low-income populations, tribes, and indigenous peoples. Given that EPA has decided without explanation that the Proposal is categorically exempt from Environmental Justice considerations, the agency has not identified or addressed any existing or

new disproportionate environmental and public health impacts on minority populations, low-income populations, and/or indigenous peoples. And the Proposal's preclusion of agency consideration of peer reviewed studies in regulatory decision making unless the underlying data are made publicly available, will weaken research and data collection relating to the health of and environment of minority populations and low-income populations.

If EPA had fulfilled its obligations under Executive Order 12,898, the agency would have concluded that the Proposal does disproportionately harm minority and low-income populations that are most in need of protection. It is well established that minority and low-income populations are most likely to experience disproportionate exposure to harmful pollutants and chemicals. The Proposal seeks to preclude the use of scientific research critical to establishing safeguards against this disproportionate exposure.

Lastly, the Proposal will reduce research and data collection needed to protect the health of minority and low-income populations as individuals are deterred based on the fear their personal information will be released and researchers avoid seeking such information. EPA has not addressed this issue.

The Proposal does not comply with Executive Order 12,898 related to Environmental Justice or any EPA guidance implementing the Executive Order. It is arbitrary and capricious and should be withdrawn.

B. Executive Order 13,045: Protection of Children From Environmental Health Risks and Safety Risks

Executive Order 13,045 requires that every agency:

- (a) shall make it a high priority to identify and assess environmental health risks and safety risks that may disproportionately affect children; and
- (b) shall ensure that its policies, programs, activities, and standards address disproportionate risks to children that result from environmental health risks or safety risks.

Executive Order 13,045, Protection of Children From Environmental Health Risks and Safety Risks, 62 Fed. Reg. 19,885 (Apr. 21, 1997). The Executive Order requires that

For each covered regulatory action submitted to OMB's Office of Information and Regulatory Affairs (OIRA) for review pursuant to Executive Order 12866, the issuing agency shall provide to OIRA the following information developed as part of the agency's decisionmaking process, unless prohibited by law:

- (a) an evaluation of the environmental health or safety effects of the planned regulation on children; and

(b) an explanation of why the planned regulation is preferable to other potentially effective and reasonably feasible alternatives considered by the agency.

Id. at 19,887. The Executive Order covers regulatory actions that are likely to result in a rule that may be economically significant under Executive Order 12,866 (which the EPA concluded applies to the Proposal, *see* 83 Fed. Reg. at 18,772) and “concern an environmental health risk or safety risk that an agency has reason to believe may disproportionately affect children.” 62 Fed. Reg. at 19,885.

EPA created a Guide to help Agency staff involved in developing actions determine whether Executive Order 13,045 applies to an Agency action and, if so, how to implement the Executive Order. Guide to Considering Children’s Health When Developing EPA Actions, at 1 Oct. 2006, https://www.epa.gov/sites/production/files/2014-05/documents/epa_adp_guide_childrenhealth.pdf. The Guide includes “a set of questions EPA staff involved in action development can ask risk assessors to ensure that the various types of information relevant to the assessment of risks to children are considered and may be useful in addressing the issue of disproportionate risks.” *Id.* at 8. And, the Guide explains: “If a rulemaking is not covered by EO 13045, but it discusses environmental health or safety, it is advisable to characterize children’s risk to the extent the data are available.” *Id.* at 7.

EPA asserts that the Proposal is not subject to Executive Order 13,045 because it does not concern an environmental health risk or safety risk. 83 Fed. Reg. at 18,773. EPA does not explain how it reached this conclusion. EPA also does not characterize children’s risk to the extent data are available. The Proposal applies to “Pivotal regulatory science,” which it defines as “the specific scientific studies or analyses that drive the requirements and/or quantitative analysis of EPA final significant regulatory decisions.” *Id.* And the Proposal defines Regulatory science as “scientific information, including assessments, models, criteria documents, and regulatory impact analyses, that provide the basis for EPA final significant regulatory decisions.” *Id.* The Proposal explains that “‘Pivotal regulatory science’ is the studies, models, and analyses that drive the magnitude of the benefit-cost calculation, the level of a standard, or point-of-departure from which a reference value is calculated. In other words, they are critical to the calculation of a final regulatory standard or level, or to the quantified costs, benefits, risks and other impacts on which a final regulation is based.” *Id.* at 18770. By its terms, the Proposal will impact (and therefore concern) all environmental health and safety risks, including many that EPA knows disproportionately affect children.

EPA failed its obligation to evaluate the environmental health or safety effects of the Proposal on children and explain why the Proposal is preferable to other potentially effective and reasonably feasible alternatives considered by the agency. The Proposal is arbitrary and capricious and should be withdrawn.

C. Examples of how the Proposal could disproportionately affect minority populations, low-income populations, and children

As explained in section III.F. and elsewhere, the Proposal would preclude the use of many of the studies that EPA has relied on to set and revise the NAAQS for fine particulate

matter (PM_{2.5}). The regulatory impact assessment from the initial decision to set the PM_{2.5} NAAQS explained that “benefits from these standards will likely be concentrated in urban areas with high concentrations of minority and low-income populations.” Regulatory Impact Analyses for the Particulate Matter and National Ambient Air Quality Standards and Proposed Regional Haze Rule, at 11–31 (July 17, 1997). When EPA revised the PM_{2.5} NAAQS in 2013, the agency confirmed:

The EPA has identified potential disproportionately high and adverse effects on minority and/or low-income populations related to PM_{2.5} exposures. In addition, the EPA has identified persons from lower socioeconomic strata as an at-risk population for PM-related health effects.

National Ambient Air Quality Standards for Particulate Matter, 78 Fed. Reg. 3085, 3267 (Jan. 15, 2013). EPA also stated that “[t]he protection offered by these standards is especially important for children because childhood represents a lifestage associated with increased susceptibility to PM-related health effects.” *Id.* at 3266. EPA has not explained how its Proposal to preclude from consideration the foundational scientific studies for fine particulate matter protections that disproportionately benefit children, minority, and low-income populations will not affect those same children, minority, and low-income populations.

Similarly, as explained in section III.A., the Proposal would preclude the consideration of epidemiology studies published in the 1990’s that correlate childhood blood lead levels with impaired brain function and adverse behavioral effects, which important EPA lead-reduction regulations are based on. A 2001 lead regulation under the Toxic Substances Control Act has been essential in helping to reduce lead poisoning among children, *see* section III.A. Lead; Identification of Dangerous Levels of Lead, 66 Fed. Reg. 1206 (Jan. 5, 2001). That rule explains “Young children are especially vulnerable to the toxic effects of lead because their nervous systems are still developing and they absorb more of the lead to which they are exposed.” *Id.* at 1207. “Moreover, the standards selected by EPA are designed first and foremost to protect children from lead in residential paint, dust, and soil.” *Id.* at 1237. Additionally, EPA explained:

The Agency’s standards will protect children in minority and low-income communities from disproportionate burdens. This is based on the findings of the Agency’s economic analysis which shows that non-white populations receive more of the public health benefit associated with the standards.

Id. EPA has not explained how its Proposal to preclude from consideration the foundational scientific studies for lead protections that disproportionately benefit children, minority, and low-income populations will not affect those same children, minority, and low-income populations.

XV. The Proposal’s peer review provision lacks any statutory basis, is vague and contrary to existing requirements for peer review

In addition to addressing how and whether the agency will consider science, the Proposal also contains a seemingly unrelated provision regarding agency peer review. The Proposal, in § 30.7, reads:

What role does independent peer review in this section?

EPA shall conduct independent peer review on all pivotal regulatory science used to justify regulatory decisions, consistent with the requirements of the OMB Final Information Quality Bulletin for Peer Review (70 FR 2664) and the exemptions described therein.

Because transparency in regulatory science includes addressing issues associated with assumptions used in models, EPA shall ask peer reviewers to articulate the strengths and weaknesses of EPA's justification for the assumptions applied and the implications of those assumptions for the results.

83 Fed. Reg. at 18,774.

There is no statutory authority for EPA to “conduct independent peer review on all pivotal regulatory science used to justify regulatory decisions, consistent with the requirements of the OMB Final Information Quality Bulletin for Peer Review (70 FR 2664) and the exemptions described therein.” The federal statutes that EPA lists as putative authority for the Proposal provide no authority for proposed § 30.7. *See* 83 Fed. Reg. at 18,769/2 (citing Clean Air Act sections 103, 301(a), 42 U.S.C. 7403, 7601(a); Clean Water Act sections 104, 501, 33 U.S.C. 1254, 1361; Safe Drinking Water Act sections 1442, 1450(a)(1), 42 U.S.C. 300j–1, 300j–9(a)(1); Resource Conservation and Recovery Act sections 2002(a)(1), 7009, 42 U.S.C. 6912(a)(1), 6979; Comprehensive Environmental Response, Compensation, and Liability Act (as delegated to the Administrator via Executive Order 12580) sections 115, 311, 42 U.S.C. 9616, 9660; Emergency Planning and Community Right-To-Know Act section 328, 42 U.S.C. 11048; Federal Insecticide, Fungicide, and Rodenticide Act sections 25(a)(1), 136r(a), 7 U.S.C. 136r(a), 136w; and Toxic Substances Control Act, as amended, section 10, 15 U.S.C. 2609, and the Administrative Procedures Act). The claimed authorities that EPA lists do not mention peer review or even allude to the concept. *Id.* Neither the Proposal nor accompanying docket materials identify *any* provision of any federal statute that authorizes EPA to promulgate proposed § 30.7. Our own research revealed no provision of any federal statute that authorizes EPA to promulgate proposed § 30.7.

When Congress writes federal statutes, Congress knows how to create legal authority for peer review, who shall conduct that peer review, what role, if any, that EPA or other parties will play, and how that peer review may be conducted. None of the provision in the law authorize EPA's Proposal in § 30.7. Instead, the statutes *require* that EPA use peer-reviewed science, regardless of whether it would meet EPA's definition of the term in § 30.7. And in cases where the law requires *EPA* to conduct the review, the statutes often spell out specifically how that should happen.

Statute	Provisions on Peer Review
CAA	<p data-bbox="358 239 786 271"><u>§ 7511b. (3) Risk assessment, management, and communication

(A) Use of science in decisionmaking

In carrying out this section, and, to the degree that an Agency action is based on science, the Administrator shall use--

- (i) the best available, *peer-reviewed science* and supporting studies conducted in accordance with sound and objective scientific practices; and
- (ii) data collected by accepted methods or best available methods (if the reliability of the method and the nature of the decision justifies use of the data).

(B) Public information

In carrying out this section, the Administrator shall ensure that the presentation of information on public health effects is comprehensive, informative, and understandable. The Administrator shall, in a document made available to the public in support of a regulation promulgated under this section, specify, to the extent practicable--

- (i) each population addressed by any estimate of public health effects;
- (ii) the expected risk or central estimate of risk for the specific populations;
- (iii) each appropriate upper-bound or lower-bound estimate of risk;
- (iv) each significant uncertainty identified in the process of the assessment of public health effects and studies that would assist in resolving the uncertainty; and
- (v) *peer-reviewed studies* known to the Administrator that support, are directly relevant to, or fail to support any estimate of public health effects and the methodology used to reconcile inconsistencies in the scientific data.

...

(12) Certain contaminants

(B) Sulfate

(i) Additional study

Prior to promulgating a national primary drinking water regulation for sulfate, the Administrator and the Director of the Centers for Disease Control and Prevention shall jointly conduct an additional study to establish a reliable dose-response relationship for the adverse human health effects that may result from exposure to sulfate in drinking water, including the health effects that may be experienced by groups within the general population (including infants and travelers) that are potentially at greater risk of adverse health effects as the result of such exposure. The study shall be conducted in consultation with interested States, shall be based on the best available, *peer-reviewed science* and supporting studies conducted in accordance with sound and objective scientific practices, and shall be completed not later than 30 months after August 6, 1996.

42 U.S.C. § 300g-1 (emphasis added).

	<p><u>§ 300j-2. Grants for State programs</u></p> <p>(d) New York City watershed protection program (1) In general The Administrator is authorized to provide financial assistance to the State of New York for demonstration projects implemented as part of the watershed program for the protection and enhancement of the quality of source waters of the New York City water supply system, including projects that demonstrate, assess, or provide for comprehensive monitoring and surveillance and projects necessary to comply with the criteria for avoiding filtration contained in 40 C.F.R. 141.71. Demonstration projects which shall be eligible for financial assistance shall be certified to the Administrator by the State of New York as satisfying the purposes of this subsection. In certifying projects to the Administrator, the State of New York shall give priority to monitoring projects that have undergone <i>peer review</i>.</p> <p>42 U.S.C. § 300j-2 (emphasis added).</p>
RCRA	<p><u>§ 6939a. Exposure information and health assessments</u></p> <p>(b) Health assessments (2) Whenever in the judgment of the Administrator, or the State (in the case of a State with an authorized program), a landfill or a surface impoundment poses a substantial potential risk to human health, due to the existence of releases of hazardous constituents, the magnitude of contamination with hazardous constituents which may be the result of a release, or the magnitude of the population exposed to such release or contamination, the Administrator or the State (with the concurrence of the Administrator) may request the Administrator of the Agency for Toxic Substances and Disease Registry to conduct a health assessment in connection with such facility and take other appropriate action with respect to such risks as authorized by section 9604(b) and (i) of this title. If funds are provided in connection with such request the Administrator of such Agency shall conduct such health assessment.</p> <p>...</p> <p>(e) Periodic reports The Administrator of such Agency shall issue periodic reports which include the results of all the assessments carried out under this section. Such assessments or other activities shall be reported after appropriate <i>peer review</i>.</p> <p>42 U.S.C. § 6939a (emphasis added).</p>
CERCLA	<p><u>§ 9604. Response authorities</u></p> <p>(i) Agency for Toxic Substances and Disease Registry; establishment, functions, etc.</p>

...

Any toxicological profile or revision thereof shall reflect the Administrator of ATSDR's assessment of all relevant toxicological testing which has been *peer reviewed*. The profiles required to be prepared under this paragraph for those hazardous substances listed under subparagraph (A) of paragraph (2) shall be completed, at a rate of no fewer than 25 per year, within 4 years after October 17, 1986. A profile required on a substance listed pursuant to subparagraph (B) of paragraph (2) shall be completed within 3 years after addition to the list. The profiles prepared under this paragraph shall be of those substances highest on the list of priorities under paragraph (2) for which profiles have not previously been prepared. Profiles required under this paragraph shall be revised and republished as necessary, but no less often than once every 3 years. Such profiles shall be provided to the States and made available to other interested parties.

...

(7)(A) Whenever in the judgment of the Administrator of ATSDR it is appropriate on the basis of the results of a health assessment, the Administrator of ATSDR shall conduct a pilot study of health effects for selected groups of exposed individuals in order to determine the desirability of conducting full scale epidemiological or other health studies of the entire exposed population.

(B) Whenever in the judgment of the Administrator of ATSDR it is appropriate on the basis of the results of such pilot study or other study or health assessment, the Administrator of ATSDR shall conduct such full scale epidemiological or other health studies as may be necessary to determine the health effects on the population exposed to hazardous substances from a release or threatened release. If a significant excess of disease in a population is identified, the letter of transmittal of such study shall include an assessment of other risk factors, other than a release, that may, in the judgment of the *peer review* group, be associated with such disease, if such risk factors were not taken into account in the design or conduct of the study.

...

(13) All studies and results of research conducted under this subsection (other than health assessments) shall be reported or adopted only after appropriate *peer review*. Such *peer review* shall be completed, to the maximum extent practicable, within a period of 60 days. In the case of research conducted under the National Toxicology Program, such *peer review* may be conducted by the Board of Scientific Counselors. In the case of other research, such *peer review* shall be conducted by panels consisting of no less than three nor more than seven members, who shall be disinterested scientific experts selected for such purpose by the Administrator of ATSDR or the Administrator of EPA, as appropriate, on the basis of their reputation for scientific objectivity and the lack of institutional ties

	<p>with any person involved in the conduct of the study or research under review. Support services for such panels shall be provided by the Agency for Toxic Substances and Disease Registry, or by the Environmental Protection Agency, as appropriate.</p> <p>42 U.S.C. § 9604 (emphasis added).</p>
EPCRA	No mentions of peer review
FIFRA	<p><u>§ 136w. Authority of Administrator</u></p> <p>(e) Peer review The Administrator shall, by written procedures, provide for <i>peer review</i> with respect to the design, protocols, and conduct of major scientific studies conducted under this subchapter by the Environmental Protection Agency or by any other Federal agency, any State or political subdivision thereof, or any institution or individual under grant, contract, or cooperative agreement from or with the Environmental Protection Agency. In such procedures, the Administrator shall also provide for <i>peer review</i>, using the advisory panel established under subsection (d) of this section or appropriate experts appointed by the Administrator from a current list of nominees maintained by such panel, with respect to the results of any such scientific studies relied upon by the Administrator with respect to actions the Administrator may take relating to the change in classification, suspension, or cancellation of a pesticide. Whenever the Administrator determines that circumstances do not permit the <i>peer review</i> of the results of any such scientific study prior to the Administrator's exercising authority under section 136d(c) of this title to immediately suspend the registration of any pesticide to prevent an imminent hazard, the Administrator shall promptly thereafter provide for the conduct of <i>peer review</i> as provided in this sentence. The evaluations and relevant documentation constituting the <i>peer review</i> that relate to the proposed scientific studies and the results of the completed scientific studies shall be included in the submission for comment forwarded by the Administrator to the advisory panel as provided in subsection (d). As used in this subsection, the term "<i>peer review</i>" shall mean an independent evaluation by scientific experts, either within or outside the Environmental Protection Agency, in the appropriate disciplines.</p> <p>7 U.S.C. § 136w (emphasis added).</p> <p><u>§ 136w-8. Pesticide registration service fees</u></p> <p>(a) Definition of costs In this section, the term "costs", when used with respect to review and decisionmaking pertaining to an application for which registration service fees are paid under this section, means--</p> <p>(1) costs to the extent that--</p>

	<p>(A) officers and employees provide direct support for the review and decisionmaking for covered pesticide applications, associated tolerances, and corresponding risk and benefits information and analyses;</p> <p>(B) persons and organizations under contract with the Administrator engage in the review of the applications, and corresponding risk and benefits information and assessments; and</p> <p>(C) advisory committees and other accredited persons or organizations, on the request of the Administrator, engage in the <i>peer review</i> of risk or benefits information associated with covered pesticide applications;</p> <p>(2) costs of management of information, and the acquisition, maintenance, and repair of computer and telecommunication resources (including software), used to support review of pesticide applications, associated tolerances, and corresponding risk and benefits information and analyses; and</p> <p>(3) costs of collecting registration service fees under subsections (b) and (c) and reporting, auditing, and accounting under this section.</p> <p>7 U.S.C. § 136w-8 (emphasis added).</p>
TSCA	<p><u>§ 2625. Administration</u></p> <p>(h) Scientific standards In carrying out sections 2603, 2604, and 2605 of this title, to the extent that the Administrator makes a decision based on science, the Administrator shall use scientific information, technical procedures, measures, methods, protocols, methodologies, or models, employed in a manner consistent with the best available science, and shall consider as applicable--</p> <p>(1) the extent to which the scientific information, technical procedures, measures, methods, protocols, methodologies, or models employed to generate the information are reasonable for and consistent with the intended use of the information;</p> <p>(2) the extent to which the information is relevant for the Administrator's use in making a decision about a chemical substance or mixture;</p> <p>(3) the degree of clarity and completeness with which the data, assumptions, methods, quality assurance, and analyses employed to generate the information are documented;</p> <p>(4) the extent to which the variability and uncertainty in the information, or in the procedures, measures, methods, protocols, methodologies, or models, are evaluated and characterized; and</p> <p>(5) the extent of independent verification or <i>peer review</i> of the information or of the procedures, measures, methods, protocols, methodologies, or models.</p> <p>15 U.S.C. § 2625 (emphasis added).</p>

§ 2617. Preemption

(b) New statutes, criminal penalties, or administrative actions creating prohibitions or other restrictions

(1) In general

Except as provided in subsections (c), (d), (e), (f), and (g), beginning on the date on which the Administrator defines the scope of a risk evaluation for a chemical substance under section 2605(b)(4)(D) of this title and ending on the date on which the deadline established pursuant to section 2605(b)(4)(G) of this title for completion of the risk evaluation expires, or on the date on which the Administrator publishes the risk evaluation under section 2605(b)(4)(C) of this title, whichever is earlier, no State or political subdivision of a State may establish a statute, criminal penalty, or administrative action prohibiting or otherwise restricting the manufacture, processing, distribution in commerce, or use of such chemical substance that is a high-priority substance designated under section 2605(b)(1)(B)(i) of this title.

...

(f) Waivers

(2) Required exemptions

Upon application of a State or political subdivision of a State, the Administrator shall exempt from subsection (b) a statute or administrative action of a State or political subdivision of a State that relates to the effects of exposure to a chemical substance under the conditions of use if the Administrator determines that--

(A)(i) compliance with the proposed requirement of the State or political subdivision of the State would not unduly burden interstate commerce in the manufacture, processing, distribution in commerce, or use of a chemical substance;

(ii) compliance with the proposed requirement of the State or political subdivision of the State would not cause a violation of any applicable Federal law, rule, or order; and

(iii) the State or political subdivision of the State has a concern about the chemical substance or use of the chemical substance based in *peer-reviewed science*; or

(B) no later than the date that is 18 months after the date on which the Administrator has initiated the prioritization process for a chemical substance under the rule promulgated pursuant to section 2605(b)(1)(A) of this title, or the date on which the Administrator publishes the scope of the risk evaluation for a chemical substance under section 2605(b)(4)(D) of this title, whichever is sooner, the State or political subdivision of the State has enacted a statute or proposed or finalized an administrative action intended to prohibit or otherwise restrict the manufacture, processing, distribution in commerce, or use of the chemical substance.

15 U.S.C. § 2617 (emphasis added).

	<p><u>§ 2605. Prioritization, risk evaluation, and regulation of chemical substances and mixtures</u></p> <p>(b) Risk evaluations (E) Metals and metal compounds</p> <p>In identifying priorities for risk evaluation and conducting risk evaluations of metals and metal compounds, the Administrator shall use the Framework for Metals Risk Assessment of the Office of the Science Advisor, Risk Assessment Forum, and dated March 2007, or a successor document that addresses metals risk assessment and is <i>peer reviewed</i> by the Science Advisory Board.</p> <p>15 U.S.C. § 2605 (emphasis added).</p>
--	---

Under longstanding federal case law, when Congress authorizes an approach in one section of a statute using specific language but does not do the same in other sections of a statute, courts presume that Congress acted purposefully and did not mean to address or authorize that approach in those other statutory sections. *See, e.g., Dean v. United States*, 556 U.S. 568 (2009) (“It is generally presumed that Congress acts intentionally when including particular language in one section of a statute but not in another.” (citing *Russello v. United States*, 464 U.S. 16, 23 (1983))). Not only are there no implied grants of authority to an agency in the other statutory sections, but the congressional decisions to authorize the approach elsewhere in the statute give even *greater* force to the conclusion that the agency has *not* been given authority where Congress did not use the same or similar authorizing language.

The EPA approach proposed in § 30.7 is even more unlawful than would be the case, independently, under this case law. Proposed § 30.7 says “EPA *shall* conduct independent peer review on all pivotal regulatory science used to justify regulatory decisions, *consistent with the requirements of* the OMB Final Information Quality Bulletin for Peer Review (70 FR 2664) and the exemptions described therein.” 83 Fed. Reg. at 18,774/2 (emphasis added). EPA proposes to bind itself (“shall”) to conduct a particular form of peer review on “*all* pivotal regulatory science” based on an *unenforceable, non-binding* OMB bulletin that has never been the subject of notice and comment rulemaking and that itself is not authorized by any federal law. To the contrary, treating the content of the unenforceable bulletin as a binding regulation would itself violate the federal statutes that EPA implements, because those statutes do not codify the bulletin, and EPA would be unlawfully codifying a mere policy preference. This EPA may not do.

This Proposal is unlawful, arbitrary and capricious, and an abuse of EPA discretion. To reiterate, the Proposal identifies *no* statutory authority for EPA to conduct independent peer review for any, much less all, “pivotal regulatory science” consistent with the dense content (and exceptions) of the OMB bulletin. The Proposal identifies *no* statutory authority for EPA to bind itself, and future administrations, to conduct peer review only in this fashion, unless and until future notice-and-comment rulemaking is undertaken. The Proposal identifies no suggestion in statutory language or legislative history that Congress intended EPA to conduct binding peer review consistent with this OMB bulletin, notwithstanding that Congress has known about this

bulletin since 2005. EPA has simply made up proposed § 30.7—with its the link to the OMB bulletin, and the putative authority for the Proposal—out of whole cloth. This EPA may not do.

The Proposal suffers additionally from unlawful vagueness. Proposed § 30.7 say that “EPA shall conduct independent peer review” without providing any coherent explanation or accompanying regulatory text about what that *means*: how will that peer review be conducted? By whom? Who will select the peer reviewers? How many will there be? Who will assure their independence and expertise? Will peer reviewers be subject to federal conflict of interest rules and policies? Will peer reviewers be anonymous? Where will the funds come from to conduct EPA peer reviews for “all pivotal regulatory science”? Has EPA estimated how many instances of “pivotal regulatory science” it anticipates conducting peer review for in one year? In prior years? Will the peer review be conducted openly and publicly? Will it be conducted in accordance with the Federal Advisory Committee Act? What will the duration of any peer review be? What purpose will that peer review serve? How will it affect future regulatory decisions? Or will it? Will there be an administrative docket? Will any product of the peer review be included in the administrative dockets for rulemaking? Will peer reviewer comments be part of the certified record for judicial review? Will the agency seek deference from future reviewing courts for the views expressed by peer reviewers? Does EPA not believe that peer review conducted by professional journals and societies is valid? Or sufficient? On what basis does EPA think professional peer review is invalid or insufficient, considering there is not one iota of evidence or support for that belief in the Proposal or the accompanying docket? What is the basic *justification* for proposed § 30.7? The Proposal provides no answers to these questions.

One obvious and serious objection to the proposed peer review mechanism is that it will be time-consuming, and it will necessarily slow EPA’s responsibilities to meet statutory deadlines and/or protect Americans by issuing timely health and environmental safeguards. The Proposal ignores this serious concern. Indeed, the Proposal contains no indication that EPA has given any thought to this serious concern, and how it will impact EPA’s statutory responsibilities and legal duty to meet congressional deadlines. EPA already misses an unacceptably high number of congressional deadlines in the statutes it administers, and the Proposal to apply peer review to “*all* pivotal regulatory science” will only exacerbate that endemic problem and the unlawfulness that it represents.

Finally, the final paragraph of § 30.7 appears to suggest that EPA should conduct peer review of the proposed agency action itself, rather than of the science underlying that action. 83 Fed. Reg. at 18,774 (stating that “EPA shall ask peer reviewers to articulate the strengths and weaknesses of *EPA*’s justification for the assumptions applied and the implications of those assumptions for the results.” (emphasis added)). It is entirely unclear how “peer review” could be applied to EPA’s reasoning itself, rather than the cited science, and the Proposal contains no further clarification.

EPA should abandon the unlawful Proposal altogether but, if EPA does finalize any rule based on the Proposal, EPA still should abandon the unlawful approach reflected in proposed § 30.7.

XVI. Conclusion

It is clear from the above that the Proposal violates the law and must be withdrawn. There is no support for the Proposal in any the statutes EPA cites, and in fact, those statutes conflict with the Proposal, as do other statutes that EPA failed to mention at all. Further, none of the other sources cited provide legal or logical support for the Proposal. The Proposal also suffers from a host of other problems: its definitions are vague; it is an unexplained reversal from prior agency policy; it handles confidential business information in a capricious manner; it treats other types of agency actions inconsistently; and it fails to analyze disproportionate impacts on communities of color, low-income communities, and children.

In the alternative, if EPA decides to move ahead with this reckless, unjustified, and unlawful effort to censor the science that EPA may consider, and must consider, to protect Americans' health and environment, the agency must first issue a supplemental proposal and actual administrative record to cover the multitude of issues, evidence, and specific regulatory text for which EPA fails to provide fair notice. The Proposal fails to provide fair notice or justifications addressing numerous issues that our comments detail—from an absence of any statutory authority, to failures to address statutory authorities that the Proposal squarely contravenes, to failures to provide reasoned explanations, including basic justifications for EPA's numerous departures from past practices. The Proposal fails to propose specific regulatory text addressing numerous implementation elements, as well as issues that are touched upon only in passing in the preamble (*e.g.*, non-linearity and LNT). Apart from all of the significant substantive and procedural defects from which the Proposal suffers, it still manages to be a shockingly shoddy effort missing actual regulatory text and supporting legal, factual, scientific, and technical information that would provide fair notice to the public.

Jennifer,

Sam sent forward another draft response for ORD to use for a letter Admin Wheeler received from Washington State's Governor Inslee regarding the science transparency rule. The draft response is the same one we have used for other state and congressional comments on the rule.

Richard reviewed and had no comments.

Please let me know if you're ok with this moving forward.

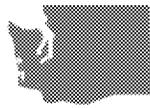

Thanks,
Megan

STATE OF WASHINGTON
Office of the Governor

August 16, 2018

The Honorable Andrew Wheeler
Acting Administrator
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue NW
Washington, DC 20460

Dear Acting Administrator Wheeler:

Several Washington state agencies charged with protecting human health and the environment have recently commented on your agency's proposed rule known as the "transparency" rule (Strengthening Transparency in Regulatory Science - Docket ID No. EPA-HQ-OA-2018-0259). I am writing in support of those comments and the request to withdraw the rule.

I find your rule to be a solution in search of a problem. Since its creation, the U.S. Environmental Protection Agency (EPA) has used science for the betterment of the country in ways that are indisputable. Starting with the successful implementation of the Clean Air Act that eliminated the problem of acid rain and checked the choking impacts of smog in our cities, scientific rigor has been the bedrock for action. Turning peer-reviewed academic research into comprehensive assessments often followed by advisory panel review and ultimately an open, public rule-making is a long and painstaking process. Despite the slow development of even the most obvious of scientific findings into positive action, I have supported the rigor of this process that allows for detailed scrutiny from all stakeholders.

The proposed rule cites the need for increased transparency but provides little evidence that this need is not being met. EPA models, for example, that serve as the basis for predicting cancer risk and blood lead levels in children are well presented, explained and supported. It is quite true that debate continues on the accuracy of such models but there is little debate that they are transparent. It appears that the only thing left for more transparency is the raw data itself, an approach that dismisses the value of the peer-review process. Setting aside the unsupported cynicism that such an attitude implies toward peer-review as a foundational piece of the scientific process, the ramifications of requiring raw data beyond what is in the peer-reviewed literature are unacceptable.

Disclosure of human data from epidemiology studies violates the integrity of that hugely important tool necessary for the protection of human health. Participants are rightly guaranteed confidentiality when they participate in such studies. Epidemiology should be welcomed by those who question modeling, often based on animal studies, as it looks at the impacts of real

world exposure in the very people that regulations are designed to protect. Redacting personal information as a solution proposed by the previous administrator shows a lack of understanding and appreciation for how these studies are approved and executed. Simply stated, risking the future use of the critical public health tool that is epidemiology is a fool's errand.

I also must question the intent here. The agency shows little stomach for increasing transparency for the thousands of chemicals in the millions of products we buy everyday citing the need for business to keep trade secrets confidential. A legitimate concern but with valid solutions. I find it hypocritical for the administration to push for unsubstantiated and unnecessary increases in transparency that could threaten public health while failing to share information on toxics in products with states.

Finally, more and more we find that science has become a political target attacked not because of its substance but because of who is delivering it or what it might mean to our way of life. These attacks are not rooted in the necessary skepticism of scientific inquiry but instead are born of a distaste for the answer itself. Sir Austin Bradford Hill, who is credited with drawing the link between smoking and cancer, famously wrote in his seminal paper on biostatistics that:

"All scientific work is incomplete - whether it be observational or experimental. All scientific work is liable to be upset or modified by advancing knowledge. That does not confer upon us a freedom to ignore the knowledge we already have, or to postpone the action that it appears to demand at a given time."

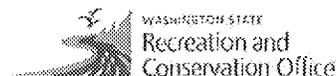

I hope that you will reconsider the detrimental effect that your proposed rule could have on advancing science so that we continue to heed new science while rejecting the easy temptation to hide behind the uncertainty that inevitably comes with it.

Very truly yours,

Jay Inslee
Governor

Re: Strengthening Transparency in Regulatory Science (Docket ID No. EPA-HQ-OA-2018-0259)

Dear Administrator Wheeler:

The Washington State Departments of Ecology, Fish and Wildlife, Natural Resources, and the Recreation and Conservation Office, respectfully submit comments on the proposed rule Strengthening Transparency in Regulatory Science (40 CFR Part 30).

We urge the U.S. Environmental Protection Agency (EPA) to withdraw the proposed rule for the following reasons:

- The proposed rule lacks detail and EPA has provided no supporting information to justify why the rule is beneficial. EPA did not evaluate the costs and benefits of the rule or provide any information on rule implementation.
- We have significant concerns that the proposed rule would impede EPA's ability to use established, peer-reviewed scientific evidence to set standards that protect the health of Washington State citizens and our environment.
- The proposed rule would hinder important research by requiring EPA only consider scientific studies where the underlying data, models, and methodologies are made publicly available and sufficient for independent validation. We have deep concerns about EPA's ability to implement the rule in a manner that allows the use of the best scientific information, while ensuring scientific progress and adequately protecting patient, business, and citizen privacy.

The Honorable Andrew Wheeler

Enclosure (1) Pages 1-5

Comments

I. Introduction

We have significant concerns that the proposed rule would impede EPA's ability to use established, peer-reviewed scientific evidence to set standards that protect the health of the citizens of Washington State and our environment, and urge EPA to withdraw the proposed rule. We appreciate EPA's decision to extend the public comment period and hold a public hearing to allow states, researchers, and other interested parties sufficient time to evaluate and comment on the proposed rule.

The proposed rule would require that EPA only consider scientific studies where the underlying data, models, and methodologies are made publicly available and sufficient for independent validation. Dose-response data and models involving human subjects are the gold standard for assessment of direct human health effects. These studies typically rely on patient data that is protected by the Health Insurance Portability and Accountability Act (HIPAA) law that safeguards and protects privacy of personal patient medical information. Further, environmental studies often require sensitive information about private citizens, companies and private properties. Federal and state agencies and academic institutions have robust processes in place and human subjects review boards to safeguard confidential information and meet high ethical standards. As long as these studies meet appropriate standards for data quality and scientific peer review they should be an integral part of the setting of environmental standards.

We have deep concerns about EPA's ability to implement the rule in a manner which allows the use of the best scientific information, while ensuring scientific progress and adequately protecting patient privacy. It is unclear how research efforts will be hindered by the requirement that de-identified health data on individual study subject be shared publically. For example, the U.S. Department of Health and Human Services *Guidance Regarding Methods for De-identification of Protected Health Information in Accordance with the Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule*¹ Safe Harbor method requires deletion of all geographic subdivisions smaller than a state in order to de-identify healthcare data. This information loss would render analysis of spatial variability of health information in air pollution epidemiology research impossible.

II. The current process is adequate

The EPA currently uses robust, transparent processes to evaluate the best available scientific research, characterize the health hazards of chemicals and air pollution, and set standards to protect public health and the environment. It is a standard practice for EPA to conduct comprehensive reviews of the best available scientific research when evaluating air and water quality standards. EPA relies on peer-

¹ U.S. Department of Health and Human Services, *Guidance Regarding Methods for De-identification of Protected Health Information in Accordance with the Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule*, <https://www.hhs.gov/hipaa/for-professionals/privacy/special-topics/de-identification/index.html>.

Enclosure (1) page 2

reviewed studies that describe the underlying data, methods, assumptions, sensitivity, and uncertainty of the results. These studies are cited and are published and available for public review. Reproducibility and independent validation are critical aspects of the scientific method, and have resulted in significant advancements in our understanding of the health effects of air pollutants at different exposures and thresholds.

EPA relies on independent advisory panels comprised of nationally-recognized experts, such as the Scientific Advisory Board (SAB), and the Clean Air Scientific Advisory Committee (CASAC), to review and evaluate the state of the research and to provide an additional layer of independent peer-review. EPA has existing policies and procedures in place to prevent conflicts of interest and ensure that the boards and committees are well-balanced, and comprised of independent members with the appropriate expertise. The processes for developing human health assessment and setting and reviewing standards by EPA have been routinely scrutinized by organizations such as the National Academy of Sciences (NAS) and the Government Accountability Office (GAO). EPA has incorporated their recommendations and improved its approach over time.²

Several of the landmark studies on the health effects of air pollution, such as the Harvard Six Cities and American Cancer Society studies, have been peer-reviewed and re-analyzed by multi-disciplinary expert panels from the Health Effects Institute (HEI).³ HEI is an independent non-profit research institute that receives funding from both EPA and industry to provide impartial credible science on the health effects of air pollution. In testimony before a Congressional committee, the President of HEI stated that “US EPA and other agencies have established procedures to produce and review science for decisions, and in many cases those procedures work to enhance the quality and credibility of the science.”

The proposed rule uses the phrase “*best available science*”, but calls into question established processes such as EPA’s integrated risk assessment system (IRIS) review program and National Ambient Air Quality Standards (NAAQS) program. In fact, EPA routinely makes the ‘best’ use of scientific information in these programs. That includes study-by-study evaluation of strengths and weaknesses of all relevant research. Also EPA more-than-adequately explains its decisions and analyses both in recommending NAAQS revisions and in quantifying chemical toxicities in IRIS.

IRIS is not a regulatory program, but it provides essential scientific information for decisions made by Washington State Department of Ecology. In a recent review of the IRIS program, the National Academy of Sciences reported that EPA has made “substantial progress” in implementing the recommendations outlined in previous NAS reports, improving the program’s overall scientific and technical performance.⁴

² See for example National Academy of Sciences (NAS), 2018, Progress Toward Transforming the Integrated Risk Information System (IRIS) Program: A 2018 Evaluation, <https://www.nap.edu/catalog/25086/progress-toward-transforming-the-integrated-risk-information-system-iris-program>; National Research Council, 2000, Strengthening Science at the U.S. Environmental Protection Agency: Research Management and Peer-Review Practices, <https://www.ncbi.nlm.nih.gov/books/NBK225708/>.

³ See Health Effects Institute, 2000, Reanalysis of the Harvard Six Cities Study and the American Cancer Society Study of Particulate Air Pollution and Mortality, <https://www.healtheffects.org/publication/reanalysis-harvard-six-cities-study-and-american-cancer-society-study-particulate-air>.

⁴ National Academy of Science, April 11, 2018, EPA’s IRIS program has made substantial progress, says new report, <http://www8.nationalacademies.org/onpinews/newsitem.aspx?RecordID=25086>.

IRIS uses a rational weight-of-evidence method to assess available research, and provide access to a comprehensive source of toxicity data. It increases our capacity to evaluate chemical hazards, and to quantify risk magnitudes and uncertainties, but it does not tell us how to manage risks. The proposed exclusion of research lacking all underlying data from IRIS would be an unnecessary waste of information.

The NAAQS review process is a model of scientific transparency. Its reviews are renowned for their high quality. In regard to the studies on which they are based, the costs of publication as well as requirements for the privacy of study subjects have prohibited making all the data obtained publically available. We strongly disagree that this diminishes the value of such epidemiology and toxicology studies to regulatory science. Exclusion of such studies would significantly reduce the amount of scientific data available to establish appropriate standards to protect public health and the environment.

The proposed rule offers very little in the way of examples of non-transparent science. Instead it asserts “[a]s a case in point, there is growing empirical evidence of non-linearity in the concentration-response function for specific pollutants and health effects”. That is true, however it has nothing to do with lack of public access of underlying research data. Instead, it calls for increased federal funding of research on non-linearity of pollution health impacts.

III. Recent actions by EPA undermine independent, scientific research

We have concerns that this proposed rule, and other recent actions by EPA will undermine scientifically robust, well established, existing processes. For example, EPA announced in 2017 that it would prohibit participation in CASAC of scientists from leading research institutions that receive EPA research grants.⁵ EPA filled a number of the vacancies with researchers funded by the industries that EPA is responsible for regulating.⁶

EPA has also reduced or eliminated funding for critical scientific research programs such as the Science to Achieve Results (STAR) grants.⁷ EPA should focus its efforts on improving existing processes and restoring funding for scientific research rather than establishing arbitrary, costly requirements that would further delay and diminish environmental research and potentially delay or weaken health-based standards.

⁵ U.S. EPA, Oct. 31, 2017, Administrator Pruitt Issues Directive to Ensure Independence, Geographic Diversity & Integrity in EPA Science Committees, <https://www.epa.gov/newsreleases/administrator-pruitt-issues-directive-ensure-independence-geographic-diversity>.

⁶ See *Science*, Nov. 3, 2017, EPA unveils new industry-friendlier science advisory boards, <http://www.sciencemag.org/news/2017/11/epa-unveils-new-industry-friendlier-science-advisory-boards>.

⁷ See U.S. EPA, 2018, FY 2019 Budget in Brief, <https://www.epa.gov/sites/production/files/2018-02/documents/fy-2019-epa-bib.pdf>

IV. The proposed rule would weaken our ability to protect public health and environment

We are concerned that the proposed rule would limit scientific research available for setting air quality standards to protect public health, and that EPA could use this rule to justify delaying new or weakening existing standards that protect the most vulnerable citizens from adverse health effects. The State of Washington relies on the scientific research and standards set by EPA to protect the health of our citizens and the environment.

Children are at greater risk from air pollution because they are physically developing and because they have higher inhalation rates than adults do. We disagree with part IV, Statutory and Executive Orders Reviews, section H, of the proposed rule. The claim that this action "is not subject to Executive Order 13045 because it does not concern an environmental health risk or safety risk" to children is not supported by scientific evidence. In fact, there is substantial body of research showing children are more sensitive than adults to environmental pollution.

We also disagree with part IV, section K., which claims that this action is not subject to Executive Order 12898: Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations. According to EPA, the purpose of Executive Order 12898 is to "focus federal attention on the environmental and human health effects of federal actions on minority and low-income populations with the goal of achieving environmental protection for all communities."⁸ There is a large and growing body of evidence that minority and low-income populations face greater exposures to environmental pollution and are more susceptible to its effects. Efforts to delay or weaken air quality standards would disproportionately impact these communities. We urge EPA to consider the environmental justice implications of the rule and examine ways to further protect vulnerable people and disadvantaged communities, in accordance with Executive Order 12898.

The last sentence in section II of the preamble to the proposed rule says "The Agency's offices should be guided by this policy to the maximum extent practicable during ongoing regulatory action, even where such research has already been generated, solicited, or obtained." Previously published studies that followed Institutional Review Board protocols to protect participant privacy could not retroactively release their underlying data because to do so would be a gross violation of both ethical norms and institutional rules. Many of these studies are the bedrock of our understanding of human health effects of air pollution exposure.

Exclusion of existing research reports from regulatory actions just because the reports do not present all their underlying data would be a huge and unnecessary waste of information and the funding used to develop it. We urge EPA to focus their efforts on future improvements rather than undertaking a costly, process to vet and review the comprehensive body of knowledge on the health hazards of air pollution.

⁸ U.S. EPA, Summary of Executive Order 12898 – Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations, <https://www.epa.gov/laws-regulations/summary-executive-order-12898-federal-actions-address-environmental-justice>.

V. Procedural concerns

The proposed rule is lacking in detail and EPA has not provided any supporting information to justify why the rule is beneficial. Moreover, EPA has not fully evaluated the costs and benefits of the rule. The costs of the rule could be significant, especially if EPA decides to apply the rule retrospectively, and use the rule as a tool to revise existing health-based air quality standards. We urge EPA to provide additional clarification on the proposal, including evaluating the costs and benefits, and clarifying how the rule would be implemented. EPA should also evaluate what data would be available for setting health-based air quality standards if the rule was applied retroactively and prospectively, and consider how it would impact EPA's ability to protect public health and the environment.

VI. Recommended revisions to Part 30 - Transparency in Regulatory Decision Making

§ 30.6 Additional requirements pertaining to the use of dose response data and models underlying pivotal regulatory science.

We agree with the first sentence of this section ("*EPA shall describe and document any assumptions and methods used, and should describe variability and uncertainty.*"), and if a rule is finalized we would find this language acceptable. However, the remainder of the language in this section, if still desired after further evaluation, would be better placed in policy or guidance documents.

VII. Conclusion

In summary, we request that EPA withdraw the proposed rule. We recommend that EPA work with states, research institutions, and organizations such as the National Academy of Sciences to identify improvements to existing processes designed to increase transparency and advance scientific research.

STATE OF WASHINGTON

DEPARTMENT OF HEALTH

August 16, 2018

The Honorable Andrew Wheeler
Administrator
Environmental Protection Agency
1200 Pennsylvania Avenue, NW
Washington, DC 20460

Dear Administrator Wheeler:

Re: Strengthening Transparency in Regulatory Science, Docket ID No. EPA-HQ-OA-2018-0259

The Washington State Department of Health (DOH) writes to express our serious concerns with the proposed rule, "Strengthening Transparency in Regulatory Science," printed in the Federal Register on June 25, 2018 (83 Fed. Reg. 24255). We urge you to withdraw this rule because it will compromise the protection of public health by reducing the amount of credible science available for decision making.

The rule proposes unreasonable procedural barriers to environmental public health scientific inquiry and policy development and limits the scope of scientific information available to inform policy. For example, published epidemiological information about changing hospital admissions for respiratory illness before, during and after the shutdown of a steel mill (Pope, 1989) appears to be excluded from consideration because this sort of "natural experiment" is not practicably reproducible. In other cases, the original studies cannot be replicated because the exposure conditions no longer exist, thanks to regulation. Since the rule is retroactive it may overturn existing policies that are based on studies where the original raw data is no longer accessible or must be withheld to comply with ethical and legal requirements of epidemiological research (e.g., requirements of an Institutional Review Boards and/ or the Health Insurance Portability and Accountability Act of 1996 (HIPAA)). By disqualifying high quality longitudinal epidemiological and clinical studies - often the most direct and relevant evidence of chemical impacts on humans - the proposed rule would diminish not strengthen the science underlying regulations.

In addition, the proposed rule establishes increased protections for confidential business information, diminishing the amount of information available to the public to inform policy, whether from the scientific community or from the business community. These provisions reduce rather than increase public transparency.

The Washington State Department of Health depends on the EPA for timely scientific research, assessments and policy to inform our efforts to protect our residents from environmental hazards, such as those associated with contamination of drinking water with perfluorinated compounds (PFAS). The added administrative barriers resulting from this rule are likely to significantly delay the development of EPA guidelines and policies. Such delays and the resulting reduced health protection are expected due to decreased access to industry claimed confidential business information, exclusion of relevant peer

reviewed scientific studies, and the need for researchers to prepare publically disclosable datasets. Such delays will result in prolonged public exposure to environmental hazards, increased costs to researchers, and increased societal costs due to unmitigated harm to the environment and to the health of our population.

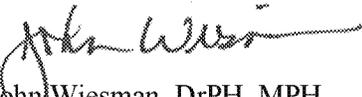

In the background section of this proposed rule, the cost of compliance with “significant regulations” is provided as justification for the proposed rule. Subsequently, it is suggested that dose response modeling used by EPA scientists for “pivotal regulatory science” is overly protective of health and the environment and therefore places unnecessary regulatory and financial burdens on industry. This justification for the proposed rule does not account for the short and long-term costs to individuals and communities from environmental degradation and the resulting population health impacts. The comprehensive dose response modelling that takes into account all available peer reviewed scientific studies provides reasonable though imperfect protection. Increasingly and across a wide range of chemicals and exposure pathways, we are learning about adverse environmental and public health effects from exposure levels much lower than ones previously thought to be safe. Approximately 13 percent of the total burden of disease in the United States has been attributed to environmental exposures. These diseases contribute to more than 398,000 deaths annually (Pugh & Gregory, 2012). Refinement of EPA dose-response models would likely improve public health. This refinement would be more likely accomplished by *increased* disclosure of confidential business information, not by the increased protection of confidential business information and decreased availability of scientific information.

In section IV, Statutory and Executive Orders Reviews, it is stated that this proposed rule does not have implications relevant to Executive Order 13175 (Consultation and Coordination With Indian Tribal Governments). This assertion does not seem to be adequately supported, and we urge additional analysis of the probable impacts of the proposed rule on Tribal Nations.

We disagree with part IV, Statutory and Executive Orders Reviews, section H, of the proposed rule. The claim that this action "is not subject to Executive Order 13045 because it does not concern an environmental health risk or safety risk" to children is not supported by scientific evidence. In fact, there is a substantial body of research showing children are more sensitive than adults to environmental pollution

This proposed rule will reduce credible science related to environmental public health, and as a result prolong public exposure to environmental hazards and increase societal costs from unmitigated harm to the environment and the health of our population. I respectfully urge you to withdraw this rule.

Sincerely,

John Wiesman, DrPH, MPH
Secretary of Health

Quick update on this one. I heard this morning that this is with Holly for signature. Barring any questions or edits from her, it should be signed later today or tomorrow. I will give you a heads up once I hear that it has been signed.

Thanks,
-Nate

Hi Everyone – Here is a quick update. As Dayna noted below, this came back from OMB a little while ago. It is currently with our (OCFO's) front office. I haven't heard back yet on when they expect to get it out, but I can confirm that it's being tee'd up for Holly. I will let you know once I find out more.

Hi there—Apparently it's over in OCFO going through their final clearance (OMB sent it back to them w no comments). We expect they will release it to Congress. We were told it might happen Friday, but that's not guaranteed.

I can get you the name of the person over there who is tracking it for us if you'd like....

Thanks!

Subject: Release of Report to Congress: Implementation of EPA’s Plan to Increase Access to Results of EPA-Funded Research

Hi- please see statement and Q/A below about the Release of, *Implementation of EPA’s Plan to Increase Access to Results of EPA-Funded Scientific Research: A Report to Congress – 2018:*

Next week, EPA is releasing a report to congress in response to the 2018 Omnibus Appropriations. EPA is continuing to implement its *Plan to Increase Access to Results of EPA-Funded Scientific Research*. The plan establishes how EPA will increase availability of EPA-funded research publications and underlying data. So far, more than 368 eligible datasets associated with EPA scientific publications have been made available to the public.

Background:

On February 22, 2013, the White House Office of Science and Technology Policy (OSTP) issued a memorandum entitled “Increasing Access to the Results of Federally Funded Scientific Research”. In response, the EPA released its plan in November 2016. The plan describes the steps the Agency will take to further increase access to the results of EPA-funded scientific research, consistent with the objectives of the OSTP Memo.

Questions and Answers:

1. Why is EPA implementing this plan?

On February 22, 2013, the White House Office of Science and Technology Policy (OSTP) issued a memorandum entitled “Increasing Access to the Results of Federally Funded Scientific Research” (OSTP Memo). The memorandum directs Federal departments and agencies that spend more than \$100 million per year on research and development (which includes EPA) “to develop...a plan...to increase public access to peer-reviewed, scientific research publications and research data resulting from agency-funded scientific research.” The fundamental notion underlying this memorandum is that the results of Federally funded scientific research should be available to the public, the scientific community, and industry to the greatest extent feasible consistent with applicable law and policy; agency mission; resource constraints; U.S. national, homeland, and economic security; and the specific objectives of the memorandum.

2. What aspects of the EPA plan have been implemented?

Implementation of the plan will occur in phases. Phase 1 was implemented on January 1, 2016 and included all publications and underlying data from intramural scientists within the Agency’s Office of Research and Development (ORD). ORD has actively worked to ensure that its journal publications or author manuscripts are accessible on PubMed Central (PMC). ORD is using the EPA’s *ScienceHub* as the catalog and repository for datasets underlying these publications. During the period metrics were available, 72% of datasets associated with publications (368 out of 508) were made available. That percentage has been increasing over time with 85% (62 out of 73) made available in the second quarter of FY 2018.

To implement phases 2 and 3 of the Plan, EPA established an Agency-wide forum. The Forum on Increasing Public Access to EPA Research was chartered as a standing group of the EPA Science Technology Policy Council on April 17, 2017. Phase 2, the implementation of public access to publications of non-ORD intramural scientists began January 1, 2018.

3. What aspects of the plan have yet to be implemented? When will they be implemented?

The target date for implementation of access to non-ORD intramural datasets underlying peer-reviewed publications is 2018. The Public Access Forum Data Working Group has drafted its implementation plan,

which is currently under review by the STPC. The data implementation plan will likely be completed and distributed across EPA during the fourth quarter of Fiscal Year 2018.

The target date for implementation of extramural peer-reviewed publications and underlying data is also 2018. The data and publications working groups are considering requirements for future extramural agreements. In addition, the Public Access Forum Extramural Scientific Research Working Group is developing language for new contracts, cooperative agreements, and grants that will be inserted into extramural agreements. Once completed, standard language will appear in new extramural funding announcements. Public access to the scientific peer-reviewed publications and underlying data sets generated from these new extramural agreements will be covered by the new language.

4. How does this plan relate to the NPRM Transparency in Regulatory Science?

On April 30, 2018, the Federal Register published a proposed rule by EPA titled: Strengthening Transparency in Regulatory Science. EPA is soliciting comments on the Notice of Proposed Rulemaking. The summary of the proposed rule states ...

...when EPA develops regulations, including regulations for which the public is likely to bear the cost of compliance, with regard to those scientific studies that are pivotal to the action being taken, EPA should ensure that the data underlying those are publically available in a manner sufficient for independent validation.

This proposed rule is related to, but distinct from, the EPA Plan to Increase Access to Results of EPA-funded Scientific Research. The proposed rule applies to making publicly available research data related to “pivotal regulatory science” informing EPA regulations, including third party data. The approved Public Access Plan prospectively makes publicly available research data funded wholly or in part by EPA.

EPA Announces Extended Comment Period and Public Hearing on Proposed Rule to Strengthen Science Transparency in EPA Regulations

.....

WASHINGTON (May 24, 2018) - Today, the U.S. Environmental Protection Agency (EPA) announced an extension of the comment period on the proposed rule, “Strengthening Transparency in Regulatory Science.” EPA is also announcing a public hearing for the proposed rule, which will be held on July 17, 2018, in Washington, D.C.

“EPA is committed to public participation and transparency in the rulemaking process,” said EPA Administrator Scott Pruitt. **“By extending the comment period for this rule and holding a public hearing, we are giving stakeholders the opportunity to provide valuable input about how EPA can improve the science underlying its rules.”**

On April 30, 2018, EPA announced the proposed rule with a 30-day comment period that was scheduled to close on May 30. With today's extension, the comment period will now close on August 17. EPA is soliciting comments on all aspects of the proposal and specifically on the issues identified in Section III. The public hearing will provide a forum for interested parties to present data, views, and arguments regarding EPA's proposed rule.

The proposed rule will strengthen the science used in regulations issued by EPA. It will require that underlying scientific information be publicly available. Also, this rule is consistent with data access requirements for major scientific journals and builds upon Executive Orders 13777 and 13783.

Comments should be identified by Docket ID No. is EPA-HQ-OA-2018-0259 and submitted through the Federal eRulemaking Portal: <http://www.regulations.gov>.

The public hearing will be held at the U.S. Environmental Protection Agency Headquarters, William Jefferson Clinton East Building, Main Floor Room 1153, 1201 Constitution Avenue NW, in Washington, D.C. 20460. The public hearing will convene at 8:00 a.m. EST and continue until 8:00 p.m. EST. Parties interested in presenting oral testimony at the public hearing should register online by July 15, 2018, at <https://www.epa.gov/osa/strengthening-transparency-regulatory-science>.

While we have taken steps to ensure the accuracy of this [internet version of the rule](#), it is not the official version of the rule for purposes of public comment. Please refer to the official version in a forthcoming *Federal Register* publication.

Subject: NowThis Inquiry: New EPA research rule

Hello,

My name is Kavish and I am a producer with NowThis Future where I cover science and tech news.

I'm reaching out to see if Dr. Jennifer Orme-Zavaleta would be willing to do an interview over Skype regarding Scott Pruitt's rule [proposal](#) regarding transparency in research.

I saw that Dr. Orme-Zavaleta, among many other scientists, signed a [letter](#) urging Pruitt to reconsider the rule.

An example of our Skype interview can be seen [here](#).

Let me know if this is a possibility. Looking to do this on Monday, April 30.

Thank you!

Best,
kavish harjai
associate producer

Subject: Here are 3 studies that might be hit by Pruitt's rule

Here are 3 studies that might be hit by Pruitt's rule

Scott Waldman, E&E News reporter

Published: Thursday, April 26, 2018

Rep. Lamar Smith (R-Texas) urged EPA Administrator Scott Pruitt to reform the science that underpins regulations. @EPAScottPruitt/Twitter

Scott Pruitt's proposed "secret science" rule could be one of the most consequential actions taken by the EPA administrator since sweeping into the agency with a stunning agenda to deconstruct key safeguards on the environment, according to his critics and supporters.

The rule announced Tuesday could require agency officials to omit credible studies that scientists say justify limits on air pollution. As Pruitt's adversaries gaped at what they described as an audacious attack on environmental rulemaking, some of his ardent supporters applauded the administrator for boldly addressing what they see as liberal bias in scientific circles.

Joseph Bast, CEO of the conservative Heartland Institute, which rejects mainstream climate science, called it the "most consequential decision made by EPA since the election of Donald Trump."

The move is seen as a sweeping change in part because the studies being targeted tend to focus on the health impacts of conventional air pollution, like smog. Reducing those effects on people can amount to billions of dollars in avoided health costs, which helps justify EPA rules to clean up power plants in addressing climate change.

Major regulations, including the Clean Power Plan, rely on dozens of studies. Many of those include personal health information, which researchers are not willing or able to release. Pruitt's rule focuses on the kind of research that relies on private databases.

Advertisement

Researchers say they're not sure what specific studies could be affected by the rule because Pruitt's proposal is indeterminate. It appears to give leeway to industry research, they said. It would also allow Pruitt or his successor to "exempt significant regulatory decisions on a case-by-case basis if he or she determines that compliance is impracticable because it is not feasible," according to the proposed rule.

Some older studies that didn't find a link between air pollution and human health may also be precluded, said Dan Greenbaum of the Health Effects Institute. An example is a recent EPA decision not to tighten air quality standards for nitrogen dioxide, a decision supported by research that didn't find causation.

"Overall, this language is still pretty vague, and exactly what will and won't be allowed is not clear," Greenbaum said.

Researchers and legal experts who read the proposed rule closely say it's hard to predict which research will be targeted. Nonetheless, here are some possible targets for exclusion.

Harvard 'Six Cities' study

This 1993 study has influenced federal air pollution regulations and laws. It's also been attacked by industry and its allies ever since it was released.

It tracked more than 20,000 people in six American cities for two years and connected air pollution to serious health effects, including mortality. It found that people in dirtier cities died faster than those in clean cities. The study's findings were independently verified, and it has been used as part of the Clean Air Act.

The Congressional Budget Office estimated benefits of \$20 billion to \$170 billion per year due to reduction of fine particulate matter, which the study first connected to mortality. Because the study uses private health data, which researchers have refused to make public, it might not be eligible for use in future EPA regulations under Pruitt's plan. The study was instrumental in the crafting of the national ambient air quality standards in 1997, which added a category for fine particulate matter.

Pruitt's proposed rule was crafted with the Harvard study in mind. Steve Milloy, a former coal executive and Trump EPA transition team member, was instrumental in pushing the proposed rule and has repeatedly criticized the Harvard study.

1995 American Cancer Society study

Another groundbreaking body of research, this study found a link between air pollution and cardiovascular disease, respiratory disease and lung cancer. It has been used in regulations over the years and has been attacked by industry. The American Cancer Society study has been backed up by dozens of independent studies that found similar results.

Arden Pope, an economics professor at Brigham Young University and co-author of the study, said researchers can't disclose all of their data when human subjects are involved. Institutions typically require researchers to agree to an Institutional Review Board, or IRB, that guarantees data privacy in any study with medical records, where blood is drawn and where sensitive health information is recorded.

"You have an ethical and institutional obligation to maintain the confidentiality of that data," Pope said. "And then some people might say, 'But ah, all you have to do is take off the names and de-identify it,' but in most cases, your IRB won't let you get away with this."

He said the research has been replicated already and that it has been public for years.

"Look at where we publish these results. They're all getting published in very high-quality, peer-reviewed journals; it's hardly secret," Pope said.

'Air Pollution and Mortality in the Medicare Population'

This major study, published in 2017 found that levels of air pollution permitted by EPA killed thousands of people every year. African-Americans and the poor are disproportionately affected by air pollution, it found. Reducing fine particulate pollution, even slightly, would save the lives of 12,000 people annually, the study says.

"The study showed that black men and persons eligible to receive Medicaid had a much higher risk of death associated with exposure to air pollution than other subgroups," the researchers wrote. "These findings suggest that lowering the annual NAAQS may produce important public health benefits overall, especially among self-identified racial minorities and people with low income."

The groundbreaking study may or may not be blocked under the proposed rule, said Greenbaum of the Health Effects Institute, which funded the research. It relies on health data from 60 million Medicare patients from 2002 to 2012; the researchers are making their codes and methodology available.

Under Pruitt's proposed rule, the study may not be used in the formation of future air pollution regulations, which have to be updated under the Clean Air Act every few years.

Hi Tom,

Nice work last week at SAB speaking about the Transparency in Science Rule.

Deliberative Process / Ex. 5

Deliberative Process / Ex. 5

I'm the OP person assigned to this action and noticed this in my news feed. I can't get behind a paywall. Do you have the letter mentioned? If so, can you share that, please.

Politico ME: BIPARTISAN LETTER ASKS PRUITT TO DROP 'SECRET SCIENCE': More than 100 lawmakers — including Republican Reps. Brian Fitzpatrick, Carlos Curbelo, Ryan Costello and Ileana Ros-Lehtinen — signed onto a letter to Pruitt today, asking him to withdraw EPA's so-called secret science proposal to bar EPA from using studies that don't make public all their data.

Best,
Mel

**House E&C Members and ORD Issues
In Prep for Administrator's April 26 Hearing**

Minority

Greg Walden (Oregon-02), Chairman

- did not vote to slash EPA budget by 1.9billion in 2017 (House Roll Call Vote 492 Slashing EPA Funding)
- he has raised concerns about the Portland Harbor Superfund site in a few hearings, though this is not in his district
- sent EPA a letter in late November 2017 about SBIR data reporting with Pallone, we responded in early January, Jennifer signed the letter

Joe Barton (Texas-02), Vice Chairman

- did not vote to slash EPA budget by 1.9billion (House Roll Call Vote 492 Slashing EPA Funding)
- does not like wind energy (quoted something about wind being finite)
- does not believe in climate change, asked about red team/blue team in 12.7.17 hearing

Fred Upton (Michigan-06)

- did not vote to slash EPA budget by 1.9billion (House Roll Call Vote 492 Slashing EPA Funding)
- works to protect the Great Lakes, including actions to protect against invasive species, pollutants, and microbeads
- sent us a letter re tire crumb in 2015

John Shimkus (Illinois-15), Chairs the Environment Subcommittee

- did not vote to slash EPA budget by 1.9billion (House Roll Call Vote 492 Slashing EPA Funding)
- helped lead efforts to update TSCA
- pro WOTUS withdrawal
- suggested EPA workload/force analysis in 12.7.17 hearing
- interested in tire crumb - one of his staffers requested a briefing in summer 2017 (we gave written info as a phone briefing wasn't appropriate at the time)

Michael Burgess (Texas-26)

- he *did* vote to slash EPA's budget by 1.9b (House Roll Call vote 492)
- pro alternative energy sources (many turbine and solar manufacturers in his district)
- asked about Title 42 in the 12.7.17 QFRs, has previously said that EPA's use of Title 42 is 'unbridled exploitation'
- toured Gold King Mine with David Piantanida in 2015

Marsha Blackburn (Tennessee-07)

- she *did* vote to slash EPA's budget by 1.9b (House Roll Call vote 492)
- climate change is "unproven science" "not settled science" (interesting note: got in argument with Bill Nye the Science Guy about this)

Steve Scalise (Louisiana-01)

- (abstained from voting on 368 or 492)
- Denka is just outside his district

Robert Latta (Ohio-05)

- he *did* vote to slash EPA's budget by 1.9b (House Roll Call vote 492)
- district just outside of Toledo (does not include the city), so he might care about HABs

Cathy McMorris Rodgers (Washington-05)

- she *did* vote to slash EPA's budget by 1.9b (House Roll Call vote 492)
- climate skeptic, was in the running to run Trump's Interior

Gregg Harper (Mississippi-03)

- he *did* vote to slash EPA's budget by 1.9b (House Roll Call vote 492)
- retiring this year

Leonard Lance (New Jersey-07)

- did not vote to slash EPA budget by 1.9billion (House Roll Call Vote 492 Slashing EPA Funding)
- Edison lab is not in his district, but close (about 15 miles away).

Brett Guthrie (Kentucky-02)

- he *did* vote to slash EPA's budget by 1.9b (House Roll Call vote 492)

Pete Olson (Texas-22)

- he *did* vote to slash EPA's budget by 1.9b (House Roll Call vote 492)
- interested in San Jacinto superfund (praised cleanup plan)
- asked about impact of RFS study at 12.7.17 hearing
- met with Pruitt in June 2017 to discuss air compliance and other things
(<https://www.epa.gov/newsreleases/epa-administrator-scott-pruitt-and-us-representative-pete-olson-discuss-issues-facing>)

David McKinley (West Virginia-01)

- he *did* vote to slash EPA's budget by 1.9b (House Roll Call vote 492)

Adam Kinzinger (Illinois-16)

- he *did* vote to slash EPA's budget by 1.9b (House Roll Call vote 492)

- pro WOTUS repeal (put out press release praising Pruitt's actions to repeal)

Morgan Griffith (Virginia-09)

- he *did* vote to slash EPA's budget by 1.9b (House Roll Call vote 492)
- introduced legislation in 2013 to reduce EPA staff by 15% over 3-4 years

Gus Bilirakis (Florida-12)

- he *did* vote to slash EPA's budget by 1.9b (House Roll Call vote 492)

Bill Johnson (Ohio-06)

- he *did* vote to slash EPA's budget by 1.9b (House Roll Call vote 492)

Billy Long (Missouri-07)

- he *did* vote to slash EPA's budget by 1.9b (House Roll Call vote 492)
- Stella, Missouri is in his district – we did a sustainable development plan for them a long time ago

Larry Buchson (Indiana-08)

- did not vote to slash EPA's budget by 1.9b (House Roll Call vote 492)

Bill Flores (Texas-17)

- he *did* vote to slash EPA's budget by 1.9b (House Roll Call vote 492)
- happy that Trump withdrew from Paris Climate Agreement
- issued press release against RFS mandate
<https://flores.house.gov/news/documentsingle.aspx?DocumentID=398808>
- issued press release in support of HONEST Act and the SAB Reform act
<https://flores.house.gov/news/documentsingle.aspx?DocumentID=398969>

Susan Brooks (Indiana-05)

- did not vote to slash EPA's budget by 1.9b (House Roll Call vote 492)

Markwayne Mullin (Oklahoma-02)

- he *did* vote to slash EPA's budget by 1.9b (House Roll Call vote 492)
- has said that he ran for office because EPA was a threat to his private company

Richard Hudson (North Carolina-08)

- he *did* vote to slash EPA's budget by 1.9b (House Roll Call vote 492)
- met with Pruitt in May 2017 <https://www.epa.gov/newsreleases/epa-administrator-pruitt-and-congressman-hudson-discuss-environmental-and-economic>

Chris Collins (New York-27)

- did not vote to slash EPA's budget by 1.9b (House Roll Call vote 492)
- happy about Pruitt's steps to repeal WOTUS
- district borders Lake Ontario and Lake Erie, so likely cares about Great Lakes efforts

Kevin Cramer (North Dakota-00)

- he *did* vote to slash EPA's budget by 1.9b (House Roll Call vote 492)
- issued press releases in support of HONEST Act and SAB Reform Act
- proposed merger of EPA and DOE in 2016

Tim Walberg (Michigan-07)

- he *did* vote to slash EPA's budget by 1.9b (House Roll Call vote 492)
- cares about Great Lakes Restoration Initiative <https://walberg.house.gov/media/press-releases/walberg-presses-epa-administrator-protecting-great-lakes>

Mimi Walters (California-45)

- she *did* vote to slash EPA's budget by 1.9b (House Roll Call vote 492)

Ryan Costello (Pennsylvania-06)

- did NOT vote for the HONEST Act or the SAB Reform Act
- did not vote to slash EPA's budget by 1.9b (House Roll Call vote 492)
- has expressed concerns over EPA budget cuts <https://costello.house.gov/media-center/press-releases/costello-responds-budget-blueprint>
- not running for reelection

Buddy Carter (Georgia-01)

- he *did* vote to slash EPA's budget by 1.9b (House Roll Call vote 492)
- very vocal against CPP
- concern about delays at Brunswick superfund site, has criticized EPA in 2018 for this

Jeff Duncan (South Carolina-03)

- he *did* vote to slash EPA's budget by 1.9b (House Roll Call vote 492)

MINORITY

Frank Pallone (New Jersey-06), Ranking Member

- has been vocal about Pruitt's recent ethics issues
- generally pro-EPA, particularly about how we are responsive to extreme events like hurricanes

- Edison lab is in his district
- one of four E&C members who sent letter to EPA IG to investigate “intimidation of ethics officials and additional costs to taxpayers due to Pruitt’s time spent outside DC”
- sent EPA a letter in late November 2017 about SBIR data reporting with Walden, we responded in early January, Jennifer signed the letter
- in 12.7.17 hearing spoke about the attack on science, SAB, critical of altered TSCA framework rules

Bobby Rush (Illinois-01)

- Interested in biofuels as he’s on the Energy and Power subcommittee
- District touches Lake Michigan (but not much) so likely interested in Great Lakes issues

Anna Eshoo (California-18)

- Concerned about drought, climate change, and transportation issues

Eliot Engel (New York-16)

- Called for Pruitt to resign on April 6
- Concerned about fracking, flooding and hurricanes (his district hit by Sandy)

Gene Green (Texas-29)

- Applauds efforts to clean up San Jacinto superfund site
- District affected by Hurricane Harvey and criticized EPA’s slow response
- Asked Pruitt to commit to lowered RFS in 12.7.17 hearing

Diana Degette (Colorado-01)

- has been vocal about Pruitt’s recent ethics issues and spending
- wants to expand National Parks access
- has issued several press releases praising actions or taking actions to reduce methane emissions
- one of four E&C members who sent letter to EPA IG to investigate “intimidation of ethics officials and additional costs to taxpayers due to Pruitt’s time spent outside DC”

Michael Doyle (Pennsylvania-14)

Janice Schakowsky (Illinois-09)

- district borders Lake Michigan so cares about Great Lakes, invasive species
- introduced legislation to reduce mercury emissions

G.K. Butterfield (North Carolina-01)

- toured an Energy Star Habitat for Humanity home in Durham with Gina McCarthy in 2014 as part of EPA's "Energy Efficiency Action Week"

Doris Matsui (California-06)

- issued press release condemning weakening the clean vehicle standards
- coauthored legislation that led to EPA implementing rules to protect consumers from formaldehyde in wood

Kathy Castor (Florida-14)

- one of four E&C members who sent April 5 letter to EPA IG to investigate "intimidation of ethics officials and additional costs to taxpayers due to Pruitt's time spent outside DC"
- district used to border Gulf of Mexico (until 2012) and was affected by BP spill, she still works to help families recover and fights against big oil

John Sarbanes (Maryland-03)

- vocal about Pruitt's ethics and spending
- cares about protecting Chesapeake Bay

Jerry McNerney (California-09)

- cares about perchlorate

Peter Welch (Vermont-00)

- concerned about three clusters of chemicals in flame retardants that can harm first responders
- cares about Lake Champlain restoration/preservation

Ben Ray Lujan (New Mexico-03)

- district affected by Gold King Mine
- promotes renewable energy
- vocal about Pruitt and ethics

Paul Tonko (New York-20)

- one of four E&C members who sent April 5 letter to EPA IG to investigate "intimidation of ethics officials and additional costs to taxpayers due to Pruitt's time spent outside DC"
- vocal about BOSC dismissals/nonrenewals
- district near Hoosick Falls (but Hoosick not in district 20)
- sent QFR about IRIS for 12.7.17 Pruitt hearing, "How do you view the role of IRIS relative to ensuring full implementation of the TSCA program?" and "Will you commit to fully supporting the IRIS program?"
- Spoke about how science and scientific integrity must be protected during the 12.7.17 hearing

- Very concerned about changes to science advisory boards, spoke about it during 12.7.17 hearing

Yvette Clarke (New York-09)

David Loebsack (Iowa-02)

- cares about RFS

Kurt Schrader (Oregon-05)

- issued press release opposing freezing grants in early 2017
- district very close to Corvallis lab

Joseph Kennedy (Massachusetts-04)

Tony Cardenas (California-29)

- vocal against efforts to dismantle EPA
- EJ and drought are issues in his district

Raul Ruiz (California-36)

- One of biggest issues in district is Salton Sea and asthma rates, EJ
- Concerned about fine PM (talked about it during 12.7.17 hearing)

Scott Peters (California-52)

- Strong supporter of methane rule

Debbie Dingell (Michigan-12)

- Cares about HABs in Lake Erie
- District includes Ann Arbor and Grosse Ile, and her staffers have asked us a few times about closing the Grosse Ile lab
- Participated in "Save the US EPA Day" in Sept 2017

Hi all,

We received comments from OMB on the QFR that ORD drafted on censored science. While the suggested language is for after August 16th, OCFO would like to respond to OMB before that date. If for any reason our responses do not go out before August 16th, OMB suggested the language in the document to be included which is what needs to be reviewed. Please let us know your thoughts and comments by August 15th if possible.

Thank you!

Subject: one question : U.S. environment agency proposes limits to science used in rulemaking

Hi Tina I hope you are doing well.

Such a shame you did not attend the toxicology conference in Belgrade, it was interesting!

I am writing you to for a piece of information.

We came across this article in Reuters which I am sure you are fully aware of:
U.S. environment agency proposes limits to science used in rulemaking

<https://www.reuters.com/article/us-usa-epa-science/u-s-epa-set-to-unveil-policy-barring-secret-science-sources-idUSKBN1HV2DJ>

The article points out that scientists and media said that this proposal result in „excluding all data where confidential patient information cannot be revealed“ but are not patient data anyway always anonymized? Would this indeed have a huge impact on your work?

Let me know if I am right in asking this question to you or if shall I re-direct my question to a colleague of yours.

Regards,

Lucia

Subject: Thursday Check in
Attachments: Response to CBO Questions about the HONEST Act - ORD Draft Answers 3-21-....doc; 1.18.18.tps managers call 1.17v2.docx

Agenda

1. Managers call (see attached draft)
2. Honest Act meeting with HSST staff (response to CBO questions attached)
 - a. Attendance at Friday, January 19th pre-meeting?
 - b. Any other prep needed?
3. SEPW (minority) briefing request - what re-organization/budget options are being contemplated for IRIS and why, and how the NAS review process is going?
 - a. Timeframe – after the NAS meeting?
4. FYI – Senator Kamala Harris phone briefing on Scientific integrity Committee, how the SIO works with the OIG, and tracking data for the annual reports.
 - a. Francesca, Vince, and Jennifer
5. Does Mike/hybrid committee need support?
6. Guidance on implementation for Implementation of EO 13812 (see email below from Krysti Corbett, director LER)
7. Round Robin

HRO, PMO and LER Communities,

As you are aware, on December 13, 2017, OPM issued [Guidance for implementation of Executive Order 13812](#) regarding the status of union forums and councils. Consistent with this guidance, the agency must take the following actions:

- Rescind all agency-wide and local labor-management partnership councils, committees, and labor-management forums, irrespective of whether they were formed pursuant to E.O. 13522 or a different authority.

- If your organization has issued “orders, rules, regulations, guidelines, or policies” in connection with the creation of the forums, you should rescind those instruments and documents that are associated with these forums and which may create legal impediments to abolishment of the forums.
- If a forum or associated guidelines, rules, or policies have imbedded into a collective bargaining agreement or other memorandum of understanding with a collective bargaining agent for employees at the agency, you must seek to renegotiate those terms at the earliest practicable juncture.

If you have any future forum or council meetings scheduled (that are not covered by a collective bargaining agreement or other enforceable MOU), you must cancel all associated meetings.

The sequencing of this is as follows:

- 1/12/2018 – Notice to LER and HR Communities
- 1/16/2018 – Notice to Stephanie Doolan, EPA union council national representative, and EPA national union representatives
- 1/17/2018 – Briefing for ARA community
- 1/26/2018 – Confirmation of compliance due to LERD (see below)

Please respond to me and Bob Coomber no later January 26, 2018, confirming your compliance with this guidance. If you have a forum or council that is covered by a CBA or MOU, please respond with a copy of the relevant agreement, and the earliest date at which it can be reopened.

Thank you for your patience, understanding and compliance with this guidance. Please contact either me or Bob Coomber at 202-564-0955 if you have any questions.

Pruitt's advisers question 'secret science' plan

Scott Waldman, E&E News reporter

Published: Wednesday, May 16, 2018

EPA's Science Advisory Board wants to review Administrator Scott Pruitt's plan to restrict studies the agency uses when crafting regulations.

The board is now led by a Pruitt appointee, Michael Honeycutt, who signed off on the request for more discussion on Pruitt's plan to limit the agency's use of scientific studies to those that use public data.

In a May 12 memo, members of an SAB working group flagged potential problems with the rule and determined that it could affect regulations by making them more or less stringent. They wrote that they learned of the proposed rule from news articles and the *Federal Register* and noted that EPA did not provide a description of the proposed action.

EPA is required by law to provide the SAB with "proposed criteria documents, standards, limitations, or regulations provided to any other Federal agency for formal review and comment, together with relevant scientific and technical information on which the proposed action is based," the group said in the memo.

Among the criticisms was that the agency appears to have developed the rule without consulting actual researchers.

Advertisement

"The precise design of the rule appears to have been developed without a public process for soliciting input from the scientific community," the group wrote. "Nor does the preamble to the rule describe precisely how the proposal builds on previous efforts to promote transparency such as the Information Quality Act and EPA's Information Quality Guidelines."

The proposed rule is based on legislation by Rep. Lamar Smith (R-Texas), chairman of the House Science, Space and Technology Committee. Pruitt adopted Smith's legislation, once known as the "Secret Science" bill, after it passed the House multiple times but failed to make it through the Senate. Smith and other proponents of the legislation say it's necessary to increase accountability in science used in regulations that can have an economic impact.

Critics say it's designed to eliminate consideration of major health studies that form the backbone of the Clean Air Act and air pollution provisions. One of the targets of the proposed rule is widely considered to be the Harvard Six Cities Study, a groundbreaking body of research that connected air pollution to significant health problems.

The researchers wrote in their memo that the Harvard study has been reviewed multiple times, by researchers who did not have access to its underlying data but came to similar conclusions.

"EPA's Science Advisory Board plays an important role in informing EPA actions on policy and regulatory matters," an EPA spokesman said. "We value the Board's expertise, and we welcome feedback from the chartered panel on areas in which they are interested in getting additional scientific information that is relevant to the rulemaking process."

The SAB working group found that the proposed rule did not ascertain the effect of data restrictions on existing regulations, nor did it consider the costs of imposing such a program. The researchers acknowledged that some scientific disciplines need more transparency but said the field has already been moving in that direction. They noted that many human health studies are conducted with the condition and agreement that the subject's confidentiality will be protected. They wrote that the proposed rule might be better applied to future studies, rather than those that are already in use at the agency.

"The Work Group also found that the rule is highly controversial (indeed a similar legislative effort in the House has been stalled in Congress for several years) and could have long-term implications," they wrote. "Furthermore, the rule could have the effect of removing legal, ethical, and peer-reviewed studies of health effects as sources to support the agency's regulatory efforts."

The researchers noted that EPA already has "mechanisms for vetting science through several expert panels," including the SAB itself. They also requested that EPA provide a scientific and technological basis for its proposed actions.

Harvard researchers — secret science plan 'irrational at best'

EPA

EPA headquarters in Washington. EPA/Flickr

An EPA plan to limit the types of studies that can be used in drafting new environmental regulations would spawn "chaos and confusion detrimental to the protection of public health," dozens of Harvard University researchers and physicians warned in comments filed today.

Not only could EPA's approach disqualify numerous studies that have already helped build the case for key safeguards, but it contains "significant ambiguities," they wrote.

Among them: Will EPA "arbitrarily exclude" studies for which the underlying raw data are not available? How will the agency use its authority to grant exemptions from the proposed data availability requirements? And how will the proposal affect measures taken by other agencies that rely on EPA findings or decisions?

The draft rule "is irrational at best and detrimental to public health and safety at worst," the approximately 90 signers said in calling for it to be scrapped.

The proposal, "Strengthening Transparency in Regulatory Science," would effectively bar EPA from using specific studies for developing new regulations unless the underlying data "are publicly available in a manner sufficient for independent validation," according to the text. Since its release this spring, the proposal has met with a torrent of opposition from scientific and public health groups. Industry organizations have been more supportive.

Some observers views the proposal's genesis as rooted in a 2013 bid by House Science, Space and Technology Chairman Lamar Smith (R-Texas) to obtain the underlying data for studies by Harvard and American Cancer Society researchers that led to first-ever air quality standards for fine particulates.

When Smith's attempt to subpoena the data from EPA fell short, he and other GOP lawmakers introduced legislation, initially known as the "Secret Science Reform Act," to block the agency from crafting new regulations based on science "that is not transparent or reproducible."

After several versions of the bill repeatedly failed to pass Congress, Smith early this year pitched then-EPA Administrator Scott Pruitt on implementing the restrictions administratively, according to records obtained by the Union of Concerned Scientists under the Freedom of Information Act (*Climatewire*, April 20).

Pruitt, dogged by ethics and spending controversies, resigned last month. His successor, acting EPA chief Andrew Wheeler, recently told E&E News that he would take "a hard look" at the proposal but wanted to move forward with it (*E&E News PM*, July 13).

With a FOIA [lawsuit](#) filed today, the Environmental Defense Fund is seeking to force EPA to release more records related to the "consideration and implementation of ideas" derived from the House legislation.

The advocacy group, which had sought the records in two requests made in March and May, said EPA's failure thus far to respond runs afoul of a statutory deadline and "deprives the public of important information that could reveal the impetus for the proposed rule, and, thus, offer significant insight into EPA's decision-making process," according to the suit, filed in the U.S. District Court for the Southern District of New York.

Given that the deadline for written comments on the proposal is Aug. 16, the suit added, "any further delay could prevent EDF and other interested parties from thoroughly evaluating and responding to subsequent actions" related to the proposal.

As we have been discussing – and ‘Administrator’s Executive Memorandum’ is likely imminent – this will effectively put the HONEST Act in action:

=====
=====

Pruitt is expected to restrict science. Here's what it means

Scott Waldman and Robin Bravender, E&E News reporters Climatewire: Friday, March 16, 2018

U.S. EPA Administrator Scott Pruitt is planning to restrict which science the agency can use, something conservative lawmakers have been pushing for years. [EPA](#)

U.S. EPA chief Scott Pruitt is expected to roll out plans soon to restrict the agency's use of science in rulemakings, pitting him against critics who say it would threaten public health and environmental protections.

In a closed-door meeting at the Heritage Foundation on Monday, Pruitt told a group of conservatives that he has plans for additional science reform at the agency, according to multiple attendees. EPA hasn't formally shared details of the plan, but it's widely expected to resemble an effort that Republican lawmakers and conservative groups have been pushing for years. It's been met with staunch resistance from Democrats and many scientists.

The plan could come "sooner rather than later," said Steve Milloy, who served on Trump's EPA transition team and attended the meeting at the Heritage Foundation.

EPA did not respond to a request for comment. And Milloy cautioned that he did not know the specifics of the plan and said he was not authorized to discuss the meeting.

The initiative is expected to require EPA — when issuing rules — to rely only on scientific studies where the underlying data are made public. It's an idea that House Science, Space and Technology Chairman Lamar Smith (R-Texas) has been championing for years. He and others argue that EPA has been crafting regulations based on "secret science" to advance its regulatory agenda.

Smith, one of the leading opponents of mainstream climate science in Congress, has repeatedly accused federal climate scientists of engaging in a massive conspiracy to

falsify climate data. And he has repeatedly introduced bills that would require EPA to publicize data it uses when crafting regulations.

Those efforts died when President Obama was in the White House, and Smith's newest legislative push doesn't appear to be moving even though Republicans control both chambers of Congress. The House passed a bill dubbed the "Honest and Open New EPA Science Treatment (HONEST) Act" — requiring that EPA rules be based on science for which underlying data is publicly available and reproducible — last March. But the measure has gone nowhere since it was referred to the Senate Environment and Public Works Committee.

Smith has tried to push the idea elsewhere, too. In comments on the 2019 budget proposal, the GOP majority on the Science panel led by Smith suggested that EPA's funding should be contingent on the administrator's "requiring that all scientific and technical information and data relied on to support a risk, exposure, or hazard assessment; criteria document; standard; limitation; regulation; regulatory impact analysis; or guidance issued by the EPA is made publicly available."

Smith did not respond to a request for comment.

Critics on the left and in the scientific community see the effort as an attempt to hinder EPA from issuing rules.

"A lot of the data that EPA uses to protect public health and ensure that we have clean air and clean water relies on data that cannot be publicly released," said Yogin Kothari with the Union of Concerned Scientists.

Many scientific studies rely on data that can't be made public for reasons like patient privacy concerns or industry confidentiality.

"If EPA doesn't have data to move forward with a public protection for a safeguard, it doesn't have to do that at all," said Kothari. "It really hamstring the ability of the EPA to do anything, to fulfill its mission."

Publishing raw data also opens scientists up to attacks from industry, which can twist or distort data to shape a deregulatory agenda, said Betsy Southerland, a former senior EPA official in the Office of Water who worked on a staff analysis of the "HONEST Act."

Southerland, who left EPA last summer, said the effort is deceptive and is not about transparency, but about sidelining peer-reviewed science that supports regulation of pollution. She said there are numerous examples of groundbreaking studies that are not replicable, such as human health studies after the dropping of atomic bombs in Hiroshima or the ecological effects of the BP PLC Gulf of Mexico oil spill. In many of the older studies, there are a plethora of people, including some who are dead, who could no longer be tracked down.

"This is just done to paralyze rulemaking," she said. "It's another obstacle that would make it so hard and so difficult to go forward with rulemaking that in the end, the only thing that would happen — in the best case you would greatly delay rulemaking; in the worst case you would just prevent it. It would be such an obstacle you couldn't overcome it."

Publicizing the data in some EPA actions, which often come after years of research, could be extensive. For example, risk assessments for certain chemicals sometimes cite hundreds or even thousands of studies, all of which would have to be tracked down for data collection, according to the EPA analysis of the "HONEST Act."

Requiring data transparency would cost hundreds of millions of dollars because it would require EPA staff to track down data from study authors and create an online management system to store and present those data, the analysis found. In addition,

EPA staff would have to spend time redacting personally identifiable information in the studies, and study authors would likely require payments for preparing and sending their data.

EPA career staff estimated that Smith's legislation would add \$250 million in costs annually for the first few years after it was implemented, Southerland said. That estimate was dismissed by senior EPA officials who said those costs were inflated and that the agency would not use many studies to which the rule would apply, but they did not provide evidence, she said. EPA's analysis of Smith's bill was published by the radio program "Marketplace."

Milloy, who has long pushed for EPA to stop issuing regulations unless the underlying scientific data are made public, said the science reform effort could be done through a directive, in the same way that Pruitt reshaped EPA's science advisory panels.

The overhaul of those committees is another area where Pruitt came through on one of Smith's longtime priorities.

In October, Smith was seated front and center at an event where Pruitt announced that he would reform the advisory panels to bar researchers who take government funding. Critics said that move skewed the advice EPA is getting by making it tough for researchers who rely on public funding to participate, but keeping industry-funded scientists on board.

Pruitt then appointed as science advisers a number of researchers whose work is funded by industry, energy lobbying groups and conservative think tanks, while forcing out academics from major research institutions.

"Pruitt did a great job in cleaning up the science advisory boards, and if he does that kind of work on this, that's fantastic," Milloy said of the expected science data reform effort. "My goal is to make sure EPA does not rely on scientific studies unless the data is made available for replication by somebody."

Kothari of the Union of Concerned Scientists called it "alarming" that the Trump administration's science agenda "is being run by the chairman of the Science Committee, given that he has continued to not care about how science informs policymaking."

"This is the second thing now that this administrator will be implementing based on legislation that was never enacted," Kothari said. "It's just another excuse for Pruitt's EPA to really abrogate EPA's responsibility to protect human health and the environment."

Scientists say they want open data — but not Pruitt's plan

Scott Waldman, E&E News reporter
Published: Wednesday, April 25, 2018

EPA Administrator Scott Pruitt spoke at agency headquarters earlier this month. Andrew Harnik/Associated Press

Scientists are worried that EPA's new plan to increase transparency will undermine it instead.

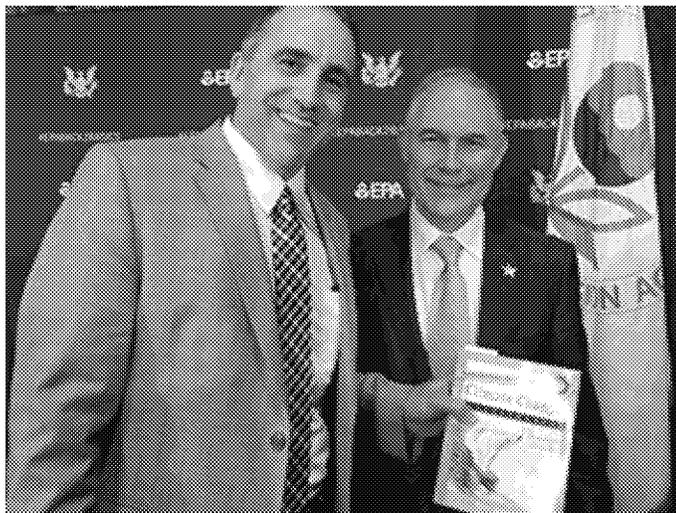

EPA Administrator Scott Pruitt yesterday unveiled a long-awaited plan to require that EPA studies used in future regulations must have open and transparent data. Pruitt said the proposed rule is part of his larger effort to dramatically reform the way science is used at the agency, which also included the removal of Science Advisory Board members who received EPA grants and were replaced with industry-friendly researchers.

"The science we use is going to be transparent, it's going to be reproducible, it's going to be able to be analyzed by those in the marketplace, and those that watch what we do can make informed decisions about whether we've drawn the proper conclusions or not," Pruitt said yesterday at EPA headquarters.

But some of the biggest critics of Pruitt's plans are scientists who say they've already been working to boost transparency for years.

Researchers have long grappled with how to make the peer-review process more accessible, how to make more research replicable and how to better share data, said Gretchen Goldman, research director for the Center for Science and Democracy at the Union of Concerned Scientists.

Scientists are always discussing ways to make their work more transparent, accessible and instructive for the community at large, Goldman added. The proposed EPA rule establishes a set of political hoops for researchers that will take more of their time, she said. And many won't be able or willing to devote more effort to the additional red tape put up by Pruitt.

Blogger Marc Morano presented his book, "The Politically Incorrect Guide to Climate Change," to Pruitt yesterday. Morano/Twitter

"This is not about all of the details that scientists need to scrutinize each other's work. That information is already widely available, and scientists spend a tremendous amount of time disclosing all of their data and methods to get their work published," she said. "This is adding additional burdens; it's not the information that is required for appropriate peer review and reproducibility of studies. This is clearly just a political move."

Scientists and leading scientific organizations were largely excluded from EPA's process in formulating the proposed rule. EPA also shut out reporters from its transparency announcement yesterday as it welcomed industry allies who have long pushed for deregulation in Washington, D.C. The audience allowed into the event, visible on a livestream of the 15-minute presentation, included a core group of those who deny mainstream climate science and who have worked to tear down climate regulations. In addition to House Science, Space and

Technology Chairman Lamar Smith (R-Texas), the audience included Will Happer, an emeritus physics professor at Princeton University and possible candidate to be Trump's science adviser; Marc Morano, who runs a climate science denial website; Steve Milloy, a Trump EPA transition team member; and Myron Ebell of the Competitive Enterprise Institute.

Richard Shiffrin, a professor of cognitive science at Indiana University, Bloomington, thinks what's needed is just minor tuning to the scientific research process, not a full-scale overhaul, he said recently at the National Academy of Sciences. There is an entire cottage industry that focuses on the problems of science, which creates the false public impression that much needs to be fixed, he said.

"The fact that we're talking about solutions still puts the focus on problems that we're trying to solve," he said in an interview with E&E News. "It's as if science is broken, so the public and Congress and the president and everyone else gets the impression that things are falling apart because scientists themselves keep talking about how bad things are and how things need to be fixed. Well, that's not true; things are going incredibly well, so I think that we have to change the narrative and make it clear to the public that science is advancing so rapidly that we can't even keep up."

In a press release yesterday, EPA cited the editorial policies of *Nature* and *Science* magazines as a justification for its proposed rule. Rush Holt, CEO of the American Association for the Advancement of Science and publisher of the *Science* family of journals, said it is dedicated to having as much peer-reviewed information as possible, while the proposed rule is just the opposite. He said EPA's effort is in the name of transparency but will shut out invaluable and necessary research that informs regulations that save lives.

"Its effect will be and maybe its intention is to be able to exclude inconvenient scientific evidence without acknowledging that it has been excluded," he said. "In other words, they'll say, 'We didn't exclude that because it doesn't qualify' so they don't have to explain that they ever excluded it, so that's just the opposite of transparency."

Pruitt allies warn of 'crisis' in science

Critics argue that Pruitt's plan would prevent the use of groundbreaking studies, including those that draw on decades of research that links air pollution to human health. At the same time, it would allow the use of studies, including those conducted by Science Advisory Board members selected by Pruitt and funded by the American Petroleum Institute, that downplay health risks of air pollution ([*Climatewire*](#), April 11).

The proposed rule would allow some data to avoid public scrutiny, as it carved out an exemption for industry data that is considered confidential business information, something the chemical industry has sought.

Rep. Eddie Bernice Johnson of Texas, ranking Democrat on the Science, Space and Technology Committee, called Pruitt's proposal an "insidious plan" designed to hamstring the ability of EPA to protect public health. She has fought efforts by her GOP colleague Smith to get a version of the proposed rule passed into law for years.

"Republicans weren't able to get their 'secret science' bills signed into law, but now they have Administrator Pruitt to do the bidding of industry at the EPA," she said in a statement. "This rule isn't about 'scientific transparency.' It's about undermining public health and the environment."

Smith has pushed such legislation for years, arguing that it would make EPA's work more transparent. Smith has alleged that EPA uses "secret science," and he has accused government researchers of fraud. At the agency headquarters yesterday, he said the new regulation is in response to a larger scientific discussion.

"Many in the scientific community agree that increased access to data is essential for reproducibility and objective analysis," he said. "Open access to scientific data fosters good policymaking. The American people have a right to understand how and why regulatory decisions are made."

In a House office building last week, Smith feted a group of researchers from the National Association of Scholars who routinely attack climate science and who say in a new report that there is a "crisis" in science because too much of it cannot be reproduced. The authors of its new report, titled "The Irreproducibility Crisis of Modern Science," say government agencies should establish review commissions to determine which existing regulations are based on reproducible research and to rescind those that are not, a process that could affect key provisions of the Clean Air Act, among other regulations.

"A reproducibility crisis afflicts a wide range of scientific and social-scientific disciplines, from epidemiology to social psychology," they wrote. "Improper research techniques, lack of accountability, disciplinary and political groupthink, and a scientific culture biased toward producing positive results together have produced a critical state of affairs."

The group has long cast doubt on established and mainstream climate science. The National Association of Scholars, tax filings show, has received hundreds of thousands of dollars in funding from the Charles Koch Foundation as well as the Sarah Scaife Foundation, both of which have supported attacks on climate science. The afterword of the report was written by Happer of Princeton.

As we have been discussing – and ‘Administrator’s Executive Memorandum’ is likely imminent – this will effectively put the HONEST Act in action:

=====

Pruitt is expected to restrict science. Here's what it means

Scott Waldman and Robin Bravender, E&E News reporters Climatewire: Friday, March 16, 2018

U.S. EPA Administrator Scott Pruitt is planning to restrict which science the agency can use, something conservative lawmakers have been pushing for years. EPA

U.S. EPA chief Scott Pruitt is expected to roll out plans soon to restrict the agency's use of science in rulemakings, pitting him against critics who say it would threaten public health and environmental protections.

In a closed-door meeting at the Heritage Foundation on Monday, Pruitt told a group of conservatives that he has plans for additional science reform at the agency, according to multiple attendees. EPA hasn't formally shared details of the plan, but it's widely expected to resemble an effort that Republican lawmakers and conservative groups have been pushing for years. It's been met with staunch resistance from Democrats and many scientists.

The plan could come "sooner rather than later," said Steve Milloy, who served on Trump's EPA transition team and attended the meeting at the Heritage Foundation.

EPA did not respond to a request for comment. And Milloy cautioned that he did not know the specifics of the plan and said he was not authorized to discuss the meeting.

The initiative is expected to require EPA — when issuing rules — to rely only on scientific studies where the underlying data are made public. It's an idea that House Science, Space and Technology Chairman Lamar Smith (R-Texas) has been championing for years. He and others argue that EPA has been crafting regulations based on "secret science" to advance its regulatory agenda.

Smith, one of the leading opponents of mainstream climate science in Congress, has repeatedly accused federal climate scientists of engaging in a massive conspiracy to falsify climate data. And he has repeatedly introduced bills that would require EPA to publicize data it uses when crafting regulations.

Those efforts died when President Obama was in the White House, and Smith's newest legislative push doesn't appear to be moving even though Republicans control both chambers of Congress. The House passed a [bill](#) dubbed the "Honest and Open New EPA Science Treatment (HONEST) Act" — requiring that EPA rules be based on science for which underlying data is publicly available and reproducible — last March. But the measure has gone nowhere since it was referred to the Senate Environment and Public Works Committee.

Smith has tried to push the idea elsewhere, too. In comments on the 2019 budget proposal, the GOP majority on the Science panel led by Smith suggested that EPA's funding should be contingent on the administrator's "requiring that all scientific and technical information and data relied on to support a risk, exposure, or hazard assessment; criteria document; standard; limitation; regulation; regulatory impact analysis; or guidance issued by the EPA is made publicly available."

Smith did not respond to a request for comment.

Critics on the left and in the scientific community see the effort as an attempt to hinder EPA from issuing rules.

"A lot of the data that EPA uses to protect public health and ensure that we have clean air and clean water relies on data that cannot be publicly released," said Yogin Kothari with the Union of Concerned Scientists.

Many scientific studies rely on data that can't be made public for reasons like patient privacy concerns or industry confidentiality.

"If EPA doesn't have data to move forward with a public protection for a safeguard, it doesn't have to do that at all," said Kothari. "It really hamstring the ability of the EPA to do anything, to fulfill its mission."

Publishing raw data also opens scientists up to attacks from industry, which can twist or distort data to shape a deregulatory agenda, said Betsy Southerland, a former senior EPA official in the Office of Water who worked on a staff analysis of the "HONEST Act."

Southerland, who left EPA last summer, said the effort is deceptive and is not about transparency, but about sidelining peer-reviewed science that supports regulation of pollution. She said there are numerous examples of groundbreaking studies that are not replicable, such as human health studies after the dropping of atomic bombs in Hiroshima or the ecological effects of the BP PLC Gulf of Mexico oil spill. In many of the older studies, there are a plethora of people, including some who are dead, who could no longer be tracked down.

"This is just done to paralyze rulemaking," she said. "It's another obstacle that would make it so hard and so difficult to go forward with rulemaking that in the end, the only thing that would happen — in the best case you would greatly delay rulemaking; in the worst case you would just prevent it. It would be such an obstacle you couldn't overcome it."

Publicizing the data in some EPA actions, which often come after years of research, could be extensive. For example, risk assessments for certain chemicals sometimes cite hundreds or even thousands of studies, all of which would have to be tracked down for data collection, according to the EPA analysis of the "HONEST Act."

Requiring data transparency would cost hundreds of millions of dollars because it would require EPA staff to track down data from study authors and create an online management system to store and present those data, the analysis found. In addition, EPA staff would have to spend time redacting personally identifiable information in the studies, and study authors would likely require payments for preparing and sending their data.

EPA career staff estimated that Smith's legislation would add \$250 million in costs annually for the first few years after it was implemented, Southerland said. That estimate was dismissed by senior EPA officials who said those costs were inflated and that the agency would not use many studies to which the rule would apply, but they did not provide evidence, she said. EPA's [analysis](#) of Smith's bill was published by the radio program "Marketplace."

Milloy, who has long pushed for EPA to stop issuing regulations unless the underlying scientific data are made public, said the science reform effort could be done through a directive, in the same way that Pruitt reshaped EPA's science advisory panels.

The overhaul of those committees is another area where Pruitt came through on one of Smith's longtime priorities.

In October, Smith was seated front and center at an event where Pruitt announced that he would reform the advisory panels to bar researchers who take government funding. Critics said that move skewed the advice EPA is getting by making it tough for researchers who rely on public funding to participate, but keeping industry-funded scientists on board.

Pruitt then appointed as science advisers a number of researchers whose work is funded by industry, energy lobbying groups and conservative think tanks, while forcing out academics from major research institutions.

"Pruitt did a great job in cleaning up the science advisory boards, and if he does that kind of work on this, that's fantastic," Milloy said of the expected science data reform effort. "My goal is to make sure EPA does not rely on scientific studies unless the data is made available for replication by somebody."

Kothari of the Union of Concerned Scientists called it "alarming" that the Trump administration's science agenda "is being run by the chairman of the Science Committee, given that he has continued to not care about how science informs policymaking."

"This is the second thing now that this administrator will be implementing based on legislation that was never enacted," Kothari said. "It's just another excuse for Pruitt's EPA to really abrogate EPA's responsibility to protect human health and the environment."

Biweekly Update on Strengthening Transparency in Regulatory Science Rulemaking
Agenda
October 4, 2018

- I. SAB
- II. Draft document: *Comparison Between the Strengthening Transparency in Regulatory Science Proposed Rule and the Scientific Integrity Policy*
- III. Staff Recommendations
 - a. Secure repositories for PII
 - b. Where to address dose-response models and issues of reproducibility (e.g., in guidance)
 - c. Whether applicability of regulation to availability of data and computer code can be made prospectively
 - d. Other issues?
- IV. Status of organizing public comments and evaluation of issues
 - a. Legal issues
 - i. OGC review
 - b. Relationship of proposed rule to environmental statutes
 - c. Meetings Scheduled with 1) OW and OGC; 2) OAR and OGC
 - i. OCSP
 - d. Replication and reproducibility
 - e. PII
 - f. Dose-response models
- V. ADP workgroup
- VI. Briefing status

Biweekly Update on Strengthening Transparency in Regulatory Science Rulemaking
Agenda
November 1, 2018

- I. Acting Administrator briefing (draft attached)
- II. OGC Briefing on Legal Issues for IOAA – November 1, 2018
- III. ADP Workgroup meeting held October 23, 2018. Next meeting November 20, 2018
- IV. SAB
- V. Status of organizing public comments and evaluation of issues
 - a. Relationship of proposed rule to environmental statutes
 - b. Controlled access data - PII, CBI and National Security data
 - c. Dose-response models and issues of reproducibility
 - d. Requirements on availability of data and computer code prospectively

Attachment

Biweekly Update on Strengthening Transparency in Regulatory Science Rulemaking
Agenda
November 29, 2018

- I. Acting Administrator briefing
- II. ADP Workgroup meeting held November 20, 2018. Next meeting mid-January 2019
- III. Evaluation of issues
 - a. Relationship of proposed rule to environmental statutes
 - b. Controlled access data - PII, CBI and National Security data
 - c. Dose-response modeling; different offices' approach to the use of defaults in dose-response modeling and model assumptions
 - d. Issues of replicability and reproducibility
 - e. Issues associated with how costs and benefits are characterized in the proposed rule

Monthly Update on Strengthening Transparency in Regulatory Science Rulemaking
Agenda
February 14, 2019

- I. Regulatory Agenda Update
- II. Acting Administrator briefing
 - a. Briefing paper
 - b. Background materials

FYI

- I. Next ADP Workgroup meeting March 6, 2019.
- II. Background briefings for IOAA
 - a. Issues associated with replicability and reproducibility – February 21, 2019
 - b. Dose-response modeling – February 28, 2019
 - c. Characterization of costs and benefits in the proposed rule – March 7, 2019
- III. Workgroup contact group meetings
 - a. Relationship of proposed rule to environmental statutes
 - b. Dose-response modeling; different offices' approach to the use of defaults in dose-response modeling
 - c. Issues associated with how costs and benefits are characterized in the proposed rule

EPA/ORD

RIN: 2080-AA14

Publication ID: Fall 2018

Title: Strengthening Transparency in Regulatory Science

Abstract: This action is intended to strengthen the transparency of EPA regulatory science. As a result of this action, EPA would ensure that the regulatory science underlying its actions is publicly available in a manner sufficient for independent validation. This action would increase transparency of the assumptions underlying dose-response data and models that support these EPA regulatory decisions. The Agency proposes to take this action under the authority of the statutes it administers, including provisions providing general authority to promulgate regulations necessary to carry out the Agency's functions.

Rodan/Teichman Update
25 October 2018, 2:00-2:30p

Agenda

0. Things Bruce needs to tell Kevin
1. Schedule for Kevin's PARS
2. Georgetown/NIST/EPA MOU
3. Public Access
 - ❖ Data memo with JOZ
 - ❖ Embargo periods > 12 months
4. Strengthening Transparency Proposed Rule
 - ❖ OGC briefing for JOZ, October 31
 - Significant rule w/o cost/benefit analysis
 - Best available science in TSCA, CAA
 - ❖ Briefing for Acting Administrator, TBD

Rodan/Teichman Biweekly

8 November 2018

Agenda

1. Items Bruce needs to share with Kevin
2. KYT FY 2018 Performance Review/ FY 2019 Performance Plan
3. Public Access Forum
 - Data Plan to STPC
 - Rate-determining next step: Extramural Order
 - D² request
4. Strengthening Transparency Proposed Rule – I/O Report to D²
5. UOG – NM White Paper
6. GU/NIST/EPA M.S. program
7. IOAA Futures effort

Bruce/Kevin Meeting

19 December 2018

Agenda

1. Items Bruce need to share with Kevin
2. Public Access Forum
 - ScienceHub “build out”
 - Intramural dataset training
 - Extramural metadata record editor
 - Meeting with OGC re Extramural
3. Strengthening Transparency Rule
 - Briefing for Acting Administrator TBD
 - The Hill article
4. GU/NIST/EPA MOU
 - Tuesdays starting 15 January 2019
 - Continuously updating lectures (e.g., TSCA in 2019, climate change reports, methane)

EPA to pursue final 'science transparency' rule in 2019

BY TIMOTHY CAMA - 12/14/18 05:15 PM EST

The Environmental Protection Agency (EPA) plans to pursue next year a final version of its much-criticized rule that would restrict the scientific studies it can use to justify regulations.

In a Friday interview with The Hill, acting EPA chief Andrew Wheeler dismissed the idea that the science transparency regulation was on the “back burner” since the administration recently listed it as a “long-term” regulatory action.

“It is not a back-burner issue. I feel strongly about that,” Wheeler said. “And we will move forward to finalize that next year.”

The transparency rule was a key priority of Wheeler’s predecessor, Scott Pruitt, before he resigned from the agency in July under a slew of ethics and spending scandals.

But Wheeler made it clear that he isn’t letting it fall by the wayside.

“I’ve worked on those issues for over 20 years. So I feel very strongly about science transparency,” said Wheeler, who has previously served as a career EPA employee, a GOP Senate aide and an energy industry lobbyist.

Under the proposal, the EPA would only be able to use scientific data and studies if they are reproducible and the underlying data can be made public, among other factors, with some exceptions, including for personal health data.

Republicans and regulated industries have been pushing similar proposals for years, arguing that the EPA previously relied too much on “secret” science that could not be fully scrutinized.

“I fundamentally believe that the more information that we put out as an agency, the better our decisions will be and the more confidence the public will have in what we’re doing,” Wheeler said.

“And I think if we’re going forward with a regulation, particularly a major regulation, we need to tell the American public, what are we using for basis? How did we decide what we’re deciding? We need to put that information out there.”

Wheeler rejected the main criticism from opponents of the rule, that it is meant to restrict the agency’s ability to regulate by putting out of reach large bodies of valuable science, such as many epidemiological studies that by their nature cannot be reproduced.

“I don’t think it’s designed to restrict what we use. It’s designed to get the information out to the public. The critics look at it as ‘oh, you’re trying to get rid of a lot of the studies, you’re trying to restrict what the agency can use.’ No,” he said.

“And part of it is to send a signal to the research community that you need to make your data available to the public. Particularly if the United States government is paying for it. But we need to make the data available to the public.”

Wheeler's opponents had read as a positive sign an October report by the White House Office of Management and Budget that the proposal was either dead or not a priority for the EPA, since it was listed in "long-term" actions that wouldn't be finalized before 2020 at the earliest.

For those critics, Wheeler's dedication to the rule is concerning.

California Attorney General Xavier Becerra, who has sued the Trump administration's EPA numerous times — frequently with success — said if the science rule moves forward, he'll fight it.

Bruce/Kevin Meeting

5 March 2019

Agenda

1. Items Bruce needs to share with Kevin
2. Public Access Forum
 - Metrics due 15 March
 - 5 March Forum Meeting
 - ScienceHub “build out”
 - Intramural dataset and SDMP training
 - Extramural metadata record editor
 - Extramural matrix (attached) being reviewed by OGC
3. Strengthening Transparency Rule
 - Briefing for Acting Administrator
 - Workgroup meetings
4. AE NPD SME
5. UOG (a.k.a. HF)
 - **Deliberative Process / Ex. 5**
 - EPA/State/Tribal – HEI presentation postponed
6. GU/NIST/EPA MOU
 - Every Wednesday (4-6 pm Lecture; 2-3 pm Office Hours)
 - Continuously updating lectures

Executive Summary

The American Chemistry Council (ACC) is pleased to provide the following comments on the Environmental Protection Agency's (EPA) proposed rule, Strengthening Transparency in Regulatory Science (Strengthening Transparency), published in the Federal Register on April 30, 2018.¹ ACC and its members are directly impacted by the science-based regulatory actions of EPA under a myriad of federal environmental statutes. As such, ACC has a keen interest in EPA's adoption and implementation of a proposal as important as this one, which will reach across the breadth of the Agency's authority.

In the following comments, ACC offers its support for the proposed rule; responds to a number of questions posed by EPA in its preamble; and provides a number of specific recommendations regarding how the proposed rule can be improved and strengthened. Specifically, ACC suggests the following:

- Implementation of the rule would benefit from policy and/or guidance regarding the weight to be accorded the science informing significant regulatory decisions
- EPA should provide better historical context and applicability to the proposed rule
- EPA has not in all circumstances properly identified from where its authority is derived under the various federal environmental statutes cited in the proposed rule
- The regulation should apply to Executive Order 12866 significant regulatory actions at the proposal stage
- Key regulatory definitions and regulatory text require greater clarity
- Clarifications to the preamble are needed
- Implementation of the rule should be statute specific
- The proposed rule should apply to enforcement and permit proceedings
- EPA should incorporate stronger data and model access requirements into its Cooperative Agreements and Grants while complying with privacy and confidentiality requirements and laws
- The rule should apply to all EPA programs, including its IRIS program
- Methodologies and technologies providing protected access to confidential and sensitive data should be employed

¹ 83 FR 18768 (April 30, 2018).

- The rule should generally apply prospectively to EPA decision making
- Bias should not be presumed
- EPA should work with entities where scientific data are not publicly available in a manner sufficient for independent evaluation

I. Introduction and Background

ACC strongly supports EPA’s demonstrated commitment in this proposal to build upon the principles underlying the Administrative Procedure Act (APA), Executive Orders 12866, 13777, and 13783, and guidance of Office of Management and Budget (OMB). In addition, ACC supports the proposal’s expansion of the 2013 “Increasing Access to the Results of Federally Funded Scientific Research” memorandum directing federal agencies and offices to develop and submit plans to the White House Office of Science and Technology (OSTP) that ensure peer-reviewed publications and digital scientific data resulting from federally-funded scientific research are accessible to the public, the scientific community, and industry—to the extent practicable.

The OSTP directive required each agency to develop a public access plan that maximizes access to federally-funded “digitally formatted scientific data”² while also protecting confidentiality, personal privacy, confidential business information (CBI), intellectual property rights, and U.S. competitiveness.³ In 2016, EPA issued its Plan to Increase Access to Results of EPA-funded Scientific Research in response to the OSTP directive.⁴ Importantly, EPA’s Strengthening Transparency proposal appears to extend such commitments beyond the government-funded requirement of the OSTP directive to “dose response data and models underlying pivotal regulatory science regardless of the source of funding or identity of the party conducting the regulatory science.”⁵

ACC believes that EPA’s proposal correctly codifies an important good governance principle—that government agencies should be as transparent as possible, within the bounds of the law, about scientific information relied upon and the justifications for the significant regulatory decisions they make.

² As defined in OMB circular 110 as “the digital recorded factual material commonly accepted in the scientific community as necessary to validate research findings, including data sets used to support scholarly publications. . .” It is a definition consistent with that of “research data” in the regulatory text of EPA’s proposal.

³ More than 20 federal agencies have developed and implemented Data Access Plans, including EPA, the National Institutes of Health (NIH), the Center for Disease Control (CDC), and the Food and Drug Administration (FDA).

⁴ Plan to Increase Access to Results of EPA-Funded Scientific Research (USEPA, November 29, 2016) <https://www.epa.gov/sites/production/files/2016-12/documents/epascientificresearchtransparencyplan.pdf>

⁵ ACC suggests improvements to EPA’s terminology in the preamble that are described later in these comments in sections VI and VII.

The Agency's focus on dose-response data and models appropriately reflects the evolution of toxicology from a largely observational science to a discipline that applies advanced scientific techniques and knowledge. Research programs within academia, government, and private sector labs have greatly improved our ability to investigate and understand the underlying biological mechanisms, modes of action, and dose responses of toxicants. We can now evaluate biological events leading to toxicity and consider how (in a dose-response manner) these biological events relate to potential risks to human health. This was not possible 10-to-20 years ago. This improvement should directly translate to the application of transparent weight-of-the-evidence approaches to the assessment of human relevance; the development of points of departure; and the derivation of protective human health equivalent dosages that minimize the use of uncertainty factors and variability. A goal has been to apply this knowledge to improve the scientific basis of government regulatory policies and industry product stewardship.

For environmental concerns, exposure-response is the more appropriate relationship to evaluate because most of the environmental test guidelines require quantifying concentrations in media external to the organism for use as the exposure metric. Toxicity information and—when available—knowledge of mechanisms, are integrated with exposure-response models for risk-based environmental safety decision making.

Despite significant scientific progress in the understanding of mechanisms of action (MOA) and adverse outcome pathways (AOP), the movement away from default precautionary assumptions has been slow to occur, particularly in certain EPA programs. Significant investments by government, academia, and the private sector into toxicological research are counteracted by the failure to move away from default assumptions toward science-based decisions.

ACC encourages EPA to implement best available scientific procedures under this rulemaking. The Agency should move away from the outdated linear concept of how biology operates toward biologically-based mechanisms, i.e., mode of action (MOA) and adverse outcome pathways (AOP) for both cancer and non-cancer effects, that clearly establish the threshold nature of toxicological endpoints for derivation of points of departure for establishing regulatory values and making regulatory decisions.^{6 7}

In the following discussion, ACC offers its comments to help clarify and strengthen the proposed rule.

⁶ Critics of this proposed policy appear to overlook the fact that the call to evaluate different dose response models is entirely consistent with the Agency's Cancer Guidelines, which have been in place since 2005. See Guidelines for Carcinogen Risk Assessment https://www.epa.gov/sites/production/files/2013-09/documents/cancer_guidelines_final_3-25-05.pdf

⁷ <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3038594/>

II. Implementation of the Rule Would Benefit from Policy and/or Guidance Regarding Weight Accorded the Science Informing Significant Regulatory Decisions

As EPA has noted, the proposed rule is consistent with and builds upon the EPA policies implemented by previous administrations. Implementation would be aided by a policy statement or guidance that indicates greater weight will be given to studies using validated test methods and procedures, models, and approaches when and where those data are based on publicly accessible data, and transparent computer algorithms.

Other scientifically relevant and reliable studies and data should not be eliminated from consideration, but rather, accorded less weight when integrating evidence from multiple studies within and across different lines of evidence. Any guidance and other relevant documents developed to assist EPA staff to comply with this rule should include specific examples and/or case studies, perhaps drawing from recent EPA rulemakings, to demonstrate what constitutes regulatory science that is material to EPA's significant regulatory decisions.

III. EPA Should Provide Better Historical Context and Applicability to the Proposed Rule

EPA is proposing to add this rule to 40 C.F.R. 30, contained in Chapter 1, Subchapter B, dedicated to "Grants and Other Federal Assistance," without explaining how or why this rule fits within this subchapter, thereby creating potential confusion regarding its applicability. The potential for confusion was enhanced by the fact that EPA's public website currently contains information regarding the content that was formerly within 40 C.F.R. 30 but was repealed on December 19, 2014, i.e., general terms and conditions applicable to grant recipient and sub-recipients.⁸ In addition, a number of questions on which EPA seeks comment relate solely to EPA cooperative agreements and grants or access to EPA-funded data.

In contrast, Section 30.3 of the proposed regulatory text state that "the provisions of this section apply to dose-response data and models underlying pivotal regulatory science regardless of who funded or conducted the underlying data, models, or other regulatory science." Stakeholders would benefit greatly from EPA providing clarification regarding the applicability of Subchapter B and whether and to what extent this rule applies to government-funded and/or beyond government-funded scientific research. We believe the broader approach is warranted.

⁸ <https://www.epa.gov/grants/epa-general-terms-and-conditions-applicable-40-cfr-part-30-and-31-recipients-effective> and see, 79 Fed. Reg. 244 at 76054 (Dec. 19, 2014).

IV. EPA Authority under Federal Environmental Statutes

The provisions cited by EPA under the Clean Air Act (CAA), the Clean Water Act (CWA), the Safe Drinking Water Act (SDWA), the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), and the Emergency Planning and Community Right-To-Know Act (EPCRA) in support of its authority to develop and implement its proposed rule all provide broad regulatory authority to promulgate regulations “as are necessary to carry out [the Administrator’s] functions” under the statute. The citation to the Resource Conservation and Recovery Act (RCRA) speaks to Labor Standards in the issuance of grants, and does not appear applicable to this rulemaking authority. EPA cites Section 25(a)(1) of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), which does provide the Agency with broad authority to “prescribe regulations to carry out the provisions of this subchapter [FIFRA].” It should be noted, however, that the statutory language is a bit different from the other cited statutes and does not read as “as are necessary to carry out...”. In addition, FIFRA Section 136r(a) does not relate to rulemaking and instead provides the Agency broad authority to undertake research necessary to carry out the purposes of FIFRA. As such, EPA may mistakenly have included Section 136r(a) to support the proposal as cited on 83 Fed. Reg. 18769. EPA’s reference to section 10 under the Toxic Substances Control Act (TSCA) also does not appear on-point. ACC believes EPA’s authority to implement this rule is derived from TSCA Section 26(h), which speaks directly to scientific information and standards to which the Agency must adhere in the administration of its work under TSCA Sections 4, 5, and 6.

V. The Regulation Should Apply to E.O. 12866 Significant Regulatory Actions at the Proposal Stage

A. Definitions in E.O. 12866 Are Well-Established, Understood, and Applied.

The proposed rule would apply to significant regulatory actions as defined by E.O. 12866 at Section 3(f) as:

- (f) “Significant regulatory action” means any regulatory action that is likely to result in a rule that may:
- (1) Have an annual effect on the economy of \$100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities;
 - (2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;
 - (3) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or
 - (4) Raise novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in this Executive order.

This definition has been applied by the Executive Branch since the Clinton Administration promulgated E.O. 12866 in 1993. Its meaning is well-established with more than twenty-

five years of use. The underlying principles, however, precede its adoption. For example, the E.O. carried over the threshold of an annual \$100 million effect on the economy that had been in place since 1978. This (3)(f)(1) threshold for economically significant regulatory actions is the same threshold that requires cost-benefit review for proposed and final regulations considered by OIRA.

A significant benefit of using the E.O. 12866 definition in the final rule is that EPA can easily apply it, against substantial practice and precedent, in a reliable, consistent, and predictable manner. This reduces the burden on the agency, and importantly, provides greater predictability to stakeholders and the public so they can understand to which agency actions the regulation will apply.

B. Conformity with E.O. 12866 Definitions Promotes Efficient OIRA Review.

Similarly, the process by which significant regulatory actions are identified under E.O. 12866 is also well-established. Here, with respect to application of the proposed rule, EPA would retain primary responsibility to identify the significant regulatory actions to which the rule should apply. OIRA would assess EPA's identification against the criteria set out in E.O. 12866. Neither EPA nor OIRA would be charged with applying a new or unfamiliar definition, nor a new process for review.

C. The Range of Agency Actions to Which the Rule Will Apply Should Not be Narrowed.

The significant regulatory elements of E.O. 12866 already require OIRA review and have for the past 25 years of established practice. The proposed rule respects that principle, and indeed, leverages it for maximum efficiency.

EPA specifically invites comment on whether a narrower definition might be appropriate, such as final regulations that are determined to be "major" under the Congressional Review Act, or "economically significant" under E.O. 12866. Either of these approaches would lose the efficiency and predictability benefits of using the E.O. 12866 definition—and would increase work for both EPA and OIRA. Further, many significant and precedential agency actions do not meet the "economically significant" threshold. For example, many federal agencies administer environmental, health and safety requirements for workers, consumer products, and environmental media—air, water, soil. It should never be the case that EPA, or EPA and other agencies, establish and/or enforce conflicting and irreconcilable health values for the same compound; require the use of different personal protective equipment; or simultaneously prohibit and permit use or discharge of a particular compound. The same rigorous scientific standards, best available science and weight-of-the-evidence approaches should be applied across programs and media to protect human health and the environment. Adoption of the E.O. 12866 definition of significant regulatory action helps avoid inconsistent regulatory decisions by federal agencies that might interfere with policies designed to protect human health and the environment, unfairly burden businesses, and impede the protection of human health and the environment.

D. The Final Rule Should Apply to Significant Guidance Documents.

OMB's Final Bulletin for Agency Good Guidance Practices defines a "significant guidance document" as a guidance document disseminated to regulated entities or the general public that may reasonably be anticipated to:

- (i) Lead to an annual effect on the economy of \$100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities;
- (ii) Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;
- (iii) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or
- (iv) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in EO 12866, as further amended.

EPA already maintains and publishes a list of significant guidance documents that meet the OMB definition.^{9 10} Applying the rule to EPA's significant guidance allows for greater parity and consistency with respect to the application of scientific principles in regulatory and guidance contexts. It ensures that the same quality and rigor will underpin decision making. It also helps ensure that EPA will apply the same principles to both regulatory requirements and implementing guidance, which provides greater certainty to the regulated community and the public.

VI. Key Regulatory Definitions and Regulatory Text Require Greater Clarity

EPA's terminology and regulatory definitions should be more concise and applied consistently to achieve greater clarity regarding the meaning and proposed application of the rule. For example, proposed section 30.2 refers to "**pivotal** regulatory science as the studies or analyses that **drive** the requirements and/or quantitative analysis of EPA final significant regulatory decisions." [Emphasis added]. This definition is distinguished from "regulatory science," defined as "scientific information, including assessments, models, criteria documents, and regulatory impact analyses, that provide the basis for EPA final significant regulatory decisions." These two definitions can be interpreted as simultaneously referencing something identical as well as one being a subset of the other. Therefore, the definitions are vague and need clarification.

⁹ See <https://www.epa.gov/laws-regulations/significant-guidance-documents>

¹⁰ Notably, EPA's list of significant guidance documents include guidance that applies directly to the regulated community, such as the agency's *2017 Guidance To Assist Interested Persons in Developing and Submitting Draft Risk Evaluations Under the Toxic Substances Control Act* (EPA-HQ-OPPT-2017-0341-0002) and *Interpretive Guidance for the Real Estate Community on the Requirements for Disclosure of Information Concerning Lead-Based Paint in Housing, Part I* (EPA-HQ-OPPT-2007-0765-0001).

Assuming the intent is to define and distinguish the subset of scientific studies and analyses that form the scientific foundation for EPA's regulatory decisions from the larger universe of *all* the scientific information reviewed and considered by the agency, a more precise word than "pivotal" would be "material." In other words, those scientific studies and analyses that are material to its regulatory decision must be or be made publicly available in a manner sufficient for independent validation.

The regulatory text in 30.4 and 30.5 should be clarified. Section 30.4 appears to apply to EPA's use of studies (or other regulatory science) relied upon when EPA takes *any* final agency action (emphasis added). In those instances, EPA should make all such studies available to the public to the "extent practicable." Section 30.5 refers specifically to the requirements that apply when "EPA uses dose response data and models underlying "pivotal" (which ACC believes is more aptly expressed as "material") regulatory science." ACC interprets this to mean that in these specific circumstances, the dose response data and models must be "publicly available in a manner sufficient for independent validation," which EPA defines as in a manner "consistent with law, protects privacy, confidentiality, confidential business information, and is sensitive to national and homeland security." Information considered "publicly available in a manner sufficient for independent validation" when it includes the information "necessary for the public to understand, assess, and replicate findings." As noted above, for environmental safety, exposure-response is the more appropriate relationship to evaluate because most of the environmental test guidelines require quantifying concentrations in media external to the organism for use as the exposure metric. EPA should provide greater clarity regarding what it intends to do in circumstances where raw data cannot be made publicly available.

EPA should include a discussion in the final rule regarding how it proposes to address exposure assessments and risk characterization data and models in the future extensions of related rules on Transparency in Regulatory Science.

Section 30.7 appears to be missing one or more words in the header to the section. It states: "What role does independent peer review in this section?" ACC believes the missing word is likely "have," but EPA should clarify and correct this section in the final rule.

EPA uses the word "justify" frequently throughout the various sections of proposed regulatory text when referencing the use of regulatory science to make its decisions. For example, section 30.7 states: "EPA shall conduct independent peer review on all *pivotal regulatory science* used to justify *regulatory decisions*." ACC suggests that there are more precise words that EPA should use to link "pivotal regulatory science" with "regulatory decisions," such as "underpin" or constitute the "foundation" of the "scientific basis" of its regulatory decisions.

ACC has offered some additional, specific language suggestions in a redline version of the proposed regulatory text that is included in these comments in Appendix A.

VII. Clarifications to the Preamble are Needed

A. Definition of “Pivotal Regulatory Science” is needed.

The definition in the proposed regulatory text and may lead to confusion among stakeholders. We recommend consistency between the preamble and the regulatory text and that EPA clarify its terminology.

Importantly, in footnote three on page 18769 of the preamble, EPA states:

EPA has the authority to establish policies governing its reliance on science in the administration of its regulatory functions. Historically, EPA has not consistently observed the policies underlying this proposal, and courts have at times upheld EPA’s use [of] non-public data in support of its regulatory actions. *See Coalition of Battery Recyclers Ass’n v. EPA*, 604 F.3d 613, 623 (D.C. Cir. 2010); *American Trucking Ass’n v. EPA*, 283 F.3d 355, 372 (D.C. Cir.2002). EPA is proposing to exercise its discretionary authority to establish a policy that would preclude it from using such data in future regulatory actions.

ACC believes that this footnote should be clarified to be consistent with the regulatory text that provides that there are exemptions to this policy outlined in sections 30.5 and 30.9. EPA’s preamble should not be at odds with the regulatory text.

Invariably there will be circumstances where underlying data no longer exist for studies and/or models that are high quality and reliable. For example, most organizations have data retention policies that have resulted in the disposal of underlying data. Furthermore, Good Laboratory Practices (GLP) regulations include defined periods of time to retain data and study records.¹¹ EPA should address how it will continue to use those studies and models in light of these policies.

B. Assertions about proposal not “directly regulating entities outside of federal government” and not having “substantial direct effects” on the states.

On page 18769 under section A, EPA states that the proposed regulation does not “directly regulate any entity outside the federal government” and on page 18772, EPA states under section E that “this action imposes no enforceable duty on any state, local or tribal governments or the private sector.” Under Section F, EPA asserts that this action does not have federalism implications and will not have “substantial direct effects on the states.” ACC is not certain that these statements are accurate. Consider, for example, the establishment of water quality standards (WQS).

¹¹ 40 C.F.R. 160.

Under Section 303(c) of the CWA, states and authorized tribes must develop WQS and submit them to EPA for its approval or disapproval. To help them develop the standards, EPA provides scientific guidance through its “Section 304(a) National Criteria Recommendations,” which specify quantitative concentrations/level and qualitative measures of pollutants that, if not exceeded, generally will ensure acceptable water quality. In developing these recommendations, EPA evaluates acceptable water quality. When developing these recommendations, EPA evaluates available scientific data on a pollutant’s effects on public health and welfare, aquatic life, and recreation. EPA recommends that states and tribes consider the Agency’s water quality criteria when developing their WQS, though states and tribes may also consider other scientific criteria that differ from EPA’s recommendations.

While EPA’s national water quality criteria recommendations are not regulations and do not impose binding requirements, they do serve as the scientific basis for the development of water quality standards and WQS are the foundation of a number of CWA programs. As EPA states in its Water Quality Standards Handbook, these standards “establish the baseline used for measuring the success of the CWA programs, so adequate protection of aquatic life and wildlife, recreational uses, and sources of drinking water, for example, depends on developing and adopting well-crafted WQS.”¹²

C. Publications should be cited.

ACC suggests that EPA revise its statement that the proposed rule “takes into consideration the policies or recommendations of third-party organizations who [sic] advocated for open science.” The recommendations referenced by EPA actually emanate from a survey of the members of three professional organizations whose memberships represent repositories of knowledge and experience in regulatory assessment.¹³ As such, reference 10 in EPA’s proposal should also be revised to cite the publication, Expert Opinion on Regulatory Risk Assessment, A Survey by the Center for Media and Public Affairs (CMPA) and Center for Health and Risk Communication (CHRC) at George Mason University” (December 6, 2013).¹⁴

D. Definition of “reproducibility” is needed.

EPA uses the term “reproducibility” in the preamble, but never defines the term and does not include the term in the definitions in the proposed regulatory text. It is unclear what constitutes a reproducible versus non-reproducible finding. It is important to consider that there are different types of reproducibility, such as methods reproducibility, results reproducibility, and reproducibility of conclusions.

¹²Water Quality Standards Handbook, Office of Water, EPA 820-B-14-008, September 2014, at p. 2.

¹³ The Risk Assessment Specialty Section of the Society of Toxicology (SOT-RASS), the Dose Response Section of the Society for Risk Analysis (SRADRS), and the International Society for Regulatory Toxicology and Pharmacology (ISTRP).

¹⁴ <https://cmpa.gmu.edu/wp-content/uploads/2013/12/GMU-Study-Report.pdf>.

For example, OMB's Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by Federal Agencies defines "capable of being substantially reproduced" as "independent reanalysis of the original or supporting data using the same methods would generate similar analytical results, subject to an acceptable degree of imprecision."¹⁵ However, the inability to reproduce research studies can be related to issues of study design, variability or differences in biological test systems, data integrity, data analyses, and in some cases, scientific misconduct. As Carl Sagan stated, "extraordinary claims require extraordinary evidence." Accordingly, new or novel findings that purport to indicate effects that have little or no biological basis, based on the weight of the evidence coupled to first principles of relevant scientific disciplines, should be subjected to suitable reproducibility requirements, which could include causal analytics.

E. Definition of "publicly available" is needed.

EPA does not define what it means by its use of the term, "publicly available." There is more than one definition of the term currently in use by federal agencies.¹⁶ EPA should clarify the level of access and disclosure to the public that is intended. If it intends to determine this on a case-by-case basis, that also should be made clear.

F. Greater clarity on data refinement issues is needed.

Another important aspect relevant to "public availability" is the level of data refinement EPA will require. The National Academies of Science, Engineering, and Medicine (NAS) held a workshop in 2016 to discuss obstacles for sharing data.¹⁷ The NAS defined several key terms to ensure clarity at the workshop. EPA should consider adopting a similar lexicon to increase the clarity of its regulation. (See Table 1 in Appendix B). In addition, the NAS Report suggests a "cleaned dataset" would be acceptable to use for all routine analyses and verification. (See Table 2 in Appendix B). EPA should establish clear standards on the acceptability of "*cleaned datasets*." This will help to standardize data reporting and formatting. It will also prevent over- and under-reporting.

¹⁵ https://obamawhitehouse.archives.gov/omb/fedreg_final_information_quality_guidelines/

¹⁶ Publicly available information means "any information that you reasonably believe is lawfully made available to the general public from: (i) Federal, state or local government records; (ii) Widely distributed media; or (iii) Disclosures to the general public that are required to be made by federal, state or local law." 17 CFR 160.3 [Title 17 -- Commodity and Securities Exchanges; Chapter I -- Commodity Futures Trading Commission; Part 160 -- Privacy of Consumer Financial Information]. Publicly available information is information that has been published or broadcast for public consumption, is available on request to the public, is accessible on-line or otherwise to the public, is available to the public by subscription or purchase, could lawfully be seen or heard by any casual observer, is made available at a meeting open to the public, or is obtained by visiting any place or attending any event that is open to the public. Office of the Director of National Intelligence & Office of the Director of National Intelligence, National Counterintelligence and Security Center, CI Glossary 2011.

¹⁷ National Academies of Sciences, Engineering, and Medicine. 2016. Principles and obstacles for sharing data from environmental health research: Workshop summary. Washington, DC: The National Academies Press. doi: 10.17226/21703.

VIII. Implementation of the Rule Should be Statute-Specific

EPA requested comment on the effect this proposed rule may have on individual EPA programs. Each of the federal environmental statutes referenced by EPA as a source for its authority to propose this rule, was enacted and designed to achieve a specific environmental goal and purpose (e.g., TSCA regulates new and existing chemicals, CAA controls air pollution on a national level, and SDWA regulates public drinking water supplies across the nation). Each statute confers its unique authority upon the agency, requiring agency review according to different scientific standards; each has its own regulations designed to effectuate the specific corresponding program's mission; and, in many cases, each statute relies on different and variable scientific disciplines. As such, ACC believes that this rule, while applicable to all the statutes identified, should be implemented by regulations specific to the objectives and scientific disciplines of each statute. ACC believes that just as the Freedom of Information Act (FOIA), which is overseen by the US Department of Justice (DOJ), is implemented by each agency with specific and separate regulations relevant to the requirements of each statute, this policy rule should be implemented by each EPA program office charged with implementing a given statute in a manner consistent with the authorities granted and requirements unique to that statute.¹⁸

IX. The Proposed Rule Should Apply to Enforcement and Permit Proceedings

EPA should apply the final rule to both “. . . enforcement activities or permit proceedings (including site-specific permitting actions) . . .” 83 Fed. Reg. 18768, 18771. In both these areas, EPA staff routinely use scientific evidence to make case-specific policy decisions that raise the same type of problems that occur when EPA promulgates regulations; therefore, this proposed regulation should apply to those to ensure that decisions in those areas are made appropriately.

For example, in both administrative and civil judicial enforcement programs, EPA routinely makes discretionary decisions targeting cases to pursue on the basis of scientific data on exposure of humans and ecological resources to pollutants. To do so, EPA relies on data regarding the inherent hazards of the chemical pollutants, and then estimates exposure potential and risks in a manner essentially the same as the approach EPA used to craft the regulations under the applicable environmental statute. Then, on an enforcement case-specific basis, EPA enforcement staff routinely use exposure/risk information to determine whether violations of the law (for regulatory enforcement under the CAA, CWA, RCRA, FIFRA, etc.) or releases to the environment (CERCLA, RCRA corrective action, OPA) have occurred warranting enforcement and determining the extent of sanctions and relief EPA will seek in an enforcement proceeding.

¹⁸ See, for example, the discussion of CWA criteria earlier in these comments under section VII. B., which is a good example of why it is important that EPA consider each statute it regulates when applying this proposed rule.

In CAA New Source Review enforcement cases, EPA must decide whether a violation of the program occurred by constructing a “major modification” to a source by assessing whether the pollutant-specific regulatory thresholds were exceeded; analyze emissions calculations using emission factors and/or test data collected from engineering studies; and then extrapolate to the specific plant. To identify the remedial action to impose, EPA must decide which Best Available Control Technology (BACT) limits are for the modifications and that decision, in turn, requires a complex analysis of data regarding costs and efficacies of various control technologies.

In a CWA enforcement case, EPA must decide whether a facility is subject to CWA jurisdiction by determining if a discharge into a jurisdictional “waters of the United States” is subject to the National Pollutant Discharge Elimination System (NPDES) permitting and then whether the discharge violates effluent discharge requirements. If so, EPA must analyze what remedial measures are necessary, including to the receiving waters. In both the CAA and CWA cases, EPA must also prepare proposed civil penalty and pollution “mitigation” assessments, each of which require the analysis of complex economic and environmental data. This policy will require EPA to be more transparent regarding its assessment and analysis of this complex data, which is much needed.

In a CERCLA enforcement case, EPA has to decide what the removal or remedial action should be, which necessitates among other things, a site-specific risk assessment and remedial technologies selection, using a wide variety of environmental and engineering data, which should be publicly available to be verified and replicated.

Similarly, for permitting purposes under environmental statutes, EPA must routinely analyze scientific studies to decide whether to grant a permit and, if so, what conditions to impose in the permit to mitigate environmental impacts to acceptable levels. For example, in a CWA NPDES permit review, EPA determines the level of each pollutant that would be discharged to waters of the United States, whether the proposed discharge will comply with effluent limits required by technology-based effluent guidelines and water-quality standards (including Total Maximum Daily Load programs), and whether control technologies will ensure that the effluent limits will be achieved consistently. Each of those decisions requires analyzing complex environmental/engineering data on a case-specific basis.

X. Incorporate Stronger Data and Model Access Requirements into Cooperative Agreements and Grants while Complying with Privacy and Confidentiality Requirements and Laws

EPA requested comment on how EPA can incorporate stronger data and model access requirements into the terms and conditions of Cooperative Agreements and Grants. ACC believes EPA can accomplish this by implementing requirements that all models and results developed under EPA Cooperative Agreements and Grants be open access and not proprietary. EPA should also require all grant proposal applicants to include as part of any

grant proposal a data management plan, similar to those required by the National Institutes of Health (NIH).¹⁹ EPA may elect to exclude from these requirements grants/agreements of some specified annual amount, but that annual amount should be reasonable and ensure that the vast majority of models and results developed under grants/agreements is shared.

EPA should adopt model evaluation criteria to apply the greatest weight and credibility to models that are open access, describe the endpoint predicted clearly, are based on unambiguous open access computer algorithms, have a defined domain of applicability, have been transparently verified with publicly available datasets, and are shown to be robust and scientifically sound for the intended use.

In addition, EPA should develop common data templates and digital platforms for the most common types of research studies to be used by entities subject to Cooperative Agreements and Grants to facilitate public use and validation.

XI. The Rule Should Apply to all EPA Programs, including its IRIS Program

EPA established the Integrated Risk Information System (IRIS) in 1985 to develop and maintain a database of human health hazard assessments for chemicals. EPA's website states: "The goal of the IRIS Program was to foster consistency in the evaluation of chemical toxicity across the Agency."²⁰ However, the IRIS Program has been plagued for years by its slow pace generating IRIS assessments and lack of scientific transparency and reproducibility, among other deficiencies. The U.S. Government Accountability Office included IRIS in its High Risk Report, which noted that EPA has not "developed sufficient chemicals assessment information under these programs to limit exposure to many chemicals that may pose substantial health risks"²¹ Although the IRIS Program has initiated changes to address some of these deficiencies, no final IRIS assessment to date reflects the full panoply of recommendations issued by the NAS in its review of the IRIS program in 2011.

Appendix C offers several specific examples of IRIS assessment that failed to reflect the best available science. We strongly recommend that the Agency apply this rule to any IRIS assessment that could be used as the basis for significant regulation.

XII. Methodologies and Technologies Providing Protected Access to Sensitive or Confidential Data

In circumstances where company CBI and other intellectual property may be implicated, EPA should confer with the CBI data owner to determine how to make that data available to the greatest extent possible without disclosing the CBI within that data, study, or model. How this is handled will likely be impacted by the type of

¹⁹ https://grants.nih.gov/grants/policy/data_sharing/data_sharing_guidance.htm

²⁰ See <https://www.epa.gov/iris/basic-information-about-integrated-risk-information-system>

²¹ https://www.gao.gov/highrisk/transforming_epa_and_toxic_chemicals/why_did_study#:t=0

regulatory decision and statute involved.

For example, under TSCA, while the summarized study results, analysis, and final report may be publicly available, the underlying data in a health and safety study may qualify as CBI when the underlying data are not in the public domain and that data provides a commercial value to its owner.²² In such circumstance, it is the availability of the underlying data that determines whether or not an unpublished study can be used by a competitor to support its notification or registration of a substance overseas without obtaining ownership or citation rights to use such data, depriving the data owner of the value of its investment in the underlying data. Current EPA regulations require chemical manufacturers to submit health and safety studies under some circumstances. However, it is noteworthy that none of these regulations routinely require study submitters to submit underlying data along with a final report. This indicates that the final report likely communicates sufficient information about the potential health and environmental effects to the public when a company has submitted health and safety studies in which it has a commercial interest in protecting.²³

ACC believes that making a final study report publicly available where the underlying data are CBI would, in most circumstances, be an effective way to make relevant information publicly available about studies and data EPA may rely on, but which must be protected as CBI in circumstances triggering this policy. In these situations, EPA can access the underlying data to confirm the methods, models, and approaches are based on validated procedures, accessible data, etc. If necessary, when specialized expertise is needed, EPA could contract with an independent third-party science reviewer to confirm those findings, although we believe this would likely only be necessary in unusual circumstances. In addition, EPA might also consider an approach followed under FIFRA where Data Evaluation Records of studies are made publicly available, but not full studies.²⁴ Another approach is that of the European Union's REACH program, which makes Robust Study Summaries (RSS) publicly available, while protecting from disclosure the competitively sensitive underlying data of health and safety studies.

When protecting data while also promoting data access, NIH guidelines should be consulted.²⁵ ACC believes many of these guidelines could be applied in EPA's implementation of this proposed policy under each of the statutory programs EPA administers to ensure the guidelines adopted suit the specific needs of each statute.

²² See, e.g., *Cohen v. Kessler*, No. 95-6140 (D.N.J. Nov. 25, 1996).

²³ 40 C.F.R. §720.50(a)(3)(i) requires that if data do not appear in the open scientific literature, the submitter must provide a full study report, including the experimental methods and materials, results, discussion and data analysis, conclusions, references, and the name and address of the laboratory that developed the data.

²⁴ See, e.g., <https://archive.epa.gov/pesticides/chemicalsearch/chemical/foia/web/pdf/010501/010501-050.pdf>

²⁵ See <https://osp.od.nih.gov/2016/05/02/protecting-data-promoting-access-improving-our-toolbox/>; <https://www.niaid.nih.gov/research/data-security>; and <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5302472/>

EPA should ensure that it implements its final rule in a manner that enables it to use confidential health records that may exist with certain kinds of studies, such as long-term air pollution and workplace exposure studies that involve confidential health records. Several agencies and organizations, in addition to NIH, have successfully addressed the issue of data access while maintaining confidentiality that should be considered by EPA. For example:

- The existing rule requiring federally funded research to be made available to other researchers. This standard could be adopted and applied to third-party funded researchers.
- Health care claims and related data are now being made available to researchers in de-identified form by some health insurance companies, such as Optum, which offers a “proprietary research database of health care and administrative data that links patient, physician, and treatment attributes from millions of geographically diverse individuals in the U.S.” Optum appears to have developed methods and procedures to appropriately address confidentiality concerns.
- Medicare claims data are already available to researchers in de-identified form. Algorithms and methods developed by the Center for Medical Services should be examined by the EPA.
- Several professional societies have guidance on the protection of health data and de-identification, such as the Institute of Electrical and Electronic Engineers and the International Association of Privacy Professionals.²⁶

EPA should develop clear guidance on protecting privacy, de-identifying data, and settling disputes should a breach occur. It may also want to consider establishing an office similar to that of NIH’s Office of Research Integrity to adjudicate any issues that may arise in the administration of its practices under this rule.²⁷

XIII. The Rule Should Generally Apply Prospectively to EPA Decision Making

ACC does not support retrospective application of the final rule in cases where the Agency follows a periodic review schedule for updating regulations, which includes review of underlying scientific assessments. Retrospective application of any regulation (and its underlying scientific evaluations) is rife with complication, confusion, and significant ambiguity for EPA and stakeholders alike. For example, each NAAQS review under the CAA is based on a substantial amount of scientific and policy information used to inform EPA’s determinations of appropriate levels for each standard. The retroactive application of this proposal to those administrative records would only serve to confuse, distress, and impede a NAAQS review process that is already severely overburdened. For example, it is unclear which administrative NAAQS records would be covered by the proposal and how far back it would apply.

²⁶ <http://www.ehealthinformation.ca/wp-content/uploads/2014/08/2010-Risk-based-de-identification-of-health-data.pdf> and https://iapp.org/media/pdf/knowledge_center/Perspectives_on_Health_Data_De-Identification_final.pdf

²⁷ <https://ori.hhs.gov/>

Without a clear statement, the proposal could potentially cover more than a decades' worth of NAAQS administrative records and scientific analyses. The value of such an application is similarly uncertain. While ACC remains supportive of increased transparency in significant regulatory actions in the future, we encourage EPA to avoid the creation of unnecessary ambiguity and burdens and refrain from the application of this proposal to previous administrative NAAQS records. ACC recommends the final rule be applied prospectively in a manner that integrates its application within the periodic review schedule established for each criteria air pollutant.

However, in cases where EPA has developed analytical tools and models, e.g., ECOSAR, in the past that incorporate dose response data, it may be valuable to apply this rule retrospectively. In other cases, such as IRIS assessments, where the Agency has yet to articulate a periodic review schedule for updating scientific assessments dating back 10-20 years or longer, EPA should develop appropriate mechanisms for application of the rule.²⁸

XIV. Bias Should not be Presumed

EPA requested comment on how application of the proposal might inadvertently introduce bias regarding the timeliness and quality of the scientific information available. If EPA uses a weight-of-the-evidence approach (as required under TSCA)²⁹ and EPA has concerns about bias having been introduced, it can evaluate this using a sensitivity analysis by evaluating the impact of each study and/or model on the overall outcome of the analysis.³⁰ That said, bias should not be inferred if newer, more scientifically robust studies based on modern, up to date knowledge of biology and dose response are determined to be of better quality, relevance, and evidentiary value.

XV. EPA Should Work with Entities Where Scientific Data are not Publicly Available in a Manner Sufficient for Independent Evaluation

Where data are not available in a manner sufficient for independent evaluation, EPA should attempt to work with data owners to reach an agreement to make the information available to the public to the greatest extent practicable without

²⁸ In addition, stakeholders who seek to urge EPA to undertake a retrospective review do have options at their disposal, e.g., they can develop a voluntary new evaluation under TSCA, petition EPA, or file an Information Quality Request (IQA) requesting a correction.

²⁹ The TSCA Risk Evaluation rule provides an excellent definition of “weight-of-the-scientific-evidence” that should be adopted across the federal government, but certainly across EPA, at a minimum. That definition is: “a systematic review method, applied in a manner suited to the nature of the evidence or decision, that uses a pre-established protocol to comprehensively, objectively, transparently, and consistently identify and evaluate each stream of evidence, including strengths, limitations, and relevance of each study and to integrate evidence as necessary and appropriate based upon strengths, limitations, and relevance.” See 82 Fed. Reg. 33726, 33733 (July 20, 2017).

³⁰ EPA’s implementation and adherence to systematic review in the implementation of this proposal as it has committed under TSCA, will serve to guard against the introduction of bias. See EP’s *Application of Systematic Review in TSCA Risk Evaluations* at https://www.epa.gov/sites/production/files/2018-06/documents/final_application_of_sr_in_tscra_05-31-18.pdf

jeopardizing the privacy, confidentiality, or the proprietary interests that deserve protection. In circumstances where there is significant difficulty making data available in a meaningful way, EPA should consider contracting with external experts in the scientific discipline at issue, have them sign confidentiality agreements, analyze the data, and prepare a confidential report with a non-confidential summary for EPA to share publicly.

APPENDIX A: Proposed Regulatory Text

Section 30.1 What is the purpose of this subpart?

This subpart directs EPA to ensure that the regulatory science underlying its actions is publicly available in a manner sufficient for independent validation.

Section 30.2 What definitions apply to this subpart?

As used in this subpart, all terms not defined herein shall have the meaning given them in the Act or in subpart A; and the following terms shall have the specific meaning given them.

- **Dose Response data and models** – the data and models used to characterize the quantitative relationship between the amount of dose or exposure to a pollutant, contaminant, or substance and the magnitude of a measured or predicted response or health or environmental impact.

A dose response and concentration response can be empirical, e.g., it can describe the measured relationship from experimental measurements. A response can be just a response and not an actual “impact.”

- **Material Regulatory Science** – specific scientific studies and analyses that represent the best available science that, based on weight-of-the-evidence, are material to and represent the scientific basis of the requirements and/or quantitative analyses of EPA final significant regulatory decisions.
- **Regulatory decisions** – final regulations determined to be “significant regulatory actions” by OMB per EO 12866, which is defined as any regulatory action that is likely to result in a rule that may:
 - Have an annual effect on the economy of \$100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health, or safety, or state, local, or tribal governments or communities;
 - Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;
 - Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or
 - Raise novel legal or policy issues arising out of legal mandates, the president’s priorities, or the principles set forth in the Executive Order 12866.
- **Regulatory science** – scientific information, including assessments, models, criteria documents, and regulatory impact analyses that provide the basis for EPA’s policies, procedures, guidance, proposed and final significant regulatory decisions.

- **Research data** – as defined by UAR is: the recorded factual material commonly accepted in the scientific community as necessary to validate research findings, but not any of the following: preliminary analyses, drafts of scientific papers, plans for future research, peer reviews, or communications with colleagues. This “recorded” material excludes physical objects (e.g., laboratory samples).

“Research data” do not include:

- (i) Trade secrets, commercial information, materials necessary to be held confidential by a researcher until they are published, or similar information which is protected under law; and
- (ii) Personnel and medical information and similar information the disclosure of which would constitute a clearly unwarranted invasion of personal privacy, such as information that could be used to identify a particular person in a research study.

Section 30.3 How do the provisions of this subpart apply?

“To dose response data and models underlying pivotal regulatory science that are used to justify significant regulatory decisions regardless of who funded it or the identity of the party conducting the regulatory science.” These provisions do not apply to “physical objects (like laboratory samples), drafts, and preliminary analyses.” Except where explicitly stated otherwise, the provisions of this subpart do not apply to any other type of regulatory action, including enforcement actions and permit proceedings, etc.

Section 30.4 What requirements apply to EPA’s use of studies when taking final action?

EPA shall clearly identify all studies or other regulatory science relied upon when it takes any agency action and make all studies available to the public to the “extent practicable.”

Section 30.5 What requirements apply to use of dose response data and models?

When promulgating significant regulatory actions, the Agency shall ensure that the dose response data and models underlying pivotal regulatory science are publicly available in a manner sufficient for independent validation, **verification**, and analysis.

This may include:

- Data (where necessary, could be subject to access and use restrictions)
- Associated protocols
- Computer algorithms and models³¹
- Recorded factual materials
- Detailed descriptions of how to access and use such information

But in a manner consistent with law, protects privacy, confidentiality, CBI, and is sensitive to national and homeland security.

³¹ We suggest substituting “algorithms” in place of “codes” because specific computer codes can be proprietary.

Information is “publicly available in a manner sufficient for independent evaluation” when it includes the information necessary for the public to “understand, assess, and replicate findings.”

Section 30.6 What additional requirements pertain to the use of dose response and models underlying pivotal science?

EPA shall describe and document any assumptions and methods used and should describe variability and uncertainty. EPA shall evaluate the appropriateness of using default assumptions, including assumptions of a linear, no-threshold response, on a case-by-case basis. EPA shall clearly explain scientific basis for each model assumption used and present analyses showing the sensitivity of the modeled results to alternative assumptions. When available, EPA shall give explicit consideration to high-quality studies that explore: a broad class of parametric dose-response or concentration-response models; a robust set of potential confounding variables; nonparametric models that incorporate fewer assumptions; various threshold models across the dose or exposure range; and models that investigate factors that might account for spatial heterogeneity.

Section 30.7 What role does independent peer review [have] in this section?

EPA shall conduct independent peer review on all pivotal regulatory science used to justify regulatory decisions, consistent with OMB Final Information Quality Bulletin for Peer Review (70 FR 2664) and the exemptions therein apply. EPA will ask peer reviewers to articulate the strengths/weaknesses of EPA’s justification for assumptions applied and the implications of those assumptions for the results.

Section 30.8 How is EPA to account for cost under this subpart?

EPA shall implement the provisions of this subpart in a manner that minimizes costs.

Section 30.9 May the EPA Administrator grant exemptions to this subpart?

Yes. The Administrator may grant an exemption to this subpart on a case-by-case basis if he or she determines that compliance is impracticable because:

- (a) It is not feasible to ensure that all dose response data and models underlying pivotal regulatory science is publicly available in a manner sufficient for independent validation, in a fashion that is consistent with law, protects privacy, confidentiality, confidential business information, and is sensitive to national and homeland security; or
- (b) It is not feasible to conduct independent peer review on all pivotal regulatory science used to justify regulatory decisions for reasons outlined in OMB Final Information Quality Bulletin for Peer Review (70 FR 2664), Section IX.

Section 30.10 What other requirements apply under this subpart?

EPA shall implement the provisions of this section consistent with the definition of “research data” in Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards, exemptions in Public Law 89–487, and other applicable federal laws. Where appropriate, data sharing agreements and state-of-the-art data-masking techniques may be employed to facilitate access to information.

ACC notes here its support for the text of Public Law 89-487, which is incorporated by reference in Section 30.10 provides the following exemptions are applicable to this proposed regulation:

- 1) Specifically required by Executive Order to be kept secret in the interest of national defense or foreign policy;
- 2) Related solely to the internal personnel rules and practices of any agency;
- 3) Specifically exempted from disclosure by statute;
- 4) Trade secrets and commercial or financial information obtained from any person and privileged or confidential;
- 5) Inter- or intra-agency memorandums or letters which would not be available by law to a private party in litigation with the agency;
- 6) Personnel and medical files and similar files the disclosure of which would constitute a clearly unwarranted invasion of personal privacy;
- 7) Investigatory files compiled for law enforcement purposes except to the extent available by law to a private party;
- 8) Contained in or related to examination, operating, or condition reports prepared by, on behalf of, or for the use of any agency responsible for the regulation or supervision of financial institutions; and
- 9) Geological and geophysical information and data (including maps) concerning wells.

Where appropriate, data-sharing agreements and data-masking techniques may be used.

APPENDIX B: Definitions of NAS Principles

Definitions in NAS Principles and obstacles for sharing data from environmental health research: Workshop summary.
Definition: meta-analysis <i>Meta-analysis</i> is a way of quantitatively combining data from many different studies using a statistical process.
Definition: reanalysis The term “ <i>reanalysis</i> ” is defined as conducting further analyses of the exact same data to determine if the same results are obtained and may include use of the same programs and statistical methodologies that were originally used to analyze the data or may use alternative methodologies.
Definition: replication The term “ <i>replication</i> ” is the repetition of a scientific experiment or a trial using exactly the same protocols and statistical programs but with data from a different population to determine if consistent results are obtained with data from a different population.
Definitions: reproduction The term research “ <i>reproduction</i> ” refers to an experiment conducted to address the same research question as the original work, but examines the question from a different angle.
Definition: raw data The term “raw data” is defined as the unmodified or unprocessed data that is obtained directly from a survey or experiment (modified from NAS, 2016 P6)
Definition: cleaned-up data <i>Cleaned-up data</i> consist of the raw data modified to remove obvious errors.
Definition: processed data The term “processed data” refers to information that has been computed and analyzed to extract relevant information (NAS, 2016), and may include: <ul style="list-style-type: none">• Aggregation – combining multiple pieces of data.• Analysis – collection, organization, analysis, interpretation and presentation of data• Classification – separation of data into various categories.• Reporting – list detail or summary data or computed information.• Sorting – the arrangement of items in some sequence and/or in different sets.• Summarization – reducing detail data to its main points.• Validation – Ensuring that supplied data is correct and relevant. (wiki https://en.wikipedia.org/wiki/Data_processing)
Definition: final clean data set

The term “*final clean data set*” is the information provided with a scientific publication (modified IOM, 2016 P6)

Definition: metadata

Metadata is a set of data that describes other data

TABLE 2 – Data flow from NAS Report

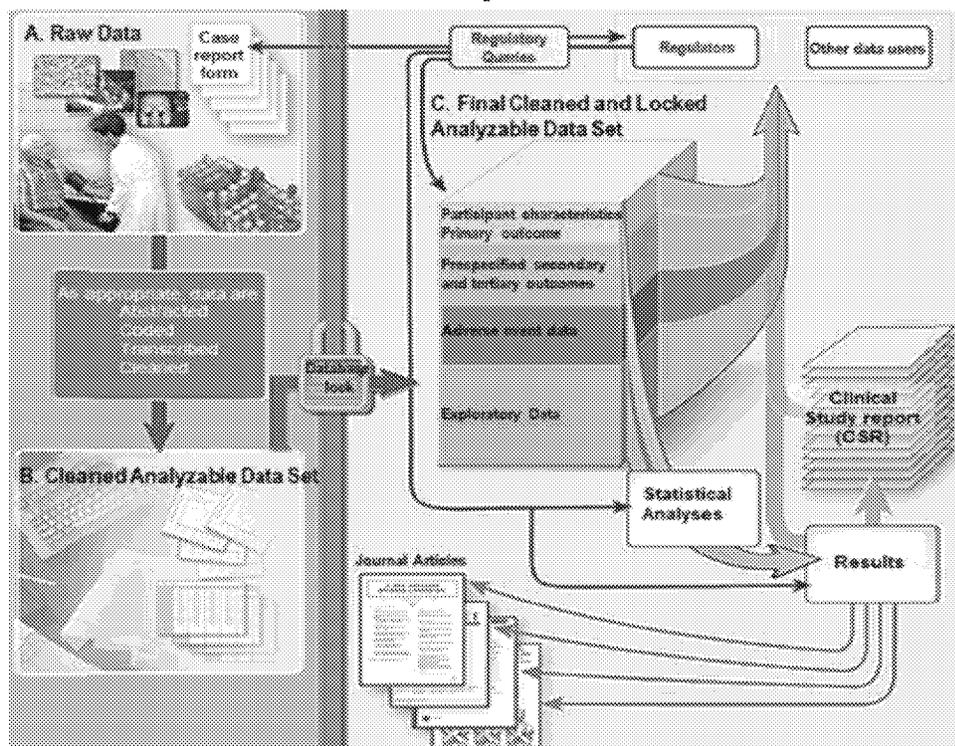

FIGURE 2-1 Data flow from participant to analyzed data and reporting. SOURCE: IOM, 2014.

APPENDIX C: Chemical-Specific Case Studies

Case Study 1: Trimethylbenzenes (TMBs)

On September 9, 2016, EPA issued its final report on the IRIS assessment of Trimethylbenzenes (TMBs), which addresses the potential non-cancer and cancer human health effects from long-term exposure to TMBs. Humans are not exposed to individual TMB compounds, but to complex mixtures. According to EPA, the primary uses for TMBs are: as a blending agent in gasoline formulations (C9 aromatic fraction); solvents; and paint thinner.

In its review of TMBs, the EPA fell far short in meeting its obligations to improve its IRIS processes and assessment reports. Without explanation, EPA failed to respond to public comments on the draft TMBs assessment, even though the IRIS process for developing assessments explicitly includes a response to comments element.

The IRIS assessment of TMBs does not accurately represent the health effects associated with exposure to TMBs because it failed to utilize a consistent and transparent data evaluation procedure for evaluating and weighing the full body of evidence.

In particular, EPA failed to rely on available guideline studies on commercial complex C9 aromatic mixtures that industry conducted under EPA's TSCA program. The entire commercial C9 aromatic blend, which contains a high percentage of TMBs, has similar toxicological properties and health effects as the individual isomers of TMB. Thus, guideline studies on the commercial complex of aromatic mixtures are highly relevant to assessing the toxicology of TMBs.

EPA's Office of Pesticide Programs (OPP) has also reviewed the toxicology of TMBs and determined that the health effects of TMBs can be efficiently assessed by relying on C9 aromatic mixture studies. OPP reached different scientific conclusions, including different quantitative health effect numbers, than that of EPA's IRIS Program. EPA, however, did not resolve these differences during the IRIS assessment of TMBs.

Case Study 2: Formaldehyde

Formaldehyde occurs naturally in every living system – from plants to animals to humans – all of which produce formaldehyde as a normal part of metabolism. In addition, its unique and versatile chemical properties make it a common and beneficial part of modern life. Formaldehyde has been the subject of extensive and robust scientific inquiry. EPA has been involved in assessing the human health risk of formaldehyde since the late 1970s. Large numbers of epidemiology, toxicology and biomechanical studies have informed the science surrounding formaldehyde, so that there a rich body of data exists.

The most recent draft Integrated Risk Information System (IRIS) formaldehyde assessment (2010) proposed exposure limits so low that the trace levels of formaldehyde found in human breath would present a cancer risk. The 2010 draft assessment also noted that: *“Human epidemiological evidence is sufficient to conclude a causal association between formaldehyde exposure and nasopharyngeal cancer, nasal and paranasal cancer, all*

leukemias, myeloid leukemia and lymphohematopoietic (LPH) cancers as a group.” The National Academy of Sciences (NAS) then conducted a peer review of this draft and issued its final report in April 2011. The NAS report was critical of the draft IRIS assessment---an assessment that the IRIS program took 12 years to develop.

The NAS stated that EPA’s claims regarding all leukemias, myeloid leukemia or related hematopoietic cancers were not supported. It noted that EPA’s preliminary conclusions appeared subjective and that no clear scientific framework had been used by EPA to reach its conclusion. The NAS recommended that EPA revisit its determination of causality for specific LHP cancers, using methodology that integrates lines of evidence and addresses the specific criticisms in the NAS report. The NAS also made numerous recommendations for the improving the overall process and application of science used in all assessments generated by the IRIS program. Now, seven years since that NAS report was published, EPA continues to revise its assessment while not disclosing how emerging scientific evidence or modern risk assessment methods are being employed.

Meanwhile, newly published research based on the recommendations in the NAS report has advanced the state of the science. Raw data (made available after multiple years of FOIA requests) from studies conducted by the Federal government ---and upon which EPA relied on for its previous assessment conclusions--- were re-analyzed and the findings contradicted the original study conclusions. Today our knowledge regarding formaldehyde is much greater; yet it does not appear that this new knowledge has been applied in the EPA’s assessment of formaldehyde risk. Published research demonstrates that inhaled formaldehyde cannot reach the bone marrow where leukemia occurs and that safe thresholds for formaldehyde exposure exist. This formaldehyde case study is an example of the long-term problems with the lack of consistent, transparent application of modern scientific knowledge regarding chemical exposures and human health risk.

Case Study 3: Ethylene Oxide

The Integrated Risk Information System (IRIS) assessment of ethylene oxide (EO) originated with a carcinogenicity assessment in 1985. The first comprehensive draft was published in 1998. An external review draft was issued in 2006, followed by a Science Advisory Board (SAB) review in 2007. Revisions of the EO assessment were made in 2011 and 2013, and an additional SAB review was conducted in 2014-2015. The final IRIS assessment for EO was posted in December 2016.

Using unsupportable and un-reviewed conservative risk assessment modeling, the IRIS assessment concludes that the one-in-a-million lifetime cancer risk value associated with exposure to EO is less than 1 part per trillion (ppt). This value is far below both EO background levels in the environment and EO levels naturally converted from ethylene in humans through breathing. This conclusion is not plausible and not scientifically supportable. It is based on an inadequate evaluation of a body of evidence from human studies that include historical exposure levels to EO that are far higher than current occupational exposure limits. Other, more accurate data sources are available, and alternative scientific risk assessment modeling approaches could have been used, but the

IRIS Program did not systematically integrate all of the evidence. Public comments on the EO IRIS assessment can be found in Docket No. EPA-HQ-ORD-2006-0756.

EO has dozens of important applications, including the manufacture of ethylene glycol based antifreeze, aircraft deicers, and PET plastics. EO is also used to produce higher-value derivatives such as ethoxylates, ethanolamines, glycol ethers, and polyether polyols. A small but critical use of EO is for the sterilization of medical equipment.

EPA's SAB 2007 review concluded that substantial revisions were needed to the draft IRIS assessment including:

- Acquiring and using individual data for modeling rather than grouping populations, which results in overly conservative estimated cancer risks;
- Considering using both linear and non-linear approaches to estimate cancer risk due to the distribution of and questionable association with certain cancer types; and
- Providing more transparency and correcting flaws associated with inappropriately grouping lymphohematopoietic cancers and combining genders for the dose-response analysis.

Meeting materials, including public comments, can be found at

<https://yosemite.epa.gov/sab/sabproduct.nsf/MeetingCal/7E3E313F627541D78525711400470D01>.

The 2015 SAB Committee that reviewed the revised 2013 EO draft IRIS assessment did not conduct an independent, unbiased review. Problems included:

- Several SAB members made inaccurate public statements indicating industry produced scientific studies should not be considered due to potential industry influence, although no evidence of biased data sponsored by industry was ever presented.
- SAB members did not understand new evidence-based medicine concepts regarding mutagenicity of cancer cells and the contribution of naturally occurring EO in DNA repair mechanisms.
- The SAB recommended using epidemiology data sets with questionable or scientifically unsound characteristics to estimate cancer risk and rejected alternative data sets that are as or more robust than those selected.

EPA still did not use individual data for modeling as recommended by the SAB in 2007, and did not adequately explore alternatives to the linear low dose modeling approach.

Meeting materials, including public comments, can be found at

<https://yosemite.epa.gov/sab/sabproduct.nsf/MeetingCal/17F305EC43EB1A6585257E2D0050255F>.

The IRIS Program used a spline approach (piecewise linear model that was not presented during either SAB review) for exposure-response analyses for each of the lymphoid and breast cancer endpoints and ultimately combined the results. This approach results in higher risk at lower exposure levels and leads to proposed regulatory levels that are orders of magnitude lower than what the epidemiologic and genotoxicity scientific evidence would support.

Further, the IRIS Program did not fully consider all available evidence in finalizing the EO assessment. Scientific evidence clearly indicates that EO is a weak mutagen and a unit risk factor of less than 1 ppt is not realistic or reliably measurable, and is orders of magnitude lower than levels of EO in ambient air and the normal, endogenous levels of EO present in human bodies. Moreover, the assessment fails to consider the difference between exposures to EO produced outside the human body and exposure to EO produced within the human body as a normal metabolic product.

August 15, 2018

Acting Administrator Andrew Wheeler
& Office of the Science Advisor
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue, NW
Washington, D.C. 20460

RE: Comments of 88 Environmental, Farmworker, Environmental Justice, Public Health, and Animal Protection Organizations on Proposed Regulations on “Transparency” in Regulatory Science, 83 Fed. Reg. 18,768 (April 30, 2018), Docket ID No. EPA-HQ-OA-2018-0259.

Earthjustice submits these Comments on behalf of the 88 undersigned environmental, farmworker, environmental justice, public health, and animal protection organizations that represent millions of people who live and work in this country. We breathe the air, drink the water, eat the food, and work in the factories, farms, and elsewhere. In every way, we depend on public health safeguards established by the U.S. Environmental Protection Agency (“EPA” or “Agency”). Our lives and our health depend on EPA’s limiting pollution and toxic chemical exposure to amounts that will not cause harm. We strongly oppose the Proposed Rule, “Strengthening Transparency in Regulatory Science,” 83 Fed. Reg. 18,768 (Apr. 30, 2018) (“Proposed Rule” or “Proposal”) because of its clear intent and impact to weaken, or prevent the necessary strengthening of, these vital public health safeguards.

I. INTRODUCTION AND SUMMARY

Though EPA, former Administrator Scott Pruitt, and industry supporters of the Proposed Rule present it as one that will strengthen public confidence in science by insisting that the data underlying scientific studies are available to the public, as well as to industry itself, this superficial gloss conceals the pernicious purpose and impact of the Proposal. As demonstrated below, the true intent and effect of the Proposed Rule are not to strengthen science, but to exclude critical public health scientific studies – the very studies that have been instrumental in setting pollution limits that save hundreds of thousands of lives and prevent millions of diseases each year, and that protect against harmful and sometimes lethal exposure to toxic chemicals. Even EPA’s own Scientific Advisory Board (“SAB”) has expressed its concern with and opposition to this Proposal for this very reason. By excluding scientific studies that examine the health impacts of environmental contamination and toxic chemicals that meet all standards of scientific validity and rigor simply because they rely upon non-public data such as confidential medical information, EPA’s Proposal would weaken, not improve, its decision-making. Analysis of the actual text, the preamble, and history of the Proposed Rule make clear that this exclusion of important sound public health science is indeed the intent of the Proposed Rule. It is not an incidental consequence of some other laudable goal, but rather is, in fact, the goal itself.

EPA did not arrive at this Proposal on science following careful analysis and discussion with scientific bodies. Rather, this Proposal follows numerous meetings between EPA staff and representatives of industries that sought to weaken rules and regulations necessary to protect public health. In fact, the text of the Proposed Rule comes not from any scientific source or career or expert staff within EPA, but rather from partisan bill language introduced years ago by members of Congress. *See infra* at Section II.C. And although the preamble to the Proposed Rule asserts that it was “informed” by the policies of major scientific journals, the policy is counter to sound scientific review policies and has been expressly repudiated by many of those journals. *See infra*, Section VI.B.1. Instead, the Proposal follows the tobacco industry playbook, using as a defense against limitations on harmful chemicals an attack on the science on process grounds. And, lest there be doubt about the true intent of the Proposed Rule, the fact that it does not act even-handedly but rather would favor inaction or removing protections over imposing or strengthening safeguards makes eminently clear the intent to protect polluters and not the public.

The problems with EPA’s Proposal are put in stark relief when compared to basic principles of scientific and health-based decision-making. Indeed, if the restrictions EPA proposes here were applied to the Food and Drug Administration (“FDA”) or the Centers for Disease Control and Prevention (“CDC”), it is unclear how many pharmaceuticals, vaccinations, or cures for diseases would ever have been approved or used as drug trial information, as underlying data frequently relies on epidemiological evidence and private medical information that cannot be released.¹ Even if EPA had authority to restrict the consideration of health-based information otherwise, it could have no scientific or rational basis to ignore health information that health professionals recognize is both relevant and often essential to consider when determining what health protections are needed.

Not only does the Proposed Rule threaten both public health and the integrity of decision-making, but it likewise is illegal, for many reasons.

- **First**, EPA lacks the authority to issue the rule. EPA asserts authority under the Clean Air Act (“CAA”), Clean Water Act (“CWA”), Safe Drinking Water Act (“SDWA”), Comprehensive Environmental Response Compensation and Liability Act (“CERCLA”), Emergency Planning and Community Right to Know Act (“EPCRA”), Federal Insecticide, Fungicide, and Rodenticide Act (“FIFRA”), Toxic Substances Control Act (“TSCA”), and the Resource Conservation and Control Act (“RCRA”). Yet in virtually every case, EPA refers to sections that authorize or mandate the Agency to undertake research, not to impose unfounded limitations on the scientific information that informs public health decisions. EPA also cites provisions authorizing it to promulgate rules “necessary” to achieve the goals of the statute, but restricting sound science is neither

¹ *See, e.g., FDA, Step 3: Clinical Research*, (last updated Jan. 4, 2018), <https://www.fda.gov/ForPatients/Approvals/Drugs/ucm405622.htm>; Nat’l Institutes of Health, *Finding a Clinical Trial* (last updated on Mar. 13, 2017), <https://www.nih.gov/health-information/nih-clinical-research-trials-you/finding-clinical-trial>; CDC, *Clinical Trials* (last updated Nov. 29, 2017), https://www.cdc.gov/epilepsy/managing-epilepsy/clinical_trials.htm.

necessary nor consistent with the statutory goals – as EPA has previously determined – for moving the country toward clean air, water, workplaces, farms, and the environment.

- **Second**, not only is the Proposed Rule not authorized by law, but it directly contravenes the specific mandate of numerous statutes, such as the SDWA and TSCA, that require EPA to use the “best available” science or all “reasonably available” science and information. It also undermines the public health objectives of the very statutes upon which EPA mistakenly relies as authority for the rule. A rule that deliberately excludes this best science cannot be reconciled with these firm Congressional mandates and public health purposes.
- **Third**, EPA’s process in proposing this rule, to date, violates procedural requirements of the Administrative Procedure Act (“APA”), as well as of the CAA, FIFRA, and TSCA. These requirements are designed to promote reasoned decision-making by ensuring the relevant documents underlying the decision are in the record and that the Proposal has sufficient specificity to permit a sound response. The Proposal does not meet those requirements. In addition, the Proposal also fails to comply with the procedures required by a number of Executive Orders, particularly the performance of an environmental justice analysis.
- **Fourth**, EPA’s Proposed Rule is arbitrary and capricious for a farrago of reasons. The Proposal is irrational and unsupported by facts, reason, history, scientific evidence, or even any reasoned explanation. EPA has failed to show that the purported benefits of the Proposed Rule – which are largely inflated or imagined – justify the burdens imposed on public health and the environment. The Proposal represents a significant change in a long-standing EPA policy without the requisite acknowledgment or justification for such a departure. Many definitions are vague and can easily be implemented in arbitrary or politically driven ways. And the Proposed Rule would allow the Administrator to make an exception for any of a wide variety of reasons, again, not cabining at all the exercise of discretion. Any one of these failures would render the rule fatally arbitrary and thus invalid; together they demonstrate that it would be extreme arrogance for EPA to continue this rulemaking to conclusion.
- **Fifth**, in addition to its overall effect, many specific provisions of the Proposed Rule are independently illegal or improper. Among other things, as currently designed, the rule would likely apply in an uneven manner, for example, only to a decision to restrict the use of a pesticide, not to allow the use of such a chemical. It is a one-way street. Yet sound science must be followed wherever it leads. This rule puts a thumb on the scale toward regulation that ignores evidence of harm to human health. In addition, the Proposed Rule aims to undermine certain peer-reviewed science by injecting industry-manufactured uncertainty regarding science into the rulemaking process. The Proposal would cast doubt on science that has gone through independent peer-review by adding a second round of agency-required peer-review. And by injecting a mandate to “minimize

costs” into the rule, even where Congress has specifically forbidden consideration of costs in determining health standards, the Proposed Rule sows confusion, doubt, and delay, and weakens our public health.

- *Finally*, EPA seeks comment on a number of ways it might make this rule even more destructive and deadly through possibilities like retroactive application or application in enforcement or permitting decisions. There is no reasoned or scientific basis for the Proposed Rule and certainly no such basis to extend it further.

EPA should end this rulemaking promptly, withdraw this Proposal, and base its decisions on the best science available. The lives and health of millions of people living in America depend on this and deserve nothing less.

TABLE OF CONTENTS

I. INTRODUCTION AND SUMMARY	1
II. THE PROPOSED RULE WOULD EXCLUDE CRITICAL SCIENTIFIC STUDIES, HARMING THE PUBLIC SIMPLY TO FURTHER A POLITICAL AGENDA	5
A. The Proposed Rule Would Exclude Critical Scientific Studies	6
B. EPA Inexcusably Ignores the Fact that by Excluding Critical Human Health Studies, the Proposed Rule Significantly Harms Public Health.	9
C. The Proposed Rule Results Not From Any Scientific Principles or Justification But Rather from Industry Pressure to Weaken Public Health Protections and Follows the Tobacco Playbook.....	14
III. EPA LACKS LEGAL AUTHORITY TO ADOPT THE PROPOSED RULE, AND THEREFORE THE RULE IS UNLAWFUL	17
A. The Stated Statutory Provisions Upon Which EPA Relies Do Not Provide Authority for the Proposed Rule.....	18
B. EPA Has No Inherent Authority to Issue This Proposed Rule.	31
IV. THE PROPOSED RULE VIOLATES PROVISIONS OF THE LISTED AUTHORIZING STATUTES, AS WELL AS NUMEROUS OTHER STATUTES, POLICIES, AND EXECUTIVE ORDERS, AND IS THEREFORE UNLAWFUL.....	33
A. The Proposed Rule Violates the Purported Authorizing Statutes.....	33
B. The Limitations on Science Also Contradict Other Environmental Statutes.	53
C. Administrative Statutes Prohibit the Proposed Prohibitions.....	55
D. The Proposed Rule is Entirely Inconsistent with the Executive Orders Upon Which EPA Relies for Support.....	56

E. The Proposed Rule Violates Public Law 95-622 and the Common Rule for Research Involving Human Subjects.	59
V. EPA FAILED TO FOLLOW PROPER PROCEDURES	60
A. EPA Failed to Follow the Administrative Procedure Act as Required for Meaningful Public Participation and Judicial Review.....	60
B. EPA Failed to Follow Procedural Requirements Under FIFRA.....	63
C. EPA Failed to Follow the Procedural Requirements Under TSCA.....	64
D. EPA Failed to Follow the Procedural Requirements Under the CAA.....	64
E. EPA Failed to Perform the Analysis Required By EO 12,898.....	64
VI. THE PROPOSED RULE IS ARBITRARY	67
A. The Proposed Rule Conflicts with Existing Government Policies and EPA’s Prior Positions, and EPA Has Not Adequately Explained this Inconsistency.	68
B. The Proposed Rule is Based on Irrational, Unsupported Conclusions.	72
C. Section 30.9 Allows Standardless and Arbitrary Application of the Rule.	78
D. The Proposed Rule Impermissibly Favors So-Called “Secret Science” That Supports a Decision <i>Not</i> to Regulate a Chemical While Disfavoring Public Health Research that Supports a Decision to Regulate a Chemical.	79
E. EPA Has Failed to Show Any Need or Reasoned Basis for the Proposed Rule.....	80
VII. OTHER PROVISIONS OF THE RULE ARE UNLAWFUL.....	82
A. EPA’s Requirement in Proposed 30.6 to Give Explicit Consideration to Studies that Explore Threshold Models Is Arbitrary.	82
B. The Requirement in Proposed 30.7 that EPA Independently Peer-Review All Pivotal Regulatory Science Used to Make Regulatory Decisions is Arbitrary.	84
C. Section 30.8’s Requirement to Consider and Minimize Costs is Unlawful.	87
VIII. EPA’S PROPOSAL WOULD DISPROPORTIONATELY HARM LOW-INCOME COMMUNITIES AND MINORITY COMMUNITIES	88
IX. ADDITIONAL TOPICS FOR COMMENTS	90
A. Retroactive Application of the Law Would Be Unlawful.	90
B. Application of the Proposed Rule to Enforcement Actions, Individual Party Adjudications, or Permit Proceedings Would be Unlawful.....	91

II. THE PROPOSED RULE WOULD EXCLUDE CRITICAL SCIENTIFIC STUDIES, HARMING THE PUBLIC SIMPLY TO FURTHER A POLITICAL AGENDA

A. The Proposed Rule Would Exclude Critical Scientific Studies.

Although the Proposed Rule is couched in terms of increasing transparency, its effect – and indeed its true purpose as made evident by emails, press statements, and other documents – would be to “preclude” EPA from using critical human health studies that rely on confidential medical information. 83 Fed. Reg. at 18,769, n.3. The rule would require that “the regulatory science underlying [a proposed EPA action] is publicly available in a manner sufficient for independent validation.” *Id.* at 18,773 (proposed 40 C.F.R. § 30.1). Using terms that are vague, unsupported, and easily susceptible of manipulation, the Proposal would apply this public availability requirement to the “dose response data and models” underlying “pivotal regulatory science” used to justify “significant” “regulatory decisions.” *Id.* (proposed 40 C.F.R. §§ 30.2, 30.3, 30.5).

In practice, the “data” underlying studies used to set quantitative limits and tolerances to protect public health and the environment often consists of confidential medical or other personal data gathered in epidemiological studies. Both the law and medical research ethics prohibit the disclosure of this data.² As EPA’s own Science Advisory Board (“SAB”) warned:

For studies published many years ago, it may not be feasible to deliver public access to data and analytic methods. There are also sensitive situations where public access may infringe on legitimate confidentiality and privacy interests, and where exceptions from complete public access may be appropriate.

Furthermore, the rule could have the effect of removing legal, ethical, and peer-reviewed studies of health effects as sources to support the agency’s regulatory efforts. The proposed rule does not acknowledge that the epidemiologic science community, for example, has been making significant efforts to make data available where possible and to develop studies based on publicly available data where appropriate.

See Memorandum from Alison Cullen, Chair, SAB Work Group, to Members of the Chartered SAB and SAB Liaisons, “Preparations for Chartered Science Advisory Board (SAB) Discussions of Proposed Rule: Strengthening Transparency in Regulatory Science RIN (2080-AA14),” 3 (May 12, 2018), [https://yosemite.epa.gov/sab/sabproduct.nsf/E21FFAE956B548258525828C00808BB7/\\$File/W](https://yosemite.epa.gov/sab/sabproduct.nsf/E21FFAE956B548258525828C00808BB7/$File/W)

² For example, as discussed *infra*, Section IV.E, under the Common Rule For Research Involving Human Subjects, 45 C.F.R. Part 46, in order to gain approval from an Institutional Research Board to conduct federally funded research, “when appropriate, there [must be] adequate provisions to protect the privacy of subjects and to maintain the confidentiality of data.” 45 C.F.R. § 46.111(a)(7). This usually requires obtaining informed consent from the research subjects, including a description of how the researchers will preserve the confidentiality of identifiable records. *Id.* § 46.116(a)(5).

[kGrp memo 2080-AA14 final 05132018.pdf](#) (“SAB Comment”).³ Thus, by imposing a requirement that certain data that cannot legally or ethically be made public be disclosed for the study to be used, EPA is effectively preventing the use of such studies.

In an effort to minimize the effect of the Proposed Rule, EPA asserts that “concerns about access to confidential or private information can, in many cases, be addressed through the application of solutions commonly in use across some parts of the Federal government.” 83 Fed. Reg. at 18,770. As support for this assertion, EPA merely says, “[s]ee examples from the U.S. Department of Health and Human Services, National Institute of Standards and Technology, U.S. Department of Education, and the U.S. Census Bureau.” *Id.* n.16. But EPA ignores the fact that removing confidential information from the underlying data in such studies is impractical, ineffective, and unnecessary. For example, in the last ozone NAAQS review, EPA reviewed more than 4,000 studies and references, and cited more than 2,200 in the final Integrated Science Assessment. Anonymizing the confidential information in all of the data underlying over 2,000 studies would be overly burdensome in terms of effort and cost.⁴

³ Given these potential impacts, at its May 31, 2018, meeting, the SAB voted to independently review this rule. See Doug Obey, “SAB Votes To Review EPA’s Science, Emissions Rules In Sign Of ‘Rebuke,’” *Inside EPA* (May 31, 2018), <https://insideepa.com/daily-news/sab-votes-review-epas-science-emissions-rules-sign-rebuke>. At this meeting, several members of the scientific and medical communities testified about the deleterious impact of the Proposed Rule. EPA, Meeting: Chartered Science Advisory Board (May 31 to June 1, 2018), <https://yosemite.epa.gov/sab/sabproduct.nsf/MeetingCal/7D239353BCECF85B85258260058B716?OpenDocument>; Written Statement from Ms. Genna Reed, Union of Concerned Scientists, [https://yosemite.epa.gov/sab/sabproduct.nsf/3B1AE8935A26E56C852582940075D516/\\$File/UCS+SAB+written+comment+5.31+v2.pdf](https://yosemite.epa.gov/sab/sabproduct.nsf/3B1AE8935A26E56C852582940075D516/$File/UCS+SAB+written+comment+5.31+v2.pdf); Written Statement from Dr. David McCabe, Clean Air Task Force, [https://yosemite.epa.gov/sab/sabproduct.nsf/A4979E2FDC1153A7852582A600787981/\\$File/34697863.pdf](https://yosemite.epa.gov/sab/sabproduct.nsf/A4979E2FDC1153A7852582A600787981/$File/34697863.pdf); Written Statement from Lynn Goldman, The George Washington University, [https://yosemite.epa.gov/sab/sabproduct.nsf/112CC313B0FB652D852582A6007BA0DA/\\$File/Goldman+Oral.pdf](https://yosemite.epa.gov/sab/sabproduct.nsf/112CC313B0FB652D852582A6007BA0DA/$File/Goldman+Oral.pdf); Written Statement from Mary Rice, American Thoracic Society, [https://yosemite.epa.gov/sab/sabproduct.nsf/6E8D2B56375A3FE5852582A600781D7E/\\$File/70258076.pdf](https://yosemite.epa.gov/sab/sabproduct.nsf/6E8D2B56375A3FE5852582A600781D7E/$File/70258076.pdf); Written Statement from Liz Borkowski, Jacobs Institute of Women’s Health, [https://yosemite.epa.gov/sab/sabproduct.nsf/69E37E4047D5208A8525829E00601B26/\\$File/26246226.pdf](https://yosemite.epa.gov/sab/sabproduct.nsf/69E37E4047D5208A8525829E00601B26/$File/26246226.pdf); Written Statement from Dr. George Thurston, NYU School of Medicine, [https://yosemite.epa.gov/sab/sabproduct.nsf/1A46C31B5E4BFFBF852582A60078E00A/\\$File/89488078.pdf](https://yosemite.epa.gov/sab/sabproduct.nsf/1A46C31B5E4BFFBF852582A60078E00A/$File/89488078.pdf).

⁴ For example, in response to proposed legislation that would have required removal of all confidential information in all studies used by EPA, the Congressional Budget Office (“CBO”) stated: “If the EPA continued to rely on as many scientific studies as it has used in recent years to support its covered actions, then CBO estimates that the agency would need to spend at least \$100 million dollars per year to upgrade the format and availability of those studies’ data to the level required by H.R. 1430.” CBO, *Cost Estimate: H.R. 1430 Honest and Open New EPA Science Treatment (HONEST) Act of 2017* at 3 (Mar. 29, 2017), <https://www.cbo.gov/system/files/115th-congress-2017-2018/costestimate/hr1430.pdf>.

Moreover, de-identifying personal information has thus far proven to be ineffective.⁵ In 2000, the U.S. Department of Health and Human Services adopted Standards for the Privacy of Individually Identifiable Health Information (commonly known as the “Privacy Rule”), pursuant to its authority under HIPAA. *See* 45 C.F.R. Pts. 160 and 164. The Privacy Rule protects all individually identifiable health information held or transmitted by certain covered entities – that is, health plans, health care clearinghouses, or health care providers – and their business associates. *Id.* §§ 160.103, 164.502(a). Under the Privacy Rule, two methods have been used to de-identify individually identifiable health information so that the data may be disclosed. *First*, the entity may rely on the judgment of a qualified individual who determines, with documentation, “that the risk is very small that the information could be used, alone or in combination with other reasonably available information, by an anticipated recipient to identify an individual who is a subject of the information.” *Id.* § 164.514(b)(1). *Second*, the entity may remove multiple enumerated categories of information, including patient names, social security numbers, full face photographs, and biometric identifiers (such as fingerprints). *Id.* § 164.514(b)(2). An entity following this approach must generalize each patient’s birth date to the relevant year and may include only the first three digits of a patient’s zip code. *Id.* § 164.514(b)(2)(i)(B), (C). Despite these seemingly thorough requirements for de-identification, the Privacy Rule is significantly less protective than it appears. In the years since its adoption, publicly available personal information has proliferated, and new databases are created every day.⁶ To “reidentify” de-identified data, an adversary need only discover an individual’s “data fingerprint”—that is, the combination of values shared by nobody else in an anonymized data set.⁷ The adversary can then link this fingerprint to publicly available, non-anonymized information to discover the individual’s identity.⁸

⁵ Even if it were effective – which it is not – as the Seventh Circuit has explained, people may have privacy interests in unidentifiable personal information: “Imagine if nude pictures of a woman, uploaded to the Internet without her consent though without identifying her by name, were downloaded in a foreign country by people who will never meet her. She would still feel her privacy had been invaded.” *Nw. Mem’l Hosp. v. Ashcroft*, 362 F.3d 923, 929 (7th Cir. 2004). Indeed, according to a 1993 study, more than 60 percent of Americans want hospitals, pharmaceutical companies, and researchers to obtain patient consent before using medical information—even if that information has been de-identified. N. Nina Zivanovic, *Medical Information as a Hot Commodity: The Need for Stronger Protection of Patient Health Information*, 19 *Intell. Prop. L. Bull.* 183, 201 (2015).

⁶ Zivanovic at 201; Paul Ohm, *Broken Promises of Privacy: Responding to the Surprising Failure of Anonymization*, 57 *UCLA L. Rev.* 1701, 1724 (2010).

⁷ Ohm at 1723. Indeed, 87 percent of the population can be identified based only on their 5-digit ZIP code, gender, and date of birth. Latanya Sweeney, *Simple Demographics Often Identify People Uniquely*, Carnegie Mellon University, Date Privacy Working Paper 3 at 2 (2000), <https://dataprivacylab.org/projects/identifiability/paper1.pdf>. More than half the population can be identified by their gender, data of birth, and city, town, or municipality, while nearly 20 percent can be identified by their gender, date of birth, and county. *Id.*

⁸ Ohm at 1724. Of course, adversaries need not resort to such sophisticated methods. As the Seventh Circuit explained in the context of medical records relating to abortion, once a patients’ de-identified records are made available, “persons of their acquaintance, or skillful ‘Googlers,’ sifting the information

Removing confidential information so that it can be publicly disclosed is also wholly unnecessary, as studies can be validated without demanding access to confidential data. As the SAB explained,

The proposed rule fails to mention that there are various ways to assess the validity of prior epidemiologic studies *without public access to data and analytic methods*. For example, the Health Effects Institute (HEI) conducted a re-analysis of the influential Harvard Six Cities and American Cancer Society (ACS) epidemiologic studies and was able to replicate its findings and to assess the robustness of the findings via sensitivity analysis.

SAB Comment at 4 (emphasis added). Yet these are some of the very studies EPA would exclude under the Proposed Rule. 83 Fed. Reg. at 18,769, n.3.

EPA then claims that the Proposal would not “compel[] the disclosure of any confidential or private information.” *Id.* at 18,770–71. While technically, true, this is misleading, because the Proposal would force decision-makers to ignore important and relevant science precisely to avoid unnecessary and illegal disclosure.⁹

The exclusionary intent of the Proposed Rule is likewise demonstrated by proposed 40 C.F.R. § 30.8, which requires that the rule be implemented so as to “minimize costs.” As the SAB explained, “[i]n addition, there are considerations associated with the cost and effort that would be involved in making large and complex existing datasets available within Institutional Review Board requirements, including the issue of who would be responsible for shouldering this burden.” SAB Comment at 3. In other words, if EPA must minimize costs, the exclusion of science, rather than taking complicated and expensive steps to hide confidential medical data, is likely to be the approach followed.

B. EPA Inexcusably Ignores the Fact that by Excluding Critical Human Health Studies, the Proposed Rule Significantly Harms Public Health.

The harm this Proposed Rule is likely to cause cannot be overstated. Restricting science in the manner proposed by EPA would result in significant public health failures.

contained in the medical records concerning each patient’s medical and sex history, will put two and two together, ‘out’ the . . . women, and thereby expose them to threats, humiliation, and obloquy.” *Nw. Mem’l Hosp.* 362 F.3d. at 929.

⁹ In his testimony before the House of Representatives Subcommittee on Environment, Committee on Energy and Commerce, former Administrator Pruitt expressly stated that EPA would only consider studies where the underlying data and methodology were made public. *See* U.S. House of Representatives, Transcript of Hearing: The Fiscal Year 2019 Environmental Protection Agency Budget (Apr. 26, 2018), <https://docs.house.gov/meetings/IF/IF18/20180426/108218/HHRG-115-IF18-Transcript-20180426.pdf>.

Epidemiological studies have been foundational to understanding critical connections between exposure to toxic chemicals and public health harms — connections that will be severed under EPA’s Proposed Rule. For example, links between certain occupations and incidences of cancer were discovered through the precursors to epidemiological studies.¹⁰ “Historically, much of what was known about the causes of cancer was derived from studies of workers,” as the work environment offered critical characteristics allowing for the occurrence of cancer to be studied, namely “well-defined populations that are exposed, often at high levels, to agents that can be quantitatively characterized.”¹¹ The methods used in these studies linking exposure to chemicals to the risk of disease “contributed importantly to the development of modern epidemiology.”¹² Just as “[i]dentifying occupational carcinogens is an important research endeavor with broad relevance to science and public health,” with “[k]nowledge of cancer hazards from occupational exposure support[ing] prevention and surveillance activities, as well as compensation of exposed workers,”¹³ so too are epidemiological studies critical to protecting the public health from exposure to toxins in our air, water, and food. EPA’s Proposal – which would remove most of these crucial studies from consideration when setting safety standards – poses a clear and present danger to our health and the environment.

Another example of toxic harm documented through epidemiological studies is airborne lead. General aviation aircraft emit the majority of airborne lead in the nation. Multiple studies have found an association between airborne lead exposure and elevated blood lead levels in children. But the Proposed Rule would, in effect, prohibit EPA from considering one of the key studies that directly links high childhood blood lead levels and living in proximity to general aviation airports. This study, M.L. Miranda et al., *A Geospatial Analysis of the Effects of Aviation Gasoline on Childhood Blood Lead Levels*, *Envtl. Health Persp.* 119(10): 1513–1516 (Oct. 2011), <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3230438/> (“Miranda Study”), a copy of which is submitted herewith, found a significant association between living in close proximity to a general aviation airport where non-commercial piston jets that use leaded aviation fuel (or “leaded avgas”) are common, and elevated blood lead levels in children. The Miranda Study relies on state blood lead surveillance data for over 125,000 children between the ages of 9 months and 7 years in six North Carolina counties who had been tested for lead between 1995 and 2003, as well as GIS mapping of the locations of the children’s homes relative to the locations of airports where aircraft use avgas, and estimates of lead emissions from aircraft. The data relied on by the Miranda Study would likely be characterized as “dose response data and models” under the Proposed Rule as the study links exposure to nearby emissions of lead with blood lead levels. Thus, EPA could refuse to rely on the Miranda Study in taking a significant regulatory action – such as regulating the use of leaded avgas – unless obvious personal identifiers of the 125,000 children whose blood lead levels were studied were made publicly available. Because North Carolina collected that data as part of a mandatory statewide registry

¹⁰ Dana Loomis et al., *Identifying occupational carcinogens: an update from the IARC Monographs*, *Occup. & Envtl. Med.* (2018), <http://oem.bmj.com/content/early/2018/05/16/oemed-2017-104944>.

¹¹ *Id.*

¹² *Id.*

¹³ *Id.*

of blood lead surveillance data – undoubtedly with assurances of strict confidentiality to the participants – it would be impossible for the Miranda Study authors to make these “dose response data and models” “publicly available in a manner sufficient for independent validation,” as section 30.5 of the Proposed Rule would require as a condition for relying on the study. Moreover, the location data are fundamental to the analysis, and these data could not be redacted in a way that still permits reproduction of the results. The authors took special care when presenting their results to preserve the privacy of the child participants, as required by their institutional review board.

The Miranda Study found that living within 1,000 meters of an airport where avgas is used may have a significant effect on blood lead levels in children, and that the impacts of avgas are highest among those children living closest to the airport. Excluding the Miranda Study from consideration of the impact of the ongoing use of leaded avgas could lead EPA to underestimate the risks posed by leaded avgas by ignoring the association found in the Miranda Study between continued use of leaded avgas and children’s exposure to lead. This could result in EPA’s wrongly deciding that leaded avgas does not endanger public health, undercutting the basis for moving forward with a ban on leaded avgas despite the fact that leaded automobile gas was banned as a danger to public health decades ago.

EPA’s exclusionary rule would also gravely limit EPA’s ability to protect the public from the health hazards associated with perfluorooctanoic acid (“PFOA,” also known as “C8”) and perfluorooctane sulfonate (“PFOS”). As the result of a settlement of a lawsuit brought against a DuPont Washington Works facility near Parkersburg, West Virginia, related to contamination of drinking water, researchers conducted exposure and health epidemiological studies consisting of nearly 70,000 participants to examine the health impacts of exposure to these chemicals. These studies looked at “demographic data, medical diagnoses (both self-report and medical records review), clinical laboratory testing, and determination of serum concentrations of 10 perfluorocarbons (PFCs),”¹⁴ information that is both sensitive and confidential. Through this work, the researchers identified probable links between exposure to these chemicals and six specific diseases: diagnosed high cholesterol, ulcerative colitis, thyroid disease, testicular cancer, kidney cancer, and pregnancy-induced hypertension.¹⁵ The results of these studies have been published in numerous articles in scientific journals. Yet, under EPA’s Proposed Rule, this research would be excluded from consideration when determining health-based standards for PFOA under a number of environmental statutes, despite the clear evidence of harm these chemicals pose. Turning a blind eye to this data would have dramatic public health consequences, as it would preclude evaluation of valuable evidence of harm from exposure that could and should form the foundation of protections under the statutes EPA is charged with executing for the benefit of the public and the environment.

¹⁵ C8 Science Panel, *The Science Panel Website* (last updated Jan. 4, 2017), <http://www.c8sciencepanel.org/index.html>.

Many other studies would likewise be excluded from consideration under the Proposed Rule either because the data is confidential and not publicly available, or because the data is old and thus the results can no longer be replicated as required by the Proposed Rule. This includes, but is not limited to, the following:

- Early studies on the neurological effects of low-dose lead exposure on children’s health have been foundational to setting lead levels for air and water, as well as for certain products such as paint.¹⁶ The underlying data is confidential and not subject to public exposure. And it is likewise nearly 40 years old and thus likely no longer available.
- Studies demonstrating the link between exposure to arsenic and developing cancer depend upon confidential clinical examinations of the patients that served as research subjects,¹⁷ and thus the sensitive health data underlying the studies cannot be publicly exposed.
- Studies on the impact of air pollution and mortality rates that have been used by EPA for decades to set air quality standards rely on confidential data that may not be lawfully disclosed.¹⁸
- EPA’s toxicological reports in its Integrated Risk Information System (“IRIS”) program, which create health reference values that the Agency uses under various statutes to assess health risks from different chemicals.¹⁹

¹⁹ Industry has sought to stall and undermine these assessments using language strikingly similar to what is in the Proposed Rule. *See, e.g.*, Valerie Volcovici, “Pressured by industry, U.S. EPA slows formaldehyde study release: documents,” *Reuters* (May 24, 2018), <https://www.reuters.com/article/us-usa-epa-formaldehyde/pressured-by-industry-u-s-epa-slows-formaldehyde-study-release-documents-idUSKCN1IP3EX>; *see also* Jennifer Sass, “Toxic Chemical Industry and House R’s Attack on Science,” NRDC (Sept. 27, 2017), <https://www.nrdc.org/experts/jennifer-sass/toxic-chemical-industry-and-house-rs-attack-science>; Written Testimony of Kenneth A. Mundt, Ramboll Environ, *The Iris Review Process: Chloroprene and the criticality of good science*, <https://science.house.gov/sites/republicans.science.house.gov/files/documents/HHRG-115-SY18-WState-KMundt-20170906.pdf>; Oral Presentation of James S. Bus, Exponent, Inc. (support provided by the

EPA's Proposal would exclude these pivotal epidemiological studies and IRIS assessments that rely on such studies, as well as other critical research merely because the underlying data cannot be made public.

Compounding this problem, many public health protections are predicated upon coincidental benefits – or “co-benefits” – defined as “favorable impact[s] of [a rule] . . . that [are] typically unrelated or secondary to the purpose of the action.”²⁰ It has long been the practice of federal agencies to include co-benefits of regulatory action when studying a proposed rule.²¹ For example, EPA includes PM2.5 reductions as a co-benefit for additional regulations, including, but not limited to, the National Emissions Standards for Hazardous Air Pollutants for Industrial, Commercial, and Institutional Boilers and Process Heaters,²² and the Petroleum Refinery NSPS.²³ In light of the interconnectedness of many of EPA's rules, a restriction on the science supporting one will have a domino effect, weakening support for all rules that rely on the undermined rule. By way of illustration, should the Proposed Rule's restriction on the science EPA can consider in its rulemaking processes impact the PM2.5 reductions, it will, in turn, severely undercut the support provided for all other environmental programs for which PM2.5 reductions serve as a co-benefit.²⁴

American Chemistry Council),

<https://science.house.gov/sites/republicans.science.house.gov/files/documents/HHRG-115-SY18-WState-JBus-2070906.pdf>; Am. Chemistry Council, <https://www.americanchemistry.com/Policy/Regulatory-Reform/ACC-CEO-Makes-the-Case-for-Fixing-EPAs-IRIS-Program-Improved-Risk-Assessments.pdf>. A repeated industry criticism of IRIS assessments focuses on “transparency,” as a code to try to attack science (just as this Proposed Rule does) even though IRIS follows peer-reviewed, scientific protocols affirmed by the National Academies of Sciences. *See, e.g.*, “ACC: National Academies Missed a Critical Opportunity with IRIS Review,” Am. Chemistry Council (Apr. 13, 2018), <https://www.americanchemistry.com/Media/PressReleasesTranscripts/ACC-news-releases/National-Academies-Missed-Critical-Opportunity-With-IRIS-Review.html>.

²⁴ Simultaneous with the Proposed Rule's attack on science, EPA issued an Advanced Notice of Proposed Rulemaking that aims to eliminate its ability to rely on co-benefits in the public health rulemaking process. *See* Increasing Consistency and Transparency in Considering Costs and Benefits in the Rulemaking Process, 83 Fed. Reg. 27,524 (June 13, 2018).

For all of these reasons, the Proposed Rule will have far-reaching and damaging consequences on public health protections. In a world in which EPA cannot consider critical studies demonstrating the deleterious impacts of toxic chemicals, pollutants, and pesticides when developing rules governing exposure levels, acceptable uses, and safety measures, there will be little to no available evidence to support the imposition of public health protections. Absent such evidence, EPA will be unable to implement rules that protect our air and water from harmful pollution, our farmworkers from toxic pesticides, and the public from overall exposure to chemicals, as EPA will have no science to point to as justification for such measures. Simply put, removal of this science from consideration in the rulemaking process will cause the very foundation upon which many of our public health standards depend to crumble.

C. The Proposed Rule Results Not from Any Scientific Principles or Justification but Rather from Industry Pressure to Weaken Public Health Protections and Follows the Tobacco Playbook.

While described as a measure to “better inform[] the public,” “enhance[] the public’s ability to understand and meaningfully participate in the regulatory process,” and to ensure that “[t]he best available science must serve as the foundation of EPA’s regulatory actions,” 83 Fed. Reg. at 18,769, the Proposed Rule does nothing of the sort. Indeed, it was not intended to do so. Multiple documents indicate that the true purpose of this rule is to restrict EPA’s ability to use relevant and credible – and frequently the best available – science that underlies strict and fully protective public health protections.

The genesis of the Proposed Rule is politically-driven legislation previously introduced by the House that would prohibit EPA from relying in its rulemaking on any science where the underlying research is not made publicly available.²⁵ Industry lobbied Congress in an effort to gut environmental and health laws by attacking the science upon which they are based. For example, both the Secret Science Reform Act of 2014 and the Secret Science Reform Act of 2015 provided that EPA may not take action “unless all scientific and technical information relied on to support such covered action is . . . *publicly available online in a manner that is sufficient for independent analysis and substantial reproduction of research results.*”²⁶ Two years later, after its prior unsuccessful attempts, the House passed the HONEST Act in March 2017, which again would have limited EPA’s ability to perform any assessment or analysis based

²⁵ See, e.g., Juliet Eilperin and Brady Dennis, “Pruitt unveils controversial ‘transparency’ rule limiting what research EPA can use,” *Washington Post* (Apr. 24, 2018), <https://www.washingtonpost.com/news/energy-environment/wp/2018/04/24/pruitt-to-unveil-controversial-transparency-rule-limiting-what-research-epa-can-use/> (noting that, during a meeting between the then-EPA Administrator and Representative Lamar Smith, who introduced the House legislation, “Smith made ‘his pitch that EPA internally implement the HONEST Act [so that] no regulation can go into effect unless the scientific data is publicly available for review.’”).

²⁶ H.R. 4012, Secret Science Reform Act of 2014 (introduced Feb. 6, 2014), <https://www.congress.gov/bill/113th-congress/house-bill/4012/text>; H.R. 1030 - Secret Science Reform Act (introduced Feb. 24, 2015), <https://www.congress.gov/bill/114th-congress/house-bill/1030/text>.

on science if the public does not have complete access to the underlying data.²⁷ When these bills did not succeed, industry looked to a new audience to try put in place what Congress failed to enact: a ban on consideration of science when making regulatory decisions critical to public health and the environment if the underlying data is not made publicly available.

Industry pitched EPA hard, and found a willing ear, complaining that air pollution limits and toxin tolerances were being set at levels that were too stringent. Given that the strong Congressional mandate expressed in numerous statutes for strict health protections would require EPA to act if the science demonstrated a risk to public health, industry saw that their best bet was to knock out the science, this time through EPA itself.²⁸ Industry groups, including the National Association of Manufacturers and American Petroleum Institute, “pitched EPA a Proposal last spring that closely resembled what became Administrator Scott Pruitt’s ‘secret science’ plan,” according to EPA internal documents.²⁹ This plan closely tracks the longstanding attacks on EPA science from these groups.³⁰ EPA was responsive to the industry pitch and met with industry groups dozens of time, while repeatedly canceling the few scheduled meetings with public health advocates.³¹

Similarly, pesticide manufacturers, such as Dow Chemical Company, have long opposed the use of epidemiological studies that collect human health data that must be kept confidential. For example, they vigorously challenged EPA’s proposal to revoke tolerances for chlorpyrifos, one of the country’s most widely used pesticides, which in effect would have prohibited the use of chlorpyrifos on food crops. EPA had found that it could not conclude that exposure to this pesticide in food and drinking water was safe based on a risk assessment that included a safety factor mandated under the Food Quality Protection Act to protect the health of infants and children whose developing bodies are uniquely vulnerable to toxic pesticides. *See* 80 Fed. Reg. 69,079, 69,090 (Nov. 6, 2015); *see also* National Academy of Science (“NAS”), *Pesticides in the*

Diets of Infants and Children (1993). EPA retained the safety factor over industry objections because epidemiologic studies indicate that prenatal exposure to chlorpyrifos can harm the developing nervous system. So the industry attacked those studies, claiming they needed to see the underlying medical information³², even though the studies – conducted by highly reputable institutions including Columbia University, University of California-Berkeley, and Mt. Sinai School of Medicine – were all published peer-reviewed articles in scientific journals. While the Columbia scientists who authored the study have allowed EPA scientists to analyze the data in a secure setting on Columbia’s campus, they have refused to make the raw data publicly available in order to protect the privacy of the mothers and children who participated in the research.³³ Not satisfied, the pesticide industry is pressing EPA to exclude the study so that it can continue to sell a pesticide known to cause severe harm to children. And EPA is playing along.

This attack on supposedly “secret science” is not new or unique to this EPA and cannot be viewed in a vacuum. Attacking the underlying science has been a key strategy for decades, most notably in the tobacco industry’s effort to limit evidence of the enormous public health harms caused by tobacco. After EPA published its final Risk Assessment for Environmental Tobacco Smoke (secondhand smoke) in 1992, which concluded that secondhand smoke “is a human carcinogen, responsible for approximately 3,000 lung cancer deaths annually in U.S. nonsmokers,”³⁴ the tobacco industry went on the attack. The Risk Assessment had been based in part on a meta-analysis of “31 epidemiologic studies from 8 different countries” which showed a significant risk of harm.³⁵ Recognizing that “[v]igorous denial is not a satisfactory defensive strategy” and that “the most significant [secondhand smoke] problem facing the Industry is the result of epidemiological studies which indicate” a risk from exposure, the tobacco industry decided to attack epidemiological science.³⁶ Industry lawyers candidly noted that “there is virtually no chance of affecting change on this issue if the focus is” secondhand smoke so “our approach is one of addressing process as opposed to scientific substance, and global applicability

³² CropLife, *Petition EPA to halt regulatory decisions that are highly influenced/determined by results of epidemiological studies that do not meet well-defined data quality standards, and that are not integrated into the health risk assessment in a transparent, well-defined manner* (Nov. 29, 2016), <http://191hmt1pr08amfq62276etw2.wpengine.netdna-cdn.com/wp-content/uploads/2016/01/FINAL-CLA-Petition-Regulatory-Decision-Making-11-29-16.pdf>; CropLife, *Comments Re: Chlorpyrifos; Tolerance Revocations; 80 FR 69080, November 6, 2015; Docket ID: EPA-HQ-OPP-2015-0653* (Jan. 25, 2015), <https://www.regulations.gov/document?D=EPA-HQ-OPP-2015-0653-0342>.

³⁶ Amended Final Opinion, *United States of America et al. v. Phillip Morris USA, Inc., et al.*, Civ. Action No. 99-2496 at 185-86 (D.D.C. Aug. 17, 2006), <http://www.publichealthlawcenter.org/sites/default/files/resources/doj-final-opinion.pdf>.

to industry rather than focusing on any single industrial sector.”³⁷ Shortly thereafter, one of RJ Reynolds’ lobbying firms organized a “Secret Science” Work Group to “[f]ocus public attention on the importance of requiring disclosure of taxpayer-funded analytical data.”³⁸

This Proposed Rule follows suit. It is just another effort to hide evidence of the public health harm of toxic chemicals, given that there is no way to change the research results showing the deleterious effects.³⁹ And this time, the effort is much broader, as it is not hiding evidence related to just one industry or one product. Indeed, when describing the hearing on the Secret Science Reform Act of 2015 – a predecessor of the Proposed Rule – Representative Eddie Bernice Johnson noted that “[w]hen the Majority held a hearing on this legislation last Congress, every Majority witness at the hearing had significant ties to the tobacco industry. . . . Judging from the groups that have endorsed this bill, it might be more accurate to state that H.R. 1030 is the polluting industries’ attempt to prevent EPA from using the best available science.” *See* Minority Staff Report at 48. The same holds true for the Proposed Rule. EPA should not be permitted to “deliberately misle[a]d the public about the risks of” certain pollutants or other chemicals by hiding evidence of their harms.⁴⁰ As several courts have found, the best available *politics* does not equate to the “*best available science*,”⁴¹ so while this Proposed Rule may serve EPA’s political ends, it does not meet the mandates of sound science.

III. EPA LACKS LEGAL AUTHORITY TO ADOPT THE PROPOSED RULE, AND THEREFORE THE RULE IS UNLAWFUL

EPA has no authority to limit what scientific information may be considered in making regulatory decisions. No statute authorizes this rule, and EPA lacks any inherent authority to regulate absent a statutory basis. Thus, should EPA proceed to promulgate the Proposed Rule or otherwise limit what science can be considered in regulatory decisions, it will be acting in violation of the law. *See* 5 U.S.C. § 706(2)(C) (requiring a reviewing court to “hold unlawful and set aside agency action . . . found to be . . . in excess of statutory jurisdiction, authority, or limitations, or short of statutory right.”).

⁴⁰ *Id.*

⁴¹ *Ecology Ctr., Inc. v. U.S. Forest Serv.*, 451 F.3d 1183, 1194 n.4 (10th Cir. 2006) (emphasis added).

A. The Stated Statutory Provisions Upon Which EPA Relies Do Not Provide Authority for the Proposed Rule.

EPA lists a number of statutes it administers as purported authority for this rule, including “provisions providing general authority to promulgate regulations necessary to carry out the Agency’s functions under these statutes and provisions specifically addressing the Agency’s conducting of and reliance on scientific activity to inform those functions.” *See* 83 Fed. Reg. 18,769. As discussed in detail below, none of the statutes cited by EPA authorizes this proposed action.⁴² EPA thus lacks authority to promulgate this rule under any statutory regime administered by the Agency, rendering the rule invalid.

i. Clean Air Act (“CAA”)

EPA cites two provisions of the Clean Air Act (“CAA”) as authority for the Proposed Rule. As further detailed below, neither provision provides such authority.

First, EPA cites Clean Air Act § 103, 42 U.S.C. § 7403, as authority for the Proposed Rule. 83 Fed. Reg. at 18,769. However, this section provides no authority for such a rule. Instead, the section requires EPA to create a research and development program for prevention and control of air pollution and to conduct research on health effects, among other issues. Specifically:

- Section 7403(a) requires EPA to “establish a national research and development program for the prevention and control of air pollution,” which includes funding or conducting studies, establishing technical advisory committees, and related activities.
- Section 7403(b) provides a list of specific “[a]uthorized activities” that EPA may take in establishing the “research and development program” under subsection (a), including, for example, collecting and making available information pertaining to the program, cooperating with other agencies, and making grants and contracts for research. *Id.* § 7403(b)(6).
- Section 7403(c) requires EPA to “conduct a program of research, testing, and development of methods for sampling, measurement, monitoring, analysis, and modeling of air pollutants.”
- Section 7403(d) requires EPA to “conduct a research program on the short-term and long-term effects of air pollutants, including wood smoke, on human health.”
- Section 7403(e) requires EPA to conduct ecosystem research.

⁴² Even assuming any of the statutory provisions upon which EPA relies provided authority to restrict science – which they do not – at best, the provisions could authorize EPA’s proposed policy only with respect to activities under the particular statute. The provisions could not authorize an across-the-board restriction on science for rulemakings under all statutes.

- Section 7403(f) requires EPA to oversee an “experimental and analytical research effort, with the experimental research to be carried out at the Liquefied Gaseous Fuels Spill Test Facility.”
- Section 7403(g) requires that, in carrying out purpose of subsection (a), EPA shall “conduct a basic engineering research and technology program to develop, evaluate, and demonstrate nonregulatory strategies and technologies for air pollution prevention.”
- Section 7403(h) authorizes certain research by the National Institute of Environmental Health Sciences.
- Section 7403(i) discusses coordination of research with “other Federal ecological and air pollution research efforts.”
- Section 7403(j) discusses acid rain research.
- Section 7403(k) discusses air pollution conferences.

Notably absent from this long list of explicit requirements and responsibilities is rulemaking authority, much less authority to exclude scientific studies from consideration by EPA in any “regulatory decisions” for any reason, including whether or not the underlying data is, or can be made publicly available. *See* 83 Fed. Reg. at 18,773-74 (proposed 40 C.F.R. §§ 30.2, 30.3, 30.5) (indicating application of Proposed Rule only to use of studies and data in “significant regulatory decisions”). Indeed, the authorized activities included in Section 7403(b) are quite specific, including actions such as collecting and disseminating information, making grants and contracts, and even “construct[ing] facilities, provid[ing] equipment, and employ[ing] staff as necessary to carry out this chapter.”

Congress knew how to authorize EPA rulemaking activities elsewhere in the Clean Air Act. That § 7403 does not include such authority, much less authority to restrict science in particular, shows a clear intent not to grant such authority. *Meghrig v. KFC W., Inc.*, 516 U.S. 479, 485 (1996). Rather, the purpose of § 7403 is plainly to promote research and to advance and increase the use and consideration of data, not to restrict it.⁴³

Equally problematic, EPA’s proposed action serves none of the goals and meets none of the requirements of § 7403. The Proposed Rule is not a “research and development program” and does not include the requisite components of such a program necessary for EPA to act pursuant to its authority under this provision. EPA is not proposing any grants or research fellowships, *see* § 7403(b), or any air pollutant monitoring, analysis, modeling, and inventory

⁴³ *See, e.g.*, § 7403(b), (c)(2), (d)(1)(A) (“collect and make available, through publications and other appropriate means . . . information . . . pertaining to [EPA’s] research and other activities”; “collect and disseminate . . . basic data on chemical, physical, and biological effects of varying air quality . . .”; “establish[] a national network to monitor, collect, and compile data . . . of air emissions, deposition, air quality . . .”; “conduct studies, including epidemiological, clinical, and laboratory and field studies, as necessary to identify and evaluate exposure to and effects of air pollutants on human health”).

research, *see* § 7403(c), or any “basic engineering research and technology program to develop, evaluate, and demonstrate nonregulatory strategies and technologies for air pollution prevention,” *see* § 7403(g). Nor is EPA proposing to conduct any epidemiological studies on air pollution or to develop any methods or techniques for human health risk assessment, *see* § 7403(d).⁴⁴

In addition, even if EPA could otherwise act pursuant to this provision, EPA may not develop health risk assessment methods and techniques applicable to air pollutants without including the following requisite statutory elements:

- The creation of an Interagency Task Force, *id.* § 7403(d)(2)(A);
- An evaluation of each of the listed hazardous air pollutants (“HAPs”) under § 7412(b)(1) “based on reasonably anticipated toxicity to humans and exposure factors” listed therein, and which “shall be reviewed by the Interagency Task Force,” *id.* § 7403(d)(2)(B);
- Preparation of environmental health assessments for each of the HAPs, with specific deadlines, that “shall be prepared in accordance with guidelines developed by the Administrator in consultation with the Interagency Task Force and the Science Advisory Board,” including a specific list of scientific elements that includes “available toxicological and epidemiological information,” “a determination of gaps in available information,” and “where appropriate, an identification of additional activities . . . needed to identify the types or levels of exposure which may present significant risk of adverse health effects in humans.” *Id.* § 7403(d)(2)(C).

EPA’s Proposal does not include any, much less each, of these required components for an exercise of § 7403 authority. Thus, even if EPA otherwise had authority to act pursuant to this provision, the Proposed Rule is inconsistent with and contravenes the very provision which EPA itself cites.

For each and all of these reasons, § 7403 does not give EPA authority to regulate science or to exclude from EPA regulatory decisions the consideration of a subset of scientific studies.

Second, EPA cites section 301(a) of the Clean Air Act, 42 U.S.C. § 7601(a), as authority for the Proposed Rule. 83 Fed. Reg. at 18,769. This section of the Clean Air Act authorizes only “such regulations as are necessary to carry out [the Administrator’s] functions under [the Clean Air Act].” 42 U.S.C. § 7601(a)(1). As discussed below, this provision does not authorize the Proposed Rule.

⁴⁴ Moreover, and as discussed in great detail *infra*, Section V, for EPA to perform any of these tasks, it would have to meet the procedural requirements constraining its research and development authority. For example, 42 U.S.C. § 7403(d) sets specific directions that ensure that EPA may not conduct a research program on the effects of air pollution on its own pursuant to this provision, but rather, for such “environmental health effects research,” EPA must consult with the Secretary of Health and Human Services, generally. *Id.* § 7403(d)(1). EPA failed to follow these requisite procedures.

It is beyond cavil that general rulemaking provisions do not “provide [EPA] Carte blanche authority to promulgate any rules, on any matter relating to the Clean Air Act, in any manner that the [EPA] wishes.” *North Carolina v. EPA* 531 F.3d 896, 922 (D.C. Cir. 2008), *on reh’g in part*, 550 F.3d 1176 (D.C. Cir. 2008) (citing *Citizens to Save Spencer County v. EPA*, 600 F.2d 844, 873 (D.C. Cir. 1979)). Rather, such regulations must be “necessary” to carry out another statutory duty. *See, e.g., id.* (“EPA cannot claim retiring excess Title IV allowances is ‘necessary’ for EPA to ensure SIPs comply with section 110(a)(2)(D)(i)(I).”); 42 U.S.C. § 7601(a). And “EPA cannot rely on its gap-filling authority to supplement the Clean Air Act’s provisions when Congress has not left the agency a gap to fill”—i.e., ‘when there is statutory language on point.’” *WildEarth Guardians v. EPA*, 830 F.3d 529, 539 (D.C. Cir. 2016) (citing *Nat. Res. Def. Council v. EPA*, 749 F.3d 1055, 1063–64 (D.C. Cir. 2014)); *see also Nat. Res. Def. Council v. EPA*, 749 F.3d 1055, 1063–64 (D.C. Cir. 2014) (“[W]e have consistently held that EPA’s authority to issue ancillary regulations is not open-ended, particularly when there is statutory language on point.” (citing *Am. Petroleum Inst. v. EPA*, 52 F.3d 1113, 1119 (D.C. Cir. 1995))).⁴⁵

EPA has not argued, nor could it, that the Proposed Rule is “necessary” for fulfilling the agency’s rulemaking duties under the CAA. Rather, as discussed *infra*, Section IV.A, EPA’s proposed exclusion of scientific data that is not publicly available is antithetical to the purposes of the CAA. Moreover, EPA itself has repeatedly determined, and the D.C. Circuit has affirmed, that disclosure of the data underlying studies on which the agency relies is *not* necessary to fulfill the Agency’s transparency and public comment obligations under the Clean Air Act, 42 U.S.C. § 7607(d).

For example, when EPA set the 1997 Particulate Matter National Ambient Air Quality Standards (“NAAQS”), “[s]everal commenters questioned EPA’s ability to rely on studies demonstrating an association between PM and excess mortality without obtaining and disclosing the raw ‘data’ underlying these studies for public review and comment.” 62 Fed. Reg. 38,652, 38,689 (July 18, 1997); *see also* EPA, *Responses to Comments on the 1996 Proposed Rule on the Nat’l Ambient Air Quality Standards for Particulate Matter* (July 1997), https://www3.epa.gov/ttn/naaqs/standards/pm/data/rte_pm.pdf. EPA responded that “[i]t would be impractical and unnecessary for EPA to review underlying data for every study upon which it relies as support for every proposed rule or standard.” 62 Fed. at 38,689. EPA made clear that disclosing such data was not its general practice, in part because EPA was not relying on the underlying data but rather on the study results themselves. *Id.* EPA recognized that “[i]f EPA and other governmental agencies could not rely on published studies without conducting an independent analysis of the enormous volume of raw data underlying them, then much plainly relevant scientific information would become unavailable to EPA for use in setting standards to protect public health and the environment.” *Id.* EPA explained:

⁴⁵ *See also Nat. Res. Def. Council v. Reilly*, 976 F.2d 36, 41 (D.C. Cir. 1992) (EPA cannot use its general rulemaking authority as justification for adding to a statutorily specified list); *Sierra Club v. EPA*, 719 F.2d 436, 453 (D.C. Cir.1983) (same); *see also Gonzales v. Oregon*, 546 U.S. 243, 264–65 (2006) (“It would go . . . against the plain language of the text to treat a delegation for the ‘execution’ of [the Attorney General’s] functions as a further delegation to define other functions well beyond the statute’s specific grants of authority.”).

[S]uch data are often the property of scientific investigators and are often not readily available because of the proprietary interests of the investigators or because of arrangements made to maintain confidentiality regarding personal health status and lifestyle information of individuals included in such data. Without provisions of confidentiality, the possibility of conducting such studies could be severely compromised.

Id. And when the 1997 PM NAAQS was challenged, the D.C. Circuit affirmed EPA's consideration of relevant scientific epidemiological evidence without disclosure of all of the raw data. *See Am. Trucking Ass'n v. EPA*, 283 F.3d 355, 372 (D.C. Cir. 2002) (The court "agree[d] with EPA that requiring agencies to obtain and publicize the data underlying all studies on which they rely 'would be **impractical and unnecessary**.'" (quoting 62 Fed. Reg. at 38,689) (emphasis added)).

In *Coalition of Battery Recyclers Association v. EPA*, 604 F.3d 613, 623 (D.C. Cir. 2010), petitioners again challenged EPA's failure to disclose underlying data for a study on the health effects of lead exposure, on which it relied to issue the 2008 Lead NAAQS. Specifically, the petitioners contended "the *Lanphear* study [on which EPA relied] contained such errors that EPA acted arbitrarily and capriciously in relying on results from the study without first obtaining and making public the underlying data for the study." *Battery Recyclers*, 604 F.3d at 622-23. EPA reiterated in its briefing that it would be "**impractical and unnecessary**" to disclose such data. *See* EPA Respondent Brief (Doc. No. 1230237) at 47 (Feb. 16, 2010) (citation and quotation marks omitted; emphasis added), *Battery Recyclers*, 604 F.3d at 623. The D.C. Circuit again agreed with and upheld EPA's determination that disclosure of underlying data is not necessary to consider the results of a health study to be relevant to a clean air rulemaking pursuant to 42 U.S.C. § 7607(d). The court applied its prior holding in *American Trucking*, that "[t]he Clean Air Act imposes no such obligation" and that "requiring agencies to obtain and publicize the data underlying all studies on which they rely would be impractical and unnecessary." *Battery Recyclers*, 604 F.3d at 623 (quoting *American Trucking*, 283 F.3d at 372). Though petitioners "attempt[ed] to distinguish their request on the ground that in *American Trucking* the court was addressing requests for data underlying several studies, while they request only that EPA obtain and make public the data underlying the *Lanphear* study," *id.* at 623, the court found that argument unpersuasive, again "noting that raw data often is unavailable due to proprietary interests of a study's scientific investigators or confidentiality agreements with study participants." *Id.* at 623 (citing *American Trucking*, 283 F.3d at 372).

EPA also cannot argue that excluding studies from the Agency's consideration when the underlying data cannot be publicly disclosed is "necessary" for ensuring the Agency relies on the best available science. As an initial matter, nowhere in the Proposed Rule does EPA find that particular studies, much less all studies that rely in part on the collection of confidential raw data (such as people's names and health records), are bad science, or even less reliable science. Nowhere does EPA show how health studies that rely in part on confidential personal information can never be relevant in any way to CAA rulemakings. Nor could it, as EPA has found such studies relevant and has relied on such studies for decades, and they are commonly accepted and valued as important scientific information of health effects within the scientific community. *See* Section IV.A. EPA cites no examples of situations where unsound, unlawful or

arbitrary decision-making resulted from an agency's reliance on studies that do not fit its newfound notions of "transparency" and "integrity." Rather, courts have repeatedly upheld actions that have relied on such studies, as cited above.

Moreover, EPA has not demonstrated that it is consistent with scientific principles to categorically *exclude* peer-reviewed scientific information from all consideration in a rulemaking, as EPA proposes to do. If EPA has any doubts or concerns regarding the merits of a particular study, it must address those doubts or concerns for that particular study in the context of a given rulemaking, where agency staff, internal scientific experts, scientific advisory committees, or commenters contend that study is relevant. EPA has provided no scientific justification for ignoring an entire class of health science simply because the underlying data has not been disclosed. Whether underlying data on which a study relies is made public or not simply has no bearing on whether a scientific study is good science, is accurate, is reliable, and is relevant to a scientific question (such as the health effects of air pollution). And to the extent EPA requires additional verification of a study, there are myriad ways it can do so without disclosing confidential data (for example, requesting an independent scientific body to conduct a confidential review). *See* Section IV.A, *infra*.

Furthermore, there is no statutory gap with respect to what studies EPA should consider (nor does EPA attempt to identify any). As further discussed below, sections of the Clean Air Act that govern air standards and rulemakings specify the applicable standards and generally require consideration of all available science. EPA has been adopting rules under most of these provisions for decades without finding any need for restrictions of the sort EPA proposes here. The Agency provides no explanation, and none exists, for suddenly finding "gaps" in these provisions.

Finally, EPA fails to acknowledge that it has had a longstanding policy of considering health studies without requiring disclosure of all underlying raw data. Indeed, it tries to minimize its prior position in a footnote, stating that: "Historically, EPA has not consistently observed the policies underlying this proposal, and courts have at times upheld EPA's use [of] non-public data in support of its regulatory actions." 83 Fed. Reg. at 18,769, n.3. It ignores the fact that EPA itself has *consistently* considered and used health studies dependent on non-public information for clean air rulemakings. Further, the Agency's longstanding policy has been that "EPA does not generally undertake evaluations of raw, unanalyzed scientific data as part of its public health standard setting process." 62 Fed. Reg. at 38,689. Only in "extreme cases – for example where there are credible allegations of fraud, abuse or misconduct – would a review of raw data be warranted." *Id.* That EPA now finds this data so important that it must be publicly disclosed before the Agency will even consider a study represents a monumental shift in course.

EPA is not working on a blank slate. Therefore, it must do more than just explain the change. Rather, EPA must provide "a more detailed justification," *FCC v. Fox Television Stations, Inc.*, 556 U.S. 502, 515 (2009); *see also Motor Vehicles Mfrs. Ass'n v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 41-42 (1983), because its new policy directly contradicts the Agency's prior findings that such studies are relevant to clean air rulemakings and provide evidence of health effects that the Agency can and must consider. EPA has not provided any reasoned explanation for its departure, much less an explanation with the requisite detail to justify its about-face.

ii. *Clean Water Act (“CWA”)*

EPA cites sections 104 and 501 of the Clean Water Act, 33 U.S.C. §§ 1254, 1361, as statutory authority for its Proposed Rule. Upon examination, these sections do not provide the authority EPA suggests.

Section 104, 33 U.S.C. § 1254, entitled “Research, investigations, training, and information,” addresses the Administrator’s authority as it relates to the establishment of national programs, cooperation, investigations, water quality surveillance system, and reports. It requires the Administrator to, among other things: “conduct and promote the coordination and acceleration of, research, investigations, experiments, training, demonstrations, surveys, and studies relating to the causes, effects, extent, prevention, reduction, and elimination of pollution”; and to “initiate and promote the coordination and acceleration of research designed to develop the most effective practicable tools and techniques for measuring the social and economic costs and benefits of activities which are subject to regulation under this chapter.” 33 U.S.C. § 1254(a)(1), (6).

Toward that end, the provision authorizes the Administrator to: “collect and make available, through publications and other appropriate means, the results of and other information, including appropriate recommendations by him in connection therewith, pertaining to such research and other activities referred to in” 1254(a)(1); and “cooperate with other Federal departments and agencies, State water pollution control agencies, interstate agencies, other public and private agencies, institutions, organizations, industries involved, and individuals, in the preparation and conduct of such research and other activities referred to in” 1254(a)(1). *Id.* § 1254(b)(1), (2). It also requires the Administrator to “conduct research on, and survey the results of other scientific studies on, the harmful effects on the health or welfare of persons caused by pollutants.” *Id.* § 1254(c). And it requires the Administrator to conduct and update a variety of studies, including, but not limited to, studies on oil pollution controls, *id.* § 1254(i), effects and control of pesticides in water, *id.* § 1254(l), waste oil disposal, *id.* § 1254(m), effects of pollution on estuaries and estuarine zones, *id.* § 1254(n), pollution from agriculture, *id.* § 1254(p), and effects and methods of controlling thermal discharges, *id.* § 1254(t).

Thus, section 1254 discusses research and studies in great detail, but it does so by setting forth requirements for *cooperation and promotion of research*. This section does not grant EPA any rulemaking authority at all, nor does it say anything about the Administrator’s ability to screen or otherwise define the parameters for research that EPA can rely on for regulatory purposes. Instead, it describes the different areas for research and study and requires the Administrator to conduct research and studies in these areas.

The second CWA provision upon which EPA relies fares no better. EPA cites to section 501, 33 U.S.C. § 1361, as additional statutory authority for this rule. This is the provision generally authorizing the Administrator to “prescribe such regulations *as are necessary to carry out his functions under this chapter*.” 33 U.S.C. § 1361(a) (emphasis added). Such authority only exists if the regulation is, in fact, “necessary to carry out” the provisions under the CWA. *Mourning v. Family Publ’n Serv., Inc.*, 411 U.S. 356, 369 (1973) (“[w]here the

empowering provision of a statute states simply that the agency may ‘make . . . such rules and regulations as may be necessary to carry out the provisions of [an] Act,’ . . . the validity of a regulation promulgated thereunder will be sustained [only] so long as it is ‘reasonably related to the purposes of the enabling legislation.’” (citation omitted)). The Proposed Rule is decidedly not necessary at all. As with the CAA discussed *supra*, the CWA regulatory authority enables the Agency to carry out its functions and fill any statutory gaps. The Proposed Rule is not needed to fill any “gaps” in the CWA, as Congress has already provided – in great detail – the Administrator’s regulatory authority as it relates to research, emphasizing the need for the use and promotion of inclusive research. *See* § 1254. Moreover, a rule “devised pursuant to Congress’ directive to issue regulations ‘necessary to carry out’ [an] Act . . . cannot stand if it is ‘arbitrary, capricious, or manifestly contrary to the statute.’” *Ragsdale v. Wolverine World Wide, Inc.*, 535 U.S. 81, 86 (2002) (citations omitted); *see also Am. Petroleum Inst.*, 52 F.3d at 1119 (“EPA cannot rely on its general authority to make rules necessary to carry out its functions when a specific statutory directive defines the relevant functions of EPA in a particular area.”). As discussed below in Section IV.A and elsewhere herein, not only is the regulation unnecessary to carry out EPA’s functions under the CWA or to fill any gaps, but it is arbitrary and antithetical to the objectives of the CWA. Thus, the Proposed Rule is not authorized under this general rulemaking provision.

iii. Safe Drinking Water Act (“SDWA”)

Despite EPA’s contrary contentions, the Safe Drinking Water Act (“SDWA”), 42 U.S.C. § 300f *et seq.*, does not provide any authority for the adoption of a policy that would “preclude” EPA from considering all relevant scientific evidence in carrying out its duty to protect the quality of drinking water in the United States. *See* 83 Fed. Reg. at 18,769, n.3. In the Proposal, EPA points to two specific provisions of the SDWA as authorizing the rule, neither of which provides the necessary authority.

First, EPA points to 42 U.S.C. § 300j-1, but its reliance on this section is misplaced. Rather than authorizing the Administrator’s selective exclusion of science and research, this section simply describes the Agency’s responsibility to gather information—that is, “[to] conduct research, studies, and demonstrations relating to the causes, diagnosis, treatment, control, and prevention of physical and mental diseases and other impairments of man resulting directly or indirectly from contaminants in water, or to the provision of a dependably safe supply of drinking water.” 42 U.S.C. § 300j-1(a)(1). This section also directs EPA to study certain serious threats to drinking water, including “polychlorinated biphenyl contamination,” “disposal of waste (including residential waste),” “surface spills of contaminants,” “virus contamination,” “abandoned injection or extraction wells,” “intensive application of pesticides and fertilizers in underground water recharge areas,” “surface disposal of contaminants in underground water recharge areas,” and “the nature, extent, sources of and means of control of contamination by chemicals or other substances suspected of being carcinogenic.” *Id.* § 300j-1(a)(3)–(9). It therefore provides no legitimate basis for a rule that aims to limit the data that EPA can consider in executing the purposes of the SDWA.

Second, EPA cites the general grant of rulemaking authority in 42 U.S.C. § 300j-9(a)(1) as authorizing the Proposed Rule. However, this section likewise does not offer authorization. While this section empowers EPA “to prescribe such regulations as are necessary or appropriate to carry out [its] functions under this subchapter,” the Proposed Rule is neither necessary nor appropriate to effectuate the SDWA.

The SDWA requires EPA to protect the public by limiting contaminants in public water systems. Specifically, the Act directs EPA to establish a “maximum contaminant level goal” for each contaminant “at the level at which no known or anticipated adverse effects on the health of persons occur and which allows an adequate margin of safety.” 42 U.S.C. § 300g-1(b)(4)(A). EPA must then set an enforceable “maximum contaminant level” as close to this goal as is feasible. *Id.* § 300g-1(b)(4).

To accomplish these goals, in 1996, Congress amended the SDWA to ensure that EPA’s regulatory decisions were scientifically sound and adequately protective of public health. As amended, the SDWA directs EPA to base its determination about whether to regulate any particular contaminant “on the *best available public health information*.” *Id.* § 300g-1(b)(1)(B)(ii)(II) (emphasis added). In addition, the amended SDWA expressly requires that, “to the degree that an Agency action is based on science, [EPA] shall use . . . *the best available, peer-reviewed science and supporting studies* conducted in accordance with sound and objective scientific practices[] and . . . data collected by accepted methods or best available methods (if the reliability of the method and the nature of the decision justifies use of the data).” *Id.* § 300g-1(b)(3)(A) (emphasis added). “Best available” means precisely what it says – the best of all that is available, not the best of some subset of what is available. The only qualifiers the SDWA places on what is “best available” are that the science be “peer-reviewed,” and that the “supporting studies” be “conducted in accordance with sound and objective scientific practices.” *Id.* Disclosure of confidential data underlying the studies plays no role in determining whether the science is the best available and is in no way required by the rule (but rather is expressly rejected by the scientific community, *see infra*). Any rule proposing to disregard reliable scientific information relevant to the regulation of drinking water contaminants directly conflicts with the SDWA’s sound science mandate.

Given that the Proposed Rule is manifestly contrary to the SDWA, which expressly requires use of the best science available, it is not authorized by the general rulemaking authority in § 300j-9(a)(1). *Mourning*, 411 U.S. at 369; *Ragsdale*, 535 U.S. at 86. EPA is thus left without an appropriate authorizing provision under the SDWA.

iv. *Comprehensive Environmental Response, Compensation, and Liability Act*
(“*CERCLA*”)

EPA also cites to provisions under the Comprehensive Environmental Response, Compensation, and Liability Act (“*CERCLA*”) as authority for its Proposed Rule. However, upon examination, these provisions likewise provide no legal support for the Proposal.

The first provision upon which EPA relies – Section 115 – is inapposite. It merely sets out goal dates for EPA to begin assessment and remediation of facilities on the National

Priorities List, and is entirely irrelevant to the issues of the Proposed Rule. *See* 42 U.S.C. § 9616. While the second provision upon which EPA relies – Section 311 – is at least relevant to the issues of the Proposed Rule, it nonetheless conflicts with the proposition that the Proposed Rule espouses. It requires the Department of Health and Human Services, in consultation with EPA, to establish and support a research program consisting of:

Basic research (including epidemiologic and ecologic studies) which may include each of the following:

- (i) Advanced techniques for the detection, assessment, and evaluation of the effects on human health of hazardous substances.
- (ii) Methods to assess the risks to human health presented by hazardous substances.
- (iii) Methods and technologies to detect hazardous substances in the environment and basic biological, chemical, and physical methods to reduce the amount and toxicity of hazardous substances.

42 U.S.C. § 9660(a)(1)(A); *see also id.* § 9660(c) (authorizing EPA to conduct research on the “detection, assessment, and evaluation of the effects on and risks to human health of hazardous substances and detection of hazardous substances in the environment”). These provisions say nothing about authorizing EPA to adopt rules at all, much less rules limiting reliance on studies that do not meet the criteria of the Proposed Rule. Section 311(a) merely provides for the Department of Health and Human Services to establish and support certain research programs. It does not give EPA any authority at all, much less authority to limit the type of studies that can be relied upon for purposes of implementing CERCLA’s operative provisions. Accordingly, CERCLA provides no support for EPA’s actions here.

v. *Emergency Planning and Community Right to Know Act (“EPCRA”)*

EPA likewise relies upon a provision in the Emergency Planning and Community Right to Know Act (“EPCRA”) that in no way authorizes this Proposed Rule. Specifically, Section 328 of EPCRA – upon which EPA relies – merely authorizes EPA to “prescribe such regulations as may be necessary to carry out” the statute. 42 U.S.C. § 11048. But this provision does not “empower[] [EPA] to establish regulations which run far afield from the substance of the Act.” *Kaw Valley, Inc. v. EPA* 844 F. Supp. 705, 708 (D. Kan. 1994) (citing *Central Forwarding, Inc. v. Interstate Commerce Comm’n*, 698 F.2d 1266, 1277 (5th Cir. 1983)). Given that the Proposed Rule is contrary to the purposes of EPCRA, *see infra*, Section IV.A, this general rulemaking provision cannot be considered “necessary,” and thus does not do the work that EPA ascribes to it. *See Mourning*, 411 U.S. at 369; *Ragsdale*, 535 U.S. at 86.

vi. *Federal Insecticide, Fungicide, Rodenticide Act (“FIFRA”)*

EPA also cites to two specific provisions in the Federal Insecticide, Fungicide, Rodenticide Act (“FIFRA”) as statutory support for the Proposed Rule. Upon closer examination, these provisions do not provide the necessary authority for this Rule.

First, EPA points to Section 20(a), 7 U.S.C. § 136r(a), which provides:

(a) Research

The Administrator shall undertake research including research by grant or contract with other Federal agencies, universities, or others as may be necessary to carry out the purposes of this subchapter, and the Administrator shall conduct research into integrated pest management in coordination with the Secretary of Agriculture. The Administrator shall also take care to ensure that such research does not duplicate research being undertaken by any other Federal agency.

By its plain language, this provision authorizes research, not the use of scientific studies in regulating pesticides. Thus, EPA’s reliance on this provision as support for this rule is misplaced.

Second, the Proposed Rule cites Section 25(a)(1), 7 U.S.C. § 136w, which authorizes the EPA Administrator “to prescribe regulations to carry out the provisions of this subchapter.” However, this broad authority is expressly limited to regulating “in accordance with the procedure[.]” prescribed in FIFRA itself. *Id.* Yet, as discussed more fully in Section V, EPA failed to comply with these requisite procedures. Accordingly, this provision provides no authority for EPA’s issuance of this rule.

vii. *Toxic Substances Control Act (“TSCA”)*

EPA’s reliance on the Toxic Substances Control Act (“TSCA”), 15 U.S.C. § 2609, as authority for the Proposed Rule, fares no better. Indeed, much like many of the other statutory provisions upon which EPA relies, this provision governs EPA’s authority to conduct and support research, and does not address EPA’s authority to use scientific data or research in support of regulatory decisions.

Specifically, section 2609 grants EPA authority to “conduct such research, development, and monitoring as is necessary to carry out the purposes of this chapter. [EPA] may enter into contracts and may make grants for research, development, and monitoring under this subsection.” 15 U.S.C. § 2609(a). Section 2609 grants EPA additional related authorities, including authority to:

- Create and operate information systems to store data relevant to chemical substances, *id.* § 2609(b);

- Develop “screening techniques for carcinogenic, mutagenic, teratogenic, and ecological effects of chemical[s],” *id.* § 2609(c);
- Establish a research program to develop chemical “monitoring techniques and instruments,” *id.* § 2609(d);
- Conduct “basic research” on chemical screening and monitoring, *id.* § 2609(e), and train federal scientists on chemical screening and monitoring, *id.* § 2609(f); and
- Develop systems for information sharing among “Federal, state, and local authorities,” *id.* § 2609(g).

Notably absent from the list of authorities under section 2609 is EPA’s authority to determine what science it can consider when making regulatory decisions. Instead, the provision solely focuses on EPA’s ability to conduct research or to fund research, independent of whether that research will or may be used by EPA to make regulatory decisions. Thus, section 2609 does not provide any basis for the authority claimed in the Proposed Rule.

Moreover, § 2625 of TSCA governs how EPA uses science when exercising its main regulatory powers under the statute, and establishes detailed criteria that EPA must use when “the Administrator makes a decision based on science” when carrying out its regulatory powers. 15 U.S.C. § 2625(h). Thus, this provision, and not those cited by EPA, would theoretically govern a rule related to the use of science. *See Bennett v. Islamic Republic of Iran*, 618 F.3d 19, 25 (D.C. Cir. 2010) (“where Congress includes particular language in one section of a statute but omits it in another section of the same Act, it is generally presumed that Congress acts intentionally and purposefully in the disparate inclusion or exclusion.” (quoting *Russello v. United States*, 464 U.S. 16, 23 (1983))). However, and as discussed more fully *infra*, Section IV.A, the Proposed Rule contravenes the requirements of § 2625 that EPA consider all “reasonably available information” when making regulatory decisions, and thus is not authorized by this provision either.

viii. Resource Conservation and Recovery Act (“RCRA”)

The Resource Conservation and Recovery Act (“RCRA”), 42 U.S.C. § 6901 *et seq.*, gives EPA the authority and responsibility to manage and control solid and hazardous waste, including the generation, transportation, treatment, storage, and disposal of the waste. EPA points to two provisions in RCRA for support of this Proposed Rule, neither of which authorizes this action.

The first provision of RCRA cited as authority for this rule, § 6912(a)(1), provides the Administrator with the general authority to “prescribe, in consultation with Federal, State, and regional authorities, such regulations as are necessary to carry out his functions under this chapter.” 42 U.S.C. § 6912(a)(1). RCRA defines the functions of EPA in the area covered by RCRA, and therefore, EPA cannot rely upon the general authority to make rules provided by the statute. *Am. Petroleum Inst.*, 52 F.3d at 1119 (“EPA cannot rely on its general authority to make rules necessary to carry out its functions when a specific statutory directive defines the relevant

functions of EPA in a particular area.”). Moreover, limiting the consideration of reliable health science when promulgating regulations that have significant health and environmental impacts is in no way “necessary” for the Administrator to carry out his functions under RCRA, and thus, for this reason too, the general rulemaking provision does not authorize this rule. *See Mourning*, 411 U.S. at 369.

The second provision of RCRA upon which EPA relies, § 6979, is inapposite. This provision pertains to labor standards related to wages for laborers and mechanics. 42 U.S.C. § 6979. This provision has no relevance to the Proposed Rule whatsoever and certainly does not provide the authority for it. Thus, nothing that EPA cites to in RCRA provides the requisite authority for this Proposed Rule.

ix. 5 U.S.C. § 301

In its notice extending the comment period and adding a public hearing, as an implicit admission that it has not cited sufficient authority for the Proposed Rule, EPA adds a new source of alleged authority, stating that “EPA is proposing this rule under authority of 5 U.S.C. 301, in addition to the authorities listed in the April 30th document.” *See* 83 Fed. Reg. 24,255, 24,256 (May 25, 2018). Just like with the other statutory provisions upon which it relies, EPA is trying to fit a square peg in a round hole.

Section 301 of Title 5 provides “[t]he head of an Executive department or military department” authority to “prescribe regulations for the government of his department, the conduct of its employees, the distribution and performance of its business, and the custody, use, and preservation of its records, papers, and property.” This provision governs internal organizational and bureaucratic steps required for operations. It allows all agencies to issue regulations to preserve and use their own papers and property. This section is plainly focused on allowing executive agencies to issue rules necessary to carry out the performance of their agencies’ internal workings, not to allow EPA to regulate scientific material in rulemakings.

Indeed, the “purpose” of this section, “which originated in 1789 as a law ‘to enable General Washington to get his administration underway by spelling out the authority of Government officers to set up offices and to file Government documents’ . . . is to set up merely internal guidelines for a given governmental agency” to perform its job. *United States v. Lewis*, No. C-CR-89-114-01, 1990 WL 11111, *5 (W.D. N.C. Feb. 5, 1990) (citation omitted). That is why it is known as the “Housekeeping Statute,” to literally allow the federal government to set up and keep house. *U.S. ex. Rel. O’Keefe v. McDonnell Douglas Corp.*, 132 F.3d 1252, 1254 (8th Cir. 1998) (citing H.R. Rep. No. 85-1461 (1958), *reprinted in* 1958 U.S.C.C.A.N. 3352). The Act was amended in 1966 as “codifying the general and permanent laws relating to the organization of the Government of the United States and to its civilian officers and employees.” Pub. L. No. 89-554, 80 Stat. 378 (Sept. 6, 1966).

In *Chrysler Corp. v. Brown*, 441 U.S. 281, 310 (1979), the Supreme Court evaluated the Housekeeping Statute and held that it does not provide statutory authority for substantive regulations. After a brief historical analysis of the provision, the Court wrote:

Given this long and relatively uncontroversial history, and the terms of the statute itself, it seems to be simply a grant of authority to the agency to regulate its own affairs. . . . It is indeed a “housekeeping statute,” authorizing what the APA terms “rules of agency organization procedure or practice” as opposed to “substantive rules.”

Id. at 309–10. Multiple courts have agreed and limited rulemaking under this provision to non-substantive rules. *See, e.g., McDonnell Douglas Corp.*, 132 F.3d at 1256 (citing examples).⁴⁶

Based on this long line of authority, EPA’s reliance on this authority is sorely misplaced. EPA’s attempt to “construe [this provision] as something more” is a “misuse” that “twist[s]” the statute beyond its intended purpose; EPA may not “twist this simple administrative statute into an authorization for the promulgation of substantive rules.” *Id.* at 1255 (citing and quoting *Chrysler Corp.*, 441 U.S. at 310 n.41 (quoting H.R. Rep. No. 85–1461 at 7 (1958))).

The Proposed Rule does not relate to the organization of EPA or how it preserves its papers or keeps house. EPA’s exclusion of critical health studies is such a far cry from being necessary to “set up offices” and to “file Government documents,” that reliance on this provision hardly passes the laugh test. As discussed extensively in these Comments, the Proposed Rule is by no means necessary for EPA to perform its job but rather is antithetical to the very statutes it is responsible for effectuating. Accordingly, for the same reasons the general rulemaking authority provisions under all of the environmental statutes EPA cites do not authorize this rule, § 301 likewise does not permit EPA to issue a rule that undermines scientific integrity as well as all of the public health and environmental protections EPA is charged with enforcing.

B. EPA Has No Inherent Authority to Issue This Proposed Rule.

EPA’s lack of statutory authority to propose this rule is fatal, as it has no inherent power to act. Indeed, it is well settled that a federal agency “literally has no power to act . . . unless and until Congress confers power upon it.” *La. Pub. Serv. Comm’n v. FCC*, 476 U.S. 355, 374 (1986); *see also Bowen v. Georgetown Univ. Hosp.*, 488 U.S. 204, 208 (1988) (“It is axiomatic that an administrative agency’s power to promulgate legislative regulations is limited to the authority delegated by Congress.”); *Clean Air Council v. Pruitt*, 862 F.3d 1, 9 (D.C. Cir. 2017) (“[I]t is ‘axiomatic’ that ‘administrative agencies may act only pursuant to authority delegated to them by Congress’” (citation omitted)); *Ohio Dep’t of Medicaid v. Price*, 864 F.3d 469, 476 (6th

⁴⁶ *See, e.g., In re Bankers Tr. Co.*, 61 F.3d 465, 470 (6th Cir. 1995) (Federal Reserve Board regulation requiring subpoenaed party to refuse production of confidential Federal Reserve Board information, contrary to Federal Rule of Civil Procedure 34, was not authorized by the Housekeeping Statute and “exceed[ed] the congressional delegation of authority”); *Exxon Shipping Co. v. U.S. Dep’t of Interior*, 34 F.3d 774, 776–78 (9th Cir. 1994) (Housekeeping Statute did not authorize regulations allowing agency to withhold deposition testimony of federal employees); *In re Cincinnati Radiation Litig.*, 874 F. Supp. 796, 826–27 (S.D. Ohio 1995) (Housekeeping Statute did not authorize 1953 Defense Department directive on the use of human volunteers in experimental research); *McElya v. Sterling Med., Inc.*, 129 F.R.D. 510, 514 (W.D. Tenn. 1990) (Housekeeping Statute did not give Department of Navy authority to create general discovery privilege for persons under its jurisdiction).

Cir. 2017) (“Agencies, after all, are creatures of statutory authority.” (citation and internal quotations omitted)). This is because, under the Constitution, Congress is the branch of government with lawmaking power. *City of Arlington, Tex. v. FCC*, 569 U.S. 290, 317 (2013) (noting that an agency has no lawmaking power unless Congress delegates that power to it). “The legislative power of the United States is vested in the Congress, and the exercise of quasi-legislative authority by governmental departments and agencies must be rooted in a grant of such power by the Congress and subject to limitations which that body imposes.” *Chrysler Corp.*, 441 U.S. at 302. Thus, EPA only has rulemaking power to the extent that Congress delegated it such power. *Lyng v. Payne*, 476 U.S. 926, 937 (1986) (“an agency’s power is no greater than that delegated to it by Congress.”).

Moreover, the fact that Congress has given EPA the authority to regulate in a certain area does not mean that it has general authority to make any rule within that area. This argument has been squarely rejected:

The [agency’s] position in this case amounts to the bare suggestion that it possesses *plenary* authority to act within a given area simply because Congress has endowed it with *some* authority to act in that area. We categorically reject that suggestion. Agencies owe their capacity to act to the delegation of authority from Congress.

Am. Library Ass’n v. FCC, 406 F.3d 689, 708 (D.C. Cir. 2005) (quoting *Ry. Labor Executives’ Ass’n v. Nat’l Mediation Bd.*, 29 F.3d 655, 670 (D.C. Cir. 1994)) (internal quotations omitted; emphasis in original); see also *Liberty Mut. Ins. Co. v. Friedman*, 639 F.2d 164, 169 (4th Cir. 1981) (“a court must reasonably be able to conclude that the grant of authority contemplates the regulations issued.” (citation and internal quotation marks omitted)). “[T]he power to issue regulations is not the power to issue any regulations.” *Nat’l Mining Ass’n v. U.S. Dep’t of the Interior*, 105 F.3d 691, 694 (D.C. Cir. 1997). In light of the statutory limitation on EPA’s authority to restrict science in the way it proposes to do, see *infra*, Section IV, any general rulemaking authority on which it might otherwise try to rely does not authorize the Proposed Rule. See, e.g., *Nat. Res. Def. Council, Inc. v. Reilly*, 976 F.2d 36, 40-41 (D.C. Cir. 1992) (refusing to allow EPA to rely on general rulemaking authority to trump specific limitations on its authority because a vague “open-ended power” does not “trump the specific provisions of the [Clean Air] Act”; and “EPA’s construction of the statute is condemned by the general rule that when a statute lists several specific exceptions to the general purpose, others should not be implied.” (citation and internal quotation marks omitted)).

Accordingly, EPA has no general or inherent authority permitting it to lawfully adopt the Proposed Rule or otherwise limit what science may be considered in the rulemaking process. It, therefore, must be acting pursuant to some grant of authority by Congress for the Proposed Rule to be lawful. Yet none of the stated authorities upon which EPA relies provides the necessary

authority to promulgate this rule.⁴⁷ Given that EPA has no statutory authority to issue the Proposed Rule, its action is *ultra vires*. See, e.g., *McDonnell Douglas Corp.*, 132 F.3d at 1257 (“An agency’s promulgation of rules without valid statutory authority implicates core notions of the separation of powers, and we are required by Congress to set these regulations aside.” (citing cases finding *ultra vires* agency action)). The Proposed Rule is therefore unlawful.

IV. THE PROPOSED RULE VIOLATES PROVISIONS OF THE LISTED AUTHORIZING STATUTES, AS WELL AS NUMEROUS OTHER STATUTES, POLICIES, AND EXECUTIVE ORDERS, AND IS THEREFORE UNLAWFUL.

A. The Proposed Rule Violates the Purported Authorizing Statutes.

Agency “regulations, in order to be valid, must be consistent with the statute under which they are promulgated.” *Decker v. Nw. Env’tl. Def. Ctr.*, 568 U.S. 597, 609 (2013) (quoting *United States v. Larionoff*, 431 U.S. 864, 873 (1977)). As discussed below, the Proposed Rule violates a number of provisions in the statutes upon which EPA relies as statutory authority. For this reason, too, the Proposed Rule is invalid.

i. CAA

The Clean Air Act’s specific rulemaking provisions do not allow EPA to create the restrictions on the consideration or use of health science that EPA proposes. Rather, these provisions govern each type of CAA rulemaking, and to the extent science can and must be considered under these provisions, EPA may not lawfully restrict the use of such science.⁴⁸ The Proposed Rule contravenes a number of CAA provisions and is thus unlawful.

First, sections 108 and 109 of the Clean Air Act do not allow EPA to restrict science as proposed and demonstrate that the Proposed Rule cannot lawfully be applied to any NAAQS rulemakings. These provisions specify that EPA’s air quality criteria (on which the NAAQS are based) must “accurately reflect the latest scientific knowledge.” 42 U.S.C. § 7408(a)(2); *id.* § 7409(b) (requiring those “criteria” be used to set NAAQS). This language unambiguously requires EPA to consider “all identifiable effects on public health,” not just some. *Id.* § 7408(a)(2). The criteria “shall include information” on defined factors, “to the extent practicable.” *Id.* This provision leaves no room for EPA to ignore or exclude studies because underlying data is not disclosed.

EPA cannot possibly ensure its air quality criteria “accurately reflect the latest scientific knowledge” if it refuses to even read certain studies based on an arbitrary public disclosure test. EPA’s past practice illustrates this: for decades, the Agency’s practice has been to review *all* available scientific studies, including those relying on non-public data. See, e.g., *Battery Recyclers*, 604 F.3d at 616; see also EPA, *Integrated Science Assessment (ISA) for Particulate*

⁴⁷ EPA may not now add any new authority (if any exists) to try to save this action, as doing so would violate public notice-and-comment requirements under the statutes cited herein, as well as under the Administrative Procedure Act.

⁴⁸ Commenters do not concede that the Proposed Rule would necessarily apply to every action under these provisions.

Matter (Final Report, Dec 2009) (2009), <https://cfpub.epa.gov/ncea/risk/recordisplay.cfm?deid=216546>; EPA, *Air Quality Criteria for Particulate Matter*, Vols. II-III (1996), <https://cfpub.epa.gov/ncea/risk/recordisplay.cfm?deid=2832>. The legislative history of § 108 confirms that Congress’s intent was for EPA to “establish such national goals on the basis of *the best information available*,” not to sit idly by until industry representatives no longer dispute questions regarding health effects. S. Rep. No. 91-1196 (Sept. 17, 1970), CAA70 Leg. Hist. 19, 110 (emphasis added).

In addition, the Proposed Rule would direct EPA to violate the statutory procedures that must be followed when the Agency sets NAAQS. This includes EPA’s appointment of an independent scientific review committee, including certain defined members, *see* 42 U.S.C. § 7409(d)(2)(A), and consideration of the recommendations of that committee when setting the NAAQS, *id.* § 7409(d)(2)(B)-(C); *see also, e.g., Mississippi v. EPA*, 744 F.3d 1334, 1346 (D.C. Cir. 2013) (explaining NAAQS development process). That committee shall advise EPA regarding whether there are “areas in which additional knowledge is required.” 42 U.S.C. § 7409(d)(2)(C). In promulgating NAAQS in the past, EPA has recognized that the CAA requires it to consider scientific advice and recommendations from such experts, including those that rely on health studies where underlying data is not disclosed.⁴⁹ Directing the Agency to ignore scientific studies presented by CASAC, just because the underlying data is not public, contravenes these statutory requirements.

Second, section 7409 of the Act requires EPA to adopt NAAQS based on the criteria, at levels requisite to protect public health with an adequate margin of safety. “[T]he Act requires [a] . . . preventative and precautionary” approach to setting NAAQS, whereby EPA must protect public health from “not just known adverse effects, but those of scientific uncertainty or that research has not yet uncovered.” *Am. Lung Ass’n v. EPA*, 134 F.3d 388, 389 (D.C. Cir. 1998) (citation and quotation marks omitted). Congress “specifically directed” EPA “to protect against . . . effects whose medical significance is a matter of disagreement.” *Lead Indus. Ass’n v. EPA*, 647 F.2d 1130, 1154 (D.C. Cir. 1980); *accord Nat. Res. Def. Council, Inc. v. EPA*, 824 F.2d 1146, 1152 (D.C. Cir. 1987) (en banc) (discussing legislative history). EPA’s proposal would

flout these precedents by refusing to consider scientific studies – even those published in peer-reviewed journals by reputable scientists – based on an arbitrary data transparency policy.

To the extent the CAA allows EPA to weigh particular studies based on its expert judgment, this does not authorize EPA to categorically exclude an entire class of studies from being considered when performing a rulemaking to fulfill the Agency’s statutory directive to protect public health and welfare. 42 U.S.C. § 7409(b)(1) (requiring primary NAAQS to be standards “the attainment and maintenance of which in the judgment of the Administrator, based on such criteria and allowing an adequate margin of safety, are requisite to protect the public health”). EPA cannot rationally engage in its task of determining an appropriate level for the NAAQS if it entirely excludes relevant health studies from its consideration simply because underlying data has not been publicly released. Under the Proposed Rule, EPA would refuse to consider studies indicating that adverse health effects occur at a specific pollutant level—even where multiple studies reach the same results—where the studies fail to meet the agency’s arbitrary disclosure tests. This would contradict the statutory requirement to assure public health protection by ignoring some of the most important health science relevant to that question and is the epitome of irrational agency action.

Third, the Proposed Rule violates section 7412 of the CAA, which includes myriad provisions that require EPA to evaluate health risks and effects of hazardous air pollutants (“HAPs” or “air toxics”) and to set emission standards to reduce these risks and effects, based on certain science-based legal tests applicable to particular § 7412 rulemakings. *See, e.g.*, 42 U.S.C. § 7412(a), (b)(1)-(4), (f)(1)-(2). In no place does the statute limit EPA’s consideration of scientific studies on health effects or risks to those studies where underlying data is publicly disclosed, nor does it authorize EPA to so limit its consideration of such scientific information. Instead, § 7412 includes language repeatedly indicating the requirement, embodying Congressional intent, for EPA to consider *all* relevant scientific information regarding health risks and effects, actual or potential, of hazardous air pollutants.

For example, § 7412(f) requires EPA to investigate and report, among other things, on “the actual health effects with respect to persons living in the vicinity of sources,” and “*any available epidemiological or other health studies*” regarding the effects of HAPs, as part of the residual risk requirements. *Id.* § 7412(f)(1)(C) (emphasis added); *id.* § 7412(f)(1) (also providing other requirements for EPA’s investigation and report to Congress). EPA submitted that report to Congress in 1999.⁵⁰ Section 7412(f) further provides that, in the absence of Congressional action on recommendations provided in EPA’s Residual Risk Report to Congress, EPA “shall . . . promulgate standards for [each air toxics] category or subcategory if promulgation of such standards is required in order to provide an ample margin of safety to protect public health in accordance with this section (as in effect before November 15, 1990).” *Id.* § 7412(f)(2)(A). This provision also directs that:

Emission standards promulgated under this subsection shall provide an ample margin of safety to protect public health in accordance with this section (as in effect before November 15,

⁵⁰ EPA, *Residual Risk Report to Congress*, EPA-453/R-99-001 (Mar. 1999), <https://www.epa.gov/fera/residual-risk-report-congress-1999>.

1990), unless the Administrator determines that a more stringent standard is necessary to prevent, taking into consideration costs, energy, safety, and other relevant factors, an adverse environmental effect. If standards promulgated pursuant to subsection (d) and applicable to a category or subcategory of sources emitting a pollutant (or pollutants) classified as a known, probable or possible human carcinogen do not reduce lifetime excess cancer risks to the individual most exposed to emissions from a source in the category or subcategory to less than one in one million, the Administrator shall promulgate standards under this subsection for such source category.

Id. § 7412(f)(2)(A). It would not be possible for EPA to fulfill its statutory directives under § 7412(f) to ensure that air toxics emissions standards “provide an ample margin of safety to protect public health,” and to assess and remove any unacceptable health risks, unless EPA considered all relevant scientific studies in assessing such health risks. *Id.* § 7412(f)(2).

Further, § 7412(f)(2) also explicitly refers to EPA’s Benzene Rule, which interpreted the prior version of this provision and which itself relied on certain studies and guidelines for which underlying data was not disclosed. *Id.* § 7412(f)(2)(B) (citing 54 Fed. Reg. 38,044 (Sept. 14, 1989)).⁵¹ As EPA determined, and Congress, the D.C. Circuit, and EPA have affirmed through citation and reliance on that rule, § 7412(f) standards must be “based on the most current scientific knowledge,” and on risk assessment guidelines and methods developed by EPA scientists and expert independent scientists. 54 Fed. Reg. at 38,062-63.⁵² EPA has repeatedly recognized this reliance on an expansive array of scientific support that includes information that relies on epidemiological and other health studies for which the underlying data is not published in later § 7412(f) rulemakings as well.

Indeed, EPA itself has interpreted its legal responsibility pursuant to this provision as “incorporating into our assessments the best available science with respect to dose-response information.”⁵³ To achieve that, EPA has followed scientific recommendations by the Office of

⁵¹ In that rule, among other studies, “the Agency compiled and presented a ‘Survey of Societal Risk’ in its July 1988 proposal (53 FR 28512-28513).” 54 Fed. Reg. at 38,046. The underlying data for that survey was not disclosed, yet the Agency both considered and relied on it. *Id.*

⁵² In that rule, EPA explained that risk assessments and § 7412(f) rules must be based on “the most current scientific knowledge and on sound scientific judgment”; EPA stated that it had based that rule on “an evaluation of the currently available information and on the regulatory mission of EPA to protect public health”; EPA also relied on the then-applicable Cancer Guidelines, and Guidelines for Exposure Assessment, explaining that “these guidelines were developed by scientists in EPA, and were extensively reviewed by the public and by expert scientists in industry, academia, environmental groups, and other governmental agencies.” 54 Fed. Reg. at 38,062-63.

⁵³ See, e.g., EPA, *Residual Risk Assessment for the Portland Cement Manufacturing Source Category in Support of the Sept. 2017 Risk and Technology Review Proposed Rule* at 23 (July 2017), <https://www.regulations.gov/document?D=EPA-HQ-OAR-2016-0442-0153> (describing the Agency’s current policy and scientific methodology for this type of health risk assessment); see also e.g., EPA, *Residual Risk Assessment for Pulp Mill Combustion Sources in Support of the October, 2017 Risk and*

Air Quality Planning and Standards, and has prioritized certain sources of such dose-response information according, in part, to “level of peer review received.”⁵⁴ These guidelines direct EPA to consult dose-response assessments such as a reference concentration (RfC, for inhalation), reference dose (RfD, for ingestion), and a unit risk estimate (URE, for cancer risk) and/or slope factor (SF, for cancer risk).⁵⁵ EPA’s scientific method is to consult and rely on IRIS (an EPA database containing peer-reviewed scientific health assessment information) as a top priority source of such information, due in part to the high level of peer review. As EPA’s guidelines explain: “IRIS is a critical resource for risk assessors because the database contains toxicity information that reflects a consensus among EPA program offices.”⁵⁶ EPA also prioritizes dose-response information from the U.S. Agency for Toxic Substances and Disease Registry (“ATSDR”), and the California EPA Office of Environmental Health Hazard Assessment.⁵⁷

Technology Review Final Rule at 6, 18-19 (July 2017), <https://www.regulations.gov/document?D=EPA-HQ-OAR-2014-0741-0266> (same). In citing these examples, Commenters do not contend that EPA’s approach is the most health-protective or that it fully incorporates the extent of current scientific knowledge, as they have repeatedly urged EPA to follow the more conservative and more scientifically up-to-date approach of the NAS Silver Book, as the Agency is well aware from submitted comments and from reviewing that report. *See, e.g.,* NAS, *Science & Decisions: Advancing Risk Assessment* (2009), <https://www.nap.edu/catalog/12209/science-and-decisions-advancing-risk-assessment>; Nat. Res. Def. Council, *Strengthening Toxic Chemical Risk Assessments to Protect Human Health* (Feb. 2012), <https://www.nrdc.org/sites/default/files/strengthening-toxic-chemical-risk-assessments-report.pdf> (describing ways EPA needs to strengthen, not weaken, risk assessments based on NAS recommendations). However, refusing to look at IRIS or other health reference values that rely in any way on non-public data as EPA proposes would represent a significant backward step by EPA, away from current science, as well as an about-face from its well-developed scientific policy and current methods which are based on years of evaluation and have gone through extensive peer review by the Science Advisory Board. *See, e.g.,* SAB, *Risk and Technology Review (RTR) Risk Assessment Methodologies* (May 2010) (supporting EPA’s approach and urging EPA to take a more protective scientific approach on certain issues).

⁵⁴ EPA, *Cement Kilns Risk Assessment*, *supra* n.53, at 23 (citing EPA, 2014a. Table 1); EPA, Table 1: Prioritized Chronic Dose-Response Values for Screening Risk Assessments (June 18, 2018), <https://www.epa.gov/sites/production/files/2014-05/documents/table1.pdf>.

⁵⁵ EPA, *Cement Kilns Risk Assessment*, *supra* n.53, at 23 (The RfC is defined as an “estimate (with uncertainty spanning perhaps an order of magnitude) of a continuous inhalation exposure to the human population (including sensitive subgroups) that is likely to be without an appreciable risk of deleterious effects during a lifetime.” The RfD is “an estimate (with uncertainty spanning perhaps an order of magnitude) of a daily oral exposure to the human population (including sensitive subgroups) that is likely to be without an appreciable risk of deleterious effects during a lifetime.” The URE is defined as “the upper-bound excess cancer risk estimated to result from continuous lifetime exposure to an agent at a concentration of 1 µg/m³ in air.” The SF is “an upper bound, approximating a 95 percent confidence limit, on the increased cancer risk from a lifetime exposure to an agent. This estimate, [is] usually expressed in units of proportion (of a population) affected per mg/kgday . . .”).

⁵⁶ EPA, *Air Toxics Risk Assessment Reference Library*, Vol. 1 Tech. Res. Manual, EPA-453-K-04-001A at 3-9 (April 2004), https://www.epa.gov/sites/production/files/2013-08/documents/volume_1_reflibrary.pdf, *id.* at 12-25 (“Dose-response assessments that have achieved full intra-agency consensus are incorporated in the Integrated Risk Information System (IRIS), which is regularly updated and available on-line (www.epa.gov/iris).”).

⁵⁷ EPA, *Cement Kilns Risk Assessment*, *supra* n.53, at 24.

Each of these recognizes the value of relevant scientific information without regard to whether full underlying data can be or has been publicly disclosed.⁵⁸

Section 7412(a)(11) likewise illustrates the constraints the CAA imposes on limiting consideration of science when establishing cancer risk. This provision defines “carcinogenic effect” as having “the meaning provided by the Administrator under Guidelines for Carcinogenic Risk Assessment as of the date of enactment.” 42 U.S.C. § 7412(a)(11). These Guidelines for Carcinogenic Risk Assessment (“Cancer Guidelines”), in turn, direct that EPA shall rely on “established scientific peer review processes,” and state that “[t]he cancer guidelines incorporate basic principles and science policies based on evaluation of the currently available information.”⁵⁹ The Cancer Guidelines also provide that EPA’s Supplemental Guidance for Assessing Susceptibility from Early-Life Exposure to Carcinogens (“Supplemental Guidance”) should be considered along with the Guidelines.⁶⁰ Both the Cancer Guidelines and Supplemental Guidance cite as relevant and in some instances important some of the very types of scientific studies that EPA’s Proposed Rule would categorically exclude: epidemiological studies which rely on private or confidential medical information, or assessments such as IRIS, California Environmental Protection Agency’s (“Cal. EPA”) assessments, and other health reference concentration information that rely on such studies.⁶¹ The Cancer Guidelines do not preclude the

⁵⁸ As IRIS values show, IRIS considers relevant and often essential epidemiological evidence for which underlying private confidential or medical information is not released. *See, e.g., EPA, EPA’s Reanalysis of Key Issues Related to Dioxin Toxicity and Response to NAS Comments, Vol. 1*, CAS No. 1746-01-06, EPA/600/R-10/038F, at 1-7 (Feb. 2012), https://cfpub.epa.gov/ncea/iris/iris_documents/documents/supdocs/dioxinvol1sup.pdf (discussing the use of two human epidemiological studies “as co-critical studies” to derive the reference dose in the IRIS assessment, and the SAB’s agreement with EPA that these represent best available science); EPA, *Toxicological Review of Hexavalent Chromium* (Aug. 1998), https://cfpub.epa.gov/ncea/iris/iris_documents/documents/toxreviews/0144tr.pdf (relying on human epidemiologic studies); EPA, *Toxicological Review of Formaldehyde-Inhalation Assessment* (June 2010), http://ofmpub.epa.gov/eims/eimscomm.getfile?p_download_id=497038 (relying on epidemiologic studies).

⁵⁹ EPA, *Guidelines for Carcinogen Risk Assessment (hereinafter “Cancer Guidelines”)* at 1-2 (Mar. 2005), https://www.epa.gov/sites/production/files/2013-09/documents/cancer_guidelines_final_3-25-05.pdf.

⁶⁰ EPA, *Supplemental Guidance for Assessing Susceptibility from Early-Life Exposure to Carcinogens*, EPA/630/R-03/003F (Mar. 2005), https://www3.epa.gov/airtoxics/childrens_supplement_final.pdf.

⁶¹ For example, the Supplemental Guidance states: “[The] critical data are either human epidemiological data on childhood exposures resulting in adult cancer or research studies with rodents involving early postnatal exposures. The major human data available are from radiation exposures . . . with very limited data available for humans exposed during childhood to chemicals.” Suppl. Guidance at 13. The Cancer Guidelines and later EPA policy state that “[a]ll studies that are considered to be of acceptable quality, whether yielding positive or null results, or even suggesting protective carcinogenic effects, *should be considered in assessing the totality of the human evidence*. Conclusions about the overall evidence for carcinogenicity *from available studies in humans* should be summarized along with a discussion of uncertainties and gaps in knowledge.” Cancer Guidelines, *supra* n.59, at 2-4 (emphasis added). They further provide that “[h]uman data may come from epidemiologic studies or case reports . . . The most common sources of human data for cancer risk assessment are epidemiologic investigations . . .

consideration of any “one kind of data” as relevant, but instead “cover the assessment of available data,” explaining that “[i]t is very important that all analyses consider the basic standards of quality, including objectivity, utility, and integrity.”⁶²

Thus, EPA’s Proposal to ignore studies because underlying data is not disclosed is antithetical to the Guidelines upon which EPA relies when determining carcinogenic effects in § 7412(a)(11). The statute’s text and incorporation of EPA’s science guidelines on cancer risk are unambiguous and leave no gap to fill regarding what “carcinogenic” means. Thus, in regulating carcinogens EPA may not apply the Proposed Rule’s exclusion of any relevant health science regarding carcinogens and carcinogenic risk from air pollutants in rulemakings.

Consistent with the reliance on all relevant health science to determine carcinogenic effects, for cancer and other health risks under § 7412(f), EPA has an existing policy of what it describes as using the “the best available science with respect to dose-response information. The recommendations are based on the following sources, in order of priority”: (1) EPA IRIS values which have all gone through independent, external peer-review; (2) ATSDR values, which follow an approach similar to EPA’s IRIS program; and (3) Cal. EPA values for which “[t]he process for developing these assessments is similar to that used by EPA to develop IRIS values and incorporates significant external scientific peer review.”⁶³ Likewise, for non-cancer health risks from air pollution, EPA’s guidelines do not exclude science that is relevant, even if underlying data is not disclosed.⁶⁴ Notably, the vast majority of health reference values that EPA uses in § 7412(f) come from EPA’s IRIS program, which includes a scientific literature review of all available relevant studies, without excluding any due to a lack of disclosure of underlying data.⁶⁵

Epidemiologic data are extremely valuable in risk assessment because they provide direct evidence on whether a substance is likely to produce cancer in humans, thereby avoiding issues such as: species-to-species inference, extrapolation to exposures relevant to people, effects of concomitant exposures due to lifestyles. Thus, epidemiologic studies typically evaluate agents under more relevant conditions. When human data of high quality and adequate statistical power are available, they are generally preferable over animal data and should be given greater weight in hazard characterization and dose-response assessment, although both can be used.” *Id.* at 2-3.

⁶² *Id.* at 1-5.

⁶³ See, e.g., EPA, *Final Residual Risk Assessment for the Petroleum Refining Source Sector* at 15-16 (Sept., 2015), <https://www.regulations.gov/document?D=EPA-HQ-OAR-2010-0682-0800>.

⁶⁴ EPA, *Risk Assessment for Other Effects* (last updated Jan. 31, 2017), <https://www.epa.gov/fera/risk-assessment-other-effects>. See also, EPA, *Guidelines for Mutagenicity Risk Assessment* (1986), <http://www2.epa.gov/risk/guidelines-mutagenicity-risk-assessment>; EPA, *Guidelines for Developmental Toxicity Risk Assessment* (1991), <http://www2.epa.gov/risk/guidelines-developmental-toxicity-risk-assessment>; EPA, *Guidelines for Neurotoxicity Risk Assessment* (1998), <http://www2.epa.gov/risk/guidelines-neurotoxicity-risk-assessment>; EPA, *Guidelines for Reproductive Toxicity Risk Assessment* (1996), <http://www2.epa.gov/risk/guidelines-reproductive-toxicity-risk-assessment>; EPA et al., *Methods for Derivation of Inhalation Reference Concentrations and Application of Inhalation Dosimetry* (1994), <http://www2.epa.gov/risk/methods-derivation-inhalation-reference-concentrations-and-application-inhalation-dosimetry>.

⁶⁵ EPA, *IRIS Process for Developing Human Health Assessments* (last updated March 7, 2018), <https://www.epa.gov/iris/basic-information-about-integrated-risk-information-system#process>.

Fourth, the Proposed Rule is unlawful because EPA is considering costs and is relying on implementation costs as a basis for the Rule, in direct violation of § 7409, § 7412(f)(2), and other provisions of the Clean Air Act where cost is not a relevant or permissible factor in determining health and environmental impacts. *See, e.g.*, 83 Fed. Reg. at 18,768 (indicating that Proposed Rule would apply to “regulations for which the public is likely to bear the cost of compliance”); *see also id.* at 18,774 (proposed § 30.8) (requiring agency to implement the Proposed Rule “in a manner that minimizes costs”). Section 7412(f)(2) prohibits consideration of economic costs in assessing and determining whether the health risks that a major air toxics source causes are “unacceptable,” as it requires a determination of what is required to provide an “ample margin of safety to protect the public health.” *Nat. Res. Def. Council, Inc.*, 824 F.2d at 1164-65 (quotation marks omitted); Benzene Rule, 54 Fed. Reg. at 38,048-49 (citing Vinyl Chloride decision as prohibiting consideration of costs when determining a “safe” or “acceptable” emission level).⁶⁶ Similarly, as EPA explained in the Cancer Guidelines: “Risk assessments may be used to support decisions, but in order to maintain their integrity as decision-making tools, they are not influenced by consideration of the social or economic consequences of regulatory action.” Cancer Guidelines, *supra* n.59, at 1-5 to 1-6. It is therefore both unlawful and arbitrary to use cost as a justification to ignore and exclude health science from residual risk air toxics assessments, and thus as part of the determination of whether risk is acceptable or unacceptable, pursuant to § 7412(f)(2).

Fifth, section 7412(n) directs EPA to “perform a study of the hazards to public health reasonably anticipated to occur as a result of emissions by electric utility steam generating units of pollutants listed under subsection (b) after imposition of the requirements of this chapter,” and to list such sources “after considering the results of [this] study.” 42 U.S.C. § 7412(n)(1). This provision includes no limitation on the data EPA can or must consider for this question, based on EPA’s own interpretation. Thus, previously, in fulfilling its duty pursuant to this provision, EPA considered a wide array of scientific studies as relevant, regardless whether underlying data was disclosed.⁶⁷ Excluding consideration of relevant scientific material addressing such hazards

⁶⁶ *See also, e.g.*, NESHAP Proposed Rule, Pulp Mills, 81 Fed. Reg. 97,046, 97,064 (Dec. 30, 2016) (citing Benzene Rule and vinyl chloride decision) (“If risks are unacceptable, the EPA must determine the emissions standards necessary to bring risks to an acceptable level without considering costs.”); NESHAP Proposed Rule, Friction Materials Mfg., 83 Fed. Reg. 19,499, 19,502 (May 3, 2018) (same); *see also Whitman v. Am. Trucking Ass’n*, 531 U.S. 457, 468-71 (2001) (EPA is prohibited from considering costs in adopting national ambient air quality standards under the Clean Air Act rules).

⁶⁷ *See, e.g.*, EPA, Supplemental Finding That It Is Appropriate and Necessary To Regulate Hazardous Air Pollutants From Coal- and Oil-Fired Electric Utility Steam Generating Units; Final Rule, 81 Fed. Reg. 24,420, 24,421-23, 24,438, nn.1, 10, 11 (Apr. 25, 2016) (citing peer-reviewed risk assessments on human health effects and additional peer review of the Mercury Risk Assessment as well as evaluation of the non-mercury HAP risk assessment and co-benefits from reductions in PM_{2.5} and SO₂ emissions in the MATS Regulatory Impact Analysis) (U.S. EPA. 2011. *Revised Technical Support Document: National-Scale Assessment of Mercury Risk to Populations with High Consumption of Self-caught Freshwater Fish In Support of the Appropriate and Necessary Finding for Coal- and Oil-Fired Electric Generating Units*. Office of Air Quality Planning and Standards. November. EPA- 452/R-11-009. Docket ID No. EPA-HQ-OAR-2009-0234-19913; U.S. EPA. 2011. *Supplement to Non-mercury Case Study Chronic Inhalation Risk Assessment for the Utility MACT Appropriate and Necessary Analysis*. Office of Air Quality Planning and Standards. November. Docket ID No. EPA-HQ-OAR-2009-0234-19912; U.S.

solely because underlying data is not available would arbitrarily lead to an incomplete assessment of relevant information and flout the statute's preventative and health-protective intent. EPA may not apply the Proposed Rule under this provision, as EPA has already recognized – for example, in acting pursuant to § 7412(n)(1) to reach the determination that it is “appropriate and necessary” to regulate power plants due to their health hazards⁶⁸ – but rather must consider the types of studies the Proposed Rule would ignore. EPA cannot depart from its decision to consider such studies relevant without meeting the *State Farm* and *Fox* tests, *see supra* at 23, which it unquestionably has not done here.

In addition, the listing and delisting provisions for HAPs and source categories, and the requirements for the urban air toxics program, require EPA to assess particular and potential health effects and risks from HAPs. *See, e.g.*, 42 U.S.C. § 7412(b)(2)-(3), (c)(9), (k). EPA's Proposal to ignore relevant scientific information due to the lack of public disclosure violates these requirements.

Sixth, CAA § 7429 requires EPA to evaluate health risks and does not allow the exclusion of relevant scientific information. For example:

- § 7429(a)(3) – standards must include new unit siting requirements that, on a site specific basis, minimize potential risks to public health or the environment;
- § 7429(e) requires permits to include site-specific provisions “if the Administrator or the State determines that emissions in the absence of such limitations or measures may reasonably be anticipated to endanger public health or the environment”;
- § 7429 (h)(3) requires residual risk review under § 112(f), and § 129(b)(1) requires the inclusion of any residual risk standards in the guidelines for existing units.

Seventh, the Proposed Rule is antithetical to the very purpose of the Clean Air Act, which is “to protect and enhance the quality of the Nation's air resources so as to promote the public health and welfare and the productive capacity of its population.” 42 U.S.C. § 7401(b)(1). A “primary goal” is “pollution prevention.” *Id.* § 7401(c). Each of the above provisions must be read in a way that advances that goal; the Proposed Rule would do the contrary and is thus inconsistent with the statute and unlawful. EPA's Proposal runs directly counter to these goals and objectives by arbitrarily excluding consideration of science that discloses health impacts of air pollution. The Proposal is not neutral. It only excludes health-based science (dose-response studies, epidemiological studies) where underlying data is not disclosed, generally because it cannot or should not be disclosed to protect individual participants' privacy and confidentiality. EPA cannot exclude whole categories of scientific data untethered from a specific context or study, but rather must assess each health study on a case-by-case basis to determine whether or not it should be considered in a particular rulemaking, under EPA's long-standing scientific guidelines and policies and its regular approach in CAA rulemakings. Instead, this Proposed Rule excludes health studies from consideration as a class, up front, before EPA is even in the rulemaking stage

EPA. 2011. *Regulatory Impact Analysis for the Final Mercury and Air Toxics Standards*. EPA-452/R-11-011. Docket ID No. EPA-HQ-OAR-2009-0234-20131.).

⁶⁸ 81 Fed. Reg. at 24,422-23.

under its authority. And it does so not for scientific reasons, but simply due to industry preferences – most notably because industry cannot pick them apart by replicating decades of air pollution health effects, or by contacting individuals who shared private medical information to replicate the collection of data.

While the CAA provides for protection of “public health and welfare,” the Proposed Rule favors excluding science even if it is the most relevant and important evidence regarding how to protect public health. While the CAA aims for “pollution prevention” to protect public health, the Proposed Rule would prevent consideration of science relevant to these very goals. Therefore, EPA’s Proposed Rule is unlawful and arbitrary. Thus, EPA cannot lawfully satisfy § 7429 for similar reasons as described above, unless it evaluates relevant information on risks.

Eighth, a number of important CAA provisions require EPA to act based on a finding that air pollution is reasonably anticipated to endanger health or the environment. *See, e.g.*, 42 U.S.C. §§ 7415, 7422, 7521. The D.C. Circuit has ruled that such language “requires a precautionary, forward-looking scientific judgment about the risks of a particular air pollutant, consistent with the CAA’s ‘precautionary and preventative orientation.’” *Coal. for Responsible Regulation v. EPA*, 684 F.3d 102, 122 (D.C. Cir. 2012) (citation omitted). Such a precautionary approach does not require scientific certainty. “If a statute is ‘precautionary in nature’ and ‘designed to protect public health,’ and the relevant evidence is ‘difficult to come by, uncertain, or conflicting because it is on the frontiers of scientific knowledge,’ EPA need not provide ‘rigorous step-by-step proof of cause and effect’ to support an endangerment finding.” *Id.* at 121 (citation omitted). Thus, the court expressly rejected the notion that EPA can or should disregard uncertain or “difficult to come by” evidence under “endangerment” statutes. Indeed, the court rejected the notion that EPA could not rely on studies that synthesized the research of others:

It makes no difference that much of the scientific evidence in large part consisted of “syntheses” of individual studies and research. Even individual studies and research papers often synthesize past work in an area and then build upon it. This is how science works. EPA is not required to re-prove the existence of the atom every time it approaches a scientific question.

Id. at 120. Thus, in making endangerment determinations, there is no lawful or rational basis for EPA to automatically exclude reliance on any studies that synthesize and evaluate research by others.

The Courts have also rejected EPA’s attempts to avoid endangerment determinations based on considerations other than the specific endangerment criteria. In *Massachusetts v. EPA*, the Court held that the endangerment language in section 7521(a)(1) required EPA to assess whether motor vehicle emissions cause or contribute to air pollution which may reasonably be anticipated to endanger public health and welfare due to climate change, and to so determine exclusive of any other policy considerations. *Massachusetts v. EPA*, 549 U.S. 497, 532-34 (2007). Likewise, here, EPA cannot avoid its duty to make endangerment findings by arbitrarily rejecting scientific studies to serve vague and disingenuous policy interests such as allegedly fostering greater public trust and greater transparency in agency decisions.

The Proposed Rule also conflicts with specific language in § 7415 requiring an endangerment finding notification,

[w]henver the Administrator, upon receipt of reports, surveys or studies from any duly constituted international agency has reason to believe that any air pollutant or pollutants emitted in the United States cause or contribute to air pollution which may reasonably be anticipated to endanger public health or welfare in a foreign country or whenever the Secretary of State requests him to do so with respect to such pollution which the Secretary of State alleges is of such a nature, the Administrator shall give formal notification thereof to the Governor of the State in which such emissions originate.

42 U.S.C. § 7415(a). This provision does not allow EPA to ignore any such “reports, surveys or studies,” if they show “reason to believe” that an air pollutant endangers public health. *Id.*

Similarly, § 7422 directs that EPA “shall review *all available relevant information*,” to determine whether to make an endangerment finding for certain radioactive pollutants (including source material, special nuclear material, and byproduct material), cadmium, arsenic and polycyclic organic matter. 42 U.S.C. § 7422(a) (emphasis added). This language expressly forecloses EPA’s refusal to consider available studies based on an arbitrary transparency screen. *See also* 42 U.S.C. § 7521(a)(1)-(a)(3)(B) (providing for EPA to promulgate revised standards for heavy duty trucks “[o]n the basis of information available to the Administrator concerning the effects of air pollutants emitted from heavy-duty vehicles or engines and from other sources of mobile source related pollutants on the public health and welfare, and taking costs into account”).

Finally, the CAA’s rulemaking provision for air standards and limitations does not allow EPA to ignore relevant scientific information, including information provided by Commenters, and likewise may not direct a court to ignore this data. Section 7607 of the CAA – which provides for judicial review of air rulemakings – prescribes more detailed rulemaking procedures than those provided by the Administrative Procedure Act for a designated list of air emission standards and rules. 42 U.S.C. § 7607(d)(1). These procedures protect the public’s right to notice and comment, in part, by requiring EPA to place into the docket and to consider and respond to all such comments. *Id.* § 7607(d)(4)(B)(i) (“Promptly upon receipt by the agency, all written comments and documentary information on the proposed rule received from any person for inclusion in the docket during the comment period shall be placed in the docket.”); *id.* § 7607(d)(5) (“In promulgating a rule to which this subsection applies (i) the Administrator shall allow any person to submit written comments, data, or documentary information; (ii) the Administrator shall give interested persons an opportunity for the oral presentation of data, views, or arguments, in addition to an opportunity to make written submissions . . .”); *id.* § 7607(d)(6)(B) (“The promulgated rule shall also be accompanied by a response to each of the significant comments, criticisms, and new data submitted in written or oral presentations during the comment period.”).

EPA's Proposed Rule contravenes these requirements and is therefore unlawful because it allows EPA to decide, before even receiving comments, that it will not consider or respond through regulatory action to any comments that submit scientific material for which underlying information is not disclosed. Under § 7607(d), EPA may not lawfully decide to ignore an entire class of science; if submitted by commenters as relevant, EPA must consider and respond in the context of the statutory test that applies to its rulemaking. Failure to do so is unlawful and arbitrary. *Id.* § 7607(d)(9).⁶⁹

Relatedly, for certain rules where recommendations are provided from scientific experts, § 7607 requires additional material to be placed into the docket, without EPA discretion. *Id.* § 7607(d)(3) (requiring a "statement" that "shall also set forth or summarize and provide a reference to any pertinent findings, recommendations, and comments by the Scientific Review Committee established under section 7409(d) of this title and the National Academy of Sciences, and, if the proposal differs in any important respect from any of these recommendations, an explanation of the reasons for such differences."). EPA's Proposed Rule unlawfully violates this provision because it would direct EPA to refuse to consider or discuss such information if based on studies for which underlying data were not disclosed.

More generally, EPA may not attempt to restrict, before a rulemaking has even begun, the type of information it will consider in that rulemaking. Doing so impinges on the federal courts' authority to determine what scientific evidence is relevant to application of CAA requirements in rulemakings. Pursuant to § 7607, the relevant court of appeals, and most frequently the D.C. Circuit, has jurisdiction to consider a petition for review of an EPA air rule. 42 U.S.C. § 7607(b). This grant of jurisdiction includes a grant allowing the court to decide what record material is relevant. *Id.*; *see also id.* § 7607(c). Notably, the court rules provide that the record on review of an agency order or regulation must include, *inter alia*, "the pleadings, evidence, and other parts of the proceedings before the agency." D.C. Cir. R. 16 ("If necessary, the court may direct that a supplemental record be prepared and filed."); *see also* Fed. R. App. P. 16. Similarly, the Federal Rules of Evidence require courts, not EPA or any other federal agency, to determine what evidence is "relevant" and "admissible." *See, e.g.*, Fed. R. Evid. 401-402 (allowing courts, and Congress by statute, but not federal agencies, to prescribe rules of evidence and determine admissibility of evidence and expert testimony).⁷⁰ Scientific information

⁶⁹ Ignoring an entire class of science is also unlawful under the APA – which applies to all EPA rulemaking – as the APA likewise requires notice and comment and requires EPA to respond to all submitted comments. *See* 5 U.S.C. § 553. EPA has also promulgated rules specific to certain statutes that likewise require notice and comment as well as consideration of and responses to those comments by EPA. *See, e.g.*, 40 C.F.R. § 25.3 (rulemaking under the CWA, SDWA, and RCRA require "public participation," including "providing access to the decision-making process, seeking input from and conducting dialogue with the public, assimilating public viewpoints and preferences, and demonstrating that those viewpoints and preferences have been considered by the decision-making official"). Thus, for the same reason the Proposed Rule violates the CAA's rulemaking provision, so too does it violate the APA and a number of other statutes that EPA is responsible for implementing.

⁷⁰ "Relevant evidence is admissible unless any of the following provides otherwise: the United States Constitution; a federal statute; these rules; or other rules prescribed by the Supreme Court." Fed. R. Evid. 402. "A witness who is qualified as an expert by knowledge, skill, experience, training, or education may testify in the form of an opinion or otherwise if: (a) the expert's scientific, technical, or other specialized

submitted by commenters undoubtedly qualifies as “evidence” that the court must consider, even if EPA refuses to do so.⁷¹ EPA may not lawfully prevent submission of such evidence, or attempt to exclude it from a rulemaking record. *Id.*⁷²

Where EPA previously attempted to restrict or change the statutory test and authority granted to courts to evaluate CAA cases, the D.C. Circuit rejected that as unlawful and outside of the bounds of EPA’s authority. *Nat. Res. Def. Council v. EPA*, 749 F.3d 1055, 1062 (D.C. Cir. 2014) (vacating affirmative defense to civil penalties because it changed the standard set by statute for court’s discretion in enforcement cases, and thus violated § 7604 and § 7413). For this reason, too, the Proposed Rule is invalid.

ii. CWA

The Proposed Rule violates the Clean Water Act in two ways: *first*, it runs afoul of its requirement to use all relevant science and the best technology available; and *second*, it undermines its mandate to protect public health. For each of these reasons, the rule cannot stand.

First, pursuant to Section 1251 of the Clean Water Act, the primary objective of the CWA is “to restore and maintain the chemical, physical, and biological integrity of the Nation’s waters.” 33 U.S.C. § 1251(a). Toward that end, a fundamental policy underlying the CWA is “to support and aid research relating to the prevention, reduction, and elimination of pollution.” *Id.* § 1251(b). The CWA thus promotes the use of good science. The Proposed Rule handicaps EPA from accomplishing these broad goals and objectives by limiting the available science and research.

For example, section 1313(c) of the CWA governs the establishment and modification of water quality standards. Pursuant to this provision, these standards “shall be such as to protect the public health or welfare, enhance the quality of water and serve the purposes of” the CWA. *Id.* § 1313(c)(2)(A). In setting these standards, EPA must “tak[e] into consideration their use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes, and also taking into consideration their use and value for navigation.” *Id.* If EPA limits the type of science acceptable for these purposes, it is not fulfilling this obligation of the CWA as it is not using all means to accomplish this requirement.

knowledge will help the trier of fact to understand the evidence or to determine a fact in issue; (b) the testimony is based on sufficient facts or data; (c) the testimony is the product of reliable principles and methods; and (d) the expert has reliably applied the principles and methods to the facts of the case.” Fed. R. Evid. 702; *See also, Daubert v. Merrell Dow Pharm., Inc.*, 509 U.S. 579 (1993).

⁷¹ Courts have repeatedly allowed the use of certain health studies as proof of harm from air pollution even though their underlying data are not publicly disclosed. *See, e.g., Battery Recyclers*, 604 F.3d at 623.

⁷² Not only does this apply to appeals of decisions under the Clean Air Act, but it also applies more generally to any agency rulemaking decision arising out of any statute under EPA’s authority that is appealed to an appellate court where the Federal Rules of Appellate Procedure and Federal Rules of Evidence apply.

Similarly, section 1313(d) requires states to establish “the total maximum daily load” for certain identified pollutants, and it must do so “at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality.” *Id.* § 1313(d)(1)(C). As with Section 1313(c), if EPA is required to do this without all available science, it is not fulfilling its obligations under this provision.

Not only do the limitations on science undermine the Agency’s ability to most effectively fulfill the obligations of the Clean Water Act, but they likewise contradict provisions in the Act that require use of the best technology available. For example, section 1311(p)(1) requires that any modified requirements of effluent limitations in certain permits apply “the best available technology economically achievable.” Failure to do so will render the effluent limitations invalid. *See, e.g., Nat. Res. Def. Council v. EPA*, 808 F.3d 556, 564 (2d Cir. 2015). Several other provisions likewise require the use of the best technology to carry out the purpose of the Act. *See, e.g.,* 33 U.S.C. § 1314(b)(1) (regulations establishing or revising effluent limitations must apply “the best practicable control technology currently available” to identify “the degree of effluent reduction attainable”); *id.* § 1314(b)(2)(A) (regulations establishing or revising effluent limitations must apply “the best control measures and practices achievable” to identify “the degree of effluent reduction attainable . . . including treatment techniques, process and procedure innovations, operating methods, and other alternatives for classes and categories of point sources”); *id.* § 1314(b)(4)(A) (regulations establishing or revising effluent limitations must apply “the best conventional pollutant control technology” to identify “the degree of effluent reduction attainable . . . for classes and categories of point sources”).

Second, the CWA also contains several additional provisions that demonstrate its overarching goal of protecting the public health. For example, one of the provisions in section 1254 – one of the two sections cited by EPA as authorizing this Proposed Rule – addresses the “collection and dissemination of scientific knowledge on the effects and control of pesticides in water.” 33 U.S.C. § 1254(l). Pursuant to this provision, the Administrator is charged with developing and issuing to the States for the purpose of carrying out the CWA “the latest scientific knowledge available in indicating the kind and extent of effects on health and welfare which may be expected from the presence of pesticides in the water in varying quantities,” and updating that information “whenever necessary to reflect developing scientific knowledge.” *Id.* There are no qualifications or other limiting factors in the type of scientific knowledge that must be considered. Rather, the provision contemplates inclusiveness to most effectively accomplish the CWA’s objectives.

Several other provisions likewise address science and research as they relate to the public health goals of the CWA. For example, section 1254a requires the Administrator to “conduct research on the harmful effects on the health and welfare of persons caused by pollutants in water.” A provision addressing protection of the Great Lakes states, in part, that “[t]he Administrator may not carry out a project under this paragraph for remediation of contaminated sediments located in an area of concern— (i) if an evaluation of remedial alternatives for the area of concern has not been conducted, including a review of the short-term and long-term effects of

the alternatives on human health and the environment.” See 33 U.S.C. § 1268(c)(11)(D). Section 1311(g)(2), which addresses requirements for modifications to effluent limitations, requires that such modifications not result in “the discharge of pollutants in quantities which may reasonably be anticipated to pose an unacceptable risk to human health or the environment.” And section 1314(a)(9) provides that the Administrator “shall publish new or revised water quality criteria for pathogens and pathogen indicators (including a revised list of testing methods, as appropriate), based on the results of the studies conducted under section 1254(v),” for the purpose of protecting human health in coastal recreation waters, and that at least once every five years, the Administrator must review and if necessary revise the water quality criteria. And EPA has long recognized that the NPDES (§ 402 permit) and fill discharges (§ 404 permit) programs require protection of public health. See, e.g., 33 U.S.C. §§ 1342, 1344 (authorizing EPA to prohibit, withdraw, or veto a discharge that “will have an unacceptable adverse effect on municipal water supplies, shellfish beds and fishery areas . . . wildlife, or recreational areas”) and implementing regulations, including Section 404(b)(1) Guidelines (40 C.F.R. Part 230).⁷³

Taken together, these provisions demonstrate that the overall focus of the CWA is to promote and protect the public health and water quality in the most comprehensive way possible. Thus, any measure that could limit science or research supporting these objectives is antithetical to the Act. For these reasons, EPA’s reliance on the CWA to support its restrictions on science is entirely misplaced.

iii. SDWA

EPA’s proposal to exclude reliable, accessible, and relevant science is antithetical to the requirements of the SDWA and thus is unlawful. The SDWA was established to protect the quality of the drinking water in the United States. To accomplish this, the SDWA requires EPA to limit contaminants in public water systems. As discussed *supra*, it does this by establishing a “maximum contaminant level goal” for each contaminant “at the level at which no known or anticipated adverse effects on the health of persons occur and which allows an adequate margin of safety.” 42 U.S.C. § 300g-1(b)(4)(A). And in deciding whether to regulate any particular contaminant to protect public health, EPA must rely on “the **best available public health information.**” *Id.* § 300g-1(b)(1)(B)(ii)(II) (emphasis added). And to the extent EPA relies on science, it must use “**the best available, peer-reviewed science and supporting studies**” available. *Id.* § 300g-1(b)(3)(A) (emphasis added). Thus, any decision to categorically ignore or otherwise fail to consider relevant scientific information when regulating drinking water would be unlawful under the SWDA.

⁷³ See, e.g., 40 C.F.R. Part 122 (requiring permits to implement water quality standards and protect public health); 40 C.F.R. § 230.10(c)(1), § 230.11 (prohibiting discharge of dredged or fill material which will cause or contribute to significant degradation of the waters of the United States, which includes: “[s]ignificantly adverse effects of the discharge of pollutants on human health or welfare, including but not limited to effects on municipal water supplies, plankton, fish, shellfish, wildlife, and special aquatic sites.”); see also § 230.50 (municipal and private water supplies).

iv. *CERCLA*

Under CERCLA, Congress created a hazardous substance research and classification regime based largely on studies that “determine relationships between exposure to toxic substances and illness”—the very dose response studies that the Proposed Rule would stifle. 42 U.S.C. § 9604(i)(1). The statute requires EPA and ATSDR to annually update a list of hazardous substances commonly found at facilities on the National Priorities List that the agencies determine “pos[e] the most significant potential threat to human health due to their known or suspected toxicity to humans and the potential for human exposure to such substances . . .” *Id.* § 9604(i)(2)(A), (B). EPA must also develop guidelines for ATSDR’s toxicological profiles of each listed substance, which must include “available toxicological information and epidemiologic evaluations . . . to ascertain the levels of significant human exposure for the substance and the associated acute, subacute, and chronic health effects.” *Id.* § 9604(i)(3)(A). For any substance for which adequate information is unavailable, EPA and ATSDR must create a program of toxicological and epidemiological research to develop that information. *Id.* § 9604(i)(5).

Congress specified that CERCLA health assessments include:

preliminary assessments of the potential risk to human health posed by individual sites and facilities, based on such factors as the nature and extent of contamination, the existence of potential pathways of human exposure (including ground or surface water contamination, air emissions, and food chain contamination), the size and potential susceptibility of the community within the likely pathways of exposure, the comparison of expected human exposure levels to the short-term and long-term health effects associated with identified hazardous substances and any available recommended exposure or tolerance limits for such hazardous substances, and the comparison of existing morbidity and mortality data on diseases that may be associated with the observed levels of exposure.

42 U.S.C. § 9604(i)(6)(F). And when assessing alternate remedial actions under CERCLA, EPA must “at a minimum, take into account . . . the persistence, toxicity, mobility, and propensity to bioaccumulate of such hazardous substances and their constituents [and] short- and long-term potential for adverse health effects from human exposure.” *Id.* § 9621(b)(1).

EPA’s Proposed Rule would prevent the Agency from using the very types of health assessments that Congress mandates. It undermines both the letter and spirit of the statute, and is therefore unlawful.

v. *EPCRA*

The Proposed Rule also violates EPCRA. EPCRA requires EPA to make determinations about whether to list new chemicals in the statute’s Toxic Release Inventory program “based on

generally accepted scientific principles or laboratory tests, or appropriately designed and conducted epidemiological or other population studies, available to [EPA].” 42 U.S.C. § 11023(d)(2). Specifically, Congress instructs EPA to add a chemical to the Toxic Release Inventory list when:

(A) The chemical is known to cause or can reasonably be anticipated to cause significant adverse acute human health effects at concentration levels that are reasonably likely to exist beyond facility site boundaries as a result of continuous, or frequently recurring, releases.

(B) The chemical is known to cause or can reasonably be anticipated to cause in humans—

(i) cancer or teratogenic effects, or

(ii) serious or irreversible—

(I) reproductive dysfunctions,

(II) neurological disorders,

(III) heritable genetic mutations, or

(IV) other chronic health effects.

(C) The chemical is known to cause or can reasonably be anticipated to cause, because of—

(i) its toxicity,

(ii) its toxicity and persistence in the environment, or

(iii) its toxicity and tendency to bioaccumulate in the environment,

a significant adverse effect on the environment of sufficient seriousness, in the judgment of the Administrator, to warrant reporting under this section.

Id. EPA thus has a mandate from Congress to consider the types of toxicological studies that EPA’s Proposed Rule would prevent the Agency from considering. For this reason, the Proposed Rule cannot withstand scrutiny.

vi. FIFRA

Not only does FIFRA not provide authority for the Proposed Rule, but it likewise contains provisions directly at odds with the purpose and effect of the Rule.

Under FIFRA, EPA must register a pesticide (with rare exceptions) before it may be sold or used in the United States. 7 U.S.C. § 136a(a). To register or re-register a pesticide, EPA must

determine that its use “will not generally cause unreasonable adverse effects on the environment.” *Id.* § 136a(c)(5)(D); *see id.* § 136(bb) (definition of “unreasonable adverse effects”). FIFRA defines “unreasonable adverse effects” as “any unreasonable risk to man or the environment, taking into account the economic, social, and environmental costs and benefits of the use of any pesticide.” *Id.* § 136(bb).

EPA requires a company seeking establishment or retention of a pesticide registration to submit data and information to enable EPA to make its unreasonable adverse effects determination. In addition to a standard set of data, EPA can issue data call-in notices requiring additional testing and information. Often, EPA requires the registrant to conduct particular laboratory tests to assess the pesticide’s toxicity. As Nancy Beck noted during the drafting of the rule, pesticide regulations require manufacturers to submit to EPA “a huge amount of data,” and that the studies come to EPA as Confidential Business Information (“CBI”). *See* Maria Hegstad, “Absent ORD Chief, Trump’s Toxics Pick Expands Reach Across EPA Science,” *Inside EPA* (May 10, 2018), <https://insideepa.com/weekly-focus/absent-ord-chief-trumps-toxics-pick-expands-reach-across-epa-science>. The raw data underlying the industry laboratory studies is rarely made available to the public, and the registrants would almost certainly oppose such disclosure on CBI grounds. Nor are such studies typically peer reviewed.

In addition, after a pesticide has been registered, the registrant must provide EPA all factual information regarding the pesticide’s unreasonable adverse effects. 7 U.S.C. § 136d(a)(2). Such information comes in a variety of forms – from academic studies, poisoning incident reports, or studies conducted for other regulatory authorities at the state, federal, or international level. Often, the raw data are unavailable.

The Proposed Rule thus conflicts with FIFRA’s pesticide registration requirements as it eliminates from consideration important studies used to show the unreasonable adverse effects of the pesticide toxins. As Beck herself acknowledged of an early version of the rule, the directive would “jeopardize our entire pesticide registration/re-registration process.” Maria Hegstad, “Absent ORD Chief, Trump’s Toxics Pick Expands Reach Across EPA Science,” *Inside EPA* (May 10, 2018). Accordingly, the Proposed Rule cannot stand.

vii. TSCA

EPA’s proposed refusal to consider or use science relevant to decisions that will affect public health directly contravenes the newly enacted revisions to TSCA. Numerous provisions of TSCA make clear that EPA may not prohibit the consideration of non-public data in regulatory decision-making under TSCA. Indeed, when viewed as a whole, TSCA establishes a comprehensive scheme for how EPA is to evaluate and use science in making regulatory decisions that forecloses the Proposed Rule.

First, TSCA requires EPA to consider all “**reasonably available information**” when making any regulatory decisions under sections 2603, 2604, and 2605. 15 U.S.C. § 2625(k) (emphasis added) (EPA “shall take into consideration information relating to a chemical . . . that

is reasonably available to [the Agency]”); *also id.* § 2605(c)(2)(A).⁷⁴ Thus, the statute mandates that if a study is reasonably available to EPA, EPA must consider it when making a significant regulatory decision under these provisions of the statute. Whether the data underlying a scientific study is publicly available has no bearing on whether the study itself is reasonably available to EPA. Because the Proposed Rule purports to apply to all significant regulatory decisions made by EPA under TSCA – including those made under these provisions – it is unlawful.

Second, when making any regulatory decision under sections 2603, 2604, and 2605, TSCA requires EPA to make an individualized evaluation of any information reasonably available to the Agency, and thus, prohibits the blanket ban erected in the Proposed Rule. Section 2625(h) establishes five statutory factors that EPA must consider when “mak[ing] a decision based on science.” 15 U.S.C. § 2625(h)(1)-(5). One of these statutory factors expressly addresses situations in which non-public scientific data is before the Agency, and requires the Agency to “consider . . . the extent of independent verification or peer review of the information or of the procedures, measures, methods, protocols, methodologies, or models.” *Id.* § 2625(h)(5). In addition, EPA must consider whether the methodologies used to collect the data are “reasonable,” *id.* § 2625(h)(1), and the “degree of clarity and completeness” with which the methods used were documented, *id.* § 2625(h)(3). In sum, Section 2625(h) requires EPA to review each scientific study on a case-by-case basis to determine whether and how to use it. This case-by-case evaluation requires EPA to consider the public or non-public nature of the underlying data as one of many factors and prohibits EPA from implementing a blanket ban on the use of non-public data in significant regulatory decisions under TSCA.

Third, the Proposed Rule is at odds with the requirement that EPA act “**consistent with the best available science**.” *Id.* § 2625(h) (emphasis added). Although Congress did not define the term in TSCA, it is clear from other statutes that an agency cannot lawfully act consistent with the best available science when it categorically bars consideration of any science based on non-public data. For example, the Endangered Species Act requires federal agencies to consider the “best scientific and commercial data available,” *see* 16 U.S.C. § 1536(a)(2), and courts have held that this provision requires an agency to consider “**all** relevant data . . . even when it is imperfect, weak, and not necessarily dispositive.” *League of Wilderness Defenders/Blue Mountains Biodiversity Project v. Connaughton*, 752 F.3d 755, 763-64 (9th Cir. 2014) (emphasis added); *see also Bldg. Indus. Ass'n of Superior Cal. v. Norton*, 247 F.3d 1241, 1246 (D.C. Cir. 2001) (an agency “must utilize the ‘best scientific . . . data **available**,’ not the best scientific data **possible**”) (emphasis in original). EPA itself acknowledged that this sort of restriction on

⁷⁴ “In proposing and promulgating a rule under subsection (a) with respect to a chemical substance or mixture, the Administrator shall consider and publish a statement based on **reasonably available information** with respect to—(i) the effects of the chemical substance or mixture on health and the magnitude of the exposure of human beings to the chemical substance or mixture; (ii) the effects of the chemical substance or mixture on the environment and the magnitude of the exposure of the environment to such substance or mixture; (iii) the benefits of the chemical substance or mixture for various uses; and (iv) the reasonably ascertainable economic consequences of the rule . . .” 15 U.S.C. § 2605(c)(2)(A) (emphasis added).

science is contrary to the requirements of TSCA; when analyzing the same restrictions proposed in the HONEST Act, EPA recognized:

Provisions under the newly amended Toxic Substance Control Act (TSCA) . . . would be significantly impacted by the HONEST Act. First, a number of provisions in section 26 could not be upheld under the HONEST Act. Section 26(h) requires the Agency to “use scientific information, technical procedures, measures, methods, protocols, methodologies, or models, employed in a manner consistent with best available science.” . . . *[T]he HONEST Act would not allow EPA to use the best available science. Section 26(i) requires the Agency to use the “weight of scientific evidence” in making decisions under TSCA, and EPA believes this would not be possible given that the provisions of the HONEST Act would prohibit the use of some data.* Finally, section 26(k) requires the Agency to “take into consideration information relating to a chemical substance or mixture, including hazard and exposure information, under the conditions of use, that is reasonable available.” EPA would be in violation of the HONEST Act when upholding these provisions under TSCA, namely *instead of using the best available science and all reasonable available data for chemical regulations, EPA would be restricted to selecting information based on availability.* This approach would introduce research bias that would compromise the quality of the Agency’s work.

EPA, EPA Analysis of HONEST Act to CBO at 3-4 (2016), <https://www.scribd.com/document/344731162/EPA-analysis-of-Honest-Act-to-CBO> (emphasis added).

Indeed, where Congress has sought to qualify a best available science requirement by implementing a total bar on particular types of science, it has done so expressly. For example, in the Consumer Productive Safety Improvement Act of 2008, Congress directed a panel studying phthalates to use “the most recent, best-available, *peer-reviewed*, scientific studies.” 15 U.S.C. § 2057c(b)(2)(B) (emphasis added). The absence of any such prohibition in TSCA is further proof that the Proposed Rule is prohibited by the statute’s best-available-science requirement.

Fourth, the Proposed Rule is inconsistent with the TSCA requirement that EPA make regulatory decisions using a “weight of the scientific evidence” approach. *Id.* § 2625(i). As EPA has itself recognized, this approach requires the Agency to individually evaluate the strengths and weakness of any study reasonably available to the Agency. 40 C.F.R. § 702.33 (defining “weight of scientific evidence” as “comprehensively, objectively, transparently, and consistently, identify[ing] and evaluat[ing] *each stream of evidence*, including strengths, limitations, and relevance of *each study* and [] integrat[ing] evidence as necessary and appropriate based upon strengths, limitations, and relevance” for purposes of risk evaluations under 15 U.S.C. § 2605 (emphasis added)). Thus, the Proposed Rule’s outright ban on

consideration of scientific studies that rely on non-public data is prohibited by the weight of the scientific evidence approach required under TSCA.

In sum, these provisions – considered together and in light of other provisions of the statute – establish a comprehensive scheme for how EPA is to consider scientific data, and this scheme prohibits the Proposed Rule’s ban on the consideration of non-public data. Together, they require EPA to: consider *all* reasonably available scientific information; evaluate each piece of information, including the methods by which it was acquired and analyzed; use each piece of information in a manner consistent with the best available science; and give each piece of information its due weight.

In addition, in deciding whether or not “there may be a reasonable basis to conclude that a chemical substance or mixture presents a significant risk of serious or widespread harm to human beings,” EPA must consider “any . . . information available to the Administrator.” 15 U.S.C. § 2603(f). And other provisions of TSCA expressly address certain types of non-public data and authorize EPA to consider it in making regulatory decisions. *See* 15 U.S.C. §§ 2604(b), 2613.

In light of the numerous provisions of TSCA addressing the consideration of scientific data, it is evident that if Congress had intended to allow EPA to bar the consideration of non-public data, it surely would have said so expressly. Given the comprehensiveness of these provisions providing otherwise, there is simply no room for a blanket ban on science that relies on non-public data. The Proposed Rule is therefore unlawful.

viii. RCRA

Not only do the provisions of RCRA upon which EPA relies not provide the requisite statutory authority, but other provisions of RCRA render the Proposed Rule unlawful. Specifically, section 8001 of RCRA provides that the Administrator shall conduct or otherwise assist in research, investigations, experiments, and other studies without limitation on what studies or data can be considered. 42 U.S.C. § 6981. The law mandates a broad and inclusionary role for science, requiring EPA to consider studies without limitation. The Proposed Rule’s elimination from consideration of entire categories of scientific data conflicts with the requirements of this section of RCRA, and thus cannot stand. *See Decker v. Nw. Env’tl. Def. Ctr.*, 568 U.S. 597 (2013).

B. The Limitations on Science Also Contradict Other Environmental Statutes.

Not only does the Proposed Rule contravene the statutes upon which EPA relies as statutory authority, but its limitations on science likewise conflict with core provisions of other environmental statutes. For example, the Food Quality Protection Act (“FQPA”), which regulates pesticide residue in conjunction with FIFRA, sets safety standards based on the consideration of *all available data*. Limiting the data available to conduct studies necessary to evaluate the harmful effects of pesticides runs counter to this mandate.

Specifically, Congress overhauled our food safety laws when it unanimously passed the FQPA, amending both the Federal Food, Drug, and Cosmetics Act (“FFDCA”)⁷⁵ and FIFRA. The overhaul responded to a seminal 1993 National Academy of Sciences (“NAS”) report criticizing EPA for treating children like “little adults” by failing to address the unique susceptibility of children to pesticide exposures based on the foods they eat, their play, metabolism, and sensitive stages of their development. NAS, *Pesticides in the Diets of Infants and Children* (1993). The NAS recommended that EPA revamp and strengthen its pesticide regulations to account for children’s vulnerabilities, consumption patterns, and exposures. Because it would take time to fill gaps in knowledge, safeguards and methodologies, the NAS recommended that additional protection be afforded in the form of “uncertainty” or “safety factors.” The NAS first described how EPA has regularly used uncertainty factors and then proposed an additional uncertainty factor for fetal developmental toxicity and where data are incomplete: “In the absence of data to the contrary, there should be a presumption of greater toxicity to infants and children. To validate this presumption, the sensitivity of mature and immature individuals should be studied systematically to expand the current limited data base on relative sensitivity.” *Id.*

The FQPA strengthened the food safety standard in several ways. *First*, under the FQPA, the EPA Administrator “may establish or leave in effect a tolerance for a pesticide chemical residue in or on food only if the Administrator determines that the tolerance is safe. The Administrator shall modify or revoke a tolerance if the Administrator determines it is not safe.” 21 U.S.C. § 346a(b)(2)(A)(i). In other words, the absence of sufficient information to find a pesticide safe means it cannot be allowed in or on our food.

Second, safe “means the Administrator has determined there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.” *Id.* § 346a(b)(2)(A)(ii). The FQPA, therefore, requires that EPA conduct an assessment based on aggregation of all exposures to a pesticide whether from eating foods, drinking water with residues of the pesticide, or uses of the pesticide in and around the home or other places where people can be exposed. 21 U.S.C. § 346a(b)(2)(A)(ii), (C)(i)(I) & (ii). The FQPA also requires EPA to assess and protect against unsafe risks posed by cumulative exposures to pesticides that share a “common mechanism of toxicity,” as is the case with pesticides in the organophosphate, carbamate, and pyrethroid families. *See* 21 U.S.C. § 346a(b)(2)(C)-(D).

Third, EPA must make specific safety determinations for infants and children. *Id.* § 346a(b)(2)(C)(ii)(I) & (II). It must consider available information concerning “the special susceptibility of infants and children,” including “neurological differences between infants and children and adults, and effects of in utero exposure to pesticide chemicals.” *Id.*

⁷⁵ Under the FFDCA, EPA must establish the maximum residue of a pesticide allowed on food, called a “tolerance,” in order for a pesticide to be permitted on food that is imported or sold in interstate commerce. 21 U.S.C. § 346a(b) & (c). EPA may “establish or leave in effect a tolerance for a pesticide chemical residue in or on a food only if the Administrator determines that the tolerance is safe.” *Id.* § 346a(b)(2)(A)(i). If it finds a pesticide residue would not be safe, EPA must revoke a tolerance. *Id.*

§ 346a(b)(2)(C)(i)(II). EPA must also base its tolerance decisions on available information about food “consumption patterns among infants and children.” *Id.* § 346a(b)(2)(C)(i)(I) & (III).

Fourth, EPA must account for children’s sensitivities, scientific uncertainty, and gaps in available data. The statute requires that “an additional tenfold margin of safety for the pesticide chemical residue and other sources of exposure shall be applied for infants and children to take into account potential pre -and post-natal toxicity and completeness of the data with respect to exposure and toxicity to infants and children.” *Id.* § 346a(b)(2)(C). EPA can depart from this requirement and use a different margin of safety “only if, on the basis of reliable data, such margin will be safe for infants and children.” *Id.*; see *Nw. Coal. for Alts. to Pesticides v. EPA*, 544 F.3d 1043, 1046 (9th Cir. 2008) (reversing EPA’s shrinkage of the safety factor in the absence of supporting data).

As an over-arching mandate, the FQPA directs EPA to make its tolerance determinations based on its assessment of the pesticide’s risk. 21 U.S.C. § 346a(b)(2)(C)(i). And throughout its mandates to assess the full effects of a pesticide, the FQPA directs EPA to base its risk assessment on “available information” about consumption patterns, special susceptibility of infants and children, and cumulative effects. *Id.* The FQPA also expressly directs EPA to consider the validity, completeness, and reliability of the available data from studies, the nature of the toxic effect, available information about the relationship between study results and human risk, and available information about aggregate and cumulative effects. *Id.* § 346a(b)(2)(C)(ii).

The Proposed Rule upends these mandates by requiring EPA to put on blinders and ignore a huge and important subset of the available data. It collides squarely with the congressional direction to consider all available data and information in order to protect our food and children in particular. It also conflicts with the congressional mandate to afford greater protection to children and our food when gaps in data prevent a full quantitative assessment and establishment of a dose-response. It thus undermines EPA’s ability to carry out its obligations under the FQPA.⁷⁶

C. Administrative Statutes Prohibit the Proposed Prohibitions.

EPA’s Proposed Rule likewise ignores requirements set forth in two administrative statutes that govern its rulemaking: the Regulatory Flexibility Act and the Data Quality Act. Under the Regulatory Flexibility Act, 5 U.S.C. § 601 *et seq.*, federal agencies must consider the impacts their regulations will have on small entities and must consider less burdensome alternatives. In developing a new regulation, an agency must take one of two actions: certify that a proposed rule will not have a significant economic impact on a substantial number of small

⁷⁶ The FQPA also amended FIFRA’s “unreasonable adverse effects” definition to include “a human dietary risk from residues that result from a use of a pesticide in or on any food inconsistent with the [FQPA] standard.” 7 U.S.C. § 136(bb)(2). Accordingly, EPA can register or re-register a pesticide only if there is a reasonable certainty of no harm from aggregate and cumulative exposures to the pesticide under the FQPA standard. The FQPA’s science standards therefore extend to EPA’s FIFRA determinations. Accordingly, just as the Proposed Rule runs afoul of the FQPA’s standards, so too does it violate FIFRA’s mandates, as amended by the FQPA.

entities, or prepare an initial regulatory flexibility analysis. EPA must publish its initial regulatory flexibility analysis or a summary of it in the Federal Register along with the proposed rule. Here, EPA includes a certification with the Proposed Rule stating that it will not have a significant economic impact on a substantial number of small entities. However, it provides no support for this certification.

Pursuant to the Data Quality Act, also known as the Information Quality Act, Treasury and General Government Appropriation Act for Fiscal Year 2001, Pub. L. No. 106-554, § 515 Appendix C, 114 Stat. 2763A-153 (2000), the Office of Management and Budget (“OMB”) issued government-wide guidelines that “provide policy and procedural guidance to Federal agencies for ensuring and maximizing the quality, objectivity, utility, and integrity of information (including statistical information) disseminated by Federal agencies. . . .” The OMB guidelines directed each federal agency to issue its own information quality guidelines to “ensure and maximize the quality, objectivity, utility, and integrity of information, including statistical information, disseminated by the agency.” 67 Fed. Reg. 8451, 8459 (Feb. 22, 2002). Following OMB’s instructions, EPA issued its own guidelines that apply to information it disseminates to the public. EPA, *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity, or Information Disseminated by the Environmental Protection Agency* (Oct. 2002), <https://www.epa.gov/sites/production/files/2017-03/documents/epa-info-quality-guidelines.pdf>. According to these guidelines, EPA uses a “weight-of-evidence” approach that “considers *all relevant information* and its quality, consistent with the level of effort and complexity of detail appropriate to a particular risk assessment.” EPA Guidelines 6.4 (emphasis added). The Proposed Rule contravenes these requirements, as it will prevent EPA from considering all relevant information by precluding consideration of certain data.

Moreover, pursuant to EPA’s guidelines, EPA must ensure that the information it disseminates “is accurate, reliable and unbiased.” EPA Guidelines 6.4(A). To do so, it uses:

the best available science and supporting studies conducted in accordance with sound and objective scientific practices, including, when available, peer reviewed science and supporting studies; and (ii) data collected by accepted methods or best available methods (if the reliability of the method and the nature of the decision justifies the use of the data).

Id. (emphasis added). Given that the Proposed Rule eliminates from consideration any scientific study where the underlying data cannot be made publicly available, it undoubtedly precludes the use of the best available science in certain situations. Thus, the Proposed Rule is inconsistent with EPA’s implementation of the Data Quality Act.

D. The Proposed Rule is Entirely Inconsistent with the Executive Orders Upon Which EPA Relies for Support.

EPA also cites to a number of Executive Orders as support for the Proposed Rule. However, upon examination, it is eminently clear that these orders are wholly inconsistent with the intent and effect of the Proposed Rule. Regardless, Executive Orders cannot lawfully or

constitutionally substitute for statutorily granted authority or contradict statutory requirements; thus, the Executive Orders provide no support or authority for the Proposed Rule.

i. Exec. Order No. 13,777, 82 Fed. Reg. 12,285

EPA asserts that the Proposed Rule is consistent with Executive Order 13,777, 82 Fed. Reg. 12,285 (Mar. 1, 2017), titled “Enforcing the Regulatory Reform Agenda.” It is not. This Executive Order establishes a task force to “evaluate existing regulations . . . and make recommendations to the agency head regarding their repeal, replacement, or modification.” It thus seeks to *reduce* regulation, and in no way authorizes EPA to promulgate new rules.⁷⁷

Additionally, the Proposed Rule is contrary to the stated purpose and policy of Executive Order 13,777, which is to “lower regulatory burdens on the American people by implementing and enforcing regulatory reform.” The Proposed Rule will do just the opposite. It will preclude EPA from considering certain data regarding health and environmental impacts of pollutants, contaminants, and other substances in its rulemaking process. The overall impact of such limitations on rulemaking aimed at protecting public health and the environment will be increased burdens on the American people.

ii. Exec. Order No. 13,783, 82 Fed. Reg. 16,093

EPA also asserts that the Proposed Rule is consistent with Executive Order 13,783, 82 Fed. Reg. 16,093 (Mar. 31, 2017), titled “Promoting Energy Independence and Economic Growth.” Yet again, EPA is wrong.

In an effort to show the Proposed Rule’s consistency with this Executive Order, EPA quotes the following part of the Order: “It is also the policy of the United States that necessary and appropriate environmental regulations comply with the law, are of greater benefit than cost, when permissible, achieve environmental improvements for the American people, and are developed through transparent processes that employ the best available peer-reviewed science and economics.” 83 Fed. Reg. at 18,769, n.5. However, as these Comments reveal, the Proposed Rule contravenes this policy in a number of ways: it fails to comply with a number of statutes and executive orders; the costs of the rule far outweigh the benefits; it will cause substantial and far-reaching harm to public health and the environment; and it has been developed through a process that lacks transparency. *See* Sections II, III, IV, V. Moreover, if implemented, the Proposed Rule will lead to future rulemakings that likewise will be inconsistent with this Executive Order, as it will preclude EPA from considering the best available peer-reviewed science and economics, which in turn will impact the cost-benefit analysis, and may violate notice-and-comment and judicial review procedures. *See* Section V.A. Thus, the Proposed Rule is entirely *inconsistent* with Executive Order 13,783.

⁷⁷ That EPA would say that the Proposed Rule is consistent with an Executive Order focused on deregulation is tantamount to an admission that the Rule’s purpose and effect is to limit the development of rules that are critical to the protection of public health and the environment.

Executive Order 13,783 also provides that greenhouse gas impact estimates should be consistent with guidance in OMB Circular A-4 (Sept. 17, 2003), which specifically requires that this analysis be based on “the best reasonably obtainable scientific, technical, and economic information available.” Though the Circular states that, where available, peer-reviewed, transparent, and reproducible studies should be used, it neither requires nor authorizes the preclusion of consideration of scientific studies based on data that cannot be made publically available. Instead, it recognizes that there will be circumstances “[w]here other compelling interests (such as privacy, intellectual property, trade secrets, etc.) prevent the public release of data or key elements of the analysis,” and provides in those cases that, rather than precluding the data, the use of “especially rigorous robustness checks to analytic results” should be applied and documented. Accordingly, for this reason too, the Proposed Rule is inconsistent with Executive Order 13,783.

iii. Exec. Order No. 13,563, 76 Fed. Reg. 3821

Executive Order 13,563 states that “[o]ur regulatory system must protect public health, welfare, safety, and our environment while promoting economic growth, innovation, competitiveness, and job creation. ***It must be based on the best available science.*** . . .” 76 Fed. Reg. 3821, 3821 (Jan. 18, 2011) (emphasis added). EPA’s reliance on this Executive Order cannot be taken seriously.

While EPA states in the preamble that “[t]he best available science must serve as the foundation of EPA’s regulatory actions,” 83 Fed. Reg. at 18,769 & n.1, the Proposed Rule undermines this foundational requirement. It has the purpose and effect of precluding the use of some of the best available science, that is, all science based on non-public data, simply because the underlying data is not publicly available. Best available science means “all existing scientific evidence relevant to the decision,” and agencies simply “cannot ignore existing data.” *Ecology Ctr., Inc. v. U.S. Forest Serv.*, 451 F.3d 1183, 1194 n.4 (10th Cir. 2006) (quoting *Heartwood Inc. v. U.S. Forest Serv.*, 380 F.3d 428, 436 (8th Cir. 2004)). Yet the Proposed Rule requires EPA to ignore existing data if it is not available for public release. Therefore, the Proposed Rule is inconsistent with Executive Order 13,563, as well as those statutes or principles that requires EPA to consider the best available science. *See* Section IV.

iv. No Executive Order Can Authorize or Contradict Enacted Statutory Restrictions on EPA’s Authority.

EPA cannot lawfully or rationally rely on an executive order to authorize the Proposed Rule, and cannot allow any cited order to influence development of the final rule. As detailed in other parts of these comments, the Clean Air Act and other statutes provide specific requirements for rulemakings with which EPA’s Proposal conflicts, and which do not authorize this Proposal.

An executive order cannot override a statute, limit the delegated authority and the legal responsibilities provided to the EPA Administrator by federal law, add factors that are impermissible under the statute, or delay statutorily required agency action. *See, e.g., In re: United Mine Workers of Am. Int’l Union*, 190 F.3d 545, 551 (D.C. Cir. 1999). In addition,

weakening or delaying public health protections based on an executive order would be unconstitutional, violating separation of powers and the requirement to follow duly enacted laws passed by Congress and signed by the President. It would likewise be unlawful, contrary to the public health obligations and rulemaking requirements of EPA's governing statutes. And EPA cannot consider or apply any other executive order in any way in this rulemaking without providing the requisite public notice and opportunity for comment that the Clean Air Act and APA require, as further discussed elsewhere in these comments.⁷⁸

E. The Proposed Rule Violates Public Law 95-622 and the Common Rule for Research Involving Human Subjects.

EPA's Proposed Rule also conflicts with Public Law 95-622 and the interagency regulations on testing of human subjects required by that law. In 1978, Congress created a President's Commission for the Study of Ethical Problems in Medicine and Biomedical and Behavioral Research (the "Commission") and directed the Commission to study the "protection of human subjects," defined to include the "health, safety, and *privacy* of individuals." 42 U.S.C. § 300v-1(b)(2), (f)(2) (emphasis added). This included a study of and issuance of recommendations concerning, among other subjects, procedures and mechanisms "to safeguard the *privacy* of human subjects of behavioral and biomedical research, [and] to ensure the *confidentiality* of individually identifiable patient records." *Id.* § 300v-1(a)(1)(E), (a)(4) (emphasis added).

In response to this charge, in 1981, the Commission recommended that all federal agencies adopt uniform regulations concerning the protection of human research subjects. *See* 47 Fed. Reg. 13,272 (March 29, 1982). Accordingly, in 1991, EPA and 13 other federal departments and agencies adopted uniform regulations on this issue (the "Common Rule"), *see* 56 Fed. Reg. 28,003 (June 18, 1991), requiring that all research involving human subjects that is "conducted, supported or otherwise subject to regulation by any Federal department or agency" be reviewed and approved by an institutional review board ("IRB"). 40 C.F.R. § 26.101(a). In order to approve research involving human subjects, an IRB must ensure that "there are adequate provisions to protect the privacy of subjects and to maintain the confidentiality of data." *Id.* § 26.111(a)(7).

In particular, the Common Rule prohibits EPA from relying on research that is "deficient relative to the ethical standards prevailing at the time the research was conducted in a way that placed participants at increased risk of harm . . . or impaired their informed consent." *Id.* §§ 26.1704(b)(2), 26.1705(b). It recognizes that the protection of private information of the subject is central to a subject's ability to provide informed consent. *See generally id.* § 26.116. And the protection of private information is central to the Common Rule more broadly – one of only two situations under which IRBs may waive the requirement to obtain written consent is if the release of the consent form risks linking the subject to the research. *Id.* § 26.117(c)(1).

EPA's Proposed Rule is thus antithetical to the confidentiality requirements of the Common Rule. It would ignore relevant health science absent publication of personal data that is

⁷⁸ *See, e.g.*, 42 U.S.C. § 7607(d)(3)-(7), (h).

required to be kept confidential under the Common Rule. To enable EPA to consider their studies in a relevant rulemaking, IRBs would have to make the underlying data publicly available, which would place them at risk of termination of federal funding, termination of ongoing studies, denial of approval for new studies, or disqualification of the IRB or its parent institution. 40 C.F.R. Part 26 subpart O & §§ 26.103, 26.123, 26.1123.

V. EPA FAILED TO FOLLOW PROPER PROCEDURES

A. EPA Failed to Follow the Administrative Procedure Act as Required for Meaningful Public Participation and Judicial Review.

The Administrative Procedure Act (“APA”) establishes rulemaking procedures and judicial review requirements for agency rules that EPA has failed to follow here. 5 U.S.C. §§ 553, 706. These requirements – which EPA entirely and unlawfully ignores – are central both to ensure an opportunity for the affected public to comment, and to ensure an adequate record for judicial review. This includes:

- Providing a meaningful opportunity for notice-and-comment;
- Ensuring that the docket contains all documents on which EPA relies;
- Providing additional information regarding what the public is being asked to comment on, and adding details that are missing from the proposal, before taking further comment.

EPA has failed to comply with these mandates, rendering this rulemaking unlawful under the APA, for several reasons.

First, in issuing this Proposed Rule, EPA violated the APA by failing to place in the administrative record all of the documents on which it purports to rely. The preamble to the Proposed Rule cites more than thirty specific documents on which EPA purportedly relies. *See, e.g.*, 83 Fed. Reg. at 18,769-72 & nn.1-2, 4-24. Of the specifically cited and relied upon documents, only about 12 are included in the docket, available at www.regulations.gov, Docket ID: EPA-HQ-OA-2018-0259, as of the date of publication of the Proposed Rule. In addition, EPA provides no support for its proposed conclusion that “EPA believes the benefits of this proposed rule justify the costs.” 83 Fed. Reg. at 18,772. Nothing in the record demonstrates what costs or benefits EPA considered to reach this determination, or whether it evaluated at all the harm to public health and to privacy that this Proposed Rule would cause.

Absent the ability to review such documents, the public is deprived of adequate notice or an ability to provide informed comments regarding the Proposal and EPA’s rationale for issuing the Proposed Rule. EPA’s failure to put the documents on which it relies into the record violates notice-and-comment under the APA and other statutes that supplement such notice requirements. *See, e.g., Am. Radio Relay League v. FCC*, 524 F.3d 227 (D.C. Cir. 2008) (agency may not cherry-pick documents on which it relies for public review; it is a violation of public notice and comment to refuse to put the documents in full on which the agency relied into the record).

Second, failing to place all of the documents on which EPA relies into the record also violates the judicial review provision of the APA by making it impossible for commenters to provide adequate comments or a complete record for judicial review of any final action EPA takes. 5 U.S.C. § 706 (“In making the foregoing determinations, the court shall **review the whole record** or those parts of it cited by a party, and due account shall be taken of the rule of prejudicial error.” (emphasis added)); *Am. Radio Relay League*, 524 F.3d at 242-43 (Tatel, J., concurring) (reiterating importance of the requirement for agency to place unredacted studies into the docket because not doing so “undermines this court’s ability to perform the review function APA section 706 demands”); *see also Walter O. Boswell Mem’l Hosp. v. Heckler*, 749 F.2d 788, 792 (D.C. Cir. 1984) (citing *Citizens to Preserve Overton Park, Inc. v. Volpe*, 401 U.S. 402, 420 (1971)) (“[R]eview is to be based on the **full** administrative record that was before the Secretary **at the time** he made his decision.” (emphasis in original)).

Not only is EPA’s failure to include in the regulatory docket all of the documents upon which it relies a violation of the APA, but it likewise contravenes procedural requirements in Title 28 of the U.S. Code that govern judicial review of agency action. *See, e.g.*, 28 U.S.C. § 2112(b) (“The record to be filed in the court of appeals . . . shall consist of the order sought to be reviewed or enforced, **the findings or report upon which it is based**, and the pleadings, **evidence**, and proceedings before the agency . . . concerned.” (emphasis added)); Fed. R. App. P. 16 (“The record on review or enforcement of an agency order consists of . . . **any** findings or report on which it is based.” (emphasis added)); *see also* 28 U.S.C. §§ 2071-77 (providing federal courts with authority to establish binding rules of procedure and evidence). Thus, EPA’s slipshod creation of the regulatory docket for the Proposed Rule cannot withstand scrutiny under either the APA or the judicial review provisions for Title 28.

Third, EPA has violated the APA (and all statutes that track its notice-and-comment requirements) by failing to provide sufficient specificity regarding the Proposed Rule. Under the APA, notice is only sufficient “if it affords interested parties a reasonable opportunity to participate in the rulemaking process,” and if the parties have not been “deprived of the opportunity to present relevant information by lack of notice that the issue was there.” *WJG Tel. Co., Inc. v. FCC*, 675 F.2d 386, 389 (D.C. Cir. 1982) (citations omitted); *see Fla. Power & Light Co. v. Nuclear Regulatory Comm’n*, 846 F.2d 765, 771 (D.C. Cir. 1988). The Proposed Rule is plagued by a lack of detail as to how EPA will interpret the broad and vague terms it creates, how it will use the Rule in connection with particular rulemakings, and how it will implement the new “independent peer review” and “exemption” provisions, and these shortcomings undermine the sufficiency of the notice provided by the Proposal. For example:

- The new definitions of “dose response data and models,” “pivotal regulatory science,” “regulatory decisions,” “regulatory science,” and “research data,” in § 30.2 are extremely broad and impermissibly vague. EPA provides no specific examples of what these terms mean or how they will actually be implemented under the long list of statutes implicated by this rule.

- Sections 30.1, 30.2, 30.3 – discussing the purpose of the Proposed Rule, the applicable definitions, and how the Proposed Rule will apply – provide broad requirements for EPA without giving any information regarding how or when EPA will implement them in connection with any given proposed or final rule.
- EPA states in § 30.5 that the Proposal will require EPA to “ensure that dose response data and models underlying pivotal regulatory science are publicly available in a manner sufficient for independent validation . . .” Yet EPA provides no indication of what this means, how it will so “ensure,” or what it will do if it is not possible to ensure this, among other shortcomings.
- Section 30.6 addresses the “additional requirements” related to the use of dose response data and models underlying “pivotal regulatory science,” but it is devoid of details necessary to assure meaningful public review and comment on how, when, or in what way EPA will implement this. It also cites no specific science and gives no indication of how or why EPA is attempting to redefine scientific information on dose response differently than it has done in the past to allow for informed consideration of why EPA is even attempting to address this issue.
- Sections 30.7 and 30.9 describe the “role” of “independent peer review” in the Proposal and permissible “exemptions” under the Rule, yet these descriptions fail to provide the process that will be used to inform the public of when a given document or study impacted by this rule does or does not qualify for an exemption. There is no indication of whether EPA will provide notice or comment, or any steps allowing for public participation, when deciding whether or not to exclude a given study from consideration.
- The preamble to the Proposed Rule is replete with broad (and unsubstantiated) statements regarding limits on EPA’s ability to consider and use science in rulemakings, as well as environmental issues EPA envisions being impacted by the Proposed Rule – for example, the NAAQs – but EPA fails to provide any specific information to inform public notice and comment on the purported impact of Proposed Rule. Commenters have done their best in view of this to provide comment on all of the likely harm that EPA’s vague and general statements would cause if fully implemented in regulatory language, but they are severely prejudiced due to EPA’s refusal to provide specific notice as required by the APA.

In sum, EPA has failed to satisfy the requirements for specific public notice that can assure meaningful comment, falling far short of the fundamental threshold requirements for notice and comment. This shortcoming is fatal to its ability to finalize this Proposed Rule.

In addition, it is especially problematic that EPA’s Proposal states that EPA will apply the Proposed Rule to “regulatory decisions” which it defines as “final regulations determined to be ‘significant regulatory actions’ by [OMB].” 83 Fed. Reg. at 18,773 (proposed § 30.2). Under

this definition, EPA can exclude and ignore science in future rulemakings without specifying where or how it will do so and without providing any public notice or comment in a future rulemaking that would be impacted by this Rule. EPA's attempt to limit the rulemaking process for undefined other rules in this manner is a violation of the APA for all of the reasons described above.

Finally, EPA's APA violations would cause significant harm to Commenters and the public if the Rule were finalized without correcting these problems. The inability to review and attempt to understand the documents on which EPA relies and thus to comment meaningfully and receive effective judicial review cause severe prejudice to the affected public. *See* 5 U.S.C. § 706(2). Even if EPA were to add documents to the docket at a later date, that would not cure this fatal flaw. Given the sweeping scope of this Proposed Rule – which would restrict the consideration and use of important health science in rulemakings which, in turn, would likely lead to a weakening of air, water, waste, chemical, pesticide and other protections – the failure to publish the documents for review for an adequate time period has undermined the public's ability to comment meaningfully, and impermissibly prevented the affected public from being able to seek and receive effective judicial review based on the record.

B. EPA Failed to Follow Procedural Requirements Under FIFRA.

EPA likewise failed to follow the specific procedures required by the Federal Insecticide, Fungicide, and Insecticide Act ("FIFRA") when issuing the Proposed Rule. Specifically, section 25w of FIFRA requires, among other things, that EPA provide a copy of any proposed rule or regulation to the Secretary of Agriculture for review and comment 60 days before a proposed rule is published in the Federal Register. 7 U.S.C. § 136w(a)(2)(A). EPA must then provide the Secretary a copy of the rule EPA intends to publish as a final rule no later than 30 days before publication. *Id.* § 136w(a)(2)(B). EPA must also consult with its own Scientific Advisory Panel in an effort to receive comments from it regarding the impact the proposed rule will have on health and the environment. *Id.* § 136w(d).⁷⁹ Such consultation must occur under the same timelines sets forth for consulting with the Secretary of Agriculture. *Id.* § 136w(d)(1). Lastly, before a final rule can take effect, EPA is required to submit the rule to Congress and "the rule or

⁷⁹ Indeed, FIFRA sets forth a specific role for its Scientific Advisory Panel, yet EPA entirely ignored them in this process:

[t]he Administrator shall also solicit from the advisory panel comments, evaluations, and recommendations for operating guidelines to improve the effectiveness and quality of scientific analyses made by personnel of the Environmental Protection Agency that lead to decisions by the Administrator in carrying out the provisions of this subchapter. The comments, evaluations, and recommendations of the advisory panel submitted under this subsection and the response of the Administrator shall be published in the Federal Register in the same manner as provided for publication of the comments of the Secretary of Agriculture under such sections.

7 U.S.C. § 136w(d)(1).

regulation shall not become effective until the passage of 60 calendar days after the rule or regulation is so transmitted.” *Id.* § 136w(a)(4).

Thus, FIFRA sets forth a clear process in which EPA must consult with a number of entities, including both the U.S. Department of Agriculture and a Scientific Advisory Panel when issuing rules impacting pesticides. *See, e.g., Nat’l Coal. Against the Misuse of Pesticides v. EPA*, 867 F.2d 636 (D.C. Cir. 1989) (noting that “FIFRA generally requires the Administrator [of EPA] to consult with the Secretary of Agriculture . . . and a seven member Scientific Advisory Panel (on environmental health questions) prior to making public any notice of intent to cancel,” in context of pesticide registration cancellation). Yet it is indisputable that EPA utterly failed to take these necessary steps. For this reason, too, EPA’s Proposal cannot stand.

C. EPA Failed to Follow the Procedural Requirements Under TSCA.

Pursuant to section 2609 of TSCA, prior to promulgating any rules, EPA must “consult[] and cooperate[] with the Secretary of Health and Human Services and with other heads of appropriate departments and agencies.” 15 U.S.C. § 2609(a); *see also id.* § 2609(b)(2)(A), (c), (d), (e), (g). Therefore, to the extent EPA relies on TSCA as authority for the Proposed Rule, it must consult and cooperate with the Secretary of Health and Human Services. Yet nowhere in the Proposed Rule does EPA indicate that it has done so. Failure to comply with this requirement would render any final rule unlawful. *See* 5 U.S.C. § 706(2)(D) (a reviewing court “shall . . . hold unlawful and set aside agency action . . . found to be . . . without observance of procedure required by law”).

D. EPA Failed to Follow the Procedural Requirements Under the CAA.

EPA’s Proposal is also deficient because it fails to follow particular procedural requirements under the CAA that are legally required for EPA to issue certain types of rules. Specifically, the CAA requires that the Clean Air Scientific Advisory Committee (“CASAC”) complete a review of air quality criteria and the NAAQS every five years. 42 U.S.C. § 7409(d)(2)(B). Because the Proposed Rule aims to “preclude [the Agency] from using [non-public] data in future regulatory actions,” it would impact the CASAC’s review of air quality criteria. 83 Fed. Reg. at 18,769, n.3. Accordingly, EPA was required to follow the path prescribed by the CAA – including submission of the proposed rule to CASAC for review, allowing CASAC to provide recommendations to the Administrator, and then requiring the Administrator to include a statement regarding the recommendations made by CASAC in the Proposed Rule. 42 U.S.C. §§ 7409(d)(2)(B), 7607(d)(3); *see also* 42 U.S.C. § 7607(b), (d). Yet, there can be no dispute that none of these steps were taken before issuance of the Proposed Rule.

E. EPA Failed to Perform the Analysis Required by EO 12,898.

EPA’s Proposed Rule also violates the environmental justice requirements of Executive Order 12,898, 59 Fed. Reg. 7629 (Feb. 16, 1994). By its own admission, EPA entirely ignored its obligation to assess the environmental justice impact of this rule prior to issuing the Proposal, dismissively stating – without any justification – that “this action is not subject to Executive Order 12,898 (59 Fed. Reg. 7629, February 16, 1994) because it does not establish an

environmental health or safety standard.” 83 Fed. Reg. at 18,773. EPA’s rationale is inconsistent with the Order, contrary to EPA’s own environmental justice plan, inconsistent with EPA’s prior positions and practices, and results in the very harms the Order is designed to protect against.

First, by its own terms, and despite EPA’s mischaracterization, Executive Order 12,898 applies to more than just “standards.” Indeed, the Order applies to all agency “programs, policies, and activities.” *See, e.g.*, 59 Fed. Reg. at 7629 (agencies must make “achieving environmental justice part of its mission by identifying and addressing as appropriate, disproportionately high and adverse human health or environmental effects of its programs, policies, and activities on minority populations and low-income populations”). Toward that end, when promulgating rules “that substantially affect human health or the environment” – which this Proposed Rule indisputably does – EPA must ensure that the rule does not have a disproportionate impact on minorities, and it must “provide minority populations and low-income populations the opportunity to comment on the development and design of research strategies undertaken pursuant to this order.” *Id.* at 7631. EPA’s novel and unsupported interpretation is wholly untethered from both the spirit and the text of the Order.

Second, EPA’s limiting interpretation ignores EPA’s own environmental justice plan – promulgated pursuant to Executive Order 12,898 – the ultimate vision of which is for EPA to “integrate[] environmental justice into everything” it does. EJ2020 Action Agenda at iii. To accomplish this vision, EPA sets forth eight different priority areas, the first of which is “rulemaking.” *Id.* Specifically, EPA aims to “institutionalize environmental justice in rulemaking,” including performance of “rigorous assessments of environmental justice analyses in rules,” in order to “deepen environmental justice practice within EPA programs to improve the health and environment of overburdened communities.” *Id.* Recognizing that “[r]ulemaking is an important function used by the EPA to protect human health and the environment for all communities,” EPA devotes the second chapter of the plan to “Rulemaking,” and through this chapter, aims to “ensure environmental justice is appropriately analyzed, considered, and addressed in EPA rules with potential environmental justice concerns, to the extent practicable and supported by relevant information and law.” *Id.* at 13. Consistent with its environmental justice plan and with Executive Order 12,898, EPA issued its own *Guidance on Considering Environmental Justice During the Development of Regulatory Actions*, recognizing how “vital” it is “that Agency rule-writers identify and address potentially disproportionate environmental and public health impacts experienced by minority populations, low-income populations, and/or indigenous peoples,” *Guidance* at 1 (May 2015), <https://www.epa.gov/sites/production/files/2015-06/documents/considering-ej-in-rulemaking-guide-final.pdf>, as well as a *Technical Guidance for Assessing Environmental Justice in Regulatory Analysis*. *Technical Guidance* (June 2016), https://www.epa.gov/sites/production/files/2016-06/documents/ejtg_5_6_16_v5.1.pdf. Thus, EPA has regularly and purposefully focused on the need for environmental justice assessments of its rulemakings. EPA’s blithe claim that this Proposed Rule does not require an environmental justice assessment is clearly at odds with what the Agency itself recognizes it must do to comply both with Executive Order 12,898, as well as its own policies.

Third, EPA’s failure to perform an environmental justice impact analysis is entirely inconsistent with EPA’s regular practice. Indeed, EPA consistently performs this sort of assessment when acting under the CAA, CWA, and other statutes.⁸⁰ This information unquestionably has been relevant to public health rulemakings in the past. EPA’s refusal to consider the environmental justice consequences of the Proposed Rule – consequences that are certainly “relevant” under *State Farm* – and its departure from its long-standing pattern and practice of considering such data without a reasoned explanation for changing course are therefore arbitrary and capricious.

Fourth, and as discussed more fully below, *see infra* Section VIII, EPA’s Proposed Rule will result in the very kind of disproportionate impact on low-income and minority communities that the Executive Order was designed to protect against. As EPA itself recognizes, minority, low-income, and tribal communities “may face greater risks” to public health and the environment “because of proximity to a contaminated sites or because fewer resources are available to avoid exposure to pollution.” *Env’tl. Justice FY2017 Progress Report* at 8, https://www.epa.gov/sites/production/files/2018-04/documents/usepa_fy17_environmental_justice_progress_report.pdf. Examples include disproportionate exposure to lead, particulate matter, and other hazardous air pollutants. *See, e.g., id.* at 8 (“reduction in lead exposure has not been realized equally across the United States and it remains a top childhood environmental health problem, disproportionately impacting minority and/or low-income populations”); *id.* at 9 (“[l]ow-income populations are among the populations that are most at-risk for adverse health effects from exposure to [particulate matter]”). Indeed, study after study has confirmed that communities of color and economically disadvantaged communities are disproportionately located near toxic waste and other sources of pollution, and that these communities disproportionately suffer adverse public health and environmental impacts.⁸¹ It is also the case that these discrete communities are frequently the

⁸⁰ *See, e.g.*, 78 Fed. Reg. 3086, 3267 (2013) (describing the goal of Executive Order 12,898 and EPA’s actions to comply with these goals, noting that it “conducted an outreach and information call with environmental justice organizations” and “identified potential disproportionately high and adverse effects on minority and/or low-income populations related to PM_{2.5} exposures,” and “identified persons from lower socioeconomic strata as an at-risk population for PM-related health effects,” and noting that “the EPA has carefully evaluated the potential impacts on low-income and minority populations. . . .”); *see also* EC/R Inc., *Risk and Technology Review - Final Analysis of Socio-Economic Factors for Populations Living Near Secondary Lead Smelting Facilities*, prepared by EC/R Inc. for EPA (Dec. 2011), <http://earthjustice.org/sites/default/files/Leadsmeltersocioeconomicanalysis.pdf>; EC/R Inc., *Risk and Technology Review - Analysis of Socio-Economic Factors for Populations Living Near Petroleum Refineries*, prepared by EC/R Inc. for EPA (Jan. 2014).

⁸¹ These studies include, but are not limited to: Mohai, P. et al., *Racial and Socioeconomic Disparities in Residential Proximity to Polluting Industrial*; Zwickl, K. et al., *Regional Variation in Environmental Inequality: Industrial air toxics exposure in U.S. Cities*, Political Economy Research Institute Working Paper Series No. 342 at 20 (Feb. 2014); Cal. EPA, OEHHA, *Cumulative Impacts: Building a Scientific Foundation* at 5-17 (Dec. 2010), <http://oehha.ca.gov/media/downloads/calenviroscreen/report/cireport123110.pdf> (citing numerous research studies showing that exposure to pollution-emitting facilities, hazardous waste facilities and disposal, toxic releases, non-attainment air areas, high motor vehicle air pollution areas, and other types

subjects of epidemiological studies that measure the health impacts of environmental and public health programs. Indeed, EPA previously recognized the importance of “strengthen[ing] the foundational link between EPA science and the needs of underserved and overburdened communities, in areas of air, water, land, health disparities, and in tribal science grants.” *2017 Progress Report* at 6. Yet now, with no explanation or need, EPA does an about-face and attempts to destroy this link. EPA’s Proposal to eliminate reliance on epidemiological health studies will thus have the effect of excluding critical and available evidence of adverse harms particular to these discrete groups, thereby removing from consideration the very science that has historically led to much-needed protections for the most vulnerable communities.

In sum, EPA was required under Executive Order 12,898 – as well as its own environmental justice plan and guidance – to conduct an assessment of the environmental justice impact of the Proposed Rule, but admittedly failed to so do. Its blatant (and acknowledged) failure to comply with its obligations is yet another reason why the Proposed Rule cannot stand.

VI. THE PROPOSED RULE IS ARBITRARY

Not only is EPA’s Proposed Rule unlawful both substantively and procedurally, but it is also impermissibly arbitrary. Indeed, the Proposed Rule is the epitome of arbitrary rulemaking: in crafting the rule, EPA

relie[s] on factors which Congress has not intended it to consider, entirely fail[s] to consider an important aspect of the problem, offer[s] an explanation for its decision that runs counter to the evidence before the agency, or is so implausible that it could not be ascribed to a difference in view or the product of agency expertise.

State Farm, 463 U.S. at 43 (defining “arbitrary and capricious” agency action). EPA wholly fails to “examine the relevant data and articulate a satisfactory explanation for its action including a ‘rational connection between the facts found and the choice made.’” *Id.* (quoting *Burlington Truck Lines v. United States*, 371 U.S. 156, 168 (1962)). To the contrary, as described below, EPA has mischaracterized its prior policy, relied on authorities that undermine its reasoning and conclusions, failed to adequately account for the Proposed Rule’s costs and benefits, granted itself unfettered discretion to decide whether and how the Rule will apply, and created an unjustified inequity between what science can be used to support a decision *not* to

of pollution is more likely to be concentrated in communities with higher minority and lower income populations); Boyce, J.K. et al., *Measuring environmental inequality*, Political Economy Research Institute Working Paper Series No. 409 at 14-16 (Dec. 2015); Hicken, M.T. et al., *A novel look at racial health disparities: the interaction between social disadvantage and environmental health*, 102:12 *Am. J. of Pub. Health* 2344, 2346-47 (Dec. 2012); Vipputuri, S. et al., *Blood lead level is associated with elevated blood pressure in blacks*, 41:3 *Hypertension* 463, 464-65 (Mar. 2003); deFur, P.L. et al., *Vulnerability as a Function of Individual and Group Resources in Cumulative Risk Assessment*, 115:5 *Envtl. Health Persp.* 817, 820-21 (2007).

regulate dangerous chemicals as compared to what can be used to support a decision to regulate. For all of these reasons, the Proposed Rule cannot stand.

A. The Proposed Rule Conflicts with Existing Government Policies and EPA’s Prior Positions, and EPA Has Not Adequately Explained this Inconsistency.

Although each new administration has some authority to change course, changes “cannot be solely a matter of political winds and currents.” *N.C. Growers Ass’n v. United Farm Workers*, 702 F.3d 755, 772 (4th Cir. 2012) (Wilkinson, J. concurring). Instead, an agency must at least “display awareness that it *is* changing position” and “show that there are good reasons for the new policy.” *FCC v. Fox Television Stations, Inc.*, 556 U.S. at 515. If the new policy “rests upon factual findings that contradict those which underlay its prior policy[] or when [the] prior policy has engendered serious reliance interests that must be taken into account,” the agency must provide “a reasoned explanation . . . for disregarding those facts and circumstances.” *Id.* at 516; *see also Encino Motorcars, LLC v. Navarro*, 136 S. Ct. 2117, 2126 (2016) (“An unexplained inconsistency in agency policy is a reason for holding an interpretation to be an arbitrary and capricious change from agency practice.” (internal quotation marks omitted) (quoting *Nat’l Cable & Tele. Commc’ns Ass’n v. Brand X Internet Servs.*, 545 U.S. 967, 981 (2005))). Without “some fidelity to law and legal process, . . . government becomes a matter of the whim and caprice of the bureaucracy.” *N.C. Growers Ass’n*, 702 F.3d at 772.

In stark contrast to these principles, EPA has done an about-face here, proposing a rule contrary to prior policy and based entirely on partisan politics and bureaucratic impulse. Though EPA asserts that the Rule “builds upon prior EPA actions in response to government wide data access and sharing policies,” and corrects the Agency’s failure to “consistently follow[] previous EPA policy (*e.g.*, EPA’s Scientific Integrity Guidance . . .) that encouraged the use of non-proprietary data and models,” 83 Fed. Reg. at 18,770, n.13, this is entirely untrue. Rather, as the prior policies and actions identified in the Proposed Rule demonstrate – and as summarized above (*see, e.g.*, Section IV.A (CAA)) – EPA has long been committed to sound science, including reliance on the best available science regardless of the nonpublic nature of the underlying data. For example, EPA’s Scientific Integrity Policy states that the dissemination of scientific information should be “uncompromised by political and other interference” and expressly “[p]rohibits all EPA employees, including scientists, managers, and other Agency leadership, from suppressing, altering, or otherwise impeding the timely release of scientific findings or conclusions.” EPA, *U.S. Environmental Protection Agency Scientific Integrity Policy* at 4–5 (Feb. 2012), https://www.epa.gov/sites/production/files/2014-02/documents/scientific_integrity_policy_2012.pdf. The Proposed Rule clearly contravenes this policy.

The Proposed Rule is also inconsistent with EPA’s Plan to Increase Access to Results of EPA-Funded Scientific Research. This Plan acknowledges that “[f]ederal agencies have a responsibility to protect confidentiality and personal privacy” and cautions that “some research data cannot be made fully available to the public but instead may need to be made available in more limited ways, *e.g.*, establishing data use agreements with researchers that respect necessary

protections.” EPA, *Plan to Increase Access to Results of EPA-Funded Scientific Research* at 4 (Nov. 29, 2016), <https://www.epa.gov/open/plan-increase-access-results-epa-funded-scientific-research>. The Plan expressly concludes that “[w]hether research data are fully available to the public or available to researchers through other means does not affect the validity of the scientific conclusions from peer-reviewed research publications.” *Id.* at 4–5 (emphasis added); see also OMB, 67 Fed. Reg., 8452, 8456 (Feb. 22, 2002) (explaining that “the reproducibility standard does not apply to all original and supporting data disseminated by agencies” and, in any case, “[e]ven in a situation where the original and supporting data are protected by confidentiality concerns, or the analytic computer models or other research methods may be kept confidential to protect intellectual property, it may still be feasible to have the analytic results subject to the reproducibility standard”). EPA’s Proposal to exclude reliable science based solely on consideration of whether the underlying data is fully available to the public is a complete reversal in position from its own prior Plan, with no legitimate explanation for the change.

Equally problematic, the Proposed Rule is entirely inconsistent with prior positions EPA has taken on this very issue. Most notably, in March 2017 – just one year before issuance of this Proposed Rule – EPA responded to questions from Congress on the proposed HONEST Act of 2017, and took a position that is squarely at odds with the Proposed Rule. See EPA, *CBO Questions for EPA Regarding H.R. xxxx, The HONEST Act of 2017* at 1 (2017), <https://www.scribd.com/document/344731162/EPA-analysis-of-Honest-Act-to-CBO> (“HONEST Act Q&A”). For example, in noting its opposition to the HONEST Act, EPA stated:

EPA supports access to data and is already on a path to make data public and transparent. EPA will do this at no additional cost to the taxpayer. EPA will do this while protecting [Personally Identifiable Information] and CBI. EPA will do this while preserving its ability to use the best available science. And EPA will do this while retaining its ability to respond quickly to emergency events. EPA strongly opposes the HONEST Act because it does none of these things and ***will significantly impede EPA’s ability to protect the health and the environment of Americans.***

Id. at 4 (emphasis added). The Agency further explained that:

The HONEST Act would not protect [Personally Identifiable Information] and CBI, and this would strongly discourage industry and academia from working with EPA. Many scientists, including those from the private sector, would not be willing to provide their data because EPA could not guarantee to protect their information, such as their trade secrets, intellectual property, or their study participants’ medical records. Scientific research is a competitive field, and it is likely that not all investigators from the private sector, or academia, will be willing to make their underlying data available – at least not immediately. ***In some instances, EPA might be***

precluded from using the best available science if the underlying data is not made available or is embargoed for a period of time. Therefore, in accordance with the HONEST Act, EPA could not use these studies to help protect health and the environment. *This would impede EPA's ability to use the best available science, because it is presumptively not the best available science if you cannot access all the science.*

Id. at 2-3 (emphasis added). It further explained that limiting science in the way proposed by the HONEST Act – and thus as proposed in the Proposed Rule –

would mean that *EPA would be unable to develop policies, guidance or regulations using the best available science.* Instead of using the best-available research for their assessments, EPA would be restricted to selecting studies based on their data availability. This approach would introduce potential research bias that could compromise the quality of the agency's work.

Id. at 4-5 (emphasis added). EPA recognized that the HONEST Act would restrict the use of reliable science, noting that the proposed legislation

would certainly limit access to the majority of studies currently in the peer reviewed literature. It's not just the number of studies but the type of studies and the integration of the results of these different types of studies with that inform the underlying scientific basis of EPA's decisions. The most informative studies include large comprehensive datasets, such as epidemiology studies, and animal toxicology studies from the open scientific literature, generally do not have all necessary information available on publication. With no new resources, the number of studies that EPA would be able to draw from would be greatly reduced – *EPA roughly estimates it could be reduced by approximately 95% given the stated data-availability requirements and processes in this bill.* And for industry-sponsored data submitted for pesticide registration, little to no data may be publicly available prior to a new registration

Few peer-reviewed studies published in scientific journals meet the requirements described in this bill. Therefore, EPA roughly estimates that less than perhaps 5% would have all of the information publicly available to independently confirm the study details as required under this bill.

Id. at 6 (emphasis added).

EPA's current stance on the category of health studies it now seeks to ban is likewise an about-face from the position it took in 2011 in response to a request by CropLife America for

EPA to establish “firm criteria for quality assessment of epidemiological studies to be used in risk assessment.” In response to CropLife America’s effort – which, like EPA’s Proposed Rule, was allegedly aimed at increasing transparency in the rulemaking process – EPA emphasized its view that mandating requirements around science would stifle scientific development and would be antithetical to the need to weigh various considerations when resolving science questions.⁸² Specifically, EPA stated:

EPA’s general practice is to address issues through non-binding guidance documents rather than by mandatory regulations. There are several reasons for this approach. First, and probably most important, *science questions usually cannot be reduced to a rigid decisional framework; rather science questions invariably involve the weighing of multiple considerations and the use of scientific judgment.* As the SAP report on EPA’s Draft Framework noted in its recommendations on criteria to be used in EPA decision-making: “Inevitably, it will be necessary to exercise some degree of scientific judgment in this assessment.” Second, encasing science decision-making in a rigid rule structure is inconsistent with the fluid and developing nature of science. Thus, *EPA is concerned that writing science decision-making rules will stultify or freeze the science underlying the rule making scientific advances less likely.* Finally, the nature of science issues is not easily compatible with the timeframes associated with formal rulemaking. Given the extended time often required to promulgate or amend a rule, the science underlying science-based criteria may well have significantly advanced between the time of the proposal and the time of the final rule. EPA may then be forced into restarting the rulemaking process or may end up being locked into outdated science decision-making until a rule can be amended. There are numerous examples of EPA appropriately addressing important science questions through guidance, not rules, at both the Agency and the program-specific (pesticide) level.

[CropLife America] has offered no compelling reason to follow a different course with regard to epidemiological data. Epidemiological data are no more “important” to pesticide risk assessments than many other data or inputs or science-related issues. . . . [T]here are many ways to insure a transparent process for science decision-making guidelines other than through rulemaking. Finally, *there is nothing unique about*

⁸² Letter from Steven P. Bradbury, Director, Office of Pesticide Programs, EPA, to Dr. Wendelyn Jones, CropLife America, re: *Petition for Rulemaking To Establish Criteria For Acceptance Of Epidemiological Evidence Into the Pesticide Risk Assessment Process for Human Health Effects* at 2 (April 15, 2011) (attached).

epidemiological data that would indicate that EPA could not craft non-binding guidelines for incorporating epidemiological data in risk assessments, including non-binding guidance on specific criteria to be considered in weighing the value of particular epidemiological data.

EPA agrees that transparency is a critical part of its science decision making. Our decisions on important policies and guidance documents always follow a transparent process with numerous opportunities for public comment.⁸³

And as discussed *supra*, Section IV.A, EPA’s position contradicts the stance it took when setting the Particulate Matter NAAQS in 1997, where it noted that “[i]t would be impractical and unnecessary for EPA to review underlying data for every study upon which it relies as support for every proposed rule or standard.” 62 Fed. Reg. 38,652, 38,689 (July 18, 1997). EPA now ignores what it acknowledged before, namely that “[i]f EPA and other governmental agencies could not rely on published studies without conducting an independent analysis of the enormous volume of raw data underlying them, *then much plainly relevant scientific information would become unavailable to EPA for use in setting standards to protect public health and the environment.*” *Id.* (emphasis added).

In the current rulemaking, EPA seems to have conveniently forgotten these prior inconsistent positions. Instead, EPA implausibly characterizes the Proposed Rule as a mere extension of existing policies, ignores its prior positions on landmark scientific studies, and contradicts its approach to considering science in the rulemaking process. EPA fails to demonstrate any awareness that it is dramatically changing course with respect to the use and consideration of scientific information, and fails to provide an adequate reason for the change. The Proposed Rule is arbitrary and capricious as a result.

B. The Proposed Rule is Based on Irrational, Unsupported Conclusions.

Not only is the Proposed Rule a drastic departure from EPA’s prior policies, positions, and procedures, but it likewise is predicated on irrational and unsupported conclusions. Indeed, a close examination of generally applicable data access policies and guidelines – including policies and recommendations of third party organizations and major scientific journals upon which EPA allegedly relies – reveals that EPA’s Proposed Rule is not based on a reasoned explanation and has no rational connection to facts in the record, but rather is entirely baseless.

1. EPA’s Proposal is inconsistent with generally applicable data access policies and guidelines.

According to EPA, “[t]he proposed rule takes into consideration the policies or recommendations of third party organizations who advocated for open science” and “the policies recently adopted by some major scientific journals, spurred in some part by the ‘replication crisis.’” 83 Fed. Reg. at 18,770. However, a review of the websites of these organizations and

⁸³ *Id.* at 2-3 (emphasis added).

journals, and statements made by journal editors regarding the Proposed Rule, indicate that the policies and guidelines on which EPA allegedly relies do not provide any support. Instead, they are wholly inconsistent with what EPA is attempting to do with this Rule.

i. EPA's Proposal is inconsistent with policies and recommendations of third party organizations upon which it relies.

Though EPA cites “the policies or recommendations of third party organizations who advocated for open science” as support for the Proposed Rule, 83 Fed. Reg. at 18,770, many of the policies and recommendations do nothing of the sort. Instead, they acknowledge that: there are numerous barriers to the disclosure of data, such as requirements to protect personal privacy; disclosure of data necessarily varies among scientific fields based on these barriers; flexibility in data access policies and guidelines is essential; and the best available science is inclusive and not exclusive in nature. EPA’s Proposal to exclude studies solely because the studies include nonpublic data contradicts these principles.

For example, the Administrative Conference of the United States (“ACUS”) Science in the Administrative Process Project, which EPA listed, recommends that agencies take a flexible approach to data disclosure: “To the extent practicable and in compliance with applicable legal restrictions, privileges, protections, and authorities, agencies should seek to provide disclosure of data underlying scientific research[.]” 78 Fed. Reg. 41,352, 41,358 (July 10, 2013). This recommendation thus states only that agencies should “seek to provide disclosure” of data “to the extent practicable” and acknowledges that many legitimate barriers to disclosure of data may exist. *Id.* Furthermore, ACUS contemplates scenarios where “data are not subject to legal or other protections” but where “the data’s owners nonetheless will not provide such access.” *Id.* In these cases, ACUS does not recommend that agencies deprive themselves of data. Rather, ACUS writes, “agencies should note [that the data’s owner did not provide access] and explain why they used the results if they chose to do so.” *Id.* Thus, the ACUS’s policy in no way supports exclusion of studies simply because the underlying data is not publicly available.

The Bipartisan Policy Center’s (“BPC”) Science for Policy Project, another organization upon which EPA relies, emphasizes similar flexibility. Rather than rejecting science when the underlying data have not been made public, the BPC encourages online publication of methods and data but notes that “[t]he extent to which data and methods should be made public will vary by field[.]”⁸⁴ In fact, in its comments requesting an extension of the deadline for filing comments in this rulemaking, BPC expressly states that it

never suggested excluding studies from consideration in developing regulation if data from those studies were not publicly available. Indeed, the panel’s overarching recommendation for assembling the “best available science” reads: “Agencies and their scientific advisory committees should *cast a wide net* (emphasis added) in reviewing studies relevant to regulatory policy, and

⁸⁴ BPC, *Improving the Use of Science in Regulatory Policy* at 46 (2009), <http://bipartisanpolicy.org/wp-content/uploads/sites/default/files/BPC%20Science%20Report%20fml.pdf>.

should make their methods for filtering and evaluating those studies more transparent.”⁸⁵

Its policies in no way support the exclusion of relevant science.

The Center for Open Science likewise does not advocate for excluding science merely because the underlying data is not public, but rather counsels flexibility in determining what level of transparency is appropriate for a given study. Its Transparency and Openness Promotion (“TOP”) Guidelines for journals⁸⁶ “recognize[] that not all of the standards are applicable to all journals or all disciplines. Therefore, rather than advocating for a single set of guidelines, the TOP Committee defined three levels for each standard.”⁸⁷ These levels “provide flexibility for adoption depending on disciplinary variation.”⁸⁸ The Center for Open Science has invited journals to “suggest revisions that improve the guidelines or make them more flexible or adaptable for the needs of particular subdisciplines.”⁸⁹ Like the other organizations upon which EPA relies, it too has adopted a flexible approach to transparency and thus provides no support for EPA’s rigid exclusion.

EPA also cites “policies and recommendations from . . . members of the Risk Assessment Specialty Section of the Society of Toxicology, the Dose Response Section of the Society for Risk Analysis, and the International Society for Regulatory Toxicology and Pharmacology[.]” 83 Fed. Reg. at 18,770, n.10. In reality, these “policies and recommendations” are merely responses to an online questionnaire by a limited number of members of the three societies.⁹⁰ A report on the questionnaire’s methodology and results acknowledged extremely low response rates ranging from 23 to 27 percent across the three groups surveyed.⁹¹ Furthermore, the report stated that nearly two-thirds of people who responded to the survey worked in industry or were consultants who may perform work for industry clients.⁹² No more than 13 percent of respondents were based in academia.⁹³ If the survey attempted to ascertain any potential conflicts of interest among industry and consultant respondents, such results were not included in the report. EPA should not rely on a limited set of responses to an online poll, especially when the Agency does not possess information about conflicts of interest among respondents.

⁸⁵ BPC, *Bipartisan Policy Center comments on “Strengthening Transparency in Regulatory Science”*, Docket ID No. EPA-HQ-OA-2018-0259-0670 (May 22, 2018), <https://www.regulations.gov/document?D=EPA-HQ-OA-2018-0259-0670>.

⁹³ The report states that “13 percent [were] based in academia or non-profit organizations.” *Id.*

ii. EPA's Proposal is inconsistent with policies adopted by major scientific journals.

As additional support for its ill-advised rule, EPA claims that “policies recently adopted by some major academic journals” informed the data access guidelines and policies that EPA allegedly considered as it developed the Proposed Rule. 83 Fed. Reg. at 18,770. In particular, it cites “related policies from the *Proceedings of the National Academy of Sciences*, *PLOS ONE*, *Science*, and *Nature*.” *Id.* But EPA provides no information as to how these journals’ policies supposedly informed the data access guidelines and policies. Despite this lack of transparency by EPA, one thing is clear: the Proposed Rule is decidedly inconsistent with the policies these journals have adopted, as stated by the journals themselves.

Indeed, a joint statement by the editors of *Proceedings of the National Academy of Sciences (PNAS)*, *PLOS*, *Science*, *Nature*, and *Cell* indicates that their journals follow the TOP Guidelines and provide necessary flexibility in how data are shared. The editors write that the TOP Guidelines “recognize the array of workflows across scientific fields and make the case for data sharing at different levels of stringency; ***in not every case can all data be fully shared.***”⁹⁴ The editors cite “data sets featuring personal identifiers” as an important example of “data that cannot be shared openly with all.”⁹⁵ Ultimately, the editors conclude that the Proposed Rule would jeopardize the development of science-based policies:

It does not strengthen policies based on scientific evidence to limit the scientific evidence that can inform them; rather, it is paramount that the full suite of relevant science vetted through peer review, which includes ever more rigorous features, inform the landscape of decision making. ***Excluding relevant studies simply because they do not meet rigid transparency standards will adversely affect decision-making processes.***⁹⁶

EPA’s reliance on these journals’ policies is thus sorely misplaced.

iii. EPA has not shown the existence of a replication crisis or its potential relevance to dose-response data and models.

EPA also premises the Proposed Rule on a so-called “replication crisis.” It claims – with no support – that the policies of major scientific journals that purportedly informed the development of the Proposed Rule were “spurred in some part by the ‘replication crisis.’” 83 Fed. Reg. at 18,770. This alleged crisis is a complete fabrication. The term “replication crisis” does not occur in any of the sources cited by EPA in support of this clause. *Id.* at 18,770, n.12.

⁹⁴ Jeremy Berg et al., “Joint statement on EPA proposed rule and public availability of data,” *Science* (Apr. 30, 2018), <http://science.sciencemag.org/content/early/2018/04/30/science.aau0116> (emphasis added).

⁹⁵ *Id.*

⁹⁶ *Id.* (emphasis added).

Indeed, the word “crisis” only appears in one of the sources, which refers to a “reproducibility crisis” and then notes that it is “debatable” whether this term is appropriate.⁹⁷

Nonetheless, EPA asserts without support that such a crisis exists and implies that its existence supports imposing the rigid requirements of the Proposed Rule. This is untrue. While there are discussions within certain scientific fields, such as clinical psychology, about inconsistent results that have been obtained when experiments conducted in those fields are repeated,⁹⁸ EPA has not explained why these discussions should cast doubt on the dose-response data or models used by the Agency. In support of the “replication crisis” clause, EPA provides web addresses to three commentaries authored by Dr. John Ioannidis of Stanford University,⁹⁹ an editorial in the journal *Science*,¹⁰⁰ and an editorial by *The Economist* newspaper.¹⁰¹ 83 Fed. Reg. at 18,770, n.12. EPA does not explain why any of the observations made in these commentaries or editorials are relevant to dose-response data and models. Perhaps that is because they are not.

In fact, the authors cited by EPA have sharply criticized the Proposed Rule. Dr. Ioannidis wrote, “If the proposed rule is approved, science will be practically eliminated from all decision-making processes. Regulation would then depend uniquely on opinion and whim.”¹⁰² *Science* editorialized, “Here, a push for transparency appears actually to be a mechanism for suppressing important scientific evidence in policy-making, thereby threatening the public’s well-being.”¹⁰³ *The Economist* has described the proposal as part of “a campaign to stifle science at the EPA.”¹⁰⁴ As they put it, “[a]ir-quality rules and pesticide limits rely on analyses of confidential medical records—which Mr Pruitt may now label suspect and try to undo.”¹⁰⁵ Once again, EPA’s cited support undermine, rather than support, the Proposed Rule.

2. There is no evidence that the benefits justify the costs much less a rational finding of that; instead, available evidence shows the opposite.

In the preamble to the Proposed Rule, EPA states – with no evidence or justification – that “the benefits of this proposed rule justify the costs.” 83 Fed. Reg. at 18,772. This conclusory statement is the very definition of arbitrary and capricious. *State Farm*, 463 U.S. at 42-43. EPA provides no evidence of what it considered to reach this statement, much less why

¹⁰⁵ *Id.*

its conclusion is rational. Indeed, EPA provides no information at all about what the “benefits” or “costs” of the Proposed Rule are, or what it evaluated to reach its conclusion. There is simply nothing in the record to support EPA’s conclusory statement.

Despite the lack of evidence in the regulatory docket, as these and other comments make clear, the costs of this Proposed Rule are far-reaching and substantial, while EPA has failed to identify any alleged benefits at all, other than vague and unsupported references to improved transparency. EPA’s Proposal to undermine, exclude, and ignore important and relevant health science in rulemaking proceedings will have serious implications on public health, privacy, the environment, and the judicial review process, and thus the costs will be significant. EPA cannot ignore these harms in its cost-benefit analysis,¹⁰⁶ even if the costs are not readily quantifiable. *See, e.g., Michigan v. EPA*, 135 S. Ct. 2699, 2707 (2015) (costs include “harms that regulation might do to human health or the environment”); Executive Order 12,866, 58 Fed. Reg. 51,735, 51,735 (Oct. 4, 1993) (it is “essential to consider” the “qualitative measures of costs and benefits that are difficult to quantify”); *see also* Food Labeling: Nutrition Labeling of Standard Menu Items in restaurants and Similar Retail Food Establishments; Extension of Compliance Date; Request for Comments, 82 Fed. Reg. 20,825, 20,828 (May 4, 2017) (acknowledging that delaying a nutrition labeling requirement would lead to millions of dollars in lost health benefits). Yet there is no evidence that EPA evaluated any of these adverse impacts, quantitatively or qualitatively.¹⁰⁷ Moreover, EPA itself estimated that the economic cost of this type of restriction on science would cost “considerably more” than \$250 million.¹⁰⁸

In addition, in performing certain CAA and other rulemakings, EPA may not consider the economic implications of considering or excluding certain science *at all*. *See* Section IV.A. Yet

¹⁰⁶ Not only does EPA provide no support for its claim that the benefits justify the costs for this Proposed Rule, but it likewise failed to follow the procedures ordinarily used to obtain confirmation of its cost-benefit analysis. In fact, EPA entirely sidestepped the procedures set forth in Executive Order 12,866 pursuant to which the Office of Information and Regulatory Affairs reviews regulatory actions to ensure the Agency’s analysis of costs and benefits is accurate, to provide time for interagency review and stakeholder meetings, and to provide the agency with any necessary changes to the proposed rule. For this Proposed Rule, OIRA completed its review *only four days after receiving it*. And these four days fell over the weekend, meaning that OIRA spent roughly two working days reviewing a rule that will have significant and far-reaching consequences across multiple statutes.

¹⁰⁷ Indeed, in a recent report on rulemakings related to health – the very type of rulemakings most impacted by the Proposed Rule – EPA and OMB quantified some of the benefits of various regulations that would be dramatically weakened under the new rule. *See, e.g., OMB, 2017 Draft Report to Congress on the Benefits and Costs of Federal Regulations*, https://www.whitehouse.gov/wp-content/uploads/2017/12/draft_2017_cost_benefit_report.pdf; EPA, *Benefits & Costs of the Clean Air Act from 1990 to 2020, the Second Prospective Study* (Apr. 2011), <https://www.epa.gov/clean-air-act-overview/benefits-and-costs-clean-air-act-1990-2020-second-prospective-study>, https://www.epa.gov/sites/production/files/2015-07/documents/fullreport_rev_a.pdf. These recent studies show health rulemakings, particularly air rulemakings, create significant benefits (including health and protection of life, reductions in the need for health care and health care costs, as well as job creation, and other economic values in avoiding days lost at work and school) that are quantitatively larger and more qualitatively valuable than the costs of pollution controls or other economic costs of the regulations.

¹⁰⁸ EPA, *CBO Questions for EPA Regarding H.R. xxxx, the HONEST Act of 2017* at 1, 2, 8, 10 (2017), <https://www.scribd.com/document/344731162/EPA-analysis-of-Honest-Act-to-CBO>.

EPA's failure to provide any lawful or rational justification for its costs/benefits statement for the Proposed Rule suggests that economic cost may have impermissibly played a role in its analysis. Had EPA focused on health rather than cost, EPA could not possibly find that the benefits of ignoring health science outweigh the costs for public health rulemakings.

C. Section 30.9 Allows Standardless and Arbitrary Application of the Rule.

The Proposed Rule is arbitrary and capricious because its standardless provisions give EPA unfettered discretion in deciding whether and how the Rule applies. It has long been held that regulations must contain “narrow, objective, and definite standards to guide the [decisionmaking] authority, . . . thereby to guard against the danger of arbitrary action.” *United States v. Abney*, 534 F.2d 984, 986 (D.C. Cir. 1976) (quoting *Shuttlesworth v. City of Birmingham, Ala.*, 394 U.S. 147, 149 (1969)). “When administrators provide a framework for principled decision-making” by “articulat[ing] the standards and principles that govern their discretionary decisions in as much detail as possible,” “the result will be to . . . enhanc[e] the integrity of the administrative process.” *Env'tl. Def. Fund, Inc. v. Ruckelshaus*, 439 F.2d 584, 598 (D.C. Cir. 1971). But where a regulation is “wholly silent as to what factors the agency is to consider in granting exceptions . . . [a]gency discretion is unfettered,” and the regulation is “arbitrary, capricious and contrary to law.” *Nat. Res. Def. Council, Inc. v. EPA*, 863 F.2d 1420, 1432 (9th Cir. 1988).

EPA's Proposed Rule lacks the requisite standards and principles that are the hallmark of lawful agency decision-making. The vague definitions proposed in 40 C.F.R. § 30.2 invite limitless agency discretion to decide when the Rule's requirements apply. For example, the Proposed Rule defines “regulatory science” as “scientific information . . . that provide the basis for EPA final significant regulatory decisions.” 83 Fed. Reg. at 18,773. But this definition lacks any discernible meaning. There is no standard or definition for determining when scientific information does or does not “provide the basis” for a regulatory decision, nor are there any standards or definitions for what subset of “regulatory decisions” should be deemed “significant.” Likewise, the Proposed Rule defines “pivotal regulatory science” as studies that “drive the requirements and/or quantitative analysis” of EPA's action, *id.*, but this too lacks any understandable meaning. There is no standard governing what science does or does not “drive” the regulatory action. The lack of regulatory standards here means that EPA staff will impermissibly determine applicability of the rule “based upon their own unwritten personal standards.” *White v. Roughton*, 530 F.2d 750, 754 (7th Cir. 1976).

In contrast to the definitions of proposed section 30.2 – which lack any meaning or standards at all – proposed section 30.9 provides a veritable grab bag of reasons the Administrator may use in his discretion to decide when not to apply the Rule. It allows the Administrator to grant a case-by-case exemption to the Rule's requirements if the Administrator determines it is not “feasible” to ensure that data may be made publicly available “in a manner sufficient for independent validation, in a fashion that is consistent with law, protects privacy, confidentiality, confidential business information, and is sensitive to national and homeland security.” 83 Fed. Reg. at 18,774. It also authorizes the Administrator to exempt application of the Rule if it is not “feasible” to conduct peer review for the multiple reasons outlined in OMB

guidance. *Id.* Here, the many vague and discretionary “exception[s] . . . threaten[] to swallow the rule,” *Nat. Res. Def. Council, Inc.*, 863 F.2d at 1432, empowering the Administrator to pick and choose the preferred scientific studies he wants considered or excluded from consideration in any given rulemaking procedure with no clear standards or principles to keep this discretion in check.

Proposed sections 30.2 and 30.9 thus give EPA unfettered discretion to be a case-by-case arbiter of scientific information, without notice-and-comment, any oversight, or any stated standards or principles limiting this discretion. These provisions allow for arbitrary application of the Rule, rendering the Proposed Rule arbitrary and thus unlawful.

D. The Proposed Rule Impermissibly Favors So-Called “Secret Science” That Supports a Decision *Not* to Regulate a Chemical While Disfavoring Public Health Research that Supports a Decision to Regulate a Chemical.

Under the terms of the Proposed Rule, EPA must ensure that underlying data is publicly available only “[w]hen promulgating significant regulatory actions.” 83 Fed. Reg. at 18,773 (proposed to be codified as 40 C.F.R. § 30.5). But as defined in the Proposed Rule, a significant regulatory action refers only to the *promulgation* of a new rule or regulation.¹⁰⁹ Accordingly, as written, the Proposed Rule arguably allows EPA to utilize non-public studies or studies that rely on non-public data to justify a decision not to regulate at all. This creates a lopsided and inequitable playing field whereby EPA can rely upon studies that it prohibits others to use when it decides not to issue a new regulation.

An example highlights the dangerousness of this inequity. Under TSCA, many provisions involve go/no-go decisions about whether to promulgate regulations at all. Thus, upon consideration of whether to regulate a chemical, EPA could arguably utilize non-public studies or studies that rely on non-public data to justify a decision not to regulate. For example, EPA could use non-public data to justify a finding that a chemical does not pose an unreasonable risk to health or the environment under Section 2605 and thus does not require regulation. Pursuant to the definitions in the Proposed Rule, such a decision does not qualify as a significant regulatory action, because a finding of no unreasonable risk does not trigger any new rule or regulation. By contrast, EPA would not be able to rely on non-public studies or studies that rely on non-public data to justify a decision to regulate a chemical.

The Proposed Rule thus creates a regulatory regime in which EPA *can* consider science based on non-public data if it shows that a chemical is not harmful (or minimizes the harmful

¹⁰⁹ In the Proposed Rule, a significant regulatory action means “final regulations determined to be ‘significant regulatory actions’ by the Office of Management and Budget pursuant to Executive Order 12866.” 83 Fed. Reg. at 18,773 (proposed to be codified as 40 C.F.R. § 30.2). In turn, Executive Order 12,866 defines a significant regulatory action, in relevant part, as “any regulatory action that is *likely to result in a rule* that may: (1) Have an annual effect on the economy of \$100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities; (2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency . . .” Exec. Order 12,866, 58 Fed. Reg. 51,735 (emphasis added).

effects of a chemical) and supports not regulating the chemical, but *cannot* consider science that shows that a chemical has harmful effects if it is similarly based on non-public data but supports a decision to regulate the chemical. EPA has not, and indeed cannot, provide any explanation or basis for this differential treatment. For this reason, too, the Proposed Rule is arbitrary and capricious and cannot stand.

Equally problematic, the Proposed Rule could lead to absurd results. For example, when determining whether a chemical poses an unreasonable risk of harm under TSCA, EPA has to consider all relevant scientific studies. If EPA finds that a chemical poses an unreasonable risk and that it must issue a regulation on that basis, the Proposed Rule mandates exclusion of studies based on non-public data from consideration, even if those same studies provide the basis for the unreasonable risk finding. Absent these particular studies, the remaining research may show no unreasonable risk of harm, obviating the need for regulation, and in turn, eliminating the Proposed Rule's requirement that EPA not consider the excluded studies. Instead, when determining no unreasonable risk of harm, EPA *must* consider the excluded studies because such a finding does not result in a significant regulatory action and thus the Proposed Rule's ban on non-public data would not apply. But because the excluded study demonstrates that the chemical *is* unreasonably risky, EPA could not go forward with an unreasonable-risk determination. This could create an endless cycle of review and re-review with certain studies included, then excluded, and then included again, *ad infinitum*. In such situations, application of the Proposed Rule creates a catch-22 in which EPA cannot make *any* determination that complies with both the APA's requirement of reasoned decision-making and the requirements of the Proposed Rule.

These flaws would plague any decision made under any provision of the statute in which EPA is required to choose between issuing or not issuing a regulation and, therefore, renders the Proposed Rule arbitrary and capricious. *See e.g.* 15 U.S.C. § 2603(a) (EPA must require testing if it finds that a chemical "may present an unreasonable risk").

E. EPA Has Failed to Show Any Need or Reasoned Basis for the Proposed Rule.

EPA's stated justifications for the Proposed Rule consist of vague platitudes such as a purported desire to strengthen the transparency and integrity of EPA regulatory science and to enhance the public's ability to understand and meaningfully participate in the regulatory process. 83 Fed. Reg. at 18,769. Yet the Proposal does not show how or why EPA's existing practices fail to adequately achieve these purposes, or how the proposed new procedures would do a better job. In reality, EPA's historic practices in adopting health and welfare standards are extraordinarily transparent, public, and accessible to interested persons.

By way of example, EPA's NAAQS process begins with preparation of an Integrated Science Assessment ("ISA"), an extensive review of available science relevant to the development of NAAQS. *See* EPA, *Integrated Science Assessment for Ozone and Related Photochemical Oxidants*, EPA 600/R-10/076F, at li-liv (Feb. 2013). Preparation of the ISA is preceded by a public workshop and call for information. *Id.* EPA collects and screens studies (with a heavy focus on studies that have been peer reviewed), prepares an initial characterization of evidence, and then provides a peer review process of the initial draft materials for scientific

quality of “building blocks” from scientists from both outside and within EPA. *Id.* at 1vii. There is then preparation of draft syntheses of the studies and draft conclusions and causal determinations, followed by CASAC input and an opportunity for public comment before preparation of the final ISA. After that, EPA staff prepares a Policy Assessment (“PA”) based on integration and interpretation of the findings of the ISA and a separate risk and exposure assessment (“REA”). Both the PA and REA are themselves subject to separate rounds of public comment. And there is yet another round of public comment after EPA proposes its action on the NAAQS. *Id.*

All of the foregoing comprises one of the most open, publicly accessible processes ever devised for the development of health standards. There are multiple layers of peer review and more than ample opportunity for the public to raise questions about the adequacy and accuracy of the studies and models presented. EPA does not and cannot rationally explain why this system requires yet another layer of complexity to provide adequate transparency, integrity, and public understanding of the process.

EPA’s process for revising ambient water criteria for the protection of human health provides another example of the transparency afforded to its rulemaking, as it provides open access to information for interested persons. In 1998, EPA “improved” this process “to provide expanded opportunities for public input, and to make the process more efficient.” 63 Fed. Reg. 68,354, 68,355 (Dec. 10, 1998). To revise its ambient water criteria, EPA must follow a multi-step process. *First*, EPA must “undertake a comprehensive review of available data and information” before developing draft criteria. *Id.* *Second*, EPA must “publish a notice in the Federal Register and on the Internet announcing its assessment . . . of the pollutant” which “describe[s] the data available to the Agency,” and solicits “scientific views as to the application of the relevant Agency methodology.” *Id.* *Third*, EPA must “utilize information obtained from both the Agency’s literature review and [from] the public [comments] to develop draft recommended water quality criteria.” *Id.* *Fourth*, and concurrent with the development of the draft criteria, EPA must publish in the Federal Register a notice soliciting the public’s “scientific views on the draft criteria,” and must “initiate . . . a documented critical review by qualified independent experts.” *Id.* *Fifth*, EPA must then evaluate and respond on the record to all “[m]ajor scientific issues” (if any) raised during the peer review or public comment period. *Id.* *Finally*, EPA must “revise the draft criteria as necessary, and announce the availability of the final water quality criteria in the Federal Register and on the Internet.” *Id.* Like the NAAQS process, this process too is fully open and transparent.

Moreover, it would be irrational and impracticable to require EPA to seek out the underlying data for, and demand separate peer review of, all data and models the Agency uses for purposes of characterizing the quantitative relationship between dose or exposure and magnitude of a predicted health or environmental impact. For instance, in the last ozone NAAQS review, EPA reviewed more than 4,000 studies and references for the ISA, and cited more than 2,200 in the final ISA. *See* EPA, Health and Environmental Research Online, ISA-Ozone (2013) (last updated July 2, 2018), https://hero.epa.gov/hero/index.cfm/project/page/project_id/1628. It is neither practicable nor

necessary for EPA to demand production of underlying data from thousands or even hundreds of studies, and to require new peer reviews of each. EPA cannot construe the statute in a way that would render it impossible to complete the review and revision of the NAAQS that Congress mandated.

EPA further tries to justify the Proposed Rule as a way to ensure the Agency is not arbitrary and capricious in its conclusions. But as previously noted, the D.C. Circuit has twice rejected the notion that EPA must obtain and disclose data underlying the studies it relies on in NAAQS development.

VII. OTHER PROVISIONS OF THE RULE ARE UNLAWFUL

A. EPA's Requirement in Proposed 30.6 to Give Explicit Consideration to Studies that Explore Threshold Models Is Arbitrary.

EPA's Proposed Rule requires the Agency to “give explicit consideration to high quality studies that explore . . . various threshold models across the dose or exposure range[.]” 83 Fed. Reg. at 18,774 (proposed 40 CFR § 30.6). A “threshold” is a dose or exposure “below which effects do not occur or are extremely unlikely.”¹¹⁰ A “threshold model” – a type of “non-linear” model¹¹¹ – is a dose-response model in which there is no response below the threshold dose or exposure.¹¹² EPA's proposed prioritization of threshold models is arbitrary, for at least three reasons.

First, EPA provides no evidence to justify the proposed requirement that it consider threshold models in dose-response assessments. EPA baldly asserts that “there is growing empirical evidence of non-linearity [*i.e.*, a threshold¹¹³] in the concentration-response function for specific pollutants and health effects[.]” but provides not a single example or citation for this unsubstantiated claim.¹¹⁴ *Id.* at 18,770. By contrast, EPA has found strong empirical evidence of no-threshold concentration-response functions for lead and reduced IQ, and particulate matter and increased mortality, following extensive reviews of the relevant literature to inform the

¹¹⁰ National Research Council, *Science and Decisions: Advancing Risk Assessment* at 128 (2009), <https://www.nap.edu/catalog/12209/science-and-decisions-advancing-risk-assessment>.

¹¹¹ EPA uses the terms “threshold” and “nonlinear” repeatedly but does not define them in the Proposed Rule. According to EPA Risk Assessment Guidelines, “the term ‘nonlinear’ refers to threshold models (which show no response over a range of low doses that include zero) and some nonthreshold models[.]” EPA, *Guidelines for Carcinogen Risk Assessment* at 1-11, n.3 (2005), https://www.epa.gov/sites/production/files/2013-09/documents/cancer_guidelines_final_3-25-05.pdf.

¹¹² A threshold model “show[s] no response over a range of low doses that include zero[.]” *Id.*

¹¹³ EPA appears to use the terms “non-linearity” and “threshold” interchangeably. If so, then EPA has asserted that there is growing evidence of thresholds in unspecified concentration-response functions but has failed to provide a supporting example or citation. If not, then EPA has not even asserted that there is growing evidence of such thresholds and has failed to state, let alone support, any scientific rationale for the proposed requirement to give explicit consideration to studies that explore threshold models.

¹¹⁴ A “concentration-response function” is a dose-response model in which the “dose” is the concentration of an air pollutant.

Agency's national ambient air quality standards.¹¹⁵ EPA's failure to provide any support for its claim is telling.

Second, the proposed requirement to consider threshold models ignores essential science, namely the approach to dose-response assessment recommended by the NAS in *Science and Decisions: Advancing Risk Assessment*. Historically, researchers applied no-threshold dose-response models to carcinogens and threshold models to non-carcinogens.¹¹⁶ But in *Science and Decisions*, NAS determined that, due to the variability in susceptibility and exposures to other chemicals (background exposures) within populations, the effects of non-carcinogens may lack thresholds in **populations** even when these effects have thresholds in certain **individuals** who are less susceptible and/or have lower background exposures.¹¹⁷ In other words, thresholds vary by individual; for some, effects have high thresholds, while for others, effects have practically no threshold due to increased susceptibility or background exposures,¹¹⁸ and this latter group may develop disease when a population is exposed, even at very low levels.¹¹⁹ Based on these findings, NAS concluded that no-threshold models should be applied to **both** carcinogens and non-carcinogens unless reliable data affirmatively support a threshold model based on detailed assessments of mode of action (how a chemical causes disease), susceptibility, and background exposures.¹²⁰ EPA's Proposed Rule entirely ignores *Science and Decisions*, its recommended approach to dose-response assessment, and the need for a detailed assessment before concluding that a threshold model is appropriate.

The "explicit consideration" of "studies that explore . . . various threshold models" required under the Proposed Rule does not qualify as a "detailed assessment" of the type recommended by NAS. While NAS recommends consideration of the available data on mode of action, susceptibility, and background exposure **before** deciding whether dose-response models are appropriate,¹²¹ the Proposed Rule requires consideration of threshold models regardless of this data. EPA provides no justification for ignoring NAS' researched approach to dose-response data.

Third, EPA's proposed requirement also disregards the Agency's own Guidelines for Carcinogen Risk Assessment, which expressly state that, in cancer risk assessments, no threshold should be assumed unless the mode of action is known and the chemical does not cause cancer

¹¹⁵ EPA, *Integrated Science Assessment for Lead* at lxxxviii (2013), http://ofmpub.epa.gov/eims/eimscomm.getfile?p_download_id=518908 ("[T]here is no evidence of a threshold below which there are no harmful effects on cognition from [lead] exposure."). EPA, *Integrated Science Assessment for Particulate Matter* at 2-25 (Dec. 2009), http://ofmpub.epa.gov/eims/eimscomm.getfile?p_download_id=494959 ("Overall, the studies evaluated further support the use of a no-threshold log-linear model[.]").

¹¹⁶ NAS, *Science and Decisions*, *supra* n.110, at 127-128.

¹¹⁷ *Id.* at 131.

¹¹⁸ *See id.*

¹¹⁹ *See id.*

¹²⁰ *See id.* at 148.

¹²¹ *Id.* The sequence of steps recommended by NAS, including the assessment of mode of action, susceptibility of vulnerable populations, and background exposure *before* model selection is depicted by Figure 5-8. *Id.* at 144.

by inducing DNA mutations that initiate tumor development.¹²² Like *Science and Decisions*, the Cancer Guidelines state that it is necessary to assess mode of action to determine whether a threshold or no-threshold model is appropriate.¹²³ EPA has historically followed this approach to ensure that its cancer risk assessments are adequately health-protective.¹²⁴ The Proposed Rule breaks from this prior practice and instead disregards science that the Cancer Guidelines say should be considered. EPA's reversal of longstanding policy is unjustified and arbitrary, and should not be permitted.

B. The Requirement in Proposed 30.7 that EPA Independently Peer-Review All Pivotal Regulatory Science Used to Make Regulatory Decisions is Arbitrary.

As part of the Proposed Rule, EPA injects a new requirement – without justification – that EPA “conduct independent peer review on all *pivotal regulatory science* used to justify *regulatory decisions* consistent with the requirements of the OMB Final Information Quality Bulletin for Peer Review (70 FR 2664) and the exemptions described therein.” 83 Fed. Reg. at 18,774. Once again, a review of the support upon which EPA relies demonstrates that this peer review obligation is contrary to current policy. It is also unnecessary, costly, and unrealistic. It seems the only things this new peer review process would accomplish is the exclusion of reliable science, increased cost and time for effective reviews, and delay of regulatory decisions that impact public health.

1. Independent Peer Review by EPA Is Unnecessary.

There is no dispute that independent peer review plays a pivotal role in the regulatory development process, subjecting original research methods and outcomes to a panel of experts in the same field.¹²⁵ Independent peer review “is a process for enhancing a scientific or technical work product so that the decision or position taken by the Agency, based on that product, has a sound, credible basis”.¹²⁶ Peer reviewers are individuals with technical expertise in the area of the work or product under review. Independent peer review processes eliminate issues arising due to conflicts of interest between the reviewer and the developers of the product/scientific work.¹²⁷ When conducted properly, independent peer review provides validation for original research and ensures that basic scientific integrity practices are employed to aid decision makers

¹²² Specifically, the Guidelines say that a linear model is used as a default approach unless these conditions apply. See EPA, *Guidelines for Carcinogen Risk Assessment*, *supra* n.111, at 3-21. A linear model, known more fully as a low-dose-linear model, is a model “whose slope is greater than zero at a dose of zero[,]” which implies no threshold. *Id.* at 1-11, n.3.

¹²³ *Id.* at 3-21.

¹²⁴ *Id.*

in making sound policy decisions. OMB’s Final Information Quality Bulletin for Peer Review (“OMB Bulletin”) confirms these principles: “Peer review can increase the quality and credibility of the scientific information generated across the federal government.”¹²⁸ Overall, it is well understood that peer review is an essential element of the regulatory process.

While it is certainly a best practice to consider only science that has been independently peer reviewed when making regulatory decisions, that does not necessitate independent peer review *by EPA*. Rather, most scientific bodies – including *Nature*, *Science*, the Bipartisan Policy Center, and *Proceedings of the National Academies of Sciences* – employ some of the most robust peer review practices that they already apply to the types of studies for which the Proposed Rule will require EPA review. Thus, as the OMB Bulletin recognizes, “[p]ublication in a refereed scientific journal may mean that adequate peer review has been performed.”¹²⁹ Thus, additional review by EPA is duplicative and wholly unnecessary.

More importantly, EPA’s Proposal is antithetical to the science communities’ policies. Rather than strengthening science, the independent peer review process would serve to exclude reliable and tested science that has been foundational to protecting public health and the environment. Indeed, despite EPA’s reliance on the policies of several major scientific journals, the Editors-in-Chief of *Science*, *Nature*, *Proceedings of the National Academy of Sciences*, and several other highly revered scientific journals and members of the scientific community released a joint statement in response to the Proposed Rule, making clear that the Rule itself “does not strengthen policies based on scientific evidence to limit the scientific evidence that can inform them; rather, it is paramount that the full suite of relevant science vetted through peer review, which concludes ever more rigorous features, inform the landscape of decision making.”¹³⁰ The joint statement concludes: “[e]xcluding relevant studies simply because they do not meet rigid transparency standards will adversely affect decision-making processes.”¹³¹

2. EPA’s Independent Peer Review Requirement Will Lead to Unnecessary Delay and Increased Costs.

Not only is independent peer review by EPA unnecessary, but it is also impractical and irrational for EPA to conduct its own independent peer review of the underlying data for studies that already have undergone a rigorous scientific review process, which is the case for those studies published in scientific journals or independently evaluated by a scientific body. It would also lead to undue delay. The standard time taken to review scientific manuscripts in the fields of medicine, public health, and natural sciences is, on average, 12-14 weeks.¹³² If EPA were to follow a comparably rigorous independent peer review on all pivotal science utilized in the regulatory decision making process, such an action would result in untimely delays in

implementation of public health protections. For example, the NAAQS Integrated Science Assessment and Risk and Exposure Assessments regularly include the review of thousands of scientific studies. It would be enormously inefficient and costly (if even possible) for EPA to re-review all of these studies.

Moreover, as clearly outlined in the OMB Bulletin, the independent peer review guidelines “do[] not cover time-sensitive health and safety disseminations, for example, a dissemination based primarily on data from a recent clinical trial that was adequately peer reviewed before the trial began. For this purpose, ‘health’ includes public health, or plant or animal infectious diseases”.¹³³ This encompasses most of the studies that EPA intends to review, including but not limited to, the Integrated Risk Information System (“IRIS”) assessments, TSCA risk evaluations, and National Emissions Standards for Hazardous Air Pollutants risk assessments.¹³⁴ In each case, EPA utilizes scientific data to make safety determinations for chemical pollutants and impacts on human health and the environment, and thus, timely review is tantamount to protecting public health. The Proposal to add another layer of review – one that is wholly unnecessary and duplicative – is antithetical to the time sensitive nature of these reviews.

Furthermore, the Bulletin makes clear that agencies should “ensure peer review does not unduly delay the release of urgent findings.”¹³⁵ Thus, if EPA wants to independently peer review all pivotal science, then it must clearly outline how it will ensure the process will not lead to undue delay. It has failed to do so. For example, there is nothing in the Proposed Rule outlining how EPA will conduct an independent review of the studies underlying the NAAQS standard, which will require review of hundreds if not thousands of science documents, within the NAAQS review cycle. The standard review period in the independent peer review process (*i.e.*, from submission of a manuscript to final review) is time intensive. If it can take months to review one manuscript,¹³⁶ it is difficult to envisage how EPA could subject every piece of pivotal regulatory science to the same standard of review and still complete scientific assessments in a timely manner.

Equally problematic, the proposed independent EPA review will lead to undue costs in terms of the time and resources required to review the relevant data. In *Strengthening Science at the U.S. Environmental Protection Agency: Research-Management and Peer Review Practice* (“NAS Review”), the National Academy of Sciences states that “[t]he cost of a peer review

¹³⁵ OMB, *Final Information Quality Bulletin for Peer Review* at 1 (Dec. 16, 2004), http://www.cio.noaa.gov/services_programs/pdfs/OMB_Peer_Review_Bulletin_m05-03.pdf.

¹³⁶ Janine Huisman & Jeroen Smits, *Duration and quality of the peer review process: the author’s perspective*, *Scientometrics* 113:633 (2017), <https://doi.org/10.1007/s11192-017-2310-5>.

effort should be carefully considered in terms of in-house staff time and resources, as well as the limited time and energy of busy experts who must take time from other worthwhile endeavors.”¹³⁷ EPA ignores this aspect in its cost-benefit analysis of the Proposed Rule, rendering the resulting rule arbitrary.

C. Section 30.8’s Requirement to Consider and Minimize Costs is Unlawful.

Proposed Section 30.8, which would require EPA to implement the provisions of the Rule “in a manner that minimizes cost,” is unlawful and arbitrary, for several reasons.

First, because EPA has only the authority conferred to it by statute, the Agency must identify the statutory authority upon which it bases its regulatory decisions about what data and models to consider on the minimization of cost. *Clean Air Council v. Pruitt*, 862 F.3d 1, 9 (D.C. Cir. 2017) (quoting *Verizon v. FCC*, 740 F.3d 623, 632 (D.C. Cir. 2014) (“It is ‘axiomatic’ that ‘administrative agencies may act only pursuant to authority delegated to them by Congress.’”) (alteration and citations omitted)). The Agency has failed to do so here.

Second, EPA’s proposal to base these decisions on cost is inconsistent with statutory mandates requiring the Agency to base regulatory decisions on the best available science. *See, e.g.*, 42 U.S.C. § 300g-1(b)(1)(B)(ii)(II) (directing EPA to base its determination about whether to regulate any particular contaminant “on the best available public health information”); 15 U.S.C. § 2625(h) (requiring EPA to act “consistent with the best available science”). Plain meaning and common usage confirm that “best available science” does not refer to whatever science is least costly. *See also supra*, Section IV.A.

Third, EPA’s proposal to base its data quality decisions on cost is inconsistent with applicable statutory mandates requiring EPA to make regulatory decisions based on considerations of public health. *Whitman v. Am. Trucking Ass’ns*, 531 U.S. 457, 469 (2001) (cost “is *both* so indirectly related to public health *and* so full of potential for canceling the conclusions drawn from direct health effects that it would surely have been expressly mentioned . . . had Congress meant it to be considered.” (emphasis in original)).¹³⁸

Fourth, section 30.8 is also unlawfully vague. As the Supreme Court has explained, “‘cost’ includes more than the expense of complying with regulations; any disadvantage could be termed a cost.” *Michigan v. EPA*, 135 S. Ct. at 2707. Yet the provision does not specify to what types of costs it refers. And despite the fact that various types of costs would necessarily need to be weighed against one another when applying this provision, the Proposed Rule is notably silent as to how that will be done. As proposed, it appears to confer nearly limitless discretion on EPA

¹³⁷ NAS, *Strengthening Science at the U.S. Environmental Protection Agency: Research-Management and Peer-Review Practices* (2000), <http://www.nap.edu/catalog/9882.html>.

¹³⁸ If anything, EPA’s proposal to base decisions on consideration of cost here is even more irrational than it was in *Whitman*, because in this case, decision-making about the science used to inform EPA’s regulatory decisions will result in a proliferation of costs and benefits that resist quantification, monetization, and comparison. These include substantial and important non-market values, including privacy, transparency, health and environmental considerations, and even the value of scientific knowledge itself.

to decline to collect and utilize relevant science on grounds of cost, in contravention of applicable statutory mandates and reasoned decision-making. *See U.S. Sugar v. EPA*, 830 F.3d 579, 644 (D.C. Cir. 2016) (“in light of the unambiguous statutory command [to regulate toxic pollution sources] . . . [t]he Agency was obligated to collect the data it needed”).

Finally, even if EPA had authority to base its data quality decisions on cost, it would be irrational and arbitrary for EPA to ignore all the costs and benefits to the public – including public health and environmental costs and benefits and privacy-related costs and benefits – that may flow from its decisions. EPA must treat costs and benefits alike, and may not “put a thumb on the scale by undervaluing the benefits and overvaluing the costs of more stringent standards.” *Ctr. for Biological Diversity v. Nat’l Highway Traffic Safety Admin.*, 538 F.3d 1172, 1198 (9th Cir. 2008). And it may not ignore the public health, environmental, and privacy-related costs of its action or inaction of its decision just because they are not quantified. *See, e.g.*, Exec. Order No. 13,563 § 1, 76 Fed. Reg. at 3821; Exec. Order No. 12,866 § 1, 58 Fed. Reg. at 51,735 (it is “essential to consider” the “qualitative measures of costs and benefits that are difficult to quantify”). OMB Circular A-4 cautions agencies against ignoring the potential magnitude of unquantified benefits, because the approach with the “largest quantified and monetized . . . estimate” is not necessarily the most cost-justified. Under all of these authorities, a “full accounting” of the costs and benefits of a rule requires that indirect benefits be counted “equivalently” with other costs and benefits.¹³⁹

For all of these reasons, section 30.8 is arbitrary and capricious and thus invalid.

VIII. EPA’S PROPOSAL WOULD DISPROPORTIONATELY HARM LOW-INCOME COMMUNITIES AND MINORITY COMMUNITIES

Not only is EPA’s elimination of its use of critical human health research and studies that serve to protect and promote public health and the environment unlawful, but it is also discriminatory. The Proposed Rule has a disproportionately deleterious impact on low-income communities and minority communities – the overburdened populations that benefit most from the epidemiological studies used to set limits on air and water pollutants and to set safe exposure levels for pesticides and other toxics. By removing this critical category of studies from consideration when setting limits on pollutant and toxic exposure as well as standards for safe air and water, EPA is turning a blind eye to accessible and illuminating evidence that provides much-needed safeguards to the vulnerable communities most impacted by the laws EPA is charged with enforcing. These communities will disproportionately suffer as a result.

Since the 1987 landmark report *Toxic Wastes and Race in the United States*,¹⁴⁰ studies have confirmed again and again that communities of color and also economically disadvantaged

¹³⁹ Cass R. Sunstein, *The Real World of Cost-Benefit Analysis: Thirty-Six Questions (and Almost as Many Answers)*, 114 Colum. L. Rev. 167, 190 (2014).

¹⁴⁰ Dr. Benjamin F. Chavis, Jr. & Charles Lee, *Toxic Wastes and Race in the United States*, Commission for Racial Justice, United Church of Christ (1987),

populations are disproportionately located near toxic waste sites and other sources of pollution. And research has also found that overall air pollution exposure is more strongly concentrated in communities of color.¹⁴¹ Pesticide exposure likewise disproportionately impacts low-income and minority communities: farmworkers tend to be poor,¹⁴² and the vast majority are of Latin American origin,¹⁴³ and they have a higher incidence of pesticide poisoning than other workers.¹⁴⁴ For example, in California, the counties with the greatest use of the highly toxic pesticide chlorpyrifos are the counties with the highest poverty levels and largest Latino populations.¹⁴⁵ In April 2014, the California Department of Public Health issued a report showing that thousands of children, disproportionately people of color, attend school in close proximity to pesticide use.¹⁴⁶ Overall, the disproportionate burden of environmental exposure among these low-income communities and communities of color cannot be disputed.¹⁴⁷

Fundamental to the research revealing the disproportionate impact of environmental harms on low-income and minority communities and the need to set appropriate standards is epidemiological data. Indeed, this category of science that EPA wants to eliminate has been foundational to establishing disparate harms from a variety of toxics in air, water, pesticides, and other environmental sources. For example:

- Epidemiological studies have shown that there is a persistent disparity in the blood lead levels measured in children of color compared to white children. These studies revealed that in 2011-2012, the mean level was almost 40 percent higher in black children 1-5 years old than in white children of the same age.¹⁴⁸

¹⁴⁸ Jain R.B., *Trends and Variability in Blood Lead Concentrations Among US Children and Adolescents*, *Envtl. Science and Pollution Research*, 23, 7880-7889 at 7884 (2016).

- While studies have shown that the mean blood lead level in black children is much lower than it was several decades ago, epidemiological studies have shown that even low levels of lead in the blood are harmful.¹⁴⁹
- A 2011 peer-reviewed epidemiological study found that urine samples of children ages 6 to 24 months were more likely to have six organophosphate metabolites the closer the child lived to a pesticide application site.¹⁵⁰
- Longitudinal cohort epidemiologic studies have shown that even low levels of exposure to the highly toxic pesticide chlorpyrifos can disrupt brain development in prenatally exposed children, leading to developmental delays, lower IQ, learning disabilities, and ADHD-like behaviors.¹⁵¹
- Epidemiological studies demonstrate that farmworkers have a higher rate of pesticide poisoning than any other workers¹⁵²

Thus, it is clear that epidemiological studies have provided a consistent source of reliable data that has been critical to demonstrating disproportionate exposure to toxic chemicals. These studies in turn have been pivotal to setting air, water, and pesticide standards necessary to protect low-income and minority populations from harmful levels of exposure.

EPA’s proposal to eliminate use of epidemiological studies will have a disparate impact on the most overburdened and vulnerable communities, eliminating the very source of data relied upon to provide protections crucial to their health and wellbeing. This Proposed Rule will perpetuate the environmental injustices that low-income and minority communities already face, as it will remove the primary tool used to study and address the inequitable environmental harms suffered by these populations.

IX. ADDITIONAL TOPICS FOR COMMENTS

A. Retroactive Application of the Law Would Be Unlawful.

EPA also requested “comment on how the prospective or retrospective application of the provisions for dose response data and models or pivotal regulatory science could inadvertently

¹⁴⁹ Lanphear B.P. et al., *Low-Level Lead Exposure and Children’s Intellectual Function: An International Pooled Analysis*, *Envtl. Health Persp.* 113, 894-899 at 898 (2005).

introduce bias regarding the timeliness and quality of the scientific information available.” 83 Fed. Reg. at 18,772. Like much of the rest of the Proposal, it is unclear what exactly EPA is asking or suggesting. Certainly, to the extent EPA uses the Proposed Rule to exclude important, valid scientific information, it will bias the quality of the scientific information available.

To the extent EPA suggests the Rule may be applied retroactively, there is simply no basis for doing so. It is well-established that an agency cannot apply a rule retroactively absent clear congressional intention for such application. *E.g.*, *Sierra Club v. Whitman*, 285 F.3d 63, 68 (D.C. Cir. 2002) (referring to “unusual ability to implement rules retroactively”); *Bowen v. Georgetown Univ. Hospital*, 488 U.S. 204, 208 (1988) (“Retroactivity is not favored in the law. Thus, congressional enactments and administrative rules will not be construed to have retroactive effect unless their language requires this result. By the same principle, a statutory grant of legislative rulemaking authority will not, as a general matter, be understood to encompass the power to promulgate retroactive rules unless that power is conveyed by Congress in express terms.” (citations omitted)). EPA has not identified any such congressional intention in any of the statutes at issue, and thus retroactive application of the Rule would be unlawful.

Nor would the statutes upon which EPA relies support such an application. For example, as explained above, the Clean Air Act does not allow—and, as the D.C. Circuit has held, certainly does not require, *e.g.*, *American Trucking*, 283 F.3d at 372—applying the so-called transparency provisions of the Proposed Rule at all in rules subject to the procedural requirements of Clean Air Act § 307(d). Such rules include NAAQS. Further, far from suggesting that EPA could lawfully reopen long-settled NAAQS to apply a new and novel standard of review, the Clean Air Act requires EPA to review and revise air quality criteria and NAAQS at least every five years and to “promulgate such *new* standards as may be appropriate.” 42 U.S.C. § 7409(d)(1) (emphasis added). This carefully chosen language confirms that Congress did not intend for EPA to apply rules like the Proposed Rule to undo existing NAAQS, but instead intended for regular reviews of scientific information to result in new NAAQS.

Even if EPA had statutory authority to apply the Proposed Rule retroactively, it could not do so rationally. *See Sierra Club*, 285 F.3d at 68 (if EPA had authority to implement a rule retroactively, “retroactivity must be ‘reasonable.’”). Indeed, retroactive application of the Proposed Rule would undo well-settled rules in a tremendously unfair and irrational way, and would lead to widespread confusion about countless environmental and public health policies and protections.

B. Application of the Proposed Rule to Enforcement Actions, Individual Party Adjudications, or Permit Proceedings Would Be Unlawful.

EPA also seeks comment on whether provisions of the Proposed Rule should apply to enforcement activities, individual party adjudications, or permit proceedings. It should not. Application of the proposed provisions to such matters would be illegal and arbitrary for all the reasons set forth above, as well as for the following additional reasons.

First, with respect to enforcement actions, EPA has no authority to bar the courts or administrative adjudicators from considering relevant evidence merely because that evidence

hasn't passed an arbitrary test for transparency and peer review. The Clean Air Act, for example, vests authority over judicial enforcement actions to the courts, not EPA, and EPA has no authority to dictate to the courts what evidence they can and can't consider, or what weight to give such evidence. *See Nat. Res. Def. Council v. EPA*, 749 F.3d 1055, 1063-64 (D.C. Cir. 2014). Indeed, courts and administrative law judges are equipped with tools to separate out credible and non-credible scientific evidence, *see, e.g.*, Fed. R. Evid. 702; *Daubert*, 509 U.S. 579. Relatedly, whether a scientific study is sufficiently transparent or has been peer reviewed provides no bearing on administrative enforcement of these statutes, which provide enforcement authority over whether there has been a violation of specified requirements and prohibitions, *see, e.g.*, 42 U.S.C. § 7413(a)(1)-(5). It also is wholly irrelevant to determining administrative civil penalties. *See, e.g., id.* § 7413(e). Though the Clean Air Act does allow consideration of "such other factors as justice may require" in setting civil penalties, EPA does not and cannot explain how its transparency and peer review tests could possibly be relevant to whether "justice" requires a different penalty for violation of a prohibition or requirement. If a defendant feels that a standard is unjust because of a lack of data transparency or peer review in supporting studies, the sole remedy is to seek review in the Court of Appeals within 60 days of the standard's publication. The validity of standards cannot be questioned in an enforcement proceeding. *See, e.g.*, 42 U.S.C. § 7607(b)(2).

Second, EPA does not explain how or where its Proposed Rule could be relevant in individual party adjudications. Though the administrative penalty provisions of the Clean Air Act provide for individual party adjudications, *see, e.g.*, 42 U.S.C. § 7413(d)(3)-(4), EPA's proposed procedures bear no relevance or applicability to such adjudications.

Third, the proposed procedures cannot lawfully or rationally be required in the context of EPA decisions to abate "imminent and substantial endangerments" ("ISEs") to human health and the environment. *See, e.g.*, 42 U.S.C. §§ 300(i)(a) (SDWA § 1431(a)), 6973(a) (RCRA § 7003(a)), 7603 (CAA § 303), and 9606(a) (CERCLA § 106(a)). None of these provisions set or authorize limitations on the studies that can be relied upon in identifying ISEs. To the contrary, both courts and the EPA have interpreted these statutes as precautionary in nature, allowing abatement action where there is only a risk of harm. *See, e.g.*, EPA, *Guidance On the Use of Section 303 of the Clean Air Act*, EPA-R08-OAR-2013-0556-0015, at 2-4 (1991) ("Section 303 Guidance"); *see also United States v. Vertac Chemical Corp.*, 453 F.3d 1031, 1045 (8th Cir. 2006) (describing § 9606(a)'s ISE standard as "cautionary" in sanctioning EPA's decision to issue a unilateral administrative order requiring cleanup of former manufacturing site). ISE authorities are so precautionary in nature that they may be used even when the risk of harm is uncertain. *See United States v. Conservation Chem. Co.*, 619 F. Supp. 162, 194 (W.D. Mo. 1985) ("Both the courts and Congress have recognized that the evaluation of a risk of harm involves medical and scientific conclusions that clearly lie on the frontiers of scientific knowledge, such that proof with certainty is impossible."). EPA guidelines state that "[i]f the Agency can show a 'reasonable medical concern' created by the suspect emissions, it will have met the 'imminent and substantial endangerment' test of Section 303." Section 303 Guidance at 4.

EPA may be required to make an endangerment finding despite “some residual uncertainty.” *Massachusetts v. EPA*, 549 U.S. at 534 (holding that EPA could not avoid its statutory obligation to regulate greenhouse gases by noting the uncertainty surrounding climate change unless the scientific uncertainty was so profound as to preclude EPA from making a reasoned judgment about the risk of harm); *see also Coal. for Responsible Regulation v. EPA*, 684 F.3d 102, 121 (D.C. Cir. 2012) (“existence of some uncertainty does not, without more, warrant invalidation of an endangerment finding. If a statute is ‘precautionary in nature’ and ‘designed to protect the public health,’ and the relevant evidence is ‘difficult to come by, uncertain, or conflicting because it is on the frontiers of scientific knowledge,’ EPA need not provide ‘rigorous step-by-step proof of cause and effect’ to support an endangerment finding.” (quoting *Ethyl Corp. v. EPA*, 541 F.2d 1, 28 (D.C. Cir. 1976), a case regarding endangerment findings under § 211(c)(1)(A) of the Clean Air Act). For all the foregoing reasons, the language and purpose of the endangerment provisions would be flouted by a requirement that EPA be barred from (or forced to delay) relying on available peer reviewed studies to decide whether and how to remedy a hazardous substance release, contamination of drinking water, or other immediate threat.

Finally, to the extent EPA decides to apply this Proposed Rule in the context of enforcement, adjudicatory, and permit actions – which it should not – it must first issue a proposal setting out its basis for such a rule and provide opportunity for comment under the Administrative Procedure Act and Clean Air Act § 307(d). EPA cannot rely on the comment opportunity provided by its April 30, 2018 Proposal, as the Proposal provides no notice whatsoever of the substance of what EPA might or might not include in a rule applying to enforcement and other actions excluded from the regulatory text of the proposal. *See* 83 Fed. Reg. at 18,773 (proposed 40 C.F.R. § 30.3).

Re: **Comments of the Attorneys General of Louisiana, Alabama, Arkansas, Indiana, Kansas, Nebraska, Oklahoma, South Carolina, Texas, Utah, and Wisconsin on EPA's Proposal to Strengthen Transparency in Regulatory Science; 83 Fed. Reg. 18,768 (April 30, 2018);
Docket ID No. EPA-HQ-OA-2018-0259**

Dear Administrator Wheeler:

The undersigned Attorneys General, as the chief legal officers of our States, write to express support for the Environmental Protection Agency's ("EPA") April 30, 2018, proposal to adopt a regulation to provide much-needed transparency regarding the scientific research and data on which the agency bases its regulatory actions ("the Proposed Rule").*

GENERAL COMMENT

The citizens of our States and the industry stakeholders so crucial to our States' economies bear the cost of regulatory compliance. Accordingly, the science on which those regulations are based should be high quality and available to the public. Public disclosures should be sufficient to permit independent validation and analysis of the data, methodology, computational code, and conclusions. Transparency of this sort not only comports most fully with the public participation in rulemaking contemplated by the Administrative Procedure Act, but is a bedrock principle for establishing public confidence in actions taken by the EPA.

The Proposed Rule addresses the troubling erosion of credibility of published scientific literature. EPA is obliged to rely upon the best available science in its regulatory actions. *See, e.g.*, Exec. Order No. 13,783, 82 Fed. Reg. 16,093 (Mar. 31, 2017); Exec. Order No. 13,563, 76 Fed. Reg. 3,821 (Jan. 21, 2011). However, absent open sharing of underlying data, methodology, and computational code, the credibility of the science is open to question. Moreover, reproducibility can be rendered impossible, further crippling the credibility of the research.

As reported in *Science*, reproducibility in scientific work is important to providing confidence in the conclusions reached, but a “troubling proportion” of peer-reviewed studies are not reproducible.¹ *Science* thus revisited the criteria for publication with the aim of increasing confidence in the studies it publishes. Similarly, a recent article in *Nature* identified lack of replication and lack of data sharing as “threats” to reproducible science.² Open and transparent sharing of the methodology applied, the data acquired, and the process of methodology implementation, data analysis and outcome interpretation was identified as the remedy. The type of open science called for in these publications—laying bare both content and process—is precisely what is achieved through the Proposed Rule.

SPECIFIC COMMENT 1: There is strong evidence that publication in a peer reviewed journal is not sufficient to ensure a study reflects valid, reproducible science.

Concern with the quality of published science goes back to at least 2005, when a study of 45 highly-cited articles in *New England Journal of Medicine*, *JAMA*, and *Lancet* concluded that at least 7 articles (16%) were contradicted by subsequent research and another 7 articles (16%) claimed stronger effects than were supported by subsequent research.³ A widely-read essay published later that year suggested that most published research findings are false.⁴ Consistent with that suggestion, Bayer Healthcare disclosed in 2011 that 43 (65%) of the company’s attempts to reproduce 67 published studies resulted in inconsistent data.⁵ In 2012, Amgen, Inc., similarly disclosed that it was only able to reproduce 6 (11%) of 53 studies that the company attempted to confirm.⁶

Consistent with the Bayer and Amgen disclosures, recent estimates for irreproducibility in preclinical and biomedical research range as high as 90% of that research, even for articles published in high-quality journals.^{7, 8, 9} The problem does not appear to be limited to particular fields. For example, a recent survey of 804 ecologists and evolutionary biologists found that questionable research practices were widespread, with 64% of surveyed researchers reporting they had at least once failed to report results because they were not statistically significant (“cherry picking”); 42% reporting they had collected more data after inspecting whether results were statistically significant (a form of “p-hacking”); and 51% acknowledging they had reported an unexpected finding as though it was hypothesized from the start.¹⁰ In short, a large fraction of the surveyed researchers admitted to manipulating their results. Not surprisingly, a 2016 survey by the journal *Nature* found that lack of reproducibility is a widespread concern among scientists.^{11, 12}

SPECIFIC COMMENT 2: There is strong evidence of widespread, outcome-altering errors in the computational code underlying many scientific studies.

¹² Editorial, *Reality Check on Reproducibility*, 533 *NATURE* 437 (2016).

Outcome-altering errors in computational code have been suggested as a significant contributor to the replication crisis.¹³ High profile retractions, technical comments, and corrections because of coding errors include papers in prominent journals such as *Science*, *PNAS*, the *Journal of Molecular Biology*, *Ecology Letters*, *Journal of Mammalogy*, *Journal of the American College of Cardiology*, *Hypertension*, and *American Economic Review*.¹⁴ Such outcome-altering errors can arise from the simplest mistakes. For example, five retractions were based on a flipped minus sign.¹⁵ Perhaps most famously, a 2010 study by Harvard University economists Carmen Reinhart and Kenneth Rogoff was undermined by errors in the authors' spreadsheet.¹⁶ ¹⁷ The Reinhart-Rogoff study had significant public policy consequences, yet the errors went undetected until a graduate student sought and reviewed the authors' working spreadsheet.^{18, 19}

SPECIFIC COMMENT 3: The Proposed Rule is consistent with the publication requirements of major scientific journals, which were adopted specifically to address the reproducibility crisis.

In its commentary accompanying the Proposed Rule, the EPA noted that its policies and the policies of open-science advocates “are informed by the policies recently adopted by some major scientific journals, spurred in some part by the ‘replication crisis.’” 83 Fed. Reg. at 18770. The EPA cited the policies of *PNAS*, *PLOS One*, *Science*, and *Nature* as examples. *Id.* at 18770 & n.11. Those policies were specifically intended to address the inability of researchers to properly assess results in the absence of underlying data and methodology. The journal *Nature* explained:

Over the past year, *Nature* has published a string of articles that highlight failures in the reliability and reproducibility of published research The problems arise in laboratories, but journals such as this one compound them when they fail to exert sufficient scrutiny over the results that they publish, and ***when they do not publish enough information for other researchers to assess results properly.***

From next month, *Nature* and the *Nature* research journals will introduce editorial measures to address the problem by improving the consistency and quality of reporting in life-sciences articles. ***To ease the interpretation and improve the reliability of published results we will more systematically ensure that key methodological details are reported,*** and we will give more space to methods sections. We will examine statistics more closely and ***encourage authors to be transparent, for example by including their raw data.***²⁰

More recently, the editors of *Nature* recognized that—despite the adoption of transparency policies—resolution of the reproducibility crisis “is far from complete.”²¹ They accordingly encouraged “funders, researchers and journals to keep up the pressure towards the openness of complete data sets and any source code required to use them.”²² Although public disclosure of data, methodology, and computational code

may not be *sufficient* to ensure that scientific claims are valid, public disclosure is absolutely *necessary* for confidence in the validity those claims.^{23, 24, 25, 26}

SPECIFIC COMMENT 4: Pre-publication peer review is not an adequate substitute for public availability of data, methodology, and computational code.

In response to the Proposed Rule, some commenters have suggested the Proposed Rule is an attempt to remove valid and relevant scientific evidence from the rule-making process. But that begs the question: in the light of overwhelming evidence that a significant portion of studies published in prominent peer reviewed journals are not reproducible, it is dubious to claim that any particular research is valid and relevant unless—at a minimum—other researchers and the public have access to the underlying data, methodology, and computational code.

More to the point, empirical evidence indicates that peer reviewers routinely fail to identify even major errors.²⁷ And peer review in less prominent journals may often occur in name only.²⁸ In short, the best available metascience—science about science—indicates that pre-publication peer review is not adequate to ensure the validity of published scientific claims.

SPECIFIC COMMENT 5: Promises to share data with qualified researchers are not an adequate substitute for public disclosure of data, methodology, and computational code.

Promises to provide other researchers with access to data, methodology, or computational code are not an adequate substitute for public availability. Such promises often go unfulfilled.²⁹ In an attempt to quantify the problem, researchers from Memorial Sloan-Kettering Cancer Center sought data from the corresponding authors of ten articles that were subject to a data sharing requirement.³⁰ Two of the authors could not be contacted. Of the remaining eight authors, four replied that sharing their data was not possible, three did not respond, and one asked for further details regarding the request. Despite a follow-up contact reminding the authors of their data sharing obligation, the Sloan-Kettering researchers received only a single data set of the ten originally sought.

Significantly, many uncredentialed members of the public are capable of reviewing and identifying errors in data, methodology, and computational code. The Reinhart-Rogoff errors, *supra*, were identified by a graduate student. Other serious, basic errors in high-profile studies have been identified by undergraduates.³¹ If undoubtedly qualified Sloan-Kettering researchers were generally unable to obtain data, there is little reason to believe other researchers—formally qualified or otherwise—will be able to do so. When the EPA decides to regulate, the public is entitled to more than empty promises that data supports that decision.

SPECIFIC COMMENT 6: The Proposed Rule is supported by and arguably required by the Administrative Procedure Act.

The Administrative Procedure Act (“APA”), 5 U.S.C. § 500 et seq., prohibits agency action, findings, and conclusions that are arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law. *See* 5 U.S.C. § 706(1). In view of the overwhelming evidence that (i) a very high percentage of published studies are not reproducible, (ii) pre-publication peer review is not sufficient to ensure that a study lacks major errors, and (iii) pre-publication peer review is not sufficient to ensure that the computational code underlying a study lacks major errors, we respectfully submit that the Proposed Rule is *necessary* and arguably *required* by the APA. Indeed, an agency action based on a study without fully disclosed data, methodology, and computational code is arguably so lacking in reasoned foundation as to be arbitrary and capricious.

SPECIFIC COMMENT 7: The Proposed Rule should apply to all agency actions that are based on science.

The replication crisis and public confidence rationales that underlie the Proposed Rule suggest that data, methodology, and computational code should be disclosed for all science relied upon to support agency actions. As a first step, the phrase “dose response data and models” should be replaced with “data and models, including dose response data and models” throughout the Proposed Rule.

SPECIFIC COMMENT 8: EPA should identify all studies (or other regulatory science) it will rely upon at the time it proposes any regulation.

In order to meaningfully comment on proposed agency action, the public should be informed of the detailed scientific basis for that action when the action is proposed. Accordingly, Proposed Section 30.4 should be amended to provide:

EPA shall clearly identify all studies (or other regulatory science) relied upon to support when it takes any final agency action. When EPA proposes any agency action, EPA ~~should~~ shall make all such studies (or other regulatory science) available to the public to the extent practicable.

SPECIFIC COMMENT 9: The proposed rule should not include exceptions that are not required by statute or the Executive Branch’s inherent powers.

In view of the widespread problems with replicating even peer-reviewed studies published in prominent journals, the EPA should minimize exceptions to the disclosure requirements set forth in the Proposed Rule. Courts have frequently rejected attempts to withhold information based on claims to privacy, etc., unless protections are specifically provided by law. *See, e.g., Johnson v. Dovey*, 2011 U.S. Dist. LEXIS 128577, at *6-7 (E.D. Cal. Nov. 7, 2011) (rejecting vague assertion of privacy rights: “CDCR’s objections are not specific in any way, and are thus insufficient to assert a privilege.”); *see also Donovan v. Nat’l Bank of Alaska*, 696 F.2d 678 (9th Cir. 1983) (“The bank cannot refuse to comply with the subpoena as a whole on the basis of its vague allegations that it might be required . . . to produce records in violation of the Financial Privacy Act.”). EPA should similarly reject such claims to “privacy, confidentiality, [and] confidential business information” vis-à-vis data and models, unless those claims are clearly supported by law or the Executive Branch’s inherent powers. Accordingly:

(a) EPA should amend the second sentence of Section 30.5 to provide that

Where the Agency is making data or models publicly available, it shall do so in a fashion that is consistent with law, ~~protects privacy, confidentiality, confidential business information,~~ and is sensitive to national and homeland security.

(b) EPA should amend the penultimate sentence of Section 30.5 to provide that

The agency shall make all reasonable efforts to explore methodologies, technologies, and institutional arrangements for making such data available before it concludes that doing so in a manner consistent with law and ~~protection of privacy, confidentiality,~~ national and homeland security is not possible.

Further, in view of the evidence that even studies published in prominent journals are often false or overstate results, the EPA should carefully consider the weight given to studies, data, and models that are not disclosed for review by the public and other researchers, even where non-disclosure is required by law.

SPECIFIC COMMENT 10: In view of the replication crisis, the EPA should re-evaluate existing regulations using the standards set forth in the Proposed Rule.

In the commentary accompanying the Proposed Rule, the EPA states that the Proposed Rule “is intended to apply prospectively . . .” 83 Fed. Reg. at 18771. In view of the overwhelming evidence that (i) a very high percentage of published studies are not reproducible, (ii) peer review is not sufficient to ensure that a study lacks major errors, and (iii) peer review is not sufficient to ensure that the computational code underlying many studies lacks major errors, we submit that the EPA should establish a plan to review the scientific basis for existing regulations under the standards of the Proposed Rule.

SPECIFIC COMMENT 11: The EPA should not delay implementation of this rule unless required to do so by statute.

Certain commenters claim the EPA has not complied with specific statutory obligations. We take no position on the EPA’s statutory obligations, but we encourage the EPA to carefully comply with applicable procedural requirements so as to minimize the risk of dilatory litigation.

* * * * *

The Proposed Rule makes great inroads towards the EPA’s ensuring public confidence in the regulations it enacts. We support making critical scientific data available in a way that is both timely and transparent to stakeholders and the public at large. To that end, we fully support the Proposed Rule. We appreciate your consideration of this comment and look forward to the prompt enactment of this important regulation.

RE: Comments of Natural Resources Defense Council on “Strengthening
Transparency in Regulatory Science,” 83 Fed. Reg. 18,768 (April 30, 2018),
Docket ID No. EPA-HQ-OA-2018-0259

I. Introduction

Natural Resources Defense Council (NRDC) is a national, not-for-profit public-health and environmental advocacy organization whose purpose is to safeguard the Earth: its people, its plants and animals, and the natural systems on which all life depends. NRDC has hundreds of thousands of members, all of whom depend on the U.S. Environmental Protection Agency (EPA) to protect them from the harms of pollution. EPA’s proposed rule, “Strengthening Transparency in Regulatory Science,” 83 Fed. Reg. 18,768 (Apr. 30, 2018) (the “Proposal”) would harm these members by limiting the types of science that EPA could use to protect the environment and public health. As described in detail below, the Proposal is an attack on science and violates the law. EPA should withdraw it immediately.

The Proposal would bar EPA from considering science based on dose response data and models that could not be made “publicly available in a manner sufficient for independent validation.” 83 Fed. Reg. at 18,773. EPA asserts that “[e]nhancing the transparency and validity of the scientific information relied upon by EPA strengthens the integrity of EPA’s regulatory actions and its obligation to ensure the Agency is not arbitrary in its conclusions.” 83 Fed. Reg. at 18,769. Notably, as described in detail below, neither the Proposal nor docket contains any factual, scientific, technical, logical, or legal support for the suggestion that science and data that are “publicly available in a manner sufficient for independent validation” are necessary elements for the “validity,” “reliability,” or “transparency” of scientific information. *Id.* EPA provides no basis for its assumption that science or studies for which data are publicly available yield more valid or reliable results than the best available, peer-reviewed, independent, credible science, for

NATURAL RESOURCES DEFENSE COUNCIL

1152 15TH STREET NW | SUITE 300 | WASHINGTON, DC | 20005 | T 202.289.6868 | NRDC.ORG

ED_002389_00024317-00001

which the underlying data are not publicly available. Similarly, the Proposal arbitrarily fails to address, much less explain, why prior EPA regulatory actions that relied upon studies, data, or other information did not reflect the “best available science” or why they were otherwise unreliable, despite failing to meet the Proposal’s standards.

To the contrary, EPA, other federal agencies, EPA scientific advisory bodies, the National Academy of Science (NAS), and EPA’s Science Advisory Board (SAB) have repeatedly and consistently relied upon the best available, peer-reviewed, independent, credible scientific studies—for which the underlying data are not publicly available—and found that science to be valid, reliable, trustworthy, and a reflection of the “best available science” that EPA claims as its concern in the Proposal. The Proposal arbitrarily excludes prior research, studies, and data that do not meet its applicability criteria based on concerns that were never announced to researchers or the public, or deemed necessary by any government agency, at the time the research, studies, or data-gathering were undertaken. The Proposal is strikingly at odds with those scientific practices and their history, with *nothing* in the rulemaking docket to support casting aspersions on the practices or history sufficient to prohibit EPA from considering such science.

EPA has unsurprisingly failed to cite a single statute that provides any basis for the Proposal. What statutes EPA does cite conflict with the Proposal, because they require EPA either to consider the best available science (which may be based on data that cannot be made public) or to regulate to protect public health and the environment (which cannot be done if critical science is ignored simply because the underlying data cannot be made public). Similarly, none of the other sources EPA cites provide legal or logical support for the Proposal.

The Proposal also suffers from a host of other problems: its definitions are vague; it is an unexplained reversal from prior agency policy; it handles confidential business information in a capricious manner; it treats other types of agency actions inconsistently; it applies retroactively to studies completed before the rule goes into effect; it fails to analyze the disproportionate effect of the rule on people of color, low-income people, and children; and it contains a cryptic peer review provision.

As explained throughout these comments, EPA’s agenda, as reflected in the Proposal, is not greater public trust or understanding; rather, the Proposal’s goal is censorship of science and studies whose underlying data are not publicly available and may not be made publicly available as a matter of law or other agreement. The Proposal should be withdrawn.

II. The Proposal is a flawed solution in search of a problem

The Proposal represents an unworkable, ill-explained, unjustified, and thoroughly unlawful approach to address a problem that does not exist. EPA does not explain why the data sharing requirements outlined in the Proposal are suddenly so urgent. This missing argument is especially significant given the decades of peer-reviewed data and models that EPA has justifiably relied on for regulatory actions. There is no “crisis in replicability” for the types of data and models that the Proposal purports to address; as an indication of this, EPA has not cited *any* sources for its assumptions presented in the Proposal.

The governing, harmful conceit of the Proposal—to censor the best available, peer-reviewed health science that EPA may consider, in order to prevent adoption of protective health and environmental safeguards—is a thinly disguised version of anti-science legislation that Republican members of Congress have introduced, repeatedly, but have been unable to enact into federal law, repeatedly.¹ NRDC opposed those bills strongly, and still does. We raised many of the identical objections to those bills that we raise to the Proposal in these comments.² Indeed, it is striking that one of the primary EPA co-authors of the Proposal was a Committee staff person for the leading congressional co-sponsor of the legislation in question when the failed bill was being shepherded through the House of Representatives.³

Members of Congress understood that new legislation was required to censor EPA consideration of high quality, peer-reviewed science, and yet EPA barreled ahead with a Proposal based on the same legislative approach while pretending, suddenly, that multiple federal laws have authorized that approach, magically, all along. For the reasons discussed in these comments, the Proposal is not authorized by any federal laws. Moreover, the Proposal violates numerous federal laws entrusted to EPA, in addition to being arbitrary and capricious and an abuse of EPA’s discretion.

A leading medical researcher notes that, if the Proposal is approved, “science will be practically eliminated from all decision-making processes” at the agency because so few studies meet (or could be expected to meet, on time scales appropriate for regulatory actions and associated public comment periods) the Proposal’s requirements for data availability.⁴ Instead of restricting the pool of available science by instituting an unworkable requirement for a broad category of scientific inquiry, EPA should focus on identifying particular weaknesses in the available evidence and targeting future investigations towards addressing specific deficiencies.

Moreover, assessing whether any particular study is reliable is not contingent on whether the underlying data can be made public, a fundamental point made clear in a report that EPA itself cited in the Proposal.⁵ The assessment of study credibility depends on a number of factors, including “how large and rigorous studies are, how well researchers have contained conflicts of interest (financial or other), and how successfully the study design and analysis have limited bias, properly accounting for the complexity inherent in each scientific question.”⁶

(Hereinafter “OMB Guidance”).

⁶ See All Science, *supra*, n. 4.

With respect to one area of dose response data and models considered by EPA, decades of quantitative, peer-reviewed investigation into the premature mortality risks caused by PM_{2.5} have replicated study findings across different geographic settings and time periods. EPA's own 2009 Integrated Science Assessment (ISA) for PM_{2.5} considered many scientific studies that do not meet the data transparency requirements of the proposed rule. The ISA concluded, based on a wealth of epidemiologic evidence, that a causal relationship exists between short-term PM_{2.5} exposures and cardiovascular effects and mortality, and is likely to exist for respiratory effects. The ISA also found that the scientific evidence is sufficient to conclude that the relationship between long-term PM_{2.5} exposure and respiratory effects is likely to be causal, and is causal for mortality. The Agency has not explained why the scientific evidence underlying these determinations is now insufficient for regulatory decision making. Its proposal to exclude scientific data based on questionable transparency requirements is arbitrary and in direct contradiction with prior Agency determinations.

As the ISA demonstrates, no Agency regulatory action is predicated on the results of any single scientific study; rather, the continual accumulation of quantitative evidence with respect to the dose-response relationships for particular environmental contaminants informs decision making. The causal criteria outlined in the ISA demonstrate the iterative process by which dose-response relationships are assessed over time as evidence is gathered and published in peer-reviewed journals. In assessing the reliability of scientific findings, "it is essential to examine evidence in its totality, recognize its relative strengths and weaknesses, and make the best judgment based on what is available."⁷

A. According to information cited in the Proposal, publicly available data is not needed to ensure reproducibility

Importantly, one of the documents that EPA relies upon in the Proposal in footnote 6 fatally undermines the Proposal's pretense that underlying data protected by confidentiality concerns must be made publicly available in order to be considered valid and reliable, and meet the "reproducibility standard." 83 Fed. Reg. at 18,769. A 2002 Office of Management and Budget report, "Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by Federal Agencies," (OMB Guidance)⁸ notes that data need not be publicly available in order to meet the reproducibility standard:

Even in a situation where the original and supporting data are protected by confidentiality concerns, or the analytic computer models or other research methods may be kept confidential to protect intellectual property, it may still be feasible to have the analytic results subject to the reproducibility standard. For example, a qualified party, operating under the same confidentiality protections as the original analysts, may be asked to use the same data, computer model or statistical methods to replicate the analytic results reported in the original study.⁹

⁷ *Id.*

⁸ *See supra*, n. 5, OMB Guidance.

⁹ *Id.* (citing Krewski, D., Burnett, R. T., Goldberg, M. S., Hoover, K., Siemiatycki, J., Abrahamowicz, M., & White, W. H., Reanalysis of the Harvard Six Cities Study and the American Cancer Society Study of Particulate Air

The OMB Guidance directly undermines the notion that the only way for research to meet the reproducibility standard is by making all underlying data available for public inspection. As the document further notes,

[t]he primary benefit of public transparency is not necessarily that errors in analytic results will be detected, although error correction is clearly valuable. The more important benefit of transparency is that the public will be able to assess how much an agency's analytic result hinges on the specific analytic choices made by the agency. Concreteness about analytic choices allows, for example, the implications of alternative technical choices to be readily assessed. This type of sensitivity analysis is widely regarded as an essential feature of high quality analysis, yet sensitivity analysis cannot be undertaken by outside parties unless a high degree of transparency is achieved. The OMB guidelines do not compel such sensitivity analysis as a necessary dimension of quality, but the transparency achieved by reproducibility will allow the public to undertake sensitivity studies of interest.¹⁰

Lastly, the OMB Guidance indicates that publicly accessible data is an unworkable requirement in some situations due to sensitive data that cannot be legally or ethically released to the public: "We acknowledge that confidentiality concerns will sometimes preclude public access as an approach to reproducibility."¹¹

The Proposal is arbitrary and capricious and an abuse of EPA discretion by creating a framework in which it is very clear its real concerns are not "actual verification" of studies and data or "best available science," but prohibiting EPA from considering and basing protective regulations on relevant, peer-reviewed science whose underlying data or elements *may not* be made publicly available, due to various legal obligations such as confidentiality agreements, laws, or regulations. The Proposal's real aims are not verification or "best available science"; instead, its aims are censoring science and obstructing evidence of the need for greater health and environmental safeguards.

B. Independent validation is already occurring

The Proposal does not require that any information *actually* be *independently validated* before EPA may consider it or base regulatory decisions on such verification. Accordingly, there is an irrational disconnect between EPA's insistence that information be "publicly available for independent validation" and the Proposal's claim that this ensures EPA will consider and use the "best available science." *See* 83 Fed. Reg. at 18,769. EPA itself has not outlined a process by which "dose response data and models" would be validated, and the Proposal does not seriously consider the methodological complications of partial redaction of underlying study data.

Pollution and Mortality," A Special Report of the Health Effects Institute's Particle Epidemiology Reanalysis Project, Cambridge, MA, Health Effects Institute (2000). (Hereinafter "Reanalysis of Harvard Six Cities Study").

¹⁰ *Id.* at 8456.

¹¹ *Id.*

The Proposal claims that its data release requirements are vital for “independent validation,” but the truth is that independent validation is happening now. As an example, consider the independent validation of the Harvard Six Cities study by the Health Effects Institute (HEI), which is characteristic of the types of complex epidemiologic investigations that could be subject to the unworkable provisions of this Proposal.¹² The Clean Air Act requires EPA to consider the best available evidence in setting and revising the National Ambient Air Quality Standards (NAAQS) to protect health within an adequate margin of safety. 42 U.S.C. § 7409(b)(1). Fine particulate matter, an air pollution category encompassing solid particles and condensed liquid droplets with a diameter of 2.5 microns or smaller (PM_{2.5}), is by far the most dangerous type of air pollution because it can penetrate deep into the lung and enter the bloodstream.¹³ The 1993 Harvard Six Cities Study, a groundbreaking study into the link between air pollution exposures and health, examined the health effects of PM_{2.5} air pollution over 16 years on more than 8,000 adults and 14,000 children relying on private medical records and air pollution monitors deployed near study volunteers.¹⁴ The study found a significant relationship between air pollution exposure and risk of early death, but the raw data could not be released publicly because researchers were obligated to ensure study participant confidentiality.

Still, relying on that data, more than 100 peer-reviewed studies have confirmed the basic results of that initial study. Because the study and others like it advanced through the rigorous peer-review process characteristic of the world’s leading scientific journals (whose editors have rejected the proposed rule¹⁵), EPA relied on the results of this study and others in 1997 when it promulgated the first-ever NAAQS for fine particulate matter.¹⁶ Since then, hundreds of additional studies into the health effects of air pollution (conducted across the country¹⁷ and internationally,¹⁸ for both short-¹⁹ and long-term²⁰ impacts of exposure) and independent re-analyses of existing datasets have affirmed the air pollution-mortality and morbidity links with increasing precision. In 2000, the Health Effects Institute published

its independent re-analysis²¹ of the Harvard Six Cities study, which confirmed the original findings. When HEI was tasked with re-analyzing the study data in February 1997, it required a major investment of time and analytical resources on a scale far beyond that envisioned by the Proposal. In fact, the HEI re-analysis, which validated the original study findings, took three years to complete.²² The fact that the original Six Cities study stood up strongly to the scrutiny of independent researchers and sensitivity analyses speaks to the methodological rigor that the peer-review system demands. Indeed, the field of air pollution epidemiology in particular already has a high reproducibility standard.²³

Clearly, the Proposal arbitrarily ignores the significant amounts of time, effort and expense associated with “independent verification” of studies and data, especially given the wide scope of peer-reviewed science that would be subject to data sharing requirements. 83 Fed. Reg. at 18,774.²⁴ Given how long it took a team of researchers to independently re-analyze a single study, and the relatively short public comment periods associated with EPA regulatory actions,²⁵ the Proposal is doubly arbitrary: it ignores the significant amounts of time, effort and expense associated with “independent verification” of studies and data. Moreover, it is possible (even likely) that studies or data submitted by the public during comment periods would need to be independently assessed before consideration by EPA. Against the backdrop of EPA rulemakings with public comment periods and open rulemaking time periods and the voluminous amounts of data that would need to be de-identified, shared, and re-analyzed, it would be impossible to achieve independent verification of relevant dose-response information.

EPA has rightly continued to rely on the robust peer-reviewed literature to inform the air quality standard-setting process year after year, incorporating the best available scientific evidence in epidemiology, toxicology, and exposure assessment to set the outdoor air quality standards at levels that protect public health and the environment. It has also (until recently) agreed with leading scientists who have spent their careers studying air pollution and health that no safe threshold of fine particulate air pollution exists. The National Ambient Air Quality Standards and Clean Air Act’s designations process have helped to clean up our nation’s air in

²¹Reanalysis of Harvard Six Cities Study, *supra* n.9.

²² Elaine Appleton Grant, “Prevailing Winds: A decades-long fight to bring clean air standards in line with environmental health science offers lessons for today,” Harvard Public Health Magazine, Fall 2012 *available at* <https://www.hsph.harvard.edu/news/magazine/f12-six-cities-environmental-health-air-pollution/>. (Hereinafter “Prevailing Winds”).

²³ See All Science, *supra*, n. 4.

²⁴ Regarding proposed § 30.7, the Proposal states that “EPA shall conduct independent peer review on *all* pivotal regulatory science used to justify regulatory decisions” (emphasis added). EPA, in its Proposal and accompanying administrative record, does not begin to grapple with the impossible, burdensome obligation the Proposal creates to conduct new and independent peer review of “all pivotal regulatory science,” especially against the backdrop of the real-world experience with the three-year, costly, resource-intensive HEI re-analysis of just *one* study. See *supra*, Prevailing Winds, at n. 22.

²⁵ Environmental statutes and the Administrative Procedure Act sometimes allow public comment periods to be as short as 30 days. This period of time is wildly out of sync with the Proposal’s conceits that making data or models underlying regulatory science publicly available will allow for independent validation. See, e.g., 83 Fed. Reg. at 18,773 (proposed § 30.1). EPA has no response to this disconnect in the Proposal or the administrative record accompanying the Proposal.

substantial ways since 1970, and have protected millions of Americans, young and old, from breathing polluted air that would harm their health.

When analyzing the HONEST Act, the previously introduced legislation aimed at achieving the same end as the Proposal, the Congressional Budget Office predicted that the yearly tab could top \$100 million to upgrade the format and availability of those studies' data to the level required if EPA continues to rely on the same volume of scientific research as in the recent past.²⁶ In part, the money would go toward obtaining all of the underlying data for specific studies, formatting the information for public use, and providing access to the needed computer codes and models, the analysis said.

The Proposal also fundamentally ignores the real-world constraints, as well as moral barriers in some cases, to replicating studies due to the impossibility or offensiveness of reproducing conditions that underlay the studies. For example, researchers cannot replicate the poor air quality conditions experienced in the past and, correspondingly, the peer-reviewed investigations of the health effects cannot be reproduced. As one leading researcher notes, “researchers cannot ethically randomize people to harmful exposures in order to tackle confounding, nor violate informed consent agreements that prohibit open sharing of private data from past studies.”²⁷

Finally, the EPA chemical assessment program, called the Integration Risk Information System (IRIS) already uses credible transparent methods to provide the public with reliable, transparent, credible chemical hazard assessments and toxicity values. The program received high praise from its last two reviews by the National Academies of Sciences (NAS 2014 and NAS 2018), as well as from the Scientific Advisory Board (SAB 2017) for its continuous improvements and successes in its methods for evaluating and integrating scientific evidence from various streams including human studies, animal studies, and mechanistic studies. This Proposal would undermine decades of expert work to advance successful data evaluation methods described in the systematic review approach now underway in the EPA IRIS program.

C. Health Insurance Portability and Accountability Act

Many of the studies that EPA has relied on to set and revise the NAAQS are epidemiological prospective cohort investigations encompassing thousands of individuals over several decades. The Proposal's provisions concerning the public sharing of underlying data from these studies directly contradict both the legal protections for private medical data under the Health Insurance Portability and Accountability Act (HIPAA)²⁸ and the requirements researchers adhere to under the purview of Institutional Review Boards (IRBs),²⁹ which typically require

investigators to ensure study participant confidentiality and data security. The foundational research in air pollution epidemiology demonstrating a causal link between pollution exposures and adverse health outcomes (including early death,³⁰ heart disease,³¹ lung cancer,³² stroke,³³ and asthma exacerbations³⁴) would be put at risk if the Proposal were finalized. Underlying sensitive health data cannot be released without obtaining individual patient consent, or consent from the next responsible party³⁵ for study participants who have died.

Importantly, the Proposal does not consider the negative effects it would have on recruitment for future epidemiological studies if members of the public had to permit access to sensitive personal and health information as a condition for study participation. Many of the peer-reviewed studies EPA uses to set and revise National Ambient Air Quality Standards through the Clean Air Act analyze the relationship between exposure to polluted air over many years and a range of adverse health effects. These comprehensive studies have enrolled thousands of American volunteers over periods ranging from several years to decades, in order to understand exactly how pollution harms us. The Proposal would have a chilling effect on the study recruitment process because of the onerous data release requirements. EPA's actual creation of these harmful consequences, and failure to consider and account for these harmful consequences, render the Proposal arbitrary and capricious and an abuse of agency discretion.

The Proposal would stand in stark contrast to the protective, guiding principles of the Health Insurance Portability and Accountability Act,³⁶ known as HIPAA. HIPAA was enacted nationally in 1996 as Public Law 104-191 and has served as a foundation for the protection of individual patients' privacy in research and in healthcare settings, setting boundaries on the appropriate use and release of health records.

According to the Department of Health and Human Services, HIPAA "establishes appropriate safeguards that health care providers and others must achieve to protect the privacy of health information; . . . holds violators accountable, with civil and criminal penalties that can be imposed if they violate patients' privacy rights; and it strikes a balance when public

responsibility supports disclosure of some forms of data – for example, to protect public health.”³⁷

With the shift away from paper to electronic medical records in recent decades, “the potential for individuals to access, use, and disclose sensitive personal health data” has increased.³⁸ While protecting individual patient privacy is a long-standing tradition among health-care and public health practitioners, previous legal protections were afforded by a patchwork of inconsistent and often inadequate laws and regulations. In 2003, pursuant to HIPAA, rules were enacted to expressly protect the privacy of certain individually identifiable health data, or “protected health information” (PHI). The HIPAA Privacy Rule (Standards for Privacy of Individually Identifiable Health Information) offered the first national standards for protecting the privacy of health information.³⁹

For researchers at American universities and teaching hospitals, HIPAA and the Privacy Rule are part of life, especially in the health sciences. Any proposed research project must submit a complete description of its planned use, protection, and storage of PHI before the university’s Institutional Review Boards (IRB), before any research project may proceed. Each researcher needs to annually renew their familiarity and expertise with the terms of HIPAA and the Privacy Rule, by taking a test to certify compliance. It is eminently obvious to those involved in research that protecting study subjects’ personal data is of the utmost importance, from an ethical and a legal viewpoint.

The Proposal, on the other hand, would disallow use of an enormous body of carefully-protected, de-identified health data from epidemiological studies large and small, for which IRBs have approved collection because patient privacy has been protected. The rule would effectively demand that study subjects’ private health information be made publicly available, or else not be usable in regulatory efforts. This measure would hamstring the research community’s ability to continue to produce foundational, health-protective research. Not only would the rule destroy society’s collective ability to benefit from studies of the causes of and potential cures for ill health, it also would veer dangerously toward compromised privacy during an era in which electronic data security is a nationwide crisis. In short, the Proposal flies in the face of decades of statutory, regulatory and institutional progress to simultaneously protect public health and privacy.

D. Anonymization or partial redaction of data is unworkable

Proponents of the Proposal have suggested that privacy concerns surrounding the sharing of health data can be mitigated by anonymizing the individual-level health data that researchers collect. This overlooks the serious problem that anonymizing data (through techniques such as data masking, coding, and de-identification techniques) might not adequately protect confidentiality or privacy. Various studies have documented that de-identification techniques to

³⁷ *Id.*

³⁹ *Id.*

render data anonymous is not “simple,” despite what the Proposal suggests, and can lead to the publication of protected confidential or private data. One study explained that “[b]y linking demographics to public records such as voter lists, and mining for names hidden in attached documents, we correctly identified 84 to 97 percent of the profiles for which we provided names.”⁴⁰ Another explained “87% (216 million of 248 million) of the population in the United States had reported characteristics that likely made them unique based only on [5-digit ZIP, gender, date of birth].”⁴¹ Finally, another explains that “any data that is even minutely useful can never be perfectly anonymous.”⁴² The Proposal does not acknowledge these issues.

The claim that publicly available dose response data and models would allow for independent validation stands in direct contradiction to the legal privacy protections that apply to key data necessary for re-analysis. The proposed partial redaction of sensitive information poses a cascading set of problems, because the statistical models characteristic of epidemiologic investigations rely on the inclusion of potentially confounding variables (*e.g.*, age, sex, home address, health status, diet and alcohol consumption, smoking history) in order to properly isolate the pollution-health relationship with precision.⁴³ To understand the dose-response connection, these studies analyze detailed health, demographic, spatial, and behavioral information from thousands of people. This information is extremely sensitive and collected at the individual level. As such, our nation’s health privacy laws and Institutional Review Board (IRB) protocols require researchers to keep the data secure and confidential to prevent misuse. Collectively, these data points help researchers understand and isolate the cause-effect relationship between exposure to air pollution and risks for various health problems. It would be extremely difficult if not impossible for anyone using partially-redacted data sets derived from epidemiologic cohort studies to “validate” the results of the original studies, because such investigators would not be working with complete data sets.

As further demonstration, the 2009 Integrated Science Assessment for PM_{2.5} notes that “[a]ppropriate statistical adjustment for confounders requires identifying and measuring all reasonably expected confounders.”⁴⁴ Therefore, exclusion of some potentially sensitive confounding variables from an underlying dataset likely would lead a different team of investigators to a different result. Causing this wrongheaded and indefensible outcome results from the core approach and conceit in the Proposal, revealing it to be yet again, arbitrary and capricious and an abuse of EPA discretion. Put another way, the quantitative findings of dose-response relationships would almost certainly differ—not as a result of any true difference in the quantitative exposure-effect relationship, but because the original work relied on complete data

sets and the new analyses would not—due to the Proposal. The resulting discrepancies in quantitative findings could serve as motivation to call the original study results into question due to faulty and incomplete re-analyses.

In any case, such an undertaking would be immensely costly, complicated, and slow—and deliver no net benefit to EPA or the American public. The cost projections are staggering: when EPA staffers in 2017 considered the potential effects of the failed HONEST Act⁴⁵ that mirrors the approach of the Proposal, they calculated⁴⁶ that efforts to anonymize health data and confidential business information could top \$250 million annually⁴⁷ (and potentially up to \$1 million **per study**) for the already strained agency workforce—huge amounts of taxpayer money and staff time that would be much better spent on implementing our nation’s environmental laws.

Despite this significant cost estimate, EPA does not confront the financial dimensions or the need for financial incentives to support the unprecedented data release requirements in the rule.⁴⁸ It also does not consider the fact that scientists do not typically receive funding to make the data underlying peer-reviewed studies available for public inspection. The Proposal would likely “significantly reduce” the evidence base that the EPA considers for air quality/health analyses (according to a Congressional Budget Office evaluation of the HONEST Act⁴⁹), a dramatic reduction that excludes the best available scientific studies that the agency has relied on for more than 20 years to set and revise the NAAQS.

Under the Proposal, EPA would not be able to rely on the best available science for its Integrated Science Assessments of air pollution that inform the NAAQS-setting process. Meanwhile, industry-funded research calling into question the air pollution-health link would not be subject to similar data release requirements, or even peer-review and independent reevaluation. This approach is asymmetric and favors selective, opaque, and questionable research methods over the consensus of robust peer-reviewed scientific investigation. Transparency in scientific data is an important topic, but one that needs to be balanced against the privacy concerns of study participants and legal and ethical restrictions on the sharing of sensitive data.

EPA identifies no indication under federal laws that Congress intended to create or authorize a lose-lose dynamic, in which EPA could exercise its authority either by excluding the best available, peer-reviewed science to inform health and environmental protections, *or* force researchers or ordinary Americans to cast aside privacy concerns, as well as legal and ethical

restrictions on the sharing of sensitive data. That false choice is entirely a creation of the agency’s misguided policy preferences in the Proposal. The rule is arbitrary and capricious and an abuse of EPA discretion, with its selective application of data release requirements and disregard for the quantitative complexities of epidemiologic research.

E. EPA misrepresents data sharing policies at scientific journals

The Proposal identifies data sharing policies at a number of peer-reviewed scientific journals and claims that these policies support the Proposal’s underlying public access requirements for dose response data and models. This is false. In fact, these various journal policies are more flexible in their terms for data sharing and nuanced in their practical approaches than what EPA fundamentally misrepresents in the Proposal. *See, e.g.*, 83 Fed. Reg. at 18,771/1, nn.20–22. An examination of these sources indicates, in fact, that the language of the Proposal is not consistent with best practices and is unworkable in practice.

The Proposal is not, as it claims, “consistent with requirements for many scientific journals.” 83 Fed. Reg. at 18,771. Specifically, the Taylor and Frances journal policy for data transparency⁵⁰ is much more nuanced than EPA claims and offers a range of options for data submission, demonstrating the need for flexibility and discipline-specific concerns with respect to the public sharing of sensitive data. The Springer Nature Research Data Policy⁵¹ cited in the proposed rule is similarly flexible, describing requirements across a spectrum for four types of underlying research data. For only one of four types of research data is data sharing required as a condition for publication. The frequently asked questions document for the Springer Nature Data Policy⁵² notes that “[t]he policies apply to all research that support publications but *reasonable restrictions on data availability are permitted to protect human privacy, biosafety or respect reasonable terms of use for data obtained under license from third parties.*”⁵³ The Proposal’s categorical exclusion and prohibition are thus flatly inconsistent with the Springer Nature Research Data policy cited in the Proposal. *See* 83 Fed. Reg. at 18,771/1, n.20.

Furthermore, Elsevier’s corresponding policy⁵⁴ is optional for authors, and states that the journal: “will . . . [e]ncourage and support researchers to share research data *where appropriate* and at the earliest opportunity, for example by enhancing our submission processes to make this easier.”⁵⁵ A frequently asked questions page further explaining this policy says that the “policy is clear in that *we encourage and support authors to share their research data rather than mandating them to do so* and provide tools and services to enable them to do this effectively.

⁵⁰ Taylor & Frances Group, “Author Services: Data Sharing Policies,” *available at* <http://authorservices.taylorandfrancis.com/wp-content/uploads/2018/01/Data-sharing-policies.pdf>.

⁵³ *Id.* (emphasis added).

⁵⁴ Elsevier, “Research Data,” *available at* <https://www.elsevier.com/about/our-business/policies/research-data>.

⁵⁵ *Id.* (emphasis added); *see also* Elsevier, “Research Data FAQs,” *available at* <https://www.elsevier.com/about/policies/research-data/research-data-faqs>.

Where there is community support for (often discipline-specific) mandates regarding data deposit, submission and sharing, some of our journals may reflect this with their own mandatory data sharing policies.”⁵⁶ This same supporting frequently asked questions resource from Elsevier says that Elsevier “respect[s] authors who need to keep research data under embargo.”⁵⁷ The Proposal, by contrast, does not allow researchers to keep their research data under embargo. Nor does the Proposal offer such discipline-specific flexibility and, as a result, is neither practically workable nor consistent with the policies of the world’s leading scientific journals.

The Elsevier policy does not apply strict data release requirements to include publicly accessible information. It says that “[r]esearch data should be made available free of charge to all researchers *wherever possible* and with minimal reuse restrictions.”⁵⁸ It further states that “[r]esearchers should remain in control of how and when their research data is accessed and used, and should be recognised and valued for the investments they make in creating their research data and making it available.”⁵⁹ Under the Proposal, researchers retain no such control over their data; the Proposal ignores these harmful ramifications.

The PLOS Data Availability policy notes that, for studies involving human participants, “data must be handled so as to not compromise study participants’ privacy.”⁶⁰ The PLOS Policy itself links to the National Institutes of Health Data Sharing Workbook, which states that:

It is rarely sufficient to simply remove names, addresses, telephone numbers, Social Security Numbers, and the like. Deductive disclosure of individual subjects becomes more likely when there are unusual characteristics or the joint occurrence of several unusual variables. Samples drawn from small geographic areas, rare populations, and linked datasets can present particular challenges to the protection of subjects’ identities.⁶¹

Similarly, the NIH Data Sharing Workbook specifies that “[s]ome investigators withhold parts of the sample; others block access to specific variables, especially items with low prevalence rates that make it easier to identify participants with unusual characteristics.”⁶² Within this policy, the “measures used to minimize the risk of breaching the confidentiality of data” are unworkable given the depth and breadth of peer-reviewed research that would fall under the rule.⁶³ The Proposal identifies no plan for EPA to manage mandatory agreements to maintain confidentiality, data encryption, electronic firewalls and locked storage facilities, password authentication of users, audit trails, disaster prevention and recovery plans, or security measures for backup tapes.

⁶³ *Id.*

To the extent data availability, even broadly defined, is contemplated in the Proposal, it is done so prospectively, not retroactively. Unlike the Proposal, the PLOS policy does not apply retroactively to all relevant studies: “[t]he data policy was implemented on March 3, 2014. Any paper submitted before that date will not have a data availability statement. However, for all manuscripts submitted or published before this date, data must be available upon reasonable request.”⁶⁴ Similarly, the Springer Nature policies began during the first quarter of 2016 but did not apply retroactively, as the Proposal would.⁶⁵

The NIH policy cited in footnote 21 of the Proposal also states that “[t]he investigator must be a tenure-track professor, senior scientist, or equivalent, to be able to submit” a data access request.⁶⁶ This fatally undermines the notion in the Proposal that data must be available to all members of the public in order to meet the reproducibility threshold. Furthermore, the Census Bureau resource,⁶⁷ also cited in footnote 21 of the Proposal, describes the Federal Research Data Centers. These centers restrict access to certain individuals, who “must obtain Census Bureau Special Sworn Status – passing a moderate risk background check and swearing to protect respondent confidentiality for life, facing significant financial and legal penalties under Title 13 and Title 26 for failure to do so.”⁶⁸ Again, this fatally undermines the notion in the Proposal that data must be available to all members of the public. While the Proposal simply says that members of the “public” can access these centers, the reality is that access to such controlled spaces is carefully restricted and *not* accessible to all members of the public. EPA does not seriously confront the significant challenges involved in enabling access.

Finally, there is no evidence in the record that the Federal Statistical Research Data Centers have the capacity to handle the substantial amounts of data that would be required to be submitted under the Proposal. But the massive increase in data-handling responsibilities propelled by the Proposal indicates strongly that EPA must first investigate and document what those resource capacities are, and whether the Centers believe they can handle increased responsibilities. If EPA fails to undertake such investigations and fails to demonstrate adequate resources and data-handling capacities, finalizing any rule based on the Proposal would be arbitrary and capricious and an abuse of EPA discretion.

The report cited in footnote 22 of the Proposal⁶⁹ suggests that strategies for data transparency “should be cost-effective,” yet no consideration of the cost repercussions of the Proposal is given in the Proposal or accompanying administrative record. This is extraordinary,

⁶⁴ See *supra*, n. 60.

⁶⁵ See *supra*, n. 52, Question 7: “Is data sharing mandatory for every article?”

and independent evidence that the Proposal and supporting materials are arbitrary and capricious and an abuse of EPA discretion. As just one example of the costs associated with data transparency requirements of this nature, the report cited by EPA itself quantified cost of compliance at \$46 million.⁷⁰ This amount represents more than two-thirds of the *entire* annual budget of the EPA office responsible for writing all clean air safeguards and standards under the Clean Air Act, the Office of Air Quality Planning and Standards.⁷¹ This amount equals over 90% of the budgeted amount for *every* EPA employee working in OAQPS.⁷² Neither the Proposal nor the accompanying administrative record remotely addresses, much less explains, how these data transparency compliance costs will be met. Moreover, the options for data sharing listed within footnote 22 are more expansive than those listed in the Proposal. They include requiring applications for access; restricting access to data for the purposes of replication, validation, and sensitivity evaluation; establishing physical controls on data storage; online training for researchers; and nondisclosure agreements.

F. The Proposal will not enhance public understanding

The Proposal claims that it “will help ensure that EPA is pursuing its mission of protecting public health and the environment in a manner that the public can trust and understand.” 83 Fed. Reg. at 18,769/1. This is false and unsupported in multiple respects. As these comments explain, the Proposal would prohibit EPA from considering information that will be the best available, peer-reviewed, independent, credible science—on the arbitrary and irrelevant grounds that underlying data are not publicly available. In this fashion, as these comments discuss, the Proposal would obstruct and thwart EPA from its mission and responsibility to protect public health and the environment.

Moreover, the Proposal would do so in a manner that the public cannot and would not trust and understand: the Proposal utterly fails to demonstrate or even support the claim that its approach ensures the information relied upon by EPA would be more trustworthy. EPA establishes no logical nexus or evidence-based link between the Proposal and its insinuations that studies or information lacking publicly available data are unreliable, invalid, irrelevant or untrustworthy. Additionally, the Proposal utterly fails to demonstrate or even support the claim that its approach ensures the information relied upon by EPA would be more understandable to the public.

First, EPA fails to establish or even support the premise of its wrongheaded belief: that the best available, peer-reviewed, independent, credible science is not understandable already to the public, or the informed, knowledgeable members of the public versed in the scientific, technical, legal, economic or policy matters relevant to EPA’s regulations, actions and mission.

⁷⁰ *Id.* at 25.

⁷² *Id.*

Second, the Proposal's claim about enhanced public understanding suffers from a fundamental internal contradiction and logical failing inherent to its approach: nothing in the Proposal requires that (1) publicly available data be actually considered, addressed, verified or replicated by EPA prior to the agency being allowed to consider the study based on that data; (2) publicly available data be actually considered, addressed, verified or replicated by any other person or party prior to EPA being allowed to consider the study based on that data; and (3) publicly available data be actually considered, addressed, verified or replicated by EPA, any person, or any party *ever*, before or after EPA is allowed to consider the study based on that data. Accordingly, it is false and unsupported to suggest that the Proposal ensures greater public "understanding" than the longstanding regulatory landscape where the Proposal's prescriptions and proscriptions do not exist.

III. The Proposal would devastate EPA's ability to protect people from hazardous substances with well-known harmful effects

A. Lead in drinking water, soil, and paint

The damaging effects of early childhood lead exposure can last a lifetime, so prevention is the only effective and meaningful solution. Lead-contaminated soil, food, drinking water, and dust from leaded paint can all be inhaled or ingested by children, and from there be circulated through the bloodstream into all the organs, bones, and brain. Adverse effects include brain damage, kidney damage and disease, infertility in men and women, elevated blood pressure and strokes in adults, and neurological damage that can cause pain in the muscles and joints.⁷³ Exposures during pre-natal and early life development are especially devastating.

The lead regulations and reduction measures resulting from the implementation of science-based EPA regulations are essential for reducing lead poisoning effects in the U.S. population. Since 2001, life-saving EPA standards under the Toxic Substances Control Act (TSCA) have protected children and families from exposure to lead in paint, dust, and soil, in and around homes and childcare facilities.⁷⁴ This regulation supports existing regulations regarding worker training and certification, lead hazard disclosure in real estate transactions, requirements for lead cleanup under state authorities, and lead hazard evaluation and control in Federally-owned housing. In addition, it establishes authority under TSCA to set residential lead dust cleanup levels.

The EPA Lead and Copper Rule (LCR) of 1991 established drinking water protections by requiring tap water monitoring and triggering a public alert and some protective action such as corrosion prevention measures or service line replacement if lead levels exceed 15 ppb. 40 C.F.R. Part 141 Subpart I. Revisions to the LCR in the 2007 rule update requirements for monitoring, treatment, and customer notification.⁷⁵ The LCR rule applies to water utilities, and

the companion Reduction of Lead in Drinking Water Act sets standards for pipes, solder, and other plumbing fittings.

The lead rules are based on risk analyses conducted by EPA using epidemiology studies published in the 1990s that correlate childhood blood lead levels with impaired brain function and adverse behavioral effects.⁷⁶ Many of the published studies are longitudinal cohort studies that include measurements of lead in blood from children decades ago, and then follow them out over time to observe lasting effects. Thanks to important EPA regulations and effective lead-reduction measures in gasoline and paint, overall blood lead levels have been reduced in many people. This makes it impossible to replicate the exposure conditions at the time the original children in the study cohort had their blood lead levels measured, such as the Port Pirie cohort study population living near a lead smelter in the 1980s.⁷⁷ Studies like these—longitudinal cohort studies, particularly those that capture exposures that may no longer occur—are not reproducible.

B. Vinyl chloride

Vinyl chloride (VC) is an industrial chemical that is manufactured as a monomer, and then polymerized into polyvinyl chloride (PVC) plastic, used in a wide variety of industrial and consumer plastic products including home siding, pipes, wire and cable coatings, packaging, furniture, household products, and automotive parts.⁷⁸ The VC monomer was first reported to cause cancer in 1969 based on animal laboratory studies.⁷⁹ This was followed almost immediately by evidence in VC workers of cancer. In addition, workplace epidemiology studies identified a link between VC exposure and a very rare degenerative bone disease called acroosteolysis that was cripplingly painful; it was not identified in the rodent studies.^{80, 81}

Vinyl chloride is regulated in workplaces, and in drinking water, food, and air:⁸²

- OSHA issued workplace regulations in 1974, forcing a reduction in the allowable level of the VC monomer by 500-times, from 500 ppm to 1 ppm averaged over an 8-hour workday.⁸³ Despite predictions of dire job losses, virtually all U.S. manufacturing

⁸² *Id.*

⁸³ United States Department of Labor, Occupational Safety and Health Administration, Regulations for Vinyl Chloride, available at

facilities met the new standard within a few years while reducing costs, largely through better containment of the unpolymerized monomer and improved exposure monitoring.⁸⁴

- EPA regulates VC pollution under the Safe Drinking Water Act (MCL=0.02 mg/L based on increased risk of cancer), and under EPA's Ambient Water Quality Criteria (0.025 ug/L).^{85, 86}
- FDA regulations limit vinyl chloride in food contact materials and packaging.⁸⁷

The studies that support these EPA safeguards, and particularly the identification of diseases in workers like acroosteolysis that were not identified in rodent studies, are critical to protecting human health and preventing adverse environmental impacts. Thanks to effective health-protective regulatory actions by EPA, OSHA and other federal agencies the elevated exposure conditions suffered by industrial workers in the 1970s and earlier are no longer the industry norm. Thus, these studies cannot meet the standards of transparency and replicability set out in the Proposal.

C. Pyrethroids

Pyrethroids are a class of insecticides that includes deltamethrin and permethrin, used on food crops including vegetables, fruit, and corn.⁸⁸ Permethrin is also used as a spray in homes and public spaces like hotels, theaters, restaurants, and hospitals.⁸⁹ It is also used to impregnate clothing, shoes, bed nets, and camping gear advertised to repel mosquitoes and ticks.⁹⁰ Pyrethroid pesticides are classified by EPA as a "likely human carcinogen," and is linked in

published studies to Parkinson’s Disease and adverse behavioral problems in prenatally exposed children.^{91, 92}

EPA convened a FIFRA Scientific Advisory Panel in October 2017 to assess its use of a Physiologically Based Pharmacokinetic Model (PBPK) used in its risk assessment for the pyrethroid pesticides. The PBPK model was sponsored and submitted to EPA by the Council for the Advancement of Pyrethroid Human Risk Assessment, L.L.C. (CAPHRA).⁹³ CAPHRA identifies its participating parties as chemical and agrochemical manufacturers.^{94, 95} CAPHRA describes its intentions as follows: “The general area of CAPHRA’s planned activity is to generate and submit to the [U.S. EPA] studies necessary to address EPA’s concerns for the potential for age-dependent sensitivity to Pyrethroids.”⁹⁶

Despite the central role of the pyrethroid PBPK model in EPA’s regulatory approval for pyrethroid pesticides, it appears that scientific peer reviewers on the FIFRA Scientific Advisory Panel were unable to obtain the raw data necessary to provide a robust peer review of the model. SAP Panelist Dr. Dale Hattis requested these data from EPA on September 6 and September 12 without receiving them, including “key data” for “evaluating the uncertainty in the modeling” and “data needed for assessment of the calibration of the PBPK models.”⁹⁷

At this point, the EPA Scientific Advisory Panel meeting is postponed indefinitely.⁹⁸ The stated reason is “due to the unavailability of experts,” but the more likely reason is to bias the

panel with the addition of industry experts, as EPA has done recently with its Scientific Advisory Boards.⁹⁹ A model that underestimates exposures and health risks will lead to regulations that fail to protect Americans from harmful exposures to pyrethroid pesticides.

D. Organophosphates, including chlorpyrifos

Congress recognized that pesticides are designed to be poisonous, and thus requires them to be registered by EPA, under the Federal Insecticide, Fungicide, and Rodenticide Act. FIFRA requires that when used according to the label, a pesticide will not cause unreasonable adverse effects on the environment or human health, which is commonly referred to as FIFRA's safety standard. FIFRA was amended by the Food Quality Protection Act, which passed Congress unanimously in 1996. Under FQPA, the agency must prohibit any pesticide use for which the registrant has failed to demonstrate that there is a reasonable certainty of no harm to vulnerable populations including infants and children from cumulative and aggregate exposure (from the diet and all other sources).

Organophosphate pesticides like chlorpyrifos are widely used in agriculture, with over 5 million pounds of the insecticide applied annually across the U.S. to a variety of crops including apples, oranges, broccoli, and berries.¹⁰⁰ Symptoms of acute poisoning include nausea and vomiting, headaches, dizziness, seizures, paralysis, and, in extreme cases, even death.

Due to risks to children's health, in 2000 EPA banned household use of chlorpyrifos and most other organophosphate pesticides.¹⁰¹ Residential uses prior to the ban were causing very high exposures to pregnant women and young children. Scientists have since learned that even much lower levels may be harmful to children.

However, scientists have since shown in longitudinal cohort epidemiologic studies, that even low levels of exposure—too low to poison a pregnant mother—can disrupt brain development in their prenatally exposed children, leading to developmental delays, lower IQ, learning disabilities, and ADHD-like behaviors.¹⁰²

To protect these children, in October 2015, the Obama Administration EPA proposed to ban chlorpyrifos because agency scientists found contamination of drinking water. A year later, EPA found that chlorpyrifos residues on food, including fruits and vegetables, are unsafe for

pregnant women and children; residue levels were far above their target risk level—in some cases, by up to 140 times.¹⁰³

These epidemiologic studies can no longer be reproduced because—thanks to FQPA and the ban on residential uses—pregnant women and young children are no longer poisoned by indoor use of organophosphate pesticides at such high levels. Banning the use of chlorpyrifos would reduce human risk, leading to a healthier future for our children.

E. Mercury

Mercury is a powerful neurotoxic agent capable of adversely affecting fetus and childhood development in low concentrations. EPA maintains a series of web pages describing the health effects of mercury.¹⁰⁴ EPA has also summarized the health and environmental effects of mercury in previous TSCA rulemakings.¹⁰⁵ Mercury is a highly neurotoxic contaminant that is most toxic when methylated. Biological processes in the watershed convert the mercury to methylmercury which accumulates in the food chain resulting in elevated levels in fish, other wildlife, and ultimately in humans.¹⁰⁶ Commonly consumed fish may have methylmercury levels 100,000 times that of the ambient water.¹⁰⁷ Mercury contamination of fish stocks is widespread in the United States.^{108, 109} Studies of mercury levels in fish in rivers, lakes, and streams across the United States found mercury levels exceeding the level for human health concern for a significant portion of the sites sampled.¹¹⁰

Newly deposited mercury has been shown to be more bioavailable and more rapidly converted to methylmercury and represents a greater fraction of the methylmercury which is

incorporated into food chains and ultimately into fish.¹¹¹ Local sources have been implicated in elevated levels of mercury measured in ambient air,¹¹² precipitation,^{113, 114} soils,¹¹⁵ and methylmercury levels in biota, including fish.¹¹⁶ Reductions in local mercury emissions levels have been tied to decreasing levels measured in the environment and biota.^{117, 118, 119} Therefore, to achieve the National Academy of Sciences' public-health goal of reducing mercury concentrations in fish,¹²⁰ current mercury emissions should be ratcheted down, thereby decreasing the amount of mercury cycling through aquatic systems and reducing contamination of fish and people.

Some populations may face even greater risks: Asians, Pacific Islanders, and Native Americans are all more likely to have elevated blood mercury levels, as are women living in the Northeast and other coastal areas, or consuming a lot of fish.^{121, 122} A 2011 study of 1,465 newborns in Minnesota's Lake Superior Basin found eight percent of the newborns had blood mercury levels above 5.8 µg/l.¹²³

¹²³ Patricia McCann, Minnesota Department of Health, Mercury Levels in Blood from Newborns in the Lake Superior Basin, GLNPO ID 2007-942, Final Report, November 30, 2011.

Researchers have estimated that in the United States methylmercury toxicity is associated with between 376 and 14,293 excess cases per year of a level of cognitive impairment that would be considered mental retardation. The cost of caring for these children has been estimated between \$500 million and \$17.9 billion annually, and this cost will be incurred every year until mercury emissions are reduced.^{124, 125} Mercury releases associated with mercury uses in products and processes contribute “significantly” to this mercury pollution.¹²⁶

EPA’s activities to protect from and minimize exposure to mercury begins with its fish advisories, since the consumption of fish is the largest exposure pathway for the general population.¹²⁷ EPA also promotes state and local fish advisories. As of 2011, all 50 states have fish advisories for mercury, and mercury accounted for 81% of all state and local fish advisories, in whole or in part.¹²⁸

This concern about mercury exposure has led EPA to restrict intentional uses of mercury in products. For example, EPA promulgated a Significant New Use Rule (SNUR) under TSCA section 5(a) for elemental mercury used in certain “convenience light switches, anti-lock braking system (ABS) switches, and active ride control system switches.”¹²⁹ Similarly, EPA promulgated a SNUR covering mercury-added flow meters, natural gas manometers, and pyrometers, because of the risk of human exposure to mercury during the products’ manufacture, use, and disposal at the products’ end of life.¹³⁰ About two years later, EPA promulgated a SNUR covering mercury-added barometers, manometers, hygrometers, and psychrometers, essentially for the same reasons.¹³¹

EPA also regulates mercury dischargers to surface waters under the Clean Water Act. This Administration recently finalized effluent guidelines for dental offices.¹³² In addition to the Clean Water Act, other environmental laws that limit mercury exposures include the Clean Air Act (CAA), Safe Drinking Water Act (SDWA), Resource Conservation and Recovery Act (RCRA), and the Emergency Planning and Community Right to Know Act (EPCRA).¹³³

EPA very conservatively estimates that more than 75,000 newborns each year may have increased risk of learning disabilities associated with in-utero exposure to methylmercury, based on maternal blood levels exceeding the EPA Reference Dose (RfD) of 5.8 µg/L.¹³⁴ Even the EPA RfD likely underestimates the extent of risks to newborns due to bio-concentration of methylmercury across the placenta.¹³⁵ Three times more women of childbearing age—7.3%—have blood mercury levels exceeding 3.5 µg/L, indicating that up to 265,000 or more infants are born each year facing cognitive impacts from mercury exposure based on maternal blood levels.¹³⁶

The RfD is based on recommendations of the National Research Council (NRC) of the National Academy of Sciences (NAS), that conducted an extensive analysis and calculations derived from three longitudinal epidemiologic studies: the Seychelles Islands, the Faroe Islands, and the New Zealand studies.¹³⁷ The studies measured neuropsychological effects in children that were exposed prenatally to methylmercury as a result of pregnant mother's consuming contaminated seafood. The use of these studies to set EPA exposure limits was the result of a years-long transparent process of expert scrutiny, public engagement, inter-agency cooperation, and publication in scientific journals.

However, the studies can no longer be reproduced, particularly the Faroe Islands study in which the exposure to the community was a result of eating whales, a practice that has since declined due to public alerts about the hazards of eating the mercury-tainted meat particularly for children and pregnant and breastfeeding women. In addition, it would take decades to repeat the studies, which took decades to conduct in the first place.

F. Air pollution

Since the Clean Air Act became law in 1970, it has helped to dramatically improve air quality across the country and deliver substantial, measurable health gains. A peer-reviewed EPA study issued in 2011 found that the Clean Air Act Amendments of 1990 achieved enormous health benefits (including avoidance of 160,000 premature deaths in adults by 2010) that will increase as programs take full effect.¹³⁸ In 2009, leading air pollution epidemiologists published

a study demonstrating that, from 1980 to 2000, reductions in exposure to PM_{2.5} pollution had increased the average American life span by 1.6 years (more than 19 months).¹³⁹

The Clean Air Act requires EPA to consider the best available evidence in setting and revising the National Ambient Air Quality Standards (NAAQS) to protect health within an adequate margin of safety. 42 U.S.C. § 7409. Fine particulate matter, an air pollution category encompassing solid particles and condensed liquid droplets with a diameter of 2.5 microns or smaller (PM_{2.5}), is one of the most dangerous types of air pollution because it can penetrate deep into the lung and enter the bloodstream.¹⁴⁰ Groundbreaking studies into the link between air pollution exposures and health like the 1993 Harvard Six Cities Study¹⁴¹ examined the health effects of PM_{2.5} air pollution over 16 years on more than 8,000 adults and 14,000 children relying on private medical records and air pollution monitors deployed near study volunteers. The study found a significant relationship between air pollution exposure and risk of early death, but the raw data could not be released publicly because researchers were obligated to ensure study participant confidentiality.

As explained in section II.B., more than 100 peer-reviewed studies have confirmed the basic results of that initial study relying on that data. Because the study and others like it went through the rigorous peer-review process characteristic of the world's leading scientific journals (whose editors have rejected the Proposal¹⁴²), EPA relied on the results of the Harvard Six Cities study and others in 1997 when it promulgated the NAAQS for fine particulate matter.¹⁴³ Hundreds of additional studies into the health effects of air pollution have been conducted since then across the country¹⁴⁴ and internationally,¹⁴⁵ for both short-¹⁴⁶ and long-term¹⁴⁷ impacts of exposure, and independent re-analyses of existing datasets have affirmed the air pollution-

mortality and morbidity links with increasing precision. In 2000, the Health Effects Institute published its independent re-analysis¹⁴⁸ of the study, which confirmed the original findings.

As explained in section II.C., many of the studies that EPA has relied on to set and revise the NAAQS are epidemiological prospective cohort investigations encompassing thousands of individuals over several decades. The Proposal's requirement for the public sharing of underlying data of these studies contradicts HIPAA's legal protections for private medical data¹⁴⁹ and requirements researchers adhere to under Institutional Review Boards (IRBs),¹⁵⁰ which typically require investigators to ensure participant confidentiality and data security. Underlying sensitive health data cannot be released without obtaining individual patient consent, or consent from the next responsible party for study participants who have died. The foundational research in air pollution epidemiology demonstrating a causal link between pollution exposures and adverse health outcomes—including early death,¹⁵¹ heart disease,¹⁵² lung cancer,¹⁵³ stroke,¹⁵⁴ and asthma exacerbations¹⁵⁵—is therefore at risk if the Proposal is finalized.

While the NAAQS have strengthened over time, epidemiologic evidence indicates that even greater health gains could be achieved if our nation's air quality standards were stronger.¹⁵⁶ The unprecedented requirements of the Proposal threaten to undermine this progress by allowing EPA to rely on weaker science that could stall or reverse historical strengthening of the NAAQS. Under the Proposal, EPA would not be able to rely on the best available science for its Integrated Science Assessments of air pollution which inform the NAAQS-setting process, while industry-funded research calling into question the air pollution-health link, would not be subject to similar data release requirements, or even peer-review and independent reevaluation. This approach is asymmetric and favors selective, opaque, and questionable research methods over the consensus of robust peer-reviewed scientific investigation. Transparency in scientific data is an important topic, but one that needs to also balance the privacy concerns of study participants and legal and ethical restrictions on the sharing of sensitive data. The rule is arbitrary in its selective

application of data release requirements and disregard for the quantitative complexities of epidemiologic research.

The Proposal also has clear adverse consequences for cost-benefit analyses that consider the substantial costs of health effects caused by exposure to air pollution. This area of work includes efforts to address carbon dioxide (CO₂) pollution and climate change, such as the Clean Power Plan. Health and air quality-related monetized benefits from reducing PM_{2.5} pollution, a co-benefit of CO₂ reductions, would be substantially reduced if EPA is unable to rely on the best available science for pollution-health impacts. In its proposed rule repealing the Clean Power Plan, EPA signaled this approach: the economic health benefits of PM_{2.5} reduction were zeroed-out¹⁵⁷ by EPA after levels reached the current annual NAAQS (12 µg/m³) or the lowest measured level (LML) of PM_{2.5} in two key peer-reviewed studies that EPA has historically relied on, including an expanded re-analysis of the Harvard Six Cities data.^{158, 159} This approach of using the NAAQS or LML as a safe threshold directly contradicts the best available science^{160, 161} and EPA's own stance on the pollution threshold issue as recently as 2012.¹⁶² The Proposal is designed to support the indefensible notion that a safe threshold of air pollution like PM_{2.5} could exist, despite the opinions of the world's leading experts on this issue and emerging evidence indicating that relatively low levels of exposure to air pollution may actually confer *more* risk¹⁶³ than even the current EPA dose-response approach for PM_{2.5} exposure assumes.

G. Radiation

1. EPA's Radiation Standards

Three federal agencies have overlapping and differing responsibilities to protect the public from radiation. The Department of Energy (DOE), which among other tasks runs the U.S. nuclear weapons program, has for decades been attempting to clean up dozens of nuclear

weapons production sites around the country in an essentially self-regulating fashion (with respect to radioactivity). The Nuclear Regulatory Commission (NRC) regulates the nation's commercial nuclear power industry of approximately 100 commercial nuclear reactors located in 31 states. The NRC implements standards as part of its regulation of civilian sources of nuclear radiation, and it oversees the decommissioning of commercial nuclear facilities. EPA, via authority granted under the Atomic Energy Act, 42 U.S.C. §§ 2011-2296; Reorganization Plan No. 3. of 1970, 5 U.S.C. app. 1; the Nuclear Waste Policy Act of 1982, as amended, 42 U.S.C. §§ 10101-10270; and the Waste Isolation Pilot Plant Land Withdrawal Act, Pub. L. 102-579, 106 Stat. 4777., issues generally applicable radiation standards for protection of the public, as well as standards for nuclear power operations, protection from radon, administering radiation cleanup standards under Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (Superfund) which governs aspects of a host of cleanups of federal and nonfederal facilities, health, and environmental standards for uranium and thorium mill tailings, and for the Waste Isolation Pilot Plant in New Mexico and the proposed Yucca Mountain nuclear waste repository in Nevada.

Specifically,

In forming EPA, the authors of Reorganization Plan No. 3 created a new national approach for protecting the general public from the harmful exposure to radiation. Two key radiation protection functions would now be housed in a single agency – the promulgation of generally applicable environmental standards to limit man-made radioactive materials in the environment, and the development of national radiation protection guidance for Federal and State agencies to follow in the development of their radiation protection programs and regulations. Along with these responsibilities, EPA was provided extensive research and surveillance capabilities to support the development of national guidance and standards, as well as the authority to provide technical assistance to the States.¹⁶⁴

Essentially, the radiation standard-setting functions for protection of the general public (not at the weapons production sites) of the Atomic Energy Commission, administered through its Division of Radiation Protection Standards, were transferred to EPA to the extent that such functions “consist of establishing generally applicable environmental standards for the protection of the general environment from radioactive material.”¹⁶⁵ Under the authority of the Atomic Energy Act, these standards were defined as “limits on radiation exposures or levels, or concentrations or quantities of radioactive material, in the general environment outside the boundaries of locations under the control of persons possessing or using radioactive material.”¹⁶⁶

And as is generally understood, EPA's and NRC's authorities are overlapping and, theoretically, work together to meet an objective of protecting the general public and radiation

¹⁶⁴ *Radiation Protection at EPA, The First 30 Years*, U.S. EPA, Office of Radiation and Indoor Air, EPA 402-B-00-001, August 2000, <http://www2.epa.gov/sites/production/files/2015-05/documents/402-b-00-001.pdf>.

¹⁶⁵ Reorganization Plan No. 3 of 1970 (July 9, 1970), <https://archive.epa.gov/epa/aboutepa/reorganization-plan-no-3-1970.html>.

¹⁶⁶ *Id.*

workers from exposures to ionizing radiation, EPA sets regulatory limits and guidelines on radionuclide concentration in air, water, and soil. *See* 40 C.F.R. §§ 190-197, *Subchapter F – Radiation Protection Programs* (*cf.*, EPA sets standards for “radiation doses received by members of the public in the general environment and to radioactive materials introduced into the general environment as the result of operations which are part of a nuclear fuel cycle.” 40 C.F.R. § 190.01.). NRC’s regulatory structures are supposed to be consistent with those set by EPA. Indeed, NRC rules, when addressing dose limits for individual members of the public, state that “[i]n addition to the requirements of this part, a licensee subject to the provisions of EPA’s generally applicable environmental radiation standards in 40 C.F.R. part 190 shall comply with those standards.” 10 C.F.R. § 20.1301(e).

2. The Linear No-Threshold (LNT) dose-response model

As it does in every other instance and under every other environmental statute, EPA relies on independent, authoritative scientific bodies to provide analyses and evaluations of scientific evidence in support of its radiation standard-setting policies. EPA bases its regulatory limits and nonregulatory guidelines for population exposures to low-level ionizing radiation on the linear no-threshold (LNT) dose-response model.¹⁶⁷ EPA’s radiation protection standards are based on the premise that any radiation dose carries some risk, and that risk increases directly with dose. This method of estimating risk is called the “linear no-threshold dose-response model (LNT).

This longstanding and well-supported assumption presumes that the risk of cancer due to a low dose exposure is proportional to dose, with no threshold. For over 40 years the LNT dose-response model has been commonly utilized when developing practical and prudent guidance on ways to protect workers and members of the public from the potential for harmful effects from radiation in balance with the commercially justified and optimized uses of radiation. EPA derives the LNT model from reports by authoritative scientific bodies including the U.S. National Academy of Sciences (NAS), the National Council on Radiation Protection and Measurements (NCRP), and the International Commission on Radiological Protection (ICRP). There is strong scientific consistency by these authoritative groups that an LNT model is the best at the current time (and has been for the past half century).^{168, 169} Indeed, EPA noted as recently as late 2015, “[o]ver the last half century, numerous authoritative national and international bodies have convened committees of experts to examine the issue of LNT as a tool for radiation regulation and risk assessment . . . Again and again, these bodies have endorsed LNT as a reasonable approach to regulating exposures to low dose radiation.”¹⁷⁰

3. Studies in support of the LNT dose-response model

The NAS Biological Effects of Ionizing Radiation (BEIR) VII committee has studied and published its report on risk models for estimating the relationship between exposure to low levels of ionizing radiation and harmful health effects.¹⁷¹ The data used in the BEIR VII study are: atomic bomb survivor studies, medical radiation studies, occupational radiation studies, and environmental radiation studies. The committee judged that the LNT model provided the most reasonable description of the relation between low dose exposure to ionizing radiation and the incidence of solid cancers that are induced by ionizing radiation.

The NCRP published its latest commentary on the LNT issue only months ago, in April 2018.¹⁷² The specific purpose of its commentary is to provide a review of recent epidemiologic data from studies with low doses or low dose rates and the Life Span Study (LSS) of atomic-bomb survivors to determine whether these epidemiologic studies broadly support the LNT dose-response model as a reasonable basis for radiation protection. Epidemiologic studies of humans provide evidence that is critically important in establishing potentially causal associations of environmental factors with the disease. The studies were selected by a consensus of experts who have a broad purview of the recent radiation epidemiology literature, and they ensured that the largest and most important eligible studies were included.

Examples of studies of radiation-exposed populations evaluated are:

1. Japanese atomic-bomb survivors

The LSS is a research program investigating life-long health effects based on epidemiologic studies. The study being conducted by the Radiation Effects Research Foundation (RERF)¹⁷³ is used by standard-setting bodies in establishing a recommendation for radiation protection. The LSS cohort¹⁷⁴ includes both a large proportion of survivors who were within 2.5 km of the hypocenters at the time of the bombings and a similar-sized sample of survivors who were between 3 and 10 km from the hypocenters whose radiation doses were negligible.

The major objective of the study is to investigate the long-term effects of atomic-bomb radiation on causes of death and incidence of cancer. The atomic-bomb survivors of Hiroshima and Nagasaki are subject to follow-up study^{175, 176} for their remaining lives, starting from 1950. The LSS cohort of atomic-bomb survivors has provided important data because it is a large cohort (~87,000 survivors of all ages) with relatively accurate dosimetry,

a wide dose range over 60 years of high-quality follow-up for mortality and over 50 years of follow-up for cancer incidence, and nearly 1,000 excess solid-cancer cases, besides excess leukemias. The study provides strong indirect support for the use of an LNT model.

2. Worker exposure studies

Radiation worker studies assess risks in worker groups exposed largely to many low doses received at a low dose rate, providing direct evidence regarding the validity of the LNT model. INWORKS is an example of these studies.¹⁷⁷ INWORKS is the latest international collaboration for examining the health of workers in more than one country who were exposed occupationally to ionizing radiation. INWORKS included dosimetry for 20 different nuclear sites/organizations in three countries. Dosimetry was based on individual personal dosimeter readings at the start of the workers beginning their radiation work (at earliest, between 1944 and 1952) through 2005. The U.S. cohort of INWORKS consisted of 119,195 nuclear workers at four Department of Energy nuclear weapons facilities (Hanford site, Idaho National Laboratory, Oak Ridge National Laboratory, and Savannah River site) and at the Portsmouth Naval Shipyard. This large study¹⁷⁸ provides one of the strongest pieces of epidemiologic evidence that the LNT quantitative model is useful for radiation protection.

3. Environmental exposure studies

An example of environmental exposure studies for low doses and low dose rate is the Chernobyl resident cohorts.^{179, 180} The 1986 accident at the Chornobyl nuclear power plant in northern Ukraine resulted in the exposure of substantial proportion of Belarus, Ukraine, and the Russian Federation to radioactive fallout. The most notable apparent health consequence of the accident has been the large increase in thyroid cancer among those exposed as children or teenagers starting 4-5 years after the accident. Studies of cohorts of children in Ukraine and Belarus who had thyroid measurements of iodine activity shortly after the Chernobyl accident and systematic thyroid screenings were conducted. The data on exposure to radioactive iodine have added considerable information relative to the dose-response relationship. The thyroid cancer experienced by children in exposed areas of the Ukraine, Belarus, and Russia conforms to the LNT model.

4. Medical exposure studies

Patients treated with lung collapse for TB in the 1930s to 1960s are one of the few medically exposed populations that provide consistent evidence for dose-response relationships. Patients on average would receive on the order of 100 chest fluoroscopies over several years.

¹⁷⁷ Leuraud, Klervi, et al. "Ionising radiation and risk of death from leukaemia and lymphoma in radiation-monitored workers (INWORKS): an international cohort study." *The Lancet Haematology* 2.7 (2015): e276–e281.

¹⁷⁸ Schubauer-Berigan, Mary K., et al. "Cancer mortality through 2005 among a pooled cohort of US nuclear workers exposed to external ionizing radiation." *Radiation research* 183.6 (2015): 620–31.

¹⁷⁹ Brenner, Alina V., et al. "I-131 dose response for incident thyroid cancers in Ukraine related to the Chornobyl accident." *Environmental health perspectives* 119.7 (2011): 933.

¹⁸⁰ Tronko, Mykola D., et al. "A cohort study of thyroid cancer and other thyroid diseases after the Chornobyl accident: thyroid cancer in Ukraine detected during first screening." *Journal of the National Cancer Institute* 98.13 (2006): 897–903.

Since the 1970s, studies¹⁸¹ of TB patients who received repeated chest x-ray fluoroscopies to monitor lung collapse have provided valuable information relevant to the LNT hypothesis. The TB fluoroscopy studies provide strong support for the LNT model for breast cancer.

NCRP commentary in conclusion of its epidemiology studies states that, based on current epidemiologic data, the LNT model should continue to be used for radiation protection purposes, and “no alternative dose-response relationship appears more pragmatic or prudent for radiation protection purposes than the LNT model.”¹⁸²

4. How the Proposal jeopardizes health protections

Because it does not cite or even note the statutory sources of EPA’s radiation standard setting authority, EPA fails to reference to the proper legal authority to address radiation protection standards and the underlying science and dose estimations, and thus fails to present the terms or substance of the proposed action or a description of the subjects and issues involved. Thus, the public has been denied a reasonable and meaningful opportunity to participate in the rulemaking process.¹⁸³

Despite the failure to precisely name radiation standards or cite the EPA’s authority under the Atomic Energy Act, the Proposal is susceptible to a reading that EPA intends to attack the underlying science for radiation standards, and the LNT in particular, just as the agency is attacking standards for the air, water, and health protections. Indeed, Dr. Edward J. Calabrese of the University of Massachusetts, longtime promoter of the radiation hormesis idea that low doses of radiation are beneficial for humans, stated in support of this draft rule, “[t]he [P]roposal represents a major scientific step forward by recognizing the widespread occurrence of non-

¹⁸² NCRP Commentary 27. “Implications of Recent Epidemiologic Studies for the Linear-Nonthreshold Model and Radiation Protection.” NCRP, 2018, at 139.

¹⁸³ In order to preserve objections in the administrative record, we submit comments directed at any wrongheaded and unlawful attack on an LNT for radiation, notwithstanding EPA’s failure to mention radiation—or any other substance or pollutant—in the “non-linearity” section of the Proposal. 83 Fed. Reg. at 18,770. The Proposal’s cursory suggestion of “non-linearity in the concentration-response function for specific pollutants and health effects,” 83 Fed. Reg. at 18,770/3, fails to provide fair notice or any justification that would allow any final rule to assert “non-linearity in the concentration-response function” for *any* specific pollutants or *any* health effects. There is *no* information, evidence, or regulatory text in the Proposal or regulatory docket supporting or even addressing the suggestion of non-linearity in the concentration-response function for *any* specific pollutants or *any* health effects. Nor is there any discussion or material in the Proposal or accompanying docket supporting or even addressing EPA’s cursory suggestion of non-linearity. The Proposal conclusorily references “growing empirical evidence of non-linearity,” *id.*, but then fails to identify *any* such empirical evidence in the Proposal or docket. Before EPA may adopt any final rule addressing “non-linearity in the concentration-response function” for *any* specific pollutants or *any* health effects, EPA would be required to re-issue a new proposed rule with actual regulatory text and supporting legal, factual, scientific, and technical information providing fair notice to the public concerning any suggestion of “non-linearity in the concentration-response function” for *any* specific pollutants or *any* health effects.

linear dose responses in toxicology and epidemiology for chemicals and radiation and the need to incorporate such data in the risk assessment process.”¹⁸⁴

EPA’s Proposal states only that “this proposed regulation is designed to increase transparency of the assumptions underlying dose-response models. As a case in point, there is growing empirical evidence of non-linearity in the concentration response function for specific pollutants and health effects.” 83 Fed. Reg. at 18,770/3. The Proposal fails to provide a citation or single shred of empirical evidence to support the statement. By contrast, the science in radiation epidemiological studies has repeatedly demonstrated, over decades, *the precise opposite conclusion*—to wit, that the LNT dose-response model provides the most reasonable description of the relation between low dose exposure to ionizing radiation and the incidence of solid cancers that are induced by ionizing radiation.

The epidemiologic science and associated studies that are the basis of adherence to the LNT and decades of protective radiation standards are likely to be expressly excluded from consideration by EPA by the terms of this Proposal. NAS and other studies that EPA has long relied upon in the radiation standards setting process are epidemiological human cohort studies. EPA’s Proposal, if implemented, would limit EPA staff from basing regulatory actions on precisely these types of studies by requiring that the underlying data of these studies be publicly shared. This would be a nearly impossible task for the agency. Data for some of the radiation epidemiological studies are accessible to users^{185, 186} with a detailed description of how a user can access the information. However, public sharing of personally identifiable information (PII) is restricted because the studies rely on confidential health data. To become an authorized user of the data sets and to reduce misuse of that data, users are barred from linking data from the database with any other source of information that leads to PII of an individual with records in the database.

These are profoundly important studies that have been peer reviewed for decades and the science that has emerged from them has been validated multiple times. But these are not studies where the entirety of the public data can be shared or independently replicated. There are no other radiation epidemiologic studies of health and longevity on a large size population (example: more than 120,000 individuals in the atomic-bomb survivor studies) that have continued for more than 60 years. Thus, replication of the studies is impossible as this data comes from individuals exposed to significant acute and protracted dose of radiation. Implementation of the rule would effectively block the use of such key scientific studies and allow for radiation standards to be either wholly weakened or made functionally meaningless.

Specifically, EPA relied on the LNT dose-response model to develop the following reports and regulations to protect the general public and radiation workers from the potential for harmful effects from radiation:

¹⁸⁴ See <https://www.epa.gov/newsreleases/epa-administrator-pruitt-proposes-rule-strengthen-science-used-epa-regulations>.

¹⁸⁵ See <https://apps.orau.gov/cedr/#.Wv73Y-4vxEY>.

¹⁸⁶ See <http://rerf.or.jp/en>.

Federal guidance reports (FGRs) for radiation protection that provide technical information and policy recommendations for radiation dose and risk assessment:

- FGR 11 (1988)¹⁸⁷—Limiting Values of Radionuclide Intake and Air Concentration and Dose Conversion Factors for Inhalation, Submersion, and Ingestion
- FGR 12 (1993)¹⁸⁸—External Exposure to Radionuclides in Air, Water, and Soil
- FGR 13 (1999)¹⁸⁹—Cancer Risk Coefficients for Environmental Exposure to Radionuclides
- EPA Radiogenic Cancer Risk Models and Projections for the U.S. Population (the “Blue Book”)¹⁹⁰

Nuclear fuel cycle standards and regulations addressing environmental issues for all phases of the uranium fuel cycle, including uranium milling; chemical conversion; fuel fabrication and reprocessing; power plant operations; waste management, storage, and disposal; and site cleanup for milling operations.

- The Uranium Fuel Cycle (40 C.F.R. Part 190)¹⁹¹—a standard that sets generally applicable environmental limits for the entire uranium fuel cycle
- Uranium and Thorium Mill Tailings (40 C.F.R. Parts 192)¹⁹²—health and environmental standards for uranium and thorium mill tailings

Examples of areas that might be impacted by this rule include:

1. Maximum allowed concentrations of radionuclides in drinking water
2. Soil cleanup levels for Superfund sites
3. Monitoring around radiation-producing equipment used for medical purposes
4. Radioactive waste disposal
5. The concept of ALARA (As Low As Reasonably Achievable) in radiation protection

Abandoning the LNT dose-response model and replacing it with either a threshold model or a concept that low doses of radiation are safe will have an adverse effect on radiation workers and the general public by allowing radiation protection regulations to be relaxed, reinterpreted and then weakened.

IV. There is no statutory authority for the Proposal

The law is clear that EPA may adopt rules only if those rules are based on statutory authority delegated by Congress. EPA may not invent statutory authority where none exists, nor adopt regulations lacking statutory authority merely because EPA believes that to be better policy. *See, e.g., Massachusetts v. EPA*, 549 U.S. 497, 535, 127 S. Ct. 1438, 1463 (2007) (“EPA must ground its reasons for action or inaction in the statute.”); *La. Pub. Serv. Comm’n v. FCC*, 476 U.S. 355, 374 (1986) (stating “agency power to act” is shaped by how “Congress confers power upon it”). Agencies need especially clear congressional delegations of authority to create regulatory exemptions. *See New York v. U.S. EPA*, 413 F.3d 3, 41 (D.C. Cir. 2005) (stating that the agency needs “clear congressional delegation” to support an exemption). EPA identifies no such delegations, certainly not the clear delegations required by law, for the Proposal.

EPA lists seven statutes as the basis for the Proposal. But none of the various statutes cited provides support for the rule’s provisions, definitions, requirements, or exemptions. Rather, EPA invents statutory authority where none exists, and creates proposed regulatory text out of thin air. In most cases, EPA simply cites its general authority for rulemaking under the statutes. But that general authority alone cannot provide a basis for the rule, especially when, as explained in section V, the rule would *conflict* with the requirements of each of the statutes. *See New York v. U.S. EPA*, 413 F.3d 3, 40–42 (D.C. Cir. 2005). In other instances, it appears that EPA just searched the statutes for the word “research” and then cited those sections without any further analysis. The cited provisions do not support the proposed rule:

A. Clean Air Act sections 103, 301(a); 42 U.S.C. §§ 7403, 7601(a)

EPA cites 42 U.S.C. § 7601(a) of the Clean Air Act as one basis for the Proposal. But that section merely authorizes the Administrator to “prescribe such regulations as are necessary to carry out his functions under this chapter.” The courts have made clear that “EPA cannot rely on its gap-filling authority to supplement the Clean Air Act’s provisions when Congress has not left the agency a gap to fill.” *NRDC v. EPA*, 749 F.3d 1055, 1064 (D.C. Cir. 2014); *see also American Petroleum Institute v. EPA*, 52 F.3d 1113, 1119 (D.C. Cir. 1995) (“the general grant of rulemaking power to EPA cannot trump specific portions of the CAA”); *NRDC v. Reilly*, 976 F.2d 36, 41 (D.C. Cir. 1992) (EPA cannot use its general rulemaking authority as justification for adding to a statutorily specified list); *Sierra Club v. EPA*, 719 F.2d 436, 453 (D.C. Cir. 1983) (same); *Gonzales v. Oregon*, 546 U.S. 243, 264–65 (2006) (“It would go . . . against the plain language of the text to treat a delegation for the ‘execution’ of [the Attorney General’s] functions as a further delegation to define other functions well beyond the statute’s specific grants of authority.”). Here, not only is there no statutory gap to fill, as explained further below, the Proposal is in direct conflict with other provisions of the Act. EPA cannot rely on 42 U.S.C. § 7601(a) to support this rule.

EPA also cites 42 U.S.C. § 7403, which requires the Administrator to establish a national research and development program for air pollution, among other things. EPA does not state specifically which of the many subsections it believes authorizes this proposed rule. Thus, the citation fails to provide sufficient notice for the public to comment on the proposed rule.

Nothing in the Proposal establishes or even purports to establish the type of national research and development program for air pollution discussed in subsection (a). But that subsection is nonetheless revealing about congressional intent concerning “studies relating to the causes, effects (including health and welfare effects) extent, prevention, and control of air pollution.” 42 U.S.C. § 7403(a)(1). There is no indication that Congress intended to allow EPA to ignore or refuse to consider studies on the health and welfare effects of air pollution only if raw data or ‘regulatory science underlying EPA’s actions [were] publicly available in a manner sufficient for independent validation.’ See 83 Fed. Reg. at 18,773 (proposed §§ 30.1–30.3). Indeed, the absence of any such congressional conditions or criteria makes it all the more obvious that EPA invented and added those criteria and conditions as a matter of its own policy preferences, contrary to the Act. This EPA may not do.

Subsection (b) authorizes EPA to collect and make available information about such research, but nothing in that subsection allows EPA to *restrict* which types of data it considers in regulatory decisions. Nor does subsection (b) draw any distinction between dose-response data and other types of data. Again, the absence of any such congressional distinction makes it all the more obvious that EPA invented and added that distinction as a matter of its own policy preferences, contrary to the Act. This EPA may not do. None of the other subsections in 42 U.S.C. § 7403 address this issue either. There is no support in the Clean Air Act for the Proposal.

B. Clean Water Act sections 104, 501; 33 U.S.C. §§ 1254, 1361

EPA cites sections 104, 33 U.S.C. § 1254, and 501, 33 U.S.C. § 1361, of the Clean Water Act as putative authority for the Proposal. Nothing in these sections authorize the Proposal’s limitations on scientific evidence.

With respect to section 104, the Proposal tellingly fails to specify which of its 22 subsections supposedly supports the restrictions EPA has proposed. This deficiency reflects a lack of authority for the Proposal in section 104. And even if EPA thinks that it can cobble together language in section 104 to support the Proposal, the agency’s complete failure to identify in the Proposal how section 104 authorizes this rulemaking means that EPA did not provide sufficient notice for the public to comment on the Proposal.

None of the subsections in section 104 states or suggests that, in promulgating regulations under the Clean Water Act, EPA may limit its consideration of “regulatory science underlying its actions” only to studies or analyses “are publicly available in a manner sufficient for independent validation.” See 83 Fed. Reg. at 18,773 (proposed § 30.5). To the contrary, several subsections indicate that Congress intended EPA to consider available scientific evidence in order to carry out the Act.

First, subsection (b) authorizes EPA to collect and publicize results and information related to studies about water pollution but does not say anything about *limiting* consideration of science simply because data cannot be made public, either as part of rulemakings or otherwise. Nor does it draw any distinction between dose-response data and other types of data.

Second, subsection (c) directs EPA to “conduct research on, and survey the results of other scientific studies on, the harmful effects on the health or welfare of persons caused by pollutants.” It provides no authority whatsoever for *limiting* consideration of studies, models or data, dose-response or otherwise, during rulemakings; indeed, by directing EPA to “survey the *results of other scientific studies*,” rather than the publicly-available dose-response data underlying those results, this subsection contradicts the Proposal’s limitations and conditions.

Third, subsection (l)(1) indicates that EPA should be inclusive with respect to considering evidence, as it directs EPA to “develop and issue to the States for the purpose of carrying out this Act *the latest scientific knowledge available* in indicating the kind and extent of effects on health and welfare which may be expected from the presence of pesticides in the water in varying quantities. He shall revise and add to such information whenever necessary to reflect developing scientific knowledge.”

Fourth, subsection (n) directs EPA to cooperate with various entities to “conduct and promote, encourage contributions to, continuing comprehensive studies of the effects of pollution, including sedimentation, in the estuaries and estuarine zones of the United States on fish and wildlife, on sport and commercial fishing, on recreation, on water supply and water power, and on other beneficial purposes.” Importantly, subsection (n)(2) reveals Congress’s intention that EPA will consider information broadly, by instructing the agency to “assemble, coordinate, and organize *all existing pertinent information* on the Nation’s estuaries and estuarine zones”

EPA also cites 33 U.S.C. § 1361 as a basis for the Proposal, but it does not provide the agency with the authority it desires. Subsection (a) merely states that the “Administrator is authorized to prescribe such regulations as are necessary to carry out his functions under this chapter.” As explained above, that general grant of authority cannot support the rule, especially when the rule conflicts with the Act. Moreover, EPA casually invokes this provision, but does not make any effort to justify the proposed restrictions as necessary to any particular CWA statutory function, so it has not made the case that this provision provides authority to adopt the Proposal’s limits.

Finally, the Act contains other indications that Congress intended EPA’s consideration of science to be inclusive. In particular, section 304(a)(1) of the Act states:

The Administrator, after consultation with appropriate Federal and State agencies and other interested persons, shall develop and publish, within one year after the date of enactment of this title (and from time to time thereafter revise) criteria for water quality *accurately reflecting the latest scientific knowledge* (A) on the kind and extent of all identifiable effects on health and welfare including, but not limited to, plankton, fish, shellfish, wildlife, plant life, shorelines, beaches, esthetics, and recreation which may be expected from the presence of pollutants in any body of water, including ground water; (B) on the concentration and dispersal of pollutants, or their byproducts, through biological, physical, and chemical processes; and (C) on the effects of pollutants on biological community diversity, productivity, and stability, including information on the

factors affecting rates of eutrophication and rates of organic and inorganic sedimentation for varying types of receiving waters.

Although water quality criteria EPA develops are not issued as regulations, such that the Proposal as written would likely not apply to them, the salient point—illustrated by the italicized language above—is that Congress refused to limit EPA’s consideration of available evidence in discharging one of its core functions aimed at protecting the nation’s waters. EPA provides no reason in the Proposal why the regulations the Proposal targets should be any different.

Accordingly, the Clean Water Act does not authorize the Proposal.

C. Safe Drinking Water Act sections 1442, 1450(a)(1); 42 U.S.C. §§ 300j–1, 300j–9(a)(1)

EPA cites 42 U.S.C. § 300j–1 of the Safe Drinking Water Act as authority for the rule. Subsection (a) of that section allows EPA to conduct some types of research on drinking water contamination and requires it to conduct other studies. But it says nothing about which types of studies EPA may consider in rulemakings and does not distinguish between dose-response studies and other types of studies. The absence of any such congressional distinction or restriction makes it all the more obvious that EPA invented and added the distinction and restrictions in the Proposal as a matter of its own policy preferences, contrary to the Act. This EPA may not do. The remainder of the subsections have nothing to do with data or research. At any rate, EPA does not state specifically which of the subsections in 42 U.S.C. § 300j–1 it believes authorizes this proposed rule. Thus, the citation fails to provide sufficient notice for the public to comment on the proposed rule.

EPA also cites 42 U.S.C. § 300j–9(a)(1), but that says only that the “Administrator is authorized to prescribe such regulations as are necessary or appropriate to carry out his functions under this subchapter.” As explained above, that general grant of authority cannot support the rule, especially when the rule conflicts with the Act. The Safe Water Drinking Act does not authorize the proposed rule.

D. Resource Conservation and Recovery Act sections 2002(a)(1), 7009; 42 U.S.C. §§ 6912(a)(1), 6979

EPA also claims that 42 U.S.C. § 6912(a)(1) of the Resource Conservation and Recovery Act provides authority for the rule. But 42 U.S.C. § 6912(a)(1) merely states that the Administrator is authorized to “prescribe, in consultation with Federal, State, and regional authorities, such regulations as are necessary to carry out his functions under this chapter.” As explained above, that general grant of authority cannot support the rule, especially when the rule conflicts with the Act. There is no support in RCRA for the Proposal.

It appears that EPA’s citation to 42 U.S.C. § 6979 is a mistake. That section deals with labor standards for construction and says nothing about research, data, or science. At any rate, EPA does not state specifically which provision of 42 U.S.C. § 6979 it believes authorizes the

Proposal. Thus, the citation fails to provide sufficient notice for the public to comment on the proposed rule.

E. Comprehensive Environmental Response, Compensation, and Liability Act (as delegated to the Administrator via Executive Order 12580) sections 115, 311; 42 U.S.C. §§ 9616, 9660

Under the Comprehensive Environmental Response, Compensation, and Liability Act, EPA cites 42 U.S.C. § 9616 as authority, but that section merely provides a schedule for the assessment and remediation of Superfund sites. It is entirely unclear what this has to do with the subject matter of the Proposal. EPA does not state specifically which provision of 42 U.S.C. § 9616 it believes authorizes the Proposal, nor does the Proposal even explain the reference. Thus, the citation fails to provide sufficient notice for the public to comment on the proposed rule.

EPA also cites 42 U.S.C. § 9660, which has many subsections. This broad citation also fails to provide sufficient notice for the public to comment on the proposed rule. Subsections (a), (b), and (c) require the Secretary of Health and Human Services and the Administrator of EPA to establish research programs on the effects of hazardous substances on human health. But nothing in those sections limits EPA's consideration of studies in which the data can be made public or draws a line between dose-response data and other types of data. The absence of any such congressional distinction or restriction makes it all the more obvious that EPA invented and added the distinction and restrictions in the Proposal as a matter of its own policy preferences, contrary to the Act. This EPA may not do. CERCLA does not authorize the Proposal.

F. Emergency Planning and Community Right-To-Know Act section 328; 42 U.S.C. § 11048

The only authority EPA cites under the Emergency Planning and Community Right-To-Know Act is 42 U.S.C. § 11048, which states that the "Administrator may prescribe such regulations as may be necessary to carry out this chapter." The citation fails to provide sufficient notice for the public to comment on the Proposal. EPA does not identify any statutory authority for why the proposed rule is necessary to carry out the chapter. As explained above, that general grant of authority cannot support the rule, especially when the rule conflicts with the Act. EPCRA does not authorize the proposed rule.

G. Federal Insecticide, Fungicide, and Rodenticide Act sections 25(a)(1), 136r(a); 7 U.S.C. §§ 136r(a), 136w

Under the Federal Insecticide, Fungicide, and Rodenticide Act, EPA cites 7 U.S.C. § 136r(a), which authorizes the Administrator to "undertake research." That section does not allow the *restriction* of what types of research EPA may consider in rulemakings or otherwise. Nor does it draw any distinction between dose-response data and other types of data. The absence of any such congressional distinction or restriction makes it all the more obvious that EPA invented and added the distinction and restrictions in the Proposal as a matter of its own policy preferences, contrary to the Act. This EPA may not do.

EPA also cites 7 U.S.C. § 136w, which is the general rulemaking authority that allows the Administrator to carry out the provisions of FIFRA. As explained above, that general grant of authority cannot support the rule, especially when the rule conflicts with the Act. Moreover, the citation fails to provide sufficient notice for the public to comment on the Proposal. FIFRA does not authorize the proposed rule.

H. Toxic Substances Control Act, as amended, section 10; 15 U.S.C. § 2609

EPA cites 15 U.S.C. § 2609 under the Toxic Substances Control Act as support for this rule. But that section states only that the “Administrator shall, in consultation and cooperation with the Secretary of Health and Human Services and with other heads of appropriate departments and agencies, conduct such research, development, and monitoring as is necessary to carry out the purposes of this chapter.” It does not allow EPA to *limit* the type of data considered in regulatory decisions, nor does it draw a distinction between dose-response data and other types of data. TSCA does not support the proposed rule. The absence of any such congressional distinction or restriction makes it all the more obvious that EPA invented and added the distinction and restrictions in the Proposal as a matter of its own policy preferences, contrary to the Act. This EPA may not do.

I. No other federal statute supports the Proposal

As EPA is aware, when an agency drafts a proposed rule pursuant to congressionally delegated authority, the exercise of that authority is governed by the informal rulemaking procedures outlined in the Administrative Procedure Act (APA), 5 U.S.C. § 553.5. EPA is required to provide the public with adequate notice of a proposed rule, followed by a meaningful opportunity to comment on the rule’s content. 5 U.S.C. § 553 (b)-(c).

The requirement under § 553 to provide the public with adequate notice of a proposed rule is generally achieved through the publication of a notice of proposed rulemaking in the Federal Register, and the APA requires that the notice of proposed rulemaking include “(1) the time, place, and nature of public rulemaking proceedings; (2) reference to the legal authority under which the rule is proposed; and (3) either the terms or substance of the proposed rule or a description of the subjects and issues involved.” 5 U.S.C. § 553(b)1-3. Generally speaking, the notice requirement of § 553 is satisfied when the agency “affords interested persons a reasonable and meaningful opportunity to participate in the rulemaking process.” *Forester v. Consumer Prod. Safety Comm’n*, 559 F.2d 774, 787 (D.C. Cir. 1977).

The Proposal fails to reference any other legal authority to support its adoption. The agency claims its Proposal is “consistent with” Administrative Procedure Act provisions to ensure public participation in the rulemaking process, 83 Fed. Reg. at 18,769/2, but this faint “consistent with” falls far short of any legal authority for the Proposal, or even any claim of such authority. The Administrative Procedure Act provides no authority for the Proposal and, tellingly, EPA does not and cannot identify any authority therein. Even were this “consistent with” claim an attempt by EPA to claim any legal authority for the Proposal, the throw-away

statement fails to provide sufficient notice for the public to comment on the proposed rule or any asserted legal authority in the APA.

Finally, the Proposal's solicitation of comment—"on whether additional or alternative sources of authority are appropriate bases for this proposed regulation"—does not and cannot itself provide any justification for EPA finalizing a rule based on additional or alternative sources of legal authority. This fails to provide sufficient notice for the public to comment on the proposed rule or any other possible legal authorities. For all these reasons, EPA lacks any basis to finalize a rule invoking any other legal authorities to support its adoption.

J. No case law supports the Proposal

The Proposal "directs EPA to ensure that the regulatory science underlying its actions is publicly available in a manner sufficient for independent validation." 83 Fed. Reg. at 18,773. However, the Proposal fails to identify a single court decision supporting an agency's decision to bar itself from considering relevant studies or information on the grounds that underlying data are not "publicly available in a manner sufficient for independent validation," where such a requirement is not statutorily imposed. Indeed, EPA in the entire Proposal only cites two cases related to this question, and EPA admits, as it must, that *both* cases "upheld EPA's use (sic) non-public data in support of its regulatory actions." *Id.* at 18,769 n.3 (citing *Coal. of Battery Recyclers Ass'n v. EPA*, 604 F.3d 613, 623 (D.C. Cir. 2010) & *Am. Trucking Ass'ns v. EPA*, 283 F.3d 355, 372 (D.C. Cir. 2002)).

Footnote 3 in the Proposal contains two noteworthy, albeit unintended, indictments of the approach proposed by EPA. First, footnote 3 states that "[h]istorically, EPA has not consistently observed the policies underlying this proposal." Tellingly, EPA does not and cannot identify even *one* example in which EPA *has observed* the policies underlying the Proposal. Our research, to the contrary, has identified no instance in which EPA has followed the policies underlying the Proposal, to bar EPA from considering relevant studies or science submitted by the public or gathered by EPA, on the grounds that the underlying data are not "publicly available in a manner sufficient for independent validation."

Second, footnote 3 implies that there are instances where EPA's use of non-public data in support of its regulatory actions was rejected by a court. *See id.* ("courts have *at times* upheld EPA's use (sic) non-public data in support of its regulatory actions.") (emphasis added). Again, the Proposal does not and cannot cite a *single* court decision that failed to uphold use of non-public, relevant science or studies relied on by EPA or any other federal or state agency in support of its regulatory actions. *Id.* Our research also failed to identify a single instance in which a court failed to uphold an agency's use of non-public, relevant science or studies by an agency, after that practice was challenged by commenters or petitioners in court.

Of course, in both the cases that the Proposal cites in footnote 3, the D.C. Circuit Court of Appeals refused to prohibit EPA from considering non-public data. In *American Trucking*, the court declined to "impose a general requirement that EPA obtain and publicize the data underlying published studies on which the Agency relies," holding that the "Clean Air Act

imposes no such obligation.” 283 F.3d at 372.¹⁹³ The court agreed with EPA that “requiring agencies to obtain and publicize the data underlying all studies on which they rely would be impractical and unnecessary.” *Id.* (quoting EPA in Particulate Matter NAAQS, 62 Fed. Reg. at 38,689).

The D.C. Circuit reaffirmed this holding in its 2010 decision, *Coalition of Battery Recyclers*, in which the court reiterated that requiring publication of all data underlying studies would be impractical and unnecessary, and was not required by the Clean Air Act. 604 F.3d at 623. EPA in the Proposal utterly fails to explain or demonstrate why its proposed, self-imposed restriction would be any less impractical or unnecessary than those it previously opposed on these grounds. This failure to explain, failure to offer any convincing counter-proof, and failure to explain the agency’s reversal of its positions in *American Trucking* and *Coal. Of Battery Recyclers Ass’n* provide independent grounds for finding EPA’s Proposal arbitrary and capricious and an abuse of discretion.

Similarly, the Proposal does not identify *any* case law supporting EPA’s claimed ability to “exercise its discretionary authority to establish a policy that would preclude it from using such [non-public] data in future regulatory actions.” 83 Fed. Reg. at 18,769 n.3. Our research failed to identify any case in which the courts allowed an agency to categorically bind itself from considering relevant, peer-reviewed science, or otherwise valid studies or evidence, because the underlying data was not made publicly available. *Cf., e.g., Southwest Airlines Co. v. Tr. Sec. Admin.*, 554 F.3d 1065, 1074 (D.C. Cir. 2009) (holding TSA was not required to disclose to airline companies the underlying data file used in a GAO report that informed TSA’s calculation of security fees given the nature of the decision—which was industry-wide rather than an adjudicative decision—and the deference given to agency denials of discovery); *Pharm. Research and Mfrs. v. FTC*, 790 F.3d 198, 210–11 (D.C. Cir. 2015) (holding the FTC was not required to disclose the 66 individual filings underlying its decision to target only the pharmaceutical industry in a new rule because the filings were confidential, were used as a general source of background in the rulemaking process, and were exempted from disclosure by statute); *State Corp. Comm’n of Kan. v. FERC*, 876 F.3d 332, 335–36 (D.C. Cir. 2017) (holding FERC was justified in relying on a study used by the agency to assess the benefits of a power facilities merger, even though the study was objected to by Kansas on the grounds that the study was performed by a third party and its results could not be verified by Kansas. The court rejected Kansas’s objections to the study because Kansas had access to a redacted electronic version of the study, though not the underlying data; Kansas did not pinpoint a specific reason to question the study, and the study’s assumptions and results had been reviewed for reasonability.)

Under some circumstances, the D.C. Circuit has upheld an agency’s decision to exclude an individual piece of evidence from the decision-making process. In *API v. EPA*, the D.C. Circuit upheld the EPA’s decision to discount a published meta-analysis that ran counter to the rule ultimately adopted. 684 F.3d 1342, 1350 (D.C. Cir. 2012). There, EPA considered the study

¹⁹³ As we discuss elsewhere in these comments, *infra* sections IV.A. & V.A., the Clean Air Act also contains no *authorization* for EPA to refuse to consider published studies submitted by commenters, or gathered by the agency, unless the data underlying the studies have been published and made available. Certainly, there is no suggestion of any such authorization in the *American Trucking* decision or any other court opinion.

but discounted its results after “[finding] its methodology wanting.” The court found the EPA decision to *discount* the study was not arbitrary and capricious because EPA had not “entirely failed to consider an important aspect of the problem [or] offered an explanation for its decision that runs counter to the evidence before the agency.” *Id.* (quoting *North Carolina v. EPA*, 531 F.3d 896, 906 (D.C. Cir. 2008)). Critically, EPA *did* consider the study (unlike the censorship approach in the instant Proposal). Moreover, following consideration, the agency offered specific reasons for not relying on the study, including its disagreements with the methodology. *Id.*

Likewise, the D.C. Circuit found in *Intercollegiate Broadcasting System v. Copyright Royalty Board*, that the Copyright Royalty Board had “properly excluded” from evidence a reference to a survey because the survey itself was not entered into evidence and could not be verified. 796 F.3d 111, 129 (D.C. Cir. 2015). In both cases, the court yielded to an agency’s discretion to exclude a particular piece of information where the agency had made an individualized determination about the source. None of these cases support the Proposal’s categorical ban on EPA considering relevant data, science, or studies (where data are not “publicly available in a manner sufficient for independent validation”), that have been submitted to the agency and that have not been the subject of any individualized determination that the studies or information are flawed or erroneous.

In its Proposal, EPA proposed to *categorically* ignore and exclude all peer-reviewed research with non-public underlying data, without individually considering each study or offering specific reasons for not relying on that study. The Proposal, by barring consideration of foundational scientific research premised upon non-public data, would result in EPA “fail[ing] to consider an important aspect of the problem.” *API*, 684 F.3d at 1350. There is no evidence of a court supporting an agency’s decision to exclude entire categories of evidence, or studies or information based on categorical prohibitions like the ones in the Proposal, without considering the source and offering specific reasons for not relying on the study. Instead, both EPA and the Courts have indicated already in *API* and *Coalition of Battery Recyclers*, that a rule like the one EPA is currently proposing is not required by the Clean Air Act and would be both impractical and unnecessary. This Proposal runs counter to the D.C. Circuit’s decision in *API* and would render EPA’s regulatory actions based on the Proposal arbitrary and capricious and an abuse of EPA’s discretion. The Proposal’s blanket rule would represent a significant and unlawful departure from D.C. Circuit rulings on agencies’ limited discretion to choose the sources it will consider and ignore.

V. The Proposal conflicts with the statutes that EPA administers

The Proposal unlawfully restricts EPA’s consideration and use of “dose response data and models that underlie” what the Proposal calls “pivotal regulatory science.” 83 Fed. Reg. at 18,770/2. The Proposal goes on to state:

“Pivotal regulatory science” is the studies, models, and analyses that drive the magnitude of the benefit-cost calculation, the level of a standard, or point-of-departure from which a reference value is calculated. In other words, they are critical to the calculation of a final regulatory standard or level, or to the quantified costs, benefits, risks and other impacts on which a final regulation is based.

Id. By restricting EPA’s implementation of its federal organic statutes and the Administrative Procedures Act in this fashion, and by defining “pivotal regulatory science” in this manner, the Proposal violates federal laws. The Proposal does so by requiring EPA to implement federal laws based on the Proposal’s criteria and conception of “pivotal regulatory science,” rather than on the congressional criteria and requirements in federal statutes that contradict, disallow, or fail to include those criteria and concepts in the Proposal.

A. Clean Air Act

1. Clean Air Act section 101

In Clean Air Act section 101(b), Congress directs EPA “to protect and enhance the quality of the Nation’s air resources so as to promote the public health and welfare and the productive capacity of its population.” 42 U.S.C. § 7401(b). The Proposal prevents EPA from doing so by blocking the agency from considering information that also is the best available, peer-reviewed, independent, credible science that could persuade or cause the agency to better protect the “public health and welfare and the productive capacity of [the Nation’s] population.” In this way, the Proposal thwarts the leading purpose of the Clean Air Act. Clean Air Act section 101 shows the Proposal is arbitrary and capricious and an abuse of EPA’s discretion.

2. Clean Air Act section 103

Clean Air Act section 103(a)(1) directs EPA to “conduct, and promote the coordination and acceleration of, research, investigations, experiments, demonstrations, surveys, and studies relating to the causes, effects (including health and welfare effects), extent, prevention, and control of air pollution.” 42 U.S.C. § 7403(a)(1). There is nothing in these congressional directives restricting these tasks (“research, investigations, experiments, demonstrations, surveys, and studies”) to materials based only on data that are “publicly available in a manner sufficient for independent validation.” 83 Fed. Reg. at 18,773/2 (proposed § 30.1). Nor is there any authorization in these congressional directives to distinguish between “research, investigations, experiments, demonstrations, surveys, and studies” that involves “dose response data and models,” and science that does not, for imposing regulatory restrictions on what science EPA must consider. The absence of any such congressional restrictions, authorizations or distinctions makes it clear that EPA invented and added the Proposal’s limitations and conditions as a matter of its own policy preferences, contrary to the Act. This EPA may not do. Clean Air Act section 103(a)(1) shows that the Proposal is arbitrary and capricious and an abuse of EPA’s discretion.

Clean Air Act subsection 103(a)(4) directs EPA to “establish technical advisory committees composed of recognized experts in various aspects of air pollution to assist in the examination and evaluation of research progress and proposals and to avoid duplication of research.” 42 U.S.C. § 7403(a)(4). Clean Air Act section 103(a)(5) directs EPA to “conduct and promote coordination and acceleration of training for individuals relating to the causes, effects, extent, prevention, and control of air pollution.” *Id.* § 7403(a)(5). There is nothing in these congressional directives restricting these tasks to materials based only on data that are “publicly available in a manner sufficient for independent validation.” 83 Fed. Reg. at 18,773/2 (proposed § 30.1). Nor is there any authorization in these congressional directives to distinguish between

research or science that involves “dose response data and models” on the one hand, and science that does not, on the other hand, for imposing regulatory restrictions on what science EPA must consider. The absence of any such congressional restrictions, authorizations, or distinctions makes it clear that EPA invented and added the Proposal’s limitations and conditions as a matter of its own policy preferences, contrary to the Act. This EPA may not do. Clean Air Act subsections 103(a)(4) & (5) show that the Proposal is arbitrary and capricious and an abuse of EPA’s discretion.

Clean Air Act section 103(b) is significantly titled “*Authorized Activities of Administrator in Establishing Research and Development Program.*” 42 U.S.C. § 7403(b) (emphasis added). It states that:

In carrying out the provisions of the preceding subsection the Administrator is authorized to—

- (1) collect and make available, through publications and other appropriate means, the results of and other information, including appropriate recommendations by him in connection therewith, pertaining to such research and other activities;
- (2) cooperate with other Federal departments and agencies, with air pollution control agencies, with other public and private agencies, institutions, and organizations, and with any industries involved, in the preparation and conduct of such research and other activities;
- (3) make grants to air pollution control agencies, to other public or nonprofit private agencies, institutions, and organizations, and to individuals, for purposes stated in subsection (a)(1) of this section;
- (4) contract with public or private agencies, institutions, and organizations, and with individuals, without regard to section 3324(a) and (b) of title 31 and section 6101 of title 41;
- (5) establish and maintain research fellowships, in the Environmental Protection Agency and at public or nonprofit private educational institutions or research organizations;
- (6) collect and disseminate, in cooperation with other Federal departments and agencies, and with other public or private agencies, institutions, and organizations having related responsibilities, basic data on chemical, physical, and biological effects of varying air quality and other information pertaining to air pollution and the prevention and control thereof;
- (7) develop effective and practical processes, methods, and prototype devices for the prevention or control of air pollution; and
- (8)

construct facilities, provide equipment, and employ staff as necessary to carry out this chapter.

Id. There is nothing in these congressional directives restricting these tasks, research or data to materials based only on data that are “publicly available in a manner sufficient for independent validation.” 83 Fed. Reg. at 18,773/2 (proposed § 30.1). Nor is there any authorization in these congressional directives to distinguish between research, science, data, or models that involves “dose response data and models” on the one hand, and science that does not, on the other hand, for imposing regulatory restrictions on what science EPA must consider. The absence of any such congressional restrictions, authorizations or distinctions makes it clear that EPA invented and added the Proposal’s limitations and conditions as a matter of its own policy preferences, contrary to the Act. This EPA may not do. Clean Air Act subsection 103(b) shows that the Proposal is arbitrary and capricious and an abuse of EPA’s discretion.

Clean Air Act section 103(d) addresses Environmental Health Effects Research:

(1) The Administrator, in consultation with the Secretary of Health and Human Services, shall conduct a research program on the short-term and long-term effects of air pollutants, including wood smoke, on human health. In conducting such research program the Administrator—

(A)

shall conduct studies, including epidemiological, clinical, and laboratory and field studies, as necessary to identify and evaluate exposure to and effects of air pollutants on human health;

(B)

may utilize, on a reimbursable basis, the facilities of existing Federal scientific laboratories and research centers; and

(C)

shall consult with other Federal agencies to ensure that similar research being conducted in other agencies is coordinated to avoid duplication.

42 U.S.C. § 7403(d). There is nothing in these congressional directives restricting these tasks, research, studies or data to materials based only on data that are “publicly available in a manner sufficient for independent validation.” 83 Fed. Reg. at 18,773/2 (proposed § 30.1). Nor is there any authorization in these congressional directives to distinguish between research, science, data or models that involves “dose response data and models” on the one hand, and science that does not, on the other hand, for imposing regulatory restrictions on what science EPA must consider. The absence of any such congressional restrictions, authorizations, or distinctions makes it clear that EPA invented and added the Proposal’s limitations and conditions as a matter of its own policy preferences, contrary to the Act. This EPA may not do. Clean Air Act subsection 103(d) shows that the Proposal is arbitrary and capricious and an abuse of EPA’s discretion.

Clean Air Act subsection 103(d)(2) directs “[i]n conducting the research program under this subsection, the Administrator shall develop methods and techniques necessary to identify and assess the risks to human health from both routine and accidental exposures to individual air pollutants and combinations thereof.” 42 U.S.C. § 7403(d)(2). Subsection 103(d)(2) then says,

“such research program shall include the following elements,” listing subsections (A)-(C). *Id.* Subsection 103(d)(2)(B) & (C) are especially relevant and revealing:

(B) An evaluation, within 12 months after November 15, 1990, of each of the hazardous air pollutants listed under section 7412(b) of this title, to decide, *on the basis of available information*, their relative priority for preparation of environmental health assessments pursuant to subparagraph (C). The evaluation *shall be based on reasonably anticipated toxicity to humans and exposure factors* such as frequency of occurrence as an air pollutant and volume of emissions in populated areas. Such evaluation shall be reviewed by the Interagency Task Force established pursuant to subparagraph (A).

(C) Preparation of environmental health assessments for each of the hazardous air pollutants referred to in subparagraph (B), beginning 6 months after the first meeting of the Interagency Task Force and to be completed within 96 months thereafter. *No fewer than 24 assessments shall be completed and published annually.* The assessments shall be prepared in accordance with guidelines developed by the Administrator in consultation with the Interagency Task Force and the Science Advisory Board of the Environmental Protection Agency. Each such assessment shall include—

- (i) an examination, summary, and evaluation of *available toxicological and epidemiological information for the pollutant to ascertain the levels of human exposure which pose a significant threat to human health and the associated acute, subacute, and chronic adverse health effects*;
- (ii) a determination of gaps in *available information related to human health effects and exposure levels*; and
- (iii) where appropriate, an identification of additional activities, including toxicological and inhalation testing, needed to identify the types or levels of exposure which may present significant risk of adverse health effects in humans.

42 U.S.C. § 7403(d)(2)(B) & (C) (emphases added).

There is nothing in these congressional directives restricting these tasks, research, studies or data to materials based only on data that are “publicly available in a manner sufficient for independent validation.” 83 Fed. Reg. at 18,773/2 (proposed § 30.1). Nor is there any authorization in these congressional directives to distinguish between research, science, data, or models that involves “dose response data and models” on the one hand, and science that does not, on the other hand, for imposing regulatory restrictions on what science EPA must consider. The absence of any such congressional restrictions, authorizations, or distinctions makes it clear that EPA invented and added the Proposal’s limitations and conditions as a matter of its own policy preferences, contrary to the Act. This EPA may not do. Clean Air Act subsection 103(d)(2) shows that the Proposal is arbitrary and capricious and an abuse of EPA’s discretion.

Equally damning for the Proposal, when Congress directs EPA to evaluate pollutants and their health effects, Congress uses broad and capacious terms:

- “on the basis of available information” (§ 103(d)(2)(B), 42 U.S.C. § 7403(d)(2)(B));

- “available toxicological and epidemiological information for the pollutant to ascertain the levels of human exposure which pose a significant threat to human health and the associated acute, subacute, and chronic adverse health effects” (§ 103(d)(2)(C)(i), 42 U.S.C. § 7403(d)(2)(C)(i)); and
- “available information related to human health effects and exposure levels” (§ 103(d)(2)(C)(ii), 42 U.S.C. § 7403(d)(2)(C)(ii)).

These instructions to EPA are prefaced with the mandatory language, “[s]uch research program *shall include* the following elements.” (§ 103(d)(2), 42 U.S.C. § 7403(d)(2)). Congress went out of its way *not* to authorize EPA to ignore “available toxicological and epidemiological information” to ensure that the agency would be “ascertain[ing] the levels of human exposure which pose a significant threat to human health and the associated acute, subacute, and chronic adverse health effects.” (§ 103(d)(2)(C)(i), 42 U.S.C. § 7403(d)(2)(C)(i)).

This shows clear congressional concern with all available science related to human health effects from air pollution—not some restricted, politicized subset of science where underlying, confidential data are “publicly available in a manner sufficient for independent validation.” Clean Air Act subsection 103(d)(2) shows that the Proposal is arbitrary and capricious and an abuse of EPA’s discretion.

When Congress directs EPA to conduct an ecosystem research program in subsection 103(e), Congress says that such program “shall include” “[e]valuation of risks to ecosystems exposed to air pollutants, including characterization of the causes and effects of chronic and episodic exposures to air pollutants and determination of the reversibility of those effects.” 42 U.S.C. § 7403(e). Subsections (e)(3)-(e)(6) address other effects on water quality, crops, soils, and other elements of ecosystems.

There is nothing in these congressional directives restricting these tasks, research, studies, or data to materials based only on data that are “publicly available in a manner sufficient for independent validation.” 83 Fed. Reg. at 18,773/2 (proposed § 30.1). Nor is there any authorization in these congressional directives to distinguish between research, science, data, or models that involves “dose response data and models” on the one hand, and science that does not, on the other hand, for imposing regulatory restrictions on what science EPA must consider. The absence of any such congressional restrictions, authorizations, or distinctions makes it clear that EPA invented and added the Proposal’s limitations and conditions as a matter of its own policy preferences, contrary to the Act. This EPA may not do. Clean Air Act subsection 103(e) shows that the Proposal is arbitrary and capricious and an abuse of EPA’s discretion.

3. Clean Air Act section 108

In section 108(a)(2), Congress required air quality criteria for air pollutants to “*accurately reflect the latest scientific knowledge useful in indicating the kind and extent of all identifiable effects on public health or welfare which may be expected from the presence of such pollutant in the ambient air,*” CAA § 108(a)(2), 42 U.S.C. § 7408(a)(2) (emphases added). In *American Trucking v. Whitman*, 531 U.S. at 457, the Supreme Court said that NAAQS must be based on “published air quality criteria that reflect the latest scientific knowledge.”

The Proposal violates these statutory requirements by prohibiting EPA from considering available science to discharge the agency's statutory responsibility to "protect the public health," with "an adequate margin of safety." CAA § 109(b)(1), 42 U.S.C. § 7409(b)(1). The Proposal does this by subverting and supplanting the congressional criteria in CAA § 108(a)(2), 42 U.S.C. § 7408(a)(2) with a restrictive standard driven by whether raw data are "publicly available in a manner sufficient for independent validation," 83 Fed. Reg. at 18,773/2 (proposed § 30.1).

With this unlawful maneuver, the Proposal prevents EPA from adopting air quality criteria that "*accurately reflect the latest scientific knowledge useful in indicating the kind and extent of all identifiable effects on public health or welfare.*" CAA § 108(a)(2), 42 U.S.C. § 7408(a)(2) (emphases added). First, the Proposal thwarts the congressional directives for "accurate[] reflection" of the "latest scientific knowledge." It does so by compelling or allowing EPA to ignore the "latest scientific knowledge," and to fail to "accurately reflect" that science, if raw data are not "publicly available in a manner sufficient for independent validation." 83 Fed. Reg. at 18,773/2 (proposed § 30.1).

Moreover, the Proposal thwarts the congressional directives for science that is "*useful in indicating the kind and extent of all identifiable effects on public health or welfare which may be expected from the presence of such pollutant in the ambient air.*" CAA §108(a)(2), 42 U.S.C. § 7408(a)(2) (emphases added). It does so, again, by compelling or allowing EPA to ignore the "latest scientific knowledge," and to fail to accurately reflect that science, if raw data are not "publicly available in a manner sufficient for independent validation." 83 Fed. Reg. at 18,773/2 (proposed § 30.1).

Further, section 208 contains the mandatory term "shall"—which does not give the agency latitude. It does not matter if that "scientific knowledge" is "publicly available" in the way EPA contemplates in the Proposal, it must simply inform the effects of air pollution on public health or welfare. Further, *American Trucking* considered the requirements of this section and specifically concluded that "the Clean Air Act imposes no" "general requirement that EPA obtain and publicize the data underlying published studies on which the Agency relies." 283 F.3d at 372.

In these statutory provisions, obviously there is no mention of the necessity, or even relevance, of raw data being "publicly available in a manner sufficient for independent validation" before EPA must consider studies based on that data. Equally plain, there is no authorization for EPA to fail to "accurately reflect" that science when issuing air quality criteria.

There is nothing in these congressional directives restricting EPA's responsibilities, or the research, studies, or data it must consider, to materials based only on data that are "publicly available in a manner sufficient for independent validation." 83 Fed. Reg. at 18,773/2 (proposed § 30.1). Nor is there any authorization in these congressional directives to distinguish between research, science, data, or models that involve "dose response data and models" on the one hand, and science that does not, on the other hand, for imposing regulatory restrictions on what science EPA must consider. The absence of any such congressional restrictions, authorizations, or distinctions makes it clear that EPA invented and added the Proposal's limitations and conditions

as a matter of its own policy preferences, contrary to the Act. This EPA may not do. Clean Air Act subsection 108(a) shows that the Proposal is arbitrary and capricious and an abuse of EPA's discretion.

4. Clean Air Act section 109

The Proposal also violates section 109 of the Clean Air Act and contravenes the Supreme Court decision in *American Trucking v. Whitman*. The Proposal's conception of "pivotal regulatory science" turns on, among other things, "analyses that drive the magnitude of the benefit-cost calculation," and "studies, models and analyses" that are "critical to the calculation of a final regulatory standard or level, or to the quantified costs, benefits, risks and other impacts on which a final regulation is based." 83 Fed. Reg. at 18,770/2; *id.* at 18,773/2 (proposed § 30.2 (*dose response data and models*)). Clean Air Act section 109(b)(1) requires EPA to promulgate or revise health-based national ambient air quality standards that are "requisite to protect the public health," "allowing an adequate margin of safety." 42 U.S.C. § 7409(b)(1).

As noted, in *American Trucking v. Whitman*, a unanimous Supreme Court said that NAAQS must be based on "published air quality criteria that reflect the latest scientific knowledge." 531 U.S. at 457. Moreover, the Court held that Clean Air Act section "109(b), interpreted in its statutory and historical context and with appreciation for its importance to the CAA as a whole, unambiguously bars cost considerations from the NAAQS-setting process." 531 U.S. at 471. The Court also squarely rejected arguments appealing to statutory language concerning "adverse public health, welfare, social, economic, or energy effects which may result from various strategies for attainment and maintenance" of NAAQS. The justices made clear such language and concerns have "no bearing upon whether cost considerations are to be taken into account in formulating the standards." *Id.*

The Proposal violates Clean Air Act section 109(b)(1) and the governing Supreme Court interpretation in *American Trucking* by purporting to allow the "magnitude of a benefit-cost calculation" and "quantified costs and benefits" to impact or govern (1) EPA's consideration of peer-reviewed science relevant to reviewing, setting or revising health-based NAAQS; and (2) EPA's review, revision or establishment of health-based NAAQS. This is unlawful.

Clean Air Act sections 109(b)(1), (2), & (c) require EPA to protect Americans' "public health" with an adequate margin of safety, and America's "welfare" from "any known or anticipated adverse effect." 42 U.S.C. § 7409(b)(1), (2) & (c). The Proposal prevents EPA from doing so by blocking the agency from considering information that also is the best available, peer-reviewed, independent, credible science that could persuade or cause the agency to better protect Americans' public health and welfare, based on the statutory criteria in section 109. In this way, the Proposal thwarts the central role and fundamental right to health-based air quality standards under the Clean Air Act. Clean Air Act section 109 shows the Proposal is arbitrary and capricious and an abuse of EPA's discretion.

5. Clean Air Act section 111

Clean Air Act section 111(a)(1) defines a standard of performance as:

a standard for emissions of air pollutants which reflects the degree of emission limitation *achievable* through the application of the *best system of emission reduction* which (taking into account the cost of achieving such reduction and any nonair quality *health and environmental* impact and energy requirements) the Administrator determines has been *adequately demonstrated*.

42 U.S.C. 7411(a)(1) (emphases added). There is nothing in these congressional directives restricting EPA's establishment of "standards of performance," or its determinations of "achievability" or "best system of emission reduction" or "adequate demonstration," to information based only on data that are "publicly available in a manner sufficient for independent validation." 83 Fed. Reg. at 18,773/2 (proposed § 30.1). Nor is there any authorization in these congressional directives to distinguish between research, science, data, or models involving "dose response data and models" on one hand, and science that does not, on the other hand, for imposing regulatory restrictions on what science EPA must consider.

EPA cannot fulfill the congressional directive to establish the "best system of emission reduction" if EPA is artificially and unlawfully restricting its consideration of data and information to those that are "publicly available in a manner sufficient for independent validation." *Id.* Nor may EPA fulfill the "adequately demonstrated" directive if systems of emission reduction that have been adequately demonstrated require EPA to consider data, science, or information that are not "publicly available in a manner sufficient for independent validation." *Id.*

Clean Air Act section 111(b)(1)(A) requires EPA to establish a list of stationary sources to be subject to section 111 standards of performance:

[The Administrator] shall include a category of sources in such list if in his judgment it causes, or contributes significantly to, air pollution *which may reasonably be anticipated to endanger public health or welfare*.

42 U.S.C. 7411(b)(1)(A) (emphasis added). There is nothing in the Act restricting EPA's consideration of which categories of sources "may reasonably be anticipated to endanger public health or welfare" to information based only on data that are "publicly available in a manner sufficient for independent validation." 83 Fed. Reg. at 18,773/2 (proposed § 30.1). There is no indication of congressional intent that what "may reasonably be anticipated to endanger public health or welfare" may be modified or constrained by ignoring science and data concerning endangerment if that information is not "publicly available in a manner sufficient for independent validation."

The absence of any such congressional restrictions, authorizations, or distinctions concerning what EPA may consider makes it clear that EPA invented and added the Proposal's limitations and conditions as a matter of its own policy preferences, contrary to the Act. This EPA may not do. Clean Air Act subsections 111(a)(1) and 111(b)(1)(A) show that the Proposal is arbitrary and capricious and an abuse of EPA's discretion.

6. Clean Air Act Section 112

Clean Air Act Section 112(b) provides a list of toxic air pollutants for which industrial sources must limit their emissions. The statute then directs the Administrator to periodically review that list of hazardous air pollutants and, where appropriate, revise this list by rule. In particular, the Administrator is directed to add pollutants which:

present, or may present, through inhalation or other routes of exposure, a threat of adverse human health effects (including, but not limited to, substances which are known to be, or may reasonably be anticipated to be, carcinogenic, mutagenic, teratogenic, neurotoxic, which cause reproductive dysfunction, or which are acutely or chronically toxic) or adverse environmental effects whether through ambient concentrations, bioaccumulation, deposition, or otherwise, but not including releases subject to regulation under subsection (r) as a result of emissions to the air.

42 U.S.C. § 7412(b)(2). There is nothing in these congressional directives restricting EPA's establishment of this list nor of the pollutants that should be added to it based only on data that are "publicly available in a manner sufficient for independent validation." 83 Fed. Reg. at 18,773/2 (proposed § 30.1). Nor is there any authorization in these congressional directives to distinguish between research, science, data, or models involving "dose response data and models" on one hand, and science that does not, on the other hand, for imposing regulatory restrictions on what science EPA must consider.

EPA cannot fulfill the congressional directive to establish section 112(b)(2)'s pollutant list if the agency is artificially and unlawfully restricting its consideration of data and information to those that are "publicly available in a manner sufficient for independent validation." *Id.* Nor will EPA be able to fully analyze pollutants for inclusion on this list if determining inclusion would require EPA to consider data, science or information that are not "publicly available in a manner sufficient for independent validation." *Id.*

Similarly, Section 112(b)(3) lays out a petition process to add chemicals to the Section 112 list that similarly require the petitioner to submit to EPA proof that "the substance is an air pollutant and that emissions, ambient concentrations, bioaccumulation or deposition of the substance are known to cause or may reasonably be anticipated to cause adverse effects to human health or adverse environmental effects." 42 U.S.C. § 7412(b)(3)(B). Here, the straightjacket that the Proposal would place on this statutory language would similarly prevent the agency from carrying out its statutory directive.

Section 112(b)(3)(C) provides criteria for *delisting* pollutants from the list. This section would nonetheless be hamstrung if the agency were limited exclusively to data that are "publicly available in a manner sufficient for independent validation." 83 Fed. Reg. at 18,773/2 (proposed § 30.1). Nor is there any authorization in the section's congressional directives to distinguish between research, science, data, or models involving "dose response data and models" on one hand, and science that does not, on the other hand, for purposes of listing or delisting pollutants from section 112's hazardous pollutant list.

Nearly every subsection of Section 112, including standards for major and area sources, reporting requirements, and accidental release provisions, touch on protecting “public health,” weighing “risks,” or assessing how “hazardous” a “substance” or “pollutant” may be. EPA cannot fulfill the congressional directives of any of these sections if the agency is artificially and unlawfully restricting its consideration of data and information to those that are “publicly available in a manner sufficient for independent validation.” *Id.* Nor will EPA be able to fully analyze risks to or impacts on human health and set section 112 standards accordingly if making such determinations would require EPA to consider data, science, or information that are not “publicly available in a manner sufficient for independent validation.” *Id.*

The absence of any such congressional restrictions, authorizations, or distinctions concerning what EPA may consider makes it clear that EPA invented and added the Proposal’s limitations and conditions as a matter of its own policy preferences, contrary to the Act. This EPA may not do. Clean Air Act section 112 makes exceedingly clear that the Proposal is arbitrary and capricious and an abuse of EPA’s discretion.

The sections listed above merely represent a sampling of some examples in Title 1 of the Act that exemplify the extent to which the Proposal is arbitrary, capricious, an abuse of EPA’s discretion, and a violation of clear congressional directives. The Act’s five other Titles are no different, and the list provided here is not exhaustive—the Clean Air Act is rife with examples of statutory language that the Proposal would distort with its adherence to data that are “publicly available in a manner sufficient for independent validation” 83 Fed. Reg. at 18,773/2 (proposed § 30.1) and research, science, data, or models involving “dose response data and models.”

B. Clean Water Act

The Proposal, if adopted, would imperil the effective implementation of the Clean Water Act. Several provisions of the Act direct EPA to consider a range of data in promulgating regulations to effectuate its goals, and the development of these regulations would be hamstrung by the Proposal’s restrictions on considering valid scientific evidence. As discussed in these comments, identifying and excluding valid scientific evidence is time- and resource-intensive and has not been demonstrated to improve the quality of the science EPA considers or its science-based decisions. Accordingly, applying the proposed limitations to the myriad of regulatory decisions the agency is supposed to make would be a recipe for complete paralysis on multiple fronts under the Clean Water Act. Some examples of the water regulations that could be adversely affected by the far-reaching the Proposal follow.

Under sections 301 and 304, EPA must develop effluent limitation guidelines, setting out nationally-applicable pollution discharge standards for various industries. These ELGs “identify, in terms of amounts of constituents and chemical, physical, and biological characteristics of pollutants, the degree of effluent reduction attainable through the application of [particular levels of pollution control stringency] for classes and categories of point sources . . .” 33 U.S.C. § 1314(b)(1)(A). EPA is to specify the factors used to determine the controls to be used, including “the age of equipment and facilities involved, the process employed, the engineering aspects of the application of various types of control techniques, process changes, the cost of achieving such effluent reduction, non-water quality environmental impact (including energy

requirements), and such other factors as the Administrator deems appropriate” *Id.* § 1314(b)(1)(B). Making these judgments and formulating the proper control levels that industrial dischargers must meet will obviously depend on data collected about the processes used in a given industry, control technology performance, cost, and energy use, among other things.

Under section 303, the Act charges EPA with issuing initial water quality standards for states that fail to submit their own, and with developing such standards if EPA determines submitted standards are not consistent with the Act. *Id.* § 1313(b). Congress required these standards to take account of a wide range of evidence, and the Proposal would therefore curtail EPA’s actions pursuant to the Act. Specifically, standards:

shall be such as to protect the public health or welfare, enhance the quality of water and serve the purposes of this chapter. Such standards shall be established taking into consideration their use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes, and also taking into consideration their use and value for navigation.

Id. § 1313(c)(2)(A).

In addition, section 303’s water quality standards process illustrates a hypocritical element of the Proposal. When states develop water quality standards, they must submit to EPA “[g]eneral information which will aid the Agency in determining the adequacy of the scientific basis of the standards,” 40 C.F.R. § 131.6(f), and EPA’s review of such a submission considers “[w]hether the State standards . . . are based upon appropriate technical and scientific data and analyses,” *id.* § 131.5(a)(4), such that states can consider a wide range of information in establishing standards and EPA’s review of the states’ standards looks simply to whether the information on which they are based is “appropriate.” By contrast, if EPA were obliged to develop standards for a state (either because of a failure to submit or an inadequate submission), the Proposal would require EPA to consider a much more limited universe of information.

Pursuant to section 307 of the Act, EPA may issue category-wide effluent standards for listed toxic pollutants that go beyond the minimum level of control the Act mandates. These more stringent standards “shall take into account the toxicity of the pollutant, its persistence, degradability, the usual or potential presence of the affected organisms in any waters, the importance of the affected organisms, the nature and extent of the effect of the toxic pollutant on such organisms, and the extent to which effective control is being or may be achieved under other regulatory authority.” Further, “[a]ny effluent standard promulgated under this section shall be at that level which the Administrator determines provides an ample margin of safety.” 33 U.S.C. § 1317(a)(4). Obviously, it takes a substantial effort for EPA to assess these various factors and determine what level of pollution is acceptable, with an “ample margin of safety,” and to do so for numerous categories of dischargers (multiplied by numerous different toxic pollutants). If EPA adopts the Proposal, it would make each element of this analysis that much more cumbersome and difficult, and thus make it harder for EPA to effectively protect the public from toxic pollution.

Section 311 includes a further example of the kinds of regulatory analyses into which the Proposal would inject confusion and administrative burden. That section charges EPA with issuing “regulations designating as hazardous substances, other than oil as defined in this section, such elements and compounds which, when discharged in any quantity into . . . [various water resources] present an imminent and substantial danger to the public health or welfare, including, but not limited to, fish, shellfish, wildlife, shorelines, and beaches.” 33 U.S.C. § 1321(b)(2)(A). Indeed, answering these kinds of questions seems particularly likely to be undermined by the Proposal, as data relevant to determining the conditions under which hazardous substances may be an “imminent and substantial danger” could well come from prior accidental releases that could fail the Proposal’s “reproducibility” trigger.

The foregoing examples are merely illustrative. The Clean Water Act imposes numerous regulatory duties on EPA, and the Proposal threatens to make carrying out those obligations harder. The Act’s foundational purpose—“to restore and maintain the chemical, physical, and biological integrity of the Nation’s waters,” 33 U.S.C. § 1251(a)—would thus be ill-served by finalizing the Proposal.

C. Safe Drinking Water Act

The Safe Drinking Water Act (SDWA) protects the nation’s public drinking water supplies. The Act generally applies to “each public water system in each State,” 42 U.S.C. § 300g, and requires EPA to set standards for drinking water contaminants that may have an adverse effect on human health and are known or anticipated to occur in such systems, *id.* § 300g-1(b)(1)(A).

For a given contaminant, the SDWA requires that EPA first establish a Maximum Contaminant Level Goal (MCLG), which is “the level at which no known or anticipated adverse effects on the health of persons occur and which allows an adequate margin of safety.” *Id.* § 300g-1(b)(4)(A). EPA must then set a Maximum Contaminant Level (MCL) “as close to the [MCLG] as is feasible.” *Id.* § 300g-1(b)(4)(B).

EPA also must, every five years, “publish a list of contaminants” that “are not subject to any proposed or promulgated national primary drinking water regulation, which are known or anticipated to occur in public water systems, and which may require regulation” *Id.* § 300g-1(b)(1)(B)(i). The SDWA requires EPA to prioritize that list based on vulnerable subpopulations that are at risk and other factors. *Id.* § 300g-1(b)(1)(C). EPA must then decide whether to regulate at least five contaminants on the list based on the “best available public health information.” *Id.* § 300g-1(b)(1)(B)(ii).

In making these determinations, the SDWA requires EPA to use “the best available, peer-reviewed science and supporting studies conducted in accordance with sound and objective scientific practices,” and “data collected by accepted methods or best available methods (if the reliability of the method and the nature of the decision justifies use of the data).” *Id.* § 300g-1(b)(3)(A); *see also id.* § 300g-1(b)(12), (13) (similar); *id.* § 300j-19 (referring to best available science standard for risk assessment of algal toxins).

The Proposal would conflict with the SDWA by prohibiting EPA from using the “best available” science and “data collected by acceptable or best available methods” solely because that data could not be made public. Indeed, courts interpreting these requirements have already rejected this proposed limitation on dose-response studies, making clear that they can indeed be the “best available” science regardless of whether the underlying data are publicly available. In *City of Waukesha v. EPA*, the court approved EPA’s use of “studies of Hiroshima and Nagasaki atomic bomb survivors” in setting limits for radium and uranium in drinking water. 320 F.3d 228, 248, 252 (D.C. Cir. 2003). But of course, these and similar studies would likely be excluded under the Proposal because the underlying data are not available.¹⁹⁴ The court also upheld the agency’s use of the linear, non-threshold (LNT) model used by EPA for both radium and uranium, *id.* at 249–50, 252, which is precisely the model that EPA now implies—without citing any evidence—is not scientifically justified.

Additionally, in carrying out its obligations to establish drinking water standards, the Act directs the agency to discuss “peer-reviewed studies known to the Administrator that support, are directly relevant to, or fail to support any estimate of public health effects and the methodology used to reconcile inconsistencies in the scientific data.” 42 U.S.C. § 300g-1(b)(3)(b)(v). Moreover, the agency must identify the “[q]uantifiable and non-quantifiable benefits for which there is a factual basis in the rulemaking record” in establishing a drinking water standard. Thus, under the express provisions of the SDWA, the agency cannot simply ignore peer-reviewed studies or other factual information in the record that the Proposed Rule would disallow from consideration, simply because the underlying data may be unavailable. *Id.* § 300g-1(b)(3)(c)(i).

If Congress had intended for the data targeted by the Proposal to be excluded, it could have said so. Instead, Congress directed EPA to use “the best available, peer-reviewed science and supporting studies conducted in accordance with sound and objective scientific practices,” and “data collected by accepted methods or best available methods.” 42 U.S.C. § 300g-1(b)(3)(A). EPA cannot ignore these commands to achieve its political goal of rolling back public health protections.

D. Resource Conservation and Recovery Act

Under the Resource Conservation and Recovery Act (RCRA), EPA regulates the generation, transportation, treatment, storage, and disposal of hazardous waste. EPA must develop, and revise from time to time, “criteria for identifying the characteristics of hazardous waste” and “for listing hazardous waste” that should be subject to regulation, “taking into account toxicity, persistence, and degradability in nature, potential for accumulation in tissue, and other related factors such as flammability, corrosiveness, and other hazardous characteristics.” 42 U.S.C. § 6921(a). EPA also must, in cooperation with Agency for Toxic Substances and Disease Registry (ATSDR) and the National Toxicology Program, “identify or list those hazardous wastes” which must be subject to regulation because they contain “certain constituents (such as identified carcinogens, mutagens, or terat[o]gens) at levels in excess of

¹⁹⁴ For a description of the studies, see Kotaro Ozasa, *Epidemiological research on radiation-induced cancer in atomic bomb survivors*, *Journal of Radiation Research*, Volume 57, Issue S1, 1 August 2016, Pages i112–i117, <https://academic.oup.com/jrr/article/57/S1/i112/2580473>.

levels which endanger human health.” *Id.* § 6921(b)(1). Likewise, EPA must promulgate regulations establishing standards applicable to generators and transporters of hazardous waste, and owners and operators of hazardous waste treatment, storage, and disposal facilities, “as may be necessary to protect human health and the environment.” *Id.* §§ 6922(a), 6923(a), 6924(a); *see also id.* § 6924(b), (d), (g).

The Proposal conflicts with RCRA’s statutory mandate. RCRA requires EPA to evaluate and regulate hazardous waste based on whether it will endanger human health and the environment, while the Proposal allows EPA to disregard relevant science simply because the underlying data cannot be made public. Under RCRA, EPA cannot ignore studies for that reason. Thus, the Proposal violates RCRA.

E. Comprehensive Environmental Response, Compensation, and Liability Act

Under CERCLA, EPA has power to clean up sites that are contaminated with hazardous substances, and to assure that responsible parties pay for such clean up. CERCLA requires EPA to issue regulations that identify hazardous substances that “present substantial danger to the public health or welfare or the environment,” and that specify the quantities of such substances that trigger the Act’s notification requirements. 42 U.S.C. § 9602(a). The Proposal contradicts this statutory mandate because it allows EPA to arbitrarily exclude some studies solely because the underlying data cannot be made public. Under the statute, EPA is required to use *all* relevant studies in determining whether a substance presents a substantial danger to people or the environment.

CERCLA also requires the President to promulgate and revise the National Contingency Plan for the removal of hazardous substances. *Id.* § 9605(a), (b). The President has delegated that authority to EPA. Exec. Order No. 12580, 52 Fed. Reg. 2923 (1987); Exec. Order No. 12777, 56 Fed. Reg. 54757. The Plan must include criteria for determining priorities “based upon relative risk or danger to public health or welfare or the environment,” taking into account enumerated factors. 42 U.S.C. § 9605(a)(8)(A). The Proposal conflicts with this section because it would direct EPA to disregard relevant studies solely because the underlying data could not be made public, even if those studies shed light on the enumerated factors.

CERCLA’s non-rulemaking provisions also show that Congress did not intend for studies to be excluded from consideration simply because the underlying data cannot be made public. For example, CERCLA authorizes the President to address hazardous substance releases that pose an “imminent and substantial danger to the public health or welfare,” and to “undertake such investigations, monitoring, surveys, testing, and other information gathering” as necessary to determine “the extent of danger to the public health or welfare or to the environment.” *Id.* § 9604(a), (b). This shows that Congress’s purpose in enacting CERCLA was to address the serious public health and environmental threats of hazardous substance releases. That purpose would be undermined if EPA could refuse to consider relevant studies only because the underlying data cannot be made public.

EPA also has co-responsibility with the ATSDR to establish a registry of diseases relating to toxic substance exposure, as well as to create a list of hazardous substances found at

Superfund sites, prepare a toxicological profile of those substances, and determine whether adequate information on the health effects of those substances exists. *Id.* § 9604(i). The statute specifically lists the types of studies and data that should be considered in determining whether adequate information exists and assessing the need for further research. *Id.* § 9604(i)(5); *see also id.* § 9604(i)(13). The statute does not exclude studies whose underlying data cannot be made public. In short, the Proposal contradicts both the statutory language and the purpose of CERCLA.

F. Emergency Planning and Community Right-to-Know Act

EPCRA establishes requirements for state and local emergency planning and reporting on hazardous chemicals. It requires EPA to publish a list of extremely hazardous substances and set, by regulation, a threshold planning quantity for each substance on the list. 42 U.S.C. § 11002(a). “Any revisions to the list shall take into account the toxicity, reactivity, volatility, dispersability, combustability, or flammability of a substance.” *Id.* § 11002(a)(4). Notably, in defining the criteria that EPA must consider for the list, EPCRA affirmatively directs EPA to consider the toxicity of the substance, among other things, and says nothing about excluding relevant studies for the reasons stated in the Proposal.

EPCRA also contains reporting requirements for owners or operators who manufacture, process, or use hazardous chemicals. *Id.* § 11023. EPA “may by rule add or delete a chemical from the list” of covered chemicals if there is sufficient evidence that the “chemical is known to cause or can reasonably be anticipated to cause significant adverse acute human health effects” or if the “chemical is known to cause or can reasonably be anticipated to cause in humans . . . cancer or teratogenic effects, or . . . serious or irreversible . . . reproductive dysfunctions[,] neurological disorders[,] heritable genetic mutations[,] other chronic health effects.” *Id.* § 11023(d). A chemical can also be added if it “is known to cause or can reasonably be anticipated to cause . . . a significant adverse effect on the environment of sufficient seriousness” due to its toxicity. *Id.* Of critical importance here, this determination “shall be based on generally accepted scientific principles or laboratory tests, or appropriately designed and conducted epidemiological or other population studies, available to the Administrator.” *Id.*

The Proposal directly conflicts with EPCRA’s requirement to use “generally accepted scientific principles or laboratory tests,” or “appropriately designed and conducted epidemiological or other population studies.” *See id.* § 11023(d). As explained throughout these comments, there is no reason the underlying data must be public for these tests and studies to be “generally accepted” or “appropriated designed and conducted.” Thus, the Proposal is—on its face—contrary to EPCRA’s mandate that EPA use these tests and studies when making determinations under the statute.

G. Federal Insecticide, Fungicide, and Rodenticide Act

FIFRA requires that all pesticides distributed or sold in the United States be registered by EPA. EPA cannot register pesticides that would cause “unreasonable adverse effects on the environment.” 7 U.S.C. § 136a. Likewise it may “by regulation” limit the distribution, sale or use of a pesticide to prevent “unreasonable adverse effects on the environment,” *id.* § 136a(a), and

must cancel the registration of pesticides that cause such “unreasonable adverse effects.” *Id.* § 136d. The term “unreasonable adverse effects on the environment” is defined to include unreasonable risks to human health, and dietary risks that violate the standard for pesticide residues under the Food, Drug and Cosmetic Act. *Id.* § 136(bb). Given that registration decisions often depend heavily on dose-response data and models, EPA must clarify whether the Proposal will apply to registration and registration review decisions. If so, the Proposal conflicts with FIFRA’s requirement that EPA determine whether pesticides proposed for registration would have unreasonable adverse effects on the environment. In light of that language, EPA cannot exclude relevant studies bearing on a pesticide’s effect on human health or the environment simply because the underlying data cannot be made public.

The potential applicability of the Proposal to exclude consideration of epidemiological studies of the health impacts of pesticides where the underlying data cannot be made public also highlights the logical inconsistency and arbitrary approach in the embodied proposed rule. On the one hand, the Proposal appears to be intended to prohibit consideration of such public health studies, but on the other hand seems to envision that industry-conducted studies and models claimed to include confidential business information would be allowed to be considered. This highlights the arbitrary and one-sided nature of the Proposal, and the clear underlying intent, which is to undermine public health protections for the benefit of industry.

Regardless of whether the Proposal applies to registration decisions, it conflicts with FIFRA in other ways. FIFRA directs EPA, when promulgating rules, to “take into account the difference in concept and usage between various classes of pesticides, including public health pesticides, and differences in environmental risk and the *appropriate data for evaluating such risk between agricultural, nonagricultural, and public health pesticides.*” *Id.* § 136w(a) (emphasis added); *see also id.* § 136w(c) (setting forth some examples of rules EPA may promulgate under FIFRA). EPA may not exclude “appropriate data” in these regulatory decisions simply because those data cannot be made public. Thus, the Proposal conflicts with FIFRA.

Finally, EPA has violated FIFRA’s procedural requirements. FIFRA requires EPA to provide the Scientific Advisory Panel and the Secretary of Agriculture with a copy of the Proposal at least 60 days before publication in the Federal Register. *Id.* § 136w(a)(2), (d). Any notification to the Secretary must be published in the Federal Register. *Id.* § 136w(a)(2)(D). There is no evidence in the Proposal that EPA followed these procedural requirements. (EPA also must provide the Panel and the Secretary a copy of the final rule 30 days before publication in the Federal Register. *Id.* § 136w(a)(2), (d).) Similarly, EPA must furnish a copy of the proposed and final regulation to the Committee on Agriculture of the House of Representatives and the Committee on Agriculture, Nutrition, and Forestry of the Senate. *Id.* § 136w(a)(3). Again, there is no evidence this occurred.

H. Toxic Substances Control Act

Under TSCA, EPA has broad authority to protect the public from harm from chemical substances and mixtures. TSCA authorizes EPA to issue regulations designed to gather information on, require testing of, and control exposure to chemical substances and mixtures.

EPA must restrict or ban any chemical substance that presents an unreasonable risk of injury to human health or the environment. *See, e.g.*, 15 U.S.C. §§ 2603, 2604, 2605.

TSCA contains specific provisions regarding EPA's use and consideration of science in rulemakings. "In carrying out sections 2603, 2604, and 2605," EPA must "use scientific information, technical procedures, measures, methods, protocols, methodologies, or models, employed in a manner consistent with the best available science." *Id.* § 2625(h). EPA must further consider the following:

- (1) the extent to which the scientific information, technical procedures, measures, methods, protocols, methodologies, or models employed to generate the information are reasonable for and consistent with the intended use of the information;
- (2) the extent to which the information is relevant for the Administrator's use in making a decision about a chemical substance or mixture;
- (3) the degree of clarity and completeness with which the data, assumptions, methods, quality assurance, and analyses employed to generate the information are documented;
- (4) the extent to which the variability and uncertainty in the information, or in the procedures, measures, methods, protocols, methodologies, or models, are evaluated and characterized; and
- (5) the extent of independent verification or peer review of the information or of the procedures, measures, methods, protocols, methodologies, or models.

Id. After consideration of these matters, EPA must make decisions "based on the weight of the scientific evidence." *Id.*

In short, EPA must examine the reliability of a study on a case-by-case basis by weighing several indicators of scientific validity. Noticeably absent from Congress's enumerated factors in § 2625(h) is whether the underlying data can be made available to the public. While § 2625(h)(4) provides that EPA should take into account "the extent of independent verification or peer review" of scientific information, this language indicates that peer review of a study could provide sufficient assurance of its reliability even without additional verification.

TSCA further directs EPA to make available to the public, among other things, "a list of the studies considered by the Administrator in carrying out each such risk evaluation, along with the results of those studies" and "each designation of a chemical substance . . . along with an identification of the information, analysis, and basis used to make the designations." *Id.* § 2625(i). Again, the statute, despite calling out specific information to be made publicly available, does not state that the *underlying data* for these studies must be made publicly available. Thus, the rule is flatly inconsistent with TSCA.

Finally, even if it were not already clear from the above provisions that EPA cannot bar consideration of studies as provided in the Proposal, TSCA also states that EPA “shall take into consideration information relating to a chemical substance or mixture, including hazard and exposure information, under the conditions of use, that is reasonably available to the Administrator.” *Id.* § 2625(k). EPA has defined “reasonably available” to mean “information that EPA possesses or can reasonably generate, obtain and synthesize for use . . . for prioritization and risk evaluation. Information that meets such terms is reasonably available information whether or not the information is confidential business information that is protected from public disclosure under 15 U.S.C. 2613.” 40 C.F.R. § 702.3. Thus, if the studies covered by the rule are “reasonably available” to EPA, the agency must consider them, regardless of whether the raw data can be made public. EPA cannot create a double standard where studies withheld from the public as confidential business information must be considered but studies for which the underlying data cannot be made publicly available cannot be considered. *See infra* section X. The Proposal is unlawful under TSCA and cannot be promulgated.

I. Food Quality Protection Act (or Food, Drug, and Cosmetics Act)

The Food Quality Protection Act (also known as the Food, Drug, and Cosmetics Act or FFDCA) governs pesticide tolerances. Section 408 of the FFDCA requires EPA to set tolerances, which are maximum residue limits, for pesticide residues on foods. In setting tolerances, EPA must find that the tolerance is “safe.” 21 U.S.C. § 346a. Safe is defined as meaning that there is a “reasonable certainty that no harm will result from aggregate exposure to the pesticide residue.” *Id.* § 346a(b)(2)(a)(ii). To make this finding, EPA considers, among other things: the toxicity of the pesticide and its break-down products, aggregate exposure to the pesticide in foods and from other sources of exposure, and any special risks posed to infants and children. *Id.* § 346a(b). For threshold effects, EPA is required to add an additional tenfold margin of safety to protect infants and children, unless the administrator finds based on reliable data that a different safety factor will ensure the pesticide is safe. *Id.* § 346a(b)(2)(C)(ii). The statute contains specific provisions regarding the type and availability of data that must be considered. *Id.* § 346a(b)(2)(D), (E), (F).

The Proposal does not cite to the FFDCA, and apparently EPA never considered whether the Proposal is consistent with the law. It is not. First, the Act defines “safe” to mean that “there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.” *Id.* § 346a(b)(2)(A)(ii). As part of this determination, EPA must “ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure.” *Id.* § 346a(b)(2)(C). EPA cannot do this if it excludes relevant studies solely because the underlying data cannot be made public.

The FFDCA specifically speaks to how threshold and non-threshold effects shall be considered. *Id.* § 346a(b)(2)(B). The Proposal cannot override the specific Congressional mandates in the FFDCA for how to conduct a tolerance assessment. In determining whether there is a reasonable certainty of no harm to infants and children, EPA must consider “available information” on consumption patterns among infants and children, special susceptibility of infants and children (including for example neurological and in utero effects), cumulative effects on infants and children. *Id.* § 346a(b)(2)(C). Likewise, the Act specifies numerous scientific

factors that must be considered in evaluating safety, including considering “available data” on these factors. *Id.* § 346a(b)(2)(D). The Proposal plainly contradicts these mandates. Obviously, published, peer-reviewed literature is “available” and must be considered. As with studies considered under other statutes, EPA fails to explain the arbitrariness of excluding published peer-reviewed studies while allowing industry studies considered confidential business information to be considered.

Finally, the FFDCA contains certain procedural requirements for “establishing general procedures and requirements to implement this section.” *Id.* § 346a(e). Yet EPA failed to cite the FFDCA—either its substantive or procedural requirements—at all in its Proposal.

J. Atomic Energy Act

The AEA, 42 U.S.C. § 2011 *et seq.*, is not a typical environmental law, as the original act established the Atomic Energy Commission (AEC) just after World War II to promote the “utilization of atomic energy for peaceful purposes to the maximum extent consistent with the common defense and security and with the health and safety of the public.” The concern found in the final clause of its original organic act, “the health and safety of the public,” has at no point disappeared in subsequent iterations of the act and this Proposal runs contrary to its clearly stated intent.

The AEC was abolished in the 1970s, and since that then, most of the functions of the AEA are carried out by the Nuclear Regulatory Commission and the U.S. Department of Energy. However, when EPA was formed in the early 1970s, it assumed the AEC’s authority to issue generally applicable environmental radiation standards to protect the health and safety of the public. Other federal and state organizations must follow these standards when developing requirements for their areas of radiation protection. EPA also implements the Federal Radiation Council’s authority under the AEA, developing guidance for federal and state agencies containing recommendations for their use in developing radiation protection requirements and working with states that have radiation protection programs.

There are several specific statutory requirements that EPA executes under the AEA, which states that “the purpose of this [Act is] to effectuate the policies set forth above by providing for – (d) a program to encourage widespread participation in the development and utilization of atomic energy for peaceful purposes to the maximum extent consistent with the common defense and security *and with the health and safety of the public.*” 42 U.S.C. § 2013(d) (emphasis added).

The following regulations are health-based standards, and as we discuss *supra* section III.G., EPA bases its regulatory limits and nonregulatory guidelines for population exposures to low-level ionizing radiation on the linear no-threshold (LNT) dose-response model, which uses the premise that any radiation dose carries some risk, and that risk increases directly with dose. The viability of each of these longstanding health-based protections will be undercut by promulgation of a final rule that resembles this draft for the reasons discussed *supra* section III.G., and in direct conflict with the AEA’s requirement that the utilization of atomic

energy for peaceful purposes be “to the maximum extent consistent with the common defense and security *and with the health and safety of the public.*”

- Environmental Radiation Protection Standards for Nuclear Power Operations (40 C.F.R. Part 190); these standards limit radiation releases and doses to the public from the normal operation (non-emergency) of nuclear power plants and other uranium fuel cycle facilities.
- Environmental Radiation Protection Standards for Management and Disposal of Spent Fuel, High Level and Transuranic Wastes (40 C.F.R. Part 191); this regulation sets environmental standards for the disposal of highly radioactive spent nuclear fuel and certain kinds of highly toxic and radioactive wastes produced from the nuclear weapons program that must ultimately be disposed of in a deep geologic repository.
- Health and Environmental Protection Standards for Health and Environmental Protection Standards for Uranium and Thorium Mill Tailings (40 C.F.R. Part 192); this regulation sets standards for the protection of the public health, safety, and the environment from radiological and non-radiological hazards associated with uranium and thorium ore processing, and disposal of associated wastes. In May of 2015, EPA proposed revisions to 40 C.F.R. 192 that would establish groundwater restoration and monitoring requirements at in-situ recovery facilities, and then in January 2017, EPA re-proposed those revisions. We await final agency action on the matter.
- Criteria for the Certification and Recertification of the Waste Isolation Pilot Plant’s Compliance with the 40 C.F.R. Part 191 Disposal Regulations (40 C.F.R. 194); these criteria apply to the certification and recertification of compliance with the radioactive waste disposal standards at the Waste Isolation Pilot Plant (WIPP) in New Mexico, the world’s only deep geologic repository, which is operated by the U.S. Department of Energy (DOE) for permanent disposal of transuranic waste from the nation's nuclear defense program.
- Public Health and Environmental Radiation Protection Standards for Yucca Mountain, Nevada (40 C.F.R. Part 197); these regulations, last promulgated in 2008 (after a Federal Appeals Court found an earlier version unlawful, *see, e.g., Nuclear Energy Inst., Inc. v. EPA*, 373 F.3d 1251 (D.C. Cir. 2004)), establish public health and environmental standards for storage and disposal of spent nuclear fuel at the proposed repository at Yucca Mountain, Nevada. The U.S. Nuclear Regulatory Commission would implement these regulations at Yucca Mountain if a repository were to be established there.
- As discussed above, the Clean Air Act requires EPA to regulate airborne emissions of hazardous air pollutants (HAPs) from a specific list of industrial sources called “source categories.” Standards known as the “National Emission Standards for Hazardous Air Pollutants” (NESHAPs) dictate specific regulatory limits for source categories that emit radionuclides. In 40 C.F.R. Part 61: the *National Emission Standards For Hazardous Air Pollutants*, EPA sets health based standards in a number of settings, such as Subpart B: *Radon Emissions from Underground Uranium Mines*; Subpart H: *Emissions of Radionuclides Other than Radon from Department of Energy Facilities*; Subpart I: *Radionuclide Emissions from Federal Facilities Other than Nuclear Regulatory Commission Licensees and Not Covered by Subpart H*; Subpart K: *Radionuclide Emissions from Elemental Phosphorus Plants*; Q: *Radon Emissions from Department of Energy Facilities*; R: *Radon Emissions from Phosphogypsum Stacks*; Subpart T: *Radon*

Emissions from the Disposal of Uranium Mill Tailings; and Subpart W: *Radon Emissions from Operating Mill Tailings*.

- And last, under the Safe Drinking Water Act (SDWA), discussed above, EPA sets health-based standards on the levels of certain radionuclides in drinking water. After much litigation, in 2000 EPA revised an outdated set of standards that had been in place since the late 1970s and set new monitoring provisions for community water systems (CWS). The current standards are: Combined radium 226/228 of 5 pCi/L; a gross alpha standard for all alphas of 15 pCi/L (not including radon and uranium); a combined standard of 4 mrem/year for beta emitters; and a the MCL for uranium at 30 µg/L.

In short, the Proposal could seriously damage EPA’s ability to administer the AEA and protect the public from radiation. Yet the Proposal fails to cite the statute at all.

VI. The cited sources do not support—and in fact contradict—the Proposal

These comments have discussed the failure of statutory authorities cited by EPA to provide any legal support or authorization whatsoever for the Proposal and its approaches. The Proposal also cites various executive orders, memoranda, reports, guidelines and the like with the suggestion or implication that these materials somehow provide support for the Proposal. They do not, and thus the Proposal violates the law. *See, e.g., Public Citizen Health Research Group v. Tyson*, 796 F.2d 1479 (D.C. Cir. 1986) (reversing and remanding agency decision to carry out last-minute directive by White House Office of Management and Budget without any apparent justification in the administrative record).

First, of course, EPA’s proposed rulemakings must be authorized by federal statutes. Executive orders provide no legal authority for agency rulemakings. Nor may executive orders contradict or alter legal responsibilities an agency has under federal statutes or justify arbitrary and capricious agency action. Equally obvious, memoranda, reports, guidelines and the like provide no legal authority for agency rulemakings, nor may they justify arbitrary and capricious agency action. *See, e.g., Medellin v. Texas*, 552 U.S. 491, 524 (2008) (“The President’s authority to act, as with the exercise of any governmental power, ‘must stem either from an act of Congress or from the Constitution itself.’” (citation omitted)); *Chrysler Corp. v. Brown*, 441 U.S. 281, 302 (1979) (“The legislative power of the United States is vested in the Congress, and the exercise of quasi-legislative authority by governmental departments and agencies must be rooted in a grant of such power by the Congress and subject to limitations which that body imposes.”). Second, an agency’s proposed rulemaking may not be at odds with federal statutes, may not be creatures of the agency’s imagination or policy preferences, and may not be otherwise arbitrary, capricious or inconsistent with law. The Proposal fails on all of these scores.

This section of our comments explains how these additional materials cited by EPA in the Proposal (1) fail to provide any support for the Proposal, on scientific, technical, policy, logical or legal grounds; and (2) actually undermine the Proposal—contradicting its approaches and assumptions, directly or indirectly—and demonstrate further that the Proposal is unsupported, arbitrary, capricious and otherwise inconsistent with law.

A. Footnote 1

The Proposal states, “The best available science must serve as the foundation of EPA’s regulatory actions.” 83 Fed. Reg. at 18,769. It cites and quotes from Executive Order 13,563, 76 Fed. Reg. 3,821 (Jan. 21, 2011): “Our regulatory system must protect public health, welfare, safety, and our environment while promoting economic growth, innovation, competitiveness, and job creation. It must be based on the best available science.” 83 Fed. Reg. at 18,769 n.1.

The executive order, issued by President Obama, not only does not support the Proposal, it directly undermines the Proposal. There is no suggestion in the cited Obama Executive Order, or in any contemporaneous or subsequent actions by Obama administration federal agencies, that “best available science” means or meant that science underlying an agency’s actions must be publicly available in a manner sufficient for independent validation, nor that “pivotal regulatory science” has any meaning akin to the proposed uses in proposed § 30.3 *See* 83 Fed. Reg. at 18,773 (“dose response data and models” and “pivotal regulatory science”).

To the contrary, no previous administration has conditioned any notion of “best available science” on the public availability of underlying data, or on the concepts behind the invented term, “pivotal regulatory science.” EPA previously routinely used and considered science and studies for which the underlying data was not publicly available as examples of the “best available science.” EPA did so for proposed and final regulations, along with other final agency actions, reports, studies and the like. EPA’s use and consideration of such science was validated by EPA’s science advisory bodies, the National Academy of Science, the Science Advisory Board, and other scientific organizations. *See supra* II.B. And explained in section IX, the Proposal does not provide sufficient explanation for its departure from this past practice.

Moreover, the Executive Order also says that “before issuing a notice of proposed rulemaking,” the “agency shall seek the views of those who are likely to be affected.” 76 Fed. Reg. 3,821. This Proposal failed to do so, despite its wide-reaching effect. A May 12, 2018, Memorandum to Members of the Chartered Science Advisory Board (SAB) and SAB Liaisons from the Chair of SAB Work Group explains: “The proposed rule deals with issues of scientific practice and proposes constraints that the agency may apply to the use of scientific studies in particular contexts. As such, this rule deals with a myriad of scientific issues for which the Agency should seek expert advice from the Science Advisory Board.” *Preparations for Chartered Science Advisory Board (SAB) Discussions of Proposed Rule: Strengthening Transparency in Regulatory Science RIN (2080-AA14)*, May 12, 2018.¹⁹⁵ The Memorandum further explains that “the precise design of the rule appears to have been developed without a public process for soliciting input from the scientific community.”¹⁹⁶ This is contrary to Executive Order 13,563.

¹⁹⁵ Preparations for Chartered Science Advisory Board (SAB) Discussions of Proposed Rule: Strengthening Transparency in Regulatory Science RIN (2080-AA14), May 12, 2018, [https://yosemite.epa.gov/sab/sabproduct.nsf/E21FFAE956B548258525828C00808BB7/\\$File/WkGrp_memo_2080-AA14_final_05132018.pdf](https://yosemite.epa.gov/sab/sabproduct.nsf/E21FFAE956B548258525828C00808BB7/$File/WkGrp_memo_2080-AA14_final_05132018.pdf).

¹⁹⁶ *Id.* at 3.

A June 28, 2018, letter from the Chair of the SAB Board, Dr. Michael Honeycutt, on behalf of the SAB, furthers this point.¹⁹⁷ That letter explains that on May 31, 2018, “the full SAB agreed with the Work Group that the proposed rule merits review by the Board and discussed the scientific issues that should be considered.”¹⁹⁸ The letter reiterates that “the precise design of the proposed rule appears to have been developed without a public process for soliciting input specifically from the scientific community.”¹⁹⁹ This letter underscores that the Proposal is inconsistent with Executive Order 13,563.

B. Footnote 2

The Proposal cites the 2009 Presidential Memorandum for the Heads of Executive Departments and Agencies on Scientific Integrity in support of the proposition that “[e]nhancing the transparency and validity of the scientific information relied upon by EPA strengthens the integrity of EPA’s regulatory actions and its obligation to ensure the Agency is not arbitrary in its conclusions. By better informing the public, the Agency is enhancing the public’s ability to understand and meaningfully participate in the regulatory process.” 83 Fed. Reg. at 18,769 (citing Memorandum for the Heads of Executive Departments and Agencies, Mar. 9, 2009). The Proposal points to the section of the 2009 Memo that states, “If scientific and technological information is developed and used by the Federal Government, it should ordinarily be made available to the public. To the extent permitted by law, there should be transparency in the preparation, identification, and use of scientific and technological information in policymaking.” *Id.* n.2.

First, the cited sentence refers to information developed and used by the federal government, but EPA has long held that it may use published scientific studies without obtaining the underlying raw data. *See, e.g.*, Initial Brief of Respondent United States Environmental Protection Agency at 47–48, *Coalition of Battery Recyclers Ass’n v. EPA*, No. 09-1011 (D.C. Cir. January 19, 2010), ECF No. 1226234 (explaining that EPA does not have an obligation to obtain and docket raw data from scientific studies it uses). The Proposal has pointed to no instances where the EPA was not transparent in the preparation, identification, and use of scientific information, including published peer reviewed scientific studies. Second, the cited sentence takes a more nuanced approach than the Proposal and recognizes exceptions even for the information developed and used by the federal government.

Importantly, the 2009 Presidential Memo also states in the sentence immediately preceding the quotation singled out by EPA, “Political officials should not suppress or alter scientific or technological findings and conclusions.” Memorandum for the Heads of Executive Department and Agencies on Scientific Integrity, 74 Fed. Reg. 10,671 (Mar. 9, 2009). The

¹⁹⁷June 28, 2018, Letter to Scott Pruitt re Science Advisory Board (SAB) Consideration of EPA Proposed Rule: Strengthening Transparency in Regulatory Science, [https://yosemite.epa.gov/sab/sabproduct.nsf/LookupWebReportsLastMonthBOARD/4ECB44CA28936083852582B004ADE54/\\$File/EPA-SAB-18-003+Unsigned.pdf](https://yosemite.epa.gov/sab/sabproduct.nsf/LookupWebReportsLastMonthBOARD/4ECB44CA28936083852582B004ADE54/$File/EPA-SAB-18-003+Unsigned.pdf).

¹⁹⁸ *Id.* at 2.

¹⁹⁹ *Id.* at 3.

Proposal, far from preserving the integrity of science, attempts to suppress established scientific findings and conclusions in the name of transparency.

The Proposal's citation to the 2009 Presidential Memo misconstrues the Memo's aims by cherry-picking a single sentence and ignoring the remainder. While the Memo emphasizes the importance of transparency and validity of scientific information, it in no way supports the Proposal's use of transparency to justify the suppression of scientific findings. Unlike the Proposal, the 2009 Presidential Memo adopts a nuanced view of scientific integrity that balances transparency with other considerations, such as privacy and avoiding scientific censorship. To this end, several statements in the 2009 Presidential Memo on Scientific Integrity directly undercut the Proposal:

(c) When scientific or technological information is considered in policy decisions, the information should be subject to well-established scientific processes, including peer review where appropriate, and each agency should appropriately and accurately reflect that information in complying with and applying relevant statutory standards . . .

Id. The Proposal seeks to preclude scientific information that has been subject to well-established scientific processes, including peer review. The Proposal also seeks to upend compliance and application of the relevant statutory standards. *See* section III.

(d) Except for information that is properly restricted from disclosure under procedures established in accordance with statute, regulation, Executive Order, or Presidential Memorandum, each agency should make available to the public the scientific or technological findings or conclusions considered or relied on in policy decisions . . .

Id. The Memorandum requires agencies to make available the scientific findings or conclusions, and even that requirement has exceptions. The Proposal would arbitrarily exclude consideration of relevant scientific findings and conclusions if the underlying data is not publicly available.

The 2009 Presidential Memorandum for the Heads of Executive Departments and Agencies on Scientific Integrity does not support EPA's proposed actions. The Proposal does not enhance transparency and validity of scientific information relied upon by EPA. It requires the agency to ignore valid scientific studies in its decision making and thus will lead to arbitrary results and weaken the integrity of EPA's actions.

C. Footnote 3

The Proposal states that it is consistent "with the principles underlying the Administrative Procedure Act and programmatic statutes that EPA administers to disclose to the public the bases for agency rules and to rationally execute and adequately explain agency actions." 83 Fed. Reg. at 18,769. In a footnote to this sentence the Proposal states:

EPA has the authority to establish policies governing its reliance on science in the administration of its regulatory functions. Historically, EPA has not consistently observed the policies underlying this Proposal, and courts have at times upheld EPA's use non-public data in support of its regulatory actions. *See Coalition of Battery Recyclers Ass'n v. EPA*, 604 F.3d 613, 623 (D.C. Cir. 2010); *American Trucking Ass'ns v. EPA*, 283 F.3d

355, 372 (D.C. Cir. 2002). EPA is proposing to exercise its discretionary authority to establish a policy that would preclude it from using such data in future regulatory actions.

83 Fed. Reg. at 18,769 n.3.

EPA recognizes the cited cases contradict the proposed rule but attempts to waive them away and asserting it has discretionary authority to do the opposite of what the D.C. Circuit decided. EPA's consideration of peer reviewed scientific studies that do not have public data is the norm, required by the Administrative Procedure Act and the programmatic statutes that EPA administers. *See* sections II, IV, & V. The proposed departure from this norm to preclude the use of such data, which the Proposal makes explicit in this footnote, is not within EPA's discretion and would violate the programmatic statutes. As explained above, nothing the Proposal provides EPA with authority to do so. The Proposal's citations to two cases that contradict its proposed actions does not support the unexplained assertion of authority.

The court in *American Trucking* stated:

More generally, we agree with EPA that requiring agencies to obtain and publicize the data underlying all studies on which they rely "would be impractical and unnecessary." Particulate Matter NAAQS, 62 Fed. Reg. at 38,689. As EPA persuasively stated in denying Petitioners' original request for the information:

If EPA and other governmental agencies could not rely on published studies without conducting an independent analysis of the enormous volume of raw data underlying them, then much plainly relevant scientific information would become unavailable to EPA for use in setting standards to protect public health and the environment.... [S]uch data are often the property of scientific investigators and are often not readily available because of ... proprietary interests ... or because of [confidentiality] arrangements [with study participants].

Am. Trucking Associations, Inc., 283 F.3d at 372.

In *Coalition of Battery Recyclers*, the D.C. Circuit cited *American Trucking*, explaining that the court had "rejected the notion that EPA had improperly failed to obtain and make public data underlying studies on which it had relied during a NAAQS rulemaking, holding that '[t]he Clean Air Act imposes no such obligation' and that 'requiring agencies to obtain and publicize the data underlying all studies on which they rely would be impractical and unnecessary.'" 604 F.3d at 623 (citations omitted). The court noted "that raw data often is unavailable due to proprietary interests of a study's scientific investigators or confidentiality agreements with study participants." *Id.*

The Proposal at least concedes that D.C. Circuit law does not support its actions. Yet EPA not explain how the Proposal is consistent with the principles underlying the Administrative Procedure Act and programmatic statutes that EPA administers. To the extent EPA believes this to be true, it should withdraw the Proposal and explain its belief.

D. Footnotes 4 & 5

The Proposal states that it is consistent with Executive Orders 13,777 and 13,783. 83 Fed. Reg. at 18,769.

The Proposal states that “[r]egulatory reform efforts shall attempt to identify ‘those regulations that rely in whole or in part on data, information, or methods that are not publicly available or that are insufficiently transparent to meet the standard for reproducibility.’” 83 Fed. Reg. at 18,769 n.4 (quoting Exec. Order No. 13,777, 82 Fed. Reg. 12,285, 12,286 (Mar. 1, 2017)). President Trump’s Executive Order No. 13,777 requires Regulatory Reform Task Forces to evaluate existing regulations and “make recommendations to the agency head regarding their repeal, replacement, or modification, consistent with applicable law.” 82 Fed. Reg. at 12,286. The Executive Order requires the task force to identify regulations that, among other things, “impose costs that exceed benefits,” and “create a serious inconsistency or otherwise interfere with regulatory reform initiatives and policies.” *Id.* The Proposal does not identify any regulations that it believes should be repealed, replaced, or modified, consistent with applicable law. Instead, the Proposal creates a new burdensome regulation. Notwithstanding EPA’s unsupported assertion that it “believes the benefits of this proposed rule justify the costs,” 83 Fed. Reg. at 18,772, the proposed rule will impose costs that exceed benefits, *see* section II.D & E. The inconsistencies within the Proposal are overwhelming (for one of the many examples, the unexplained willingness to consider certain scientific studies in some contexts while excluding the consideration of those same studies in other contexts, *see* section XI). And the Proposal, as explained in sections IV. & V., is not consistent with applicable laws. Rather than being consistent with President Trump’s Executive Order, the proposed rule contradicts it.

Regarding President Trump’s Executive Order 13,783, the Proposal quotes, “It is also the policy of the United States that necessary and appropriate environmental regulations comply with the law, are of greater benefit than cost, when permissible, achieve environmental improvements for the American people, and are developed through transparent processes that employ the best available peer-reviewed science and economics.” 83 Fed. Reg. at 18,769 n.5 (quoting Exec. Order No. 13,783, 82 Fed. Reg. 16,093 (Mar. 31, 2017)). EPA presumably believes the proposed rule is consistent with the language “transparent processes that employ the best available peer-reviewed science and economics.” But that language, and the rest of the quotation, contradicts the Proposal. As explained throughout these comments, the Proposal would prevent EPA from promulgating regulations that comply with the law, would cost more than any benefit it could achieve, and would preclude the use of the best available peer-reviewed science.

E. Footnote 6 & 15

The Proposal cites to the 2002 OMB Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by Federal Agencies to justify the Proposal’s focus on transparency, 83 Fed. Reg. at 18,769 n.6, and to support its contention that the guidelines “require” that “regulators to ensure that key findings are valid and credible,” *id.* at 18,770 n.15. Despite these citations, the Guidelines do not support EPA’s proposal to preclude the consideration of peer-reviewed scientific studies. *See Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information*

Disseminated by Federal Agencies, 67 Fed. Reg. 8,452, 8,454 (Feb. 22, 2002). The Proposal points to no agency finding that it believes is invalid and not credible. Rather, the Proposal will cause EPA to reach findings that are invalid and not credible because the agency will make these findings without consideration of the best available science. The Proposal contradicts the Guidelines.

The 2002 OMB Guidelines contain many statements that undercut the Proposal on their face.

<p>Text of 2002 OMB Guidelines</p>
<p>“As a general matter, in the scientific and research context, we regard technical information that has been subjected to formal, independent, external peer review as presumptively objective. . . . An example of a formal, independent, external peer review is the review process used by scientific journals.” 67 Fed. Reg. at 8,454.²⁰⁰</p>
<p>Analysis</p>
<p>While the 2002 OMB Guidelines recognize technical information that has been subjected to formal, independent, external peer review as “presumptively objective,” the Proposal upends this idea and forces the EPA to regard such technical information as invalid and not worthy of consideration.</p>
<p>Text of 2002 OMB Guidelines</p>
<p>“‘Agencies may identify, in consultation with the relevant scientific and technical communities, those particular types of data that can practicably be subjected to a reproducibility requirement, given ethical, feasibility, or confidentiality constraints.’ Further, as we state in our expanded definition of ‘reproducibility’ . . . ‘If agencies apply the reproducibility test to specific types of original or supporting data, the associated guidelines shall provide relevant definitions of reproducibility (e.g., standards for replication of laboratory data).’ OMB urges caution in the treatment of original and supporting data because it may often be impractical or even impermissible or unethical to apply the reproducibility standard to such data. For example, it may not be ethical to repeat a ‘negative’ (ineffective) clinical (therapeutic) experiment and it may not be feasible to replicate the radiation exposures studied after the Chernobyl accident. When agencies submit their draft agency guidelines for OMB review, agencies should include a description of the extent to which the reproducibility standard is applicable and reflect consultations with relevant scientific and technical communities that</p>

²⁰⁰ This statement is qualified by a section on the sufficiency of peer review: “Some comments argued that journal peer review should be adequate to demonstrate quality, even for influential information that can be expected to have major effects on public policy. OMB believes that this position overstates the effectiveness of journal peer review as a quality-control mechanism. Although journal peer review is clearly valuable, there are cases where flawed science has been published in respected journals.” *Id.* at 8,455. Nonetheless, nothing in the guidelines suggest that peer-reviewed science can be wholesale ignored simply because the underlying data cannot be made public.

were used in developing guidelines related to applicability of the reproducibility standard to original and supporting data.” *Id.* at 8,456.

Analysis

The OMB Guidelines emphasize the ethical, feasibility, and confidentiality constraints associated with reproducing particular types of studies, and underscore the importance of consultation with relevant scientific and technical communities in the development of reproducibility requirements. The Proposal recklessly ignores these precautions, subjecting “regulatory science” to requirements that the underlying data be made publicly available in a manner sufficient for independent validation. The Proposal does so without consultation of relevant scientific communities and without concern as to whether such data can practicably be subjected to such requirements. As explained in section II, the data underlying many scientific studies affected by the Proposal cannot be made publicly available given the ethical, feasibility, and confidentiality concerns addressed by the OMB Guidelines.

Text of 2002 OMB Guidelines

“With regard to original and supporting data related thereto, agency guidelines shall not require that all disseminated data be subjected to a reproducibility requirement. Agencies may identify, in consultation with the relevant scientific and technical communities, those particular types of data that can practicable [sic] be subjected to a reproducibility requirement, given ethical, feasibility, or confidentiality constraints. It is understood that reproducibility of data is an indication of transparency about research design and methods and thus a replication exercise (i.e., a new experiment, test, or sample) shall not be required prior to each dissemination.” *Id.* at 8,460.

Analysis

The Guidelines state that reproducibility of data is one indication of transparency but does not suggest that reproducibility is the *only* indication of transparency, nor does it suggest that agencies should preclude non-reproducible, non-publicly available scientific studies from agency consideration, as the Proposal envisions. Contrary to the Proposal, the Guidelines state that agencies should not require data to be subjected to a reproducibility requirement.

Text of 2002 OMB Guidelines

“With regard to analysis of risks to human health, safety and the environment maintained or disseminated by the agencies, agencies shall either adopt or adapt the quality principles applied by Congress to risk information used and disseminated pursuant to the Safe Drinking Water Act Amendments of 1996 (42 U.S.C. 300g– 1(b)(3)(A) & (B)). Agencies responsible for dissemination of vital health and medical information shall interpret the reproducibility and peer-review standards in a manner appropriate to assuring the timely flow of vital information from agencies to medical providers, patients, health agencies, and the public. Information quality standards may be waived temporarily by agencies under urgent situations

(e.g., imminent threats to public health or homeland security) in accordance with the latitude specified in agency-specific guidelines.” <i>Id.</i>
Analysis
The Guidelines recognize the ethical, feasibility, and confidentiality constraints of reproducing certain types of data. The Proposal ignores these issues. Furthermore, the Guidelines recommends that risk assessments related to human health, safety, and the environment are subject to quality principle standards established by Congress through the SDWA, which differ from the Proposal.
Text of 2002 OMB Guidelines
“Even in a situation where the original and supporting data are protected by confidentiality concerns, or the analytic computer models or other research methods may be kept confidential to protect intellectual property, it may still be feasible to have the analytic results subject to the reproducibility standard. For example, a qualified party, operating under the same confidentiality protections as the original analysts, may be asked to use the same data, computer model or statistical methods to replicate the analytic results reported in the original study. <i>See, e.g., ‘Reanalysis of the Harvard Six Cities Study and the American Cancer Society Study of Particulate Air Pollution and Mortality,’ A Special Report of the Health Effects Institute’s Particle Epidemiology Reanalysis Project, Cambridge, MA, 2000.” Id. at 8,456.</i>
Analysis
Unlike the Proposal, the OMB Guidelines recognize that studies have been able to be reproduced even without publicly disclosing all their data. Although the OMB Guidelines positively discuss this option, the Proposal would preclude EPA from considering both the initial study and the reanalysis study from consideration in regulatory decision making.

The Proposal’s concerns about transparency are addressed by the Guidelines and do not justify precluding consideration of the best available science. The 2002 OMB Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by Federal Agencies does not support the Proposal. *See also* section II.A.

F. Footnote 7

The Proposal claims that it is consistent with the OMB Memorandum 13-13: Open Data Policy—Managing Information as an Asset, which

requires agencies to collect or create information in a way that supports downstream information processing dissemination activities. This includes using machine-readable and open formats, data standards, and common core and extensible metadata for all new information creation and collection efforts. It also includes agencies ensuring information stewardship through the use of open licenses and review of information for privacy, confidentiality, security, or other restrictions to release.

83 Fed. Reg. at 18,770 n.7. However, the Open Data Policy required that agencies balance the “value of openness against the cost of making those data public.” 2013 OMB Memorandum for the Heads of Executive Departments and Agencies on Open Data Policy at 6. Included in the costs of making those data public is an individual’s right to privacy, which the agencies are required to consider when releasing data. *Id.* at 10. The EPA’s Proposal does not balance these values, and instead pursues public availability of data in the realm of dose response data at all costs.

The Open Data Policy Memorandum contains a number of passages that conflict with, rather than support, the Proposal:

Nothing in this Memorandum shall be construed to affect existing requirements for review and clearance of pre-decisional information by OMB relating to legislative, budgetary, administrative, and regulatory materials. Moreover, nothing in this Memorandum shall be construed to reduce the protection of information whose release would threaten national security, invade personal privacy, breach confidentiality or contractual terms, violate the Trade Secrets Act, violate other statutory confidentiality requirements, or damage other compelling interests.

Id. at 12. The Open Data Policy Memorandum specifically called out the problem of exposing personally identifiable information:

As defined in OMB Memorandum M-1 0-23, ‘personally identifiable information’ (PII) refers to information that can be used to distinguish or trace an individual’s identity, either alone or when combined with other personal or identifying information that is linked or linkable to a specific individual. The definition of PII is not anchored to any single category of information or technology. Rather, it requires a case-by-case assessment of the specific risk that an individual can be identified. In performing this assessment, it is important for an agency to recognize that non-PII can become PII whenever additional information is made publicly available (in any medium and from any source) that, when combined with other available information, could be used to identify an individual.

Id. at 4. The Memorandum expresses concern for individual privacy and notes the ease with which non-personally identifiable information can be used to identify an individual when combined with other publicly available information. The Proposal attempts to wave away these concerns with assertions that confidential information can be de-identified. 83 Fed. Reg. at 18,770–71. The problems with the Proposal’s emphasis of such “de-identification” techniques are explored further in section II.D. Far from weighing considerations of privacy, the Proposal would simply bar the use of studies based on confidential information that could not be de-identified.

Again, while the Memorandum makes clear that agencies must consider privacy, it says nothing about barring agency consideration of documents based on that analysis. Rather, the thrust of the Memorandum is ensuring that private information is not inadvertently publicly disclosed, and balancing that obligation with the presumption of government openness:

Agencies must incorporate privacy analyses into each stage of the information's life cycle. In particular, agencies must review the information collected or created for valid restrictions to release to determine whether it can be made publicly available, consistent with the *Open Government Directive's* presumption in favor of openness, and to the extent permitted by law and subject to privacy, confidentiality pledge, security, trade secret, contractual, or other valid restrictions to release. If the agency determines that information should not be made publicly available on one of these grounds, the agency must document this determination in consultation with its Office of General Counsel or equivalent.

Id. at 9.

It is not clear to what extent EPA believes the Proposal is consistent with the Memorandum. But given the Memorandum's recognition of the various constraints on, and nuanced approach to, the release of data publicly, EPA's reliance on the Memorandum is misplaced. The Proposal's attempt to preclude consideration of peer reviewed science from regulatory review is not consistent with the Memorandum.

G. Footnotes 8 & 9

The Proposal states that it "builds upon prior EPA actions in response to government wide data access and sharing policies, as well as the experience of other federal agencies in this space." 83 Fed. Reg. at 18,770 (footnotes omitted). A footnote to this sentence generally lists the following, without any explanation of how the Proposal builds upon them:

Plan to Increase Access to Results of EPA-Funded Scientific Research; EPA Open Government Plan 4.0; Open Data Implementation Plan; EPA's Scientific Integrity Policy; Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by the Environmental Protection Agency.

83 Fed. Reg. at 18,769 n.8. Another footnote generally lists the following agencies, again without any explanation of how the Proposal builds upon their experience:

For example, see related policies from the National Science Foundation, National Institute of Science and Technology, the National Institutes of Health; and the U.S. Census Bureau, which provides secure access to data from several agencies in an environment that protects against unauthorized disclosure (<https://www.census.gov/fsrdc>).

Id. n.9. First, EPA does not explain what it means by "builds upon." The EPA's own Science Advisory Board Work Group states that the preamble to the rule does not "describe precisely how the [P]roposal builds on previous efforts to promote transparency such as the Information Quality Act and EPA's Information Quality Guidelines." May 12, 2018 Memorandum to Members of the Chartered Science Advisory Board (SAB). The citations are to large documents and policies and it is not clear what, if any, parts EPA believes the Proposal "builds upon." Second, none of these documents or agency policies bar, or recommend barring, the use of

studies in regulatory decision making, as the Proposal seeks to do. Third, many of these documents contradict, and support the withdrawal of, the Proposal.

The Proposal cites the 2016 EPA Plan to Increase Access to Results of EPA-Funded Scientific Research (“2016 EPA Plan”). 83 Fed. Reg. at 18,770 n.8. But the Proposal is a significant departure from the policy advanced in the 2016 EPA Plan. The Plan recognized that some data could not be made publicly available due to privacy and confidentiality concerns, acknowledged that peer-reviewed publications based on such data were no less scientifically valid, and specifically excluded this data from the purview of the plan to increase access. 2016 EPA Plan, at 4–6, 19. In contrast, the Proposal would prevent the EPA from considering a peer-reviewed publication related to dose response if its underlying data could not be made publicly available.

In fact, statements in the 2016 EPA Plan undercut the Proposal:

While the Agency strives to increase access to its research results, it recognizes, consistent with the OSTP Memo, that Federal agencies have a responsibility to protect confidentiality and personal privacy, respect proprietary interests and property rights, and balance between the value of providing long-term access and its associated costs. It is important to recognize that some research data cannot be made fully available to the public but instead may need to be made available in more limited ways, e.g., establishing data use agreements with researchers that respect necessary protections. *Whether research data are fully available to the public or available to researchers through other means does not affect the validity of the scientific conclusions from peer-reviewed research publications.*

Id. at 4–5 (emphasis added). The Proposal ignores the 2016 EPA Plan’s express acknowledgment that the validity of peer-reviewed scientific research does not depend on the public availability of the underlying data. Though the 2016 EPA Plan clearly states that research can be valid even if its data are not publicly available, the Proposal requires EPA to disregard this valid research.

The 2016 EPA Plan also makes clear that it does not restrict EPA’s ability to consider conclusions or data:

Nothing in this Plan shall be construed to impair or otherwise affect the authority granted by law to EPA. The validity of scientific conclusions drawn from research publications or their associated research data, or EPA’s ability to consider those conclusions and data in its actions, does not depend on compliance with this Plan.

Id. at 6. In contrast, the Proposal requires that EPA ignore certain conclusions or data that is not publicly available.

The 2016 EPA Plan also contains definitions that EPA claims to include in the Proposal, but, in reality, does not:

Scientific research data are defined, consistent with the OSTP Memo and 2 C.F.R. 200.315 as the digital recorded factual material commonly accepted in the scientific

community as necessary to validate research findings. *Research data* as used in this Plan are the digital scientific research data resulting from EPA-funded scientific research.

Id. at 19.

Consistent with the definition in 2 C.F.R. § 200.315(e)(3), research data does not include:

- Preliminary analyses, drafts of scientific papers, plans for future research, peer reviews, or communications with colleagues;
- Physical objects (e.g., laboratory samples);
- Trade secrets and commercial information;
- Materials necessary to be held confidential by a researcher until publication of results in a peer-reviewed journal; and
- *Personnel, medical, and similar files the disclosure of which would constitute a clearly unwarranted invasion of personal privacy, such as information that could be used to identify a particular person in a research study.*

The following specific examples of scientific research are excluded from this Plan:

- Interim results or other preliminary scientific research data not used to generate the results in the final peer-reviewed publication;
- Preliminary scientific research documentation beyond the article, supplementary materials, and metadata regarding preliminary research plans, including preliminary study protocols and other preliminary *a priori* decisions (recognizing that preliminary plans may have changed during the research project);
- Information that may disclose intellectual property rights;
- National security and other classified information.

2016 EPA Plan, at 19 n.8 (emphasis added).

The Proposal purports to define Research Data in the same way as the 2016 EPA Plan, as that term is defined in the Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards, or at 2 C.F.R. § 200.315(e)(3). 83 Fed. Reg. at 18,773 (to be codified at 40 C.F.R. § 30.2). As explained above, in the 2016 EPA Plan, Research Data does not include, among other things, personnel and medical information, and similar information which would constitute an unwarranted invasion of personal privacy, such as information that could be used to identify a particular person in a research study. *See* 2 C.F.R. § 200.315(e)(3); 2016 EPA Plan, at 19 n.8. But puzzlingly, the Proposal does not apply this definition in the Proposal's text, instead creating a new term "dose response data and models" and only excluding from that definition "physical objects (like laboratory samples), drafts, and preliminary analyses." 83

Fed. Reg. at 18,773 (to be codified at 40 C.F.R. § 30.2). Not only is the Proposal inconsistent with the 2016 EPA Plan, but its definitions and application of those definitions conflict with the regulations it purports to apply.

The Proposal also ignores an important distinction between future EPA-funded research, which the agency presumably has more control over, and research funded by other entities or generated in the past, which EPA cannot control:

This Plan prospectively covers peer-reviewed scientific research publications in scholarly journals and digital research data that result from EPA-funded research. The Plan does not apply to research publications or research data generated from scientific research conducted prior to the implementation of the Plan.

2016 EPA Plan at 5. The Proposal, which overlooks this distinction and creates a conflicting definition of research data to preclude consideration of peer reviewed science in regulatory decision making, does not “build upon” the 2016 EPA Plan.

In short, there are key differences between the 2016 EPA Plan and the Proposal:

- The Plan in no way restricts the materials the EPA can consider in its decision-making, *id.* at 5, whereas the Proposal categorically prohibits the EPA from considering certain scientific publications.
- The Plan focuses on making EPA-funded research publications and data available to the public, *id.*, whereas the Proposal applies to research used by the EPA, no matter how it is funded.
- The Plan is forward-looking and does not apply to research conducted prior to implementation, *id.*, whereas the Proposal will, in practice, apply retroactively.
- The Plan applies broadly to EPA-funded publications and data that could be made publicly available, *id.*, with exceptions for sensitive data, while the Proposal specifically targets “dose response data and models” underlying “pivotal regulatory science.”

The Proposal also cites the Open Data Implementation Plan, but again it is not clear how EPA believes the Proposal builds upon that plan. The Open Data Implementation Plan notes exceptions that the Proposal does not adequately address:

The Open Data Policy requires agencies to develop and strengthen policies and processes to ensure that only appropriate data are released to the public and made available online. EPA must designate one of three ‘access levels’ for each data asset (public, restricted public and non-public). Exceptions to publicizing data may result from law, regulation or policy, which address privacy, confidentiality, security or other valid restrictions.

Open Data Implementation Plan, February 11, 2015, at 4. The Open Data Policy recognizes not all data can be made publicly available; it does not suggest that EPA disregard studies based on such data.

The Proposal then cites the Scientific Integrity Policy, which similarly does not support the Proposal. First, the Scientific Integrity Policy “describes the scope and role of a standing committee of Agency-wide scientific integrity officials,” which would presumably include issues the Proposal seeks to address. U.S. Environmental Protection Agency Scientific Integrity Policy, at 1. The Proposal makes no mention of this committee and does not suggest the committee was consulted in developing the Proposal. The Policy states, “To operate an effective science and regulatory agency like the EPA, it is also essential that political or other officials not suppress or alter scientific findings,” *id.*, and “policy makers shall not knowingly misrepresent, exaggerate, or downplay areas of scientific uncertainty associated with policy decisions,” *id.* at 5. Yet this is precisely what political officials at EPA are doing—the Proposal seeks to suppress well-established and peer-reviewed science from consideration by the agency. As explained in section III.G.4, the Proposal’s assertion, without any citations or support, that “there is growing empirical evidence of non-linearity in the concentration-response function for specific pollutants and health effects,” 83 Fed. Reg. at 18,770, is precisely the type of activity the Policy warned against.

The Proposal also cites EPA’s 2002 Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by the EPA (OMB Guidance) to support its claim that the Proposal “builds upon prior EPA actions.” 83 Fed. Reg. at 18,770 n.8. Like many of the sources cited, the OMB Guidance does not support the Proposal and contradicts the Proposal’s aims:

When evaluating environmental problems or establishing standards, EPA must comply with statutory requirements and mandates set by Congress based on media (air, water, solid, and hazardous waste) or other environmental interests (pesticides and chemicals). Consistent with EPA’s current practices, application of these principles involves a “weight-of-evidence” approach that *considers all relevant information and its quality, consistent with the level of effort and complexity of detail appropriate to a particular risk assessment.*

OMB Guidance, at 21 (emphasis added). The Proposal’s categorical exclusion of non-publicly available “dose response data” is a departure from EPA’s previous practice, as described in the OMB Guidance, of weighing all relevant information. EPA reiterated this in exacting detail in other places in the OMB Guidance:

In the Agency’s development of “influential” scientific risk assessments, *we intend to use all relevant information*, including peer reviewed studies, studies that have not been peer reviewed, and incident information; evaluate that information based on sound scientific practices as described in our risk assessment guidelines and policies; and *reach a position based on careful consideration of all such information (i.e., a process typically referred to as the ‘weight-of-evidence’ approach).* In this approach, *a well-developed, peer-reviewed study would generally be accorded greater weight than information from a less well-developed study that had not been peer-reviewed, but both studies would be considered.* Thus the Agency uses a “weight-of-evidence” process when evaluating peer-reviewed studies along with all other information.

Id. at 26 (emphases added). The OMB Guidance consistently make clear that the agency will consider all scientific information (even non-peer reviewed science). Contrary to the OMB Guidance, the Proposal seeks to disseminate information that excludes consideration of relevant peer-reviewed science. The Proposal does not “build upon,” but rather directly conflicts with, the 2002 OMB Guidance.

H. Footnote 10

The Proposal states that it “takes into consideration the policies or recommendations of third party organizations who advocated for open science.” 83 Fed. Reg. at 18,770. It states that “These include policies and recommendations from: The Administrative Conference of the United States’ Science in the Administrative Process Project; National Academies’ reports on Improving Access to and Confidentiality of Research Data, Expanding Access to Research Data, and Access to Research Data in the 21st Century; the Health Effects Institute; Center for Open Science; members of the Risk Assessment Specialty Section of the Society of Toxicology, the Dose Response Section of the Society for Risk Analysis, and the International Society for Regulatory Toxicology and Pharmacology; and the Bipartisan Policy Center’s Science for Policy Project.” 83 Fed. Reg. at 18,770 n.10.

The Proposal does not explain what it means by “takes into consideration.” To the extent EPA is relying on these policies or recommendations, it has not provided enough information to evaluate that reliance and it must withdraw the Proposal. And consistent with the Proposal’s other citations, EPA points to nothing in the policies or recommendations from these third-party organizations that supports the Proposal’s preclusion of peer-reviewed science from consideration in regulatory decision making.

The Bipartisan Policy Center (BPC) states that “*the proposed rule is not consistent with the BPC report in substance or intent.*”²⁰¹ The BPC further explained that the Science for Policy Project “report never suggested excluding studies from consideration in developing regulation if data from those studies were not publicly available.”²⁰² The BPC concludes “EPA must use the best available science in the most effective way to truly fulfill its mission of protecting human health and the environment.”²⁰³

The Proposal’s “consideration” of these works can be summed up by the author of the Administrative Conference of the United States’ Science in the Administrative Process Project Report, and member of the seven-author panel that produced the Bipartisan Policy Center’s Science for Policy Project:

“I really don’t know what the problem is that they think they’re fixing,” she said, adding that many of her co-authors “would laugh and hoot” at some of the scientific ideas expressed in the rule.

²⁰¹ Grumet, J. 2018. Bipartisan Policy Center comments on “Strengthening Transparency in Regulatory Science,” Docket ID No. EPA-HQ-OA-2018-0259, May 22, <https://www.regulations.gov/document?D=EPA-HQ-OA-2018-0259-0670>.

²⁰² *Id.*

²⁰³ *Id.*

“They don’t adopt any of our recommendations, and they go in a direction that’s completely opposite, completely different,” she told me after reading the rule. “They don’t adopt any of the recommendations of any of the sources they cite. I’m not sure why they cited them.”²⁰⁴

The Proposal *rejects* the policies or recommendations of these third-party organizations. The policies and recommendations of these third-party organizations do not support the EPA’s proposal to preclude the consideration of peer-reviewed studies in regulatory decision making. *See also* section II.E.

I. Footnotes 11 & 12

The Proposal states, “These policies are informed by the policies recently adopted by some major scientific journals, spurred in some part by the ‘replication crisis.’” 83 Fed. Reg. at 18,770 (footnotes omitted). The Proposal cites, as examples “related policies from the Proceedings of the National Academy of Sciences, PLOS ONE, Science, and Nature,” *id.* n.11, as well as articles from three of those journals, plus the Economist, a magazine-format newspaper, *id.* n.12.

It’s not clear to what extent, if any, the Proposal considered or relied on the cited policies. The scientific journal policies appear to have been considered secondarily, to the extent they informed the other organizations’ policies. As explained throughout these comments, the third-party organizations’ policies offer no support for the Proposal. Importantly, all the cited scientific journal policies are for prospective publication, do not suggest disregarding consideration of studies without public data, and have exceptions to protect confidential or private information. *See also* section II & II.E.

The Editors-in-Chief of the Science family of journals and Nature, the Executive Editor of Public Library of Science (PLOS) Journals, the Interim Editor-in-Chief of Proceedings of the National Academy of Sciences, and the Vice President of Editorial/Acting Editor-in-Chief of Cell Press/Cell issued a joint statement on the Proposal:

We are writing in response to a proposed rule announced by the Environmental Protection Agency (EPA) in a 24 April 2018 press release (1). The release reads, “The rule will ensure that the regulatory science underlying Agency actions is fully transparent, and that underlying scientific information is publicly available in a manner sufficient for independent validation.”

Data sharing is a feature that contributes to the robustness of published scientific results. Many peer-reviewed scientific journals have recently adopted policies that support data sharing, consistent with the Transparency and Openness Promotion (TOP) standards. These standards, however, recognize the array of workflows across scientific fields and make the case for data sharing at different levels of stringency; in not every case can all

²⁰⁴ Robinson Meyer, *Scott Pruitt’s New Rule Could Completely Transform the EPA*, The Atlantic, April 25, 2018, <https://www.theatlantic.com/science/archive/2018/04/how-the-epas-new-secret-science-rule/558878/>.

data be fully shared. Exceptional circumstances, where data cannot be shared openly with all, include data sets featuring personal identifiers.

We support maintaining the rigor of research published in our journals and increasing transparency regarding the evidence on which conclusions are based. As part of these goals, we require that all data used in the analysis must be available to any researcher for purposes of reproducing or extending the analysis. Importantly, the merits of studies relying on data that cannot be made publicly available can still be judged. Reviewers can have confidential access to key data and as a core skill, scientists are trained in assessing research publications by judging the articulation and logic of the research design, the clarity of the description of the methods used for data collection and analysis, and appropriate citation of previous results.

*It does not strengthen policies based on scientific evidence to limit the scientific evidence that can inform them; rather, it is paramount that the full suite of relevant science vetted through peer review, which includes ever more rigorous features, inform the landscape of decision making. Excluding relevant studies simply because they do not meet rigid transparency standards will adversely affect decision-making processes.*²⁰⁵

And John P.A. Ioannidis, the author of one of the articles the Proposal cites regarding the alleged “replication crisis” that the Proposal mentions but does not explain, *see* section II., published an editorial in response to the Proposal.²⁰⁶ The article is informatively titled: “All science should inform policy and regulation,” and not surprisingly, it does not support the Proposal. Ioannidis states “[i]f the proposed rule is approved, science will be practically eliminated from all decision-making processes. Regulation would then depend uniquely on opinion and whim.” *Id.* Ioannidis explains that “we should recognize that most of the raw data from past studies are not publicly available,” and

[s]ome deficiencies may be unavoidable. For example, researchers cannot ethically randomize people to harmful exposures in order to tackle confounding, nor violate informed consent agreements that prohibit open sharing of private data from past studies.

*Id.*²⁰⁷ Ioannidis goes on to say that “simply ignoring science that has not yet attained such standards, is a nightmare,” and “we would see governments discarding science at massive scale because of perceived imperfections and impurities.” *Id.*

²⁰⁵ Jeremy Berg, et al., Letter, “Joint statement on EPA proposed rule and public availability of data,” *Science*, Vol. 360, Issue 6388, 4 May 2018, available at <http://science.sciencemag.org/content/360/6388/eaau0116> (emphasis added).

²⁰⁶ Ioannidis, J. P., “All science should inform policy and regulation,” *PLoS Medicine* 15(5) (May 3, 2018), <http://journals.plos.org/plosmedicine/article?id=10.1371/journal.pmed.1002576>.

²⁰⁷ As explained in section III., the Proposal would preclude the consideration of many past studies whose raw data are not and cannot be made available. This issue is also described in the May 12, 2018 SAB Memo discussed above: “For studies published many years ago, it may not be feasible to deliver public access to data and analytic methods.” Whatever strategies the Proposal suggests EPA consider in the future to address confidential and personal information (and the flaws with a proposed rule suggesting a key issue will be solved sometime in the future

Ioannidis also notes that “we have extremely strong evidence that the tobacco pandemic is devastating; that the MMR vaccine is generally safe; that climate change is happening; and that air pollution is a major health hazard,” in contrast to “most dietary advice one might hope to give about specific nutrients.” *Id.* The subjects that Ioannidis explains have strong evidence are the issues EPA is responsible for addressing that the Proposal seeks to discredit. Ioannidis further notes:

For example, the pivotal research on the health effects of air pollution is particularly strong. The Six Cities and American Cancer Society studies are exemplary large-scale investigations, with careful application of methods, detailed scrutiny of measurements, replication of findings, and, importantly, detailed re-analysis of results and assessment of their robustness by entirely independent investigators. The re-analysis and sensitivity analyses were conducted by the Health Effects Institute that was funded by stakeholders some of whom may have desired to see opposite conclusions. It would be wonderful, if in the future the same rigorous re-analysis and replication standards could become the standard for all important areas of research that can inform policy.

Id. (footnotes omitted).

The Proposal does not explain how it takes into consideration the sources cited in footnotes 10–12. Nevertheless, these major scientific journal policies and articles offer no support for EPA’s Proposal to preclude consideration of scientific studies from regulatory decision making.

J. Footnote 13

When seeking comment on how to ensure that more data is available over time for public validation, the Proposal states “EPA has not consistently followed previous EPA policy (e.g., EPA’s Scientific Integrity Guidance, referenced above) that encouraged the use of non-proprietary data and models.” 83 Fed. Reg. at 18,770 n.13. The Proposal provides no support for the idea that EPA has not consistently followed previous EPA policy that encouraged the use of non-proprietary data and models. To the extent EPA believes this is a problem, EPA should withdraw the Proposal and explain what policies it has not followed and how it has not followed those policies. EPA should present options to address those alleged shortcomings. At all events, this general reference to previous EPA policy, just like the references in Footnote 8 discussed above, does not support the Proposal. *See also* sections IV.J & VI.C.

K. Footnote 14

The Proposal states that “EPA’s regulatory science should be consistent with the Office of Management and Budget’s Final Information Quality Bulletin for Peer Review.” 83 Fed. Reg. at 18,770. For this proposition, the Proposal links to a one-page Memorandum on the “Issuance of OMB’s ‘Final Information Quality Bulletin for Peer Review.’” *Id.* n.14 (citing

described below), EPA does not present any strategies for dealing with past studies. This is another reason why the Proposal should be withdrawn.

<https://www.whitehouse.gov/wp-content/uploads/2017/11/2005-M-05-03-Issuance-of-OMBs-Final-Information-Quality-Bulletin-for-Peer-Review-December-16-2004.pdf>). This Memorandum does not contain enough information to determine whether or how the Proposal is consistent with it. The Memorandum merely states that the Bulletin “establishes government-wide guidance aimed at enhancing the practice of peer review of government science documents,” and that “[p]eer review is an important procedure used by the scientific community to ensure that the quality of published information. Peer review can increase the quality and credibility of the scientific information generated across the federal government.” Memorandum on the “Issuance of OMB’s ‘Final Information Quality Bulletin for Peer Review.’” Nothing in the Memorandum or EPA’s description of it supports the Proposal to exclude peer reviewed science from consideration in regulatory decision making.

Similarly, nothing in the Bulletin supports the Proposal either. The Proposal does not point to any peer-reviewed studies without publicly available data that reached incorrect conclusions. The Proposal also does not explain how the current peer review process EPA uses for disseminating information conflicts with the Bulletin. And the Bulletin says nothing about standardized test methods, consistent data evaluation procedures, or good laboratory practices, which the EPA proposes to use in the prior sentence. As explained in throughout these comments and in sections VII, VII, & XV, EPA does not provide enough information on what EPA’s regulatory science would look like under the Proposal to determine if it would be consistent with the Bulletin. If EPA has a plan for how it intends to make its regulatory science consistent with the Bulletin, the agency has not included it in the Proposal. The Proposal should be withdrawn.

The Proposal’s regulatory text states, “EPA shall conduct independent peer review on all pivotal regulatory science used to justify regulatory decisions, consistent with the requirements of the OMB Final Information Quality Bulletin for Peer Review (70 FR 2664) and the exemptions described therein.” 83 Fed. Reg. at 18,774. As explained in section XV, this section is far too vague for the reader to understand what EPA intends and the Proposal provides no justification for why this vague requirement is necessary. The Proposal fails to provide fair notice or justification for its “independent peer review” requirement and before EPA could adopt any final rule with this requirement, EPA must propose a new rule with regulatory text and supporting legal, factual, scientific, and technical information providing fair notice to the public.

L. Footnotes 16-22

The Proposal recognizes that there are concerns about access to confidential or private information. The Proposal cites to various agencies and documents to support its general and unexplained, belief “that concerns about access to confidential or private information can, in many cases, be addressed through the application of solutions commonly in use across some parts of the Federal government.” 83 Fed. Reg. at 18,770. Tellingly, EPA concedes that concerns about access to confidential or private information cannot always be addressed, but says nothing about these instances or how it intends to evaluate them. For the times that EPA believes concerns about access to confidential or private information can be addressed, the Proposal does not explain how it plans to do so nor address the costs. The Proposal merely directs readers to general and vague statements from different contexts. The Proposal fails to provide fair notice or justification of what EPA would do to address issues with confidential or private information.

The Proposal merely says to “See examples from the U.S. Department of Health and Human Services, National Institute of Standards and Technology, U.S. Department of Education, and the U.S. Census Bureau,” *id.* n.16, and points generally to Health and Human Services “Guidance Regarding Methods for De-identification of Protected Health Information in Accordance with the Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule,” *id.* n.17. The Proposal does not say what actions from these examples EPA proposes to use.

The Proposal states that the National Academies have noted that in the past, restricted data products were created by relatively simple data masking, coding, and de-identification techniques, and notes that “Nothing in the past suggests that increasing access to research data without damage to privacy and confidentiality rights is beyond scientific reach.” 83 Fed. Reg. at 18,771 (citing *Expanding Access to Research Data Reconciling Risks and Opportunities*, The National Academies Press, 2005, <https://www.nap.edu/catalog/11434/expanding-access-to-research-data-reconciling-risks-and-opportunities> at 27, 36). First, this is not fully supported as experience shows increasing access to data can damage privacy and confidentiality rights. See section II.D. Again, the Proposal does not say which, if any of these techniques the EPA will use, or how the EPA will use them. And while the National Academies may believe that increasing access to data without damage to privacy and confidentiality is not beyond scientific reach, the Proposal does not explain how this belief translates to past, present, and future scientific studies EPA considers in regulatory decision making. This document does not explain how EPA will address concerns about confidential or private information and does not support EPA’s Proposal to preclude consideration of those studies that do not make public underlying data for those, or other reasons.

The Proposal next cites to two National Academies documents and a document from the Bipartisan Commission on Evidence Based Policy. 83 Fed. Reg. at 18,771 & n.19. But the Proposal fails to explain how these documents support its proposed actions or explain how EPA intends to protect confidential information. The Proposal merely states that they “have discussed the challenges and opportunities for facilitating to secure access to confidential data for non-government analysts.” 83 Fed. Reg. at 18,771. The Proposal does not address those challenges or describe the opportunities it intends the EPA to use. Again, these documents do not support the vague Proposal.

The Proposal states that “the requirements for availability may differ,” and “may range from deposition in public data repositories, consistent with requirements for many scientific journals, to, for certain types of information, controlled access in federal research data centers that facilitate secondary research use by the public.” *Id.* (footnotes omitted). The Proposal again cites to journal policies or recommendations generally and the policies for access to data from National Institute of Health and Census Bureau. *Id.* nn.20 & 21. Section II.E. explains how the Proposal misrepresents these policies and that the Proposal is inconsistent with best practices and unworkable in reality.²⁰⁸ Importantly, the Proposal does not say how the requirements would

²⁰⁸ Contrary to the Proposal, the journals cited have exceptions to their data sharing policies and some do not require, but merely encourage, data sharing (<https://authorservices.taylorandfrancis.com/data-sharing-faqs/>, <https://www.elsevier.com/about/our-business/policies/research-data/research-data-faqs>, <http://journals.plos.org/plosone/s/data-availability>, <https://www.springernature.com/gp/authors/research-data->

differ, what studies would be required to deposit what data into what repositories, and what studies would be required to allow controlled access to what data in what federal research data centers. Moreover, the Proposal does not address the costs that these actions would entail. Again, if EPA intends to use these different ways to provide data that meet concerns about confidential and private information, the agency must withdraw the rule and issue a new proposed rule that explains the methods it proposes to use.

The Proposal generally wraps up this section with:

EPA should collaborate with other federal agencies to identify strategies to protect confidential and private information in any circumstance in which it is making information publicly available. These strategies should be cost-effective and may also include: Requiring applications for access; restricting access to data for the purposes of replication, validation, and sensitivity evaluation; establishing physical controls on data storage; online training for researchers; and nondisclosure agreements.

83 Fed. Reg. at 18,771 (footnote omitted). The Proposal's many flaws are clear in these sentences. EPA does not know what the Proposal entails. The Proposal suggests that EPA *should* identify strategies in the future and that these strategies *should be* cost-effective. The Proposal does not say what cost-effective means, nor what EPA should do if it does not identify any cost-effective strategies, yet it still seeks to alter legal obligations and regulatory decision making in reliance on this unexplained suggestion. The EPA also does not point to any authority for the proposition that the agency's consideration of peer reviewed scientific studies depends on the cost-effectiveness of some strategy the agency develops for publicizing and protecting the underlying data.

And listing options EPA can use does not help. The Proposal fails to explain why EPA has not already identified the strategies or options and in what circumstances it would use them. The Proposal suggests that it will exclude a large class of scientific studies from regulatory decision making but contains a vague assertion that it will look for "cost effective" ways in the future to exclude less them.

The corresponding footnote to these sentences offers no further explanation or support: "These recommendations are consistent with those of Lutter and Zorn (2016). <https://www.mercatus.org/system/files/Mercatus-Lutter-Public-Access-Data-v3.pdf>.we re." The document cited is a Working Paper from the Mercatus Center, which advertises itself as "world's premier university source for market-oriented ideas."²⁰⁹ The Working Paper does not provide concrete strategies or regulatory text. Nor does it analyze any strategies' application by EPA and

policy/faqs/12327154). And the National Institute of Health and Census Bureau repositories referenced do not provide access to the repositories to the public but a more limited subset of researchers (e.g., "tenure-track professor, senior scientist, or equivalent," for NIH access, <https://osp.od.nih.gov/scientific-sharing/requesting-access-to-controlled-access-data-maintained-in-nih-designated-data-repositories-e-g-dbgap/>). See also section II.V.

²⁰⁹ <https://www.mercatus.org/about>.

their cost-effectiveness. It similarly states, “the range of potential measures includes . . .” and lists thirteen options.²¹⁰ Contrary to the Proposal, the Working Paper recommends that:

In the event that authors do not supply their underlying data and an agency still believes that relying on the results of a study is warranted, the agency ought to explain why it has sufficient confidence to use the study. For example, the agency might note that other researchers have already reproduced the study results or that the data are available to third parties who sign nondisclosure agreements but that the data cannot be posted publicly.²¹¹

When discussing concerns about access to confidential or private information, the Proposal ignores an important aspect of the problem that it creates: the data masking, coding, and de-identification techniques might not adequately protect confidentiality or privacy. Research has documented that de-identification techniques to render data anonymous is not “simple” as the Proposal characterizes and can lead to the publication of protected confidential or private data. One study explained “[b]y linking demographics to public records such as voter lists, and mining for names hidden in attached documents, we correctly identified 84 to 97 percent of the profiles for which we provided names.”²¹² Another explained that “87% (216 million of 248 million) of the population in the United States had reported characteristics that likely made them unique based only on {5-digit ZIP, gender, date of birth}.”²¹³ Finally, another explains that “any data that is even minutely useful can never be perfectly anonymous.”²¹⁴ The Proposal does not address these difficulties and should be withdrawn. *See also* section II.D.

EPA’s belief that concerns about access to confidential or private information caused by the Proposal should be addressed in the future is problematic by itself. The cited materials—describing ways different organizations can address concerns in different contexts—do not support this belief. The Proposal does not propose or analyze any strategies it notes EPA should consider, even though it seeks to implement a binding legal change. The Proposal also does not consider important limitations of making underlying data publicly available. This is not surprising given that the Proposal sent for the Office of Information and Regulatory Affairs four-day Executive Order 12,866 review stated that “EPA believes that concerns about access to confidential or private information are without merit.”²¹⁵ While at least EPA recognized the merit to concerns about confidential or private information, in the four days since sending the

version for review the agency clearly did not perform the analysis necessary to figure out how those concerns would be addressed.

The impact and costs of the Proposal are dependent on such strategies and cannot be measured or analyzed without proposed regulatory text. EPA cannot publish a final rule without first proposing what it will do about confidential and private information and analyzing the option it proposes. EPA should withdraw the Proposal.

M. Footnote 23

The Proposal states:

The benefits of EPA ensuring that dose response data and models underlying pivotal regulatory science are publicly available in a manner sufficient for independent validation are that it will improve the data and scientific quality of the Agency's actions and facilitate expanded data sharing and exploration of key data sets; *this is consistent with the conclusions of the National Academies.*

83 Fed. Reg. at 18,772 (emphasis added, footnote omitted). The last statement links to a 120-page document titled *Expanding Access to Research Data Reconciling Risks and Opportunities*, by the Panel on Data Access for Research Purposes, Committee on National Statistics, Division of Behavioral and Social Sciences and Education of the National Research Council of the National Academies Press. *Id.* (citing <https://www.nap.edu/catalog/11434/expanding-access-to-research-data-reconciling-risks-and-opportunities>).

The Proposal does not suggest that its plan to preclude the use of scientific studies from regulatory decision making is consistent or supported by the National Academies. Rather, the Proposal generally states that benefits of data availability the Proposal seeks is consistent with conclusions of the National Academies. The Proposal does not say what the conclusions of the National Academies are or how they support the Proposal. The charge to the Panel in the cited document was “to assess competing approaches to promoting exploitation of the research potential of microdata—particularly linked longitudinal microdata—while preserving respondent confidentiality.”²¹⁶ The panel was asked to consider the tradeoffs between the benefits and risks of data access and to make recommendations about “how microdata should optimally (from a societal standpoint) be made available to researchers.”²¹⁷ The panel offered various recommendations, focused on agencies that have data-collection responsibilities providing data to researchers. This is a different context than EPA's proposal to preclude the consideration scientific studies when undertaking its statutorily required decision making to protect human health and the environment. EPA's general citation to this 120-page document for consistent conclusions does not support the Proposal.

²¹⁶ *Expanding Access to Research Data Reconciling Risks and Opportunities*, The National Academies Press, 2005, at 1-2.

²¹⁷ *Id.*

N. Footnote 24

The cost-benefits analysis for the Proposal is non-existent, violates Executive Orders 12,866 and 13,563, and on its own requires that the Proposal be withdrawn. *See also* section II.D. Without support, the Proposal states that “EPA believes the benefits of this proposed rule justify the costs.” 83 Fed. Reg. at 18,772. The most discussion of costs occurs when the Proposal quotes the Mercatus Center free-market think-tank Working Paper discussed above:

One recent analysis found that: “Improvements in reproducibility can be thought of as increasing the net benefits of regulation because they would avoid situations in which costs or benefits are wrongly estimated to occur or in which regulatory costs are imposed without corresponding benefits. . . .” They concluded that “an increase in existing net benefits from greater reproducibility, which, if it occurred, would cover the costs of obtaining the data and making the data available.”

Id. (quoting Randall Lutter and David Zorn, *On the Benefits and Costs of Public Access to Data Used to Support Federal Policy Making*, Mercatus Working Paper, September 2016).

This quote is not close to a sufficient cost-benefit analysis. First, the Working Paper’s plausibility analysis is dubious. Among other problems, the analysis examines the time it takes for chemical manufactures, processors, and distributors to identify and provide *studies* in their possession related to a specific chemical and equates that to the time it would take EPA to obtain, review, process, redact, and publicly maintain *data* for any study it considers. Lutter and Zorn, at 21–22 (citing (40 C.F.R. pt. 716)). The chemical study Health and Safety Data Reporting Rule and the cost estimate the Working Paper’s analysis is based on does not require submission of underlying data unless requested by EPA. 40 C.F.R. § 716.10(a)(4). The analysis also does not include time or costs to the researchers outside of the agency. Lutter and Zorn, at 21–22. Further, the Working Paper assumes that EPA would only receive the underlying data for 20% of the requested scientific studies EPA relies on. *Id.* at 25. Therefore, the Working Paper lowers the already questionable cost estimate by eliminating costs associated with collecting and preparing data for the other 80% of studies. *Id.* The Working Paper does not explain what the authors expect EPA to do about 80% of studies EPA currently relies on for which it does not receive the underlying data, but the Proposal would require the agency to unlawfully ignore those studies in regulatory decision making.

Importantly, even the partial quote the Proposal presents does not provide results of a cost-benefit analysis nor conclude the costs outweigh the benefits. Instead it says that *if* an increase in benefits occurred, the costs would be covered. The same article states this point explicitly:

Of course, our estimates of the benefits of public access to data supporting federal regulatory decisions fall short of proving that the benefits outweigh the associated costs. They do show, however, the plausibility of such a claim.

Lutter and Zorn, at 29. The Proposal does nothing to address this or try to determine how plausible such a claim is. EPA has not provided a defined Proposal, nor done any cost analysis of its Proposal, that could be analyzed. The fact that this is the best support the EPA could provide

for its baseless belief that the Proposal's benefits justify its costs further shows that EPA must withdraw the Proposal.

The additional materials cited by EPA do not provide any support for the Proposal, on scientific, technical, policy, logical, or legal grounds, and in fact, the materials actually undermine the Proposal. The cited materials demonstrate that the Proposal is unsupported, arbitrary, capricious, and otherwise inconsistent with law. The fact that EPA cites many of these materials because they contain, from different contexts, options EPA could enact as part of the proposed rule further demonstrates that the Proposal must be withdrawn as it fails to provide fair notice to the public of what is being proposed.

VII. The proposed rule's definitions are vague, arbitrary, and capricious, and fail to provide fair notice to the public of how EPA would implement any final rule

The Administrative Procedure Act requires notices of proposed rulemakings to include "the terms or substance of the proposed rule or a description of the subjects and issues involved." 5 U.S.C. § 553(b)(3). Proposals must "provide sufficient factual detail and rationale for the rule to permit interested parties to comment meaningfully." *Honeywell International, Inc. v. EPA*, 372 F.3d 441, 445 (D.C. Cir. 2004).

The instant Proposal lacks any statutory authority for regulatory terms and text, concepts, and other inventions that make up its foundation. Moreover, many of these regulatory terms and text are vague, unexplained, internally inconsistent, and otherwise arbitrary and capricious.

A. "pivotal regulatory science" (§§ 30.2, 30.3)

The term "pivotal regulatory science" is perhaps the most vague, unexplained and internally inconsistent term used in the Proposal. The term has no statutory basis in any statute cited by EPA, or otherwise. Beyond having no statutory underpinning, the meaning of the phrase is neither self-evident nor adequately defined in the Proposal.

EPA's choice to modify "regulatory science" with the adjective "pivotal" does nothing to clarify the scope of scientific studies and information encompassed by the Proposal. "Pivotal regulatory science" is defined within the regulation as "the specific scientific studies or analyses that drive the requirements and/or quantitative analysis of EPA final significant regulatory decisions." 83 Fed. Reg. at 18,773/3 (proposed § 30.2). This definition is as unclear and unsupported as the term itself.

The use of the phrase "drive the requirements" within the C.F.R. definition is particularly incoherent. What does "drive the requirements" mean? The Proposal nowhere says. Does the definition apply only to scientific studies that were outcome determinative? Does it encompass any scientific study that was considered in making the requirements? What about studies that were useful but not determinative? Something else entirely? Can more than one study be "pivotal" to the regulatory decision, or does the term "drive the requirements" imply that only one study could be "pivotal" to a given decision? Furthermore, are most of the studies used by EPA considered to "drive the requirements" or is this term limited in some fashion, unrevealed to the public? Will EPA "know it when it sees it," making it up as the agency goes along?

It is arbitrarily, vague, and unexplained under the Proposal which science would be considered “pivotal,” and under what conditions. Because the term was created out of thin air to serve EPA’s purposes and has no statutory grounding or intuitive meaning, this ambiguity-ridden definition is woefully inadequate. It is also arbitrary and capricious and an abuse of EPA’s discretion. EPA is well aware of the insufficiency of the definition, as is evident in the agency’s solicitation of comments on the definitions of “pivotal regulatory science” and “dose response data and models” within the Proposal. *See* 83 Fed. Reg. at 18,771.

Notably, the proposed C.F.R. definition also differs substantially from a definition of “pivotal regulatory science” appearing earlier in the Proposal, which defines the term as “the studies, models, and analyses that drive the magnitude of the benefit-cost calculation, the level of a standard, or point-of departure from which a reference value is calculated. In other words, they are critical to the calculation of a final regulatory standard or level, or to the quantified costs, benefits, or risks and other impacts on which a final regulation is based.” 83 Fed. Reg. at 18,770.

Next, it bears repeating that EPA does not and cannot identify any statutory basis—in federal environmental statutes, the Administrative Procedures Act or otherwise—to apply the Proposal’s approach “to the calculation of a final regulatory standard or level, or to the quantified costs, benefits, or risks and other impacts on which a final regulation is based.” 83 Fed. Reg. at 18,770. EPA simply makes this up.

EPA’s separate explanation here suffers from additional defects, namely an internal inconsistency, incoherency and unbounded reach that do not accord with the proposed C.F.R. definition. EPA’s preambular explanation says that “pivotal regulatory science” is “critical to the calculation of a final regulatory standard or level, or to the quantified costs, benefits, or risks *and other impacts* on which a final regulation is based.” 83 Fed. Reg. at 18,770 (emphasis added) The Proposal nowhere explains what these “other impacts” are. Nor does the Proposal limit or bound these “other impacts,” nor link them to the sentence’s incoherent notion of what is “critical” and what is not. Moreover, the preambular gloss is inconsistent with the proposed C.F.R. definition. The former says “pivotal regulatory science” is critical to hopelessly vague “other impacts” on which a final rule is based. *Id.* The proposed C.F.R. definition, by contrast, says “pivotal regulatory science” “drive[s] the requirements and/or quantitative analysis of EPA final significant regulatory decisions.” 83 Fed. Reg. at 18,773/3 (proposed § 30.2). The Proposal does not square the contradictions between science that drives a final rule’s requirements and science that is “critical” to “other impacts” in a final rule.

Furthermore, EPA not only fails to provide a passable definition for its invented term, “pivotal regulatory science,” the agency fails to provide its rationale for limiting the scope of the rule to so-called “pivotal regulatory science.” Within the unlawful, arbitrary, and capricious worldview reflected in the Proposal, why is the “public availability of science and data in a manner sufficient for independent validation” any less important or necessary or justified when the science is not “pivotal” or “critical” to a regulatory decision? Why should not all science, studies, data and information considered by EPA meet the standards for transparency, verifiability, independent validation, and trustworthiness that are the abiding concerns of the Proposal? Why is it not arbitrary and capricious for EPA to continue to consider science and data

that are unavailable and insufficient for independent validation in areas outside the reach of the Proposal? EPA offers no explanation for this disparate treatment; the agency's reasoning, such as it is, is entirely conclusory.

By way of explanation for the limitation, EPA only suggests that the imposed standards “are of paramount importance when the government relies on science to inform its significant regulatory decisions.” 83 Fed. Reg. at 18,769. This explanation is hopelessly circular and ultimately incoherent. For starters, EPA does not explain why it believes this explanation to be true. Next, the Proposal just substitutes the word, ‘paramount,’ for the word, ‘critical,’ that it substitutes for the word, ‘pivotal.’ (The Proposal’s drafters evidently were just flipping through a thesaurus.) This failure to thoroughly explain both the term “pivotal regulatory science” in a way that meaningfully defines the scope of the regulation, and the rationale behind limiting the application only to pivotal (critical, paramount) science, makes it impossible for interested parties to comment fully and meaningfully on the Proposal. Should EPA intend to finalize this unlawful proposal, EPA first must withdraw the Proposal, then issue a supplemental proposal with the necessary definitions and explanations. Better yet, EPA should abandon this illegal and harmful proposal altogether.

B. “regulatory science” (§ 30.1)

Amazingly, the key regulatory purpose of the Proposal, addressed in proposed section 30.1, does not even use the term “pivotal regulatory science” (or critical or paramount regulatory science, for that matter). Instead, section 30.1 uses the altogether different term, “regulatory science.” 83 Fed. Reg. at 18,773/2.

The Proposal makes no attempt to clarify how “pivotal regulatory science” is distinct from the separately defined, “regulatory science,” a term integral to proposed section 30.1, which states the Proposal’s very purpose. “Regulatory science” is defined to mean “scientific information, including assessments, models, criteria documents, and regulatory impact analyses, that provide the basis for EPA final significant regulatory decisions.” *Id.* (proposed § 30.2). This definition is almost identical to that of pivotal regulatory science, with the exception that “regulatory science” encompasses information that “provide the basis for EPA final significant regulatory decisions,” while “pivotal regulatory science” “drives the requirements.”

The phrase “provides the basis” does nothing to illustrate the meaning of regulatory science, or to limit or particularize its scope, because it is equally vague and unexplained. *All* science, data, and information considered by EPA, and relied upon by EPA, “provides the basis” for final EPA regulatory decisions, insofar as EPA includes those materials in its administrative record, certifies that record for judicial review, and may cite and rely upon that information in explaining and defending its final regulatory decisions. Accordingly, the proposed “regulatory science” definition is capacious and unbounded, so long as EPA considered it, making the definition very far afield from the narrower, undefined, and no less incoherent, “pivotal regulatory science.”

Alternatively, the phrase “provides the basis” in the proposed “regulatory science” (§ 30.2) definition could mean that science was one of many studies considered, that it was the

bedrock study upon which regulation was grounded, that EPA relied on the study, or that the study was critical to EPA's determination. The Proposal nowhere addresses or explains whether or how these possible meanings are distinct from the possible meanings of the "drive the requirements" phrase of the "pivotal" definition. Therefore, it is entirely unclear from these definitions what makes science that "provides the basis" distinct from science that "drive the requirements." Neither of these terms meaningfully distinguishes "pivotal" regulatory science from ordinary regulatory science.

The Proposal goes on to exacerbate all of this internal confusion through the workings of its proposed regulatory text. There, EPA alternates between explaining the Proposal in terms of "regulatory science" and "pivotal regulatory science." For example, in proposed § 30.1, the Proposal "directs EPA to ensure that the *regulatory science* underlying its actions is publicly available . . ." 83 Fed. Reg. at 18,773/2 (emphasis added). Later, in proposed § 30.3, the Proposal indicates that the provisions apply "to dose response data and models underlying *pivotal regulatory science* that are used to justify significant regulatory decisions." *Id.* at 18,773/3 (emphasis added). In the subsequent section, proposed § 30.4, the Proposal references "all studies (or regulatory science) relied upon . . ." *Id.* The Proposal is arbitrarily vague and incoherent concerning whether "regulatory science" that is relied upon is the same as "pivotal regulatory science," or whether it is a new category of science entirely. Does this phrasing imply that the definition of "regulatory science" does not already include science that is "relied upon"? If so, does EPA mean that the phrase, "provides the basis," is not synonymous with "relied upon"? The Proposal provides no answers to these questions.

Taken together, this demonstrates that "regulatory science" and "pivotal regulatory science" are vague, even incoherent terms with definitions that lend no assistance to commenters in understanding the Proposal. The terms lack statutory authority, are vague, inconsistent, unexplained, and otherwise arbitrary and capricious.

C. "in a manner sufficient for independent validation" (§ 30.1)

Although the phrase, "in a manner sufficient for independent validation," is repeated frequently throughout the Proposal, and is integral to its very operation, the phrase is not defined in the proposed definitional section (§ 30.2). Later in proposed regulatory text, the Proposal does specify that "[i]nformation is considered 'publicly available in a manner sufficient for independent validation' when it includes the information necessary for the public to understand, assess, and replicate findings." 83 Fed. Reg. at 18,773–74 (proposed § 30.5). Proposed section 30.5 goes on to list categories of information that "may" be included in this concept. The explanation provided by proposed § 30.5 is a non-definition; it provides no additional clarification. How much information is sufficient for the public to understand, assess and replicate findings? Can this standard sometimes be met by releasing methodology but not raw data?

Critically, and fatally to the enterprise behind the Proposal, there is nothing in the proposed regulatory text or preambular language that requires information, science or data to be independently validated or replicated before EPA may consider it. EPA does not base the Proposal upon any requirement or expectation that the information, science or data be shown to

be accurate, trustworthy, reliable or correct before EPA may consider it. This portion of the Proposal reveals EPA's unlawful agenda to be one concerned with prohibiting EPA from considering relevant, peer-reviewed, quality science, *not* one concerned with actual replication or validation. The Proposal's condition that science and information be "publicly available in a manner sufficient for independent validation and replication" is revealed to be mere smokescreen for an EPA enterprise to censor the best available science that would support adoption of more protective health and environmental safeguards.

The Proposal fails to explain how the term, "in a manner sufficient for independent validation," and the proposed § 30.5 definition will increase transparency in science or why it is necessary to ensure that EPA will consider the best available science. To the contrary, as explained elsewhere in these comments, *supra* sections II. & III., the Proposal's approach would *preclude* EPA from considering the best available science that is relevant to EPA's responsibilities. EPA also fails to explain why data underlying peer-reviewed studies must be publicly available "in a manner sufficient for independent validation" when independent researchers can verify science without making the underlying data, which is often confidential, publicly available.

D. "all terms not defined herein shall have the meaning given them in the Act or in Subpart A" (§ 30.2)

Proposed § 30.2 specifies that "all terms not defined herein shall have the meaning given them in the Act or in subpart A." The Proposal nowhere says to what "Act" it is referring. The Proposal purports to implement multiple Acts administered by EPA, with different terms and definitions and court interpretations that may contradict one another. Nowhere does the Proposal square this factual and legal reality with structure of its unlawful approach, and the language in proposed § 30.2. It seems clear that the Proposal's drafters just cut-and-paste boilerplate language from other EPA regulations that do, in fact, implement just one of the federal environmental statutes that EPA administers; in those other regulations, such an approach makes sense. In the Proposal at issue here, it is incoherent and internally inconsistent across the different statutes that EPA administers.

It also is not clear to what "subpart A" EPA is referring, because there is no citation to the Code of Federal Regulations. If this is intended to reference 40 C.F.R. Part 30, Subpart A, that Subpart was removed from the C.F.R. in 2014. *See* 79 Fed. Reg. 75,871; *see also* 80 Fed. Reg. 61,087.

E. "dose response data and models" (§ 30.2)

Dose response data and models is defined as "the data and models used to characterize the quantitative relationship between the amount of dose or exposure to a pollutant, contaminant, or substance and the magnitude of a predicted health or environmental impact. Such functions typically underlie pivotal regulatory science that drives the size of benefit-cost calculations, the level of a standard and/or the points of departure from which reference values (reference doses or reference calculations) are calculated." (§ 30.2). Despite being an important phrase repeated through the Proposal and the proposed text, this compound definition is vague and arbitrary. It

also is circular—the very terms being defined are used in the definition. It’s unclear what data EPA is referring to in this phrase and definition. Moreover, it’s unclear what EPA means by “[s]uch functions typically under pivotal regulatory science . . .” And the problems with “pivotal regulatory science” have already been discussed. As explained in section XII, the definition does not adequately describe what the proposal covers. This definition, along with the rest of the Proposal, is arbitrary and capricious and must be withdrawn.

F. “case-by-case basis” (§ 30.6; § 30.9)

In proposed § 30.6, EPA proposes to “evaluate the appropriateness of using default assumptions, including assumptions of a linear, no-threshold dose response, on a case-by-case basis.” 83 Fed. Reg. at 18,774. In proposed § 30.9, the Proposal grants the Administrator the ability to “grant an exemption to this subpart on a case-by-case basis if he or she determines that compliance is impracticable” for a number of enumerated reasons. Both of these provisions inject additional arbitrariness into the rule, in that they ensure that the Proposal may be applied unevenly—for certain rulemakings the “rules” of the Proposal can be discarded or ignored where desired. This, in addition to and with other sections of the Proposal, underscores that it is arbitrary and capricious and must be withdrawn.

VIII. The Proposal is vague and misleading regarding which types of regulatory actions will be covered

EPA is proposing to apply the Proposal to regulatory actions defined by an unenforceable Executive Order that has few, if any, limiting principles. The Proposal states that it applies to “*dose response data and models underlying pivotal regulatory science* that are used to justify significant *regulatory decisions*.” 83 Fed. Reg. at 18,773. Section § 30.2 then defines “regulatory decisions” as “final regulations determined to be ‘significant regulatory actions’ by the Office of Management and Budget pursuant to Executive Order 12866.” 83 Fed. Reg. at 18,773. According to Executive Order 12866,

- (f) “Significant regulatory action” means any regulatory action that is likely to result in a rule that may:
- (1) Have an annual effect on the economy of \$100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities;
 - (2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;
 - (3) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or
 - (4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in this Executive order

Regulatory Planning and Review, 58 Fed. Reg. 51,735, 51,735 (Sept. 30, 1993).

EPA suggests in some places that the Proposal applies only to final rulemakings. *See* 83 Fed. Reg. at 18,771 (“EPA solicits comment on whether and to what extent these requirements, or other provisions and policies, should apply to other stages of the rulemaking process . . .”). However, OMB guidance on Executive Order 12,866 states that the definition is intended to cover “any policy document of general applicability and future effect, which the agency intends to have the force and effect of law, such as guidance, funding notices, manuals, implementation strategies, or other public announcements, designed to implement, interpret, or prescribe law or policy or to describe the procedure or practice requirements of an agency.” OMB, *Memorandum for Heads of Executive Departments and Agencies, and Independent Regulatory Agencies*, at 5 n.3 (Oct. 12, 1993). Therefore, there is an inconsistency between what EPA says it is doing, and what it is really proposing.

Indeed, under the OMB guidance and past agency practice, what qualifies as a “significant regulatory action” is a fluid and ad-hoc determination. It is impossible to truly know what effect—and how large an effect—the Proposal would have on rulemakings because it is impossible to know, at this point, what agency actions might be covered. Whether an action is deemed a “significant regulatory action” by OMB can only be determined after the regulation has been proposed and is subject to apparently unbridled discretion by OMB, and there is an infinite universe of rulemakings that EPA could propose in the future. Without knowing what types of agency actions would be covered, the public is left in the dark about the Proposal’s true impact. By using the amorphous definition of “significant regulatory actions,” EPA ensures that the Proposal would have sweeping effects.

IX. The proposed rule is a reversal of EPA’s position without sufficient justification

When an agency reverses course, it must “provide reasoned explanation for its action.” *FCC v. Fox Television Stations, Inc.*, 556 U.S. 502, 515 (2009); *Motor Vehicle Mfrs. Ass’n of U.S., v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 43 (1983). And when that reversal “rests upon factual findings that contradict those which underlay [the agency’s] prior policy,” a “more detailed justification” is needed. *Fox*, 556 U.S. at 515. Indeed, “an agency’s decision to change course may be arbitrary and capricious if the agency ignores or countermands its earlier factual findings without reasoned explanation for doing so.” *Id.* at 537 (Kennedy, J., concurring).

As the Supreme Court explained in its 2016 *Encino Motorcars* decision, an agency must supply “good reasons” for a policy revision, cannot leave “unexplained inconsistency,” and must address “serious reliance interests.” *Encino Motorcars, LLC v. Navarro*, 136 S. Ct. 2117, 2126 (2016). In *Encino*, the Department of Labor reversed its decades-long practice of treating service advisors at automobile dealerships as exempt from the Fair Labor Standards Act’s overtime provisions, offering minimal explanation for the policy change. *Id.* at 2123. The Court overturned the rule, holding that the Department had not met its obligation to offer a “reasoned explanation,” especially given the decades of reliance on the policy. *Id.* at 2126. It was not enough that the Department included conclusory statements declaring its new policy to be a reasonable interpretation of the statute because the Department failed to provide any good reasons for the new policy. *Id.* at 2127. As explained by the Court, “[t]his lack of reasoned explanation for a regulation that is inconsistent with the Department’s longstanding earlier position results in a rule that cannot carry the force of law.” *Id.*

In *Organized Village of Kake v. United States Department of Agriculture*, the Department of Agriculture, relying on a detailed factual record, decided not to exempt the Tongass National Forest from a rule that would limit road construction and timber harvesting in national forests, explaining that the benefits would outweigh the potential economic loss. 795 F.3d 956, 959–61, 967–68 (9th Cir. 2015) (*en banc*). Just two years later, on “precisely the same record,” the agency issued a new decision reversing course. *Id.* at 968. The court concluded that the “absence of a reasoned explanation for disregarding previous factual findings violate[d] the APA.” *Id.* at 969. The court also recognized that “[e]lections have policy consequences,” but even when reversing a policy after an election, “an agency may not simply discard prior factual findings without a reasoned explanation.” *Id.* at 968.

EPA previously routinely used and considered science and studies for which the underlying data was not publicly available in regulatory actions. As explained above, EPA has not identified even *one* example in which EPA *has observed* the policies underlying the Proposal, and our research has likewise uncovered no such instance. The Proposal essentially admits as much, stating:

Historically, EPA has not consistently observed the policies underlying this Proposal, and courts have at times upheld EPA’s use non-public data in support of its regulatory actions. *See Coalition of Battery Recyclers Ass’n v. EPA*, 604 F.3d 613, 623 (D.C. Cir. 2010); *American Trucking Ass’ns v. EPA*, 283 F.3d 355, 372 (D.C. Cir. 2002).

83 Fed. Reg. at 18,769, n.3. The Proposal then goes on to say that “EPA is proposing to exercise its discretionary authority to establish a policy that would preclude it from using such data in future regulatory actions.” *Id.* The Proposal’s categorical exclusion of non-publicly available “dose response data” is also departure from EPA’s previous practice, as described in the 2002 EPA Guidelines, of weighing all relevant information.

In short, EPA provide no basis for changing course on this issue, especially when EPA has enshrined the previous policy in agency guidelines and litigation. EPA’s failure to explain this change in course violates the law.

X. The proposed rule’s handling of Confidential Business Information (CBI) is unlawfully vague and arbitrary and capricious

EPA’s Proposal states that “where the Agency is making data or models publicly available, it shall do so in a fashion that is consistent with law, protects privacy, confidentiality, [and] confidential business information.” 83 Fed. Reg. at 18,773. In crafting the Proposal, EPA has created a vague, double-edged sword that favors industry in some situations, and in others, creates barriers for industry groups submitting CBI. In both situations, the public could be harmed by the Proposal.

In an April 26, 2018 House hearing, then-Administrator Scott Pruitt suggested that CBI may be redacted and submitted to EPA under the Proposal, much like confidential health information:

Rep. Cramer: Maybe you could elaborate a little bit, how personal data can be protected and is protected. Nobody's asking for the names of every victim of every, you know, of every pollution source that's ever happened in the world, or that's been sourced in any study. They're not asking for personal data. We're asking simply for the science to be revealed. You can protect the data, right?

Administrator Pruitt: Both the personal data, Congressman, as well as confidential business information, both CBI and personal information can be redacted and can be addressed and still serve the purposes of the proposed rule.

As others have noted, however, this is not always the case. "Industry-conducted studies could contain confidential business information required to be withheld by law. In addition, companies may have intellectual property rights that would be violated if access to underlying data allowed competitors to rely on a study without replicating it."²¹⁸ In certain cases, this will work to the detriment of regulated entities.

For example, industry stakeholders may submit studies, data or information for which CBI redactions would prevent EPA from considering those materials, because the information is not "publicly available in a manner sufficient for independent validation." 83 Fed. Reg. at 18,768. This could prevent EPA from adopting standards, exclusions, or other regulatory provisions informed by that information. Similarly, other industry stakeholders opposed to the appeals and demands sought by the first set of stakeholders, would be harmed if EPA nonetheless considers the latter industry's submissions, notwithstanding redacted CBI that is not "publicly available in a manner sufficient for independent validation"—while at the same time EPA refuses to consider confidential non-business information submitted by the opponent-stakeholders. *Id.*

In other cases, CBI exclusions will create a double standard, where the public, including adversarial industry stakeholders, will not have access to industry-funded studies or other information relevant to the rulemaking process, because EPA has designated that information CBI and refused to make it "publicly available in a manner sufficient for independent validation." *Id.* The Proposal nonetheless indicates that some or all of that CBI-redacted studies and information will be considered by EPA. This double standard, and unexplained, differential treatment of submissions relevant and even integral to EPA's rulemakings, is the essence of arbitrary and capricious action.

Industry groups themselves will be impacted by this double standard. During, or prior to, a rulemaking, industry groups sometimes appeal to EPA to loosen the rigor of agency regulations, accord industry operational flexibilities, extend compliance deadlines, or take other actions to reduce alleged regulatory burdens. Frequently industry accomplishes this by submitting information particular to a specific company or industry sector; a particular chemical or product formulation; or a particular process unit or manufacturing process. These submissions

²¹⁸ Bloomberg News, Energy & Environment Report, "Practitioner Insights: EPA's Flawed 'Secret Science' Plan Puts Good Science at Risk," May 21, 2018, *available at* <https://www.bna.com/practitioner-insights-epas-n57982092715/>.

frequently are accompanied by claims that information is CBI, due to the company-specific or industry-specific nature of information that may be proprietary, confidential or the subject of trade secrets. Industry parties may also submit health studies or risk assessments they have conducted that may contain confidential clinical data or other information that they do not wish to make publicly available, or that they are barred from making publicly available due to confidentiality agreements, the death of study participants or other reasons.

The Agency itself is aware that its misguided Proposal works at odds with CBI. In a recent email exchange, an EPA staffer working on the rule, Richard Yamada, was informed of industry concerns by a colleague. Yamada

included the concerns of the chemical industry when crafting the plan. Earlier this year, Nancy Beck, deputy assistant administrator of EPA's chemicals office, raised pointed concerns to Yamada and other EPA staffers about what a "secret science" policy would mean for regulating chemicals under the Toxic Substances Control Act (TSCA). Beck, a former senior director at the American Chemistry Council, wrote that requiring underlying data to be public would affect pesticide registrations and TSCA implementation, particularly if it did not account for confidential business information, or CBI.

"Yes, thanks this is helpful – didn't know about the intricacies of CBI – ok, we will need to thread this one real tight! Thanks Nancy!" Yamada wrote in response to Beck's warning.²¹⁹

Section 30.3, described below, may be the agency's attempt at such a "thread," but in attempting to carve out certain agency actions for special treatment, the Proposal again underscores just how arbitrary and capricious it is. The Proposal would create a dynamic in which EPA is unable to consider that CBI or otherwise confidential health or risk data in deciding whether to adopt regulations or issue guidance that grants industry the requested regulatory flexibilities.

When EPA exercises its regulatory authorities, the Proposal may constrain the agency's ability to be flexible or relieve regulatory obligations, precisely where and when it might be needed most: by being responsive to particular demonstrations made by specific companies based on persuasive information that also happens to be CBI. Former Administrator Pruitt appeared to sanction this outcome in his responses, above, to Rep. Cramer, where he suggested that any CBI could be redacted, much like health information.

The Proposal fails to address CBI in a coherent way, and in so doing furthers the problems inherent in its present use at the agency, while also creating a new set of obstacles for both industries and the public to deal with as it relates to business information and EPA's regulatory responsibilities.

²¹⁹ Scott Waldman, "Meet the man helping Pruitt reshape science," *Climatewire*, (May 23, 2018), <https://www.eenews.net/stories/1060082467>.

XI. The Proposal arbitrarily and capriciously allows EPA to treat individual party adjudications, enforcement activities, and permit proceedings differently than “significant regulatory actions”

The Proposal at section 30.3 states that:

Except where explicitly stated otherwise, the provisions of this subpart do not apply to any other type of agency action, including individual party adjudications, enforcement activities, or permit proceedings.

83 Fed. Reg. at 18,773. This provision most clearly highlights one of the arbitrary and capricious advantages that industry stakeholders enjoy under the Proposal: it exempts from its censoring coverage EPA activities where industry is the primary party likely to submit confidential information that EPA may consider and rely upon. This, notwithstanding that the submitted information is not “publicly available in a manner sufficient for independent validation,” while still being highly relevant and even integral to EPA’s legal responsibilities. *Id.* at 18,768.

Permitting activities are one key example. For permitting actions taken under the CAA, RCRA, CWA, etc., the Proposal arbitrarily and capriciously allows EPA to continue to rely on highly relevant regulatory science and other information supplied by industry that is not “publicly available in a manner sufficient for independent validation.” *Id.* at 18,771–73. A company seeking a permit or permit revision may submit regulatory science, confidential business information or other non-confidential information that is not “publicly available in a manner sufficient for independent validation.” *Id.* EPA could consider non-peer reviewed, non-transparent industry science or information to conclude that a non-transparent industry model demonstrates no adverse air quality impact on a neighboring national park or wilderness area. This, despite the inputs and assumptions behind the model being unavailable to the public. An applicant could assert that there are safe exposure levels for PM_{2.5} or lead, and therefore EPA need not require any mitigation measures at concentrations below NAAQS levels in attainment areas. Industry applicants could rely upon hidden CBI to project no emissions increases for purposes of NSR permitting under the so-called “demand growth” exclusion, notwithstanding the unavailability of information critical to industry’s claim and EPA’s acceptance of that claim. Considering this and other non-transparent information, EPA could conclude that permits or permit revisions may be granted in situations where they should not lawfully be granted, notwithstanding that the non-transparent, unavailable information is scientifically erroneous and even absurd.

A second example is public information submitted during enforcement proceedings. The Proposal arbitrarily and capriciously allows EPA to continue to rely on highly relevant regulatory science and other information supplied to the agency by industry during enforcement proceedings, even when that information is not “publicly available in a manner sufficient for independent validation.” *Id.* at 18,771–73. Consider, for example, a company that receives a notice of violation from EPA and meets with the agency to make the case that EPA and the Department of Justice should not file a complaint. The company may submit regulatory science, confidential business information, or other non-confidential information that is not “publicly available in a manner sufficient for independent validation.” *Id.* at 18,768. EPA could consider

non-peer reviewed, non-transparent, erroneous industry science to conclude that formaldehyde or asbestos are not carcinogens, or that PM_{2.5} or lead have safe exposure levels, or that CO₂ does not endanger public health or welfare. Considering this and other non-transparent information, EPA could conclude that prosecution is not warranted, or that the information represents mitigating factors for penalties or injunctive relief, notwithstanding that the non-transparent, unavailable information is scientifically erroneous and even absurd.

The third case is public information submitted during individual party adjudications. *Id.* at 18,771–73. The Proposal arbitrarily and capriciously allows EPA to continue to rely on highly relevant regulatory science and other information supplied to the agency by industry during individual party adjudications, even when that information is not “publicly available in a manner sufficient for independent validation.” *Id.* at 18,768. Consider, for example, a company facing an EPA order or applicability determination that qualifies as an adjudication under the APA or one of the federal statutes that the agency administers.

The company may submit regulatory science, confidential business information or other non-confidential information that is not “publicly available in a manner sufficient for independent validation.” EPA could consider non-peer reviewed, non-transparent industry science to conclude that formaldehyde or asbestos are not carcinogens, or that PM_{2.5} or lead have safe exposure levels, or that CO₂ does not endanger public health or welfare. Considering this and other non-transparent information during the individual party adjudication, EPA could conclude that adoption of the order is not warranted, or that agency regulations should be interpreted in a way that does not apply to that company’s actions. Indeed, EPA could conclude, after considering the non-transparent, unavailable information, that the regulations should not apply in ways that would affect an entire industrial sector favorably, while harming the public meant to be protected by those regulations. Under proposed section 30.3, EPA could consider the non-transparent, unavailable information to reach these objectionable outcomes, notwithstanding that the information is scientifically erroneous and even absurd.

The Proposal nowhere explains why it is valid and consistent with EPA’s statutory authorities and responsibilities to consider information that is not “publicly available in a manner sufficient for independent validation” under the situations allowed in proposed section 30.3 (individual party adjudications, enforcement activities, or permit proceedings), while prohibiting EPA consideration of that information in situations covered by the Proposal’s prohibitions. Indeed, it is striking that the Proposal does not even *attempt* any such explanation or justification. *Id.* at 18,771–73. This is undoubtedly because there is no coherent, lawful justification or explanation that the agency could muster; it is unsurprising that the Proposal cannot overcome this.

Indeed, it is a hallmark of the Proposal’s inherent arbitrariness and capriciousness that the Proposal prohibits EPA from considering the *identical regulatory science, studies, and information* in some regulatory situations, while allowing EPA to consider the *identical regulatory science, studies, and information* in other regulatory situations—based merely upon the *type of situation*, rather than any differences in availability, replicability, verifiability, or validation concerning the information. Proposed section 30.3 prohibits EPA from considering information that is not “publicly available in a manner sufficient for independent validation”

during so-called “significant regulatory decisions,” while prohibiting EPA from considering that *identical regulatory science, studies, or information* during “any other type of agency action, including individual party adjudications, enforcement activities, or permit proceedings.” 83 Fed. Reg. at 18,768, 18,771. The Proposal does not and cannot explain or justify this differential treatment, so the Proposal does not even try.²²⁰

Finally, proposed section 30.3 is unlawfully vague, open-ended and arbitrary due to the capacious and unlimited way that EPA has drafted the exclusion from the Proposal’s prohibitions. Section 30.3 indicates that “the provisions of this subpart do not apply to any other type of agency action.” This grants EPA capacious and effectively unlimited discretion and authority to decide what “any other type of agency action” is and is not, without providing the public or regulated entities any criteria, understanding or advance notice as to how EPA will exercise that discretion and authority. That is the essence of arbitrary and capricious agency action. Indeed, the Proposal is structured in such a way that EPA will be exercising that discretion and authority—to decide what “any other type of agency action” does and does not cover—in secret, with no public input and no public awareness, concerning the situations in which EPA will and will not consider non-transparent, unavailable information. In addition to this being perversely ironic, considering the “transparency” title of the Proposal, this fact renders the Proposal even more arbitrary and capricious and unlawful.

XII. The Proposal treats studies, models and analyses that are integral to the functioning of EPA regulatory programs and the implementation of statutes in an arbitrary and capricious manner

In the Proposal, EPA professes concern with transparency, clarity, and independence; using the best available information; making sure that information is replicable and verifiable, and ensuring the public is able to participate meaningfully in the regulatory process. The Proposal says this will help EPA carry out its mission in a manner the public can trust and understand:

The proposed regulation provides that, for the science pivotal to its significant regulatory actions, EPA will ensure that the data and models underlying the science is publicly available in a manner sufficient for validation and analysis.

83 Fed. Reg. at 18,769/1.

The best available science must serve as the foundation of EPA’s regulatory actions. Enhancing the transparency and validity of the scientific information relied upon by EPA strengthens the integrity of EPA’s regulatory actions and its obligation to ensure the Agency is not arbitrary in its conclusions. By better informing the public, the Agency in enhancing the public’s ability to understand and meaningfully participate in the regulatory process.

²²⁰ Should EPA realize and conclude that it must explain and justify this differential treatment in any final rule, EPA first must issue a supplemental proposal with these explanations and justifications for public review and opportunity for comment prior to issuing any final rule.

Id. at 18,769/2.

When EPA develops significant regulations using public resources, including regulations for which the public is likely to bear the cost of compliance, EPA should ensure that the data and models underlying scientific studies that are pivotal to the regulatory action are available to the public. This proposed rule is designed to increase transparency in the preparation, identification, and use of science in policymaking.

Id. at 18,769/3.

Regulatory determinations based on science should describe and document any assumptions and methods used, and should address variability and uncertainty.

Id. at 18,770/2.

“Pivotal regulatory science” is the studies, models, and analyses that drive the magnitude of the benefit-cost calculation, the level of a standard, or point-of-departure from which a reference value is calculated. In other words, they are critical to the calculation of a final regulatory standard or level, or to the quantified costs, benefits, risks and other impacts on which a final regulation is based.

Id.

This [P]roposal will help ensure that EPA is pursuing its mission of protecting public health and the environment in a manner that the public can trust and understand.

Id. at 18,769/1.

In this section of our comments, we make the following points opposing the Proposal and supporting its withdrawal:

- First, the Proposal as written sweeps broadly to capture—and thereby to prohibit EPA from considering—studies, models, and analyses that are integral to the functioning of EPA regulatory programs, implementation of statutes like the Clean Air Act, and protection of public health and the environment. It is both destructive and unlawful for EPA to refuse or fail to consider these additional studies, models, and analyses. We discuss numerous examples below.
- Second, to the extent that the Proposal does capture one or more of the studies, models, or analyses below, the Proposal would require EPA to conduct independent peer review of these materials before considering or using them, or before continuing to make them available for public use and awareness. *See* 83 Fed. Reg. at 18,774 (proposed § 30.7). This is objectionable and absurd. It is also unlawful for the same reasons that the Proposal is unlawful, as detailed in these comments and others.
- Third, to the extent that EPA disagrees that one or more of these studies, models, and analyses are captured by the Proposal, continuing to consider these materials while

prohibiting EPA from considering other materials would be arbitrary and capricious. This is because these studies, models and analyses have the same hallmarks as “pivotal regulatory science” that the Proposal would exclude, as discussed in greater detail below. We emphasize that we do not believe EPA *should* or that EPA *may* fail to consider these other studies, models, or data, for the reasons set forth in these comments. Rather, our point is that continuing to consider these materials demonstrates additionally that the Proposal is arbitrary, capricious, and an abuse of discretion.

The Proposal states that “[t]he provisions of this subpart apply to dose response data and models underlying pivotal regulatory science that are used to justify significant regulatory decisions regardless of the source of funding or identity of the party conducting the regulatory science.” 83 Fed. Reg. at 18,773/3 (proposed § 30.3). Next, the Proposal defines “dose response data and models” to mean:

the data and models used to characterize the quantitative relationship between the amount of dose or exposure to a pollutant, contaminant, or substance and the magnitude of a predicted health or environmental impact. Such functions typically underlie pivotal regulatory science that drives the size of benefit-cost calculations, the level of a standard, and/or the points of departure from which reference values (reference doses or reference concentrations) are calculated.

Id. at 18,773/2 (proposed § 30.2). Then, the Proposal defines “pivotal regulatory science” to mean “the specific scientific studies or analyses that drive the requirements and/or quantitative analysis of EPA final significant regulatory decisions.” *Id.* Finally, the Proposal defines “regulatory science” to mean “scientific information, including assessments, models, criteria documents, and regulatory impact analyses, that provide the basis for EPA final significant regulatory decisions.” *Id.*

The Proposal either covers on its face, or appears to cover, the following examples of studies, models, and analyses that are integral to the functioning of EPA regulatory programs, implementation of statutes like the Clean Air Act, and protection of public health and the environment. It would be harmful, unlawful, arbitrary and capricious, and an abuse of EPA’s discretion to include these materials within the sweep of the Proposal’s prohibitions.

Alternatively, if EPA disagrees that the following examples are covered by the Proposal, then continuing to consider these materials that have the same hallmarks as the prohibited materials, and that raise the same issues and concerns that cause EPA to prohibit their consideration, demonstrates that the Proposal is arbitrary and capricious, biased, and internally inconsistent and contradictory.²²¹ Moreover, in this case, the Proposal would suffer from fatal failures to explain why EPA may consider these materials, while the Proposal would prohibit EPA from considering other materials.

²²¹ See, e.g., *Air Transport Ass’n of Am. v. DOT*, 119 F.3d 38, 43 (D.C. Cir. 1997) (vacating regulation: “the most serious logical problem with [the] regulation—which we simply cannot accept,” is that the agency’s explanation “is internally inconsistent”).

A. Integrated Planning Model

EPA uses the Integrated Planning Model (IPM) to analyze the projected impact of environmental policies on the electric power sector in the lower 48 contiguous states and the District of Columbia. The IPM is a proprietary multi-regional, dynamic, deterministic linear programming model of the U.S. electricity sector developed by ICF International, and is used to support public and private sector clients

The IPM provides forecasts of least-cost capacity expansion, electricity dispatch, and emission control strategies for meeting energy demand and environmental, transmission, dispatch, and reliability constraints. The IPM can and has been used by the EPA to evaluate the costs and emissions impacts of policies to limit emissions of SO₂, NO_x, CO₂, HCl, and Hg from the electric power sector, including the following:

- the Clean Air Mercury Rule;
- Clean Air Interstate Rule;
- Clear Skies legislation;
- Mercury and Air Toxics Standards;
- Cross State Air Pollution Rule;
- Notice of Availability of the Environmental Protection Agency’s Preliminary Interstate Ozone Transport Modeling Data for the 2015 Ozone National Ambient Air Quality Standard, 82 Fed. Reg. 1733 (Jan. 6, 2017);
- EPA’s Power Sector Modeling in Support of the Notice of Data Availability – Preliminary Interstate Ozone Transport Modeling Data for the 2015 Ozone NAAQS;²²²
- New Source Performance Standards for the electric power sector;
- Clean Power Plan, Clean Power Plan repeal, and proposed Clean Power Plan replacement.

As a proprietary model, the IPM is not “publicly available in a manner sufficient for validation and analysis.” 83 Fed. Reg. at 18,769/1. The model’s inputs, assumptions, methodologies, and operation are not “transparent” in the manner described in the Proposal, notwithstanding the model being pivotal to EPA regulatory actions. *Id.* at 18,770/3. EPA has used the IPM regularly to “drive the magnitude of the benefit-cost calculation and the level of standards” in Clean Air Act regulations. *Id.* at 18,770/2. “The use of default models, without consideration of alternatives or model uncertainty, can obscure the scientific justification for EPA actions.” *Id.* at 18,770/3. The public lacks access to the IPM’s “[c]omputer codes and models involved in the creation and analysis of such information.” 83 Fed. Reg. at 18,774/1 (proposed § 30.5(c)).

²²² <https://www.epa.gov/airmarkets/epas-power-sector-modeling-support-notice-data-availability-preliminary-interstate-ozone>.

B. National Electric Energy Data System

The National Electric Energy Data System (NEEDS) database contains the generation unit records used to construct the model plants that represent existing and planned/committed units in EPA modeling applications of the IPM. The NEEDS includes geographic, operating, air emissions, pollution control, planned retirement dates, and other information on generating units. The NEEDS is customarily updated simultaneously with IPM updates. Data contained in NEEDS are taken from EIA forms, EIA AEO, NERC ES&D database, Ventyx new entrants' database (subscription required), EPA's emission tracking system (EPA Emissions Collection and Monitoring Plan System, ECMPS), and utility and regional EPA comments.

Similar to the IPM, with which NEEDS is integrated by EPA, NEEDS contains information that is not “publicly available in a manner sufficient for validation and analysis.” 83 Fed. Reg. at 18,769/1. The inputs, assumptions, methodologies, and operation are not “transparent” in the manner described in the Proposal, notwithstanding the database being pivotal to EPA regulatory actions. *Id.* at 18,770/3. The Ventyx database requires a paid subscription that prevents NEEDS data from being transparent and publicly available in a manner sufficient for validation and analysis. EPA has used the NEEDS regularly (with the IPM) to “drive the magnitude of the benefit-cost calculation and the level of standards” in Clean Air Act regulations. *Id.* at 18,770/2.

C. The National Energy Modeling System

The National Energy Modeling System (NEMS), developed by Energy Information Administration (EIA), generates the Annual Energy Outlook (AEO) forecasts. EPA relies on NEMS forecasts for power sector modeling inputs and assumptions in IPM, including electricity demand and fuel prices.

Similar to the IPM, with which NEMS is also integrated by EPA, NEMS contains information and assumptions that are not “publicly available in a manner sufficient for validation and analysis.” 83 Fed. Reg. at 18,769/1. The inputs, assumptions, methodologies, and operation are not “transparent” in the manner described in the Proposal, notwithstanding the database being pivotal to EPA regulatory actions. *Id.* at 18,770/3. EPA has used the NEMS regularly (with the IPM) to “drive the magnitude of the benefit-cost calculation and the level of standards” in Clean Air Act regulations. *Id.* at 18,770/2.

D. Co-Benefits Risk Assessment

COBRA is a tool available for download from EPA that helps state and local governments: (1) evaluate how changes in air pollution from clean energy policies and programs affect human health at the county, state, regional, or national levels; (2) estimate the economic value of health benefits associated with clean energy policies and programs to compare against program costs; (3) map and visually represent the air quality, human health, and health-related economic benefits from reductions in emissions of PM_{2.5}, SO₂, NO_x, NH₃, VOCs resulting from clean energy policies and programs.

COBRA is intended to be a preliminary screening tool that state and local policymakers can use to identify health benefits associated with clean energy policy approaches. It provides preliminary estimates of the impact of air pollution emission changes on ambient particulate matter (PM) air pollution concentrations, translates this into health effect impacts, and then monetizes these impacts. It was developed by Abt Associates and it is copyrighted. EPA's website lists multiple analyses that have used COBRA.²²³

COBRA contains information and assumptions that are not “publicly available in a manner sufficient for validation and analysis.” 83 Fed. Reg. at 18,769/1. The inputs, assumptions, methodologies and operation are not “transparent” in the manner described in the Proposal, notwithstanding the database being pivotal to EPA regulatory actions. *Id.* at 18,770/3. COBRA was developed by Abt based upon taking models from the very same epidemiological studies that the Proposal would prohibit EPA from considering and converting them into health impact functions.²²⁴ Accordingly, COBRA would be “tainted” and unusable by EPA or other parties based on the same (unlawful, arbitrary) prohibitions reflected in the Proposal. EPA and other parties have used the COBRA to “drive the magnitude of the benefit-cost calculation and the level of standards” in Clean Air Act regulations. 83 Fed. Reg. at 18,770/2.

E. Avoided Emissions and Generation Tool

The Avoided Emissions and Generation Tool, developed by Synapse, estimates the emissions benefits of energy efficiency and renewable energy policies and programs. The AVERT quantifies the particulate matter (PM_{2.5}), nitrogen oxides (NO_x), sulfur dioxide (SO₂), and carbon dioxide (CO₂) emissions benefits of state and multi-state EE/RE policies and programs. The target audience for this tool is state air quality planners evaluating county, state, and regional emissions displaced at electric power plants by energy efficiency and renewable energy programs. It enables state and local authorities to include AVERT-calculated emission impacts of EE/RE policies and programs in air quality modeling and Clean Air Act plans used to meet the National Ambient Air Quality Standards, with the concurrence of the appropriate EPA regional office.

²²³ See, e.g., Analysis of the Public Health Impacts of the Regional Greenhouse Gas Initiative (Abt Associates, 2017); Change is in the Air: How States Can Harness Energy Efficiency to Strengthen the Economy and Reduce Pollution (ACEEE, 2014); Comments on B21-0650 –Renewable Portfolio Standard Expansion Amendment Act of 2016 (Chesapeake Climate Action Network testimony to the DC Transportation and Environment Committee, 2016); Health Impact and Economic Costs of Volkswagen's Lack of Compliance with the United States' Emission Standards (International Journal of Environmental Resources and Public Health. 13(9): 891. 2016), <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5036724/>; Minneapolis Climate Action Plan: Public Health and Environmental Justice; Plug-In Vehicles in California (UC- Berkeley Transportation Sustainability Research Center, 2012); A Retrospective Analysis of the Benefits and Impacts of U.S. Renewable Portfolio Standards (National Renewable Energy Laboratory and Lawrence Berkeley National Laboratory, January 2016); Staff White Paper on Benefit-Cost Analysis in the Reforming Energy Vision Proceeding (New York Department of Public Service, July 2015); Standardized Regulatory Impact Assessment: Computers, Computer Monitors, and Signage Displays (Prepared for California Energy Commission, June 2016).

²²⁴ See U.S. EPA, User's Manual for the Co-Benefits Risk Assessment Health Impacts Screening and Mapping Tool (COBRA), Version 3.2 (May 2018), https://www.epa.gov/sites/production/files/2018-05/documents/cobra_user_manual_may2018_508.pdf.

The AVERT contains information and assumptions that are not “publicly available in a manner sufficient for validation and analysis.” 83 Fed. Reg. at 18,769/1. The inputs, assumptions, methodologies and operation are not “transparent” in the manner described in the Proposal, notwithstanding the database being pivotal to EPA regulatory actions. *Id.* at 18,770/3. AVERT was developed by Synapse based upon taking models from the very same epidemiological studies that the Proposal would prohibit EPA from considering.²²⁵ Accordingly, AVERT would be “tainted” and unusable by EPA or other parties based on the same (unlawful, arbitrary) prohibitions reflected in the Proposal. EPA and other parties have used AVERT to “drive the magnitude of the benefit-cost calculation and the level of standards” in Clean Air Act regulations, including State Implementation Plans for energy efficiency and renewable energy measures. 83 Fed. Reg. at 18,770/2.

F. Community Multi-scale Air Quality Modeling System

The Community Multi-scale Air Quality Modeling System simultaneously models multiple air pollutants, including ozone, PM, and air toxics, to help regulators determine the best air quality management scenarios for their communities, states and countries. Using data about land use, meteorology, and emissions, CMAQ provides detailed information about the concentrations of air pollutants in a given area for any specified emissions or climate scenario. It combines three types of models—meteorological models, emissions models, and air-chemistry transport models.

EPA and states have used CMAQ for more than a decade. The National Weather Service also uses CMAQ to produce daily U.S. forecasts for ozone air quality. States use CMAQ to develop and assess implementation actions needed to attain National Ambient Air Quality Standards. EPA has used CMAQ to support the development of NAAQS; provide guidance on NAAQS implementation to State environmental agencies and EPA Regional Offices; assess impacts of changing air pollution levels on human health by EPA and the Centers for Disease Control and Prevention; and assess impacts of polluted rainfall to sensitive ecosystems such as the Chesapeake Bay.²²⁶ EPA has said, bluntly, that “[t]he loss or stagnation of [CMAQ] would jeopardize protection of public health and adequate assessment of Clean Air Act compliance.” *Id.*

The CMAQ contains information and assumptions that are not “publicly available in a manner sufficient for validation and analysis.” 83 Fed. Reg. at 18,769/1. The inputs, assumptions, methodologies, and operation are not “transparent” in the manner described in the Proposal, notwithstanding the database being pivotal to EPA regulatory actions. *Id.* at 18,770/3. The CMAQ relies, in part, on the very same epidemiological studies that the Proposal would

²²⁵ See U.S. EPA, User’s Manual for the Co-Benefits Risk Assessment Health Impacts Screening and Mapping Tool (COBRA), Version 3.2 (May 2018), https://www.epa.gov/sites/production/files/2018-05/documents/cobra_user_manual_may2018_508.pdf.

²²⁶ U.S. EPA, Community Multiscale Air Quality (CMAQ) Model Impact Statement, https://www.epa.gov/sites/production/files/2017-08/documents/cmaq_impact_statement_29aug2017.pdf.

prohibit EPA from considering.²²⁷ Accordingly, CMAQ would be “tainted” and unusable by EPA or other parties based on the same (unlawful, arbitrary) prohibitions reflected in the Proposal. EPA and other parties have used CMAQ to “drive the magnitude of the benefit-cost calculation and the level of standards” in Clean Air Act regulations. *Id.* at 18,770/2.

G. EPA U.S. Nine-region MARKAL Database.

The EPA MARKet ALlocation (MARKAL) model is a data-driven, bottom-up energy systems economic optimization model. A census region representation of U.S. energy system, it was developed by EPA researchers for use with MARKAL model, an energy system optimization model used by local and federal governments and academic researchers. It is used in more than 35 countries. “The EPAUS9r is a distinct representation of the U.S. energy system designed to be used within the MARKAL model structure. The database characterizes the flow of energy associated with the extraction or import of resources, the conversion of these resources into useful energy, and the use of the energy in meeting end-use demands within and between the nine census regions of the United States.”²²⁸

The MARKAL contains information and assumptions, and is based on commercial software, that are not “publicly available in a manner sufficient for validation and analysis.” 83 Fed. Reg. at 18,769/1. The software is not open source.²²⁹ The inputs, assumptions, methodologies, and operation are not “transparent” in the manner described in the Proposal, notwithstanding the database being pivotal to EPA regulatory actions. *Id.* at 18,770/3. EPA and other parties have used MARKAL to “drive the magnitude of the benefit-cost calculation and the level of standards” in Clean Air Act regulations. *Id.* at 18,770/2.

H. Emissions & Generation Resource Integrated Database.

eGRID is a comprehensive source of data on the environmental characteristics, including emissions and resource mix data, for almost every power plant and company that generates electricity in the U.S. eGRID data can be used for: GHG registries and inventories, carbon footprints, consumer information disclosure, emission inventories and standards, power market changes, and avoided emission estimates. It was developed with Abt Associates.

eGRID data are used in the following applications and programs: “Power Profiler web application, Climate Leaders protocols, ENERGYSTAR’s Portfolio Manager and Target Finder, Waste Wise Office Carbon Footprint Tool, the Personal Greenhouse Gas Emissions Calculator, the Greenhouse Gas Equivalencies Calculator, and the Green Power Equivalency Calculator.”²³⁰

²²⁷ See U.S. EPA, User’s Manual for the Co-Benefits Risk Assessment Health Impacts Screening and Mapping Tool (COBRA), Version 3.2 (May 2018), https://www.epa.gov/sites/production/files/2018-05/documents/cobra_user_manual_may2018_508.pdf.

²²⁸ U.S. EPA, EPA U.S. Nine-region MARKAL DATABASE, Database Documentation, <https://nepis.epa.gov/Adobe/PDF/P100I4RX.pdf>.

²²⁹ Database Documentation, *supra* n.228.

²³⁰ U.S. EPA, The Emissions and Generation Resource Integrated Database: Technical Support Document for eGrid With Year 2016 Data, https://www.epa.gov/sites/production/files/2018-02/documents/egrid2016_technicalsupportdocument_0.pdf.

“eGRID is also used by other Federal Government agencies such as Oak Ridge National Laboratory (ORNL) for their Combined Heat and Power Calculator, the National Energy Technology Laboratory (NETL) for their sponsored distributed National Carbon Sequestration Database and Geographic Information System (NATCARB), and the National Renewable Energy Laboratory (NREL) for their micropower distributed generation optimization model named HOMER.”²³¹

eGRID contains information and assumptions that are not “publicly available in a manner sufficient for validation and analysis.” 83 Fed. Reg. at 18,769/1. The inputs, assumptions, methodologies, and operation are not “transparent” in the manner described in the Proposal, notwithstanding the database being pivotal to EPA regulatory actions. *Id.* at 18,770/3. eGRID relies, in part, on the very same epidemiological studies that the Proposal would prohibit EPA from considering.²³² Accordingly, eGRID would be “tainted” and unusable by EPA or other parties based on the same (unlawful, arbitrary) prohibitions reflected in the Proposal. EPA and other parties have used eGRID to “drive the magnitude of the benefit-cost calculation and the level of standards” in Clean Air Act regulations. *Id.* at 18,770/2.

I. National Emissions Inventory (NEI)

The National Emissions Inventory is a comprehensive and detailed estimates of air emissions of criteria pollutants, criteria precursors, and hazardous air pollutants from air emissions sources, released every three years and based on data provided by state, local, and tribal air agencies for sources in their jurisdictions and supplemented by data developed by EPA. There is data for point sources, nonpoint sources, onroad sources, nonroad sources, and “event” sources.

The NEI contains information and assumptions that are not “publicly available in a manner sufficient for validation and analysis.” 83 Fed. Reg. at 18,769/1. The inputs, assumptions, methodologies and operation are not “transparent” in the manner described in the Proposal, notwithstanding the database being pivotal to EPA regulatory actions. *Id.* at 18,770/3. “Raw input datasets” underlying the NEI, for example, are available to “all EPA staff, EIS data submitters (*i.e.*, the S/L/T air agency staff), Regional Planning Organization staff that support state, local and tribal agencies, and contractors working for the EPA on emissions related work”—but not available to the public.²³³ Facility-level identification is also hidden from the public, while only some supporting material is publicly available.²³⁴ EPA and other parties have used the NEI to “drive the magnitude of the benefit-cost calculation and the level of standards” in Clean Air Act regulations. *Id.* at 18,770/2.

²³¹ Technical Support Document for eGrid, *supra* n.230.

²³² See U.S. EPA, User’s Manual for the Co-Benefits Risk Assessment Health Impacts Screening and Mapping Tool (COBRA), Version 3.2 (May 2018), https://www.epa.gov/sites/production/files/2018-05/documents/cobra_user_manual_may2018_508.pdf.

²³⁴ 2014 National Emissions Inventory, version 2 Technical Support Document, *supra* n.233, at 1–2.

XIII. The Proposal’s retroactivity provisions are arbitrary and capricious

In the Proposal, EPA states that the proposed regulation “is intended to apply prospectively.” 83 Fed. Reg. at 18,771. However, a few pages later, the agency “solicits comments on how the prospective or retrospective application of the provisions for dose response data and models or pivotal regulatory science could inadvertently introduce bias regarding the timeliness and quality of the scientific information available.” Also, the Proposal states that “for regulatory programs . . . in which future significant regulatory actions may be based on the administrative record from previous reviews . . . , EPA seeks comment on the manner in which this proposed rule should apply to that previous record.” *Id.* at 18,772.

In short, despite its assertion that the rulemaking is “intended” to apply prospectively, the Proposal contemplates prohibiting EPA—or will prohibit EPA—from relying on studies generated *prior* to rulemakings that fail to meet the Proposal’s ill-defined criteria for “publicly available data.” This approach is arbitrary and capricious, runs counter to the specific language of many statutes the agency is tasked with administering, and would destroy the agency’s ability to promulgate health-based standards to protect the American public using the best available science.

The Proposal ignores an entire body of case law that has considered and roundly rejected both retroactivity in rulemakings and limiting data that underlies rulemakings to “publicly available data.” In so doing, the Proposal is arbitrary and capricious, and should be rejected.

The Supreme Court strongly disfavors retroactive application of rules. The Court has stated that:

Retroactivity is not favored in the law. Thus, congressional enactments and administrative rules will not be construed to have retroactive effect unless their language requires this result. [] By the same principle, a statutory grant of legislative rulemaking authority will not, as a general matter, be understood to encompass the power to promulgate retroactive rules unless that power is conveyed by Congress in express terms. [] Even where some substantial justification for retroactive rulemaking is presented, courts should be reluctant to find such authority absent an express statutory grant.

Bowen v. Georgetown Univ. Hosp., 488 U.S. 204, 208–09 (1988) (internal citations omitted). Notably, the Proposal does not identify a single provision in a single statute that EPA administers, or any other federal law, that requires or even authorizes any final rule based on the Proposal to have retroactive effect. *See generally* 83 Fed. Reg. at 18,768–74. There has been no power conveyed by Congress in express terms to promulgate retroactive rules related to any element of the Proposal; it is unsurprising that the Proposal does not and cannot identify *any* express or even implied grant of authority. *See Bowen*, 488 U.S. at 208–09.

The Proposal claims prospective application, while nonetheless noting that in some circumstances EPA may desire to apply the rule retroactively. 83 Fed. Reg. at 18,771. This, too, is unlawful and fails to meet the high burden in the Supreme Court’s *Bowen* decision and its progeny concerning retroactive application of agency rules. The suggestion in the Proposal, for

example, that EPA may invoke the Proposal’s approach to review all prior health and scientific studies underlying the NAAQS is illegitimate, arbitrary and capricious, and contrary to caselaw.²³⁵ *Bowen* and its progeny do not permit agency rules to have retroactive effect to disallow health studies and regulatory science generated prior to, or relied upon by EPA prior to, adoption of any final rule based on the Proposal. This caselaw does not entertain any such exception and accepting any such exception for these circumstances would circumvent the holdings and reasoning of this case law.

XIV. The Proposal fails to address environmental justice concerns and harms to children, as required by Executive Order 12,898 and Executive Order 13,045

EPA claims that it need not address Executive Order 12,898 (Environmental Justice in Minority Populations) nor Executive Order 13,045 (protecting children) because “this action does not concern an environmental health risk or safety risk” 83 Fed. Reg. at 18,773. This is an unsupported and inaccurate claim. The implementation of this rule would impact the rules and guidelines that are set to protect children, people of color, the elderly, low-income, and other underserved populations.

A. Executive Order 12,898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

Executive Order 12,898 applies to agency “programs, policies and activities” and directs agencies such as the EPA, “[t]o the greatest extent practicable and permitted by law” to “identify[] and address[], as appropriate, disproportionately high and adverse human health or environmental effects” of agency programs, policies and actions on minority populations and low-income populations.” Executive Order 12,898, Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations, 59 Fed. Reg. 7629 (Feb. 16, 1995). Because minority and low-income populations have historically been underrepresented in agency decision making, Executive Order 12,898 also aims to improve public participation of these populations in the decision-making process. *Id.* at 7630–32. Moreover, Executive Order 12898 aims to “improve research and data collection relating to the health of and environment of minority populations and low-income populations.” *Id.* at 7630.

In keeping with these and other principles, EPA created a Guidance document for determining when environmental justice should be considered when developing regulations titled “Guidance on Considering Environmental Justice During the Development of Regulatory Actions.” To achieve Executive Order 12,898’s goals, the Guidance directs rule-writers and decision-makers to respond to three core Environmental Justice questions throughout the process:

²³⁵ See 83 Fed. Reg. at 18,772/1 (“For regulatory programs, like the National Ambient Air Quality Standards program, in which future significant regulatory actions may be based on the administrative record from previous reviews—particularly where the governing statute requires repeated review on a fixed, date-certain cycle—EPA seeks comment on the manner in which this proposed rule should apply to that previous record.”)

1. How did the public participation process provide transparency and meaningful participation for minority populations, low-income populations, tribes, and indigenous peoples?
2. How did the rule-writers identify and address existing and/or new disproportionate environmental and public health impacts on minority populations, low-income populations, and/or indigenous peoples?
3. How did actions taken under #1 and #2 impact the outcome or final decision?

Guidance on Considering Environmental Justice During the Development of Regulatory Actions, May 2015, at ii, <https://www.epa.gov/sites/production/files/2015-06/documents/considering-ej-in-rulemaking-guide-final.pdf> (footnote omitted). It is important to note that a regulatory action may involve a potential environmental justice concern if it could:

- Create new disproportionate impacts on minority populations, low-income populations, and/or indigenous peoples;
- Exacerbate existing disproportionate impacts on minority populations, low-income populations, and/or indigenous peoples; or
- Present opportunities to address existing disproportionate impacts on minority populations, low-income populations, and/or indigenous peoples through the action under development.

Id. at 10. And “[i]n determining whether potential EJ concerns may be at issue in regulatory actions, some level of analysis is needed, be it qualitative, quantitative, or some combination of both.” *Id.* at 15.

The Proposal improperly ignores Executive Order 12,898 and the agency’s obligations to address Environmental Justice in minority and low-income populations. EPA does not appear to have considered the Proposals effect on minority and low-income populations at all or performed any analysis, let alone attempt to address the Environmental Justice concerns. Instead, the Proposal states “The EPA believes that this action is not subject to Executive Order 12898 (59 FR 7629, February 16, 1994) because it does not establish an environmental health or safety standard.” 83 Fed. Reg. at 18,773. But Executive Order 12,898 is not limited to actions that “establish an environmental health or safety standard,” and EPA does not explain the basis for its conclusion that the Proposal is exempt. This is arbitrary and capricious.

The Proposal makes no mention of the Guidance on Considering Environmental Justice During the Development of Regulatory Actions, and the Proposal directly conflicts with many of the Executive Order’s, and the Guidance document’s provisions. With the single English language hearing EPA held in Washington DC, EPA has not provided for meaningful participation of minority populations, low-income populations, tribes, and indigenous peoples. Given that EPA has decided without explanation that the Proposal is categorically exempt from Environmental Justice considerations, the agency has not identified or addressed any existing or

new disproportionate environmental and public health impacts on minority populations, low-income populations, and/or indigenous peoples. And the Proposal's preclusion of agency consideration of peer reviewed studies in regulatory decision making unless the underlying data are made publicly available, will weaken research and data collection relating to the health of and environment of minority populations and low-income populations.

If EPA had fulfilled its obligations under Executive Order 12,898, the agency would have concluded that the Proposal does disproportionately harm minority and low-income populations that are most in need of protection. It is well established that minority and low-income populations are most likely to experience disproportionate exposure to harmful pollutants and chemicals. The Proposal seeks to preclude the use of scientific research critical to establishing safeguards against this disproportionate exposure.

Lastly, the Proposal will reduce research and data collection needed to protect the health of minority and low-income populations as individuals are deterred based on the fear their personal information will be released and researchers avoid seeking such information. EPA has not addressed this issue.

The Proposal does not comply with Executive Order 12,898 related to Environmental Justice or any EPA guidance implementing the Executive Order. It is arbitrary and capricious and should be withdrawn.

B. Executive Order 13,045: Protection of Children From Environmental Health Risks and Safety Risks

Executive Order 13,045 requires that every agency:

- (a) shall make it a high priority to identify and assess environmental health risks and safety risks that may disproportionately affect children; and
- (b) shall ensure that its policies, programs, activities, and standards address disproportionate risks to children that result from environmental health risks or safety risks.

Executive Order 13,045, Protection of Children From Environmental Health Risks and Safety Risks, 62 Fed. Reg. 19,885 (Apr. 21, 1997). The Executive Order requires that

For each covered regulatory action submitted to OMB's Office of Information and Regulatory Affairs (OIRA) for review pursuant to Executive Order 12866, the issuing agency shall provide to OIRA the following information developed as part of the agency's decisionmaking process, unless prohibited by law:

- (a) an evaluation of the environmental health or safety effects of the planned regulation on children; and

(b) an explanation of why the planned regulation is preferable to other potentially effective and reasonably feasible alternatives considered by the agency.

Id. at 19,887. The Executive Order covers regulatory actions that are likely to result in a rule that may be economically significant under Executive Order 12,866 (which the EPA concluded applies to the Proposal, *see* 83 Fed. Reg. at 18,772) and “concern an environmental health risk or safety risk that an agency has reason to believe may disproportionately affect children.” 62 Fed. Reg. at 19,885.

EPA created a Guide to help Agency staff involved in developing actions determine whether Executive Order 13,045 applies to an Agency action and, if so, how to implement the Executive Order. Guide to Considering Children’s Health When Developing EPA Actions, at 1 Oct. 2006, https://www.epa.gov/sites/production/files/2014-05/documents/epa_adp_guide_childrenhealth.pdf. The Guide includes “a set of questions EPA staff involved in action development can ask risk assessors to ensure that the various types of information relevant to the assessment of risks to children are considered and may be useful in addressing the issue of disproportionate risks.” *Id.* at 8. And, the Guide explains: “If a rulemaking is not covered by EO 13045, but it discusses environmental health or safety, it is advisable to characterize children’s risk to the extent the data are available.” *Id.* at 7.

EPA asserts that the Proposal is not subject to Executive Order 13,045 because it does not concern an environmental health risk or safety risk. 83 Fed. Reg. at 18,773. EPA does not explain how it reached this conclusion. EPA also does not characterize children’s risk to the extent data are available. The Proposal applies to “Pivotal regulatory science,” which it defines as “the specific scientific studies or analyses that drive the requirements and/or quantitative analysis of EPA final significant regulatory decisions.” *Id.* And the Proposal defines Regulatory science as “scientific information, including assessments, models, criteria documents, and regulatory impact analyses, that provide the basis for EPA final significant regulatory decisions.” *Id.* The Proposal explains that “‘Pivotal regulatory science’ is the studies, models, and analyses that drive the magnitude of the benefit-cost calculation, the level of a standard, or point-of-departure from which a reference value is calculated. In other words, they are critical to the calculation of a final regulatory standard or level, or to the quantified costs, benefits, risks and other impacts on which a final regulation is based.” *Id.* at 18770. By its terms, the Proposal will impact (and therefore concern) all environmental health and safety risks, including many that EPA knows disproportionately affect children.

EPA failed its obligation to evaluate the environmental health or safety effects of the Proposal on children and explain why the Proposal is preferable to other potentially effective and reasonably feasible alternatives considered by the agency. The Proposal is arbitrary and capricious and should be withdrawn.

C. Examples of how the Proposal could disproportionately affect minority populations, low-income populations, and children

As explained in section III.F. and elsewhere, the Proposal would preclude the use of many of the studies that EPA has relied on to set and revise the NAAQS for fine particulate

matter (PM_{2.5}). The regulatory impact assessment from the initial decision to set the PM_{2.5} NAAQS explained that “benefits from these standards will likely be concentrated in urban areas with high concentrations of minority and low-income populations.” Regulatory Impact Analyses for the Particulate Matter and National Ambient Air Quality Standards and Proposed Regional Haze Rule, at 11–31 (July 17, 1997). When EPA revised the PM_{2.5} NAAQS in 2013, the agency confirmed:

The EPA has identified potential disproportionately high and adverse effects on minority and/or low-income populations related to PM_{2.5} exposures. In addition, the EPA has identified persons from lower socioeconomic strata as an at-risk population for PM-related health effects.

National Ambient Air Quality Standards for Particulate Matter, 78 Fed. Reg. 3085, 3267 (Jan. 15, 2013). EPA also stated that “[t]he protection offered by these standards is especially important for children because childhood represents a lifestage associated with increased susceptibility to PM-related health effects.” *Id.* at 3266. EPA has not explained how its Proposal to preclude from consideration the foundational scientific studies for fine particulate matter protections that disproportionately benefit children, minority, and low-income populations will not affect those same children, minority, and low-income populations.

Similarly, as explained in section III.A., the Proposal would preclude the consideration of epidemiology studies published in the 1990’s that correlate childhood blood lead levels with impaired brain function and adverse behavioral effects, which important EPA lead-reduction regulations are based on. A 2001 lead regulation under the Toxic Substances Control Act has been essential in helping to reduce lead poisoning among children, *see* section III.A. Lead; Identification of Dangerous Levels of Lead, 66 Fed. Reg. 1206 (Jan. 5, 2001). That rule explains “Young children are especially vulnerable to the toxic effects of lead because their nervous systems are still developing and they absorb more of the lead to which they are exposed.” *Id.* at 1207. “Moreover, the standards selected by EPA are designed first and foremost to protect children from lead in residential paint, dust, and soil.” *Id.* at 1237. Additionally, EPA explained:

The Agency’s standards will protect children in minority and low-income communities from disproportionate burdens. This is based on the findings of the Agency’s economic analysis which shows that non-white populations receive more of the public health benefit associated with the standards.

Id. EPA has not explained how its Proposal to preclude from consideration the foundational scientific studies for lead protections that disproportionately benefit children, minority, and low-income populations will not affect those same children, minority, and low-income populations.

XV. The Proposal’s peer review provision lacks any statutory basis, is vague and contrary to existing requirements for peer review

In addition to addressing how and whether the agency will consider science, the Proposal also contains a seemingly unrelated provision regarding agency peer review. The Proposal, in § 30.7, reads:

What role does independent peer review in this section?

EPA shall conduct independent peer review on all pivotal regulatory science used to justify regulatory decisions, consistent with the requirements of the OMB Final Information Quality Bulletin for Peer Review (70 FR 2664) and the exemptions described therein.

Because transparency in regulatory science includes addressing issues associated with assumptions used in models, EPA shall ask peer reviewers to articulate the strengths and weaknesses of EPA's justification for the assumptions applied and the implications of those assumptions for the results.

83 Fed. Reg. at 18,774.

There is no statutory authority for EPA to “conduct independent peer review on all pivotal regulatory science used to justify regulatory decisions, consistent with the requirements of the OMB Final Information Quality Bulletin for Peer Review (70 FR 2664) and the exemptions described therein.” The federal statutes that EPA lists as putative authority for the Proposal provide no authority for proposed § 30.7. *See* 83 Fed. Reg. at 18,769/2 (citing Clean Air Act sections 103, 301(a), 42 U.S.C. 7403, 7601(a); Clean Water Act sections 104, 501, 33 U.S.C. 1254, 1361; Safe Drinking Water Act sections 1442, 1450(a)(1), 42 U.S.C. 300j–1, 300j–9(a)(1); Resource Conservation and Recovery Act sections 2002(a)(1), 7009, 42 U.S.C. 6912(a)(1), 6979; Comprehensive Environmental Response, Compensation, and Liability Act (as delegated to the Administrator via Executive Order 12580) sections 115, 311, 42 U.S.C. 9616, 9660; Emergency Planning and Community Right-To-Know Act section 328, 42 U.S.C. 11048; Federal Insecticide, Fungicide, and Rodenticide Act sections 25(a)(1), 136r(a), 7 U.S.C. 136r(a), 136w; and Toxic Substances Control Act, as amended, section 10, 15 U.S.C. 2609, and the Administrative Procedures Act). The claimed authorities that EPA lists do not mention peer review or even allude to the concept. *Id.* Neither the Proposal nor accompanying docket materials identify *any* provision of any federal statute that authorizes EPA to promulgate proposed § 30.7. Our own research revealed no provision of any federal statute that authorizes EPA to promulgate proposed § 30.7.

When Congress writes federal statutes, Congress knows how to create legal authority for peer review, who shall conduct that peer review, what role, if any, that EPA or other parties will play, and how that peer review may be conducted. None of the provision in the law authorize EPA's Proposal in § 30.7. Instead, the statutes *require* that EPA use peer-reviewed science, regardless of whether it would meet EPA's definition of the term in § 30.7. And in cases where the law requires *EPA* to conduct the review, the statutes often spell out specifically how that should happen.

Statute	Provisions on Peer Review
CAA	<p data-bbox="358 239 786 271"><u>§ 7511b. Federal ozone measures</u></p> <p data-bbox="358 310 1414 642">(g) Ozone design value study The Administrator shall conduct a study of whether the methodology in use by the Environmental Protection Agency as of November 15, 1990, for establishing a design value for ozone provides a reasonable indicator of the ozone air quality of ozone nonattainment areas. The Administrator shall obtain input from States, local subdivisions thereof, and others. The study shall be completed and a report submitted to Congress not later than 3 years after November 15, 1990. The results of the study shall be subject to <i>peer and public review</i> before submitting it to Congress.</p> <p data-bbox="358 681 834 713">42 U.S.C. § 7511b (emphasis added).</p> <p data-bbox="358 754 776 786"><u>§ 7412. (3) Risk assessment, management, and communication

(A) Use of science in decisionmaking

In carrying out this section, and, to the degree that an Agency action is based on science, the Administrator shall use--

- (i) the best available, *peer-reviewed science* and supporting studies conducted in accordance with sound and objective scientific practices; and
- (ii) data collected by accepted methods or best available methods (if the reliability of the method and the nature of the decision justifies use of the data).

(B) Public information

In carrying out this section, the Administrator shall ensure that the presentation of information on public health effects is comprehensive, informative, and understandable. The Administrator shall, in a document made available to the public in support of a regulation promulgated under this section, specify, to the extent practicable--

- (i) each population addressed by any estimate of public health effects;
- (ii) the expected risk or central estimate of risk for the specific populations;
- (iii) each appropriate upper-bound or lower-bound estimate of risk;
- (iv) each significant uncertainty identified in the process of the assessment of public health effects and studies that would assist in resolving the uncertainty; and
- (v) *peer-reviewed studies* known to the Administrator that support, are directly relevant to, or fail to support any estimate of public health effects and the methodology used to reconcile inconsistencies in the scientific data.

...

(12) Certain contaminants

(B) Sulfate

(i) Additional study

Prior to promulgating a national primary drinking water regulation for sulfate, the Administrator and the Director of the Centers for Disease Control and Prevention shall jointly conduct an additional study to establish a reliable dose-response relationship for the adverse human health effects that may result from exposure to sulfate in drinking water, including the health effects that may be experienced by groups within the general population (including infants and travelers) that are potentially at greater risk of adverse health effects as the result of such exposure. The study shall be conducted in consultation with interested States, shall be based on the best available, *peer-reviewed science* and supporting studies conducted in accordance with sound and objective scientific practices, and shall be completed not later than 30 months after August 6, 1996.

42 U.S.C. § 300g-1 (emphasis added).

	<p><u>§ 300j-2. Grants for State programs</u></p> <p>(d) New York City watershed protection program (1) In general The Administrator is authorized to provide financial assistance to the State of New York for demonstration projects implemented as part of the watershed program for the protection and enhancement of the quality of source waters of the New York City water supply system, including projects that demonstrate, assess, or provide for comprehensive monitoring and surveillance and projects necessary to comply with the criteria for avoiding filtration contained in 40 C.F.R. 141.71. Demonstration projects which shall be eligible for financial assistance shall be certified to the Administrator by the State of New York as satisfying the purposes of this subsection. In certifying projects to the Administrator, the State of New York shall give priority to monitoring projects that have undergone <i>peer review</i>.</p> <p>42 U.S.C. § 300j-2 (emphasis added).</p>
RCRA	<p><u>§ 6939a. Exposure information and health assessments</u></p> <p>(b) Health assessments (2) Whenever in the judgment of the Administrator, or the State (in the case of a State with an authorized program), a landfill or a surface impoundment poses a substantial potential risk to human health, due to the existence of releases of hazardous constituents, the magnitude of contamination with hazardous constituents which may be the result of a release, or the magnitude of the population exposed to such release or contamination, the Administrator or the State (with the concurrence of the Administrator) may request the Administrator of the Agency for Toxic Substances and Disease Registry to conduct a health assessment in connection with such facility and take other appropriate action with respect to such risks as authorized by section 9604(b) and (i) of this title. If funds are provided in connection with such request the Administrator of such Agency shall conduct such health assessment.</p> <p>...</p> <p>(e) Periodic reports The Administrator of such Agency shall issue periodic reports which include the results of all the assessments carried out under this section. Such assessments or other activities shall be reported after appropriate <i>peer review</i>.</p> <p>42 U.S.C. § 6939a (emphasis added).</p>
CERCLA	<p><u>§ 9604. Response authorities</u></p> <p>(i) Agency for Toxic Substances and Disease Registry; establishment, functions, etc.</p>

...

Any toxicological profile or revision thereof shall reflect the Administrator of ATSDR's assessment of all relevant toxicological testing which has been *peer reviewed*. The profiles required to be prepared under this paragraph for those hazardous substances listed under subparagraph (A) of paragraph (2) shall be completed, at a rate of no fewer than 25 per year, within 4 years after October 17, 1986. A profile required on a substance listed pursuant to subparagraph (B) of paragraph (2) shall be completed within 3 years after addition to the list. The profiles prepared under this paragraph shall be of those substances highest on the list of priorities under paragraph (2) for which profiles have not previously been prepared. Profiles required under this paragraph shall be revised and republished as necessary, but no less often than once every 3 years. Such profiles shall be provided to the States and made available to other interested parties.

...

(7)(A) Whenever in the judgment of the Administrator of ATSDR it is appropriate on the basis of the results of a health assessment, the Administrator of ATSDR shall conduct a pilot study of health effects for selected groups of exposed individuals in order to determine the desirability of conducting full scale epidemiological or other health studies of the entire exposed population.

(B) Whenever in the judgment of the Administrator of ATSDR it is appropriate on the basis of the results of such pilot study or other study or health assessment, the Administrator of ATSDR shall conduct such full scale epidemiological or other health studies as may be necessary to determine the health effects on the population exposed to hazardous substances from a release or threatened release. If a significant excess of disease in a population is identified, the letter of transmittal of such study shall include an assessment of other risk factors, other than a release, that may, in the judgment of the *peer review* group, be associated with such disease, if such risk factors were not taken into account in the design or conduct of the study.

...

(13) All studies and results of research conducted under this subsection (other than health assessments) shall be reported or adopted only after appropriate *peer review*. Such *peer review* shall be completed, to the maximum extent practicable, within a period of 60 days. In the case of research conducted under the National Toxicology Program, such *peer review* may be conducted by the Board of Scientific Counselors. In the case of other research, such *peer review* shall be conducted by panels consisting of no less than three nor more than seven members, who shall be disinterested scientific experts selected for such purpose by the Administrator of ATSDR or the Administrator of EPA, as appropriate, on the basis of their reputation for scientific objectivity and the lack of institutional ties

	<p>with any person involved in the conduct of the study or research under review. Support services for such panels shall be provided by the Agency for Toxic Substances and Disease Registry, or by the Environmental Protection Agency, as appropriate.</p> <p>42 U.S.C. § 9604 (emphasis added).</p>
EPCRA	No mentions of peer review
FIFRA	<p><u>§ 136w. Authority of Administrator</u></p> <p>(e) Peer review The Administrator shall, by written procedures, provide for <i>peer review</i> with respect to the design, protocols, and conduct of major scientific studies conducted under this subchapter by the Environmental Protection Agency or by any other Federal agency, any State or political subdivision thereof, or any institution or individual under grant, contract, or cooperative agreement from or with the Environmental Protection Agency. In such procedures, the Administrator shall also provide for <i>peer review</i>, using the advisory panel established under subsection (d) of this section or appropriate experts appointed by the Administrator from a current list of nominees maintained by such panel, with respect to the results of any such scientific studies relied upon by the Administrator with respect to actions the Administrator may take relating to the change in classification, suspension, or cancellation of a pesticide. Whenever the Administrator determines that circumstances do not permit the <i>peer review</i> of the results of any such scientific study prior to the Administrator's exercising authority under section 136d(c) of this title to immediately suspend the registration of any pesticide to prevent an imminent hazard, the Administrator shall promptly thereafter provide for the conduct of <i>peer review</i> as provided in this sentence. The evaluations and relevant documentation constituting the <i>peer review</i> that relate to the proposed scientific studies and the results of the completed scientific studies shall be included in the submission for comment forwarded by the Administrator to the advisory panel as provided in subsection (d). As used in this subsection, the term "<i>peer review</i>" shall mean an independent evaluation by scientific experts, either within or outside the Environmental Protection Agency, in the appropriate disciplines.</p> <p>7 U.S.C. § 136w (emphasis added).</p> <p><u>§ 136w-8. Pesticide registration service fees</u></p> <p>(a) Definition of costs In this section, the term "costs", when used with respect to review and decisionmaking pertaining to an application for which registration service fees are paid under this section, means--</p> <p>(1) costs to the extent that--</p>

	<p>(A) officers and employees provide direct support for the review and decisionmaking for covered pesticide applications, associated tolerances, and corresponding risk and benefits information and analyses;</p> <p>(B) persons and organizations under contract with the Administrator engage in the review of the applications, and corresponding risk and benefits information and assessments; and</p> <p>(C) advisory committees and other accredited persons or organizations, on the request of the Administrator, engage in the <i>peer review</i> of risk or benefits information associated with covered pesticide applications;</p> <p>(2) costs of management of information, and the acquisition, maintenance, and repair of computer and telecommunication resources (including software), used to support review of pesticide applications, associated tolerances, and corresponding risk and benefits information and analyses; and</p> <p>(3) costs of collecting registration service fees under subsections (b) and (c) and reporting, auditing, and accounting under this section.</p> <p>7 U.S.C. § 136w-8 (emphasis added).</p>
TSCA	<p><u>§ 2625. Administration</u></p> <p>(h) Scientific standards In carrying out sections 2603, 2604, and 2605 of this title, to the extent that the Administrator makes a decision based on science, the Administrator shall use scientific information, technical procedures, measures, methods, protocols, methodologies, or models, employed in a manner consistent with the best available science, and shall consider as applicable--</p> <p>(1) the extent to which the scientific information, technical procedures, measures, methods, protocols, methodologies, or models employed to generate the information are reasonable for and consistent with the intended use of the information;</p> <p>(2) the extent to which the information is relevant for the Administrator's use in making a decision about a chemical substance or mixture;</p> <p>(3) the degree of clarity and completeness with which the data, assumptions, methods, quality assurance, and analyses employed to generate the information are documented;</p> <p>(4) the extent to which the variability and uncertainty in the information, or in the procedures, measures, methods, protocols, methodologies, or models, are evaluated and characterized; and</p> <p>(5) the extent of independent verification or <i>peer review</i> of the information or of the procedures, measures, methods, protocols, methodologies, or models.</p> <p>15 U.S.C. § 2625 (emphasis added).</p>

§ 2617. Preemption

(b) New statutes, criminal penalties, or administrative actions creating prohibitions or other restrictions

(1) In general

Except as provided in subsections (c), (d), (e), (f), and (g), beginning on the date on which the Administrator defines the scope of a risk evaluation for a chemical substance under section 2605(b)(4)(D) of this title and ending on the date on which the deadline established pursuant to section 2605(b)(4)(G) of this title for completion of the risk evaluation expires, or on the date on which the Administrator publishes the risk evaluation under section 2605(b)(4)(C) of this title, whichever is earlier, no State or political subdivision of a State may establish a statute, criminal penalty, or administrative action prohibiting or otherwise restricting the manufacture, processing, distribution in commerce, or use of such chemical substance that is a high-priority substance designated under section 2605(b)(1)(B)(i) of this title.

...

(f) Waivers

(2) Required exemptions

Upon application of a State or political subdivision of a State, the Administrator shall exempt from subsection (b) a statute or administrative action of a State or political subdivision of a State that relates to the effects of exposure to a chemical substance under the conditions of use if the Administrator determines that--

(A)(i) compliance with the proposed requirement of the State or political subdivision of the State would not unduly burden interstate commerce in the manufacture, processing, distribution in commerce, or use of a chemical substance;

(ii) compliance with the proposed requirement of the State or political subdivision of the State would not cause a violation of any applicable Federal law, rule, or order; and

(iii) the State or political subdivision of the State has a concern about the chemical substance or use of the chemical substance based in *peer-reviewed science*; or

(B) no later than the date that is 18 months after the date on which the Administrator has initiated the prioritization process for a chemical substance under the rule promulgated pursuant to section 2605(b)(1)(A) of this title, or the date on which the Administrator publishes the scope of the risk evaluation for a chemical substance under section 2605(b)(4)(D) of this title, whichever is sooner, the State or political subdivision of the State has enacted a statute or proposed or finalized an administrative action intended to prohibit or otherwise restrict the manufacture, processing, distribution in commerce, or use of the chemical substance.

15 U.S.C. § 2617 (emphasis added).

	<p><u>§ 2605. Prioritization, risk evaluation, and regulation of chemical substances and mixtures</u></p> <p>(b) Risk evaluations (E) Metals and metal compounds In identifying priorities for risk evaluation and conducting risk evaluations of metals and metal compounds, the Administrator shall use the Framework for Metals Risk Assessment of the Office of the Science Advisor, Risk Assessment Forum, and dated March 2007, or a successor document that addresses metals risk assessment and is <i>peer reviewed</i> by the Science Advisory Board.</p> <p>15 U.S.C. § 2605 (emphasis added).</p>
--	--

Under longstanding federal case law, when Congress authorizes an approach in one section of a statute using specific language but does not do the same in other sections of a statute, courts presume that Congress acted purposefully and did not mean to address or authorize that approach in those other statutory sections. *See, e.g., Dean v. United States*, 556 U.S. 568 (2009) (“It is generally presumed that Congress acts intentionally when including particular language in one section of a statute but not in another.” (citing *Russello v. United States*, 464 U.S. 16, 23 (1983))). Not only are there no implied grants of authority to an agency in the other statutory sections, but the congressional decisions to authorize the approach elsewhere in the statute give even *greater* force to the conclusion that the agency has *not* been given authority where Congress did not use the same or similar authorizing language.

The EPA approach proposed in § 30.7 is even more unlawful than would be the case, independently, under this case law. Proposed § 30.7 says “EPA *shall* conduct independent peer review on all pivotal regulatory science used to justify regulatory decisions, *consistent with the requirements of* the OMB Final Information Quality Bulletin for Peer Review (70 FR 2664) and the exemptions described therein.” 83 Fed. Reg. at 18,774/2 (emphasis added). EPA proposes to bind itself (“shall”) to conduct a particular form of peer review on “*all* pivotal regulatory science” based on an *unenforceable, non-binding* OMB bulletin that has never been the subject of notice and comment rulemaking and that itself is not authorized by any federal law. To the contrary, treating the content of the unenforceable bulletin as a binding regulation would itself violate the federal statutes that EPA implements, because those statutes do not codify the bulletin, and EPA would be unlawfully codifying a mere policy preference. This EPA may not do.

This Proposal is unlawful, arbitrary and capricious, and an abuse of EPA discretion. To reiterate, the Proposal identifies *no* statutory authority for EPA to conduct independent peer review for any, much less all, “pivotal regulatory science” consistent with the dense content (and exceptions) of the OMB bulletin. The Proposal identifies *no* statutory authority for EPA to bind itself, and future administrations, to conduct peer review only in this fashion, unless and until future notice-and-comment rulemaking is undertaken. The Proposal identifies no suggestion in statutory language or legislative history that Congress intended EPA to conduct binding peer review consistent with this OMB bulletin, notwithstanding that Congress has known about this

bulletin since 2005. EPA has simply made up proposed § 30.7—with its the link to the OMB bulletin, and the putative authority for the Proposal—out of whole cloth. This EPA may not do.

The Proposal suffers additionally from unlawful vagueness. Proposed § 30.7 say that “EPA shall conduct independent peer review” without providing any coherent explanation or accompanying regulatory text about what that *means*: how will that peer review be conducted? By whom? Who will select the peer reviewers? How many will there be? Who will assure their independence and expertise? Will peer reviewers be subject to federal conflict of interest rules and policies? Will peer reviewers be anonymous? Where will the funds come from to conduct EPA peer reviews for “all pivotal regulatory science”? Has EPA estimated how many instances of “pivotal regulatory science” it anticipates conducting peer review for in one year? In prior years? Will the peer review be conducted openly and publicly? Will it be conducted in accordance with the Federal Advisory Committee Act? What will the duration of any peer review be? What purpose will that peer review serve? How will it affect future regulatory decisions? Or will it? Will there be an administrative docket? Will any product of the peer review be included in the administrative dockets for rulemaking? Will peer reviewer comments be part of the certified record for judicial review? Will the agency seek deference from future reviewing courts for the views expressed by peer reviewers? Does EPA not believe that peer review conducted by professional journals and societies is valid? Or sufficient? On what basis does EPA think professional peer review is invalid or insufficient, considering there is not one iota of evidence or support for that belief in the Proposal or the accompanying docket? What is the basic *justification* for proposed § 30.7? The Proposal provides no answers to these questions.

One obvious and serious objection to the proposed peer review mechanism is that it will be time-consuming, and it will necessarily slow EPA’s responsibilities to meet statutory deadlines and/or protect Americans by issuing timely health and environmental safeguards. The Proposal ignores this serious concern. Indeed, the Proposal contains no indication that EPA has given any thought to this serious concern, and how it will impact EPA’s statutory responsibilities and legal duty to meet congressional deadlines. EPA already misses an unacceptably high number of congressional deadlines in the statutes it administers, and the Proposal to apply peer review to “*all* pivotal regulatory science” will only exacerbate that endemic problem and the unlawfulness that it represents.

Finally, the final paragraph of § 30.7 appears to suggest that EPA should conduct peer review of the proposed agency action itself, rather than of the science underlying that action. 83 Fed. Reg. at 18,774 (stating that “EPA shall ask peer reviewers to articulate the strengths and weaknesses of *EPA*’s justification for the assumptions applied and the implications of those assumptions for the results.” (emphasis added)). It is entirely unclear how “peer review” could be applied to EPA’s reasoning itself, rather than the cited science, and the Proposal contains no further clarification.

EPA should abandon the unlawful Proposal altogether but, if EPA does finalize any rule based on the Proposal, EPA still should abandon the unlawful approach reflected in proposed § 30.7.

XVI. Conclusion

It is clear from the above that the Proposal violates the law and must be withdrawn. There is no support for the Proposal in any the statutes EPA cites, and in fact, those statutes conflict with the Proposal, as do other statutes that EPA failed to mention at all. Further, none of the other sources cited provide legal or logical support for the Proposal. The Proposal also suffers from a host of other problems: its definitions are vague; it is an unexplained reversal from prior agency policy; it handles confidential business information in a capricious manner; it treats other types of agency actions inconsistently; and it fails to analyze disproportionate impacts on communities of color, low-income communities, and children.

In the alternative, if EPA decides to move ahead with this reckless, unjustified, and unlawful effort to censor the science that EPA may consider, and must consider, to protect Americans' health and environment, the agency must first issue a supplemental proposal and actual administrative record to cover the multitude of issues, evidence, and specific regulatory text for which EPA fails to provide fair notice. The Proposal fails to provide fair notice or justifications addressing numerous issues that our comments detail—from an absence of any statutory authority, to failures to address statutory authorities that the Proposal squarely contravenes, to failures to provide reasoned explanations, including basic justifications for EPA's numerous departures from past practices. The Proposal fails to propose specific regulatory text addressing numerous implementation elements, as well as issues that are touched upon only in passing in the preamble (*e.g.*, non-linearity and LNT). Apart from all of the significant substantive and procedural defects from which the Proposal suffers, it still manages to be a shockingly shoddy effort missing actual regulatory text and supporting legal, factual, scientific, and technical information that would provide fair notice to the public.

COMMENTS OF ATTORNEYS GENERAL OF NEW YORK, NEW JERSEY, CALIFORNIA, CONNECTICUT, DELAWARE, ILLINOIS, IOWA, MAINE, MARYLAND, MASSACHUSETTS, MINNESOTA, NORTH CAROLINA, OREGON, PENNSYLVANIA, WASHINGTON, AND THE DISTRICT OF COLUMBIA, THE SECRETARY OF THE PENNSYLVANIA DEPARTMENT OF ENVIRONMENTAL PROTECTION, AND THE ATTORNEYS OF KING COUNTY, WASHINGTON AND THE CITIES OF CHICAGO, LOS ANGELES, NEW YORK, OAKLAND, PHILADELPHIA AND SAN FRANCISCO

Andrew Wheeler
Acting Administrator
U.S. Environmental Protection Agency
Washington, DC 20460

Re: Docket ID No. EPA-HQ-OA-2018-0259, Proposal to Limit Use of Scientific Evidence in Rulemaking, 83 Fed. Reg. 18,768 (April 30, 2018).

Dear Acting Administrator Wheeler:

The undersigned twenty-three State Attorneys General and County and City Attorneys respectfully submit the following comments on the U.S. Environmental Protection Agency's (EPA) April 30, 2018 proposal to limit the use of scientific evidence in rulemaking, 83 Fed. Reg. 18,768. The proposed rule would severely limit the scientific evidence that EPA can consider when adopting rules and standards to protect human health and the environment. It violates controlling federal law, is arbitrary and capricious, and contains clear errors in reasoning. The proposed rule was also issued without adequate review, most notably without *any* review from EPA's own science advisors. It will not "improve" the science relied upon by EPA, but will instead exclude much, if not most, of the science underpinning EPA action to protect the environment and our citizens from harm. Coupled with the former Administrator's directive prohibiting EPA grant recipients from serving on scientific advisory panels, the proposal reflects an effort to subvert well-founded agency practices for developing science-based regulations. This proposal is particularly troubling given EPA's critical mission and its significant responsibilities to the American people. EPA's change in leadership provides a unique opportunity to hit the reset button; we urge you to withdraw this harmful and deeply flawed proposal.

EXECUTIVE SUMMARY

While the proposal is worded vaguely, the intent is clear—in developing future regulations to protect human health and the environment, EPA would be precluded from considering relevant, probative scientific studies, models, or other information that have been

validated through peer review, on the sole basis that the underlying data are not publicly available.

It is equally clear that the proposed rule would violate the very federal laws EPA is required to uphold. To cite just a few examples, in performing its duties, EPA must rely on “the best available, peer-reviewed science and supporting studies conducted in accordance with sound and objective scientific practices,” 42 U.S.C. § 300g-1(b)(3)(A)(i) (Safe Drinking Water Act); on the “best available science,” 15 U.S.C. § 2625(h) (Toxic Substances Control Act); on “the latest scientific knowledge,” 33 U.S.C. § 1314(a)(1) (Clean Water Act) and 42 U.S.C. § 7408(a)(2) (Clean Air Act); and on “generally accepted scientific principles or laboratory tests, or appropriately designed and conducted epidemiological or other population studies,” 42 U.S.C. § 11023(d)(2) (Emergency Planning and Community Right-to-Know Act). Indeed, no federal environmental law so much as suggests that, in setting standards, EPA can ignore the “latest” or “best” or “appropriately designed and conducted” scientific studies whenever any portion of the underlying data is not public—which is often the case for important privacy reasons. The scientific community has made clear that such a limitation is *not* in accordance with best practices. This anti-science approach has stalled in Congress and been rejected by the courts; it has no place at EPA. Indeed, in rejecting an industry effort to impose the same strictures imposed here, the D.C. Circuit was persuaded by EPA’s position that “requiring agencies to obtain and publicize the data underlying all studies on which they rely ‘would be impractical and unnecessary,’” and agreed with EPA that such a requirement would mean “‘much plainly relevant scientific information would become unavailable to EPA for use in setting standards to protect public health and the environment.’” *Am. Trucking Ass’ns, Inc. v. EPA*, 283 F.3d 355, 372 (D.C. Cir. 2002).

EPA’s proposal would also violate the Administrative Procedure Act (APA), 5 U.S.C. § 501 *et seq.*, both because it is arbitrary and capricious, and because it flouts that Act’s important procedural requirements. EPA claims that the entire basis for the proposed rule is to ensure that the “pivotal regulatory science” underlying EPA regulations is transparent. But EPA ignores existing laws and policies that already do exactly that and which also take into account the need to protect medical data and other confidential information. This proposed rule would promote transparency in name only; in truth, it would mean that EPA’s important decisions would no longer be informed by the latest, best available, and generally accepted science. Disturbingly, the proposed rule’s only failsafe is the EPA Administrator’s sole discretion to determine on a case-by-case basis that compliance is “impracticable” when making data publicly available is “not feasible.” But the proposal provides no standards to govern the Administrator’s exercise of discretion in determining “impracticability or “feasibility”—a recipe for the very arbitrariness that the APA prohibits.

With respect to EPA’s process, this proposal has been rushed, is vague, and creates more questions than it answers. it does not clearly state the actual parameters of the proposed rule, it is open-ended in terms of alternatives under consideration, and it fails to provide critical information such as projected costs. It is also completely unclear—or worse, contradictory—whether and how this proposed rule would apply to EPA’s cost-benefit analyses. Still more troubling, EPA has failed to consult its own Science Advisory Board (SAB) about this proposed rule despite the SAB’s assessment that “this rule deals with a myriad of scientific issues for

which the Agency should seek expert advice.”¹ Proposing a rule that limits the use of scientific data without even notifying, let alone consulting, the Agency’s own expert scientific advisors is a text book example of an arbitrary and capricious failure to consider “relevant factors.” *Motor Vehicle Mfrs. Ass’n v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 42-43 (1983).

In light of these substantive and procedural infirmities, it is unsurprising that the proposed rule also makes little sense as a matter of science. Although EPA now claims that science is “better” only when both the underlying information is publicly available and the results reproducible, that position is contrary to the scientific consensus, and EPA provides no support for its assertion. The downsides of this proposal are significant: critical studies already designed and published on virtually all aspects of public health and environmental protection have relied on information for which complete disclosure is impossible for various reasons, including legally mandated confidentiality protections. This is particularly true of seminal and long-standing epidemiological studies that EPA has relied upon in setting air and other health-based standards. Therefore, the proposal would force EPA to ignore important peer-reviewed studies of health effects in future regulatory efforts. As our nation’s leading scientists at the National Academies of Sciences, Engineering, and Medicine (NAS) warned in a July 16, 2018 letter to EPA, the proposal’s overly stringent transparency requirements “pose a threat to the credibility of regulatory science.”²

Although EPA stated in its proposal that this rule would not affect any states, and therefore has no federalism implications, nothing could be further from the truth. The adoption of this proposed rule would very likely affect the protectiveness of the standards that EPA sets, which would significantly impact federal and state efforts to protect the quality of our air, water, and land, and the health and welfare of the American people. Some states’ environmental laws and regulations explicitly adopt EPA standards in all or some instances, or at the very least require an express justification for any deviation. So it is clear that a fundamental change in how EPA develops standards would most certainly affect state standards, and therefore would affect the health of our residents and our natural resources.

¹ Memorandum from Alison Cullen, Chair, SAB Work Group on EPA Planned Actions for SAB Consideration of the Underlying Science to Members of the Chartered SAB and SAB Liaisons, *Preparations for Chartered Science Advisory Board (SAB) Discussions of Proposed Rule: Strengthening Transparency in Regulatory Science RIN (2080-AA14) 2* (May 12, 2018) [hereinafter SAB Work Group Memo], available at [https://yosemite.epa.gov/sab/sabproduct.nsf/E21FFAE956B548258525828C00808BB7/\\$File/WkGrp_memo_2080-AA14_final_05132018.pdf](https://yosemite.epa.gov/sab/sabproduct.nsf/E21FFAE956B548258525828C00808BB7/$File/WkGrp_memo_2080-AA14_final_05132018.pdf).

² Letter from Marcia McNutt, President, Nat’l Acad. of Sciences, C.D. Mote, Jr., President, Nat’l Acad. of Eng. & Victor J. Dzau, President, Nat’l Acad. of Med., to Andrew Wheeler, Acting Administrator, U.S. Env’tl. Prot. Agency (July 16, 2018) [hereinafter NAS Letter], available at <http://www.nationalacademies.org/includes/EPA%20Proposed%20Rule%20Docket%20EPA-HQ-OA-2018-0259%20NASEM%20Comment.pdf>.

For all these reasons, as discussed in detail below, we oppose this misguided proposal to limit the science on which EPA relies. EPA should withdraw this flawed proposal and return to its core mission of protecting human health and the environment.

LEGAL COMMENTS

I. EPA Lacks Statutory Authority to Promulgate the Proposed Rule, Which Conflicts with Statutory Requirements Regarding EPA’s Consideration of Scientific Information

Agencies may not adopt or implement regulations that conflict with the statutes under which they are promulgated, and an agency’s interpretation of those statutes must always at least be reasonable. *See Chevron, U.S.A., Inc. v. Natural Res. Defense Council, Inc.*, 467 U.S. 837, 842-44 (1984). Accordingly, an agency’s regulations cannot be “arbitrary, capricious, or manifestly contrary to the statute,” *id.*, or “in excess of statutory jurisdiction, authority, or limitations, or short of statutory right,” 5 U.S.C. § 706. Further, agencies may not rely on general statutory grants of rulemaking authority to promulgate regulations that are otherwise inconsistent with more specific statutory directives. *Global Van Lines, Inc. v. Interstate Commerce Comm’n*, 714 F.2d 1290, 1293-97 (5th Cir. 1983).

In this case, the proposed rule is at odds with provisions of multiple statutes EPA is charged with implementing. For example:

- The Clean Air Act (CAA) requires that air quality criteria “accurately reflect *the latest scientific knowledge* useful in indicating the kind and extent of *all identifiable effects on public health or welfare*.” § 108(a)(2), 42 U.S.C. § 7408(a)(2) (emphases added).
- The Safe Drinking Water Act (SDWA) requires that findings which support a determination to regulate a contaminant “be based on *the best available public health information*,” and that, in developing the National Primary Drinking Water Regulations, “to the degree that an Agency action is based on science, the Administrator shall use *the best available, peer-reviewed science and supporting studies conducted in accordance with sound and objective scientific practices*.” §§ 1412(b)(1)(B)(ii)(II), 1412(b)(3)(A)(i), 42 U.S.C. §§ 300g-1(b)(1)(B)(ii)(II), 300g-1(b)(3)(A)(i) (emphases added).
- The Clean Water Act (CWA) requires that water quality criteria “accurately reflect[] *the latest scientific knowledge*.” § 304(a)(1), 33 U.S.C. § 1314(a)(1) (emphasis added).
- The Toxic Substances Control Act (TSCA) requires the Administrator, in decisions based on science, to “use scientific information, technical procedures, measures, methods, protocols, methodologies, or models, employed *in a manner consistent with the best available science*,” and, in carrying out certain sections of the Act, to “take into consideration information relating to a chemical substance or mixture . . . that is

reasonably available to [him or her].” § 26(h), (k), 15 U.S.C. § 2625(h), (k) (emphases added).

- The Emergency Planning and Community Right-to-Know Act (EPCRA) requires that a determination to add a chemical to the Toxics Release Inventory “be based on *generally accepted scientific principles or laboratory tests, or appropriately designed and conducted epidemiological or other population studies, available to the Administrator.*” § 313(d)(2), 42 U.S.C. § 11023(d)(2) (emphasis added).

Even statutory provisions that EPA chose to cite as authority for the proposed action prohibit the Agency from promulgating the proposed rule. For example, CWA § 104(l) explicitly requires that “[t]he Administrator shall . . . develop and issue . . . *the latest scientific knowledge available* in indicating the kind and extent of effects on health and welfare which may be expected from the presence of pesticides in water.” 33 U.S.C. § 1254(l) (emphasis added). It strains credulity to believe that a directive to issue the “latest scientific knowledge available” somehow imposes a requirement that the Administrator only issue knowledge based on publicly available data, and EPA has not supplied any substantive argument that it does. Similarly, although Section 25 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) directs that regulations “take into account . . . *the appropriate data* for evaluating [] risk,” 7 U.S.C. § 136w (emphasis added), it would be arbitrary and capricious to define “appropriate” to exclude from consideration relevant and valid scientific studies, as EPA proposes to do in this rulemaking. Requirements to review the “latest” and “appropriate” scientific data are not *carte blanche* to impose new, unscientific limits on that data.

Because the proposed rule would run afoul of these provisions and potentially others,³ EPA’s citation to general rulemaking authorities such as CAA § 301(a), 42 U.S.C. § 7601(a), and CWA § 501, 33 U.S.C. § 1361, is unavailing. Such general provisions of rulemaking authority cannot override more specific statutory directives. *Global Van Lines*, 714 F.2d at 1293-97. Nor can EPA’s reliance on 5 U.S.C. § 301 in the notice extending the comment period save its *ultra vires* proposal. 83 Fed. Reg. at 24,256. Known as the “housekeeping statute,” 5 U.S.C. § 301 is “simply a grant of authority to the agency to regulate its own affairs,” not a general, independent basis for deviating from a specific statutory directive or limiting the scope of other statutes. *See Chrysler Corp. v. Brown*, 441 U.S. 281, 308-12 (1979).

Thus, as a general matter, EPA’s obligation is clear: it must base its decisions on such criteria as the latest scientific knowledge, the best available, peer-reviewed science, and/or generally accepted scientific principles or laboratory tests. No statute suggests that EPA, in setting standards, can reject scientific evidence that meets those criteria solely because the underlying data are not public or because the evidence is based on models that otherwise follow long-accepted scientific guidelines. In short, EPA lacks sufficient legal authority to either adopt or implement the proposed rule, and its proposed action conflicts with the statutes it must follow.

³ For example, CAA § 184(d), 42 U.S.C. § 7511c(d), “require[s] that the best available air quality monitoring and modeling techniques be used” in setting the criteria for determining ozone contributions in nonattainment areas.

II. The Proposal Does Not Meet Baseline Rulemaking Requirements and Should Be Withdrawn

a. EPA Failed to Obtain Input from Scientists in Developing a Proposal with Sweeping Impacts on Agency Use of Science

Common sense, good government, and the APA's fundamental requirement for informed decision-making all dictate that an agency developing a proposed rule should consult with persons having expertise regarding the subject matter of the proposal. EPA's Scientific Integrity Policy makes clear that these principles apply with great force here: "it is essential that the EPA's policymakers involve science experts on scientific issues and that the scientific information and processes relied upon in policymaking manifest scientific integrity, quality, rigor, and objectivity."⁴ Indeed, Congress mandated in the Environmental Research, Development and Demonstration Authorization Act of 1978 that when EPA provides a proposed rule such as the one at issue here to another federal agency for formal review and comment, it must also provide that same proposal to the SAB: "the Administrator . . . shall make available to the [SAB] such proposed criteria document, standard, limitation, or regulation, together with relevant scientific and technical information in the possession of the Environmental Protection Agency on which the proposed action is based." 42 U.S.C. § 4365(c)(1). Yet, as revealed in a June 28, 2018 letter from the SAB Chair to former Administrator Pruitt, EPA violated this fundamental requirement: although EPA provided the proposed rule to the Office of Management and Budget (OMB) for review on April 18, 2018, the SAB never had the opportunity to review it and instead learned of the proposal only from subsequent news reports and the April 30, 2018 *Federal Register* notice.⁵

Nor did EPA obtain input from the NAS or any other external science organizations or experts in developing the proposal. As the SAB work group noted: "Although the proposed rule cites several valuable publications that support enhanced transparency, the precise design of the rule appears to have been developed without a public process for soliciting input from the scientific community." SAB Work Group Memo at 3.

EPA offers no explanation for its inexplicable failure to consult with science experts, including the SAB, on this proposal, and it is beyond question that this highly consequential proposal demanded such consultation. Not only is this statutorily required, *see* 42 U.S.C. § 4365(c)(1), but as the SAB Work Group Memo states, "[t]he proposed rule deals with issues of scientific practice and proposes constraints that the [A]gency may apply to the use of scientific studies in particular contexts. As such, this rule deals with a myriad of scientific issues for

⁴ U.S. Env'tl. Prot. Agency, *Scientific Integrity Policy 3*, available at https://www.epa.gov/sites/production/files/2014-02/documents/scientific_integrity_policy_2012.pdf.

⁵ Letter from Michael Honeycutt, Chair, Science Advisory Bd., to E. Scott Pruitt, Administrator, U.S. Env'tl. Prot. Agency 2 (June 28, 2018) [hereinafter SAB June 28 Letter], available at [https://yosemite.epa.gov/sab/sabproduct.nsf/LookupWebReportsLastMonthBOARD/4ECB44CA28936083852582BB004ADE54/\\$File/EPA-SAB-18-003+Unsigned.pdf](https://yosemite.epa.gov/sab/sabproduct.nsf/LookupWebReportsLastMonthBOARD/4ECB44CA28936083852582BB004ADE54/$File/EPA-SAB-18-003+Unsigned.pdf).

which the Agency should seek expert advice from the [SAB].” SAB Work Group Memo at 2. Underscoring the importance of the issue, the full 44-member SAB followed up on the Work Group’s Memo with a unanimous vote to review the proposal and urged EPA to proceed no further until EPA does what it should have done in the first place: “request, receive and review scientific advice from the SAB.” SAB June 28 Letter at 1.

Put simply, EPA’s effort to rush this proposed rule out the door without any input from the SAB or other scientists violates basic principles of good government and policy-making as well as EPA’s legal duty. We urge EPA to withdraw this ill-conceived proposal and to consult with the SAB, the National Academy of Sciences, and the broader scientific community before determining if any rule is needed.

b. The Proposal is Too Vague, Conclusory, and Conditional to Allow for Meaningful Public Participation

EPA’s failure to solicit input from the SAB and other scientific groups is exacerbated by its failure to meet the fundamental legal requirements for a valid rulemaking proposal under the APA. The APA requires that “general notice of proposed rulemaking shall be published in the Federal Register,” including the “terms or substance of the proposed rule.” 5 U.S.C. § 553(b). The straightforward purpose of this requirement is to give the affected public an opportunity to provide meaningfully informed comment on an agency’s proposal. *See Home Box Office, Inc. v. Fed. Comm’n Comm’n*, 567 F.2d 9, 35-36 (D.C. Cir. 1977). But here, EPA’s notice of proposed rulemaking is vague as to the actual parameters of the proposed rule, is open-ended in terms of the alternatives under consideration, and fails to provide key information such as projected costs. Courts will not hesitate to strike down final rules based on proposals so lacking in specificity. *See, e.g., Horsehead Res. Dev. Co. v. Browner*, 16 F.3d 1246, 1268 (D.C. Cir. 1994) (noting that “general notice that a new standard will be adopted affords the parties scant opportunity for comment”).

Far from meeting the requirement to “disclose in detail the thinking that has animated the form of a proposed rule and the data upon which that rule is based,” *Home Box Office*, 567 F.2d at 35–36, the proposal at issue here creates far more questions than it answers. Most fundamentally, the proposal fails to provide a rationale for EPA to act contrary to accepted scientific practice, i.e., to preclude consideration of probative scientific information that has been subject to rigorous peer review for the sole reason that underlying data are confidential and therefore not publicly available. The proposal states that “EPA believes the benefits of this proposed rule justify the costs,” 83 Fed. Reg. at 18,772, but fails to provide any specific information, quantification, or analysis as to what EPA believes are the proposed rule’s purported benefits or expected costs, including the significant costs from the loss of probative information that the proposed rule would work to exclude. For example, Section 30.7 of the proposed rule could be read to require EPA to undertake very costly independent review of “pivotal” science on which it relies, but Section 30.8, entitled “How is EPA to account for cost under this subpart?” states only that EPA will “minimize costs.” *Id.* at 18,774. The absence of data and analysis in support of EPA’s cost-benefit conclusion deprives the public of a meaningful opportunity to evaluate the proposal and thus violates EPA’s duty under the APA.

Further, the proposal says the rule is intended to apply prospectively, but also states that EPA “should be guided by this policy to the maximum extent practicable during ongoing regulatory action.” *Id.* at 18,771. Yet it never explains how or why ongoing EPA actions would be subject to the proposed rule and which existing scientific studies are implicated by the proposed rule. It also fails to acknowledge the costs from delays in rulemaking proceedings while EPA performs the additional review called for above and beyond the extensive scientific peer review to which scientific studies have already been subjected. Other open-ended aspects of the proposal similarly fail to provide commenters with a sufficient guide as to what any final rule would look like or how it would operate if adopted. For example:

- The proposal defines “pivotal regulatory science” as “the specific scientific studies or analyses that drive the requirements and/or quantitative analysis of EPA final significant regulatory decisions.” *Id.* at 18,773. However, the proposal does not specify to what extent studies must support regulatory decisions to be considered a “driver,” who will determine what qualifies as pivotal regulatory science, or at what stage of the rulemaking process such determinations will be made. The proposal is also unduly vague in its use of undefined terms that are subject to interpretation, such as the use of the term “uncertainty” in Section 30.6 of the proposed rule. *Id.* at 18,774.
- The proposal says EPA “should collaborate” with other agencies to identify strategies to protect private information (such as patient health records) when it is making information publicly available. *Id.* at 18,771. However, there is no timeframe for this process, no explanation of what will happen until such strategies are formed, and no indication of what these strategies will be.
- EPA asks “whether alternative or additional regulatory or other policy vehicles are appropriate to establish and implement these policies, and whether further regulatory or other policy vehicles on the programmatic or statutory level would be appropriate as alternative or additional steps.” *Id.* It is EPA’s job to identify and describe these alternatives, and to explain why it has put forward its particular proposal: it may not, at this late stage, ask amorphous questions on policy design.
- EPA seeks comment on criteria it should use to establish exemptions, whether case-by-case exemptions may be appropriate, whether the proposed rule should apply to a broader or narrower set of regulatory proceedings, and whether certain categories of regulatory actions should be exempt. *Id.* at 18,772. As written, the proposed rule would allow the Administrator to grant exemptions based solely on his or her own determination of what is “feasible” without offering any definition or bounds on that term. *Id.*
- EPA asserts that the proposed rule is generally consistent with a number of policies or reports by scientific groups or scientific journals, but it does not specify in what respects those documents support its proposal, nor does it identify any groups or reports that advocate precluding consideration of non-public data in regulatory decision-making. In fact, contrary to EPA’s assertion, the Bipartisan Policy Center, a

group with which EPA claims consistency, clarified that the proposed rule “is not consistent” with the Center’s position “in substance or intent.”⁶ EPA’s false assertion of consistency with the policies and positions of leading science groups thus misleads the public and inhibits their informed participation.

- EPA seeks comment as to “whether the disclosure requirements . . . should be *expanded* to cover other types of data and information, such as, for example, economic and environmental impact *data and models that are designed to predict the costs, benefits*, market impacts and/or environmental impacts of specific regulatory interventions.” 83 Fed. Reg. at 18,772 (emphasis added). However, EPA also states that the “pivotal regulatory science” to which the proposed rule would already apply includes “studies, models, and analyses that drive the magnitude of the benefit-cost calculation.” *Id.* at 18,770. It is thus unclear whether and how EPA intends the proposed rule to apply to the cost-benefit determinations that it performs.
- The proposal provides no analysis of its environmental impacts and fails to explain how EPA has addressed the requirements of the National Environmental Policy Act, 42 U.S.C. § 4321 *et seq.*
- The proposal fails to meet EPA’s obligations under Executive Order 12898, which requires the Agency to address the proposal’s “disproportionately high and adverse human health or environmental effects” on “minority and low-income populations.” 59 Fed. Reg. 7629 (Feb. 16, 1994). Section IV.K of the proposal incorrectly asserts that Executive Order 12898 does not apply since the proposal “does not establish an environmental health or safety standard,” 83 Fed. Reg. at 18,773. But the Executive Order by its own terms applies to the “effects of” all federal agency “programs, policies, and activities,” 59 Fed. Reg. at 7629, and thus plainly applies here. While the proposal would jeopardize the health of all Americans, it would have increased impacts upon the nation’s most sensitive populations—such as children, those with chronic illnesses, and environmental justice communities.
- The proposal likewise fails to meet EPA’s obligations under Executive Order 13045, which requires the Agency to identify and assess environmental health risks that may disproportionately affect children. 62 Fed. Reg. 19,885 (Apr. 23, 1997). That Executive Order also requires each federal agency to “ensure that its policies, programs, activities, and standards address disproportionate risks to children that result from environmental health risks,” *id.* at 19,885, and thus applies here.
- EPA states in conclusory fashion that the proposed rule “does not have federalism implications” and “will not have substantial direct effects on the states.” 83 Fed. Reg. at 18,772-73. However, the proposal fails to explain whether or how the proposed rule would apply to EPA’s review and approval of state standards, and, accordingly,

⁶ Letter from Jason Grumet, President, Bipartisan Policy Center, to E. Scott Pruitt, Administrator, U.S. Env’tl. Prot. Agency (May 22, 2018), *available at* https://www.eenews.net/assets/2018/05/31/document_gw_01.pdf.

deprives commenters of a full and fair opportunity to assess and comment on the proposal's federalism implications.

In sum, EPA's skeletal outline falls far short of the APA's notice requirements and fails entirely to "examine the relevant data and articulate a satisfactory explanation for its action including a rational connection between the facts found and the choice made." *Natural Res. Defense Council, Inc. v. U.S. Env'tl. Prot. Agency*, 859 F.2d 156, 209 (D.C. Cir. 1988). EPA should withdraw the proposal on these grounds alone.

c. EPA Failed to Identify Legal Authority for the Proposed Rule

The APA further requires that a notice of proposed rulemaking contain "reference to the legal authority under which the rule is proposed." 5 U.S.C. § 553(b)(2). "[T]he required specification of legal authority must be done *with particularity*," and "must be sufficiently precise to apprise interested persons of the agency's legal authority to issue the proposed rule." *Global Van Lines*, 714 F.2d at 1298 (quoting H.R. Rep. No. 1980, at 24 (1946) and U.S. Dept. of Justice, *Attorney General's Manual on the Administrative Procedure Act* 29 (1947)). EPA has also failed to meet this requirement.

In both the April 30, 2018 notice of proposed rulemaking and the May 25, 2018 notice extending the comment period, EPA discusses statutory authority for the proposed rule, citing to a number of provisions, largely from statutes it implements. 83 Fed. Reg. at 18,769; 83 Fed. Reg. 24,255, 24,256 (May 25, 2018). In particular, EPA invokes the CAA, CWA, SDWA, EPCRA, FIFRA, TSCA, Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), and Resource Conservation and Recovery Act (RCRA). 83 Fed. Reg. at 18,769.

But rather than identify legal authority with particularity, the cited statutory provisions mainly set forth EPA's broader authorities to conduct research and promulgate regulations. Few of the cited provisions actually address EPA's ability to pick and choose amongst valid scientific information, studies, and techniques in its formation of environmental standards and modeling, and none authorize the wholesale preclusion of probative, relevant studies, as EPA proposes here. Tellingly, in the proposal itself, EPA requests assistance to determine "whether additional or alternative sources of authority are appropriate bases for the proposed regulation." *Id.* at 18,771. EPA's inability to identify specific statutory authority for its proposed action falls far short of the APA's standard for notice and comment rulemaking, as would any ultimate reliance on statutory authority EPA has failed to cite. *See Global Van Lines*, 714 F.2d at 1297-99.

III. The Proposed Rule Arbitrarily and Capriciously Requires EPA to Exclude Relevant Studies and Models, and is not Saved by Exemption Provisions

The proposed rule opens the door for arbitrariness, bias, and selectivity in its application, in contravention of the factors that Congress has required EPA to consider in setting standards, such as the best available science or latest scientific knowledge.

The proposed rule disregards the APA's bedrock requirement that an agency's decision-making be based on a consideration of the relevant factors and data. *See Motor Vehicle*

Mfrs., 463 U.S. at 42-43 (articulating standard and citing numerous cases). An agency's action is arbitrary and capricious not only if the agency "entirely fail[s] to consider an important aspect of the problem," but also if it "relie[s] on factors which Congress has not intended it to consider." *Id.* at 43. The proposed rule would call for EPA to do both. First, in excluding studies and models from its consideration based only on whether the underlying data are publicly available or have been subject to additional independent review by EPA, EPA would be excluding studies and models that Congress has instructed it to consider by requiring it to use, for example, the "best available science" or "latest scientific knowledge." Second, because none of the statutes EPA administers specify that, in setting standards, it shall consider whether the studies and models it uses have publicly available data or have been independently reviewed by EPA, EPA would be using factors that Congress did not intend it to rely on in deciding to exclude studies and models based on the proposed rule. *See Am. Trucking*, 283 F.3d at 372 (finding that the CAA does not require EPA to "obtain and publicize the data underlying the studies on which the Agency relies"). EPA's failure to consider otherwise relevant studies and models that do not meet the proposed rule's requirements would therefore be arbitrary and capricious. *See Motor Vehicle Mfrs.*, 463 U.S. at 42-43.

In apparent recognition of the overly limiting nature of the proposed rule's requirements, the proposal also includes a provision that would allow the Administrator to grant case-by-case exemptions based on his or her subjective determination that compliance is "impracticable" because making data publicly available or conducting independent peer review is "not feasible." 83 Fed. Reg. at 18,774. However, allowing the Administrator to make ad-hoc exemptions for specific studies or models does not cure the proposed rule's fatal defect of requiring EPA to consider factors other than those specified by Congress. *See Alltel Corp. v. Fed. Comm'n Comm'n*, 838 F.2d 551, 561 (D.C. Cir. 1988) (holding that an agency "cannot save an irrational rule by tacking on a waiver procedure" because the "essence of waiver is the assumed validity of the general rule"). Rather, because the proposed rule contains no standards requiring the exemptions to be based on the relevance, importance, or scientific validity of the study or model at issue, the Administrator's ability to arbitrarily include certain studies at his or her discretion simply compounds the extent to which the proposed rule would allow EPA to deviate from the requirements of the statutes it is charged with implementing.

In addition, because the proposed rule offers no definition or standards to guide the Administrator's determination of what is "practicable" or "feasible," the exemption provision gives the Administrator broad discretion in making such determinations.⁷ Without any

⁷ The exception to the proposed rule's requirement of additional independent peer review, unlike the exception to the transparency requirement, does instruct the Administrator to look at Section IX of the OMB Final Information Quality Bulletin for Peer Review, 70 Fed. Reg. 2664 (Jan. 14, 2005), when making those determinations. *See* 83 Fed. Reg. at 18,774. However, this direction makes little sense because Section IX of the Bulletin primarily discusses situations in which peer review is not *needed* rather than not feasible. *See* 70 Fed. Reg. at 2667 (providing exceptions for individual adjudications, agency regulatory impact analyses, routine information, and accounting and other financial information). The use of Section IX as a guidepost is not only inappropriate but is also unhelpful because almost all of the situations described therein are outside the category of "pivotal regulatory science" that the proposed rule addresses. Notably, although

standardized and objective criteria, the exemption process could, for example, allow biased determinations by the Administrator that provide an exception for confidential business information in studies submitted by chemical and pesticide manufacturers, while excluding academic toxicology or epidemiology studies. The NAS also highlighted this concern, noting that “[d]ecisions about exemptions should be based on formal agency guidance and not according to criteria established by a single EPA employee.” NAS Letter at 3. Given how severely the proposed rule would limit the scientific evidence available for EPA’s use, the proposed exemption provisions could become the basis upon which *most* of the science relied on by EPA in its rulemaking is admitted. The exceptions could thus largely swallow the rule, resulting in greater arbitrariness in EPA regulatory actions rather than greater transparency.

IV. Existing Statutes, Policies, and Procedures Already Provide for Transparency and Ensure Scientific Reliability, Rendering the Proposed Rule Unnecessary

a. Existing Laws and Policies Promote Transparency

EPA’s proposal is unnecessary because existing laws and policies already fulfill its stated purpose. EPA claims that the rule will ensure that the “pivotal regulatory science” underlying “significant” EPA regulations is fully transparent, and will ensure that underlying data and models are publicly available in a manner sufficient for independent validation. 83 Fed. Reg. at 18,770. Notwithstanding its stated purpose, the proposed rule would not add anything useful to the existing body of policies and laws already in place, which include mechanisms to provide for maximum transparency while taking into account the need to protect the privacy of medical data, confidential business information, and the like. These existing laws and policies include the following:

- A directive issued on February 22, 2013, by the White House Office of Science and Technology Policy directing federal agencies with more than \$100 million in annual research and development expenditures (which includes EPA) to develop plans for increasing public access to the results of the research they support, specifically scholarly publications and digital data.⁸
- OMB Memorandum 13-13,⁹ which mandates, among other things, broader public access to federal and federally funded data and information, and provides that

there is an exemption for time-sensitive disseminations when the findings of a study have already been adequately peer-reviewed, there is no general exception for situations in which independent EPA review would be duplicative of external peer review that has already been performed.

⁸ Memorandum from John P. Holden, Director, Executive Office of the President, Office of Science and Technology Policy, to Heads of Executive Departments and Agencies, *Increasing Access to the Results of Federally Funded Scientific Research* (Feb. 22, 2013), available at https://obamawhitehouse.archives.gov/sites/default/files/microsites/ostp/ostp_public_access_memo_2013.pdf.

⁹ Memorandum from Sylvia M. Burwell, Dir., Steve VanRoekel, Fed. Chief Info. Officer, Todd Park, U.S. Chief Tech. Officer & Dominic J. Mancini, Acting Administrator of the Office of Info.

information collection should be done in a way to support information dissemination. This includes building redaction, slicing, and exporting into how data are collected to reduce the cost of public access later on. The memorandum also requires agencies to create data catalogs to include datasets “that can be made publicly available but have not yet been released.” *Id.*

- The Data Quality Act, also known as the Information Quality Act, which is designed to improve the quality, objectivity, utility, and integrity of data released by the federal government. 44 U.S.C. § 3501. Pursuant to this act, EPA issued *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by the Environmental Protection Agency*.¹⁰ These Guidelines, which apply to rulemaking, among other things, provide that “EPA intends to ensure reproducibility according to commonly accepted scientific, financial, or statistical standards. . . . [I]f access to data and methods cannot occur due to compelling interests such as privacy, trade secrets, intellectual property, and other confidentiality protections, EPA should, to the extent practicable, apply especially rigorous robustness checks to analytic results and carefully document all checks that were undertaken.” *Id.* at 21.
- The Data Access Act (attached as a rider to the Omnibus Appropriations Act of fiscal year 1999, P.L. 105-277), which requires federal agencies, including EPA, to ensure that all research data produced under a federal award be made available to the public under the Freedom of Information Act. The law promotes public access while protecting privacy by excluding medical and business-related confidential data from disclosure. *See* 2 C.F.R. § 200.315 (which superseded OMB Circular A-110).
- EPA’s November 2016 public access plan,¹¹ which covers publications and digital data and requires those seeking EPA research and development funding to develop data management plans that describe the data to be collected in their studies and approaches for preserving and providing access to that data. For publications, the plan requires researchers to make peer-reviewed journal articles resulting from federally funded research publicly accessible in designated repositories no later than a year after the official date of publication.

& Regulatory Affairs, Exec. Office of the President, Office of Mgmt. and Budget, *Open Data Policy—Managing Information as an Asset* (May 9, 2013), available at <https://www.whitehouse.gov/sites/whitehouse.gov/files/omb/memoranda/2013/m-13-13.pdf>.

¹⁰ U.S. Env’tl. Prot. Agency, *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by the Environmental Protection Agency* (Oct. 2002) [hereinafter *Information Quality Guidelines*], available at <https://www.epa.gov/sites/production/files/2017-03/documents/epa-info-quality-guidelines.pdf>.

¹¹ U.S. Env’tl. Prot. Agency, *Plan to Increase Access to Results of EPA-Funded Scientific Research* (Nov. 29, 2016), available at <https://www.epa.gov/sites/production/files/2016-12/documents/epascientificresearchtransparencyplan.pdf>.

In sum, while EPA should encourage making data available to researchers and the public where lawful and appropriate, existing laws and policies applicable to federal agencies already do that, while protecting the scientific integrity of the “pivotal regulatory science” considered by EPA in promulgating standards and weighing the various factors that impact those standards. EPA’s proposal ignores these established transparency laws and policies in service of excluding relevant science, thereby undercutting the environmental laws that EPA enforces by limiting the use of best available science.

b. Existing Policies and Procedures Provide for a Robust and Transparent Peer Review Process That Ensures the Validity of Scientific Information Relied Upon by EPA, and EPA Provides No Explanation for Why an Additional Level of Review Is Required

EPA has a long history of peer review of scientific studies supporting its regulations, relying on independent analyses of studies while also giving respect to those privacy protections required by law or non-disclosure agreements. As the NAS has pointed out, the National Academies “have developed a long-standing body of work that demonstrates scientific literature can be evaluated in a transparent and objective manner without complete disclosure of the underlying data.” NAS Letter at 2. And as several scientific journal editors have noted, scientists conducting peer review “are trained in assessing research publications by judging the articulation and logic of the research design, the clarity of the description of the methods used for data collection and analysis, and appropriate citation of previous results.”¹² This peer review process ensures the reliability and validity of the scientific information relied upon by EPA in the regulatory process.

Existing policies and procedures for peer review include the following:

- EPA’s *Peer Review Handbook* provides that if a regulation is supported by a scientific and technical work product, the underlying work product should be peer reviewed unless it meets listed exemption criteria.¹³ The Handbook explains that a critical element in ensuring that decisions are based on sound and defensible science is to have an open and transparent peer review process. *Id.* at xiii.
- EPA vets scientific studies through several independent expert panels, including the SAB, the EPA Clean Air Scientific Advisory Committee, the EPA FIFRA Scientific Advisory Panel, and the EPA Chemical Assessment Advisory Committee. The Clean Air Scientific Advisory Committee routinely reviews and

¹² Jeremy Berg, Philip Campbell, Veronique Kiermer, Natasha Raikhel & Deborah Sweet, *Joint Statement on EPA Proposed Rule and Public Availability of Data*, Science, Apr. 30, 2018 [hereinafter *Joint Statement*], available at <http://science.sciencemag.org/content/early/2018/04/30/science.aau0116.full.pdf>.

¹³ U.S. Env’tl. Prot. Agency, *Peer Review Handbook* 28, 44-45 (4th ed. 2015), available at https://www.epa.gov/sites/production/files/2016-03/documents/epa_peer_review_handbook_4th_edition.pdf.

evaluates epidemiological and toxicological studies that are the basis for dose response relationships used in risk and exposure assessments for air pollutants regulated under the National Ambient Air Quality Standards (NAAQS); the Chemical Assessment Advisory Committee reviews toxicological assessments of various chemicals for inclusion in EPA's Integrated Risk Information System database,¹⁴ and the NAS has reviewed EPA risk assessment practices numerous times.¹⁵

- Each of these independent committees or panels is required to be staffed by a “fairly balanced” mix of regulators, academics, and industry/consultant representatives who bring a well-balanced perspective to the process. *See* Federal Advisory Committee Act, 5 U.S.C. App. 2 § (5)(b)(2), (c).
- OMB bulletin entitled “Final Information Quality Bulletin for Peer Review,” 70 Fed. Reg. 2664-02 (Jan. 14, 2005), is applicable to all federal agencies, including EPA, and establishes government-wide guidance aimed at enhancing the practice of peer review of government science documents. The bulletin was subject to extensive public and agency comment on two prior draft versions. It includes guidance to federal agencies on what information is subject to peer review, the selection of appropriate peer reviewers, opportunities for public participation, and related issues. The bulletin also defines a peer review planning process that provides for public participation whenever possible and permits the public and scientific societies to comment about which scientific reports and studies merit especially rigorous peer review.

The proposed rule ignores this existing robust peer review process and its role in independently validating scientific information and ensuring that published information meets the standards of the scientific community.

In addition, despite the existing peer review process, EPA apparently proposes to require that EPA itself conduct an additional “independent” review. *See* 83 Fed. Reg. at 18,774. Yet the proposal nowhere discusses how EPA would vet reviewers to identify persons who are purportedly more competent than those already used in past or current peer review processes, or the level of EPA staffing and associated costs that would be needed for additional review—only stating that EPA will implement the proposed rule in a manner “that minimizes costs.” *Id.* at 18,774. But any requirement for EPA to conduct additional review would entail additional significant costs, contrary to the proposal's assertion. *Id.* at 18,772. The practical outcome of

¹⁴ *See, e.g.*, U.S. Env'tl. Prot. Agency, *IRIS Assessment Development Process (2015)*, available at https://www.epa.gov/sites/production/files/2015-09/iris_process_figure_2015.jpg (providing a graphical listing of all the rounds of review in the existing IRIS process, which includes internal review, intra-agency review, external review (public comments), and peer-review (SAB)).

¹⁵ *See, e.g.*, Nat'l Research Council, *Science and Decisions: Advancing Risk Assessment (2009)*, available at <https://www.nap.edu/catalog/12209/science-and-decisions-advancing-risk-assessment>.

the proposal is that EPA may end up relying on a much smaller number of studies and/or on a less robust subset of relevant available studies, thus undermining the regulatory decision-making process.

In sum, EPA fails to acknowledge the rigor of existing processes in statutes, policies and federal procedures, or to explain how its proposal would provide any added value and minimize costs. EPA should abandon this unnecessary and counterproductive exercise.

V. Obtaining Private Data May Not Be Practically Possible and, Even When it is Possible to Make Data Available, the Proposed Rule Would Unnecessarily Impose Substantial Costs to Do So

The proposal's suggestion that concerns about access to confidential or private data can simply be addressed through the application of tools used by other federal agencies, *id.* at 18,770-71, will be unworkable or impracticable for many past and even future studies. For example, the proposal cites to guidance regarding methods to de-identify protected health information under the privacy rules of the 1996 Health Insurance Portability and Accountability Act (HIPAA), Pub. L. No. 104-191, 110 Stat. 1936. *Id.* at 18,771 n.17. That guidance document is 28 pages, contains detailed instructions for de-identification, including how experts are to assess the risk of identification of information, and emphasizes the importance of data-sorting systems to manage protected health information for the de-identification process, including use of a one-way cryptographic function to obscure personally identifiable information.¹⁶ Among other things, the guidance provides that various identifiers of individuals—including all names, geographic subdivisions smaller than a state (with one exception), dates directly related to an individual, telephone numbers, biometric identifiers, and so forth—must be de-identified. *HIPAA Guidance* at 4-5. The guidance thus highlights that, in fact, it is not easy to address confidentiality concerns: the de-identification process is complex and must be designed into the overall study process, something that cannot be done for historic studies. Moreover, to the extent that one of the purposes of the proposal is to enable persons to replicate studies, this may not be possible where the de-identified data is critical to the studies' findings and conclusions.

And even if it were possible, EPA's proposal ignores the large costs that would be associated with the complex process of de-identifying data and fails to identify who would pay for these procedures. As scientists from the Union of Concerned Scientists have pointed out, redacting confidential data from large studies "isn't just blocking out a line," it is a huge job that can take thousands of hours, at commensurately high cost.¹⁷ Similarly, a Work Group of the SAB, EPA's external scientific advisors charged with evaluating EPA's science and regulatory

¹⁶ See U.S. Dept. of Health & Human Servs., *Guidance Regarding Methods for De-Identification of Protected Health Information in Accordance with the Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule 6* (Nov. 26, 2012) [hereinafter *HIPAA Guidance*], <https://www.hhs.gov/hipaa/for-professionals/privacy/special-topics/de-identification/index.html>.

¹⁷ See Ed Yong, *The Transparency Bills That Would Gut the EPA*, *The Atlantic*, March 15, 2017, <https://www.theatlantic.com/science/archive/2017/03/how-to-gut-the-epa-in-the-name-of-honesty/519462/>.

actions, explained that there are considerations associated with the cost and effort that would be involved in making large and complex existing datasets available within Institutional Review Board (IRB)¹⁸ requirements, including the issue of who would be responsible for shouldering this burden. *See* SAB Work Group Memo at 3.

Indeed, those anticipated costs are well-documented, albeit not in EPA's proposal. In 2017, Congress proposed the Honest and Open New EPA Science Treatment Act, H.R. 1430, 115th Cong. (2017), which, like the proposed rule, provided that EPA could only rely on studies whose data were open and accessible. In assessing that legislation, the Congressional Budget Office (CBO) estimated that costs to EPA associated with redacting confidential information to comply with this act would be at least \$100 million per year.¹⁹ These costs would encompass obtaining the underlying data, review of the data to address confidentiality concerns, formatting the data for public access, providing computer codes and models used, and providing directions for accessibility of the data. And the CBO did not include in its cost estimate the additional costs related to the potential need for contractors due to EPA staffing issues to assist with this work. Similar costs can be expected with the proposal as drafted, undermining the proposal's assertion that it does not amount to an Executive Order 13771 regulatory action. *See* 83 Fed. Reg. at 18,772. Rather than acknowledging those costs, however, the only place where the proposed rule even mentions costs is in Section 30.8, which states that "EPA shall implement the provisions of this subpart in a manner that minimizes costs"—a misleading and fatally vague projection of the impacts of the proposed rule. 83 Fed. Reg. at 18,774.

Because EPA's existing processes, including peer review, already help ensure that studies used by EPA are scientifically sound, the proposed rule is not needed to add credibility or reliability to the development of EPA models and standards. Instead, it will burden EPA and the public with unnecessary delays and expense, and result in the unnecessary exclusion of important scientific evidence that is critical to the development of standards that are protective of human health and the environment.

¹⁸ An IRB is a committee that applies research ethics to review the methods proposed for research to make sure they are ethical. Membership generally consists of individuals with varying backgrounds and affiliations, knowledgeable not only about a specific research activity, but also applicable law, institutional regulations, and standards of professional conduct. *See, e.g.*, 45 C.F.R. § 46.107; 21 C.F.R. § 56.107.

¹⁹ Cong. Budget Office, *Cost Estimate: H.R. 1430 Honest and Open New EPA Science Treatment (HONEST) Act of 2017* 3 (Mar. 29, 2017), available at <https://www.cbo.gov/system/files/115th-congress-2017-2018/costestimate/hr1430.pdf>. The predecessor to the HONEST Act was the so-called Secret Science Reform Act, H.R. 1030, 114th Cong. (2015). The CBO estimated that costs associated with redacting confidential information to comply with the latter act would be even higher—around \$250 million per year initially. *See Cost Estimate: H.R. 1030 Secret Science Reform Act of 2015* 1-3 (Mar. 11, 2015), available at <https://www.cbo.gov/sites/default/files/114th-congress-2015-2016/costestimate/hr1030.pdf>.

VI. EPA Has Not Considered the Substantial Direct Effects the Proposed Rule Would Have on the States

States, as sovereign entities, have an interest in protecting the natural resources within their borders, and the health and well-being of their residents. *See Alfred L. Snapp & Son, Inc. v. Puerto Rico, ex rel., Barez*, 458 U.S. 592, 607 (1982). EPA states that the proposed rule “does not have federalism implications” and “will not have substantial direct effects on the states.” 83 Fed. Reg. at 18,772-73. This is simply incorrect because states are often statutorily required to adopt EPA standards, sometimes lack resources to deviate from EPA standards, frequently are required to obtain EPA approval of state-set standards, and may feel the effects of EPA decisions far beyond the environmental sphere.

Most obviously, some states’ environmental laws and regulations explicitly adopt the standards set by EPA or require an express justification for any deviation. For example, under state law, Pennsylvania’s Department of Environmental Protection may not promulgate air quality control measures to implement a NAAQS if the control measures are more stringent than federal measures unless it demonstrates that the higher standard is necessary to attain or maintain a NAAQS, to satisfy related CAA requirements, to prevent assessment or imposition of CAA sanctions, or to comply with a final federal court decree. *See 35 Pa. Consol. Stat. § 4004.2*. Similarly, New Jersey’s Department of Environmental Protection must justify any deviation from federal standards pursuant to Executive Order 27 (Whitman 1994). Changes to federal standards resulting from the application of an arbitrary subset of the available science will either change the standards applicable at the state level or require states to initiate proceedings to impose and justify the imposition of different standards based on rigorous, comprehensive science. Therefore, any change to EPA’s process for developing its standards will necessarily impact state standards as well.

Even those states that are not statutorily required to apply federal standards may not have the institutional capacity to develop their own standards and therefore, for practical reasons, often rely on the standards set by EPA. For example, because of lack of institutional capacity, and in acknowledgement of EPA’s expertise, Washington D.C. has traditionally relied on EPA to set air quality standards. Further, even more states rely on the publicly available models created by EPA in determining appropriate state standards. For all the reasons discussed in the technical comments that follow, the adoption of this proposed rule would very likely affect the protectiveness of the standards that EPA sets and limit the models that EPA makes available to the public. The regulatory programs of all states that rely on EPA standards or models, including all the signatories of this letter, would therefore be affected by the proposed rule, and states’ ability to protect their environment and the health of their citizens would be undermined by its adoption.

Still more, under some programs, standards set by the states must be approved by EPA. *See, e.g.*, 40 C.F.R. §§ 131.20, 131.21 (Water Quality Standards). If the proposed rule were applied to EPA’s review and approval of state standards (and it is unclear whether that would be so—another fatal flaw in the proposal), then the rule would also affect the states in this context—further altering the balance of cooperative federalism in the implementation of these programs. Needless to say, if the proposed rule applies to EPA’s review and approval of state standards, the

federalism implications could not be any clearer—and EPA’s failure to grapple with them or even recognize that they exist is arbitrary and capricious. The proposal’s lack of clarity on this issue impairs the states’ ability to provide meaningful comment.

Finally, the proposed rule would also impact the states through the incorporation of EPA standards into the regulations or programs of other federal agencies that rely on EPA standards and/or modeling. Should EPA adopt a deficient standard due to the arbitrary exclusion of available scientific information, other federal agencies relying on EPA standards as a basis for action would be affected, as would be the states that interface with those federal programs. As such, the impacts of the proposed rule are likely to impact states in areas far beyond the environmental field.

Based on EPA’s complete failure to consider or discuss the effects of its action on state programs, the proposal should be withdrawn so that EPA can adequately consult with state officials to analyze these important impacts. *See* Exec. Order 13132 § 6(a) (instructing agencies to “ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications”); *Chem. Mfrs. Ass’n v. U.S. Env’tl. Prot. Agency*, 870 F.2d 177, 203 (5th Cir. 1989).

TECHNICAL COMMENTS

I. Consideration of Valid Scientific Studies Most Relevant for Regulatory Standards Would Be Severely Limited

For reasons discussed below, the proposed rule would severely limit EPA’s ability to consider valid and important scientific studies and data, including many that are most relevant for use as the basis for regulatory standards.

a. The Proposed Rule Would Exclude the Use of Studies That Were Based on Confidential Data

The proposed rule fails to recognize or acknowledge the existence of many studies already designed and published with terms that make complete transparency difficult or impossible because of IRB requirements and other important confidentiality protections. The proposal thus could have the effect of excluding important peer-reviewed studies of health effects from use as sources to support EPA’s past and future regulatory efforts simply because they do not meet excessively rigid transparency standards. This is particularly true for long-standing confidential epidemiological studies that EPA has relied upon in setting air quality and other health-based standards.

In general, and specifically in EPA’s 2005 *Guidelines for Carcinogen Risk Assessment*, human (i.e., epidemiology) data are preferred to animal data as the basis for risk assessment toxicity factors (e.g., cancer potency factors or reference doses for non-carcinogenic effects) when they are of sufficient quality and are amenable to dose response modeling.²⁰ This is

²⁰ U.S. Env’tl. Prot. Agency, *Guidelines for Carcinogen Risk Assessment* 2-3 (Mar. 2005),

because animal data always carry inherent uncertainties in regard to their relevance to humans. *Id.* Epidemiology data collected over at least the last 40 years, however, have been generated under the auspices of IRBs working to protect the patient or participant information obtained by academic institutions, government entities, hospitals, and other organizations, and thus disclosure of that data would be difficult, if not impossible.

Generally accepted professional practice for the collection of human data requires IRB review and informed consent from the individuals from whom the data are collected. Although the proposal states that “concerns about access to confidential or private information can, in many cases, be addressed through the application of solutions commonly in use across some parts of the Federal government,” 83 Fed. Reg. at 18,770, this will not be possible for many studies because IRBs dictate the specific terms of this informed consent, including that the conditions of collection and analysis of human data be specified *before* initiation of the study. These *a priori* conditions include the types of analyses that will be performed, how the data will be used, and whether and how the data can be shared. In general, *a priori* conditions preclude sharing raw data with entities not included in the original IRB approval and performing analyses not specified in the original IRB approval, even if portions of the data are redacted. Furthermore, clinical data collected from physicians, hospitals, clinics, etc., may also be subject to restrictions under HIPAA, over and above IRB restrictions.

These factors would all preclude EPA’s or researchers’ ability to provide raw, unpublished data for re-analysis as required under the proposed EPA rule. Thus, the provisions of the proposed rule would essentially prohibit the use of such epidemiology data in human health risk-based assessment despite their clear superiority over animal data for use in risk assessment. For older epidemiology data, such as data from studies on occupational exposures to workers in factories before the advent of strict IRB requirements, raw data are seldom if ever still available. Therefore, such data, including high quality data generated by major corporations in conjunction with academic institutions, would also not be available to EPA under the proposed rule. Thus, effectively, the proposed rule would restrict the epidemiology data available for use by EPA, even where the weight of the evidence clearly supports a finding of causality and risk.

Two examples of studies that could be impacted by EPA’s proposed rule are the Harvard Six Cities Study and the American Cancer Society Cancer Prevention Study II.²¹ These studies followed thousands of people over nearly two decades, and linked personal medical histories, occupational histories, and home locations to detailed air quality data to show that people exposed to more particulate matter are more likely to die prematurely. In order to collect all the

Speizer, *An Association Between Air Pollution and Mortality in Six U.S. Cities*, 329 *New Eng. J. Med.* 1753, 1753-59 (1993), available at <https://www.nejm.org/doi/10.1056/NEJM199312093292401>; *Cancer Prevention Study II*, *Am. Cancer Soc’y*, <https://www.cancer.org/research/we-conduct-cancer-research/epidemiology/cancer-prevention-study-2.html>.

information, researchers entered into confidentiality agreements with the study participants, agreeing that their private information would not be made public. These promises of confidentiality (wholly apart from the difficulty and cost of redacting personal information) would render the studies “non-transparent” under the proposed rule, enabling or requiring EPA to ignore them. This is so even though the studies have been thoroughly peer-reviewed and their results have been re-analyzed by the Health Effects Institute, which confirmed the robustness of the studies’ findings with respect to air pollution and mortality.²² Under the proposed rule, EPA could ignore these two foundational studies and other peer-reviewed studies built upon them in setting health-based air quality standards for particulate matter and other pollutants.²³ The effect could be devastating and deadly, as these standards save lives. EPA estimates that reductions in ambient particulate matter under the 1990 Clean Air Act Amendments will prevent 230,000 adult deaths by 2020.²⁴

b. The Proposed Rule Would Also Exclude Studies That Cannot Be Reproduced

“Reproducibility,” “replication,” and “validation” of scientific studies are mentioned throughout the proposed rule, but these terms are not defined. *See, e.g.*, 83 Fed. Reg. at 18,773-74. These terms could be interpreted to mean that studies used as the basis for regulations must be replicated. It would clearly be impossible to replicate many key studies based on data on human or ecological effects resulting from unintentional adverse events and disasters. Some extreme examples are data on the effects of radiation from atomic bomb survivors, data on wildlife toxicity from the Exxon Valdez oil spill, and data on the human health impacts of the September 11, 2001 World Trade Center disaster.²⁵ Other important data may come from older studies of human volunteers that could not be replicated under current ethical standards.

Laboratory animal studies are controlled studies which use genetically similar test subjects maintained under identical conditions, with the only difference between the control and treated groups being exposure to the chemical being tested. Although such studies are expected to give the same results if they are reproduced, scientists do not routinely perform laboratory experiments that are identical to previously reported studies, but rather, use results from the scientific literature as the basis for design of different studies that will add to the body of knowledge on the topic being studied. In contrast to the controlled conditions of animal studies, there is more variability among humans than the strains of lab animals utilized. Additionally, the exact underlying conditions of human studies can rarely be exactly replicated (i.e., under the same circumstances of exposure and other factors) even when the same protocols are followed. Thus even a contradictory result in a “reproduced” epidemiological study would not necessarily invalidate an observation from an earlier study, provided that the first study followed valid methods and conducted appropriate statistical analyses.

In addition, although it would depend on the specifics of the study and the nature of the endpoint investigated, a single human study would not generally be considered definitive by itself. Rather, all such well-conducted studies contribute to the weight of evidence supporting a scientific conclusion. Reliance on the weight of the evidence, rather than on any one individual study, is a safeguard that helps to ensure validity of the overall conclusions. Therefore, even if such studies could be replicated, their replication is not necessary for making a conclusion based on the overall weight of the evidence.

To the extent the proposal seeks to enable third parties to “re-run” an analysis using the same supporting data and the same models, this may not be possible where proprietary models, methods, designs, and/or data were used in the study. But, as EPA points out in its Information Quality Guidelines, in cases where the Agency relies on proprietary models that cannot be made publicly available, the model applications are subject to EPA’s peer review policy and other validation checks. *Information Quality Guidelines* at 47. The Guidelines indicate that “[t]hese steps, along with transparency about the sources of data used, various assumptions employed, analytic methods applied, and statistical procedures employed should assure that analytic results are ‘capable of being substantially reproduced.’” *Id.*

c. The Proposed Rule Would Favor Industry Contract Laboratory Toxicology Studies, Which May Not Evaluate the Most Sensitive and Relevant Effects

The proposed rule would also favor consideration of industry toxicology studies over equally valid peer reviewed studies from other institutions. It states that “where available and appropriate, EPA will use . . . standardized test methods, consistent data evaluation procedures, and good laboratory practices.” 83 Fed. Reg. at 18,770. Under current EPA risk assessment approaches, all relevant scientific data are considered.²⁶ In contrast, this language indicates the

2086 (2003); available at https://www.afsc.noaa.gov/Publications/misc_pdf/peterson.pdf; City of New York, Dept. of Health & Mental Hygiene, *World Trade Center Health Registry*, <https://www1.nyc.gov/site/911health/about/wtc-health-registry.page>.

²⁶ See, e.g., Integrated Risk Info. System, Nat’l Ctr. for Env’tl. Assessment, Office of Research &

proposed rule is significantly more restrictive than current EPA guidance as far as the types of valid peer-reviewed scientific data that can be considered.

It is critical to note that the phrase “good laboratory practices” (GLP) referenced by EPA is not a value descriptor. Rather, it is a technical term referring to a specific category of study conduct and reporting that is intended for specific regulatory purposes. GLP/standardized test method studies are typically conducted by industrial or contract laboratories, and test for limited parameters in order to meet specific regulatory requirements, such as for registration of pesticides, drugs, and other products. These protocols often have not been updated to incorporate recent approaches in toxicology, and they may not look at the most sensitive and relevant toxicological effects of the product being studied. In contrast, other equally scientifically valid studies, typically conducted in research laboratories in academic, industrial, or government institutions, use specialized approaches to evaluate specific toxicological effects of the chemical under study, and may not follow the standardized protocols specified in regulatory requirements. The use of GLP protocols does not necessarily mean that the study is of higher quality, and there is no scientific reason that the data generated under the highly circumscribed regulatory requirements for product registration should receive greater weight than any other valid scientific data. Rather, all studies should be evaluated on their own merits.

d. The Proposed Rule Would Exclude Studies for Which Underlying Data Are Not and May Not Be Available

The proposed rule would preclude consideration of studies – old and new – for which data are not and may not be available. Many of the standards that are developed or updated by EPA are for chemicals that have an extensive, older body of scientific literature on their effects, but that are not currently being actively researched. Thus, the vast majority of studies considered for standard-setting are not new and were not conducted, designed, or published with the goal of ensuring data availability. Accordingly, their data are likely unavailable and, even if data were kept, the formats in which older data are stored may not be accessible from currently available computers, potentially invalidating the use of those studies as the basis for future regulatory standards. Processes for additional data availability are currently being developed and will likely increasingly be incorporated into research protocols in the future; however, it is unknown whether these forthcoming protocols will meet the transparency requirements of the proposed rule.

In addition, even going forward, many academic scientists whose research is relevant to EPA regulations may not conduct and report their studies in a way that satisfies the requirements of the proposed rule. The proposed rule’s provisions would require significant additional resources and could impose unreasonable and impractical requirements beyond those included in current protocols. Academic researchers, who often study sensitive and relevant health effects that are not evaluated in industry-sponsored GLP studies, typically focus on publishing their studies in peer-reviewed journals and obtaining research funding; they may not be concerned about or even consider whether their studies would qualify for use in establishing EPA

Dev., U.S. Env'tl. Prot. Agency, *Toxicological Review of Benzo[a]pyrene*, xxxiii-xxxvi (2017), available at https://cfpub.epa.gov/ncea/iris/iris_documents/documents/toxreviews/0136tr.pdf.

regulations, and/or may not have the resources to reshape their approach to maintaining data. Additionally, many researchers, particularly in other nations but also in the United States, may not even be aware of EPA requirements for a study's use in regulations. For those researchers who do attempt to comply with the proposed rule's requirements, the extent and nature of the data that must be maintained and made publicly available is vague and unclear, making compliance virtually impossible.

II. The Proposed Rule is Wrongly Premised on Unsupported Assumptions Regarding Scientific Studies

a. The Proposed Rule Assumes Erroneously and Without Explanation that Only Studies for Which the Underlying Data Are Publicly Available Are Valid

A fundamental premise of the proposed rule is that only studies for which the underlying data are publicly available are valid for decision-making. This premise is inconsistent with generally accepted practices for conducting and evaluating scientific research. Furthermore, the rationale for the premise is not provided: EPA presents no evidence for the conclusion that its current criteria for selecting studies result in scientifically invalid conclusions or overly stringent regulations. Indeed, the D.C. Circuit has already rejected EPA's proposed approach of excluding studies relying on non-public data as "impractical and unnecessary" when raised by a trade association as part of a challenge to an air quality standard. *Am. Trucking*, 283 F.3d at 372.

b. The Proposed Rule Incorrectly Assumes that the Studies and Data Upon Which EPA Relies Are of Questionable Validity

The proposed rule also assumes that the studies and data used in EPA's decision-making are of questionable validity. However, this assumption is unsupported. It is not the case that the studies and data EPA uses to establish regulations are selected simply because they report effects at the lowest levels. Rather, EPA performs an extensive hazard identification process prior to selecting key studies and specific health endpoints. This process evaluates the relevant human epidemiology, animal toxicology, and mode of action studies to ensure that the studies and endpoints ultimately chosen are supported by the overall body of scientific literature. Recently, a rigorous systematic review process has been developed and implemented by EPA's Integrated Risk Information System program to ensure even greater thoroughness and objectivity in hazard identification.²⁷ Thus, EPA already ensures that the studies and data upon which it relies are valid.

²⁷ Integrated Risk Info. System, Nat'l Ctr. for Env'tl. Assessment, Office of Research & Dev., U.S. Env'tl. Prot. Agency, *National Academy of Sciences Committee to Review Advances Made to the IRIS Process: A Workshop* (Feb. 1-2, 2018), available at <https://www.epa.gov/sites/production/files/2018-02/documents/nas020118final.pdf>.

III. The Proposed Rule's Data Availability Requirements Are Unnecessary and Unclear

a. EPA's Proposed Data Availability Requirements Are Not Necessary to Improve or Ensure the Scientific Basis of Regulations

Studies and associated data do not have to be publicly available or reproducible to ensure that they are scientifically valid. This point has already been made in statements of concern about the proposed rule by authoritative scientists, including the editors of the most prestigious scientific journals (Science, Nature, PLOS, PNAS, Cell) and the members of a Work Group of the SAB itself. See *Joint Statement* and SAB Work Group Memo. As stated by the journal editors, “scientists, including peer reviewers, are trained in assessing research publications by judging the articulation and logic of the research design, the clarity of the description of the methods used for data collection and analysis, and appropriate citation of previous results [I]t does not strengthen policies based on scientific evidence to limit the scientific evidence that can inform them Excluding relevant studies simply because they do not meet rigid transparency standards will adversely affect decision-making processes.” *Joint Statement*.

In fact, there are longstanding methodologies for evaluating the strength of epidemiology findings that are commonly used to draw conclusions about causality.²⁸ The SAB Work Group notes that “the proposed rule fails to mention that there are various ways to assess the validity of prior epidemiologic studies without public access to data and analytic methods,” using as an example the Health Effects Institute’s well-known re-analysis of the Harvard Six Cities and American Cancer Society air quality studies, which successfully replicated those studies’ findings. SAB Work Group Memo at 4.

b. EPA's Proposed Data Availability Requirements Are Not Clearly Defined and Do Not Ensure Validity of Data

The extent and nature of the data that would be required to be made publicly available is not clearly defined in the proposed rule. The proposed rule states that information is considered “publicly available in a manner sufficient for independent validation” when it includes the “information necessary for the public to understand, assess, and replicate findings. This may include, for example: (a) Data (where necessary, data would be made available subject to access and use restrictions); (b) Associated protocols necessary to understand, assess, and extend conclusions; (c) Computer codes and models involved in the creation and analysis of such information; (d) Recorded factual materials; and (e) Detailed descriptions of how to access and use such information.” 83 Fed. Reg. at 18,774.

This could be interpreted to require maintenance of data down to the most basic level, verging on the absurd, and could impose unreasonable and impractical requirements that go well beyond those already included in current protocols. For example, it could require maintenance of records that are not routinely archived by academic research labs, such as printouts of data from all calibration curves and analyses from instruments that measure clinical parameters in

²⁸ See, e.g., Sir Austin Bradford Hill, *The Environment and Disease: Association or Causation?* 58(5) Proc. Royal Soc’y Med. 295, 295-300 (1965) (“The Hill Criteria for Causality”).

blood or other similar endpoints in animal and human studies, or photos of each individual organ as it is evaluated for gross pathology in toxicology studies. Even if such data are maintained for a period after a study is completed, it is not feasible for such records to be maintained indefinitely by research laboratories, which would then make the study that the data supports unavailable for use in future regulations.

For toxicology studies, such data availability requirements would result in favoring studies performed under GLP protocols, which typically retain more raw data than research studies. But, as discussed in more detail above, GLP studies may not evaluate the most sensitive and relevant toxicological effects of the chemical being studied and are not inherently of higher quality than studies conducted under other protocols.

IV. Provisions of the Proposed Rule Related to Modeling Conflict with Scientific Guidelines

The proposed rule would flout long-accepted scientific modeling methods and require undue justification and explanation of assumptions and uncertainty.

a. The Proposed Rule Encourages Deviation from Linear Dose Response Modeling, the Generally Accepted Choice for Modeling in Carcinogen Risk Assessment

The proposed rule would favor less protective threshold modeling, contrary to EPA's own guidance and generally accepted toxicology practice. It states that "EPA shall evaluate the appropriateness of using default assumptions, including assumptions of a linear, no-threshold dose response, on a case-by-case basis" and that "EPA shall give explicit consideration to high quality studies that explore . . . various threshold models across the dose or exposure range." 83 Fed. Reg. at 18,774. These requirements are inconsistent with EPA guidance, specifically the 2005 *Guidelines for Carcinogen Risk Assessment*. These guidelines state that EPA's default dose response modeling approach for carcinogenic substances is linear extrapolation from the point-of-departure (essentially the lower limit of the range of the experimental data) to the origin (zero exposure, zero risk). This default no-threshold approach assumes that any dose of a carcinogen results in some level of risk, making it the most protective of human health. Threshold models, by contrast, assume that there is some dose of a carcinogen at which there is no cancer risk, an assumption that is less health protective and that has not been conclusively established in most cases. It is unclear what EPA means by "explicit consideration," or what EPA would consider to be "high quality studies," but insofar as those terms are intended to mean that EPA will give preference to studies utilizing threshold models, such a preference would be inconsistent with EPA's 2005 *Guidelines for Carcinogen Risk Assessment* as well as generally accepted practice in the field of toxicology.

In most cancer risk assessments, dose response data within the low risk range, which is the range of interest for regulatory purposes, are lacking. Thus, low-dose extrapolation is used to estimate risks in the lower dose range where data are unavailable. For estimation of risks below the range of the data, there are an infinite number of possible threshold and non-threshold assumptions regarding the shape of the dose response curve that can be envisioned, with no substantive basis for assuming the general superiority of one assumption over another. To

deviate from the default assumption that any dose of a carcinogen results in some risk in the absence of chemical-specific data that demonstrate a threshold mode-of-action of carcinogenicity²⁹ would be mere speculation and would assume, with no scientific support, that Americans can be safely exposed to those substances. To “evaluate the appropriateness” of the linear, non-threshold approach for low-dose extrapolation by also considering non-linear and threshold models would provide no cognizable benefit in modeling accuracy or clarity, but instead could result in the manipulation of results, delay, and obfuscation.

In the limited circumstances where the data support threshold modeling, EPA’s 2005 *Guidelines for Carcinogen Risk Assessment* already provide for departure from the default linear extrapolation in risk assessment and instead allow for the use of threshold modeling. *Id.* at A-8. In fact, EPA has used a threshold approach for carcinogen risk assessment when there is clear, chemical-specific, empirical evidence of a threshold mode of action.³⁰ This careful, well-founded approach is generally considered both scientifically supportable and protective of public health, as opposed to the proposed rule’s requirement for justification of the default linear approach on a case-by-case basis and “explicit consideration [of] high quality studies that explore various threshold models across the dose or exposure range.” 83 Fed. Reg. at 18,774. Without a well-founded and substantiated scientific basis, EPA should not entertain such a fundamental departure from accepted, public-health protective risk assessment practices.

b. The Proposed Rule Would Unreasonably Require Consideration of Nonparametric Models

The proposed rule would require that “when available, EPA shall give explicit consideration to high quality studies that explore . . . [a] broad class of parametric dose response or concentration response models” and “nonparametric models that incorporate fewer assumptions.” 83 Fed. Reg. at 18,774. Parametric models are those in which the number and nature of the parameters (i.e., assumptions) are fixed in advance, while nonparametric models are those in which the assumptions are determined from the data. For approximately 20 years, EPA has employed parametric modeling in risk assessment by providing and using benchmark dose response modeling software. Although the proposal implies that this is not the case, this software already allows investigation of the most appropriate parametric model(s) for risk assessment and currently provides “a broad class of parametric dose response, concentration-response models.” *Id.*

There is no obvious benefit to adding an additional layer of analysis—nonparametric modeling—on top of this longstanding approach. Nonparametric models are useful only when the quantity and quality of the data are sufficient to infer a clear and plausible estimate of the overall pattern. But when there are few data and/or data are of poor quality, as is often the case

²⁹ Mode of action is defined by EPA as the “sequence of key events and processes, starting with interaction of an agent with a cell, proceeding through operational and anatomical changes, and resulting in cancer formation.” *Guidelines for Carcinogen Risk Assessment* at 1-10 n.2.

³⁰ See, e.g., U.S. Envtl. Prot. Agency, *Toxicological Review of Chloroform* (2001), available at https://cfpub.epa.gov/ncea/iris/iris_documents/documents/toxreviews/0025tr.pdf.

in situations to which the proposed rule would apply, nonparametric models can produce a wide variation of results with few, if any, constraints on plausibility. In such cases, the use of nonparametric models is not scientifically supportable, and moving forward, little would be gained from considering them in terms of accuracy and clarity of the predictions, while the potential for delay and obfuscation would again multiply. The proposed rule's requirement that nonparametric models be explicitly considered, without regard to the applicability of a particular model, is therefore misguided and scientifically unsound.

c. The Proposed Rule Would Unreasonably Require Justification of All Default Assumptions

The proposed rule would require EPA to “evaluate the appropriateness of using default assumptions” and “clearly explain the scientific basis for each model assumption used and present analyses showing the sensitivity of the modeled results to alternative assumptions.” 83 Fed. Reg. at 18,774. This would effectively foreclose the important use of default assumptions, requiring a detailed justification for each of the many assumptions included in any given model—an inefficient, time-intensive, and unnecessary task.

Default assumptions are selected from a range of possible values based on both scientific considerations (e.g., whether they are supportable based on available data) and policy considerations (e.g., whether the upper or lower percentile, rather than the mean or median value, should be used to protect most of the population). In cases of significant variability and/or uncertainty in the available data, there are essentially an infinite number of alternative assumptions that can be chosen. The use of default assumptions thus provides a straightforward way to manage the complexity presented by variability and uncertainty.

And, while default assumptions do need to be justified when initially selected, EPA uses a well characterized set of default assumptions in risk assessment and updates them when indicated by newer scientific information.³¹ Accordingly, the rationales and limitations underlying these assumptions are well documented, including (as would be required by the proposed rule) discussion of variability, as well as sensitivity analyses that evaluate the impact on the model results of changing the default value to a range of non-default alternative values. Default values have been selected as both scientifically valid and protective of human health; if alternative values are selected, they are likely to be less health-protective than existing defaults. There is thus little benefit to be gained at this point by reinventing the wheel each time a default assumption is employed. To forego these well-established default assumptions and require

³¹ See, e.g., Memorandum from Dana Stalcup, Acting Director, Assessment and Remediation Division, Office of Superfund Remediation and Technology Innovation to Superfund National Policy Managers, Regions 1-10, *Human Health Evaluation Manual, Supplemental Guidance: Update of Standard Default Exposure Factors* (Feb. 6, 2014), available at https://www.epa.gov/sites/production/files/2015-11/documents/oswer_directive_9200.1-120_exposurefactors_corrected2.pdf; Office of Water, U.S. Env'tl. Prot. Agency, *Human Health Ambient Water Quality Criteria: 2015 Update* (2015), available at <https://www.epa.gov/sites/production/files/2015-10/documents/human-health-2015-update-factsheet.pdf>.

justification of each assumption chosen from a long list of potentially less health-protective assumptions would only give rise to prolonged debate, obfuscation, and manipulation of model outcomes, not improvement of the scientific basis of the risk assessment. The delay this would cause, for no supportable reason, can only lead to the conclusion that it is EPA's intent to inhibit, rather than improve, regulation.

d. The Proposed Rule Would Require a Description of, But Fails to Define, Uncertainty

The proposed rule would also require that EPA “describe and document any assumptions and methods used . . . and uncertainty.” 83 Fed. Reg. at 18,774. However, uncertainty is not defined in the proposed rule, and it is unclear what type of uncertainty is implied. Uncertainty could mean discussion of the magnitude of the statistically based range of model predictions. There could also be uncertainties unrelated to the model, such as qualitative uncertainty about the human relevance of the animal toxicity endpoint used as the basis for the risk assessment. EPA's failure to define the type of uncertainty at issue makes the proposed rule impermissibly vague and deprives the public of a meaningful opportunity to comment on its impacts.

V. The Proposed Rule Would Undermine Protection of Human Health and the Environment, in Contradiction to EPA's Mission

Overall, the requirements of the proposed rule discussed above would lead EPA to adopt less protective standards across many regulatory programs, which is contrary to EPA's mission to protect human health and the environment. The proposed rule would allow for the use of less protective dose response models and assumptions in human health risk assessment. It would also preclude consideration of scientifically valid human and animal studies reporting sensitive and relevant toxic effects based on unjustified requirements for public availability of data, and instead favor consideration of studies that do not assess the most sensitive and relevant health effects endpoints.

For example, EPA is required to review its air quality standards (NAAQS) for criteria pollutants every five years and, if necessary, revise them to protect public health and the environment. *See* 42 U.S.C. § 7409(d). The NAAQS review process builds on the administrative record from prior rulemakings, including historic studies that are part of that record. Under the proposed rule, EPA may refuse to consider these studies and others because they rely on data pertaining to the personal medical histories of participants that cannot, by the studies' terms or by law, be divulged. Restricting the use of such studies would significantly undermine current and future NAAQS reviews.

And, indeed, the proposed rule appears to be especially aimed at such a restriction. EPA's April 30, 2018 rule proposal follows an April 12, 2018 memorandum issued by President Trump to former EPA Administrator Pruitt directing him to “examine the current NAAQS review process and develop criteria to ensure transparency in the evaluation, assessment, and characterization of scientific evidence in such reviews.”³² But, as explained above, it would be

³² Memorandum from Donald J. Trump, President of the United States, to the Administrator of the U.S. Env'tl. Prot. Agency, *Presidential Memorandum for the Administrator of the*

illegal for EPA, in setting standards, to ignore peer-reviewed, relevant science on the grounds that confidential, private patient data underlying a study have not been made public.

Relatedly, EPA's proposal may also restrict the health and welfare benefits tied to the NAAQS that support other rulemakings. For example, in calculating the costs and benefits of rules to reduce air emissions, in some cases the majority of the benefit estimates are attributable to reductions in one or more criteria pollutants that are not the primary objective of the rule. These reductions are referred to as co-benefits, and the health impacts and monetized benefits are based on studies used in the air quality standards-setting process for criteria pollutants. For example, in promulgating the Mercury and Air Toxics Standard rule governing air emission standards for hazardous air pollutants (including mercury) from power plants, EPA states "[i]t is important to note that the monetized benefits include many but not all health effects associated with PM_{2.5} exposure." 77 Fed. Reg. 9304, 9431 (Feb. 16, 2012); *see also id.* at 9305. Thus, restricting the use of studies that underlie emission standards for criteria pollutants could significantly impact the cost-benefit analyses for various other health-related rules by failing to account for all the benefits, making it far more likely that the costs will be predicted to exceed the benefits and that the regulatory standards will, accordingly, be lowered.

Further, in developing regulations EPA uses other types of models in addition to dose response models. These include toxicokinetic models that predict a chemical's absorption, distribution, metabolism, and excretion, as well as fate and transport models that predict a chemical's movement in the environment and distribution to environmental media. The proposed rule's provisions that could decrease protectiveness of dose response analysis (e.g., requiring justification of default assumptions and precluding consideration of relevant studies due to data disclosure requirements) could similarly result in decreased protectiveness of these other types of models. In regulations based on dose response analysis combined with toxicokinetic and/or fate and transport analyses, the overall decrease in protectiveness would be magnified.

The proposed rule also does not differentiate between standards set to protect human health, and standards and models used to protect the environment, such as the CWA's aquatic life criteria and standards used in ecological risk assessments under CERCLA.³³ Many of the same serious concerns raised in these comments are equally applicable to such standards and models, including: EPA's lack of consultation with the SAB, the National Academy of Sciences, and the broader scientific community; the requirement that EPA conduct its own review of all pivotal regulatory science; and the proposed rule's potential to impose unreasonable data maintenance requirements. Also, the use of GLP protocols is inappropriate for studies involving ecosystems and associated biota. Consequently, the problems concerning EPA's ability to rely

Environmental Protection Agency (Apr. 12, 2018), <https://www.whitehouse.gov/presidential-actions/presidential-memorandum-administrator-environmental-protection-agency/>.

³³ *National Recommended Water Quality Criteria*, U.S. Env'tl. Prot. Agency (Apr. 2, 2018), <https://www.epa.gov/wqc/national-recommended-water-quality-criteria>; *Superfund Risk Assessment: Ecological Risk Topics*, U.S. Env'tl. Prot. Agency (Feb. 16, 2018), <https://www.epa.gov/ris/superfund-ris-assessment-ecological-risk-topics>.

on the best available scientific studies would also limit EPA's ability to protect ecosystems and wildlife in a scientifically robust manner.

CONCLUSION

As the comments above demonstrate, the proposed rule is antithetical to EPA's mission to protect human health and the environment. The proposed rule is riddled with substantive and procedural infirmities and would achieve the opposite of its purported purpose. EPA's failure to consult with its own internal science experts when developing the proposal is, at best, gross malfeasance and, at worst, a conscious effort to subvert the Agency's statutorily mandated practice of using the best available science. We urge EPA to jettison this tainted vestige of the prior leadership and restore public confidence in the Agency's commitment to its core mission, and we stand ready to pursue legal remedies should EPA persist in this misguided effort.

RE: Strengthening Transparency in Regulatory Science, Docket Number: EPA-HQ-OA-2018-0259

Dear Sir or Madam:

The Chlorine Institute (“CI” or the “Institute”) is a 190 member, not-for-profit trade association of chlor-alkali producers worldwide, as well as packagers, distributors, users, and suppliers. The Institute’s North American Producer members account for more than 93 percent of the total chlorine production capacity of the U.S., Canada, and Mexico. The Institute’s mission chemicals, namely chlorine, sodium hydroxide and potassium hydroxide, hydrogen chloride, sodium hypochlorite, and vinyl chloride monomer, are used throughout the U.S. economy and are paramount to the protection of public health.

With reference to the April 30, 2018 Federal Register Notice “Strengthening Transparency in Regulatory Science” (83 FR 18768), CI members recognize and applaud EPA’s efforts to increase transparency in rulemaking. CI agrees with the statement in the Federal Register, “the best available science must serve as the foundation of EPA’s regulatory actions.” Environmental stewardship is a shared responsibility among industry, EPA, local authorities, and the general public. In order for industry and EPA to work together to steward America’s land, water, and air, scientific rigor must guide each party’s actions. How EPA writes its regulations will affect the health and wellbeing of Americans and our global neighbors. To prudently regulate the many domestic stewards of the environment, EPA must effectively use the best available science, including reputable peer-reviewed science and commercially available modeling software. However, the proposed rule may have the unintended consequence of excluding sound, peer-reviewed science in the rulemaking process. EPA’s jurisdiction covers many complex, highly detailed areas – from determining safe contaminant levels in drinking water to regulating hazardous waste to air emissions.

Data Supporting Commissioned, Non-Peer Reviewed Studies Should be Transparent

There are instances when interested parties commission a laboratory or other research organization to perform a study. This third party does the scientific study and may draw conclusions, but does not solicit other peers (a “fourth” party) to review the findings. For non-peer reviewed commissioned studies such as these, the underlying data should be made available to the public, along with the

conclusions, assumptions, methods used, and a discussion of limits of extrapolation. Because such studies lack the layers of review that accompany peer-reviewed science, they should be held to a higher standard of transparency if relied upon in rulemaking decisions.

Peer-Reviewed Studies Are Acceptable for Rulemaking

For policy decisions based upon peer-reviewed journals and literature, the articles should be available to the public (for a nominal fee, if necessary), but it is not necessary to provide every underlying data point for public inspection in rulemaking. Requiring every individual data point from such studies to be made available will greatly reduce the number of sound, scientific articles available for rulemaking. The peer-review process is widely accepted in the scientific community. Journals that publish peer-reviewed articles have ethical guidelines for reviewers^{1,2}. Reputable publishers use a robust peer-review process that has a series of quality controls.

If EPA has concerns about whether to use a particular study because it appears that the conclusions are based on faulty science, it is the EPA's duty to investigate the study further and make its concerns known in the rulemaking process. Similarly, if the public has concerns on a study used by the EPA, those concerns and any counter studies may be raised in the rulemaking process.

Commercially Available Computer Software is Acceptable for Rulemaking

Industry often uses commercially available computer code and software to design, build, and operate chemical facilities, and to predict emissions. For example, EPA's RMP rule allows the use of EPA's own RMP*COMP software for worst-case scenario modeling estimations. Another example of a widely used, commercially available tool in engineering is Aspen Plus® modeling software. When tools like these are used within the applicable limits of the software, they are very useful. The key is to use the computer code and/or software within its intended applicability range and with appropriate assumptions.

In this instance, "commercially available" is defined as published software or code with a sound scientific basis, available for use by the public or government. Any commercially available models or computer codes that are used in rulemaking decisions should include a disclosure about the basis, applicability limits, and assumptions of the parameters used with the computer code/software. However, CI believes that making the complete computer code or software code available for review is not necessary.

Commercially available computer code and software often contains intellectual property. It is easy to imagine a scenario where widely accepted, commercially available computer modeling software was used to estimate emissions to determine potential dosages of surrounding populations as a part of rulemaking. The scientific study that used commercially available software named all the assumptions

¹ *Science* publication Peer Review Ethical Guidelines - <http://www.sciencemag.org/authors/peer-review-science-publications>

² Wiley's Best Practice Guidelines on Publishing Ethics A Publisher's Perspective, Second Edition - <https://authorservices.wiley.com/ethics-guidelines/index.html>

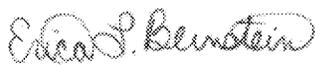

and modeling parameters it used and was then peer reviewed. Such a study would surely qualify as scientifically rigorous and worthy of inclusion in rulemaking decisions. It's unlikely that commercial software makers would be willing to surrender their extensive code, as that could give competing software companies an advantage.

If, however, similar to aforementioned commissioned studies computer code is used in a novel way specific only to the commissioned study at hand, such code should be made public.

CI members believe both in data transparency in rulemaking and scientific rigor. While we are in agreement with the spirit of the *Strengthening Transparency in Regulatory Science* proposed rule, we believe that, with changes to allow peer-reviewed science and eliminating the requirement to disclose computer code from commercially-available software, EPA and the chlor-alkali industry can work together to achieve true environmentalism.

Thank you for your time and attention.

Best Regards,

Erica Bernstein

Environment, Safety and Security

August 15, 2018

The Honorable Andrew Wheeler
Acting Administrator
U.S. Environmental Protection Agency
1200 Pennsylvania Ave, NW
Washington, D.C. 20460

Re: Rescinding EPA’s Proposed Rule, “Strengthening Transparency in Regulatory Science”

Dear Acting Administrator Wheeler:

The undersigned public health, science, labor, transparency, accountability, and environmental organizations urge you to withdraw the proposed rule entitled “Strengthening Transparency in Regulatory Science,” issued by former EPA Administrator Scott Pruitt on April 30, 2018.¹ The ill-conceived, badly written, and unlawful proposal is flawed beyond repair and should be rescinded. Further, this proposed rule runs counter to your stated commitment to “robust and civil dialogue with the public.”² Any further time and money spent on this proposal would be a waste of valuable public resources. EPA and OMB should focus their limited resources on protecting public health and the environment rather than continuing to consider such a flawed proposal.

In your first address to EPA staff, you emphasized that you “will seek the facts” and aim to carry out “the vital mission of protecting human health and the environment.”³ To extend the benefits of science to all people, including those communities that already bear a disproportionate burden of environmental pollution, EPA must preserve the role of science as a key input for crafting public policy.

Unfortunately, the implementation of this rule would do just the opposite, undermining the ability of the Agency to use the best available science to protect public health and the environment. The proposal will not improve the use of science at EPA, but instead would restrict the types of science the Agency may use in regulatory decisionmaking. This includes, but is not limited to, studies that rely on personal health data, confidential business information, intellectual property, or older studies where the authors or data sources may not be accessible. Restricting the use of robust and well-established scientific information prevents EPA from meeting its mission.

² Wheeler, A.R. 2018. Message from the Acting Administrator: Public Participation and Transparency in EPA Operations, July 30. Online at https://www.eenews.net/assets/2018/07/30/document_pm_02.pdf. Accessed July 31, 2018.

³ Environmental Protection Agency (EPA). 2018. Acting Administrator Wheeler Addresses EPA Staff (News Release), July 11. Online at <https://www.epa.gov/newsreleases/acting-administrator-wheeler-addresses-epa-staff>. Accessed July 31, 2018.

Equally problematic, the proposed rule is not authorized by any authority delegated to EPA by Congress and is contrary to a number of statutes under EPA's authority. This includes, but is not limited to, the Clean Air Act; Clean Water Act; Toxic Substances Control Act; Lautenberg Chemical Safety Act; Safe Drinking Water Act; Federal Insecticide, Fungicide, and Rodenticide Act; and more. Substantively, the rule violates numerous public health and environmental provisions contained in these laws, as well as requirements to use the best available science or to consider all available information, while procedurally, it violates the Administrative Procedure Act and a number of other laws that set forth specific procedures EPA must follow during its rulemaking process. It also lacks an environmental justice analysis even though the rule will have the greatest impact on low-income and minority communities that benefit from protections based on the very studies the rule restricts from consideration when setting exposure limitations for pollution and toxic chemicals. Simply put, the proposal cannot withstand legal scrutiny.

The proposed rule also lacks justification and has little information on what implementation would mean for external researchers or how it would affect EPA's work to protect public health and the environment. It was developed without meaningful input from the scientific community. EPA's Science Advisory Board (SAB), tasked with reviewing the Agency's regulatory agenda and recommending actions that merit independent review, only learned about the rulemaking after it was already proposed. As a result, an SAB workgroup recommended that the advisory body review the merits of the rule because "it deals with a myriad of scientific issues for which the Agency should seek expert advice from the Science Advisory Board."⁴ After a nearly unanimous vote concurring with the memo, the SAB wrote in a June 28 letter to former Administrator Scott Pruitt that "[t]he SAB urges the Agency to ... request, receive, and review scientific advice from the SAB before revising the proposed rule."⁵

Numerous scientific voices have spoken out in opposition to the proposed rule, including those with standards EPA claimed were consistent with the proposed rule. For example, the editors of leading peer-reviewed scientific journals, *Science*, *Nature*, *Public Library of Science (PLOS)*, *Proceedings of the National Academy of Sciences*, and *Cell* wrote:

"[I]t does not strengthen policies based on scientific evidence to limit the scientific evidence that can inform them; rather, it is paramount that the full suite of relevant science vetted through peer review, which includes ever more rigorous features, inform the landscape of decision making. Excluding relevant studies simply because they do not meet rigid transparency standards will adversely affect decision-making processes."⁶

Accessed July 18, 2018.

⁶ Berg, J., P. Campbell, V. Kiermer, N. Raikhel, and D. Sweet. 2018. Joint statement on EPA proposed rule and public availability of data. *Science*, April 30. DOI: 10.1126/science.aau0116. Online at <http://science.sciencemag.org/content/early/2018/04/30/science.aau0116/>. Accessed July 30, 2018.

Among those not consulted in the crafting of this rule were the National Academies of Sciences, Engineering, and Medicine (NASEM), though EPA nonetheless frequently cited the NASEM in the proposed rule. EPA's reliance on the NASEM is misrepresented, as the Academies have held several committee meetings and carried out a series of reports detailing how scientific literature can be evaluated transparently without the full disclosure of underlying datasets.⁷ In a comment on the rule, the NASEM urged EPA to seek objective and expert guidance in evaluating scientific standards at EPA and offered itself as an independent review body.⁸

Likewise, the Bipartisan Policy Center (BPC) clarified in a comment to the agency that “the proposed rule is not consistent” with its report on the use of science in policymaking that EPA cited in “substance or intent.”⁹ BPC supports enhanced transparency, but “the report never suggested excluding studies from consideration in developing regulation if data from those studies were not publicly available.”¹⁰

The damage inflicted by this rule would have far-reaching consequences beyond undermining EPA's scientific research processes. It would weaken public health and environmental protections that keep people safe from toxic chemicals and hazardous pollution, and would ultimately mean less protection for communities who already bear the brunt of environmental contamination and associated health impacts.

Decision makers and the public need access to the best-available scientific evidence, and our health and safety depend on using that valuable information to make regulatory decisions. It is critical that as acting Administrator you follow through on your pledge to “seek the facts,” by withdrawing this flawed proposal that would politicize science and prevent the agency from fulfilling its mission.

Emily,

Could you add this to the meeting invitation for the SAB prep discussion tomorrow at 4:15. Thank you!

Draft agenda

1. Preparation & Coverage

- a. Scene Setting & Review of Regulatory Actions (Thurs. 5/31, 3:15-5:00)(see tables of actions below & recommendations from SAB WG in 3rd column)

SAB Discussions about EPA Planned Actions and their Supporting Science

- Public Comments
- Presentation from the Work Group Chair

- Discussion
- Disposition of the Planned Actions

Dr. Michael Honeycutt

Registered speakers

Dr. Alison Cullen,
Chair, SAB Work Group on EPA Planned Actions for SAB Consideration of the Underlying Science
SAB Members

- b. Coverage options and possible supplementation of prior Q&As

2. Review/Planning as it relates to other Agenda sessions

3. Next steps

Tables – Summary of Proposed Actions that the SAB WG Considered for Additional SAB Comment on the Supporting Science

Spring 2017

Deliberative Process / Ex. 5

Deliberative Process / Ex. 5

Attachments/Background (for purposes of discussion, focus is mostly with the SAB Agenda though other items below include detailed background for which we also have some original materials in Word files)

1. SAB Agenda
2. Spring 2017 SAB WG Memo (including recommendations for SAB review of actions & associated background – templates on each action, SAB WG Qs & Answers in response at attachments B & C)
3. Fall 2017 SAB WG Memo (& associated background)
4. SAB WG Memo on Scientific Transparency action
5. SAB Best Practices

Note FYI that public comments are also being posted to the SAB Meeting site:

Subject: Morning Energy, presented by Anheuser-Busch: Zinke's turn on the Hill — EPA watchdog: Aides slow to turn over docs — House to take up Yucca bill today

By Kelsey Tamborrino | 05/10/2018 06:01 AM EDT

With help from Eric Wolff, Alex Guillén, Anthony Adragna and Jennifer Haberkorn

ZINKE HEADS TO THE HILL: Interior Secretary Ryan Zinke faces his Senate appropriators today to discuss his department's budget request for fiscal 2019. Expect Democrats to bring up familiar topics, such as his plans to reorganize the department and last year's decision to shrink national monuments in Utah. Subcommittee ranking member Tom Udall plans to tell Zinke that until courts weigh in on whether his move was legal, "I believe that moving forward with land management plans that will open these iconic areas to development is reckless."

Subcommittee Chair Lisa Murkowski may be interested in hearing more about Zinke's plans for oil and gas development in Alaska, after Interior kicked off its environmental review of potential drilling in part of the Arctic National Wildlife Refuge thanks to language she got included in last year's tax bill. And Sen. Lamar Alexander, another member of the subcommittee, can follow up on the maintenance backlog for the national parks, an issue the two discussed when Zinke visited Tennessee last week.

Ahead of the hearing, the Coalition to Protect America's National Parks is sending a letter to Zinke, with signatures from current and former employees of the National Park Service, calling on him to support permanent reauthorization of the Land and Water Conservation Fund, an issue with support in both parties.

If you go: The Senate Appropriations Interior-Environment Subcommittee hearing begins at 9:30 a.m. in 138 Dirksen.

— **But first:** Zinke will join Agriculture Secretary Sonny Perdue at USDA headquarters for an 8 a.m. briefing on the forecast for this year's wildfire season.

WATCHDOG: EPA AIDES SLOW TO SEND DOCS: EPA's internal watchdog complained last year that Administrator Scott Pruitt's aides were taking their sweet time handing over documents related to a probe into their boss' travels, new emails show. Although the standoff between the inspector general's office and Pruitt's staff was resolved a month later, the incident illustrates tensions between political appointees and career oversight officials that developed early on. The IG's office is in the process of conducting multiple reviews into Pruitt's actions.

The new emails, released under a FOIA request from California's Justice Department, show the IG's office was seeking information for its probe of Pruitt's frequent travel to Oklahoma on EPA business, Pro's Alex Guillén reports. That same probe was later expanded to include a wider swath of Pruitt's travel practices, including his first-class flights that cost more than \$100,000. (The investigation is slated to be completed this summer.)

At the time, the agency's assistant inspector general for audits, Kevin Christensen, wrote to a top career official in EPA's finance office to warn of a "potential situation" with the travel audit just two weeks after it began, the emails show. Christensen flagged messages showing Pruitt's chief of staff Ryan Jackson was

"screening" documents before releasing them to the Office of Inspector General. "This does not fit the definition of unfettered access or comply with the Administrator memo on access and providing information to the OIG," Christensen wrote to Jeanne Conklin, EPA's controller who oversees financial management and reporting. "When we are denied access to information until approved for release, it raises the question as to what is being withheld and approved for release."

The emails spotlight concerns about the lack of transparency atop the agency since Pruitt joined. And other emails released to California's Department of Justice also show career ethics officials warning Pruitt's aides about accepting industry awards and attending political events, further exemplifying internal tensions as Pruitt's external problems grow. Read more from Alex [here](#).

— **Related reporting:** Amid ongoing scrutiny, Pruitt met with industry representatives Wednesday, where a reporter asked if he still had the confidence of the White House. Pruitt said: "I think they've spoken very clearly," Bloomberg [reports](#).

WELCOME TO THURSDAY! I'm your host Kelsey Tamborrino. Bracewell's Frank Maisano was the first to correctly identify Detroit as home to the first paved roadway. Woodward Avenue carries the designation M-1 for its status as the first place to pour a 1-mile patch of concrete roadway. For today: Name the state first lady who simultaneously served as a member of the House. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

TRUMP EXTENDS OLIVE BRANCH: President Donald Trump called coal baron Don Blankenship Wednesday to exchange pleasantries and offer up congratulations for waging his campaign, POLITICO's Alex Isenstadt reports. The conversation was described as straightforward, polite and cordial, and comes days after Trump tweeted that voters shouldn't vote for Blankenship in the West Virginia Republican primary. Blankenship also published an [open letter](#) to Trump on Wednesday that in part blamed the president for his loss. "Your interference in the West Virginia election displayed a lack of understanding of the likely outcome of the upcoming general election," Blankenship wrote. But he ended with a note of optimism: "I look forward to meeting with you in the near future." Alex reported the president had also reached out to Rep. [Evan Jenkins](#), who also lost in Tuesday's primary, but had yet to connect with the Republican party's winner, Patrick Morrisey, as of Wednesday evening. Read [more](#).

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks. The zero-emission trucks will be able to travel between 500 and 1,200 miles. Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025. [Learn more](#). **

HOUSE GOES NUCLEAR: The House will take up the long-awaited [H.R. 3053 \(115\)](#), the "Nuclear Waste Policy Amendments Act of 2018," for consideration today, with votes expected between 10:45 a.m. and 11:45 a.m. The bipartisan legislation would update how the U.S. handles nuclear waste and promote development of the Yucca Mountain repository in Nevada, among other provisions. The legislation is expected to pass, although it will face a much shakier Senate reception with Sen. [Dean Heller](#) facing a tough re-election race this year. Rep. [John Shimkus](#), who introduced the comprehensive nuclear waste package, previously said he hadn't had any recent talks with Senate counterparts about potentially moving the bill across the Capitol. Still, its appearance today is a victory for Shimkus: [Greg Walden](#) told reporters this week that Shimkus had sent handwritten letters to the homes of every member of leadership during recess encouraging the bill to come up, praising his tenacity.

COURT SAYS CRA IS A-OK: A federal judge in Alaska yesterday [dismissed](#) an environmental group's lawsuit that called the Congressional Review Act unconstitutional. The Center for Biological Diversity specifically challenged the CRA [resolution](#) successfully passed by Congress last spring that nullified an Interior Department rule regarding hunting in Alaska wildlife refuges.

Judge Sharon Gleason of the U.S. District Court for Alaska, an Obama appointee, noted that both the CRA itself and this specific resolution were passed by both chambers and signed by the president, fulfilling the constitutional requirements for creating laws. Other parts of CBD's argument similarly failed to hold water. "The Court finds that even construing all the facts in favor of CBD, CBD's constitutional claims fail to adequately allege a plausible basis for relief," Gleason wrote.

SUNNY CALIFORNIA: The California Energy Commission voted unanimously Wednesday to require solar panels be installed for all newly built single-family homes and multifamily buildings less than three stories starting in 2020. A CEC study found that installing solar would increase home prices, but that would be more than offset by lower utility bills, according to the Los Angeles Times. The move has been anticipated for years and was supported by much of the home building industry. More from the LAT [here](#).

STEELWORKERS SAY YES TO RFS: The United Steelworkers are supporting Trump's recent decisions on the Renewable Fuel Standard, which include expanding sales of 15 percent ethanol fuels and having EPA and USDA workout some kind of program for biofuel credits on exported ethanol. "While it will continue to review the details, [USW] supports a deal brokered by the President that appears to address the long-running conflict between ethanol producers and oil refiners over federal biofuels mandates," the union said in a press release.

HOUSE GOP DROPS RESCISSIONS PACKAGE: House Majority Leader [Kevin McCarthy](#) unveiled the chamber's batch of [spending cuts](#) Wednesday. Similar to the White House's [request](#), the package makes cuts to Energy Department loan guarantee programs for clean energy and vehicle technologies. The bill is expected to [go directly to the House floor](#) for a vote, [Pro's Sarah Ferris reports](#). Senate GOP leaders have said they will consider the bill if and when it passes the House.

MEANWHILE IN BONN: Things aren't going as planned for the second week of climate talks in Bonn, Germany, punting further discussions to another meeting in September. The U.N. Framework Convention on Climate Change [said](#) Wednesday that there would be an additional meeting from Sept. 3-8 in Bangkok amid a stalemate centered in part around clarity on climate finance between developed and developing countries. The new date underscores the pressure negotiators are under to advance talks enough for ministers to strike a deal later this year at the COP24 in Katowice, Poland. "We need to resolve differences on finance, accounting and transparency," Alden Meyer of the Union of Concerned Scientists [told POLITICO Europe's Kalina Oroschakoff](#).

CALVERT: EPA-INTERIOR COMING SHORTLY: Rep. [Ken Calvert](#), who oversees EPA and Interior on the Appropriations Committee, told ME to expect their fiscal 2019 bill "pretty soon" as work's going well. "We're working on final details now," he said. As for the perennial question, yes, Calvert expects policy riders to be in play: "There's always riders," he quipped.

AUTOMAKERS WANT MORE FUEL EFFICIENCY: The Alliance of Automobile Manufacturers and the Global Automakers, trade associations which together represent most of the automakers who sell cars in the U.S., will tell Trump that they most definitely want increases in fuel efficiency standards, contra that zero increase preference of the Department of Transportation. They also want the federal government to work out a single national standard with California, rather than face either a bifurcated market or a long legal battle. "Automakers are deeply committed to increased fuel economy and safety measures that meet the needs of our customers, and we expect to share the importance of government policies that provide certainty to the auto sector, continue to reduce greenhouse gas emissions, reflect what consumers will buy and result in a national policy that includes California," the two groups said in a statement.

FOLLOW THE MONEY: The Environmental Integrity Project released a database Wednesday of political contributions from companies and conservative organizations that met with Pruitt between Feb. 21, 2017, and April 13 of this year. The database was compiled via EPA calendars, FEC reports and data from the Center for Responsive Politics. See it [here](#).

SAVE THE DATE: BLM scheduled meetings to discuss its plans for an environmental review of planned oil and gas leases in ANWR. Several will be held in Alaska, including one each in Fairbanks and Anchorage on May 29 and May 30, respectively. Another meeting is scheduled for Washington D.C. on June 15. For those who can't make the hearings, BLM plans to live stream the Fairbanks and Anchorage dates.

MAIL CALL! ISN'T IT IRONIC? Six Democratic senators wrote to Office of Information and Regulatory Affairs Administrator Neomi Rao on the office's review and evaluation process for EPA's proposed "secret science" proposal to ban the use of studies that don't publicly disclose all their data. "The review process and rollout of this rule appears to have been rushed and secretive — which is particularly ironic for a proposal that purportedly aims to improve agency transparency and decision-making processes," they write.

Separately, bipartisan Reps. Ryan Costello and Paul Tonko sent a letter to the National Academy of Sciences asking for its input on the proposed rule, which was discussed when Pruitt testified before the House E&C Committee. Read the letter here.

Of course, Pruitt seems pleased with the proposal: Bloomberg's Ari Natter snapped a photo of new signs at EPA that tout the agency's "Strengthening Transparency in Regulatory Science."

ROCK STARS: Access Fund and American Alpine Club are sponsoring their annual "Climb the Hill" event today with professional rock climbers and outdoor recreation advocacy groups, who will hit the Hill today to talk outdoor recreation and public lands. Sen. Maria Cantwell will attend a reception with the group at 3 p.m. in 385 Russell. High-profile members of the rock-climbing community and executives from REI, Patagonia and The North Face will attend.

QUICK HITS

— Pair of investor-pushed resolutions pass at Kinder Morgan, Axios.

— Saudis pledge to "mitigate" loss of Iranian oil exports from U.S. sanctions. But crude prices rise anyway, The Washington Post.

— Emails: Perdue's donors, agency coordinated on biomass, E&E News.

— Hugh Hewitt used his MSNBC gig to praise efforts to weaken a law that his firm's client is accused of violating, Media Matters.

— Emails show Heritage Foundation offered Pruitt flights, hotel, and talking points for its conference, ThinkProgress.

HAPPENING TODAY

8:00 a.m. — The Women's Council on Energy and the Environment discussion on "Congressional Energy and Environmental Priorities: 2018 and Beyond," 400 North Capitol Street NW

8:30 a.m. — The International Trade Administration meeting of the Renewable Energy and Energy Efficiency Advisory Committee, 1401 Constitution Avenue NW

8:45 a.m. — Peter G. Peterson Foundation holds "the 2018 Fiscal Summit: Debt Matters," 1301 Constitution Ave NW

9:00 a.m. — House Appropriations Interior-Environment Subcommittee two-part hearing on "American Indian/Alaska Native Public Witnesses," 2007 Rayburn

9:00 a.m. — The Environmental Law Institute conference on "Infrastructure Review and Permitting: Is Change in the Wind?" 601 Massachusetts Avenue NW

9:00 a.m. — The Washington Post discussion on "The Energy 202 Live," 1301 K Street NW

9:30 a.m. — Senate Appropriations Interior-Environment Subcommittee hearing on Interior's FY 2019 budget request, 138 Dirksen

10:00 a.m. — House Energy and Commerce Energy Subcommittee hearing examining the state of electric transmission infrastructure investment, planning, construction and alternatives, 2123 Rayburn

1:00 p.m. — The United States Energy Association forum on "Chemical Looping Prospective: An Advanced Approach to Coal Utilization," 1300 Pennsylvania Avenue NW

2:00 p.m. — Center for Climate and Energy Solutions webinar on "City-Utility Partnerships for a Cleaner Energy Future."

THAT'S ALL FOR ME!

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks from the pioneer in hydrogen-electric renewable technology, Nikola Motor Company. The zero-emission trucks — which will be able to travel between 500 and 1,200 miles and be refilled within 20 minutes, reducing idle time — are expected to be integrated into Anheuser-Busch's dedicated fleet beginning in 2020.

Through this agreement Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025.

"At Anheuser-Busch we're continuously searching for ways to improve sustainability across our entire value chain and drive our industry forward," said Michel Doukeris, CEO of Anheuser-Busch. "The transport industry is one that is ripe for innovative solutions and Nikola is leading the way with hydrogen-electric, zero-emission capabilities. We are very excited by the possibilities our partnership with them can offer."

EPA watchdog knocked Pruitt aides for slowing probe [Back](#)

By Alex Guillén | 05/09/2018 06:43 PM EDT

EPA's internal watchdog complained last year that Scott Pruitt's top aides were delaying handing over documents to auditors probing the administrator's travel practices, according to newly released emails.

That standoff between the EPA inspector general's office and Pruitt's team was resolved a month after the IG's staff flagged the issue and warned that the reticence to release the documents came close to impeding their probe, the emails show. But the incident highlights early tension between EPA's political appointees and the internal watchdog, which is now conducting multiple reviews of Pruitt's actions.

And it shows that concerns about the lack of transparency atop the agency since Pruitt joined have rankled people inside the agency as well as outside. POLITICO reported last week that Pruitt's political appointees were screening documents produced for public records requests related to the embattled administrator, slowing the release of information.

The new emails, released under a Freedom of Information Act request from California's Justice Department, show the IG's office was seeking information for its probe of Pruitt's frequent travel to Oklahoma on EPA business, enabling him to spend numerous weekends at his home in Tulsa.

That probe was later expanded to look at Pruitt's other travel practices, including his first-class flights that cost more than \$100,000, and it is expected to be completed by this summer. The watchdog has since opened additional probes into Pruitt's security spending, condo rental, soundproof phone booth, large raises for aides and allegations of retaliation against staff who questioned him.

Kevin Christensen, EPA's assistant inspector general for audits, wrote in September to a top career official in EPA's finance office to warn of a "potential situation" with the travel audit just two weeks after it began, the emails show. He flagged messages showing Pruitt's chief of staff Ryan Jackson was "screening" documents before releasing them to the Office of Inspector General.

"This does not fit the definition of unfettered access or comply with the Administrator memo on access and providing information to the OIG," Christensen wrote to Jeanne Conklin, EPA's controller who oversees financial management and reporting. "When we are denied access to information until approved for release, it raises the question as to what is being withheld and approved for release."

The auditors were able to obtain the documents on Pruitt's flights from the EPA's finance office in Cincinnati, even as Pruitt's staff continued to withhold them, Conklin wrote to Kevin Minoli, a career official who at that time served as EPA's acting general counsel.

"Do they not understand in the [Office of the Administrator]," Conklin asked Minoli. "Perhaps someone can speak to them and make them understand that the OIG has the documents already and they appear close to impeding the audit."

Both Minoli and Conklin stated in their email exchange that neither of them advised Pruitt's staff that they had the power to delay or withhold handing over documents to the OIG.

Minoli said in an email a week later that Jackson had delayed providing the records over concerns the audit might make public some previously redacted information, such as Pruitt's calendar and flight records. Minoli said he discussed the matter with the deputy inspector general, Chuck Sheehan, and noted the IG's office "has a long-standing practice of not using privileged information in their published work unless absolutely necessary."

An EPA spokesman on Wednesday declined to comment on the incident.

Other emails released to California's Department of Justice under the FOIA request also show career ethics officials warning Pruitt's aides about accepting industry awards and attending political events.

In March 2017, the Oklahoma-based National Stripper Well Association told Pruitt it would award him its "Industry Leader Award" at an annual gala, which was sponsored by Koch Industries. The group represents the

owners of the hundreds of thousands of small wells that produce less than 15 barrels of oil or 90,000 cubic feet of natural gas per day.

But EPA ethics official Justina Fugh noted in an email to Pruitt's schedulers, Sydney Hupp and Millan Hupp, that NSWA was registered to lobby the federal government and Pruitt would violate his ethics agreement if he accepted the honor.

The group had praised Pruitt's decision that month to halt the Obama EPA's request for oil and gas companies to provide the agency with information about methane emissions, a possible first step toward regulating pollution in those existing wells. "NSWA Got a Win at EPA Already!" touted an early March [blog post](#) by the group. It is unclear whether Pruitt's award was directly connected to that decision.

Fugh warned the Hupps that Pruitt would have to walk a fine line in accepting anything from a lobbying entity. Items with "no other intrinsic value" like a plaque may be OK, she said, but "an ashtray or coffee table book" would not be.

Pruitt ultimately appears to have accepted a plaque from the NSWA, according to a [photo](#) posted on the group's site and his own internal calendars. Another photo posted on the NSWA's Facebook page shows Pruitt [posing](#) with Koch executives.

Pruitt's Outlook calendar, released in response to public records requests, lists the topic of the speaking engagement as "acceptance of award, thank you."

EPA did not say whether Pruitt officially accepted the award from the group along with the plaque, despite Fugh's advice.

"We gave the plaque to [the Office of the Executive Secretariat] who confirmed that we could keep it," EPA spokesman Jahan Wilcox said. NSWA did not say Wednesday why it honored Pruitt.

Pruitt aides hinted to ethics officials last fall that he expected to be invited to increasing numbers of political events, which ethics officials warned raises a host of Hatch Act concerns about mixing political activities with his official duties.

Earlier in his tenure, Pruitt had decided not to attend an Oklahoma GOP fundraiser after reports revealed the event would feature a speech on EPA issues.

Last fall, Ronna McDaniel, the head of the Republican National Committee, invited Pruitt to attend an Oct. 25 fundraiser in Dallas for Trump Victory, a joint fundraising committee that funnels money to the RNC and Trump's reelection campaign.

"We will get more and more of these" invites as "political season" approaches, Jackson wrote to an ethics official.

Hatch Act restrictions would allow Pruitt to attend, but he would be barred from mentioning his EPA affiliation or asking for donations, Fugh replied. EPA could not cover his travel costs, although the agency could pay for his security detail's travel, Fugh added. Event organizers could not specifically invite guests with issues before the agency and would need to rescind invitations to anyone with business before EPA.

Pruitt ultimately appears to have skipped that fundraiser.

Emily Holden contributed to this report.

Trump calls Blankenship after pushing for his loss in West Virginia [Back](#)

By Alex Isenstadt | 05/09/2018 10:55 PM EDT

President Donald Trump connected by phone on Wednesday with Don Blankenship, the former coal baron and ex-con whose Senate candidacy he helped sink.

Trump and Blankenship spoke briefly, according to three people familiar with the discussion. The conversation was described as straightforward, polite and cordial, with the president calling to exchange pleasantries and offer his congratulations on waging the campaign.

The call came two days after Trump took to Twitter to urge West Virginia Republicans to reject Blankenship's candidacy. In the tweet, Trump argued that Blankenship, who spent a year in jail following a 2010 explosion at his Upper Big Branch Mine that killed 29 workers, would be unable to defeat Democratic Sen. Joe Manchin in November.

Trump's intervention undermined Blankenship, who had aligned himself closely with the president — so much so that he described himself as "Trumpier than Trump."

Blankenship would go on to lose the primary decisively, finishing a distant third behind state Attorney General Patrick Morrisey and Rep. Evan Jenkins.

In his remarks to supporters on Tuesday evening, Blankenship attributed his loss to the president's last-minute intervention in the contest, saying that it had halted his momentum.

"I think if there was any single factor based on the polling at different times, the debates, and all the things I saw, it was probably President Trump's lack of endorsement — I don't know what to call it, but 'Don't vote for Don' tweet," he said. "I don't know what else it would have been."

In the final hours of the race, he said he was convinced that Trump had been pushed into the intervention by Senate Majority Leader Mitch McConnell, who had aggressively opposed Blankenship.

Blankenship on Wednesday released an "open letter" to Trump in which he accused the president of spreading "fake news against me."

"Your interference in the West Virginia election displayed a lack of understanding of the likely outcome of the upcoming general election," Blankenship added. "Patrick Morrisey will likely lose the general election. It's too late to change that, but it's not helpful to do to me what others are doing to you."

The president also connected briefly with Jenkins, but as of Wednesday evening had yet to connect with Morrisey, the winner of the primary. On Tuesday, though, Morrisey spoke with Donald Trump Jr. During the call, the president's eldest son promised to be helpful.

Trump's calls on Wednesday, several Republicans said, were partly aimed at healing the wounds following a deeply divisive primary. Blankenship has yet to endorse Morrissey, who aggressively attacked him during the final days of the race.

Some in the party are concerned that the deep-pocketed Blankenship, who spent more than \$2.5 million of his own funds in the primary, could wage an effort to damage Morrissey in the general election.

DOE loan guarantee programs hit hard in White House rescissions package [Back](#)

By Anthony Adragna | 05/08/2018 11:08 AM EDT

More than \$5 billion in Energy Department loan guarantee programs for clean energy and vehicle technologies would be cut under a \$15 billion rescissions [request](#) unveiled today by the White House.

The proposal would cut \$684 million from clean energy loan guarantee programs, on top of the \$4.33 billion in proposed cuts to Advanced Technology Vehicles Manufacturing loan program [already announced](#) by the Trump administration.

"This proposed rescission would eliminate subsidy amounts that are inconsistent with the President's policies," the proposal says of cutting from the loan guarantee programs.

In addition, the package would cut \$10 million in water quality research grants, which the proposal says "are duplicative with other Federal programs."

WHAT'S NEXT: The package is expected to easily pass the House but faces a less certain fate in the Senate.

Trump spending cut package to head directly to House floor [Back](#)

By Sarah Ferris | 05/09/2018 01:03 PM EDT

House Republican leaders are moving quickly to tee up the White House's \$15 billion package of proposed spending cutbacks.

GOP leaders plan to release legislative text of [the White House's proposal](#) as early as today, a House GOP aide confirmed.

The package is expected to closely mirror the Trump administration's request, which targeted unspent dollars from years-old accounts.

It will not go through the House Appropriations Committee, another GOP aide confirmed. That sets up the bill directly for a floor vote.

Most Republicans have embraced the proposed cuts, even as some budget hawks complained that most of the savings are only on paper.

But some, like GOP Rep. Vern Buchanan of Florida, have rejected the idea of cutting \$7 billion of budget authority from the Children's Health Insurance Program.

White House officials have argued that most of the funding has technically expired and can't be used, so it would have zero impact on the program.

The CBO confirmed that point today, saying that there would be no actual cuts or coverage reductions for CHIP.

House GOP leaders unveil rescissions bill [Back](#)

By Sarah Ferris | 05/09/2018 08:28 PM EDT

House Republican leaders today unveiled a package of spending cuts, following a request from President Donald Trump this week.

The House GOP bill contains \$10.45 billion in specific cuts, including roughly \$7 billion to the Children's Health Insurance Program.

Other cutbacks in the GOP bill — including one targeting an energy program in the 2009 Obama-era stimulus bill — do not provide specific dollar amounts.

House GOP leaders will now begin whipping support for the bill, which is expected to go directly to the House floor for a vote. Senate GOP leaders have said they will consider the bill if and when it passes the House.

Under a decades-old law, presidential rescissions requests can pass the Senate with a simple majority, instead of the usual 60-vote threshold for procedural votes.

Democrats argue that Trump's bill would require the full 60 votes, however, because it targets mandatory funding, and not solely discretionary.

Subject: Morning Energy: Did Pruitt skate by? — EPA prepping Oversight docs — McConnell tries for West Virginia redemption

By Kelsey Tamborrino | 04/27/2018 06:01 AM EDT

With help from Anthony Adragna

DID PRUITT SKATE BY? EPA Administrator Scott Pruitt had a simple task Thursday: Keep his conservative backers happy — and in turn, keep the president happy. And he may have managed to do just that. While Democrats and environmentalists panned Pruitt's performance, the EPA chief, who is facing a heavy stack of ethical and spending quandaries, left most Republicans pleased enough with his performance that he's probably salvaged his job for now.

But of course, President Donald Trump has yet to weigh in on Pruitt's performance. And on a day that saw Trump's nominee for Veterans Affairs withdraw, triggering a long Trump rant on "Fox & Friends," that could be good news for the EPA chief, POLITICO's Nancy Cook reports. "As long as [Pruitt's] explanations hold and there are no crazy discrepancies or smoking gun or anything like that, I don't think that creates any red flags for Pruitt," said one Republican close to the White House, who predicted Pruitt would survive the scrutiny.

Still, Pruitt's shifting answers about what he knew about controversial raises for two close aides raised a lot of concerns that he hadn't been completely forthright during his interview with Fox News earlier this month. Under lawmakers' questioning, he acknowledged that he had authorized his chief of staff to award pay increases to his aides — but said he did not know how high they would be or that they would circumvent the White House's disapproval. That's different than what he told Fox's Ed Henry when he said he hadn't known about the raises until after the fact and that he did not know who authorized them.

Pruitt used the two hearings to blame his torrent of scandals on career staff, as POLITICO's Anthony Adragna, Annie Snider and Alex Guillén reported, while maintaining the headlines surrounding him aren't painting an accurate picture. "Let me be very clear: I have nothing to hide as it relates to how I've run the agency for the past 16 months," Pruitt said. (In case you missed it, POLITICO's Energy team has the full recap of the key moments here.)

But all in all, his critical audience of House Republicans exited two separate hearings Thursday believing that Pruitt fared well. "I found his responses credible," said Rep. Mike Simpson, a House appropriator. Meanwhile, Rep. Ken Calvert, the chairman of the House Appropriations Interior-Environment subcommittee, said Pruitt did "fine." "He answered our questions," he said. "... He's doing well, he's very professional, he's doing his job." And Illinois' John Shimkus, who chaired Pruitt's first hearing, said he thought Pruitt handled himself well and that Republican members were tough in their questions, Anthony recaps. "Some of it was accountability for policy, so I don't know what more [critics] want," Shimkus said. "I think that he answered the questions in the best way that he could answer them."

Of course, Pruitt's performance did not please everyone. "I think the opprobrium that you've generated on some of these spending decisions is actually warranted," GOP Rep. Ryan Costello, who is retiring from Congress, told Pruitt. Ana Unruh Cohen, managing director of government affairs at the Natural Resources Defense Council said the EPA administrator "demonstrated beyond any doubt that he is unqualified" to lead his

agency. "He should be fired before sundown," she said. And Rep. [Marcy Kaptur](#), ranking member of the Appropriations subcommittee that questioned Pruitt, used the term "evasive" to describe the performance. "For someone who has been in the job a year and a half, he didn't seem to command a lot of the details," she said. "... I don't think we know the full extent of what he's done yet."

WHAT COMES NEXT? Keep in mind: Pruitt's under multiple investigations that have yet to fully play out. "We have a committee that's looking into these charges and we'll have a resolution," Calvert said of Pruitt's ongoing scandals. "We'll see what comes of it." Today, for one, marks the deadline set by House Oversight Chairman [Trey Gowdy](#) in his [expanded probe](#) into the embattled EPA chief's activities. He's called for a host of documents to be delivered and interviews to be scheduled by today. An EPA official said the agency is currently in the process of providing the documents, [Anthony reports](#). The official said the documents will respond to the allegations of lavish spending and unethical conduct and may negate the need for several aides to appear for interviews.
