**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks from the pioneer in hydrogen-electric renewable technology, Nikola Motor Company. The zero-emission trucks — which will be able to travel between 500 and 1,200 miles and be refilled within 20 minutes, reducing idle time — are expected to be integrated into Anheuser-Busch's dedicated fleet beginning in 2020.

Through this agreement Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025.

"At Anheuser-Busch we're continuously searching for ways to improve sustainability across our entire value chain and drive our industry forward," said Michel Doukeris, CEO of Anheuser-Busch. "The transport industry is one that is ripe for innovative solutions and Nikola is leading the way with hydrogen-electric, zero-emission capabilities. We are very excited by the possibilities our partnership with them can offer."

Stories from POLITICO Pro

Failed legal argument against California car rules gets second wind under Trump Back

The Trump administration's plan to stymie California's tough greenhouse gas emissions for cars is about to trigger an epic legal fight — and the White House appears to be planning to use the same strategy that failed to block the state's rules a decade ago.

California's supporters, however, hope any courtroom battles will play out the way they did when the auto industry tried to prevent California and other like-minded states from setting stricter emissions limits than those pushed by EPA: with a pair of resounding legal defeats.

"It's sort of déjà vu because it's going to be basically round two," said Kevin Leske, who was an assistant attorney general in Vermont in 2007 when the state fought off an industry lawsuit seeking to block the greenhouse gas rules for cars.

"Here we are, 10 or 11 years later, basically facing the prospect, it sounds like, of the Trump administration making the same arguments that the auto industry did," added Leske, now a law professor at Barry University in Florida.

If finalized, the move would be one of the biggest regulatory rollbacks of the Trump administration, and it could go even further than what automakers have asked the White House to do. And its advocates say despite the previous legal setbacks, they hope to take the issue to a higher court, something they were denied in the previous battle when a political deal ended the conflict.

In the meantime, California, which has already spearheaded a lawsuit over EPA's April decision to weaken the standards, is already preparing for a major regulatory break with the Trump administration. The state's Air Resources Board on Monday asked for public input for regulatory language that it will not consider cars complying with a weakened federal standard to be acceptable in California.

The legal issue will center on the interplay between the long-standing fuel economy standards known as the Corporate Average Fuel Economy, which is issued by the National Highway Traffic Safety Administration under the 1975 Energy Policy and Conservation Act, and the relatively new greenhouse gas emissions standards enforced nationally for the first time under the Obama administration.

In requiring a national CAFE standard, Congress barred states from issuing their own laws or regulations "related to" fuel economy standards. But California's novel approach to regulate carbon dioxide emissions via the state's special authority under the Clean Air Act gave it significant leverage to force car makers to meet stricter rules.

In order to avoid a patchwork of different regulations between California and its allies and the rest country, the Trump administration is expected to seek to nullify the waiver EPA granted California in 2009 allowing it to enforce its own rules. EPA has never tried to revoke a waiver, and legal observers note the law does not explicitly grant EPA such authority.

But the Trump administration is expected to try to circumvent any questions around revoking the waiver by arguing that EPCA preempts California from enforcing its auto emissions standards — essentially the same argument automakers and dealers deployed in multiple lawsuits over a decade ago.

A May 1 letter from Sen. Tom Carper to EPA and DOT says the draft proposal would adopt that EPCA preemption argument.

That strategy fell short first time around, when a California judge concluded that greenhouse gas standards are too different from fuel economy regulations to fall under EPCA's "related to" preemption language. Emissions

may be closely correlated to fuel efficiency, he ruled, but factors like air conditioning usage and credits for electric vehicles mean that the pollution rules are not explicitly aimed at fuel economy, and thus are not preempted

Meanwhile, a Vermont judge also ruled in 2007 that since EPA had approved the California standard under the Clean Air Act waiver, it becomes a proper government motor vehicle standard, which EPCA requires DOT to take into account when setting fuel economy targets. Congress "could not have intended that an EPA-approved emissions reduction regulation did not have the force of a federal regulation," the judge wrote.

Those two legal rulings with the span of a few months would seem to be formidable hurdles for any EPCA preemption argument. And they case gets even more difficult for the Trump administration when the Supreme Court's landmark ruling in that year's *Massachusetts v. EPA* is added in. In that case, the majority said that fuel economy and greenhouse gas rules may "overlap," but could both be administered in a way that would "avoid inconsistency."

"I think it's fair to say this ground has been trod before and it's not looking good if Pruitt's EPA trots out this EPCA preemption argument again," said Sara Colangelo, the environmental law and policy program director at Georgetown University.

Congress also passed two major Clean Air Act updates after EPCA, in 1977 and 1990, that expanded California's special powers and didn't address the exemption at all, a move Colangelo said "really signals that they intended California to maintain this special position as the laboratory for advancing pollution controls in the emissions arena."

NHTSA declined to address the preemption issue, but said in a statement that its "top priority" is safety and that the administration "must also consider economic practicability." A spokesman for California's Air Resources Board said that the preemption proposal "would harm people's health, boost greenhouse gas pollution and force drivers to pay more money at the pump for years."

Those two previous court losses are not slowing down conservatives pushing the Trump administration to adopt the preemption argument now.

Undeterred, a coalition of industry groups wrote to EPA Administrator Scott Pruitt in March urging him to revoke California's waiver by concluding it is preempted by EPCA.

"Even though these two lower courts have weighed in, I think there's opportunity now for the lawsuits to move on to a higher level," Patrick Hedger, the policy director for the FreedomWorks Foundation, a conservative advocacy group.

He added that no higher court ultimately addressed the issue. Appeals in both cases were dropped as part of the single national standard deal reached between the Obama administration, California and automakers. Hedger noted that the Supreme Court's *Massachusetts v. EPA* ruling was not specifically about EPCA preemption.

Marlo Lewis, a senior fellow at the Competitive Enterprise Institute, believes the best way to win the preemption argument is to focus on the high degree of overlap to show the two standards are "related" under EPCA

"You and your dad are different people. Are you not related?" Lewis said. "The idea that they're not related because they're not identical is just pure rhetorical flimflam."

Like many other deregulatory actions, this proposal would substantially benefit the energy-producing that voted for Trump.

For conservatives, blocking California's climate change authority is the ultimate goal, since the Democratic hold on state politics and California's size mean its aggressive action on climate change has an outsize influence on the rest of the nation.

"I think this is one step in basically saying, 'Look, we're not going to allow California on this issue or any others in the future to continue to supersede federal policy on these issues and basically impose their standards on the entire country just because of the size of the market," said Hedger.

Halting fuel economy standards at 2020 levels would mean needing roughly 2 billion barrels more oil over the lifetime of cars built from 2021 to 2026, said David Cooke, a senior vehicles analyst at the Union of Concerned Scientists. And that's not counting the longer-term demands that would be caused for future model years that would start with lower targets because of this potential freeze.

Pruitt sought tight control of events even on friendly turf [Back](#)

By Anthony Adragna and Emily Holden | 05/08/2018 06:38 PM EDT

EPA Administrator Scott Pruitt and his staff went to great lengths to avoid unscripted questions when he toured the country speaking to industry groups, and even a seemingly friendly ice breaker can be deemed unacceptable.

"How often do you get back to Oklahoma?" the top official from the Iowa Association of Electric Cooperatives planned to ask Pruitt when he addressed the group last December, according to internal emails that were recently made public.

That question was crossed out when an EPA staff member sent back a proposed list of questions for Pruitt's "fireside chat" with Chuck Soderberg, the association's executive vice president. Tate Bennett, EPA's associate administrator of public engagement, did not explain why that and another question had been removed, but at the time of his Nov. 29 email the administrator was already [facing questions](#) over his travel practices. A few months earlier, EPA's inspector general had [launched an investigation](#) into whether the agency had sufficient policies in place to "prevent fraud, waste and abuse with the Administrator's travel that included trips to Oklahoma."

The [emails](#) among Bennett, other EPA staffers and representatives of the Iowa cooperatives were included in the thousands of documents obtained by the Sierra Club through a public records lawsuit. They reveal a pattern of Pruitt and his staff working to limit access by independent journalists, pre-screen questions from friendly interviewers and coordinate his message with lobbyists ahead of gatherings with conservative or industry groups.

Ahead of the Iowa event, the co-op association's director of government relations, Kevin Condon, confirmed that neither his group nor EPA would issue a media advisory, and they would cancel a press gaggle but still host an interview with the group's internal Living with Energy in Iowa magazine.

That publication also got questions [pre-approved](#) by EPA staff.

"Let me know if any of these give you heartburn," said Erin Campbell, the co-op group's director of communications. "This would be a friendly interview environment and we're keeping the conversation focused on Iowa consumers."

In another instance, before Pruitt spoke at a U.S. Chamber of Commerce event in June, EPA received a list of 10 proposed questions from the head of the group's energy institute, Karen Harbert. They touched on his regulatory philosophy, his efforts to rollback rules, and whether co-owning a minor league baseball team taught him lessons useful for running a federal agency. EPA staff did not appear to object to Harbert's proposed list.

When Pruitt was slotted to speak at a Texas Oil and Gas Association conference in October, EPA staff asked for a Q&A format with a representative of the group, rather than have the administrator take three pre-screened questions from the crowd.

EPA aides asked for the change in plans after being made aware that four reporters would be attending from the Houston Chronicle, Bloomberg BNA and Reuters.

Bennett wrote that after updating Pruitt that the media would attend, "he'd like to respectfully request that the entire format now be Q&A with two chairs on stage." She also shared a list of questions the moderator could ask, including on regulatory rollbacks, on what Pruitt would consider "true environmentalism" and on what his relationship was like with the president.

"What has it been like to run such a newsworthy agency? More difficult than you imagined?" the last question read.

And in at least one instance, a lobbyist for a group Pruitt was set to address offered to help write his speech for him. Before Pruitt and an entourage of eight staffers and security agents traveled in November to Kiawah Island, South Carolina, for a speaking engagement with the American Chemistry Council, the group's lobbyist Bryan Zumwalt asked a scheduler who to contact to help write Pruitt's speech.

"Who in your sop (sic) should I be working with to help prepare Administrator Pruitt's talking points/speech? Figure someone there might like the help on key areas to discuss," he said.

The scheduler, deputy White House liaison Hayley Ford, replied that Millan Hupp, director of scheduling and advance, and Bennett could assist.

Trump plan leaves biofuel makers cold [Back](#)

By Eric Wolff | 05/08/2018 06:48 PM EDT

President Donald Trump's latest bid to strike a deal on biofuels on Tuesday appeared to win over oil refiners, but a plan to allow ethanol exports to qualify for credits under the federal program left biofuel producers irate.

Trump gave ethanol producers two big victories at the White House meeting by reiterating his promise to allow 15 percent ethanol fuels year-round and rejecting a price cap on the credits, called Renewable Identification Numbers, that are used to prove compliance with the Renewable Fuel Standard. But ethanol producers balked at

the plan to have EPA Administrator Scott Pruitt and Agriculture Secretary Sonny Perdue set up a system to allow ethanol exports to receive RINs.

"The notion of allowing exported ethanol to count toward an oil company's RFS obligation is extremely problematic," Bob Dinneen, president and CEO of the Renewable Fuels Association, said in a statement. "In no way will that ever be acceptable or considered a win for our industry."

But the Trump administration said it has found the right balance between competing parts of its electorate.

"After several meetings and input from stakeholders on both sides, President Trump is pleased to announce that a final decision has been made that allows E15 to be sold year-round, while providing relief to refiners," White House spokeswoman Lindsay Walters said in a statement. "This outcome will protect our hardworking farmers and refinery workers. The President is satisfied with the attention and care that all parties devoted to this issue."

Refiners backed the idea, although they were wary of a separate proposal to allow EPA to consider requiring large oil refineries to take on the ethanol-blending requirements the agency lifted from small refiners by issuing dozens of compliance waivers.

Sen. Ted Cruz (R-Texas) emerged from Tuesday's meeting calling the deal a "win-win." Refiners have been pressing for years to change the program to lower compliance costs that they say are eating away at their profits.

"President Trump brought together two sides that thought a deal couldn't be reached and he found a 'win-win' solution to one of the most intractable regulatory problems facing the nation — a problem that has been neglected for years," refiner Valero Energy said in a statement.

The group of independent refiners pushing for changes, led by Valero, Carl Icahn's CVR and some Philadelphia-area refiners, had previously sought a cap on RIN prices in exchange for supporting an increase in the sales of E15.

At Tuesday's meeting, the seventh so far held by the White House, a source said Trump agreed to definitively reject any price cap, but he also asked Pruitt and Perdue to work out a plan for how exports could ease price pressure on RINs. Currently, ethanol that is shipped abroad is stripped of the RINs that can be used to meet a refiner's RFS obligation. Sources who work with refiners say preserving those credits would increase the supply and drive down prices for refineries.

"Because biofuels exports are a long-time major objective of the farm community, allowing export RINs is literally the anticipated win-win solution, obviating the need for more direct cost containment devices," said a refining industry source close to discussions.

But ethanol producers, who have been increasing their exports in recent years, complain that allowing those shipments to earn RINS would undermine the biofuel program's goals.

"Pursuing a path that includes RIN credits on export gallons would violate the letter and spirit of the RFS, serving the interests of oil refiners who have already benefited from Administrator Pruitt's unprecedented RFS volume waivers at the further expense of America's farmers," Kevin Skunes, president of the National Corn Growers Association, said in a statement.

Sources said Tuesday's meeting included a lengthy discussion about whether EPA could potentially reallocate the 1.2 billion gallons of ethanol demand the industry says has been exempted under the dozens of compliance waivers the agency has granted to small refineries. One source said Pruitt expressed openness to shifting those gallons to large refiners, something the refiners opposed. But that reallocation discussion got tied up with the

idea of export RINs, and Pruitt and Perdue left the White House with instructions to develop some kind of proposal.

"There was discussion about how to reallocate the waived obligations so that demand for biofuels wouldn't be hurt," Sen. [Chuck Grassley](#) (R-Iowa) said in a statement. "While details weren't decided, I look forward to reviewing a plan being developed by Secretary Perdue and Administrator Pruitt. Any fix can't hurt domestic biofuels production."

Republican Sen. [Pat Toomey](#) of Pennsylvania also expressed reservations about the vague promise of changes to the program.

"The proposal discussed at our White House meeting today might result in lower RIN prices, which would relieve this artificial burden — but even that is not clear until details are established," he said in a statement.

Even as the White House has pushed for a deal, Sen. [John Cornyn](#) (R-Texas) and Rep. [John Shimkus](#) (R-Ill.) have been leading efforts in Congress to overhaul the program. Shimkus and his staff have said in the past that administrative changes to the program would undermine their effort, though they appear to be moving full-steam ahead for now.

"Executive actions aren't a substitute for legislation," said Shimkus spokesman Jordan Haverly. "The only path to an enduring and equitable deal for farmers, refiners, ethanol producers, automakers and consumers — especially one that won't spend more time in court than on the books — is through Congress. Those legislative efforts remain ongoing."

Trump's latest strike against regulations: His infrastructure plan [Back](#)

By Annie Snider and Anthony Adragna | 02/16/2018 05:01 AM EDT

President Donald Trump's infrastructure plan would trigger one of the most significant regulation rollbacks in decades, benefiting not just roads and bridges, but businesses ranging from coal mines to homebuilders to factories.

The blueprint the White House released this week would eliminate the Environmental Protection Agency's authority to veto the Army Corps of Engineers' wetlands permits, a power that the EPA wielded during the Obama administration to block a controversial mountaintop coal mine in West Virginia. Industrial facilities like coal plants and steel factories could get 15-year Clean Water Act pollution permits — up from five years — that would be automatically renewed. For some infrastructure permits, the deadline for opponents to file legal challenges would shrink from six years to 150 days.

The proposed revisions to some of the nation's bedrock environmental regulations are drawing heavy criticism from congressional Democrats — including in the Senate, where Republicans would need at least nine extra votes to enact Trump's plan. Environmental groups say the ambition of the plan's deregulation push contrasts with the relatively meager amount of federal money the White House is proposing to contribute toward the \$1.5 trillion total.

"This isn't an infrastructure package," said Melissa Samet, an attorney with the National Wildlife Federation. "This is an all-out attack on longstanding environmental protections that have done a lot of good for this country."

Republicans and business groups have long complained that the federal government's often cumbersome permitting process, governed by laws Congress enacted decades ago, creates unnecessary delays for projects. "We built the Empire State Building in just one year," Trump said in his State of the Union address last month. "Is it not a disgrace that it can now take 10 years just to get a permit approved for a simple road?"

Supporters of Trump's plan are happy the White House is pushing for changes.

"We're very pleased with the permitting provisions," said Ross Eisenberg, a vice president at the National Association of Manufacturers. "Even some of them being signed law would be a major improvement. We don't want to blow up the process. We just want it to go faster."

Senate Environment and Public Works Chairman John Barrasso (R-Wyo.) said he hopes Democrats will come around.

"You're never going to win over every obstructing Democrat, but they've got to realize that projects have been slowed down in their states," Barrasso said.

But Democrats say the nation's real infrastructure problem is money — and the Trump proposal calls for just \$200 billion in federal investments over the next decade for needs including roads, bridges, airports, water plants, veterans' hospitals and rural broadband service. And they questioned whether Trump's aim is really just to make regulatory reviews more efficient.

"The president's contentions are not to streamline a process, but to compromise needed environmental and public health issues," Sen. Ben Cardin (D-Md.) told reporters.

Some kind of environmental streamlining has been a part of most of the major infrastructure measures Congress has passed in recent years. Provisions in the 2012 highway bill and a 2014 water bill aimed to get agencies to coordinate their permit reviews more efficiently and impose consequences for delays.

Supporters of those changes included then-Sen. Barbara Boxer (D-Calif.), an environmental stalwart, who argued that the streamlining amounted to common sense despite the opposition of some environmentalists. Many of those provisions have yet to take effect, however.

Trump's infrastructure proposal would go much further, setting strict deadlines for reviews and curtailing EPA's say over projects.

For instance, Trump has touted the proposal's two-year limit for agencies to issue final permitting decisions, including a strict 21-month limit on analyses done under the National Environmental Policy Act of 1970, one of the nation's foundational environmental laws.

The law requires federal agencies to make a public estimate of the environmental impacts when the federal government spends money or makes a permitting decision, although nothing in the law requires agencies to limit environmental damage. Repeated environmental studies under NEPA were one factor that contributed to the Obama administration's nearly seven-year review of the Keystone XL oil pipeline, a project Trump has pushed to revive this year.

Under Trump's proposal, agencies would be required to complete environmental reviews in no more than 21 months. Anyone seeking to challenge the permits would have just 150 days to sue, instead of the current six years.

Industry groups argue the act's long statute of limitations for permit challenges leaves a cloud of uncertainty over projects. But Samet, the National Wildlife Federation attorney, said 150 days runs by quickly when challengers have to track down documents that regularly run hundreds of pages, decipher them, find experts to analyze the data, hire lawyers and scrounge up the money to cover legal costs.

The result, she said: "Bad projects will move forward. There'll be nothing to stop them."

Trump's plan would also deliver on a long-sought Republican goal of curbing EPA's authority under the Clean Water Act's wetlands program — a change that would have sweeping effects not just for infrastructure projects but for nearly any kind of development.

The blueprint would remove EPA's authority to oversee the Army Corps of Engineers' determinations about which streams and wetlands are subject to Clean Water Act protections. And it would take away the EPA's ability to veto dredge-and-fill permits that it decides would cause undue harm to the environment.

EPA has used that veto authority only 13 times since the Clean Water Act was enacted, including with its 2012 reversal of a Army Corps permit for the Mingo Logan mountaintop coal mine in West Virginia — a decision that angered the coal industry's supporters in Congress. Most of the other occasions when it used that power came during Republican administrations.

Trump's proposal would also extend pollution discharge permits under the Clean Water Act from five years to 15, and allow them to be automatically renewed as long as "water quality needs do not require more stringent permit limits." Those changes that would apply not only to municipal wastewater treatment plants but also to industrial facilities.

The plan also calls for eliminating a section of the Clean Air Act that requires EPA to review, comment on and rate other agencies' environmental impact statements.

While the proposal may allow construction on projects to get started faster, it might end up creating bigger problems in the end, argued Kym Hunter, an attorney with the Southern Environmental Law Center. She said a narrower NEPA review wouldn't just keep potential environmental problems from coming to light, but it would also keep the public in the dark about whether a project would live up to its promises.

"NEPA is about taking that hard look," Hunter argued. "When it was promulgated in 1970, the idea was if you think about what you are doing you're likely to make a better decision. This [Trump proposal] would just encourage agencies to rush forward without being thoughtful, without being careful."

Trump's plan also attempts to limit the ability of courts to halt work on projects while lawsuits proceed. But that could backfire too, Hunter said, if it keeps courts from halting an ill-conceived project until after a government body has started spending money and taking on debt.

Sen. Tom Carper of Delaware, the top Democrat on the Environment and Public Works Committee, didn't dismiss the idea of making updates to the decade-old laws. But if the administration's goal is to weaken environmental regulations, he said, "we're not going to get very far."

Trump's proposed regulatory rollbacks left out of Senate infrastructure bill [Back](#)

By Annie Snider | 05/08/2018 06:44 PM EDT

The first major infrastructure bill introduced in Congress since President Donald Trump took office ignores virtually all of the big-ticket deregulatory proposals the White House laid out in its blueprint earlier this year.

Chief among Trump's complaints about the country's infrastructure system is the amount of time it takes to get environmental permits. The package the White House [unveiled](#) in February included a meager \$200 billion in federal funding for infrastructure, and instead focused on a number of so-called environmental streamlining provisions. Among them: proposals to eliminate the EPA's authority to veto the Army Corps of Engineers' wetlands permits and reduce the length of time opponents have to file legal challenges to permits from six years to 150 days.

But none of those provisions made it into what stands to be a multibillion dollar water resources measure introduced by top Republicans and Democrats on the Senate Environment and Public Works Committee on Tuesday.

That bill, dubbed America's Water Infrastructure Act of 2018, is so far the most significant step lawmakers have taken to help fulfill the president's marquee campaign promise to revitalize the country's transportation arteries. And in a bid to have a feather in their caps to take home before the 2018 midterm elections, lawmakers in the upper chamber are charting a bipartisan course with the measure.

"We focus on the 80 percent where we have general agreement, and we're going to get something done," Sen. [Tom Carper](#) (D-Del.), the top Democrat on the panel and a cosponsor of the measure, told reporters.

The House Transportation and Infrastructure Committee is working on its own water resources bill that also could be released this month, and members are pursuing a bipartisan approach, too, as they have historically.

The Senate bill is sidestepping battles over the nation's foundational environmental laws, including the National Environmental Policy Act and the Clean Water Act. Republicans and business groups fault those laws for delays and skyrocketing costs — "Is it not a disgrace that it can now take 10 years just to get a permit approved for a simple road?" Trump asked in his State of the Union address in January — but Democrats and environmentalists defend them as critical protections.

Instead, the bill's authors set their sights on a suite of more practical changes at the Army Corps of Engineers — one of the government's most red-tape-laden bureaucracies that just about every lawmaker loves to hate.

The bill includes dozens of provisions aimed at making the agency more transparent and responsive to Congress and the communities it works with to build projects. It would make a major change to the way the Army Corps budgets, in an effort to help projects that are important to states but aren't competing well for scarce federal dollars under the current approach. And it would create a board related to water storage projects that an environment committee aide said is aimed at helping communities understand early on whether their project will be able to get a permit.

The measure also includes a number of drinking water and wastewater provisions, issues that became a major component of the last such measure in 2016, when an aid package to help Flint, Mich., recover from its lead

contamination crisis was included. The new Senate bill includes provisions to help small and rural water utilities with technical assistance, allow communities to use federal drinking water dollars to protect their water sources, and to help communities balance multiple costly wastewater upgrade requirements at the same time.

The meat of the bill is six new project authorizations for the Army Corps, including a ship channel extension project in Texas, flood control projects in New York and Hawaii, and hurricane protection projects in Florida and Texas. The bill would also increase the amount that can be spent for the Savannah Harbor expansion project, a top priority for Georgia's senators, and allow more water to be stored at a key Wyoming reservoir.

And it's not just Trump's environmental permitting changes that senators rejected in the bill; they also responded to the White House's past proposals to eliminate or significantly cut a popular Great Lakes restoration program by increasing its authorization. The bill would also require EPA to open a new program office for the Long Island Sound, where the Trump administration also proposed eliminating funding.

Asked Tuesday how work on the the House's measure is coming, Transportation Committee Chairman [Bill Shuster](#) (R-Pa.) said "good."

But one fault line is already emerging between the two chambers.

Shuster has backed a proposal from his water resources subcommittee chairman, Rep. [Garret Graves](#) (R-La.) to move the Army Corps of Engineers out of the Pentagon and to another agency like the Department of Transportation or the Interior Department. But an EPW aide said that both Republicans and Democrats in the Senate have concerns with the idea; their bill would instead mandate a study by the National Academy of Sciences into the structuring of the Army Corps.

"We're trying to pass a bipartisan bill and I think that would make it very difficult to do with the limited amount of time that we have," the aide said.

Top takeaways from the first big primary of 2018 [Back](#)

By Steven Shepard, Elena Schneider and Scott Bland | 05/09/2018 01:13 AM EDT

Republicans can exhale now.

Convicted coal magnate Don Blankenship's surprise third-place finish in Tuesday's West Virginia GOP Senate primary sidestepped yet another debacle for the party after consecutive meltdowns in special elections in Alabama and Pennsylvania. Instead, party leaders celebrated state Attorney General Patrick Morrisey's win, which capped the first multi-state primary of 2018.

The night saw Republicans pick three of the 10 candidates who will take on Democratic senators in states President Donald Trump won, and the first House incumbent go down in a primary in 2018.

Here are POLITICO's seven takeaways from Tuesday:

1. Republicans averted catastrophe, but victory in West Virginia is far from assured.

A Blankenship nomination might well have extinguished GOP hopes of toppling Democratic Sen. Joe Manchin, despite the state's heavy Republican electorate. Blankenship was living in a Phoenix halfway house this time last year, after his conviction for conspiracy to skirt mine safety rules after an incident claimed the life of 29 miners at one of his facilities. He called Senate Majority Leader Mitch McConnell "Cocaine Mitch," and made racially charged comments about McConnell's family.

Morrisey is someone national Republicans can embrace. National Republican Senatorial Committee executive director Chris Hansen said in a statement Tuesday night that Morrisey will "fight for conservative values" and predicted his victory over Manchin in the general election.

But Morrisey enters the race with his own baggage — even if it's nothing like Blankenship's. Morrisey used to be a Washington lobbyist, and Morrisey's wife still is one. Also, Morrisey ran for Congress in 2000 — in New Jersey.

Rep. Evan Jenkins, who finished second on Tuesday night, tried to level those attacks. But the punches didn't land with Blankenship's circus-like candidacy stealing the spotlight.

With Blankenship fading into the distance, Manchin can contrast his folksy, "Pepperoni Roll," West Virginia affect against Morrisey's Jersey accent and D.C. "swamp" ties. Republicans will fire back, alleging that Manchin isn't the aw-shucks bipartisan he claims to be and doesn't stick up for Trump, who is very popular in the state.

2. Words alone can't earn the Trump mantle.

Reps. Luke Messer and Todd Rokita spent the final week of the GOP Senate primary in Indiana trying to convince voters that Mike Braun — the businessman and former one-term state representative who had surged to the front of the field on an outsider message — wasn't a reliable conservative. They cited Braun's participation in Democratic primaries for more than three decades.

But Braun easily defeated both Messer and Rokita because his outsider message, in contrast with his two D.C. insider rivals, resonated more than his Democratic past. (Braun said he only voted in Democratic primaries to influence local elections, but Messer and Rokita painted that as a lame excuse.)

Braun's argument was easier to make after Trump's 2016 presidential campaign. Trump's opponents in the GOP primaries needed the billionaire for his past donations to Democratic candidates, or his past conservative apostasies on issues like abortion and universal health care. Trump parried those attacks, barely breaking a sweat.

Ultimately, as much as Rokita (who donned a red "Make America Great Again" hat in his ads) or Messer (who talked up Trump for a Nobel Peace Prize) tried to claim the Trump mantle, Braun seemed more like the real deal. He hit Messer and Rokita for being attorneys who never practiced law, instead getting into politics at a young age. And Braun, who will now try to unseat Democratic Sen. Joe Donnelly, said he was the only candidate who had signed the front of a paycheck, while his opponents had been endorsing government checks for most of their careers.

3. House members went down hard.

It was a bad night for House members running statewide: Jenkins lost to Morrisey by more than 5 points. Rokita and Messer finished even further behind Braun.

Rep. Jim Renacci, who still won the GOP nomination to face Sen. Sherrod Brown in Ohio, failed to win a majority of the vote in the primary, despite endorsements from Trump and the state Republican Party.

For a party led by a first-time-candidate-turned-president, it's not surprising that Congress isn't the ideal springboard to higher office. But the GOP is relying on other House members to maintain its Senate majority — whether it's Martha McSally in Arizona, Marsha Blackburn in Tennessee or Kevin Cramer in North Dakota.

And for members facing competitive statewide primaries — think McSally, Kristi Noem for governor in South Dakota, Raul Labrador for Idaho governor or Diane Black for Tennessee governor — they may find their congressional résumés are more anchors than propulsion for their candidacies.

4. The first incumbent falls. Will others join?

Rep. Robert Pittenger (R-N.C.) became the first incumbent member of Congress knocked out in a primary in 2018.

Pittenger tried to align himself closely to Trump, touting in his first TV ad that he was the "strongest supporter" of the president. But Mark Harris, a pastor who nearly beat Pittenger in 2016, successfully tagged Pittenger as a part of the "Washington swamp." Republicans in primaries across the country are questioning their opponents' pro-Trump bona fides, a strategy that proved effective here.

Pittenger's loss surprised national and local Republicans, who expected the congressman to survive the primary challenge. But Harris' campaign said Pittenger's "votes didn't match his rhetoric," pointing to his support for the omnibus spending bill in March, said Andy Yates, a spokesman for the campaign. (Harris, a social conservative, said he planned to join the House Freedom Caucus.)

It's not clear that there's a long list of Pittengers about to be swept away in primaries. Still, his defeat could serve as a wake-up call to incumbents who have struggled to unite Republicans at the ballot box in the past, like Reps. Martha Roby (Ala.) and Doug Lamborn (Colo.).

5. Both parties got their men for Ohio governor.

It was an easy night for both parties watching the Ohio gubernatorial race. State Attorney General Mike DeWine easily dispatched Lt. Gov. Mary Taylor in the GOP primary, aided by the imprimatur of the state party.

And on the Democratic side, former state Attorney General Richard Cordray cruised past Rep. Dennis Kucinich after weeks of hand-wringing that the race against the at-times eccentric Kucinich was closer than it should have been.

In the end, Cordray — who until recently headed the federal Consumer Financial Protection Bureau — crushed Kucinich and four other challengers, even winning a greater percentage in the Democratic primary among a fractured field than DeWine earned in a one-on-one matchup with Taylor.

Both parties quickly pivoted to trying to attach a Washington brand to their opponents. The Republican Governors Association called Cordray "a Washington D.C. power-hungry insider," despite DeWine's 20-year congressional tenure.

Meanwhile, the Democratic Governors Association said DeWine was "a card-carrying member of the D.C. and Columbus swamp," despite the fact that Cordray was DeWine's predecessor as attorney general and was an Obama political appointee.

Either way, the gubernatorial election this year will be a rematch of the 2010 attorney general race. DeWine, four years removed from a loss to Brown, toppled the then-incumbent Cordray by 1 percentage point in the GOP wave year.

6. Chalk two up for the GOP establishment.

Establishment Republicans got more good news in Ohio when Troy Balderson and Anthony Gonzalez won primaries for open congressional seats.

Balderson, backed by former Rep. Pat Tiberi, beat Melanie Leneghan in two primaries in Ohio's 12th District on Tuesday — one for the November election, and one for an August special election to complete Tiberi's unexpired term.

The race was a proxy war between Tiberi — an long-time ally of former House Speaker John Boehner — and Rep. Jim Jordan (R-Ohio). Tiberi spent money on TV ads to back Balderson, while Jordan, the House Freedom Caucus co-founder, cut a competing TV ad for Leneghan that aired with help from conservative megadonor Richard Uihlein.

Gonzalez, a former Ohio State University football star, won a similar fight in the state's 16th District. He defeated state Sen. Christina Hagan, who had Jordan's backing in the race.

Both districts have been Republican strongholds — the 16th is even more solidly red than the 12th. But given Democrats' stronger-than-expected performances in special elections in the Trump era, Republicans are gearing up for a fight for the Tiberi seat over the next three months.

"There will be a very clear contrast between Troy and ... [Democratic nominee] Danny O'Connor in the months ahead," said Rep. Steve Stivers (R-Ohio), who chairs the National Republican Congressional Committee.

7. Women are dominating Democratic primaries

Women are running for federal office in record numbers in 2018 — and it looks like Democratic primary voters are poised to support those candidates like never before. There were 20 open Democratic House primaries with women on the ballot Tuesday night, and voters selected a female nominee in 17 of them.

It's a sharp turnaround from past years when female Democrats faced big hurdles in trying to win support from voters. A good number of the primary winners Tuesday night are running in heavily Republican seats with little chance of winning general elections. But they are still part of an important trend: Evidence is building that Democratic voters are tilting toward supporting women this year.

Keep this in mind as we approach primaries in big states full of battleground districts over the next two months: California and New York in June, and Pennsylvania next week.

[Pruitt fast-tracked California cleanup after Hugh Hewitt brokered meeting](#) [Back](#)

By Emily Holden and Anthony Adragna | 05/07/2018 10:12 PM EDT

EPA Administrator Scott Pruitt [placed](#) a polluted California area on his personal priority list of Superfund sites targeted for "immediate and intense" action after conservative radio and television host Hugh Hewitt brokered a

meeting between him and lawyers for the water district that was seeking federal help to clean up the polluted Orange County site.

The previously unreported meeting, which was documented in emails released by EPA under a Freedom of Information Act lawsuit by the Sierra Club, showed Pruitt's staff reacting quickly to the request last September by Hewitt, who has been one of Pruitt's staunchest defenders amid a raft of ethics controversies around his expensive travel, security team spending and a cheap Washington condo rental from a lobbyist.

Pruitt has drawn criticism from environmentalists and other critics for letting prominent GOP backers and industry groups influence the agency's agenda — even as he has kicked scientists off of EPA's advisory panels and moved to limit the kinds of peer-reviewed research it will consider when making decisions.

In many cases, the people whose advice Pruitt is heeding could be useful supporters for him in a future race for U.S. senator or president. They include GOP megadonor Sheldon Adelson, who — as POLITICO reported in March — persuaded Pruitt last year to take a meeting with an Israeli water purification company called Water-Gen that later won a research deal with the EPA.

Hewitt, a resident of Orange County whose son James works in EPA's press office, emailed Pruitt in September to set up a meeting between the administrator and the law firm Larson O'Brien, which employs Hewitt and represents the Orange County Water District. Pruitt had been planning to meet with the lawyers in California a month earlier, but cancelled the trip to undergo knee surgery.

"I'll join if the Administrator would like me too or can catch up later at a dinner," Hewitt wrote in his Sept. 18 message. Hewitt added that the issues surrounding the Superfund site were "Greek to me but a big deal in my home county."

Pruitt's aides responded within minutes and quickly confirmed an Oct. 18 meeting for the lawyers and a project director.

Six weeks after that meeting, on Dec. 8, the Orange County North Basin site appeared on Pruitt's list of 21 contaminated areas to address. A month later, Pruitt proposed listing the site on EPA's National Priorities List, a move that could make it eligible for long-term federal cleanup funding from the federal government if the responsible polluters cannot be identified and forced to pay for its remediation.

Since then, Hewitt has been a robust defender of Pruitt, dismissing his recent controversies as "nonsense scandals" on MSNBC in early April and saying his detractors were "just trying to stop the deregulation effort."

Pruitt has touted the agency's Superfund work as one of his key priorities, setting up a task force to seek to speed up the clean-up of the nation's worst contaminated sites. That task force had been headed by Albert "Kell" Kelly, a former banker and longtime friend, who departed the agency last week after news about loans he provided to Pruitt in Oklahoma, including the mortgage provided to Pruitt for a house he bought from a lobbyist when he was a state senator.

Environmental advocates have worried Pruitt's efforts to identify Superfund priority sites would bypass the process set up by Congress to ensure cleanup resources are divided fairly, and that he could focus on sites seen as important to his political supporters. And environmentalists have said Pruitt's rush to claim that contaminated properties have been remediated could risk turning them over to local governments and businesses that might pursue cheaper, inadequate solutions.

Elgie Holstein, senior director for strategic planning at the Environmental Defense Fund who has been tracking EPA's Superfund actions, said the connection to Hewitt is "not a surprise."

"The biggest fear we have is that No. 1, the administrator's political priorities and personal ambitions, political ambitions become the primary criteria for action under this program instead of science and health," Holstein said.

EPA never disclosed the meeting with Hewitt's contacts. It was listed on Pruitt's public calendar as a staff briefing. But on his private Outlook schedule, which the agency has released in response to lawsuits, it appeared as an "Orange County Superfund Site" meeting with Kelly and two other staffers. The records did not list the Californians in attendance at the meeting at EPA headquarters in Washington.

But EPA spokesman Jahan Wilcox confirmed that two lawyers representing the water district, Robert O'Brien and Scott Sommer, and the water district director of special projects, Bill Hunt, were there. A third lawyer, former federal Judge Stephen G. Larson, was forced to cancel his trip due to wildfires in California, according to emails.

"Hugh Hewitt helped arrange the meeting at the request of the water district but did not attend," Wilcox said.

Wilcox said the meeting was for the water district to "brief EPA on the Superfund site's cleanup efforts and request expedited cleanup," following a 2016 agreement with the agency to conduct a remedial investigation and feasibility study, at a cost of \$4 million over two years. Hunt did not immediately respond to a request for comment.

Hewitt in an email to POLITICO called Pruitt a friend and said he does not have a working relationship with him. He said that his firm has represented the water district and worked on the site with EPA's regional office for years but that he had not participated in that work.

Hewitt said he requested a meeting because the water district wanted to brief the new EPA team, he said, adding that he was an Orange County resident until 2016 as well as an Orange County Children and Families Commission member. He said that he "very much" wanted the Superfund site remediated as soon as possible.

According to an EPA [fact sheet](#), the Orange County site has more than five square miles of polluted groundwater containing chlorinated solvents and other contaminants across the cities of Anaheim, Fullerton, and Placentia. It includes the Orange County Groundwater Basin, which provides drinking water to more than 2.4 million residents across 22 cities, according to the agency. Those pollutants can damage humans' nervous systems, kidneys and livers, and some are considered carcinogenic.

EPA has just begun its process of studying the contamination and it has not determined which companies caused the pollution in the area. But an [administrative settlement](#) with the EPA in 2016 says the area was home to "electronics manufacturing, metals processing, aerospace manufacturing, musical instrument manufacturing, rubber and plastics manufacturing, and dry cleaning."

Hewitt also thanked EPA schedulers for working to arrange a meeting between Pruitt and the California Lincoln Clubs, which describe themselves as in favor of "limited government, fiscal discipline and personal responsibility." After some rescheduling Pruitt eventually met with representatives of the group on a trip to California in March of this year, according to his public calendar. Prominent Orange County businessman John Warner also helped to connect that group with staffers.

Pruitt and his scheduling staff have frequently sought to set up meetings with or for influential Republican figures, according to the internal EPA emails.

His team accepted an invitation for him to address The Philanthropy Roundtable at an invitation-only event at the White House for "conservative and free-market foundation CEOs and individual wealth creators to discuss

the greatest opportunities for foundations to protect and strengthen free society" and "what [Pruitt] views as unique opportunities for philanthropic action.

As POLITICO [reported](#) in March, Pruitt also met with an Indiana coal executive and Trump fundraiser who was seeking to soften a pollution rule.

Pruitt also crafted his travel schedule — including a tour of states in August — to meet with big business much like a member of Congress would during the annual recess.

In July, EPA's associate administrator of public engagement Tate Bennett was working with Pruitt to "essentially create an August recess for the EPA to be out in the states talking with individual companies & doing listening sessions within sectors," said Leah Curtsinger, the federal policy director for the Colorado Association of Commerce & Industry, in an email introducing Bennett to her husband, public affairs director at coal company Cloud Peak Energy and a fellow alum of Senate Majority Leader Mitch McConnell's office.

Annie Snider contributed to this report.

House subpanel approves cybersecurity, small-scale LNG bills [Back](#)

By Anthony Adragna | 04/18/2018 11:19 AM EDT

A House Energy and Commerce subpanel today approved a quartet of bills designed to boost DOE's efforts to protect the nation's electric grid from cyberattack.

All four cybersecurity measures — [H.R. 5174 \(115\)](#), [H.R. 5175 \(115\)](#), [H.R. 5239 \(115\)](#), [H.R. 5240 \(115\)](#) — advanced by voice vote.

H.R. 5175 asks DOE to coordinate the federal, state and business responses to physical and cybersecurity threats. H.R. 5239 would establish a voluntary DOE program to test the cybersecurity of products intended for use in the bulk-power system. H.R. 5240 would encourage public-private partnerships on cybersecurity efforts, while H.R. 5174 would have DOE bolster its emergency response efforts.

In addition, the subcommittee approved [H.R. 4606 \(115\)](#), which would allow the expedited approval of small-scale shipments of liquefied natural gas, over the objections of most Democrats. That vote was 19 to 14.

"Leave it to the Republican leadership of this committee to markup a bill that has even fewer environmental safeguards than a Trump Administration proposal," Rep. [Frank Pallone](#) (D-N.J.), ranking member of the full committee, said. "This bill is unnecessary, it is bad policy and it is a legislative earmark."

WHAT'S NEXT: The bills will get consideration by the full House Energy and Commerce Committee.

REDEFINING EPA: Overhauling an agency and its mission -- Complete coverage

April 25, 2018

Latest News

Facing Legal Hurdles, EPA's 'Secret Science' Plan Punts On Key Issues

EPA Administrator Scott Pruitt has signed a long-promised plan barring the agency's use of any information in decision-making that is not publicly available, but the proposed rule punts on a host of tricky legal and

implementation issues, including statutory mandates to use the best available science and how to address confidential trade secrets and medically protected data.

NRDC Threatens Rare SDWA Suit Over New Jersey City's LCR Compliance

The Natural Resources Defense Council (NRDC) is threatening to file a rare suit against state and local officials in New Jersey over alleged violations of the Safe Drinking Water Act (SDWA) lead and copper rule (LCR), citing sampling and water treatment issues that are central to EPA's debate over how to update the LCR.

Utilities Urge EPA To Delay Ash Rule Deadlines Pending Policy Revisions

Utilities are urging EPA to postpone compliance deadlines in its coal ash disposal rule while the agency revises the policy to allow for site-specific disposal criteria and other flexibilities, warning that even if the rule is changed ahead of those deadlines there will be little time to craft new standards before facilities must take "irreversible" compliance steps.

EPA, State Air Funding Cuts Might Hinder Implementation Of NAAQS Memo

State air regulators are warning that President Donald Trump's bid to slash EPA and state air quality funding could hinder implementation of his memo directing the agency to overhaul and streamline the national ambient air quality standards (NAAQS) process, saying even current funding might be insufficient to achieve the memo's goals.

EPA Argues Ruling Scrapping Parts Of Ozone Policy At Odds With Air Law

EPA is asking a U.S. Court of Appeals for the District of Columbia Circuit panel to reconsider its ruling scrapping parts of an Obama-era rule on implementing the 2008 ozone ambient air limit and revoking the 1997 standard, arguing that the court's fears over the rule worsening air quality are unfounded and at odds with the Clean Air Act.

EPA Urges Local Officials To Adopt Pre-Disaster Climate Adaptation Plans

EPA is urging local government officials to adopt "worst-case" climate adaptation plans to limit damage from future natural disasters, a stance that appears to be at odds with the Trump administration's general resistance to acknowledging and addressing climate change and its adverse impacts.

Daily Feed

5th Circuit prepares to hear ELG delay challenge

An appeals court is starting up a case over EPA's delay of an Obama-era power plant effluent rule after a district judge blocked environmentalists' bid to keep an identical suit in a lower court.

Democrats seek IG probe into Pruitt's Superfund pick

The lawmakers are seeking an inquiry into whether EPA followed "suitability" requirements when Administrator Scott Pruitt hired a disgraced former banker to oversee the agency's Superfund reforms.

California court upholds state's Prop. 65 glyphosate listing

While the state court rejected industry arguments, a federal court has blocked the state from requiring the pesticide be labeled as a carcinogen.

Pruitt signs proposed rule limiting EPA science

EPA's proposal has drawn concerns from industry groups who fear it would limit EPA's ability to use trade secret information to approve chemicals and pesticides.

EPA poised to release science transparency rule

It is not clear how the measure will address concerns from industry groups and some top agency officials that basing regulatory decision on publicly available science will limit use of confidential industry studies.

Ewire: Inhofe, other GOP senators call for Pruitt hearing

In today's Ewire: Sen. Jim Inhofe (R-OK) says "a couple of us on the committee think it's appropriate to have a hearing in so far as any accusation having to do with his office is concerned."

Boozman touts 'SRF WIN' bill but open to changes

Sen. John Boozman (R-AR) told water industry representatives he is willing to make additional changes to his bill that some industry representatives have criticized.

Suppliers Seek 'Robust' Vehicle GHG Standards With Additional 'Flexibility'

Auto industry suppliers are detailing their call for the Trump administration to embrace "robust" vehicle greenhouse gas and fuel economy standards with more flexibility for automakers, urging agencies to formally seek comment on an "advanced technologies flexibility option" that would recognize California's "critical role" in limiting emissions and possibly prevent years of litigation over the program.

Top Advisers Pan Pruitt's Science Transparency Rule, Seek SAB Review

Top EPA science advisers, including Administrator Scott Pruitt's hand-picked chairman of the agency's Science Advisory Board (SAB), are strongly criticizing the administrator's controversial plan to require only publicly available research to justify its regulations, charging it will undermine rules' integrity and was developed without adequate review.

EPA Science Plan Skirted Usual Process, Raising Finalization, Legal Doubts

The Trump EPA's controversial plan requiring use of publicly available research to justify rules appears to have been developed by political appointees without following the agency's usual action development process (ADP) for crafting important rules, leaving career staff and program offices out of the loop but raising doubts about how it will be finalized without them.

Magistrate Suggests Court Unlikely To Halt Discovery In Youth Climate Suit

A federal magistrate judge is strongly suggesting that he is unlikely to grant the Trump administration's request to halt discovery in a novel suit brought by 21 youth plaintiffs who charge that the government is violating the Constitution and the public trust doctrine by failing to protect them from the worst harms of climate change.

Subject: Western Wire: Mining The Future

[View this email in your browser](#)

Mining The Future

This week *Western Wire* [previews the 120th National Western Mining Conference](#), hosted by the Colorado Mining Association in Denver, Colo. next week. We sat down with leaders in the mining safety, technology, recruitment, and industry-higher education outreach to show how the industry is moving to adapt to a changing landscape of an aging workforce, heightened competition for talent, and the ever-present duty to ensure employee safety. From drones to outside-the-box innovation competitions and targeted recruitment to career development, the future of mining is now, according to the speakers in our feature piece.

No More 'Secret Science': With EPA Administrator Scott Pruitt [poised](#) to move his agency away from the policy of using "secret" studies that obstruct transparency by preventing data and methodology to be shared with other researchers and the public in general, critics have said he's moving away from science. Not so, say supporters, who believe the push for open and public discourse and the disclosure of study data will increase not only transparency but the quality of the studies that help the EPA determine regulatory actions that affect our lives and the economy. "It would be better if the data was just available. That's how science is supposed to be," Steve Milloy told *Western Wire*.

You Say You Want A Revolution: Well, you know, *Western Wire* takes a [look](#) at the competition sponsored by Stanford's Natural Gas Initiative that focuses on methane emissions identification through drone or truck and plane-mounted technologies. The Mobile Monitoring

Challenge aims to study methane emission detection and measurement with the competing companies and academic projects hoping to achieve commercial viability. "There's an enormous opportunity for utilization of unmanned aerial systems for detection and characterization of methane emissions in the oil and gas sector," said Andrew Aubrey, Ph.D., Founder and CEO at SeekOps, Inc.

Finally, the Bureau of Land Management's quarterly [lease sales](#) for 2018 opened quietly after a robust 2017. Nearly \$21.5 million in revenues was taken in across six Western states this month on leases that one Utah county planner called an "important contributor to a diversified county economy."

Here are *Western Wire's* headlines from the week...

NEWS

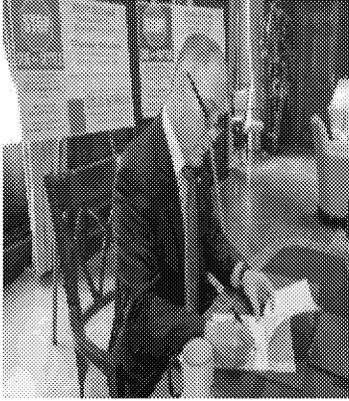

CMA Conference: The Future Of Mining Is Now

BY MICHAEL SANDOVAL AND ELENA CONNOLLY MARCH

27, 2018

The mining industry faces a tall order: adapt to a changing landscape of an aging workforce, heightened competition for talent, and the ever-present duty to ensure employee safety. According to those who speak next week, the industry is up to the task.

ANALYSIS

[From 'Secret Science' To 'Science In The Sunshine,' Pruitt's Push Opens EPA Transparency](#)

BY MICHAEL SANDOVAL MARCH 30, 2018

Environmental Protection Agency (EPA) Administrator Scott Pruitt plans to halt the "secret science" underpinning his agency's regulations, opening a conversation about how studies can be weaponized in favor of onerous regulations without additional scrutiny and the transparency involved in determining how data and methodology are pursued or analyzed by outside researchers.

NEWS

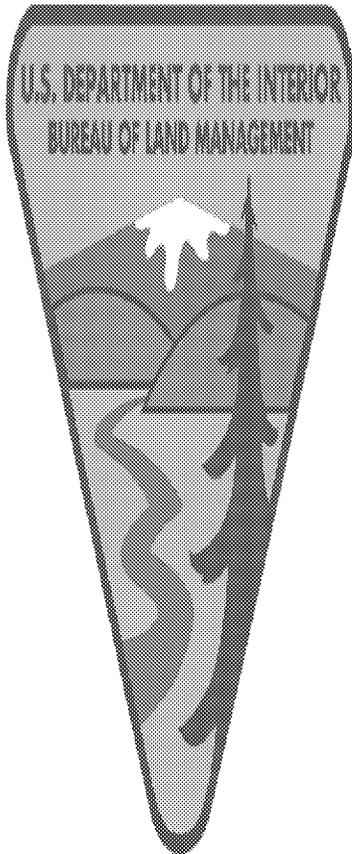

['Revolution In Gas-Sensing Technologies' Could Reshape Methane Emissions Detection In Mobile Monitoring Challenge](#)

BY MICHAEL SANDOVAL MARCH 28, 2018

Twelve different technologies from 11 organizations from drones to plane and truck monitors aimed at detecting and measuring methane emissions have been selected to advance to the testing phase of the Mobile Monitoring Challenge, the competition's sponsors announced this week.

NEWS

BLM's First Quarterly Lease Sale Opens Quietly After Robust 2017

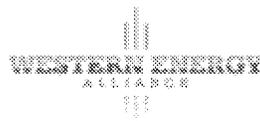

BY MICHAEL SANDOVAL MARCH 28, 2018

The Bureau of Land Management's first quarterly lease sale for oil and gas development on the agency's multiple-use lands in 2018 opened quietly after a robust showing in 2017 that saw Western states draw nearly \$350 million in receipts.

To: Woods, Clint [/o=ExchangeLabs/ou=Exchange Administrative Group (FYDIBOHF23SPDLT)/cn=Recipients/cn=bc65010f5c2e48f4bc2aa050db50d198-Woods, Clint]
Subject: Morning Consult Energy: U.S. Exit From Iran Nuclear Deal Would Have Limited Oil Market Impact, Analysts Say

By [Jacqueline Toth](#)

Morning Consult has published the latest edition of its monthly Trump Tracker, showing the president's approval state by state, month over month. See it [here](#).

Top Stories

- Analysts said they expect the impact on oil markets to be limited if President Donald Trump announces today that the United States will withdraw from the 2015 Iran nuclear deal and reinstates sanctions on oil exports from Iran. The sanctions are likely to

reduce Iranian oil exports by 300,000 to 500,000 barrels per day, fewer than the cut of 1 million to 1.5 million barrels under President Barack Obama's administration. ([CNBC](#))

- Records made available through a Freedom of Information Act request show the Environmental Protection Agency had 33 threat investigations ongoing as of the middle of March, including 10 involving Administrator Scott Pruitt in the prior six months, with threats sent via Twitter posts, phone calls, emails, postcards and other sources. The files show that the EPA investigated 50 threats to agency officials in fiscal year 2017, 43 in 2016 and 47 in fiscal year 2015. ([The New York Times](#))
- Senior staff members at the White House are telling Trump to fire Pruitt, believing Deputy EPA Administrator Andrew Wheeler would accomplish Trump's environmental agenda without drawing as much negative publicity as Pruitt has, according to two administration officials. At a briefing Monday, White House press secretary Sarah Huckabee Sanders said there were no "personnel announcements on that front" regarding Pruitt's future but expressed confidence in Wheeler. ([The New York Times](#))
- In a voice vote, a House Appropriations subcommittee approved a spending bill to fund the Energy Department and Army Corps of Engineers at \$44.7 billion - \$8.2 billion more than the Trump administration recommended in its budget request and an increase of \$1.5 billion over fiscal 2018 spending. The bill would increase funding for nuclear weapons, water development and fossil fuel and nuclear research but would reduce energy efficiency and renewable energy program funding. ([The Hill](#))

General

[New Files Detail the Threats Made Against Scott Pruitt at the E.P.A.](#)

Eric Lipton et al., The New York Times

The Environmental Protection Agency had a total of 33 threat investigations underway as of mid-March - 10 of them involving Scott Pruitt from the last six months - a security assessment released Monday shows, offering the most detailed tally yet of threats against the agency's top official.

[White House Aides Are Urging President Trump to Fire Scott Pruitt, the E.P.A. Chief](#)

Coral Davenport and Maggie Haberman, The New York Times

Senior White House staff members are encouraging President Trump to fire Scott Pruitt, his embattled Environmental Protection Agency chief, according to two top administration officials. While Mr. Trump has until now championed Mr. Pruitt, the officials say the president's enthusiasm may be cooling because of the ongoing cascade of alleged ethical and legal missteps.

[House panel votes to boost funding for Energy Dept., Army Corps](#)

Timothy Cama, The Hill

A House subcommittee voted Monday for a bipartisan funding bill to give \$44.7 billion to the Energy Department and Army Corps of Engineers, rejecting many of President Trump's proposed cuts to the programs.

[Pruitt fast-tracked California cleanup after Hugh Hewitt brokered meeting](#)

Emily Holden, Politico

EPA Administrator Scott Pruitt placed a polluted California area on his personal priority list of Superfund sites targeted for "immediate and intense" action after conservative radio and television host Hugh Hewitt brokered a meeting between him and lawyers for the water district that was seeking federal help to clean up the polluted Orange County site.

[Memo says Pruitt flew first class to avoid 'lashing out from passengers'](#)

Sara Ganim and Gregory Wallace, CNN

Documents provided to Congress fail to show Scott Pruitt got federally required waivers to fly first class - and if he did, then his office has twice declined to hand them over to fellow Republicans asking for the verification.

How Pruitt's Aides Work to Shield the Boss: Seven Quotes
Eric Lipton, The New York Times

The New York Times was given a cache of E.P.A. emails and other documents detailing the communications of top political aides to Scott Pruitt, the Environmental Protection Agency chief, after the Sierra Club, an environmental group, sued to obtain the correspondence.

AGs urge Pruitt to stop 'secret science' plan
Sean Reilly, E&E News

EPA should halt planned changes to its standards for scientific research used in writing new regulations and then ask independent experts whether any action is needed, New York Attorney General Eric Schneiderman and seven other Democratic attorneys general urged today.

Interior sending officers to assist patrolling the US, Mexico border
Miranda Green, The Hill

The Interior Department is sending its law enforcement officers to help the Department of Homeland Security secure the U.S.- Mexico border, according to an internal email obtained by The Hill.

White House plots update to NEPA guidelines
Nick Sobczyk, E&E News

The Trump administration has signaled its intent to update the baseline National Environmental Policy Act guidelines for the whole federal government.

Maryland to Other States: Stop Sending Us Your Dirty Air
Kris Maher, The Wall Street Journal

From a grassy hilltop in western Maryland, a high-tech spying operation tracks the source of pollution and ozone coming into the state.

Tab for refurbishing Rick Perry's office: \$4,652
Christa Marshall, E&E News

The Department of Energy spent \$4,652 last year to refurbish Secretary Rick Perry's office, including \$857 for a wingback chair and \$1,157 for a sofa.

Oil recedes as market awaits Trump decision on Iran

Amanda Cooper, Reuters

Oil retreated from 3-1/2 year highs on Tuesday as investors waited for an announcement by President Donald Trump later in the day on whether the United States will reimpose sanctions on Iran.

Oil and Natural Gas

Iran sanctions seen having limited impact on oil market if Trump scraps nuclear deal

Tom DiChristopher, CNBC

President Donald Trump may withdraw the United States from the 2015 Iran nuclear deal by restoring sanctions on Iranian oil exports this week. But analysts say the impact on the market will likely be limited.

Pa. Pipeline Row Shows Enviro Rights Amendment Still Murky

Matt Fair, Law 360

A recently advanced effort to hold a Sunoco Inc. unit liable for violations of the Pennsylvania Constitution over a controversial pipeline project highlights what attorneys say is continued uncertainty around the so-called environmental rights amendment, which was reinvigorated by the state's Supreme Court last year.

Sempra says it is sticking to 2019 startup for three trains at Cameron LNG

Harry Weber, Platts

Sempra Energy said Monday its top priority is making sure the three production units at the Cameron LNG export terminal in Louisiana are online in 2019, and for now it is confident there won't be any more delays.

Utilities and Infrastructure

FERC approves elimination of SPP regional entity

Robert Walton, Utility Dive

The Federal Energy Regulatory Commission's decision last week aims to "promote effective and efficient administration of bulk-power system reliability," and it will expand the geographic footprints of both MRO and SERC.

Solar has transformed into solar-plus-storage; What will net metering become?

Herman K. Trabish, Utility Dive

When distributed solar becomes more of a stress than a service to the grid, it transforms into solar-plus-storage and begins again the struggle to build economies of scale to drive its price down to levels competitive with traditional generation.

Renewables

Injury at Tesla solar business draws company's biggest safety fine

Will Evans, The Center for Investigative Reporting

Federal safety officials fined Tesla Inc. more than \$110,000, the biggest safety fine in the company's history, after an employee received a high-voltage electrical shock at a solar energy facility in Massachusetts.

Steel town that voted for Trump banks on renewables

Benjamin Storrow, E&E News

In this prairie city, where the Sangre de Cristo Mountains rise to meet the parched expanse of the Southern Plains, blue-collar workers whose grandfathers toiled for generations in steel mills are making wind turbines and installing solar panels.

New Water-Based Battery Could Help Store Solar and Wind Energy

Avery Thompson, Popular Mechanics

A group of researchers at Stanford University have developed a new type of battery using water and salt that they hope could be used to store energy produced from wind and solar farms, increasing the effectiveness of renewable energy sources.

Coal

[DOE's coal crusade keeps the heat on FERC](#)
Sam Mintz and Rod Kuckro, E&E News

Cracks in the public relationship between the Federal Energy Regulatory Commission and the Department of Energy were on display last week with dueling comments from a DOE spokesperson and one of FERC's five commissioners.

Nuclear

[Nev. lawmakers prepare battle against Yucca bill](#)
Sam Mintz, E&E News

Nevada's congressional delegation is gearing up to battle a major nuclear waste reform bill that is up for a vote in the House this week and would advance the proposed spent fuel repository at Yucca Mountain.

Climate

[Germany probes Audi for potential new illegal emissions device](#)
Edward Taylor, Reuters

German motor vehicle authority KBA has summoned Audi for a formal hearing about whether its diesel-engined A6/A7 models have been fitted with a previously unknown defeat device, Germany's Transport Ministry said on Tuesday.

[After Fatal Uber Crash, a Self-Driving Start-Up Moves Forward](#)
Cade Metz, The New York Times

On Monday, an orange and blue car with the words "Self-Driving Vehicle" prominently displayed on both sides drove itself through the streets of this rapidly growing city north of Dallas, navigating across four lanes of traffic and around a traffic circle.

Opinions, Editorials and Perspectives

[Private Sector Stands Ready to Modernize Nation's Electric Infrastructure](#)
Linda Apsey, Morning Consult

In energy policy conversations across the country, one key point often is missing: the growing importance of electricity transmission infrastructure to our economy.

America risks being left behind on clean energy

U.S. Rep. Raul M. Grijalva (D-Ariz.), Washington Examiner

French President Emmanuel Macron's recent visit to the U.S. offers a stern reminder that even as the Trump administration tries to withdraw our country from the global community, our friends and foes around the world continue to respond to climate change, and those responses will have long-lasting implications.

Oil Market May Get Blindsided by Iran Deal

Spencer Jakab, The Wall Street Journal

The oil market has surged on the expectation that President Donald Trump will reimpose sanctions on Iran. No matter what Mr. Trump decides, oil bulls and other beneficiaries of higher prices shouldn't get too confident.

Tesla's Factory in a Fishbowl

John D. Stoll, The Wall Street Journal

Elon Musk has always run his car company at his own pace, but now he finds himself in a historic race to deliver on enormous promises. The next six months will determine whether Tesla Inc.'s Model 3 can reshape the U.S. auto industry or serve merely as a flashy footnote.

Clean up EPA's inefficient toxic waste program

Winston Porter, The Hill

EPA's Superfund hazardous waste cleanup program is in need of leadership.

Research Reports

The carbon footprint of global tourism

Manfred Lenzen et al., Nature Climate Change

Tourism contributes significantly to global gross domestic product, and is forecast to grow at an annual 4%, thus outpacing many other economic sectors.

Subject: Morning Consult Energy: Week in Review & What's Ahead

By Jacqueline Toth

Morning Consult Energy will be off for the Labor Day holiday. Publication of the morning briefs and afternoon updates will resume Tuesday.

Week in Review

Trump administration

- President Donald Trump announced that the United States and Mexico agreed to revisions to the North American Free Trade

Agreement - a step that had been delayed in part by disagreements over energy issues.

- Trump signed proclamations to allow targeted relief from the administration's steel import quotas for South Korea and Brazil, and from quotas on both steel and aluminum for Argentina, according to the Commerce Department.

Utilities

- The Colorado Public Utilities Commission approved Minneapolis-based electric utility Xcel Energy Inc.'s proposed plan to retire two coal-fired power plants in Pueblo, Colo., and to invest \$2.5 billion in natural gas, solar and wind energy in Colorado.
- Documents released under a Freedom of Information Act request to a nonprofit identified PG&E Corp. as the utility that the Federal Energy Regulatory Commission fined \$2.7 million in May for losing control of a database with 30,000 records containing sensitive information, including passwords and system controls, which was exposed online for 70 days.

Clean energy

- California lawmakers passed a bill to require the state to source 100 percent of its power from clean energy resources by 2045. The measure awaits the signature of Gov. Jerry Brown (D).
- Facebook Inc. announced it will target the purchase of renewable energy for 100 percent of its operations by the end of 2020 and to cut its greenhouse gas emissions by 75 percent from 2017 levels.

Oil and gas

- King Salman, the father of Crown Prince Mohammed bin Salman, put the brakes on Saudi Arabian Oil Co.'s planned initial public offering, according to three sources with ties to the kingdom's government, after the king concluded it would undermine the kingdom by requiring full public disclosure of Aramco's finances.
- Following its validation of a sufficient number of petition signatures, the Colorado Secretary of State's office announced the state will vote this November on whether to ban oil and gas drilling within 2,500 feet of homes, businesses and other areas deemed vulnerable.

- Construction on the Trans Mountain pipeline was effectively halted after Canada's Federal Court of Appeal unanimously rejected the country's approval of the project, declaring the National Energy Board's regulatory review of the \$3.5 billion pipeline "impermissibly flawed" for not examining tanker traffic resulting from the project and for not adequately consulting with indigenous people.

Environmental Protection Agency

- The Environmental Protection Agency told the U.S. Supreme Court that it is no longer pursuing a regulation to limit the use of refrigerant chemicals, and that the high court doesn't need to take up companies' appeal of a lower court's ruling that overturned the Obama-era restrictions.
- An EPA spokeswoman said the agency intends to ask the White House Office of Management and Budget to examine its draft proposal that questions whether it had been "appropriate and necessary" for the agency to set limits in 2012 on toxic emissions from existing power plants, including for mercury.

What's Ahead

- Both the House and Senate are in session this week.
- The Environmental Protection Agency's Office of Inspector General said it expects to release a report on the administrator's Protective Service Detail on Tuesday.
- The Senate Commerce, Science and Transportation Committee has scheduled an executive session for Wednesday at 10 a.m. on legislation, including a bipartisan bill on bycatch reduction, and several nominations, including Kelvin Droegemeier to be director of the White House Office of Science and Technology Policy.
- Rep. Brian Fitzpatrick (R-Pa.) and Sen. Sheldon Whitehouse (D-R.I.) are expected to speak at an event hosted by The Hill and the

Bipartisan Policy Center on Thursday on public and private sector climate solutions.

Subject: Morning Consult Energy: Rollback of Clean Power Plan Said to Give States More Power Over Coal-Fired Plants

By [Jacqueline Toth](#)

Top Stories

- The Trump administration intends to give states greater latitude to create their own rules to make coal-fired power plants more efficient or to request permission to opt out of such regulations, under a proposed replacement of the Obama administration's Clean Power Plan, according to an unpublished draft and a source familiar with other parts of the plan. The proposal's release is expected in the coming days. ([Politico](#))

- Environmental Protection Agency staff cast doubt on the Transportation Department's calculations of the benefits of the Trump administration's proposed changes to federal fuel economy and greenhouse gas emission standards for certain vehicles, according to an internal June 18 memo posted online by the EPA. The memo estimates that the changes would increase traffic deaths by 17 annually from 2036-2045 due to increased vehicle traffic, instead of the annual reduction of 150 deaths over that period as forecast by the Transportation Department, and that the new fuel efficiency plan would result in net societal costs of \$83 billion rather than the Transportation Department's estimate of \$49 billion in net benefits. ([Reuters](#))
- Onshore oil and gas developer Diamondback Energy Inc. will buy Energen Corp. through an all-stock deal of about \$8.4 billion that would give Diamondback shareholders ownership of about 62 percent of the combined company and Energen shareholders control of the rest. Completion of the deal, which is valued at \$9.2 billion including debt, would mean the new entity would control 390,000 acres in the Permian Basin. ([The Wall Street Journal](#))

Subject: Morning Energy: Perry's latest bid to save coal — NEPA focus of hearing today — More on the Pruitt front

By Kelsey Tamborrino | 04/25/2018 05:54 AM EDT

With help from Anthony Adragna

PERRY'S LATEST BID TO SAVE COAL: So far, Energy Secretary Rick Perry has had no success in his effort to construct a safety net to keep alive coal-fired and nuclear power plants threatened with shutdowns — a mission that's come straight from President Donald Trump. And Perry's latest potential gambit to use the 1950 Defense Production Act in hopes of designating the plants as crucial for national security may not fare better than his previous efforts, energy experts tell Pro's Eric Wolff.

Experts say the bid would stretch the definition of the law and almost certainly draw legal challenges. Plus invoking the act that was last used by the Obama administration to push advanced biofuels would probably hit a snag in Congress, since lawmakers would need to approve perhaps billions of dollars in funding to keep the plants afloat, the experts say.

Using the Korean War-era law to protect the plants could be a novel approach to aiding power plants, Eric writes, especially after Perry failed to gain FERC's support for his proposal to give the plants financial backing. And since Energy Department lawyers stymied a push last year to invoke the agency's authority under the Federal Power Act to force the plants to run, Perry and his staff appear to have very few viable options left.

But the fresh take on the act doesn't necessarily mean it'll work. "To me, it's a tough argument to make. It's a specious argument on its surface that seems like a perversion of the intended use of the Defense Production Act," said Tom Hicks, a former acting undersecretary of the U.S. Navy under former President Barack Obama and now a principal at the advisory firm The Mabus Group. Read [more](#).

WELCOME TO WEDNESDAY! I'm your host Kelsey Tamborrino, and James Daniel was the first to guess the most recent senator to appear on a U.S. postage stamp. A geography question for today: The Blue Nile and the White Nile combine to form the Nile River at which capital city? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

POLITICO's Ben White is bringing Morning Money to the Milken Institute Global Conference to provide coverage of the day's events and evening happenings. The newsletter will run April 29 — May 2, 2018. [Sign up](#) to keep up with your daily conference coverage.

DON'T FEAR THE NEPA? House Natural Resources will hold an oversight [hearing](#) this afternoon on what it calls the "weaponization" of the National Environmental Policy Act, and it could be a doozy. The committee notice calls NEPA — the seminal law that requires an environmental review on all federal actions — activists' "weapon of choice." Republicans have long-sought to undo parts of the law, and today's hearing will likely echo some of the rhetoric out of the Trump administration, which has supported faster NEPA reviews as part of its [infrastructure push](#). The hearing will review challenges from NEPA and will evaluate reforms to "de-

weaponize" the law to "minimize opportunities for bad faith litigation, and restore the law to its original intent," according to a committee [notice](#).

The committee previously took up the topic last year, holding a similar [hearing](#) in November on modernizing the law for the 21st century. James Coleman, a law professor at the Southern Methodist University, is expected to say the current NEPA process is "broken" and that bipartisan efforts to fix the problem have failed. "As President Obama's regulatory czar put it, 'If the permitting bureaucracy were a supervillain, it would be the Blob,'" he'll say, according to his testimony. "Right now, the Blob is winning: We have lost decades of investment while environment reviews grow longer and longer. How can we ensure that the U.S. does not fall behind our global competitors?"

Meanwhile, Laura Alice Watt of Sonoma State University, who says she is a proponent of environmental reviews that are conducted consistently, will discuss the effect of NEPA on the Point Reyes National Seashore, where a review over the last 20 years has contributed to the erosion of active ranches. Melissa Hamsher of Eclipse Energy Resource Corporation and former CEQ official Horst Greczmiel will also testify. Democratic Rep. [Donald McEachin](#), ranking member of the Oversight subcommittee, will say that he'll hold the administration and Republicans to account on NEPA. "Many communities — and especially vulnerable minority and low-income communities — have had to endure a decades-long pattern of environmental injustice, in no small part because they were denied a say in important decisions that affected them," McEachin is expected to say. **If you go:** The hearing kicks off at 2 p.m. in 1324 Longworth.

SPEAKING OF NEPA: The League of Conservation Voters [sent this letter](#) to House members Tuesday urging them to oppose [H.R. 3144 \(115\)](#), which LCV says would "attack" the Endangered Species Act and NEPA by "mandating dam operations harmful to endangered salmon and steelhead in the Pacific Northwest."

ADD THIS TO THE LIST: Two days before two House hearings and fresh off an [announcement](#) on EPA's plan to bar scientific studies that don't publicly disclose data, Administrator Scott Pruitt got another appointment to testify on his agency's budget. This time Pruitt will appear in May before the Senate appropriations subcommittee that oversees EPA's budget, [Lisa Murkowski said](#) Tuesday.

OH, TO BE A FLY ON THE WALL: Sen. [Shelley Moore Capito](#), one of the Republican EPW members [open to a hearing](#) with Pruitt, told ME Tuesday she has a "well-timed" phone call with him scheduled for this week. "I think he wants to talk about some regulatory measures," she said. "But I'm going to probably ask him questions on the current state of some of the things that I've read and we'll see where it goes." She said the call had been set up last week.

McConnell voices support ... again: Majority Leader [Mitch McConnell](#) told reporters Tuesday he remained a supporter of Pruitt's, while noting the EPA chief's busy Thursday on the Hill. "We'll just see," he said. "I expect there will be a lot of interest."

PERROTTA WORKED FOR TRUMP-BACKED MEDIA COMPANY: Pasquale "Nino" Perrotta — the Secret Service veteran who heads Pruitt's security detail — previously worked on assignments for the tabloid publishing company American Media Inc. during the 2016 presidential campaign, The New York Times reported Tuesday. While it is unclear when Perrotta started working at AMI, the Times reports some of his activities at the company included physical security, cybersecurity and investigative services involving litigation. [Read more](#).

OLD AD-AGE: The Natural Resources Defense Council is sponsoring an ad today in The Washington Post that calls for Pruitt's ouster. The ad — which says: "President Trump promised to drain the swamp. He should start with EPA Administrator Scott Pruitt" — will run as an insert in 3,000 copies of the Post and will be delivered to Capitol Hill on Thursday. [See it](#).

IF YOU PLAY YOUR CARDS RIGHT: The Environmental Defense Fund mapped out what it says are Pruitt's unanswered questions surrounding scandals while he helms EPA and during his time as Oklahoma attorney general — 86 of them to be exact. The group will also hand out a deck of "Non Trivial Pruitt Questions" during Thursday's hearings with a sampling of the ethical questions. See the cards here.

Rally cry: Separately, the American Federation of Government Employees will hold a rally today from noon until 1 p.m. in support of EPA workers. Democratic Reps. Salud Carbajal, Don Beyer, Bill Foster, Sheila Jackson Lee, Alan Lowenthal, Grace Meng, Jamie Raskin and Debbie Wasserman Schultz are all set to attend the rally, which will take place outside of EPA headquarters.

MACRON ADDRESS LAWMAKERS: French President Emmanuel Macron hits the Hill this morning to address a joint session of Congress. Earlier this week, the French president said he'd call for continued U.S. intervention in Syria in his speech. "I will advocate for multilateralism," Macron said in an interview on "Fox News Sunday." But it's also possible issues concerning climate will come up — which would likely receive a welcome reception from Democrats.

Macron, a staunch supporter of the Paris accord, also briefly mentioned climate during a joint press conference with the president Tuesday. "We also talked about the climate. And here, also, we know where we stand," Macron said vaguely. "France will continue to work on major pieces, including the global compact for the environment. But I think I can say that our economic — our businesses, our researchers can continue to work on — can create solutions in the field." Both he and Trump are "attached to that," he said.

Bold move: It's probably not an indication of environmental topics to come, but Apple CEO Tim Cook brought former EPA chief Lisa Jackson to Tuesday's state dinner with Macron. Jackson, who now works as vice president of environment, policy and social initiatives at Apple, has attended events with Cook in the past — but it's an interesting move considering Jackson's not been known to mince words about the Trump administration. For what its worth, Cook will meet today with Trump in the Oval Office.

MORE NOMS: Trump sent James Hubbard's nomination to be undersecretary of Agriculture for natural resources and the environment to the Senate Tuesday. Hubbard, of Colorado, replaces Robert Bonnie, who resigned from the post.

DEMOCRATS CITE SAFETY: Three Energy and Commerce Democratic leaders on Tuesday called on the Government Accountability Office to probe EPA's enforcement of federal health and environmental safeguards. "We are concerned that President Trump's and Administrator Pruitt's policies to 'streamline' permitting processes, reduce regulatory 'burdens' for industry, and defer to states on enforcement will lead to more environmental law violations due to lax enforcement at both the state and federal level," ranking member Frank Pallone and Reps. Diana DeGette and Paul Tonko write in a letter to GAO Comptroller Gene Dodaro. Read it here.

MAIL CALL! GOING NUCLEAR: Former national security officials and nonproliferation experts will send this letter today to congressional foreign affairs leadership stating that for national security reasons, it is in the U.S.' best interest to have a nuclear cooperation agreement — a so-called 123 Agreement — with Saudi Arabia.

— **Democratic Sens. Maria Cantwell and Jeff Merkley** and Reps. Raúl Grijalva and Jared Huffman sent a letter to Interior Secretary Ryan Zinke on Tuesday, calling on him to undo plans for a 2019 lease sale in Alaska's Beaufort Sea. Read it here.

— **Sen. John Barrasso, chairman of the Senate EPW Committee and Capito**, subcommittee chairwoman on clean air and nuclear safety, sent a letter to Pruitt and Perry, asking them to protect the confidential business information of U.S. small refineries. Read the letter here.

AT IT AGAIN: Michigan GOP Rep. [Fred Upton](#) officially filed for reelection in the state's 6th District, [MLive reports](#). "We are full steam ahead and excited about the future," the Energy and Commerce lawmaker said in a statement.

A TANGLED WEB: The Environmental Data & Governance Initiative is out with a new monitoring report this morning that says EPA removed pages related to "international priorities" and "international grants and cooperative agreements," as well as corresponding links, from its [International Cooperation](#) web page. The page in question listed priority areas including "strong environmental institutions," "climate change" and "clean water," among other terms, which EDGI says were removed in December 2017. Read the report [here](#) and see screenshots [here](#).

GROUPS TO SUE OVER DRINKING WATER IN NEW JERSEY: The NRDC and Newark Education Workers Caucus say they will sue the city of Newark, N.J., and Catherine McCabe, the acting commissioner of the New Jersey Department of Environmental Protection, over lead contamination in the city's drinking water, [Pro New Jersey's Danielle Muoio reports](#). A Newark city official [said Tuesday](#) that the complaint filed by the groups is "absolutely and outrageously false."

OLYMPIANS HEAD TO HILL FOR CLIMATE: Five Winter Olympians will brief House and Senate offices today on the impact of climate change on winter sports and outdoor recreation. Cross-country skier Jessie Diggins, freestyle skier David Wise, halfpipe snowboarder Arielle Gold, biathlete Maddie Phaneuf and alpine skier Stacey Cook all will appear on the panel, which is co-hosted by nonprofit Protect Our Winters, Citizens Climate Lobby, and Sens. [Michael Bennet](#) and [Susan Collins](#). **If you go** : The briefing begins at 12:30 p.m. in 538 Dirksen.

CORRECTION: The April 24 edition of Morning Energy misstated the purpose of H.R. 3144 (115). The bill would codify the 2014 Biological Opinion until 2022, while the NEPA and the environmental impact statement processes continue.

Stories from POLITICO Pro

Perry's latest bid to help coal faces uphill battle [Back](#)

By Eric Wolff | 04/25/2018 05:08 AM EDT

Energy Secretary Rick Perry's latest idea to protect coal-fired and nuclear power plants may not fare much better than his previous efforts, according to energy experts.

Perry is considering invoking the 1950 Defense Production Act to keep money-losing power plants running by designating them as crucial for national security. But that would stretch the definition of the law and almost certainly draw legal challenges — and it would hit a big hurdle in Congress, which would need to approve perhaps billions of dollars in funding to keep the plants afloat, the experts said.

At the urging of President Donald Trump, Perry has sought to keep open coal and nuclear power plants that are threatened with shutdowns amid the stagnant demand for power — and even as natural gas and renewable power sources grab a growing share of the market.

So far, Perry's had no luck. FERC earlier this year rejected his proposal to give the plants financial support, and Energy Department lawyers stymied a push last year to invoke the agency's authority under the Federal Power Act to force the plants to run.

Some experts said any attempt to use the DPA is likely to meet the same fate.

"To me, it's a tough argument to make. It's a specious argument on its surface that seems like a perversion of the intended use of the Defense Production Act," said Tom Hicks, a former acting undersecretary of the Navy under former President Barack Obama and now a principal at the advisory firm The Mabus Group. "Defense Production Act is on the vanguard of the need for resources, not on the back end for an industry being challenged by economic forces."

But the effort has been a priority for Trump and Perry, who sees saving coal-fired power generation as vital to U.S. security, according to a source familiar with the conversations on the issue.

The Cold War-era law grants the federal government powerful authorities to inject cash into companies essential for national defense in order to preserve domestic supplies of key products. But DOE will have to make the case that electricity produced specifically from coal and nuclear power plants, and not other types of power, is a critical resource.

Using the act to protect the plants when there appeared to be no immediate shortage of power supplies would be a novel application that would almost certainly face legal challenge.

"If the administration uses DPA, they're going to be using it very creatively," said Ari Peskoe, director of the Electricity Law Initiative at the Harvard Law School Environmental and Energy Law Program. "They may come up with reasoning for higher rates and who's going to pay for it. Whether that will hold up, I don't know."

Perry and his staff appear to have very few viable options for bailing out coal and nuclear power, a major energy priority for Trump, who has promised to revive the coal industry. DOE has opened a [comments process](#) for interested parties to weigh in on its use of the Federal Power Act's 202(c) emergency provisions, though that would require the agency to go through FERC, which unanimously rejected a similar Perry effort in January.

The 202(c) effort has been pushed by coal magnate Bob Murray, owner of Murray Energy, and by FirstEnergy Solutions, the unit of FirstEnergy Corp. that is in bankruptcy proceedings and which expects to shut down four coal and nuclear power plants. That company asked DOE to use the emergency authority to save not only its plants, but all 85 coal and nuclear power plants in the PJM Interconnection power market.

The DPA was last used by the Obama administration starting in 2012 to help spur the biofuels industry to develop the kind of advanced biofuels that could power ships and aircraft. The government can purchase capital equipment for the cause of national security, and it can fund advertising to support the effort.

And it allows the government to become the buyer of last resort, which could put Washington on the hook to buy excess power generated by coal and nuclear plants. Technically, this electricity could only be purchased at the "cost of production," a level that in the past has been determined by a team within the Defense Department.

While no hard estimate for the cost of a DPA subsidy exists, consultants [analyzing Perry's previous bailout proposal](#) estimated costs between \$4 billion and \$10.6 billion annually.

That's a far higher level than Congress typically allocates for the DPA. It provided \$67.4 million in the omnibus passed in March, [H.R. 1625 \(115\)](#), down slightly from the \$76 million it provided for all projects in 2017, according to a report submitted to Congress.

And Congress — and the Republican Party — is deeply divided on using government subsidies to save these plants. Rep. [David McKinley](#) (R-W.Va.) has some allies from other coal districts for the effort, but other free market-oriented lawmakers like Rep. [Pete Olson](#) (R-Texas) say they want to see markets function unimpeded.

McKinley's staff has been in touch with DOE and the White House, as has West Virginia Sen. [Joe Manchin](#) (D).

"I think it's an emergency national concern for the national defense of our country. I think Rick Perry agrees with it, and I think the president does also," Manchin told POLITICO.

PJM has itself said the retirement of FirstEnergy's coal plants did not pose a threat to the region's power supplies, and that it had ample generation to meet demand. It has opposed any effort to mandate to require the plants to stay online.

"We believe that a market-oriented approach consistent with the American free-enterprise system offers better results than government-mandated subsidies," said PJM spokesman Jeff Shields.

Anthony Adragna contributed to this report.

Pruitt scales back EPA's use of science [Back](#)

By Emily Holden and Annie Snider | 04/24/2018 03:28 PM EDT

Environmental Protection Agency chief Scott Pruitt announced Tuesday he would seek to bar the agency from relying on studies that don't publicly disclose all their data, a major policy change that has long been sought by conservatives that will sharply reduce the research the agency can rely on when crafting new regulations.

The unveiling of the proposed rule delivers a win to Republicans like House Science Chairman Lamar Smith (R-Texas), who unsuccessfully pushed legislation to impose the same type of change. The move also demonstrates Pruitt's persistence in pursuing President Donald Trump's anti-regulation agenda just two days before the embattled EPA chief is due to face fierce questioning from lawmakers about his hefty spending, expanded security detail and cheap condominium rental from the wife of an energy lobbyist.

At an invitation-only meeting at EPA headquarters with Smith, Sen. Mike Rounds (R-S.D.) and other supporters of the policy, Pruitt said the proposed rule was critical in ensuring that the agency was transparent about how it is making decisions to justify costly new regulations. It is the latest step Pruitt has taken to fundamentally shift the agency's approach to science.

"It is a codification of an approach that says as we do our business at the agency the science that we use is going to be transparent, it's going to be reproduceable, it's going to be able to be analyzed by those in the marketplace. And those who watch what we do can make informed decisions about whether we've drawn the proper conclusions or not," Pruitt said.

Text of the proposed rule was not immediately available.

The proposal, based on legislation pushed by Smith, is intensely controversial, and scientists and public health groups say it will prevent federal regulators from enacting health and safety protections. Nearly 1,000 scientists, including former EPA career staffers, signed a letter opposing the policy sent by the Union of Concerned Scientists to Pruitt on Monday.

Their primary concern was that many of the country's bedrock air and water quality regulations are based on research that cannot disclose raw data because it includes the personal health information.

But industry has its own version of the same problem. EPA often relies on industry studies that are considered by companies to be confidential business information when determining whether new pesticides and toxic chemicals are safe to use. Internal EPA emails obtained under the Freedom of Information Act show that EPA political officials, including Nancy Beck, who became the chief of the agency's chemical safety office last year after working for years at a chemical industry lobbying group, worried that the new policy would limit the agency's ability to consider industry data or would force companies to make this proprietary data public.

"We will need to thread this one real tight!" Richard Yamada, political official who led work on the new policy wrote to Beck after she raised the concerns.

It was not immediately clear if the new proposed rule included measures to address those concerns.

Rush Holt, CEO of the American Association for the Advancement of Science, said Pruitt's changes could keep the agency from revising public health regulations as problems arise or new data comes to light.

"On the surface it sounds so innocuous or even beneficial. What could be wrong with transparency? Well it's clear to me that this is not based on an effort to be transparent. It is rather based on an effort to be just the opposite," he said.

"EPA is particularly important because when science is misused, people die," he added.

Pruitt has been discussing the new scientific policy publicly for weeks, but it only went to the White House for interagency review last week. Such swift review is very rare for the Office of Management and Budget, which often takes months to vet a new policy. At least one group, the Environmental Defense Fund, has requested a meeting with OMB officials to discuss the rule, but OMB's website shows that no meetings have been scheduled with interested groups.

Many public health studies can't be replicated without exposing people to contaminants, and environmental disasters such as the Deepwater Horizon oil spill cannot be recreated, the group said, raising intellectual property, proprietary and privacy concerns.

Pruitt's predecessor Gina McCarthy, and her air chief Janet McCabe, in an op-ed in The New York Times in March said concerns about studies are dealt with through the existing peer-review process, which ensures scientific integrity.

"[Pruitt] and some conservative members of Congress are setting up a nonexistent problem in order to prevent the E.P.A. from using the best available science," they said.

Murkowski: Pruitt will testify to Senate appropriators [Back](#)

By Anthony Adragna | 04/24/2018 03:03 PM EDT

EPA Administrator Scott Pruitt is scheduled to testify in May before the Senate appropriations subcommittee that oversees his budget, Sen. [Lisa Murkowski](#) (R-Alaska), who chairs the panel, said today.

Murkowski did not elaborate on her plans for the hearing or how much it would delve into Pruitt's ethics and spending. But she said it was "absolutely appropriate" for the Environment and Public Works Committee to hold an oversight hearing on the administrator's conduct in office, an idea that has been endorsed by [multiple Republicans](#) on the authorization committee.

"I'm hoping they move on it sooner than later," Murkowski said of the EPW committee.

EPW Chairman [John Barrasso](#) (R-Wyo.) said today he has "serious questions" about how Pruitt has handled taxpayer dollars but stopped short of announcing plans for Pruitt to testify.

"We'll see what comes out of the hearings this Thursday," Barrasso said, referring to Pruitt's scheduled appearance of two House hearings that day.

Barrasso said he planned to send additional letters to EPA, following his recent request for details on the administrator's use of four separate email accounts. In response to that earlier letter, EPA [told him](#) all of Pruitt's accounts are searched in response to public records requests.

"You want to make sure taxpayers are getting value for their dollars," Barrasso told reporters today. "We want to make sure money is being spent appropriately."

WHAT'S NEXT: Murkowski declined to say when Pruitt would appear before her Appropriations Subcommittee on Interior, Environment and Related Agencies, but she has [said previously](#) it was expected to be the week of May 7.

Pruitt support in Senate erodes as GOP lawmakers seek hearings [Back](#)

By Anthony Adragna | 04/23/2018 08:32 PM EDT

Scott Pruitt's wall of GOP support is developing new cracks, with three key Senate defenders calling for hearings into the embattled EPA administrator's recent controversies — and Sen. Lisa Murkowski announcing Tuesday that she plans to bring him before her appropriations panel in May.

Three other Republicans, including staunch Pruitt ally Sen. Jim Inhofe (R-Okla.), told POLITICO on Monday that they would also support hearings by the Senate Environment and Public Works Committee to look into the former Oklahoma attorney general's actions. Their words came as Pruitt, who has managed to hold onto President Donald Trump's public support for now, faces a pair of House hearings Thursday that could be make-or-break for his hopes of remaining in the Cabinet.

"I think that a couple of us on the committee think it's appropriate to have a hearing in so far as any accusation having to do with his office is concerned," Inhofe told POLITICO.

Inhofe said he was troubled by a report over the weekend in The New York Times detailing a sweetheart deal Pruitt received on an Oklahoma City home previously owned by a lobbyist while serving in a state government. The Oklahoma Republican declined to discuss which allegations he found disturbing, but said "there are some things in there that I'd like to check out and see."

Joining his call for a Senate hearing were two other senior GOP members of the EPW panel, Sens. Shelley Moore Capito (W.Va.) and John Boozman (Ark.).

"Most people have concerns about some of the allegations," Boozman said. "At some point he'll be before the committee and we'll dig deeper and see exactly what's going on."

EPW Chairman John Barrasso (R-Wyo.) said Tuesday that he has "serious questions" about how Pruitt has handled taxpayer dollars, but he stopped short of announcing plans for Pruitt to testify.

"We want to make sure money is being spent appropriately," Barrasso said.

Murkowski (R-Alaska), who chairs the subcommittee that oversees EPA's appropriations, did not elaborate on her plans for her own hearing with Pruitt, or how much it would delve into his ethics and spending. But she said it would be "absolutely appropriate" for Barrasso's panel to hold an oversight hearing on the administrator's conduct in office, an idea that multiple Republicans on the authorization committee have endorsed.

"I'm hoping they move on it sooner than later," Murkowski said of the EPW Committee.

To date, four House Republicans have called on Pruitt to resign, along with scores of elected Democrats. And Sen. Susan Collins (R-Maine), has said Pruitt was "the wrong person" to lead the agency based on his policies.

Pruitt has drawn criticism about his ethics and lavish spending in recent months. Three congressional committees, the White House and EPA's inspector general are all probing his behavior, ranging from his security expenses, high pay raises for aides, first-class travel and meetings with a coal group.

The House Oversight Committee has requested interviews with five senior agency aides. The White House said it would formally investigate Pruitt's expenses after the Government Accountability Office last week found EPA broke the law by failing to notify Congress about a \$43,000 privacy booth Pruitt had built in his office.

Pruitt will go to the Hill on Thursday to testify before a House Energy and Commerce subcommittee in the morning and at a House Appropriations subpanel in the afternoon. Those appearances will mark his first time before Congress since the recent allegations broke.

Both Inhofe and Capito said they thought those House hearings would prove pivotal for Pruitt's long-term future in the administration.

"It's really important," Capito said. "He's going to have to answer some tough questions. I'm sure they'll be put to him by both sides and we'll see what his response is."

Meanwhile, EPW ranking member Tom Carper (D-Del.) said he had a good conversation with House Oversight Chairman Trey Gowdy (R-S.C.) regarding Pruitt, but he said there was no formal bipartisan agreement to work together on an investigation.

"I just gave him plenty of encouragement that he's doing the right thing," he said.

But the mounting public criticism from Republicans suggests GOP lawmakers' patience in defending the EPA chief's behavior is waning.

"Some of the things that he's done and that he's been alleged to do are just indefensible," Sen. John Kennedy (R-La.) said. "You just can't put lipstick on those pigs. You can't."

French president to call for American role in Syria [Back](#)

By Ian Kullgren | 04/22/2018 10:03 AM EDT

French President Emmanuel Macron said Sunday he will call for continued U.S. intervention in Syria before a joint session of Congress this week.

"I will advocate for multilateralism," Macron said in an interview on "Fox News Sunday."

Macron is visiting Washington this week in the first official state visit of the Trump presidency. In an interview with Chris Wallace at the presidential palace in Paris, Macron said he has a "special relationship" with President Donald Trump, describing them both as political outsiders.

"Both of us are probably the maverick of the systems on both sides," Macron said. "President Trump's election was unexpected in your country and probably my election was unexpected in my country."

Macron said that the United States is still an indispensable player for achieving peace in the Middle East, adding that France will rely on the U.S. in Syria once the conflict comes to an end.

"We will have to build a new Syria afterwards," he said.

Apple's Tim Cook attending White House state dinner for Macron [Back](#)

By POLITICO Pro Staff | 04/24/2018 07:15 PM EDT

Apple CEO Tim Cook is attending tonight's White House state dinner for French President Emmanuel Macron.

Cook was spotted arriving for the dinner with former EPA Administrator Lisa Jackson, who is now vice president of environment, policy and social initiatives for Apple, according to a pool report.

Jackson served as head of the EPA under former President Barack Obama.

REDEFINING EPA: Overhauling an agency and its mission -- Complete coverage

May 18, 2018

The Weekly Focus

Absent Federal Policy, Governments File Tort Suits For Environmental Harms

From fossil fuels that cause climate change, to lead paint and a host of toxic chemicals, state, county and city governments are increasingly turning to common law nuisance claims to recover cleanup and other funds from manufacturers, a growing sign that federal policy may be inadequate – or at least insufficiently funded – to address these harms.

Latest News

Inhofe Floats 'Legislative Fix' To Codify Limits On States' CWA 401 Decisions

Sen. James Inhofe (R-OK) is suggesting Congress create “a good legislative fix” to prevent states from using their authority under Clean Water Act (CWA) section 401 to stall federal projects such as construction of natural gas pipelines, drawing support from Assistant Secretary of the Army for Civil Works R.D. James at a May 17 hearing.

EPA Proposes To Scrap Most Obama-Era Revisions To RMP Program

The Trump administration is proposing to scrap most requirements of the Obama-era final rule updating EPA's facility accident prevention program, rescinding numerous new safety requirements in response to industry and state petitions, and arguing that EPA failed to adequately coordinate with other agencies in issuing the costly changes.

EPA Again Finds Formaldehyde Poses Leukemia Risks But Stalls Study

After years of additional study and scientific review, EPA has again found that formaldehyde poses leukemia and other cancer risks, though Democratic senators say the draft finding has prompted Trump EPA appointees to block release of the assessment and they are urging Administrator Scott Pruitt to quickly release it.

Democrats Take Rare Step Of Using CRA To Kill Trump Rule, Despite Critique

Democrats are taking the rare step of using the Congressional Review Act (CRA), the law that eases Congress' ability to repeal EPA and other agencies' rules, to block a Trump administration rule rolling back Obama-era 'net neutrality' mandates, despite criticism from environmentalists that it legitimizes use of a poorly-written law that Republicans and industry have long-used as a deregulatory tool and which they are seeking to repeal.

Daily Feed

Narrow CWA test fails to make the cut as Farm Bill amendment

While the House Rules Committee did not allow a floor vote on the proposed Farm Bill amendment, the language limiting which waters are regulated could still serve as a marker for EPA's upcoming rule.

EPA touts 'renewed emphasis' on self-audit policies

EPA is promoting "opportunities to increase compliance through use of existing self-disclosure policies or tailored programs."

Wehrum sidesteps queries on SAB review of science rule

The EPA air chief's responses to a Democratic lawmaker's questions suggest the agency may urge its science advisors to avoid a review of its controversial rule seeking to block the use of 'secret science.'

Ewire: Amid scandals, Pruitt lawyers up

In today's Ewire: The EPA chief has hired a white-collar defense attorney to advise him as he faces more than a dozen official investigations, and hired another attorney to set up a legal defense fund.

Wehrum strongly hints EPA will not scrap GHG risk finding

EPA's air chief said Administrator Scott Pruitt is trying to find a way to allow critics of the finding have "some voice," but he said there is no "process" to solicit those views and there is no "schedule" to do so.

Subject: FW: Cooler Heads Coalition next meeting reminder and EPA's secret science reforms

From: Myron Ebell [mailto:Myron.Ebell@cei.org]
Sent: Monday, April 30, 2018 11:14 AM
To: Myron Ebell <Myron.Ebell@cei.org>
Subject: Cooler Heads Coalition next meeting reminder and EPA's secret science reforms

The Cooler Heads Coalition will hold its May strategy meeting on Monday, 14th May, beginning at 12 noon at CEI, 1310 L Street, N. W., Seventh Floor. Please e-mail or ring me at 331-2256 with questions or agenda items.

EPA's Scientific Transparency Reforms:

EPA Administrator Scott Pruitt on 24th April announced a proposed rule to end the use of secret science (and make other science reforms) in EPA's regulatory process. The press release is here: <https://www.epa.gov/newsreleases/epa-administrator-pruitt-proposes-rule-strengthen-science-used-epa-regulations>. The link to the proposed rule is at <https://www.epa.gov/newsroom/proposed-rule-strengthening-transparency-regulatory-science>.

One week before Pruitt's announcement, the National Association of Scholars published an important study by David Randall and Christopher Welser on *The Irreproducibility Crisis of Modern Science*. Here is the link: https://www.nas.org/projects/irreproducibility_report.

Pruitt deserves lots of credit and so do many people who have worked for decades for scientific transparency. I'll mention only two here: Steve Milloy of JunkScience.com and Representative Lamar Smith, Chairman of the House Science, Space, and Technology Committee. Steve, a charter member of the Cooler Heads Coalition, has ongoing coverage of the controversy at JunkScience.com. Here is Chairman Smith's statement: <https://science.house.gov/news/press-releases/smith-remarks-administrator-pruitt-s-scientific-transparency-announcement>.

The blowback from environmental pressure groups and the junk science community has been amusing to watch. They are all for transparency and reproducibility, but not for requiring it when using junk science to justify costly new rules. Here are some examples: <http://thehill.com/opinion/energy-environment/384898-epa-proposal-will-hobble-good-science-and-harm-american-families>
<https://s3.amazonaws.com/ucs-documents/science-and-democracy/secret-science-letter-4-23-2018.pdf>;

<https://www.popsci.com/epa-transparency-public-health-data>

Here are three news stories that toe the party line:

https://www.washingtonpost.com/news/energy-environment/wp/2018/04/24/pruitt-to-unveil-controversial-transparency-rule-limiting-what-research-epa-can-use/?noredirect=on&utm_term=.29e5569ee37d

https://www.huffingtonpost.com/entry/pruitt-epa-transparency-rule-science_us_5adf44a8e4b07560f395fb16

<http://www.latimes.com/politics/la-na-pol-epa-science-20180424-story.html>

Although it isn't easy to argue against scientific transparency, the campaign against EPA's reforms is going to be intense. We will need to gear up to counter the mis-information from the environmental pressure groups and spread by the mainstream media. Angela Logomasini, my CEI colleague, does a good job in this article published on the Hill blog:

<http://thehill.com/opinion/energy-environment/385411-pruitts-rule-ending-secret-science-is-pro-science-pro-consumer>

Subject: Morning Energy, presented by Anheuser-Busch: Conservative talker has pull with Pruitt — It's primary day in coal country — Trump meets with ethanol

By Kelsey Tamborrino | 05/08/2018 05:40 AM EDT

With help from Eric Wolff and Anthony Adragna

PRUITT GETS TO IT FOR HEWITT: New emails emerged Monday that provide previously unknown details in the ongoing raft of controversies that have plagued EPA Administrator Scott Pruitt — and provide more ammo for onlookers who worry Pruitt spends too much time currying favor with his political allies.

Conservative commentator Hugh Hewitt brokered a meeting that ultimately ended with a polluted California area on Pruitt's personal priority list of Superfund sites, POLITICO's Emily Holden and Anthony Adragna report. Hewitt lives in Orange County, where the Superfund site sits, and has a son who works in EPA's press office. The TV and radio host emailed Pruitt back in September to set up a meeting between Pruitt and the law firm Larson O'Brien, which employs Hewitt and represents the Orange County Water District. "I'll join if the Administrator would like me too or can catch up later at a dinner," Hewitt wrote in the email, which was obtained under a FOIA lawsuit by the Sierra Club. He added that the issues surrounding the Superfund site were "Greek to me but a big deal in my home county."

Weeks later, the Orange County North Basin site in question appeared on Pruitt's list of 21 contaminated areas to address. Pruitt then proposed listing the site on the agency's National Priorities List, making it potentially eligible for long-term federal cleanup funding. Since the meet-up, Hewitt has been a staunch defender of Pruitt, dismissing his recent controversies as "nonsense scandals" on MSNBC in early April. EPA spokesman Jahan Wilcox confirmed that Hewitt helped arrange the meeting at the request of the water district but didn't attend.

The meeting adds to environmentalists' concerns about Pruitt. "The biggest fear we have is that No. 1 the administrator's political priorities and personal ambitions, political ambitions become the primary criteria for action under this program instead of science and health," said Elgie Holstein, senior director for strategic planning at the Environmental Defense Fund who has been tracking EPA's Superfund actions. [Read the story here.](#)

FIRST CLASS MEMO: EPA on Monday also released a copy of a memo written by the former head of Pruitt's security detail justifying his first class flights. "We have observed and increased awareness and at times lashing out from passengers which occurs while the Administrator is seated in coach with [his security detail] not easily accessible to him due to uncontrolled full flights," Pasquale "Nino" Perrotta wrote in the May 1, 2017, memo. "Therefore, we believe that the continued use of coach seats for the Administrator would endanger his life and therefore respectfully ask that he be placed in either business and or first class accommodations." The Washington Post and E&E obtained copies of the memo via a FOIA request. Perrotta retired from the agency last week.

WELCOME TO TUESDAY! I'm your host Kelsey Tamborrino. Congrats to Cummins Inc.'s Patrick Wilson, who was first to identify former House Speaker Nathaniel Banks of Massachusetts as the representative who served 11 terms and ran for election on five different party tickets. He was successful in all but the Liberal

Republican ticket. For today: What president was first to watch a major league baseball game from the dugout? Bonus points if you can name the team. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

BLANKENSHIP'S BIG DAY: We should know by tonight who will face Sen. [Joe Manchin](#) in a West Virginia Senate race that Republicans see as one of their biggest pickup opportunities of the year — that is, unless coal baron Don Blankenship scores a surprise upset in the surprisingly tight GOP primary. President Donald Trump [tweeted Monday](#) that Blankenship "can't win the General Election in your State," though he didn't endorse one of his opponents. That likely didn't ease fears that the two other major candidates — Rep. [Evan Jenkins](#) and state Attorney General Patrick Morrisey — will split the anti-Blankenship vote evenly and allow the former Massey Energy CEO to come out ahead. Blankenship recently was released from a year in jail following an explosion at the Upper Big Branch Mine that killed 29 workers. Blankenship has called the Upper Big Branch disaster the "worst tragedy" of his life, and is working to have his [conviction thrown out](#). (He has previously lost on appeal and failed to convince the Supreme Court to take the case.) For his part, Blankenship said Monday he was confident he would win, POLITICO's Alex Isenstadt [reports from Mount Hope, W. Va.](#)

That's not all: The Mountain State is not alone in kicking the 2018 midterms into gear. Statewide primary elections also are happening today in Ohio and Indiana and North Carolina, including solar energy entrepreneur and Democrat Dan McCready, who is running in North Carolina's 9th District. Vox nicely breaks down today's big races nationwide [here](#) and POLITICO has 7 things to watch [here](#).

SCHNEIDERMAN RESIGNS: New York Attorney General Eric Schneiderman, who has sued Exxon Mobil and fought the Trump administration's deregulatory agenda, [announced](#) his resignation Monday night in the wake of a report from the [New Yorker](#) that four women had accused him of abuse in previous romantic relationships. Two of the women who went on the record "say that they eventually sought medical attention after having been slapped hard across the ear and face, and also choked," according to the magazine. In a statement, Schneiderman disputed the allegations but said they "will effectively prevent me from leading the office's work at this critical time." The resignation takes effect at the close of business today.

Before the New Yorker story broke, Schneiderman and the attorneys general from seven other states called on Pruitt to withdraw his "secret science" proposal to ban the use of studies that don't publicly disclose all their data. Read the letter [here](#).

CHOPPING BLOCK: The White House on Monday [outlined](#) its package of proposed spending cuts, rescinding \$4.3 billion from the Energy Department's Advanced Technology Vehicles Manufacturing loan program, which supports the production of fuel-efficient, advanced technology vehicles. It was part of an overall request for \$15 billion worth of rescissions from previously appropriated funds from prior years. Another package going after the FY18 omnibus is expected later this year. More [here](#).

ON THE GRID: Puerto Rico's electric grid — which failed to provide power for much of the island for several months after last year's hurricanes — will be the focus of a Senate Energy and Natural Resources hearing this morning. The CEO of the Puerto Rico Electric Power Authority Walter Higgins and Bruce Walker, assistant Energy secretary for electricity delivery and energy reliability, are among the names set to testify. "The end goal is a modern and intelligent energy system that can serve as the resilient engine for Puerto Rico's economic revitalization," Walker is expected to say. Officials [say](#) close to 95 percent of power has now been restored on the island. **If you go:** The [hearing](#) kicks off at 10 a.m. in 366 Dirksen.

— **Forty-seven U.S. and international scientific groups** sent a [letter](#) to Puerto Rico Gov. Ricardo Rosselló on Monday, urging him to keep the island's statistical agency, the Puerto Rico Institute of Statistics, and its board of directors fully independent. "To address the challenges posed by its decade-long economic recession and the devastation of back-to-back hurricanes, Puerto Rico must chart its path toward sustainable recovery using reputable and reliable data and statistical methods," the letter says.

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks. The zero-emission trucks will be able to travel between 500 and 1,200 miles. Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025. [Learn more.](#) **

ENERGY-WATER BILL ADVANCES: The House Appropriations Energy-Water subpanel swiftly approved its \$44.7 billion energy and water spending bill on a voice vote Monday, sending the measure to the full committee for consideration. The appropriations bill largely ignores the president's budget request, earning the approval of Democrats, who applauded the boost in funding for the Army Corps of Engineers and DOE thanks to the bipartisan agreement to lift spending caps. [Read more.](#)

TRUMP MEETS WITH SENATORS ON RFS: In what could perhaps be the final time, Trump plans to meet today with at least Sens. [Chuck Grassley](#), [Joni Ernst](#), [Ted Cruz](#) and [Pat Toomey](#) to discuss their dueling priorities around federal ethanol policy. Who else will be in the room remains unclear, as sources told ME conflicting stories: An ethanol source said neither Pruitt, nor the Ag secretary, would be present, while a Republican Senate aide said both would be there.

A source said Team Ethanol's main goal is to get Trump to affirm his commitment to year-round sales of 15 percent ethanol, but the rest of the agenda seems to be unclear. A biofuels source said they expect Trump to kick the biofuels battle to Congress, where Sen. [John Cornyn](#) and Rep. [John Shimkus](#) have been trying to write a bill to overhaul the RFS. Cruz said at a Capitol Hill rally last week that he would view that decision as doing nothing. Cruz and Toomey are still seeking Renewable Fuel Standard changes to dramatically lower the program's compliance costs for refineries. Trump is scheduled to meet with Republican senators at 11:15 this morning, according to his public schedule.

— **Continuing their push for year-round sales of E15**, fuel retailers from 11 states sent a letter to Trump on Monday, calling on him to instruct EPA to immediately follow up on a pledge to allow the year-round sale of E15 before summer restrictions kick in on June 1. [Read the letter here.](#) Eighteen other groups, including the Sierra Club and Earthjustice, signed [onto their own letter](#) expressing concern with the administration's openness to the year-round sale of E15. And the American Energy Alliance launched a digital ad campaign Monday urging for the repeal of the RFS. [Watch that ad here.](#)

EXPECTING BIG THINGS: Shimkus is expecting broad support from the House when his comprehensive nuclear waste package [H.R. 3053 \(115\)](#) gets a vote Thursday. "I think people are ready to do something rather than nothing," he told reporters Monday. Shimkus said it's been a months-long process to educate members about the importance of the legislation and added he sent texts to Speaker [Paul Ryan](#) and Majority Leader [Kevin McCarthy](#) thanking them for finally bringing the package to the floor.

But he's not crazy: Shimkus said he hadn't had any recent talks with Senate counterparts about potentially moving the bill across the Capitol and he didn't expect they would this year with one of their most vulnerable incumbents (and ardent Yucca opponent), Sen. [Dean Heller](#), locked in a competitive reelection.

WHERE'S PERRY? Perry is slated to speak today during the Washington Conference on the Americas, where Commerce Secretary Wilbur Ross and Deputy Secretary of State John Sullivan, among others, are set to also appear. Perry will deliver remarks on "energy integration in the Americas" at 3:15 p.m. See the full agenda [here.](#)

E&C TACKLES EVs: The House Energy and Commerce Environment Subcommittee will listen to discussion today on how fuel vehicles and electric vehicles will coexist as electric vehicles become more popular. The hearing begins at 10:15 a.m. in 2322 Rayburn, or stream it [here.](#)

MAIL CALL: A diverse coalition of energy groups — including Advanced Energy Economy, the American Petroleum Institute and the American Wind Energy Association — on Monday urged Perry not to bail out coal and nuclear plants. Read their [letter](#).

INHOFE BACKS JACKSON: An Axios [report](#) that Pruitt chief of staff Ryan Jackson has been frozen out of the EPA chief's inner circle didn't sound right to his former boss, Sen. [Jim Inhofe](#). "I've known him well since he was 18 years old and I don't think they'd be capable of sidelining him," he told ME. Inhofe admitted that if the report is true — "that's an if I'm not willing to accept," he cautioned — it would be deeply concerning.

PRUITT MEETS MOTHERS ON CHEMICAL BAN: Two mothers will meet today with Pruitt, where they will press the administrator to ban paint strippers containing methylene chloride after their sons died using products with the chemical, according to the Environmental Defense Fund. On former President Barack Obama's last day in office, his administration proposed using the updated Toxic Substances Control Act to ban the use of the chemical in most commercial paint removers. Pruitt [told lawmakers](#) recently that he thinks EPA can make a decision on its proposed ban by the end of the year.

THAT'S ALL FOR ME!

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks from the pioneer in hydrogen-electric renewable technology, Nikola Motor Company. The zero-emission trucks — which will be able to travel between 500 and 1,200 miles and be refilled within 20 minutes, reducing idle time — are expected to be integrated into Anheuser-Busch's dedicated fleet beginning in 2020.

Through this agreement Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025.

"At Anheuser-Busch we're continuously searching for ways to improve sustainability across our entire value chain and drive our industry forward," said Michel Doukeris, CEO of Anheuser-Busch. "The transport industry is one that is ripe for innovative solutions and Nikola is leading the way with hydrogen-electric, zero-emission capabilities. We are very excited by the possibilities our partnership with them can offer."

Pruitt fast-tracked California cleanup after Hugh Hewitt brokered meeting [Back](#)

By Emily Holden and Anthony Adragna | 05/07/2018 10:12 PM EDT

EPA Administrator Scott Pruitt placed a polluted California area on his personal priority list of Superfund sites targeted for "immediate and intense" action after conservative radio and television host Hugh Hewitt brokered a meeting between him and lawyers for the water district that was seeking federal help to clean up the polluted Orange County site.

The previously unreported meeting, which was documented in emails released by EPA under a Freedom of Information Act lawsuit by the Sierra Club, showed Pruitt's staff reacting quickly to the request last September by Hewitt, who has been one of Pruitt's staunchest defenders amid a raft of ethics controversies around his expensive travel, security team spending and a cheap Washington condo rental from a lobbyist.

Pruitt has drawn criticism from environmentalists and other critics for letting prominent GOP backers and industry groups influence the agency's agenda — even as he has kicked scientists off of EPA's advisory panels and moved to limit the kinds of peer-reviewed research it will consider when making decisions.

In many cases, the people whose advice Pruitt is heeding could be useful supporters for him in a future race for U.S. senator or president. They include GOP megadonor Sheldon Adelson, who — as POLITICO reported in March — persuaded Pruitt last year to take a meeting with an Israeli water purification company called Water-Gen that later won a research deal with the EPA.

Hewitt, a resident of Orange County whose son James works in EPA's press office, emailed Pruitt in September to set up a meeting between the administrator and the law firm Larson O'Brien, which employs Hewitt and represents the Orange County Water District. Pruitt had been planning to meet with the lawyers in California a month earlier, but cancelled the trip to undergo knee surgery.

"I'll join if the Administrator would like me too or can catch up later at a dinner," Hewitt wrote in his Sept. 18 message. Hewitt added that the issues surrounding the Superfund site were "Greek to me but a big deal in my home county."

Pruitt's aides responded within minutes and quickly confirmed an Oct. 18 meeting for the lawyers and a project director.

Six weeks after that meeting, on Dec. 8, the Orange County North Basin site appeared on Pruitt's list of 21 contaminated areas to address. A month later, Pruitt proposed listing the site on EPA's National Priorities List, a move that could make it eligible for long-term federal cleanup funding from the federal government if the responsible polluters cannot be identified and forced to pay for its remediation.

Since then, Hewitt has been a robust defender of Pruitt, dismissing his recent controversies as "nonsense scandals" on MSNBC in early April and saying his detractors were "just trying to stop the deregulation effort."

Pruitt has touted the agency's Superfund work as one of his key priorities, setting up a task force to seek to speed up the clean-up of the nation's worst contaminated sites. That task force had been headed by Albert "Kell" Kelly, a former banker and longtime friend, who departed the agency last week after news about loans he provided to Pruitt in Oklahoma, including the mortgage provided to Pruitt for a house he bought from a lobbyist when he was a state senator.

Environmental advocates have worried Pruitt's efforts to identify Superfund priority sites would bypass the process set up by Congress to ensure cleanup resources are divided fairly, and that he could focus on sites seen as important to his political supporters. And environmentalists have said Pruitt's rush to claim that contaminated properties have been remediated could risk turning them over to local governments and businesses that might pursue cheaper, inadequate solutions.

Elgie Holstein, senior director for strategic planning at the Environmental Defense Fund who has been tracking EPA's Superfund actions, said the connection to Hewitt is "not a surprise."

"The biggest fear we have is that No. 1, the administrator's political priorities and personal ambitions, political ambitions become the primary criteria for action under this program instead of science and health," Holstein said.

EPA never disclosed the meeting with Hewitt's contacts. It was listed on Pruitt's public calendar as a staff briefing. But on his private Outlook schedule, which the agency has released in response to lawsuits, it appeared as an "Orange County Superfund Site" meeting with Kelly and two other staffers. The records did not list the Californians in attendance at the meeting at EPA headquarters in Washington.

But EPA spokesman Jahan Wilcox confirmed that two lawyers representing the water district, Robert O'Brien and Scott Sommer, and the water district director of special projects, Bill Hunt, were there. A third lawyer, former federal Judge Stephen G. Larson, was forced to cancel his trip due to wildfires in California, according to emails.

"Hugh Hewitt helped arrange the meeting at the request of the water district but did not attend," Wilcox said.

Wilcox said the meeting was for the water district to "brief EPA on the Superfund site's cleanup efforts and request expedited cleanup," following a 2016 agreement with the agency to conduct a remedial investigation and feasibility study, at a cost of \$4 million over two years. Hunt did not immediately respond to a request for comment.

Hewitt in an email to POLITICO called Pruitt a friend and said he does not have a working relationship with him. He said that his firm has represented the water district and worked on the site with EPA's regional office for years but that he had not participated in that work.

Hewitt said he requested a meeting because the water district wanted to brief the new EPA team, he said, adding that he was an Orange County resident until 2016 as well as an Orange County Children and Families Commission member. He said that he "very much" wanted the Superfund site remediated as soon as possible.

According to an EPA [fact sheet](#), the Orange County site has more than five square miles of polluted groundwater containing chlorinated solvents and other contaminants across the cities of Anaheim, Fullerton, and Placentia. It includes the Orange County Groundwater Basin, which provides drinking water to more than 2.4 million residents across 22 cities, according to the agency. Those pollutants can damage humans' nervous systems, kidneys and livers, and some are considered carcinogenic.

EPA has just begun its process of studying the contamination and it has not determined which companies caused the pollution in the area. But an [administrative settlement](#) with the EPA in 2016 says the area was home to "electronics manufacturing, metals processing, aerospace manufacturing, musical instrument manufacturing, rubber and plastics manufacturing, and dry cleaning."

Hewitt also thanked EPA schedulers for working to arrange a meeting between Pruitt and the California Lincoln Clubs, which describe themselves as in favor of "limited government, fiscal discipline and personal responsibility." After some rescheduling Pruitt eventually met with representatives of the group on a trip to California in March of this year, according to his public calendar. Prominent Orange County businessman John Warner also helped to connect that group with staffers.

Pruitt and his scheduling staff have frequently sought to set up meetings with or for influential Republican figures, according to the internal EPA emails.

His team accepted an invitation for him to address The Philanthropy Roundtable at an invitation-only event at the White House for "conservative and free-market foundation CEOs and individual wealth creators to discuss the greatest opportunities for foundations to protect and strengthen free society" and "what [Pruitt] views as unique opportunities for philanthropic action.

As POLITICO [reported](#) in March, Pruitt also met with an Indiana coal executive and Trump fundraiser who was seeking to soften a pollution rule.

Pruitt also crafted his travel schedule — including a tour of states in August — to meet with big business much like a member of Congress would during the annual recess.

In July, EPA's associate administrator of public engagement Tate Bennett was working with Pruitt to "essentially create an August recess for the EPA to be out in the states talking with individual companies & doing listening sessions within sectors," said Leah Curtsinger, the federal policy director for the Colorado Association of Commerce & Industry, in an email introducing Bennett to her husband, public affairs director at coal company Cloud Peak Energy and a fellow alum of Senate Majority Leader Mitch McConnell's office.

Annie Snider contributed to this report.

Blankenship, predicting victory, thumbs his nose at GOP [Back](#)

By Alex Isenstadt | 05/07/2018 08:27 PM EDT

MOUNT HOPE, W. Va. — A defiant Don Blankenship on Monday shrugged off President Donald Trump's last-minute plea for Republican primary voters to reject his insurgent Senate candidacy — and flatly predicted it would fail to halt his momentum.

On the final day of the dramatic West Virginia campaign, the coal baron and ex-prisoner seemed unbothered by the president's foray into the contest, arguing that voters would see through it as the latest ploy in an establishment-led effort aimed at keeping him from winning the nomination.

"I think it's still over," he declared to reporters here during a frenzied final day of the race. "It probably tightens it a point or two, but I don't think it matters much."

At another point in the day, after a reporter asked if he was feeling confident, Blankenship had a deadpan response: "Yeah, we're gonna win."

Senior Republicans are fretting that Blankenship, who spent a year behind bars after the 2010 explosion at his Upper Big Branch Mine that killed 29 workers, has vaulted into the lead heading into Tuesday's primary. GOP officials reviewed a range of surveys over the weekend, with some showing Blankenship holding a narrow single-digit advantage over his mainstream opponents, Rep. Evan Jenkins and state Attorney General Patrick Morrisey. Others had Blankenship ahead by more.

The national GOP has waged an all-out campaign to stop him from winning the nomination. They're convinced would destroy the party's prospects of ousting Democratic Sen. Joe Manchin in November. And many Republicans say a Blankenship win would be yet another black eye for the party, which is still reeling from last year's loss in the Alabama special election.

Over the past month, a super PAC aligned with Senate Majority Leader Mitch McConnell has spent over \$1.3 million on a barrage of anti-Blankenship TV ads.

With the former prisoner gaining momentum, the effort to stop him has gone into overdrive. As the race entered its final day, Blankenship's rivals — who had spent almost the entire campaign attacking one another — turned their fire on him.

In a not-so-veiled jab at Blankenship, Jenkins held a morning campaign event at a memorial for coal workers. At one point, he noted that one of his great grandfathers died in a mine explosion.

"The president could not have made it any clearer this morning that Don Blankenship is not the guy to beat Joe Manchin," Jenkins said.

Morrissey, who spent the day hopscotching across central West Virginia, announced that he'd sent a letter to Blankenship's parole officer highlighting what he argued was a violation. At one point, he took to Twitter to suggest questions for reporters to ask Blankenship. And he released a digital advertisement unloading on the coal baron, and highlighting his role in the 2010 explosion.

"Families devastated, children left fatherless, wives widowed," a narrator intoned. Many in the party are skeptical that the 11th-hour offensive will succeed — and, behind the scenes, finger-pointing is underway. Some are pinning the blame on the White House, saying it should have rebuked Blankenship earlier. Others say the fault lies with Jenkins and Morrissey, whose near constant attacks left one another badly damaged and created an opening for Blankenship.

Still others are pinning the blame on McConnell, saying that he should have long ago used his political muscle to clear the primary field and thereby avoid the three-way dynamic that has played to Blankenship's benefit.

McConnell has privately expressed concern to associates about Blankenship, whom he has long viewed as a serious threat in the contest. A loss for the Senate GOP leader, who hails from a neighboring Appalachian state and has faced withering attacks from Blankenship, would be embarrassing.

Over the weekend, McConnell spoke by phone with the president about the contest. According to a Republican official briefed on the call, Trump informed McConnell that he planned to criticize Blankenship publicly, a step he hadn't taken previously. Among the issues that arose on the call were Blankenship's TV ads, some of which have gone after McConnell's family in deeply personal, racial terms.

White House aides spent part of Friday drafting a tweet targeting Blankenship. Then, on Monday, the president hit send.

"To the great people of West Virginia we have, together, a really great chance to keep making a big difference," he wrote. "Problem is, Don Blankenship, currently running for Senate, can't win the General Election in your State...No way! Remember Alabama. Vote Rep. Jenkins or A.G. Morrissey!"

For Blankenship, who has tied himself closely to the president and on Monday declared himself "Trumpier than Trump," the attack could have stung. Yet as the race came to a close, Blankenship seemed unbothered.

Speaking to reporters after touring a freight shipping office here, Blankenship said he placed no stock in the president's tweet. It was McConnell, Blankenship said, who convinced Trump to weigh in. After Tuesday, Blankenship added, the president would be embarrassed he followed McConnell's lead.

"It's obvious that the president is suffering from the same thing that many in the public do, which is misinformation and untruths," Blankenship said. "The lesson that will be learned here when I win is that you shouldn't blindly endorse or cast doubts or favoritism unless you actually look at their record and not depend on the people in that swamp that you're trying to drain."

At times, Blankenship seemed to take pleasure in his recalcitrance. He refused to commit to endorsing his primary rivals should they win, which he said wouldn't happen, anyway. He wouldn't apologize for running TV ads lambasting McConnell's "China family." And he reiterated that he wouldn't vote for McConnell to serve as Senate GOP leader.

At one point, Blankenship noted that he'd been disrespected at other times in his career. The Marshall University-educated businessman noted that he'd grown up poor before becoming a multimillionaire, and recalled one episode in which he easily passed a CPA exam that Ivy Leaguers he knew had struggled with.

Now, he said, he was confronting another kind of establishment.

"I've been underestimated," he said, "all my life."

What's in Trump's \$15B spending cuts package [Back](#)

By Kaitlyn Burton | 05/07/2018 08:29 PM EDT

The White House is set to release a \$15 billion spending cuts package Tuesday. Here are some of the plan's targets, a senior administration official told reporters today:

- \$7 billion from the Children's Health Insurance Program, which covers about 9 million low-income children.
- \$4.3 billion from the Energy Department's Advanced Technology Vehicles Manufacturing loan program, which supports the production of fuel-efficient, advanced technology vehicles.
- \$800 million from the Center for Medicare and Medicaid Innovation, which was created under Obamacare.
- \$252 million from the 2015 Ebola outbreak response.
- \$148 million from the Animal and Plant Health Inspection Service for responding to disease outbreaks "that have already been resolved," the official said.
- \$107 million for technical assistance after Hurricane Sandy for emergency watershed programs.
- \$15 million from USDA's Rural Cooperative Development Grant program, which seeks to boost the economies of rural areas.

Trump tries to woo conservatives with bid to cut spending [Back](#)

By Sarah Ferris and Kaitlyn Burton | 05/07/2018 09:05 AM EDT

The White House on Tuesday will send \$15 billion in proposed spending cuts to Congress in an attempt to demonstrate fiscal austerity to skeptical conservatives, senior administration officials confirmed Monday night.

The administration had last week planned to send Congress a package of \$11 billion in spending reductions. But since then, some conservatives have quietly pushed for an even bolder proposal, particularly after the GOP's spending binge in recent months, said Republicans familiar with the discussions.

The White House initially floated as much as \$60 billion in cuts, including an unprecedented attempt to cancel money from this year's omnibus spending bill. The proposal was later downsized to \$11 billion, and then back up to \$15 billion, targeting only unused funding from past years, which POLITICO first reported.

One senior administration official told reporters that the proposal coming Tuesday is "the largest single rescissions package at one time."

The White House also plans to make a second attempt at clawing back funding from the omnibus, but the senior administration official said that could come weeks later.

The official said President Donald Trump will be personally involved in the details of the next package, which will include "substantial" cuts in current spending based on the president's own budget request.

Unlike regular spending bills, a presidential rescissions package is given fast-track authority in both chambers. That means the proposal is one of the rare spending-related bills that is able to bypass the 60-vote threshold in the Senate.

Nearly half of the package, a whopping \$7 billion, pulls from the Children's Health Insurance Program, which covers about 9 million low-income children.

Of this, \$5 billion is fiscal 2017 funding that has already expired, and \$2 billion is money from a so-called contingency fund that states can tap into if they're short on cash.

These CHIP rollbacks "will not impact the program," the senior administration official said.

It would also cut \$800 million from the Center for Medicare & Medicaid Innovation, which was created under Obamacare.

In addition, the proposal will target 38 programs with large amounts of leftover cash, including \$148 million from the Animal and Plant Health Inspection Service, \$107 million for Hurricane Sandy in 2013 and \$252 million for the Ebola outbreak in 2015.

The senior administration official said the White House is starting with "uncontroversial" cutbacks as a sweetener to bring Democrats on board.

"I don't think we believe there's a reason we wouldn't get bipartisan support for a package like this," the official said.

The process also includes a special bonus for fiscal hawks: Whenever the president submits a rescissions request, that spending is frozen automatically for 45 legislative days, or until Congress formally rejects it.

OMB Director Mick Mulvaney said in April that he hopes for a vote in the House before the July Fourth recess, and officials told reporters Monday that the House is "very interested in this package."

The GOP-dominated House is expected to easily clear the rescissions package, but even White House officials are less confident about its fate in the Senate, White House legislative affairs director Marc Short told POLITICO on Monday. Trump is pleased with the \$15 billion proposal, Short said.

In a call with Capitol Hill staff on Monday, White House officials skirted a question about whether Majority Leader Mitch McConnell had signed off on the proposal.

"We are in discussions with the majority leader," the administration official said on the call, which POLITICO was permitted to listen to by a staffer. "We're hopeful the Senate's going to come our way but I would say it's an ongoing conversation right now."

Trump's unusually large request would come after a nearly two-decade drought of any formal rescissions proposal.

Former President Bill Clinton was the last president to propose rescissions. His three requests totaled just \$128 million, a fraction of Trump's request.

Even with Trump's record-setting sum, conservative groups are demanding the Trump administration go further by proposing to cancel funds from the omnibus, which Trump threatened to veto.

Americans for Prosperity, the right-leaning group founded by the Koch brothers, is asking the White House to reel back \$45 billion from the \$1.3 trillion omnibus.

The group on Monday released an exhaustive list of programs it believes should go on the chopping block, including homeless assistance grants, a Coast Guard security center, FBI salaries and the National Cancer Institute.

Behind the scenes, top budget officials have wrestled for weeks with Republican lawmakers on the size and scope of the rescissions package.

The debate was largely centered on whether to cut money across the board from the omnibus spending package, or whether to target individual programs.

Few Republicans wanted the across-the-board cuts as those would have hit the hard-won increases to military spending. But officials also worried that going after specific programs would spur infighting among Republicans, according to one former top GOP congressional aide briefed on the deliberations — an outcome everyone hoped to avoid ahead of the 2018 midterm elections.

Meanwhile, belt-tightening conservatives in the House are still hoping for more than \$15 billion in cuts.

An internal survey of dozens of House Republican Study Committee members found that lawmakers overwhelmingly support the largest possible rescissions request. The survey, which was obtained by POLITICO, found that 71 percent of RSC members said they would back a proposal that cut at least \$60 billion. Another 9 percent said they'd support any amount.

And 94 percent of RSC members surveyed said the rescissions package should cut at least some domestic funding from this year's \$1.3 trillion omnibus. Only 6 percent said "maybe."

Republican budget wonks also wondered if the final package would accomplish the task of reducing government spending in a meaningful way, if it indeed took previously unspent money from old programs.

"This is not a deficit reduction exercise, but more of a public relations exercise to soothe the base and convince them that the White House is fiscally responsible," said G. William Hoagland, a senior vice president at the Bipartisan Policy Center and former director of budget and appropriations for former Senate Majority Leader Bill Frist as well as the former director of the Senate Budget Committee.

"If they are finding unused budget authority and putting that in a special package to Congress as appropriators are trying to put together the [fiscal] 2019 bill, it may have the effect of creating more spending for 2019 rather than less," Hoagland said.

Nancy Cook, John Bresnahan and Matthew Nussbaum contributed to this report

House Appropriations panel advances \$44.7B energy and water bill [Back](#)

By Annie Snider | 05/07/2018 06:15 PM EDT

A House Appropriations Committee subpanel swiftly approved its \$44.7 billion energy and water spending bill on a voice vote today, sending it to the full committee for consideration.

Democrats applauded the boost in funding that the measure provides for the Army Corps of Engineers and DOE thanks to the bipartisan agreement to lift spending caps.

"Our bill is certainly a message to the executive branch that the legislative branch rejects the ill-considered, draconian cuts we have come to expect to every important agency we fund in this bill," said Rep. [Marcy Kaptur](#), the top Democrat on the subcommittee.

Overall, the bill would provide \$7.28 billion to the Army Corps of Engineers, \$451 million over 2018 levels. That includes \$1.6 billion for harbor maintenance activities, or \$160 million more than the level appropriators committed in a major 2014 bill.

DOE's energy programs would get \$13.4 billion under the measure, with increases for fossil and nuclear energy research and cuts for renewable energy and energy efficiency.

Democrats objected to that disparity, as well as to a spate of policy riders in the bill such as a provision to repeal the Obama administration's Waters of the U.S. rule and another to override a court decision and operate the Columbia and Snake rivers' dams for hydropower production rather than protecting endangered salmon.

WHAT'S NEXT: The full House Appropriations Committee is expected to consider the measure soon.

Last week, a bipartisan group of lawmakers urged Congress to block any provisions curtailing the next spending bill.

The letter came from members of both parties, including representatives who have vowed to address drought and other effects of climate change.

Half of the group's 78 members are Democrats, and their president is a Republican. **But** it is real, giving some progress on climate change seriously. **But** granting green credentials to Republicans based on actions of its members.

When it came time to sign the bill, Deutch said he was disappointed that it would prohibit or limit the federal government's ability to address the effects of climate change. Its impacts, only nine of the 50 House members voted in favor of the bill.

"I'm very disappointed," Rep. Deutch told **The Post**. "I'm really serious about this. I can bring together Democrats and Republicans and be really helpful. But the caucus vote is not helpful on climate change. Part of that support would undermine our efforts."

Deutch added that he thought the bill would be a "no-brainer" for Nita Lowey (D-N.Y.), the chairwoman of the House Environment Committee, "would be an easy sell" to her constituents in a letter.

It was hard to lock down members of the caucus on Memorial Day, a key time for House members to go home, Deutch explained. "In the next week, we'll have a vote," Deutch said, "and the fact is that the only way to get this matter is their votes."

Founded by Deutch and Rep. Louie Gohmert, the caucus's constituents are already grappling with the effects of climate change. Deutch said he wanted to be bipartisan from the start. He said he would have one Republican for every Democrat.

The young caucus is still growing. Deutch said he had just last week. **But the addition**

This version includes the following edits. (I think since then we've received a docket number, which I can forward separately).

1. Comment requesting docket #
2. Comment to remove watermark
3. Inserted RIN 2080-AA14
4. Comment FOR FURTHER INFORMATION CONTACT needs an employee name & tel#
5. Double spaced the document
6. Suggested using References section rather than footnotes
7. Removed CRA section
8. Added special header for Administrator signature page / removed Deliberative heading
9. Comment to add signer name & title below the signature line
10. Made minor reg text edits

Subject: Morning Consult Energy: Refinery Owned by Icahn Said to Receive RFS Waiver

By [Jacqueline Toth](#)

Top Stories

- CVR Energy Inc., an oil refinery owned by former Trump adviser Carl Icahn, in recent months received a hardship waiver from the Environmental Protection Agency that exempts a plant in Wynnewood, Okla., from fuel blending requirements under the Renewable Fuel Standard, according to two industry sources. Icahn, who ended his advisory role in August after lawmakers questioned whether he had ethical conflicts working as both an

advisor and investor, is under federal investigation into whether he influenced biofuels policy while advising President Donald Trump. ([Reuters](#))

- Marathon Petroleum Corp., the second-largest refiner in the United States, said it plans to buy pipeline and refining company Andeavor in a cash-and-stock deal worth \$23.3 billion, according to the two companies. Marathon, based in Findlay, Ohio, has operations in the East, and Andeavor, based in San Antonio, operates in the West, which could make it easier for the companies to get regulatory approval. ([The Wall Street Journal](#))
- The Environmental Protection Agency's Office of Inspector General opened another investigation into Administrator Scott Pruitt, this time over his \$50-a-night condo rental in Washington from a lobbyist whose husband represented clients with matters at the agency, according to letters from Inspector General Arthur A. Elkins Jr. to Democratic Reps. Don Beyer of Virginia and Ted Lieu of California. The EPA's top ethics officer has said the housing arrangement did not violate rules on gift-giving, but the officer had not examined whether it ran against other ethics regulations or if the space was used as the lease indicated. ([Bloomberg](#))
- Pruitt has directed three senior EPA officials - Deputy Administrator Andrew Wheeler, Chief of Staff Ryan Jackson and Chief Financial Officer Holly Greaves - to review future agency spending made on his behalf that exceeds \$5,000, according to a signed memorandum. The memo came after Pruitt, at House hearings on Thursday, addressed allegations of extravagant spending on his behalf, including the purchase of a \$43,000 soundproof phone booth for his office, whose cost he ascribed to the decisions of career officials. ([The Hill](#))

Report: The Great Recession, 10 Years Later

How much of an impact does the recession continue to have on Americans, their perceptions of the financial industry, and their personal finances?

General

EPA Watchdog Opens Probe of Administrator Pruitt's Condo Rental

Jennifer A. Dlouhy, Bloomberg

The Environmental Protection Agency's internal watchdog will probe Administrator Scott Pruitt's unorthodox rental of a Capitol Hill condominium from a lobbyist, marking at least the 10th federal investigation of the agency's chief.

Pruitt signs memo directing aides to scrutinize future big expenses

Timothy Cama, The Hill

Under intense scrutiny of his expenses, Environmental Protection Agency (EPA) chief Scott Pruitt directed three senior officials to review any future expenditures made on his behalf that cost more than \$5,000.

EPA staff in 'despair' after Pruitt blame game

Emily Holden, Politico

Scott Pruitt may have survived his testimony on Capitol Hill, but he's coming back to a further enraged and demoralized Environmental Protection Agency staff.

Proposed shake-up at National Park Service could make senior leaders hit the road

Joel Achenbach, The Washington Post

A major management shake-up could be underway at the National Park Service, including the proposed reassignment of the veteran superintendent of Yellowstone National Park and six other senior executives, according to several individuals familiar with the plan

California Air Regulator to Pruitt: 'Call Me Maybe?'

Mark Chediak et al., Bloomberg

California's top air-quality regulator took to Twitter Friday to engage Environmental Protection Agency Administrator Scott Pruitt over the future of automotive pollution standards.

Dem AGs renew call for Pruitt to recuse himself from climate rule repeal process

Timothy Cama, The Hill

Democratic state attorneys general are renewing their call for Environmental Protection Agency (EPA) Administrator Scott Pruitt to

recuse himself from the process of repealing the agency's climate change rule for power plants.

OMB backdates completion date for 'secret science' review
Sean Reilly, E&E News

The White House has altered an official timeline to show that a required review of a proposed EPA science rule was finished one day before agency Administrator Scott Pruitt signed it this past Tuesday.

Water delivery suspended in Nevada mine battle
Scott Sonner, The Associated Press

It was an uncharacteristically urgent demand at a U.S. Superfund site where the cleanup of an abandoned World War II-era mine has dragged on for two decades and progress is measured, at best, in years.

Oil slips on rising U.S. rig count; Iran concerns limit downside
Koustav Samanta, Reuters

Oil prices dipped on Monday after a rising rig count in the United States pointed to higher production there, but markets held near their highest in over three years and remained set for a second straight month of gains.

Oil and Natural Gas

U.S. EPA grants biofuels waiver to billionaire Icahn's oil refinery - sources
Jarrett Renshaw et al., Reuters

The U.S. Environmental Protection Agency has granted a financial hardship waiver to an oil refinery owned by billionaire Carl Icahn, a former adviser to President Donald Trump, exempting the Oklahoma facility from requirements under a federal biofuels law, according to two industry sources briefed on the matter.

Marathon Petroleum to Buy Andeavor for More Than \$20 Billion
Dana Cimilluca et al., The Wall Street Journal

Marathon Petroleum Corp. plans to buy pipeline and refining company Andeavor for more than \$20 billion, the companies said Monday.

Saudi Aramco Shakes Up Board, Adds First Female Director
Summer Said, The Wall Street Journal

Saudi state-oil giant Aramco reshuffled its board, adding five members including its first-ever female director, as it prepares for a public listing.

Trump officials seek to ease landmark offshore drilling safety rules

Timothy Cama, The Hill

The Trump administration is proposing to roll back parts of a landmark offshore drilling safety regulation that was written in response to the 2010 BP Deepwater Horizon disaster.

Utilities and Infrastructure

'Cyber Blindspot' Threatens Energy Companies Spending Too Little

Naureen S. Malik, Bloomberg

What's the cost of securing the nation's energy from a cyber attack?

Pruitt: EPA will seek 'comprehensive rule' to alter New Source Review

Gavin Bade, Utility Dive

If Pruitt survives investigation into possible ethics violations, the power sector can expect more action on NSR and science policy.

PJM CEO touts benefits of new market amid shifting dynamics in the West

Kate Winston, Platts

A new electricity market in the West could offer unique benefits compared to the existing markets in the region, PJM Interconnection President and CEO Andrew Ott said Friday in an interview with S&P Global Platts.

Can San Diego Ditch the Power Company? Not Without a Fight

Ivan Penn, The New York Times

Seeking control over the way their electricity was generated and paid for, Cape Cod residents banded together two decades ago to bypass the local utility and buy power in bulk.

Renewables

[Electric scooters draw hordes of investors and users - but a number of critics as well](#)
Deborah Findling, CNBC

The market for electric scooters is booming, with names like LimeBike, Spin, Bird among the few companies appealing to consumers in big cities who are looking for quick, convenient and environmentally-friendly transportation.

Coal

[DTE Electric plans to keep Belle River, Monroe coal plants running: official](#)
Bob Matyi, Platts

Even though it is retiring three of its coal plants by 2023, DTE Electric intends to keep running its 1,395-MW Belle River and 3,000-MW Monroe coal plants until around 2030 and 2040, respectively, Trevor Lauer, DTE president and chief operating officer, said Friday in an interview.

Nuclear

[Nuclear Power Plants Have a 'Blind Spot' for Hackers. Here's How to Fix That.](#)
Sean Lyngaas

Billy Rios likes to hack the machines that make modern society function. Take the Morpho Itemiser 3, a prototype of the device the Transportation Security Administration uses to screen airport travelers for explosives and narcotics.

Climate

Unprecedented U.S.-British project launches to study the world's most dangerous glacier

Chris Mooney, The Washington Post

The largest U.S.-British Antarctic mission in seven decades officially launched at an event in Cambridge on Monday, as the two countries pooled dollars and scientific resources for missions to West Antarctica's Thwaites glacier - a Florida-size ice body that, scientists fear, could flood the world's coastlines in our lifetimes.

In Cities v. Fossil Fuels, Exxon's Allies Want the Accusers Investigated

David Hasemyer, InsideClimate News

The elbowing for advantage between ExxonMobil and the California cities and counties suing the oil giant for billions of dollars in climate change damages has spread to the U.S. Securities and Exchange Commission.

Opinions, Editorials and Perspectives

Support From Congress Shows High Stakes of Coal Plant for Tribes and Economies

Darren Bearson, Morning Consult

Comprehensive energy legislation has not been at the top of Congress' agenda throughout the first years of the Trump presidency.

Why climate change can't escape Washington's back burner

Amy Harder, Axios

When it comes to federal policy priorities, climate change rarely drives the agenda.

Scott Pruitt's feisty defense of himself may have been good enough to save his job of destroying the earth!

Tom Toles, The Washington Post

There are times when what you are watching is so far out of line with what is actually happening and what actually matters that you know that somebody is screamingly bonkers

Scott Pruitt Is Forced to Confront Reality

Emily Atkin, The Atlantic

Thursday morning's hearing of the House Energy and Commerce Committee was supposed to be all about Scott Pruitt, the embattled head of the Environmental Protection Agency. But it also turned out to be about Drew Wynne.

The Incredible Shrinking Exxon
Spencer Jakab, The Wall Street Journal

Exxon Mobil put an exclamation point on what ails big oil on Friday.

Scott Pruitt seems determined to harm the environment
The Editorial Board, The Washington Post

Environmental Protection Agency Administrator Scott Pruitt's expanding ethical cloud is one reason he should not be the nation's top environmental officer. The other is that he seems determined to ruin the environment.

EPA scandals overshadow Scott Pruitt failure to undo Obama environmental regulations
Stuart Shapiro, USA Today

Scott Pruitt told Congress this week that the many ethics complaints against him are an attempt to discredit him because of his successful efforts to eliminate environmental regulations as head of the Environmental Protection Agency.

Research Reports

North American Power & Utilities Deal Insights Q1 2018
PricewaterhouseCoopers

Fading uncertainties regarding tax reform, the unique window of opportunity for solar and wind energy assets, and a continuing drive to rationalize portfolios all served to keep results strong in the first quarter of 2018.

Subject: Re: Science Transparency

It is for 2pm and we would love to have you and the Senator come! Below is some more details. Let me know when you can and we can add him to the run of show.

- EPA is proposing a regulation intended to strengthen the transparency of EPA regulatory science.
- The proposed regulation provides that when EPA develops regulations, including regulations for which the public is likely to bear the cost of compliance, with regard to those scientific studies that are pivotal to the action being taken, EPA should rely on such studies if the data underlying those are publicly available in a manner sufficient for independent validation.
- EPA will be soliciting comment on this proposal and how it can best be promulgated and implemented in light of existing law and prior Federal policies that already require increasing public access to data and influential scientific information used to inform federal regulation.

Subject: Morning Consult Energy: Brent Crude Hits Highest Level Since 2014 on Concerns About Resumed Iran Sanctions

By [Jacqueline Toth](#)

Top Stories

- Worries about a resumption of U.S. sanctions on Iran pushed up the price of Brent crude oil to \$75.89 a barrel, its highest level since November 2014. The surge in oil prices followed a warning from Iranian President Hassan Rouhani that it would be a "historic" mistake for the United States to withdraw from the 2015 nuclear deal with Iran. ([Financial Times](#))

- ConocoPhillips Co. is trying to take the Caribbean facilities on Curacao, Bonaire and St. Eustatius owned by Venezuela's Petróleos de Venezuela, S.A. to enforce the \$2 billion arbitration award it recently won in a lawsuit against PDVSA for the nationalization of oil projects more than 10 years ago in Venezuela, according to three sources. The facilities on the three islands are important to PDVSA's oil processing, storing and blending operations and accounted for around a quarter of Venezuela's oil exports in 2017. ([Reuters](#))
- ISO-New England, the grid operator for New England, asked the Federal Energy Regulatory Commission for permission to work toward a reliability must-run agreement to prevent the retirement of two units of an Exelon generating station in Middlesex, Mass., according to a filing. Exelon has said it intends to retire the two units once their capacity supply obligations expire May 31, 2022, but losing the two units, ISO-NE said, would result in violations of mandatory reliability standards. ([Platts](#))
- New Volkswagen AG Chief Executive Herbert Diess has received a safe-passage assurance from the Justice Department that allows him to travel freely around the world without fear of being arrested in relation to VW's emissions cheating scandal, according to two sources. Diess, who was appointed as head of the automaker last month, also has a spoken assurance that he will be told in advance if prosecutors will charge him as part of their ongoing investigation into the scandal. ([Bloomberg](#))
- According to newly released internal emails, political appointees of Environmental Protection Agency Administrator Scott Pruitt reviewed records collected in response to Freedom of Information Act requests for documents related to Pruitt's activities, which slowed the speed of information released under the act. The emails show that political staff also chastised career EPA staff for releasing files without first letting them screen the documents. ([Politico](#))

These are the Most Loved Brands in America

The brands that define American culture and commerce, ranked using over 250,000 survey interviews with U.S. adults.

General

EPA clamps down on document requests linked to Pruitt **Alex Guillén, Politico**

Top aides to Scott Pruitt at the Environmental Protection Agency are screening public records requests related to the embattled administrator, slowing the flow of information released under the Freedom of Information Act - at times beyond what the law allows.

Pruitt's problematic security had a playbook **Sara Ganim et al., CNN**

Make protection feel like a perk. Cultivate a healthy paranoia. Eliminate the usual annoyances of travel.

Senate Banking Chair Mike Crapo Set Up Campaign Shop in Scott Pruitt's Lobbyist Pad **Lachlan Markay et al., The Daily Beast**

The townhouse that served as a cut-rate rental pad for EPA administrator Scott Pruitt doubled as a veritable campaign headquarters for one of the most powerful chairman in the U.S. Senate.

Couple who rented condo to Pruitt pays fine to D.C. **Anthony Adragna, Politico**

The lobbyist couple whose condo EPA Administrator Scott Pruitt leased for \$50 a night paid a \$2,034 fine Friday for wrongly renting out the property, a spokesman for the D.C. Department of Consumer and Regulatory Affairs said.

New Interior guidance prohibits telling developers Endangered Species Act permits are mandatory **Miranda Green, The Hill**

Fish and Wildlife Service (FWS) staff can no longer advise builders they need to obtain a permit mandated by law to maintain endangered species habitat, according to new Interior Department guidance.

The man who could replace Scott Pruitt **Eric Wolff, Politico**

The man poised to take the reins at the Environmental Protection Agency if Scott Pruitt falls to scandal is a longtime Washington insider and coal

lobbyist who would pursue the same anti-regulation agenda - only without all of Pruitt's baggage.

Iran nuclear worries pushes crude oil to 4-year high
Stephen Smith, Financial Times

Brent crude on Monday touched its highest level since 2014 as oil prices increased on rising tension between the US and Iran.

Oil and Natural Gas

Conoco moves to take over Venezuelan PDVSA's Caribbean assets - sources
Marianna Parraga et al., Reuters

U.S. oil firm ConocoPhillips has moved to take Caribbean assets of Venezuela's state-run PDVSA to enforce a \$2 billion arbitration award over a decade-oil nationalization of its projects in the South American country, according to three sources familiar with its actions.

Oil MLPs Are Beckoning Again, but Know the Risks
Jeff Brown, The Wall Street Journal

Oil producers are pumping fiercely, and crude prices are up since last summer but still below previous peaks. Car buyers are grabbing gas-guzzling pickups and SUVs. World demand for oil is growing.

Utilities and Infrastructure

ISO-NE seeks US FERC permission to keep Exelon units online for fuel security
Marcy Crane, Platts

In an apparent first, the New England grid operator has asked federal regulators for permission to pursue a reliability must-run agreement to keep two retiring units of Exelon's Mystic Generating Station in Middlesex, Massachusetts, online to address reliability risks related to "fuel security."

How Storms, Missteps and an Ailing Grid Left Puerto Rico in the Dark
James Glanz et al., The New York Times

It took months to restore electricity in Puerto Rico after hurricanes dealt a one-two punch. Many homes are still without power, and the system's future is far from certain.

Illinois to sue EPA for exempting Foxconn plant from pollution controls

Valerie Volcovici, Reuters

Illinois' Attorney General said on Friday she plans to sue the U.S. Environmental Protection Agency for allowing a proposed Foxconn Technology Co Ltd plant in neighboring Wisconsin to operate without stringent pollution controls.

Renewables

Western coal-burning giant embraces wind

Benjamin Storrow, E&E News

A Western utility giant has so much wind that it has begun to turn its back on fossil fuels.

Coal

Trump admin cites Paris targets to expand Mont. coal mine

Dylan Brown, E&E News

Even while President Trump is pulling the United States out of the Paris Agreement, his administration is citing other nations' climate goals to justify expanding a Montana coal mine.

Nuclear

Top-level turmoil at EPA raises local concern about West Lake Landfill progress

Bryce Gray, St. Louis Post-Dispatch

As Environmental Protection Agency Administrator Scott Pruitt faces a mounting list of ethics and spending complaints, many locally wonder how the controversy will affect the West Lake Landfill Superfund site.

Climate

VW CEO Given Rare U.S. Safe-Passage Deal

Tom Schoenberg et al., The Wall Street Journal

Not long after U.S. authorities filed sealed charges against Volkswagen AG's old chief executive officer, they granted the new CEO a rare safe-passage deal.

EPA's climate change website went down a year ago for 'updating.' It's still not back.

Chris Mooney, The Washington Post

The news came on a Friday evening in late April last year: The U.S. Environmental Protection Agency had removed an informational website about climate change, taking down a page that had been up, in some form, for nearly two decades and under three presidents.

IG will probe alleged censoring of draft NPS climate study

Michael Doyle et al., E&E News

The Interior Department's Office of Inspector General will scrutinize alleged alterations to a pending National Park Service report related to climate change and rising sea levels.

Opinions, Editorials and Perspectives

The future is in supercomputers

Energy Secretary Rick Perry, CNN

Technology is easy to take for granted, but it has an incredible impact. Computers, for instance, are commonplace, but they give us extraordinary capabilities. And we may only be seeing the beginnings of their potential.

The EPA's new 'secret science' rule makes sense from a risk-assessment perspective

Michael Dourson, Washington Examiner

Environmental Protection Agency Administrator Scott Pruitt's recent announcement that EPA will not use "secret science" - that is science for which the underlying data is not available - is challenging. Whereas EPA is routinely in receipt of unpublished toxicity studies for chemicals designed for commerce, not all important scientific findings are publishable.

Clean water is essential to health care around the globe
William Reilly, The Hill

When four British hospitals shut down for all but emergency care due to a major waterline burst, bedpans, bottled water and hand gel were handed out and patients were asked to not flush toilets.

Scott Pruitt's breathtaking corruption is part of Paul Ryan's legacy
Jennifer Rubin, The Washington Post

Using your government job to check off travel destinations on your bucket list is just about the swampiest gambit in a long list of Pruitt's abuses.

Don't prop up coal if the economy can't
The Editorial Board, Washington Examiner

Don't prop up coal if the economy can't. One of the reasons President Trump was elected is that President Barack Obama's launched a mean-spirited and heavy-handed campaign to kill coal as a source of electricity.

A power primer for the Trump era
Amy Harder, Axios

Electricity, the thing we all use but don't really notice, has unexpectedly become a hot topic under President Trump.

Research Reports

Climate-driven shifts in sediment chemistry enhance methane production in northern lakes
E. J. S. Emilson, Nature Communications

Freshwater ecosystems are a major source of methane (CH₄), contributing 0.65 Pg (in CO₂ equivalents) yr⁻¹ towards global carbon emissions and offsetting ~25% of the terrestrial carbon sink. Most freshwater CH₄ emissions come from littoral sediments, where large quantities of plant material are decomposed.

Teleforum Calls This Week

Dial 888-752-3232 to Participate

Courthouse Steps: *Lucia v. SEC*

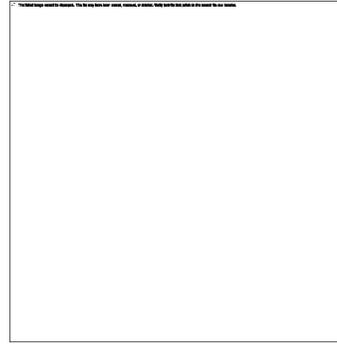

Litigation and Administrative Law Practice Groups Teleforum

Monday, April 23, 2018 | 3:00 p.m. ET

Prof. Gregory Dolin

Co-director of the Center for Medicine
and Law
University of Baltimore School of Law

Kevin B. Muhlendorf

Partner
Wiley Rein LLP

In *Lucia v. SEC*, the SEC fined the petitioner Raymond J. Lucia \$300,000 and barred him from working as an investment advisor for anti-fraud violations of the anti-fraud provisions of the Investment Advisers Act. The petitioner requested SEC review, arguing that the administrative proceedings were invalid, as the administrative law judge (ALJ) who decided his case was unconstitutionally appointed. ALJs are appointed by SEC staff in a manner that Lucia claimed violated the Appointments Clause under Article II, Section 2, Clause 2 of the Constitution. When the SEC ruled against Lucia, he appealed to the D.C. Circuit which denied the petition for review by a divided court, issuing a new decision affirming the SEC's decision as required under D.C. Circuit Rule 35(d).

Kevin Muhlendorf of Wiley Rein and Professor Gregory Dolin of the University of Baltimore School of Law will join us to give their impressions of the oral argument of this important case.

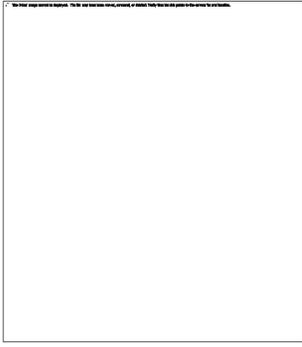

Analyzing how EPA is Addressing "Secret Science"

Regulator Transparency Project Teleforum

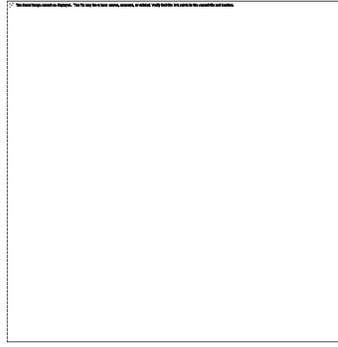

Tuesday, April 24, 2018

|

12:00 noon ET

Daren Bakst
Senior Research Fellow in
Agricultural Policy
The Heritage Foundation

Dr. Richard B. Belzer
Associate Fellow
R Street Institute

Moderator:
Devon Westhill
Director
Regulatory
Transparency Project

EPA Administrator Scott Pruitt announced that his agency would no longer allow the use of "secret science" in developing federal regulations. Specifically, the agency will only use scientific studies to develop regulations when the data and methodology for those studies are made accessible to the public. Is there really a secret science or transparency problem that even needs to be addressed? If so, have there been attempts historically to correct the problem? What are the implications of excluding such studies? This presentation will provide background on this effort and discuss how transparency in government can be strengthened and better inform policymaking.

Courthouse Steps: *Trump v. Hawaii*

International & National Security Law Practice Group Teleforum

Wednesday, April 25, 2018 | 3:00 p.m. ET

Steven Giaier
Senior Counsel
House Committee on Homeland Security

On April 25, the Supreme Court will hear oral argument in *Trump v. Hawaii*, the latest iteration of Hawaii's challenge to President Trump's Executive Order suspending immigrant and nonimmigrant entry into the country by citizens of specific countries. While the original order banned entry of citizens from seven majority Muslim countries, it was superseded by the current order which affects citizens from other countries as well, such as Chad, North Korea and Venezuela. Steve Giaier attended oral argument and will join us to share his observations.

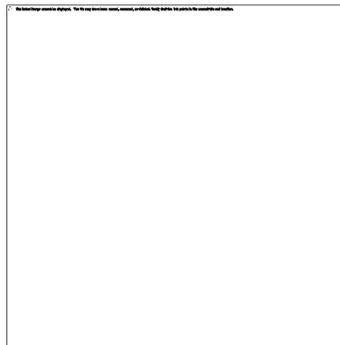

The Struggle to Rein In Shareholder Activism

Corporations, Securities & Antitrust Teleforum

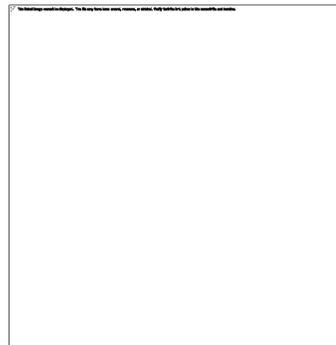

Thursday, April 26, 2018

|

2:00 p.m. ET

Jason A. Levine
Litigation Partner
Vinson & Elkins LLP

Lawrence Elbaum
Litigation Counsel
Vinson & Elkins LLP

For over a decade, shareholder activism has been on the rise, affecting an increasing number of publicly-traded companies. Essentially a re-brand of the 1980s-era "corporate raiders," today's activists are primarily institutional shareholders that seek to profit by forcing change at companies - whether by seeking board seats, pursuing managerial purges, or effectuating transactions for short-term gain. Shareholder activism is a battle for corporate control, accomplished largely through proxy fights and publicity campaigns. This Teleforum will provide an overview of the shareholder activism landscape, strategies and counter strategies to protect against activist tactics, and will assess the prospect for legal reforms intended to stem the flow of activist campaigns.

Courthouse Steps: Animal Science Products v. Hebei Welcome Pharmaceutical

Litigation Practice Group Teleforum

Friday, April 27, 2018 | 2:00 p.m. ET

John Shu

Attorney and Legal Commentator

Animal Science Products, a U.S. company, sued Hebei Welsome Pharmaceutical Co., a Chinese company, for violating U.S. antitrust laws by coordinating prices and artificially decreasing supply. Hebei moved to dismiss the case, stating that they were acting according to Chinese law. The district court denied the dismissal, and the jury trial found in favor of Animal Science Products, ordering Hebei to pay them \$147 million in damages.

Hebei appealed, and the circuit court reversed the district court's denial to dismiss. The circuit court reasoned that the district court had erred in not deferring to the Chinese government's interpretations of its laws, as the Chinese government had appeared in court to defend Hebei's actions.

John Shu will join us to discuss his perceptions of the oral argument in this important case.

Previously Recorded Calls

Antitrust Enforcement by State Attorney Generals

**Corporations, Securities & Antitrust and Financial Services & E-Commerce
Practice Group Teleforum**

State Attorneys General often investigate antitrust violations - ranging from price fixing to anticompetitive mergers - in conjunction with the federal antitrust enforcement agencies (the U.S. Department of Justice and the Federal Trade Commission). But recently the nation's AGs have more frequently taken the lead, conducting their own investigations and initiating independent enforcement actions. Are these examples of state AGs merely utilizing their own statutory authority to protect their constituents? Are they filling a vacuum when federal authorities choose not to act? Or are they becoming the equivalent of national regulators? An experienced panel of antitrust practitioners and representatives from state AG offices will share their perspectives on the impact of increased antitrust enforcement by the state AGs and what businesses and their counsel need to understand about it.

[Listen]

The Role of Congressional Intelligence Committees

International & National Security Law Practice Groups and Article I Initiative Teleforum

Former Minority Staff Director and General Counsel for the House Permanent Select Committee on Intelligence Michael Bahar, Former General Counsel Michael Geffroy of the U.S. Senate Select Committee on Intelligence, and Former Minority Staff Director for the House Permanent Select Committee on Intelligence Heather Molino will join us to discuss the role of Congressional Intelligence Committees. How well are they able to discharge their duties in the present environment? Has the Russian investigation impeded their functionality? Are they able to provide effective oversight? What could be improved?

[Listen]

Preview: *Trump v. Hawaii*

[Listen]

Tenth Anniversary of *Heller*

Criminal Law & Procedure Practice Group Teleforum

This year marks the tenth anniversary of *Heller v. District of Columbia*. Before *Heller*, courts had split on whether the Second Amendment recognized an individual right to keep and bear arms or if that right was limited only to those citizens participating in organized militias. Justice Antonin Scalia, writing for the majority, held that the Second Amendment recognized a right of individuals to keep and bear arms for private self-defense. In the wake of *Heller*, most lower courts have rejected Second Amendment challenges to state and federal gun control laws. The decision, however, left many questions unanswered concerning the scope of the Second Amendment.

In this Teleforum, Professors Nelson Lund and Darrell Miller will debate the original meaning of the Second Amendment, whether *Heller* was correctly

decided, whether lower courts are faithfully applying *Heller*, and how *Heller* might apply to future legislation regarding the right to keep and bear arms.

Subject: Morning Energy: Heightened vetting for Pruitt-related FOIAs — EPA narrows air permitting guidelines — Coolant industry: Global warming industry is so cool it's hot

By Kelsey Tamborrino | 05/04/2018 05:41 AM EDT

With help from Anthony Adragna, Eric Wolff and Emily Holden

ALL FOIA ONE, ONE FOIA ALL: You may need to have a little patience if you're waiting for EPA to ship over any documents about Administrator Scott Pruitt's activities. Freedom of Information Act requests that relate to Pruitt get an extra layer of vetting before they are released to the public, new internal emails obtained by POLITICO show. Top aides to the administrator, including chief of staff Ryan Jackson, perform the "awareness reviews" on all or most document requests related to Pruitt — on top of the reviews done by career experts. And that is contributing to the slow flow of information released under records requests at EPA, Pro's Alex Guillén reports.

The new vetting processes described in the emails are done before the agency releases essentially any documents involving the administrator. And the emails show Pruitt's political appointees chastising career employees who released documents in accordance with FOIA without letting them screen the records first.

In one exchange from last August, Jackson and Liz Bowman — the head of EPA's Office of Public Affairs who announced on Thursday she was stepping down — expressed concern about documents related to comments Pruitt made on CNBC disputing that carbon dioxide from human activities was the primary cause of climate change. "Why did Kevin Bogardus from E&E all of a sudden get a response to a FOIA today, without any awareness from our FOIA office?" Bowman wrote on Aug. 2, adding later that the deadline wasn't until the end of the month.

ME readers will recall from February that EPA has been flooded with FOIA requests under Pruitt, forcing many groups to sue for the release of documents. But the new emails, which EPA gave to the Natural Resources Defense Council following legal action, shed new light on the cloud of secrecy that surrounds the agency.

While Obama-era EPA officials said the agency sometimes used awareness reviews during their time at the agency when career staff thought documents would generate a lot of interest, FOIA experts say the extra vetting of documents appears to be on the rise under Pruitt. "This does look like the most burdensome review process that I've seen documented," said Nate Jones, director of the FOIA Project at George Washington University's National Security Archive. Read more.

HAPPY FRIDAY! I'm your host Kelsey Tamborrino, and the American Petroleum Institute's Khary Cauthen correctly guessed that Roger Taney — who was nominated for Treasury secretary — was rejected by the Senate, 18-28, in 1834. Not all hope was lost, however, as Taney went on to become a Supreme Court justice. For today: Who was the only member of the Continental Congress to sign all four of the great state papers? Bonus points if you can name all four papers. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

EPA NARROWS GUIDELINES: EPA will alter its interpretation of when related facilities are considered a single source for air permitting purposes in a way that could ease their permitting requirements, Alex reports.

The April 30 [memo](#) was sent by EPA air chief Bill Wehrum concerning the so-called common control designation, which says plants located near each other should be aggregated for permitting purposes and subject to stricter standards if they are operated by the same entity. Under the new guidance, that will include entities that can "dictate decisions of the other that could affect the applicability of, or compliance with, relevant air pollution regulatory requirements." The memo concerns a Pennsylvania landfill and nearby biogas processing facility that are owned by different companies. Read [more](#).

ADD ADELSON'S NAME TO THE LIST: Yet another high-profile political ally emerged Thursday to have helped Pruitt arrange an international trip: GOP mega-donor Sheldon Adelson. According to new documents obtained by The Washington Post, Adelson arranged parts of Pruitt's canceled trip to Israel — where he was in part scheduled to unveil an agreement with Water-Gen, an Israeli water purification company championed by Adelson. Read the full report [here](#).

MORE INFO PLEASE: Four senior House Energy and Commerce Democrats — [Frank Pallone](#), [Paul Tonko](#), [Diana DeGette](#) and [Kathy Castor](#) — sent a [letter](#) to Pruitt Thursday asking for the names of three people Steven Hart — a lobbyist who was also married to the EPA chief's landlord — [recommended](#) for slots on the agency's Scientific Advisory Board. "Despite your earlier claims that J. Steven Hart had no clients with business before EPA, it is now clear that Mr. Hart did represent clients with business before your agency and, in fact, lobbied you on their behalf," they wrote.

MORE TIME PLEASE: Sixty-four Democrats signed onto a letter to Pruitt calling for a 90-day comment period on a his recent "secret science" proposal to ban the use of studies that don't publicly disclose all their data. "Given the large response from scientists and stakeholders before the rule was officially proposed, a comment period of 30 days will not allow for meaningful engagement from stakeholders," the letter states. Read it [here](#).

'NOT OKAY': Interior's inspector general found a male National Park Service regional office official made unwanted sexual advances toward a female employee on consecutive days that she told him were "not okay." The official retired before a scheduled interview and stopped responding to the IG. Read the report [here](#).

CLOVIS OUT ... AGAIN: Sam Clovis, a former Trump campaign aide who had been serving as the Agriculture Department's liaison to the White House, is departing the department and will return home to Iowa, a USDA official confirmed to POLITICO's Liz Crampton. The president had previously nominated him to be USDA undersecretary for research, education and economics, where he faced backlash for his lack of science credentials and ultimately withdrew his name from consideration for that position in November. Greens had also particularly focused on Clovis for his comments that he did not believe in man-made climate change. Read [more](#).

COOLANT INDUSTRY: GLOBAL WARMING INDUSTRY IS SO COOL IT'S HOT: The White House now has evidence that a global warming treaty limiting coolants would generate thousands of new jobs, and now it must decide whether to send the treaty to the Senate for ratification. A [report](#) released Thursday by the Air Conditioning Heating and Refrigeration Institute and the Alliance for Responsible Atmospheric Policy said that the amendment to the Montreal Protocol limiting use of hydrofluorocarbons, a greenhouse gas, would help American manufacturers who produce the bulk of the world's supply of advanced coolants. Ratifying the treaty would produce 33,000 additional jobs and an extra \$12.5 billion of annual manufacturing output.

The report is considered critical to help presidential aides persuade President Donald Trump to advance the treaty to the Senate, despite the president's aversion to multilateral treaties, his predecessor's accomplishments, and anything involving global warming. "U.S. ratification of the Kigali Amendment is good for American jobs, good for the economy, and crucial for maintaining U.S. leadership across the globe," said John Hurst, Chairman of The Alliance, and Vice President of Lennox International. He added, "Over 30 countries have ratified the amendment. America cannot afford to be on the sideline. America must continue to lead."

ZINKE HIRES GOP ADVISER FOR NPS: Interior Secretary Ryan Zinke hired Chuck Laudner, a Iowa Republican political consultant who was an adviser to Trump's campaign, for a position with the National Park Service, an Interior spokeswoman confirmed to Pro's Ben Lefevre. Laudner previously worked with Rick Santorum's presidential campaign in Iowa in 2012 and was executive director for the Iowa Republican Party from 2007-08. Interior hired Laudner "a few weeks ago," spokeswoman Heather Swift said, though she did not say what job he had taken.

MAY THE FOURTH BE WITH YOU: Zinke teased out some "Star Wars" related news on Thursday. In a video featuring the secretary walking alongside motorized BB-8 and R2-D2 toys, the droid rolls over an Interior logo. Zinke tweeted the video with a message: "Tomorrow is a big day. More to come. #MayTheFourthBeWithYou." See it.

BLANKENSHIP ATTACKS McCONNELL'S "CHINA FAMILY": West Virginia GOP Senate hopeful Don Blankenship released another ad on Thursday attacking Majority Leader Mitch McConnell. This time, the spot claims "Swamp Captain Mitch McConnell has created millions of jobs for China people." The ad, which POLITICO's Alex Isenstadt reports on here, is expected to start airing today. It closes with a shot of Blankenship holding two young children, one on each arm as he pronounces, "I will beat Joe Manchin and ditch cocaine Mitch for the sake of the kids." The ad arrives days ahead of the state's May 8 primary.

FOIA WHAT IT'S WORTH: The Montana-based Western Values Project filed a FOIA request to EPA in an effort to make public any communication about Zinke. The request includes all communications between select EPA employees that contain "Zinke," "RZ" or "Interior Secretary" and comes in response to a report in The Atlantic that alleges an EPA press employee planted stories about Zinke in order to distract from his boss. EPA spokesman Jahan Wilcox in a statement to the Atlantic called the allegations "categorically false."

CLIMATE LAWMAKERS REBUT CARBON LEGISLATION: The Citizens' Climate Lobby released a rebuttal to Rep. Steve Scalise's concurrent resolution, H. Con. Res. 119 (115), which expresses the sense of Congress that a carbon tax would be detrimental to the U.S. economy. The climate lobby refutes the resolution, claiming that if done correctly, a tax or fee on carbon could boost the economy. Read the rebuttal here and the bill text here.

MAIL CALL! BIOFUELS WRITE TO EPA ON STRATEGY: A coalition of Midwest biofuels associations sent a letter Thursday to EPA asking it to move administrative time and staff away from Renewable Fuel Standard exemptions and instead toward approvals for cellulosic ethanol. "The discrepancy between the way EPA is handling RFS exemptions and cellulosic ethanol pathway approvals tells you everything you need to know about how this EPA is treating the RFS," said Iowa Renewable Fuels Association Executive Director Monte Shaw in a statement. Read the letter.

— **The Business Council for Sustainable Energy**, a coalition of companies and trade associations, wrote to members of Congress on Thursday, asking that they reauthorize energy title programs in the farm bill, H.R. 2 (115). "It is essential that a healthy, robust bipartisan energy title continue as part of new comprehensive agriculture legislation," writes the group's president, Lisa Jacobson. The letter also lays out potential improvements to the programs. Read it here.

— **Congressional Western Caucus Chairman Paul Gosar led 18 lawmakers** in a letter requesting Pruitt reverse course and proceed with an intention to withdraw the Obama-era EPA's preemptive veto of the Pebble Limited Partnership mining project under Section 404(c) of the Clean Water Act. They write that EPA's January decision not to overturn the preemptive vote "has sowed tumult for interested parties."

VW'S WINTERKORN CHARGED: Former Volkswagen AG leader Martin Winterkorn was charged with conspiracy and wire fraud in connection with the company's long-running emissions cheating scheme, according to an indictment unsealed Thursday by the Justice Department. The indictment, issued by a federal

grand jury sitting in the Eastern District of Michigan, charged Winterkorn with four counts of violating federal law. The first count charges that he conspired with other senior executives and Volkswagen employees to defraud customers, the United States and violate the Clean Air Act by making false representations about the company's supposedly "clean diesel" vehicles. The other three counts concern wire fraud tied to the scheme. More from Pro's Lauren Gardner [here](#).

GOING OUT WEST: New Mexico Sen. [Martin Heinrich](#) delivers a keynote address today at the [Outdoor Economics Conference](#), and he's [expected to discuss](#) his legislation to establish the White Sands National Monument as a national park, as well as discuss the outdoor recreation industry in the region. Watch it live [here](#).

REPORT: GRID RESILIENCY IN THE FACE OF NUCLEAR CLOSURES: A new IHS Markit report released Thursday examines the effect of five nuclear closures in the PJM Interconnection, finding the closures will reduce annual net benefits for consumers from PJM grid-based electricity by about \$8 billion per year over 2013-2016. That "translates into a consumer net benefit per kilowatt-hour of PJM nuclear generation of about 3 cents per kWh," the report found. The report was prepared for Nuclear Matters, an industry-funded organization. Read it [here](#).

MOVER, SHAKER: The Joseph Rainey Center for Public Policy, a think tank focused on sustainable politics and inclusive governance, has named Sarah Hunt its founding CEO. Hunt previously was director at the Center for Innovation and Technology at the American Legislative Exchange Council.

HITTING THE ROADMAP: The Delta Institute released a "Coal Plant Redevelopment Roadmap" on Thursday to provide insight into coal-impacted municipalities and their transition processes. Modules in the roadmap will show economic and environmental impacts, as well as provide information on engagement strategies for such communities, among other topics. See it [here](#).

ON THE POD: NPR's podcast, Embedded, released a new episode Thursday on coal in Buchanan County, Va. Listen [here](#).

Stories from POLITICO Pro

EPA's top spokesperson to depart [Back](#)

By Emily Holden | 05/03/2018 11:26 AM EDT

EPA's top spokeswoman is leaving the agency, the latest in a string of departures by key staffers amid the swarm of investigations into Administrator Scott Pruitt's potential ethical [lapses](#).

The exit of Liz Bowman comes after Pruitt's lead security agent, Pasquale "Nino" Perrotta, and EPA's Superfund task force head and adviser Albert "Kell" Kelly both [quit](#) earlier this week. Perrotta has cited negative media attention as contributing to his decision. His role in Pruitt's [security spending](#) was under review by the agency's inspector general, and he was interviewed by House Oversight Committee staffers on Wednesday.

EPA also confirmed Kelly was leaving because he attracted controversy over being banned from the banking industry.

Bowman, who will join Iowa Republican Sen. Joni Ernst's staff, has been associate administrator for public affairs since shortly after Pruitt was confirmed in early 2017. She was previously director of issue and advocacy communications for the American Chemistry Council.

"I leave extremely thankful for the opportunity to serve the Trump administration and Administrator Pruitt," Bowman said. "Being a member of the EPA team has allowed me to further my skills, learn from my mistakes and make lifelong friendships. It has also provided me the opportunity to develop a new, and deep, respect for the public servants who serve the American people, day in and day out, to ensure that we all have access to clean air, land and water."

EPA chief of staff Ryan Jackson said Bowman "has been an invaluable lead of our public affairs office during this past year."

"I congratulate her on pursuing great and new opportunities on Capitol Hill where we'll continue to work with her, just in a different capacity," he said.

Bowman's last day at EPA is May 11.

Daniel Lippman contributed to this report.

Critics pound EPA chief after he disputes human role in climate change [Back](#)

By Alex Guillén | 03/09/2017 12:04 PM EDT

EPA Administrator Scott Pruitt said Thursday that carbon dioxide emitted by human activity is not the primary driver of climate change, a conclusion out of step with mainstream climate science that drew immediate condemnation from Democrats and environmentalists.

"I think that measuring with precision human activity on the climate is something very challenging to do, and there's tremendous disagreement about the degree of impact," Pruitt said on CNBC. "So, no, I would not agree that it's a primary contributor to the global warming that we see." He also called for continued study of the issue.

That is a stronger position than Pruitt took during his confirmation hearing, when he said that the degree of human contribution to climate change is "subject to more debate."

Democrats rushed to condemn Pruitt's remarks.

"This is just nuts: EPA chief Scott Pruitt just claimed carbon not causing climate change," Sen. Brian Schatz (D-Hawaii) tweeted a few minutes after the interview aired. "We Senate D's will be a check on his crazy views."

Most scientists agree that greenhouse gases emitted by human activity like burning fossil fuels is the primary driver of climate change. That includes Pruitt's own agency, which says that human-emitted CO2 "is the primary greenhouse gas that is contributing to recent climate change."

One prominent environmentalist suggested Pruitt should be impeached.

"Pruitt misled Congress about his willingness to do a core part of his job," Sierra Club Executive Director Michael Brune wrote on Twitter. "Contradicting science + law should mean removal from office now."

Pruitt also acknowledged on his CNBC appearance that the Supreme Court has ruled on the matter and that the Obama administration issued an "endangerment finding" concluding greenhouse gases are a threatening pollutant.

But, he added, "nowhere in the continuum, nowhere in the equation, has Congress spoken. The legislative branch has not addressed this issue at all."

Pruitt was slated to speak at the CERAWEEK oil industry conference in Houston later Thursday. He said on CNBC that he would bring a "pro-growth, pro-jobs and pro-environment" message to the conference.

EPA narrows guidelines for aggregating sources for air permitting [Back](#)

By Alex Guillén | 05/03/2018 05:59 PM EDT

EPA will alter its interpretation of when related facilities are considered a single source for air permitting purposes in a way that could ease their permitting requirements.

Permitting rules say that plants located near each other should be aggregated for permitting purposes if they are operated by the same entity, known as "common control." In that case, the facilities' emissions can be aggregated and be subject to more stringent permitting requirements than if treated separately.

In an April 30 [memo](#) concerning a common control designation for a Pennsylvania landfill and nearby biogas processing facility that are owned by different companies, EPA air chief Bill Wehrum revised the agency's interpretation so that facilities meet the definition if one entity has "the power or authority ... to dictate decisions of the other that could affect the applicability of, or compliance with, relevant air pollution regulatory requirements."

A dependent relationship should not necessarily mean common control, he added. Facilities can be "economically or operationally interconnected" without being able to direct the other.

In the immediate case of the Pennsylvania landfill and processing plant, Wehrum concluded that the two are not commonly controlled because the landfill could otherwise meet methane emissions limits by burning off biogas and because the processing plant hopes to secure other sources of biogas.

WHAT'S NEXT: Ultimately, EPA's reasoning is only a recommendation. Pennsylvania regulators have the final say on whether these particular facilities fall under "common control."

Sam Clovis is leaving USDA [Back](#)

By Liz Crampton | 05/03/2018 08:16 PM EDT

Sam Clovis, the former Trump campaign aide who had been serving as USDA's liaison to the White House, is leaving the Agriculture Department and will return home to Iowa, a USDA official confirmed Thursday evening.

Clovis' last day is Friday. A "goodbye party" was being held for him on Thursday night, according to a source attending the party.

Clovis had served as a co-chairman and policy adviser on the Trump campaign and later led the USDA beachhead team for the Trump transition, but ran into trouble when President Donald Trump nominated him to be USDA undersecretary for research, education and economics.

Clovis withdrew his name from consideration in November — before the Senate Agriculture Committee could hold a confirmation hearing — after facing a torrent of criticism from Senate Democrats and environmental advocates. Clovis drew fire for his skepticism of climate science, past comments on issues like race and gender, and what critics on the left said was his lack of scientific credentials that are legally required for the position, which would also have had him serve as the department's chief scientist.

Clovis had endured criticism for months, but his withdrawal came shortly after he was swept up in special counsel Robert Mueller's probe of Russian interference in the 2016 campaign and the Trump campaign's alleged ties to Russian interests. While serving on the campaign, Clovis had supervised George Papadopoulos, a Trump campaign foreign policy adviser who struck a plea deal on charges he lied to FBI investigators about his communications with Russia-linked contacts. Clovis' withdrawal followed shortly after news of Papadopoulos' plea deal.

More recently, Clovis had been posted to the Natural Resources Conservation Service to provide guidance.

"Dr. Clovis was one of the first people through the door at USDA in January 2017, and we are grateful for his time here," a USDA spokesman said. "He is a good man and a patriot who for decades has served his country admirably. While we are sad Dr. Clovis is leaving USDA, we wish him well on his future endeavors back home in Iowa."

Daniel Lippman contributed to this report.

Zinke hires Iowa political consultant for Interior parks job [Back](#)

By Ben Lefebvre | 05/03/2018 06:55 PM EDT

Interior Secretary Ryan Zinke has hired Iowa Republican political consultant Chuck Laudner for a position with the National Park Service, an Interior spokeswoman confirmed today.

Interior hired Laudner "a few weeks ago," spokeswoman Heather Swift said, though she did not say what his job he had taken.

"Rebuilding our National Parks infrastructure is a major legislative priority of the Secretary and President and Chuck is helping make it happen," Swift said.

Laudner was an [adviser](#) to President Donald Trump's campaign, and he previously worked with Pennsylvania Republican Sen. Rick Santorum's presidential campaign in Iowa in 2012. Laudner also worked as the executive director for the Iowa Republican Party from 2007 to 2008.

Iowa has two national parks, according to the NPS website.

Laudner's appointment could be the latest example that Zinke is considering a possible presidential run. A [polling firm](#) asked Iowa residents in April their opinion on Zinke, while a political group run by former advisers to Vice President Mike Pence paid for a 30-second [television ad](#) featuring Zinke that aired in Washington, D.C. in March.

"What a curious hire," said Aaron Weiss, media director at Center for Western Priorities, a conservation group. "Chuck Laudner doesn't appear to be at all qualified for a job at the Interior Department, but he's very well-qualified to advise a politician with future ambitions in Iowa."

Blankenship goes after McConnell's 'China family' in new ad [Back](#)

By Alex Isenstadt | 05/03/2018 05:25 PM EDT

West Virginia GOP Senate hopeful Don Blankenship is amping up his racial attacks on Senate Majority Leader Mitch McConnell with a new ad declaring, "Swamp captain Mitch McConnell has created millions of jobs for China people."

"While doing so, Mitch has gotten rich," Blankenship adds. "In fact, his China family has given him tens of millions of dollars."

McConnell's wife, Transportation Secretary Elaine Chao, was born in Taiwan and her parents are Chinese. Her father is chairman of a shipping company.

The new spot, which is expected to start airing on Friday, comes just ahead of the May 8 primary. As the dramatic contest comes to a close, Blankenship, a former coal baron who spent a year in prison following the 2010 explosion at his Upper Big Branch Mine that killed 29 workers, has focused his assault squarely on McConnell — sometimes in harshly racial terms.

During a recent interview with POLITICO, Blankenship said McConnell "has a lot of connections in China." He also said that Chao is "from China, so we have to be really concerned that we are in truth" putting America's interests first.

Earlier this week, Blankenship began running another TV spot labeling McConnell "cocaine Mitch." The spot is apparently in reference to a 2014 report that drugs were once found aboard a shipping vessel owned by Chao's family.

McConnell has singled out Blankenship for defeat, convinced that a Blankenship primary win would destroy the party's prospects for defeating Democratic Sen. Joe Manchin in November. A McConnell-aligned super PAC has aired about \$1.3 million in negative ads against Blankenship.

Blankenship is facing two more mainstream GOP opponents, Rep. Evan Jenkins and state Attorney General Patrick Morrisey. Recent polls have shown Blankenship fading.

With Blankenship going after Chao, McConnell's political team has swung back aggressively. Josh Holmes, a longtime McConnell political adviser, has described Blankenship as "mentally ill."

In his new spot, Blankenship responds to that accusation, saying: "Mitch's swamp people are now running false, negative ads against me. They're also childishly calling me despicable and mentally ill."

The ad closes with a shot of Blankenship holding two young children, one on each arm as he pronounces, "I will beat Joe Manchin and ditch cocaine Mitch for the sake of the kids."

Holmes fired back at Blankenship. "This clown is a walking talking case study for the limitation of a prison's ability to rehabilitate," he wrote in a text message.

While Blankenship has attempted to focus the campaign on China during the closing stretch of the race, McConnell's team has noted that in 1999 Blankenship spoke of moving to China and becoming a Chinese citizen. Blankenship's girlfriend was born in China, according to media reports.

Pruitt airs environmental concerns about proposed Alaska mine [Back](#)

By Alex Guillén | 01/26/2018 07:34 PM EDT

EPA Administrator Scott Pruitt today announced he has serious concerns about any potential mining project in Alaska's Bristol Bay region, creating doubt that the controversial Pebble Mine proposal may ultimately be approved.

EPA said in a release today that it will suspend its proposed withdrawal of Obama-era restrictions after hearing from Alaskan residents and other interested parties. The proposed mine has long drawn opposition from some in the state, including independent Gov. Bill Walker, as well as environmentalists, over worries that it could harm Bristol Bay's critical salmon fisheries.

"It is my judgment at this time that any mining projects in the region likely pose a risk to the abundant natural resources that exist there," Pruitt said in a statement. "Until we know the full extent of that risk, those natural resources and world-class fisheries deserve the utmost protection."

The permitting process, which is handled at this stage by the Army Corps of Engineers, can continue, EPA said. But the agency warned that the developers will have to clear a "high bar." The agency added in a release that not revealing Pruitt's doubts at this stage would be "disingenuous." EPA has veto power over such Army Corps permits.

Pebble Limited Partnership CEO Tom Collier said in a statement that the company "can demonstrate that we can responsibly construct and operate a mine at the Pebble Deposit that meets Alaska's high environmental standards."

DOJ charges former VW CEO with conspiracy, wire fraud [Back](#)

By Lauren Gardner | 05/03/2018 04:42 PM EDT

DOJ unsealed an indictment today charging former Volkswagen AG leader Martin Winterkorn with conspiracy and wire fraud linked to the automaker's effort to cheat U.S. diesel emissions standards.

Winterkorn is charged with one count of conspiracy with other VW executives to defraud the United States, along with the manufacturer's customers. The other three counts concern wire fraud tied to the scheme.

"If you try to deceive the United States, then you will pay a heavy price," Attorney General Jeff Sessions said in a statement. "The indictment unsealed today alleges that Volkswagen's scheme to cheat its legal requirements went all the way to the top of the company. These are serious allegations, and we will prosecute this case to the fullest extent of the law."

The indictment alleges that Winterkorn knew of the emissions cheating as far back as May 2014, and that he was informed again of it in July 2015. VW as a company pleaded guilty in March 2017 to criminal charges related to the regulatory deception and agreed to pay a \$2.8 billion criminal penalty.

Subject: Morning Consult Energy, Presented by Wells Fargo: Filing Confirms Lobbyist Linked to Pruitt's Rental Condo Contacted EPA on Behalf of Client

By Jacqueline Toth

Top Stories

- A disclosure filed by Williams & Jensen confirmed that J. Steven Hart had contacted the Environmental Protection Agency on behalf of Smithfield Foods in the first three months of this year, contradicting Hart's previous assertions that he had not lobbied Administrator Scott Pruitt's agency last year while Hart's wife was renting to Pruitt a \$50-per-night condo or since the rental agreement ended. Additionally, Hart said he would step down as

chairman of the lobbying firm, citing recent publicity from the condo rental. ([The Hill](#))

- Two EPA officials who have joined Pruitt at the agency were involved in Pruitt's acquisition of a house close to the Oklahoma City Capitol, according to records. The shell company that held the property was registered to Kenneth Wagner, a business partner of Pruitt's who is now an EPA appointee, while the mortgage was issued by Albert Kelly, a top aide running the agency's Superfund program who has been barred from work in the financial industry due to an undisclosed banking violation. ([The New York Times](#))
- Former New York City Mayor Michael Bloomberg said he would pay the \$4.5 million needed to cover the United States' commitment to the Paris climate accord, after President Donald Trump started a process last year to remove the country from the pact. Bloomberg charity, Bloomberg Philanthropies, said it will continue to contribute funding to the agreement if the United States does not rejoin the accord. ([Reuters](#))

How Windmills as Wide as Jumbo Jets Are Making Clean Energy Mainstream
Stanley Reed et al., The New York Times

At the northern end of Denmark's Jutland peninsula, the wind blows so hard that rows of trees grow in one direction, like gnarled flags.

Electric Scooters Are Causing Havoc. This Man Is Shrugging It Off.
Nellie Bowles et al., The New York Times

Travis VanderZanden, the chief executive of electric scooter company Bird Rides, surveyed the new indoor park at his office one morning this week.

100% renewables - gimmick or game changer?

Christa Marshall, E&E News

Are company claims about 100 percent renewables wrong?

Coal

With court battles on coal ash raging, Virginia Attorney

General Mark Herring stays on sidelines so far

Robert Zullo, Richmond Times-Dispatch

Before he filed it last month, Maryland Attorney General Brian Frosh invited other states' attorneys general to sign on to an amicus brief urging a federal appeals court to uphold a ruling that coal ash pollution moving from unlined pits at a Tennessee power plant into the Cumberland River violates the federal Clean Water Act.

Nuclear

DOE's Walker: National security assessment broader than grid reliability

Gavin Bade, Utility Dive

The Department of Energy's assessment of a national security threat goes beyond grid reliability assessments from the federal government and regional grid operators, DOE Assistant Secretary Bruce Walker told Utility Dive Friday.

Climate

Michael Bloomberg to write \$4.5 million check for Paris climate pact

Yasmeen Abutaleb, Reuters

Former New York mayor and billionaire Michael Bloomberg said on Sunday he will write a \$4.5 million check to cover this year's U.S. financial commitment to the Paris Climate Agreement.

The Latest Climate Threat for Coastal Cities: More Rich People
Christopher Flavelle, Bloomberg

When Hurricane Irma reached Florida's Big Pine Key in September, it caused the floor of Terry and Sharon Baron's cream-colored mobile home to collapse.

Overseer Faults Volkswagen's Reform Efforts Since Emissions Scandal

Jack Ewing, The New York Times

Volkswagen's attempt to remake its company culture and become more law abiding has received poor grades from the former United States prosecutor who is enforcing the carmaker's compliance with a deal that settled emissions cheating charges.

Antarctic Glaciers Are Helping Drive Their Own Melt **Chelsea Harvey, E&E News**

Glaciers in Antarctica are melting from the bottom up as warm ocean water seeps underneath the ice. It's now the dominant driver of ice loss across most of the continent.

A Message from Wells Fargo:

Wells Fargo: Committed to the environment

How can a bank help the world transition to a lower-carbon economy? By setting goals and meeting them. Last year, Wells Fargo began meeting 100% of its global electricity needs with renewable energy. We remain committed to protecting the environment and leading by action through our businesses, our operations and our philanthropy. [Learn more.](#)

Opinions, Editorials and Perspectives

Incentives Working to Spur Land Conservation **Drew Troyer, Morning Consult**

The United States loses about 6,000 acres of open space every day to development. Land that previously served agricultural or ecological balance purposes is bought up and converted into new homes or shopping centers.

How Do You Celebrate Earth Day When Scott Pruitt Is Still at the E.P.A.? **Elizabeth Kolbert, The New Yorker**

Today is Earth Day, and, to mark the occasion, thousands of Americans will flock to parks, beaches, and hiking trails. Others will stay home, monitoring their Twitter feeds for the latest Scott Pruitt scandal.

Is it finally Scott Pruitt's time to go?

Jennifer Rubin, The Washington Post

Even casual political-watchers know that Friday is the customary day for dropping bad news and dumping senior officials. No senior official is more deserving of being dumped than Environmental Protection Agency Administrator Scott Pruitt.

The energy revolution has already begun

David Von Drehle, The Washington Post

Between the science-denying trolls who say climate change is a hoax and the we're-all-doomed Cassandras who picture the last human remnant escaping to Mars, there is an exciting frontier.

OPEC Can Live With Tweets So Long as Venezuela Gets Worse

Liam Denning, Bloomberg

What explains President Donald Trump's Friday-morning focus on restrictive commodity agreements? Your guess is as good as mine.

Research Reports

Stakeholders' and Officials' Views on Federal Odorizing Requirements

U.S. Government Accountability Office

While federal odorization requirements follow a risk-based approach by focusing on pipelines in populated areas, the officials and stakeholders GAO contacted disagreed on the need to modify these requirements for some pipelines.

REDEFINING EPA: Overhauling an agency and its mission -- Complete coverage

April 23, 2018

Latest News

EPA Floats 'Secret Science' Ban Rule, Signaling Possible Internal Fixes

EPA has sent for White House review a proposed rule to increase the transparency of regulatory science, advancing Administrator Scott Pruitt's controversial efforts to ban the use of "secret science" in a move that

suggests officials have addressed at least some internal concerns that such a policy could violate statutory protections of medical privacy and trade secrets.

Previewing Hearing, Environmentalists Fault EPA Coal Ash Rule Revisions

Environmentalists are previewing their testimony for an EPA hearing next week on the agency's planned revisions to its coal ash disposal rule, warning that the changes would increase risks to children's health by removing a mandate to protect sensitive subpopulations and harm communities by ending a requirement to quickly clean up ash spills.

Compliance Costs Create Dilemma For Wehrum's Bid To Kill Utility MACT

ORLANDO, FL -- EPA air chief William Wehrum is acknowledging that he faces a dilemma over whether to grant calls from utilities and others to scrap the regulatory justification for the Obama-era utility air toxics rule as a "satisfying" move, or retain it as even some of its staunchest industry critics have spent millions in compliance costs.

EPA's Chloroform Study Plan Raises Queries Over Reach Of IRIS Reviews

Introducing their plan to science advisors last September, Bahadori's presentation slides explained that chloroform has a "small evidence base" and the plan is to conduct a "targeted update to address Agency need." EPA's Superfund, air and Region 4 offices expressed a specific need for an inhalation reference value for chloroform, the documents say.

CSB Asks Appellate Court To Back Broad Subpoena On 'Potential' Releases

The U.S. Chemical Safety and Hazard Investigation Board's (CSB) is asking a federal appellate court to grant it broad power to subpoena documents related to "potential" releases at facilities where it is investigating industrial incidents, a move that a major refiner is resisting, charging it amounts to an unlawful expansion of the board's powers.

Daily Feed

IG to investigate Pruitt security on personal travel

This investigation will be separate from probes already under way into Pruitt's travel and security detail, "so as not to delay the completion of our ongoing work in those areas," EPA's IG says.

States criticize EPA's efforts to 'delay' CWA jurisdiction rule suit

Seven GOP-led states are pushing back against EPA's latest attempt to block substantive litigation over the 2015 Clean Water Act jurisdiction rule.

Democratic senators block ballast provision

Democratic senators have blocked a controversial provision that would remove EPA's Clean Water Act regulation of ships' ballast water.

ALA ties ozone spike to global warming

The American Lung Association is using its annual 'state of the air' report to call for action to protect Obama-era Clean Air Act rules from attacks by Congress and EPA.

Federal judge sends utility ELG delay suit to appeals court

The judge's order ends a lower court suit over the Trump EPA's delay of the Obama-era power plant effluent rule and shifts focus to a pending appeals court case.

Ewire: Mulvaney pledges probe of Pruitt's spending

In today's Ewire: "I'm not any happier about it than you are," White House budget chief Mick Mulvaney tells a House financial services panel, referencing reports of Scott Pruitt's spending as EPA administrator.

EPA GHG inventory sees 2.5 percent drop in 2016

EPA Administrator Scott Pruitt touted the use of innovative technologies for the decline in greenhouse gases, calling it "one of the great environmental successes of our time."

Wheeler's New Approach • Keeping Calendars Public • 'Secret' Science Gets Public Airing

By [Marissa Horn](#)

Scott Pruitt's agenda may never go out of style, at least under a GOP president.

But the way that agenda was delivered to the public during Pruitt's 503 days at the EPA is ending, the EPA's acting administrator told Bloomberg Environment in an exclusive [interview](#) yesterday in Canonsburg, Pa.

Later this week, we'll be digging into new acting chief Andrew Wheeler's comments on environmental permitting, enforcement, and a topic that marks an about-face for an agency that [barred](#) three reporters from entering a chemical summit in May—communication.

NOT-SO SECRET CALENDAR: Speaking of Wheeler, [Abby Smith](#) took a look at whom he spoke with during his first week at the EPA.

In another shift from Pruitt's tenure at the agency, Wheeler is updating his calendar daily. Wheeler's anticipated forthrightness—both about his day-to-day

schedule and the EPA’s policymaking process—could give regulated industries more clarity, attorneys and consultants say.

For updates, follow [Abby](#) on Twitter and look for the story later today on our [website](#).

SCIENCE TRANSPARENCY: The EPA proposal to [ensure transparency](#) in the science it considers when writing regulations will be the subject of a public hearing today.

Among those speaking in favor of the measure is the U.S. Chamber of Commerce, which according to its written testimony will praise EPA “for finally addressing a longstanding problem inherent in much of its regulatory decision-making processes.” [Sylvia Carignan](#) is tracking.

OTHER STORIES WE’RE COVERING

Subject: Morning Energy: Where do biofuels stand? — This week: Pruitt faces the Hill — Macron heads to Washington

By Kelsey Tamborrino | 04/23/2018 05:42 AM EDT

With help from Eric Wolff and Annie Snider

YOU CAN'T ALWAYS GET WHAT YOU WANT: Despite efforts by President Donald Trump to settle a long-running dispute between ethanol backers and the refining industry, progress on a biofuels deal has stalled. Instead, the administration has taken a piecemeal approach to the policy, pushing for an expanded market for higher blends of ethanol, while handing out exemptions to the Renewable Fuels Standard to small refiners.

Trump, for his part, has huddled multiple times with members of his Cabinet, industry and lawmakers from both corn belt and oil states, Pro's Eric Wolff reports. But so far, there's been little progress in striking a grand deal. At odds are the independent refiners, who say they feel financial stress from the RFS, and the agriculture sector, which is anxious to expand the market for corn ethanol.

Trump has promised to allow year-round sales of 15 percent ethanol blends of gasoline, while EPA Administrator Scott Pruitt has so far granted more than two dozen temporary waivers to small refineries that exempt them from the mandate requiring them to blend ethanol with gasoline. "After 18 months of pursuing various regulatory forms of relief and a handful of Oval Office confabs, the merchant refiners ended up with [an increase in E15] taking even more market share away from them in return for some small refiner hardship waivers — and some of them did not even get that," one oil refining source told Eric.

And Pruitt's controversies stemming from his first-class flights, security spending and condo rental from a lobbyist, have left the EPA chief unable to make an aggressive case for instituting price caps many refiners want on the biofuel credits, according to an administration source. Read more [here](#).

Democrats weigh in: House Energy and Commerce ranking member [Frank Pallone](#) and Agriculture ranking member [Collin Peterson](#) sent this [letter](#) to the president on Friday, expressing concern with the waivers issued by Pruitt to small refineries, writing it "undermines the goal of the RFS program, creates uncertainty and economic hardship in the agricultural community, and gives unfair advantage to specific facilities within the refining sector."

GOOD MONDAY MORNING! I'm your host Kelsey Tamborrino, and Entergy's Rob Hall was first to correctly answer that former Senate Majority Leader Robert Taft's father served as a Supreme Court chief justice. For today: Who was the first woman to be awarded the Medal of Honor? ICYMI: Check out the [event videos and highlights](#) from last Tuesday's event on how private businesses can address clean energy and build a more sustainable future.

PRUITT HEADS TO THE HILL: Thursday's the day: Pruitt is scheduled to face questions from two House committees for the first time since his swirling scandals emerged in March. He'll appear before both the House Appropriations [Committee](#) and the Energy and Commerce [Committee](#) to discuss his agency's budget request for fiscal 2019, but of course lawmakers are planning to take Pruitt to task over his ethics and spending issues. "Members are going to have questions about how things are going at the EPA and how the money is being spent," E&C Chairman [Greg Walden](#) told POLITICO last week. "And we will. We should. He'll have to answer those."

Not least on the list of questions: POLITICO's Theo Meyer and Eliana Johnson were first to report this weekend that the lobbyist, J. Steven Hart, whose wife rented a \$50-per-night condo to Pruitt, also lobbied the agency while Pruitt was leading it, according to a Friday [filing](#) by his firm. That news comes despite the denials from both Hart and Pruitt that the lobbyist did not have any business before the agency. Hart announced his resignation from his lobbying firm Williams & Jensen hours before the disclosure was published. He was already planning to retire in November, but moved up his departure in the wake of the revelation that his wife had been Pruitt's landlord.

An EPA official acknowledged on Saturday that Pruitt had met with Hart, who attended a meeting with a former meat-processing executive concerned about Trump's proposal to cut spending on a Chesapeake Bay cleanup program. But the official argued that the meeting didn't meet the definition of lobbying. The disclosure, meanwhile, says Hart lobbied the EPA on issues "relating to support for EPA Chesapeake Bay Programs." A spokeswoman for House Oversight Chairman [Trey Gowdy](#), who is already probing the administrator, told POLITICO that "the Committee has already been looking into this matter." [Read more.](#)

The hits keep coming: The Associated Press reported on Friday [that state records](#) show how, as Oklahoma's attorney general, Pruitt ordered investigations agents from his office to work as his driver and bodyguard. And a separate [report from The New York Times](#) probed how Pruitt bought a historic house in Oklahoma from a top lobbyist with the help of a shell company.

— **Another Republican called on Pruitt to resign** this weekend, marking [at least four](#) current Republican lawmakers to do so. "Yes EPA Administrator Scott Pruitt should resign. Wrong fit from start for agency dedicated to protecting our environment," New Jersey Rep. [Frank LoBiondo](#) [tweeted](#). "#EarthDay2018 reinforces our need to promote pristine planet via clean air & water, leaving it better for future generations. Requires leadership & balance."

NOW THAT'S A MISTAKE: Three days after releasing a raft of communications between top EPA personnel to the Union of Concerned Scientists under the Freedom of Information Act, the agency removed them from its electronic library Friday. Among the documents were emails POLITICO [cited](#) on Thursday that show political officials developing a new scientific transparency policy were more concerned with the impact it could have on the agency's ability to consider industry data when reviewing pesticides and toxic chemicals for safety than they were about potentially excluding studies on the effect of pollution on public health, as many scientists have warned. EPA sent the policy, based on legislation from House Science Chairman [Lamar Smith](#) (R-Texas), to the White House for interagency review Thursday.

EPA did not respond to requests for comment over the weekend, but Yogin Kothari with UCS said the agency [told](#) him it accidentally released documents with private information and privileged attorney-client communications. His group removed emails it considered to fit that description and [posted](#) the rest on its website.

XCEL NOT SO INTO MARKETS AFTER ALL: Colorado utility Xcel Energy blew a hole in Southwest Power Pool's plans for a western power market when the company announced late Friday it had dropped out of the Mountain West Transmission Group. SPP had been working with the informal group of power providers for months to try and join the power market — and SPP had advanced the effort as recently as last month. Xcel

didn't respond to a request for comment, but the press release said there were "limited benefits" in the effort and "increasingly uncertain costs."

Perhaps most intriguing to ME is the company's point that "Xcel now sees few opportunities for westward expansion of the RTO which might have added to the value proposition." SPP faces competition from both California's already established energy-imbalance market that includes utilities in the Pacific Northwest and Nevada, and a nascent joint project between eastern market operator PJM Interconnection and western reliability manager PEAK. Xcel's press release did not say if it had engaged with either of these other projects.

MR. MACRON HEADS TO WASHINGTON: French President Emmanuel Macron makes his first official visit to Washington this week, where he'll meet with the president and deliver an address to a joint meeting of Congress. Macron and his wife will be hosted by the president and first lady at a private dinner tonight and the two leaders will participate in a bilateral meeting on Tuesday.

Officially, the two heads of state are set to discuss ongoing issues in Syria, the Iran deal and trade tensions. But keep an ear out for climate mentions, too. Macron has been critical of Trump's announcement that he would remove the U.S. from the Paris climate agreement.

Ahead of his meeting with Trump, Macron appeared on "Fox News Sunday," where he was asked whether he believes Trump will serve his full term. "I never wonder that," Macron said. "I mean, I work with him because both of us are very much at the service of our country in both side. And for me, that's why — even when we have some disagreements on climate and on some issues, I think the most important thing is to — I mean, just to remind that we are at the service of our people, that's our legitimacy."

FROM BLOOMBERG WITH LOVE: Special envoy to the U.N. for climate action Michael Bloomberg pledged to help cover the U.S. financial commitment to the Paris climate accord on Sunday. Appearing on CBS, the former New York City mayor announced he would foot the \$4.5 million bill to the U.N. Climate Change Secretariat under the 2015 agreement that was struck by former President Barack Obama.

"America made a commitment. And as an American, if the government's not going to do it, we all have a responsibility, and I'm able to do it," he said on CBS. "So yes, I'm going to send them a check for the monies that America had promised to the organization." Bloomberg will also make more funding available should the U.S. government fail to produce funds for its share of the U.N. climate budget in 2019, according to a press release announcing the action.

READY FOR TAKEOFF: Rep. Jim Bridenstine will be sworn-in at 2:30 p.m. today as the new NASA administrator. After the swearing-in ceremony, Vice President Mike Pence and Bridenstine will speak live with three NASA astronauts currently living on the International Space Station.

MAIL CALL! Senate Democrats sent a series of letters Friday, calling on the administration and agency heads to share documents related to the Koch brothers' role in influencing policy in the Trump era. The letters cite specific actions for which the Koch network has taken credit, including shrinking national monuments, exiting the Paris climate change agreement and streamlining of infrastructure permitting. "Americans have a right to know if special interests are unduly influencing public policy decisions that have profound implications for public health, the environment, and the economy," the senators write. The letters, led by Sen. Sheldon Whitehouse, come before Senate floor speeches this week from Democrats that are expected to detail the influence of the Koch brothers network. Read the letter to the White House here, EPA here and Interior here.

IN CELEBRATION OF EARTH DAY: The president touted his administration's rollback of "unnecessary and harmful regulations," and pointed toward a "market-driven economy" as an essential tool in environmental protection. "A healthy environment and a strong economy go hand in hand," a White House presidential message said. "We know that it is impossible for humans to flourish without clean air, land, and water. We also

know that a strong, market-driven economy is essential to protecting these resources." Trump said for that reason, his administration is "dedicated to removing unnecessary and harmful regulations that restrain economic growth and make it more difficult for local communities to prosper and to choose the best solutions for their environment."

REPORT OUT ON DOE BUDGET: The Information Technology and Innovation Foundation is out with a new report today analyzing the Energy Department's budget for research, development and demonstration. The report details how the administration's current budget proposal for fiscal 2019 would "impose the largest single-year decrease" in DOE history. "R&D spending as a share of sales in the U.S. energy industry is only 0.4 percent, compared with 8.5 percent in aerospace and defense, 9.8 percent in computers and electronics, and 2.4 percent in the automotive industry," the report finds. Read it [here](#).

Stories from POLITICO Pro

Failure to strike biofuels deal opens door for smaller ethanol moves Back

By Eric Wolff | 04/23/2018 05:01 AM EDT

President Donald Trump's long-sought biofuels deal between the agricultural and refining industries appears to be turning into a piecemeal policy cobbled together through EPA that expands the market for corn ethanol while granting exemptions from the program to many small oil processors.

Trump has huddled several times with members of his Cabinet, refining and ethanol industry players, and lawmakers from both corn-belt and oil states. But so far, there's been little progress in striking a grand deal that would relieve the financial pain that some independent refiners say the Renewable Fuel Standard is causing them while acceding to agriculture-sector pressure to expand the market for corn ethanol.

Instead, Trump has promised to allow year-round sales of 15 percent ethanol blends of gasoline while EPA Administrator Scott Pruitt has handed out more than two dozen temporary waivers to small refineries that exempt them from the mandate requiring them to blend ethanol with gasoline.

"After 18 months of pursuing various regulatory forms of relief and a handful of Oval Office confabs, the merchant refiners ended up with [an increase in E15] taking even more market share away from them in return for some small refiner hardship waivers — and some of them did not even get that," said a source with an oil refining company.

For over a year, refiners have urged the administration to put a cap on the price of the biofuel credits that refiners must buy to meet their RFS compliance levels. But the move has been sharply opposed by ethanol and corn interests, as well as Sen. Chuck Grassley (R-Iowa), who as recently as last month called a potential cap "CATASTROPHIC to ethanol."

But the prices for biofuel credits, called Renewable Identification Numbers, have fallen since Pruitt's EPA began issuing at least 25 compliance waivers. Although that's angered biofuels supporters who complain it has sapped demand for ethanol, they see the administration's plan to drop the Clean Air Act rules that have barred E15 sales in the summer in some states as a boon.

"Right now we're going to have anywhere from a billion- to a billion and a half-[gallon] reduction in [ethanol] demand because of [RFS] waivers given so far," Sen. Mike Rounds (R-S.D.) told POLITICO. "I think we're moving in the right direction, but we want to make sure we get the [E15] waiver in place."

At a meeting with Midwestern senators and governors April 12, Trump announced his plan to expand E15 sales. But Trump also said there were efforts to set a transition period for the two years "where we will have a little bit of complexity," an apparent reference to refiners' worries that an increase in the number of RINs from higher E15 sales won't help push down prices for the credits in the near term.

The expansion of E15 sales came after an early April meeting at the White House, where Agriculture Secretary Sonny Perdue urged Trump to give corn farmers something to offset the ethanol demand drop they were seeing from the refinery compliance waivers, as well as the decline expected because of China's retaliatory import tariffs put in place after Trump announced his trade penalties, according to an administration source. The Washington Post reported Trump spent much of the meeting discussing the controversies around Pruitt's condo rental from a lobbyist and heavy spending on first-class travel and round-the-clock security.

Trump's discussion of Pruitt's controversies left the EPA chief unable to make an aggressive case for instituting price caps on RINs, according to an administration source, and have put him in a generally weakened position inside the White House.

And that may have killed the effort to establish RIN price caps, and given traction to the piecemeal EPA actions on E15 and the temporary compliance waivers, according to both administration and industry sources.

"[The oil industry] got what they wanted with the small refinery waivers, so we should get what we want," said Rob Walther, vice president of federal affairs for the ethanol producer POET.

Refiners, who over the last several months have sought and received RFS waivers for the 2016 and 2017 compliance years, are now expected to be pushing for the same exemptions for 2018 before they even know what their final liability for the year is.

Separately, a debate has grown over how EPA has been able to issue so many waivers to refiners this year. Though an EPA spokeswoman says the agency continued to use the same process it had under the Obama EPA to grant those exceptions, oil and ethanol industry sources acknowledge it has made crucial changes that make it far easier to get out from under the biofuel mandates.

In particular, EPA is relying on report language congressional appropriators added to 2016 and 2017 government funding bills that called on EPA to loosen its requirements for determining if a refinery should be awarded a waiver. EPA has also softened its definition of what constitutes economic hardship for a refinery as a result of a ruling from the U.S. Court of Appeals for the 10th Circuit last year.

That decision, in the case of *Sinclair Wyoming Refining v. EPA*, said the agency's test for defining economic hardship as whether a refiner was about to be pushed into bankruptcy had been too severe.

EPA has also taken a more aggressive interpretation of the law, saying it would no longer grant only partial waivers. Instead, the agency is now granting full-volume waivers to qualifying small refineries, according to an industry attorney.

The American Petroleum Institute, which represents the biggest oil companies, has opposed the waivers, and ethanol producers are furious at the use of the congressional report language to loosen the standards for receiving them. Monte Shaw, executive director of the Iowa Renewable Fuels Association, said his group has asked allies on the Appropriations Committee to consider writing their own language into future appropriations reports reversing the previous guidance.

Other groups think EPA is relying too much on that congressional guidance that is not included in the law.

"The report language does not override the plain reading of the statute," said Bob Dinneen, CEO of the Renewable Fuels Association. "While the court's decision in *Sinclair* might suggest EPA views these waivers differently, EPA has turned 180 degrees in its interpretation of the statute, and essentially now requires no demonstration of economic hardship. That's not what either the statute or the court required."

EPA staff has begun work trying to figure out how to best implement the expansion of E15 sales, which corn growers see as pivotal for the program's near future. But ethanol producers and their allies are looking ahead to the long term, in which E25 and E30 provide the octane for smaller, high-efficiency engines that get far higher fuel efficiency than current models.

"We have to move to the point to emphasize the need for octane, for these small engines that become more important in meeting CAFE standards in coming years," Rounds said. "That's where ethanol really shines."

Lobbyist whose wife rented to Pruitt lobbied EPA despite denials [Back](#)

By Theodoric Meyer and Eliana Johnson | 04/20/2018 06:43 PM EDT

The prominent lobbyist whose wife rented a condominium to Environmental Protection Agency Administrator Scott Pruitt lobbied the agency while Pruitt was leading it, contrary to his and Pruitt's public denials that he had any business before the agency, according to a Friday filing by his firm.

The [disclosure](#) from the lobbying firm Williams & Jensen contradicts Pruitt's public statement last month that the lobbyist, J. Steven Hart, had no clients with business before the EPA, and came hours after Hart's resignation from the firm.

An EPA official acknowledged on Saturday that Pruitt had met with Hart, who attended a meeting with a former meat processing executive concerned about President Donald Trump's proposal to cut spending on a Chesapeake Bay cleanup program. But the official argued that the meeting didn't meet the definition of lobbying.

A second EPA official, agency spokesman Jahan Wilcox, told POLITICO: "We have no knowledge of any facts that precipitated Williams & Jensen electing to make this filing."

The disclosure is the latest sign of one-time allies distancing themselves from Pruitt, whose job is in jeopardy because of multiple investigations into his stewardship of the agency, ranging from spending on a 20-person security team and first-class travel to the installation of costly office furniture and a soundproof phone booth. The Government Accountability Office said earlier this week that the purchase of the booth, which cost \$43,000, violated federal law. And the staff of House Oversight Chairman Trey Gowdy (R-S.C.) has interviewed a former EPA political appointee who alleges that Pruitt lied about not knowing about steep raises given to two of his top aides.

When asked late Friday about Hart's lobbying activities, a Gowdy spokeswoman told POLITICO that 'the Committee has already been looking into this matter.'"

Sen. Sheldon Whitehouse (D-R.I.) said in a statement Saturday that any evidence of deception about Pruitt's relationship with the lobbyist-turned-landlord would bode ill for the EPA administrator.

"It doesn't get much swampier than an agency head getting a sweetheart deal on rent from a lobbyist with business before his agency, but someone lying about it afterwards does make it worse," Whitehouse said. "The laundry list of Pruitt scandals grows."

Hart announced he would resign from Williams & Jensen hours before the firm filed a disclosure showing that he lobbied the EPA for Smithfield Foods in the first quarter of 2017. While Hart, the chairman and former chief executive of the firm, has disputed that the contact he had with Pruitt and Pruitt's chief of staff, Ryan Jackson, constituted lobbying activity, the disclosure indicates otherwise.

Hart lobbied the EPA on issues "relating to support for EPA Chesapeake Bay Programs," according to the disclosure.

Pruitt told Fox News earlier this month that "Hart has no clients that have business before this agency."

Smithfield paid Williams & Jensen, which has lobbied for the company for years, \$70,000 to lobby on a variety of matters in the first quarter, according to the disclosure filing. Hart also lobbied Congress on trade, agriculture and food safety issues on Smithfield's behalf during the first quarter, alongside other Williams & Jensen lobbyists.

But Smithfield said Hart's lobbying of the EPA "was not undertaken at the direction of or on behalf of Smithfield Foods."

"These activities were conducted at the request of a then former executive and current Smithfield Foundation board member, Dennis Treacy, in his personal capacity," the company said in a statement. "Mr. Treacy is associated with several environmental organizations and is a member of the Chesapeake Bay Commission."

Treacy had been Smithfield's chief sustainability officer, as well as president of the nonprofit Smithfield Foundation, and before that had led Virginia's Department of Environmental Quality.

The first EPA official, who spoke on condition of anonymity, said Pruitt and Jackson, his chief of staff, met with Treacy and Hart on July 11 for 20 minutes in Pruitt's office. That's backed up by a chain of agency emails obtained by POLITICO, which show Treacy requesting a meeting in May to discuss his "focused and unique view of environmental protection" with Pruitt, and one finally being scheduled for July 11.

On July 10, Hart wrote to Jackson that he wanted to attend the meeting at Treacy's request. Hart added that Treacy "is a good guy and can be trusted. He is coming in as the business rep on the Chesapeake Bay Foundation — another of your controversies."

But the disclosure filed by Williams & Jensen indicates that Hart's lobbying work took place in the first three months of this year, not in 2017.

The official said Hart set up the meeting as a "personal introduction" but that Treacy used a Smithfield email address, which may have prompted Williams & Jensen to consider the meeting lobbying activity on behalf of Smithfield. Treacy wanted to talk about the president's proposed budget cuts to EPA's spending on Chesapeake Bay, the subject of one of the nation's premier ecosystem restoration projects, the official said.

The official said Pruitt discussed his meeting with Hart with EPA staff before going on Fox News for an interview this month, where Pruitt maintained that Hart had no clients with business before the agency. But "it has been clear in [Pruitt's] mind for months now this was a personal introduction of an individual who was supportive of the administration, who wanted to meet the administrator."

Smithfield Foods has had a tangled history with Chesapeake Bay: In 1997, a federal judge slapped the company with a record \$12.6 million fine for violating the Clean Water Act by dumping hog waste into a bay tributary. But Smithfield is now listed as a corporate partner of the nonprofit Alliance for the Chesapeake Bay.

Pruitt's rental of the Capitol Hill condo — a relative bargain at \$50 a night — had attracted criticism even before the filing because Hart has lobbied on energy issues in the past. Hart is also a past political donor to Pruitt, contributing a total of \$4,366 in cash and in-kind services to the former Oklahoma attorney general's campaigns and leadership PAC.

Pruitt's lease originally had J. Steven Hart's name printed on it as the landlord, but someone crossed it out and wrote in the name of his wife, Vicki. Public records show Vicki Hart's name on both the mortgage and deed. (Vicki Hart is also a lobbyist but works primarily on health care issues.)

Hart was already planning to retire in November but moved up his departure in the wake of the revelation that his wife has been Pruitt's landlord.

"Considering the last couple of weeks, I think it is easier on my family and the firm to expedite my departure," Hart wrote on Friday afternoon in an email to family and friends that was obtained by POLITICO.

Williams & Jensen confirmed Hart's departure.

"Mr. Hart informed the firm of his decision to resign today," the firm said in a statement on Friday. "We are grateful to Steve for his 35 years of service and we wish him and his family well in all of their future endeavors."

Hart did not respond to a request for comment. But he was sharply critical of the news coverage of the Pruitt scandal in the email he sent on Friday.

"As you know, these days I am no more an energy lobbyist than I am an astronaut," Hart wrote. "But, why let the facts get in the way of a good story?"

After leaving the firm, Hart wrote that he was "looking forward to devoting myself to an independent legal practice, some strategic business counseling for a few clients, golf, and shooting (not in that order)."

Third Republican calls on Pruitt to resign [Back](#)

By Alex Guillén | 04/05/2018 03:34 PM EDT

Rep. [Elise Stefanik](#) (R-N.Y.) today called on EPA Administrator Scott Pruitt to resign, becoming at least the third Republican to do so even as more conservative lawmakers come to Pruitt's defense.

"I'm going to make news today," Stefanik said at a town hall meeting in South Glens Falls, about 45 miles north of Albany, according to [The Saratogian](#). "I think Scott Pruitt should resign. I fundamentally disagree with how Pruitt has handled the EPA."

Reps. [Carlos Curbelo](#) and [Ileana Ros-Lehtinen](#), both Florida Republicans, earlier this week called for Pruitt's ouster, as have a number of Democrats. Pruitt is facing increased scrutiny for ethics issues including the \$50-per-night rent he paid to rent space in a condo from a lobbyist last year.

Meanwhile, conservative Republicans like Sens. [Rand Paul](#) (R-Ky.) and [Ted Cruz](#) (R-Texas) have come to Pruitt's defense today.

"Why do Obama and his media cronies want so badly to drive @EPAScottPruitt out of office?" [tweeted](#) Cruz.

Pruitt "is likely the bravest and most conservative member of Trump's cabinet," [tweeted](#) Paul. "We need him to help @realDonaldTrump drain the regulatory swamp."

EPA emails show industry worries slowed new science policy [Back](#)

By Annie Snider | 04/19/2018 05:01 PM EDT

EPA's rollout of a controversial new transparency policy that would severely restrict the scientific research the agency can rely on when drafting new regulations has been slowed down by political officials' fears that it could have major unintended consequences for chemical makers, according to newly released EPA documents.

The issue of scientific transparency has been high on the agenda of House Science Chairman [Lamar Smith](#) (R-Texas), who has found strong support from EPA Administrator Scott Pruitt — much to the consternation of public health advocates and green groups, who view the effort as backdoor attack on the agency's ability to enact environmental regulations.

Since Pruitt announced plans for the new policy last month, researchers and public health proponents have raised alarms that it could restrict the agency's ability to consider a broad swath of data about the effects of pollution on human health. But documents released under the Freedom of Information Act show that top EPA officials are more worried the new restrictions would prevent the agency from considering industry studies that frequently support their efforts to justify less stringent regulations.

Emails between EPA officials obtained by the Union of Concerned Scientists show that Nancy Beck, the top political official in the agency's chemicals office who came to the agency after serving as a key expert for the chemical industry's lead lobbying group, voiced major concerns after she received a draft of the not-yet-released policy on Jan. 31.

The new scientific transparency directive is expected to require that the raw data for all studies EPA relies on be publicly available, and that the studies be peer-reviewed. But Beck said these requirements would exclude a great deal of industry data about pesticides and toxic chemicals that her office considers when determining whether a substance is safe or must be restricted.

It costs companies "millions of dollars to do these studies," Beck wrote in an email to Richard Yamada, the political official in EPA's office of research and development who is spearheading work on the new scientific policy and is also a former staffer for the House Science Committee chairman.

"These data will be extremely valuable, extremely high quality, and NOT published," Beck wrote. "The directive needs to be revised."

Moreover, much of this data, Beck noted, is considered proprietary by companies. It is dubbed confidential business information, and even though EPA can consider it as part of its regulatory review, the data cannot legally be made public.

Yamada replied to thank Beck for the heads up. "Yes, thanks this is helpful - didn't know about the intricacies of CBI," he wrote. "We will need to thread this one real tight!"

The term "confidential business information" primarily applies to industry information. That data is separate from the personal medical information that public health researchers worry could block consideration of their work.

Yogin Kothari, a lobbyist for the Union of Concerned Scientists, said the emails show the Trump administration's EPA has been "trying to stack the deck in favor of the industries they're supposed to be regulating."

"They want to potentially create exemptions for industry, but if you look at this entire set of documents ... you will see that there's not a single consideration for the impacts on public health data, on long-term health studies, on studies that EPA does after public health disasters like the BP oil spill," he said.

EPA spokeswoman Liz Bowman emphasized the policy is not yet finalized.

"These discussions are part of the deliberative process; the policy is still being developed. It's important to understand; however, that any standards for protecting [confidential business information] would be the same for all stakeholders," she said in a statement.

The emails indicate Pruitt wanted the new science policy rolled out at the end of February, and teased his plans in an interview with conservative outlet The Daily Caller in mid-March. But the agency has yet to finalize the policy.

The transparency directive has its origins in legislation introduced by Smith during the Obama administration, that had the backing of a number of industry groups, including the American Chemistry Council. The House Science Committee chairman frequently charged that the Obama EPA used "secret science" to justify "costly new regulations."

Although versions of the measure were approved by the House multiple times, the Senate never took it up. CBO estimated that one version of Smith's legislation would cost EPA \$250 million a year, at least in the initial years, and a leaked staff response to questions from the budget office said a later version would be even more costly, would endanger confidential medical and business information, and "would prevent EPA from using the best available science."

But Smith found an ally in Pruitt. The emails indicate that Smith met with Pruitt in early January and show that Pruitt's staff quickly began working on a directive to "internally implement" the legislation.

Industry's backing for the new scientific approach began to waiver under the Trump administration, though. When a top American Chemistry Council scientist testified before Smith's committee in February 2017, she emphasized the need to protect industry information if the transparency initiative moved forward.

"One of the things that we do need to take into consideration as making that data publicly available is that there are adequate protections for confidential business information to ensure that we keep innovation and competitiveness available for the marketplace," Kimberly White told the committee.

Industry has historically claimed that a wide range of information about chemicals, ranging from the processes by which they are produced, to the locations of manufacturing plants, to their very identities, must be kept confidential in order to keep competitors from learning trade secrets. Environmental and public health advocates argue that industry claims this exemption in many cases where it's not necessary and that it often keeps important health and safety information from public view.

The issue was a key point of debate when Congress considered a major overhaul of the nation's primary chemical safety law passed 2016 and has reemerged as Pruitt's EPA sets about implementing the law.

Asked for comment on EPA's new effort to implement the scientific transparency approach internally, American Chemistry Council spokesman Scott Openshaw said the group looks forward to reviewing the directive once it's finalized.

"It is critical that any final directive properly protect confidential business information and competitive intelligence," he said in a statement.

The internal emails show that EPA political staff were particularly attuned to this concern. In a Feb. 23 email to colleagues, Beck forwarded language from a 2005 White House document that laid out narrow exemptions from its requirement that all "important scientific information" disseminated by the federal government go through peer review.

"[Y]ou may need to tweak but hopefully there is something helpful here that can be borrowed/adopted," she wrote.

Richard Denison, lead senior scientist for the Environmental Defense Fund, said that EPA's access to industry data is indeed important to its ability to review the safety of new chemicals and pesticides, but said the internal EPA communications show that Pruitt's EPA wants to "have their cake and eat it too" with the new directive.

"They're trying to force peer review studies done by academic scientists to disclose every last detail, while at the same time allowing industry studies to be kept private or aspects of those to still be kept private," he said.

He pointed out that the concerns Beck raised about the burden the new policy would place on industry are the very same ones that the CBO report said the policy would place on EPA.

France's Macron arrives for 'celebration' of unlikely friendship with Trump [Back](#)

By Nicholas Vinocur and Michael Crowley | 04/22/2018 09:45 PM EDT

PARIS — French President Emmanuel Macron will receive full state honors in Washington this week, nine months after he rolled out a literal red carpet for Donald Trump on Paris' Avenue des Champs Elysées.

The three-day visit is likely to feature more displays of public affection between two leaders who talk on the phone constantly and closely coordinated recent airstrikes against Syria. Despite the U.S president's enormous unpopularity in his country, Macron virtually never criticizes Trump in public and calls him a "friend." Trump in turn reportedly even scribbled a [love note](#) to the 40-year-old French president last July.

This week's visit will be "something of a celebration of the relationship," a senior Trump administration official said.

Few would have predicted such talk just after Macron's May 2017 election defeat of the nationalist insurgent Marine LePen, whom Trump [implied](#) he supported. Macron's dark-horse win was seen as a rebuke to the western nationalist movement of which Trump has become a symbol. And while the French [adored](#) President Barack Obama as a suave intellectual, Trump is seen as the embodiment of a gauche American.

But rather than denounce Trump as many French politicians have, Macron has sought to win Trump over with flattering words. In an interview with "Fox News Sunday," Macron stressed his similarities with Trump, saying both he and the president could be called a "maverick" whose election had been unexpected.

The two men hardly see eye to eye on policy, and are expected to debate the Iran nuclear deal, Syria and trade policy, among other sensitive topics.

But Macron and Trump have worked closely together as Paris takes a larger leadership role on international issues — at a time when Britain is sidelined by political chaos and a weakened German Chancellor Angela Merkel's relationship with Trump is cool at best.

"Macron has become Trump's main European interlocutor when it comes to addressing international crises," Alexandra de Hoop Scheffer, senior transatlantic fellow at the German Marshall Fund, [wrote](#) in a recent policy paper.

Macron and Trump will share a private dinner Monday evening, followed by a bilateral meeting early Tuesday. They'll then meet with Cabinet members before a state dinner at the White House. On Wednesday, Macron will address a joint session of Congress.

In their private talks, the two men are likely to focus on security issues, including a fast-approaching decision point for the Iran nuclear deal. French officials say they share some of Trump's concerns about the July 2015 pact brokered by President Barack Obama, but are urging Trump not to abandon the agreement in mid-May, when Trump has threatened to reimpose sanctions on Tehran.

Macron has sought common ground with Trump by saying the current deal is flawed and that he might be willing to crack down on Iran's ballistic missile program. But Trump wants much stronger measures that French officials worry could abrogate the deal entirely. A Trump official said the deal would be "a major topic of discussion" during Macron's visit.

The official also said the two leaders "will discuss, probably in some detail, the way ahead in Syria."

In a televised debate last week, Macron said he had changed Trump's mind on the U.S. presence in war-torn Syria: "President Trump said the USA's will is to disengage from Syria. We convinced him that it was necessary to stay," the French leader said.

The White House quickly denied that characterization, and Macron later said he never meant the countries should maintain an indefinite military presence in the country.

But on Sunday, Macron told Fox News that he would urge international cooperation during his address to Congress, warning that Iran would benefit from a U.S. and European abandonment of Syria. "We are very much attached to the same values, and especially liberty and peace," Macron said of America and France.

Trade will also be on the agenda, after Macron and Merkel — who's due to fly into Washington on April 27, a few days after Macron leaves — both vowed to tell the U.S. president that Europe would not stand for his recent steel tariffs. U.S. officials may in turn complain to Macron's entourage about a French-led proposal to slap a 3-percent tax on U.S. internet giants.

Despite the menu of issue differences, officials on both sides sought to lower expectations for specific results from the meeting.

"It's largely symbolic," an aide to Macron said.

"I think what the President would like to hear from President Macron is his counsel and his point of view and his perspective," said the Trump official. "Whether we will actually solve, or come to closure, or a full detailed agreement on some of the issues that we've touched on is difficult to say at this remove."

As they work together internationally, Trump and Macron are both fending off political threats at home. A year into his presidency, the French president's sheen as a political prodigy and savior of European liberalism has been dulled by grinding rail strikes and sagging poll numbers.

Macron wants Trump to stand at his side as the European Union's soon-to-be sole military power with a permanent seat on the United Nations Security Council, nuclear capability and the will to intervene where others will not.

The April 14 strike on Syria's chemical facilities bolstered the burgeoning Franco-American relationship, French officials say. Macron and Trump spoke repeatedly during the crisis — and no fewer than seven times over the past month, according to accounts from the Elysée presidential palace.

While Britain also joined the strikes, Merkel barely featured in the Syrian discussions. Characteristically for intervention-averse Germany, she did not order participation in the strikes, commenting on them after the fact as "necessary and appropriate."

Once the missiles had hit their targets, Macron seized on a chance to drive home his point: While others may waver, France remains a red-blooded beacon of Western power. Paris had intervened in Syria for the "honor of the international community," he told the European Parliament in Strasbourg

One outstanding question about the Macron-Trump relationship that fascinates commentators in Europe: Does the French president really like Trump, or is he just "playing him"?

European commentators suggested as much last summer when, during Trump's visit to Paris, Macron mimicked his guest's signature thumbs-up move to TV cameras.

There may be no definitive answer. Macron is a one-time stage actor who loves to quote classical French playwrights from memory and, as he told a pair of French interviewers last weekend, has "no friends."

Quizzed about Macron's apparent affection for Trump, the French president's aides say he has concluded that befriending Trump and avoiding any direct criticism of the U.S. president that could inflame his temper are the best ways of keeping Trump — and the United States — on his nation's side.

Subject: Morning Energy: Spotlight on FERC at Pro summit — Hitching a ride on the 'minibus' — 'Secret science' out in the open

By Kelsey Tamborrino | 07/17/2018 05:43 AM EDT

With help from Emily Holden, Anthony Adragna, Colin Wilhelm and Darius Dixon

SEE YOU THERE: Today's the day — POLITICO Pro is hosting its second annual Pro summit, featuring one-on-one conversations with newsmakers across the policy landscape, including two sessions on energy.

FERC Commissioner Cheryl LaFleur will sit down this afternoon with our own Darius Dixon, before the regulatory body is deadlocked next month following the exit of GOP Commissioner Rob Powelson. LaFleur, a Democrat, has served under presidents from both parties and experienced the agency in almost every configuration — whether it has all five commissioners in place, or just one. There's no shortage of topics to chew over: the potential impact of an Energy Department coal and nuclear rescue plan, the heated rhetoric against states that stand in the way of pipelines, and whether FERC is "on the wrong side of history" when it comes to climate change. Darius' interview with LaFleur starts around 2 p.m.

Also on tap: California Air Resources Board Chairwoman Mary Nichols, Murray Energy CEO Bob Murray and the Council on Foreign Relations' Amy Myers Jaffe will participate in a panel this morning on America's "energy future." Nichols, for one, has been heavily involved in discussions with the Trump administration over car rules that the White House is considering rolling back. Expect questions related to the administration's efforts to pare back regulations and increase oil, gas and coal production — and an in-depth conversation on what that means for free market forces and renewables.

See the full agenda [here](#) and watch the livestream [here](#).

WELCOME TO TUESDAY! I'm your host, Kelsey Tamborrino. Citizens' Climate Lobby's Brett Cease was first to correctly identify the two presidents who threw out the first pitch at an All-Star game in D.C.: Franklin D. Roosevelt in 1937 and John F. Kennedy in 1962. For today: Which state or states have just one consonant in its spelling? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

JUST RELEASED: [View the latest POLITICO/AARP poll](#) to better understand Arizona voters over 50, a voting bloc poised to shape the midterm election outcome. Get up to speed on priority issues for Hispanic voters age 50+, who will help determine whether Arizona turns blue or stays red.

HITCHING A RIDE ON THE 'MINIBUS': The House Rules Committee late Monday made 70 amendments to the EPA and Interior title of the spending minibuss, [H.R. 6147 \(115\)](#). The amendments focus on blocking a host of Obama-era environmental regulations even as the Trump administration is in the process of rolling back many of those. Some of the amendments that caught ME's eye:

— **Diesel emissions grants:** Rep. [Gary Palmer's amendment](#) would eliminate the popular bipartisan Diesel Emissions Reduction Grant program used to retrofit diesel engines like those in school buses,

— **WOTUS:** Rep. Don Beyer's amendment would remove language blocking the Obama administration's Waters of the U.S. regulation,

— **Obama-era methane rule:** Rep. Markwayne Mullin's amendment would block enforcement of the Obama-era regulation aimed at curbing methane emissions from new oil and gas sources, which the Trump administration is already reconsidering,

— **Social cost of carbon:** Another amendment from conservatives would bar the use of the social cost of carbon in rulemakings,

— **Trailer efficiency:** Reps. Barry Loudermilk and Morgan Griffith's amendment would bar EPA from applying stricter fuel efficiency and greenhouse gas emissions standards to certain truck trailers,

— **Chesapeake Bay:** Rep. Bob Goodlatte's effort would limit EPA's ability to go after states that miss Chesapeake Bay cleanup milestones,

— **Ozone:** Rep. Glenn Grothman's amendment would block implementation of EPA's 2015 tightened ozone standard,

— **Coal ash:** A Democratic amendment would block the Trump EPA from revisiting an Obama-era coal ash regulation,

— **Endangered Species Act riders:** Several measures would bar the administration from issuing or enforcing Endangered Species Act rules relating to species like the lesser prairie chicken and Preble's meadow jumping mouse,

— **Attorney fees:** An amendment from Reps. Jason Smith and Greg Gianforte would block attorney fees from being awarded in any Clean Air Act, Clean Water Act or Endangered Species Act settlement, and,

— **Inspectors general:** Nothing related to former Administrator Scott Pruitt was made in order, but the House will consider an amendment from Rep. Raúl Grijalva that would increase the budget of the Interior Department's inspector general by \$2.5 million.

Read the full list of amendments made in order to the measure here.

'SECRET SCIENCE' OUT IN THE OPEN: EPA's controversial proposal to consider only research with publicly available data gets a public hearing at agency headquarters today starting at 8 a.m. Nearly 70 health, medical, academic and science groups — including the American Lung Association, American Heart Association, American Medical Association and American Academy of Pediatrics — oppose the plan, which they say could hamstring public health and environment protections.

EPA's Science Advisory Board voted unanimously to review the proposal, which Pruitt said was meant to bolster transparency. Paul Billings, national senior vice president of advocacy at the American Lung Association, called the rule a "coordinated effort to ignore the science that is inconvenient to the EPA's agenda," and compared it to lobbying efforts by the tobacco industry in the 1990s to exclude studies that showed secondhand smoke could kill.

What's at stake? The proposal could move forward quickly enough to allow EPA to roll back certain air quality standards currently under review. According to the Natural Resources Defense Council, the plan could undercut computer models meant to test chemicals under the new Toxic Substances Control Act and could toss

out landmark studies that relied on personal health records following extraordinary events, including when Hiroshima and Nagasaki victims were tested over time to find out the effects of radiation on humans.

The meeting will run until 8 p.m. or an hour after the last of more than 100 registered speakers has commented. Speakers, aside from many environment and public health groups, include the American Petroleum Institute, the U.S. Chamber of Commerce, the American Chemistry Council, FreedomWorks Foundation and climate science critic Steve Milloy. Dan Byers of the Chamber of Commerce's Global Energy Institute is expected to applaud the agency's efforts and commend EPA for going through the formal public comment and rulemaking process. "It is one thing to be cavalier about transparency principles when their application has little or no import to public policy, but federal rules that impact millions of people and billions of dollars should be held to a higher standard," he is expected to say. Also registered are Reps. Paul Tonko, Suzanne Bonamici and Dan Lipinski. Comments can be submitted until Aug. 16.

Related reading: Competitive Enterprise Institute senior fellow Angela Logomasini looks at the science transparency rule in analysis published today. "The rule is actually far more modest and flexible than depicted by its critics, and its goals are in fact achievable," Logomasini writes. Read it here.

FOR THE RECORD: The House Rules Committee meets at 3 p.m. this afternoon to formulate a rule on an anti-carbon tax resolution, H. Con. Res. 119 (115), that calls a tax on carbon released from fossil fuels "detrimental to the United States economy." The Rules panel will tee up a vote later this week on the resolution, which is led by Majority Whip Steve Scalise and would put a range of lawmakers — most notably the Climate Solutions Caucus — on the record on the issue.

WHERE'S ZINKE? Interior Secretary Ryan Zinke will deliver remarks this morning at the first meeting of the "Made in America" Outdoor Recreation Advisory Committee. The committee is tasked with advising the secretary on "public-private partnerships across all public lands, with the goal of expanding access to and improving infrastructure on public lands and waterways." See the meeting agenda.

AMERICA'S PLEDGE STILL WORKING ON PLEDGES: Michael Bloomberg and California Gov. Jerry Brown, the co-chairs of climate organization "America's Pledge," have unveiled a preview of the report they will release at the Global Climate Action Summit in San Francisco in September, detailing "bottom-up" opportunities for climate action sans federal leadership. The list is familiar: boosting renewables, accelerating coal retirements, retrofitting buildings for energy efficiency, electrifying building energy use, accelerating electric vehicle adoption, phasing out HFCs, preventing methane leaks at the wellhead, reducing methane leaks in cities, reducing emissions from land and starting carbon markets.

Vice Chairman Carl Pope said the group still plans to debut a quantitative analysis outlining what state and local governments are already doing, what they have committed to and what they are keying up. "We have every reason to believe the rest of the world is watching this very closely," Pope said, noting that the U.N.'s top climate official, Patricia Espinosa, mentioned the group and summit by name at the Vatican earlier this month. Read it here.

ESA GETS ITS DAY: Proposed tweaks to the Endangered Species Act will be front and center at a Senate Environment and Public Works hearing this morning. The hearing will feature testimony from Wyoming Gov. Matt Mead, Colorado Parks and Wildlife's Bob Broscheid and Virginia's Secretary of Natural Resources Matthew J. Strickler, and will focus on a discussion draft released by Chairman John Barrasso earlier this month aimed at changing the statute. **If you go:** The hearing kicks off at 9:45 a.m. in 406 Dirksen. Livestream here.

TAKEN BY STORMWATER: The House on Monday passed by voice vote H.R. 3906 (115), the Innovative Stormwater Infrastructure Act of 2017, which would "establish centers of excellence" for stormwater control infrastructure. The legislation, introduced last year by Democratic Rep. Denny Heck, directs EPA to create a

stormwater infrastructure funding task force to make recommendations on the availability of public and private funding for stormwater infrastructure.

DOE ISSUES FIRST TRIBAL LOAN GUARANTEE: The Energy Department will issue its first solicitation for the Tribal Energy Loan Guarantee Program today. The program provides up to \$2 billion in partial loan guarantees to support energy development in Native American and Alaska Native communities. According to DOE, today's solicitation marks more than \$40 billion in energy infrastructure loans and loan guarantees from DOE's Loan Programs Office in five areas.

HOUSE PANEL TO HOLD GRID HEARING: House Natural Resources will hold a hearing on July 25 on Puerto Rico's electric grid recovery and possible improvements to make it more efficient and resilient to future hurricanes. On top of the devastation caused by Hurricane Maria last year, Puerto Rico's electric utility owes bondholders \$9 billion, and most of its leadership departed last week after clashes with Gov. Ricardo Rosselló over executive compensation and political control of the utility, which is quasi-governmental.

MAKING THE GRADE: The Environment America Research & Policy Center is out today with its state-by-state report card, "Renewables on the Rise," which details increases in solar, wind, energy efficiency, electric vehicles and battery storage. The report says the U.S. now produces almost six times as much renewable electricity from wind and solar than it did in 2008. It also found that in March of last year, wind and solar produced 10 percent of the United States' electricity — marking a first. On the state level, the report said California, Arizona, North Carolina, Nevada and Texas saw the greatest total increases from 2008 until 2017 in solar energy generation. See the report [here](#) and a state-by-state interactive map [here](#).

YOU DOWN WITH TIP? A bipartisan group of four senators [wrote to](#) Energy Secretary Rick Perry on Monday in support of the Western Area Power Administration's Transmission Infrastructure Program, which was axed under the Trump administration's fiscal 2019 budget proposal. "TIP is one of the few federal programs that directly supports new and upgraded electric transmission," according to the letter, signed by Sens. [Catherine Cortez Masto](#), [Martin Heinrich](#), [Dean Heller](#) and [Cory Gardner](#).

HOUSE PLANS FLOOD INSURANCE VOTE: The House is planning to vote next week to extend the National Flood Insurance Program, ahead of its July 31 expiration, sources familiar with the matter tell Pro Financial Services' Zachary Warmbrodt. There are already a few options on the table for the program: one from Financial Services Chairman [Jeb Hensarling](#), who has been trying to put together an extension bill that includes reforms, and a new bill introduced by Scalise and Rep. [Tom MacArthur](#) that would reauthorize the program through Nov. 30. Read [more](#).

FOR YOUR RADAR: Republican Sen. [Chuck Grassley](#) introduced bipartisan legislation on Monday targeting price fixing by OPEC. The bill would amend the Sherman Act to make oil-producing and exporting cartels illegal, and was co-sponsored by Sens. [Amy Klobuchar](#), [Mike Lee](#) and [Patrick Leahy](#). "It's long past time to put an end to illegal price fixing by OPEC," Grassley said in a statement. Read the legislation [here](#).

MAIL CALL! National Rural Electric Cooperative Association CEO Jim Matheson [sent a letter](#) to the leadership of the Energy and Commerce Environment Subcommittee on Monday in support of legislation to reform the New Source Review permitting program.

— **More than 100 Democrats** signed onto a letter to members of both House and Senate Armed Services committees today to urge them to oppose any provisions to the National Defense Authorization Act that would "have widespread, negative consequences for the conservation of our imperiled wildlife and public lands." Read the letter [here](#).

— **Iowa's congressional delegation** invited acting EPA Administrator Andrew Wheeler to their state to discuss the Renewable Fuel Standard. Read it [here](#).

What role will Hispanic voters over 50 play in Arizona this Fall? Read POLITICO Magazine's new series "The Deciders" which focuses on this powerful voting bloc that could be the determining factor in turning Arizona blue.

House plans vote to keep flood insurance program going Back

By Zachary Warmbrodt | 07/16/2018 06:49 PM EDT

The House is planning to vote next week to extend the National Flood Insurance Program before leaving town ahead of the program's July 31 expiration, sources familiar with the matter said.

House Financial Services Chairman Jeb Hensarling (R-Texas) has been trying to put together an extension bill that includes reforms, sources said. Another option is a new bill introduced by House Majority Whip Steve Scalise (R-La.) and Rep. Tom MacArthur (R-N.J.) that would reauthorize the program through Nov. 30.

In a statement, Scalise said it was important to keep working on a long-term flood insurance reauthorization but that his bill would take concerns about a lapse off the table for the remainder of hurricane season.

While the House has passed a five-year reauthorization and overhaul, the Senate hasn't reached agreement on its own bill amid disputes over how to retool the program. It's unclear if the Senate would be able to pass anything other than a clean, short-term reauthorization at this stage. Sources said Sen. John Kennedy (R-La.) was planning to try to hotline an extension through January.

Good afternoon

Today, the Administrator signed the proposed rule "Strengthening Transparency in Regulatory Science."

This proposed regulation is intended to strengthen the transparency of EPA regulatory science. The proposed regulation provides that when EPA develops regulations, including regulations for which the public is likely to bear the cost of compliance, with regard to those scientific studies that are pivotal to the action being taken, EPA should ensure that the data underlying those are publicly available in a manner sufficient for independent validation.

In this notice, EPA solicits comment on this proposal and how it can best be promulgated and implemented in light of existing law and prior Federal policies that already require increasing public access to data and influential scientific information used to inform federal regulation.

Attached is the signed and dated proposed rule. For your convenience, please go to p. 19 for the Administrator's signature.

Please contact me if you have any questions.

Sincerely,
Laura

Subject: EPA Announces Extended Comment Period and Public Hearing on Proposed
Rule to Strengthen Science Transparency in EPA Regulations

EPA Announces Extended Comment Period and Public Hearing on Proposed Rule to Strengthen Science Transparency in EPA Regulations

WASHINGTON (May 24, 2018) - Today, the U.S. Environmental Protection Agency (EPA) announced an extension of the comment period on the proposed rule, “Strengthening Transparency in Regulatory Science.” EPA is also announcing a public hearing for the proposed rule, which will be held on July 17, 2018, in Washington, D.C.

“EPA is committed to public participation and transparency in the rulemaking process,” said EPA Administrator Scott Pruitt. **“By extending the comment period for this rule and holding a public hearing, we are giving stakeholders the opportunity to provide valuable input about how EPA can improve the science underlying its rules.”**

On April 30, 2018, EPA announced the proposed rule with a 30-day comment period that was scheduled to close on May 30. With today’s extension, the comment period will now close on August 17. EPA is soliciting comments on all aspects of the proposal and specifically on the issues identified in Section III. The public hearing will provide a forum for interested parties to present data, views, and arguments regarding EPA’s proposed rule.

The proposed rule will strengthen the science used in regulations issued by EPA. It will require that underlying scientific information be publicly available. Also, this rule is consistent with data access requirements for major scientific journals and builds upon Executive Orders 13777 and 13783.

Comments should be identified by Docket ID No. is EPA-HQ-OA-2018-0259 and submitted through the Federal eRulemaking Portal: <http://www.regulations.gov>.

The public hearing will be held at the U.S. Environmental Protection Agency Headquarters, William Jefferson Clinton East Building, Main Floor Room 1153, 1201 Constitution Avenue NW, in Washington, D.C. 20460. The public hearing will convene at 8:00 a.m. EST and continue until 8:00 p.m. EST. Parties interested in presenting oral testimony at the public hearing should register online by July 15, 2018, at <https://www.epa.gov/osa/strengthening-transparency-regulatory-science>.

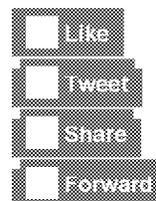

While we have taken steps to ensure the accuracy of this [Internet version of the rule](#), it is not the official version of the rule for purposes of public comment. Please refer to the official version in a forthcoming *Federal Register* publication.

Subject: Morning Energy, presented by ExxonMobil: Democrats try to make GOP pay at the pump — Nukes out at PJM even as capacity prices double — Senate Appropriations marks up Energy-Water

By Kelsey Tamborrino | 05/24/2018 05:42 AM EDT

With help from Anthony Adragna and Eric Wolff

PUMP UP THE VOLUME: Days away from the Memorial Day weekend, gas prices are on the rise — and Democrats didn't have to look far for someone to blame. During a press conference in front of a notably pricey Exxon gas station, Democratic leaders blamed President Donald Trump's foreign policy decisions — including his move to reimpose sanctions on Iran — for the 50-cent-per-gallon surge in prices since he took office. "There's a straight line between Trump's policies and the price of gasoline," Sen. [Brian Schatz](#) told Pro's Ben Lefebvre and Anthony Adragna.

A page out of the Trump playbook: In pushing the blame onto Republicans, Democrats aren't breaking new ground. Trump himself called for former President Barack Obama's firing when in October 2012 gas prices hit "crazy levels." Republicans weren't surprised by the Democratic talking point, either. "Everyone's going to look for whatever political leverage they have going into an election," Sen. [Lisa Murkowski](#) said. "[But do] you think that Republicans created the high prices? No."

Roadblocks ahead: The Democratic message faces a big obstacle: Short of an energy crisis like the one President Jimmy Carter faced in his 1980 reelection campaign, it's tough to convince voters the president is to blame for expensive gas. Especially because the White House has little control over gas prices, which largely track the movement in global crude oil market prices. Energy market watchers say the price rally is largely due to moves by OPEC and Russia, in addition to the collapse of Venezuela's oil industry. [Read more.](#)

RELATED DOC: Trump has staffed his administration with oil and auto industry insiders, according to a new report from ethics watchdog group Public Citizen. The report breaks down industry influence by the numbers and finds 52 administration staff members have oil and gas ties, 15 with auto industry ties and 10 who have ties to both. Those industry ties are most concentrated at EPA, Interior and the White House. [Read the report.](#)

GOOD THURSDAY MORNING! I'm your host Kelsey Tamborrino. Congrats to the American Petroleum Institute's Khary Cauthen, who was the first to identify Franklin D. Roosevelt as the first president to have a state car custom built to Secret Service standards. For today: In what year did someone first attempt to jump the White House fence? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

POLITICO and the South China Morning Post are partnering to expand coverage of U.S.-China relations. Read our note from POLITICO Editor-in-Chief John Harris and Editor Carrie Budoff Brown to [learn more](#). If you want all China-related content that appears through this partnership sent directly to your inbox, go to your [account settings](#) to sign up for the South China Morning Post tag or reach out to your [account manager](#) for assistance.

COMMENT PERIOD EXTENDED: EPA [extended](#) the comment period for its controversial "secret science" proposal that was set to end on May 30. The public will now have until Aug 16 to make their voices heard on

the proposal to ban the use of studies that don't publicly disclose all data. EPA also said it would hold a public hearing July 17 in Washington on the proposal rule, heeding public requests to do so.

NUKES OUT OF PJM EVEN AS CAPACITY PRICES DOUBLE: PJM Interconnection, which manages the nation's largest power market, shed almost a third of its nuclear capacity in capacity auction results released yesterday for the 2021-22 delivery year. The auction, which provides extra payments to generators in return for staying available to run at any time, saw prices nearly double to \$140 per megawatt-day, and it will generate \$9.3 billion in revenue for companies with plants that cleared. Stu Bressler, PJM's senior vice president for Operations and Markets said prices rose because companies were trying to make up revenue lost to lower energy prices. "The offers from supply resources into the capacity auction take into account the actual as well as the anticipated energy revenues when they construct those offers in order to meet their required revenues," he told reporters Wednesday.

More megawatts cleared the auction for every other fuel type. Solar capacity quadrupled and wind added 529 MW, making up for ground lost in last year's auction. Coal added 500 MW compared to the previous auction, something that may catch the attention of the Department of Energy, which is trying to save coal plants. "The results of this auction should reassure everyone that the electricity markets are working and maintaining a reliable system," said Susan Buehler, a spokeswoman for the grid operator. "PJM has always said we don't believe there is any need for intervention."

Plenty of power: PJM continues to have far more power than it needs to meet reserve requirements. In 2021-22, it will have a 21.5 percent reserve, well above the 15.8 percent target. That reserve is actually down 2 points from the auction to supply power for 2020-21.

EVERY BILL GETS ITS DAY: The Senate Appropriations Committee will mark up its fiscal 2019 Energy-Water appropriation bill, which puts discretionary funding at \$43.8 billion — \$566 million more than this year's appropriation and \$7.2 billion more than the administration requested. The bill provides \$6.65 billion for the Office of Science — a \$390 million boost — and would increase funds for ARPA-E, which the White House has sought to eliminate. The committee will also consider so-called 302(b) allocations.

How it'll play out: Lamar Alexander is already eyeing how the Senate might move on the title in the coming weeks. "My guess would be two or three bills would come over from the House, Sen. [Mitch] McConnell could put those bills together, put them on the floor at once and allow amendments to them all," Alexander, who chairs the Energy and Water Subcommittee, told reporters. He added that 83 senators had provided input into his bill and that his subcommittee was able to address those suggestions "to some degree in almost every case."

If you go: The markup kicks off at 10:30 a.m. in 106 Dirksen.

BRIDENSTINE'S CLIMATE EVOLUTION COMPLETE: NASA Administrator Jim Bridenstine endorsed a major federal report that echoed the scientific consensus that human activity is the primary driver of climate change. Under questioning Wednesday from Sen. Brian Schatz, the former Oklahoma lawmaker said the National Climate Assessment "has clearly stated that it is extremely likely ... that human activity is the dominate cause of global warming and I have no reason to doubt the science that comes from that." Bridenstine agreed that his new position on the science constituted an evolution of his views and vowed to protect climate science work at the space agency. Keep in mind: The climate report in question is the same assessment Administrator Scott Pruitt sought to rebuff in his proposed "red team-blue team" debate. Watch the Bridenstine clip here.

WHEN WE LAST LEFT OUR HEROES: Top deputies across the Trump administration — including EPA Deputy Administrator Andrew Wheeler, Deputy Energy Secretary Dan Brouillette and USDA Deputy Secretary Stephen Censky — will meet today to try to resolve long-standing tensions over the Renewable Fuel Standard. The group will pick up where the president left off during his meeting on the topic last month, including the unfinished business of whether to allow biofuel exports to receive Renewable Identification Numbers, and whether to reallocate the gallons small refiners were exempted from blending under economic hardship waivers

from EPA. A refining source previously told Pro's Eric Wolff the USDA is trying to capitalize on the controversies surrounding EPA and has been pressing the agency to move quickly on allowing year-round sales of 15 percent ethanol fuel.

And with small refinery exemptions on the table, ME will be looking to see how Wednesday's news that Marathon Petroleum asked EPA for an exemption plays out. Ahead of today's meeting, the ethanol and biofuel trade association Growth Energy released a statement that called out the "flood of illegitimate waivers" and their resulting "'demand destruction' for U.S. farmers at a time when rural communities can least afford it."

**** Presented by ExxonMobil:** Biofuels refined from algae could transform how we power the vehicles that move people and things. It's energy-rich and emits significantly less CO₂ than most transportation fuels. And it doesn't compete with food and fresh water supplies. We're researching how to scale up algae biofuels production in a meaningful way. EnergyFactor.com **

BIODIESEL WANTS MORE: Biodiesel producers think EPA should crank up the biodiesel requirement, not leave it flat, as POLITICO reported yesterday. "These rumored numbers are disappointing," Kurt Kovarik, VO for federal affairs for the National Biodiesel Board said in a statement. "Holding biomass based diesel flat is a missed opportunity to signal growth, which is what the RFS is intended to do. ... The easiest way to fix this and turn around growing dissatisfaction among rural voters is to provide growth to the biodiesel industry and increase this number."

STILL WORKING: John Cornyn, the Senate's No. 2 Republican, said he continues to have discussions on his legislation to overhaul the Renewable Fuel Standard "almost daily, certainly at the staff level," but wasn't sure the talks would bear fruit this year. "We keep making progress but the goal line still seems some ways a way," he told reporters. "I'd love to solve the problem this year, but I just don't know."

CARB AND EPA HAVE A MEET: EPA and the California Air Resources Board met Wednesday to open negotiations on a single unified standard for fuel economy, following a White House meeting with automakers earlier in the month. EPA and the National Highway Traffic Safety Administration are threatening to try and revoke California's waiver, risking a lengthy court battle that could balkanize the auto market. "Today's conversations between Administration Officials and the California Air Resources Board were productive," EPA and the Department of Transportation said in a joint statement following the meeting. "We are fully supportive of an open dialogue that proceeds in an expedited manner. EPA and USDOT look forward to moving ahead on a joint proposed rule and receiving practical and productive feedback from all stakeholders."

MOVING QUICKLY: Senate EPW Chairman John Barrasso said Wednesday he's working to reach a time agreement with Democrats to speed floor consideration of a broad water infrastructure package S. 2800 (115) that cleared his panel unanimously earlier this week. Barrasso said it would "be great" to get the bill passed before the Fourth of July recess. His Democratic counterpart on the panel, Sen. Tom Carper, agreed it wouldn't take long for the Senate to complete its work on the bill: "I don't think we're going to need a week. We might need a day," he said.

N.J. GOV DEFENDS EXXON SETTLEMENT USE: New Jersey Gov. Phil Murphy defended using money from a \$225 million settlement with Exxon Mobil to help balance his state's budget. The Democratic governor told reporters he wasn't happy about the decision, but said the state had "been dealt a lousy hand." Environmental groups are appealing the settlement in the hopes of negotiating a new deal, Pro New Jersey's Danielle Muoio reports.

MAIL CALL! FINISH UP, FERC: A new letter from 16 Democratic senators calls on FERC to finish up its rule to allow distributed energy resources to connect to the grid. The letter, led by Sheldon Whitehouse and Ed Markey, concerns the integration of DERs and renewable aggregators into capacity and energy markets. "This

will enable consumers to play a central role in strengthening reliability and avoiding unnecessary costs by supplying localized energy services," the senators write. Read the [letter](#).

REPORT: TRIBAL COMMUNITIES AT RISK: The Clean Air Task Force published a new [brief](#) Wednesday on the adverse health effects from oil and gas pollution on tribal lands. The report, which looked at lands in New Mexico, North Dakota and Utah, found that Native Americans face disproportionate health risks from living near sources of pollutants, such as VOCs, NOx and resultant smog.

WHAT'S HAPPENING IN COLORADO? The Colorado Association of Commerce and Industry and the National Association of Manufacturers will host [an event](#) today with former Interior Secretary and Colorado Attorney General Gale Norton, focusing on the Boulder, Colo., [climate lawsuit](#) against energy manufacturers over their role in contributing to climate change. Ahead of the event, Independent Petroleum Association of America's Energy in Depth is launching a digital ad buy in the state on the opposition against the lawsuit. Watch [the video](#).

THANKS, CHARLIE: The Citizens for Responsible Energy Solutions will announce a \$185,000 [television and digital ad](#) buy today, thanking Massachusetts Gov. Charlie Baker for his actions addressing climate change and on clean energy solutions. The ads will run across the state and encourage residents to thank Baker for his leadership.

MOVER, SHAKER: Van Ness Feldman announced Wednesday that Jason Larrabee, former Interior principal deputy assistant secretary for fish and wildlife and parks, has joined the firm as a senior policy adviser.

QUICK HITS

Democrats turn to GOP playbook in pinning gas prices on Trump [Back](#)

By Ben Lefebvre and Anthony Adragna | 05/24/2018 05:02 AM EDT

A spike in gasoline prices is giving Democrats a rare chance to borrow an old Republican tactic: pounding the occupant of the White House for motorists' pain at the pump.

They're unleashing the message with gusto against President Donald Trump, arguing that his foreign policy moves — including his push to reimpose sanctions on Iran — are to blame for a 50-cent-per-gallon surge in prices since he took office. Democrats also note that gas prices are the highest they've been in nearly four years despite the multibillion-dollar windfall that oil companies are set to receive from the GOP-backed tax bill.

"There's a straight line between Trump's policies and the price of gasoline," Rep. [Brian Schatz](#) (D-Hawaii) said in a brief interview, echoing a growing chorus of Democrats.

Voters are already feeling spooked: Forty-two percent of Americans won't take a road trip for summer vacation this year, a much lower number of people than last year, and many of them cited higher gas prices as the reason, according to a [survey](#) by gas station data company GasBuddy.

But the Democratic message faces a big obstacle, even as the party is riding a wave of optimism to the November midterms: Short of an energy crisis like the one former President Jimmy Carter faced in his 1980 reelection campaign, it's tough to convince voters the president is to blame for expensive gas, as GOP candidate Mitt Romney found out when he [tried to use it](#) against former President Barack Obama 2012.

Trump himself frequently criticized Obama for rising gas prices in the run-up to his reelection, [tweeting](#) weeks before the November 2012 vote, "Gas prices are at crazy levels--fire Obama!"

GOP lawmakers say they aren't surprised by the Democrats' efforts and they doubt voters will buy the attacks.

"Everyone's going to look for whatever political leverage they have going into an election," Sen. [Lisa Murkowski](#) (R-Alaska), chairwoman of the Energy and Natural Resources Committee, told POLITICO. "[But do] you think that Republicans created the high prices? No."

Still, Democrats believe that the jump in prices at the pump to [nearly \\$3 a gallon](#) will be a core pocketbook issue for voters on the Memorial Day weekend, which signals the beginning of the high-demand summer driving season.

"I'm going to be having town meetings at home over the course of the week. They'll be in rural areas. People drive a long way and they're not going to see this as an abstract issue," Sen. Ron Wyden (D-Ore.), the top Democrat on the Senate Finance Committee, told POLITICO.

Wyden's panel on Tuesday released a report highlighting the fact that the nation's four largest oil companies are poised to reap some \$15 billion in tax benefits over the next decade from the GOP's tax law, while gas prices reach their highest levels in years. Sen. Ed Markey (D-Mass.) released his own staff report this week using the same tactic, blaming higher prices on "President Trump's incoherent foreign policy."

To be sure, the White House has little control over gas prices, which largely track the movement in global crude oil market prices. Those prices have jumped more than 60 percent since last June, even as U.S. oil production climbs to record levels. Energy market watchers say the price rally is largely because OPEC and Russia have cooperated to sop up extra supplies in the international markets as demand continues to climb.

In addition, the collapse of Venezuela's oil industry, one of the biggest foreign suppliers to the U.S., has pushed prices up. Its oil exports have fallen by a third from January 2016 amid the country's political meltdown, and the Trump administration looks poised to place sanctions on the country's remaining exports.

"Even OPEC could not have hoped for this kind of result," said Kevin Book, analyst at energy consulting firm ClearView Energy.

But analysts are also saying that the White House may indeed be contributing to the rise in prices. Trump's appointment of John Bolton as his national security adviser has spooked oil traders who worry about tensions in the Middle East, said Citigroup energy analyst Eric Lee. Meanwhile, Trump's threat to place heavy sanctions on Iran could remove oil from the global markets, and his moving the U.S. embassy in Israel to Jerusalem may irritate Saudi Arabia enough that the kingdom won't increase its own oil flows to lessen the hurt on U.S. drivers.

"It's a combination of things, but what really took prices to the current level is U.S. policy or at least uncertainty," Lee said in an interview.

On Wednesday, a gaggle of Democratic senators including Markey, Minority Leader Chuck Schumer, Maria Cantwell (Wash.) and Bob Menendez (N.J.) held a news conference at an Exxon filling station near the Capitol to blame the price increase on Trump.

"It's well known that geopolitical instability drives oil prices, and gas prices, around the world higher and higher," said Menendez, ranking member of the Senate Foreign Relations Committee. "The Trump administration's chaotic approach to foreign policy not only served instability around the world, it certainly serves to drive up oil prices higher and higher."

When asked how any president could impact pump prices, Schumer told reporters that Trump should pressure OPEC member states and U.S. oil companies to lower their prices.

"He's very, very tight with the crown prince," Schumer said of Trump's relationship with the head of Saudi Arabia. "He's very, very tight with the head of the UAE, very, very tight, supposedly, with Putin. Why doesn't he use that? Oil companies just got a big tax break. Jawbone them."

Trump and Republicans still have one card to play, analysts said: releasing oil into the market from the Strategic Petroleum Reserve, which could tap down prices. That's precisely what some Democrats asked Obama to do in early 2012 when they faced rising retail prices.

"I wouldn't be surprised if the president were to consider the use of the SPR to dampen prices to play to his base for the midterm elections," said Gary Ross, head of global oil analytics at S&P Global Platts. "He might see

such as a signal that he cares, and one that might deflect some criticism for higher gasoline prices due to Iranian sanctions."

White House and Energy Department spokespeople declined to answer questions about whether the administration would consider an SPR release if prices continue to climb.

Editor's note: A POLITICO partnership in China [Back](#)

By John F. Harris and Carrie Budoff Brown | 05/22/2018 05:04 AM EDT

POLITICO readers will see on our pages today something new and important: the first stories reflecting the publication's commitment to illuminating the U.S. relationship with China.

POLITICO, which began in 2007 as preeminently a Washington publication, in recent years has had a global focus. In Europe, we have the largest news operation covering the increasingly complex and consequential workings of the European Union. Including our growing coverage in the U.S., POLITICO's 250 reporters and editors are now in 15 cities spanning nine time zones. Increasingly, we have heard from our most engaged readers that the place to expand our focus is toward the Pacific, as the U.S. relationship with China — intensely competitive in some spheres, intertwined and mutually dependent in others — will hover over the political and policy debates of the next generation.

One part of our expanding coverage involves a content partnership we are unveiling today with the South China Morning Post. SCMP, based in Hong Kong, is the oldest newspaper in Asia and is the only independent English-language publication in the region. SCMP has an editorial staff of 300 in Asia, with about 40 reporters stationed in mainland China. Like POLITICO, the publication has global ambitions. Under the partnership, SCMP editors will have access to POLITICO stories to share with their readers, and POLITICO editors can draw on the SCMP stories we believe our readers will find most relevant. Over time, editors in both newsrooms will look for opportunities to combine resources on original stories produced in combination with POLITICO and SCMP journalists.

Our experience shows often that the most important stories are best illuminated by being reported simultaneously from multiple perspectives. That's what we do every day in the United States and in Europe. In combination with SCMP, we will now be able to do the same on important subjects — trade, finance, technology and national security among them — at the heart of U.S. interests in China.

And you can expect POLITICO's growth to continue. As our readers' interests reflect a global perspective, so will our publication's journalistic focus and resources.

Senate subcommittee advances energy and water spending bill [Back](#)

By Eric Wolff | 05/22/2018 03:44 PM EDT

A Senate subcommittee today advanced the Energy-Water appropriations bill to the full committee.

The bill appropriates \$43.8 billion in discretionary funding, \$566 million more than last year's appropriation and \$7.2 billion more than the administration requested. Non-defense activities rose \$474 million, while defense activities were increased \$92 million.

The bill provides \$6.65 billion for the Office of Science, \$390 million more than the last appropriation. And it funds an increase for ARPA-E. It also maintains funding for a weatherization assistance program and includes an extra \$196 million for drought resilience, among other measures.

Chairman [Lamar Alexander](#) lamented that writing the bill was made more difficult because the committee "started with an unrealistic budget proposal from the administration."

Appropriators funded DOE's Office of Energy Efficiency and Renewable Energy at \$2.3 billion, the same level as the current appropriation, but \$1.6 billion than President Donald Trump's budget.

The bill also provides \$6.9 billion for the Army Corps of Engineers, the largest appropriation for the corps, according to Alexander. It makes full use of the Inland Waterways Trust Fund, specifically the top four priority projects.

Emails show Pruitt pushing 'red team-blue team' climate debate [Back](#)

By Alex Guillén and Anthony Adragna | 05/15/2018 06:39 PM EDT

EPA Administrator Scott Pruitt had hoped at least twice last year to announce his plans for a controversial red team-blue team debate that would take aim at a federal assessment supporting climate change science, according to newly released emails.

Pruitt's contentious review was abandoned because of the White House's objections, but the [communications](#) reveal new details about how the process would have worked and who was influencing Pruitt.

Many scientists have complained that a red team-blue team style debate was a poor way to examine the scientific evidence that overwhelmingly supports the findings that humans are the primary driver behind climate change. But for Pruitt, who had once suggested the event might be televised, [the debate](#) appeared to be directed at rebuffing the Fourth National Climate Assessment.

That government-wide report issued on Nov. 3 contradicted many Trump administration political appointees who have questioned the connection between greenhouse gas pollution and global warming.

A draft press release that circulated on Nov. 4 among top EPA officials, and which was shared with Pruitt on Nov. 5, laid out the line of attack, according to the documents made public on Tuesday by EPA following a records request from the Natural Resources Defense Council.

"EPA is standing up a Red Team peer review of the report," they wrote, while the "blue team" would essentially be the federal assessment and its authors.

"A robust, transparent public peer review evaluation of climate change is something everyone should support," Pruitt said in the unreleased November statement. "Now is a perfect opportunity for the formation of a 'Red Team' exercise."

The draft release also included space for quotes from two prominent climate science critics: Steve Koonin, an Obama-era Energy Department official, and William Happer, a Princeton physicist who argues that increased carbon dioxide would benefit the planet.

The duo appear to have been tapped to help guide the red-team review together.

"Your contributions even in a small way to the validity of the red team blue team approach would be appreciated," Ryan Jackson, Pruitt's chief of staff, wrote to Koonin and Happer on Nov. 4.

In an email to POLITICO, Happer said the exercise was "badly needed," while Koonin, now the director of the Center for Urban Science and Progress at New York University, told POLITICO the National Climate Assessment was "demonstrably deficient on a number of points."

EPA did not return a request for comment.

Pruitt has previously said a Wall Street Journal piece written by Koonin in April 2017 calling for a similar EPA review of climate science was his inspiration for instigating the "red team" review.

The emails, however, show that Koonin and his allies began wooing Pruitt even before that. In an email more than a week before Koonin's WSJ piece ran, Dan Yergin, the Pulitzer-winning oil historian and vice chairman of IHS Markit who joined a board advising President Donald Trump, introduced Koonin by email to Jackson.

Pruitt and Koonin met April 28, and the emails show Koonin was closely involved in the process afterward.

Koonin sent EPA a "prospectus" outlining the exercise, and though much of it was redacted by EPA before its release, Koonin suggested timing the red team review to the National Climate Assessment, which was due out six months later. Doing so would "ensure that certainties and uncertainties in projections of future climates are accurately presented to the public and decision makers," he wrote.

A revised version of the prospectus was circulated by EPA to White House officials in July after news of Pruitt's plans had leaked.

"There are a lot of press reports about EPA's planning on this. None of it is being run by us. This seems to be getting out of control," wrote Michael Catanzaro, a top energy adviser to Trump who has since left the administration, a few days after receiving Koonin's proposal.

In late June, Liz Bowman, then a top EPA spokeswoman, questioned whether the exercise could be announced as early as July 5 or 6. But it wasn't until November that top Pruitt staffers begin circulating a draft press release on the announcement.

A draft of the announcement on Nov. 5 inspired a [lengthy email chain](#), which EPA redacted, that involved direct messages from Trump chief of staff John Kelly, strategic communications director Mercedes Schlapp, and former White House staff secretary Rob Porter.

Pruitt was [touting](#) his plans to launch the red team review as late as December. Emails early in that month [indicate](#) the agency's air chief, Bill Wehrum, would make the announcement on Dec. 12 while Pruitt traveled in Morocco. One message that included Jackson had the subject line of "Red Team/Blue Team Announcement Planned for Tuesday, Dec. 12."

The [New York Times](#) reported in March that Kelly and other top officials stopped the announcement in the fall, and Kelly's deputy Rick Dearborn met with Pruitt in mid-December to declare the plan dead.

Sources: EPA, DOE, USDA to talk biofuels Thursday [Back](#)

By Eric Wolff | 05/22/2018 05:09 PM EDT

Top deputies for EPA and the departments of Energy and Agriculture will meet on Thursday to hash out changes to the Renewable Fuel Standard, sources in the ethanol industry and the Senate told POLITICO today.

EPA Deputy Administrator Andrew Wheeler, DOE Deputy Secretary Dan Brouillette and USDA Deputy Secretary Stephen Censky will try to resolve long-standing tensions over the program. None of the agencies responded to requests for comment.

The group will pick up the items left unfinished from the meeting with President Donald Trump last month, including whether to allow biofuel exports to receive Renewable Identification Numbers, and whether to reallocate the gallons small refiners were exempted from blending under the economic hardship waivers granted by EPA.

A refining industry source says that USDA has been pressing EPA to move quickly on allowing year-round sales of 15 percent ethanol fuel, and that USDA "is looking to jam EPA" on reallocating the gallons in the 2019 blending mandate.

"They are probably trying to take advantage of what they imagine to be Pruitt's weakened status these days," the source said. "Not sure it will work."

Subject: Morning Energy, presented by the National Rural Electric Cooperative Association: What's inside the Senate farm bill? — 11 states win WOTUS injunction — Oil refiners win out in biofuels stalemate

By Kelsey Tamborrino | 06/11/2018 05:42 AM EDT

With help from Annie Snider and Alex Guillén

SHIFTING GEARS TO SENATE'S FARM BILL: The Senate Agriculture Committee is aiming to move its long-awaited [farm bill](#) through the chamber in a speedy three-and-a-half weeks, hoping for a vote on the bipartisan measure that includes reauthorizing its Energy Title programs before the July 4 recess. Chairman [Pat Roberts](#) and ranking member [Debbie Stabenow](#) are hoping for a drama-free process, Pro's Agriculture team [reports](#), starting with the committee mark up on Wednesday.

— **Among the Energy Title programs** that would be reauthorized are the Biorefinery Assistance Program, which provides loan guarantees to build facilities that make advanced biofuels and renewable chemicals; the Rural Energy for America Program, which gives grants for renewable energy systems and energy efficiency improvements; and the Repowering Assistance Program, which reimburses biorefineries for dropping fossil fuels in favor of biomass like wood chips and perennial grasses.

Digging deeper: Democratic Sen. [Ron Wyden](#) held up his soil provision for its focus on improving soil health, in a way that would also address climate change. Wyden's provision, he said in a [statement](#), would establish a pilot project managed by USDA to promote the use of advanced farming practices to capture carbon in soil.

— **Conservation programs were spared major cuts** in the Senate legislation, leaving in place two flagship USDA conservation programs — the Conservation Stewardship Program and the Environmental Quality Incentives Program — as separate entities, while the House bill aims to combine parts of both, Pro's Liz Crampton [writes](#). Read the draft bill [here](#).

11 STATES WIN WOTUS INJUNCTION: A federal judge granted a [preliminary injunction](#) on Friday evening against the Obama administration's Waters of the U.S. rule to 11 states. Judge Lisa Godbey Wood for U.S. District Court for the Southern District of Georgia, a George W. Bush appointee, ruled that the states have a substantial likelihood of winning at least some of their claims against the 2015 rule, also called the Clean Water Rule. She singled out two of the states' claims as particularly strong: that the Obama rule violated the Clean Water Act with its sweeping coverage of wetlands and streams high up in the tributary network, and that it violated the Administrative Procedures Act by making significant changes between the proposed and final versions of the rule.

A nation divided: The Georgia court's injunction covers the states of Georgia, Alabama, Florida, Indiana, Kansas, North Carolina, South Carolina, Utah, West Virginia, Wisconsin and Kentucky. That puts the rule on hold in half the country, with a North Dakota district court judge having granted a preliminary injunction to 13 states shortly after the rule was finalized in 2015.

But does it matter? Not immediately, since the Trump administration has already finalized a rule delaying the effective date for WOTUS until 2020. But environmental groups and blue states are challenging that delay rule in court; if they win, that could kick the 2015 rule back into effect. But perhaps more important than the

practical consequences is the signal the ruling sends: Friday's preliminary injunction is the first major ruling on the Obama rule since the Supreme Court kicked the fight down to district courts, and it suggests that opponents of the rule, who have a number of suits filed across the country, including a nationwide injunction request in a Texas district court, may have more wins ahead.

IT'S MONDAY! I'm your host Kelsey Tamborrino, and Andeavor's Stephen Brown correctly identified former President Bill Clinton as the last president to propose a rescissions package. For today: What is the oldest capital city in the United States? PHONE A FRIEND: Despite controversies surrounding mattresses and Chick-fil-A, EPA Administrator Scott Pruitt remains in the president's good graces, The New York Times reports in a story focusing on turnover within the White House. The Times writes that President Donald Trump has taken to seeking counsel from outside voices, including Pruitt, and "has dismissed the advice of several aides who have tried to persuade him to fire Mr. Pruitt in light of the growing questions about misuse of his authority." Trump and Pruitt "speak frequently, and the president enjoys discussing his negative view of Jeff Sessions, the attorney general, with the embattled EPA leader." Keep in mind, Pruitt reportedly has his eye on Sessions' job.

You can drive my car: But even with the president's support, emails continue to provide further fodder for Pruitt critics. ABC News dug out some emails exchanged last fall between a former Pruitt aide and a Toyota representative, which show the Lexus parent company offered the administrator a private chance to test drive one of its brand new Lexus' models — "a potentially problematic pitch to the head of a regulatory body from a company subject to its regulation." Toyota told ABC, however, Pruitt never drove the vehicles. More [here](#).

ICYMI: Pruitt spoke before Colorado's Western Conservative Summit Friday night, where he continued to dismiss criticism as a product of the "substantial" and "transformative changes" occurring at his agency. Asked about criticism of his leadership, Pruitt said, "it was all about Washington and not about people across the country," according to E&E News' Jennifer Yachnin. "The president gets that, I get that, that's why you see a combustible situation."

IN THE SENATE: The Senate Appropriations Committee will pick up a series of spending bills this week, beginning Tuesday with a subcommittee markup on its Interior-Environment appropriations bill for fiscal 2019. The full committee is expected to take up the bill on Thursday morning. House appropriators advanced their \$35 billion Interior-EPA spending bill by a party-line vote last week.

START THE CLOCK: Now that the House has passed the president's roughly \$15 billion in spending cuts via H.R. 3 (115), the Senate is running out of time to carry the torch to the finish line. Under an obscure federal law, Congress can take up the White House's plans for spending cuts with a simple majority in the Senate, Pro's Sarah Ferris reports. But those filibuster-proof powers expire: The Senate must approve the bill by June 22 or be forced to recruit Democrats to the effort. Read [more](#).

A CLOSER LOOK AT THE COMMUNIQUE: The president left this weekend's G-7 meeting with an abrupt reversal on the joint communique, which U.S. officials worked closely with negotiators for days to write, POLITICO's Andrew Restuccia and Brent Griffiths [report](#). Trump announced his decision in a tweet, lashing out at Canadian Prime Minister Justin Trudeau, who expressed opposition to Trump's trade policies at the conclusion of the summit. "... I have instructed our U.S. Reps not to endorse the Communique as we look at Tariffs on automobiles flooding the U.S. Market!" Trump wrote.

But while trade was the focus of Trump's ire, the communique he opted to leave behind also would have dealt with energy. Five bullet points of the agreement were devoted to "climate change, oceans and clean energy," although the U.S. was left out of any items specifically addressing climate change. "We commit to ongoing action to strengthen our collective energy security and demonstrate leadership in ensuring that our energy systems continue to drive sustainable economic growth," the document read.

The other nations also recommitted to the Paris climate agreement, while a separate line outlined that the United States "commits to ongoing action to strengthen the world's collective energy security, including through policies that facilitates open, diverse, transparent, liquid and secure global markets for all energy sources." [Read it.](#)

NO NEWS IS GOOD NEWS FOR REFINERIES: While corn-state Republicans thanked the president last week for squashing proposed changes to the Renewable Fuel Standard that would have sharply increased Renewable Identification Numbers in the market, experts tell Pro's Eric Wolff it's oil refiners who are reaping the rewards of the stalled deal. While refineries say the increase in RINs is necessary to bring down their cost of compliance, the dozens of economic hardship waivers already issued by Pruitt to small oil processors has pushed the cost of those credits to their lowest levels in five years — and without a biofuels deal those waivers will stay in place for now, Eric reports.

"**No deal allows the EPA to continue** to implement actions as they see fit, and those have been benefiting refiners," said Andy Lipow, an oil industry analyst with Lipow Oil Associates. "[Pruitt's] actions are geared toward helping manufacturing, and the oil industry is just one of the many he's been helping through the deregulation process."

But while those waivers have helped bring RIN prices down, ethanol producers complain it removes an incentive for oil industry players to develop new infrastructure to increase fuel blending. Brooke Coleman, executive director of the Advanced Biofuels Business Council, suggested Pruitt was pushing the limits of the program without concern that the changes could be cut down in court, as scandals mount around him.

"**At the end of the day** the political cost of all of this stuff ultimately falls on an administration that is unlikely to include him," Coleman said. "One has to wonder if his systematic dismantling of the RFS is something that comes to his benefit and to no one else and that's fine with him." [Read more.](#)

EPA SAYS IT WILL DECIDE FUTURE OF 2015 OZONE RULE BY AUGUST: EPA on Friday told a federal court that it expects to decide by Aug. 1 whether to formally reconsider the 2015 ozone standard. Lawsuits challenging the rule were put on hold in April 2017, just days before oral arguments were scheduled, because the agency said it needed time to decide whether to roll the standard back. EPA has since been ordered by the courts to issue almost all the designations that make up the next implementation step for the 2015 rule. In a Friday [filing](#), EPA urged the court not to revive the suit per a recent request from the ozone rule's challengers, so that it can complete its reconsideration review by Aug. 1.

For those keeping track at home: It's been about 32 months since the 2015 rule was finalized. Because NAAQS standards are supposed to be reviewed every five years, we're currently about 28 months from the next statutory deadline. Factor in either court review time or a reconsideration rulemaking — the next ozone standard is much closer than you think.

POPE WARNS ON CLIMATE CHANGE: The Vatican's two-day confab with top oil executives this weekend centered around the risks of climate change, Reuters reports, with the pope telling executives it is destroying civilization and that the world must reduce fossil fuel use. Pope Francis addressed around 50 executives on Saturday, where he told them that energy access for all is necessary to eliminate poverty and hunger. Read [more](#).

IRAN DEAL CLOUDS NORTH KOREA SUMMIT: Heading into this week's historic summit between Trump and North Korea's Kim Jong Un, the Iran deal lingers, POLITICO's Nahal Toosi reports. The Islamic Republic announced last week that it has expanded its ability to enrich uranium, a key ingredient for nuclear weapons, just weeks after Trump quit the Obama-era Iran deal — and the North Koreans are certainly watching to see what happens next. By insisting the Iran deal should have been far more comprehensive and longer-lasting, Nahal writes, Trump has effectively set a higher — and potentially unattainable — standard for any deal with Kim. Read [more](#).

Related reading: As Trump prepares for the summit in Singapore, he will do so without the help of a White House science adviser or senior counselor trained in nuclear physics, the Times [reports](#), marking him as the first president since 1941 to not name one.

ZINKE WEIGHS IN: Interior Secretary Ryan Zinke appeared on Fox News this weekend to talk trade policy and national security ahead of the summit. Watch it [here](#).

EASY RIDER: A custom Renewable Fuels Association motorcycle that runs on ethanol will debut tonight on an episode of Discovery Channel's "American Chopper." The bike by Paul Jr. Designs is part of RFA's recently announced "Fuel Your Knowledge" campaign to educate on ethanol-blended fuels in small engines, long a controversial issue in the mandates for the biofuel. The episode airs at 10 p.m. tonight.

WATCH: The Sierra Club is out with a new video featuring Minnesota landowners and how they feel about Enbridge's proposed Line 3 tar sands pipeline. Watch it [here](#).

MOVER, SHAKER: The National Wildlife Federation will today announce that Mike Saccone will serve as its associate vice president for communications. Saccone most recently was communications director for the Keystone Policy Center.

HAPPENING THIS WEEK

MONDAY

8:30 a.m. — The Woodrow Wilson Center's Polar Initiative forum on "Space Technology for a Smart and Resilient Arctic," 1300 Pennsylvania Avenue NW

9:00 a.m. — Citizens' Climate Lobby International Conference and Lobby Day, 2500 Calvert St. NW

9:00 a.m. — International Fuel Ethanol Expo, Omaha, Neb.

10:00 a.m. — The Stanford Woods Institute for the Environment and the Stanford Precourt Institute for Energy forum on "Carbon Removal in the Climate Response Portfolio," 529 14th Street NW

11:00 a.m. — The International Trade Administration discussion on "The Importance of Commercial Nuclear Exports to the U.S. Economy," 2322 Rayburn

12:00 p.m. — Atlantic Council conversation with Vincent DeVito, 1030 15th Street NW

12:00 p.m. — The Heritage Foundation discussion on "Common Sense Farm Subsidy Reforms," 214 Massachusetts Avenue NE

2:00 p.m. — House Natural Resources Committee field hearing on "Effects of Mismanagement of the Cormorant in the Great Lakes Region," Alpena, Mich.

4:00 p.m. — The Wilson Center Brazil Institute discussion on "Brazil-U.S. Cooperation in Implementing Carbon Emissions Reduction Policies," 1300 Pennsylvania Ave NW

TUESDAY

7:45 a.m. — POLITICO Playbook Breakfast interview with House Majority Whip Steve Scalise on Republican priorities and the leadership agenda, 901 Fourth Street NW

8:30 a.m. — The Fuel Cell and Hydrogen Energy Association forum and showcase, 1300 Pennsylvania Ave NW

9:30 a.m. — Senate Appropriations Interior-Environment Subcommittee markup of the FY 2019 Interior-Environment appropriations bill, 124 Dirksen

9:30 a.m. — The Woodrow Wilson Center's Environmental Change and Security Program discussion on "A More Resilient World: The Role of Population and Family Planning in Sustainable Development," 1300 Pennsylvania Avenue NW

10:00 a.m. — Senate Energy and Natural Resources Committee hearing on FERC, 366 Dirksen

12:00 p.m. — The High Performance Building Coalition briefing on building the industry of the future, 2322 Rayburn

12:30 p.m. — The Henry L. Stimson Center and the Institute of Nuclear Materials Management seminar on the disposal of nuclear waste, 1211 Connecticut Avenue NW

1:00 p.m. — United States Energy Association discussion on carbon capture use and policy, 1300 Pennsylvania Avenue NW

WEDNESDAY

8:15 a.m. — NAESCO holds Technology and Financing Workshop, Milwaukee

8:30 a.m. — Securing America's Future Energy discussion on "America's Workforce and the Self-Driving Future," 805 21st Street NW

9:30 a.m. — Senate Agriculture Committee markup of the 2018 farm bill, 328-A Russell

10:00 a.m. — Senate Energy and Natural Resources Committee hearing on various bills, 366 Dirksen

10:00 a.m. — Senate Environment and Public Works Committee hearing on "Innovation and America's Infrastructure: Examining the Effects of Emerging Autonomous Technologies on America's Roads and Bridges," 406 Dirksen

1:00 p.m. — The Electric Drive Transportation Association discussion on "Building the Modern Grid with E-Mobility," 529 14th Street NW

2:30 p.m. — Senate Environment and Public Works Superfund Subcommittee hearing on "Oversight of the Army Corps' Regulation of Surplus Water and the Role of States' Rights," 406 Dirksen

2:30 p.m. — International Association of Drilling Contractors event on "Onshore and Offshore Drilling Rigs," 406 Dirksen

THURSDAY

8:30 a.m. — The National Academy of Sciences workshop on "The Feasibility of Addressing Environmental and Occupational Health Exposure Questions Using Department of Defense Biorepositories," 2101 Constitution Avenue NW

10:30 a.m. — Senate Appropriations Committee markup of the FY 2019 Interior-Environment appropriations bill, 106 Dirksen

1:00 p.m. — The Center for American Progress discussion on "Silencing Science: Risks Posed to Climate and Energy Data from Political Interference," 1333 H Street NW

3:00 p.m. — The Woodrow Wilson Center discussion on "Building Resilience Through Integrated Regional Programming," 1300 Pennsylvania Ave NW

FRIDAY

8:15 a.m. — Securing America's Energy Future forum on its report titled "America's Workforce and the Self-Driving Future," 805 21st Street NW

10:00 a.m. — The Center for Strategic and International Studies discussion on Energy Department priorities, 1616 Rhode Island Avenue NW

12:00 p.m. — The Global America Business Institute discussion on spent fuel management in Sweden, 1001 Connecticut Avenue NW

THAT'S ALL FOR ME!

**** A message from the National Rural Electric Cooperative Association:** America's electric cooperatives power 42 million members and empower their communities. Co-ops also play a vital role in transforming the electric sector. Senate Ag debuts bipartisan farm bill [Back](#)

By Helena Bottemiller Evich, Catherine Boudreau and Liz Crampton | 06/08/2018 12:29 PM EDT

The Senate Agriculture Committee on Friday released its long-awaited [farm bill](#), a measure crafted to draw bipartisan backing that would make only minor changes to the farm safety net and the food stamps program.

Senate Agriculture Chairman [Pat Roberts](#) (R-Kan.) and ranking member [Debbie Stabenow](#) (D-Mich.) have said for months they wouldn't undertake a major rewrite of farm policy or the Supplemental Nutrition Assistance Program — in part because the tight budget environment allows them no additional money to work with, but also because they chose to avoid the political conflicts that fueled the failed vote on the House farm bill last month.

"When ranking member Stabenow and I started this journey in Manhattan, Kansas, last year, we made a commitment to make tough choices and produce a good, bipartisan farm bill," Roberts said in a statement. "I'm pleased that today marks a big step in the process to get a farm bill reauthorized on time.

"Whether it's low prices, over-burdensome regulations, or unpredictable trade markets, it's no secret that farmers and ranchers are struggling," he added. "That's why we need a farm bill that works for all producers across all regions. Simply put, our producers need predictability — and that's just what our bill provides."

By opting to write a bipartisan measure, Roberts and Stabenow are hoping for a drama-free process that would quickly move the measure to the floor. The Senate Agriculture Committee plans to mark up the bill Wednesday, and Majority Leader [Mitch McConnell](#) has said he will bring it to the floor before the July 4 recess.

"From revitalizing small towns, to promoting good stewardship of our land and water, to expanding local food economies, this farm bill is a major bipartisan victory," Stabenow said in a statement.

The Senate's decision to propose a largely status quo bill that would be capable of winning support from both sides of the aisle sets up potentially contentious negotiations with the House should both chambers pass their respective bills.

The Senate bill, as expected, would leave SNAP largely unchanged. The House farm bill, [H.R. 2 \(115\)](#), became a partisan lightning rod over its proposals to impose stricter work requirements on millions of able-bodied SNAP recipients, while tightening eligibility rules and significantly expanding state-run education and training programs.

Unlike the House bill, the Senate's effort doesn't call for new work requirements for SNAP recipients or significant changes to eligibility requirements. The bill would cut the majority of bonuses doled out to states for

reducing their error rates, a safeguard designed to address accusations that several states in recent years have essentially gamed the system to artificially lower their rates and thus collect incentive payments from USDA. The bill also would "modernize" how states administer SNAP verification, committee staff told reporters.

The bill also features a provision that calls for additional SNAP education and job training pilot programs — building off those authorized by the 2014 farm bill. The new pilots would be targeted at particularly vulnerable populations, including people who are elderly, homeless, recently incarcerated, disabled or struggling with substance abuse.

The House bill takes a somewhat different approach to SNAP job training, seeking a tenfold increase in federal funding while making participation for able-bodied adults largely mandatory (unless the recipient works an average of 20 hours per week).

Under the Senate bill's nutrition title, the Emergency Food Assistance Program, which helps dole out commodities to people in need, would get a boost in funding, and many other popular nutrition incentive programs would continue on as they are now. There's also a provision to create a new pilot program to examine the effectiveness of produce prescriptions — a practice by which doctors write prescriptions for people to purchase fruits and vegetables.

While the Senate bill largely seeks to lock in existing farm safety net policy, it contains provisions aimed at ensuring payments from the commodity support program known as Agriculture Risk Coverage are more consistent across county lines, but would leave the Price Loss Coverage support program untouched. The House measure would sweeten PLC, which triggers payments when crop prices drop below levels Congress sets in the law, by allowing reference prices to move upward as the market improves, but would cap them at 115 percent.

The adjusted gross income limit, which is aimed at preventing wealthy farmers from collecting commodity subsidies, would be lowered from \$900,000 to \$700,000 under the Senate bill. However, the bill would not tighten provisions defining what it means to be "actively engaged" in farming, an assessment that determines which producers are eligible for payments. [Chuck Grassley](#) (R-Iowa) has said he will offer an amendment at the markup to reform the definition to cut down on subsidies being paid to people who don't work the land.

The House farm bill would make it easier for farmers to collect greater subsidies, both by expanding eligibility to family members like nieces, nephews and first cousins, and by allowing each individual owner of farms that are structured as limited-liability corporations and S corporations to have their own payment limit, instead of an overall cap for the entire entity.

Conservation programs would see incremental adjustments under the Senate bill. That's at odds with the House's bid to overhaul the nation's conservation efforts by eliminating the Conservation Stewardship Program as well as seeking to cut \$800 million from the farm bill's conservation title over a decade. The Senate proposed no cuts to the title.

Under the Senate bill, acreage that is allowed to be enrolled in the Conservation Reserve Program would increase to 25 million, 1 million more acres than the current cap but still 4 million fewer than what the House proposed. The Conservation Reserve Program financially rewards farmers for taking environmentally sensitive land out of production.

The House bill, largely because of its SNAP proposals, was lambasted by Democrats as a raw deal for low-income people, and not a single Democrat supported it last month when it failed by a vote of 198-213. But that margin of defeat had much to do with the House Freedom Caucus revolting in an effort to force a vote on a conservative immigration package — a situation that remains unresolved and has clouded efforts to bring the bill up for a re-vote.

The process in the House has been so polarizing that House Agriculture ranking member [Collin Peterson](#) (D-Minn.) has said publicly that he would team up with Senate leaders during conference negotiations, if and when the process gets that far.

The current farm bill expires at the end of September.

Senate farm bill makes small tweaks to conservation programs [Back](#)

By Liz Crampton | 06/08/2018 02:07 PM EDT

Conservation programs were spared major cuts in the Senate [farm bill](#), which seeks to leverage public-private partnerships to boost conservation efforts around the country.

That's a marked difference from the House's proposals to slash funding by more than \$800 million over ten years for conservation initiatives and to eliminate the Conservation Stewardship Program. The Senate bill would leave the two flagship USDA conservation programs — CSP and the Environmental Quality Incentives Program — as separate entities, while the House bill aims to combine parts of both.

The Senate [measure](#) would restore funding for the Agricultural Conservation Easement Program, which faced deep cuts in the 2014 farm bill. It also would increase funding for the Regional Conservation Partnership Program, a popular program that connects local environmental groups to farmers, and would increase flexibility in how the effort is administered in an attempt to incentivize more private investment.

The acreage cap under the Conservation Reserve Program — which pays farmers to take land out of production — would be lifted to 25 million acres under the Senate bill, in effect allowing for one million more acres to be enrolled. That bump would be paid for by lowering the annual rental rate for both general and continuous sign-ups to 88.5 percent of the county rental rate. The House bill would increase the acreage cap to 29 million acres — an issue that will have to be worked out in conference should both chambers pass their legislation.

The Senate bill also contains a number of provisions geared at improving soil health and water quality.

EPA chief Pruitt is said to be eyeing attorney general job [Back](#)

By Andrew Restuccia | 01/05/2018 12:40 PM EDT

Scott Pruitt, the administrator of the Environmental Protection Agency, has told friends and associates that he's interested in becoming attorney general, according to three people familiar with the internal discussions.

With rumors swirling that Jeff Sessions could depart the administration and two members of the House Freedom Caucus calling on the former Alabama senator to resign, Pruitt is quietly positioning himself as a possible candidate for the job.

"Pruitt is very interested," a person close to him said. "He has expressed that on a number of occasions."

It's unclear whether Pruitt would be on the shortlist for the position, but people close to the president said Trump has grown to like him. Pruitt has emerged as the face of Trump's deregulatory agenda, taking steps to overturn former President Barack Obama's climate change regulations. He was also a leading advocate for pulling out of the Paris agreement on climate change.

Pruitt has developed a reputation in Washington as one of the most ambitious members of Trump's Cabinet, and people close to him have long suspected that he harbors bigger aspirations in politics, perhaps as governor or senator. Two people close to him also said he has toyed with the possibility of running for president someday.

The EPA denied that Pruitt is eyeing the attorney general position.

"No, this is not true," agency spokesman Jahan Wilcox said in a statement. "From creating regulatory certainty to cleaning up toxic superfund sites, Administrator Pruitt is solely focused on implementing President Trump's agenda to protect the environment."

Pruitt's allies stressed that he is happy at the EPA and, in the words of one person who has talked to him, "feels he's doing nation-changing work."

Before joining the Trump administration in February, Pruitt served as Oklahoma's attorney general, and he was a state senator before that.

A prominent Washington attorney advising one member of the administration said choosing Pruitt to replace Sessions would make sense because, as a member of the Cabinet who has already been confirmed by the Senate, Pruitt could serve in an acting capacity until he is formally nominated.

But a Pruitt nomination for attorney general would face fierce resistance from Democrats, who have criticized his tenure at the EPA, arguing that he is too closely tied to the oil industry and has weakened crucial environmental protections.

Sessions' relationship with Trump has ebbed and flowed in recent months. It reached a low point over the summer, when Trump called out Sessions on Twitter, publicly wondering why the attorney general wasn't investigating Hillary Clinton — and people close to the president said his relationship with Sessions has never fully recovered.

The president has also complained about Sessions' decision to recuse himself from the Russia investigation.

"Sessions should have never recused himself, and if he was going to recuse himself, he should have told me before he took the job and I would have picked somebody else," Trump said in a July interview with The New York Times.

The Times published an article on Thursday that said a top White House lawyer tried to persuade Sessions not to recuse himself. The Times also reported that a Sessions aide asked a congressional staffer whether he had damaging information about the director of the FBI at the time, James Comey.

Trump fired Comey in May, a move that is under scrutiny by special counsel Robert Mueller as he investigates whether the president obstructed justice.

It's unclear how the Times article will influence Sessions' status in the White House. A White House spokeswoman and several senior administration officials did not respond to requests for comment on the issue.

In an op-ed published on Thursday, Republican Reps. Mark Meadows and Jim Jordan, the chairman and former chairman of the conservative House Freedom Caucus, appeared to channel Trump's frustrations. The lawmakers called on Sessions to step down, railing against intelligence leaks to the press.

"Attorney General Jeff Sessions has recused himself from the Russia investigation, but it would appear he has no control at all of the premier law enforcement agency in the world," the lawmakers wrote. "It is time for Sessions to start managing in a spirit of transparency to bring all of this improper behavior to light and stop further violations.

"If Sessions can't address this issue immediately, then we have one final question needing an answer: When is it time for a new attorney general? Sadly, it seems the answer is now."

House appropriators advance \$35B Interior-EPA spending package [Back](#)

By Alex Guillén | 06/06/2018 05:04 PM EDT

The House Appropriations Committee today approved its \$35 billion Interior-EPA spending bill by a party-line vote of 25-20.

Committee Republicans blocked an effort from Democrats to boost EPA's Office of Inspector General by \$12 million, saying the watchdog already has "robust" appropriations. The bill funds the OIG at \$12 million less than his request, but higher than the amount requested by the White House.

The committee voted down an amendment that would have required EPA's administrator and deputy administrator to report public details of travel costs within 10 days of a trip, along with various amendments targeting a repeal of the Waters of the U.S. rule and other policy riders, along with EPA's proposed science transparency policy, offshore drilling and other standard policy disputes.

Lawmakers approved an amendment that would change revenue sharing for drilling in the Arctic National Wildlife Refuge. The approved amendment would send 50 percent of revenue to the federal government, 47 percent to the state and 3 percent to the Alaskan Native claims settlement fund.

They also backed a tongue-in-cheek amendment from Rep. Marcy Kaptur (D-Mich.) that would limit EPA from spending more than \$50 on any one fountain pen, a response to a recent Washington Post report that Pruitt spent \$1,560 for a dozen personalized fountain pens. The amendment passed with no "nay" votes.

WHAT'S NEXT: Lawmakers hope to have the bill before the full House sometime this summer, but it is unclear whether the Senate will act on a similar timeframe. Like most other appropriations bills in recent years, Congress has passed an omnibus rather than conferencing directly.

House Republicans serve up Trump's spending cuts [Back](#)

By Sarah Ferris | 06/07/2018 09:23 PM EDT

The House passed a cost-cutting measure Thursday that President Donald Trump has personally championed, advancing the first major deficit-reduction bill of his tenure.

Nearly every House Republican voted to support the roughly \$15 billion in spending cuts, which target spare cash at a slew of domestic programs, ranging from children's health insurance to public housing.

The White House has declared the legislation "an important step toward bringing the nation's fiscal house in order," part of a yearlong approach to "reduce wasteful and unnecessary spending." But even supporters of the proposal acknowledge that it is a modest effort, particularly after Republicans in Congress have repeatedly blown past fiscal restraints in pursuit of budget increases and tax cuts.

The bill would result in only about \$1 billion in real savings, according to Congress' budget scorekeeper, because the vast majority of the money couldn't — or wouldn't — be spent anyway. And that savings amounts to much less than 1 percent of the funding handed out under Congress' latest spending bill.

"I think it is a small step, probably more procedural than anything else," said Republican Study Committee Chairman Mark Walker (R-N.C.), who has helped push the bill to the floor over the past month. "At least we're still trying to have some kind of thought that we're fiscally conscious here."

Trump is the first president in two decades to use the rescissions tool. Under an obscure federal law, Congress can take up the White House's plans for renegeing spending with a simple majority in the Senate.

The filibuster-proof powers do expire, however. The Senate must approve the bill by June 22 or be forced to recruit Democrats to the effort.

With just 10 working days until that deadline, prospects for the bill remain unclear in the Senate, where every GOP senator will need to support the package.

White House budget director Mick Mulvaney has personally met with Sen. Lisa Murkowski, an Alaska Republican who has raised issues with the cuts to CHIP, in an effort to secure her vote. Sen. Susan Collins of Maine, another GOP moderate, has not yet said whether she supports the bill.

Senate Appropriations Chairman Richard Shelby (R-Ala.) has also remained noncommittal to the package, despite a slew of changes from the White House.

"We'll see what the House does. We'll look at it," Shelby said on Thursday. "I think whatever we rescind, we ought to evaluate it. Is it substantive, or is it more optics, or what?"

The House vote comes a month after the White House unveiled its sweeping proposal, which proved difficult to sell across the GOP Conference.

Multiple Republican lawmakers in the House had refused to support the initial version because it would have eliminated funding to fight the Ebola virus amid emergence of a new outbreak in Central Africa. Others, mostly from New York and New Jersey, were skittish about eliminating money set aside from Hurricane Sandy recovery work. So the White House agreed this week to make concessions that would jolt the legislative effort back to life.

Officials released a revised package on Tuesday that backs away from cuts to anti-Ebola and hurricane recovery cash, though it maintained \$7 billion in cuts to the Children's Health Insurance Program. Those reductions have opened up a tough line of attack from Democrats, even after nonpartisan budget officials confirmed that the measure would have no effect on the health program for kids.

"\$7 billion for sick kids. It's really unbelievable if you stop and consider it," Rep. Joe Crowley (D-N.Y.) shouted from the House floor Thursday. "Republicans are asking children to pay for their tax cut to the rich."

Democrats on the Senate Budget Committee attacked the GOP's bill as "nothing more than a PR stunt," arguing that the Republican tax overhaul cost 1,300 times as much as the so-called rescissions package would save.

Just one day before the bill landed on the House floor, a fight over the children's health care program erupted in a closed-door House GOP meeting, with multiple lawmakers expressing concerns about the optics of those cuts ahead of the November elections.

The same day, leaders of the conservative Republican Study Committee said in a sit-down with House Speaker Paul Ryan that they wanted a vote on the rescissions package before agreeing to back any spending bills.

"In this conference, you sometimes have to draw a line in the sand," Walker said Thursday before the vote.

The White House's revisions didn't win the votes of every GOP holdout. Rep. Mario Diaz-Balart (R-Fla.), for example, said the latest version was "better," but voiced concerns with cutbacks to a low-income housing program.

"I commend them for looking at where we can save money. That's a good thing," Diaz-Balart said. "But now, we're down to probably less than \$1 billion, and some policy issues. Cutting money from a program to get people from dependency to self-sufficiency is probably not something we should do."

The \$15 billion in cuts marks the largest rescissions package in history and is far less of a lightning rod than Trump himself once imagined. After this spring's funding battle, the president vowed to use the obscure budget tool to claw back money from the trillion-dollar omnibus bill.

That changed after House Majority Leader Kevin McCarthy quietly helped persuade White House officials to lower their sights and produce a mostly controversy-free bill intended to reclaim unspent funding from past years.

Rep. Tom Cole (R-Okla.), a co-sponsor of the bill, described it as an attempt to "weed the garden."

"I started out as a skeptic," Cole said. "I actually raised questions about this, because I was afraid it would undo a carefully negotiated deal. It doesn't do that."

The Trump administration is already planning two more spending cutbacks, including one that would target money laid out under the fiscal 2018 spending package. The second proposal is expected before the midterm elections.

Fiscal hawks, like those at the Committee for a Responsible Federal Budget, are cautioning House Republicans not to take a victory lap on debt reduction after the rescissions bill.

"Rescissions are only a very small step forward in restraining spending," the group wrote in a statement Thursday.

Adam Cancryn contributed to this report.

Trump stuns allies, won't sign G-7 joint agreement [Back](#)

By Andrew Restuccia and Brent D. Griffiths | 06/09/2018 02:37 PM EDT

President Donald Trump said the United States will not sign a joint agreement with other G-7 countries, an abrupt reversal that will further erode relations with key U.S. allies and underscore the country's increasing isolation under Trump.

Trump announced his decision in a tweet while lashing out at Canadian Prime Minister Justin Trudeau, who expressed opposition to Trump's trade policies at the conclusion of the contentious summit.

"Based on Justin's false statements at his news conference, and the fact that Canada is charging massive Tariffs to our U.S. farmers, workers and companies, I have instructed our U.S. Reps not to endorse the Communique as we look at Tariffs on automobiles flooding the U.S. Market!" Trump wrote, adding that Trudeau was "very dishonest and weak."

It's a remarkable change of tune for the United States. U.S. officials worked closely with G-7 negotiators for days on the communique, and other nations took pains to ensure that Trump would sign on, despite deep disagreements on trade.

Trump's decision is likely to further divide the U.S. from its G-7 allies, who have long been skeptical of the president and have publicly and privately expressed deep frustration with Trump's flippant comments and desire to overhaul their trade policies.

For Trump, the decision may be a political winner. The president's base is deeply skeptical of the system of international cooperation that has for so long been at the core of U.S. foreign and economic policy.

Earlier in the day, Trump rated his relationship with G-7 leaders a perfect 10 — but the deep divide between the United States and some of its closest allies nonetheless shined through at the high-profile summit in Canada.

Even as Trump insisted he gets along just fine with his counterparts leading Canada, France, Germany, Italy, Japan and the United Kingdom, he further ostracized himself, arguing that Russia should be invited back into

the exclusive international group and threatening to cut off trade relations with the G-7 nations if they don't rethink what he says are unfair trade practices.

"The G-8 is a more meaningful group than the G-7," Trump told reporters in a free-wheeling press conference before departing the continent for his historic meeting with Kim Jong Un.

Indeed, Trump did little to hide his distaste for the summit from the outset — arriving late to the summit on Friday and missing his first scheduled meeting with French President Emmanuel Macron and then joining a Saturday breakfast on gender equality after it had already started.

Soon after Trump boarded Air Force One, having cut short his time in Canada, German Chancellor Angela Merkel's office distributed a photograph of G-7 leaders standing in a semi-circle with Trump sitting on the other side of a table with his arms crossed — an image that underscored Trump's isolation.

Photos taken from other angles during the meeting appear to show a less dramatic scene, but the decision by Merkel's office to release that picture was nonetheless seen as a symbol of what many in the international community have begun derisively referring to as a the "G6 +1."

Trump's ongoing efforts to strengthen ties with Moscow were perhaps the most unsettling for the West.

Russia was kicked out of the group, then the G-8, in 2014 for illegally annexing Crimea from Ukraine. Since then, Russia has been accused of meddling in the 2016 U.S. presidential election and poisoning a former Russian spy on British soil.

But Trump blamed former President Barack Obama, not Russian President Vladimir Putin, for the annexation of Crimea — adding that he may have done something different in response if it happened on his watch.

Trump's comments were met with skepticism from many U.S. allies. "Before discussions could begin on any of this, we would have to ensure Russia is amending its ways and taking a different route," British Prime Minister Theresa May said in a television interview on Friday after Trump first broached the issue.

Trump's comments about bringing Russia back into the G-7 come as he is planning a summit with Putin. The Kremlin said Saturday that Vienna has been discussed as a possible venue for the meeting.

In the run-up to the G-7 summit, Trump told people close to him that he was dreading the meeting. The president hates being lectured to by other foreign officials and he tends to avoid one-on-one confrontations. Trump is more fixated on building relationships with powerful and domineering world leaders like Putin, Chinese President Xi Jinping and Kim, who he is eager to meet in Singapore.

Tensions over trade, meanwhile, dominated the summit. As POLITICO reported on Friday, Trump, during a private meeting, floated the idea of ending all tariffs and trade barriers between the U.S. and its G-7 allies. Right before leaving for Singapore, Trump upped the ante in his press conference with reporters, warning that he could cut off or severely limit trade access to the United States if G-7 countries don't cooperate.

"We're the piggybank that everybody is robbing," Trump said. "And that ends."

The Trump administration recently imposed tariffs on steel and aluminum imports from Canada, Mexico and the European Union, a decision that sent shockwaves throughout the world and resulted in a venomous response from key U.S. allies. Ahead of the summit, Trudeau called the decision "insulting" and "totally unacceptable."

The U.S. imposed the tariffs on national security grounds, a rationale that offended close allies like Canada. But Trump refused to back away from that justification.

"It is our balance sheet, it is our strength, it is our national security," he told reporters. "To have a great military, you need a great balance sheet."

In his final press conference, Trudeau said people who expected the G-7 countries to resolve their differences with Trump on trade during the summit were expecting too much.

Trudeau also sharply disagreed with Trump's comments from earlier Saturday that the NAFTA deal should have a clause that sunsets the agreement, signaling more future fireworks on trade between the two nations.

"There will be no sunset clause," Trudeau said.

His words apparently set Trump off.

"PM Justin Trudeau of Canada acted so meek and mild during our @G7 meetings only to give a news conference after I left saying that, 'US Tariffs were kind of insulting' and he 'will not be pushed around.' Very dishonest & weak. Our Tariffs are in response to his of 270% on dairy!"

Every U.S. president has disagreements with other countries, even allies, but Trump's tweet marked an unprecedented rebuke of the nation's neighbor and ally.

And it's the latest example of Trump upending U.S. relations with longtime allies, and turning the tables on countries that have been dependable friends for decades.

Some G7 officials said Trump was too late. The communique was agreed, the summit done, the leaders packing up or already gone.

They noted the leaders' declarations are typically not signed, simply agreed at the summit and published by the host country. The declarations had already been published and distributed to reporters at the summit site before Trump blasted out his tweets.

"We stick to the communique as agreed by all participants," an EU official said.

Before Trump departed on Saturday morning, Trump had said that his relationships with other G-7 leaders could not be better.

"I would say the level of relationship is a 10," he said. "We have a great relationship, Angela and Emmanuel and Justin."

Trump also sought to cut through the tensions with some humor during the meeting.

"Justin has agreed to cut all tariffs," he joked with reporters on Friday during his bilateral meeting with Trudeau.

When Trudeau was asked if he was disappointed that Trump decided to leave the summit early, Trump interjected. "He's happy," Trump said, sticking out his tongue to indicate he was joking.

David M. Herszenhorn contributed to this report from La Malbaie, Canada.

Biofuel deal stalemate keeps pressure off refiners [Back](#)

By Eric Wolff | 06/08/2018 02:33 PM EDT

Ethanol backers praised President Donald Trump this week for blocking changes to the biofuel program that they feared would be a setback for the corn-based fuel, but experts say it's oil refiners who are getting all the benefits from the stalemate.

Iowa Republican Sens. [Chuck Grassley](#) and [Joni Ernst](#) both [thanked Trump](#) on Tuesday for refusing to sign off on a deal to alter the Renewable Fuel Standard to expand sales of E15 fuel but allow exports of ethanol to qualify for compliance credits, a change that would have sharply increased the number of those Renewable Identification Numbers in the market.

Though refineries have portrayed that increase in RINs as a necessary approach to bring down their cost of compliance, the dozens of economic hardship waivers that EPA Administrator Scott Pruitt has granted to small oil processors has already pushed the cost of those credits to their lowest levels in five years. And the failure to reach an agreement on changes to the RFS mean those EPA waivers will stay in place for now.

"No deal allows the EPA to continue to implement actions as they see fit, and those have been benefiting refiners," said Andy Lipow, an oil industry analyst with Lipow Oil Associates. "[Pruitt's] actions are geared toward helping manufacturing, and the oil industry is just one of the many he's been helping through the deregulation process."

Ethanol producers say EPA has de facto lowered the legal ethanol blending mandate for U.S. refiners by at least 1.5 billion gallons by issuing the waivers. That, as well as the chatter about allowing RINs on exports, drove RIN prices down to 18 cents per gallon on Monday, a dramatic fall from prices near \$1 last August, according to energy price data service OPIS. Those prices has ticked up slightly to 21 cent per gallon by Thursday.

And RIN prices aren't expected to rise much, even though any deal is on hold for now.

"The only reason RIN prices are as high as they are today is uncertainty of small refinery policy," said Neelesh Nerurkar, an analyst with ClearView Energy Partners. "Just because a reform deal is on ice, doesn't mean RIN prices should shoot up."

Both Grassley and Ernst have been critical of Pruitt — who Ernst [derided](#) as "about as swampy as you get" this week — and ethanol groups expect that he will continue to be sympathetic to the complaints of the refiners. Pruitt was seen [at dinner](#) this week with Sen. [Ted Cruz](#) (R-Texas), who has championed the refiners' arguments in the White House talks.

"It's clear that the refiners have the ear of Administrator Pruitt," said Brooke Coleman, executive director of the Advanced Biofuels Business Council. "We feel like Administrator Pruitt is going to stay at it."

While the corn growers and ethanol backers have been pleased Trump has stuck to his promise to support the biofuel, some refiners say the agricultural groups may be missing an opportunity to stake out a real compromise

solution that allows them to sell more fuel, especially since Pruitt's EPA could find new ways to help the oil industry.

"There's going to be some changes in this program," said a refining industry source. "If anything, changes [ethanol producers] want to the RFS program will come with a price attached to it that is stability for RINs. They had a golden opportunity to get what they want the most. There are other options that almost certainly will proceed if this option is off the table."

EPA declined to comment on whether the agency would seek future changes to the RFS, but Pruitt has aggressively explored ways to change the program. Last fall he proposed cutting biodiesel requirements in half. When that effort failed, he put the word out that the agency would be taking a broader interpretation the rules allowing small refiners facing economic hardship to be exempted from requirements, according to an oil industry source.

EPA has reportedly granted waiver exemptions to the RFS to over two dozen refiners, along with retroactive exemptions to two refiners dating back to 2014. In at least once case, EPA granted an exemption to a refinery even though it exceeded the 75,000 barrel-per-day capacity definition of "small refinery" because the plant operated at lower volumes. Pruitt also granted a waiver to refiner Philadelphia Energy Solutions as part of the refinery's bankruptcy proceedings.

Those waivers have helped bring the RIN prices down, a core goal for the refiners, but one that ethanol producers complain removes an incentive for oil industry players to develop new infrastructure to increasing fuel blending.

Advanced Biofuel's Coleman suggested that Pruitt was pushing the limits of the program without concern that the changes could be cut down in court — even as questions about Pruitt's future swirl because of the growing number of scandals around him.

"At the end of the day the political cost of all of this stuff ultimately falls on an administration that is unlikely to include him. One has to wonder if his systematic dismantling of the RFS is something that comes to his benefit and to no one else and that's fine with him," Coleman said.

Members of Congress working on a legislative overhaul of the RFS would prefer to see to see EPA and the administration stop mucking around with the program. Sen. [John Cornyn](#) (R-Texas) and Rep. [John Shimkus](#) (R-Ill.) have been working on a bill to make broader changes. Supporters of a legislative fix worried that big administrative changes would suck the life out of an overhaul bill.

"The inability to reach a deal on administrative changes to the RFS perfectly illustrates the need for an enduring, legislative solution," said Jordan Haverly, a Shimkus spokesman. "That goal is no less difficult to reach, but it's the only way we'll get to an agreement that works for growers, producers, refiners, automakers, marketers, and most importantly, consumers."

Nixed Iran nuclear deal looms over Trump's North Korea talks [Back](#)

By Nahal Toosi | 06/10/2018 06:59 AM EDT

Days before President Donald Trump embarked on a North Korea summit meant to solve one nuclear crisis, Iran hinted at another.

The Islamic Republic announced last week that it has expanded its ability to enrich uranium, a key ingredient for nuclear weapons. The move came just weeks after Trump abruptly quit the Barack Obama-era deal that largely dismantled Iran's nuclear program, and it could be a first step toward an eventual Iranian dash to a nuclear bomb.

Iran probably didn't time its move to throw a stink bomb into Tuesday's summit in Singapore between Trump and North Korean leader Kim Jong Un, experts say. But the news served as a vivid reminder of how the troubled Iran nuclear deal will haunt Trump's talks with Kim.

The North Koreans are certainly watching.

"In my informal conversations with North Korean officials, they have consistently brought up the Iran deal," said Suzanne DiMaggio of New America, who, like many North Korea analysts, occasionally engages in unofficial discussions with the country's representatives.

For all of Trump's criticisms of the 2015 Iran deal, it was one of the most rigorous nonproliferation agreements ever negotiated. By insisting the Iran deal should have been far more comprehensive and longer-lasting, Trump has effectively set a higher — and possibly unattainable — standard for any deal with Kim.

Democrats say Trump's actions on Iran could undermine him as he seeks a deal with North Korea. "The fact that the U.S. president pulled out of an international agreement, it does affect America's credibility," said Sen. Ben Cardin (D-Md.). "I don't want to overstate it, but it doesn't help."

Trump aides argue, however, that by scrapping the Iran deal, the president has demonstrated his seriousness about securing a better bargain with Kim.

So far, Kim has shown no sign that Trump's withdrawal from the Iran agreement makes him less willing to strike a deal of his own with the United States. Nor has North Korea responded to Trump's vow, in remarks to reporters Thursday, that he is "totally prepared to walk away" from his talks with Kim, unlike U.S. negotiators Trump says were too eager to accommodate Iran.

But reaching a credible deal with North Korea will likely be far harder than it was to reach the deal with Iran, according to former U.S. officials and analysts.

The main reason: Unlike Iran, which always said its nuclear program was meant for civilian use, North Korea already has nuclear weapons, and it has even threatened to use them against the United States.

North Korea's overall nuclear program is more advanced and more widespread. It is also believed to be partly hidden underground, making it harder to understand and almost impossible to fully disable in a military strike. All those factors give Kim more negotiating leverage than Tehran had during the Obama years.

Reaching that more basic agreement with Iran still took several years of talks, sanctions and implementation work. It included an interim deal as well as coordination with world powers beyond the United States.

A permanent agreement with North Korea — in which the country, at a minimum, eliminates its nuclear stockpile — will also likely take years to implement, given the size and complexity of its nuclear program. And that's only if North Korea agrees to give up its nukes, something many analysts say its isolated and paranoid leadership will never do.

Despite Trump's criticisms of Obama's "rotten" deal with Iran, he's already following a similar strategy when it comes to North Korea.

Just as the U.S. and its allies jointly cranked up economic sanctions to bring Tehran to the negotiating table, the Trump administration has rallied other countries around a "maximum pressure campaign" imposing new sanctions on North Korea. The Iranians, their economy in pain, eventually agreed to talk.

The Trump team also has indicated that, as with the Iran deal, economic incentives will be at the heart of any agreement with North Korea. Secretary of State Mike Pompeo has spoken of private-sector investment in North Korea, while Trump said last week that his diplomacy could "usher in a new era of prosperity, security and peace for all Koreans, for North and South, and for people everywhere."

While Iran was eager to see sanctions lifted on its oil-exporting economy and has courted foreign investment, North Korea's demands may be more complicated. North Korea has a smaller and far less globally integrated economy than Iran, making it less vulnerable to sanctions pressure.

North Korea has also spurned offers of economic help, saying in a recent statement that "we have never had any expectation of U.S. support in carrying out our economic construction and will not at all make such a deal in the future." That leaves many experts predicting that what Kim really wants is assurances about his regime's security.

One of Trump's complaints about the Iran deal was that it was too narrow — that it didn't cover Iran's ballistic missiles, its sponsorship of terrorism and other vexing matters. Obama aides say that had they tackled those elements, they never would have reached a deal, because Iran refused to discuss issues beyond its nuclear program.

If Trump expands his demands to cover things like North Korea's atrocious human rights abuses or its stockpile of chemical and biological weapons, that will make any deal harder and more time-consuming. It will also likely require additional U.S. concessions. But leaving such issues untouched will expose Trump to criticism that he went too easy on Kim.

Making matters somewhat easier is the fact that North Korean troublemaking beyond its borders is fairly modest, at least as compared to Iran's multiple interventions across the Middle East, a region of far more political interest to Washington than East Asia.

It remains unclear what Kim truly wants from Trump. Even the North Korean leader's stated commitment to "denuclearization" is vague and could mean that he will give up his nuclear arms only over a long period of time or after controversial U.S. steps like a possible removal of America's 28,500 troops from South Korea.

One sensitive issue will be the duration of any agreement Trump reaches with Kim. Trump complained repeatedly that some provisions of the Iran deal expired after 10 or 15 years, alleging that that would allow Iran to resume a robust nuclear program. Trump insisted, before withdrawing from the deal, that it be modified to restrict Iran's nuclear activities permanently.

If Trump ends up granting a "sunset" for any North Korea deal, he'll be open himself to charges of hypocrisy.

In a letter to Trump last week, seven senior Senate Democrats, including Minority Leader Chuck Schumer, laid out tough benchmarks for what they'd like to see in a deal. It starts with the "dismantlement and removal" of all of North Korea's nuclear, chemical and biological weapons. The Democrats also insisted on severe restrictions on the country's ballistic missile work, as well as intrusive inspections like those required of Iran.

Ruling out the possibility of sunsets, they declared that "any agreement with North Korea must be permanent in nature." Their bottom line: Any deal giving North Korea sanctions relief for anything less than "the verifiable performance of its obligations to dismantle its nuclear and missile arsenal is a bad deal."

In a column published Tuesday, Seyed Hossein Mousavian, a former spokesman for Iran's nuclear negotiators, offered some advice to North Korea ahead of the summit, namely that its "main card in negotiations with the United States is its nuclear weapons."

"If [North Korea] gives up this bargaining chip upfront, it can forget about the United States implementing its side of the deal," Mousavian wrote on the NK News website. The Asian country "must seek a phased deal that requires each side to implement its commitments in a step-by-step fashion with proportional reciprocation."

Trump and Pompeo have already pre-empted one potential talking point from critics of their North Korea diplomacy: that Congress should have a say.

Republicans blasted the Obama White House for structuring the Iran agreement so that it was not a treaty requiring ratification by the U.S. Senate. But Pompeo, who last week called Obama's 2015 deal a "flimsy piece of paper," has said Trump would strive to submit the North Korea deal to the Senate in the form of a treaty.

But with partisan divides so strong, odds are low that a treaty could get the necessary two-thirds approval in the Senate. The more topics a proposed treaty with North Korea tackles, the greater the chances of political opposition — especially if the U.S. is seen as appeasing a regime considered more brutal than the one in Tehran.

At the moment, the Iran nuclear deal hasn't fully collapsed — European countries who helped negotiate are looking for ways to salvage it, and Iran's announcement last week is said to be within the deal's boundaries.

As they watch the Iran deal teeter, some Obama administration officials who helped craft it say they nonetheless hope Trump's diplomatic overture to Kim succeeds.

Some of them note that a treaty would be difficult to secure, but said it probably would be fine if Congress passes special legislation reviewing any agreement with Kim, just as it did for the Iran deal. The Iran-related legislation requires that the president periodically certify to Congress whether Tehran is complying with the agreement.

When it comes to oversight, it's important to "not set thresholds that are impossible," said Wendy Sherman, a former U.S. official who has negotiated with Iran and North Korea.

If Trump can secure an agreement with North Korea that dismantles its nuclear program, tackles other areas of concern and is permanent, it would be a modern-day miracle, former officials and analysts say. The reality, though, is that even getting a deal with North Korea that mirrors the one with Iran would be a major accomplishment.

"The Trump administration will be very lucky to get a deal as good as the Iran deal with the North Koreans," DiMaggio said. "It should have been a model to emulate."

Dear Clint:

Hope this finds you well – I am sure you are BUSY!

Could not help but remember when we saw the latest news (<https://www.epa.gov/newsreleases/daily-caller-scott-pruitt-will-end-epas-use-secret-science-justify-regulations>) the many constructive discussions we had had when you were at House Science about the opportunities to enhance data sharing. Though I am sure you are occupied with many things, I thought you should know we are very much still on the case, trying to make our data available – and educating the scientific community about the need to do so. We actually had already planned an entire session at our Annual Conference in Chicago in late April on “Reproducibility in Environmental Health Research” and are pleased to have Steve Goodman, who authored the attached with John Ioannidis to lead off in the session. If there is someone there who you think could benefit from attending, please let us know and we can help facilitate that...

And in the meantime, if there are ways that we might help in identifying the opportunities and the potential snags in this new initiative, please let us know...

All the best!
Dan

SCIENTIFIC INTEGRITY

What does research reproducibility mean?

Steven N. Goodman,* Daniele Fanelli, John P. A. Ioannidis

The language and conceptual framework of “research reproducibility” are nonstandard and unsettled across the sciences. In this Perspective, we review an array of explicit and implicit definitions of reproducibility and related terminology, and discuss how to avoid potential misunderstandings when these terms are used as a surrogate for “truth.”

Concern about the reproducibility of scientific research has been steadily rising recently with reports that the results of experiments in numerous domains of science could not be replicated (1, 2). Whereas problems in biomedical research have garnered most of the attention, concerns have touched almost every field in the biological and social sciences and beyond (3) (Fig. 1). As the movement to examine and enhance the reliability of research expands, it is important to note that some of its basic terms—reproducibility, replicability, reliability, robustness, and generalizability—are not standardized. This diverse nomenclature has led to confusion, both conceptual and operational, about what kind of confirmation is needed to trust a given scientific result. Here, we dissect this vocabulary, explore the reasons for the confusion, and offer a framework to improve both communication and understanding.

DEFINING THE TERMS

Although the importance of multiple studies corroborating a given result is acknowledged in virtually all of the sciences (Fig. 1), the modern use of “reproducible research” was originally applied not to corroboration, but to transparency, with application in the computational sciences. Computer scientist Jon Claerbout coined the term and associated it with a software platform and set of procedures that permit the reader of a paper to see the entire processing trail from the raw data and code to figures and tables (4). This concept has been carried forward into many data-intensive domains, including epidemiology (5), computational biology (6), economics (7), and clinical trials (8). According to a U.S. National Science Foundation (NSF) subcommittee on replicability in science (9), “reproducibility refers to the ability of a researcher to duplicate

the results of a prior study using the same materials as were used by the original investigator. That is, a second researcher might use the same raw data to build the same analysis files and implement the same statistical analysis in an attempt to yield the same results.... Reproducibility is a minimum necessary condition for a finding to be believable and informative.”

Documenting this kind of reproducibility thus requires, at minimum, the sharing of analytical data sets (original raw or processed data), relevant metadata, analytical code, and related software. Reproducibility defined in this way mainly addresses issues of trust that data and analyses are as represented. The definition does not specify to what extent deviations are acceptable. Such reproducibility does not add new evidential weight, although greater subjective weight is often accorded to evidence that is more highly trusted. New evidence is provided by new experimentation, defined in the NSF report as “replicability,” which refers to “the ability of a researcher to duplicate the results of a prior study if the same procedures are followed but new data are collected.”

Although the preceding conceptual distinctions might seem clear, the definitions do not provide clear operational criteria for what constitutes successful replication or reproduction. Furthermore, the terminology is not universally used, and sometimes the meanings above are reversed. Consider the language of Francis Collins, director of the U.S. National Institutes of Health (NIH), in his commentary on plans to enhance research reproducibility (10):

“... a complex array of other factors seems to have contributed to the lack of reproducibility. Factors include poor training of researchers in experimental design, increased emphasis on making provocative statements rather than presenting technical details, and publications that do not report basic elements of ex-

perimental design. Some irreproducible reports are probably the result of coincidental findings that happen to reach statistical significance, coupled with publication bias. Another pitfall is over-interpretation of creative ‘hypothesis-generating’ experiments, which are designed to uncover new avenues of inquiry rather than to provide definitive proof for any single question. Still, there remains a troubling frequency of published reports that claim a significant result, but fail to be reproducible.”

This short passage covers a wide range of issues subsumed under the rubric of reproducibility: design, reporting, analysis, interpretation, and corroborating studies (that is, replication, as previously defined). If one looks at the terminology being used across the scientific literature, one finds similar variation and intermingling of concepts. For example, the largest-scale attempt to replicate experiments in psychology was published with the title “Estimating the reproducibility of psychological science,” (2) clearly alluding the term “reproducibility” with the conduct of new studies.

One notable absence from this diverse lexicon is the word “truth.” The fundamental concern of Collins and others is, in fact, not reproducibility per se, but whether scientific claims based on scientific results are true. Below, we discuss how treating reproducibility as an end in itself—rather than as an imperfect surrogate for scientific truth—is partly responsible for the current terminological and operational morass, and suggest how we can benefit by refocusing on cumulative evidence and truth.

A NEW LEXICON FOR RESEARCH REPRODUCIBILITY

We start the process of clarification by proposing a new terminology to distinguish between the various interpretations of reproducibility. Rather than offer new technical meanings for words whose common language interpretations are nearly identical (such as reproducibility, replicability, and repeatability), we propose to ally the word reproducibility—currently the most widely used single term in this domain—with descriptors for the underlying construct. This yields three terms: methods reproducibility, results reproducibility, and inferential reproducibility. Although we apply these terms mainly to the biomedical field, they have utility across many domains of science, each of which has different conventions and cultures about how

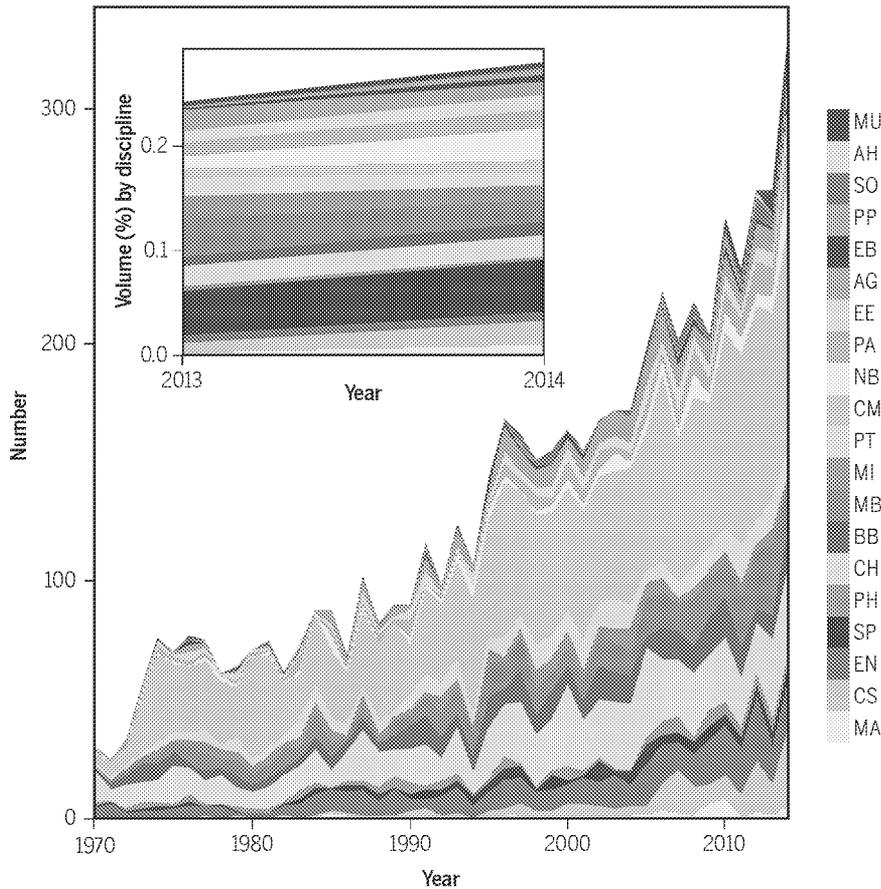

Fig. 1. Reports rising. Number of publications recorded in Scopus that have, in the title or abstract, at least one of the following expressions: research reproducibility, reproducibility of research, reproducibility of results, results reproducibility, reproducibility of study, study reproducibility, reproducible research, reproducible finding, or reproducible result. Papers are classified by discipline on the basis of the journal, following an adaptation and expansion of Thomson Reuters' Essential Science Indicators classification system. Journals not included in the latter database were hand-classified on the basis of their name. The subplot reports the percentage over the total number of records for each discipline, in the last 2 years of the series. Disciplines legend: MA, mathematics; CS, computer sciences; EN, engineering; SP, space science; PH, physics; CH, chemistry; BB, biology and biochemistry; MB, molecular biology; MI, microbiology; PT, pharmacology and toxicology; CM, clinical medicine; NB, neurobiology and behavior; PA, plant and animal sciences; EE, environment and ecology; AG, agricultural sciences; EB, economics and business; PP, psychology and psychiatry; SO, social sciences, general; AH, arts and humanities; MU, multidisciplinary. The time series was truncated at 2014.

to handle the role of chance, the level of certainty required for making published claims, and the adopted criteria for "proof" (Table 1) (11).

Methods reproducibility is meant to capture the original meaning of reproducibility, that is, the ability to implement, as exactly as possible, the experimental and computational procedures, with the same data and tools, to obtain the same results. Results reproducibility refers to what was previously described as "replication," that is, the production of corroborating results in a new study, having followed

the same experimental methods. Inferential reproducibility, not often recognized as a separate concept, is the making of knowledge claims of similar strength from a study replication or reanalysis. This is not identical to results reproducibility, because not all investigators will draw the same conclusions from the same results, or they might make different analytical choices that lead to different inferences from the same data. Here, we explore the definitions and operational complexities of each of these concepts.

Methods reproducibility

Methods reproducibility refers to the provision of enough detail about study procedures and data so the same procedures could, in theory or in actuality, be exactly repeated. Operationally, this can mean different things in different sciences. In the biomedical sciences, this means, at minimum, a detailed study protocol, a description of measurement procedures, the data gathered, the data used for analysis with descriptive metadata, the analysis software and code, and the final analytical results. In laboratory science, how key reagents and biological materials were created or obtained can be critical. In theory, these requirements are clear, but in practice, the level of procedural detail needed to describe a study as "methodologically reproducible" does not have consensus. For example, the detection of batch effects, which have been responsible for a number of high-visibility claims and retractions, can require information on exactly which samples were tested on which machine in what order and on what day, together with calibration data. This level of detail is typically not provided in publications and is not always retained by the investigator.

In the clinical sciences, the definition of which data need to be examined to ensure reproducibility can be contentious. The relevant data could be anywhere along the continuum from the initial raw measurement (such as a pathology slide or image), to the interpretation of those data (the pathologic diagnosis), to the coded data in the computer analytic file. Many judgments and choices are made along this path and in the processes of data cleaning and transformation that can be critical in determining analytical results. Last, even if there is consensus on the appropriate analytical data set, methodologic reproducibility requires an understanding of which and how many analyses were performed in a published paper were chosen. So, whether a particular study is to be considered methodologically reproducible is contingent on whether there is general agreement about the level of detail needed in the description of the measurement process, the degree of processing of the raw data, and the completeness of the analytic reporting.

Results reproducibility

Results reproducibility (previously described as replicability) refers to obtaining the same results from the conduct of an independent study whose procedures are as closely matched

Table 1. Examples of differences that affect the approach to reproducibility in distinct scientific domains.

Degree of determinism
Signal to measurement-error ratio
Complexity of designs and measurement tools
Closeness of fit between hypothesis and experimental design or data
Statistical or analytic methods to test hypotheses
Typical heterogeneity of experimental results
Culture of replication, transparency, and cumulating knowledge
Statistical criteria for truth claims
Purposes to which findings will be put and consequences of false conclusions

to the original experiment as possible. As with methods reproducibility, this might be clear in principle but is operationally elusive. The problem arises in settings where there is substantial random error in any result, making unclear the criteria for considering results to be “the same.” The intuition and logic of results reproducibility are derived from systems that are deterministic or for which the signal-to-error ratio is exceedingly high. But, when the same intuition and logic are applied to studies with substantive stochastic components, the paradigm of accumulating evidence might be more appropriate than any binary criteria for successful or unsuccessful replication.

In a deterministic system (for example, computational research), the outcome is determined by the initial conditions. Methods reproducibility is often demonstrated through results reproducibility because the two are linked by determinacy—the signal-to-noise ratio is effectively infinite. A single failure to reproduce the original results with identical inputs casts doubt on the methodology and on any predictions (12).

Closely related is a proof-of-principle study, which demonstrates a new phenomenon not previously observed; for example, delivery of the first normal, live-born infant derived from in vitro fertilization or a first case of human limb regeneration would be sufficient to show that such phenomena are possible. That said, a first demonstration will not be accepted without intensive, independent scrutiny of the methods employed and the outcomes claimed, in order to rule out the possibility of misconduct, selective reporting, or procedural compromise. Failure to replicate the phenome-

non under circumstances that preclude ancillary causes (for example, mistaken diagnosis, faulty procedures, measurement error, biased design, or fraud) constitutes effective disproof of the original claim. This type of scrutiny helped debunk claims of cold fusion (13) and pluripotent stem cell creation (14).

The bright-line logic of deterministic and proof-of-principle studies is superficially mimicked through statistical significance testing; findings that are statistically significant are often regarded either as literally true or, at least, as justifying a knowledge claim, and those that aren't are regarded as either confirming the null hypothesis or inconclusive. However, it is inappropriate to combine null hypothesis-significance testing with intuition from fields of science with determinacy or very high signal-to-noise ratios. Statistical significance by itself tells very little about whether one study has “replicated” the results of another. For example, two studies that show identical 10% survival differences between the treatment and control arms would have very different degrees of statistical significance if their sample sizes were substantially different. If one was highly significant and the other far from significance, the two studies might be reported individually as supporting opposite conclusions, in spite of the fact that they are mutually corroborative.

An interpretive error complementary to the one described above involves the assumption that multiple studies that fail to demonstrate statistical significance necessarily confirm the absence of an effect. This fallacy was demonstrated, for example, in a well-known early meta-analysis of the effect of tamoxifen on breast cancer survival (15). (Meta-analysis is the mathematical pooling of results of multiple independent studies that investigate the same research question.) In this pooled analysis, 25 of 26 individual studies of tamoxifen's effect were not statistically significant. Naively, these nonsignificant findings could be described as having been replicated 25 times. Yet, when properly pooled, they cumulatively added up to a definitive rejection of the null hypothesis with a highly statistically significant 20% reduction in mortality. So the proper approach to interpreting the evidential meaning of independent studies is not to assess whether or not statistical significance has been observed in each, but rather to assess their cumulative evidential weight.

The above example involved randomized experiments without major bias. If major biases are at play, having multiple statistically

significant studies and even a statistically significant summary result for a meta-analysis does not guarantee that a genuine effect exists. For example, many studies on single nutrients and even their meta-analyses show significant associations with cancer or death risk, but most reflect confounding and reporting biases (16). What matters in such scientific fields is not replication defined by the presence or absence of statistical significance, but the evaluation of the cumulative evidence and assessment of whether it is susceptible to major biases, due to either the study design or the self-selection of subjects in ways that are unknown or not measurable.

It is easier to statistically define nonreplication than replication, through statistical tests of heterogeneity, which can evaluate whether the difference between two or more experimental results might be due to the play of chance. Two or more studies are judged to be statistically heterogeneous when the between-study variance in reported effects is substantially greater than what is expected from sampling error. Such tests, however, are greatly underpowered and therefore unreliable when comparing several studies, particularly when they are small or imprecise (17). Conversely, when there are many large studies, tests for heterogeneity might demonstrate statistical heterogeneity (and, therefore, lack of results reproducibility) even if the effect sizes of different studies are close (17) and regarded as scientifically equivalent. Therefore, a preferred way to assess the evidential meaning of two or more results with substantive stochastic variability is to evaluate the cumulative evidence they provide vis-à-vis a hypothesis of interest and not whether one contradicts or discredits the other through the lens of statistical significance.

Whether experiments can be pooled to provide cumulative evidence depends further on which features of a study or results are considered scientifically equivalent enough to pool. For example, in a recent replication effort of the anti-Leishmania activity of tested peptides, it was difficult to tell whether replication had been achieved or not; the peptides were found to have anti-Leishmania activity, but at concentrations 10 to 50 higher than in the original experiments and close to the toxicity range of eukaryotic human cells (18). Rejection of the null hypothesis in the two sets of experiments was insufficient to garner consensus about results reproducibility when consensus was missing about the operational scientific question, that is, whether the peptides had activity at low (and clinically relevant) con-

centrations or at any concentration. These experiments could be regarded as conflicting on the first question and mutually supportive on the second, so the question of results reproducibility is always dependent on the specificity of the underlying scientific question.

In the absence of a consensus on what constitutes successful results reproduction, investigators employ a range of operational definitions, as occurred in the case of the evaluation of the (results) reproducibility of 100 psychology studies conducted by the Open Science Collaboration (2). They acknowledged the lack of an accepted definition and so examined the studies from a variety of perspectives: significance levels, effect sizes, the number of studies whose effect size was within the confidence interval of another selected study, whether the combined estimate of the original and replication studies was statistically significant and finally, a “subjective assessment” of reproducibility. The lack of a single accepted definition opened the door to controversy about their methodological approach and conclusions (19).

Robustness and generalizability

We briefly introduce these terms because they are sometimes used in lieu of the term reproducibility. Robustness refers to the stability of experimental conclusions to variations in either baseline assumptions or experimental procedures. It is somewhat related to the concept of generalizability (also known as transportability), which refers to the persistence of an effect in settings different from and outside of an experimental framework. The issue of generalizability arises in clinical trials and other types of studies in which the context of how an intervention is delivered and the types of subjects tested are highly relevant. When a universal property of nature or biology is being explored, generalizability is often assumed, and the concept of robustness of a finding to minor variations in experimental procedures is more frequently invoked. Whether a study design is similar enough to the original to be considered a replication, a “robustness test,” or some of many variations of pure replication that have been identified, particularly in the social sciences (for example, conceptual replication, pseudoreplication), is an unsettled question (12).

Inferential reproducibility

This dimension of reproducibility, while underrecognized, might be the most important one. It refers to the drawing of qualitatively similar conclusions from either an indepen-

dent replication of a study or a reanalysis of the original study. Inferential reproducibility is not identical to results reproducibility or to methods reproducibility, because scientists might draw the same conclusions from different sets of studies and data or could draw different conclusions from the same original data, sometimes even if they agree on the analytical results. The aforementioned debate about the interpretation of the psychology reproducibility results could be seen as an example of this (19). There are many contributors to these differences, including different assessments of the prior probability of the hypotheses being explored—which can only be examined through a Bayesian lens—and different choices about how to analyze and report data, which we will discuss under the general rubric of “multiplicity.”

Bayesian perspectives. What scientists and science users are really concerned about when they debate research reproducibility is the truth of research claims. Research reproducibility and other related concepts can be regarded as ways to operationalize truth. To express this informally, if a finding can be reliably repeated, it is likely to be true, and if it cannot be, its truth is in question (20). Unfortunately, the standard frequentist approach to statistics does not allow the assigning of a probability of truth to a hypothesis or claim (21). However, the philosophy underlying Bayesian statistics does: The probability that a claim is true after an experiment is a function of the strength of the new experimental evidence combined with how likely it was to be true before the experiment. Viewed through this lens, the aim of repeated experimentation is to increase the amount of evidence, measured on a continuous scale, either for or against the original claim.

How much evidence needs to be gathered for effective proof depends on the prior probability of the original hypothesis, which itself depends on prior evidence. If a hypothesis is highly unlikely a priori, such as the presence of extrasensory perception or the therapeutic effect of homeopathy, a large amount of high-quality evidence would have to be gathered to outweigh the very strong prior reasons to view such claims skeptically (22, 23). Conversely, for a hypothesis based on a plausible, coherent, and robust body of prior work, such as the research that preceded the development of imatinib for leukemia (24), a claim is more likely to be true both before and after an experiment that supports it. Under the

Bayesian paradigm, every study contributes evidence that adds to the prior evidence, represented by the a priori probability of truth of a given claim. Reproducibility plays no formal role except that repeated experiments with similar findings will generate strong cumulative evidence, which can confirm or refute an initial finding.

A hybrid Bayesian-frequentist index that captures the traditional notion of results reproducibility is predictive power: the probability that, given a result in one experiment, the next experiment of specified design will be statistically significant. This probability has been dubbed the replication (25) or reproducibility probability (26). After a significant result, this probability is typically far lower than most scientists suspect, due to the random variation of the *P* value. This phenomenon shows that the failure to observe a significant result in a second experiment of similar design is to be expected and cannot be used as a criterion to undermine the credibility of the first experiment (25–28).

Multiplicity. Multiplicity, combined with incomplete reporting, might be the single largest contributor to the phenomenon of nonreproducibility, or falsity, of published claims. Multiplicity can arise in many ways, including testing many hypotheses in one experiment, testing one hypothesis many times or in multiple ways in one or more studies, and other maneuvers that virtually guarantee a chance observation that will appear to strongly support some hypotheses. A diverse vocabulary has developed in various fields for the biases or practices that can mislead because of multiplicity (Table 2). These range from the conduct of multiple experiments (and reporting only “good” ones) to the use of multiple endpoints, multiple predictors, and, perhaps most invisibly, the fitting of many mathematical or statistical models. Coupled with incomplete or selective reporting, these practices are a formula for generating findings unlikely to be supported by further experimentation. However, the adverse effects of multiplicity can be greatly ameliorated through complete reporting of analytical procedures and choices (for example, reporting the total number of associations tested or models considered).

These practices are likely to thrive when there is low consensus on the correct methodology and what is considered sufficiently complete reporting. Many scientific fields have seen an increasing burden of multiplicity,

Table 2. Terminology to describe practices that introduce or hide multiplicity.

Multiple comparisons (many statisticians)
File-drawer problem (29)
Pseudoreplication (32)
Significance questing (33)
Data mining, dredging, torturing (34)
Hypothesizing after the results are known (HARKing) (30)
Data snooping (35)
Selective outcome reporting (36)
Silent multiplicity (37)
Specification searching (38)
P-hacking (31)

because they have expanded their capacity to measure more variables and to fit increasingly complex models. Scientific fields that routinely work with multiple hypotheses without correcting for or reporting the occurrence of multiplicity run a higher risk of non-reproducibility of results or inferences.

A variety of old and new practices that are described as specific forms of bias actually result from multiplicity. The classic file-drawer publication bias problem (wherein non-significant or “uninteresting” results are not published) (29) results in bias under the assumption that multiple studies are being produced independently but a biased sample is published. The acronym “HARKing”—hypothesizing after the results are known—is used in psychology literature to indicate the phenomenon of constructing hypotheses after the data are analyzed, suggesting that only one hypothesis was tested while many were contemplated (30). The practice of P-hacking, a term recently coined in psychology literature and applied to a long-recognized phenomenon in modeling, refers to applying multiple statistical analyses and subanalyses until hitting upon and reporting a statistically significant result while not completely reporting how it was obtained (31).

Ultimately, inferential reproducibility might be an unattainable ideal, and in some situations not even a desirable one, because differences between scientists and their interpretations of a single or multiple studies are the means through which weaknesses or gaps in the evidence base are identified and science progresses. What is clear, however, is that none

of these types of reproducibility can be assessed without complete reporting of all relevant aspects of scientific design, conduct, measurements, data, and analysis. Such transparency will allow scientists to evaluate the weight of evidence provided by any given study more quickly and reliably and design a higher proportion of future studies to address actual knowledge gaps or to effectively strengthen cumulative evidence, rather than explore blind alleys suggested by research inadequately conducted or reported.

CONCLUSIONS

The lexicon of reproducibility to date has been multifarious and ill-defined. The causes of and remedies for what is called poor reproducibility, in any scientific field, require a clear specification of the kind of reproducibility being discussed (methods, results, or inferences), a proper understanding of how it affects knowledge claims, scientific investigation of its causes, and an improved understanding of the limitations of statistical significance as a criterion for claims. Many aspects of the new interest in research reproducibility have been salutary, but we need to move toward a better understanding of the relationship between reproducibility, cumulative evidence, and the truth of scientific claims.

Meeting Rates

HOTEL NOT INCLUDED. For U.S. Government and student rates, please contact Robert Shavers at HEI. Student rates are available to full-time, currently enrolled students (please bring student ID to the conference to collect registration packet).

Full Conference

Sunday Through Tuesday \$675

Includes the Pre-Conference Workshop (separate registration required) and all meals and breaks, Sunday lunch through Tuesday lunch, except Monday dinner.

Single Day

Sunday \$280

Includes the Pre-Conference Workshop (separate registration required) and lunch, breaks, reception, and dinner.

Monday \$280

Includes breakfast, lunch, and breaks.

Tuesday \$280

Includes breakfast, lunch, and breaks.

Travel Award

Apply for the Student and Postdoc Travel Award at www.healtheffects.org/content/travel-award

Further Information

Robert Shavers, Health Effects Institute
75 Federal Street, Suite 1400, Boston, MA 02110 USA
Telephone +1-617-488-2308 • Fax +1-617-488-2335
rshavers@healtheffects.org

Registration and Program Updates

Obtain registration materials and program information online at www.healtheffects.org/annual-conference. The posted program and schedule are updated regularly.

Accommodations

HEI's special group rate is \$210 plus tax, for single or double room. Please book your room by **April 2, 2018** online at www.healtheffects.org/annual-conference. Guests can also call **1-800-55-DRAKE (37253)** and refer to group code **HEF** to receive the special rate.

HEALTH EFFECTS INSTITUTE

ANNUAL CONFERENCE
April 29–May 1, 2018
The Drake Hotel
Chicago, Illinois

The Health Effects Institute is an independent, non-profit research organization that, for 38 years, has provided decision makers with high-quality, impartial, and relevant science on the health effects of air pollution. Its core support is provided jointly by the U.S. Environmental Protection Agency and the motor vehicle industry; additional support is contributed by a range of domestic and international industries, governments, foundations, and development agencies. An overview of HEI, information on its current research program, and all published HEI reports are available for downloading free of charge, at www.healtheffects.org/publications.

HEI Annual Conference 2018

Health Effects Institute
75 Federal Street, Suite 1400
Boston, MA 02110-1817, USA

PLEASE POST

SUNDAY, APRIL 29**9-11:30 AM Pre-Conference Workshop: Causal Modeling in Air Pollution Research and Policy**

Chairs: Francesca Dominici, Harvard T.H. Chan School of Public Health, and Katherine Walker, Health Effects Institute

Recent years have seen a growing interest in the application of causal modeling methods to explore causal relationships between air pollution and health. This session will bring together experts in causal modeling to introduce different methods, provide critical perspectives on their potential contributions and limitations, and discuss their interpretation within the broader context of causation. Open to all conference attendees.

1:00 PM Ozone: Global Pollutant, Personal Effects

Chairs: Dan Greenbaum, Health Effects Institute, and Jana Milford, University of Colorado–Boulder

Ozone is a secondary pollutant that is regulated through the National Ambient Air Quality Standards (NAAQS), which are reviewed every five years; the next ozone review is due to start soon. This session will discuss challenges in controlling ozone levels, including atmospheric transport across continents and climate change, and the current science-based evidence that will contribute to the ozone health assessment. The session will end with a discussion of key issues relevant to the next ozone NAAQS.

4:15 PM Poster Session I**6:00 PM Opening Reception, Dinner, and Keynote Speaker**

Venkat Sumantran, Chairman, Celeris Technologies; coauthor of Faster, Smarter, Greener: The Future of the Car and Urban Mobility

April 29–May 1, 2018

**The Drake Hotel
Chicago, Illinois**

Health Effects Institute

www.healtheffects.org/annual-conference

MONDAY, APRIL 30**8:30 AM Traffic-Related Air Pollution and Health: A Moving Target**

Chairs: Francesco Forastiere, Lazio Regional Health Service, Italy, and Fred Lurmann, Sonoma Technology, Inc.

This session will discuss important factors related to the design and interpretation of health studies of traffic-related air pollution (TRAP). It is intended to aid the scope of a new systematic review to update HEI's 2010 review of the health effects of TRAP. We will introduce the Traffic Review Panel and announce new HEI studies on TRAP, taking into account other factors, such as noise, socioeconomic status, and green space.

10:45 AM Air Pollution and Diabetes: What Is the Evidence?

Chairs: Barbara Hoffmann, University of Düsseldorf, Germany, and Ivan Rusyn, Texas A&M University

Diabetes and obesity, as well as air pollution, are known risk factors in the development of cardiovascular and respiratory diseases. Air pollution is associated with development of diabetes in adults, and there is some evidence that early-life exposure in children may be associated with diabetes later in life. This session will discuss the evidence, who is most susceptible, and what mechanisms are behind these observations.

1:30 PM Poster Session 2**3:15 PM Reproducibility in Environmental Health Research**

Chairs: Amy Herring, Duke University, and Kiros Berhane, University of Southern California

Awareness has grown that many scientific studies are not reproducible and this problem seems to be particularly widespread in certain fields of science. Environmental standards are health based and there have been long-standing debates about replicability and reproducibility (including data access, analysis, and quality) of the studies underpinning regulations. Questions about reproducibility have been discussed in scientific journals and are reflected in congressional efforts at transparency. This session will describe these issues and present examples of the best practices.

5:15 PM Free Evening**TUESDAY, MAY 1****8:30 AM Advancing Air Quality, Global Health, and Energy Science at HEI**

Research Committee Chair *David Eaton, University of Washington–Seattle*, and Review Committee Chair *James Merchant, University of Iowa*, will introduce the two committees and preside over a presentation of HEI's research program, which includes traffic-related air pollution, low levels of exposure, accountability and mechanisms of effect, as well as the expanding Global Health Program. Energy Research Committee Chair *George Hornberger, Vanderbilt University*, will join them to present HEI's Energy Research Program, focused on the potential for human exposure and health effects from the development of oil and natural gas from unconventional resources.

11:00 AM The Power of Place: Pathways to Urban Living

Chairs: David Foster, University of Wisconsin–Madison, and Frank Kelly, King's College London, United Kingdom

More than half of the world's population now lives in urban areas, and this number is expected to increase due to continuing population growth and urbanization. Air pollution and noise, along with interrelated factors such as physical inactivity, lack of green space, stress, and socioeconomic deprivation, are associated with adverse health. This session will explore how integrated urban design, transport planning, and new mobility and transportation technologies can improve city residents' health and reshape cities in the future.

2:30 PM Conference Adjourns**PLEASE POST**

Note: This is a preliminary program. The timing and order of the sessions are subject to change.

Eyeing State Discretion, EPA, ECOS Grapple With New Program Review Policy

ST. PAUL, MN -- EPA and state regulators are continuing months-long talks on streamlining agency reviews of states' federally-delegated programs, seeking to clarify the level of deference EPA staff should afford state

regulators and crafting a policy for elevating disputes among lower-level officials during permitting or enforcement reviews.

Legal Briefs Highlight Wide-Ranging Attacks On EPA's CSAPR 'Update'

A series of new legal briefs from several states, power companies and environmental groups highlights wide-ranging and often competing attacks on the Obama EPA's "update" to its Cross-State Air Pollution Rule (CSAPR) emissions trading program, a program that the Trump administration is defending in ongoing appellate litigation.

Auto Suppliers Seek Compromise To Avoid Fractured Vehicle GHG Rules

Auto suppliers and a car-state Democrat are urging policymakers to avoid a political and legal blowup over pending revisions to light-duty vehicle GHG and fuel economy rules, pushing Trump officials to work seriously with California on a possible deal, while also suggesting that defenders of the Obama-era standards must be open to some changes.

In IRIS Comments, DOD Queries Study EPA Uses To Set Uranium Policies

The Defense Department (DOD) is querying whether a 1998 study EPA is considering using in its upcoming Integrated Risk Information System (IRIS) assessment of uranium -- a study that is also the basis for several strict regulatory policies -- is appropriate, or whether the agency should instead use a 1949 study that could result in weaker limits.

D.C. Circuit Slated To Hear Suit Over EPA's 'Exceptional Events' Air Policy

The U.S. Court of Appeals for the District of Columbia Circuit will hear oral argument March 22 in a suit filed by environmentalists over EPA's rule allowing Clean Air Act regulatory exemptions for air pollution associated with "exceptional events" such as wildfires, a policy critics claim allows for unlawful increases in emissions.

Daily Feed

EPA seeks an extra 90 days to propose lead dust rule update

"While it is important for the proposed rule to be issued expeditiously, it is also important for EPA to have a clear and reasonable timetable," EPA says.

Quote-Unquote: EPA promises new audit and science policies

Plus: a reason to stay in the Paris climate accord and governors urge Trump to reject proposals that would 'weaken' RFS.

Ewire: Climate science's big day in court

The parties have eight questions to answer at the novel court-ordered "tutorial."

House panel seeks briefing on EPA reorganization plans

The Trump administration has developed a draft EPA workforce reorganization plan, not yet released publicly, with an eye toward incorporating reorganization proposals into its fiscal year 2019 budget.

Environmentalists denounce Pruitt's planned science policy

"This canard about 'secret science' began as an attempt by industry to undermine the landmark research -- from more than two decades ago -- that determined air pollution is bad for your health," one environmentalist says.

Subject: Reproducing Science...

Dear Clint:

Hope this finds you well – I am sure you are BUSY!

Could not help but remember when we saw the latest news (<https://www.epa.gov/newsreleases/daily-caller-scott-pruitt-will-end-epas-use-secret-science-justify-regulations>) the many constructive discussions we had had when you were at House Science about the opportunities to enhance data sharing. Though I am sure you are occupied with many things, I thought you should know we are very much still on the case, trying to make our data available – and educating the scientific community about the need to do so. We actually had already planned an entire session at our Annual Conference in Chicago in late April on “Reproducibility in Environmental Health Research” and are pleased to have Steve Goodman, who authored the attached with John Ioannidis to lead off in the session. If there is someone there who you think could benefit from attending, please let us know and we can help facilitate that...

And in the meantime, if there are ways that we might help in identifying the opportunities and the potential snags in this new initiative, please let us know...

All the best!

Dan

Subject: PM 2.5 goes mainstream

“Mainstream,” that is, assuming anybody still reads *The New Republic* nowadays.

* * * *

Air Pollution Denial Could Become EPA Policy

For decades, the agency has said that inhaling soot in any amount is unsafe. The Trump administration might change that.

By Emily Atkin

The New Republic

August 8, 2018

Much of the Republican Party has long denied the science of climate change—that humans are causing the planet to warm. They’ve been less willing, historically, to deny the science of air pollution, which states that breathing in soot is bad for humans. But norms have changed since Donald Trump became president. For the last year and a half, fringe theories once promoted only by tobacco lobbyists and the very far-right have seeped into the offices of the Environmental Protection Agency. Now, those theories could soon be reflected in official EPA regulations intended to protect the public’s health.

A story published Monday in environmental policy outlet E&E News details the evidence. “After decades of increasingly strong assertions that there is no known safe level of fine particle exposure for the American public, [the] EPA under the Trump administration is now considering taking a new position,” reporter Niina Heikkinen wrote. “The agency is floating the idea of changing its rulemaking process and setting a threshold level of fine particles that it would consider safe.” (She’s referring to particulate matter that is 2.5 micrometers or less in diameter, small enough to penetrate deep into the circulatory system and potentially infiltrate the central nervous system. PM2.5 is the main component of soot.)

Under these changes, which are being considered by EPA acting administrator Andrew Wheeler, PM 2.5 would no longer be considered a “non-threshold pollutant”—one that causes harm at any level of exposure. Instead, it would become a “threshold pollutant,” or one that causes harm only above a certain exposure level. Wheeler is considering this change most likely because it would help him to legally justify repealing the Clean Power Plan, a set of Obama-era climate regulations to reduce greenhouse gas emissions from coal plants.

Wheeler must prove that Obama’s policy would do more harm than good. Obama’s EPA had argued that the Clean Power Plan would reduce PM2.5 pollution, thus creating from \$13 billion to \$30.3 billion in public health benefits. This figure made up about half of the Clean Power Plan’s stated benefits. If Wheeler changes the official designation of PM2.5, the EPA’s position would be that breathing in small amounts of soot has the same impact as breathing in none. Thus, many of Obama’s predicted benefits would be erased.

This goes against nearly all mainstream scientific research on air pollution. But Wheeler might be able to make it official EPA policy anyway. That’s because in April, the EPA’s disgraced former administrator, Scott Pruitt, proposed a new rule to limit how science can be used at the agency. Championed by a former tobacco lobbyist, the rule prohibits the EPA from using research that includes confidential data about human subjects—effectively disqualifying much of the research showing how air pollution damages public health.

The scientific community is pushing back against the agency’s so-called secret science policy. On Tuesday, the entirety of Harvard University—its law school, medical school, school of public health, and all its teaching hospitals—wrote in an extensive letter that the “rule will wreak havoc on public health, medical, and scientific research and undermine the protection of public health and safety.” The school warned that the EPA’s rule could disqualify high-quality science that supports some of the EPA’s strongest regulations on lead, arsenic, hormone-disrupting chemicals, and—of course—air pollution.

Wheeler hasn’t yet decided whether the EPA will change its position on PM2.5. If he does, air pollution denial will become U.S. policy for the first time.

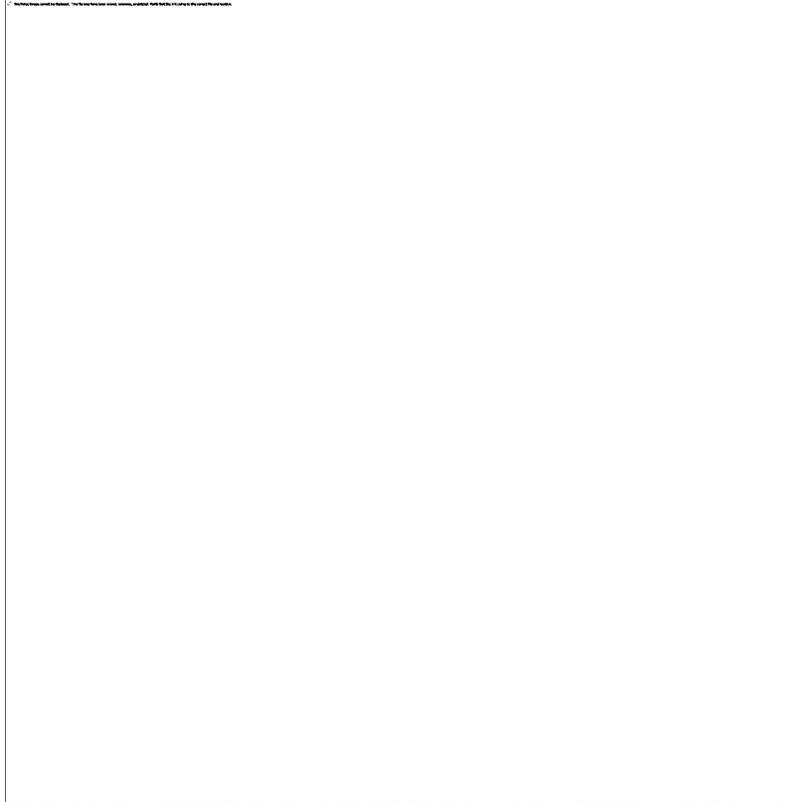

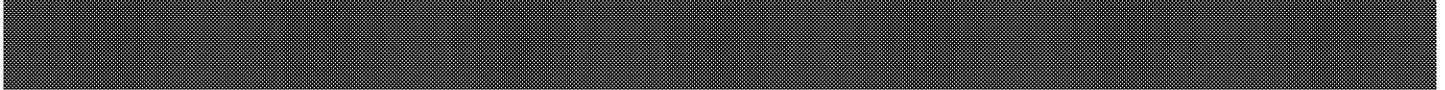

Emily Atkin is a staff writer at The New Republic.

Subject: Morning Consult Energy: Brent Crude Rises Past \$80 a Barrel Amid Uncertainty Over Iran Sanctions

By [Jacqueline Toth](#)

Top Stories

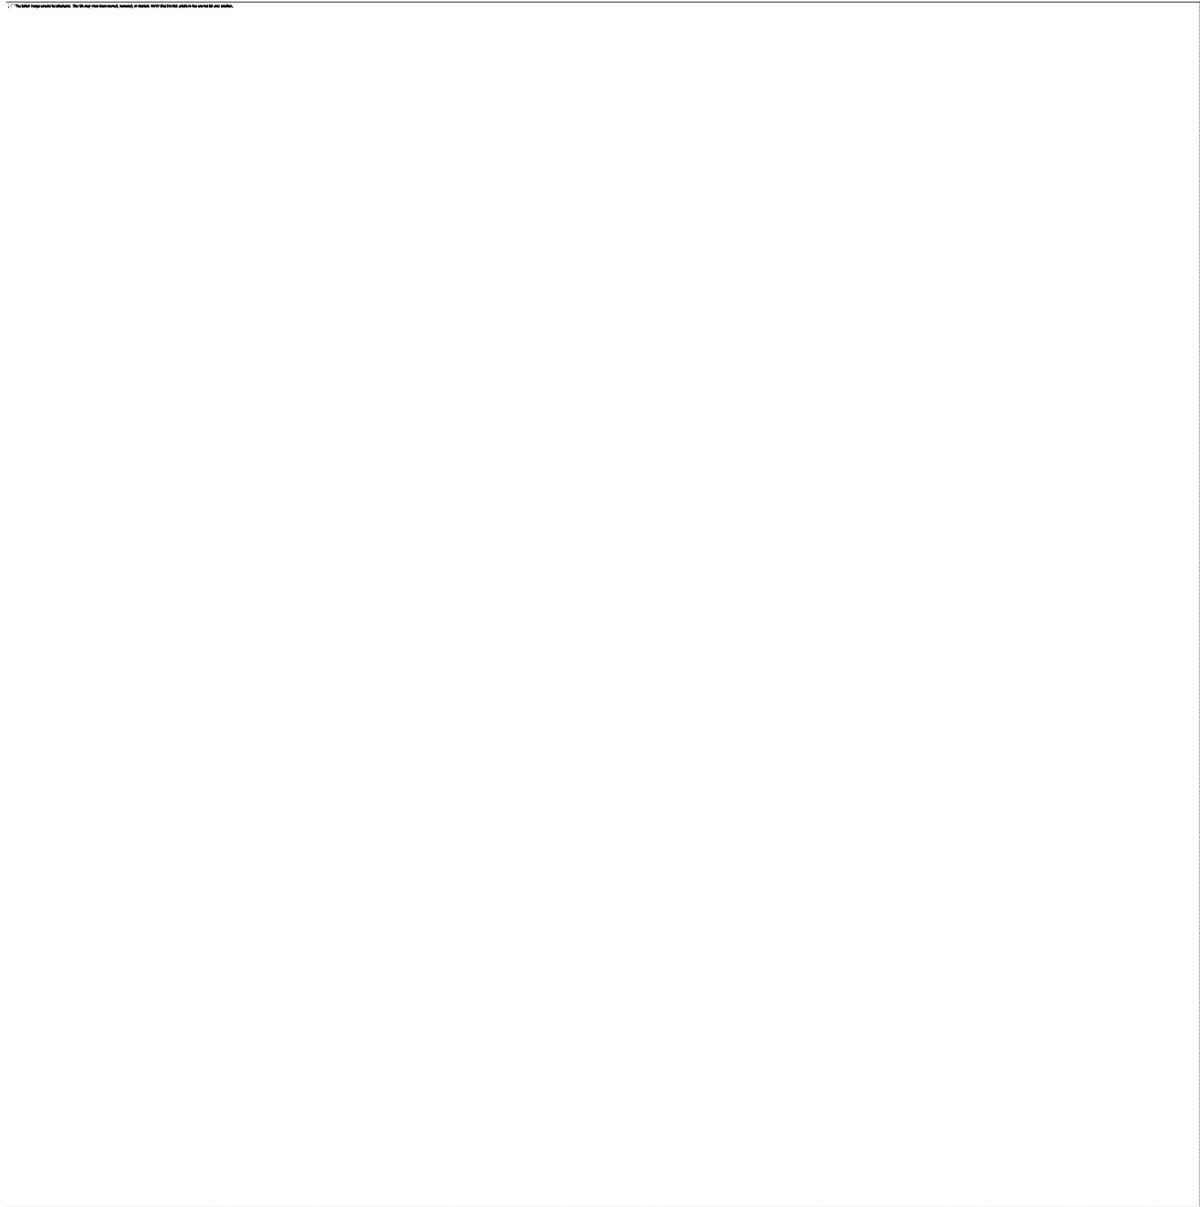

- Brent crude prices rose past \$80 a barrel, their highest level since November 2014, as the world continues to react to the United States' decision to withdraw from the Iran nuclear deal and reinstate sanctions on Iran, and as European companies start pulling back from Iran given the threat of sanctions. Brent crude was up 0.8 percent to \$79.91 a barrel on London's ICE Futures exchange. ([The Wall Street Journal](#))

- For the last few weeks, Environmental Protection Agency Administrator Scott Pruitt has been advised by white-collar defense lawyer Paul Rauser, co-founder of the Aegis Law Group, over the federal investigations Pruitt faces surrounding extravagant spending and allegations of ethical lapses, according to two people familiar with the situation. Pruitt's support among White House staffers has waned, but President Donald Trump "hasn't yet gotten to the point" of wanting to fire Pruitt yet, according to a former White House official. ([Politico](#))
- Citing security concerns, a senior United States diplomat warned that the United States might choose to sanction Russia's Nord Stream 2 natural gas pipeline that is planned to span from Russia to Germany. The project would double how much natural gas Russia can ship to Europe from Siberia. ([The Associated Press](#))
- The National Highway Traffic Safety Administration launched what is at least its second investigation into car crashes involving vehicles made by Tesla Inc., this time over last week's crash of a car on Autopilot in Utah. The NHTSA, which has sent a team of investigators to look into the accident, said it "will take appropriate action" depending on the results of its review. ([Reuters](#))
- Canadian Finance Minister Bill Morneau said Canada will cover Kinder Morgan Inc.'s losses on the \$5.75 billion Trans Mountain pipeline expansion, a project Prime Minister Justin Trudeau approved in 2016 but which British Columbia has vowed to block, citing environmental risks. Kinder Morgan has said it will abandon the project on May 31 unless political and legal hurdles over the project are lifted. ([The Wall Street Journal](#))

These are the Most Loved Brands in America

The brands that define American culture and commerce, ranked using over 250,000 survey interviews with U.S. adults.

General

[Brent Crude Hits \\$80 Amid Concerns Over Iran Supply](#)
Sarah McFarlane, The Wall Street Journal

Brent crude prices climbed past \$80 a barrel Thursday, as Washington's decision to reinstate sanctions on Iran continued to fuel a rally that has pushed the market to 3½-year highs.

[Pruitt taps outside attorney for help amid investigations](#)
Andrew Restuccia and Emily Holden, Politico

EPA administrator Scott Pruitt has tapped a white-collar defense lawyer to advise him as he grapples with a dozen federal investigations into his activity, according to two people familiar with the situation.

[EPA's Own Advisory Board Questions "Secret Science" Plan](#)
Scott Waldman, E&E News

EPA's Science Advisory Board wants to review Administrator Scott Pruitt's plan to restrict studies the agency uses when crafting regulations.

[Environmental groups sue EPA for abandoning hard rock mining rule](#)
Valerie Volcovici, Reuters

Six environmental groups on Wednesday filed a lawsuit against U.S. Environmental Protection Agency chief Scott Pruitt for abandoning a rule that would have forced hard-rock mining companies to prove they have enough money up front to clean up hazardous substances released at mine sites.

[EPA's Scott Pruitt given extension to file financial disclosure](#)
Josh Siegel, Washington Examiner

Environmental Protection Agency Administrator Scott Pruitt did not file his financial disclosure form for 2018 when it was due Tuesday because he was granted an extension.

[EPA move on chemical study may trip up Pruitt](#)
Annie Snider, Politico

EPA Administrator Scott Pruitt is facing a new controversy over chemical contamination that could prove even more damaging than his spate of recent ethics scandals.

Dems claim Pruitt's former security chief intervened to hire business associate

Miranda Green, The Hill

Two Democrats on the Senate Environment and Public Works Committee are requesting that the Environmental Protection Agency (EPA) inspector general (IG) look into the business dealings of Administrator Scott Pruitt's former head of security.

Scott Pruitt's Policy Director at EPA Met With Hundreds of Industry Representatives, Emails Show

Sharon Lerner, The Intercept

A cache of internal Environmental Protection Agency communications shows that the embattled agency administrator Scott Pruitt isn't the only one who has been in frequent contact with the industries that the environmental agency is supposed to regulate.

Oil magnate gave Pence tickets to NFL game he walked out of

Megan R. Wilson, The Hill

Vice President Pence received NFL tickets from oil magnate Forrest Lucas and tickets to the 2017 Super Bowl valued at \$15,000 from Houston Texans owner Bob McNair, according to the vice president's most recent personal financial disclosure form.

Oil and Natural Gas

US Warns of Sanctions Risk to Germany-Russia Gas Pipeline

Frank Jordans, The Associated Press

A pipeline project between Russia and Germany risks triggering U.S. sanctions because of security concerns, a senior American diplomat said Thursday.

Canada Ready to Compensate Kinder Morgan for Pipeline Losses

Paul Vieira, The Wall Street Journal

In a bid to protect Canada's reputation as an attractive destination for energy investment, the Liberal government pledged Wednesday to cover Kinder Morgan Inc.'s losses on the Trans Mountain pipeline expansion caused by British Columbia's efforts to delay and potentially kill the project.

US court ruling sparks tussle over impact on construction of Atlantic Coast gas pipe project
Maya Weber, Platts

Following an appeals court decision late Tuesday vacating a US Fish and Wildlife Service authorization for the Atlantic Coast Pipeline, the next battleground is emerging over the extent to which construction can move forward on the 600-mile natural gas pipeline project.

Oil Is Above \$70, but Frackers Still Struggle to Make Money
Christopher M. Matthews and Bradley Olson, The Wall Street Journal

American shale drillers are still spending more money than they are making, even as oil prices rise.

Statoil name change shines light on future of Big Oil
Patrick McLoughlin, Platts

Statoil officially changed its name to Equinor on Wednesday after a shareholder vote, raising but not necessarily answering questions as to the degree of strategic change in the Norwegian energy major's focus.

Two North America Pipeline Giants Bring Units Back Into Fold
Amanda Jordan, Bloomberg

Two of North America's biggest pipeline companies announced plans to repurchase subsidiaries as the industry seeks to curb future tax obligations in the face of a federal overhaul.

Utilities and Infrastructure

Full reconstruction of Puerto Rico's grid could take a decade, says lead contractor
Robert Walton, Utility Dive

It's been eight months since Hurricane Maria destroyed Puerto Rico's electric grid. Despite significant recovery work, there are still thousands without power - and though the island is not prepared for it, the 2018 Atlantic hurricane season begins in two weeks.

New York proposes strict carbon emission limits for existing power plants
Robert Walton, Utility Dive

Federal efforts to impose carbon emission limits on power plants have been stalled for some time amid litigation and an unfavorable political climate, leaving it to states to take action to address a major source of greenhouse gas emissions.

Renewables

U.S. safety agency sends team to investigate Tesla crash **David Shepardson, Reuters**

The U.S. National Highway Traffic Safety Administration (NHTSA) said on Wednesday that it was sending a team to investigate the crash of a Tesla Inc vehicle last week in Utah that occurred while the car was in Autopilot mode.

Nissan's Following Tesla Into Solar Power and Home Batteries **Jack Stewart, Wired**

Given the weather in the United Kingdom-that cloudy, foggy, drizzly country-it doesn't seem like the best place to launch a business that revolves around solar power. But this is where the builder of the world's best-selling electric car just started selling Nissan Energy Solar, a generation-to-acceleration scheme that equips customers with roof-mounted panels and a battery to store some of the electricity they generate.

Coal

Judge allows bankrupt FirstEnergy Solutions to exit power plant co-op **Robert Walton, Utility Dive**

A judge in the U.S. Bankruptcy Court of the Northern District of Ohio, Eastern Division, has granted a preliminary injunction allowing FirstEnergy Solutions to withdraw from the Ohio Valley Electric Corporation (OVEC), a cooperative of companies that operates two coal-fired power plants.

Nuclear

The French stress test for nuclear power

Andrew Ward and David Keohane, Financial Times

Years late and billions over budget the first European Pressurised Reactor is set to become operational. Its success is critical for France.

Climate

Nominee skirts question on climate science

Maxine Joselow, E&E News

President Trump's nominee to lead the National Highway Traffic Safety Administration yesterday refused to say whether she agrees with mainstream climate science.

Opinions, Editorials and Perspectives

Investors Stand with the Gwich'in to Defend Arctic Refuge

Bernadette Demientieff, Morning Consult

As far back as I can remember, my people have considered the coastal plain of the Arctic National Wildlife Refuge sacred. Known to the Gwich'in people as "Iizhik Gwats'an Gwandaii Goodlit / the sacred place where life begins," I was always told that if it were ever disturbed, we would lose our identity, our culture and our way of life as Gwich'in.

California utilities race to charge your electric car, bus, forklift

Adrian Martinez, Utility Dive

California has its eye on the prize when it comes to the future of its air and the future of its energy grid. That's why it's taking on the most aggressive EV charging station plan in the nation.

Unable to sway oil prices, Trump admin now missing clean energy potential

Robert Johnson, Axios

Market fears of snapback sanctions on Iranian oil exports have caused oil prices to rise, providing a stark reminder that the U.S. is still the world's largest oil consumer. In response to the trend, President Trump said that such prices "will not be accepted."

Pruitt's EPA disregards the science behind the Clean Air Act
Bernard D. Goldstein, The Hill

In the name of "cooperative federalism," Environmental Protection Agency Administrator Scott Pruitt is out to gut one of the finest examples of cooperative federalism in environmental law - that of setting outdoor air pollutant standards.

Research Reports

Barriers to Industrial Decarbonisation
Sandbag

Industries operating within the EU's Emissions Trading System (ETS) account for some 42% of the bloc's total CO₂ emissions. Reducing these sources of greenhouse gases is critical to meeting the EU's overall emissions targets and limiting global temperature rise in line with the Paris Agreement.

REDEFINING EPA: Overhauling an agency and its mission -- Complete coverage

March 21, 2018

Latest News

EPA Planning Streamlined Audit Policy For New Oil & Gas Facilities

ST. PAUL, MN -- Seeking to increase compliance with environmental rules, EPA is crafting a new audit policy for streamlining disclosure of non-compliance by new oil and natural gas facilities and is seeking states' input on the issue, though environmentalists and others are cautioning that strong enforcement will still be needed to deter non-compliance.

Amidst Uncertainty, EPA Expects To Miss Deadline For Lead Hazard Rule

Government lawyers have told a federal appellate court that EPA will miss a 90-day deadline -- expected to kick in as soon as March 27 -- for proposing updates to its lead hazard standard for residential structures though the lawyers are asking the court to clarify the deadline after the judges failed to issue an expected mandate that would have made the order final.

4th Circuit Poised To Hear Suit Testing CWA Liability For Coal Ash Sites

The U.S. Court of Appeals for the 4th Circuit is poised to hear oral argument March 21 in the first appeal over whether coal ash disposal sites that pollute surface waters through groundwater leaks are liable under the Clean Water Act (CWA), and the eventual ruling could set a precedent for whether ash facilities nationwide face penalties for leaks.

Former Adviser Holds Out Hope Trump May Remain In Paris Climate Deal

Despite President Donald Trump's pledge to withdraw from the Paris climate deal, a former climate adviser hopes the president will eventually reverse his stance and remain in the deal, albeit with a weaker greenhouse gas reduction target than the Obama administration and which would be approved by Congress.

6th Circuit's CWA Ruling Could Bolster GOP Calls For Permit Streamlining

The U.S. Court of Appeals for the 6th Circuit has rejected a Michigan road commission's novel suit claiming that EPA objections to draft Clean Water Act (CWA) permits are final agency actions subject to judicial review, but the ruling may boost GOP lawmakers' claim that the case shows a need to streamline CWA permits.

D.C. Circuit Backs EPA's Approval Of States Using CSAPR As Haze Control

A federal appeals court in a unanimous ruling is backing the Obama EPA's policy allowing states to rely on their participation in the Cross-State Air Pollution Rule (CSAPR) emissions trading program to satisfy regional haze air pollution control mandates, rejecting challenges to the policy from environmentalists and utility industry groups.

Bolstering EPA Rules, New Study Details Risks Of Lead Exposure In Adults

A new study linking low-level lead exposure with increased risk of adult deaths from cardiovascular disease could help EPA strengthen its cost-benefit analyses and drive new or updated rules to address the metal, including a measure addressing lead paint in public and commercial (P&C) buildings where the agency is struggling to assess risks to adults.'

Daily Feed

Udall urges EPA to answer GAO questions on secure phone booth

The top Democrat on the appropriations panel overseeing EPA's budget questions whether Administrator Scott Pruitt's secure phone booth is an unnecessary taxpayer expenditure that violated budget laws.

EPA proposes technical changes to refinery air rules

EPA is proposing a series of technical amendments to its air rules governing the refinery sector, which it says will ease regulatory burdens and save the industry millions of dollars.

EPA plans state meeting on PFAS

EPA is planning a meeting with states on the ubiquitous class of chemicals but it is not clear whether it will ensure the consistent risk values that state drinking water regulators are seeking.

Judge rejects POTWs' suit over CWA test methods

The suit by wastewater utility groups was their second attempt to challenge a test method that they claim EPA and states cannot lawfully mandate in discharge permits.

Ewire: Pruitt to issue policy curtailing 'secret science'

In today's Ewire: The policy, long pushed by Rep. Lamar Smith (R-TX), would require scientific studies used for regulations to publish their underlying data though critics say the move is simply an effort to hinder EPA rules.

IG finds 'allegedly flawed' methane studies not used for rules

At issue is a pair of studies conducted by the Environmental Defense Fund and University of Texas-Austin to estimate oil and gas methane emissions, though some argue the reports underestimate emissions.

MORNING ENERGY NEWS | 8.29.2018

Subscribe Now

Possibly the single most important change in the regulatory paradigm. Ever.

Cato Institute (8/27/18) blog post: "Since the 1950s, environmental regulations are largely based upon something called the 'linearity-no threshold' (LNT) model, which holds, for example, that the first photon of ionizing radiation has the same probability of causing cancer as the bazillionth one... In fact the LNT model isn't just wrong—nature actually works opposite to it. Small amounts of exposure to things that are toxic in large amounts can actually be beneficial... The alternative model is also largely the handiwork of Dr. Calabrese, which he calls the 'biphasic dose-response,' or 'hermetic' model."

"Capitalism as we know it is over. So suggests a new report commissioned by a group of scientists appointed by the UN Secretary-General. The main reason? We're transitioning rapidly to a radically different global economy, due to our increasingly unsustainable exploitation of the planet's environmental resources."

– Nafeez Ahmed, Vice Motherboard

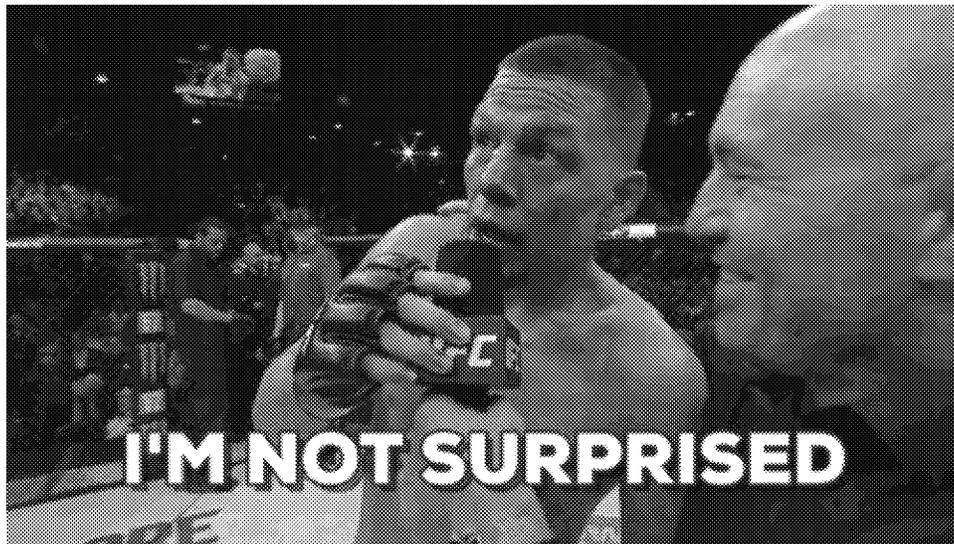

A reminder that politicians are great at destroying economic opportunities for Americans.

The Salt Lake Tribune (8/7/18) reports: "The West's coal country has long sought to offset declining domestic coal consumption through exports to Pacific Rim countries. But politically liberal West Coast cities and states have gotten in the way, obstructing proposals for new coal-handling terminals. Now, Utah is looking south of the U.S. border to ship its coal and possibly natural gas overseas. On Thursday, the Utah Office of Energy Development (OED) signed a memorandum of understanding with economic development officials for the Mexican state of Baja California to establish 'a close binational collaboration' aimed at connecting Utah energy resources with new markets abroad."

Shocker! The bureaucracy opposes transparency.

The Hill (8/28/18) reports: "The Pentagon is criticizing the Environmental Protection Agency's (EPA) proposal to boost 'transparency' standards for the science it uses in decision making. Patricia Underwood in the Department of

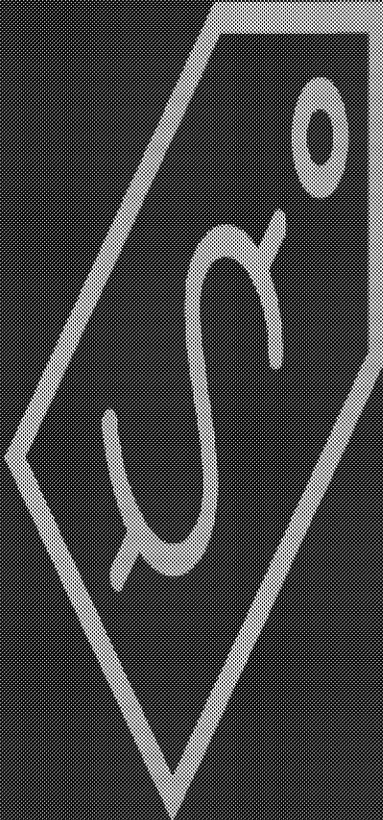

Defense's office of energy, installations and environment told the EPA last week that the proposal could unnecessarily exclude sound science from the agency's use."

How the war on climate change hammers the world's poor.

New York Post (8/26/18) op-ed: "Forcing poor countries to reduce emissions does even more harm, because cheap, abundant energy brings prosperity. Example: Activists argue Bangladesh should cut coal expansion. That would

deliver global climate benefits worth nearly \$100 billion. But the forgone boost to the Bangladeshi economy would cost about \$50 billion. Aside from the immorality of obliging poor nations to avoid policies that would reduce poverty, the big problem with forcing carbon cuts is that green energy is not yet the savior that it is portrayed as. Even after decades of heavy investment in subsidies to support green-energy production — costing more than \$150 billion just this year — the International Energy Agency finds that wind provides just 0.6 percent of energy needs, and solar 0.2 percent."

Subject: FW: request for public hearing help
Attachments: FRN extension and hearing 5.10.18_.docx; FR Notice_Strengthening Transparency extension and hearing example.docx

Good Afternoon,

I attached the original notice with bubble comments highlighting concerns. I also revised the noticed and attached that as well without bubble comments but highlighting areas of concern or blanks.

Deliberative Process / Ex. 5

- This notice lists the map room as the location of the hearing. However, the map room is in high demand and without knowing a true date of publication it may not be available.
- We don't typically offer AV support due to time constraints. We ask that any presentations be submitted to the docket.

If anyone would like to call me and go over the document, I can be reached at 564-3175.

John –

I've never been involved in the outreach end of the business, so I can only guess who might be good contacts for this. I'm sure that Millett and company is a good place to start. Since OAQPS was heavily involved with CPP, I suggest checking with Mary Henigin and Alan Rush. In our shop, you might check with Tamara, who often knows about things that have to do with involving the public.

I've cc'd Mary, Alan, and Tamara here.

Hi folks, any thoughts on who to reach out to or join a mtg Mon on public mtg question(s), see below, haven't read fully to ascertain whether this in regard to the FRN for announcing the public mtg or logistics of organizing or both. Anyway, do we know who did these for CPP? Thx.

John

Subject: Morning Consult Energy: California Moves Forward With Bill to Require 100% State Sourcing from Clean Energy by 2045

By [Jacqueline Toth](#)

Top Stories

- The California Assembly passed a bill to require the state to source 100 percent of its power from clean energy resources by 2045, legislation which now moves to the state Senate. Enactment would make California the second U.S. state, after Hawaii, to rely only on clean energy. ([Los Angeles Times](#))
- At the first of three hearings on the issue, the Defense Nuclear Facilities Safety Board said a Department of Energy order issued

in May that would let the agency withhold sensitive data from the board would violate the U.S. Atomic Energy Act. A technical expert for the board said the order has already been cited to prevent the board from accessing data about explosives at the department's Pantex Plant outside of Amarillo, Texas, and about a worker's complaint at the Los Alamos National Laboratory. ([ProPublica](#))

- Calgary-based Imperial Oil Ltd., a producer in Canada's oil sands that is 69 percent owned by Exxon Mobil Corp., said it will reduce its emissions by 10 percent over the next five years from 2016 levels through the use of new technology and better reliability and energy efficiency. The announcement is the second time this year that Exxon, the world's largest oil explorer, published an emissions target. ([Bloomberg](#))

CSR & Political Activism in the Trump Era

How to avoid a firestorm and improve your brand's reputation.

General

Pentagon challenges 'secret science' proposal

Sean Reilly, E&E News

Add the Defense Department to the ranks of those expressing concern about EPA's plans to restrict the use of scientific research in writing new regulations.

Senate Confirms Head of New Energy Department

Cybersecurity Office

Rebecca Kern and Patrick Ambrosio, Bloomberg Environment

The Senate Aug. 28 confirmed Karen Evans to lead a new Energy Department office devoted to protecting the nation's electric grid.

US official reiterates push to move land agency out West

Brady McCombs, The Associated Press

The move isn't a done deal, Susan Combs, an assistant secretary at Interior, said as she visited a northern Utah city that is among those under consideration for the new location. But she spoke passionately during a round table in Ogden about the need to bridge the gap between bureaucrats and the people affected by their decisions.

How McCain's death might affect Scott Pruitt

Robin Bravender, E&E News

The Arizona Republican's perch atop the Senate Armed Services Committee is widely expected to be occupied by Sen. Jim Inhofe (R-Okla.), who might be more likely to run for re-election - and more likely to win - if he's the chairman of that powerful panel.

US officials take action to protect Alaska whistleblower

Dan Joling, The Associated Press

The federal office that protects employees against reprisals for whistleblowing is advocating on behalf of a federal employee in Alaska who complained about the handling of an Arctic offshore lease sale.

Oil steady on lower Iran exports, rising U.S. supply

Christopher Johnson, Reuters

Oil prices steadied on Wednesday, supported by news of a fall in Iranian crude supplies as U.S. sanctions deter buyers, but held back by evidence of a rise in U.S. inventories.

Oil and Natural Gas

Mexico's new government may halt oil auctions indefinitely - document

Adriana Barrera, Reuters

Mexico's incoming government is considering indefinitely suspending auctions for oil and gas projects, and giving state-owned Pemex authority to pick its own joint-venture partners rather than holding competitive tenders, according to policy guidelines seen by Reuters.

Three regions account for half of U.S. natural gas production

Katherine Blunt, Houston Chronicle

The U.S. Energy Department reported that the Appalachian Basin in the Northeast, the Permian Basin in West Texas and the Haynesville Shale straddling Texas and Louisiana have grown to account for almost 50 percent of domestic production, up from 15 percent in 2007.

TransCanada's Shale Gas Pipe Cost Jumps by Almost \$1 Billion

Ryan Collins, Bloomberg

TransCanada Corp. won a 49 percent price increase for space on the pipeline it's building to haul shale gas from Appalachian fields as labor shortages and escalating land prices pushed construction costs almost \$1 billion higher.

In America's Hottest Drilling Spot, Vast Volumes of Gas Go Up in Smoke

Rebecca Elliott, The Wall Street Journal

In America's busiest oil field, roughly \$1 million worth of natural gas goes to waste each day.

Chinese energy executive says \$84 billion investment in West Virginia still on track

Bill Holland, Platts

A plan calling for nearly \$84 billion in Chinese investment in West Virginia petrochemical and natural gas projects will be honored despite the rumblings of a trade war between the US and China, the head of the Chinese conglomerate making the investment push said in Hong Kong on Monday.

Iran's Oil Exports Dropping Faster Than Expected Before U.S. Sanctions

Benoit Faucon, The Wall Street Journal

Iran expects crude exports to fall by a third in September, according to people familiar with purchasing plans, potentially posing an unforeseen supply risk to markets.

U.S. energy companies fume over rejected steel tariff exemptions

Liz Hampton, Reuters

Commerce has received more than 37,000 exemption requests, far more than it planned to handle. Although 130 employees and contractors are now evaluating the applications, the agency had only ruled on 2,871 of those requests as of August 20.

Utilities and Infrastructure

Analysis: Utilities spending about \$520 million to repair systems after Hurricane Harvey

Mark Watson, Platts

In the year since Hurricane Harvey devastated the western Gulf Coast with high-speed winds and record rain totals, electric utilities have spent about \$520 million to repair damage and harden systems in preparation for the next major storm, and that work continues.

Renewables

Tencent-Backed EV Maker Seeks Valuation Above \$8 Billion in IPO

Jie Ma, Bloomberg

NIO Inc., the Chinese electric-car maker backed by Tencent Holdings Ltd., is planning a U.S. initial public offering that would give it a valuation topping \$8 billion as it gears up to take on the likes of Tesla Inc.

Tesla wins court case against Ontario government over rebate cancellation

Anna Mehler Paperny, Reuters

A Canadian court has ruled in favor of Tesla Inc after the electric carmaker challenged the province of Ontario's wind-down of an electric vehicle rebate.

Face the heat: Should EV incentives be restructured for battery degradation?

Herman K. Trabish, Utility Dive

A century after EVs fell out of the car market because gasoline-powered vehicles were cheaper to operate, forecasts show battery-powered transportation could take the market back because it is cleaner and becoming affordable. But controversial new research proposes revising EV policy because batteries degrade over time, increasing costs and emissions.

In Elon Musk's World, Brakes Are for Cars, Not C.E.O.s

David Gelles, The New York Times

Associates, including several people inside the company interviewed over the past week, portray him as a workaholic who zeroes in on the smallest details.

Coal

Coal industry between a rock and a hard place

Henry Sanderson, Financial Times

A push to reduce the development of coal mines along with increasing pressure from investors to divest from fossil fuels is creating a split in the mining industry between companies exiting the sector and those vowing to remain.

Nuclear

Second Hanford radioactive tunnel collapse expected. And it could be more severe

Annette Cary, Tri-City Herald

The possible collapse of a second Hanford tunnel storing radioactive waste is both more likely than thought a year ago and the effects potentially more severe, according to Hanford officials.

Climate

[Texas sues Trump EPA for declaring San Antonio's ozone pollution levels too high](#)

Josh Siegel, Washington Examiner

Texas Gov. Greg Abbott, and Attorney General Ken Paxton, both Republicans, sued the Trump administration in federal court Tuesday for ruling that parts of San Antonio have toxic ozone levels that are too high.

[California lawmakers finalize details of a \\$1-billion wildfire prevention plan, but tough votes lie ahead](#)

John Myers, Los Angeles Times

A bipartisan group of California lawmakers proposed on Tuesday to spend \$1 billion to clear fire-prone trees and brush from across the state over the next five years while providing new relief for utility companies that have said wildfire costs could lead them to bankruptcy.

[5 Terrifying Takeaways From California's New Climate Assessment](#)

Lydia O'Connor, HuffPost

In a vast assessment that draws on more than 50 reports on climate change, state officials paint a grim picture of California's future if greenhouse gas emissions continue at their current rate. Below are five of the assessment's most unsettling predictions.

Opinions, Editorials and Perspectives

[The Affordable Clean Energy Rule Should Be Renamed 'Path to Hothouse Earth'](#)

Sweta Chakraborty, Morning Consult

The Obama administration's plan was to reduce carbon emissions by 32 percent from 2005 levels by the year 2030. Trump's plan is a carefully crafted gross misnomer.

[Next frontier of Russian meddling: energy intimidation](#)

Former Ambassador Douglas Lute, The Hill

While Putin has yet to play this card beyond Ukraine, energy intimidation must be a national security concern among many of our NATO allies.

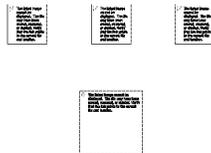

Elon Musk's Public Reckoning
The Editorial Board, The Wall Street Journal

Tesla shareholders have been on a bumpy ride amid Elon Musk's media outbursts and flirtation with taking the company private. The CEO late last week abandoned that idea, and perhaps he saw that public markets have their uses.

Research Reports

Black carbon radiative effects highly sensitive to emitted particle size when resolving mixing-state diversity
Hitoshi Matsui et al., Nature Communications

Here we use a multiple-mixing-state global aerosol microphysics model and show that the sensitivity (range) of present-day BC direct radiative effect, due to current uncertainties in emission size distributions, is amplified 5-7 times (0.18-0.42 $W m^{-2}$) when the diversity in BC mixing state is sufficiently resolved.

All –

Please find attached the latest versions of the draft responses to the SAB Chair’s letters to the Administrator. I have included a “clean” version which accepts all changes and shows most of the comments have been resolved. I also included a version in “track changes” so people can see the extensive edits we have been making. These versions both include the latest information from OAQPS and OTAQ on their relevant actions and which the believe address concerns and comments received.

The next steps would be for our review and final edits to the letters, so please send me any feedback by COB Monday (today). We will then incorporate any last edits and clean up the letter to move forward promptly.

Subject: Morning Consult Energy: Trump to Miss Climate Session at G7 Summit in Early Departure

By [Jacqueline Toth](#)

Top Stories

- President Donald Trump will not attend the climate change and environment sessions of the Group of 7 summit in Canada, the White House said in a statement that followed several critical tweets between Trump and French President Emmanuel Macron and Canadian Prime Minister Justin Trudeau that illustrated the friction between the United States and some of its allies. The White House said that Trump will leave the summit mid-morning

on Saturday and that an aide will take Trump's place at the sessions. ([CNN](#))

- Energy Department employees are worried that the agency is not giving sufficient oversight to its own spending, sources said, as it has received increased appropriations beyond what the Trump administration requested while a lag in appropriations from Congress means it has to spend most of the full-year funding in six months. The agency has issued over \$300 million for energy-related projects since mid-April, a level of spending that could lead Congress to complain the department is "spending unwisely, when it forced the agency to do that," said Stan Collender, a public policy professor at Georgetown University. ([E&E News](#))
- In its review of 10 chemicals that is required under a 2016 update to the federal chemicals law, the Environmental Protection Agency excluded the potential impacts of exposure to the chemicals' presence in water, in the air or on the ground, according to internal documents the agency released last week, focusing instead on the effects of direct exposure to the substances. The chemical industry has pushed for this more narrow review approach, and EPA spokesman Jahan Wilcox said the agency can better protect people and the environment by focusing on exposure "likely to represent the greatest areas of concern to EPA." ([The New York Times](#))
- The EPA is seeking changes to the cost-benefit analysis it performs for its regulations, proposing an end to counting the benefits to rulemakings that reduce more than one kind of pollution. The agency noted that it received comments from multiple industry groups in 2017 requesting this type of analytical change. ([InsideClimate News](#))
- Iran's Organization of the Petroleum Exporting Countries Governor Hossein Kazempour Ardebili criticized the reported request from the United States to Saudi Arabia that it boost its oil production to cover the declines expected in Iranian oil exports following the U.S. reimposition of sanctions on Iran. He predicted that OPEC would not "act against two of its founder members" and that oil prices would rise in response to U.S. sanctions on Iran and Venezuela. ([Reuters](#))

General

[Trump to skip climate portion of G7 after Twitter spat with Macron and Trudeau](#)

Kevin Liptak et al., CNN

President Donald Trump plans to depart from this weekend's Group of 7 summit in Canada several hours early, the White House announced Thursday, punctuating an explosion of acrimony between Trump and his foreign counterparts on the eve of the talks.

['It's a mess': Employees fret over spending spree](#)

Christa Marshall, E&E News

The Department of Energy has been on a spending spree, making employees worry their agency is "cutting corners" by moving so much cash so quickly.

[Toyota offered Pruitt private test drive of new Lexus model, emails show](#)

Lucien Bruggeman, ABC News

Toyota's top brass offered embattled Environmental Protection Agency Administrator Scott Pruitt a private test drive in one of Lexus' latest models late last year, and although it's not clear if there was ever a test drive, it's a potentially problematic pitch to the head of a regulatory body from a company subject to its regulation.

[Scott Pruitt Made Public Servants Fetch His Protein Bars and Greek Yogurt](#)

Lachlan Markay and Asawin Suebsaeng, The Daily Beast

If you've worked for Scott Pruitt, there's a not-insignificant chance that you have fetched him his favorite junk-and health!-food while on the job.

[The Chemical Industry Scores a Big Win at the E.P.A.](#)

Eric Lipton, The New York Times

The Trump administration, after heavy lobbying by the chemical industry, is scaling back the way the federal government determines health and safety risks associated with the most dangerous chemicals on the market, documents from the Environmental Protection Agency show.

[More than 100 bipartisan lawmakers urge Pruitt to scrap 'secret science' rule](#)

Miranda Green, The Hill

Bipartisan members of the House are calling on the Environmental Protection Agency (EPA) to withdraw a recently proposed rule aiming to increase transparency that some fear will limit science used in the regulation process.

[Ex-Volkswagen CEO summoned to testify in emissions lawsuit: Bild](#)

Ilona Wissenbach et al., Reuters

Former Volkswagen Chief Executive Martin Winterkorn has been asked to testify before a German court in connection with a lawsuit seeking damages from the carmaker over its emissions cheating scandal, a German paper reported on Thursday.

[Pruitt Starts Rewriting How EPA Weighs Costs, Benefits of Regulation](#)

John H. Cushman Jr., InsideClimate News

The Environmental Protection Agency took its first step on Thursday toward a comprehensive overhaul of the cost-benefit calculations that underpin the entire array of its regulations, notably any actions to rein in global warming.

[Oil Prices Cool After Recent Rally](#)

Sarah McFarlane, The Wall Street Journal

Oil prices edged lower Friday, giving up some of the ground made in a recent rally spurred by supply concerns in Venezuela and Iran.

Oil and Natural Gas

[Iran slams U.S. for seeking Saudi oil output hike, says OPEC won't comply](#)

Alex Lawler, Reuters

Iran criticized a U.S. request that Saudi Arabia pump more oil to cover a drop in Iranian exports and predicted OPEC would not heed the appeal, setting the stage for a tough meeting of the producer group later this month.

[Oil Boom Bottleneck Costs Permian Investors \\$1 Billion a Day](#)

David Wethe et al., Bloomberg

More than \$1 billion a day. That's how much value a Permian Basin pipeline crunch wiped out from the explorers most focused on the booming U.S. shale region in two weeks.

Exxon to Show Its Green Side in Meeting with Pope Francis
Bradley Olson, The Wall Street Journal

Exxon Mobil Corp. the oil giant, long derided by environmentalists, is trying to give itself a green facelift.

Trump requested Saudi oil support before Iran nuclear decision - sources
Rania El Gamal et al., Reuters

A day before U.S. President Donald Trump withdrew from the Iran nuclear deal, one of his senior officials phoned Saudi Arabia to ask the world's largest oil exporter to help keep prices stable if the decision disrupted supply.

Canada pushes oil pipeline, looks to gain Chinese market and end US as sole buyer for its oil
Patti Domm, CNBC

By building the Trans Mountain expansion, Canada will be able to sell oil outside North America, bringing in higher prices for its oil.

Appalachian natural gas market reacts to explosion, force majeure
John McManus et al., Platts

An explosion early Thursday morning in Marshall County, West Virginia, on TransCanada's Columbia Gas Transmission system caused a force majeure on the pipeline's Leach XPress and put prices in the region on a roller-coaster.

Trump, Backing Coal and Nuclear, Shuns Natural Gas
Alex Neuhauser, U.S. News & World Report

President Donald Trump catapulted to office with the support of the natural gas industry and pledged to introduce an era of U.S. "energy dominance" led by gas and coal. But since taking office, Trump has repeatedly taken steps that promise to crimp the industry he once showered with praise and drive up costs for taxpayers he had promised to help.

Construction planned to prepare Alaska's Arctic refuge for oil drilling

Yereth Rosen, Reuters

The Trump administration said on Thursday it would spend \$4 million on construction projects in the Arctic National Wildlife Refuge in preparation for oil drilling in the nation's biggest wildlife park.

Oil demand set to peak around 2030 as more cars go electric: Equinor

Robert Perkins, Platts

Global oil demand will peak around 2030 at 111 million b/d as a sharp rise in electric vehicles and energy efficiency gains offset growing demand from the aviation and petrochemical sectors, Norwegian producer Equinor said in its long-term energy outlook.

Utilities and Infrastructure

The energy sector is driving job growth, but not where you think

Robert Walton, Utility Dive

Energy efficiency and utility investments in grid modernization are growing sector employment.

Renewables

Tesla Model X in California Crash Sped Up Prior to Impact

Alan Levin and Ryan Beene, Bloomberg

The Tesla Inc. Model X that crashed in California earlier this year while being guided by its semi-autonomous driving system sped up to 71 miles an hour in the seconds before the vehicle slammed into a highway barrier, investigators said Thursday.

2 Western senators want to repeal Trump's solar tariffs

Susan Montoya Bryan, The Associated Press

Republican Dean Heller of Nevada and Democrat Martin Heinrich of New Mexico introduced a measure that calls for duties and tariffs for

solar cells to revert to previous rates and to allow for companies affected by the tariffs hike to seek reimbursements.

Coal

Bluestone Coal to reopen met mine as export, domestic demand boom

Bob Matyi, Platts

Fueled by strong export and domestic demand for metallurgical coal, Bluestone Coal is reopening an underground mine in West Virginia in July and hiring 250 employees for all of its met coal operations in the state, CEO Jay Justice said Thursday.

Nuclear

Micro-Reactors Get Potential Boost in Defense Authorization Bill Provision

Jacqueline Toth, Morning Consult

A provision tucked into the House's annual National Defense Authorization Act that could eventually pave the way for smaller-sized nuclear reactors to be deployed at one or more sites operated by federal agencies sends a signal of support and opportunity in the burgeoning field, developers and industry observers say.

Hanford contractor settles accusations of using front companies

Annette Cary, Tri-City Herald

Washington Closure Hanford has reached a settlement agreement with the Department of Justice in a lawsuit involving millions of dollars worth of small-business subcontracts.

Judge's ruling keeps over-budget nuclear project from being shut down

Sammy Fretwell, The State

A judge on Thursday stopped the federal government from suspending construction of a nuclear fuel factory at the Savannah River Site atomic weapons complex near Aiken.

Climate

Truck Emissions Study Aimed at EPA Limits All Along, Records Show

Abby Smith, Bloomberg

Newly released records show university researchers coordinated closely with the company funding a study that found trucks with rebuilt engines were as clean as new trucks, an argument the company used to persuade the EPA to lift emissions limits on its products.

CO₂ trading group IETA warns on carbon floor price risk

Frank Watson, Platts

Global carbon market industry group, the International Emissions Trading Association, on Wednesday warned that the introduction of carbon floor prices by European countries risks distorting the market with no environmental benefits.

Opinions, Editorials and Perspectives

Nuclear Energy: A Path Forward for Environmental Advocates

Carol M. Browner, Morning Consult

As a former Environmental Protection Agency administrator and director of the White House Office of Energy and Climate Change Policy, I have long championed accountability and stewardship for the planet - a sense of ownership over the role we play in the fate of our world.

The nuclear industry is making a big bet on small power plants

Scott L. Montgomery, The Conversation

Until now, generating nuclear power has required massive facilities surrounded by acres of buildings, electrical infrastructure, roads, parking lots and more. The nuclear industry is trying to change that picture - by going small.

California Adopts Federal HFC Rules After Court Gutted EPA SNAP Program

The California Air Resources Board (CARB) has adopted strong controls on hydrofluorocarbons (HFCs) -- the potent climate warming chemicals -- in refrigerants and air-conditioning systems that echo requirements under EPA's Significant New Alternatives Policy (SNAP) program that were gutted by a court ruling last year.

EDF Signals New Chemical-Specific Path To Target EPA SNURs Under TSCA

The Environmental Defense Fund (EDF) is warning that a draft EPA rule allowing a new use of an existing chemical is "legally vulnerable," suggesting a new chemical-specific path for environmentalists to challenge EPA's approval of new chemical uses under the revised Toxic Substances Control Act (TSCA).

Judges Grapple With How To Force Climate Review Of Coal Lease Program

Appellate judges during March 23 arguments appeared to grapple with how environmentalists could force the Interior Department's Bureau of Land Management (BLM) to review the climate change impacts of its coal leasing program under the National Environmental Policy Act (NEPA).

Court Faults BLM NEPA Review For Failing To Assess Downstream GHGs

A federal district court has found the Bureau of Land Management's (BLM) resource management plan (RMP) for the fossil fuel-rich Powder River Basin to be in violation of the National Environmental Policy Act (NEPA) for failing to consider the downstream greenhouse gas impacts of the vast oil, gas and coal resources that could eventually be extracted under the plan.

Utilities, Northeast States Clash Over Proof For EPA Interstate Air Petitions

Electric utilities and Northeastern states are clashing over the standard of proof states must meet in order to succeed with Clean Air Act petitions asking for direct federal regulation of air pollution sources in one state that

are hindering another state's ability to attain national ambient air quality standards (NAAQS) such as the ozone NAAQS.

Daily Feed

EPA floats new climate talking points downplaying GHG science

The agency's newly developed talking points stress adaptation to the effects of climate change while saying there are "clear gaps" in studies on its human causes.

Quote-Unquote: Covering a wide range of environmental issues

Including: 'secret science', the Marks legal test, cybersecurity and a leaner IG office.

Ewire: EPA, states meet to speed permitting

In today's Ewire: EPA is meeting with state regulators to speed agency approvals of a host of state permits. Plus: Pruitt fights back on travel costs and the last Clean Power Plan meeting.

EPA stepping up cybersecurity effort following recent utility attack

EPA is sponsoring a free workshop to prepare water utilities for possible cybersecurity attacks in the wake of recent Russian attacks on utilities and other critical infrastructure.

Subject: Morning Energy: Trump wildfire tweets renew spending fight — Several API staffers head for exit — City goes to court over PFAS

By Kelsey Tamborrino | 08/08/2018 05:38 AM EDT

With help from Annie Snider and Eric Wolff

MAKING WAVES: In attempting to blame California's devastating wildfires on environmental laws and Democratic Gov. Jerry Brown, President Donald Trump may have upped the stakes for one of the many spending fights Congress will have to resolve this fall. No serious expert has endorsed the president's view that allowing some water to follow its natural course to the Pacific Ocean has complicated efforts to battle the blaze, and the president offered more measured comments late Tuesday night. But Trump's earlier series of tweets this week echoed arguments that agricultural interests have been making for years in long-running wars over how the thirsty state's scant supplies get used.

In Congress, California Republicans are trying to block the state from diverting less water to central and southern California farms and cities to preserve more for endangered fish, a plan that has won support from local green groups like the San Francisco chapter of the Sierra Club. The State Water Resources Control Board, whose members were appointed by Brown, is set to vote this month on the plan, and while agricultural interests and their allies are largely powerless to stop him in Sacramento they have had better luck in Washington. GOP Rep. Jeff Denham, whose Central California district would feel some of the deepest cuts under the state's plan, successfully attached an amendment to the House Interior-EPA appropriations bill to block federal funding related to implementation of the plan.

The policy rider faces an uphill battle as appropriators attempt to conference the House measure with the Senate's companion bill, H.R. 6147 (115), which contains no such language. Sen. Dianne Feinstein, the California Democrat who was key to a 2016 California drought deal, hasn't taken a public position on the issue, but has historically opposed legislative efforts to override California law. And the provision is sure to draw the ire of Northern California Democrats who have called Denham's provision a water grab.

Denham hosted Interior Secretary Ryan Zinke at the New Melones Dam late last month, and shortly thereafter the Interior Department formally weighed in with comments opposing the state's plan, saying it would "essentially elevate the Project's fish and wildlife purposes over the Project's irrigation and domestic purposes contrary to the prioritization scheme carefully established by Congress."

Don't forget: Zinke's No. 2, David Bernhardt, was previously the long-time lobbyist for the powerhouse Westlands Water District, battling to send more water to the district's massive farms.

That's not all: The president presented a subdued response to the California wildfires during remarks Tuesday night, where he told reporters he was "monitoring the situation very close," adding that his administration "is in constant contact with everything going out in the state and with the local authorities and with the state authorities." Trump applauded the firefighters and first responders and said his administration would hold meetings about the wildfires, "because there are reasons and there are things you can do to mitigate what's happening," per a pool report.

WELCOME TO WEDNESDAY! I'm your host, Kelsey Tamborrino. Bracewell's Frank Maisano is back with the win for knowing the island country of Tokelau is powered entirely by solar. SEVERAL API STAFFERS HEAD FOR EXIT: The oil and gas industry's top trade association is losing several staffers after hiring [a new chief executive](#), according to sources and social media posts. At least six officials at the American Petroleum Institute, including one of its top lobbyists, have left in recent months, an association spokesman confirmed to Pro's Ben Lefebvre and Marianne LeVine. API's former senior director of federal affairs, Khary Cauthen, is among those who've exited. Cauthen is now vice president of federal affairs at LNG supplier Cheniere, according to a Cheniere spokesperson. Additional senior officials at API are expected to leave in the coming weeks, sources said. Read more [here](#).

DINNER GUESTS: Trump dined last night with [business executives](#) at the White House, including Continental Resources CEO Harold Hamm, according to a pool report. The dinner follows [news](#) this week that Hamm's company gave \$25,000 in May to the legal defense fund created for Trump aides caught up in special counsel Robert Mueller's Russia investigation.

VOTERS SELECT MICHIGAN GOV. CONTENDERS: Come November, Democrat Gretchen Whitmer will face off against Republican state Attorney General Bill Schuette for Gov. Rick Snyder's term-limited seat amid the still-unresolved drinking water crisis in Flint and PFAS contamination elsewhere. Whitmer won the Democratic nomination Tuesday, turning back a primary challenge from progressive [outsider candidate](#) Abdul El-Sayed. Schuette, who leads the state's investigation into the Flint water crisis, also handily won his race. Read the recap of last night's primary winners and losers [here](#).

Detroit-area voters faced power outages in at least 14 polling sites due to thunderstorms that struck the area Monday night, electric and gas company DTE Energy [said](#) Tuesday morning. The outages caused some poll workers to rely on flashlights and small generators to keep things running for voters, according to [tweets](#) sent by Rashida Tlaib, a Democratic candidate in the 13th District. Power was eventually restored to all 14 polling places by around 4:30 p.m., the electric company [said](#).

CITY GOES TO COURT OVER PFAS: The toxic nonstick chemicals known as PFAS that have been popping up in water supplies across the country will be the focus of a lawsuit sought by the New York city of Newburgh. The city [filed a federal lawsuit](#) Monday over the contamination in its own water supply in the U.S. District Court of the Southern District of New York. The suit, the city said, seeks to require 23 defendants to clean up the watershed contamination and pay for the supply of clean water needed until the contamination is gone. The defendants range from those who have manufactured or sold the chemicals to those who owned and operated the Stewart Air National Guard Base and Stewart International Airport, where the contamination originated. The lawsuit alleges the defendants' use of the "aqueous film forming foam" resulted in the spread of 12 different types of PFAS chemicals within Washington Lake, the city's primary water supply.

EDF FILES 'SECRET SCIENCE' FOIA SUIT: The Environmental Defense Fund is suing EPA over its failure to release documents requested under the Freedom of Information Act pertaining to EPA's proposed "secret science" rule to ban the use of studies that don't publicly disclose all their data. Earthjustice is representing EDF in the [lawsuit](#), which was filed Tuesday in the District Court for the Southern District of New York. The suit comes as a slate of experts at Harvard University also submitted a [comment letter](#) on the transparency rule Tuesday, ahead of the Aug. 16 comment deadline.

SECRET KEEPERS: The Trump administration won't have to turn over documents to a law firm related to its legal arguments for the decision to shrink national monuments, U.S. District Judge David Nye said Monday. The law firm, Advocates for the West, sued for 12 documents withheld from a public records request related to the move to downsize the Bears Ears and Grand-Staircase-Escalante national monuments, The Associated Press reports. Instead the federal judge said the records are protected presidential communications. The Advocates for the West's lawyer told the AP the group hasn't decided whether to appeal the decision to the 9th U.S. Circuit Court of Appeals, but said the decision "shows how difficult it is to force sunlight on a government that flourishes in secrecy."

PRIVATE PRACTICE: Tesla CEO Elon Musk took to Twitter on Tuesday to say he's considering taking the electric car company private, jolting the company's stock. The tweet came after a Financial Times report that said Saudi Arabia's sovereign wealth fund has acquired an undisclosed stake of between 3 percent and 5 percent of Tesla's shares this year. In a vague tweet, Musk said he was considering taking the company private at \$420 a share and already has secured funding.

Shortly after, the company posted an email Musk sent to staff explaining the potential move. Musk wrote that the intention is not to merge SpaceX and Tesla, but to instead emulate SpaceX's structure. Tesla shares were at about \$342 in morning trading, Pro's Patrick Temple-West reports, but shortly after 2 p.m., trading was halted on the Nasdaq market at \$367.09, up 7 percent from the start of the day. When trading resumed, Tesla shares bid higher to close at \$379.44.

HAPPY BIRTHDAY, RFS: The Renewable Fuel Standard turns 13 today, making it old enough to have its bar or bat mitzvah. Ethanol producers are filled with naches over the program's expansion of domestic biofuel production, but they want presents. What they'd really like is a Clean Air Act waiver allowing year-round sales of E15, something Trump promised Iowans last week was "very close" (though acting EPA Administrator Andrew Wheeler was skeptical). "President Trump vowed to protect the engine of economic growth that has delivered for 13 years," Kyle Gilley, a spokesman for ethanol producer POET, said in a statement. "It is time to allow year-round E15 access for America's drivers."

BLM SEEKS COMMENT ON ALASKA PROSPECT: The Bureau of Land Management announced Tuesday it is taking comment until Sept. 6 on scoping for an environmental impact statement for the Willow oil and gas prospect within the Bear Tooth Unit of Alaska's National Petroleum Reserve. ConocoPhillips Alaska initiated discussions with the agency regarding the potential development of the prospect, BLM said, which is located within federal leases held by ConocoPhillips.

The proposed project includes the construction of a central processing facility, roadways, an infrastructure pad, drill pads with up to 50 wells on each, an airstrip, pipelines, and a gravel mine on the BLM-managed lands within the reserve, which makes up 23 million acres. Already environmentalists are targeting the project's potential adverse effects. "It will scar the land, harm wildlife and worsen climate change," said Kristen Monsell, senior attorney at the Center for Biological Diversity, in a statement.

POWER BACK FOR MOST: The Puerto Rico Electric Power Authority said this week that just 25 customers — or .002 percent — remain without electricity in the aftermath of Hurricane Maria, which first hit the island 11 months ago. That number is out of the close to 1.4 million customers who initially lost power from the hurricane.

CLIMATE SUMMIT IN SIGHTS: The Peoples Climate Movement will host a press conference in San Francisco today announcing its "Rise for Climate, Jobs and Justice" day of action on Sept. 8 — one week before the Global Climate Action Summit takes place in the city. Today's press conference will involve a street mural drawn in real-time by artists using materials from areas affected by the California wildfires.

MAIL CALL! NUCLEAR REACTIONS: Four senators are expressing concern over a draft proposed rule to decommission nuclear power plants. In a letter to Nuclear Regulatory Commission Chairwoman Kristine Svinicki, the lawmakers question the rule's changes to environmental considerations and financial protection requirements, among other issues, and write that the proposal would make it easier for nuclear power plants to be exempt from safety, security and emergency planning regulations. The letter was signed by Sens. Ed Markey, Bernie Sanders, Kirsten Gillibrand and Kamala Harris.

Trump wildfire tweets spark bewilderment about California water Back

By Annie Snider, Carla Marinucci and Jeremy B. White | 08/06/2018 03:10 PM EDT

OAKLAND, Calif. — Californians are stunned at President Donald Trump's latest tweets on the state's catastrophic wildfires — and his insistence that the state is burning because leaders are letting too much fresh water flow into the Pacific Ocean.

Trump tweeted Monday that California "Governor Jerry Brown must allow the Free Flow of the vast amounts of water coming from the North and foolishly being diverted into the Pacific Ocean. Can be used for fires, farming and everything else. Think of California with plenty of Water - Nice! Fast Federal govt. approvals."

That tweet — on the heels of a Sunday tweet that referenced California's "bad environmental laws" as a cause of the state's current raging wildfires — drew an immediate reaction from veteran California GOP strategist Rob Stutzman, who responded via Twitter: "This is nuts" and also "low water IQ." Stutzman has advised former Gov. Arnold Schwarzenegger and a host of national and state GOP candidates.

Trump's comments may be referencing an unrelated dispute between Brown's administration and California Republicans over how much of the state's water can be diverted to Southern California farms and cities and how much must be allowed to flow naturally to benefit endangered and threatened fish species.

Wildfires around California have killed nine people, but firefighters have not raised concerns about the available water supplies.

"The notion that somehow more water would be mitigating or better in fighting these fires is just mind-boggling," Stutzman told POLITICO on Monday. "I don't watch 'Fox & Friends,' but it would seem that someone has put the idea in his head. It doesn't even show an elementary understanding of water policy."

Fox & Friends had aired a segment about the California fires nearly five hours before Trump's Monday tweet but didn't discuss water issues as part of the segment.

Stutzman called the president's recent tweets on California fires and water policy "frightening," saying that "water has nothing to do with why these places are tinder boxes. It's very exasperating. ... It's a statement from the president that shows no understanding of hydrology."

He said he would advise Brown, a Democrat, to "not take the bait" and react to such uninformed views.

Indeed, Evan Westrup, the spokesman for Brown, told POLITICO that "this does not merit a response." But he also added via email: "It's a sad state of affairs when journalism is reduced to chasing the uninformed, unsupervised tweets of the president."

Some Democrats seized on the latest tweet. Rhys Williams, spokesman for Democratic gubernatorial candidate Gavin Newsom, tweeted: "Has anybody seen the baby's pacifier? He dropped it again."

In a purely political sense, Trump's tweets reflected his alignment with California Republicans who have long complained that the state unfairly prioritizes environmental uses for water over the state's sprawling agricultural industry. Putting "fish over farms" is a popular formulation that has been invoked by Trump allies from California's agricultural heartland, such as Reps. [Devin Nunes](#) and [Kevin McCarthy](#).

"Forests should be managed properly and water should be allowed for farmers to grow food to feed people," Nunes wrote on Twitter in response to Trump's Sunday tweet, cheering the president "for bringing much needed attention to our flawed environmental policies!"

Trump has courted the Republican-leaning Farm Bureau heavily. California's water wars are a huge issue for the group. Trump addressed the annual Farm Bureau convention in January, becoming the first president in more than two decades to do so. He also [raised the issue](#) during a campaign stop in Fresno in 2016.

But experts who make their living studying California's water system reacted for the second consecutive day with a communal groan of exasperation. Peter Gleick of the Pacific Institute, one of the state's foremost experts on how the state manages its water, issued a tweet calling Trump's latest missive "nuts" after labeling the president's initial tweet "gobbledygook bullsh--."

In an email to POLITICO, Gleick noted that the water that flows from California's rivers into the ocean is what remains after cities and farms take their gulp — and that those flows are critical to shoring up ecosystems that, in some parts of the state, are teetering on the brink of collapse.

"Trump's tweets last night and today show a profound misunderstanding about water, fires, California environmental policy, and of course, climate change," Gleick said, adding that the "idea that somehow state water policies are leading to a shortage of water for fighting the fires is too stupid to rebut."

Stutzman said that even more potentially damaging is that the president's Twitter pronouncement is "even somewhat offensive, given that he's trying to make a point on the backs of these fires."

He noted the president on Twitter to date has shown "no sympathy" and expressed no personal concern for the 18 active and raging blazes around the state, which have to date been responsible for the destruction of more than 1,000 homes and billions of dollars in damage.

Ironically, Stutzman said, Trump has stepped on what could have been his own positive message to California — that the White House "has been quick to approve funds and the emergency declarations have come without any complications."

In July, the State Water Resources Control Board proposed major changes to the state's water allocations, preserving more for ailing fish populations. The changes are slated for a vote later this month. That announcement drew the ire of the state's agricultural groups, and state Republicans have turned to their allies in Congress, who have voted to block federal funding related to the allocation plan.

API sees staff departures as new chief settles in [Back](#)

By Ben Lefebvre and Marianne LeVine | 08/07/2018 06:04 PM EDT

The American Petroleum Institute, the oil and gas industry's top trade association, is losing several staffers as its new chief executive settles in, according to sources and social media.

At least six API officials, including one of its top lobbyists, have left in recent months, an association spokesman confirmed. Additional senior officials are expected to leave in the coming weeks, according to two other sources familiar with the moves.

The departures come as Mike Sommers, a former chief of staff to then-House Speaker John Boehner, formally [takes over](#) API from former president and chief executive Jack Gerard. The industry is negotiating a host of issues with Congress and the White House, including a new offshore drilling plan, renewable fuel standards and steel tariffs.

API's former senior director of federal affairs Khary Cauthen has left to become vice president of federal affairs at LNG supplier Cheniere, according to a Cheniere spokesperson. Former API policy adviser Heidi Keller joined oil company BP as associate director in July, according to her LinkedIn account. Former API Senior Director for External Mobilization Deryck Spooner joined e-cigarette company JUUL Labs, according to a JUUL spokesman. Tyra Metoyer, who worked in API's Houston office, also decamped for JUUL in July, according to her LinkedIn profile.

Former Chief Financial Officer John Robertson left in June, according to his LinkedIn page. Vice President of Global Industry Services Lisa Salley has also left the association, the API spokesperson confirmed. Their current activities are unknown.

The former API staffers did not immediately reply to requests for comment sent via social media.

Business executives come back to Trump a year after Charlottesville [Back](#)

By Andrew Restuccia, Christopher Cadelago and Stephanie Murray | 08/07/2018 01:52 PM EDT

Business executives who distanced themselves from President Donald Trump a year ago in the wake of the deadly clashes in Charlottesville are back to finding common cause with the administration.

The guest list for a Tuesday night dinner at the president's Bedminster, New Jersey, country club includes 15 top executives of some of the country's largest companies. Of the guests, one publicly resigned from a Trump outside advisory council after the president's refusal to condemn white supremacists and neo-Nazis. And two others were reportedly close to stepping down from another advisory council before Trump abruptly dissolved the councils himself amid the backlash.

The dinner offers Trump a high-profile opportunity to show his critics that at least some in the business community have set aside their previous criticism of him.

"They feel that they can associate with [Trump] now because his policies have been such an amazing success," said Stephen Moore, an economic adviser to Trump during the 2016 presidential campaign.

Moore added that he was surprised the president, infamous for blocking those he believes have betrayed him, invited some executives back into the fold: "I don't understand why President Trump would invite anyone who ran for the high grass when there were the first signs of trouble."

One of the attendees slated to attend Tuesday's dinner, Johnson & Johnson CEO Alex Gorsky, released a statement last year criticizing Trump and announcing his decision to step down from Trump's advisory council on manufacturing.

Though Gorsky had initially insisted he would remain on the council, he changed his mind after Trump gave a press conference at Trump Tower in which he drew an equivalence between white supremacists and the protesters who rallied in Charlottesville against their racist views. "[T]he president's remarks yesterday — equating those who are motivated by race-based hate with those who stand up against hatred — were unacceptable," Gorsky said in the statement at the time. A Johnson & Johnson spokesperson did not immediately respond to a request for comment about why Gorsky decided to attend the Bedminster dinner.

At least two other attendees - PepsiCo CEO Indra Nooyi and Ernst & Young CEO Mark Weinberger - were reportedly weighing stepping down from a separate outside policy advisory group before the president announced that he was disbanding the councils.

Several Trump loyalists are also among the invitees to the dinner, including Continental Resources CEO Harold Hamm, Red Apple Group CEO John Catsimatidis and LeFrak CEO Richard LeFrak. Hamm, a vocal defender of Trump who has advised him on energy policy, donated \$25,000 in May to a legal defense fund created for the benefit of White House aides.

Another attendee, FedEx CEO Fred Smith, also has close ties to Trump, even though he has criticized Trump's trade policies. Smith was among the business executives who attended a "Pledge to America's Workers" event last month at the White House, where he received repeated shoutouts from Trump.

Boeing CEO Dennis Muilenburg, who will also attend the dinner, has also courted Trump since he took office and regularly speaks with the president.

Though Nooyi was among the executives who were angry about Trump's remarks about Charlottesville, she also has close ties to the White House. Ivanka Trump, Trump's daughter and adviser, called Nooyi a "mentor" to her in a tweet Tuesday morning amid news that Nooyi would step down as Pepsi's CEO.

International Paper CEO Mark Sutton, another of the participants scheduled to attend Tuesday's dinner, condemned the violence that took place in Charlottesville in a statement at the time, but said he was remaining on Trump's manufacturing council.

Other attendees scheduled to attend Tuesday's dinner include Fiat Chrysler CEO Michael Manley, Mastercard CEO Ajaypal Banga, Boston Beer Company chairman Jim Koch, Honeywell CEO Darius Adamczyk, Newsmax CEO Christopher Ruddy and DocuSign chairman Keith Krach.

The dinner comes during Trump's working vacation in Bedminster, which White House spokesman Hogan Gidley said Monday is taking place while the "White House undergoes needed renovations to the Oval Office and other areas in the West Wing."

White House aides have organized several meetings with the president throughout the week.

Trump allies back fund for aides' legal defense in Mueller probe [Back](#)

By Kyle Cheney and Lorraine Woellert | 08/06/2018 01:54 PM EDT

A legal defense fund created for the benefit of White House aides has largely relied on contributions from a handful of President Donald Trump's longtime friends and political allies in the first five months of its existence.

Phillip Ruffin, a billionaire casino mogul who has worked with Trump and accompanied him to Moscow for the Miss Universe Pageant in 2013, contributed \$50,000 in April, the documents show. Continental Resources, an oil shale company whose CEO, Harold Hamm, has advised Trump on policy, kicked in \$25,000 in May.

The largest donation in the most recent quarter came from Geoffrey Palmer, a Los Angeles developer who has been a large political contributor of Trump's. He contributed \$100,000 in late June.

The contributions are being collected by the Patriot Legal Expense Fund Trust, a vehicle established by Trump allies in February and managed by former New York GOP Congresswoman Nan Hayworth. It is designed to pay for legal fees for Trump aides who are roped into special counsel Robert Mueller's investigation of Russian interference in the 2016 presidential election. Aides to former President Bill Clinton had a similar arrangement for congressional and special counsel probes during his administration.

The only money raised in the fund's first quarter, which ended March 31, came from a Virginia-based consulting firm called ProActive Communications, which chipped in \$22,000. The firm is owned by Mark Serrano, a onetime consultant to Trump's presidential campaign who is also the spokesman for the legal defense fund.

In all, the fund raised about \$200,000 from February to the end of June. It released its required first- and second-quarter paperwork Monday, after watchdog groups filed complaints with the IRS that the fund had missed a July filing deadline.

"I expected to see millions of dollars raised already," said Craig Holman, a lobbyist with the nonprofit Public Citizen, which filed a complaint with the IRS. "Clearly, there has not yet been a comprehensive effort to raise funds and support the legal costs of administration officials."

Clinton's first fund, established in 1994 to help pay for his personal legal defense amid inquiries into a land deal and a sexual harassment lawsuit, raised more than \$608,000 in the first six months of its existence. The Trump defense fund was designed to pay for his aides' expenses, not for the president's own legal fees.

The Republican National Committee also has been paying legal fees for Trump family members and others under investigation for activities related to the 2016 campaign.

Hayworth did not respond to requests for comment. A lawyer for the fund referred questions to Serrano, who also did not respond.

The Trump team's fund does not accept donations from lobbyists, and anyone giving at least \$200 over a calendar year must have their donations disclosed.

Ocasio-Cortez and Sanders work to elect first Muslim governor [Back](#)

By Daniel Strauss | 08/04/2018 06:42 AM EDT

Bernie Sanders and Alexandria Ocasio-Cortez are joining forces to elect an underdog but potentially history-making candidate on the ballot in Michigan next week: Abdul El-Sayed, a 33-year-old physician who would be the nation's first Muslim governor.

Sanders is spending the final weekend of the race in the state, and Ocasio-Cortez was there last week to campaign with El-Sayed ahead of Tuesday's Democratic primary. He also has a constellation of hard-left groups in his corner, including MoveOn.org, Justice Democrats and Our Revolution, the offshoot of Sanders' failed presidential campaign.

After a July lull in primary season, the race in Michigan represents the first opportunity for insurgent liberals to shove Democrats leftward since Ocasio-Cortez's upset victory over Rep. Joe Crowley (D-N.Y.) six weeks ago. Tuesday is also the first real test of the burgeoning alliance between Sanders and Ocasio-Cortez, who have also campaigned for two congressional candidates on the ballot next week in Kansas.

El-Sayed, a first-time candidate who's trailed in public polls, has emerged as a threat to the front-runner, former state Sen. Gretchen Whitmer. Whitmer is a favorite of most elected Democrats as well as organized labor and women's groups such as EMILY's List, which backs Democratic women who support abortion rights.

Every public poll of the primary has shown Whitmer leading El-Sayed and entrepreneur Shri Thanedar, a self-funder who has blanketed the airwaves with television ads but hasn't caught fire. But with Sanders parachuting into Michigan this weekend, El-Sayed backers and Sanders allies see a parallel in recent history.

"Bernie was written off" going into the 2016 presidential primary in Michigan, said Democratic strategist Julian Mulvey, whose firm worked for Sanders on that campaign. "I think Nate Silver predicted that Hillary Clinton had a 99 percent chance of winning in Michigan, and Bernie was able to pull it out. So the best thing you can do is have Bernie going in there to help try to close."

Attorney General Bill Schuette is the favorite to win the Republican primary and has been endorsed by President Donald Trump. Schuette has worked to distance himself from unpopular term-limited Gov. Rick Snyder, a Republican. The state is seen as a prime pickup opportunity for Democrats.

According to a Democrat close to her campaign, Whitmer's most recent internal polling showed her with a 16-point lead in the primary. She has raised more money than El-Sayed, and she has more institutional support: In addition to local politicians, unions and EMILY's List, Whitmer was just endorsed by Sen. Kirsten Gillibrand (D-N.Y.).

But El-Sayed, a former executive director of the Detroit Health Department and a public-health expert, has built a significant support base by presenting himself as a Sanders-aligned progressive alternative to the more mainstream Whitmer. Some of the same outside groups that backed Sanders in 2016 are behind El-Sayed, as are Rep. Ro Khanna (D-Calif.) and grass-roots favorites like Ocasio-Cortez and activist Michael Moore. El-Sayed has also received donations from Ben Affleck and received praise from the hosts of the liberal podcast Pod Save America.

Sanders endorsed the candidate only this week, even though El-Sayed had embraced the Vermont senator and many of his core issues, like a \$15 minimum wage, single-payer health care and tuition-free college for families making less than \$150,000 a year. Sanders is planning to appear at two El-Sayed rallies on Sunday, in Detroit and Ypsilanti.

"Abdul has run a campaign — win or lose — that speaks explicitly to the policies that Bernie talked about during the 2016 campaign and continues to talk about in the Senate," said Ari Rabin-Havt, a senior adviser to Sanders. "Abdul lines up so perfectly on these values that the endorsement is a testament to running a campaign based on that."

El-Sayed hasn't shied from his religion in the campaign, even as he's had to swat away rumors that he's a George Soros plant sympathetic to the Muslim Brotherhood. He's happily described the immigrant story of his father moving to the United States from Egypt and spending time with his stepmother, whose family history in Michigan goes back to before the Civil War.

But foremost, El-Sayed and his liberal supporters are betting that campaigning on a Sanders-style platform isn't just good politics in a primary: They're trying to prove that a candidate can tout these issues and win one of the three states that Trump flipped in 2016.

"Michigan is ground zero for the debate over how you win back power from Trump and Trumpism," said Ben Wikler, the Washington director of MoveOn.org, which is backing El-Sayed. "And Abdul El-Sayed is the living avatar of the idea that to defeat Trump you don't move right."

In addition to El-Sayed, Sanders and Ocasio-Cortez are backing two congressional candidates on the ballot Tuesday in Kansas. The two New York natives traveled last month to the state to stump with two candidates: Brent Welder, a former Sanders campaign staffer running for a battleground seat in the Kansas City suburbs, and James Thompson, a repeat, liberal challenger for a more solidly Republican seat.

Welder is running in a crowded, six-candidate Democratic primary for the right to take on Rep. Kevin Yoder (R-Kan.) in a district Clinton narrowly won in 2016. But in a sign that Republicans see Welder's ties to Sanders as a liability, a conservative group began running last-minute ads on Friday that appear designed to boost Welder in the Democratic primary, meddling that Welder's opponents decried, blaming Yoder and the GOP.

Back in Michigan, while El-Sayed is rallying with Sanders, Whitmer will be campaigning with prominent Michigan Democratic politicians, including Detroit Mayor Mike Duggan and Rep. Brenda Lawrence.

Whitmer's surrogates and supporters remain bullish about her chances but also are familiar with their state's history of upsets in gubernatorial races. Democrat Jennifer Granholm wasn't the front-runner when she ran for governor in 2002.

"There's polling data, but primaries are tough to poll," said former Gov. Jim Blanchard, a Whitmer supporter, adding that he still expects Whitmer to win.

EMILY's List President Stephanie Schriock painted the primary as an ultimately constructive argument about how to win a general election fight in a battleground state. The differences between Whitmer and El-Sayed, Schriock said, pale in comparison to the contrast between either of them and Schuette, the front-runner in the Republican primary.

"The values all these Democrats share is the same," Schriock said. "What we're having is a very active debate on how to get there. I'll take that. That's what we're talking about there. You've got Schuette on the other side, who wants to tear it all down."

El-Sayed echoed that sentiment on Friday, promising that Democrats will come together, despite the intraparty battle playing out in the final days before the primary.

"Four days out, things can get heated," El-Sayed tweeted Friday. "I admire [Whitmer and] the vigorous debate we share. While I deeply disagree on health care [and] corporate money in politics, I admire her work [and] commitment to serve. We will walk in lockstep, whoever wins, to a blue wave in November."

Chaotic day for Tesla shares amid Musk's tweeting [Back](#)

By Patrick Temple-West | 08/07/2018 05:59 PM EDT

Trading in shares of electric vehicle maker Tesla Inc. was halted today after founder and CEO Elon Musk said on Twitter that his company could be taken private.

Musk stunned the stock market with a message from his personal Twitter account: "Am considering taking Tesla private at \$420. Funding secured."

Tesla shares were at about \$342 in morning trading. Shortly after 2 p.m., trading was halted on the Nasdaq market at \$367.09, up 7 percent from the start of the day. When trading resumed, Tesla shares bid higher to close at \$379.44.

Tesla's shares have been attacked by short-sellers this year, and Musk has taunted them on Twitter before.

"It is possible that he wants to hurt short sellers of Tesla now [and] he has been very vocal against them recently." analysts for Morningstar wrote today.

WHAT'S NEXT: In a [blog](#) posting on Tesla's website, Musk said no final decision has been made and he did not elaborate about funding for the deal.

Subject: Draft Admin. Response to SAB re: 2017 Actions & Scientific Transparency
Attachments: Draft 070518 - Admin Response to SAB re 2017 Actions + Sci Transpy.docx

Clint,

With compliments to Leif, here's an updated draft response to the SAB. Included a few marginal questions and notes for your review/awareness. Please refine and share with Justin as you like and let me know how/when you'd like to also reach out to ODs/staff for feedback on the response and potential briefings and/or questions to the Board for consideration. Thanks!

John

Pruitt's Scandals Complicate Path For EPA Waste, International Nominees

Ongoing concerns about EPA Administrator Scott Pruitt's ethics scandals, the agency's limited responses to oversight requests and other issues will make it difficult for President Donald Trump's nominees to head the

agency's waste and international affairs offices to gain Senate approval, Democratic senators told a June 20 environment committee hearing.

Reversing Course, Inhofe Defends Pruitt, Calling Accusations 'Lies'

Sen. James Inhofe (R-OK) is strongly defending EPA Administrator Scott Pruitt against numerous allegations of unethical conduct, calling them "outrageous lies," an apparent reversal from a week ago when the senator said he was upset by Pruitt's missteps and suggested the administrator might need to step down.

Major Glider Manufacturer Blames Layoffs On EPA's Stalled Repeal Proposal

One of the country's largest manufacturers of high-emitting "glider" trucks is blaming EPA's failure, so far, to scrap Obama-era production limits on the vehicles for layoffs at the company, a situation that highlights the Trump EPA's incomplete deregulatory efforts and which could play into political efforts to speed action on the repeal rule.

ATSDR Seeks To Downplay Effect Of PFAS Risk Levels Stricter Than EPA's

A federal health agency has released its much-anticipated draft toxicological profile for perfluorinated chemicals that recommends risk values more conservative than EPA's, but the agency is downplaying potential health concerns from exposures above its limits, cautioning the public not to read its levels as cleanup or health effects standards.

EPA Drops Plan For CWA Spill Rule Despite Settlement To Consider Policy

EPA is proposing to formally drop plans for a Clean Water Act (CWA) rule to prevent or contain industrial chemical spills by claiming that current policies already cover all the requirements that a comprehensive spill policy would include, drawing fire from environmentalists who had a settlement with EPA to consider pursuing the new rule.

Daily Feed

EPA issues TSCA new chemicals submission guide

EPA's guidance seeks to advise industry on how to ensure speedy review and approvals of their new chemicals submissions.

New York sues manufacturers over firefighting foam contamination

The state says the suit is the first to target manufacturers of firefighting foam containing perfluorinated chemicals.

EPA sends ozone NAAQS 'good neighbor' rule for OMB review

The agency's pending proposed rule could potentially find that EPA does not need to take additional regulatory steps to help states attain the 2008 ozone national ambient air quality standard.

Quote-Unquote: Covering NEPA, secret science and a plan to reorganize EPA

CEQ begins its long-awaited NEPA rethink, Colorado opts to adopt California vehicle rules, and the Heritage Foundation's approach for revamping EPA.

Ewire: Bipartisan group forms to push carbon tax

In today's Ewire: Co-chaired by former Sens. Trent Lott (R-MS) and John Breaux (D-LA), Americans for Carbon Dividends is hoping to break decades of GOP resistance to carbon controls.

Texas business group launches new suit over Obama-era CWA rule

The suit seeks to block not only the 2015 rule but any future rule from asserting authority over waters known as Texas coastal prairie wetlands.

Subject: Morning Energy: Second 'minibus' pulls in — The great California divide — Trump-Putin meeting's energy potential

By Kelsey Tamborrino | 07/16/2018 05:42 AM EDT

With help from Daniel Lippman

SECOND 'MINIBUS' PULLS IN: With negotiations still stalled on the first fiscal 2019 "minibus" funding bill, the House Rules Committee will meet today on the second minibus, which means debate on a host of thorny, energy-related issues. The measure, H.R. 6147 (115), combines funding for Interior-Environment with Financial Services, and while not as controversial as some of the other spending bills the House is slated to take up, it'll offer lawmakers ample opportunity to zero in on the indiscretions of former EPA Administrator Scott Pruitt, as well as address issues like what coastlines should be exempt from offshore drilling.

House Republican leaders are aiming to keep any fighting off the floor by curtailing the amendments to the two-bill package, Pro's Lauren Aratani reports. And because the Rules panel will likely seek a "structured" rule, the most controversial tweaks are expected to be cast aside. Still, Democrats will use debate over the spending bill to rehash Pruitt's missteps, Lauren reports, and pursue continued investigation into allegations that he misused taxpayer money.

The panel begins work today on more than 160 proposed amendments submitted last week to the Interior-Environment portion, including one to ensure EPA's inspector general will continue its investigations into Pruitt, and another that would bar funds from being used to install a private phone booth in or near the office of the Interior secretary. Another proposed tweak would require EPA to publicly disclose all funds used for top-level travel, within 10 days of each trip — a clear call to Pruitt's tenure at EPA.

ME is also keeping an eye on an amendment from Democratic Rep. Paul Tonko that would bar EPA from using money to adopt a rule that would keep the agency from using research without publicly disclosed data, as Lauren highlights. Dozens of lawmakers from both parties have also sponsored amendments that would bar federal funds from being used to support offshore drilling in various locations off the nation's coasts, as the White House seeks to expand exploration for oil and gas. Read more here.

GOOD MONDAY MORNING! I'm your host, Kelsey Tamborrino. The League of Conservation Voters' Gene Karpinski was first to identify Hawaii as the state that does not have a straight line forming part of its border. Today's question comes from Bracewell's Frank Maisano in honor of this week's All-Star game: Which presidents threw out the first pitch at an All-Star game in D.C.? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

What role will Hispanic voters over 50 play in Arizona this Fall? Read POLITICO Magazine's new series "The Deciders" which focuses on this powerful voting bloc that could be the determining factor in turning Arizona blue.

THE GREAT CALIFORNIA DIVIDE: California Democrats rebuked Sen. [Dianne Feinstein](#) this weekend and endorsed her progressive opponent, state Sen. Kevin de León, who has been embraced by climate hawks among other liberal activists in his long-shot bid to keep Feinstein from winning a fifth term. The vote offers a glimpse into the dynamics in the state Democratic party, POLITICO's Carla Marinucci and Jeremy B. White report, where infighting between moderate and progressive factions has taken over.

The decision to endorse de León delivers a much-needed lifeline to the struggling campaign of the state Senate president pro tem, who came in second in California's jungle primary earlier this year to earn a spot against Feinstein in November. De León has made climate and environmental policy keystone issues and has been endorsed by Climate Hawks Vote, 350 Action, 350.org's Bill McKibben and billionaire environmentalist [Tom Steyer](#). The nod from the state party ensures his campaign valuable voter outreach information and the potential for an infusion of federal campaign cash, Carla and Jeremy report.

Feinstein on Saturday downplayed the symbolism of the de León endorsement. "This was not a close primary election, and there were 32 people on the ballot," she said of the June vote. "I take nothing for granted ... we work hard." For his part, de León told POLITICO on Saturday that he thinks "it's always good to have younger generations rise up and assume positions of leadership."

Still, the vote draws attention to the deepening divide between in state's Democratic party and what action Feinstein is taking to lessen the pressure. Last week, the California Democrat [told E&E News](#) she supports a ban on fracking in the state, something she had previously stopped short of saying. As the ranking Democrat on the Senate Judiciary Committee, Feinstein has [also touted](#) her importance in the effort to oppose Brett Kavanaugh's nomination to the Supreme Court — another issue [closely watched](#) by environmentalists and industry alike.

Climate Hawks Vote Founder R.L. Miller said in a statement the group appreciated Feinstein's "new position on fracking," but highlighted de León's potential in California. "Kevin de Leon has shown vision, courage, and tenacity," Miller said. "He's an extraordinary leader for extraordinary times, moving California toward a bright future with bills like his SB 100 (100 percent clean energy by 2045) and SB 54, the California Values Act (sanctuary state) that was just upheld in court." Read [more](#).

TRUMP-PUTIN MEETING'S ENERGY POTENTIAL: The president is in Helsinki today for his highly anticipated meeting with Russian President Vladimir Putin. While the two have met before on the sidelines of other events, today's confab will be the first meeting between the two presidents, Jon Huntsman, the U.S. ambassador to Russia, [said Sunday](#). Unlike official presidential summits, the meeting in Helsinki will not feature a joint statement or any predetermined policy results. "You don't know what's going to come out of this meeting, but what it will be is the first opportunity for these presidents to actually sit down across a table, alone and then with their teams, to talk about everything from meddling in the election, to areas where we have some shared interests," Huntsman said.

Of course, President Donald Trump made news last week on the Russian energy front at a [breakfast meeting](#) with NATO chief Jens Stoltenberg where he said Germany is "totally controlled by Russia" and specifically called out the controversial Nord Stream 2 gas pipeline project. Energy Secretary Rick Perry said last week Trump thinks the "Nord Stream 2 is not in the European Union's best interest, and my bet is he'll be more than happy to tell President Putin that straight to his face," [Axios reported](#). The State Department [told Reuters](#) last week that Western firms invested in the pipeline were at risk of sanctions, although Perry told reporters that sanctions would be "kind of the last place we would like to land" but said they were an option.

WHERE'S WHEELER? Marking another departure from the Pruitt era at EPA, the agency gave a heads-up that acting Administrator Andrew Wheeler will be in Canonsburg, Pa., this afternoon. Wheeler will be in the area to attend a meeting of the Washington County Chamber of Commerce, alongside Region 3 Administrator Cosmo Servidio.

ON TAP THIS WEEK: The Rules Committee will meet Tuesday to consider a resolution, H. Con. Res. 119 (115), that calls a carbon tax "detrimental" to the U.S. economy and "not in the best interest" of the country. The meeting tees up a likely vote later this week on the non-binding resolution, following a recent push by conservative groups to take up the measure. The legislation is led by Majority Whip Steve Scalise, Pro's Anthony Adragna reports, and could offer an interesting vote for Climate Solutions Caucus members, who have yet to weigh in on specific solutions for addressing climate change.

EPA ETHICS OFFICIAL DEFENDS FOIA PROCESS: Kevin Minoli, EPA's principal deputy general counsel, replied last night to the top Democrat on the House Oversight Committee, who on Friday pressed for a subpoena over the agency's handling of FOIA requests. In his letter, Minoli offers to brief Congress on the agency's FOIA Expert Assistance Team that was created in 2013 to "make the FOIA process at EPA better." While Minoli's letter acknowledges "EPA's FOIA program is far from perfect," he highlights the work of the FEAT and other offices, writing that they have "laid a foundation from which EPA's FOIA program could be a model of what a FOIA program should be, not an example of what a FOIA program should not be." Read the letter.

MAIL CALL! Thirteen attorneys general on Friday demanded in a letter to Wheeler that his agency withdraw an order to manufacturers of glider trucks that the agency will not enforce a strict 300-unit production cap for 2018 and 2019, which was issued by Pruitt on his last day. The AGs call the move "clearly unlawful" and a violation of EPA's policy against "no action assurances." In a statement, New York AG Barbara Underwood said Pruitt gave "a parting gift to polluters on his very last day as EPA Administrator — bolstering the Trump Administration's legacy of siding with corporations over people." New York, along with California, Connecticut, Illinois, Maine, Maryland, Massachusetts, New Jersey, North Carolina, Oregon, Pennsylvania, Vermont and Washington, signed onto the letter, as did the Pennsylvania Department of Environmental Protection and the California Air Resources Board.

— **GOP Reps. Greg Walden, Gregg Harper and John Shimkus** wrote to Wheeler on Friday, seeking additional information on EPA's process for reviewing grant applications. Read the letter here.

CLEARPATH ACTION BACKS UPTON: Jay Faison's ClearPath Action Fund will announce its endorsement of Michigan Rep. Fred Upton today. The clean energy advocacy group will begin running digital ads backing the Michigan Republican as part of a six-figure effort for his reelection. Upton, who is the chairman of Energy and Commerce's Energy Subcommittee, "has an accomplished record of shepherding many bills hitting every facet of clean energy innovation," Faison said in a statement.

MOVERS, SHAKERS: Matthew Mailloux, managing director at the American Conservation Coalition, joined the New Hampshire Office of Strategic Initiatives as Gov. Chris Sununu's energy adviser.

— **Katie Valentine** is now a media relations associate at the Conservation Fund. She is the former deputy climate editor at ThinkProgress.

Lawmakers battle over busting budget to pay for veterans health care [Back](#)

Spooking House conservatives and risking a presidential veto, Senate spending leaders are proposing to blow past budget limits to fund a popular private health care program for military veterans.

Minutes before they were to meet on Thursday, congressional appropriators canceled their first public conference talk that had been intended to settle differences in three of the 12 annual spending bills President Donald Trump must sign by Sept. 30 to avert a government shutdown. One of the three provides for spending on veterans.

The 11th-hour cancellation came amid a cross-Congress showdown over how to pay for a program that allows some veterans to spend taxpayer money on private doctors and hospitals. The question is whether to break budget limits, known as caps, to come up with the cash.

"They canceled the meeting. But it's all about the VA," Senate Appropriations Chairman Richard Shelby (R-Ala.) told reporters Thursday, apparently referring to GOP leaders. "Do we break the caps? Do we prorate everything else? Do we cut other veterans programs to fund this? We got a shortfall, and we got to work it out. And we're not there yet."

Congress needs to approve \$1.6 billion for fiscal 2019, plus nearly \$18.2 billion more in the two years thereafter, to fully fund what has been authorized for the VA Choice program and its successor within the new VA Mission Act.

The suggestion that Congress "break the caps" set by the budget deal, H.R. 1892 (115), struck this year is already irking House conservatives, who would be loath to vote on any final spending bill that goes above those limits — even in the face of an impending shutdown this fall. The idea likely would not play well, either, in talks with a White House that was already seen as surprisingly conciliatory in signing that grand budget deal.

Money for veterans programs comes with special political protections, however, since policymakers want to avoid the uncomfortable optics of fighting funding for those who have served in the military. And top Democrats are already trying to use that perception to their advantage.

"You don't go to a veterans assembly and say 'We're not going to help the veterans,'" Sen. Patrick Leahy (D-Vt.), ranking Democrat on the Senate Appropriations Committee, said Thursday.

The administration has been heavily involved in discussions for weeks. The White House budget office has argued that any extra VA money would be akin to breaking this year's budget deal.

"It's obviously critically important to give veterans the resources they need, and we think that can happen inside the existing caps," according to a senior administration official.

Leahy planned to offer an amendment during the conference meeting that would have added funding for the veterans health care program. The meeting was then postponed, he said, because negotiators didn't want to go on record against doling out that cash. A GOP aide said that Republicans weren't expecting any amendments in Thursday's meeting, the first time negotiators would meet face-to-face.

"A lot of the people were I think concerned, I'm told, that they'd have to vote today," Leahy said.

The issue isn't as simple as supporting or opposing money for VA Choice, though.

The funding problem began last month, when Congress enacted a bill, [S. 2372 \(115\)](#), that created a budget gap by switching the program's community care services from the mandatory side of the ledger to the discretionary side.

Democrats — as well as some Republican appropriators — are in favor of exempting the new money from Congress' strict spending caps. But many Republicans, including White House officials, say the cash should come out of the government's already-determined budget, even if that means trimming the topline for other programs.

That means Congress would need to divert hundreds of millions of dollars from other programs into the veterans health care program, which until this year, was funded automatically.

For their part, House lawmakers have already agreed to pay for part of the program without blowing through budget limits. The veterans spending bill, [H.R. 5786 \(115\)](#), that the House passed last month as part of a three-bill [minibus](#) would fully fund the program for fiscal 2019.

In a statement to POLITICO on Thursday, House Speaker [Paul Ryan](#) called out Leahy by name, saying the Senate spending bill "neglected" to fund the VA program despite the House's action.

"This attack is the height of hypocrisy," said a senior House GOP aide. "Democrats are scrambling to cover up the fact they have not kept their promises as the House did."

House GOP leaders have repeatedly refused to adjust Congress' current spending cap to pay for the additional discretionary spending on the veterans program. Instead, Republicans agreed to pitch in that \$1.1 billion by reshuffling existing money from the House's funding bill for the Department of Homeland Security.

Their Democratic counterparts, led by Rep. [Nita Lowey \(D-N.Y.\)](#), have protested the move, arguing that it will shortchange other domestic programs. Lowey's own caps-busting amendment was rejected by the spending committee.

The fight over the budget caps has been long simmering and nearly broke out into the open earlier this summer.

Shelby had long backed Leahy's amendment to surpass the caps, but the GOP chairman was forced to shelve his support for bringing it to the floor at the last minute after several conservatives raised issues with it, according to Senate aides.

Shelby even declared on the Senate floor in May that he would support a plan that exceeds the caps, warning that Congress' newest version of the veterans law authorized large sums of spending "without providing any way to pay for it under the spending caps."

"Fortunately, there is existing law and ample precedent for adjusting spending caps to reflect changes resulting from a shift in mandatory spending to discretionary spending," Shelby said on the floor.

Anthony Adragna and John Bresnahan contributed to this report.

Pruitt scales back EPA's use of science [Back](#)

By Emily Holden and Annie Snider | 04/24/2018 03:28 PM EDT

Environmental Protection Agency chief Scott Pruitt announced Tuesday he would seek to bar the agency from relying on studies that don't publicly disclose all their data, a major policy change that has long been sought by conservatives that will sharply reduce the research the agency can rely on when crafting new regulations.

The unveiling of the proposed rule delivers a win to Republicans like House Science Chairman Lamar Smith (R-Texas), who unsuccessfully pushed legislation to impose the same type of change. The move also demonstrates Pruitt's persistence in pursuing President Donald Trump's anti-regulation agenda just two days before the embattled EPA chief is due to face fierce questioning from lawmakers about his hefty spending, expanded security detail and cheap condominium rental from the wife of an energy lobbyist.

At an invitation-only meeting at EPA headquarters with Smith, Sen. Mike Rounds (R-S.D.) and other supporters of the policy, Pruitt said the proposed rule was critical in ensuring that the agency was transparent about how it is making decisions to justify costly new regulations. It is the latest step Pruitt has taken to fundamentally shift the agency's approach to science.

"It is a codification of an approach that says as we do our business at the agency the science that we use is going to be transparent, it's going to be reproduceable, it's going to be able to be analyzed by those in the marketplace. And those who watch what we do can make informed decisions about whether we've drawn the proper conclusions or not," Pruitt said.

Text of the proposed rule was not immediately available.

The proposal, based on legislation pushed by Smith, is intensely controversial, and scientists and public health groups say it will prevent federal regulators from enacting health and safety protections. Nearly 1,000 scientists, including former EPA career staffers, signed a [letter](#) opposing the policy sent by the Union of Concerned Scientists to Pruitt on Monday.

Their primary concern was that many of the country's bedrock air and water quality regulations are based on research that cannot disclose raw data because it includes the personal health information.

But industry has its own version of the same problem. EPA often relies on industry studies that are considered by companies to be confidential business information when determining whether new pesticides and toxic chemicals are safe to use. Internal EPA emails obtained under the Freedom of Information Act show that EPA political officials, including Nancy Beck, who became the chief of the agency's chemical safety office last year after working for years at a chemical industry lobbying group, worried that the new policy would limit the agency's ability to consider industry data or would force companies to make this proprietary data public.

"We will need to thread this one real tight!" Richard Yamada, political official who led work on the new policy wrote to Beck after she raised the concerns.

It was not immediately clear if the new proposed rule included measures to address those concerns.

Rush Holt, CEO of the American Association for the Advancement of Science, said Pruitt's changes could keep the agency from revising public health regulations as problems arise or new data comes to light.

"On the surface it sounds so innocuous or even beneficial. What could be wrong with transparency? Well it's clear to me that this is not based on an effort to be transparent. It is rather based on an effort to be just the opposite," he said.

"EPA is particularly important because when science is misused, people die," he added.

Pruitt has been discussing the new scientific policy publicly for weeks, but it only went to the White House for interagency review last week. Such swift review is very rare for the Office of Management and Budget, which often takes months to vet a new policy. At least one group, the Environmental Defense Fund, has requested a meeting with OMB officials to discuss the rule, but OMB's website shows that no meetings have been scheduled with interested groups.

Many public health studies can't be replicated without exposing people to contaminants, and environmental disasters such as the Deepwater Horizon oil spill cannot be recreated, the group said, raising intellectual property, proprietary and privacy concerns.

Pruitt's predecessor Gina McCarthy, and her air chief Janet McCabe, in an op-ed in The New York Times in March said concerns about studies are dealt with through the existing peer-review process, which ensures scientific integrity.

"[Pruitt] and some conservative members of Congress are setting up a nonexistent problem in order to prevent the E.P.A. from using the best available science," they said.

Net neutrality, offshore drilling, tax-free churches: What's dredged up in the latest spending debate [Back](#)

By Lauren Aratani | 07/16/2018 05:03 AM EDT

House leaders will bring two more spending bills to the floor this week, still aiming to pass all 12 of the fiscal 2019 measures before federal cash runs out on Sept. 30. Albeit a softball compared to the more controversy-packed funding bills, this second "minibus" provides ample opportunity for political potshots and fiery policy debate.

House Republican leaders are expected to keep much of that fighting off the floor by curtailing amendments to the two-bill package, [H.R. 6147 \(115\)](#), which includes funding for the Interior Department, EPA, IRS, SEC and General Services Administration — among several other agencies — as well as federal courts and Washington, D.C.

But issues such as federal jobs for young immigrants, financial transactions with marijuana vendors and the indiscretions of former EPA Administrator Scott Pruitt are sure to come up as GOP leaders prep for floor debate.

The House Rules Committee is set to meet Monday night to wade through the more than 240 proposed amendments to the Financial Services, [H.R. 6258 \(115\)](#), and Interior-Environment titles. Because the panel will likely seek a "structured" rule, the most controversial tweaks are expected to be cast aside before the legislative duo is called up for floor debate. What to watch:

Sticking it to Scott Pruitt

Though Pruitt is EPA administrator no more, Democrats will use this week's spending bill to rehash his missteps and pursue continued investigation into allegations that he misused taxpayer money. One proposed amendment would withhold funds for finalizing any EPA rules Pruitt initiated, until the agency's inspector general completes its investigations into the former administrator's spending.

Another proposed tweak would require the EPA to publicly disclose all funds used for top-level travel, within 10 days of each trip.

The bill already includes a committee-approved, tongue-in-cheek provision that would bar the EPA's chief from purchasing fountain pens that cost more than \$50, following reports that Pruitt spent \$3,230 on especially pricey writing tools. And an amendment has been proposed that would essentially bar the Interior secretary from installing a private phone booth, after Pruitt spent \$43,000 on a soundproof stall.

Supporting the marijuana economy

More than 20 co-sponsors — from both sides of the aisle — have piled on in support of an amendment that would prevent financial institutions from being penalized for serving legal marijuana businesses.

Disputing research requirements

Rep. Paul Tonko (D-N.Y.) has drafted an amendment that would bar the EPA from using money to adopt a rule that would keep the agency from using research without publicly disclosed data. Conservatives argue that the rule brings transparency to scientific research, but many scientists contend that the stipulation would allow the agency, under the guise of transparency, to pick and choose which research it will use for regulations.

Protecting employment for DREAMers

An amendment by Rep. Pete Aguilar (D-Calif.), and another by Rep. Darren Michael Soto (D-Fla.), would ensure immigrants protected under the Deferred Action for Childhood Arrivals program are eligible for federal employment. Although some moderate Republicans have voiced support for that effort, chances of action have grown slim after House Republicans failed last month to bring GOP immigration proposals to the floor.

Stopping offshore drilling

Dozens of lawmakers from both parties have sponsored amendments that would bar federal funds from being used to support offshore drilling in various locations off the nation's coasts, as the White House seeks to expand exploration for oil and gas.

Curtailing church donations

Several Democrats have endorsed an amendment by Rep. Debbie Wasserman Schultz (D-Fla.), and another by Rep. John Lewis (D-Ga.), that would seek to continue enforcement of the current prohibition on tax-exempt nonprofit organizations endorsing or donating to political candidates. House Republicans have included language in the Financial Services title that would basically ban the IRS from rooting out churches that break that rule.

Reviving net neutrality

Democrats have proposed an amendment that would restore the FCC's net neutrality rules, after the commission's repeal took effect this month.

Billionaire Steyer endorses de León over Feinstein [Back](#)

By David Siders | 04/18/2018 11:53 AM EDT

LOS ANGELES — Tom Steyer, the billionaire Democratic mega-donor, is endorsing Kevin de León in his longshot bid to unseat California Sen. Dianne Feinstein, the latest rebuke of Feinstein from her party's increasingly agitated left flank.

Steyer's endorsement - if followed by outside spending - could improve de León's standing in a race that he has so far failed to make competitive. Feinstein, a centrist Democrat, holds a massive advantage over the progressive state senator in both fundraising and public opinion polls.

"I have known Sen. de León for years and have fought alongside him on immigrant rights, expanding health care, and climate change," Steyer said in a prepared statement. "Our work together on behalf of all Californians has assured me that he would be a champion of California's priorities and values. Kevin de León has proven himself to be the best of the next generation, and I am proud to support him for U.S. Senate."

The endorsement was not unexpected. Steyer once considered challenging Feinstein himself, and he has appeared on cable television previously as a near-surrogate for de León. Earlier this year, Steyer described the contest on MSNBC as "incrementalism versus visionary thinking in the Democratic Party."

Lauded by many young, progressive activists in California, de León in February deprived Feinstein of her own state Democratic Party's endorsement, outpolling her by 17 percentage points in the delegate vote.

But the state senator remains largely unknown to the broader electorate in California. Feinstein leads him 42 percent to 16 percent among likely voters, according to a Public Policy Institute of California poll last month.

The race between Feinstein and de León is unlikely to be decided before November. With no prominent Republican running in the state's top-two primary in June, Feinstein and de León are both expected to advance to the general election.

Feinstein: I'm equipped to lead anti-Kavanaugh brigade [Back](#)

By Carla Marinucci | 07/14/2018 01:39 PM EDT

OAKLAND, Calif. — Sen. Dianne Feinstein, the ranking Democrat on the Senate Judiciary Committee, said Saturday that the vetting process for the confirmation of Brett Kavanaugh to the Supreme Court will be "incredibly difficult," and that her staff is reading nearly 1 million documents that she said could give red-state Democrats reason to oppose his nomination.

Feinstein made her toughest comments to date about opposing Kavanaugh's nomination while addressing a "Unity Breakfast" of her supporters at a California Democratic Party executive Committee meeting in Oakland. State party activists will decide later Saturday on an endorsement in Feinstein's race against progressive state Sen. Kevin de León.

Reminding supporters of her seniority in the Senate and her leadership position on the Judiciary Committee, Feinstein said she has helped write the party's modern-day battle plan for a Supreme Court confirmation. She said that she has sat in on more than 10 confirmation hearings for Supreme Court justices since she was elected in 1992. But Kavanaugh's nomination, Feinstein said, "is beyond, [it is] different from all of them. ... Because this man will be the deciding vote on most things we hold most dear."

"This president has said he would appoint the person that would take down Roe [v.Wade] ... and I take him at his word," she said.

Feinstein told Democrats that now, as the nomination process goes forward, "we have a massive effort going ... We collect information from everywhere," including the Bush Presidential archives.

"The vetting process of this justice is going to be incredibly difficult... it's estimated that 1 million pieces of paper that our staff is going to need to go through prior to a hearing," she said. "I can tell you this: That it is really key and critical that Democrats, including those in difficult states, get the support of our party so that they can do the right thing in this vote..."

Feinstein noted that "we have five Democratic [senators up for reelection] from states that Donald Trump won [by large margins], and this makes this vote difficult for them," she said. "For me, it's not difficult at all. But I'm the lead Democrat on the committee, and we will put together a kind of message, I hope, for the American people which will enable those Democrats to vote along with us."

Feinstein gets progressive smackdown [Back](#)

By Carla Marinucci and Jeremy B. White | 07/15/2018 08:01 AM EDT

California Democrats, torn by infighting between moderate and progressive factions, rebuked Sen. Dianne Feinstein's bid for a fifth term — for the second time this year.

The state party's executive committee voted Saturday to endorse progressive state Sen. Kevin de León in the general election, signaling what many fear will be a divisive Democrat-on-Democrat battle going toward to the fall in California, where the party hoped to put the focus on a host of crucial congressional races that could determine control of the House of Representatives.

The endorsement delivers a lifeline to de León's struggling campaign — and the party's imprimatur, which is accompanied by valuable access to slate cards, email lists and voter outreach machinery that will allow him to reach an estimated 2 million Democratic voters. And he could also get an infusion of federal campaign cash shared with the party, party officials said.

Feinstein, who was also snubbed in February at the annual state convention where party activists declined to endorse her bid for reelection, had pleaded for party unity prior to Saturday's vote. She asked the executive committee of the California Democrats, the nation's largest state Democratic Party, to choose "no endorsement" — what many saw as a strategic defense to head off an aggressive challenge for the party's endorsement by de León.

And in an effort to frame the endorsement clash in the context of the national political landscape, the senator's team circulated a "no-endorsement" plea signed by a half-dozen Democrats whose campaigns in contested California districts are a linchpin of the national party's strategy to retake the House.

The final vote gave de León 217 votes, or 65 percent — beating the 60 percent required threshold — versus 94 votes, or 28 percent, for the "no endorsement" urged by Feinstein, and 22 votes, or 7 percent, for the senator herself.

The Senate contest pits two contrasting pols: Feinstein — at 85, the oldest member of the Senate — and De León, 51, a former state Senate president pro tem and son of a single immigrant mother. She is a centrist long at odds with her state party's leftist activist grass roots, while he is a progressive who has called for new "bold leadership" from Democrats unafraid of confronting President Donald Trump head-on.

"I think it's always good to have younger generations rise up and assume positions of leadership," de León told POLITICO on Saturday.

His fight, he said, was not about "a gender issue ... it's not an age issue." Pointing to progressive icons Sens. Elizabeth Warren and Bernie Sanders, de León said, "it's about the right values."

The weekend's nail-biter over the party's Senate general election endorsement underscored the depths of the bitter divisions still lingering from the 2016 battles between more progressive backers of Sanders' presidential bid and the more centrist faction of Hillary Clinton supporters in the nation's most populous state.

Although the endorsement involved just a small circle of the most activist voters — a 313-member executive committee in a party that represents 8.4 million voters — many Democratic insiders said it carried potentially dangerous implications for the party beyond the state's borders.

Not only did the internal battle threaten to extend the rift among Democrats in California — a traditional mother lode of campaign contributions — many Democratic leaders, including former state chair Art Torres, worried about the prospect of a circular firing squad.

"We have the opportunity to change the nature and the control of the House," said Torres, a Feinstein backer, adding that a de León endorsement threatened that Democrats "won't have enough federal money to put into those congressional campaigns."

"Federal money is the hardest to raise," he said, "and if the party is going to spend money on a U.S. Senate campaign — why do it?"

For de León's campaign, snagging the party's endorsement was widely seen as his last shot at making a serious run at Feinstein. California's senior senator pummeled him by 32 percentage points in the June all-party primary, winning more than 70 percent of the Democratic vote in a contest in which 32 candidates competed.

She has also dramatically outraised him: Feinstein reported \$10.3 million cash on hand at the end of March, compared with \$672,330 for de León, according to campaign finance reports.

But de León has gained traction among the party's far left as the author of the controversial SB54, the California Values Act, also known as the "sanctuary state" law. The legislation, aimed at curtailing the cooperation of local law enforcement with federal immigration officials, was recently largely upheld by a federal judge's ruling.

De Leon has also called for abolishing the Immigration and Customs Enforcement agency and impeaching Trump — a position that is shared by his friend, wealthy Democratic activist Tom Steyer.

In making the rounds this weekend in caucus meetings at Oakland's Marriott Hotel, Feinstein repeatedly reminded Democrats of her seniority in Washington, her legislative leadership on issues like the assault weapons ban, and of what she vowed will be her pivotal role as the ranking Democrat on the Senate Judiciary Committee — which will weigh Trump's nomination of Brett Kavanaugh to the Supreme Court.

Feinstein on Saturday downplayed the symbolism of a de León endorsement and her difficulty with the party's grass roots, insisting it would have no effect on her campaign. "This was not a close primary election, and there were 32 people on the ballot," she said of the June contest. "I take nothing for granted ... we work hard."

"I think people understand I'm now ranking on Judiciary, going into one of the biggest moments that this party has — the decisive Supreme Court justice," she said. "This is a very big deal because this affects the life of every American going forward. So who that Supreme Court seat goes to is all-important."

Asked why her decades of accomplishments in public office haven't earned her an easy endorsement from her party in her bid this year, Feinstein jokingly shrugged: "Well, that thought occurred to me — but I wiped it out of my mind completely."

In a measure of the contest's intensity, party members said they were inundated with appeals from both camps in recent days, and Feinstein's call for neutrality irked some pro-de León inhabitants of the party's progressive wing.

"Delegates are very angry at the constant barrage of emails we've gotten from people who have endorsed Dianne Feinstein telling us not to endorse," said R.L. Miller, a prominent environmental activist who was wearing one of a profusion of "United4KDL" stickers.

In caucus meetings and in hallways where he made the rounds, de León argued that Trump's recent actions on immigrant family separations, the Supreme Court and environmental policy demanded unfailingly tough action and confrontation from Democrats in Washington. And — without ever naming Feinstein — he repeatedly drew a sharp contrast with her centrist approach and more conciliatory style on Capitol Hill.

"We need bold leadership in Washington today," de León told a meeting of the Women's Caucus. "Brett Kavanaugh is in a position to take away the rights of every American. ... That's why we have to shut the Senate down — and never allow this individual to come to the Senate floor," he said to cheers. "This is where you need the courage of your convictions — to not be on the sidelines, but on the front lines because what's at stake is a generation of power."

Steyer also drew cheers from the Democratic crowd in Oakland when he delivered a similar message to Democratic lawmakers on Capitol Hill: "If you don't have what it takes to lead now, when we are totally under the gun, then don't come asking for support later," he said. "Lead, follow or get out of the way."

Feinstein has appeared to respond to progressive pressures as the campaign has unfolded. She moved left on a pair of issues where her moderation has long stood out in California: she endorsed legalizing marijuana, reversing her longtime opposition, and renounced her prior embrace of the death penalty.

Bill Carrick, Feinstein's campaign strategist, downplayed the importance of this weekend's vote, saying that the opposition of the party's far left to Feinstein is "not a surprise; we've been through this in the past."

Carrick noted that de León "got the lowest total of any candidate" ever in a top-two primary race, while "she won every county, 70 percent of the Democrats, every congressional district of every kind of demographic that exists in California. So I think we're in good shape."

Still, he acknowledged that it would have been "much better for the Democratic Party" to present a unified front as the November election approaches, and to have avoided an endorsement fight.

Despite the passion of progressive voters, he said, a political reality exists even in solidly blue California. "We can't be naïve about these swing districts," he said. "The idea that suddenly we vaporize the Republicans in these districts and just walk in, is just crazy. They're all going to be very, very close districts."

U.S. ambassador: Trump-Putin meeting 'isn't a summit' [Back](#)

By Quint Forgey | 07/15/2018 10:53 AM EDT

President Donald Trump's highly anticipated meeting on Monday in Helsinki with Russian President Vladimir Putin is just that — only a meeting, the U.S. ambassador to Russia said Sunday.

"It isn't a summit. I've heard it called a summit. This is a meeting," Jon Huntsman said on [NBC's "Meet the Press."](#)

"In fact, it's the first meeting between the two presidents," Huntsman added. "They've had some pull-asides, one at the G-20 in Hamburg and the other at the APEC Ministerial in Da Nang, Vietnam, but this is really the first time for both presidents to actually sit across the table and have a conversation."

Unlike previous presidential summits — such as Ronald Reagan's visit to China in 1984, Huntsman said — Trump and Putin's get-together in Helsinki will not feature a state dinner, a joint statement or any predetermined policy deliverables.

"You don't know what's going to come out of this meeting, but what it will be is the first opportunity for these presidents to actually sit down across a table, alone and then with their teams, to talk about everything from meddling in the election, to areas where we have some shared interests," Huntsman said.

Huntsman also said recent developments in special counsel Robert Mueller's investigation of Russian interference in the 2016 presidential election, including the Friday indictment of 12 Russian military officials for hacking the Democratic National Committee, will be a part of Monday's talks.

"That now makes probably almost 30 Russians who have been rolled up by the Mueller indictment. That investigation continues," Huntsman said. "The bigger picture is we need to hold the Russians accountable for what they did, their malign activity throughout Europe as well. That's a part of the conversation that needs to take place."

But Huntsman wouldn't say whether Trump would push Putin for the extradition of the dozen Russian military officers to stand trial in the United States.

"I don't know if he'll make the ask, but it may be part of the agenda. It may be part of their bilateral meeting together. We'll have to see," Huntsman said, adding that the FBI office and the U.S. Embassy in Moscow would work to advance that goal.

"That doesn't necessarily mean that the Russians are going to follow through with it," Huntsman cautioned. "But we'll see if those steps will be taken."

House to vote on whether carbon tax 'detrimental' to economy [Back](#)

By Anthony Adragna | 07/13/2018 01:18 PM EDT

The House Rules Committee will meet Tuesday to tee up chamber consideration of a resolution, [H. Con. Res. 119 \(115\)](#), arguing a carbon tax would be "detrimental" to the U.S. economy and "not in the best interest" of the country, according to [a notice](#).

Nineteen conservative groups, including the Competitive Enterprise Institute, American Energy Alliance and Americans for Tax Reform, sent House leadership [a letter](#) earlier this week urging them to take up the resolution.

The non-binding resolution is led by Majority Whip [Steve Scalise](#) and may be an interesting vote for members of the Climate Solutions Caucus. That bipartisan group's ranks have swelled to more than 80 lawmakers, but members have yet to weigh in on specific solutions for how to address climate change.

WHAT'S NEXT: The Rules Committee will [meet](#) on the resolution July 17 at 3 p.m.

Ending Secret Science or Censoring Science?

Posted by Chester Babst

On April 30, 2018, EPA issued a Notice of Proposed Rulemaking entitled “Strengthening Transparency in Regulatory Science.” Although EPA’s stated intent is to increase transparency and public confidence in the Agency’s regulations, a number of its critics have described the proposed rule as “exquisitely opaque,” “vague,” and “lacking data transparency.” Even supporters of the proposed rule seem to recognize that it may need some work before it is issued in final form....

Subject: Morning Consult Energy: Musk Backtracks on Plan to Take Tesla Private

By [Jacqueline Toth](#)

Top Stories

- Tesla Inc. Chief Executive Elon Musk said that he and the board of directors will not pursue turning Tesla into a private company, following a tumultuous few weeks of speculation and the launch of a securities investigation after Musk tweeted on Aug. 7 that he was considering taking the company private. Separately, six of Tesla's board members reaffirmed their support for Musk as CEO. ([The New York Times](#))

- The United States and Mexico may resolve outstanding differences over the North Atlantic Free Trade Agreement talks as early as today after breakthroughs on energy and automobile issues, according to three people familiar with the discussions. The two countries have addressed the incoming Mexican government's concerns that the new agreement would put too many constraints on how Mexico can treat foreign oil firms that invest in the country, said Jesus Seade, the NAFTA negotiator for President-elect Andres Manuel Lopez Obrador. ([Bloomberg](#))
- Documents released under a Freedom of Information Act request to a nonprofit identify PG&E Corp. as the utility that the Federal Energy Regulatory Commission fined \$2.7 million in May for losing control of a database with 30,000 records containing sensitive information, including passwords and system controls, which was exposed online for 70 days. At the time it issued the fine for the 2016 breach, FERC had declined to name the utility. ([The Wall Street Journal](#))

CSR & Political Activism in the Trump Era

How to avoid a firestorm and improve your brand's reputation.

General

Pesticide Studies Won E.P.A.'s Trust, Until Trump's Team Scorned 'Secret Science'

Danny Hakim and Eric Lipton, The New York Times

José Camacho once worked the fields here in the Salinas Valley, known as "the Salad Bowl of the World" for its abundance of lettuce and vegetables. His wife still does.

Oil dips as trade row weighs, Iran sanctions expected to cut supply

Henning Gloystein, Reuters

Oil prices fell on Monday on concerns the U.S.-China trade dispute will erode global economic growth, although looming U.S. sanctions against Iran's oil sector kept crude from falling further, traders said.

Oil and Natural Gas

Saudi Aramco loses its 'in perpetuity' oil and gas rights

Anjali Raval, Financial Times

Saudi Arabia has cut the length of time that its state energy company has exclusive rights to the kingdom's vast oil and gasfields, raising questions about Saudi Aramco's long-term production and revealing a power struggle between the company and the government.

Venezuela's PDVSA files appeal against Crystallex court ruling

Angus Berwick, Reuters

Venezuela's state oil firm Petroleos de Venezuela SA (PDVSA) said on Saturday it filed an appeal requesting that a Delaware court vacate a decision on Aug. 23 granting Canadian miner Crystallex the right to seize its U.S. assets.

Gas-fired generation remains on track to capture increasingly larger share of MISO market

Brandon Evans, Platts

After several years of increased coal-to-gas switching across the Midcontinent Independent System Operator service area, the region is expected to become even more bullish for gas as additional coal retirements loom while multiple new gas-fired plants are slated to enter service over the next few years.

Utilities and Infrastructure

California lawmakers find critics on both sides as they unveil effort to help utilities pay wildfire costs

John Myers, Los Angeles Times

A far-reaching proposal to assist electric utility companies faced with covering billions of dollars in wildfire damage was unveiled Friday to intense debate over whether ratepayers would end up saddled with some of the bill for California's worst-ever fire year.

Utilities pivot from power plants to grid work for profits

Emery P. Dalesio, The Associated Press

Electric utilities are pouring billions of dollars into a race to prevent terrorists or enemy governments from shutting down the power grid and everything that depends on electricity in America's hyper-connected society.

PacifiCorp, Idaho Power agree to make CAISO their reliability coordinator

Peter Maloney, Utility Dive

Idaho Power and PacifiCorp committed Thursday to take Reliability Coordinator (RC) services from the California ISO (CAISO). The Balancing Authority of Northern California has also committed to using CAISO's services, bringing the total commitments to three.???

Microgrid adoption could accelerate in the US in coming years

Jared Anderson, Platts

Citing an increase in power outages, Silicon Valley manufacturing firm JSR Micro said Thursday it will install a microgrid system that can power its operations if the power grid fails, a solution that could proliferate in the coming years.

Renewables

Exxon Seeks Wind, Solar Power Delivery in Texas

Brian Eckhouse and Kevin Crowley, Bloomberg

Exxon Mobil Corp. has been looking to buy renewable energy for delivery in Texas, according to people familiar with the matter.

Energy firm executives plead not guilty in tax credits case
The Associated Press

Two top executives of a Salt Lake City-based biodiesel company have pleaded not guilty to fraud and other federal charges accusing them of filing false claims that resulted in the company being issued \$511 million of renewable fuel tax credits.

Musk's Brazen Gambit Collapsed as Investor Support Withered
Dana Hull et al., Bloomberg

Elon Musk's stunning tweet that he wanted to take Tesla Inc. private and had funding secured was a classic Musk moonshot - given credibility only by the sense that if anyone could possibly pull such a brazen feat, he was the guy.

Musk's U-turn on Tesla deal could intensify his legal, regulatory woes
Michelle Price, Reuters

Tesla Inc Chief Executive Elon Musk's decision to abruptly abandon a plan to take his electric carmaker private will not resolve his mounting regulatory and legal woes, and may even make them worse, some securities lawyers said.

Coal

Clean Power Plan replacement revealed, but Wyoming's moved on
Heather Richards, Casper Star Tribune

The Clean Power Plan was once the storm on the horizon for Wyoming's coal industry, threatening job loss, production decline and a catastrophic revenue drain both in coal communities and the state as a whole.

Even in Coal Country, Trump Aid Won't Keep This Power Plant Open
Chris Martin, Bloomberg

Vistra Energy Corp. plans to close another money-losing coal plant this year despite the Trump administration's efforts to prop up the ailing fossil-fuel industry.

Amid relaxed coal restrictions, NIPSCO keeps plan to retire plants

Karen Caffarini, Post-Tribune

The Trump administration's newly announced proposal to dramatically scale back restrictions on emissions from coal-fired power plants would result in more asthma and other health issues in the region, while failing to stop these plants' inevitable demise, according to a local environmentalist and an Indiana University professor.

Nuclear

The Nuclear Power Plant of the Future May Be Floating Near Russia

Andrew E. Kramer, The New York Times

Along the shore of Kola Bay in the far northwest of Russia lie bases for the country's nuclear submarines and icebreakers. Low, rocky hills descend to an industrial waterfront of docks, cranes and railway tracks. Out on the bay, submarines have for decades stalked the azure waters, traveling between their port and the ocean depths.

The \$4.7 Billion Nuclear Bill That No One Wants to Pay

Mengqi Sun, The Wall Street Journal

The primary owner of a power plant with two partially built nuclear reactors in South Carolina walked away from the \$9 billion project last summer because of high construction costs and delays. Now no one wants to pay for it.

Climate

VW's compliance monitor urges greater transparency

Edward Taylor and Jan Schwartz, Reuters

Volkswagen's external compliance monitor on Monday said he disagreed with some VW executives' use of privacy and attorney client privilege rights to withhold information about a \$27 billion global emissions cheating scandal.

Merkel says EU should meet existing emissions aims, not set new ones

Thomas Escritt, Reuters

A proliferation of extreme weather events around the world provides ample evidence that climate change is a reality, German Chancellor Angela Merkel said on Sunday, but she rejected calls for more ambitious climate protection goals.

Trump reshaped U.S. climate policy in one month: August 2018

Maxine Joselow and Benjamin Storrow, E&E News

August was supposed to be a quiet month for climate politics, a time when Congress went on recess; President Trump played golf in Bedminster, N.J.; and Americans took a break from politics before this November's midterm elections. Instead, it may go down as a historic turning point in U.S. climate efforts.

So Far, More Heat Waves Do Not Mean More Heat Deaths

Christopher Joyce, WAMU

More Americans die from the effects of heat than of any other form of severe weather, and this summer has seen one heat wave after another. Some places in the U.S. and elsewhere have recorded their highest temperatures ever.

Opinions, Editorials and Perspectives

Trump ends Obama's war on coal

U.S. Rep. Steve Scalise (R-La.), Washington Examiner

Last week's announcement from the Trump administration, on the EPA's new Affordable Clean Energy Plan to replace the Clean Power Plan, is another welcome addition to President Trump's list of promises fulfilled that benefit American workers.

Putting Elon Musk's Tesla into climate change perspective

Amy Harder, Axios

Elon Musk and Tesla offer a gripping corporate tale and coveted electric cars, but when it comes to climate change, they are a rather minor subplot.

Climate change brought down another government in Australia. Here's what happened.

Joshua Busby, The Washington Post

In Australia, Scott Morrison was sworn in as prime minister on Friday night, after an internal party revolt that led to the downfall of Malcolm Turnbull, who had been premier since September 2015. Conservative backbenchers within Turnbull's own right-leaning Liberal party rejected his proposal to address climate change through an emissions reduction target, and challenged his leadership.

McCain Was a Warrior for the Climate

Fred Krupp, The Wall Street Journal

As a prisoner of war two generations ago, John McCain proved his patriotism and bravery. But it was through his more recent work to protect future generations of Americans that I knew Sen. McCain. Tributes to the American hero, who died Saturday at 81, must not overlook the political bravery-and, yes, patriotism-he showed in the fight to meet the threat of climate change.

Research Reports

Streamlining Environmental Permitting

EHS Strategies

The push is on to find ways to speed up the federal review and authorization process for major infrastructure projects, which are those that require multiple agency approvals, an environmental impact statement, and designated funding.

The Favor Factory

Jenny Rowland and Marc Rehmann, The Center for American Progress

On August 3, 2017, Secretary of the Interior Ryan Zinke spent his afternoon and evening with David Lesar, the chairman of oil services giant Halliburton. The two men met in Zinke's lavish Interior Department offices, toured the Lincoln Memorial together, and then had dinner at a popular Washington, D.C., beer garden

Subject: Pruitt plans to change EPA policy on scientific studies

By Alex Guillén

03/20/2018 10:38 AM EDT

EPA Administrator Scott Pruitt plans to change how the agency considers scientific information when writing regulations in a way that likely will exclude certain studies, he told the [Daily Caller](#).

Pruitt told the news site he will reverse longtime agency policy to require that any studies used to support regulations make their raw data available for review and replication by independent scientists.

"We need to make sure their data and methodology are published as part of the record," Pruitt said. "Otherwise, it's not transparent. It's not objectively measured, and that's important."

The changes are in line with legislation that House Science Chairman [Lamar Smith](#) (R-Texas) has pushed for years, but which was never been passed by the Senate. Democrats, environmentalists and scientific groups have long criticized that legislation as an attempt to cherry-pick data friendly to industry from the voluminous body of epidemiological science. And EPA already releases significant amounts of this data, they said.

CBO [said last year](#) the changes "would significantly reduce the number of studies that the agency relies on." And although EPA said it could make the changes at little to no cost, CBO estimated it would spend \$5 million from 2018 through 2022. EPA [previously told CBO](#) it would have to spend \$250 million a year scrubbing information from thousands of studies "to ensure the transparency of information and data supporting some covered actions."

WHAT'S NEXT: Pruitt did not say when he will issue a formal directive changing EPA's science policy.

Subject: Morning Consult Energy: U.S. Petroleum Exports Hit Record High of \$19.9 Billion in April

By [Jacqueline Toth](#)

Top Stories

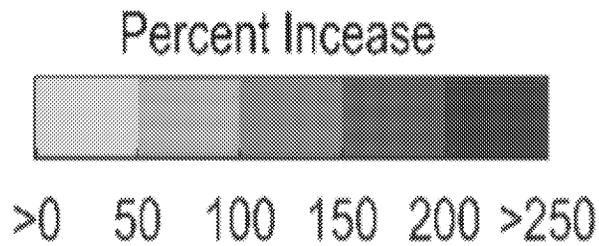

- A record \$19.9 billion in petroleum exports from the United States in April contributed to a 2.1 percent reduction in the country's trade gap that month, according to the Commerce Department. The United States is now shipping as much as four times the amount of petroleum each month as it exported a decade ago, and the increase in those exports, which started around the recession,

is boosting oil producers' earnings and protecting the U.S. economy from oil price shocks. ([The Wall Street Journal](#))

- Several Republican lawmakers suggested they are losing patience with Environmental Protection Agency Administrator Scott Pruitt after recent news reports revealed that he asked a close aide to look into buying a used mattress from the Trump Hotel and to contact Chick-fil-A about a potential franchise for his wife. One of those lawmakers, Sen. John Kennedy (R-La.), said he would not "try to defend the indefensible," but President Donald Trump, at a briefing on this year's hurricane season, reiterated his support for Pruitt and said the "EPA is doing really, really well." ([Politico](#))
- Trump's decision to impose tariffs on imported solar panels have pushed domestic renewable energy firms to cancel or freeze over \$2.5 billion in large solar installation investments, as well as thousands of jobs, according to companies, which is more than the \$1 billion in projects announced by firms that are building or expanding solar panel factories in the United States. Developer Cypress Creek Renewables LLC, for example, said it froze \$1.5 billion for about 150 projects, mostly in the Carolinas, Texas and Colorado, due to increased costs from the tariffs. ([Reuters](#))
- Coal tycoon Bob Murray, chief executive of Murray Energy Corp., showed at least six coal-related draft executive orders to the Trump administration last year, according to records released under a Freedom of Information Act request, though it did not appear that Trump signed the orders. The draft orders included language on withdrawing from the Paris climate agreement and suspending ozone and coal ash regulations. ([E&E News](#))
- The United Steelworkers, North America's largest industrial union representing refinery workers, said in a statement that Trump's decision to postpone changes to federal biofuel blending requirements "threatens the livelihood" of tens of thousands of workers. The American Petroleum Institute trade group, however, said that it was glad that the Trump administration scrapped its plan and that it would rather see "comprehensive legislative reform" of the Renewable Fuel Standard. ([Reuters](#))

Introducing: The Midterm Wave Watcher

A new interactive feature showcasing a range of survey research insights related to the 2018 midterm elections.

General

Republicans losing patience with scandal-scarred Pruitt **Anthony Adragna and Emily Holden, Politico**

Republicans on Capitol Hill are growing frustrated with EPA Administrator Scott Pruitt - and many are now publicly questioning whether he can hang on to his job amid the unending stream of scandals.

Bob Murray drafted 6 orders on coal, climate for Trump **Hannah Northey and Benjamin Storrow, E&E News**

Coal executive Bob Murray last year presented Trump administration officials with half a dozen draft executive orders aimed at exiting the Paris climate accord and peeling back coal regulations.

Another mess for Pruitt: Overstaying his White House welcome at lunch **Emily Holden et al., Politico**

EPA Administrator Scott Pruitt loves eating at the White House mess, an exclusive U.S. Navy-run restaurant open only to White House officials, Cabinet members and other dignitaries.

Pruitt: Chick-fil-A is a 'franchise of faith' **Miranda Green, The Hill**

Environmental Protection Agency (EPA) Administrator Scott Pruitt is defending actions he took to try to help his wife secure a franchise opportunity with the fast food company Chick-fil-A, calling it a "franchise of faith."

Democrats want a 9/11-type commission to probe Puerto Rico hurricane controversy **Christine Condon, McClatchy DC**

Democrats are eager to make the controversy over the Hurricane Maria death toll a political flashpoint this fall, telling voters they want a special commission to investigate the Trump administration's response to the disaster in the same way a similar panel investigated the 9/11 terrorist attacks.

Trump praises hurricane response amid demands for Maria death toll investigation

Lorraine Woellert and Colin Wilhelm, Politico

President Donald Trump praised his administration's response to last year's devastating storms even as thousands of Puerto Rican evacuees face eviction from temporary shelters and the island remains partly without power nine months after Hurricane Maria.

EPA Plan for Transparency in Science Alarms Industry, Too
Eric Roston, Bloomberg

Scientists are concerned that the proposal would restrict studies that rely on health records obtained with the understanding that the identities of patients be kept confidential, a practice that some conservatives label "secret science."

Major oil group launches new coalition to promote offshore drilling

Miranda Green, The Hill

A top U.S. oil and gas industry leader is setting its sights on expanding offshore drilling in the eastern Gulf and off the coast of mid-Atlantic states.

Oil rises as reality dawns over Venezuela's export crisis

Amanda Cooper, Reuters

Oil rose on Thursday on concerns about a plunge in exports from Venezuela, although surging U.S. production kept gains in check.

Oil and Natural Gas

Record Oil Exports Help Cut U.S. Trade Gap

Josh Mitchell and Christopher M. Matthews, The Wall Street Journal

The U.S. exported a record amount of oil and fuel in April, helping to narrow the nation's trade gap while giving the economy a lift.

Trump's move to please farmers on biofuels reform draws refinery union ire

Jarrett Renshaw and Chris Prentice, Reuters

U.S. President Donald Trump, in yielding to pressure from farming states and agreeing to suspend changes to U.S. biofuel policy is now being criticized by another important constituency, the main union for oil refinery workers.

As Fuel Prices Rise, Airlines Warn of Higher Fares
Martha C. White, The New York Times

The price of jet fuel has gone up 50 percent in the past year, and airline executives are warning that they may have to raise ticket prices and cut capacity if fuel costs continue to rise.

Utilities and Infrastructure

LaFleur, Glick Promise a Light Touch on Changing West
Jason Fordney, RTO Insider

Two top federal energy regulators told state utility commissioners that they will take a light-handed approach as the West develops new market structures, allowing flexibility and acknowledging regional differences.

Exelon CEO endorses nuke bailout, punts on leaked DOE memo
Gavin Bade, Utility Dive

The CEO of the largest U.S. nuclear operator on Wednesday urged the federal government to take urgent action to halt the retirement of nuclear power plants, but stopped short of endorsing the framework for emergency action outlined in a Department of Energy memo leaked last week.

Renewables

Billions in U.S. solar projects shelved after Trump panel tariff
Nichola Groom, Reuters

President Donald Trump's tariff on imported solar panels has led U.S. renewable energy companies to cancel or freeze investments of more than \$2.5 billion in large installation projects, along with thousands of jobs, the developers told Reuters.

China's Solar Cutback Wiping Out Trump Bump for First Solar **Chris Martin, Bloomberg**

President Donald Trump said imposing solar tariffs would help domestic companies. But China's surprise decision to slash installations is negating those gains, and shares of U.S. manufacturers are plunging.

PJM region and California dominate US storage via different paths

Peter Maloney, Utility Dive

While much of the U.S. activity surrounding energy storage has been focused on California and the PJM region, the locus of activity is expected to expand as states like New York and Massachusetts implement ambitious storage goals.

Coal

Colorado utility plans to retire coal plants, add renewables **Dan Elliott, The Associated Press**

Colorado's largest electricity provider said Wednesday it wants to retire two coal-fired units a decade early and nearly double the share of power it gets from renewable sources.

Nuclear

U.S. subsidies may not save some coal, nuclear plants slated for closure **Scott DiSavino, Reuters**

Several major U.S. operators of nuclear reactors and coal plants said they had not changed plans to close plants in coming years, even after the White House said it would take emergency steps to subsidize struggling operators.

Climate

Hurricanes Are Linger Longer. That Makes Them More Dangerous. **Kendra Pierre-Louis, The New York Times**

With wind speeds that can top 180 miles per hour, hurricanes are not usually thought of as slow. Yet tropical cyclones, which include hurricanes, have grown more sluggish since the mid-20th century, researchers say. That may mean bad news for people residing in their path.

[A Wyoming Reservation Shows the New Face of Drought](#)
John Fialka, E&E News

Perhaps the most menacing and widespread aspects of climate change are the droughts that can come with climbing temperatures.

Opinions, Editorials and Perspectives

[Zinke's 'Konichi Wa' Controversy Shows Need For Cultural National Monuments](#)
Carole Hayashino, Morning Consult

On Memorial Day, Interior Secretary Ryan Zinke appeared on Breitbart Radio, where he expressed support for President Donald Trump's border wall and defended his controversial decision to send Interior staff to the border. He also went out of his way to double-down on shocking, offensive comments he made to Congresswoman Colleen Hanabusa (D-Hawaii) during a recent congressional hearing.

[Cost-Benefit Reform at the EPA](#)
The Editorial Board, The Wall Street Journal

Barack Obama's Environmental Protection Agency jammed through an average of 565 new rules each year during the Obama Presidency, imposing the highest regulatory costs of any agency. It pulled off this regulatory spree in part by gaming cost-benefit analysis to downplay the consequences of its major environmental rules.

[Here's why Trump's new strategy to keep ailing coal and nuclear plants open makes no sense](#)
James Van Nostrand, The Conversation

President Donald Trump recently ordered Energy Secretary Rick Perry to take "immediate steps" to stop the closure of coal and nuclear power plants.

[In Trump's power moves, it's coal first, nuclear power second](#)
Amy Harder, Axios

President Trump is asking his administration to bolster economically struggling coal and nuclear power plants - but the concerns over coal are really driving decisions.

[Trump's Coal Plan Is Bad News](#)
Theodore Kupfer, National Review

The proposal, if implemented, would force energy-grid operators across the country to buy power from these plants for a period of two years - and fulfill a key promise of Trump's to stand up for the coal industry.

[Maybe Scott Pruitt isn't corrupt enough](#)
Dana Milbank, The Washington Post

Scott Pruitt: You can do better than this.

[How I Learned to Stop Worrying and Love Electric Scooters](#)
Kevin Roose, The New York Times

I wanted to hate the scooters. I really did.

Research Reports

[A global slowdown of tropical-cyclone translation speed](#)
James P. Kossin, Nature

As the Earth's atmosphere warms, the atmospheric circulation changes. These changes vary by region and time of year, but there is evidence that anthropogenic warming causes a general weakening of summertime tropical circulation.

Subject: Morning Energy: Another mess for Pruitt — Virgin Islands party boss: Zinke ties improved hurricane response — Coal magnate delivered draft orders to Trump

By Kelsey Tamborrino | 06/07/2018 05:41 AM EDT

With help from Darius Dixon, Anthony Adragna and Annie Snider

ANOTHER MESS FOR PRUITT: Scott Pruitt has an appetite for food from the White House mess — a U.S. Navy-run restaurant for use only by White House officials, Cabinet members and other dignitaries. In fact, he loves eating there so much, the White House asked him to stop coming by so often, POLITICO's Emily Holden, Andrew Restuccia and Anthony Adragna report.

The message was clear, according to one person close to Pruitt: "We love having Mr. Pruitt, but it's not meant for everyday use." A member of the White House's Cabinet affairs team told agency chiefs of staff last year that their bosses shouldn't treat the mess like their personal dining hall — a comment that came in response to Pruitt's recurring use of the restaurant, sources said.

Pruitt's allies privately disputed that the warning about overuse of the mess was aimed squarely at him, but nobody contests that he's a frequent presence at the establishment in the basement of the West Wing. The White House did not respond when asked about his lunch habits, and EPA declined to comment.

A billing statement from July 2017 offered a glimpse into Pruitt's trips to the mess, racking up a bill of \$400 over nine trips that month — a relative bargain in downtown Washington considering the menu. A cheeseburger at the White House runs just \$6.35, according to Pruitt's bill. Compare that to the \$17 you'd pay for a burger from another favorite Pruitt spot, French bistro Le Diplomate. Read [more](#).

Support for Pruitt is also falling on Capitol Hill, Anthony and Emily report, in the wake of this week's news that Pruitt sought to buy a used mattress from the Trump Hotel and inquired about securing a Chick-fil-A franchise for his wife. Two more top aides to Pruitt — scheduler Millan Hupp and counsel Sarah Greenwalt — also are leaving the agency. "I'm not going to come down here, just because he happens to be a nominee of a president I support or a nominee from my party, and try to defend the indefensible," Sen. [John Neely Kennedy](#) said. More [here](#).

On the other hand, [Cory Gardner](#), who heads the Senate GOP campaign arm, told reporters he doesn't think Pruitt's ongoing ethics woes will harm his party in the midterms. "The states like Missouri, Indiana, North Dakota have benefited from a regulatory approach this administration has taken," Gardner said.

Environmentalists' "Boot Pruitt" campaign will gather a "group of cows" outside the Capitol South Metro station today from 8 a.m. to 9:15 a.m. to hand out fake Chick-fil-A coupons for a free chicken sandwich with a donation to Pruitt's legal defense fund. They'll hold signs reading: "Breeth Mor Caribun" and "What the Cluck, Pruitt?"

VIRGIN ISLANDS BOSS PLAYS UP ZINKE RELATIONSHIP: The head of the Virgin Islands Republican Party suggested his fundraising group's longstanding relationship with Interior Secretary Ryan Zinke helped improve the department's response to last year's hurricanes that struck the island territory, Pro's

Ben Lefebvre reports. John Canegata said he had direct access to Interior officials after the storm thanks to money his group raised for Zinke when he was a member of Congress.

Calling Zinke a "close friend," Canegata boasted of his connections in a televised appearance that aired in the Virgin Islands last month but has not received widespread attention outside of the territory. While numerous officials played a role in helping the islands recover from hurricanes Maria and Irma, "behind the scenes, trust me, a lot of telephone calls, a lot of maneuvering was going on because, I think, some of the relationships we built," Canegata said of Zinke.

Interior acknowledged that officials contacted Canegata after the hurricanes but said they did so as part of a wider effort to contact business leaders based in the territory and Zinke did not call him personally. Canegata works for Cruzan Rum, but a company representative told Ben he was not involved in coordinating its relief efforts. Interior expedited the reimbursement of taxes on Virgin Islands rum following the storms, but it was unclear whether Canegata influenced that decision; he did not respond to a request for comment.

For his part, Zinke has known Canegata since at least 2015, Ben reports. The secretary previously came under fire for a fundraiser for the VIGOP, as the group is known, during an official trip to the islands in his first month in President Donald Trump's Cabinet. Read more.

IT'S THURSDAY! I'm your host Kelsey Tamborrino. NRECA's Dan Riedinger correctly identified John Tyler as the only president to have not been a resident of the U.S. when he died. Tyler resided in Virginia at the time, which was part of the Confederate States of America. Today's question: Which Congress had the largest number of veterans in office? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

MURRAY DELIVERED EXECUTIVE ORDERS TO TRUMP: Coal magnate Bob Murray handed off drafts of six executive orders that would roll back Obama-era environmental regulations to Trump during the beginning of his administration, according to documents from DOE released under FOIA. The documents include a letter to Energy Secretary Rick Perry from Murray praising Trump's March 2017 energy independence executive order, and included a note where Murray wrote, "we have developed the enclosed materials for your review and consideration, consisting of: six (6) Executive Orders further rescinding anti-coal regulations of the Obama administration; and one (1) memorandum outlining the legal rationale for each of these action, and others."

While Trump did not sign those exact orders, the administration has moved to enact similar policies, Pro's Darius Dixon reports. The documents, which were sent to DOE the day Trump signed his energy independence order and one day before Murray met with Perry and DOE chief of staff Brian McCormack, also included concepts about grid security and "resiliency" that Perry later touted as part of his push to stop coal power plants from closing. Read more.

BAILOUT ON HIS MIND: In private remarks given during his visit to FEMA headquarters Wednesday, Trump mentioned a slew of topics that had nothing to do with hurricanes, The Washington Post reports, while only briefly mentioning Puerto Rico. Trump instead encouraged Perry to make an announcement about rescuing economically struggling coal and nuclear power plants, the Post reports. "I'd love to put it out — 'clean coal, nuclear,' it's a very important message," he said, telling Perry he needed to hold a news conference.

WRDA MOVES AHEAD: The House passed the Water Resources Development Act of 2018 (H.R. 8 (115)) last night, marking the first major piece of infrastructure legislation to move under the Trump administration, Pro's Annie Snider reports. Lawmakers signed off on the measure on a broadly bipartisan vote of 408-2. The bill — markedly narrower than the Senate's measure — would authorize six new Army Corps of Engineers projects and enact a suite of policy reforms at the red tape-laden agency.

What about the Senate? For those wondering, EPW Chairman John Barrasso told ME he'd not yet locked down a time for the Senate to consider its broader version of the water resources infrastructure legislation. Separately, Sen. Tammy Baldwin sent this letter to Trump, calling on him to urge Congress to include a permanent Buy America provision in the legislation.

MUM'S THE WORD: Barrasso, whose state produces a lot of coal and uranium, told ME he isn't ready to back Trump's proposed bailout for coal and nuclear power plants. "I've read the article but I want to actually see what the proposal is," he said. DOE is still formulating the details of how it would intervene to save the struggling plants.

RESCISSIONS VOTE TODAY: The House is set to vote today on Trump's \$15 billion rescissions bill, Pro's Sarah Ferris reports. The House Rules Committee teed up the bill, H.R. 3 (115), on Wednesday, a quick turnaround that surprised even some GOP lawmakers.

ALL ABOARD: After the rescissions package, the House is ready to start debate on its "minibus" appropriations package, which includes energy and water, legislative branch and military construction-VA spending bills, Pro's Kaitlyn Burton reports. The Rules Committee has set up floor votes on 50 amendments to the energy and water title. A final vote on the overall bill is expected Friday.

SHIMKUS SPEAKS: Rep. John Shimkus, one of the most ardent Yucca Mountain champions in Congress, said his loud floor dispute with Paul Ryan on Tuesday was simply a dispute over "strategy going forward." Other members suggested it had to do with the timing of the Energy-Water bill, since Shimkus thinks delaying until after the midterms might allow Yucca language to make it into the title. The Senate has avoided tackling Yucca due to Sen. Dean Heller's close reelection contest.

POWER OF THE PEN: The House Appropriations Committee agreed to bar EPA from spending more than \$50 on a fountain pen. The amendment — an apparent reference to the \$1,560 Pruitt spent on a dozen fancy writing implements — passed on a voice vote at Wednesday's markup. The panel cleared its version of the fiscal 2019 EPA-Interior bill, on a vote of 25-20. Committee Republicans blocked an effort from Democrats to boost EPA's Office of Inspector General by \$12 million, but approved an amendment that would change revenue sharing for drilling in the Arctic National Wildlife Refuge. And while the pen amendment passed, the committee shot down another amendment from Democratic Rep. Mike Quigley related to Pruitt's travel.

MEETING WITH A FULL DECK: The last time the leadership of FERC and the Nuclear Regulatory Commission got together, there were just enough commissioners between the two agencies to fill one five-member board. Fast-forward to today, and it's a full house for the first time in years thanks to confirmation of two new NRC leaders last month. The get-together is slated to run for just over two hours. An agenda hasn't been released but the meetings usually involve staff presentations on grid reliability — and how it might be impacted by the retirement of nuclear plants — and cybersecurity regulations. Finding the areas where an

economic regulator overlaps with a safety watchdog isn't always obvious. The meeting is slated to run from 9 a.m. to 11:15 a.m. at FERC headquarters, and will be [webcast](#).

ROYALTY RUMPUS: Interior's Royalty Policy Committee approved recommendations Wednesday aimed at expanding energy lease sales and lowering royalty rates, Ben recaps. But during the advisory committee's meeting, two members questioned whether it had the power to suggest changes to federal environmental review. "NEPA is not referred to in the [committee] charter," Rod Eggert, a professor at the Colorado School of Mines, said during the meeting. "The text in the charter refers to royalties and collections of royalties." Read more [here](#).

Later Wednesday, BLM sent out a [memo](#) instructing field offices to look for ways to speed up permit processing, including by using categorical exclusions, Ben [reports](#).

— **Meanwhile, the Central Arizona Project will meet today** on proposals for sourcing cheaper power to run the Navajo Generating Station. The Bureau of Land Reclamation last week sought to delay the coal-fired power plant's closure, arguing that a 1968 law gives Zinke the authority to require the Arizona water project buy energy from the power plant. Reuters has the rundown [here](#).

GROUPS WARY OF INTERIOR DRAFT BILL: A coalition of sportsmen's groups is concerned about draft legislation that appeared before the House Natural Resources Energy Subcommittee on Wednesday. According to the [draft bill](#), it would enable Interior to recover the costs of administrative protests to oil and gas lease sales, drilling permits and other applications. The bill, [they say](#), would make it more difficult for sportsmen and women to comment on oil and gas lease sales on public land.

BLANKENSHIP IS BACK: Former coal baron Don Blankenship hasn't given up hope to take on the establishment and earn himself a spot in the Senate. After losing a primary bid to West Virginia Attorney General Patrick Morrisey, Blankenship's campaign [announced](#) Wednesday it is petitioning to gain ballot access for the general election as the nominee for the Constitution Party.

BIPARTISAN LETTER ASKS PRUITT TO DROP 'SECRET SCIENCE': More than 100 lawmakers — including Republican Reps. [Brian Fitzpatrick](#), [Carlos Curbelo](#), [Ryan Costello](#) and [Ileana Ros-Lehtinen](#) — signed onto a letter to Pruitt today, asking him to withdraw EPA's so-called secret science proposal to bar EPA from using studies that don't make public all their data. Read the letter [here](#).

DEMS WARN AGAINST E15: Democratic Sens. [Tom Udall](#) and [Peter Welch](#) are calling on EPA to abide "by all legal and regulatory requirements" as the Trump administration weighs the year-round sale of 15 percent ethanol blends of gasoline. "We are very concerned that career EPA officials may be being directed to reverse over 25 years of the agency's position to manufacture legal and scientific justifications for a politically-directed decision on E15," they write. Read the [letter](#).

MAIL CALL! RELEASE THE STUDY: A coalition of environmental groups will send [this letter](#) today to HHS Secretary Alex Azar, calling on him to release the controversial federal chemical pollution study [blocked](#) by EPA officials.

— **Nineteen environmental groups filed a letter** to the House in opposition of [H.R. 5895 \(115\)](#), the so-called minibus, which they say sets up an improper use of water and natural resources, and undermines safe nuclear waste disposal. Read it [here](#).

FOR YOUR RADAR: The International Wildlife Conservation Council, which came [under fire](#) for the big-game trophy hunters added to its ranks, will hold its next meeting June 19 in Atlanta, according to the [Federal Register](#).

ON THE WEB: The Center for American Progress is launching a new website today that is dedicated to tracking legal challenges to the Trump administration's conservation agenda. See it [here](#).

Stories from POLITICO Pro

Another mess for Pruitt: Overstaying his White House welcome at lunch [Back](#)

By Emily Holden, Andrew Restuccia and Anthony Adragna | 06/06/2018 10:17 PM EDT

EPA Administrator Scott Pruitt loves eating at the White House mess, an exclusive U.S. Navy-run restaurant open only to White House officials, Cabinet members and other dignitaries.

But apparently he liked it too much, and the White House asked him to please eat elsewhere sometimes.

In response to Pruitt's recurring use of the restaurant next to the Situation Room in the basement of the West Wing, a member of the White House's Cabinet affairs team told agency chiefs of staff in a meeting last year that Cabinet members shouldn't treat the mess as their personal dining hall, according to three people with knowledge of the issue.

The message was clear, according to one person close to Pruitt: "We love having Mr. Pruitt, but it's not meant for everyday use." Another person added that the White House asked Cabinet members to visit the mess only occasionally because there are [few tables available](#).

A renovation to update the West Wing HVAC last August included the mess kitchen and may have limited space, one person said. The renovation came shortly after the president tapped John Kelly as chief of staff, and he implemented several day-to-day changes to bring order to the White House.

The White House did not respond to a request for comment and EPA declined to comment. Pruitt's allies privately disputed that the warning about overuse of the mess was aimed squarely at him, but nobody contests that he's a frequent presence at the White House for lunch.

Pruitt has been known to complain that EPA headquarters has no cafeteria of its own and no private dining quarters, according to multiple sources, who said Pruitt still often heads to the White House for lunch. One source said EPA officials called the White House to explain that Pruitt didn't have a place to eat at EPA and would like to continue to visit. Pruitt's EPA office is only a few blocks up Pennsylvania Avenue from the White House.

A [billing statement](#) from July 2017 offered a glimpse into Pruitt's use of the mess, showing the EPA chief or people linked to him dined at the mess at least nine times that month, racking up a bill of \$400, a relative bargain in downtown Washington. Pruitt and his guests dined on dishes like "cowboy" skirt steak, popcorn chicken and waffles, spinach strawberry salad and beer-braised brisket tacos.

While the food is considered to be top-notch, the prices are a real bargain. Skirt steak runs just \$10.25, while coriander beef kabobs were just \$11.95 each. And a cheeseburger runs just \$6.35, according to his bill. The burger at another of Pruitt's haunts, French bistro Le Diplomate, runs \$17.

Records obtained through a Sierra Club Freedom of Information Act request [also show](#) Pruitt often sought to bring friends from Oklahoma to the White House mess.

Five friends from Tulsa — Charlie Polston, Carlyn Mattox, David Mattox, Bob Wagoner and Jerry Dillon — were invited for a September lunch there with him, though it didn't appear in Pruitt's detailed calendar obtained through FOIA.

That lunch came just two weeks after Pruitt made a lunch date there with Bob Funk, a wealthy Oklahoma Republican with whom he bought a major stake in the minor league Oklahoma City RedHawks baseball team back in 2003.

"Please have Mr. Funk arrive at EPA building at 11:40am to ride with Administrator Pruitt to the WH," Lincoln Ferguson, a senior adviser for public affairs, wrote in [an email](#). There was no entry in Pruitt's calendar for the time when the lunch was to have taken place.

Calendars from Pruitt's senior aides show he made frequent use of the space in the month following his February 2017 Senate confirmation. He dined there on Feb. 27, March 2 and met with Ivanka Trump, the president's daughter and West Wing adviser, on March 13. Chief of staff Ryan Jackson's calendar also lists a lunch in the "Mess" on March 16.

Pruitt also hosted representatives from the Oklahoma Farm Bureau on March 29, according to Jackson's calendar. And he returned for lunch with Mike Catanzaro, a senior White House energy aide, and several senior aides on April 7.

Pruitt and his guests also seemed to have a sweet tooth, partaking of a dessert called "Chocolate Freedom" on multiple occasions. As POLITICO [reported](#) in January 2017, the dish — a molten cake made with imported French chocolate that must be ordered at the beginning of lunch because of the baking time — was also popular among Obama administration staffers on their way out the door.

Chocolate Freedom has garnered [rave reviews online](#), and once prompted comedian Zach Galifianakis to [ask](#) whether it was also the staff's nickname for former President Barack Obama.

Also available to diners: boxes of red, white and blue M&Ms featuring the presidential seal.

Alex Guillén contributed to this report.

Pruitt wanted to buy 'old mattress' from Trump International Hotel [Back](#)

By Anthony Adragna | 06/04/2018 10:43 AM EDT

Two senior House Oversight Democrats are demanding Chairman Trey Gowdy (R-S.C.) subpoena Scott Pruitt for documents after one of his closest aides told congressional investigators the EPA administrator had her book a personal flight to the Rose Bowl, search for housing for him and try to buy him an "old mattress" from the Trump International Hotel.

Ranking member Elijah Cummings (D-Md.) and Gerry Connolly (D-Va.) demanded that Gowdy compel Pruitt to turn over all documents related to the potential mattress purchase, efforts to secure personal flights, and work that agency employees performed on non-EPA tasks for Pruitt that have been withheld from an earlier April Democratic request. That followed a May 18 transcribed interview with Millan Hupp, Pruitt's scheduler.

"If Ms. Hupp's statements to the Committee are accurate, Administrator Pruitt crossed a very clear line and must be held accountable," they wrote. "Federal ethics laws prohibit Administrator Pruitt from using his official position for personal gain and from requesting and accepting services from a subordinate employee that are not part of that employee's official duties."

As part of its investigation into Pruitt, the Oversight Committee said it has conducted several transcribed interviews and obtained 2,350 pages of documents, and a spokeswoman criticized the release of Hupp's testimony.

"Selectively releasing portions of witness interview transcripts damages the credibility of our investigation and discourages future witnesses from coming forward. The Committee will continue conducting a serious, fact-driven investigation, and therefore will wait until the conclusion of our investigation to release our findings," committee spokeswoman Amanda Gonzalez said in a statement.

White House Press Secretary Sarah Huckabee Sanders said Monday the administration is "looking into" the issues in the Democrats' letter, but didn't outline any more specific steps.

"I couldn't comment on the specifics of the furniture use in his apartment and certainly would not attempt to," she said, referring to Pruitt's interest in the mattress.

According to the Democrats' letter, Hupp told Oversight staff she worked with the managing director of the Trump International Hotel in hopes of securing an old mattress. She said Pruitt had told her someone at the hotel indicated he could purchase the mattress, though she did not know why he wished to do so and did not know if he ultimately bought it.

In addition, Hupp said she sent several emails to real estate agents over a period of several months last summer during work hours to help Pruitt find housing after he verbally asked for her help. She said she visited a "probably more than 10" properties during her lunch hour over the course of several months. Hupp said she didn't use work email for the searches and was not paid for her efforts.

Pruitt and his wife ultimately settled on an apartment on 13th and U streets, but left it shortly afterwards because "they were not comfortable in the area," according to Hupp.

Democratic lawmakers have honed in on Pruitt's admission during a May 16 Senate subcommittee hearing that Hupp had searched for housing for him without pay on her own personal time.

"It doesn't cut it that they're a friend or that kind of thing," Sen. Tom Udall (D-N.M.) told Pruitt at the hearing, because having a subordinate staff member voluntarily conduct tasks on personal time would constitute a gift.

"That's in violation of federal law," Udall told Pruitt.

An EPA spokesman said the agency continued to give the information it was seeking.

"We are working diligently with Chairman Gowdy and are in full cooperation in providing the Committee with the necessary documents, travel vouchers, receipts and witnesses to his inquiries." EPA spokesman Jahan Wilcox said in a statement.

According to the Democrats' letter, Hupp said around Christmas she used a personal credit card from Pruitt in her possession to arrange his personal trip to the Rose Bowl in California to watch the Oklahoma Sooners football team play. She did not know why Pruitt, who sent her the details for the trip, and couldn't book the flight on his own.

"He just sent me the flights details and asked me to book for him," Hupp said.

Hupp indicated she considered Pruitt a personal friend, which was why she did these tasks for him. She said the two had met for dinners that were attended by just the two of them.

"We worked very closely together and spent a lot of time together," she said. "I traveled with him, so naturally a friendship developed."

Republicans losing patience with scandal-scarred Pruitt [Back](#)

By Anthony Adragna and Emily Holden | 06/06/2018 05:37 PM EDT

Republicans on Capitol Hill are growing frustrated with EPA Administrator Scott Pruitt — and many are now publicly questioning whether he can hang on to his job amid the unending stream of scandals.

Several GOP lawmakers said their patience was running thin after this week's news that Pruitt sought to buy to buy a used mattress from the Trump Hotel and inquired about securing a Chick-fil-A franchise for his wife. And Pruitt's circle of confidantes inside the agency appeared to be shrinking as well, with two of his closest aides set to depart in the coming days.

"The constant drip needs to stop so the agency can get its footing and focus back," House Energy and Commerce Chairman Greg Walden (R-Ore.) told reporters. "They're doing some really good work in the environmental front, but this needs to stop."

"Sometimes people get tripped up on other things besides the core mission, and I think that's what you're seeing," Sen. Shelley Moore Capito (R-W.Va.) told reporters.

Pruitt's scheduler, Millan Hupp, is resigning following her interview by the House Oversight Committee during which she disclosed that she helped her boss find housing and inquired about purchasing a used mattress for him from the Trump International Hotel.

And his top legal counsel, Sarah Greenwalt, will also depart, according to sources. Both women had worked for Pruitt in the Oklahoma attorney general's office and both were among the staff that received raises that had been rejected by the White House.

"I think it's extremely fair to say her and Millan both are tired of the daily grind here," one EPA official said. "Everybody is painfully aware of that."

While acknowledging that President Donald Trump would ultimately make any decision about Pruitt's job, several Republicans indicated Pruitt's support was waning in their conference.

"I'm not going to come down here, just because he happens to be a nominee of a president I support or a nominee from my party, and try to defend the indefensible," Sen. John Kennedy (R-La.) said. "I thought that Mr. Pruitt would have learned his lesson."

Kennedy added: "I said the same thing about Tom Price," referring to Trump's former HHS secretary who resigned after spending lavishly on military and private jets.

Trump reaffirmed his support for Pruitt on Wednesday when they participated in a briefing on the 2018 hurricane season with several Cabinet officials.

"EPA is doing really, really well," Trump said. "You know, somebody has to say that about you a little bit. You know that, Scott."

But even staunch Pruitt allies like Sen. Jim Inhofe (R-Okla.) said the mounting scandals had them rethinking their support.

"Some are true, some are not true. Whether he can weather the storm, I'm not sure," Inhofe said. "The accusations are all troubling. They are."

A few Republicans stood by Pruitt, arguing he's been targeted by an environmental community and press corps eager to take him down.

"I like him," Sen. Roger Wicker (R-Miss.) said. "He is a target because he's keeping the president's campaign promises."

But a more common view among GOP lawmakers was the collective stream of scandals were taking their toll and making Pruitt's position untenable.

"Take a thousand cuts and [there's] not much energy left," Senate Appropriations Chairman Richard Shelby (R-Ala.) told reporters.

Rep. John Shimkus (R-Ill.), who leads the Energy and Commerce subcommittee overseeing EPA, joked he "can't keep up" with the flood of allegations and said he's concerned they haven't stopped.

"These unforced errors are unforced errors," he said. "I don't like being asked all the time about this."

But he raised a possible reason why Republicans weren't abandoning Pruitt: getting a replacement confirmed by the Senate would be nearly impossible.

"Are you going to promise me we could even get an administrator?" he said. "I think that's another concern."

In a video posted by a Nexstar Wednesday, Pruitt defended his attempts to set his wife up with a Chick-fil-A franchise Wednesday, while the president reaffirmed his support in the administrator.

Pruitt said that his wife is "an entrepreneur herself" and that the pair loved the fast-food franchise. As he has in the past, Pruitt dismissed criticism of his behavior as being driven by opposition to the Trump administration's deregulatory policies.

"With great change comes, I think, opposition," he said in a clip the reporter posted to Twitter.

Pruitt did not directly address whether he had asked an EPA aide to reach out to Chick-fil-A President Dan Cathy to inquire about his wife opening up her own restaurant, as the Washington Post first reported Tuesday.

"Chick-fil-A is a franchise of faith and it's one of the best in the country, so that was something we were very excited about," he told the Nextstar reporter Wednesday. "We need more of them in Tulsa, [Okla.]. We need more of them across the country."

Kelsey Tamborrino contributed to this report.

Trump's Interior chief 'hopping around from campaign event to campaign event' [Back](#)

By Ben Lefebvre and Esther Whieldon | 10/05/2017 05:01 AM EDT

Republican donors paid up to \$5,000 per couple for a photo with Interior Secretary Ryan Zinke at a fundraiser held during a taxpayer-funded trip to the U.S. Virgin Islands, according to documents reviewed by POLITICO — raising questions about his habit of mixing official government business with political activism.

The new details about Zinke's March trip to the Caribbean, including the previously undisclosed invitation to the Virgin Islands Republican Party fundraiser, emerged after weeks of scrutiny of the former Montana GOP congressman's travels. The nearly two-hour event was one of more than a half-dozen times Zinke has met with big donors or political groups while on department-paid trips, Interior travel records and other documents show.

Ethics watchdogs say Zinke is combining politics with his Interior duties so frequently that he risks tripping over the prohibitions against using government resources for partisan activity, even though his appearance at the Virgin Islands event seems to have been legal. Democrats have also seized on the issue, including 26 House members who wrote in a letter Tuesday that Zinke's travels "give the appearance that you are mixing political gatherings and personal destinations with official business."

Zinke has said all his actions have obeyed the law, dismissing concerns about his travel as "a little BS."

But some ethics advocates say Zinke's attendance at a fundraiser during his first month as secretary is not in line with past administrations' conduct, even if he crossed no legal red lines.

"It happens on occasion with other Cabinet secretaries, perhaps even a little more often as you get near the election, but it is not a very common practice for Cabinet members to be hopping around from campaign event to campaign event like we're seeing with Zinke," said Craig Holman, government affairs specialist for government watchdog Public Citizen.

The secretary is already under investigation by his department's inspector general over his use of taxpayer-funded private planes for some of the trips, and the Office of Special Counsel is looking into an activist group's allegations that he violated the Hatch Act, the law limiting political activism by federal employees. The White House has cracked down on Cabinet members' travel habits following former HHS Secretary Tom Price's resignation on Friday, which occurred after POLITICO reported on his own expensive flights.

Zinke visited the Virgin Islands from March 30 to April 1 on an official trip related to the Interior Department's role overseeing the U.S. territory. On his first day, following a "veterans meet and greet" and a reception with Gov. Kenneth Mapp, he appeared in his personal capacity at a March fundraiser for the local Republican Party at the patio bar of the Club Comanche Hotel St. Croix, department records show.

Tickets for the fundraiser ranged from \$75 per person to as much as \$5,000 per couple to be an event "Patron," according to Zinke's official calendar and a copy of the invitation. Patrons and members of the host committee, who paid \$1,500 per couple, could get a photo with Zinke at the start of the event, which was attended by local party members and elected officials.

The following day, Zinke took a \$3,150 flight on a private plane, paid for by the department, from St. Croix to official functions on St. Thomas and returned later that evening. Interior Department officials said there was no

other way to accommodate his schedule, which included official events on both islands commemorating the 100th anniversary of the Dutch government transferring control of the islands to the United States.

Zinke is allowed to engage in partisan political activity in a "purely personal (not official) capacity," so long as he does not use government resources, according to Interior Department guidelines on the Hatch Act and other federal laws. The invitation to the GOP fundraiser did not identify Zinke by his official title and included a disclaimer that the money is being solicited by the local party and "not by any federal official."

All told, Zinke has spent around \$20,000 for three charter flights as secretary, nowhere near the \$1 million tab Price racked up on non-commercial trips. But he has on numerous occasions attended political receptions, spoken to influential conservative groups or appeared alongside past campaign donors during trips has taken outside of Washington, D.C., for official department business.

In one instance, Zinke gave a motivational speech for a professional hockey team owned by a major campaign contributor that he said was official business — and which required him to charter a \$12,000 flight to Montana for an appearance at the Western Governors Association the next day.

In another case, during a speech to the Western Conservative Summit in Denver, he was introduced via a recorded voice as the Interior secretary and Zinke proceeded to talk about the agency's priorities. The summit was organized by the Centennial Institute, which bills itself as Colorado Christian University's think tank and is a part of the State Policy Network of organizations that collectively push for conservative state-level legislation.

An Interior spokeswoman said Zinke always follows the law but declined to answer specific questions about his appearance at the Virgin Islands fundraiser, nor say whether he would keep raising political money. The agency also has yet to post Zinke's trip expenses involving any of the political events.

"The Interior Department under the Trump Administration has always and will always work to ensure all officials follow appropriate rules and regulations when traveling, including seeking commercial options at all times appropriate and feasible, to ensure the efficient use of government resources," spokeswoman Heather Swift said in a statement.

Swift did not respond to questions about whether the department had gotten reimbursement for the political portion of Zinke's three-day Virgin Islands trip, as the head of one watchdog group says it should have.

"Some of this travel is clearly political and that part of the travel should have been paid for by the RNC, NRCC, state political parties, a campaign committee or Zinke personally," said Daniel Stevens, executive director of the Campaign for Accountability.

No payments to the department are listed in the Virgin Islands Republican Party's FEC records.

Zinke is not the first Interior secretary, or Cabinet member, to have his activities questioned.

In 2012, a watchdog group called Cause of Action urged the Office of Special Counsel to investigate whether President Barack Obama's then- Interior Secretary Ken Salazar had violated the Hatch Act while taking an Obama reelection campaign RV tour of Colorado with a couple of lawmakers and the state lieutenant governor. Local organizers of one stop on that tour had billed Salazar on its online events calendar as attending the political rally in his official role. OSC would not say whether its investigation uncovered any problems, but travel records Interior has posted show that one of Salazar's aides had told the tour's coordinator the schedule "should not refer to (Salazar as) 'secretary.'" Salazar did not respond to a request for comment.

A former Salazar aide, who was not authorized to speak on the record, said the Obama administration generally tried to avoid scheduling political events that coincided with official travel because it was difficult to divvy up what expenses should be reimbursed by a campaign.

The special counsel's office found Obama HHS Secretary Kathleen Sebelius in violation of the Hatch Act in 2012, saying she had made "extemporaneous partisan remarks" by endorsing a candidate for North Carolina governor during a speech she made in her official capacity. Sebelius tried to scrub the violation by reclassifying the appearance as political and reimbursing the Treasury Department for costs associated with the trip.

Sally Jewell, who was Interior secretary during Obama's second term, said Zinke was within his rights to appear at the fundraiser in the Virgin Islands. Jewell said she once appeared at a fundraiser for Democratic Sen. Maria Cantwell while in Obama's Cabinet, though she paid her own way to Washington state and was not identified by her official title.

"If he had legitimate business while he's on the island, to do a political thing on the side, I don't think that is that unusual," Jewell said in an interview.

EPA Administrator Scott Pruitt canceled his scheduled appearance at a fundraiser for the Oklahoma Republican Party in April because an invitation had identified him by his official title and said he would discuss his work at the agency. EPA ethics officials said he would have been cleared to attend the event if not for that language on the invitation.

Watchdog groups say Zinke's behavior fits a pattern for Trump's Cabinet.

"These government resources have been abused by this administration," said Virginia Canter, an executive branch ethics counsel for Citizens for Responsibility and Ethics in Washington who previously worked as an ethics official for Presidents George H.W. Bush, George W. Bush and Obama. "To the extent that some of that supports their political ambitions is inconsistent with the intent of this authority."

The Campaign for Accountability called on Interior's inspector general and the Office of Special Counsel to investigate whether Zinke violated the Hatch Act or department ethics rules with his speech to the hockey team, which the group said appeared to be a favor for a donor. Interior's IG office announced its investigation earlier this week, and OSC told the Campaign for Accountability that it was looking into the group's complaint, according to an email shared with POLITICO. The OSC declined to comment.

Reps. Raúl Grijalva (D-Ariz.) and Donald McEachin (D-Va.) have asked Interior's IG to also look into any trips on which the secretary was accompanied by his wife, Lola Zinke, who is chairing the campaign of Montana Republican Troy Downing, a candidate to unseat Democratic Sen. Jon Tester next year. Swift said Lola Zinke was not in the Virgin Islands and has paid her own way whenever she has traveled with her husband on official trips.

Many who know him see Zinke's travels as an attempt to keep in touch with political contacts as he contemplates what he will do after leaving the Trump administration. Back home, the 55-year-old former Montana congressman is seen as an attractive candidate for the open-seat governor's race in 2020, when Democratic Gov. Steve Bullock will have to step down because of term limits.

"I think he's definitely got political aspirations; that's one of the reasons why he is where he is at right now," said Land Tawney, executive director of Backcountry Hunters and Anglers, a Montana-based sportsman group that supported Zinke's bid for Interior secretary. "You don't go from being a Montana legislator to a first-term congressman to [Interior] secretary without having ambition."

The Virgin Islands trip was Zinke's first interaction with big donors or influential conservative groups during his travel as Interior secretary.

A weeklong trip in May that took Zinke through Montana, Utah and California also offered a chance to squeeze in some political events.

Zinke delivered the keynote speech at the RNC spring meeting on May 11 in Coronado, Calif. Zinke had flown to California the previous night, after several days touring monuments in Utah, and the RNC speech was his only event in the state aside from a meeting earlier that afternoon with Rep. Amata Radewagen, the Republican delegate from American Samoa, and members of the American Tunaboat Association.

The next day, Zinke flew back to Montana, where he joined Sen. Steve Daines (R-Mont.) and Vice President Mike Pence to tour a coal mine on the Crow Indian reservation operated by the Westmoreland Coal Co.

The trip offered Zinke and Pence an opportunity to tout the Trump administration's work to promote new coal mining on federal lands — and it allowed them to make a brief detour to promote Zinke's congressional replacement. That Friday night, Zinke, Pence and Daines attended a political rally for GOP candidate Greg Gianforte, and Zinke attended a get-out-the vote event for the Montana GOP the next day.

Zinke apparently paid for his return trip to Washington out of his own pocket — it was marked "personal travel" on his calendar, a designation not applied to the other flights on that trip.

Gianforte, whose wife is a major political donor in Montana, won the May 25 special election to take over Zinke's House seat.

Greg and Susan Gianforte donated more than \$10,000 to Zinke's 2016 congressional campaign and another \$10,000 to a joint Zinke-Daines PAC, according to federal records. The couple donated \$5,000 for his earlier run for Congress.

Zinke met with big influencers and donors in June as well.

On June 25, he flew from D.C. to Reno, Nev., where his only scheduled event was a meeting of the Rule of Law Defense Fund, a group of Republican attorneys general that has been linked to the Koch brothers, where he spoke and took questions for about 30 minutes, according to his schedule.

After his remarks, he sat at a dinner table with Montana's attorney general, the government relations specialist for the Venetian Resort Hotel Casino and Las Vegas Sands, and Koch Industries lobbyist Allen Richardson, Interior documents show.

The next day, Zinke flew to Las Vegas for an event on public lands in nearby Pahrump, Nev., and a speech that night to the National Hockey League's Vegas Golden Knights. Bill Foley, the team owner and chairman of Fidelity, introduced Zinke. Foley donated \$7,800 to Zinke's 2014 campaign, while employees and PACs associated with Fidelity and related companies gave another \$180,000. Interior officials said the speech to the NHL team was part of Zinke's official duties, and they pointed to scheduling conflicts it created to justify his use of a \$12,000 private plane to get to a Western Governors Association meeting in Montana the next day.

In July, Zinke spoke to several conservative groups in Colorado during a three-day trip that also included tours of Interior Department facilities in the state. He flew into Denver on July 20 so he could appear that evening at a closed-door reception for the American Legislative Exchange Council, a group of conservative state legislators, lobbyists and industry groups that has pushed for more state control over federal lands.

And over the next two days, he was a featured speaker at a Republican committee roundtable and attended the Western Conservative Summit in Denver.

Zinke's political ties to Virgin Islands improved Interior's hurricane response, party boss says [Back](#)

By Ben Lefebvre | 06/07/2018 05:11 AM EDT

The top GOP official in the U.S. Virgin Islands suggested his fundraising group's "behind the scenes" relationship with Interior Secretary Ryan Zinke helped influence the department's response to last year's hurricanes in the island territory.

John Canegata, the head of the Virgin Islands Republican Party, said he had direct access to Interior officials after the storm thanks to money his group raised for Zinke, whom he described as a "close friend." Zinke, a former congressman, has known Canegata since at least 2015, and the secretary was at a [fundraiser](#) for the VIGOP, as the group is known, during an official trip to the islands in his first month in President Donald Trump's Cabinet.

Interior officials acknowledged reaching out to Canegata, who also works for a major rum distiller in the territory, although they said it was part of a wider effort to contact business leaders based in the territory and Zinke did not call him personally. However, a representative of the distiller said Canegata was not involved in their relief efforts, and a spokesman for the Virgin Islands' House delegate disputed Canegata's involvement in the hurricane response.

The department expedited reimbursements of rum taxes as part of its response to the hurricanes, although it's unclear whether Canegata's connection influenced that decision. Interior has jurisdiction over U.S. territories including the Virgin Islands but not Puerto Rico, which suffered more extensive devastation.

Disaster response experts say it would be inappropriate for Canegata's political connections to influence Interior's efforts in the Virgin Islands.

"These are processes that are supposed to be transparent and supposed to be above the board," said Eric LeCompte, executive director of Jubilee USA, an anti-poverty group that has been involved in hurricane disaster relief efforts. "So, it would not be something a political party would be part of."

VIGOP is not a typical political party and faces frequent inquiries from the FEC to better explain its fundraising practices and expenses. Some critics, including past Republican clients, say the group bilks conservative donors with promises to fight Democrats while spending the bulk of its money on overhead instead of political advocacy. The group spends the [vast majority of its money](#) on a small group of Washington-area political consultants who have also done work for Zinke's campaign and leadership PACs.

Zinke was introduced to the VIGOP in 2015 by a Washington fundraising consultant who also did work for his campaigns, and as a member of Congress he has traveled to at least two political conferences in the Virgin

Islands sponsored by the group, POLITICO reported last year. Zinke and Canegata are seen together during a prior trip in a photo posted to Facebook.

Canegata boasted about his Zinke ties in a televised appearance on WTJX Virgin Islands Public Broadcasting that aired last month but has not received widespread attention outside of the territory.

"We were in direct connection with the Department of Interior," Canegata said in the broadcast.

"Secretary Zinke, happens to be, I wouldn't say a personal friend, but a close friend," Canegata continued. "Prior to him being the secretary of Interior, we spent some time in Washington, we spent some time here in the Virgin Islands. We supported him when he was a congressman and, behold, he becomes the secretary of Interior."

While Canegata credited other officials with their part in aiding the island's response, he said the pre-existing connection to Zinke was key.

"Obviously, we have our congresswoman, our governor doing their job," Canegata continued. "But behind the scenes, trust me, a lot of telephone calls, a lot of maneuvering was going on because, I think, some of the relationships we built."

The Office of Special Counsel on Tuesday closed its investigation into Zinke's appearance at the Virgin Islands fundraiser in March 2017, finding that he had not violated the Hatch Act because he was there in his official capacity and VIGOP reimbursed Interior for its expenses. Interior's inspector general also recently said the appearance at the fundraiser was not inappropriate. It is unclear whether either of those investigations addressed any link between VIGOP and Interior's hurricane response; both offices declined to comment.

Interior's Office of Insular Affairs, which oversees the Virgin Islands, "reached out to dozens of local government employees as well as major private sector employers in the USVI to check their power status and to see how the office could help," Interior spokeswoman Heather Swift said in an email. Canegata "was contacted by those Insular Affairs officials because he works for one of those major private employers, Cruzan Rum."

Canegata, a supply chain specialist at the rum distillery, had no role in the company's disaster relief efforts, according to Cruzan Rum human resources manager Ayanda Daniels.

"He wasn't part of the coordination," Daniels told POLITICO. "Maybe he had a conversation with someone in order to do something, but we had another team for company response."

James Norton, a former Department of Homeland Security Deputy official during the George W. Bush administration, said it is important for disaster response efforts to be handled through the appropriate channels.

"As a matter of proper procedure, it would only be appropriate for all federal actions to be dealt with solely with official authorities at the Department of Defense, Interior, Homeland Security, FEMA, etc., and those local officials on the ground," said Norton, who is now head of the consulting agency Play-Action Strategies. "Anything other than raising awareness and reaching out to get an update on what's happening would be inappropriate, as a political party or other organization doesn't have command and control authority, nor would they be the designated principal federal official on the ground directing rescue operations."

A spokesman for Stacey Plaskett, the Democratic House delegate from the Virgin Islands, disputed Canegata's version of events.

"I cannot honestly remember hearing them or seeing them do anything to that effect," Plaskett's spokesman Mike McQuerry said. "The congresswoman was the person here in D.C. that worked extremely hard during that time to get those funds to the Virgin Islands."

Canegata did not respond to a request for comment this week.

Interior expedited reimbursement of \$223 million in taxes on Virgin Islands rum imported into the mainland and provided a \$567,500 grant to help with a post-hurricane finance audit. Other hurricane relief funds would have come from FEMA, an Insular Affairs spokesperson said.

Otherwise, Zinke and Insular Affairs head Doug Domenech met with Virgin Islands Gov. Kenneth Mapp to discuss recovery efforts, the Insular Affairs spokesperson said. In November, Domenech also met representatives of Cruzan Rum's parent company, Beam Suntory, to discuss the rum tax reimbursements Interior makes to the territory. Beam Suntory donated \$1.5 million to hurricane relief efforts the previous month.

Swift said Zinke did not personally reach out to Canegata. "The only official in the USVI the Secretary called was Governor Mapp," she said.

Murray had early access to Perry to share coal plan [Back](#)

By Eric Wolff | 12/07/2017 04:22 PM EDT

Coal magnate Bob Murray pitched Energy Secretary Rick Perry on his plan to throw an economic lifeline to coal companies less than a month before Perry set in motion plans to aid the industry, according to newly disclosed photographs that show the two meeting.

The liberal magazine [In These Times](#) obtained pictures of Murray and Perry from a March 29 meeting at Energy Department headquarters, less than a month after Perry was sworn in. Several other officials were in attendance, including Andrew Wheeler, who at the time was a lobbyist for Murray and has since been nominated as EPA's No. 2 official.

The meeting puts Murray and Perry together at a crucial moment in the timeline of the Trump administration's push to save the struggling coal industry, an effort that would benefit Murray Energy in particular while hiking electricity prices for potentially millions of people. A month before the meeting, one of Murray's biggest customers, FirstEnergy Corp., had told investors it was seriously considering sending its merchant division, FirstEnergy Solutions, into bankruptcy, a move which would likely void its supply contracts with Murray's coal mines.

Three weeks after Murray's visit, Perry would order a grid study that later became part of the justification for a proposed rule to reward coal and nuclear power plants for providing "grid resiliency." FERC, which has jurisdiction over the proposal, must make a decision on it by Monday.

At the time of the meeting, Wheeler was already the leading candidate to become the deputy administrator for EPA. Wheeler, who represented Murray as a lobbyist for Faegre Baker Daniels, would not be officially

nominated for months. Wheeler, who has acknowledged participating in meetings on Murray's coal plan at DOE and on Capitol Hill, cleared committee last week and is awaiting Senate confirmation.

Murray is an outspoken supporter of President Donald Trump and held a fundraiser for him during the 2016 campaign.

DOE did not dispute the validity of the photos.

"Industry stakeholders visit the Department of Energy on a daily basis," DOE spokeswoman Shaylyn Hynes said, when asked about the meeting. "The DOE proposal to FERC was about the future and resiliency of the nation's power supply, an issue much bigger than one industry or company."

The photographs show Perry sitting at the head of a table in the Department of Energy, with Bob Murray, CEO of Murray Energy, to his left, and Wheeler down the table from Murray.

"Enclosed is an Action Plan for achieving reliable and low cost electricity ... and to assist in the survival of our Country's coal industry, which ... power grid reliability and low cost electricity," Murray writes in a cover letter to Perry, parts of which are visible in one photo from the meeting.

Though the document has never been publicly released, DOE critics say Murray's plan appears to have inspired DOE's grid study and the proposed rule Perry sent FERC in September. Copies are visible at the seats of most of the participants, including Perry and Murray. Wheeler, who told members of the Senate Environment Committee he had only seen the memo briefly, is not holding a copy in the photos obtained by In These Times. Murray told Greenwire in November he "didn't have any involvement" in writing the rule.

Murray has acknowledged sharing the plan with Trump.

"I gave Mr. Trump what I called an action plan very early," Murray said in a recent PBS Frontline documentary on EPA. "It's about three-and-a-half pages and — of what he needed to do in his administration. He's wiped out page one."

The meeting appears to have been successful for all. One of the photos shows Perry and Murray in a big bear hug.

Murray delivered executive orders on coal rules to Trump administration [Back](#)

By Darius Dixon | 06/06/2018 07:05 PM EDT

Coal magnate Bob Murray delivered six draft executive orders ready for President Donald Trump to sign to roll back Obama-era environmental regulations in the early weeks of the administration, according to newly released Energy Department documents.

The documents released Wednesday after a Freedom of Information Act request include a letter to Energy Secretary Rick Perry from Murray praising Trump's March 2017 energy independence executive order, which largely aimed to help the coal industry. And to bolster that effort, Murray wrote, "we have developed the

enclosed materials for your review and consideration, consisting of: six (6) Executive Orders further rescinding anti-coal regulations of the Obama administration; and one (1) memorandum outlining the legal rationale for each of these action, and others."

Those executive orders were also sent to EPA Administrator Scott Pruitt, whose agency had jurisdiction over most of the issues they involved, such as ozone rules and regulations on coal ash.

Trump has not signed executive orders resembling Murray's, but the administration has moved to enact the policies, such as pulling U.S. out of the Paris climate agreement. The documents, which were sent to DOE the day Trump signed his energy independence order and one day before Murray met with Perry and DOE chief of staff Brian McCormack, also included concepts about grid security and "resiliency" that Perry later touted as part of his push to stop coal power plants from closing.

"The Department of Energy ("DOE") must issue an emergency directive to have an immediate study done of the security and resiliency of our electric power grids," the document states. "DOE will direct that no power plants having an available fuel supply of at least forty-five (45) days be closed during the study period, or a minimum of two (2) years."

Perry later ordered his staff to write a study about the electric grid that was eventually tied to a regulatory proposal that FERC create financial rewards for power plants with a 90-day supply of fuel on-site. That condition would have overwhelmingly benefited coal and nuclear generators, but it was shot down by FERC in January.

Critics have said Murray would be the biggest beneficiary of Trump's efforts, since his company supplies coal to many of the power plants at risk of closing because of stiff competition from cheap natural gas and renewable power as well as lagging electricity demand from consumers.

Murray spokesman Gary Broadbent confirmed the company had submitted the documents to Perry "to assist in the reversal of the illegal, job-killing, anti-coal regulations of the Obama Administration."

"Mr. Murray has always sought to secure reliable, low-cost electricity for all Americans, as well as to preserve and protect the jobs and family livelihoods of thousands of coal mining families," he said in a statement. "We applaud the actions taken by President Trump's Administration, to date, to protect these jobs and to advance the energy security of the United States."

Murray has repeatedly called on DOE to issue must-run orders for FirstEnergy power plants that consume his coal, and he blasted the FERC commissioners who opposed the on-site fuel proposal.

On Tuesday, a top DOE official said the agency is still formulating a plan to keep struggling coal and nuclear power plants from closing, and it had no deadline to meet Trump's demand to rescue them.

"We are evaluating options," Energy Undersecretary Mark Menezes told reporters. Last week, Trump called on DOE to take "immediate steps" to stop a wave of coal and nuclear power plant retirements, and like Perry, he cast the shutdowns as a threat to national security.

House passes WRDA bill [Back](#)

By Annie Snider | 06/06/2018 09:42 PM EDT

The House has overwhelmingly approved the Water Resources Development Act of 2018, [H.R. 8 \(115\)](#), the first major infrastructure legislation to move under the Trump administration.

Lawmakers signed off on the measure on a broadly bipartisan vote of 408-2. The bill would authorize six new Army Corps of Engineers projects and enact a suite of policy reforms at the red tape-laden agency. It is significantly narrower than the Senate's measure, which would also make changes to EPA drinking water and wastewater programs.

And it includes a provision that could stir some controversy with the Senate, ordering a study of whether the Army Corps' civilian work should remain within the Department of Defense.

But House leaders dodged provisions that could have derailed the bill by blocking controversial amendments from floor consideration. Those included efforts to repeal the Obama administration's Waters of the U.S. rule, allow firearms at Army Corps recreational sites and exempt pesticide spraying from Clean Water Act permitting requirements.

WHAT'S NEXT: The Senate is expected to consider its version of the WRDA bill, America's Water Infrastructure Act of 2018, [S. 2800 \(115\)](#), this summer.

Trump calls for coal, nuclear power plant bailout [Back](#)

By Eric Wolff | 06/01/2018 02:29 PM EDT

President Donald Trump pressed for a quick regulatory bailout for struggling coal power plants on Friday — a move that would buoy a mining industry that offered him crucial support in 2016, but is riling other energy companies and even some free-market conservatives.

The White House called on Energy Secretary Rick Perry to take immediate steps to keep both coal and nuclear power plants running, backing Perry's claim that plant closures threaten national security. An administration strategy to do that laid out in a memo to the National Security Council circulated widely among industry groups on Friday, but it was not clear that intervention could survive the inevitable political and legal challenges.

It was the latest step in more than a year of efforts by the administration to compel power companies to keep operating the money-losing plants that are suffering from the rise of competing energy sources like natural gas. Those proposals have drawn opposition from most utilities, along with environmentalists, gas producers, power grid operators and conservatives who say it would be an unwarranted intrusion to the energy markets.

The White House statement calling for action came after days of Trump making similarly aggressive moves on international trade, slapping tariffs on the European Union, Canada and Mexico to protect U.S. industries like aluminum and steel. In this case, the president is acting on behalf of what he likes to call "beautiful, clean coal," a once-dominant fuel that still plays a major role in his stump speeches.

Trump "has directed Secretary of Energy Rick Perry to prepare immediate steps to stop the loss of these resources," White House press secretary Sarah Huckabee Sanders said in a statement Friday, referring to coal and nuclear plants.

She added that Trump believes "keeping America's energy grid and infrastructure strong and secure protects our national security... Unfortunately, impending retirements of fuel-secure power facilities are leading to a rapid depletion of a critical part of our nation's energy mix, and impacting the resilience of our power grid."

The statement came five months after federal energy regulators rejected Perry's call that they adopt his proposal to keep the struggling coal and nuclear power plants operating. That proposal would have overwhelmingly benefited mining magnate Bob Murray, an outspoken Trump supporter whose operations supply coal to several endangered plants in the Midwest and Northeast, according to a POLITICO analysis.

Trump's National Security Council gathered Friday to discuss the draft memo that lays out arguments why the administration should use federal authority to keep the money-losing power plants open — despite the assurances from some of the nation's grid operators that no such emergency exists.

"Any federal intervention in the market to order customers to buy electricity from specific power plants would be damaging to the markets and therefore costly to consumers," said the PJM Interconnection, which operates the nation's largest power grid and stretches from the Midwest the Atlantic Coast, in a statement. "There is no need for any such drastic action."

A broad swath of trade associations representing oil and gas, wind and solar power, consumer groups and advanced energy technologies slammed the plan, and they were joined by some congressional Democrats.

"This would be an egregious abuse of power," Sen. Ron Wyden (D-Ore.) said in a statement. "I fought this proposal before, and I will continue to fight this corrupt scheme to prop up the coal industry at the expense of American consumers."

That new 41-page memo, first revealed by Bloomberg News on Thursday evening, says that under the 2015 highway and transit bill known as the FAST Act, DOE must identify critical energy infrastructure, a process the agency is undertaking now with the help of its national labs. But because that is likely to take two years, DOE in the meantime should use the 1950 Defense Production Act and the Federal Power Act to require the plants to keep operating, the memo says.

Power sector experts have said using the two laws to keep specific plants operating would stretch both those measures, and would certainly trigger a major legal fight. Critics of the administration's strategy said the memo appears to signal that the White House is preparing for a fight.

"One way to view the release of this draft is that it is a trial balloon to see how fierce and fast the opposition will be," said Dena Wiggins, CEO of the industry lobby group Natural Gas Supply Association, which opposes the DOE plan. "We've known for some time that all of these federal authorities ... were in play, so the fact that we've now seen it in writing doesn't really change anything. It does, however, underscore how hard it is to cobble together a sound legal rationale to bail out otherwise uneconomic coal and nuclear plants."

And critics say the push to bail out the plants is simply Trump's effort to reward backers like Murray, the coal baron, and live up to his campaign promise to revive coal country. Perry first began work on the power plant issue in March 2017, when he met with Murray at DOE, and Trump himself personally directed Perry to take action on the issue since last summer.

Murray's coal mines have been a major supplier for power plants owned by FirstEnergy Solutions, a unit of Ohio-based utility giant FirstEnergy that sank into bankruptcy this spring. FirstEnergy Solutions has said it plans to close or sell five of its money-losing coal and nuclear power plants.

But the Federal Energy Regulatory Commission and the grid operator have said that even with the planned closures, the region has ample power to supply the market's needs. Stagnant power consumption growth, coupled with the rise of natural gas and renewable power sources like wind, has displaced many of the older coal and nuclear facilities in the markets.

The memo also calls for establishing a new requirement for the electric grid based on "resilience," a term Perry injected into the regulatory conversation last fall with a proposed rule that would have rewarded plants that could keep 90 days of fuel on site. FERC rejected that rule, but it also created a new proceeding to try to define "resilience," which some in the industry say pertains to the grid's ability to withstand and recover from a physical or cyberattack.

The memo largely focuses on the issue of resilience, which it says would suffer if coal and nuclear power plants retire. It specifically targets natural gas as a weakness, because the plants that burn the fuel rely on pipelines that could be disrupted, while coal and nuclear power plants can keep months' worth of fuel on site.

"Natural gas pipelines are increasingly vulnerable to cyber and physical attacks," the memo says. "The incapacitation of certain pipelines through the United States would have severe effects on electric generation necessary to supply critical infrastructure facilities."

House to vote Thursday on Trump's spending cuts plan [Back](#)

By Sarah Ferris | 06/06/2018 05:32 PM EDT

President Donald Trump's prized deficit-reduction package is rolling toward the House floor this week, though its prospects in the Senate remain in doubt — with little time to spare.

House leaders have set a vote Thursday on the Trump administration's roughly \$15 billion rescissions bill, according to a GOP aide, nearly a full month after the proposal was first delivered to Capitol Hill.

The House Rules Committee will tee up the bill, [H.R. 3 \(115\)](#), on Wednesday evening, a lightning turnaround that surprised even some GOP lawmakers.

The last-minute scheduling change comes after the White House [agreed this week](#) not to slash hundreds of millions of dollars from politically sensitive programs, like Hurricane Sandy aid, which helped [secure votes](#) from numerous GOP holdouts.

Even with some of those unpopular cuts reversed, several House Republicans remain anxious about the plan's optics — specifically, cuts to the ultra-popular Children's Health Insurance Program.

At a closed-door meeting of House Republicans Wednesday, several GOP lawmakers stood up to complain that the kids' health cuts could hit hard on the campaign trail, despite assurance from neutral budget experts that the cuts wouldn't harm the program.

In fact, the vast majority of the White House's proposed spending cuts would exist only on paper. The bill would save only \$1 billion over a decade, according to the CBO, which is far less than 1 percent of the size of Congress' last spending bill, H.R. 1625 (115).

Next, the White House will have to sell the bill to the Senate, where a single Republican "no" vote could sink the package.

Budget chief Mick Mulvaney has already met with Sen. Lisa Murkowski, an Alaska Republican who has raised issues with the cuts to CHIP. Sen. Susan Collins of Maine, another GOP moderate, has not yet said whether she supports the bill.

If the House clears the bill Thursday, the Senate will have roughly two weeks to send the measure to Trump's desk before its filibuster-proof powers expire June 22.

Minibus spending package ready for House floor action [Back](#)

By Kaitlyn Burton | 06/06/2018 07:46 PM EDT

The House Rules Committee today teed up a three-bill spending bundle for floor consideration as soon as Thursday.

All in all, the panel approved 50 Energy-Water amendments, 22 Military Construction-VA amendments and seven Legislative Branch amendments, setting them up for floor votes.

While the minibus, H.R. 5895 (115), will likely pass, House Democratic leaders threw a wrench in things when they urged lawmakers to oppose the bill, POLITICO reported Tuesday evening.

Votes on the package are expected to come after a separate Thursday vote on the White House's rescissions measure, H.R. 3 (115). Conservatives, including the Republican Study Committee, asked for the spending cuts to be taken up first, according to a House GOP aide. The Rules Committee teed up the rescissions proposal in a 9-3 vote tonight, allowing no amendment votes.

The minibus would be the first House-passed fiscal 2019 funding measure.

Sarah Ferris contributed to this alert.

House appropriators advance \$35B Interior-EPA spending package [Back](#)

By Alex Guillén | 06/06/2018 05:04 PM EDT

The House Appropriations Committee today approved its \$35 billion Interior-EPA spending bill by a party-line vote of 25-20.

Committee Republicans blocked an effort from Democrats to boost EPA's Office of Inspector General by \$12 million, saying the watchdog already has "robust" appropriations. The bill funds the OIG at \$12 million less than his request, but higher than the amount requested by the White House.

The committee voted down an amendment that would have required EPA's administrator and deputy administrator to report public details of travel costs within 10 days of a trip, along with various amendments targeting a repeal of the Waters of the U.S. rule and other policy riders, along with EPA's proposed science transparency policy, offshore drilling and other standard policy disputes.

Lawmakers approved an amendment that would change revenue sharing for drilling in the Arctic National Wildlife Refuge. The approved amendment would send 50 percent of revenue to the federal government, 47 percent to the state and 3 percent to the Alaskan Native claims settlement fund.

They also backed a tongue-in-cheek amendment from Rep. [Marcy Kaptur](#) (D-Mich.) that would limit EPA from spending more than \$50 on any one fountain pen, a response to a recent [Washington Post report](#) that Pruitt spent \$1,560 for a dozen personalized fountain pens. The amendment passed with no "nay" votes.

WHAT'S NEXT: Lawmakers hope to have the bill before the full House sometime this summer, but it is unclear whether the Senate will act on a similar timeframe. Like most other appropriations bills in recent years, Congress has passed an omnibus rather than conferencing directly.

GOP blocks funding increase for EPA watchdog probing Pruitt activities [Back](#)

By Alex Guillén | 06/06/2018 03:06 PM EDT

House Republicans today blocked a Democratic effort to increase funding for EPA's Office of Inspector General to help the watchdog deal with the increased workload stemming from Administrator Scott Pruitt's spending and ethics scandals.

Rep. [Mark Pocan](#) (D-Wis.) and a bloc of Democrats on the House Appropriations Committee pushed an amendment that would have boosted OIG funding for fiscal 2019. It ultimately was voted down on a party-line vote of 21-26.

"It's hard to imagine that there is a more overworked inspector general than at the EPA these days," Pocan said. "This is not a Democrat/Republican thing, this should be a good government thing."

Interior-EPA Appropriations Chairman [Ken Calvert](#) (R-Calif.) said the bill "already includes robust support for EPA's inspector general."

The House Interior-EPA spending package would provide the OIG funding of just over \$50 million, about flat with 2018's level. Most of that is appropriated directly, though some of it is pulled from the Superfund program for OIG's work on Superfund-specific issues. Pocan's amendment would have drawn the extra \$12 million from EPA's "workforce reshaping" account inside the \$2.5 billion environmental programs.

In a February [letter](#), EPA Inspector General Arthur Elkins said the president's proposed OIG budget of \$46 million would "substantially inhibit the OIG from performing the duties of the office." He asked instead for a budget of \$62 million. That request came before an avalanche of congressional requests to review various Pruitt-related issues on spending and ethics.

WHAT'S NEXT: The committee will vote later today on the full spending bill.

Interior advisory committee recommends streamlining environmental reviews for drilling [Back](#)

By Ben Lefebvre | 06/06/2018 06:31 PM EDT

An Interior Department advisory board on Wednesday approved a slew of recommendations aimed at expanding energy lease sales and lowering royalty rates, even as some members questioned whether it had the power to suggest changes to federal environmental reviews.

The Royalty Policy Committee wrapped up its latest meeting in New Mexico after approving nine [recommendations](#) for Secretary Ryan Zinke to change how the department collects payments from energy production on federal land. Most of the suggestions would benefit oil and gas companies operating on federal acres, while two recommendations were aimed at boosting renewable energy production.

Two committee members disagreed with a recommendation for the Bureau of Land Management to issue "categorical exclusions" for certain oil and gas projects, allowing those projects to forgo full environmental reviews under the National Environmental Protection Act.

"NEPA is not referred to in the [committee] charter," Rod Eggert, a professor at the Colorado School of Mines, said during the meeting. "The text in the charter refers to royalties and collections of royalties."

Committee member Monte Mills of the University of Montana agreed that recommending categorical exclusions fell outside of the committee's scope.

Western Energy Alliance President Kathleen Sgamma, another member of the committee, defended the recommendation, saying it would increase royalty payments to Interior by making it easier for companies to drill on public land.

"We're trying to increase competitiveness of federal lands," Sgamma said during the meeting. "NEPA is often the aspect of the federal process that takes the longest and decreases the competitiveness of public lands the most."

Ultimately, the committee approved the recommendation and deferred further discussion about the scope of its charter until its next meeting, yet to be scheduled.

The committee also suggested Interior make it easier for companies to pay lower royalty rates for mature oil and gas wells and those "difficult" to operate. And it recommended Zinke ask Congress to amend the Outer Continental Shelf Lands Act with language allowing Interior to hold offshore energy project lease sales in Guam and other U.S. territories.

The committee's two renewable power suggestions were that Interior offer annual lease sales for 2 gigawatts of offshore wind power every year for a decade starting in 2024; and to instruct BLM to reduce fees and streamline permit requirements for solar projects.

BLM tells field office to expedite drilling permit reviews [Back](#)

By Ben Lefebvre | 06/06/2018 08:20 PM EDT

The Bureau of Land Management instructed field offices to prioritize the use of old environmental reviews or categorical exclusions to expedite drilling permit applications for sites where work is already underway, according to a memo released today.

The bulletin posted on the BLM website said those methods will allow officials to process the applications "in the most expeditious and appropriate manner" under the National Environmental Policy Act.

The BLM bulletin directed its field offices that existing environmental analysis for new projects proposed for old sites "should be used to the greatest extent possible" instead of starting a new environmental review process.

If the old analysis isn't sufficient, field offices should determine whether the application falls under an existing categorical exclusion, meaning a new NEPA review would not be required. Criteria to determine whether an exclusion would be available include whether a similar project has already occurred on the same site within the previous five years.

BLM posted its memo soon after Interior's Royalty Policy Committee recommended earlier today that the agency increase its use of categorical exclusions.

WHAT'S NEXT: The environmental review priority list goes into effect immediately.

White House, EPA headed off chemical pollution study [Back](#)

By Annie Snider | 05/14/2018 12:43 PM EDT

Scott Pruitt's EPA and the White House sought to block publication of a federal health study on a nationwide water-contamination crisis, after one Trump administration aide warned it would cause a "public relations nightmare," newly disclosed emails reveal.

The intervention early this year — not previously disclosed — came as HHS' Agency for Toxic Substances and Disease Registry was preparing to publish its assessment of a class of toxic chemicals that has contaminated water supplies near military bases, chemical plants and other sites from New York to Michigan to West Virginia.

The study would show that the chemicals endanger human health at a far lower level than EPA has previously called safe, according to the emails.

"The public, media, and Congressional reaction to these numbers is going to be huge," one unidentified White House aide said in an email forwarded on Jan. 30 by James Herz, a political appointee who oversees environmental issues at the OMB. The email added: "The impact to EPA and [the Defense Department] is going to be extremely painful. We (DoD and EPA) cannot seem to get ATSDR to realize the potential public relations nightmare this is going to be."

More than three months later, the draft study remains unpublished, and the HHS unit says it has no scheduled date to release it for public comment. Critics say the delay shows the Trump administration is placing politics ahead of an urgent public health concern — something they had feared would happen after agency leaders like Pruitt started placing industry advocates in charge of issues like chemical safety.

Sen. Maggie Hassan (D-N.H.) called the delay "deeply troubling" on Monday, urging Pruitt and President Donald Trump "to immediately release this important study."

"Families who have been exposed to emerging contaminants in their drinking water have a right to know about any health impacts, and keeping such information from the public threatens the safety, health, and vitality of communities across our country," Hassan said, citing POLITICO's reporting of the issue. Details of the internal discussions emerged from EPA emails released to the Union of Concerned Scientists under the Freedom of Information Act.

Sen. Jeanne Shaheen, a fellow New Hampshire Democrat, called the delay "an egregious example of politics interfering with the public's right to know. ... [I]t's unconscionable that even the existence of this study has been withheld until now."

The emails portray a "brazenly political" response to the contamination crisis, said Judith Enck, a former EPA official who dealt with the same pollutants during the Obama administration — saying it goes far beyond a normal debate among scientists.

"Scientists always debate each other, but under the law, ATSDR is the agency that's supposed to make health recommendations," she said.

The White House referred questions about the issue to HHS, which confirmed that the study has no scheduled release date.

Pruitt's chief of staff, Ryan Jackson, defended EPA's actions, telling POLITICO the agency was helping "ensure that the federal government is responding in a uniform way to our local, state, and Congressional constituents and partners."

Still, Pruitt has faced steady criticism for his handling of science at the agency, even before the recent spate of ethics investigations into his upscale travels and dealings with lobbyists. In his year leading EPA, he has overhauled several scientific advisory panels to include more industry representatives and recently ordered limits on the kinds of scientific studies the agency will consider on the health effects of pollution.

On the other hand, Pruitt has also called water pollution one of his signature priorities.

The chemicals at issue in the HHS study have long been used in products like Teflon and firefighting foam, and are contaminating water systems around the country. Known as PFOA and PFOS, they have been linked with thyroid defects, problems in pregnancy and certain cancers, even at low levels of exposure.

The problem has already proven to be enormously costly for chemicals manufacturers. The 3M Co., which used them to make Scotchguard, paid more than \$1.5 billion to settle lawsuits related to water contamination and personal injury claims.

But some of the biggest liabilities reside with the Defense Department, which used foam containing the chemicals in exercises at bases across the country. In a March report to Congress, the Defense Department listed 126 facilities where tests of nearby water supplies showed the substances exceeded the current safety guidelines.

A government study concluding that the chemicals are more dangerous than previously thought could dramatically increase the cost of cleanups at sites like military bases and chemical manufacturing plants, and force neighboring communities to pour money into treating their drinking water supplies.

The discussions about how to address the HHS study involved Pruitt's chief of staff and other top aides, including a chemical industry official who now oversees EPA's chemical safety office.

Herz, the OMB staffer, forwarded the email warning about the study's "extremely painful" consequences to EPA's top financial officer on Jan. 30. Later that day, Nancy Beck, deputy assistant administrator for EPA's Office of Chemical Safety and Pollution Prevention, suggested elevating the study to OMB's Office of Information and Regulatory Affairs to coordinate an interagency review. Beck, who worked as a toxicologist in that office for 10 years, suggested it would be a "good neutral arbiter" of the dispute.

"OMB/OIRA played this role quite a bit under the Bush Administration, but under Obama they just let each agency do their own thing..." Beck wrote in one email that was released to UCS.

Beck, who started at OMB in 2002, worked on a similar issue involving perchlorate, an ingredient in rocket fuel — linked with thyroid problems and other ailments — that has leached from defense facilities and manufacturing sites into the drinking water of at least 20 million Americans. Beck stayed on at OMB into the Obama administration, leaving the office in January 2012 and going to work for the American Chemistry Council, where she was senior director for regulatory science policy until joining EPA last year.

Yogin Kothari, a lobbyist with the Union of Concerned Scientists, called Beck's January email "extremely troubling because it appears as though the White House is trying to interfere in a science-based risk assessment."

Environmentalists say such interference was routine during the Bush administration.

"It's why the Obama administration issued a call for scientific integrity policies across the federal government," Kothari said in an email to POLITICO. "Dr. Beck should know firsthand that the Bush administration sidelined science at every turn, given that she spent time at OMB during that time."

Soon after the Trump White House raised concerns about the impending study, EPA chief of staff Ryan Jackson reached out to his HHS counterpart, as well as senior officials in charge of the agency overseeing the assessment to discuss coordinating work among HHS, EPA and the Pentagon. Jackson confirmed the outreach last week, saying it is important for the government to speak with a single voice on such a serious issue.

"EPA is eager to participate in and, contribute to a coordinated approach so each federal stakeholder is fully informed on what the other stakeholders' concerns, roles, and expertise can contribute and to ensure that the federal government is responding in a uniform way to our local, state, and Congressional constituents and partners," Jackson told POLITICO via email.

Pruitt has made addressing per- and polyfluoroalkyl substances, or PFAS, a priority for EPA. The unpublished HHS study focused on two specific chemicals from this class, PFOA and PFOS.

States have been pleading with EPA for help, and experts say that contamination is so widespread, the chemicals are found in nearly every water supply that gets tested.

In December, the Trump administration's nominee to head the agency's chemical safety office, industry consultant Michael Dourson, withdrew his nomination after North Carolina's Republican senators said they would not support him, in large part because of their state's struggles with PFAS contamination. Dourson's previous research on the subject has been criticized as too favorable to the chemical industry.

Shortly after Dourson's nomination was dropped, Pruitt announced a "leadership summit" with states to discuss the issue scheduled for next week.

In 2016, the agency published a voluntary health advisory for PFOA and PFOS, warning that exposure to the chemicals at levels above 70 parts per trillion, total, could be dangerous. One part per trillion is roughly the equivalent of a single grain of sand in an Olympic-sized swimming pool.

The updated HHS assessment was poised to find that exposure to the chemicals at less than one-sixth of that level could be dangerous for sensitive populations like infants and breastfeeding mothers, according to the emails.

Dave Andrews, a senior scientist with the Environmental Working Group, said those conclusions line up with recent studies on the health effects of PFAS.

"They are looking at very subtle effects like increased risk of obesity for children exposed in womb, lowered immune response, and childhood vaccines becoming not as effective," Andrews said.

The HHS document at issue is called a toxicological profile, which describes the dangers of a chemical based on a review of previous scientific studies. It would carry no regulatory weight itself, but could factor into cleanup requirements at Superfund sites.

EPA scientists, including career staffers, were already talking with the HHS researchers about the differences in their two approaches to evaluating the chemicals when officials at the White House raised alarm in late January, the emails show. Those differences, according to the correspondence, stemmed from the agencies' use of different scientific studies as a basis, and from taking different approaches to accounting for the harm that the chemicals can do to the immune system — an area of research that has burgeoned in the two years since EPA issued its health advisory.

Enck, the former EPA official, said she sees one troubling gap in the emails: They make "no mention of the people who are exposed to PFOA or PFOS, there's no health concern expressed here."

Subject: Morning Consult Energy: Trump Plans to Impose \$60 Billion in Annual Tariffs Against China

By [Sei Chong](#)

Top Stories

- President Donald Trump is planning to impose \$60 billion in annual tariffs against more than 100 Chinese products, which are expected to be announced Friday, according to administration officials. Trump was initially presented with a \$30 billion tariff package, sources said, but Trump ordered them to roughly double the scope of the tariffs. ([The Washington Post](#))

- Environmental Protection Agency Administrator Scott Pruitt said in an interview that the EPA would stop using "secret science" in the rulemaking process, referring to non-public scientific studies. Under the new policy, regulators could consider only scientific studies that make their data available for public scrutiny. ([Daily Caller](#))
- GOP leaders and senior White House officials are rejecting last-minute attempts to tack on controversial policy riders as they seek to clear the way toward passage of a \$1.3 trillion spending bill before government funding expires on Friday. House Speaker Paul Ryan (R-Ky.) discussed the new spending bill in a House GOP Conference meeting last night, and the bill's release is expected to be released today. ([Politico](#))
- The Interior Department today will hold an auction of more than 51,000 acres in southeastern Utah for oil and gas development, including land near the boundaries of the former Bears Ears National Monument, which was scaled back by the Trump administration last year, and the Hovenweep and Canyons of the Ancients monuments. Conservationists say the Bureau of Land Management has not taken into account the potential impact of drilling in sensitive archaeological and wilderness sites. ([Reuters](#))
- Uber Technologies Inc. suspended testing of autonomous cars in Tempe, Ariz., Pittsburgh, San Francisco and Toronto after one of the cars, which had an emergency backup driver behind the wheel, hit and killed a woman on a street in Tempe. The accident is believed to be the first pedestrian death linked to self-driving technology. ([The New York Times](#))

House Energy and Water Development Subcommittee hearing on National Nuclear Security Administration budget	10 a.m.
House E&C Energy and Environment subcommittees hearing on Nuclear Regulatory Commission budget	10:15 a.m.
House Indian Affairs Subcommittee oversight hearing on FY19 budget for Indian affairs	10:30 a.m.
House Economic Development, Public Buildings and Emergency Mgmt Subcommittee hearing on 2017 wildfires	10:30 a.m.
House Federal Lands Subcommittee hearing on HR 5210, HR 2584	2 p.m.
Atlantic Council discussion on "Future of Solar Energy and the Role of American Leadership"	3:45 p.m.

WEDNESDAY

Electric Power Conference	7 a.m.
American Coalition for Ethanol DC Fly-In and Government Affairs Summit	7:30 a.m.
AWEA Wind Project Siting & Environmental Compliance Conference	7:30 a.m.
American Shore and Beach Preservation Association Coastal Summit	7:45 a.m.
ClimateCon's Business of Climate Forum	7:45 a.m.

UtilityDive workshop on clean energy's impact on electric utility industry	8:30 a.m.
House Ways and Means Committee hearing with USTR Robert Lighthizer about trade policy	10 a.m.
Senate Environment and Public Works Committee hearing on Nuclear Regulatory Commission oversight	10 a.m.
House Commerce, Justice, Science, and Related Agencies Subcommittee hearing on NOAA FY19 budget	10 a.m.
House Natural Resources Committee markup	10:15 a.m.
House Oversight Subcommittee on National Security hearing on hurricane recovery in Puerto Rico	2 p.m.
House Water, Power and Oceans Subcommittee hearing on FY19 Bureau of Reclamation spending	2 p.m.

THURSDAY

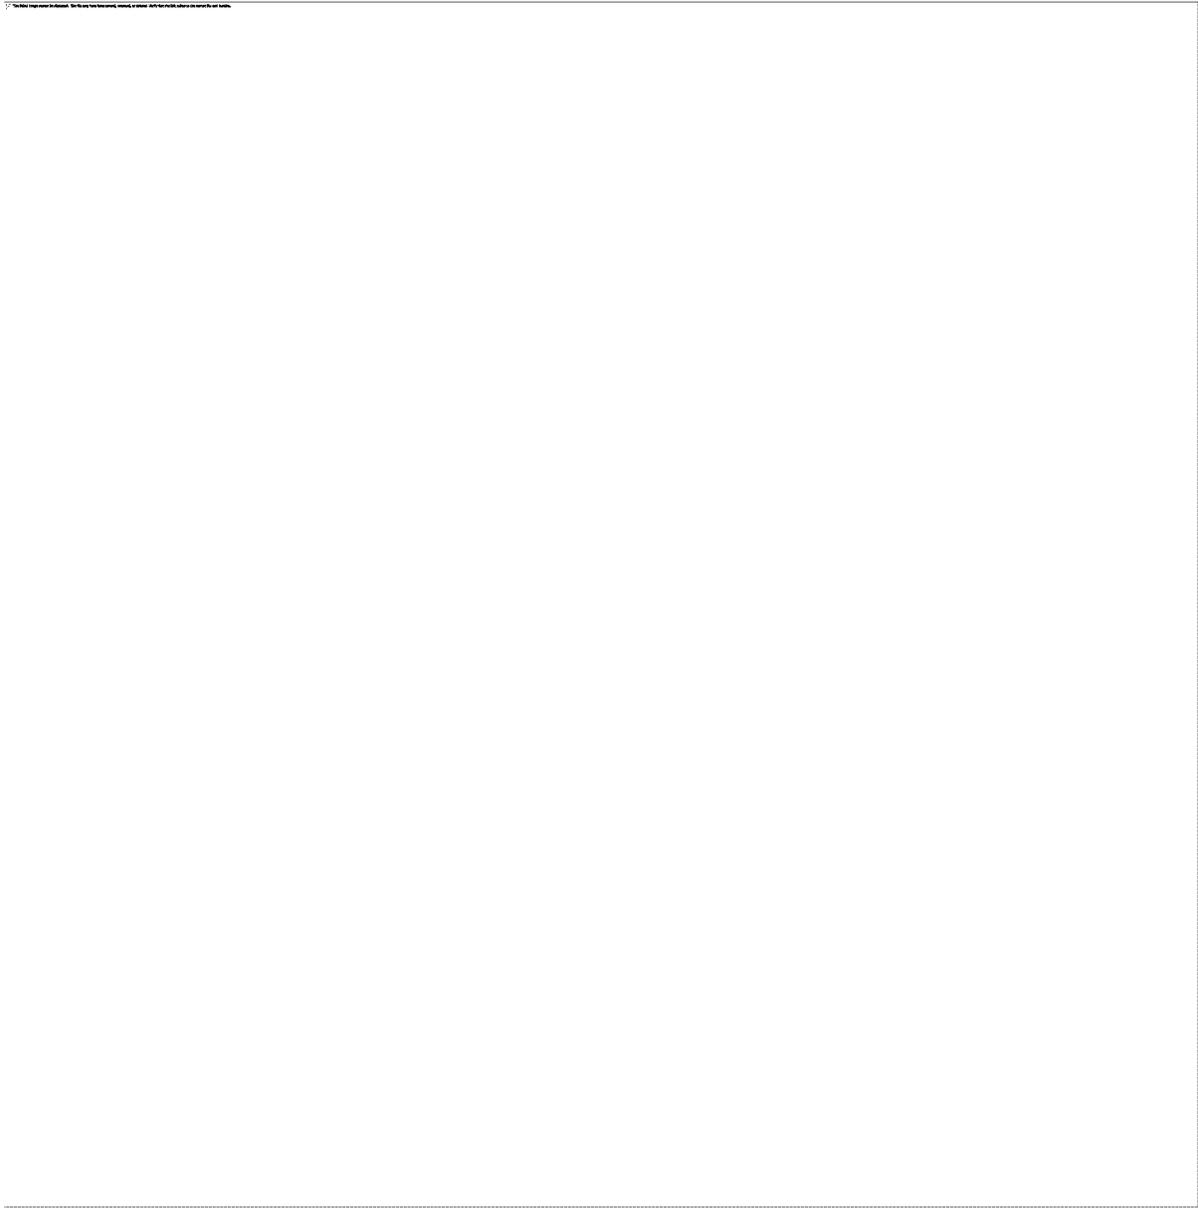

Electric Power Conference	7:30 a.m.
American Coalition for Ethanol DC Fly-In and Government Affairs Summit	7:30 a.m.
American Shore and Beach Preservation Association Coastal Summit	8 a.m.
Wilson Center's China Environmental Forum discussion on China's energy ambitions	9 a.m.
House Energy and Water Development Subcommittee hearing on FY19 Applied Energy budget	9 a.m.
House Ways and Means Committee hearing with Commerce Secretary Wilbur Ross about tariffs	9 a.m.
Senate Energy and Natural Resources hearing on Western water supply outlook and water infrastructure bills	10 a.m.

Senate Finance Committee hearing with USTR Lighthizer on the president's trade policy agenda 10 a.m.

AEI discussion with Transportation Undersecretary Derek Kan on future of infrastructure policy 2 p.m.

FRIDAY

Energy Institute at Haas POWER Conference on Energy Research and Policy 8 a.m.

New Report: The Future of Retail

Insights into how consumers are reacting to changes in the retail industry, and what they're looking for in the future.

General

Trump prepared to hit China with \$60 billion in annual tariffs **Damian Paletta et al., The Washington Post**

President Trump is preparing to impose a package of \$60 billion in annual tariffs against Chinese products, following through on a longtime threat that he says will punish China for intellectual property theft and create more U.S. jobs. The tariff package, which Trump plans to unveil by Friday, was confirmed by four senior administration officials.

Scott Pruitt Will End EPA's Use Of 'Secret Science' To Justify Regulations **Michael Bastasch, Daily Caller**

Environmental Protection Agency (EPA) Administrator Scott Pruitt will soon end his agency's use of "secret science" to craft regulations. "We need to make sure their data and methodology are published as part of the record," Pruitt said in an exclusive interview with The Daily Caller News Foundation.

Congress closes in on massive spending bill **Sarah Ferris et al., Politico**

Congressional leaders and top White House officials are clearing the way for a massive \$1.3 trillion spending bill, scrapping several last-minute attempts to tack on controversial policy riders ahead of a Friday deadline to fund the government.

Self-Driving Uber Car Kills Pedestrian in Arizona, Where Robots Roam **Daisuke Wakabayashi, The New York Times**

Arizona officials saw opportunity when Uber and other companies began testing driverless cars a few years ago. Promising to keep oversight light, they invited the companies to test their robotic vehicles on the state's roads. Then on Sunday night, an autonomous car operated by Uber - and with an emergency backup driver behind the wheel - struck and killed a woman on a street in Tempe, Ariz.

EPA to hold national summit on chemicals found in drinking water

John Siciliano, Washington Examiner

The Environmental Protection Agency said Monday that it will hold a two-day summit in May to address a chemical that has been seen as a drinking water contaminant.

Oil prices rise on Middle East tension, falling Venezuela output
Henning Gloystein, Reuters

Oil prices rose by almost 1 percent on Tuesday, lifted by a weak dollar, tensions in the Middle East and concerns of a further fall in Venezuelan output.

Oil and Natural Gas

U.S. Interior Department offers oil leases near Utah's wilderness monuments

Valerie Volcovici, Reuters

The U.S. Department of Interior on Tuesday will auction off more than 51,000 acres (21,000 hectares) in southeastern Utah for oil and gas development, over objections from conservationists, who say the move threatens sensitive archaeological and wilderness sites.

U.S. tariffs on China could hamper new LNG export projects along Gulf Coast

Collin Eaton, Houston Chronicle

New U.S. tariffs on Chinese goods could make it harder for U.S. liquefied natural gas exporters to tap into China's booming market and get investors to sink money into Gulf Coast projects.

Petroleum industry calls for 'flexible' process for considering exemptions to Trump's steel tariffs

Josh Siegel, Washington Examiner

The American Petroleum Institute on Monday called on the Commerce Department to show deference to affected industry groups when it considers exemptions to President Trump's 25 percent tariff on steel, just moments after Commerce issued guidance saying it would consider exemptions for products that are "unmet by domestic production or on specific national security considerations."

[A small oil field in Oklahoma is seeing big bets from producers](#)
John Benny, Reuters

A little-known shale oil play in Oklahoma is attracting more drilling and investment as rising output from newer wells is enticing companies to boost production beyond the giant Permian basin in Texas. The Meramec formation is a part of what is called the STACK region - Sooner Trend Anadarko basin Canadian and Kingfisher counties - where companies such as Marathon Oil and Devon Energy bought up acreage following the oil slump in 2014.

[Safety inspectors to spend more time on offshore drilling platforms](#)
Miranda Green, The Hill

The Interior Department's safety arm will soon increase its physical inspection time for offshore drilling.

[SandRidge Energy Rejects Midstates Petroleum's Bid But Hires Advisers to Review Strategic Alternatives](#)
Maria Armental, The Wall Street Journal

SandRidge Energy Inc. has rejected Midstates Petroleum Co.'s unsolicited offer, saying the numbers didn't make a deal feasible, but it has hired advisers and said it is open to other options-that may include Midstates.

Utilities and Infrastructure

[Feds route millions to aging Minnesota electrical lines](#)
Maya Rao, Star Tribune

As electrical systems age and decline in northwestern Minnesota, Runestone Electric Association is preparing to upgrade 180 miles of line and build 88 more with the help of federal loans. "A lot of the equipment is over 30 years old and pre-computers and electronic devices ... it's like going from an old rotary phone to a smartphone," said Al Haman,

manager of operations and engineering at the Alexandria-based utility company.

How Big Is the Peak Capacity Market for Batteries?

Julian Spector, Greentech Media

The age of storage serving peak power has only just begun, so the size of that market is very much up for debate. California has already halted a new gas plant in favor of deploying energy storage in its place.

Renewables

SunPower: Tariff Exclusion Would Free Funds to Open New US Solar Manufacturing Facilities

Julia Pyper, Greentech Media

Solar industry stakeholders filed applications with the Office of the U.S. Trade Representative last week seeking exclusions from the Trump administration's 30 percent tariff on imported solar products.

Coal

A complicated calculus keeps the remaining coal fleet alive

Peter Maloney, UtilityDive

It's no secret that the coal fleet in the U.S. is shrinking. The number of coal-fired power plants is roughly half it was about 10 years ago.

Could this 'clean coal' plant proposal be answer to Indiana's 17 billion tons of reserves?

Sarah Bowman and Emily Hopkins, IndyStar

When it comes to coal, the United States is what the Middle East is for oil. That fact is not lost on an industry competing for relevancy at a time when it's undersold by natural gas and renewable energy.

Nuclear

Nevada senators fight Yucca Mountain restart on two fronts

Gary Martin, Las Vegas Review-Journal

Trump administration efforts to revive the licensing process for a nuclear waste repository at Nevada's Yucca Mountain are being met with stiff resistance from Nevada's senators.

Why Oil-Rich Saudi Arabia Is Turning to Nuclear Power

Mahmoud Habboush and Bruce Stanley, Bloomberg

With the world's second-biggest proven reserves of oil, Saudi Arabia seems an unlikely aspirant to the nuclear-energy club. Yet the largest oil exporter plans to build at least 16 nuclear reactors over the next 25 years at a cost of more than \$80 billion.

Climate

The Arctic's carbon bomb might be even more potent than we thought

Chris Mooney, The Washington Post

For some time, scientists fearing the mass release of greenhouse gases from the carbon-rich, frozen soils of the Arctic have had at least one morsel of good news in their forecasts: They predicted that most of the gas released would be carbon dioxide, which, though a greenhouse gas, drives warming more slowly than some other gases.

How do you talk to Pruitt about climate change?

Niina Heikkinen, E&E News

U.S. EPA boss Scott Pruitt is skilled at sticking to his talking points, particularly when it comes to climate change. For journalists covering that issue, pushing Pruitt beyond his rhetoric has become more important as the EPA chief has become one of the Trump administration's highest-profile officials casting doubt on mainstream climate science.

McDonald's Tries to Boost Reputation by Cutting Greenhouse Gases

Leslie Patton, Bloomberg

McDonald's Corp., on a quest to boost sales by improving its image, is vowing to cut its greenhouse-gas emissions.

Can climate litigation save the world?

Damian Carrington, The Guardian

Courts are a new front line of climate action with cases against governments and oil firms spiralling, and while victories have so far been rare the pressure for change is growing

Canada's Outdoor Rinks Are Melting. So Is a Way of Life.
John Schwartz, The New York Times

Jack Williams and his sister, Cara, sat in their kitchen watching their backyard rink melt. "Dad calls it a big birdbath," said Jack, who is 12.

Opinions, Editorials and Perspectives

Renewable Energy Growth Is Surging and Boosting U.S. Economy
Isak Kvam, Morning Consult

A new report published this month highlights the rapid growth in renewable energy throughout the U.S. as the country moves toward a clean-energy economy. The 2018 Sustainable Energy in America Factbook was produced by the Business Council for Sustainable Energy by Bloomberg New Energy Finance, and it's chock full of good news for renewable energy, the U.S. economy and our low-carbon future.

All hail Ryan Zinke, our imperial viceroy
Dana Milbank, The Washington Post

Were these normal times, we would now be saying "sayonara" to Ryan Zinke. President Trump's secretary of the interior has inspired a half-dozen ongoing investigations into his travel expenses, his blending of official business with political activities and personal pleasure, and his whimsical management of a 70,000-person, 500 million-acre agency.

Drone Company Hangs On to Win Clean-Energy Bet
Matthew A. Winkler, Bloomberg

Clean earns more money. That's the mantra for investors reaping the reward of alternative energy outperforming fossil fuel. They've known since 2013 that you don't have to drive a Tesla or own its shares (they're up 826 percent) to benefit from green companies lapping the carbon crowd with superior perennial returns.

The Divestment Movement Gains Steam
Dennis Wamsted, Institute for Energy Economics & Financial Analysis

Fossil fuel divestment took center stage during a good part of IEEFA's annual conference last week in New York, with experts and government officials weighing in in detail on the burgeoning movement.

Research Reports

Groundswell: Preparing for Internal Climate Migration **Kanta Kumari Rigaud et al., World Bank**

This report, which focuses on three regions-Sub-Saharan Africa, South Asia, and Latin America that together represent 55 percent of the developing world's population-finds that climate change will push tens of millions of people to migrate within their countries by 2050.

At: 04-Jun-2018 16:15:42

Greetings,

I'm writing an overview/catch-up piece about the proposed "Strengthening Transparency in Regulatory Science" rule. It's an introduction to the debate(s). It explains what the rule would appear to do, why many scientists and organizations say they oppose it in its current form, and shares some of the comments from the public docket. I'd like to run the below questions and comments by you, in the event that EPA would like to respond to any or all of them, or flag anything specific you would like considered for inclusion. Thank you. Eric

1) Any thoughts on these things?:

- A public comment from the Bipartisan Policy Center says that the proposal "is not consistent with the [2009] BPC report in substance or intent" [<https://bit.ly/2Js0NIR>].
- The SAB's Friday agreement to include the transparency rule in its coming letter to the Administrator.
- Five leading peer reviewed journals in a public comment suggest that the rule would "limit the scientific evidence" that can inform policy [<https://bit.ly/2Lm2vZI>].
- The Ranking Member of the House Science Committee, U.S. Rep. Johnson, sent in a public comment that accuses

the agency of executive “overreach”
[<https://bit.ly/2J86kFb>].

- This recent essay by Stanford’s John Ioannidis:
<https://bit.ly/2IopXY1>

Some other questions:

- A comment from a GWU Regulatory Studies Center scholar concludes that “The requirements proposed here are not a radical departure from existing guidelines.” What in the proposal is a departure, and why is it necessary?
- Is “secret science” fraudulent science? What studies specifically are the best examples of it? (I noticed that that phrase does not appear in the rule.)
- Is this line from the 2002 “Guidelines for Ensuring and Maximizing the Quality...” a plausible summary of the overall “transparency” v “best available science” debate [<https://bit.ly/2J8qA9r>]? “However, the objectivity standard does not override other compelling interests such as privacy, trade secrets, intellectual property, and other confidentiality protections.” Is this sentence consistent with the proposed rule?
- The same 2002 guidance cites the HEI work on the Harvard Six Cities study and the ACS PM study as an example how to verify studies without absolute public disclosure. Is that 3rd-party verification by HEI still a useful reference for reproducibility? Would this rule vacate that guidance?
- Could small business owners be disproportionately affected by the rule?
- Can you describe the review process for the proposal before it went out on April 30? How deeply were career staff involved in its drafting?

- This question may sound petty, but I'm actually just curious, probably because it relates to my own nightmares when publishing stories on any topic. Copy-editing errors are rare in regulations, but there are at least two in the 4/30 proposal. It just made me wonder if anything about the rule was rushed:
 - Footnote 3: "...Historically, EPA has not consistently observed the policies underlying this proposal, and courts have at times upheld EPA's use non-public data in support..."
 - Section §30.7 heading: "What role does independent peer review in this section?" [This question is written correctly on the prior page.]

Thanks again for any insight.

Sent: 5/1/2018 10:05:06 AM
To: Woods, Clint [/o=ExchangeLabs/ou=Exchange Administrative Group (FYDIBOHF23SPDLT)/cn=Recipients/cn=bc65010f5c2e48f4bc2aa050db50d198-Woods, Clin]
Subject: Morning Energy: How 'the swamp' could overtake West Virginia's primary — Groups react to EPA's proposed 'secret science' rule — API to tap Mike Sommers

By Kelsey Tamborrino | 05/01/2018 06:01 AM EDT

With help from Garrett Ross

HOW 'THE SWAMP' COULD OVERTAKE WEST VIRGINIA'S PRIMARY: West Virginia Attorney General Patrick Morrisey may be touting himself in the GOP Senate primary as a Washington outsider who wants to "blow up" D.C., but his opponents are dragging him through the muddy swamp. "Morrisey got filthy rich in the swamp lobbying for special interests," says the narrator of one of his opponent Rep. Evan Jenkins' ads, Pro's Theodoric Meyer reports. And while Morrisey, who's hoping to take on Democratic Sen. Joe Manchin this fall, has so far weathered the attacks and continues to do well in public polling, the May 8 vote will ultimately test whether GOP voters are willing to send a former lobbyist to Washington.

"Morrisey's self-described 'outsider' rhetoric cloaks an insider record: Before he was elected attorney general, Morrisey spent eight years as a Washington lobbyist, and the influence industry has fueled his campaign with hundreds of thousands of dollars in contributions," Theo writes. "It's going to be challenging, because the word 'lobbyist' has such negative connotations," said Cam Savage, a Republican operative who helped run Sen. Todd Young's successful 2016 campaign against former Democratic Sen. Evan Bayh, whose work for a Washington law and lobbying firm hindered his campaign. Read more.

IN THE OTHER CORNER of the Republican primary sits coal baron Don Blankenship, who spent a year in prison following the 2010 explosion at his Upper Big Branch Mine that killed 29 workers and who continues to escalate his attacks against Senate Majority Leader Mitch McConnell, POLITICO's Alex Isenstadt reports. The Senate hopeful is out with a new ad that dubs McConnell "Cocaine Mitch" as polls show Blankenship falling behind his more mainstream opponents. "One of my goals as U.S. senator will be to ditch Cocaine Mitch," Blankenship says toward the end of the new ad, possibly referring to a 2014 report in the liberal Nation magazine that drugs were once found aboard a shipping vessel owned by the family of McConnell's wife, Transportation Secretary Elaine Chao, Alex reports.

WELCOME TO TUESDAY! I'm your host Kelsey Tamborrino. BP America's Bob Stout was the first to correctly guess that former President Calvin Coolidge was the first president to attend the White House Correspondents' Dinner. For today: Which president brought the first professional baseball team to the White House to visit? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter @kelseytam, @Morning_Energy and @POLITICOPro.

POLITICO's Ben White is bringing Morning Money to the Milken Institute Global Conference to provide coverage of the day's events and evening happenings. The newsletter will run April 29 - May 2. **Sign up to keep up with your daily conference coverage.**

WHILE CONGRESS IS AWAY, THE CONFERENCES WILL PLAY: The National Hydropower Association continues its Waterpower Week in Washington today with remarks from FERC Chairman Kevin McIntyre and Thomas Smith, chief of operations and regulatory division for the U.S. Army Corps of Engineers. McIntyre will discuss the "global frontiers of waterpower," providing an update on FERC's

hydropower activities and his perspective on the industry's future. Smith will deliver remarks during the presidential luncheon this afternoon, alongside Herbie Johnson, hydro general manager at the Southern Company. The annual conference is tied to three co-located conferences, including the NHA conference, the International Marine Renewable Energy Conference and the Marine Energy Technology Symposium.

— **The Solar Summit 2018 also kicks off today in San Diego**, where Abigail Ross Hopper, president and CEO of the Solar Energy Industries Association, will discuss solar in the Trump era, with a focus on the corporate tax reform, Section 201 and other macro-level risks. Hopper will be joined on stage by Avangrid Renewables' Laura Beane and Charlie Gray, director of the Solar Energy Technologies Office at DOE's Office of Energy Efficiency & Renewable Energy.

A LOAN IN THE SUN: Coinciding with the solar conference, GTM Research is out with a new report this morning on U.S. residential solar financing. The report found that last year was the first year since 2011 when more systems have been purchased with cash and loans (59 percent) than with leases and power purchase agreements (41 percent). That's in part due to the availability of loan products, as well as a shortage of third-party ownership suppliers, and Tesla and Vivint's move away from third-party ownership, the GTM report found.

The report also said that competition has intensified in solar loans, with various solar-specific loan providers, traditional banks and credit unions entering the realm. The increased competition has led to "uber-competitive rates and therefore compressed margins, leaving questions about the financial health and long-term viability of many of these loan providers," a summary of the report said.

RULE REACTIONS: EPA is moving full-speed ahead in its controversial scientific policy that would exclude the use of studies that don't publicly disclose all data. The agency published the proposed rule in the Federal Register on Monday, kicking into gear a 30-day comment period. And already, several groups have come forward to oppose the policy, laying out what they see as the policy's adverse effects — and calling for more consideration before any formal change.

— **The Union of Concerned Scientists** — which sent a letter signed by more than 1,000 scientists to EPA Administrator Scott Pruitt last week asking him to reverse course prior to the rule's announcement — plans to send another urging for the comment period to be extended a minimum of 60 days and calling for the agency to hold three public hearings across the U.S. to receive additional input. "The current timeframe and lack of opportunities for engagement are wholly inadequate and will not allow for thorough public input of this proposed rule and its impact on science-based health and environmental safeguards." Read the letter here.

— **A group of scientific journals** released a joint statement saying that the proposal "does not strengthen policies based on scientific evidence to limit the scientific evidence that can inform them; rather, it is paramount that the full suite of relevant science vetted through peer review, which includes ever more rigorous features, inform the landscape of decision making. Excluding relevant studies simply because they do not meet rigid transparency standards will adversely affect decision-making processes."

A SOMMERS DAY: The American Petroleum Institute is expected to tap Mike Sommers to replace Jack Gerard to lead the oil and gas industry lobbying group, two sources tell POLITICO's Emily Holden and Eric Wolff. Sommers was former House Speaker John Boehner's chief of staff and has since spent two years leading the American Investment Council, a private equity trade group. Gerard announced earlier this year that he would step down in August. Read more.

TRUMP GRANTS TARIFF EXTENSION FOR SOME: The president extended a temporary exemption by one month for Canada, Mexico and the European Union from heavily watched steel and aluminum tariffs, the White House announced Monday. The move gives the key U.S. allies until June 1 to reach a deal with the administration to avoid the tariffs of 25 percent on steel and 10 percent on aluminum exports sent to the United

States. The tariffs were slated to take effect at 12:01 a.m. today if President Donald Trump had not moved to extend the deadline, POLITICO's Megan Cassella [reports](#).

WHISTLEBLOWER SAYS PRUITT LIED: Kevin Chmielewski, the former deputy chief of staff for operations at EPA, told ABC News Pruitt was telling a "bold-faced" lie last week when he testified to lawmakers that none of his employees were retaliated against for raising concerns about his spending decisions. Chmielewski, who was dismissed and is now acting as a whistleblower, told ABC that chief of staff Ryan Jackson called him into his office and said: "Hey — Administrator Pruitt either wants me to fire you or put you in an office so that he doesn't have to see you again." Chmielewski added: "And in addition to that, he wants to put Millan (Hupp) in your spot, as your title and your pay grade."

EPA declined to comment to ABC in response to Chmielewski's allegations, but the outlet said it obtained a personnel form filled out by EPA human resources officials that said Chmielewski resigned on March 17. "The form is not signed by Chmielewski, who says he was actually forced to leave a month before that date," ABC writes. [Read more](#).

DEMOCRATS PRESS PRUITT ON TESTIMONY: Separately, Democratic Reps. [Doris Matsui](#) and [Paul Tonko](#) sent a letter Monday calling out a different aspect of Pruitt's testimony last week before Congress. The pair point to a contradiction between Pruitt's remarks and reports that the administration has [drafted](#) a proposed rulemaking to block California's waiver authority to set stricter standards for light-duty vehicles. "If true, these reports directly contradict your testimony last week. As you were reminded at the start of that hearing, it is a violation of the law to knowingly make false statements to a Congressional committee," Matsui and Tonko write in a letter to Pruitt. Asked last week about whether he would revoke California's special Clean Air Act waiver, Pruitt [told lawmakers](#) "not at present." The lawmakers requested Monday that Pruitt provide all documentation related to the development of the notice of proposed rulemaking by Friday. [Read the letter here](#).

SAGE SUIT: Conservation groups are suing the Trump administration over policies that they say would "adversely impact essential habitats and populations" for the greater sage grouse. The lawsuit, filed in the U.S. District Court in Boise, concerns Interior Department's oil and gas lease auctions in Nevada, Utah, Montana, Wyoming and Idaho — and calls on the court to reverse the sales. "There's no scientific or legal support behind these policies, and no public support for them either," said Michael Saul, a senior attorney at the Center for Biological Diversity. "They're clearly intended to make fossil fuel development the dominant use of public land, and that's illegal." [Read the complaint](#).

DOE 'ENCOURAGED' BY PJM MOVE: The Energy Department said it was "encouraged" by news Monday that PJM Interconnection [will perform](#) "stress tests" on different parts of the grid to identify fuel supply vulnerabilities. "PJM's concerns are consistent with what DOE, NERC, and others have been saying for years: premature retirements of fuel-secure resources are putting the future of our nation's electric grid at risk, and that undermines our national security," DOE press secretary Shaylyn Hynes said in a statement. DOE urges the regulatory agency "to take immediate action to stop the loss of fuel-secure capacity," Hynes said, adding that DOE continues to review all of its options within its authority to ensure a resilient grid. Recently, Energy Secretary Rick Perry [has considered](#) invoking the 1950 Defense Production Act to keep money-losing power plants running by designating them as crucial for national security.

BY PROXY: A new report from the American Council for Capital Formation out today found that proxy advisory firms — which advise shareholders on how to assess and vote on company plans — are operating with minimal oversight and are moving toward an increasingly activist stance on issues relating to the environment, as well as social and political issues. The report, titled "The Conflicted Role of Proxy Advisors," examines the impact such proxy firms have on major policies at most publicly traded companies. [Read it here](#).

FIRST OFFICIAL DAY ON THE JOB: Today is Secretary of State Mike Pompeo's first full day in Foggy Bottom, where he will deliver a speech to introduce himself to the department. POLITICO's Nahal Toosi breaks

down the differences between Pompeo and his predecessor and former Exxon Mobil CEO Rex Tillerson [here](#). But keep an ear out for any climate mentions, as diplomats and environmentalists [gather](#) today in Bonn, Germany, to work out the kinks of the Paris climate agreement. Greens have hit Pompeo as a climate science doubter, while others like Competitive Enterprise Institute's Myron Ebell have said the Kansas Republican will be a "forceful advocate" of Trump's decision to exit the Paris accord.

A PENNY FOR YOUR FREETHOUGHT CAUCUS: Democratic Reps. [Jared Huffman](#), [Jamie Raskin](#), [Jerry McNerney](#) and [Dan Kildee](#) launched the Congressional Freethought Caucus on Monday "to promote sound public policy based on reason, science, and moral values, protect the secular character of our government, and champion the value of freedom of thought worldwide." In a [statement](#), Huffman said the caucus "will help spark an open dialogue about science and reason-based policy solutions."

PAY THE PRICE: The New York Independent System Operator and state policymakers released [a draft plan](#) on Monday to price carbon as part of the electric system, Pro New York's Marie French reports. The move comes as an early step toward addressing the impact of state subsidies for renewables and nuclear power on the competitive market. "Under the proposal, a social cost of carbon set by state regulators would be added on to regional energy prices," Marie writes. Read [more](#).

Lobbyists fuel lobbyist-turned-'outsider' Senate candidate [Back](#)

By Theodoric Meyer | 05/01/2018 05:00 AM EDT

West Virginia Attorney General Patrick Morrisey has gone a notch above pledging to "drain the swamp" during his Senate campaign. "Let's not just change Washington; let's blow it up," Morrisey says in an early [TV ad](#), as he drops a mountain on the Capitol dome.

But Morrisey's self-described "outsider" rhetoric cloaks an insider record: Before he was elected attorney general, Morrisey spent eight years as a Washington lobbyist, and the influence industry has fueled his campaign with hundreds of thousands of dollars in contributions. Morrisey's wife is also a lobbyist, and their work in D.C. has been the subject of unforgiving attacks from both of Morrisey's opponents in the Republican Senate primary.

"Morrisey got filthy rich in the swamp lobbying for special interests," the narrator says in [one](#) of Rep. [Evan Jenkins'](#) commercials.

Morrisey has weathered the attacks, leading the field or running a close second in recent public polls of the Republican primary to take on Democrat [Joe Manchin](#), one of the most vulnerable senators up for reelection this year. The race has attracted national attention as Washington Republicans attempt to derail the candidacy of Don Blankenship, the former coal-mining executive who spent a year in prison for his role in a mine explosion that killed 29 men. But next week's primary will also test whether GOP voters are willing to send a former lobbyist to Washington, despite President Donald Trump's vow to curb K Street's influence.

"It's going to be challenging, because the word 'lobbyist' has such negative connotations," said Cam Savage, a Republican operative who helped run Sen. [Todd Young's](#) (R-Ind.) successful 2016 campaign against former Democratic Sen. Evan Bayh, whose work for a Washington law and lobbying firm hindered his campaign.

While Morrisey has tried to deflect attention away from his lobbying past, he has embraced it behind the scenes. Morrisey's campaign raised more than \$250,000 from more than 200 current and former registered lobbyists through March 31, according to a POLITICO review of campaign finance records — accounting for nearly 20 percent of his individual donations.

Morrisey has raised even more from corporate and lobbying firm PACs, as well as from people who aren't registered lobbyists but clearly work in Washington's influence industry, such as former Rep. Mike Ferguson (R-N.J.), who heads BakerHostetler's federal policy team but isn't registered as a lobbyist. Of the \$250,000, roughly \$167,000 of it comes from lobbyists who are currently registered.

Many of Morrisey's lobbyist contributors work for health care and pharmaceutical interests, which Morrisey represented during his own years on K Street. They include Rodger Currie, the top lobbyist for Pharmaceutical

Research and Manufacturers of America, the powerful trade group for drug companies, who wrote Morrisey's campaign a \$2,000 check in December.

Former Rep. David Jolly (R-Fla.), a former lobbyist elected in 2014, said his lobbying background "was definitely an issue that my opponents tried to use to define me" in the race. He was able to overcome those attacks, he said, because he hadn't lobbied for clients that voters found objectionable.

Morrisey represented about 30 clients during his time at two Washington firms, Sidley Austin and King & Spalding, including big pharmaceutical companies such as Bayer, Novartis and Novo Nordisk. If Jolly had represented such clients, he said, he might have had a tougher race.

"These are very fair and legitimate questions," Jolly said.

Morrisey has shied away from discussing his lobbying days, instead casting himself as an outsider and conservative in contrast with Jenkins, who used to be a Democratic state legislator.

Morrisey refused to say the word "lobbyist" during a debate last week, even as Jenkins and Blankenship attacked him for lobbying for the pharmaceutical industry — a sensitive subject in a state that's struggling to combat an opiate crisis partly fueled by drug distributors. Asked by the moderators at the end of the debate to clear up a misconception about himself, Morrisey said only that he'd "never worked on opiate issues in the private sector."

Morrisey's campaign website uses similar language, describing him as a former "health care attorney in the private sector."

Jenkins, who's facing Blankenship and Morrisey in the three-way race for the nomination, has raised far less from K Street, even though, as a sitting congressman, he has plenty of opportunity to mingle with lobbyists, too.

A review of Jenkins' campaign finance reports turned up only 10 current and former lobbyists who had given a combined \$20,000 to his campaign since he filed to run last May. Four of them are currently registered. Jenkins has raised much more than Morrisey from corporate PACs: about \$136,000 to Morrisey's \$86,000, according to a POLITICO analysis.

Morrisey's campaign declined to make him available for an interview.

"Patrick Morrisey served as a law partner and practice group co-chair at two of the largest law firms in the country, focusing his practice on health care regulatory matters, legislative issues, compliance, fraud and abuse, administrative law, investigations, and solving client problems," Nachama Soloveichik, a Morrisey campaign spokeswoman, said in a statement.

Preeya Noronha Pinto, a partner at King & Spalding who lobbied alongside Morrisey and gave his campaign \$500 last year, said much of their work involved meeting with administration officials and, occasionally, members of Congress in an effort to get Medicare, Medicaid and other government health care programs to cover new drugs and medical devices developed by their clients. She said she hadn't seen the ad in which Morrisey drops a mountain on the Capitol, but she wasn't surprised he was running a campaign critical of Washington.

"I think everybody in a certain respect, even if they've worked here for years, thinks that D.C. is dysfunctional and there's a lot of room for improvement," Pinto said.

Morrisey's wife, Denise Henry Morrisey, has also been the subject of attacks based on her lobbying work.

"His wife's firm lobbies for Planned Parenthood," the narrator charges in one of Blankenship's TV ads. "The Morrisseys won't stop drug abuse or abortions by lobbying for drug companies and abortion clinics."

Soloveichik, the Morrissey campaign spokeswoman, said Denise Morrissey would stop lobbying if her husband were elected to the Senate. But she declined to say whether Denise Morrissey would give up her stake in Capitol Counsel, a top Washington firm in which she owns a 15 percent stake.

Denise Morrissey agreed to an interview with POLITICO last week but later stopped responding to emails and phone calls.

Savage, the Republican operative who worked as a consultant on Young's campaign in 2016, said it was possible to parry lobbying attacks — but only with willingness to answer questions about it.

Savage managed former GOP Sen. Dan Coats' comeback campaign in Indiana in 2010, when he won back his old seat in 2010 after working as a lobbyist. Savage credited Coats' victory, in part, to his willingness to be forthcoming about his lobbying work.

"The attacks after that kind of fell flat, to be honest with you," Savage said.

Kevin Robillard contributed to this report.

Blankenship slams 'Cocaine Mitch' in anti-McConnell ad [Back](#)

By Alex Isenstadt | 04/30/2018 06:23 PM EDT

West Virginia Senate hopeful Don Blankenship is intensifying his offensive against Majority Leader Mitch McConnell, calling him "Cocaine Mitch" in a new TV ad released just more than a week until the Republican primary.

"One of my goals as U.S. senator will be to ditch Cocaine Mitch," Blankenship says toward the end of the [spot](#), which comes as polls show the coal baron falling behind his more mainstream opponents.

Blankenship, who spent a year in prison following the 2010 explosion at his Upper Big Branch Mine that killed 29 workers, offers no context for the jab. But he may be referring to a 2014 [report](#) in the liberal Nation magazine that drugs were once found aboard a shipping vessel owned by the family of McConnell's wife, Transportation Secretary Elaine Chao.

Blankenship has gone after McConnell in startlingly personal ways. During a recent interview with POLITICO, Blankenship said McConnell "has a lot of connections in China," and that Chao is "from China, so we have to be really concerned that we are in truth" putting America's interests first.

A McConnell representative did not respond to a request for comment.

With the May 8 primary fast approaching, Blankenship has launched a slash-and-burn campaign targeting the Senate GOP leader. Blankenship's offensive comes as polls show him falling behind GOP Rep. Evan Jenkins and state Attorney General Patrick Morrisey in the primary.

McConnell's political operation has moved aggressively to block Blankenship's path. Operatives close to the majority leader, convinced that Blankenship would lose to Democrat Joe Manchin in the November general election, have launched a super PAC that has spent about \$1.3 million on TV ads attacking the coal baron.

One ad from Mountain Families PAC describes Blankenship as a "convicted criminal," who lived a lavish lifestyle while ignoring mine safety laws.

"Don Blankenship was about the money," the spot concludes. "West Virginia families paid the price."

Pruitt scales back EPA's use of science [Back](#)

By Emily Holden and Annie Snider | 04/24/2018 03:17 PM EDT

Environmental Protection Agency chief Scott Pruitt announced Tuesday he would seek to bar the agency from relying on studies that don't publicly disclose all their data, a major policy change that has long been sought by conservatives that will sharply reduce the research the agency can rely on when crafting new regulations.

The unveiling of the proposed rule delivers a win to Republicans like House Science Chairman [Lamar Smith](#) (R-Texas), who unsuccessfully pushed legislation to impose the same type of change. The move also demonstrates Pruitt's persistence in pursuing President Donald Trump's anti-regulation agenda just two days before the embattled EPA chief is due to face fierce questioning from lawmakers about his hefty spending, expanded security detail and cheap condominium rental from the wife of an energy lobbyist.

At an invitation-only meeting at EPA headquarters with Smith, Sen. [Mike Rounds](#) (R-S.D.) and other supporters of the policy, Pruitt said the proposed rule was critical in ensuring that the agency was transparent about how it is making decisions to justify costly new regulations. It is the latest step Pruitt has taken to fundamentally shift the agency's approach to science.

"It is a codification of an approach that says as we do our business at the agency the science that we use is going to be transparent, it's going to be reproducible, it's going to be able to be analyzed by those in the marketplace. And those who watch what we do can make informed decisions about whether we've drawn the proper conclusions or not," Pruitt said.

Text of the proposed rule was not immediately available.

The proposal, based on legislation pushed by Smith, is intensely controversial, and scientists and public health groups say it will prevent federal regulators from enacting health and safety protections. Nearly 1,000 scientists, including former EPA career staffers, signed a [letter](#) opposing the policy sent by the Union of Concerned Scientists to Pruitt on Monday.

Their primary concern was that many of the country's bedrock air and water quality regulations are based on research that cannot disclose raw data because it includes the personal health information.

But industry has its own version of the same problem. EPA often relies on industry studies that are considered by companies to be confidential business information when determining whether new pesticides and toxic chemicals are safe to use. Internal EPA emails obtained under the Freedom of Information Act show that EPA political officials, including Nancy Beck, who became the chief of the agency's chemical safety office last year after working for years at a chemical industry lobbying group, worried that the new policy would limit the agency's ability to consider industry data or would force companies to make this proprietary data public.

"We will need to thread this one real tight!" Richard Yamada, political official who led work on the new policy wrote to Beck after she raised the concerns.

It was not immediately clear if the new proposed rule included measures to address those concerns.

Rush Holt, CEO of the American Association for the Advancement of Science, said Pruitt's changes could keep the agency from revising public health regulations as problems arise or new data comes to light.

"On the surface it sounds so innocuous or even beneficial. What could be wrong with transparency? Well it's clear to me that this is not based on an effort to be transparent. It is rather based on an effort to be just the opposite," he said.

"EPA is particularly important because when science is misused, people die," he added.

Pruitt has been discussing the new scientific policy publicly for weeks, but it only went to the White House for interagency review last week. Such swift review is very rare for the Office of Management and Budget, which often takes months to vet a new policy. At least one group, the Environmental Defense Fund, has requested a meeting with OMB officials to discuss the rule, but OMB's website shows that no meetings have been scheduled with interested groups.

Many public health studies can't be replicated without exposing people to contaminants, and environmental disasters such as the Deepwater Horizon oil spill cannot be recreated, the group said, raising intellectual property, proprietary and privacy concerns.

Pruitt's predecessor Gina McCarthy, and her air chief Janet McCabe, in an op-ed in The New York Times in March said concerns about studies are dealt with through the existing peer-review process, which ensures scientific integrity.

"[Pruitt] and some conservative members of Congress are setting up a nonexistent problem in order to prevent the E.P.A. from using the best available science," they said.

API's Gerard to exit on an oil industry winning streak [Back](#)

By Ben Lefebvre | 01/17/2018 06:05 PM EDT

American Petroleum Institute President and CEO Jack Gerard's plan to exit the powerful trade association could signal the end an era for oil industry lobbying.

Gerard notched up a long list of achievements during his 10-year tenure, which coincided with the oil and gas boom that turned the U.S. into the world's largest energy producer. He will step down in August after deciding not to renew his contract, API announced.

Gerard took the helm at the API after leading the American Chemistry Council and the National Mining Association. And he was well compensated, receiving \$6 million in salary and other compensation as of 2015, according to the API's latest tax forms.

During his time atop API, flagging U.S. production rebounded with the advent of fracking and horizontal drilling, allowing energy producers to tap new resources in North Dakota, Appalachia and West Texas. And as overall oil output doubled to nearly 10 million barrels a day, API's membership swelled by 50 percent, to more than 600 companies.

That helped API to expand its reach, and it doled out \$9.4 million on lobbying Washington lawmakers in 2017, quadruple the amount it spent in the year Gerard took the helm.

API helped overturn the decades-old ban on oil exports, open new areas to drilling — including the Arctic National Wildlife Refuge — and win federal approval for the Keystone XL pipeline. And under Gerard, API also introduced the term that would eventually be taken up by President Donald Trump, when in 2012 it called for a "new era of American world energy dominance."

"We've taken the nation from energy scarcity to energy abundance," Gerard said of the industry at the API's annual State of American Energy address in Washington earlier this month.

But he warned at that event that it wasn't time for API to take "a victory lap," as he cited a to-do list that contained little more than continuing a yearslong fight to repeal a biofuels mandate the industry finds burdensome and streamlining the federal permitting process.

"It's hard to say API wasn't successful under his tenure," said John Northington, a former Clinton-era Interior Department official who works as an energy consultant for many API member companies, adding that it delivered much of what the industry wanted to accomplish.

Not all energy industry insiders agreed, however. Some pointed that for an organization with annual revenue of around \$250 million — much of which it spent on advertisements, including one that ran during last year's Super Bowl, or donations to Republicans — the API's influence was limited. Despite a string of recent wins, it hadn't managed to record any progress in altering the decade-old Renewable Fuel Standard for biofuels or ending restrictions under the Jones Act against foreign-flagged ships transporting fuel between U.S. ports.

"They have this ridiculous amount of money, but they don't get a lot of results," said one refining industry source who requested anonymity to discuss the association. "They don't do bad work, but for that kind of money, you expect more."

The API's ranks have also become divided over how to handle growing public concern about the oil and gas industry's role in climate change. The group in 2016 created a task force to massage the industry's environmental image and work Democrats on a potential carbon tax, a policy that drives a wedge between companies like Exxon Mobil, which has supported such a tax, and Chevron, which has opposed it.

An API spokeswoman said it was unknown whether Gerard was retiring or would join another organization. Gerard will help lead the search for a new president and CEO, the spokeswoman added.

One possible replacement for Gerard is API's current executive vice president and chief strategy officer, Marty Durbin. Durbin had been in charge of API's government affairs before departing to become head of the lobby group America's Natural Gas Alliance, which subsequently merged with API.

Other names floated by industry insiders as potential candidates included Mike Sommers, a former chief of staff for former House Speaker John Boehner, now CEO of the American Investment Council; Karen Harbert, head of the U.S. Chamber of Commerce's Global Energy Institute; and former Sen. Blanche Lincoln, an Arkansas Democrat.

An API spokeswoman did not comment on possible candidates.

[Back](#)

Sources: API expected to tap Sommers as new chief [Back](#)

By Emily Holden and Eric Wolff | 04/30/2018 04:33 PM EDT

The American Petroleum Institute is expected to tap Mike Sommers, the head of a private equity trade group who worked as a top aide to former House Speaker John Boehner, to replace Jack Gerard at the helm of the powerful oil and gas industry lobby group, according to two sources.

Gerard announced his retirement earlier this year after a decade at the helm of the API, where he notched up a long list of achievements including overturning the decades-old ban on crude oil exports. He will step down in August.

API did not reply to a request for comment.

The oil and gas industry has so far gotten strong support from the Trump administration, which has moved to open the Arctic National Wildlife Refuge to exploration, is considering making wide swathes of coastal waters available to the industry, and last week said it would roll back some Obama offshore drilling rules.

But API has urged the White House to scrap its steel and aluminum tariffs, and to keep core provisions of NAFTA in place as it negotiates an update to the trade agreement.

Sommers, who was Boehner's chief of staff, has led the American Investment Council for two years, a position that kept him close to Arclight Capital Partners, The Blackstone Group, EnCap Investments and other firms that have invested heavily in energy projects. He also served as an aide to former President George W. Bush in 2005 at the National Economic Council working on agriculture, trade and food policy.

Barry Worthington, CEO of the United States Energy Association, which brings together public and private organizations, corporations and government agencies, said he'd been told Sommers would succeed Gerard.

"Jack Gerard is going to be a tough act to follow," he said.

Gerard was also one of the best-paid lobbyists in Washington, D.C. He received \$5 million in direct compensation from API, plus another \$1.2 million in perks in 2015, according to the group's latest IRS forms.

Marianne Levine and Ben Lefebvre contributed to this report.

Trump grants key U.S. allies an extra month of tariff relief [Back](#)

By Megan Cassella | 04/30/2018 05:57 PM EDT

President Donald Trump has decided to extend by one month a temporary exemption from steel and aluminum tariffs for Canada, Mexico and the European Union, the White House announced Monday evening.

The move gives key allies — and three of the U.S.' four largest trading partners — until June 1 to reach some sort of deal with the Trump administration to avoid duties of 25 percent on steel and 10 percent on aluminum exports sent to the United States. The tariffs had been set to take effect at 12:01 a.m. Tuesday if Trump had not moved to extend the deadline.

The administration has also reached preliminary agreements with three other countries that had initially been granted a temporary exemption — Argentina, Brazil and Australia — allowing them to escape the duties as details are finalized over the next 30 days, the White House said. Trump did not set a deadline for those details to be worked out but said he would consider reimposing the tariffs if the agreements are not finalized "shortly."

One other country, South Korea, had already reached a preliminary deal for a permanent exemption from the steel tariffs because it agreed to cap its exports to the U.S. at 70 percent of the average export volume over the previous three years. Trump's official proclamation said the administration will monitor the implementation and effectiveness of that quota and left room for Trump to "revisit" his decision if needed.

"In all of these negotiations, the administration is focused on quotas that will restrain imports, prevent transshipment, and protect the national security," the White House said in its declaration. "These agreements underscore the Trump administration's successful strategy to reach fair outcomes with allies to protect our national security and address global challenges to the steel and aluminum industries."

The declaration brings some clarity to a decision-making process that until the official release left key allies wondering whether they would beginning Tuesday face penalties sure to roil international markets and disrupt global supply chains. Few people inside the White House or overseas had been sure of what or even when Trump would decide.

Imposing the duties would also have affected foreign steel industries that depend on access to the U.S. market. Canada and Mexico both send more than half of their steel produced annually into the United States, while the 28 nations of the EU together serve as the largest single supplier of steel to the U.S.

Of \$29.1 billion worth of steel that the United States imported last year, \$6.2 billion came from the 28 nations of the EU and \$2.9 billion from other European countries. About \$5.1 billion came from Canada, \$2.8 billion from South Korea, \$2.5 billion from Mexico, \$1.6 billion from Japan, \$1.4 billion from Russia and just \$976 million from China.

A U.K. government spokesperson called the extension "positive" and said EU countries would continue to work to reach a permanent solution.

"We remain concerned about the impact of these tariffs on global trade and will continue to work with the EU on a multilateral solution to the global problem of overcapacity, as well as to manage the impact on domestic markets," the spokesperson said in a statement Monday night.

Although the move grants some of the United States' closest allies another month to work out a deal, it remains unclear what sort of concessions would satisfy Trump and his administration.

Commerce Secretary Wilbur Ross and other administration officials have said in recent days that countries would have to choose between either quotas or tariffs — but the EU, Canada and Mexico have said they expect a full exemption without having to agree to such restrictions.

"We're busy alienating the few friends we have left," said Bill Reinsch, a senior adviser at the Center for Strategic and International Studies. "The president clearly, on trade issues, doesn't make a distinction between the good guys and the bad guys. If you're not doing exactly what he wants, you're a bad guy by definition — and nothing else counts."

The process of deciding on the exclusions and exemptions has been chaotic since the departure of former White House staff secretary Rob Porter, who was heavily invested in trade policy and making sure that differing viewpoints were included in the decision-making process.

U.S. Trade Representative Robert Lighthizer, meanwhile, has had myriad policy questions on his plate, including the ongoing NAFTA talks and his upcoming trip to China later this week to talk trade.

With any final decision still up in the air, some nations have indicated exactly how they will retaliate if and when Trump does impose the tariffs. The European Union last month generated a list of U.S. exports ranging from peanut butter to lipstick and yachts that would face punitive 25 percent duties on their way into the European market if Brussels is not spared. The EU's list, which is valued at roughly \$3.4 billion, is largely comprised of products from Republican states and districts that would bear the brunt of the tariff impact.

At the same time, European nations have also been working among themselves and with the United States to strike a compromise. German Chancellor Angela Merkel and French President Emmanuel Macron both traveled to the White House last week to talk face-to-face about the issue with Trump, who is still toying with the decision.

Merkel and Macron both spoke over the weekend with U.K. Prime Minister Theresa May about the "vital importance" of Europe's steel and aluminum industries and pledged to work together with the rest of the EU to push for a compromise and a permanent exemption.

To that end, EU Trade Commissioner Cecilia Malmström also spoke again over the phone on Monday with Ross.

Tensions are similarly high with Canada and Mexico, who are in intensive trade negotiations with the United States to update NAFTA.

Both countries have repeatedly made clear that they expect to be granted a full, permanent exemption from the tariffs without having to agree to quotas or any other restrictions. But their temporary reprieve was contingent upon a successful completion of the NAFTA rewrite — and with that deal still at least a week away, it remains unclear whether Trump will make the exemption permanent or at least extend it on a temporary basis while negotiations continue.

For either of the U.S. neighbors, imposition of the duties would ratchet up trade tensions at a time when all three countries are working to wrap up a NAFTA negotiation that has already been technically and politically difficult.

"Obviously, Lighthizer knows very clearly our position and how we have to react if any measure is imposed," Mexican Economy Secretary Ildefonso Guajardo said Friday during a visit to Washington to talk NAFTA. "I have been very clear that in this context a quota on steel won't be the best way to go."

If the tariffs do go ultimately into effect for any of the countries involved, a key question will be whether Trump will ratchet up the pressure again after the countries inevitably retaliate, Reinsch said.

"We act, they act, that's round one. The question will be, is [Trump] then going to start round two?" he said, noting that one round of tit-for-tat is "not that unusual" but that two would be more remarkable. "I think the trade war starts in round two."

Nancy Cook and Jakob Hanke contributed to this report.

Source: EPA draft would halt auto standards at 2021 levels, block California authority [Back](#)

By Alex Guillén | 04/27/2018 06:28 PM EDT

A draft proposal from EPA would freeze auto emissions standards after model year 2021 and seek to block California's ability to enact its own more stringent regulations, according to a source familiar with the draft.

The text of the draft is still reportedly in flux, but if ultimately finalized, it would erase half a decade's worth of the Obama administration's much-touted emissions savings, handing a major win to the oil industry. It would also set up a nasty legal fight with California that many legal experts believe the state could win.

The [Los Angeles Times](#) first reported on the draft plan today.

EPA Administrator Scott Pruitt on Thursday [told](#) a House Energy and Commerce subcommittee that he did "not at present" have any plans to try to revoke California's Clean Air Act waiver to enforce more stringent standards.

"It's important that we work together to achieve, as was indicated earlier, a national standard," Pruitt added.

Automakers successfully lobbied the Trump administration to revisit the 2022-2025 standards — although most indicated they simply wanted more flexibility to reach the ultimate emissions goals in 2025. They had complained it would be difficult to meet the Obama administration's goals that would have ultimately lifted the average fuel economy target for the nation's fleet of cars and light trucks to 55 miles per gallon by 2025.

Industry trade groups and individual automakers have also cautioned that a single national standard is preferable to a regulatory patchwork of rules.

WHAT'S NEXT: EPA reportedly will send the proposal to the White House for review in the near future. The agency is working alongside the National Highway Traffic Safety Administration, which is writing its own separate but related fuel economy rules for 2022-2025 vehicles.

Pruitt: EPA not going after California's waiver 'at present' [Back](#)

By Anthony Adragna | 04/26/2018 12:04 PM EDT

EPA Administrator Scott Pruitt said today his agency is "not at present" attempting to undo California's special Clean Air Act waiver allowing the state to set stricter emissions levels for vehicles.

"It's important that we work together to achieve, as was indicated earlier, a national standard," Pruitt said at a House Energy and Commerce subcommittee hearing this morning. "We are working very diligently and diplomatically with California to find answers on this issue."

California officials have warned they would diligently challenge any effort by the Trump administration to go after the waiver.

PJM to probe fuel supply vulnerabilities [Back](#)

By Eric Wolff | 04/30/2018 11:08 AM EDT

PJM Interconnection said today it would seek to identify any fuel supply vulnerabilities in its grid and design market tools to increase resilience, a move that appears designed to head off Energy Secretary Rick Perry's effort to bail out coal-fired and nuclear power plants.

PJM says in a report out today it will run models to "stress test" different parts of the grid to see if fuel security could be compromised under different circumstances. If it finds risks of fuel constraints, it would consider allowing different prices for power from generators that are better able to hedge against fuel problems.

"As is the case with reliability standards, PJM believes the most effective way to address fuel security is to define and establish fuel security criteria and then use market forces to allow all resources to compete to meet those criteria," the report says.

The report's biggest concern appears to be a grid dominated by natural gas, since cold weather can increase demand for home heating and constrain gas supplies. The report makes only one mention of renewables.

PJM has consistently opposed efforts by DOE to exercise emergency authority under either the Federal Power Act or the Defense Production Act to directly subsidize coal or nuclear power plants struggling in the face of low cost power from natural gas and renewables.

Perry's latest bid to help coal faces uphill battle [Back](#)

By Eric Wolff | 04/25/2018 05:08 AM EDT

Energy Secretary Rick Perry's latest idea to protect coal-fired and nuclear power plants may not fare much better than his previous efforts, according to energy experts.

Perry is considering invoking the 1950 Defense Production Act to keep money-losing power plants running by designating them as crucial for national security. But that would stretch the definition of the law and almost certainly draw legal challenges — and it would hit a big hurdle in Congress, which would need to approve perhaps billions of dollars in funding to keep the plants afloat, the experts said.

At the urging of President Donald Trump, Perry has sought to keep open coal and nuclear power plants that are threatened with shutdowns amid the stagnant demand for power — and even as natural gas and renewable power sources grab a growing share of the market.

So far, Perry's had no luck. FERC earlier this year rejected his proposal to give the plants financial support, and Energy Department lawyers stymied a push last year to invoke the agency's authority under the Federal Power Act to force the plants to run.

Some experts said any attempt to use the DPA is likely to meet the same fate.

"To me, it's a tough argument to make. It's a specious argument on its surface that seems like a perversion of the intended use of the Defense Production Act," said Tom Hicks, a former acting undersecretary of the Navy under

former President Barack Obama and now a principal at the advisory firm The Mabus Group. "Defense Production Act is on the vanguard of the need for resources, not on the back end for an industry being challenged by economic forces."

But the effort has been a priority for Trump and Perry, who sees saving coal-fired power generation as vital to U.S. security, according to a source familiar with the conversations on the issue.

The Cold War-era law grants the federal government powerful authorities to inject cash into companies essential for national defense in order to preserve domestic supplies of key products. But DOE will have to make the case that electricity produced specifically from coal and nuclear power plants, and not other types of power, is a critical resource.

Using the act to protect the plants when there appeared to be no immediate shortage of power supplies would be a novel application that would almost certainly face legal challenge.

"If the administration uses DPA, they're going to be using it very creatively," said Ari Peskoe, director of the Electricity Law Initiative at the Harvard Law School Environmental and Energy Law Program. "They may come up with reasoning for higher rates and who's going to pay for it. Whether that will hold up, I don't know."

Perry and his staff appear to have very few viable options for bailing out coal and nuclear power, a major energy priority for Trump, who has promised to revive the coal industry. DOE has opened a comments process for interested parties to weigh in on its use of the Federal Power Act's 202(c) emergency provisions, though that would require the agency to go through FERC, which unanimously rejected a similar Perry effort in January.

The 202(c) effort has been pushed by coal magnate Bob Murray, owner of Murray Energy, and by FirstEnergy Solutions, the unit of FirstEnergy Corp. that is in bankruptcy proceedings and which expects to shut down four coal and nuclear power plants. That company asked DOE to use the emergency authority to save not only its plants, but all 85 coal and nuclear power plants in the PJM Interconnection power market.

The DPA was last used by the Obama administration starting in 2012 to help spur the biofuels industry to develop the kind of advanced biofuels that could power ships and aircraft. The government can purchase capital equipment for the cause of national security, and it can fund advertising to support the effort.

And it allows the government to become the buyer of last resort, which could put Washington on the hook to buy excess power generated by coal and nuclear plants. Technically, this electricity could only be purchased at the "cost of production," a level that in the past has been determined by a team within the Defense Department.

While no hard estimate for the cost of a DPA subsidy exists, consultants analyzing Perry's previous bailout proposal estimated costs between \$4 billion and \$10.6 billion annually.

That's a far higher level than Congress typically allocates for the DPA. It provided \$67.4 million in the omnibus passed in March, H.R. 1625 (115), down slightly from the \$76 million it provided for all projects in 2017, according to a report submitted to Congress.

And Congress — and the Republican Party — is deeply divided on using government subsidies to save these plants. Rep. David McKinley (R-W.Va.) has some allies from other coal districts for the effort, but other free market-oriented lawmakers like Rep. Pete Olson (R-Texas) say they want to see markets function unimpeded.

McKinley's staff has been in touch with DOE and the White House, as has West Virginia Sen. Joe Manchin (D).

"I think it's an emergency national concern for the national defense of our country. I think Rick Perry agrees with it, and I think the president does also," Manchin told POLITICO.

PJM has itself said the retirement of FirstEnergy's coal plants did not pose a threat to the region's power supplies, and that it had ample generation to meet demand. It has opposed any effort to mandate to require the plants to stay online.

"We believe that a market-oriented approach consistent with the American free-enterprise system offers better results than government-mandated subsidies," said PJM spokesman Jeff Shields.

Anthony Adragna contributed to this report.

Chatty Pompeo strikes early contrast with reclusive Tillerson [Back](#)

By Nahal Toosi | 04/30/2018 06:11 PM EDT

Mike Pompeo, the new secretary of state, is leaning hard into the side of the job his predecessor seemed to hate the most: public relations.

Within hours of being confirmed last week, Pompeo took along several journalists on a trip to Europe and the Middle East, answering their questions in public and private, and appearing Sunday on ABC News' "This Week." He's planning a town hall meeting with State Department staff soon. And he may even start tweeting.

The moves are in many ways a return to tradition for a secretary of state, a high-profile position where words are the most powerful tool. But they stand in marked contrast to the man Pompeo replaced, Rex Tillerson, whose early lack of visibility caused lingering damage to his reputation inside the Trump administration and beyond.

"It signals that, unlike Tillerson, Pompeo recognizes some of the basic things he needs to do to make the State Department relevant," said Ilan Goldenberg, a former Obama-era State official now with the Center for a New American Security. "By itself, it won't make Pompeo an effective secretary of state. But not doing these things really hurt Tillerson."

On Tuesday afternoon, his first full day in Foggy Bottom itself, Pompeo will deliver a speech introducing himself to the department. Staffers and journalists won't be the only ones listening; foreign diplomats will also parse Pompeo's words carefully.

Tillerson, too, gave a well-received speech his first full day on the job. But for months afterward, he almost seemed to have taken a vow of silence.

He refused to engage reporters, didn't hold a town hall until three months in and had no social media presence. U.S. diplomats soon found themselves aimless, lacking guidance from Tillerson and his small coterie of advisers. Veteran NBC News reporter Andrea Mitchell took to loudly asking questions of a silent Tillerson during his public appearances, videos of which went viral. The department's daily press briefing, a decades-old

tradition, was put on ice for nearly two months. Under pressure, Tillerson brought it back, but in a scaled back format. Headlines asked: "Where's Rex?"

Tillerson puzzled a foreign policy establishment used to secretaries of state — including Hillary Clinton and John Kerry — who sought, rather than shunned, public attention. Many State Department staffers came to see Tillerson as isolated and aloof. And foreign leaders who concluded he was ineffectual and out of the loop engaged directly with the White House instead.

Tillerson greatly increased his visibility in the second half of his 14-month tenure, but the damage was done. Trump fired Tillerson in mid-March.

The difference between Tillerson and Pompeo might be explained, in part, by their respective backgrounds: Tillerson had previously been a taciturn CEO of ExxonMobil, Pompeo a pugnacious congressman from Kansas.

"His background as a congressman is a great asset in his current position," said Brett Schaefer, a foreign policy analyst with the conservative Heritage Foundation. "He has a great deal of experience in interacting with a broad number of people and doing so in a way that is designed to listen to their concerns and respond to them."

Pompeo has also pledged to stay in close touch with his former colleagues in Congress. Tillerson drew criticism for being slow to respond to lawmakers' requests.

And while Tillerson showed no visible interest in social media, a person familiar with Pompeo's situation said he is considering using Twitter.

David Wade, a former chief of staff to Secretary of State John Kerry, argued that a secretary of state's public words matter well beyond the Washington Beltway. "Externally, you're in a race to define the American narrative against those like Russia and China which will fill in their own narrative if you're absent," he said.

Calling Tillerson "an abysmal failure at communications both internally and externally," Wade said Pompeo "can be a good communicator, and as a politician he's more talented than his predecessor." But, he added, "all the public diplomacy in the world can't get him out from under the weight of Trump's tweets and slurs about people from the Middle East to Africa."

The timing of Pompeo's Thursday confirmation vote allowed him to attend a long-scheduled meeting of NATO foreign ministers in Brussels the next day, winning him early plaudits from others in the military alliance.

"He actually jumped on a plane just after he was sworn in and he was able to address the North Atlantic Council, the foreign ministers of NATO, just 12 hours and 34 minutes after his confirmation," NATO Secretary General Jens Stoltenberg said with admiration.

Pompeo left Washington with six journalists on his plane. On his first major overseas trip, Tillerson brought just one reporter, from the conservative Independent Journal Review.

As he continued from Brussels to Saudi Arabia, Israel and Jordan over the weekend, Pompeo picked up two more reporters. He spoke to the reporters on the plane and also took questions during news conferences on the ground.

Tillerson, by contrast, generally avoided even the reporters who — having been denied seats on his official plane — chased him around the world on commercial flights.

Shortly after he took office, Tillerson took a quick trip to Bonn, Germany, for a meeting of G-20 foreign ministers. At an appearance on the sidelines with Russian Foreign Minister Sergey Lavrov, reporters were escorted out of the room before Tillerson gave remarks. Even Lavrov was puzzled: "Why did they shush them out?" he asked.

"I'm not a big media press access person. I personally don't need it," Tillerson would later tell the IJR reporter, who traveled with him to Asia a month later.

During his 15 months as CIA director, Pompeo forged a much closer relationship with Trump than Tillerson. He is believed to have a much better sense of where the president stands, and his own, often-hawkish views appear more in line with Trump's thinking. Pompeo has also been vocal about wanting to improve morale at the State Department, where many diplomats have been distressed over Trump's attempts to slash their budget and Tillerson's unwillingness to listen to their expertise.

In a news conference in Brussels, Pompeo pointed out that he'd met with U.S. diplomats who work in the Belgian capital and that he was committed to making his department more relevant.

The diplomats, he said, "may have been demoralized, but they seemed in good spirits. They are hopeful that the State Department will get its swagger back."

Pruitt's Science Margin for Error • Coal Country Debate • Undersea Robots Study Dead Zone

By *Chuck McCutcheon*

Scott Pruitt drew lots of attention when he declared limits on “secret science” in policymaking. But it’s no secret to lawyers watching the EPA chief that he has no room for error in crafting the policy.

The proposed open-data policy would enable the EPA head to issue waivers, David Schultz writes in a story being published today. Environmental attorneys say the waiver provision actually makes the proposal even more vulnerable to legal challenges.

“How is EPA choosing when to waive and when not to waive?” asks Amanda Leiter, a law professor at American University in Washington. “Does that give the EPA too much discretion? Will they just be cherry-picking?”

COAL COUNTRY DEBATE: The West Virginia Republican Senate race goes

nationwide tonight, with the three top contenders squaring off in a nationally televised Fox News debate.

All three candidates want the same things for coal—to get the government out of the way, to open more mines, to burn more coal for energy, to export more coal to foreign countries, and to create more jobs at home.

The splashiest name is former coal mogul and ex-convict [Don Blankenship](#). So far, Blankenship has concentrated on criticizing the Mine Safety and Health Administration, which he says is the real culprit for the mine disaster that landed him in jail. Blankenship wants to split MSHA into two agencies, one responsible for regulating and the other for enforcement.

West Virginia Republican U.S. Senate candidate Don Blankenship appears at a town hall campaign event in Huntington in February.
Photographer: Luke Sharrett/Bloomberg via Getty Images

Rival Evan Jenkins walks into the debate with three and a half years' experience in the House and two decades before that as a state lawmaker. If elected, he'd be a reliable vote to pare back the EPA's budget and staffing. He's worked to give money to Appalachian states to clean up abandoned mines and backs funding research to extract rare earth elements from coal.

The third candidate, state Attorney General Patrick Morrisey, shares some similarities to Scott Pruitt. Like the EPA chief when he was Oklahoma's attorney general, Morrisey sued the Obama EPA several times, and both Morrisey and Pruitt are strong believers in deregulation. [Stephen Lee](#) is watching.

OMAN DEAD ZONE: It sounds like bad science fiction: Undersea robots spent eight months exploring a marine dead zone off the coast of Oman.

But the robot research yielded scary real-life results, [Matthew Kalman](#) writes in a story [being published today](#). Scientists found that the zone of oxygen-starved waters, mapped in the 1960s, had grown and crept closer to the coast of Oman, squeezing valuable tuna, lanternfish, and other fish into a shrinking layer of oxygen-rich water close to the surface.

Dead zones are a “disaster waiting to happen, made worse by climate change, as warmer waters hold less oxygen, and by fertilizer and sewage running off the land into the seas,” says Bastien Queste, a research fellow at the U.K.'s University of East Anglia.

John, Leif, and Justin,

Thanks again, and my apologies for the delay. Attached are a handful of edits but I think this should get the ball rolling for the office directors' review of their specific actions. John, if you wouldn't mind sending it to them later today or early tomorrow after Justin has a chance to provide comment, I'd appreciate it.

Clint,

With compliments to Leif, here's an updated draft response to the SAB. Included a few marginal questions and notes for your review/awareness. Please refine and share with Justin as you like and let me know how/when you'd like to also reach out to ODs/staff for feedback on the response and potential briefings and/or questions to the Board for consideration. Thanks!

John

Analyzing how EPA is Addressing "Secret Science"

A Teleforum Sponsored by the Regulatory Transparency Project

Tuesday, April 24, 2018 | 12:00 p.m. ET

Daren Bakst

Senior Research Fellow
Agricultural Policy
The Heritage Foundation

Richard Belzer

Independent Consultant
Regulation, Risk, Economics &
Information Quality

EPA Administrator Scott Pruitt announced that his agency would no longer allow the use of "secret science" in developing federal regulations. Specifically, the agency will only use scientific studies to develop regulations when the data and methodology for those studies are made accessible to the public. Is there really a secret science or transparency problem that even needs to be addressed? If so, have there been attempts historically to correct the problem? What are the implications of excluding such studies? This presentation will provide background on this effort and discuss how transparency in government can be strengthened and better inform policymaking.

Featuring:

- **Daren Bakst**, Senior Research Fellow, Agricultural Policy, The Heritage Foundation
- **Richard Belzer**, Independent Consultant, Regulation, Risk, Economics & Information Quality
- **Moderator: Devon Westhill**, Director, Regulatory Transparency Project

To listen to this Regulatory Transparency Project Teleforum, please dial 888-752-3232 at 12:00 p.m.

To learn more about the Regulatory Transparency Project, visit RegProject.org.

Dial 888-752-3232 to Listen In

Speaker Biographies

Daren Bakst

Daren Bakst studies and writes about agriculture subsidies, property rights, environmental policy, food labeling and related issues as The Heritage Foundation's research fellow in agricultural policy.

Mr. Bakst, who joined Heritage's Roe Institute for Economic Policy Studies in May 2013, previously was a policy counsel for the U.S. Chamber of Commerce, where he focused on regulatory reform as well as food and agricultural policy. He worked for seven years at the Raleigh, N.C.-based John Locke Foundation, one of the largest state-based, free-market think tanks. As director of legal and regulatory studies there, he concentrated on property rights and environmental policy.

Mr. Bakst has appeared in or been quoted by media outlets such as The Wall Street Journal, USA Today, The Washington Times, CNN and National Review Online.

He serves on the Federalist Society's Environmental Law & Property Rights and Administrative Law & Regulation Executive Committees and was previously a member of the Energy, Environment and Agriculture Task Force of the American Legislative Exchange Council.

Mr. Bakst, who hails from West Palm Beach, Fla., received his bachelor's and master's degrees from George Washington University. A licensed attorney, he holds a law degree from University of Miami and a master of laws degree from American University.

Richard Belzer

Since 2001, Dr. Richard Belzer has been an independent consultant in regulation, risk, economics and information quality. Previously he was a visiting professor of public policy at Washington University in St. Louis and economist in the Office of Information and Regulatory Affairs in the Office of Management and Budget. He

received his Ph.D. in public policy from Harvard University (1989), Master's in Public Policy (MPP) from the John F. Kennedy School of Government (now Harvard Kennedy School) (1982), and MS and BS degrees in agricultural economics from the University of California at Davis (1979, 1980). He is a regular contributor to scholarly professions through journal peer review and service to professional societies. He was elected Treasurer of the Society for Risk Analysis (1998, 2000) elected Secretary-Treasurer of the Society for Benefit-Cost Analysis (2008, 2010, 2012). He earned multiple awards for exemplary performance at OMB, the SRA's Distinguished Service Award (2003), and the SBCA's Richard O. Zerbe, Jr. Distinguished Service Award (2017). In 1995, he was named a Fellow of the Cecil and Ida Green Center for the Study of Science and Society. In 2017, Dr. Belzer completed a 2-year term as a member of the USEPA Science Advisory Board Panel on Economy-wide Modeling. He serves as a member of the RTP Energy and Environment Working Group.

Subject: Morning Consult Energy: California Said to Consider Decoupling Auto Emissions Rules from Federal Standards

By Sei Chong

Top Stories

- If the Environmental Protection Agency eases Obama-era rules on vehicle greenhouse gas emissions, California is likely to push back by decoupling the state's standards from the federal rules and has begun informing the nine states that have adopted California's standards of the possibility, two people familiar with the matter said. If California goes its own way on emissions standards, it

would require automakers to adjust to different efficiency regulations around the nation. ([Bloomberg](#))

- The city council of Jacksonville, Fla., is expected to approve today fast-tracked incentives for JinkoSolar (U.S.) Inc., a Chinese solar panel maker that wants to open a plant in the city. JinkoSolar would be the first Chinese company to set up a factory in the United States after President Donald Trump imposed tariffs on imported solar panel equipment in January. ([Jacksonville Daily Record](#))
- U.S. District Judge Brian Morris in Great Falls, Mont., has ordered Bureau of Land Management officials who are involved in regional planning for the Powder River Basin, which supplies 40 percent of the nation's coal, to consider reducing coal mining as a way to fight climate change. The judge, who issued the ruling Friday, told the government and environmental groups to work together on additional planning in the region but declined environmentalists' request to halt mining. ([The Associated Press](#))

Morning Consult Report: The Future of Retail

Get insights into how consumers are reacting to changes in the retail industry, and what they're looking for in the future.

General

California's Ready to Retaliate If Trump Cuts Auto Rules, Sources Say

Ryan Beene and John Lippert, Bloomberg

As the Trump administration begins to dismantle Barack Obama's ambitious auto efficiency regulations, California is said to be poised to retaliate by doing something that automakers have feared: de-coupling the state's rules with those set in Washington.

EPA Plan Would Discount Health Benefits of Reducing CO₂ Emissions

Niina Heikkinen, E&E News

U.S. EPA's "secret science" plan could reduce the health benefits that come along with controlling carbon emissions, scrambling previous calculations that gave weight to saving lives and avoiding heart attacks. The most immediate consequence of the potential policy—which would prevent the agency from using some scientific studies in its rulemaking—could fall on EPA's efforts to rewrite the Clean Power Plan, according to proponents and critics of EPA's proposal.

The E.P.A. Says It Wants Research Transparency. Scientists See an Attack on Science.

Lisa Friedman, The New York Times

The Environmental Protection Agency is considering a major change to the way it assesses scientific work, a move that would severely restrict the research available to it when writing environmental regulations.

Unlike those in the resistance, certain career officials' stars have risen under Trump

Juliet Eilperin and Dino Grandoni

He's known by some as the cicada. Randal Bowman has toiled 32 years at the Interior Department. A proponent of limited federal regulation, he goes underground during Democratic administrations.

Sources: Zinke tells employees diversity isn't important

Sara Ganim, CNN

Several employees at the Interior Department have told CNN that Secretary Ryan Zinke repeatedly says that he won't focus on diversity, an apparent talking point that has upset many people within the agency. Three high-ranking Interior officials from three different divisions said that Zinke has made several comments with a similar theme, saying

"diversity isn't important," or "I don't care about diversity," or "I don't really think that's important anymore."

Oil holds above \$70 as geopolitics eclipses supply outlook
Amanda Cooper, Reuters

Oil rose on Tuesday, holding above \$70 a barrel for a third day, supported by concerns that tensions in the Middle East could lead to supply disruptions, although with global output rising fast, investors remained cautious.

Oil and Natural Gas

Shell sketches future with drastically fewer fossil fuels
Amy Harder, Axios

Coal, oil and natural gas would plummet within the next couple of decades in a new report Royal Dutch Shell released Monday, envisioning a future where world leaders cut greenhouse gas emissions as laid out in the 2015 Paris climate deal.

Deepwater Oil Starting to Hold Its Own With Shale, Chevron Says
David Wethe, Bloomberg

Chevron Corp. is studding the ocean floor with heavy-duty pumping gear as part of an effort to make deepwater oil discoveries competitive with shale.

Devon Energy eyes more asset sales to simplify portfolio
Ernest Scheyder, Reuters

U.S. oil producer Devon Energy Corp said on Monday it was looking to sell even more assets than previously announced in order to focus its portfolio on three shale regions.

Inside the Tax Bill's \$25 Billion Oil Company Bonanza
Antonia Juhasz, Pacific Standard

Last month, during a retreat in West Virginia, congressional Republicans set out their 2018 party goals. Their primary objective is to hold onto their majorities in the House of Representatives and the Senate, and the key mechanism for doing so is to ride the coattails of the Tax Cuts and Jobs Act.

Foreign Trade Houses Grab Dominant Share of U.S. Crude Exports

Sarah McFarlane, The Wall Street Journal

A handful of international trade houses are dominating the buying and selling of U.S. crude exports, two years after Washington lifted its ban on sending oil abroad.

Utilities and Infrastructure

MVP contractor tied to pipeline cited for environmental violations

Kate Mishkin, Charleston Gazette-Mail

A construction company working on a natural gas pipeline that recently was accused of violating environmental standards also will work on the Mountain Valley Pipeline. Precision Pipeline, a Wisconsin-based construction company, will work on the Mountain Valley Pipeline, which is still in its nascent stages. It has been working on the Rover Pipeline, which is nearing completion.

Appeals court rejects bid for pipeline restrictions

Alex Rose, Delaware County Daily Times

The Commonwealth Court of Pennsylvania has rejected an appeal from six Middletown residents seeking the ability to enforce a local ordinance against Sunoco in the construction of the Mariner East 2 pipeline.

Renewables

When incentives are in hand, JinkoSolar to move quickly

Karen Brune Mathis, Jacksonville Daily Record

JinkoSolar (U.S.) Industries Inc.'s plans for its Jacksonville solar-panel plant could unfold quickly if City Council signs off Tuesday, as expected, on fast-tracked legislation for incentives.

How California Taught China to Sell Electric Cars

Mark Chediak et al., Bloomberg

A liberal bastion and an authoritarian government agree on how to help bring about the future of cars, with help from the state.

China draws up plans to promote standardization in electric vehicles

David Stanway, Reuters

China said it will work to improve levels of standardization in its electric vehicle industry - a sector it is aggressively promoting to help combat smog and to position the country as a leading car-making giant in the future.

Coal

Judge: Less mining must be studied for No. 1 US coal region

Mead Gruver, The Associated Press

U.S. government officials who engage in regional planning for an area of Wyoming and Montana that supplies 40 percent of the nation's coal must consider reducing coal mining as a way to fight climate change, a judge has ruled.

Half of All U.S. Coal Plants Would Lose Money Without Regulation

Joe Ryan, Bloomberg

It's long been clear that U.S. coal plants are struggling. A study released Monday shows how much - concluding that barely half earned enough revenue last year to cover their operating expenses.

Nuclear

ITER nuclear fusion project avoids delays as U.S. doubles budget

Geert De Clercq, Reuters

The United States has agreed to double its planned 2018 budget contribution to the ITER project to build a prototype nuclear fusion reactor, avoiding delays to the international project this year, its director said on Monday.

Climate

Meeting Paris Agreement Targets Will Take Massive Cuts in Emissions

Brian K Sullivan, Bloomberg

Meeting the Paris accord's temperature targets will take massive cuts to greenhouse gas emissions within 15 years, but won't require them to be reduced to zero, according to a new study published Monday in the journal Nature Climate Change.

Runaway Arctic Ice Menaces Oil Rigs and Shipping as the Planet Warms

Bob Berwyn, InsideClimate News

As the planet warms, giant icebergs and sea ice that once would have remained trapped in the frozen Arctic are moving southward faster and more frequently, menacing shipping and oil and gas drilling operations.

These Maps Show How Climate Change Will Mess Up The Weather Where You Live

Ben Schiller, Fast Company

If you like the weather where you live, but are worried it's not going to be the same as climate change wreaks havoc on meteorological systems, there's now a way to know where you should be planning to move. The Climate Ex map shows the climatic similarities between different places, as well as the projected climate changes for those places over time.

Hotting up: how climate change could swallow Louisiana's Tabasco island

Oliver Milman, The Guardian

Avery Island, a dome of salt fringed by marshes where Tabasco sauce has been made for the past 150 years, has been an outpost of stubborn consistency near the Louisiana coast. But the state is losing land to the seas at such a gallop that even its seemingly impregnable landmarks are now threatened.

China meets 2020 carbon target ahead of schedule: Xinhua

David Stanway, Reuters

China met its 2020 carbon intensity target three years ahead of schedule last year, the official Xinhua news agency reported on Tuesday, citing the country's top climate official Xie Zhenhua.

Opinions, Editorials and Perspectives

The EPA Cleans Up Its Science

Steve Milloy, The Wall Street Journal

The Environmental Protection Agency will no longer rely on "secret" scientific data to justify regulations, Administrator Scott Pruitt announced last week. EPA regulators and agency-funded researchers have become accustomed to producing unaccountable, dodgy science to advance a political agenda.

Scott Pruitt's Attack on Science Would Paralyze the E.P.A.

Gina McCarthy and Janet G. McCabe, The New York Times

Scott Pruitt, the administrator of the Environmental Protection Agency, has announced that he alone will decide what is and isn't acceptable science for the agency to use when developing policies that affect your health and the environment.

Research Reports

Predicting unpredictability

Steven J. Davis, Nature

Analysts and markets have struggled to predict a number of phenomena, such as the rise of natural gas, in US energy markets over the past decade or so. Research shows the challenge may grow because the industry - and consequently the market - is becoming increasingly volatile.

Enhancing Canada's Climate Commitments: Building on the Pan-Canadian Framework

Jeffrey Rissman et al., Energy Innovation and Pembina Institute

The Pembina Institute and Energy Innovation collaborated to create the Canada Energy Policy Simulator, a versatile, free and open-source computer model evaluating the impacts of 50 policies on pollutant emissions, cash flows, human lives saved, and more. Our analysis finds that even if the PCF is fully implemented, 2030 emissions will exceed Canada's goal by 161 million metric tons (MMT), a gap 3.7 times larger than the 44 MMT shortfall predicted by Canada's government.

**But the notion that biomass is
that once forests are cleared
back as planned.**

“Like so much else from Pruitt and his administration,” said Sami Yassa, who opposes burning wood for electricity.

If the forests do grow back, why are there so many complications:

- **While carbon dioxide emissions from wood products are low, trees take decades or more to grow back — say, a forest fire can take decades to regrow.**
- **Wood products are often exported, for instance, to Europe, which has declared wood pellets carbon neutral, despite their greenhouse gas emissions.**
- **Even if forests grow back, they are not the same wooded habitat for decades.**

The EPA’s own Science Advisory Board said the agency’s policy memo released last week that “it is not scientifically valid to claim that wood is carbon neutral,” the board said any such determination.

William Schlesinger, president of the Science Advisory Board member, said “on this subject,” he said — by making a determination. “We’re supposed to provide an opinion on what’s our role?”

Why does the forest products industry say carbon neutral could make it easier to meet climate goals?

deregulating biomass carbon dioxide emissions provisions in the Clean Air Act.

“Recognizing that forest biomass energy production will encourage landowners to reforest, create long-paying jobs well into the future, and protect the health of Forest Owners, said in a statement.

Why do conservationists care? The new biomass Clean Power Plan, or something like it, means biomass energy would be treated like so-called “zero-carbon” sources of electricity.

And Congress? Lawmakers, including Sen. Al Franken, said it was spurred by the May 2015 report from the Energy and Agriculture department that urged support for biomass.”

EPA Issues Carbon-Neutral Biomass Policy, Spurning SAB Review Efforts

EPA in a new guidance document says it will treat carbon dioxide emissions “resulting from the combustion of biomass from managed forests at stationary sources for energy production as carbon neutral,” largely spurning a Science Advisory Board (SAB) review of the issue because the agency believes it has taken too long.

EPA Floats 'Secret Science' Ban Rule, Signaling Possible Internal Fixes

EPA has sent for White House review a proposed rule to increase the transparency of regulatory science, advancing Administrator Scott Pruitt's controversial efforts to ban the use of "secret science" in a move that suggests officials have addressed at least some internal concerns that such a policy could violate statutory protections of medical privacy and trade secrets.

Federal Climate Policy 'Vacuum' Has Spurred Uptick In Novel Climate Suits

The recent increase in climate nuisance and other novel private litigation has occurred because of the federal climate policy "vacuum," according to several legal observers, and while they disagree on the suits' prospects, supporters say the new litigation has already begun to address legal hurdles that would have doomed similar efforts several years ago.

Climate Beat

Litigation: Environmentalists cite major 'legal error' in BLM methane ruling

The groups ask the 10th Circuit to block a lower court ruling that "committed an unprecedented legal error" by staying implementation of BLM's regulation without applying court's traditional four-part tests for such relief.

Litigation: Circuit court vacates Trump NHTSA's CAFE penalty delays

The win for states and environmentalists could presage legal problems for the Trump administration's broader efforts to weaken vehicle fuel efficiency rules, critics say.

Loose Change: White House official reiterates support for Pruitt

In today's news roundup: The comments from White House legislative director come amid new reporting about Pruitt's time in Oklahoma, where he also displayed a taste for VIP treatment and high-end travel.

Subject: Morning Energy: Pruitt's watershed moment — 'Secret science' policy coming — Blankenship slipping

By Kelsey Tamborrino | 04/24/2018 05:42 AM EDT

With help from Emily Holden

PRUITT'S WATERSHED MOMENT: EPA Administrator Scott Pruitt is approaching his two separate House committee hearings this week with sagging support on the hill. The make-or-break moment is approaching as once-stalwart backers begin to express concern about the controversies that have swirled in recent weeks. Republican Sen. Jim Inhofe (Okla.) — perhaps Pruitt's staunchest ally in Congress — told Pro's Anthony Adragna he thinks it's "appropriate to have a hearing in so far as any accusation having to do with his office is concerned," and he cited a report in The New York Times detailing a sweetheart deal Pruitt received on an Oklahoma City home previously owned by a lobbyist.

Sen. Shelley Moore Capito (R-W.Va.) also thought Thursday's hearings before the House Energy and Commerce and Appropriations committees would prove pivotal for Pruitt's long-term future in the administration. "It's really important," Capito said. "He's going to have to answer some tough questions. I'm sure they'll be put to him by both sides and we'll see what his response is."

And Sen. John Boozman joined his two Republican colleagues in supporting hearings by the Environment and Public Works Committee. Meanwhile, sources told Bloomberg that administration officials privately cautioned lawmakers and other conservative allies to pump the brakes on their defenses of Pruitt.

Publicly, however, the White House stands firm in its commitment to Pruitt. Press secretary Sarah Huckabee Sanders told reporters the administration is "continuing to review a number of the reports" about Pruitt, but noted the EPA chief "has done a good job of implementing the president's policies," particularly on deregulation and energy dominance. White House legislative affairs director Marc Short was more direct earlier Monday: "I think Scott Pruitt is doing a great job and we look forward to keeping him there as EPA administrator," he told MSNBC.

More to come? Earlier Monday, five senior congressional Democrats asked House Oversight Chairman Trey Gowdy to obtain further documents and hold hearings after obtaining new records they say raise "troubling" new questions about Pruitt's security expenditures. EPW ranking member Tom Carper told Anthony he had a good conversation with Gowdy regarding Pruitt, but said there was no formal bipartisan agreement to work together on an investigation. "I just gave him plenty of encouragement that he's doing the right thing," Carper said. Read more.

WELCOME TO TUESDAY! I'm your host Kelsey Tamborrino. Congrats to the Nuclear Energy Institute's Robert Powers, who was first to correctly guess Mary Walker was the first woman to receive the Medal of Honor. For today: Who is the last former senator to appear on a U.S. postage stamp? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter @kelseytam, @Morning_Energy and @POLITICPro.

POLITICO's Ben White is bringing Morning Money to the Milken Institute Global Conference to provide coverage of the day's events and evening happenings. The newsletter will run April 29 - May 2. **Sign up to keep up with your daily conference coverage.**

BLINDED WITH SCIENCE: EPA's Pruitt is expected to unveil his new science policy that restricts the agency from relying on research that doesn't make public all its available data, a source briefed on the announcement tells Pro's Emily Holden. The proposed rule, which the agency submitted to the White House for review last week, will mirror legislation from House Science Chairman Lamar Smith (R-Texas).

Pruitt argues the change will bolster transparency, but scientists and health advocates say it is an effort to constrain rulemaking. The rollout has been delayed as agency officials tried to determine how to treat industry research used to evaluate the safety of pesticides and toxic chemicals, as Pro's Annie Snider reported last week. While academic studies often can't disclose data that includes personal health records, corporations can't reveal proprietary information either.

SCIENTISTS REACT: Close to 1,000 scientists signed onto a letter to Pruitt Monday, calling on the administrator to reverse course on his plans to revise how the agency considers outside research. "EPA can only adequately protect our air and water and keep us safe from harmful chemicals if it takes full advantage of the wealth of scientific research that is available to the agency," write the scientists, including some former EPA career staffers. Read it here.

A BLANK SLIP: GOP establishment attacks on former coal baron Don Blankenship seem to be taking hold, POLITICO's Alex Isenstadt reports via new polling. With the West Virginia Senate primary a mere two weeks away, a poll out Monday found Blankenship falling behind his more mainstream rivals, GOP Rep. Evan Jenkins and state Attorney General Patrick Morrisey. The poll found Morrisey leading with 24 percent, followed by Jenkins with 20 percent, and Blankenship trailing with 12 percent.

National Republicans have scrambled to intervene in the race, concerned that a Blankenship primary win would destroy their prospects of defeating Democratic Sen. Joe Manchin in November. Blankenship, who spent a year in jail following the deadly 2010 explosion at his Upper Big Branch Mine, has poured nearly \$2 million of his own money into a slash-and-burn style campaign savaging Jenkins and Morrisey as pawns of the establishment, Alex writes. Blankenship has also used the Senate run as a path to clear his name. So far, much of his campaign has been geared toward portraying himself as the casualty of the Obama-era Justice Department, which he says was bent on locking him up.

The new survey, which was conducted April 17-April 19 and has a margin of error of 4.9 percentage points, precedes a GOP debate today, and another that will be hosted by Fox News next week for a nationally televised audience. Read more.

SPECIAL ELECTION TODAY: Arizona voters will decide today who will pick up the seat left vacant by Rep. Trent Franks' departure in the state's 8th District. While neither candidate highlights specific environmental issues on her campaign website, Republican Debbie Lesko and Democrat Hiral Tipirneni have markedly different takes on climate change. Tipirneni's site says she believes "climate change is real and that we need to reduce carbon emissions." Meanwhile, Lesko said during a debate earlier this year that "certainly not the majority" of climate change is human-caused. "I think it just goes through cycles and it has to do a lot with the sun. So no, I'm not a global warming proponent," she said.

RULES TO MEET ON COLUMBIA RIVER BILL: The House Rules Committee will meet at 5 p.m. to formulate a rule on H.R. 3144 (115), which would void the environmental impact statement process for altering the hydropower system along the Columbia and Snake rivers. Earlier this month, the 9th Circuit Court of Appeals sided with the state of Oregon, the Nez Perce tribe and conservation groups, ruling that dam operations on the Columbia and Snake rivers must forgo hydropower production during key times of the year to protect

endangered salmon. An environmental impact statement for the system has been the subject of congressional fights, with Rep. [Cathy McMorris Rodgers](#) filing the legislation to void that process.

COAL ASH HEARING TODAY: EPA holds a [public hearing](#) today on its proposal to [roll back](#) the Obama-era regulation for the cleanup and disposal of coal ash. The hearing will begin at 9 a.m. in Arlington, Va., where there will be three sessions: 9 a.m. until noon; another beginning at 1 p.m. and ending at 4 p.m.; and a final session beginning at 5 p.m. and ending at 8 p.m.

PROMISES, PROMISES: Senate spending leaders vowed to restore chamber-wide debate on amendments to individual appropriations bills, Pro's Sarah Ferris and Kaitlyn Burton [report](#). It's a risky move, ME readers may recall, considering how Democrats [blocked](#) a largely noncontroversial Energy and Water bill in 2016 because of a proposed amendment on Iran, and in 2015, House Republicans' Interior-Environment bill was tripped up by an unrelated rider on the Confederate flag. But Senate Appropriations Chairman [Richard Shelby](#) and his Democratic counterpart [Patrick Leahy](#) told committee members in a closed-door meeting Monday that leadership has agreed to allow amendments on the Senate floor for every individual spending bill. And the two have met with Majority Leader [Mitch McConnell](#) and Minority Leader [Chuck Schumer](#) in recent days about opening up the floor for debate on spending bills.

JUDGE: ENBRIDGE PIPELINE SHOULD STICK TO PLAN : An administrative law judge recommended on Monday that Minnesota regulators approve Enbridge Energy's proposal for replacing its Line 3 crude oil pipeline. But the court stipulated that the pipeline should follow the existing route, not the company's preferred route, which would carry Canadian tar sands crude from Alberta across areas in the Mississippi River, the Associated Press reports. Administrative Law Judge Ann O'Reilly's recommendation to the Public Utilities Commission sets up further disputes, "because the existing line crosses two Ojibwe reservations where tribal governments have made it clear that they won't consent and want the old line removed altogether." Read [more](#).

A METHANE TO THE MADNESS: The comment period on the Bureau of Land Management's proposal to reverse the Methane Waste Prevention Rule ended Monday, drawing thousands of far-reaching comments. The left-leaning Center for Western Priorities [analyzed a random sample](#) of 2,000 comments, it said, finding 99.8 percent of them were opposed to the proposal. The Independent Petroleum Association of America and Western Energy Alliance meanwhile submitted joint [comments](#) applauding the move. "We were pleased to see workable changes are being considered to the rule that more accurately represent the scope of power and authority given to the BLM for regulating this type of activity," IPAA's Dan Naatz said in a statement. And, E2, an affiliate of the Natural Resources Defense Council, sent a letter to Interior Secretary Ryan Zinke on Monday, expressing its opposition to BLM's proposal. Close to 400 businesses signed onto that letter, which calls BLM's proposal "a net negative for the American public." Read it [here](#).

MAIL CALL! IN HONOR OF NATIONAL PARKS WEEK: League of Conservation Voters organized 122 groups — including the American Civil Liberties Union and the Human Rights Campaign — in a letter to members of Congress opposing the administration's moves on public lands. National monuments "have helped make our public lands more inclusive," the letter states, before calling on lawmakers to "reject any legislation that would limit the president's authority under the Antiquities Act or codify any unlawful rollbacks of existing national monuments." Read it [here](#).

FOR YOUR RADAR: The House will vote to overhaul the 1988 Stafford Act this week, Pro's Budget & Appropriations team [reports](#). The three-decade-old bill is the main piece of legislation overseeing federal disaster-relief efforts, with proposed tweaks that include new incentives to build "smarter and stronger to better withstand disasters in the future," according to GOP Majority Leader [Kevin McCarthy](#)'s office. That could equate to big changes on how states spend disaster relief money.

ICYMI: ZINKE DRAWS OLIVER'S IRE: The Interior secretary got the full treatment from HBO host John Oliver on "Last Week Tonight" on Sunday. Oliver hit Zinke for [referring to himself](#) as a geologist and said he

"has a real flair for creative license." Of course, Zinke is not the first to draw scrutiny from the HBO host. A judge recently dismissed a defamation lawsuit brought by coal magnate Bob Murray against Oliver, who referred to Murray as a "geriatric Dr. Evil." Watch the Zinke video [here](#).

STATE NEWS — CUOMO INTRODUCES PLASTIC BAG BILL: New York Gov. Andrew Cuomo introduced a [bill](#) Monday to ban the use of plastic bags throughout the state, Pro New York's Danielle Muoio reports. The legislation — a long-sought promise from Cuomo — would give the state Department of Environmental Conservation jurisdiction over all matters concerning plastic bags and recycling, but comes with caveats that left some environmental advocates saying it isn't far-reaching enough. Read [more](#).

White House reiterates support for Pruitt [Back](#)

By Anthony Adragna | 04/23/2018 02:30 PM EDT

The White House says it is still standing behind EPA's Scott Pruitt, voicing support for the embattled administrator two days after it was revealed that a Washington lobbyist whose wife rented a condo to him personally lobbied Pruitt despite weeks of denying they had held any meetings.

"We're reviewing some of those allegations, however Administrator Pruitt has done a good job of implementing the president's policies, particularly on deregulation," press secretary Sarah Huckabee Sanders said at the White House briefing.

She added the administration continues its look into Pruitt's conduct, including his lavish spending, first-class travel arrangements, pay raises for political appointees and use of security personnel. White House budget director Mick Mulvaney told a congressional subcommittee last week he'd investigate the EPA chief's spending \$43,000 on a privacy booth for his office.

Pruitt is scheduled to testify at two House hearings on Thursday.

What's next: Sanders said the White House is "monitoring" additional reports about Pruitt.

White House stands behind Pruitt despite new lobbying disclosure [Back](#)

By Anthony Adragna | 04/23/2018 01:54 PM EDT

The White House said Monday it still stands behind EPA Administrator Scott Pruitt, praising him for enacting President Donald Trump's environmental and energy policies even as it looked into reports of ethical lapses.

It was the first statement from the White House since POLITICO first reported that despite his denials, Pruitt had met with a lobbyist whose wife rented the Environmental Protection Agency chief his \$50-per-night condo. A disclosure form filled late Friday said J. Steven Hart had lobbied the EPA, although both the agency and the lobbyist contend the meeting, held last July, did not constitute formal lobbying.

"We're reviewing some of those allegations. H however, Administrator Pruitt has done a good job of implementing the president's policies, particularly on deregulation," press secretary Sarah Huckabee Sanders said at the White House briefing.

The White House has been looking into Pruitt's lavish spending on first-class travel arrangements, pay raises for political appointees and use of security personnel. Budget director Mick Mulvaney told a congressional subcommittee last week he'd investigate the EPA chief's spending of \$43,000 on a privacy booth for his office.

That's on top of several ongoing probes by the EPA's own watchdog and three by congressional committees, including the House Committee on Oversight and Government Reform.

Pruitt is scheduled to testify at two House hearings on Thursday.

Sanders' comments come as five senior congressional Democrats asked House Oversight Chairman Trey Gowdy (R-S.C.) to seek new documents and hold hearings regarding "troubling" new questions about Pruitt's security expenditures.

According to nonpublic documents cited in the Democrats' letter, Pruitt's office was not cleared for classified communications as of March 2017. EPA previously said Pruitt's need to handle such information justified the installation of the privacy booth. The Government Accountability Office concluded last week the agency violated federal law by not informing Congress of the purchase.

The letter also alleges that a security sweep of Pruitt's office — the contract for which went to a business partner of Pruitt's security chief, Pasquale "Nino" Perrotta — went outside federal contracting norms without proper pre-approval.

"Given the latest developments and these new documents, we believe these and related matters are ripe for additional document requests to EPA and that Administrator Pruitt should testify about all of these matters immediately," the lawmakers wrote. Sens. Tom Carper of Delaware and Sheldon Whitehouse of Rhode Island and Reps. Elijah Cummings of Maryland and Gerry Connolly and Don Beyer, both of Virginia, signed the letter.

Pruitt support in Senate erodes as GOP lawmakers seek hearings [Back](#)

By Anthony Adragna | 04/23/2018 08:32 PM EDT

Scott Pruitt's wall of GOP support developed some new cracks on Monday, with three key Senate defenders calling for hearings into the embattled EPA administrator's recent controversies.

The three, including staunch Pruitt ally Sen. Jim Inhofe (R-Okla), all said they supported hearings by the Senate Environment and Public Works Committee to look into the former Oklahoma attorney general's actions.

"I think that a couple of us on the committee think it's appropriate to have a hearing in so far as any accusation having to do with his office is concerned," Inhofe told POLITICO.

Inhofe said he was troubled by a report over the weekend in The New York Times detailing a sweetheart deal Pruitt received on an Oklahoma City home previously owned by a lobbyist while serving in a state government. The Oklahoma Republican declined to discuss which allegations he found disturbing, but said "there are some things in there that I'd like to check out and see."

Joining his call for a Senate hearing were two other senior GOP members of the EPW panel, Sens. Shelley Moore Capito (W.Va.) and John Boozman (Ark.).

"Most people have concerns about some of the allegations," Boozman said. "At some point he'll be before the committee and we'll dig deeper and see exactly what's going on."

EPW Chairman John Barrasso (R-Wyo.) told reporters he expected Pruitt would come to testify at some point, but he stopped short of providing a specific timeframe or stating his intention to call a hearing.

To date, four House Republicans have called on Pruitt to resign, along with scores of elected Democrats. And Sen. Susan Collins (R-Maine), has said Pruitt was "the wrong person" to lead the agency based on his policies.

Pruitt has drawn criticism about his ethics and lavish spending in recent months. Three Congressional committees, the White House and EPA's inspector general are all probing his behavior, ranging from his security expenses, high pay raises for aides, first-class travel and meetings with a coal group.

The House Oversight Committee has requested interviews with five senior agency aides and the White House said it would formally investigate Pruitt's expenses after the Government Accountability Office last week found EPA broke the law by failing to notify Congress about a \$43,000 privacy booth Pruitt had built in his office.

Pruitt will go to the Hill on Thursday to testify before a House Energy and Commerce subcommittee in the morning and at a House Appropriations subpanel in the afternoon. Those appearances will mark his first time before Congress since the recent allegations broke.

Both Inhofe and Capito said they thought those House hearings would prove pivotal for Pruitt's long-term future in the administration.

"It's really important," Capito said. "He's going to have to answer some tough questions. I'm sure they'll be put to him by both sides and we'll see what his response is."

Meanwhile, EPW ranking member Tom Carper (D-Del.) said he had a good conversation with House Oversight Chairman Trey Gowdy (R-S.C.) regarding Pruitt, but he said there was no formal bipartisan agreement to work together on an investigation.

"I just gave him plenty of encouragement that he's doing the right thing," he said.

But the mounting public criticism from Republicans suggests GOP lawmakers' patience in defending the EPA chief's behavior is waning.

"Some of the things that he's done and that he's been alleged to do are just indefensible," Sen. John Kennedy (R-La.) said. "You just can't put lipstick on those pigs. You can't."

EPA emails show industry worries slowed new science policy [Back](#)

By Annie Snider | 04/19/2018 05:01 PM EDT

EPA's rollout of a controversial new transparency policy that would severely restrict the scientific research the agency can rely on when drafting new regulations has been slowed down by political officials' fears that it could have major unintended consequences for chemical makers, according to newly released EPA documents.

The issue of scientific transparency has been high on the agenda of House Science Chairman [Lamar Smith](#) (R-Texas), who has found strong support from EPA Administrator Scott Pruitt — much to the consternation of public health advocates and green groups, who view the effort as backdoor attack on the agency's ability to enact environmental regulations.

Since Pruitt announced plans for the new policy last month, researchers and public health proponents have raised alarms that it could restrict the agency's ability to consider a broad swath of data about the effects of pollution on human health. But documents released under the Freedom of Information Act show that top EPA officials are more worried the new restrictions would prevent the agency from considering industry studies that frequently support their efforts to justify less stringent regulations.

Emails between EPA officials obtained by the Union of Concerned Scientists show that Nancy Beck, the top political official in the agency's chemicals office who came to the agency after serving as a key expert for the chemical industry's lead lobbying group, voiced major concerns after she received a draft of the not-yet-released policy on Jan. 31.

The new scientific transparency directive is expected to require that the raw data for all studies EPA relies on be publicly available, and that the studies be peer-reviewed. But Beck said these requirements would exclude a great deal of industry data about pesticides and toxic chemicals that her office considers when determining whether a substance is safe or must be restricted.

It costs companies "millions of dollars to do these studies," Beck wrote in an email to Richard Yamada, the political official in EPA's office of research and development who is spearheading work on the new scientific policy and is also a former staffer for the House Science Committee chairman.

"These data will be extremely valuable, extremely high quality, and NOT published," Beck wrote. "The directive needs to be revised."

Moreover, much of this data, Beck noted, is considered proprietary by companies. It is dubbed confidential business information, and even though EPA can consider it as part of its regulatory review, the data cannot legally be made public.

Yamada replied to thank Beck for the heads up. "Yes, thanks this is helpful - didn't know about the intricacies of CBI," he wrote. "We will need to thread this one real tight!"

The term "confidential business information" primarily applies to industry information. That data is separate from the personal medical information that public health researchers worry could block consideration of their work.

Yogin Kothari, a lobbyist for the Union of Concerned Scientists, said the emails show the Trump administration's EPA has been "trying to stack the deck in favor of the industries they're supposed to be regulating."

"They want to potentially create exemptions for industry, but if you look at this entire set of documents ... you will see that there's not a single consideration for the impacts on public health data, on long-term health studies, on studies that EPA does after public health disasters like the BP oil spill," he said.

EPA spokeswoman Liz Bowman emphasized the policy is not yet finalized.

"These discussions are part of the deliberative process; the policy is still being developed. It's important to understand; however, that any standards for protecting [confidential business information] would be the same for all stakeholders," she said in a statement.

The emails indicate Pruitt wanted the new science policy rolled out at the end of February, and teased his plans in an interview with conservative outlet The Daily Caller in mid-March. But the agency has yet to finalize the policy.

The transparency directive has its origins in legislation introduced by Smith during the Obama administration, that had the backing of a number of industry groups, including the American Chemistry Council. The House Science Committee chairman frequently charged that the Obama EPA used "secret science" to justify "costly new regulations."

Although versions of the measure were approved by the House multiple times, the Senate never took it up. CBO estimated that one version of Smith's legislation would cost EPA \$250 million a year, at least in the initial years, and a leaked staff response to questions from the budget office said a later version would be even more costly, would endanger confidential medical and business information, and "would prevent EPA from using the best available science."

But Smith found an ally in Pruitt. The emails indicate that Smith met with Pruitt in early January and show that Pruitt's staff quickly began working on a directive to "internally implement" the legislation.

Industry's backing for the new scientific approach began to waiver under the Trump administration, though. When a top American Chemistry Council scientist testified before Smith's committee in February 2017, she emphasized the need to protect industry information if the transparency initiative moved forward.

"One of the things that we do need to take into consideration as making that data publicly available is that there are adequate protections for confidential business information to ensure that we keep innovation and competitiveness available for the marketplace," Kimberly White told the committee.

Industry has historically claimed that a wide range of information about chemicals, ranging from the processes by which they are produced, to the locations of manufacturing plants, to their very identities, must be kept confidential in order to keep competitors from learning trade secrets. Environmental and public health advocates argue that industry claims this exemption in many cases where it's not necessary and that it often keeps important health and safety information from public view.

The issue was a key point of debate when Congress considered a major overhaul of the nation's primary chemical safety law passed 2016 and has reemerged as Pruitt's EPA sets about implementing the law.

Asked for comment on EPA's new effort to implement the scientific transparency approach internally, American Chemistry Council spokesman Scott Openshaw said the group looks forward to reviewing the directive once it's finalized.

"It is critical that any final directive properly protect confidential business information and competitive intelligence," he said in a statement.

The internal emails show that EPA political staff were particularly attuned to this concern. In a Feb. 23 email to colleagues, Beck forwarded language from a 2005 White House document that laid out narrow exemptions from its requirement that all "important scientific information" disseminated by the federal government go through peer review.

"[Y]ou may need to tweak but hopefully there is something helpful here that can be borrowed/adopted," she wrote.

Richard Denison, lead senior scientist for the Environmental Defense Fund, said that EPA's access to industry data is indeed important to its ability to review the safety of new chemicals and pesticides, but said the internal EPA communications show that Pruitt's EPA wants to "have their cake and eat it too" with the new directive.

"They're trying to force peer review studies done by academic scientists to disclose every last detail, while at the same time allowing industry studies to be kept private or aspects of those to still be kept private," he said.

He pointed out that the concerns Beck raised about the burden the new policy would place on industry are the very same ones that the CBO report said the policy would place on EPA.

Poll: Coal baron Blankenship fading in W.Va. Senate primary [Back](#)

By Alex Isenstadt | 04/23/2018 07:26 PM EDT

WHEELING, W.Va. — A new poll out Monday evening shows recently imprisoned coal baron and Senate hopeful Don Blankenship fading in the Republican primary, amid an avalanche of establishment attacks aimed at stopping him from winning the nomination.

With the primary two weeks away, the survey shows Blankenship, who spent a year in jail following the deadly 2010 explosion at his Upper Big Branch Mine, falling far behind his more mainstream rivals, GOP Rep. Evan Jenkins and state Attorney General Patrick Morrisey. The poll found Morrisey leading with 24 percent, followed by Jenkins with 20 percent, and Blankenship trailing with 12 percent. Thirty-nine percent were undecided.

The survey, which was conducted April 17-19 and has a margin of error of 4.9 percentage points, came as Blankenship squared off against his rivals in a 90-minute debate held at Wheeling Jesuit University. The candidates spent much of the evening aligning themselves with President Donald Trump, and beating up on Democratic Sen. Joe Manchin.

They will also meet on Tuesday, and again next week for a nationally televised debate hosted by Fox News.

The survey of 411 primary voters was commissioned by GOPAC, an organization that promotes state Republican legislators, and was conducted by National Research Inc., a polling firm that worked on Trump's 2016 campaign. Neither has taken sides in the primary.

National Republicans have scrambled to intervene in the contest, fearing that a Blankenship primary win would destroy their prospects of unseating Manchin. The 68-year-old former coal executive has spent nearly \$2 million of his own to fund a slash-and-burn style campaign savaging Jenkins and Morrisey as establishment pawns.

He has also sought to clear his name. Much of Blankenship's campaign has been geared toward portraying himself as the casualty of an Obama Justice Department bent on locking him up.

Fearful that Blankenship was gaining traction, Mountain Families PAC, a super PAC overseen by strategists close to Senate Majority Leader Mitch McConnell's political operation, swung back — airing around \$700,000 worth of TV ads in recent days accusing Blankenship of contaminating drinking water.

The effort to defeat Blankenship has gone further. Earlier this month, Trump flew to West Virginia to hold an event aimed at selling his tax reform legislation. The president was seated next to Jenkins and Morrisey, a clear attempt to promote their candidacies over Blankenship, who was not in attendance.

For national Republicans, the move was not without risk. Last year, a McConnell-aligned super PAC spent millions to stop Alabama Senate candidate Roy Moore from winning the nomination, only to see it backfire. Moore used it to cast himself as the victim of the establishment, and went on to win the primary before losing the general election in a stunning upset.

Blankenship is taking a similar approach. With the contest hurtling into the final stretch, he has begun airing commercials calling McConnell a "swamp creature."

And during a news conference on Monday morning, Blankenship pledged not to support McConnell as Senate GOP leader if he's elected.

"He needs to understand that if I'm there I will not vote for him for majority leader, and so the rest of the senators should understand that they should not put him up if they need my vote," he told reporters.

The candidates largely avoided attacking each other at Monday's debate, perhaps because three lesser-known contenders were also included onstage, a setup that limited the amount of speaking time.

Blankenship used the debate to further his argument against the establishment. He called the 2010 mine explosion "heart-wrenching," and called it "one of the worst days of my life."

But he blamed the disaster on the government, saying it had taken steps to limit the amount of airflow available to the miners.

During his closing remarks, Blankenship referred to Washington as the "district of corruption," and argued that politicians there often tried to make themselves look like they were fighting over ideals when they were merely posturing.

"When I go to D.C.," he said, "it won't be a fake fight, it will be a real fight."

With candidates and outside groups crowding the TV airwaves, much of the firepower is being directed at Jenkins, a second-term congressman who in 2014 defeated longtime Democratic Rep. Nick Rahall. All told, around \$1.2 million is expected to be spent against Jenkins, according to a media buyer.

Among those spending heavily against Jenkins is Duty and Country, an outside Democratic group with offices in Washington. To date the group has spent around \$380,000 on TV, the vast majority of it against Jenkins.

At Monday's debate, Jenkins argued that Democrats were trying to "meddle" in the primary. He said their attacks on him was proof that the opposing party viewed him as the biggest threat to Manchin.

The Democratic effort, he added, was unprecedented in West Virginia politics.

"They're scared to death of Evan Jenkins on the ballot in November because they know Evan Jenkins can beat Joe Manchin," the congressman said.

Court chooses salmon over hydropower in Columbia River fight [Back](#)

By Annie Snider | 04/02/2018 02:34 PM EDT

The 9th Circuit Court of Appeals has sided with the state of Oregon, the Nez Perce tribe and nearly a dozen conservation groups, ruling that hotly contested dam operations on the Columbia and Snake Rivers must forgo hydropower production during key times of the year in order to protect endangered salmon.

The three-judge panel upheld a lower court's decision requiring that water be spilled over the top of dams along the Columbia River System, including the powerhouse Grand Coulee dam, the largest power station in the U.S., during periods when young salmon and steelhead migrate to the ocean. The hydropower turbines pose a threat to the fish.

The Justice Department, representing the National Marine Fisheries Service, Army Corps of Engineers and Bureau of Reclamation, had argued that requiring such operations would cause electricity rates to spike and could threaten the reliability of the electrical grid.

The ruling stems from a years-long battle over the nearly 100-year-old hydropower system along the Columbia and Snake rivers. Conservation groups and tribes with treaty fishing rights want the system altered and operated to benefit wildlife, including calling for the removal of four dams along the Snake River. As part of that litigation, the federal agencies are also working on an environmental impact statement for the system that has been the subject of congressional fights, with Rep. Cathy McMorris Rodgers (R-Wash.) filing a measure (H.R. 3144) to void that process, and Democratic lawmakers coming out in opposition.

WHAT'S NEXT: Unless they successfully appeal the decision, the federal agencies will need to release water over the top of dams beginning this spring. The ongoing environmental impact statement process will continue.

Senate spending leaders vow to open up floor debate for amendments [Back](#)

By Sarah Ferris and Kaitlyn Burton | 04/23/2018 06:20 PM EDT

Senate Appropriations Chairman Richard Shelby is vowing to restore chamber-wide debate on amendments to individual appropriations bills to help end Congress' stop-and-go funding cycle.

Shelby (R-Ala.), along with his Democratic counterpart Sen. Patrick Leahy, of Vermont, told committee members in a closed-door meeting today that leadership has agreed to allow amendments on the Senate floor for every individual spending bill.

"There is perhaps unanimity, but certainly strong consensus that if the appropriations process is going to work we're going to be casting votes on amendments and we stay here and we vote," Sen. Jerry Moran (R-Kan.) told reporters exiting the meeting, which was the committee's first bipartisan sit-down of fiscal 2019

"I think it's the single best way to restore the Senate the way the Senate's supposed to work. The full Senate gets a chance to offer a variety of amendments, and if you don't like it, you can vote against it," Sen. Lamar Alexander (R-Tenn.) added.

Shelby and Leahy have met with Majority Leader Mitch McConnell and Minority Leader Chuck Schumer in recent days about opening up the floor for debate on spending bills.

When asked if both leaders were on board, Shelby added: "They tell us they are, and I like to believe them." Leahy added: "We both talked with both of them. I think they both understand. The Senate can't go on like this."

It's a risky gambit, particularly in an election year. Contentious amendments have held up bills in both chambers in recent years.

Back in 2016, Senate Democrats blocked a largely noncontroversial Energy and Water bill because of a proposed amendment on Iran. In 2015, the House GOP's Interior-Environment bill was tripped up by an unrelated rider on the Confederate flag.

The number of amendments on Senate spending bills has dropped dramatically in the last two decades, as the chambers considers fewer and fewer individual bills.

Subject: Morning Energy, presented by Anheuser-Busch: Zinke's turn on the Hill — EPA watchdog: Aides slow to turn over docs — House to take up Yucca bill today

By Kelsey Tamborrino | 05/10/2018 06:01 AM EDT

With help from Eric Wolff, Alex Guillén, Anthony Adragna and Jennifer Haberkorn

ZINKE HEADS TO THE HILL: Interior Secretary Ryan Zinke faces his Senate appropriators today to discuss his department's budget request for fiscal 2019. Expect Democrats to bring up familiar topics, such as his plans to reorganize the department and last year's decision to shrink national monuments in Utah. Subcommittee ranking member Tom Udall plans to tell Zinke that until courts weigh in on whether his move was legal, "I believe that moving forward with land management plans that will open these iconic areas to development is reckless."

Subcommittee Chair Lisa Murkowski may be interested in hearing more about Zinke's plans for oil and gas development in Alaska, after Interior kicked off its environmental review of potential drilling in part of the Arctic National Wildlife Refuge thanks to language she got included in last year's tax bill. And Sen. Lamar Alexander, another member of the subcommittee, can follow up on the maintenance backlog for the national parks, an issue the two discussed when Zinke visited Tennessee last week.

Ahead of the hearing, the Coalition to Protect America's National Parks is sending a letter to Zinke, with signatures from current and former employees of the National Park Service, calling on him to support permanent reauthorization of the Land and Water Conservation Fund, an issue with support in both parties.

If you go: The Senate Appropriations Interior-Environment Subcommittee hearing begins at 9:30 a.m. in 138 Dirksen.

— **But first:** Zinke will join Agriculture Secretary Sonny Perdue at USDA headquarters for an 8 a.m. briefing on the forecast for this year's wildfire season.

WATCHDOG: EPA AIDES SLOW TO SEND DOCS: EPA's internal watchdog complained last year that Administrator Scott Pruitt's aides were taking their sweet time handing over documents related to a probe into their boss' travels, new emails show. Although the standoff between the inspector general's office and Pruitt's staff was resolved a month later, the incident illustrates tensions between political appointees and career oversight officials that developed early on. The IG's office is in the process of conducting multiple reviews into Pruitt's actions.

The new emails, released under a FOIA request from California's Justice Department, show the IG's office was seeking information for its probe of Pruitt's frequent travel to Oklahoma on EPA business, Pro's Alex Guillén reports. That same probe was later expanded to include a wider swath of Pruitt's travel practices, including his first-class flights that cost more than \$100,000. (The investigation is slated to be completed this summer.)

At the time, the agency's assistant inspector general for audits, Kevin Christensen, wrote to a top career official in EPA's finance office to warn of a "potential situation" with the travel audit just two weeks after it began, the emails show. Christensen flagged messages showing Pruitt's chief of staff Ryan Jackson was

"screening" documents before releasing them to the Office of Inspector General. "This does not fit the definition of unfettered access or comply with the Administrator memo on access and providing information to the OIG," Christensen wrote to Jeanne Conklin, EPA's controller who oversees financial management and reporting. "When we are denied access to information until approved for release, it raises the question as to what is being withheld and approved for release."

The emails spotlight concerns about the lack of transparency atop the agency since Pruitt joined. And other emails released to California's Department of Justice also show career ethics officials warning Pruitt's aides about accepting industry awards and attending political events, further exemplifying internal tensions as Pruitt's external problems grow. Read more from Alex [here](#).

— **Related reporting:** Amid ongoing scrutiny, Pruitt met with industry representatives Wednesday, where a reporter asked if he still had the confidence of the White House. Pruitt said: "I think they've spoken very clearly," Bloomberg [reports](#).

WELCOME TO THURSDAY! I'm your host Kelsey Tamborrino. Bracewell's Frank Maisano was the first to correctly identify Detroit as home to the first paved roadway. Woodward Avenue carries the designation M-1 for its status as the first place to pour a 1-mile patch of concrete roadway. For today: Name the state first lady who simultaneously served as a member of the House. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

TRUMP EXTENDS OLIVE BRANCH: President Donald Trump called coal baron Don Blankenship Wednesday to exchange pleasantries and offer up congratulations for waging his campaign, POLITICO's Alex Isenstadt reports. The conversation was described as straightforward, polite and cordial, and comes days after Trump tweeted that voters shouldn't vote for Blankenship in the West Virginia Republican primary. Blankenship also published an [open letter](#) to Trump on Wednesday that in part blamed the president for his loss. "Your interference in the West Virginia election displayed a lack of understanding of the likely outcome of the upcoming general election," Blankenship wrote. But he ended with a note of optimism: "I look forward to meeting with you in the near future." Alex reported the president had also reached out to Rep. [Evan Jenkins](#), who also lost in Tuesday's primary, but had yet to connect with the Republican party's winner, Patrick Morrisey, as of Wednesday evening. Read [more](#).

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks. The zero-emission trucks will be able to travel between 500 and 1,200 miles. Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025. [Learn more](#). **

HOUSE GOES NUCLEAR: The House will take up the long-awaited [H.R. 3053 \(115\)](#), the "Nuclear Waste Policy Amendments Act of 2018," for consideration today, with votes expected between 10:45 a.m. and 11:45 a.m. The bipartisan legislation would update how the U.S. handles nuclear waste and promote development of the Yucca Mountain repository in Nevada, among other provisions. The legislation is expected to pass, although it will face a much shakier Senate reception with Sen. [Dean Heller](#) facing a tough re-election race this year. Rep. [John Shimkus](#), who introduced the comprehensive nuclear waste package, previously said he hadn't had any recent talks with Senate counterparts about potentially moving the bill across the Capitol. Still, its appearance today is a victory for Shimkus: [Greg Walden](#) told reporters this week that Shimkus had sent handwritten letters to the homes of every member of leadership during recess encouraging the bill to come up, praising his tenacity.

COURT SAYS CRA IS A-OK: A federal judge in Alaska yesterday [dismissed](#) an environmental group's lawsuit that called the Congressional Review Act unconstitutional. The Center for Biological Diversity specifically challenged the CRA [resolution](#) successfully passed by Congress last spring that nullified an Interior Department rule regarding hunting in Alaska wildlife refuges.

Judge Sharon Gleason of the U.S. District Court for Alaska, an Obama appointee, noted that both the CRA itself and this specific resolution were passed by both chambers and signed by the president, fulfilling the constitutional requirements for creating laws. Other parts of CBD's argument similarly failed to hold water. "The Court finds that even construing all the facts in favor of CBD, CBD's constitutional claims fail to adequately allege a plausible basis for relief," Gleason wrote.

SUNNY CALIFORNIA: The California Energy Commission voted unanimously Wednesday to require solar panels be installed for all newly built single-family homes and multifamily buildings less than three stories starting in 2020. A CEC study found that installing solar would increase home prices, but that would be more than offset by lower utility bills, according to the Los Angeles Times. The move has been anticipated for years and was supported by much of the home building industry. More from the LAT [here](#).

STEELWORKERS SAY YES TO RFS: The United Steelworkers are supporting Trump's recent decisions on the Renewable Fuel Standard, which include expanding sales of 15 percent ethanol fuels and having EPA and USDA workout some kind of program for biofuel credits on exported ethanol. "While it will continue to review the details, [USW] supports a deal brokered by the President that appears to address the long-running conflict between ethanol producers and oil refiners over federal biofuels mandates," the union said in a press release.

HOUSE GOP DROPS RESCISSIONS PACKAGE: House Majority Leader [Kevin McCarthy](#) unveiled the chamber's batch of [spending cuts](#) Wednesday. Similar to the White House's [request](#), the package makes cuts to Energy Department loan guarantee programs for clean energy and vehicle technologies. The bill is expected to [go directly to the House floor](#) for a vote, [Pro's Sarah Ferris reports](#). Senate GOP leaders have said they will consider the bill if and when it passes the House.

MEANWHILE IN BONN: Things aren't going as planned for the second week of climate talks in Bonn, Germany, punting further discussions to another meeting in September. The U.N. Framework Convention on Climate Change [said](#) Wednesday that there would be an additional meeting from Sept. 3-8 in Bangkok amid a stalemate centered in part around clarity on climate finance between developed and developing countries. The new date underscores the pressure negotiators are under to advance talks enough for ministers to strike a deal later this year at the COP24 in Katowice, Poland. "We need to resolve differences on finance, accounting and transparency," Alden Meyer of the Union of Concerned Scientists [told POLITICO Europe's Kalina Oroschakoff](#).

CALVERT: EPA-INTERIOR COMING SHORTLY: Rep. [Ken Calvert](#), who oversees EPA and Interior on the Appropriations Committee, told ME to expect their fiscal 2019 bill "pretty soon" as work's going well. "We're working on final details now," he said. As for the perennial question, yes, Calvert expects policy riders to be in play: "There's always riders," he quipped.

AUTOMAKERS WANT MORE FUEL EFFICIENCY: The Alliance of Automobile Manufacturers and the Global Automakers, trade associations which together represent most of the automakers who sell cars in the U.S., will tell Trump that they most definitely want increases in fuel efficiency standards, contra that zero increase preference of the Department of Transportation. They also want the federal government to work out a single national standard with California, rather than face either a bifurcated market or a long legal battle. "Automakers are deeply committed to increased fuel economy and safety measures that meet the needs of our customers, and we expect to share the importance of government policies that provide certainty to the auto sector, continue to reduce greenhouse gas emissions, reflect what consumers will buy and result in a national policy that includes California," the two groups said in a statement.

FOLLOW THE MONEY: The Environmental Integrity Project released a database Wednesday of political contributions from companies and conservative organizations that met with Pruitt between Feb. 21, 2017, and April 13 of this year. The database was compiled via EPA calendars, FEC reports and data from the Center for Responsive Politics. See it [here](#).

SAVE THE DATE: BLM scheduled meetings to discuss its plans for an environmental review of planned oil and gas leases in ANWR. Several will be held in Alaska, including one each in Fairbanks and Anchorage on May 29 and May 30, respectively. Another meeting is scheduled for Washington D.C. on June 15. For those who can't make the hearings, BLM plans to live stream the Fairbanks and Anchorage dates.

MAIL CALL! ISN'T IT IRONIC? Six Democratic senators wrote to Office of Information and Regulatory Affairs Administrator Neomi Rao on the office's review and evaluation process for EPA's proposed "secret science" proposal to ban the use of studies that don't publicly disclose all their data. "The review process and rollout of this rule appears to have been rushed and secretive — which is particularly ironic for a proposal that purportedly aims to improve agency transparency and decision-making processes," they write.

Separately, bipartisan Reps. Ryan Costello and Paul Tonko sent a letter to the National Academy of Sciences asking for its input on the proposed rule, which was discussed when Pruitt testified before the House E&C Committee. Read the letter here.

Of course, Pruitt seems pleased with the proposal: Bloomberg's Ari Natter snapped a photo of new signs at EPA that tout the agency's "Strengthening Transparency in Regulatory Science."

ROCK STARS: Access Fund and American Alpine Club are sponsoring their annual "Climb the Hill" event today with professional rock climbers and outdoor recreation advocacy groups, who will hit the Hill today to talk outdoor recreation and public lands. Sen. Maria Cantwell will attend a reception with the group at 3 p.m. in 385 Russell. High-profile members of the rock-climbing community and executives from REI, Patagonia and The North Face will attend.

QUICK HITS

— Pair of investor-pushed resolutions pass at Kinder Morgan, Axios.

— Saudis pledge to "mitigate" loss of Iranian oil exports from U.S. sanctions. But crude prices rise anyway, The Washington Post.

— Emails: Perdue's donors, agency coordinated on biomass, E&E News.

— Hugh Hewitt used his MSNBC gig to praise efforts to weaken a law that his firm's client is accused of violating, Media Matters.

— Emails show Heritage Foundation offered Pruitt flights, hotel, and talking points for its conference, ThinkProgress.

HAPPENING TODAY

8:00 a.m. — The Women's Council on Energy and the Environment discussion on "Congressional Energy and Environmental Priorities: 2018 and Beyond," 400 North Capitol Street NW

8:30 a.m. — The International Trade Administration meeting of the Renewable Energy and Energy Efficiency Advisory Committee, 1401 Constitution Avenue NW

8:45 a.m. — Peter G. Peterson Foundation holds "the 2018 Fiscal Summit: Debt Matters," 1301 Constitution Ave NW

9:00 a.m. — House Appropriations Interior-Environment Subcommittee two-part hearing on "American Indian/Alaska Native Public Witnesses," 2007 Rayburn

9:00 a.m. — The Environmental Law Institute conference on "Infrastructure Review and Permitting: Is Change in the Wind?" 601 Massachusetts Avenue NW

9:00 a.m. — The Washington Post discussion on "The Energy 202 Live," 1301 K Street NW

9:30 a.m. — Senate Appropriations Interior-Environment Subcommittee hearing on Interior's FY 2019 budget request, 138 Dirksen

10:00 a.m. — House Energy and Commerce Energy Subcommittee hearing examining the state of electric transmission infrastructure investment, planning, construction and alternatives, 2123 Rayburn

1:00 p.m. — The United States Energy Association forum on "Chemical Looping Prospective: An Advanced Approach to Coal Utilization," 1300 Pennsylvania Avenue NW

2:00 p.m. — Center for Climate and Energy Solutions webinar on "City-Utility Partnerships for a Cleaner Energy Future."

THAT'S ALL FOR ME!

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks from the pioneer in hydrogen-electric renewable technology, Nikola Motor Company. The zero-emission trucks — which will be able to travel between 500 and 1,200 miles and be refilled within 20 minutes, reducing idle time — are expected to be integrated into Anheuser-Busch's dedicated fleet beginning in 2020.

Through this agreement Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025.

"At Anheuser-Busch we're continuously searching for ways to improve sustainability across our entire value chain and drive our industry forward," said Michel Doukeris, CEO of Anheuser-Busch. "The transport industry is one that is ripe for innovative solutions and Nikola is leading the way with hydrogen-electric, zero-emission capabilities. We are very excited by the possibilities our partnership with them can offer."

Stories from POLITICO Pro

EPA watchdog knocked Pruitt aides for slowing probe [Back](#)

By Alex Guillén | 05/09/2018 06:43 PM EDT

EPA's internal watchdog complained last year that Scott Pruitt's top aides were delaying handing over documents to auditors probing the administrator's travel practices, according to newly released emails.

That standoff between the EPA inspector general's office and Pruitt's team was resolved a month after the IG's staff flagged the issue and warned that the reticence to release the documents came close to impeding their probe, the emails show. But the incident highlights early tension between EPA's political appointees and the internal watchdog, which is now conducting multiple reviews of Pruitt's actions.

And it shows that concerns about the lack of transparency atop the agency since Pruitt joined have rankled people inside the agency as well as outside. POLITICO reported last week that Pruitt's political appointees were screening documents produced for public records requests related to the embattled administrator, slowing the release of information.

The new emails, released under a Freedom of Information Act request from California's Justice Department, show the IG's office was seeking information for its probe of Pruitt's frequent travel to Oklahoma on EPA business, enabling him to spend numerous weekends at his home in Tulsa.

That probe was later expanded to look at Pruitt's other travel practices, including his first-class flights that cost more than \$100,000, and it is expected to be completed by this summer. The watchdog has since opened additional probes into Pruitt's security spending, condo rental, soundproof phone booth, large raises for aides and allegations of retaliation against staff who questioned him.

Kevin Christensen, EPA's assistant inspector general for audits, wrote in September to a top career official in EPA's finance office to warn of a "potential situation" with the travel audit just two weeks after it began, the emails show. He flagged messages showing Pruitt's chief of staff Ryan Jackson was "screening" documents before releasing them to the Office of Inspector General.

"This does not fit the definition of unfettered access or comply with the Administrator memo on access and providing information to the OIG," Christensen wrote to Jeanne Conklin, EPA's controller who oversees financial management and reporting. "When we are denied access to information until approved for release, it raises the question as to what is being withheld and approved for release."

The auditors were able to obtain the documents on Pruitt's flights from the EPA's finance office in Cincinnati, even as Pruitt's staff continued to withhold them, Conklin wrote to Kevin Minoli, a career official who at that time served as EPA's acting general counsel.

"Do they not understand in the [Office of the Administrator]," Conklin asked Minoli. "Perhaps someone can speak to them and make them understand that the OIG has the documents already and they appear close to impeding the audit."

Both Minoli and Conklin stated in their email exchange that neither of them advised Pruitt's staff that they had the power to delay or withhold handing over documents to the OIG.

Minoli said in an email a week later that Jackson had delayed providing the records over concerns the audit might make public some previously redacted information, such as Pruitt's calendar and flight records. Minoli said he discussed the matter with the deputy inspector general, Chuck Sheehan, and noted the IG's office "has a long-standing practice of not using privileged information in their published work unless absolutely necessary."

An EPA spokesman on Wednesday declined to comment on the incident.

Other emails released to California's Department of Justice under the FOIA request also show career ethics officials warning Pruitt's aides about accepting industry awards and attending political events.

In March 2017, the Oklahoma-based National Stripper Well Association told Pruitt it would award him its "Industry Leader Award" at an annual gala, which was sponsored by Koch Industries. The group represents the

owners of the hundreds of thousands of small wells that produce less than 15 barrels of oil or 90,000 cubic feet of natural gas per day.

But EPA ethics official Justina Fugh noted in an email to Pruitt's schedulers, Sydney Hupp and Millan Hupp, that NSWA was registered to lobby the federal government and Pruitt would violate his ethics agreement if he accepted the honor.

The group had praised Pruitt's decision that month to halt the Obama EPA's request for oil and gas companies to provide the agency with information about methane emissions, a possible first step toward regulating pollution in those existing wells. "NSWA Got a Win at EPA Already!" touted an early March [blog post](#) by the group. It is unclear whether Pruitt's award was directly connected to that decision.

Fugh warned the Hupps that Pruitt would have to walk a fine line in accepting anything from a lobbying entity. Items with "no other intrinsic value" like a plaque may be OK, she said, but "an ashtray or coffee table book" would not be.

Pruitt ultimately appears to have accepted a plaque from the NSWA, according to a [photo](#) posted on the group's site and his own internal calendars. Another photo posted on the NSWA's Facebook page shows Pruitt [posing](#) with Koch executives.

Pruitt's Outlook calendar, released in response to public records requests, lists the topic of the speaking engagement as "acceptance of award, thank you."

EPA did not say whether Pruitt officially accepted the award from the group along with the plaque, despite Fugh's advice.

"We gave the plaque to [the Office of the Executive Secretariat] who confirmed that we could keep it," EPA spokesman Jahan Wilcox said. NSWA did not say Wednesday why it honored Pruitt.

Pruitt aides hinted to ethics officials last fall that he expected to be invited to increasing numbers of political events, which ethics officials warned raises a host of Hatch Act concerns about mixing political activities with his official duties.

Earlier in his tenure, Pruitt had decided not to attend an Oklahoma GOP fundraiser after reports revealed the event would feature a speech on EPA issues.

Last fall, Ronna McDaniel, the head of the Republican National Committee, invited Pruitt to attend an Oct. 25 fundraiser in Dallas for Trump Victory, a joint fundraising committee that funnels money to the RNC and Trump's reelection campaign.

"We will get more and more of these" invites as "political season" approaches, Jackson wrote to an ethics official.

Hatch Act restrictions would allow Pruitt to attend, but he would be barred from mentioning his EPA affiliation or asking for donations, Fugh replied. EPA could not cover his travel costs, although the agency could pay for his security detail's travel, Fugh added. Event organizers could not specifically invite guests with issues before the agency and would need to rescind invitations to anyone with business before EPA.

Pruitt ultimately appears to have skipped that fundraiser.

Emily Holden contributed to this report.

Trump calls Blankenship after pushing for his loss in West Virginia [Back](#)

By Alex Isenstadt | 05/09/2018 10:55 PM EDT

President Donald Trump connected by phone on Wednesday with Don Blankenship, the former coal baron and ex-con whose Senate candidacy he helped sink.

Trump and Blankenship spoke briefly, according to three people familiar with the discussion. The conversation was described as straightforward, polite and cordial, with the president calling to exchange pleasantries and offer his congratulations on waging the campaign.

The call came two days after Trump took to Twitter to urge West Virginia Republicans to reject Blankenship's candidacy. In the tweet, Trump argued that Blankenship, who spent a year in jail following a 2010 explosion at his Upper Big Branch Mine that killed 29 workers, would be unable to defeat Democratic Sen. Joe Manchin in November.

Trump's intervention undermined Blankenship, who had aligned himself closely with the president — so much so that he described himself as "Trumpier than Trump."

Blankenship would go on to lose the primary decisively, finishing a distant third behind state Attorney General Patrick Morrisey and Rep. Evan Jenkins.

In his remarks to supporters on Tuesday evening, Blankenship attributed his loss to the president's last-minute intervention in the contest, saying that it had halted his momentum.

"I think if there was any single factor based on the polling at different times, the debates, and all the things I saw, it was probably President Trump's lack of endorsement — I don't know what to call it, but 'Don't vote for Don' tweet," he said. "I don't know what else it would have been."

In the final hours of the race, he said he was convinced that Trump had been pushed into the intervention by Senate Majority Leader Mitch McConnell, who had aggressively opposed Blankenship.

Blankenship on Wednesday released an "open letter" to Trump in which he accused the president of spreading "fake news against me."

"Your interference in the West Virginia election displayed a lack of understanding of the likely outcome of the upcoming general election," Blankenship added. "Patrick Morrisey will likely lose the general election. It's too late to change that, but it's not helpful to do to me what others are doing to you."

The president also connected briefly with Jenkins, but as of Wednesday evening had yet to connect with Morrisey, the winner of the primary. On Tuesday, though, Morrisey spoke with Donald Trump Jr. During the call, the president's eldest son promised to be helpful.

Trump's calls on Wednesday, several Republicans said, were partly aimed at healing the wounds following a deeply divisive primary. Blankenship has yet to endorse Morrissey, who aggressively attacked him during the final days of the race.

Some in the party are concerned that the deep-pocketed Blankenship, who spent more than \$2.5 million of his own funds in the primary, could wage an effort to damage Morrissey in the general election.

DOE loan guarantee programs hit hard in White House rescissions package [Back](#)

By Anthony Adragna | 05/08/2018 11:08 AM EDT

More than \$5 billion in Energy Department loan guarantee programs for clean energy and vehicle technologies would be cut under a \$15 billion rescissions [request](#) unveiled today by the White House.

The proposal would cut \$684 million from clean energy loan guarantee programs, on top of the \$4.33 billion in proposed cuts to Advanced Technology Vehicles Manufacturing loan program [already announced](#) by the Trump administration.

"This proposed rescission would eliminate subsidy amounts that are inconsistent with the President's policies," the proposal says of cutting from the loan guarantee programs.

In addition, the package would cut \$10 million in water quality research grants, which the proposal says "are duplicative with other Federal programs."

WHAT'S NEXT: The package is expected to easily pass the House but faces a less certain fate in the Senate.

[Back](#)

Trump spending cut package to head directly to House floor [Back](#)

By Sarah Ferris | 05/09/2018 01:03 PM EDT

House Republican leaders are moving quickly to tee up the White House's \$15 billion package of proposed spending cutbacks.

GOP leaders plan to release legislative text of [the White House's proposal](#) as early as today, a House GOP aide confirmed.

The package is expected to closely mirror the Trump administration's request, which targeted unspent dollars from years-old accounts.

It will not go through the House Appropriations Committee, another GOP aide confirmed. That sets up the bill directly for a floor vote.

Most Republicans have embraced the proposed cuts, even as some budget hawks complained that most of the savings are only on paper.

But some, like GOP Rep. Vern Buchanan of Florida, have rejected the idea of cutting \$7 billion of budget authority from the Children's Health Insurance Program.

White House officials have argued that most of the funding has technically expired and can't be used, so it would have zero impact on the program.

The CBO confirmed that point today, saying that there would be no actual cuts or coverage reductions for CHIP.

House GOP leaders unveil rescissions bill [Back](#)

By Sarah Ferris | 05/09/2018 08:28 PM EDT

House Republican leaders today unveiled a package of spending cuts, following a request from President Donald Trump this week.

The House GOP bill contains \$10.45 billion in specific cuts, including roughly \$7 billion to the Children's Health Insurance Program.

Other cutbacks in the GOP bill — including one targeting an energy program in the 2009 Obama-era stimulus bill — do not provide specific dollar amounts.

House GOP leaders will now begin whipping support for the bill, which is expected to go directly to the House floor for a vote. Senate GOP leaders have said they will consider the bill if and when it passes the House.

Under a decades-old law, presidential rescissions requests can pass the Senate with a simple majority, instead of the usual 60-vote threshold for procedural votes.

Democrats argue that Trump's bill would require the full 60 votes, however, because it targets mandatory funding, and not solely discretionary.

Subject: Morning Consult Energy: Trump Administration Considers Using Two Federal Laws to Aid Coal, Nuclear Plants

By [Jacqueline Toth](#)

Top Stories

- A planned Energy Department directive would use federal emergency authority under both the Federal Power Act and the Defense Production Act to order grid operators to purchase electricity from coal and nuclear plants in an effort to help those plants compete against cheap natural gas and renewable sources, according to a draft 41-page internal memorandum dated May 29 and circulated Thursday prior to a National Security Council

meeting on the topic today. There was no indication that President Donald Trump had signed off on the plan, or if an order would ultimately be issued. ([Bloomberg](#))

- Pope Francis, who wrote his encyclical on the necessity of addressing climate change, will host a meeting late next week at the Vatican with executives from major oil producers, like BP PLC and Equinor ASA, as well as investment companies to discuss how the firms can tackle a changing climate, according to sources. Former Energy Secretary Ernest Moniz was also expected to attend. ([Axios](#))
- On Thursday, electric cars scored a boost as New Jersey's largest utility owner, Public Service Enterprise Group, spelled out a plan to dole out \$300 million on electric car charging stations; California approved \$738 million in investments by utilities to promote electric vehicles; and the New York Power Authority said it would spend as much as \$250 million on charging stations. The move by the California Public Utilities Commission is the largest utility investment in electric vehicle adoption in the United States to date and promotes a potential electric car-charging network across the state. ([Bloomberg](#))
- In a unanimous vote, the Environmental Protection Agency's 44-member Science Advisory Board of outside experts said it would review the agency's proposed rule to prevent the EPA from using unpublished scientific data in its rulemakings, noting the proposal was written without discussions with the scientific community. The panel also voted to review five additional agency actions, such as its proposed repeal of the Clean Power Plan and glider truck emission standards, and its plan to change current fuel-efficiency standards. ([Washington Examiner](#))

[Battered Puerto Rico still 2 months from full power as hurricane season opens](#)

John Bacon, USA Today

More than eight months after Hurricane Maria tore across Puerto Rico and knocked out power to virtually the entire island of 3.3 million people, full power restoration remains another two months away, authorities said Thursday.

[The Energy Grid Isn't Insured Enough to Handle a Catastrophic Hack](#)

Naureen S. Malik, Bloomberg

Insurers are limiting how much coverage energy companies can buy to protect themselves against a major attack by hackers, potentially leaving investors, customers and taxpayers on the hook for sizable losses.

[Federal assessment finds 'gaps' in preparation for electric grid attacks](#)

Morgan Chalfant, The Hill

An assessment released by the departments of Energy and Homeland Security this week finds that there are shortfalls preventing the energy sector from improving its ability to respond rapidly in the event of a major cyberattack that disrupts the electric grid.

Renewables

In a Single Day, the Electric Car Boom Gains Speed in 3 States
Mark Chediak and Joe Ryan, Bloomberg

First, New Jersey's biggest utility owner Public Service Enterprise Group laid out a plan to spend \$300 million on electric-car charging stations. Then California cleared utilities to invest a combined \$738 million on projects promoting EVs.

For Electric Cars Without a Plug, Thank Tesla (the Scientist)
Stephen Williams, The New York Times

At its introduction last summer in Barcelona, Spain, the 2019 Audi A8 quattro became the poster child of automotive high tech: matrix L.E.D.s that shine from the headliner with the wave of a hand, advanced autonomous driver assistance sensors, active electromechanical suspension. And on the floor under one of the models, a gray metal pad.

Coal

Trump to Grant Lifeline to Money-Losing Coal Power Plants Nuclear
Jennifer A. Dlouhy, Bloomberg

Trump administration officials are making plans to order grid operators to buy electricity from struggling coal and nuclear plants in an effort to extend their life, a move that could represent an unprecedented intervention into U.S. energy markets.

U.S. coal lobby fights black-lung tax as disease rates surge
Valerie Volcovici, Reuters

The Black Lung Disability Trust Fund is at risk of insolvency due to soaring debt and a slashing of coal-company contributions through a tax cut scheduled for the end of the year, according to a report the U.S. Government Accountability Office plans to publish soon, two sources briefed on the study told Reuters.

Nuclear

Plant overcharged TVA nearly \$4.4 million
Dave Flessner, Times Free Press

The Tennessee Valley Authority was overcharged nearly \$4.4 million by a contractor at the Watts Bar Nuclear Power Plant for construction of the Unit 2 reactor from 2013 to 2015, according to an audit released Wednesday.

Climate

EBRD publishes guidance for firms disclosing climate impacts **Nina Chestney, Reuters**

The European Bank for Reconstruction and Development has published guidance for companies reporting on the physical impact of climate change in their financial results.

SoftBank Fund Puts \$2.25 Billion in G.M.'s Driverless Unit **Neal E. Boudette and Michael J. de la Merced, The New York Times**

Self-driving cars have increasingly figured in visions of the automotive future, and a big new investment is the latest signal that such a moment is close at hand.

Opinions, Editorials and Perspectives

Asian Allies Need U.S. Energy Exports **Surya Gunasekara, Morning Consult**

President Donald Trump knows a bad deal when he sees ones, so it should not come as a surprise when the president fulfilled another campaign promise to abandon the Iran nuclear deal. His sober analysis was spot on; the Iran deal was a "horrible, one-sided deal" that allowed Iran to reach the brink of nuclear breakout and will never bring peace.

We're keeping our Paris climate change commitments and our economies are booming: Governors **Jerry Brown et al., USA Today**

The 2015 Paris Agreement on climate change was a landmark moment in human history. It crystallized decades of negotiations into a framework embraced by every country in the world to confront the existential threat of climate change and work together to solve the challenge.

Wacky Prices Pinch Oil Producers' Profits
Spencer Jakab, The Wall Street Journal

"Oil prices rose yesterday." That sound bite is usually enough for those with a casual interest in the direction of the world's most important commodity, whether it is because they own a few hundred shares of Exxon Mobil or want to know how much next weekend's road trip will cost.

Developments in Energy Storage Could Spell the End of the Duck Curve

Purvin N. Patel, POWER Magazine

To alleviate the problematic conditions resulting from the duck curve, utilities have traditionally turned to natural gas peaker plants to quickly deliver energy during peak demand periods.

The New Tech That Terrifies OPEC

Spencer Jakab, The Wall Street Journal

What doesn't kill you makes you stronger. Two years ago, it looked like Saudi Arabia was winning its fight against the U.S. shale oil industry by furiously pumping crude to drive down prices.

The sage grouse isn't just a bird - it's a proxy for control of Western lands

John Freemuth, The Conversation

The Trump administration is revising an elaborate plan developed under the Obama administration that sought to steer energy development away from sage grouse habitat. Conservation groups are suing in response, arguing that this shift and accelerated oil and gas leasing threaten sage grouse and violate several key environmental laws.

The Paris agreement's emissions goals may be in trouble, with or without U.S. participation

Johannes Urpelainen, The Washington Post

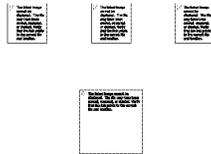

Last June, President Trump announced that the United States would withdraw from the 2015 Paris agreement on climate change. How are the Paris goals looking, a year later? It may be too early to assess whether the Paris signatories are on track with their pledges for the year 2030, but rising carbon dioxide emissions in Asia and Europe, in particular, are a troubling sign.

Research Reports

New Realities, New Risks: Rethinking the Strategic Petroleum Reserve

Jason Bordoff et al., Columbia University Center on Global Energy Policy

The last few years have offered a reminder, if any was needed, that oil markets are no stranger to volatility. From OPEC's reported demise to OPEC's resurgence, the rapid fall and rise again of US shale, and the ebb and flow of geopolitical risk, oil has been on a rocky ride. After industry leaders and experts declared that the days of cheap oil were over-"\$100 per barrel is becoming the new \$20," explained one top oil CEO in 2014-consensus shifted to a view that oil prices would remain "lower for longer" before sharply rising again in the last few months.

REDEFINING EPA: Overhauling an agency and its mission -- Complete coverage

June 1, 2018

The Weekly Focus

EPA's Push To Overhaul NAAQS Poses Test For 'Cooperative Federalism'

EPA's push to overhaul and streamline the national ambient air quality standards (NAAQS) process will pose a major test for Administrator Scott Pruitt's pledge to give states more power over environmental decisions, as some states welcome new NAAQS compliance flexibility while others fear it will boost interstate pollution.

Latest News

SAB Votes To Review EPA's Science, Emissions Rules In Sign Of 'Rebuke'

EPA advisers have voted to review the science underlying agency rules aimed at rolling back a suite of Obama administration's greenhouse gas and emissions regulations, as well as a controversial proposal to require that major rules be based on publicly available science, decisions that environmentalists say amount to a "sharp rebuke" of Administrator Scott Pruitt's deregulatory agenda.

SAB Chair Honeycutt Dodges Tough Questions On EPA Science Policies

Michael Honeycutt, the new chair of EPA's Science Advisory Board (SAB), dodged tough questions from reporters on EPA's "secret science" policy, review of major EPA rulemakings and related issues at the first panel meeting since his appointment, but he reaffirmed his skepticism of the Obama administration's decision to tighten the ozone ambient air standard.

EPA, Sierra Club Fail To Reach Deal On Key 'Sue-And-Settle' Test Case

EPA and the Sierra Club have abandoned an effort to settle a suit over the agency's failure to produce congressionally mandated studies on the environmental impacts of the renewable fuel standard (RFS), seeking instead to brief the case in a move that suggests Administrator Scott Pruitt's directive against settling such cases is driving the action.

Observers Criticize Hill GOP Claim No RIA Needed For 'Glider' Repeal Rule

Key observers are criticizing claims by Hill Republicans that the Office of Management and Budget (OMB) should not require a regulatory impact analysis (RIA) when reviewing EPA's plan to scrap production limits on high-emitting "glider" trucks because it is deregulatory, saying there is no such exception.

Judges Reject Rehearing In Groundwater Suit, Teeing Up High Court Petition

A closely divided appellate court will let stand a panel ruling that imposed Clean Water Act (CWA) liability for an underground pipeline leak that reached surface waters through groundwater, but the narrow vote -- with five judges in favor of *en banc* rehearing -- signals that the question is far from settled and could bolster a Supreme Court petition.

Daily Feed

States launch suit to force EPA to implement landfill rules

Eight states say EPA has failed to take action on state compliance plans for the Obama-era methane standards for existing landfills, charging that the agency has "conceded" its failure to act.

OMB formally reviewing vehicle GHG rule rollback plan

It is not clear if officials have incorporated calls from a wide range of industry groups to seek input on a more moderate plan to largely retain Obama-era stringency levels while offering more compliance "flexibility."

Senate Democrats seek IG inquiry into Pruitt's house hunting

Top Democratic senators are seeking an investigation into whether Administrator Scott Pruitt violated federal regulations when one of his top aides searched for housing on his behalf.

Ewire: Pruitt touts Trump's support amid ethics scandals

EPA Administrator Scott Pruitt says that he has President Donald Trump's support despite a slew of recent ethics scandals and a looming IG report.

PEER claims ethics violations in Pruitt defense fund

A whistleblower group says EPA Administrator Scott Pruitt's legal defense fund seems "calculated to give the appearance of taking untoward gifts," and calls for investigations into its structure and donors.

Former EPA chief launches new Harvard climate center

Gina McCarthy said the new center seeks to transform science into "meaningful actions that will deliver a healthier, more just, and sustainable world."

Hi Clint,

I hope things are still going well. Here's your eFolder for tomorrow, Friday, January 26, 2018.

10:30am – 11:00am Speech Requests Review
*11:00am – 12:00pm CSAPR Update Briefing
*1:00pm – 2:00pm Public Review of Draft Inventory of GHG Emissions and Sinks: 1990-2016
2:00pm – 3:30pm CONFIRMED: EPA PRE-INTERNAL CALL : HONEST ACT IMPLEMENTATION
2:15pm – 3:00pm Scheduling Meeting
3:30pm – 4:00pm OGC Discussion

If there are any other briefing materials you would like for me to share, please let me know and I'll make sure you get them.

Thank you,

Rhonda Wright

By Kelsey Tamborrino | 08/17/2018 05:44 AM EDT

With help from Annie Snider, Ben Lefebvre and Alex Guillén

A COUNTRY DIVIDED: Which streams and wetlands are protected under the Clean Water Act? As of Thursday, the answer depends on where you're standing. After a South Carolina District Court ruling overturning the Trump administration's attempted delay of the Obama administration's Waters of the U.S. rule for failing to offer the public a proper opportunity to comment, the 2015 rule is now officially on the books in 26 states — but not in the other 24 states where other district court injunctions are in place.

"**The agencies refused to engage** in a substantive reevaluation of the definition of the 'waters of the United States' even though the legal effect of the Suspension Rule is that the definition of 'waters of the United States' ceases to be the definition under the WOTUS rule and reverts to the definition under the 1980s regulation," Judge David Norton wrote in Thursday's ruling. "An illusory opportunity to comment is no opportunity at all."

Environmental groups hailed the decision, with Jon Devine of the Natural Resources Defense Council calling it a "sharp rebuke to the Trump administration." Meanwhile, Zippy Duvall, president of the American Farm Bureau Federation, one of the fiercest critics of the Obama-era rule, called on the Trump administration to "to take immediate steps to limit the impact of this dangerous court decision."

But will it hold? The Justice Department is reviewing the decision, a spokesman said, and players on both sides broadly expect an appeal. Separately, EPA said in a statement it and the Army Corps of Engineers "will review the order as the agencies work to determine next steps." But the fate of the delay rule could ultimately become moot if the federal district judge in Texas grants a nationwide injunction request.

And don't forget, this is just the warm-up fight. The battle royale will be over the Trump administration's rule to repeal the 2015 rule, which the agency has not finalized. Geoff Gisler, the Southern Environmental Law Center attorney who brought yesterday's case on behalf of local environmental groups, argued that Thursday's South Carolina court decision has implications for that fight and "should give the agencies pause" as they move forward. "The agencies just aren't telling the public what they're doing," he argued. "What this decision said was you can't just have a comment period, it has to be a meaningful comment period."

WE MADE IT TO FRIDAY! I'm your host, Kelsey Tamborrino. Simon and Company's Jen Covino named the eight senators who formerly served as mayors: [Dianne Feinstein](#), [Cory Booker](#), [Jim Inhofe](#), [Bob Corker](#), [Bernie Sanders](#), [Tim Kaine](#), [Mike Enzi](#) and [Bob Menendez](#). For today: Who are the three current House lawmakers who previously served as ambassadors? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

FAR FROM OVER: A federal judge's order directing the State Department to conduct a supplemental environmental review for the Keystone XL pipeline's updated path through Nebraska is another setback in nearly a decade full of them for TransCanada. The order is sure to stall construction of the pipeline for months, Pro's Ben Lefebvre [reports](#). Plaintiffs in the case said the review would involve public hearings in Nebraska and consultations with Native American tribes whose land the pipeline would traverse.

Pipeline opponents are hoping to use the new review to push for a broader study of the project, Ben reports. Doug Hayes, a lawyer for the Sierra Club and one of the plaintiffs in the case, said the judge's ruling that the "entire pipeline remains interrelated and requires one [environmental review] to understand the functioning of the entire unit" could open the door for them to seek a new review for the pipeline's entire route. "If they are going back to do a supplemental environmental impact statement, our position is they would need to evaluate all the new impacts of the pipeline," Hayes said. "That would take definitely months."

WHERE'S WHEELER? Acting EPA Administrator Andrew Wheeler [travels](#) to Michigan today to discuss issues plaguing the Great Lakes and meet with GOP Rep. [Tim Walberg](#), a member of the Energy and Commerce Committee, and officials from the Michigan Department of Natural Resources and Department of Environmental Quality.

WHEELER DELIVERS MESSAGE ON HARASSMENT: Wheeler reaffirmed EPA's policy against harassment in a [memorandum](#) sent to staff Thursday. Wheeler wrote that he expects "all individuals working at the EPA — employees, supervisors and non-employees — will not engage in or be subjected to unlawful and prohibited harassment."

MURKOWSKI: FERC NOMINEE SHOULD GO LITMUS TEST-FREE: Senate Energy Chairman [Lisa Murkowski](#) wouldn't comment on POLITICO's [report](#) that DOE's Bernard McNamee will be nominated to FERC. But the Alaska Republican said she believes that the next nominee shouldn't face a litmus test over their view of the Trump administration's efforts to prop up coal and nuclear power plants, Pro's Darius Dixon [reports](#). "I worry that this is going to be viewed as, 'If you don't commit to voting against or voting for, then you're not going to have my support,'" Murkowski said. "That's not the way that we should be selecting commissioners for the FERC."

GET YOUR COMMENTS IN: American Petroleum Institute's Frank Macchiarola reiterated the need for Renewable Fuel Standard reform on a call with reporters Thursday outlining the group's comments for EPA's proposed biofuel blending requirements for the coming year under

the RFS. "Very simply what we want is an end to this program by 2022," he said. Macchiarola said API is "willing to compromise" on certain policies like a waiver for summertime sales of E15, but only if the program will sunset by 2022. "The problem again is that the ethanol industry has been dug in to not doing anything," Macchiarola said. He added legislation is being drafted to reform the program in both chambers, but noted challenges and lengthy debate are likely ahead. Comments are due today on EPA's proposed volumes, with the final rule due to be released by Nov. 30.

— **API is also looking at the proposed plan** by EPA and the Department of Transportation to freeze fuel efficiency standards for cars and trucks. "It is a very complex proposal to a very complex program," Macchiarola said. "We will say that we appreciate the administration's relooking at CAFE in the light of changing energy market realities."

SECRET'S OUT: Thursday was the last day for comments on EPA's proposed "secret science" rule, which would ban the use of studies that don't publicly disclose all their data. Getting their thoughts in under the wire, Sens. Sheldon Whitehouse, Brian Schatz, Maggie Hassan, Jeff Merkley, Ed Markey, Tammy Duckworth, Kirsten Gillibrand, Tom Carper and Kamala Harris banded together to make their opposition known. "The proposed rule is illegal because it is arbitrary and capricious," they write, adding that "the proposed rule is illegal because it is the result of an effective delegation of rulemaking authority to private interests."

The American Chemistry Council, meanwhile, applauded the proposal in its comment Thursday. "EPA's proposal codifies an important good governance principle — that government agencies should be as transparent as possible, within the bounds of the law, about scientific information relied upon and the justifications for the significant regulatory decisions they make." Still, the trade association also highlighted that implementation of the plan would benefit from better historical context and applicability, and that greater clarity is required on key definitions and regulatory text, among other recommendations.

FIGHTING FIRE WITH A FEDERAL PLAN: The Agriculture Department released a new, aggressive approach to fighting wildfires Thursday, with proactive steps. During a bipartisan press conference, Secretary Sonny Perdue unveiled a plan that emphasizes increased collaboration with states, implementation of mapping and remote sensing tools, and management practices such as prescribed burns and timber sales, Pro's Liz Crampton reports. Though Perdue brushed aside specific questions on climate change's role, he said Interior Secretary Ryan Zinke is on board with the plan and noted further details and costs will be forthcoming from the U.S. Forest Service. "Really a lot of people ... when you talk about climate change, they want to talk about what the causes are," Perdue said. "[What] we're trying to talk about is the impact."

FERC RESTARTS PART OF PIPELINE: FERC modified a stop work order for the Mountain Valley Pipeline this week, allowing construction to restart for around 77 miles of the pipeline's West Virginia route with the exception of a 7-mile area surrounding the Weston and Gauley Bridge Turnpike Bridge Trail, MVP said Thursday. However, the company said about half of its construction workforce has been released due to continued delays. MVP said that it "remains committed to the earliest possible in-service date," though it noted that is now expected to arrive during the fourth quarter of 2019.

GREENS CALL FOR FERC REVIEW: The Southern Environmental Law Center and Appalachian Mountain Advocates petitioned the 4th U.S. Circuit Court of Appeals on Thursday to review FERC's approval of the Atlantic Coast Pipeline. The suit was filed on behalf of 13 other conservation groups. "FERC ordered the ACP construction stopped because the 4th Circuit determined that permits were issued without proper scrutiny," SELC attorney Greg Buppert said

in a statement. "On the very same day, FERC rejected a rehearing request in which the conservation groups asserted that it also rushed through its decision to permit a pipeline that we don't need." The 4th Circuit last week vacated two permits issued for the project by the U.S. Fish and Wildlife Service and the National Park Service.

GREENS FILE FOIA SUIT: Environmental group Friends of the Earth filed a [lawsuit](#) Thursday against the Interior Department for lack of response to a Freedom of Information Act request. The lawsuit seeks to compel DOI to produce documents related to senior members of the department and the industries they regulate. The suit points to David Bernhardt's work as a lawyer and lobbyist for oil and gas companies and Vincent DeVito's time working as an energy industry representative. Friends of the Earth is being represented by the law firm Meyer Glitzenstein & Eubanks LLP.

AD-ING IT UP: Ahead of Wyoming's gubernatorial primaries Tuesday, a partnership between the Wyoming Wildlife Federation and Rocky Mountain Farmers Union, dubbed the Wyoming Conservation Legacy, will launch a five-figure ad campaign asking candidates to support conservation. The campaign will begin on Saturday and run through Aug. 21 with full-page print ads in the Casper Star Tribune and the Wyoming Tribune Eagle, separate radio buys on Wyoming Public Media programs, and digital ads across the state. See the ads [here](#).

MAIL CALL! ON THE FARM: The National Biodiesel Board sent a [letter](#) to farm bill conference committee lawmakers reiterating its support for the inclusion of biodiesel programs in the five-year bill.

STAR-STUDED SUMMIT: Attendees of the [Global Climate Action Summit](#) in San Francisco in September will hear from former White House officials, including former Vice President Al Gore and Secretary of State John Kerry. The summit announced Thursday night that new delegates will join the event, including Executive Secretary of the United Nations Framework Convention on Climate Change Patricia Espinosa and U.N. Special Envoy for Climate Action Michael Bloomberg. Actor Alec Baldwin and chimpanzee expert Jane Goodall will also attend.

GO NUCLEAR: The American Nuclear Society this week launched a nuclear science educational program for middle schoolers that covers topics like fission and fusion, and detecting radiation. The "[Navigating Nuclear: Energizing Our World](#)" program is aligned with the Next Generation Science Standards framework, which provides an evidence-based foundation for scientific research.

MOVER, SHAKERS: Jack Cramton, policy adviser for Sen. [Bill Cassidy](#) (R-La.), will start Monday as a legislative affairs adviser at the Department of Energy's Congressional and Intergovernmental Affairs Office.

Stories from POLITICO Pro

Judge restores WOTUS rule in 26 states [Back](#)

By Alex Guillén | 08/16/2018 03:20 PM EDT

A federal judge today ruled that the Trump administration violated administrative legal requirements when it delayed the start of the Obama administration's Waters of the U.S. rule by two years — a move that means the rule will now go into effect for about half the country.

The judge said EPA and the Army Corps of Engineers had unlawfully declined to consider any comments addressing substantive issues related to WOTUS or an earlier 1982 version when it proposed delaying the rule to give the agencies more time to repeal and replace it.

That was a fatal flaw, ruled Judge David Norton of the U.S. District Court for South Carolina, a George H.W. Bush appointee. Delaying the WOTUS rule has the effect of reverting to the 1982 rule, he wrote.

Norton's injunction means the Obama-era rule will take effect in 26 states. The other 24 are covered by two different injunctions, one issued to 13 states in 2013 and one issued to another 11 states in June.

However, WOTUS may be blocked nationwide again if the rule's opponents get their way. In another WOTUS lawsuit in a federal court in Texas, three states in February asked for a nationwide injunction of WOTUS. That court has yet to decide on the matter.

WHAT'S NEXT: The Trump administration is working to finalize its repeal of the Obama WOTUS rule. And EPA and the Corps are expected to propose a replacement rule in the near future.

Montana ruling could set back Keystone XL for months [Back](#)

By Ben Lefebvre | 08/16/2018 04:37 PM EDT

The fight over the Keystone XL pipeline isn't over yet.

District Court Judge Brian Morris' partial order that the State Department must conduct a supplemental environmental review to account for the pipeline's new path through Nebraska is another setback for developer TransCanada that's likely to delay construction of the nearly decade-old project by at least several months.

The order was a response to Nebraska regulators' approval in November 2017 of a route for the 830,000 barrel-a-day pipeline through the state that TransCanada had not proposed. The original environmental assessment the Trump administration used to approve Keystone XL earlier that year — a review conducted during the Obama administration — only considered a different route that TransCanada had planned for the pipeline.

The new route through Nebraska would cross through five counties that weren't included in the State Department's original environmental review, Morris noted in his order, meaning it would cross different waterways and require an additional pump station, .

Pipeline opponents say they hope to use Wednesday's ruling to push for a new broader study of the project.

Doug Hayes, a lawyer for the Sierra Club, one of the plaintiffs in the case, told POLITICO that Judge Morris' statement in his ruling that the "entire pipeline remains interrelated and requires one [environmental review] to understand the functioning of the entire unit" could open the door for them to seek a new review for the pipeline's entire route through the U.S.

"If they are going back to do a supplemental environmental impact statement, our position is they would need to evaluate all the new impacts of the pipeline," Hayes said. "That would take definitely months."

Jane Kleeb, who has long fought the pipeline and is now chairwoman of the Nebraska Democratic Party, said she thought process would drag out even longer.

"We think it buys us a year," she told POLITICO. "We just think there's a lot of significant hurdles in front of them."

Plaintiffs in the case said a new review would entail holding public hearings in Nebraska and consulting with Native American tribes whose land the pipeline would traverse.

Environmental groups have argued the pipeline posed a special risk because of the nature of the heavy oil it would transport, and that it would increase global carbon emissions. The Obama administration quashed the project in 2015, only to see their decision reversed when President Donald Trump took office a year and a half later.

A TransCanada spokesman declined to comment pending the company's review of the judge's decision.

Russ Girling, the company's chief executive officer, said during a call with investors earlier this month that the company hoped to make a final decision on whether to build the pipeline later this year or in early 2019. If approved, construction could start during the first quarter of 2019, Girling added.

A State Department official was not immediately available to comment.

Keystone XL also faces a test in Nebraska Supreme Court, where a lawsuit filed by environmental groups and state landowners challenges Nebraska regulators' approval of a route that TransCanada never formally requested. Hearings in that case are expected to start in October.

TransCanada is also waiting for several permits from federal agencies. Interior's Bureau of Land Management must issue right-of-way permits to cross federal land in Montana, and the Army Corp of Engineers must approve the pipeline's path over several waterways across the country.

Sources: DOE's McNamee to get FERC nod [Back](#)

By Eric Wolff and Darius Dixon | 08/08/2018 04:07 PM EDT

The White House plans to nominate Energy Department official Bernard McNamee to fill the FERC leadership seat being vacated by departing Commissioner Rob Powelson, three sources familiar with discussions tell POLITICO.

McNamee helped roll out Energy Secretary Rick Perry's proposal last year to save struggling coal and nuclear power plants — an issue that sources have said served as a key litmus test for Trump administration officials evaluating a replacement for Powelson, who is [set to resign](#) Friday.

FERC in January unanimously voted down that plan, which sought to create special payments for power plants capable of holding 90 days of fuel on-site. But the administration has been considering additional options such as invoking rarely used emergency powers to force power plants to run, which would potentially give McNamee a chance to provide the pivotal vote on the subsequent rates and rules as a commissioner.

It is unclear when President Donald Trump would formally nominate McNamee, and the vetting process still seems to be underway. It would likely take the Senate several months to confirm him, a process that would start with hearings at the Energy and Natural Resources Committee.

Neither the White House nor DOE immediately responded to requests for comment Wednesday.

McNamee, who runs the DOE's Office of Policy, has been in and out of the agency under Trump. He was deputy general counsel for energy policy last year when he worked on Perry's ill-fated proposal to FERC. In February, he left DOE for a senior post with the Texas Public Policy Foundation, a conservative think tank [with ties to Perry](#), before returning to DOE in May.

Before joining the Trump administration, McNamee previously worked at McGuireWoods, as chief of staff to Texas Attorney General Ken Paxton and as an aide to Sen. [Ted Cruz](#) (R-Texas).

Murkowski: Next FERC nominee should be free of litmus tests [Back](#)

By Darius Dixon | 08/16/2018 05:38 PM EDT

Alaska GOP Sen. [Lisa Murkowski](#) today declined to comment on POLITICO's [report](#) that DOE's Bernard McNamee would be nominated to FERC, but said she believes that the next nominee shouldn't face a litmus test over their view of the Trump administration's efforts to prop up coal and nuclear power plants.

"I worry that this is going to be viewed as 'If you don't commit to voting against or voting for, then you're not going to have my support,'" Murkowski, who chairs the Senate Energy and Natural Resources Committee, told POLITICO, referring to the administration's efforts to stave off coal retirements by potentially issuing emergency orders. "That's not the way that we should be selecting commissioners for the FERC."

Trump will want someone fairly aligned with the administration, she said, though she added that FERC came to the "right decision" in rejecting the Energy Department's controversial push to create special market payments for coal and nuclear plants last year. Still, she hoped that FERC's independence would be respected and that Democrats won't be reflexively opposed to the White House nominee in the way that they have been for Supreme Court nominee Brett Kavanaugh.

"A seat on the FERC is different than being a deputy secretary of Energy or Labor or whatever. Again, this is an independent regulatory agency that has a very different mission," she said. "The mission is not whatever the White House says it is. It is a very specific, statutory mission and so you want somebody who is going to be true to that. My hope is that the White House picks somebody who can demonstrate that they will be true to that."

USDA unveils plan for fighting wildfires [Back](#)

By Liz Crampton | 08/16/2018 03:00 PM EDT

USDA said today it's embarking on a new, aggressive approach to combat wildfires by taking preventative steps like working more with states and upping use of forest management tools.

Department officials at a press conference unveiled a 22-page plan that emphasizes increased collaboration with states, implementation of mapping and remote sensing tools, and management practices such as prescribed burns and timber sales.

Further details and costs of the initiative will be forthcoming after the U.S. Forest Service and other agencies hold discussions with state partners, USDA Secretary Sonny Perdue said. He added that Interior Secretary Ryan Zinke is on board, although he was not in attendance.

The plan comes as the West is enduring yet another brutal wildfire season after 2017 ranked as the most expensive year for wildfires. Federal agencies last year spent \$2.9 billion to suppress wildfires across the country, according to USDA.

"Today to truly protect our forest and communities, we must increase the size of our projects and access larger landscapes across boundaries," Perdue said. "Frankly we cannot do it ourselves. It's got to be done in the shared stewardship of state and local communities."

Perdue was joined by interim Chief of the U.S. Forest Service Vicki Christiansen and Sens. [Maria Cantwell](#) (D-Wash.), [Lisa Murkowski](#) (R-Alaska), [Ron Wyden](#) (D-Ore.) and [Steve Daines](#) (D-Mont.).

On the Benefits and Costs of Public Access to Data Used to Support Federal Policy Making

Randall Lutter and David Zorn

September 2016

MERCATUS WORKING PAPER

3434 Washington Blvd., 4th Floor, Arlington, Virginia 22201
www.mercatus.org

Randall Lutter and David Zorn. "On the Benefits and Costs of Public Access to Data Used to Support Federal Policy Making." Mercatus Working Paper, Mercatus Center at George Mason University, Arlington, VA, September 2016.

Abstract

Congress is considering two bills that would require the Environmental Protection Agency (EPA) to make publicly available all data from studies that it relies on as it develops regulations. The Congressional Budget Office estimates that it would cost \$250 million per year for the EPA to comply with such a requirement. As an alternative to these bills, the Obama administration points to an Office of Science and Technology Policy directive requiring that agencies spending more than \$100 million per year on research issue plans to maximize public access to federally funded data. We show that this directive has not been implemented by the EPA and that there is good reason to question the validity of scientific research when the data used to create it is not publicly available. Furthermore, there is good reason to believe that the CBO significantly overestimated the cost of the bills. We recommend that all regulatory agencies generally provide public access to the data they rely on to develop economically significant regulations.

All studies in the Mercatus Working Paper series have followed a rigorous process of academic evaluation, including (except where otherwise noted) at least one double-blind peer review. Working Papers present an author's provisional findings, which, upon further consideration and revision, are likely to be republished in an academic journal. The opinions expressed in Mercatus Working Papers are the authors' and do not represent official positions of the Mercatus Center or George Mason University.

On the Benefits and Costs of Public Access to Data Used to Support Federal Policy Making

Randall Lutter and David Zorn

Over the past few decades, the quality of published scientific research has increasingly come into question.¹ Researchers seeking to verify independently the results of articles published in prestigious scientific journals have reported different results with surprising frequency.² In August 2015, for example, researchers investigating 100 published papers in psychology found that, while 97 percent of original studies reported statistically significant results, only 39 percent of efforts to reproduce estimates of these effects reported finding the original results.³ Irreproducible results pose such a serious problem that there is a growing awareness that all interested parties need to do more to contribute to a lasting and effective solution.⁴

To protect reproducibility, many scientific journals, including *Science*, *Nature*, and *Environmental Science & Technology*, have adopted policies that require authors to provide access to supporting data, statistical models, and even lab specimens. The *American Economic Review* (*AER*) investigated the reproducibility of results of published papers after the implementation of stronger data access rules.⁵ The *AER* researchers found that data posting requirements are quite effective at promoting reproducibility—in the sense that analysis of original data with identical methods generates the original results. Based on their review of data

and code placed in repositories for published papers, the *AER* researchers concluded that “all but two of the articles (95 percent) could be replicated with little or no help from the author(s).”⁶ Researchers had earlier found that inadvertent errors in empirical economics research were “commonplace.”⁷ A recent paper in *Environmental Health Perspectives*, a journal of the National Institutes of Health, proposes guidance for judging the quality of risk assessments. The guidance includes the following as a criterion for the selection of literature to be used in a risk assessment: “Sufficient data for the critical studies and the models used in the assessment are available to interested external parties so as to enable them to replicate/verify the assessment outcomes and to judge the scientific credibility of the data/models.”⁸

Recognizing the need to ensure both reliability of the scientific underpinnings of its policy decisions and public confidence in that reliability, the federal government took steps in 2002 to improve the quality of and access to information it uses in policy making. In its Information Quality Guidelines, the Office of Management and Budget (OMB) states, “If an agency is responsible for disseminating influential scientific, financial, or statistical information, agency guidelines shall include a high degree of transparency about data and methods to facilitate the reproducibility of such information by qualified third parties.”⁹ It elaborates that “making the data and methods publicly available will assist in determining whether analytic results are reproducible.”¹⁰ OMB defines reproducibility to mean the “information is capable of being substantially reproduced, subject to an acceptable degree of

¹⁰ Ibid.

imprecision.”¹¹ OMB further explains that “‘capable of being substantially reproduced’ means that independent analysis of the original or supporting data using identical methods would generate similar analytic results, subject to an acceptable degree of imprecision or error.”¹²

An OMB directive to federal agencies provides for public access under the Freedom of Information Act (FOIA) to federally funded research data related to published research findings used in developing federal regulations.¹³ The directive covers federal grants to and agreements with institutions of higher education, hospitals, and other nonprofit organizations:

In response to a Freedom of Information Act (FOIA) request for research data relating to published research findings produced under an award that were used by the Federal Government in developing an agency action that has the force and effect of law, the Federal awarding agency shall request, and the recipient shall provide, within a reasonable time, the research data so that they can be made available to the public through the procedures established under the FOIA.¹⁴

To promote scientific integrity, President Obama signed a memorandum on scientific integrity in March 2009,¹⁵ and the Office of Science and Technology Policy (OSTP) issued an implementing memo on scientific integrity in December 2010¹⁶ and one on increasing access to the results of federally funded scientific research in February 2013.¹⁷

Some members of Congress have sought additional action by introducing two bills—H.R. 1030¹⁸ and S. 544¹⁹—that would require the Environmental Protection Agency (EPA) to make publicly available supporting data from any studies that it relies on in its policy making. The

¹⁸ Secret Science Reform Act of 2015, H.R. 1030, 114th Cong. (2015).

¹⁹ Secret Science Reform Act of 2015, S. 544, 114th Cong. (2015).

Obama administration has issued statements of administration policy on these bills, indicating that a veto is likely because the bills “would undermine EPA’s ability to protect the health of Americans, would impose expensive new mandates on EPA, and could impose substantial litigation costs on the Federal government. It also could impede EPA’s reliance on the best available science.”²⁰

Ultimately, public access to data affects not only the efficacy of public policies but also public trust in the federal government’s actions. Distrust can prevent the timely adoption of effective solutions to policy problems. Increasing access to the research data used in developing federal regulations may promote public trust.

In this paper, we review current federal policies and procedures intended to ensure that scientific and technical research meets appropriate quality standards and we compare them with similar practices and procedures used by nonfederal institutions. We focus on access to data and computer code because we find that requirements for public access to data and code have become a best practice in nonfederal scientific institutions.²¹

The scientific experience can inform us about the likely success of new federal policies intended to improve the quality and accessibility of information because federal policies and institutions have analogs in the scientific world. Some organizations in the scientific community are adopting best practices to protect scientific integrity. Identifying and characterizing these practices and describing their possible use by federal government agencies should help inform us about how to promote access and reproducibility. Contrary to the findings of some earlier work,

²⁰ “Statement of Administration Policy, H.R. 1030, Secret Science Reform Act of 2015,” March 3, 2014.

²¹ This industry best practice has not yet been adopted by any of the top federal scientific journals, including *Environmental Health Perspectives*, *Emerging Infectious Diseases*, and *Journal of Rehabilitation Research and Development*. See Randall Lutter and David Zorn, “Reinforcing Reproducibility: What Role for the Federal Government?,” *Regulation* 38, no. 4 (2015–2016): 15–16.

our analysis suggests that data and code access can be provided at a reasonable cost that the benefits of transparency and greater reproducibility will likely exceed.

We also summarize major initiatives that the federal government has undertaken to improve the quality and public accessibility of federal policy making (including initiatives of the Obama administration) and their limitations. We then describe evidence that many scientific research papers present results that are irreproducible (and thus unreliable), and we describe steps that high-quality scientific journals have taken to address the issue. We next assess the benefits and costs of implementing a policy of general access to the data and code used in developing economically significant federal regulations. Finally, we make recommendations for improving the policy-making process by requiring public accessibility to the data and code underlying research that federal agencies use to support policies.

Federal Policies on Data Quality and Public Access

Public debate over federal policies that limit public access to the data used in regulatory decisions dates to at least the 1970s. In 1970, the FDA recommended that doctors prescribe oral hypoglycemic drugs only for patients with adult-onset (Type 2) diabetes that could not be controlled by diet and only when the patients were not insulin dependent.²² The recommendation was made on the basis of a federally funded study carried out by the University Group Diabetes Program (UGDP), which found that the oral hypoglycemic drug tolbutamide was associated with an increased death rate from cardiovascular disease among mildly diabetic patients.²³ The results of the UGDP study were immediately controversial. Some researchers raised questions about the

²² “Status of Problem of Usage of Tolbutamide, Preliminary Statements: FDA Statement, Friday May 22, 1970,” *Diabetes* 19, no. 6 (1970): 467.

²³ Dave R. Kelleher, “Applying the Freedom of Information Act in the Area of Federal Grant Law: Exploring an Unknown Entity,” *Cleveland State Law Review* 27, no. 2 (1978): 294–311.

study's design. In addition, the unavailability of oral hypoglycemic drugs would significantly reduce the treatment options for many patients. And the FDA's actions would potentially expose physicians to malpractice lawsuits.

In 1974, the proponents of oral hypoglycemic drugs, who organized as the Committee on the Care of the Diabetic (CCD), criticized the UGDP study and, using the FOIA, began requesting the data underlying the UGDP study in order to replicate the results. In 1975, the FDA proposed restrictive changes to the labeling of oral hypoglycemic drugs largely on the basis of the results of the UGDP study. In 1977, Secretary of Health, Education, and Welfare Joseph Califano declared that phenformin, another oral hypoglycemic drug, was an imminent public health hazard and withdrew FDA approval of drug products that contained it. The FDA denied the CCD's FOIA request on the grounds that the study's data were not agency records subject to the FOIA because the data were maintained by the UGDP and not by an agency of the federal government. A case was brought in federal district court as *Forsham v. Califano* on whether the data should be subject to the FOIA. Forsham and members of the CCD seeking access to the data lost in US District Court and the US Court of Appeals. In 1980, the US Supreme Court ruled that, even though the UGDP study was federally funded, the UGDP data were not subject to the FOIA as long as a federal agency did not have physical possession of the data.²⁴

Two decades later, a similar issue arose when the EPA issued the National Ambient Air Quality Standards for Particulate Matter largely on the basis of federally funded research, particularly the Harvard School of Public Health's Six Cities study and an American Cancer Society (ACS) study.²⁵ Challenges to the regulation included criticisms of the studies' design and

²⁴ *Forsham v. Harris*, 445 U.S. 169 (1980).

²⁵ EPA, "National Ambient Air Quality Standards for Particulate Matter; Final Rule," 62 Fed. Reg. 38652-760 (July 18, 1997).

analysis. Efforts to obtain access to the data underlying the studies failed. The EPA did not possess the data, so the FOIA requests for the data came up empty. Researchers for both studies then gave access to the data to a team of researchers selected by the Health Effects Institute, a nonprofit research institute jointly funded by the EPA and the automotive industry that specialized in the health effects of air pollution so that the researchers could attempt to replicate the studies. In 2000, the reanalysis team reported that it had found very few coding problems with the data used in either study and that it had been able to replicate the point estimates made by the studies' researchers.²⁶ The team also performed a number of sensitivity analyses, a few of which showed a reduction in the estimated effects of particulate matter on mortality.²⁷ The Harvard and ACS researchers refused to share the data more widely on the grounds that they had promised the study participants anonymity and that the data contained personally identifiable information.²⁸ Lack of access to data has continued to play a significant role in the policy debate over EPA's clean air rules. In response to a congressional subpoena seeking the data used in the Six Cities and ACS studies, the EPA stated in 2014 that it still did not possess sufficient data to replicate the results of the original studies, even after multiple interactions with the owners of the data.²⁹

In 1998, partly in response to the difficulties in obtaining data from the Harvard and ACS researchers, Congress passed the Shelby Amendment as part of Public Law 105-277. The amendment directs OMB to revise *Circular A-110* ("Uniform Administrative Requirements for

Lack of transparency has been alleged against the National Marine Fisheries Service and agencies in the Department of the Interior at a May 19, 2016, hearing titled "Examining Deficiencies in Transparency at the Department of the Interior" before the House Committee on Natural Resources, Subcommittee on Energy and Mineral Resources. See the testimony of Peter Seidel and Kathleen Sgamma.

Grants and Agreements with Institutions of Higher Education, Hospitals, and Other Non-Profit Organizations”) “to require Federal awarding agencies to ensure that all data produced under an award will be made available to the public through the procedures established under the Freedom of Information Act.”³⁰ The Shelby Amendment effectively negated the US Supreme Court’s ruling in *Forsham v. Harris*, at least with respect to research that might be funded later. After two rounds of public comment, OMB revised *Circular A-110* in 1999 to improve public access to federally funded data. Specifically, if federally funded research findings are published in a journal or “when an agency publicly and officially cites the research findings” in issuing a federal regulation, then in the event of a FOIA request for the research data, “the awarding agency shall request, and the recipient shall provide, within a reasonable time, the research data so that they can be made available to the public” through FOIA procedures.³¹

The Shelby Amendment and *Circular A-110* improve public access to federally funded research and data, but obstacles remain. One limitation is that *Circular A-110* does not apply to research by for-profit contractors. Moreover, it is dependent on the use of the FOIA to petition for access to a specific piece of research. The FOIA allows the public to request that federal agencies provide records that the government possesses or has funded (because of the Shelby Amendment). The law requires that agencies “respond” to a request within 20 business days (four calendar weeks), plus an additional 10 business days (for a total of six calendar weeks) if a request involves searching multiple sites (which will usually be the case with research funded through contracts or grants).³² Agencies may respond within the timeframe by affirming that records relating to the request exist. The records may be delivered to the requester at a later time.

³⁰ Omnibus Appropriations Act for FY 1999, Pub. L. No. 105-277 (1998).

³¹ OMB, *Circular A-110*.

³² Openness Promotes Effectiveness in Our National Government Act of 2007, Pub. L. No. 110-175 (2007).

Relying on the FOIA process requires that a requester file a request with the funding agency; that the funding agency determine whether the data requested are subject to the FOIA; and, if so, that the agency then request the data from the researcher. The researcher then sends the data to the funding agency, and the funding agency reviews the data to ensure that no data are protected from public disclosure under established FOIA exceptions.

Agencies often respond to FOIA requests quite slowly, according to independent assessments of agency responsiveness. Using 2015 statistics reported by the Department of Justice, which oversees FOIA activities for the federal government, the Center for Effective Government scored how well agencies performed at processing FOIA requests.³³ Using the data that agencies reported in their annual FOIA reports for 2013, the center rated agency performance based on 16 factors most highly weighted toward the percentage of requests fully or partially granted, the percentage of requests responded to within 20 days, the average number of days to respond to requests, and the size of each agency's request backlog. Also, the Cause of Action Institute tested agency response times to FOIA requests in 2012.³⁴ Table 1 shows the results of both studies of FOIA responses by agency. Other studies by Bloomberg³⁵ and the FOIA Project³⁶ yielded similar results, except they showed that many agencies do not respond to requests even after 180 days.

Other administration initiatives have sought to promote public access to data. For example, a 2013 memorandum from the Office of Science and Technology Policy (OSTP) goes beyond *Circular A-110*. The OSTP states that federally supported data should be publicly accessible and directs executive branch agencies that spend more than \$100 million a year

funding research to develop and issue plans to maximize access by the general public to digitally formatted data created with federal funds.³⁷ Also, federally funded research data should be deposited in a repository for public access, according to the OSTP memo. The Obama administration touts the OSTP initiative as a reason that H.R. 1030 and S. 544, requiring the EPA to provide public access to research data used in policy making, are unnecessary.³⁸

Table 1. Agency Responsiveness to FOIA Requests

Agency	CEG FOIA score for processing requests (%) ^(a)	Average number of days to respond to Cause of Action Institute FOIA request ^(b)
Department of Agriculture	94	84.1
Department of Transportation	63	125.0
Department of Health and Human Services	60	135.4
Department of Defense	55	155.0
Environmental Protection Agency	52	47.0
Department of Veterans Affairs	51	79.5
Department of Homeland Security	51	148.0
Department of Education	Not covered by CEG study	21.0
Department of Energy	Not covered by CEG study	101.0
Department of the Interior	Not covered by CEG study	147.0
Department of Commerce	Not covered by CEG study	No response in 240 days

Table 2. Policies of Federal Agencies for Publicly Posting Taxpayer-Funded Research Data

Agency	Policy for posting data	Effective date
Agency for Healthcare Research and Quality ^(a)	Researchers are expected to share data at the time of publication of the main findings from the dataset. The agency promotes use of publicly accessible databases.	Oct. 2015
Assistant secretary for preparedness and response, Department of Health and Human Services ^(b)	Researchers must publish digital scientific datasets in a recognized scientific data repository that is capable of long-term preservation of the data and open access to the public within 30 months from the creation of the dataset or on publication of a peer-reviewed article based on the dataset, whichever is sooner.	Oct. 2015
Centers for Disease Control and Prevention ^(c)	Researchers should make data available no later than 30 months after completion of collection, but only on request and only to an agency-approved party for an agency-approved public health purpose.	Oct. 2015
Department of Defense ^(d)	Researchers should store digitally formatted scientific datasets at the time of publication of research where the data are publicly accessible.	pending rulemaking
Department of Energy ^(e)	Researchers should propose appropriate plans to provide access to data.	Oct. 2015
Department of Transportation ^(f)	Researchers must ensure that unclassified data are available for public download and analysis.	Dec. 2015
Food and Drug Administration ^(g)	Researchers are expected to commit to sharing digital data underlying their research findings on publication of their findings in a peer-reviewed article.	Jan. 2016
National Aeronautics and Space Administration ^(h)	Researchers whose work has appeared in peer-reviewed publications must provide a plan for making the research data that underlie their results and findings digitally accessible within a reasonable time period after publication.	Feb. 2015
National Institute of Standards and Technology ⁽ⁱ⁾	Researchers must provide a plan for storage and preservation of the data and for how data will be made available to the public.	Dec. 2014
National Institutes of Health ^(j)	Researchers are expected to make data available at the time the study appears in a peer-reviewed publication.	Dec. 2015
National Oceanic and Atmospheric Administration ^(k)	Researchers must make data available typically within two years of collection or when an article using the data is published if earlier than two years. Data must be publicly discoverable through the agency's data inventory and must be publicly accessible via online services in widely used machine-readable formats.	March 2016
National Science Foundation ^(l)	Researchers should deposit at an appropriate repository all data resulting from the research funded by an award from the foundation, regardless of whether the data support a publication.	no earlier than Jan. 2017
Smithsonian Institution ^(m)	Researchers must submit digital research data supporting publications via an electronic copy or link to such copy to Smithsonian-managed or -approved repositories within a negotiated period of time.	Oct. 2015
Department of Agriculture ⁽ⁿ⁾	Researchers will be required to make the digital data underlying the conclusions of peer-reviewed scientific research publications freely available in public repositories in machine-readable formats.	2017

The OSTP initiative has not been effectively implemented. First, it would not accomplish the goals of H.R. 1030 and S. 544 because it covers only federally funded research and not other research that agencies rely on for policy making, and it is clear that public access to research data is not *required* by most agencies. Most only require commitments to share the data. In the next

section, we will see that such policies employed by scientific journals have proven to be ineffective at ensuring accessibility to research data. Also, more than three years after OSTP issued its directive, a number of major research funding agencies have failed to issue the necessary plans. The EPA, the Office of the Director of National Intelligence, US Agency for International Development, and the departments of Education, Homeland Security, and the Interior have not posted plans to comply with the OSTP initiative.⁴⁰

Public access to data would be inadequate or not timely even for those agencies that have posted approved plans. Plans for the National Science Foundation and the Department of Agriculture are not scheduled to go into effect until sometime in 2017 and for the Department of Defense possibly later, depending on the length of its rulemaking process. Also, several agency plans only require data access for research once it has been published in a peer-reviewed journal, while others make provision for access to data not associated with a publication. Anyone wanting gain access to data funded by the Centers for Disease Control and Prevention must apply via a questionnaire that includes describing the requester's research qualifications and reasons for wanting the data.⁴¹ If the requester's credentials and interest are deemed meritorious, the requester may still have to wait 30 months after final collection of the data.⁴²

Irreproducibility in Scientific Research and Policies to Enhance Reproducibility

Access to the data necessary to replicate scientific studies is essential because the results of so many peer-reviewed scientific publications have proven to be impossible to reproduce. For

⁴⁰ John P. Holdren, letter to House and Senate Appropriations Committees, April 29, 2016, https://www.whitehouse.gov/sites/default/files/microsites/ostp/public_access_report_to_congress_apr2016_final.pdf.

⁴² Ibid.

example, researchers at Amgen were able to replicate only 11 percent of 53 major cancer research papers published between 2001 and 2011.⁴³ Researchers at Bayer reported that they could reproduce the results reported in a set of drug research studies relevant to the company only 25 percent of the time.⁴⁴ Researchers reviewing articles in the fields of neuroscience, developmental biology, immunology, cell and molecular biology, and general biology showed that in 54 percent of papers the methods and materials were not identified well enough to permit replication.⁴⁵ A survey of psychologists found that researchers could successfully replicate results of only 49 percent of 257 peer-reviewed papers.⁴⁶

The federal government recognizes the challenges that irreproducible scientific research poses for innovation, the greater scientific enterprise, science-based policy development, and the efficient allocation of research funding. In 2014, the OSTP and the National Economic Council issued a request for information on how the federal government can “identify policy opportunities to promote innovation and its economic benefits in the United States.”⁴⁷ One of the questions was the following: “Given recent evidence of the irreproducibility of a surprising number of published scientific findings, how can the Federal Government leverage its role as a significant funder of scientific research to most effectively address the problem?”⁴⁸ One approach to this question is to review how the nonfederal scientific community seeks to ensure reproducibility specifically and research quality generally.

⁴⁸ *Ibid.*, 44066.

OMB uses peer review as a standard for research relevant for policy, stating that properly peer-reviewed articles deserve a rebuttable presumption of substantial reproducibility.⁴⁹ Peer review in academia is the process that journal editors use to judge the significance and originality of research papers submitted for publication. When journal editors send manuscripts to referees for peer review, they typically ask whether a manuscript properly reviews the existing literature, uses methods adequate to support its conclusions, and reaches conclusions that represent a meaningful contribution to the literature. Reviewers are rarely asked to verify the findings of studies they review, and they typically lack the incentives or resources to do so.⁵⁰ Thus, peer review does not address whether research findings are reproducible.⁵¹ In 2002, a report of the National Research Council stated that “peer review alone does not detect fraud, validate factual findings . . . or substitute for the judgments of the scientific community as a whole.”⁵²

Redoing experiments for research or policy-making purposes may be prohibitively costly for studies that were conducted over a period of years or that required special access to research subjects. Replication using the original data is still important to ensure reliability. For this reason, a number of the most prominent scientific journals require that authors commit to data sharing.⁵³

⁴⁹ Joshua B. Bolten, “Memorandum for the Heads of Departments and Agencies, Subject: Issuance of OMB’s ‘Final Information Quality Bulletin for Peer Review,’” December 16, 2004.

⁵⁰ Sara Schroter et al., “What Errors Do Peer Reviewers Detect, and Does Training Improve Their Ability to Detect Them?,” *Journal of the Royal Society of Medicine* 101, no. 10 (2008): 507–14. Researchers intentionally inserted eight errors into a 600-word paper and sent the paper to 300 reviewers. None of the 300 reviewers noted more than five of the eight errors, and 20 percent of reviewers failed to note any of the eight errors. The median number of errors identified by reviewers was two.

⁵³ Lutter and Zorn, “Reinforcing Reproducibility.”

Even in cases in which journal policies require authors to commit to sharing data on request, authors rarely follow through on those promises.⁵⁴ This finding has been instrumental in persuading journal editors to require that data be placed in repositories or otherwise made publicly accessible as a condition for publication, rather than just requiring authors to commit to sharing data on request.⁵⁵ The use of public repositories for the archiving of data has become virtually universal in evolutionary biology.⁵⁶ Some research shows that journal requirements to archive data increase data availability 1,000-fold compared with journals with no policy at all, suggesting that requirements for data archiving are very important.⁵⁷

Posting study data has proven to be effective at improving the reliability of research in economics. In empirical economics, a study of replication of well-regarded peer-reviewed research in a highly regarded journal suggested that inadvertent errors may be “commonplace rather than rare occurrences.”⁵⁸ The *AER* subsequently adopted a policy “to publish papers only if the data used in the analysis are clearly and precisely documented and are readily available to any researcher for purposes of replication.” Further, the *AER* conducted an evaluation of its policy and reported in 2011 that about 80 percent of 39 sampled papers met the spirit of the data availability policy and that 95 percent were substantially reproducible. Independent efforts at replication of nine selected papers found no serious errors (with almost exact replication for five studies and “several small discrepancies . . . immaterial to the

⁵⁸ Dewald, Thursby, and Anderson, “Replication in Empirical Economics,” 587.

conclusions” for another four).⁵⁹ This result represents a marked improvement relative to the results of the original 1986 study of replication by Dewald, Thursby, and Anderson. The difference is attributable, at least in part, to the change in the *AER*’s policy of data accessibility. Although analytic methods underlying papers published in the *AER* are different from those used in other disciplines, the experience of the *AER* suggests that data accessibility improves the reliability of the results of published, peer-reviewed scientific papers. Economic methods are broadly similar to those used in other types of scientific research in that they involve complicated statistical analyses of large volumes of nonexperimental data.

Administrative measures taken to date by the federal government have not been adequate to provide timely access to the data and code necessary to assess the independent reproducibility of scientific findings used in federal regulations. Yet the experience of scientific journals suggests that such replication is important because published articles have been found to contain errors with surprising frequency. Thus, one might ask what the benefits and costs are of a policy change that would require agencies to make publicly available all the data and code underlying their regulatory decisions. We next turn to the two parts of this question, focusing on the requirements of H.R. 1030 and S. 544, if extended to the federal government.

Costs of Greater Access to Data Relevant to Federal Rulemaking

The cost of providing access to data has been one of the primary concerns about requiring access to data used by the federal government.⁶⁰ H.R. 1030 and S. 544 would require the EPA to ensure that the data and computer code underlying any scientific research that an agency relies on in a “risk, exposure, or hazard assessment, criteria document, standard, limitation,

⁵⁹ Moffitt, “Report of the Editor.”

⁶⁰ A. A. Rosenberg et al., “Congress’s Attacks on Science-Based Rules,” *Science* 348, no. 6238 (2015): 964–66.

regulation, regulatory impact analysis, or guidance” is publicly available online. According to the Congressional Budget Office (CBO), “Based on information from EPA, CBO estimates that the agency would spend, on average, \$10,000 per scientific study for activities to meet the bill’s requirements. Specifically, such funding would cover the costs of obtaining all of the underlying data used in a study, reviewing the data to address any confidentiality concerns, formatting the data for public access, providing access to the computer codes and models used in the study’s analysis, and providing descriptions and documentation on how to access the data. Such activities could entail correspondence and negotiations with study authors and publishers and computer processing services to construct and maintain databases to store study-related information.”⁶¹ On the basis of that number and an estimate that the EPA references about 25,000 scientific studies per year in its rulemaking, CBO estimates that it would cost the EPA about \$250 million per year to comply with the requirements of the bills if they were enacted.⁶²

We develop an alternative and more transparent estimate of the costs of complying with those bills using estimates that the EPA has already developed for existing requirements that certain firms submit data. The costly activities and services that need to be performed to provide data access can be divided into two categories—data collection and data accessibility. Data collection includes most of the activities listed by CBO:⁶³ correspond with researchers and publishers to obtain the data, review the data for confidentiality concerns, format the data for public access, publicly post the computer code and models used in each study’s analysis, and provide descriptions and documentation on how to obtain the data. Data accessibility includes

⁶¹ CBO, “Cost Estimate, S. 544, Secret Science Reform Act of 2015,” June 5, 2015.

⁶² *Ibid.*, 3.

⁶³ *Ibid.*, 2.

the last activity mentioned by CBO: provide “computer processing services to construct and maintain data bases to store study-related information.”⁶⁴

When federal agencies require that industries or individuals provide information to the government, under the provisions of the Paperwork Reduction Act they must estimate the amount of time needed to provide the information. The EPA’s Health and Safety Data Reporting Rule (40 C.F.R. 716), most recently updated in 2012, requires the chemical industry to undertake activities similar to the data collection activities that the EPA would need to perform under H.R. 1030 and S. 544.⁶⁵ The rule requires manufacturers, processors, and distributors to identify any health and safety studies in their possession that relate to the health or environmental effects of certain chemical substances and mixtures, to copy and summarize the relevant studies, to make lists of studies that are currently in progress, and to review the studies for confidential business information.

The EPA’s supporting statement for its information collection request under the Paperwork Reduction Act gives the number of hours that the EPA estimates for data collection activities. The following estimates are from the EPA’s 2015 supporting statement for the Health and Safety Data Reporting Rule.⁶⁶ The EPA estimates that it would take chemical manufacturers and processors 3.0 hours to determine which of their locations might have relevant studies, plus 4.5 hours to search through the files at those locations for the relevant studies. Those activities should roughly correspond to the efforts that a federal employee would need to spend communicating with researchers and publishers to locate the data underlying a published study and to obtain the data for compliance with a data access policy.

⁶⁴ Ibid.

⁶⁵ EPA, “Health and Safety Data Reporting; Addition of Certain Chemicals,” 77 Fed. Reg. 71561–67 (December 3, 2012).

⁶⁶ EPA, “Supporting Statement for a Request for OMB Review under the Paperwork Reduction Act,” August 31, 2015.

The EPA estimates that it would take chemical manufacturers and processors 1.0 hour to review each study for confidential business information. That should closely correspond to the amount of time needed for a federal employee to review study data for confidentiality concerns in preparation for public disclosure under a data access policy.

The EPA estimates that it would take chemical manufacturers and processors 1.0 hour to photocopy all relevant studies for submission to the agency. Given modern technology, by the time research has been published, almost all relevant underlying data and computer code and models will be in electronic format, so photocopying will be unnecessary. However, formatting unformatted data for public access can take a significant amount of time. In the absence of better information on this point, we surmise that formatting unformatted data and making the analytic models and computer code used in EPA analyses available may, in some cases, take 10.0 hours per study.

The EPA estimates that it would take chemical manufacturers and processors 12.0 hours to make a robust summary of the studies they would submit to the agency. That should roughly correspond to the amount of time needed for a federal employee to provide descriptions and documentation on how to access the data. We note that the level of effort and education necessary to provide a robust summary of scientific research is significantly greater than that needed to write metadata descriptions of study data and instructions on how to make the data available for use by the public. Based on the EPA's estimates, we can presume that the data collection activities needed to make public the data underlying the studies that the EPA uses in its rulemaking would take 30.5 hours per study.

In the same information collection request, the EPA explains how it calculates the monetary cost of paperwork processing activities that the agency must perform for its Health and

Safety Data Reporting Rule. The EPA uses the basic hourly wage for a Grade 13, Step 5 federal employee and adds 60 percent to account for benefits and overhead (the nonwage costs of employee time).⁶⁷ The Office of Personnel Management’s 2015 General Schedule Locality Pay Table for the Washington–Baltimore–Northern Virginia area lists that basic hourly wage as \$49.32.⁶⁸ Adjustment for benefits and overhead brings the full labor cost to \$78.91 per hour. At that rate, the 30.5 hours spent on data collection activities would cost \$2,407 for each study relied on by the EPA.

Once the EPA collects and prepares the data for public posting, there will be a cost for storage and maintenance of the data for public accessibility. Researchers at Indiana University have estimated the cost of constructing and maintaining a scientific data repository large enough to contain the data for 64,340 scientific publications, with data files of 32 GB per publication.⁶⁹ The average annual number of new research publications supported by National Science Foundation funding is 64,340, and 32 GB is the average size of a dataset associated with such research.⁷⁰ The Indiana University researchers estimate the cost of providing storage, maintenance, and access to the data for each publication to be \$151.⁷¹

Based on this information, we estimate the total cost to the EPA for data collection and public accessibility would be \$2,558 per study, or about 26 percent of the \$10,000 per study cost estimated by CBO. These cost estimates (both CBO’s estimate and the one we present here) assume a baseline of no public access to the EPA data. We estimate, however, that \$592 (or 23

⁶⁷ Ibid., 15.

⁶⁸ Office of Personnel Management, “Salary Table 2015-DCB, Incorporating the 1% General Schedule Increase and a Locality Payment of 24.22% for the Locality Pay Area of Washington-Baltimore-Northern Virginia, DC-MD-VA-WV-PA, Total Increase: 1%, Effective January 2015,” accessed July 29, 2016.

⁶⁹ Beth Plale et al., “Repository of NSF-Funded Publications and Related Datasets: ‘Back of Envelope’ Cost Estimate for 15 Years,” March 2013.

⁷⁰ Ibid.

⁷¹ Ibid., 8.

percent) of the total cost is just for obtaining the data. To the extent that the agency uses the same scientific research in its decision making regarding multiple rules, the cost of making research data publicly accessible would be less than \$2,000 per study in those cases, or less than 20 percent of the cost estimated by CBO. Finally, to the extent that study authors posted the necessary data when their studies were published, the costs would be lower still. Many journals require authors to post their supporting data as a condition of publication.

CBO's cost estimate of \$250 million per year for the EPA to comply with H.R. 1030 and S. 544 depends not only on the cost per study but also on the number of studies that the EPA relies on per year. CBO estimates that the EPA uses an average of 25,000 studies per year, based on a midpoint of 12 to 50,000 studies referenced for two different regulations.⁷² We can use information from Regulations.gov to make a more transparent estimate. During the 10 years between January 1, 2005, and December 31, 2014, Regulations.gov listed 177,772 documents as being placed in the EPA's dockets and categorized as "Supporting and Related Material." That category includes some scientific research, some documents summarizing many pieces of scientific research, and many other nonscience-related documents such as administrative documents produced by the agency. A reasonable estimate is that each supporting document represents a single piece of scientific research. In this case, the EPA would reference, on average, 18,000 pieces of scientific research each year.

Using any estimate of the number of pieces of research *referenced* by the EPA is, however, very likely to be an overestimate of the number of pieces of research that would be covered by the texts of H.R. 1030 and S. 544. Both bills refer to research "relied upon" by the agency. The bills do not define the phrase or clarify what research is included by the term, but it

⁷² CBO, "Cost Estimate, S. 544."

is reasonable to interpret the phrase “relied upon” as more narrow than referenced. The agency may reference many pieces of research that are related to a rulemaking but that it does not truly rely on to influence or justify a provision of the rule. For example, all of the EPA’s recent National Ambient Air Quality Standards rules present estimates of the costs to comply with Executive Order 12866, but these costs are irrelevant during judicial review.⁷³

Assuming a cost of \$2,558 per study, our estimate of the total annual cost for the EPA to obtain and post the data for the amount of scientific research that the agency has traditionally cited per year would be \$46 million. In its estimate, CBO mentions that costs over time would decline; once data had been obtained and posted for a study, there would be no additional cost to relying on that study again. The same would be true of our estimate.

The EPA may find that it is unable to obtain the underlying data for many scientific studies. Researchers have shown that, even when authors say their data are available on request, a large percentage of authors do not provide data on request.⁷⁴ They do not respond; they respond after months of delay; or they respond without sharing their data. If this is the case with research that the EPA wants to rely on, the EPA’s costs associated with such studies will only be \$592 for attempting to obtain the data and a small additional amount for asking the authors repeatedly. Based on the studies that have attempted to obtain access to data from peer-reviewed studies, we estimate that after spending 7.5 hours attempting to obtain data from study authors, the EPA will receive data for only 20 percent of the requested studies.⁷⁵ In that case, we estimate that the full \$2,558 cost per study will apply to only 3,600 studies per year (20 percent of 18,000)

⁷³ Whitman, Administrator of Environmental Protection Agency, et al. v. American Trucking Associations, Inc., et al., 531 U.S. 457 (2001).

⁷⁴ Timothy H. Vines et al., “The Availability of Research Data Declines Rapidly with Article Age,” *Current Biology* 24, no. 1 (2014): 94–97, and Youngseok Kim and Melissa Adler, “Social Scientists’ Data Sharing Behaviors: Investigating the Roles of Individual Motivations, Institutional Pressures, and Data Repositories,” *International Journal of Information Management* 35, no. 4 (2015): 408–18.

⁷⁵ Ibid.

and that the \$592 cost of attempting to obtain the data will apply to 14,400 studies per year (80 percent of 18,000), for a total cost of less than \$18 million.

Those who object to H.R. 1030 and S. 544 say that, when the EPA is not able to use scientific studies because supporting data are not available, it will “weaken the ability of science to inform federal rule-making.”⁷⁶ Such a claim seems to ignore the fact that a large percentage of published studies are unreliable. Further, the willingness to make data available is related to the strength of the evidence and the quality of reporting of the statistical results.⁷⁷ So one may presume that regulatory policies are more likely to be based on valid scientific relationships where data are available.

Benefits of Greater Access to Data

Public access to the data underlying studies used by federal agencies in making significant public policies may lead to increases in the true net benefits of federal policies by helping to ensure that the policies are based on valid science and not on published studies with irreproducible results.

Available data let us calculate how large the increases in net benefits of regulations from improved reproducibility would need to be to exceed the costs of providing this greater reproducibility. To calculate this increase, we begin with a 2014 OMB report that states that the EPA’s estimates of the annualized benefits of 34 major rules, finalized by the EPA between October 1, 2003, and September 30, 2013, were \$165 billion to \$850 billion.⁷⁸ This report also states that the estimated annualized costs for major rules issued during that decade were \$38 billion

⁷⁶ Rosenberg et al., “Congress’s Attacks.”

⁷⁷ Jelte M. Wicherts, Marjan Bakker, and Dylan Molenaar, “Willingness to Share Research Data Is Related to the Strength of the Evidence and the Quality of Reporting of Statistical Results,” *PLOS ONE* 6, no. 11 (2011): e26828, and Moffitt, “Report of the Editor.”

⁷⁸ OMB, “2014 Report to Congress on the Benefits and Costs of Federal Regulations and Unfunded Mandates on State, Local, and Tribal Entities,” June 15, 2015.

to \$46 billion. Dividing the benefits and costs for the 10 years of rules suggests that the annual net benefits of these major rules are \$12 billion to \$81 billion, a range derived by subtracting the largest cost estimate from the smallest benefit estimate and the smallest cost estimate from the largest benefit estimate. Improvements in reproducibility can be thought of as increasing the net benefits of regulations because they would avoid situations in which costs or benefits are wrongly estimated to occur or in which regulatory costs are imposed without corresponding benefits. More specifically, we can calculate an increase in existing net benefits from greater reproducibility, which, if it occurred, would cover the costs of obtaining the data and making the data available.

To address fully the uncertainty in such a calculation, we consider both the range of uncertainty in annual net benefits of the EPA's rules and the uncertainty in the costs of providing accessibility to the data underlying those rules. As just discussed, the baseline annual net benefits could be either \$12 billion or \$81 billion, as in two rows of table 3. Similarly, the incremental cost of providing accessibility could be either of the two estimates presented in the last section (\$18 million or \$46 million) or CBO's estimate of \$250 million. We represent these possibilities as three columns in table 3. The content of each of the six cells in the table represents how large the incremental improvement in annual net benefits from the EPA's rules would have to be for such improvements to outweigh the costs of achieving them. As shown, an improvement in net benefits of 0.02 to 2.08 percent would imply that the net benefits of requiring data access are positive.

These estimates are conservative insofar as they ignore the incremental net benefits of the 287 nonmajor final rules that the EPA issued during the 10-year period ending in September 2013.⁷⁹ The estimates also ignore other important benefits of transparency, public participation, and collaboration. Making the data publicly available to verify the findings of research that influences

⁷⁹ From a search of Regulations.gov, accessed January 19, 2016, <http://www.regulations.gov/#!searchResults;rpp=25;po=0;dct=FR;a=EPA;dk=R;pd=10%257C01%257C03-09%257C30%257C13;docst=Final+Rule>.

policy-making may increase the level of trust in federal policies. It is also likely that providing all sides of controversial issues with access to relevant scientific data would serve to focus debates more on strengthening the relationship of policies to reproducible science.

Table 3. Percentage Increases in Estimated Regulatory Net Benefits Needed to Equal Various Estimates of the Cost of Data Access

Annual net benefits of new EPA regulations	Range of annual costs of ensuring access to data used in EPA regulations, %		
	\$18 million (assuming 20% data availability)	\$46 million (assuming 100% data availability)	\$250 million (CBO estimate, assuming 100% data availability)
\$12 billion	0.15	0.38	2.08
\$81 billion	0.02	0.06	0.31

Note: EPA = Environmental Protection Agency; CBO = Congressional Budget Office.

Source: Authors' calculations. See text for explanation.

Some research institutions assert that data availability enhances the scientific enterprise. As the National Institutes of Health explains, “Sharing data reinforces open scientific inquiry, encourages diversity of analysis and opinion, promotes new research, makes possible the testing of new or alternative hypotheses and methods of analysis, supports studies on data collection methods and measurement, facilitates the education of new researchers, enables the exploration of topics not envisioned by the initial investigators, and permits the creation of new data sets when data from multiple sources are combined.”⁸⁰ In the National Institutes of Health’s estimation, data sharing is required to speed the implementation of efforts to improve public policies.⁸¹ Beyond data sharing, providing public access to data in archives has important social benefits in

⁸⁰ National Institutes of Health, “NIH Announces Draft Statement on Sharing Research Data,” March 1, 2002. For some illustrations of the benefits of widely shared information, see the discussion on crowdsourcing by Jerry Brito in “Hack, Mash, & Peer: Crowdsourcing Government Transparency,” *Columbia Science and Technology Law Review* 9 (2008): 119.

⁸¹ “Data sharing is essential for expedited translation of research results into knowledge, products, and procedures to improve human health.” Quoted in National Institutes of Health, “Final NIH Statement on Sharing Research Data,” February 26, 2003. A similar point is made in the editorial, “Sharing Data to Save Lives,” *Nature Medicine* 21, no. 1235 (2015): nm.3991.

preserving the public stock of data, which otherwise is easily lost. As some evolutionary biologists explain, “Once the results of a study are published (if ever), the data on which those results are based are often stored unreliably, subject to loss by hard drive failure and (even more likely) by the researcher forgetting the specific details required to use the data. Moreover, most data are never available to the broader community, even after publication of the results; in most cases this unavailability is permanent due to the eventual death of the researchers involved. We are losing nearly all of this important legacy.”⁸² Of course, our estimates of the benefits of public access to data supporting federal regulatory decisions fall short of proving that the benefits outweigh the associated costs. They do show, however, the plausibility of such a claim.

Policy Recommendations

We show that, without public access to data, federal agencies are at risk of making policy decisions based on flawed information that can misdirect public and private resources. Moreover, public access to influential data is essential for agencies to maintain transparency and for the public to have a meaningful opportunity to participate in the regulatory process in an informed manner. A policy prescribing public access to data in studies that the EPA relies on for its rulemaking would likely offer net benefits with costs much smaller than those estimated by CBO for H.R. 1030 and S. 544. Still, those legislative proposals could be improved. We suggest several refinements to require public access for data used in federal rulemaking.

First, those legislative proposals should be broadened to cover all regulatory agencies. As we show here, papers in numerous scientific disciplines frequently contain irreproducible results,

⁸² Mark D. Rausher et al., “Data Archiving,” *Evolution* 64, no. 3 (2010): 603–4. Rausher et al. also note the value that data archives provide for reproducibility: “The availability of data for published studies also allows error-checking, making science more open, and letting us more rapidly reach accurate conclusions.”

making every federal agency that uses such research results vulnerable to having irreproducible results inadvertently influence policy.

Second, H.R. 1030 and S. 544 should target regulations that are economically significant as defined by Executive Order 12866. According to a search of RegInfo.gov, executive branch agencies published 66 economically significant final regulations in 2015; according to a search of Regulations.gov, the federal government published 1,124 final regulations during 2015. Even though economically significant regulations represent a small percentage of the regulations published, OMB considers them to account for the “vast majority of costs and benefits of new Federal regulations.”⁸³

H.R. 1030 and S. 544 should be amended to define “relied upon” to clarify that those legislative proposals affect only research that an agency uses to support or define key dimensions of policy. Research that merely provides background information relating to a policy is not influential research that is “relied upon” by an agency.

We are not recommending that agencies use the data obtained to replicate the results of studies, although it would be a sensible approach to show reasonable due diligence in regard to the scientific basis for public policies. We are, however, recommending that agencies seek to obtain the data underlying the studies that they rely on and then post the data publicly (after adopting appropriate protections for confidential business information and human subject and patient privacy), so that interested parties can attempt to replicate the results of the studies.

The existence of personally identifiable information (PII) in research data need not be an insurmountable barrier to broader access. A 2007 OMB memorandum with the subject “Safeguarding against and Responding to the Breach of Personally Identifiable Information”

⁸³ OMB, “Draft Report to Congress on the Costs and Benefits of Federal Regulations,” 62 Fed. Reg. 39366 (July 22, 1997).

recognizes that different data have different levels of impact with PII generally having moderate or high impact.⁸⁴ OMB should also instruct the agencies to maximize access to such data if they are used by a federal agency in rulemaking. Depending on the risks to privacy posed by the PII at issue, OMB should encourage agencies to select controls from a suite of measures that can be adopted to protect PII. The range of potential measures includes the following:

- requiring applications for access,
- imposing nondisclosure agreements,
- requiring online training for researchers on how to protect PII,
- implementing digital rights management technologies to prevent copying or redistribution of data,
- establishing physical controls on how data is stored,
- air-gapping computers used to access the data so that the data is never exposed to the Internet,
- restricting the printing of data,
- allowing access to data only at Federal Statistical Research Data Centers,
- allowing data to be used only for the purposes of replication, validation, and sensitivity evaluation,
- requiring background checks,
- requiring users to post performance bonds that will be forfeited if they inadvertently act to release PII,
- imposing civil or criminal penalties for the release of PII, and
- blacklisting violators from accessing PII in the future.

These special considerations for providing access to data containing PII cannot all be legitimately applied to all research data. Specifically, agencies cannot treat all data as though they contain equally sensitive PII.

⁸⁴ Clay Johnson III, “Memorandum for the Heads of Executive Departments and Agencies, Subject: Safeguarding Against and Responding to the Breach of Personally Identifiable Information,” May 22, 2007. OMB has long recognized that agencies should continue to protect the confidentiality of data to the degree promised to research subjects in the consent forms that were approved by the Institutional Review Board for the research.

Many federal agencies already provide access to data containing PII under certain circumstances and already have guidelines for handling PII. Examples include Internal Revenue Service data that include confidential information on income and audits,⁸⁵ Agency for Healthcare Research and Quality Medical Expenditure Panel Survey data that include medical diagnosis, treatment, and billing information,⁸⁶ and Bureau of Labor Statistics National Longitudinal Survey of Youth data that include criminal records, intellectual achievement statistics, sexual activity, and substance use.⁸⁷

The US Government Accountability Office has issued several reports in the last few years finding that federal agencies should protect PII better.⁸⁸ However, we could find no concerns the Government Accountability Office expressed in any of these reports about problems caused by providing access to data for research purposes.

When the PII in research data has the highest degree of sensitivity, so that the data are accessible only after an application process, we recommend that agencies significantly lengthen the standard 60-day comment period on proposed regulations in order to make allowances for the delays in accessing data.

In the event that authors do not supply their underlying data and an agency still believes that relying on the results of a study is warranted, the agency ought to explain why it has

⁸⁵ The following papers illustrate the use of such data: Jason DeBacker et al., “Once Bitten, Twice Shy? The Lasting Impact of IRS Audits on Individual Tax Reporting,” March 25, 2015; Raj Chetty et al., “Is the United States Still a Land of Opportunity? Recent Trends in Intergenerational Mobility,” *American Economic Review* 104, no. 5 (2014): 141–47.

⁸⁶ Agency for Healthcare Research and Quality, “Medical Expenditure Panel Survey Restricted Data Files Available at the Data Centers,” October 8, 2009, accessed June 29, 2016.

⁸⁷ US Bureau of Labor Statistics, “National Longitudinal Survey of Youth 1997 Topical Guide to the Data,” accessed June 29, 2016.

⁸⁸ See, for example, Government Accountability Office, “Information Security: IRS Needs to Further Improve Controls over Financial and Taxpayer Data,” March 2016; Government Accountability Office, “Federal Information Security: Agencies Need to Correct Weaknesses and Fully Implement Security Programs,” September 2015; Government Accountability Office, “Information Security: VA Needs to Address Identified Vulnerabilities,” November 2014; and Government Accountability Office, “Information Security: Agency Responses to Breaches of Personally Identifiable Information Need to Be More Consistent,” December 2013.

sufficient confidence to use the study. For example, the agency might note that other researchers have already reproduced the study results or that the data are available to third parties who sign nondisclosure agreements but that the data cannot be posted publicly.

Our recommendation is similar to one by the Administrative Conference of the United States. In 2013, this independent federal agency made recommendations regarding the use of science in administrative processes. Specifically, regarding policy making, the agency recommended that “agencies should seek to provide disclosure of data underlying scientific research, including both privately and federally funded research being considered by the agencies. Where practicable, such information should be disclosed in machine-readable format. Where such data are not subject to legal or other protections, and the data’s owners nonetheless will not provide such access, agencies should note that fact and explain why they used the results if they chose to do so.” Furthermore, “each agency should identify and make publicly available (on the agency website or some other widely available forum) references to the scientific literature, underlying data, models, and research results that it considered. . . . Consistent with the limitations in the Information Quality Act (IQA) guidelines . . . each agency should ensure that members of the public have access to the information necessary to reproduce or assess the agency’s technical or scientific conclusions.”⁸⁹

We want to clarify that we are calling for access only to the data necessary to replicate a study. We are not calling for access to all raw research data, which are all the data collected in the course of a research study. The data needed to replicate a study will usually have been processed to standardize, format, and organize the information for analysis and distribution and to exclude some raw data (e.g., lab notes that are not relevant to the results of the study as

⁸⁹ Administrative Conference of the United States, “Science in the Administrative Process,” June 14, 2013.

presented). This distinction is also made by journals such as *Science*⁹⁰ and *PLOSOne*,⁹¹ which require the posting of all data necessary for replication as a condition of publication.

Our recommendation is more targeted than the requirements of H.R. 1030 and S. 544 in that it would initially require public access to data underlying a much smaller set of regulatory decisions—those that are economically significant. This targeting would greatly reduce the expected number of actions subject to mandatory public data access.

That would be great, can you send us what you have, as well as the draft of the policy/proposed rule? I can work on the draft press release and talking points, while Daisy/Stephen focus on planning the event with John.
