Factors EPA may consider in the decision on whether to propose requirements for an industry sector include: 1) the amounts of hazardous substances released to the environment; (2) the toxicity of these substances; 3) the existence and proximity of potential receptors; 4) contamination historically found from facilities; 5) whether the causes of this contamination still exist; 6) experiences from Federal cleanup programs; 7) projected costs of Federal clean-up programs; and 8) corporate structures and bankruptcy potential. EPA's action will consider whether section 108(b) financial assurance will effectively reduce these risks. The proposed rule for the hardrock mining industry (82 Fed. Reg. 3,388) is contrary to the new administration's priority to focus on promoting U.S. businesses, industries, and job creation, and may add a potentially unnecessary additional financial burden on this industry group. Additionally, many of these facilities are already required to maintain financial assurance under State programs, raising the question of why additional Federal requirements are necessary.

Since many of the affected facilities are likely to be already required to have Resource Conservation and Recovery Act (RCRA) financial assurance, this requirement should be deemed unnecessary. It is not clear what additional benefit this regulation will provide or what additional activities it will cover.

Recommendation

AFPM does not support a rulemaking process for additional financial assurance at this time as the benefits have not been adequately demonstrated.

7. Elimination of "Once in Always in" policy for MACT rules

On January 3, 2007, EPA proposed amendments to the General Provisions to the national emission standards for hazardous air pollutants (NESHAP). The proposed amendments would replace the policy described in the May 16, 1995 EPA memorandum entitled, "Potential to Emit for MACT Standards—Guidance on Timing Issues," from John Seitz, Director, Office of Air Quality Planning and Standards (OAQPS), to EPA Regional Air Division Directors.¹³ This policy clarified when a major source of hazardous air pollutants can become an area source – by obtaining federally enforceable limits on its potential to emit – rather than comply with major source requirements. The proposed amendments would allow a major source to become an area source at any time by limiting its potential to emit HAPs to below the major source thresholds of 10 tpy of any single HAP or 25 tpy of any combination of HAPs. EPA also proposed revising tables in numerous MACT standards that specify the applicability of General Provisions requirements to account for the regulatory provisions proposed through this notice.

After receiving comments, no further action was taken on this proposed rule.

¹² Idaho Conservation League, et al., No. 14-1149 (D.C. Cir. 2016).

¹³ "Potential to Emit for MACT Standards – Guidance on Timing Issues," May 16, 1995, <https://www.epa.gov/sites/production/files/2015-08/documents/pteguid.pdf>.

Recommendation

AFPM recommends that EPA finalize this rule, as proposed to minimize the long-term compliance burden for sources that reduce emissions below the major source threshold. Finalizing this rule would provide a powerful incentive for facilities to reduce emissions to below the major source threshold, where possible and practicable.

8. Hazardous Waste Generators Improvement Rule

EPA recently published the Hazardous Waste Generators Improvement Rule.¹⁴ The rule is helpful in some respects but imposes additional burdens in others. For instance, it causes waste generators who violate even one “Condition for Exemption” to be treated as if it was a violation of a waste treatment, storage, and disposal facilities (TSDFs) requiring a RCRA permit even though waste generators are not required to comply with as many regulations as a TSDF. Violation of a single minor condition can therefore mean that an otherwise exempt facility must obtain a RCRA permit and can be cited for violations of numerous regulations and permit conditions. This regulatory change contradicts the clear intention of Congress that RCRA permits not be required of hazardous waste generators who do not treat, store, or dispose of the waste.

Recommendation

EPA should revise the provisions equating a generator violation as a TSDF violation and the need for so many conditions constraining RCRA generators from realizing the improvements in the final rule.

9. Site Remediation MACT

EPA has proposed changes to the NESHAP for the Site Remediation source category.¹⁵ The proposal would expand the regulatory program to include air emissions associated with site remediation conducted under the authority of CERCLA and RCRA. Eliminating the exemption will subject such remediation sites to new regulatory burdens and expense, when such sites are already subject to RCRA and CERCLA air emission controls. The agency itself acknowledges that the expansion is redundant and unnecessary, stating in the proposal that “[w]e do not anticipate any [Hazardous Air Pollutant (HAP)] emission reductions from the proposed removal of the RCRA/CERCLA exemption.” 81 FR 29825. Thus, by the Agency’s own admission, this is a proposed rule that, if finalized, would impose new regulatory burdens, yet achieve no environmental benefit.

Recommendation

AFPM supports withdrawing this proposed rule in its entirety and maintaining the current RCRA/CERCLA exemption.

¹⁴ 40 CFR Part 260-265; 40 CFR Part 268; 40 CFR Part 270; 40 CFR Part 279.

¹⁵ “National Emission Standards for Hazardous Air Pollutants: Site Remediation, 81 *Fed. Reg.* 29,821 (May 13, 2016).

10. EPA's Tentative Denial of a Petition to Expand the Corrosivity Characteristic to Include Solids

In 81 *Fed. Reg.* 21,295 (April 11, 2016), EPA responded to a court-ordered deadline and agreement to evaluate expanding the definition of corrosive hazardous waste (HW) (D002 waste code) to include solids. EPA proposed to reject the Public Employees for Environmental Responsibility (PEER) petition requesting this expansion on the grounds that it fails to demonstrate that the revisions are necessary to protect human health. Other programs, such as OSHA's worker safety regulations, address the petitioner's stated concerns as well.

Recommendation

AFPM supports EPA's denial of the petition, maintaining the current definition of the HW corrosivity characteristic.

11. Hazardous Waste Import-Export Rule

The proposed revisions of the existing regulations will require hazardous waste exporters and receiving facilities recycling or disposing hazardous waste from foreign sources to maintain a single publicly accessible Website ("Export/Import Web site") to which documents can be posted regarding the confirmation of receipt and confirmation of completed recovery or disposal of individual hazardous waste import and export shipments.

Recommendation

AFPM supports withdrawing this regulation as it will likely not add to protection of human health and the environment. The existing system of documentation under RCRA adequately tracks the fate of imported or exported hazardous waste.

12. Aquatic Life Ambient Water Quality Criterion for Selenium in Freshwater

EPA issued updated CWA guidance, which is used in setting water quality standards and is relevant to CWA discharge permits and other regulatory programs (e.g., RCRA ecological risk assessment).¹⁶

The updated criteria are overly conservative in the application of selenium standards to lentic and lotic water bodies and in the corresponding fish tissue standards, which are not applicable in all instances. Revised implementation guidance should clearly state that flexibility to evaluate area-specific appropriate fish species and area water body conditions is necessary and prudent. As an example, the recently issued criteria are based on warm water fish uptake; however, the regulations need flexibility to account for local sensitive aquatic species.

¹⁶ "Recommended Aquatic Life Ambient Water Quality Criterion for Selenium in Freshwater," 81 *Fed. Reg.* 45,285 (July 13, 2016).

Recommendation

AFPM supports a reevaluation of this guidance based upon more realistic assumptions, such as accounting for local sensitive aquatic species.

B. Fuels

Key Fuels Regulation facing AFPM members:

1. Renewable Fuel Standard (RFS) – 40 CFR Part 80, Subpart M

One of the biggest challenges American fuel manufacturers are experiencing today involves the regulatory conflicts and problems with the size and scope of EPA's RFS program. The RFS is an unworkable policy that disadvantages consumers, drives up costs, and fails to achieve its purported goals.

The Energy Independence and Security Act of 2007 (EISA) expanded the RFS to include a de facto mandate for 15 billion gallons of corn ethanol by 2015. EISA also established an advanced biofuels mandate that includes three subcategories: cellulosic biofuels, biomass-based diesel, and "other advanced." "Other advanced" biofuels have regulatory significance because the statutory sum of cellulosic biofuels and biomass-based diesel is less than the total advanced biofuels requirement and must be made up with ethanol derived from sugar, additional cellulosic biofuels, or additional biomass-based diesel. Under EISA, the total renewable mandate will increase to 36 billion gallons by 2022 unless EPA waives or revises the annual mandates. The Congressionally-forecasted quantities of "other advanced" biofuels are particularly problematic because the cellulosic industry failed to commercialize drop-in renewable fuels, such as cellulosic gasoline.

AFPM opposes government-mandated biofuel blending, which distorts the free market's efficient allocation of transportation fuels and disadvantages consumers. The statutory RFS provisions contain an aggressive schedule for mandating the use of a large amount of ethanol. Declining gasoline demand and increasing ethanol mandates under the RFS threaten our nation's fuel supply. Moving beyond the E10 blendwall¹⁷ is not feasible because higher ethanol blends are not suitable for widespread distribution given the incompatibility of these blends with the existing fleet of motor vehicles, small engines, marine engines, and fuel distribution infrastructure.

Recommendation

EPA should use realistic projections of the demand for gasoline/ethanol blends and E85, and for the production of cellulosic biofuel. The Agency should must use its waiver authority to reduce the advanced, cellulosic, and total renewable fuel obligations to ensure the overall mandate for renewable fuel does not exceed the E10 blendwall. EPA must continue to recognize the blendwall and realistic E0 demand and should not set an RFS mandate that would cause the average mandated ethanol content to exceed 9.7 percent of projected gasoline demand.

¹⁷ "E10" refers to a blend of 90 percent gasoline and 10 percent ethanol.

In addition, EPA should move the existing point of obligation to the position holder at the blending rack. This would make the RFS more equitable by leveling the playing field between refiner and large exempt blenders. AFPM petitioned EPA to move the point of obligation on August 4, 2016. EPA subsequently proposed a denial of the petition on November 22, 2016, and closed the comment period on February 22, 2017.

In addition to the RFS recommendations above, AFPM has additional suggestions for EPA fuels regulations that should be deleted/eliminated or modified, including:

Topic	Discussion	Recommendation
Winter Reformulated Gasoline (RFG) and winter conventional gasoline (CG) 40 CFR Part 80	<p>Currently, CG and RFG are segregated year-round. The RFG segregation restrictions are unnecessary because all RFG downstream of a refinery must meet RFG specifications anyway. Minor mixing of non-RFG products, as can occur in normal product distribution systems, that does not cause RFG to be off-spec with EPA compliance specifications (benzene, sulfur, and VOC-reduction) should not be prohibited.</p> <p>This will provide optimization of fuel distribution and storage through the reduction of the need to downgrade expensive RFG to lower-valued products (such as transmix or conventional gasoline).</p>	<p>Delete requirements to segregate winter RFG and winter conventional gasoline.</p> <p>Assuming EPA removes the distinction between RFG and conventional gasoline in the non-VOC season (winter), it also should:</p> <ul style="list-style-type: none"> • Remove the survey requirement for winter RFG (because there would not be winter RFG any longer) in 80.68; and • Adjust the total number of surveys and samples so that the sample size is based on a statistically supported calculation to provide the prescribed level of accuracy in the survey results. Any other current minimum sample requirements should also be removed.
The RFG survey oxygen program to verify downstream oxygenate blending 40 CFR Part 80	Since all RFG has been E10 since 2006, a retail survey is an unnecessary expense. The RFS regulations are requiring ethanol blending at or near the blendwall rendering the survey pointless and no longer necessary.	Eliminate the RFG survey oxygen program in 80.69.
Mandatory Greenhouse Gas (GHG) emissions reporting	EPA was required by the appropriations bill for FY 2008 (P. L. 110-161) to develop a program for reporting GHG emissions. Reporting	Delete requirements for mandatory GHG emissions reporting.

40 CFR Part 98	has been required for years without an associated GHG emissions control requirement.	
Fuel registrations 40 CFR Part 79	Refiners are required to submit duplicative information on multiple EPA reporting forms, resulting in redundant reporting requirements.	<ul style="list-style-type: none"> • Eliminate the Fuel Manufacturer Quarterly Report for Motor Vehicle Gasoline or Diesel Fuel as it serves no purpose or provides duplicate information (EPA Form 3520-12Q). • Eliminate the Fuel Manufacturer Annual Report for Motor Vehicle Gasoline or Diesel Fuel as it also serves no purpose or provides duplicate information (EPA Form 3520-12A).
Reid Vapor Pressure (RVP) of the complex model valid range for RFG 40 CFR Part 80	EPA has promulgated ranges for several gasoline parameters. One of these is a lower limit for RVP in the complex model at 80.45, 6.4 psi.	Change the lower RVP of the complex model valid range for RFG to 6.0 psi.
RFS program 40 CFR Part 80	Renewable volume obligations should not include transmix. Transmix is not gasoline or diesel fuel and cannot be used directly as a transportation fuel.	Allow refiners to back out transmix from their gasoline and diesel production when calculating their renewable fuel obligations (RVOs) in the RFS program.
Gasoline properties required for certification and reported to EPA in batch reports 40 CFR Part 80	<p>The only EPA compliance standards for gasoline are benzene, sulfur, and summertime volatility (RVP for conventional gasoline and RFG volatile organic compounds (VOC) reduction). Other gasoline parameters (<i>i.e.</i>, olefins, aromatics and distillation) are currently required to be reported to EPA for every batch of gasoline produced or imported. These other parameters were necessary for complex model compliance.</p> <p>However, the complex model is only used now for summer RFG VOC. The batch reports should be revised.</p>	<p>The following should be the <u>only</u> properties reported on batch reports:</p> <ul style="list-style-type: none"> • All batches – Sulfur and benzene • All summer batches – RVP • All summer RFG batches – VOC Reduction and supporting test results (oxygen, E200, E300, aromatics, and olefins) <p>In addition to removing the reporting requirements and obsolete regulatory certification sections, the regulations, primarily at</p>

		<p>§80.47, should be clarified that EPA-required tests need only be run if the property is used in determining compliance with an EPA standard or an EPA reporting requirement.</p> <p>This will reduce compliance exposure with regard to running an EPA-required test method incorrectly. For instance, we may still run distillation year-round for all gasoline batches, but running it flawlessly by the EPA-prescribed version of the D-86 test method would only carry compliance implications for summer RFG batches. Another value is <i>the complex model limits would no longer apply</i> for all conventional gasoline and for all non-VOC RFG, reducing a current refinery constraint.</p> <p>--- OR ---</p> <p>Eliminate gasoline batch reporting altogether</p> <p>The gasoline batch reports support the refiner's benzene, sulfur, and volatility compliance reporting. The annual attestation is sufficient to check that the refiner's testing records support the refiner's compliance with the standards. The batch reporting is duplicative and burdensome.</p> <p>The two options above reduce the number of parameters in</p>
--	--	---

		batch reports or eliminate batch reporting altogether and apply to individual batches and composites of batches.
Independent laboratory sampling and testing of RFG (or at least non-VOC RFG) 40 CFR Part 80	<p>In the early days of the RFG program, with uncertainty around how refinery labs would perform, the independent laboratory option seemed to make sense to help EPA evaluate if a particular refinery laboratory was having testing performance issues. Today, especially under the Tier 3 rule, refineries have more stringent lab performance requirements. The independent lab requirement no longer adds value and only causes extra cost and delay in producing RFG.</p> <p>This could reduce the cost of producing RFG, including the cost of independent sampling and testing, and reduce shipping delays while waiting for independent lab sampler.</p>	Eliminate independent laboratory sampling and testing of RFG (or at least non-VOC RFG).
The Substantially Similar (SubSim) Interpretive Rule 73 Fed. Reg. 22277 (April 25, 2008)	<p>The current SubSim Interpretive Rule refers to a 1988 version of ASTM D4814. Today's fuel is being manufactured to meet modern versions of D4814. Differences exist between the 1988 version and the current versions that cause sub-optimization of the fuel pool.</p> <p>This would enable greater optimization during fuel production by only having to meet a single, modern specification.</p>	Update the SubSim Interpretive Rule.
RFG reporting 40 CFR Part 80	AFPM would like to see the elimination of quarterly RFG reports, as annual reports are sufficient for EPA's statistical and enforcement needs.	Amend 40 CFR Sec. 80.75 to require annual reporting.
Volumetric Additive Reconciliations (VARs) 40 CFR Part 80	AFPM members are striving to reduce administrative tasks, and reduce compliance exposure with regard to ensuring each of the required elements are placed on a VAR record each month for each additive system. This	Eliminate required VARs.

	requirement is unnecessary to ensure compliance with the regulatory requirement that certified detergent additives be used in all gasoline.	
EPA administrative <i>preview</i> of Office of Transportation and Air Quality Registration (OTAQREG) registration changes	When a company submits a registration change, duly signed by the responsible corporate officer (RCO), such changes should be accepted as submitted, and should not be subject to an EPA review prior to making the changes effective. The delay caused by EPA's review/approval queue is unnecessary. If EPA reviews changes after they are effective and the changes are found to be in violation, the company should bear the burden of the erroneous submission. The main value of an electronic submission system should be speed. This value is negated when EPA previews everything before it is effective. AFPM requests a reduction in wait time to make registration changes.	Eliminate EPA administrative <i>preview</i> of OTAQREG registration changes.
Ultra low sulfur diesel (ULSD) 40 CFR Part 80, Subpart I	AFPM is seeking increased clarity around applicable requirements. Subpart I is riddled with expired requirements, making it very difficult for regulated parties (and the regulators) to understand the requirements.	Eliminate expired elements of 40 CFR Part 80 Subpart I (ULSD).
Detergent additive regulations 40 CFR Part 80	The "Interim" detergent additive program was implemented in 1996 (effective in 1997) at 80.161, but the requirements remain listed in the CFR. Retaining expired requirements in the regulations complicates a regulatory entity's compliance.	Eliminate §80.141 through §80.160.
Gasoline Toxics 40 CFR Part 80, Subpart J	40 CFR Part 80, Subpart J, Gasoline Toxics, was effectively replaced by Subpart L, Gasoline Benzene. Removal of this obsolete regulation will increase understanding of applicable requirements.	Eliminate 40 CFR Part 80, Subpart J, Gasoline Toxics.

Lead and phosphorous test methods 40 CFR Part 80	Section 80.3 references appendices of Part 80 as test methods to test for lead and phosphorus. These methods are antiquated and should be replaced with references to the appropriate ASTM test methods.	Eliminate §80.3 in 40 CFR (lead and phosphorous test methods).
RFS 0104 reports 40 CFR Part 80	All information for the RFS 0104 report comes straight from the EPA Moderated Transaction System (EMTS) except the volume of biofuel held at the end of the quarter and even that is not required for obligated parties. If the biofuel inventories are necessary, maybe it can be set up to enter that into EMTS, or have just a single annual report of inventories for non-obligated parties. EPA already has access to this information and should not maintain a separate reporting requirement for information it already has in its possession.	Eliminate the quarterly RFS 0104 reports.
Downstream Oxygenate Blending 40 CFR Part 80	<p>There are four separate programs that govern the inclusion of downstream oxygenates in gasoline, each with distinct testing requirements: 1) anti-dumping, 2) RFG, 3) gasoline benzene and 4) gasoline sulfur</p> <ul style="list-style-type: none"> - Conventional blendstock for oxygenate blending (CBOB) may be included if it meets requirements of 80.101(d)(4)(ii) - must demonstrate added by refiner or have contract with downstream oxygenate blending (currently only 18 percent accounted for) - RFG 80.69(a) – hand blend and in-use retail survey to ensure oxygenate was added downstream - Tier 2 gasoline sulfur allowed 0 ppm ethanol in calculations, now Tier 3 (beginning 2017) requires refiners to test for ethanol content or assume 5 ppm (this also necessitates testing neat reformulated blendstock for oxygenate blending) 	<p>Simplify and modernize the programs, ideally using one methodology for CG/RFG, which covers all programs and would maintain the level of stringency.</p> <p>Options: Test hand blends for all gasoline (instead of only for RFG), or refinery gate sampling and testing for all gasoline.</p>

	<p>(RBOB)/CBOB, in addition to hand blended sample testing required per 80.69, etc.)</p> <ul style="list-style-type: none"> - Gasoline benzene allow refiners to be included in RFG (if 80.69 is met) or 80.101(d)(4) is met <p>Many reporting options and requirements create burden, causes refiners to blend conventional gasoline (CG) that is cleaner than RFG, and test both neat and oxygenated blended samples.</p>	
Emergency response streamlining and enhancement 40 CFR Part 80	<p>The variation of procedures in response to a temporary fuel supply interruption (such as a hurricane) from state to state creates challenges from a timing and complexity standpoint. In some states, response is only available if the interruption/shortage is due to a named storm, and some states would only offer enforcement discretion. In addition, the level of approval varies from a state agency approval to needing the Governor's signature (always slower), etc. There should be a consistent, Federal process, and in return, EPA needs to let states drop any NAAQS exceedances during this time from Attainment determinations. This would remove the major concern for states in these waivers being granted by removing the potential penalty for these actions.</p>	<p>A Federal process to either self-implement or receive rapid approval for summer gasoline RVP waivers in case of temporary supply interruptions.</p>
Butane blending 40 CFR Part 80	<p>Six reports are required for butane blending and as a result, there is much redundancy.</p>	<p>Streamline and eliminate redundancies of butane blending reporting requirements.</p>
Gasoline Loading Racks 40 CFR 63 Subpart XX	<p>There needs to be an efficient means for temporary relaxation of some of the Federal rules on Gasoline Loading Racks (40 CFR 63 Subpart XX) to allow for open dome loading during periods of supply interruption. The regulation requires loading to be controlled using a vapor recovery</p>	<p>The regulations should recognize temporary situations when there is a supply disruption.</p>

	system, and that greatly slows down the loading time and truck turnaround. EPA offers enforcement discretion, which is not sufficient. Perhaps states should be authorized to grant permission, since they have a better grip on local conditions and needs than Federal policymakers.	
--	--	--

C. TSCA and LCSA Implementation

The following comments are organized by opportunities that AFPM believes EPA can take advantage of when finalizing regulations to implement the LCSA. Comments on EPA's existing chemical work plan and new chemicals program are also included. AFPM is also commenting on certain policies, procedures and guidance that are integral to TSCA but have not been included in any existing or proposed regulations. AFPM sees a unique opportunity for EPA to minimize regulatory burdens as these regulations are implemented.

I. Implementation of the LCSA

- a) AFPM supports EPA's efforts to implement the LCSA, wants the subsequent regulations to reflect the intent of Congress, and believes that EPA should meet the deadlines outlined in the statute.**

The LCSA requires EPA to promulgate a series of regulations ranging from modernizing the TSCA Inventory to outlining the processes for prioritization of substances, risk evaluation and collection of fees. AFPM fully supports the Agency's efforts to propose the rules and meet the deadlines imposed by LCSA.

While it is important to meet statutory deadlines, it is equally important to reflect the intent of Congress in any regulations required by a particular statute. AFPM believes that if the Agency is fully transparent throughout the rulemaking process, any deviation from the statutory requirements, including deadline obligations, will be understood by stakeholders.

- b) EPA has an opportunity to reduce regulatory burdens when finalizing rules that have been proposed to implement the LCSA provisions.**

EPA has proposed rules to modernize the TSCA inventory, outline the process for prioritization of substances for further work, and establish a framework for risk evaluations of high priority substances. AFPM has commented on each of those proposals, outlining concerns and offering constructive suggestions. Although some stakeholders may say that congressionally mandated regulations are outside of the scope of EO 13777, AFPM disagrees. The final rules ("TSCA Inventory Notification (Active-Inactive) Requirements" [EPA-HQ-OPPT-2016-0426]; "Procedures for Prioritization of Chemicals for Risk Evaluation Under the Toxic Substances Control Act" [EPA-HQ-OPPT-2016-0636]; and, "Processes for Risk Evaluation and Chemical Prioritization Under the Amended Toxic Substances Control Act" [EPA-HQ-OPPT-2016-0400]),

which are expected in June 2017, should meet the general objectives of EO 13777, which are to reduce regulatory burdens. Below are several examples of where regulatory burdens could be reduced while finalizing proposed rules under TSCA.

c) To reduce the burdens associated with new chemical reviews, prioritization of existing substances for work, and the risk evaluation process, EPA should revise its interpretation of the LCSA safety standard’s “conditions of use.”

In general, EPA’s interpretation of “conditions of use” is overly broad and goes well beyond what Congress intended when creating the safety standard. This interpretation has already created additional and unnecessary burdens on the regulated community as well as the Agency. This effect can be seen in the new chemicals program, where EPA is considering uses beyond those identified by the manufacturer. The result has been lengthy reviews, as well as demands for complex toxicity testing (i.e., sub-chronic and chronic inhalation studies) that do not reflect potential exposures from uses identified in the premanufacture notice (PMN).

When creating LCSA, Congress did not intend a dramatic change in the safety standard, nor did it intend for EPA to significantly change the way it conducts risk evaluations for new and existing chemicals. The intent was to allow EPA to more efficiently use its TSCA regulatory tools and to make the Agency’s processes and decision-making more transparent and based on the best available science.

There are no provisions in the LCSA that require EPA to consider all conditions of use, nor was that the intent of Congress. In fact, at Section 6(b)(4)(F)(ii) the statute explicitly mentions “sentinel exposures” when requiring EPA to describe its consideration of exposures. Sentinel exposures are employed to represent broad categories of use so that the assessor does not have to go into each specific subcategory of use. Sentinel exposures represent realistic upper-bound exposures within those broad use categories. The exposures are expected to be much greater than other sources or pathways, so if the margin of exposure is at an acceptable level, there is no need to delve into each and every type of use or background source. This approach reduces the regulatory burden on industry and EPA, while ensuring an effective health and safety regulatory program.

AFPM interprets the inclusion of sentinel exposures as a clear message to the Agency that it should not include every conceivable use when determining the scope of a risk evaluation. The intent of Congress was to allow EPA flexibility in its approach to risk evaluation so that the Agency could maximize the efficient use of resources.

The move away from EPA’s standard risk assessment practices has already brought the new chemical review process to a sudden halt, impeding innovation in the US and affecting supply chains throughout the economy. The result of EPA’s misinterpretation of conditions of use has wasted time and resources by not focusing on the uses and exposures that present the greatest risk. EPA’s new approach lacks the type of focus the Agency had for years in the new chemicals program and in other previous risk assessment activities. Prior to EPA’s move away from its established risk evaluation approaches, nearly ten times the number of new and often safer chemicals were introduced into the US on an annual basis than in Europe. Currently, the backlog of new chemicals in the review process numbers in the hundreds, which is unprecedented. If this

trend continues, by the end of the year Europe will outpace the US in the number of new chemicals entering commerce, which is directly linked to American innovation.

EPA should not consider uses and exposures outside of those identified by the PMN submitter. That will alleviate the backlog of substances in the new chemical review process and return the Agency to its successful and internationally acclaimed approach to new chemical reviews. Importantly, AFPM is not suggesting that EPA disregard “known, intended, or reasonably foreseen uses” of existing chemicals; rather, the Agency should more narrowly exercise and clearly articulate its discretion in the prioritization and risk evaluation process rules to use qualitative, semi-quantitative and other approaches when evaluating hazards, exposures and risks.

d) Acceptance of robust summaries in lieu of full study reports will reduce regulatory burdens on EPA, the regulated community and other interested stakeholders.

The concept of a robust summary was developed and established as part of the High Production Volume (HPV) Challenge, which was a voluntary program that allowed sponsors to voluntarily submit hazard information to EPA on high production volume chemicals. The idea was to reduce the burdens of gathering full study reports, submitting the full reports to EPA, and Agency staff reviewing them. The format and content of robust summaries was the result of a multi-stakeholder group and designed to provide a technically qualified reviewer with enough information to make a scientific judgment on the study methods, reliability and results. Since then, the concept of a robust summary has been adopted globally through individual environmental authorities, as well as the Organization for Economic Cooperation and Development (OECD) and United Nations environment programs.

Full study reports from laboratory toxicity studies are voluminous and have significant monetary value, often into the hundreds of thousands and even millions of dollars. Great care must be taken to protect that private property and its contents, which creates a burden on both industry and EPA. In addition, reviewing the volumes of underlying data found in a study report should only be reserved for cases of scientific ambiguity, questionable scientific integrity or where there is significant disagreement with the interpretation of results.

EPA adoption of robust summaries will bring about greater consistency in regulatory approaches with countries that have strong trade relationships with the US. Robust summaries will significantly reduce potential burdens on EPA and the regulated community. AFPM believes that there are no issues with adopting the use of robust summaries for actions under TSCA Sections 4, 5, 6, and 8.

e) EPA can reduce the burdens associated with risk evaluations by allowing manufacturers to voluntarily submit risk evaluations conducted by EPA contractors and other approved technical organizations.

Part of the risk evaluation process outlined in TSCA Section 6, as modified by LCSA, is a process by which manufacturers can voluntarily request a risk evaluation on a chemical. The statute directs EPA regarding the number of chemicals that can go through this process at any one time, but gives EPA discretion as to how the process is implemented. AFPM urges EPA to consider expediting the approval or disapproval of dossiers that have already undergone a risk evaluation by an EPA-approved contractor or other technically qualified convener of risk experts. This would create a

pathway for a series of risk evaluations that is parallel and concurrent to the risk evaluations conducted by EPA.

AFPM member companies have a tremendous amount of experience in a variety of different programs that regulate chemicals in commerce. Petrochemicals, refining streams and derivative products tend to be well-studied and have been reviewed through a variety of programs. The dossiers prepared for other programs, such as REACH in Europe, can be easily modified for an evaluation under TSCA. While EPA is busy conducting evaluations on chemicals it selects as high priorities, industry should be afforded the opportunity to hire an EPA contractor or other technically qualified consultancy to convene a panel of experts and conduct a risk evaluation that could be submitted for expedited evaluation by the Agency.

A simple and straightforward process would include the following:

1. Company or consortium retains an EPA contractor or other technically qualified consultancy to conduct a risk evaluation on a chemical, which follows the procedures outlined by EPA;
2. EPA contractor convenes a panel of technical experts to review the dossier of hazard and exposure information;
3. Expert panel reaches a conclusion based on the TSCA safety standard;
4. EPA contractor packages the dossier, list of panelists (including qualifications), review procedures and outcome for submission to EPA;
5. Company or consortium submits package to EPA for expedited review; and
6. EPA makes decision whether chemical meets safety standard.

f) EPA can reduce the burdens associated with modernization of the TSCA Inventory.

AFPM generally supports the approach proposed by EPA to create a list of substances currently in commerce, which will become the Active portion of the TSCA Inventory. AFPM has identified opportunities where EPA can reduce the reporting burden when creating the Active list.

The intent of Congress when crafting TSCA Section 8(b) was to create and continually update an Inventory of substances actually in commerce. It is widely agreed by Congress and stakeholders that the TSCA Inventory no longer reflects an accurate depiction of chemicals in commerce; therefore, Congress added provisions in the LCSA to modernize (reset) the TSCA Inventory. Those provisions are quite clear that the sole purpose of the Inventory reset is to create an Active Inventory that lists chemicals in commerce, and create an Inactive Inventory that lists chemicals that may have been in commerce at some point in the past. Only the chemical names are necessary to create the Active and Inactive lists. Any other information contradicts the objectives set out in Section 8(a)(5)(A) to avoid unnecessary reporting, reduce the costs of compliance and to limit reporting to the entities most likely to have that information.

g) EPA should only require submission of the substance that was manufactured and not require date ranges when reporting substances to the Active portion of the Inventory.

In Unit I.C. of its Federal Register notice, “TSCA Inventory Notification (Active-Inactive) Requirements” at 82 FR 4255 (January 13, 2017), EPA first mentions a requirement for reporting the “date range when manufacture occurred,” because the Agency could “obtain confirmation that the chemical substance in question had indeed been manufactured or processed” during the 10-

year time period. EPA reiterates the proposed inclusion of date ranges in Unit III.C. and adds that the information is necessary to limit erroneous reporting outside of the look-back period, ensure the accuracy of the notices, and increase the reliability of commercial activity designations. AFPM does not agree that the reporting of date ranges will achieve any of these objectives.

Date ranges for manufacturing activities are typically not retained for 10 years, so it is very unlikely that companies will have that information. Because companies are unlikely to have date ranges going back 10 years, that information will do nothing to limit reporting of manufacture beyond the 10-year period – i.e., the erroneous reporting.

Date ranges will not ensure the accuracy of information contained in Form A. Companies will already be required to sign a statement verifying the accuracy of reported information. AFPM does not see how adding a date range assures Inventory accuracy.

Date ranges have no impact on the reliability of commercial activity designations. Again, companies will already be signing a statement that assures the accuracy of the submitted information, so adding date ranges does not verify whether a substance was produced or imported. In fact, knowing whether a substance was produced or imported has no purpose in creating an Active Inventory. Only the identification of the substance is necessary for the Inventory reset.

In summary, AFPM sees no purpose for requiring date ranges in Form A submissions. That information will be difficult, if not impossible to ascertain, which presents an unnecessary burden on reporters and runs counter to the objectives set forth in Section 8(a)(5)(A). Eliminating date ranges will reduce the cost of compliance and avoid unnecessary reporting, both of which are objectives outlined in Section 8(a)(5)(A). It will also avoid a situation where EPA is requiring reporting from a party not likely to have that information, which is another objective outlined in that subparagraph.

h) EPA should not require the type of commercial activity when reporting a substance to the Active portion of the Inventory.

Knowing whether a substance was produced domestically or imported is not necessary to determine whether the substance was in commerce during the past 10 years. The purpose of the Inventory reset is solely to create a list of chemicals that are active in commerce. It doesn't matter if the chemicals were produced or imported, since both fall under the definition of "manufacture." AFPM urges EPA to delete the requirement to report the type of commercial activity, which will further the Agency's goals of reducing "unnecessary" reporting and reducing the cost of compliance, both outlined explicitly in Section 8(a)(5)(A).

i) EPA should ensure that a company no longer intending to sell a chemical into commerce is not responsible for reporting to the Inventory reset, even if that company manufactured the substance within the past 10 years.

There are many reasons that businesses cancel or divest products or product lines. In cases where businesses or product lines are sold or merged, the new entity that intends to sell those substances into commerce should be responsible for and be afforded the opportunity to report for the purpose of being placed on the Active portion of the Inventory. The company that sold the business or product line should not be responsible for reporting because there is no longer intent to distribute

that substance for commercial purposes and there is a high likelihood that the pertinent records were transferred as part of the business transaction. One of the objectives of TSCA Section 8(a)(5)(A) is to limit reporting to the entity most likely to have the information. In this case, the seller would not likely have that information.

Another example is a company experiencing a temporary domestic supply disruption sometime in the past, which could have been the result of a supply shortage in the US, and then being forced to obtain a substance from a non-domestic source for a limited time. The company had and still has no intent to import in the future, as this was a temporary situation. The company should not be required to report that substance to the Active Inventory if there was and still is no intent to distribute the substance in commerce in the future.

j) Polymers on the current TSCA Inventory should also appear on the Interim Active Inventory.

Polymers on the TSCA Inventory but not subject to Chemical Data Reporting (CDR) rule requirements are excluded from EPA's proposed Interim Active Inventory, including polymers with a "Y" designation. Many polymers were placed on the TSCA Inventory before EPA promulgated the polymer exemption under Section 5. These low risk polymers would likely meet the standard for the polymer exemption today. The purpose of the polymer exemption was to alleviate the need for EPA to expend resources reviewing these low-risk substances under the new chemicals program. These polymers should appear on the Interim Active Inventory to help avoid unnecessary reporting and reduce the cost of compliance, which are objectives found in Section 8(a)(5)(A).

k) AFPM commends EPA for eliminating the requirements for substantiation of CBI claims when reporting to the Active Inventory, especially for substances reported during the 2016 CDR reporting cycle, because those claims were recently substantiated.

In Unit III.E. of its Federal Register notice, "TSCA Inventory Notification (Active-Inactive) Requirements" at 82 FR 4255 (January 13, 2017), Summary of the Proposed Rule, EPA does not include mandatory substantiation requirements for CBI claims for chemical identity made on Form A. Under a separate rule, to be promulgated at a future date, EPA will propose the substantiation requirements for those claims. AFPM generally supports the decision to postpone substantiation requirements for CBI claims older than five years and include them in the Review Plan, but believes substantiation for substances reported during the latest CDR cycle is unnecessary. AFPM also supports EPA's acceptance of early, voluntary substantiations with Form A submissions.

Section 8(b)(4)(B)(iii) compels EPA to require substantiation of CBI claims for chemical identities; however, Section 8(b)(4)(D)(i) excludes companies that have "substantiated the claim in a submission made to the Administrator during the 5-year period ending on the last day of the of the time period specified by the Administrator." The statute does not specify a particular type of submission for the substantiation, so AFPM interprets these provisions to apply to any CBI substantiation, including submissions under CDR.

AFPM agrees with the Agency decision to reduce the reporting burden by minimizing the information requirements, especially for CBI recently claimed and substantiated during the most

recent CDR reporting cycle. Minimizing the information requirements would also help the Agency meet its obligations under Section 8(a)(5)(A) by not requiring reporting that is “unnecessary or duplicative” and minimizing “the cost of compliance.”

AFPM supports EPA’s decision to honor the existing CBI claims of manufacturers and processors, even if they were not the original CBI claimants. Through this decision, EPA acknowledges that businesses are acquired, merged and even leave the marketplace. The maintenance of an existing CBI claim can provide companies with an innovation-based competitive advantage that would not otherwise be afforded.

I) EPA should regularly update the Active list to avoid multiple reporting of any one substance.

To further achieve the objectives set forth in Section 8(a)(5)(A) of “TSCA Inventory Notification (Active-Inactive) Requirements,” EPA should update the Interim Active Inventory on a frequent and regular basis. This would alert others that manufacture those same substances and avoid redundant reporting, thereby reducing unnecessary reporting and the overall cost of compliance. The purpose of the Active Inventory is to create a list of chemicals currently in commerce, not a list of manufacturers that produce or import those chemicals.

II. Existing Regulations Prior to LCSA

a) EPA can reduce the burdens of substantiating CBI claims.

Congress has provided EPA with a great deal of discretion when it comes to substantiating claims of CBI. EPA requires up-front substantiation and periodic re-substantiation for all CBI claims, which has become quite burdensome over the years. AFPM views CBI as intellectual property and believes that companies should be afforded more deference when asserting a CBI claim.

40 CFR 711.30 outlines the questions companies are required to answer when asserting a CBI claim. The questions are numerous and burdensome, which provides a disincentive to companies wishing to keep their sensitive business information confidential, especially from foreign competitors that do not respect the concept of intellectual property. EPA could significantly reduce the regulatory burden by limiting the number of questions that need to be answered to substantiate a CBI claim.

b) EPA should reduce the reporting requirements of substances that are non-toxic or do not present a potential for exposure under the intended use, and use its Section 8 Preliminary Assessment and Information Rule (PAIR) authority to collect information for chemicals it intends to prioritize.

Currently, data on production, use and exposure must be reported for substances on the TSCA Inventory that are produced or imported above 25,000 pounds per year, regardless of whether those chemicals pose a risk to human health or the environment. This includes materials that are non-

toxic or for which there is no potential for exposure under their intended uses. During the last available reporting cycle, EPA collected information on 7,690 chemicals from 4,785 sites.

AFPM supports the Agency's efforts to collect information under CDR. Casting such a broad net, however, is not necessary. Most of the information collected under CDR will not be used for prioritization or risk evaluation; rather, it will just be put on a web site. Additionally, the quality of the exposure information collected under CDR is questionable, since manufacturers are unlikely to possess downstream use and exposure information.

EPA could reduce the reporting burdens under CDR by exempting or partially exempting non-toxic chemicals and those that do not present a potential for exposure under the intended uses, such as intermediates. Limiting collected information to quantities manufactured and known uses can still provide EPA with enough information to make a rough estimate of risk.

EPA has computer models and other tools that can predict ranges of toxicity and potential exposures, just by knowing the molecular structure of the chemical and its general uses. If EPA requires more precise or detailed information, it should use its authority under TSCA Section 8(a) and issue a PAIR rule that includes processors (i.e., those most likely to have downstream use and exposure information). PAIR rules are more targeted than general information collections (i.e., CDR reporting) and can include specific entities without burdening the rest of industry.

c) Chemicals that are manufactured in the U.S. for export and returned to the U.S. should not be counted as imports or subject to CDR reporting.

There are a number of reasons why a chemical could be manufactured, exported, then returned to the U.S. The only information relevant to EPA should be the original manufacture of the substance. To count returns as imports results in double-counting and distorts the actual market picture, in addition to placing an unnecessary burden on reporters.

d) Substances that are byproducts from recycling processes should be exempt or partially exempt from reporting under the CDR rule.

TSCA Section 8(b) requires EPA to create and maintain a list of chemicals in commerce, commonly known as the TSCA Inventory. For many years companies were required to report the chemicals and amounts they were manufacturing and importing under the Inventory Update Rule (IUR). In 2006, EPA changed the nature of IUR reporting, significantly increasing the burden by including information related to use and exposure. EPA stopped using the term "Inventory Update Rule" in 2011 and established the term "Chemical Data Reporting."

Included in CDR reporting are byproducts from recycling processes. AFPM believes that the burden associated with reporting byproducts under CDR is a strong disincentive for recycling. Furthermore, it results in a distortion of the marketplace because the recycling does not change the overall volume of the manufacture for that substance. Those same molecules are counted over and over, each time the material is recycled. To make matters worse, the companies required to report byproducts of recycling will be considered manufacturers and could be subject to even more costly burdens, such as toxicity testing and risk evaluations. EPA should exempt byproducts of recycling processes from CDR reporting.

- e) **EPA should allow for a non-punitive correction to the TSCA Inventory for Chemical Substances of Unknown or Variable Composition, Complex Reaction Products, and Biological Materials (UVCBs) to reduce the potential burden associated with the new chemical review process.**

UVCB substances, also known as Class 2 substances, cannot be represented by a distinct molecular structure. They may be isomeric mixtures, complex and naturally occurring mixtures of related molecules, and other materials for which separation and purification of components is technically or economically unfeasible. Many products derived from oil, such as petroleum streams, waxes, base oils, etc., are UVCBs.

In the past several years, EPA's enforcement office has threatened action against AFPM member companies because EPA staff insisted that certain UVCB nomenclature was outdated. This marked a distinct change in nomenclature policy, but the regulated community was never afforded the opportunity to comment on the change, nor was it given any chance to comply.

EPA stated that the manufacturers of those substances were out of compliance with TSCA and demanded that certain UVCBs be renamed and treated as new chemicals subject to the burdensome new chemical review process, even though the products and processes used by manufacturers had not changed in decades, even before there was an EPA. AFPM members and petroleum-related products are not the only ones facing this sudden burden.

In addition to fines of up to \$25,000 per day, the burden of reporting the substance as a new chemical would entail a sudden stoppage in manufacturing or import, disrupting supply chains that depend on the chemical. Each UVCB would have to be broken up into sub-species and a premanufacture notice would be required for each separate substance, potentially numbering in the hundreds. The potential burden under this scenario could cripple a small or medium-sized company. EPA could easily reduce the burden of UVCB nomenclature issues by instituting a non-punitive TSCA Inventory correction and allow companies to work in cooperation with the Agency to resolve long-standing nomenclature issues.

D. Conclusion

AFPM encourages the Administration to work with Congress to bring long overdue reforms to the regulatory process. Reforms to increase transparency, enhance the quality of data used in rulemaking, and increase the accountability of the Administration and Congress to the American people are important goals that will promote economic opportunities while protecting health, safety, and the environment. Significant reductions in air, water, and waste pollution have occurred over the past several decades. Further reductions generally come at an increasing cost and are smaller than prior reductions. This rising cost to benefit ratio should be strongly considered in any future statutory or regulatory changes.

AFPM looks forward to continuing our work with you and other federal agencies to create a regulatory environment that protects public health and welfare without destroying jobs, jeopardizing our nation's energy security, or eroding our domestic manufacturing capabilities. If

you have any questions about our comments or need any additional information, please contact me at (202) 552-8461 or dfriedman@afpm.org.

Sincerely,

A handwritten signature in dark ink, appearing to read "David Friedman". The signature is fluid and cursive, with the first name "David" being more prominent than the last name "Friedman".

**Subcommittee on Superfund, Waste Management, and Regulatory Oversight
of the Senate Committee on Environment and Public Works**

on

S. 543, the EPA Science Advisory Board Reform Act of 2015

May 20, 2015

Thank you for the opportunity to testify. My name is Scott Faber and I am Senior Vice President of Government Affairs for EWG, a national environmental health organization.

EWG strongly opposes legislation designed to cripple the Environmental Protection Agency's ability to carry out its essential functions, including S. 543, the EPA Science Advisory Board Reform Act of 2015.

By providing independent advice to the EPA Administrator, the Science Advisory Board has played a unique role in environmental protection for more than three decades. The SAB is primarily focused on *technical* issues, not policy issues, and does not make risk management or regulatory decisions. Its role is limited to offering advice on the scientific and technical basis on which the agency makes its risk management and regulatory decisions. The Board makes recommendations that are grounded in science, not politics.

Unfortunately, S. 543 would inject politics and needless delay into the Board's scientific and technical deliberations.

First, S. 543 would place the affiliation of potential Board members ahead of their scientific qualifications by establishing a quota for representatives of state, local and tribal governments.

SAB members are called upon to provide their technical and professional expertise, not to represent the views of any particular agency or organization. By creating such a quota system, S. 543 would undermine the integrity of the SAB and the original intent of Congress to enlist the advice of scientists “qualified by education, training and experience to evaluate scientific and technical information.”¹

Second, S. 543 would allow the appointment of Board members who have potential financial conflicts of interest, so long as those interests are disclosed. Under current law, EPA carefully evaluates the potential conflicts of interest of all Board members in accordance with federal law, which permits waivers in some cases, and with the ethics requirements of the Federal Advisory Committee Act (FACA). Like the quota system described in Sec. 2(b)(2)(B) of S. 543, a provision permitting Board members with financial conflicts would undermine the integrity, and potentially the impartiality, of SAB reviews.

Third, S. 543 would discourage qualified experts from agreeing to serve on the Board. In particular, Sec. 2(b)(3)(D) would have a chilling effect on participation by requiring public disclosure of SAB members’ private financial information. In addition, Sec. 2(b)(7) would needlessly limit the number of terms a Board member could serve, frustrating the SAB’s access to individuals with specialized expertise.

Fourth, S. 543 would create significant new and unnecessary burdens on the Board that are ultimately designed to delay EPA action. In particular, S. 543 would require the SAB to provide written responses to all public comments – which in some cases number more than 100,000. In addition, S. 543 would extend the public comment period beyond a Board meeting – even though FACA prevents the board from considering such comments without holding yet another public meeting. This would create an endless cycle of meetings and comments that would ultimately impede and delay the Board’s ability to provide the Administrator with its scientific and technical advice.

¹ 42 U.S.C. 4365

Advocates for S. 543 claim these reforms would increase transparency, empower scientists, avoid conflicts of interest and enhance the Board's scientific integrity.² However, the Federal Advisory Committee Act already provides important safeguards that prevent conflicts of interest and ensure public access and input to the SAB's deliberations. What's more, the Board already has launched initiatives to solicit even greater public participation.³ More generally, the Office of Science and Technology Policy⁴ has taken steps to ensure the scientific integrity of agency actions and the EPA has adopted its own Scientific Integrity Policy,⁵ consistent with the Information Quality Guidelines of the Office of Management and Budget.⁶

In summary, these provisions of S. 543 would undermine the SAB's scientific integrity by making Board membership subject to organizational affiliation rather than merit; by increasing, not reducing, financial conflicts of interest; and by creating a needless cycle of meetings and comments that will only serve to delay action.

As the Union of Concerned Scientists has noted, S. 543 and S. 544, the so-called "Secret Science Reform Act of 2015," are elements of a broader strategy to delay and ultimately deny to EPA the ability to improve air and water quality for all Americans.

In particular, S. 544 would sharply limit the science EPA can rely on by prohibiting the use of studies based on private health data, proprietary models and confidential business information. S. 544 would also prohibit the use of long-term studies, workplace exposure studies, oil and chemical spill studies, and other research that is difficult or impractical to "reproduce" but that provides critical information about health effects. What's more, S. 544 creates an outrageous

double standard by restricting the use of such studies in actions designed to protect public health but permitting them in actions that benefit industry, such as permit approvals and chemical registrations.

Taken together, these bills would needlessly rob EPA of the ability to rely upon basic science and needlessly limit the agency's ability to subject scientific and technical questions to review by the Science Advisory Board. We urge you to oppose S. 543 and S. 544.

Thank you for the opportunity to testify.

**Subcommittee on Superfund, Waste Management, and Regulatory
Oversight Hearing:**

**“Oversight of Scientific Advisory Panels and Processes at the
Environmental Protection Agency and Legislative Hearing on S. 543
the Science Advisory Board Reform Act of 2015”**

Wednesday, May 20, 2015, at 9:30 a.m.

Thank you Subcommittee Chairman Rounds for convening today’s oversight and legislative hearing, and thank you to our witnesses for being here to testify. Today’s hearing covers a very important issue that hinges nearly every decision made by the Environmental Protection Agency (EPA): science.

When it comes to very technical and complex matters before the EPA, Congress specially crafted laws to ensure that EPA decisions are based on sound science and advice from independent experts. Two key panels advising the EPA on such matters we will review today include the Science Advisory Board (SAB) and the Clean Air Scientific Advisory Committee (CASAC).

Ideally, these panels should be composed of well-qualified and balanced experts, operate in an open and transparent process, and provide a robust and independent review to inform EPA action. However, current SAB and CASAC panels deviate far from this framework. We will hear testimony today that these panels exclude

professionals with real-world expertise, lack geographic diversity, limit public participation, and fail to hold the EPA accountable.

A prominent theme that will emerge from the testimony today is that the SAB is not fully independent from the EPA. The SAB has not fulfilled its obligation to respond to Congress because of EPA interference. EPA limits the ability for the SAB to review critical science and regulatory actions. The SAB is discouraged from expressing dissenting views and communicating uncertainties in reviews. EPA selects members of the SAB and CASAC who are seemingly an extension of the Agency due to the number of EPA grants received, work cited under review, or tenure on such panels.

Testimony will also highlight the need for Senators Boozman and Manchin's S. 543, the Science Advisory Board Reform Act of 2015, to address these issues. I am a proud cosponsor of S. 543. The bill would bring the much needed transparency, public participation, accountability, and independence to the advisory process which will ultimately lead to better science and better EPA decision-making.

I ask that my full statement be entered into the record. Thank you.

STATEMENT OF

Roger O. McClellan
Advisor, Toxicology and Human Health Risk Analysis
Albuquerque, New Mexico

Before the

Subcommittee on Superfund, Waste Management and Regulatory Oversight
Committee on Environmental and Public Works
U.S. Senate

Hearing Purpose:

- a) Oversight related to the panels and processes by which the Environmental Protection Agency receives independent advice**
- b) Review of S.543, the Science Advisory Board Reform Act of 2015**

May 20, 2015

Good Morning, Mr. Chairman and Members of the Subcommittee. Thank you for the invitation to present my views on the importance of independent scientific advice and an effective and efficient Science Advisory Board to inform the Environmental Protection Agency's policy decisions and regulations.

My biography is attached to this statement (Attachment 1). Since 1999, I have served as an Advisor to public and private organizations on issues related to air quality in the ambient environment and workplace drawing on more than 50 years of experience in comparative medicine, toxicology, aerosol science, and risk analysis. Prior to 1999, I provided scientific leadership for two organizations – the Chemical Industry Institute of Toxicology (1988-1999) in Research Triangle Park, NC and the Lovelace Inhalation Toxicology Research Institute (1966-1988) in Albuquerque, NM. The Chemical Industry Institute of Toxicology (now The Hamner Institutes for Health Sciences), was a not-for-profit research organization funded primarily by the chemical industry. The Lovelace Inhalation Toxicology Research Institute, continuing today as part of the Lovelace Respiratory Research Institute, was a non-profit research institute funded with both public and private funds. Both organizations, under my leadership, earned an international reputation for developing scientific data that informed the setting of important occupational and environmental health standards. During my career, I have held adjunct faculty appointments at 8 different universities and held major leadership roles in scientific organizations with membership from all sectors of the economy. I make this point since, in my opinion, the USA is fortunate to have many well-qualified scientists in all sectors of Society.

In my opinion, sound scientific advice from highly competent scientists and engineers is critical to the successful functioning of any science-based enterprise operating in the public or private sector. This includes the Environmental Protection Agency that develops policies and regulations that have substantial impact on the health and well-being of the American public, including those mediated through the U.S. economy. The EPA's policy decisions and the resultant promulgation of regulations must be informed by the best available scientific information independent of any preconceived ideological inclination as to a particular policy or regulatory outcome.

The testimony I offer today also draws on my experience serving on numerous scientific advisory committees for government agencies, academic institutions, non-profit entities, trade associations and private companies. This has included service on advisory committees to all the major federal agencies concerned with health issues, including service on many EPA Scientific Advisory Committees starting soon after the U.S. Environmental Protection Agency (EPA) was created by President Richard M. Nixon by Executive Order.

At the time EPA was created, I was serving as Chair of the Environmental Radiation Exposure Committee to the U.S. Public Health Service (USPHS). When the USPHS radiation protection activities were transferred to the new EPA, the Environmental Radiation Exposure Advisory Committee became advisory to the EPA along with dozens of other Advisory Committees that had operated as part of EPA's predecessor Agencies, such as the National Air Pollution Control Administration. The Bureau of the Budget, the predecessor to the current Office of Management and Budget, noted the large number of Advisory Committees and the

hundreds of consultants. The Bureau of Budget thought there must be a more efficient way for the new Agency to secure scientific advice. The EPA responded, after seeking informal consent from the Congress, by creating a Science Advisory Board (SAB) under the Chairmanship of the late Dr. Emil Mrak, then Chancellor of the University of California-Davis. The new SAB had umbrella committees organized along disciplinary lines; the key committees were Health, Engineering, and Ecology. I argued for an alternative structure with committees organized by issues or media. However, I lost the argument, with my colleagues noting that “birds of a feather” are comfortable together, and that Academic institutions are organized by disciplines. Recognizing that the radiation science field is different, that specific Committee was retained and I joined the SAB Executive Committee. Thus began my long involvement with EPA and its advisory processes.

In one of my files I have a photograph of Administrator William Ruckelshaus providing me a certificate confirming my appointment as Chair of the EPA’s Environmental Radiation Exposure Committee. As expected, most of the early advisory attention focused on each Committee advocating for a bigger share of the budget from the EPA’s newly created centralized Office of Research and Development. Only later would the SAB become involved with the other programmatic offices.

One of the first major issues EPA management brought to the SAB involved airborne Pb. The Natural Resources Defense Council (NRDC) had sued the EPA to have Pb listed as a criteria air pollutant under the Clean Air Act Amendments of 1970. When EPA lost the suit at the Appeals Court, it had to proceed with developing a Criteria Document to support its issuance of a National Ambient Air Quality Standard for Pb. Administrator Douglas Costle, on the advice of Dr. Mrak as Chair of the SAB, asked me to chair an *ad hoc* Committee to review the draft criteria document on airborne Pb. The Administrator appointed an appropriately diverse committee with multiple scientific and engineering disciplines represented. Within a week of the appointments being announced, I received a telephone call from one of the prospective Committee members telling me that he had two problems with the Committee. One problem, as he expressed it, was that two committee members were “lackeys or toadies of industry.” The second problem of concern to him was my serving as Chair – “I do not think you will advocate for a stringent airborne Pb NAAQS.” At the time I was an employee of the Lovelace Medical Foundation in Albuquerque, NM managing an Atomic Energy Commission funded program on the toxicity of airborne materials. I suggested that if the prospective member had any problems with the composition of the Committee or chairmanship he should contact Administrator Costle. Needless to say, the deliberations of the Committee, and especially the hallway conversations, were contentious. As the deliberations proceeded, the EPA wisely decided to remove the recommendation of a specific Pb NAAQS from the criteria document, recognizing that the level of the standard and averaging time were policy decisions that should be informed by science and not made by scientists. It is noteworthy that a significant amount of Committee time was spent receiving public comments. I am proud to note that when the *ad hoc* airborne Pb standard committee concluded its work, the lead attorney from the NRDC congratulated me on my leadership of the Committee.

Forty five years later I have five major concerns with EPA’s Advisory Committee activities: (a) the role of academic scientists versus scientists employed or engaged by industry,

(b) the important distinction between offering scientific advice to inform policy decisions versus scientists making and/or endorsing policy decisions, (c) the role of the SAB in offering independent science advice versus responding only to EPA requests for advice, (d) the role of the SAB committee activities as a forum for public comment, and (e) the need for a strong SAB Executive Committee to enhance the effectiveness of the multiple committees operating under the SAB umbrella.

Over the subsequent years, I have been a member of several dozen EPA Advisory Committees, including serving as Chairman of seven Committees and more than 20 years of service on the SAB Executive Committee. In those early decades, the SAB Executive Committee – consisting of about 12 individuals who chaired the major SAB committees or had at-large appointments – played a valuable role in coordinating the activities of multiple committees and, most importantly, advising the EPA Administrator on major scientific issues. This included the SAB offering both unsolicited advice and independently recommending the initiation of important advisory functions. I am disappointed that the current EPA SAB apparently no longer has that kind of Executive Committee.

I am proud to say that the activities of the *ad hoc* Committee that reviewed the Pb Criteria Document, which I noted earlier, had a small role in the Congress amending the Clean Air Act in 1978 to formally require the EPA Administrator to appoint a Clean Air Scientific Advisory Committee (CASAC). I am pleased to have served both as Chair of CASAC (1988-1992) and in one of the seven positions mandated by the Clean Air Act and as a consultant on numerous CASAC Panels that considered all of the criteria pollutants. I note the role of both members of CASAC and consultants. In my opinion, the appointment of CASAC members and consultants deserves equal attention. The consultants frequently out-number the seven CASAC members that are legislatively mandated. My last CASAC service was on the Particulate Matter (PM) Panel (2000-2007). The CASAC and the PM Panel struggled over the distinction between offering scientific advice and attempting to mandate the specific level of the NAAQS for PM_{2.5}. The majority of the Panel wanted to advise the Administrator that the annual PM_{2.5} National Ambient Air Quality Standard (NAAQS) must be reduced from 15 µg/m³ to 14 µg/m³ or lower. I was a minority on the Panel, arguing that the specific concentration level and statistical forms of the NAAQS were inter-related policy decisions that should be informed by science; however, the level and form are ultimately policy judgments that can only be made by the EPA Administrator. Science alone cannot identify the concentration and statistical form requisite to setting a NAAQS consistent with the language of the Clean Air Act. I have addressed this issue in a paper I authored entitled “Role of Science and Judgment in Setting National Ambient Air Quality Standards: How low is low enough?” *Air Quality and Atmospheric Health* 5: 243-258, 2012.

In addition to serving on numerous EPA Advisory Committees, I have served on Advisory Committees to essentially all of the federal agencies that are concerned with environmental and occupational factors influencing the health of individuals and populations. I have also served on various committees of the National Research Council and the Institute of Medicine of which I am a member. In many cases, the issues at hand have been at the interface between the physical and engineering sciences and the biological and medical sciences. Each of these disciplinary areas has different traditions and approaches to defining what is known and

unknown on a given subject. Issues in the life sciences are especially contentious because they are at the interface of science, the environment and health, where different individuals, including scientists, have strong personal ideological views as to a preferred policy outcome or regulation.

It is my professional opinion that scientific advisory committees offer the most useful advice to inform public policy when they examine all the scientific evidence relevant to the issue at hand, identifying the strengths and weaknesses of various facets of the science, including differences in the opinions of individual Board or Committee members on specific scientific matters. I am concerned that the differences in scientific views among Committee members are frequently down-played in a rush to create a consensus opinion. It is my view that consensus is best left to ideologically-based institutions such as religious organizations, labor unions and political parties. “Consensus” positions in the life sciences are frequently based on ideological positions and pressure, not necessarily science alone.

An issue of major concern for scientific advisory committees, irrespective of the issue being addressed, is how the deliberations and actions of the Committee are influenced by funding that the Committee members have received in the past or may receive during the course of future employment. This issue is of heightened interest as institutions, in both the public and private sectors, increasingly face severe constraints on financial support for scientific research. Indeed, the top priority for many organizations that are science-based is what can be done to make certain their scientific constituency receives its “fair share” of funding.

Many scientists hold the view that funding from federal agencies comes with no strings attached, while anyone receiving private sector funding is somehow indentured. In short, some individuals argue that academic scientists are free of bias and conflicts of interest, while industry affiliated scientists automatically have biases and conflicts of interest. I think such a viewpoint is open to question when the funding agency, such as the EPA, is also a regulatory agency. In my opinion, the agency needs to focus on reducing scientific uncertainty on a range of issues and take special precautions to avoid creating a funding environment focused on identifying new crises or creating more stringent regulations. In my opinion, the creation of a more stringent standard or regulation should not be viewed as a criterion of success for scientific research or scientific advisory bodies. Alternatively, I argue that the criterion of success for an advisory committee should be whether it appropriately examined all the scientific evidence, including both the strengths and weaknesses, so the information could inform policy judgments.

As an aside, I am of the opinion that private sector funding is of critical importance to advancing scientific knowledge and its application. However, the interface between industry-funded science and its use in informing policy decisions needs the same kind of scrutiny as the science created with public funding.

Let me return to the importance of distinguishing between an advisory committee’s evaluation of the science, on the one hand, and its entering into the policy arena and offering policy judgments, on the other hand. This is dangerous turf because many policy makers would like to say the science “dictated” the outcome on specific difficult policy decision; that the Administrator was a mere bystander to the science. I addressed these issues in the paper I noted earlier.

An important underlying concern for the use of science to inform policy decisions is access to the underlying data for review and, indeed, re-analysis by others. This is an issue addressed in Senate Bill 544. In my opinion, any science used in the federal regulatory process should have been published in a high-quality peer-reviewed journal and, equally as important, the underlying data must be available to other qualified scientists for review and potential re-analysis. Key data used in the setting of several of the NAAQS in the past have not always met the second test. As one academic scientist noted, “I do not want some industrial-hired gun wading through my data.” I applaud the Johns Hopkins University team that created the National Morbidity and Mortality Air Pollution (NMMAPS) data set, used extensively in the setting of several NAAQS, for making that data set publicly available to others. My colleague, Dr. Suresh Moolgavkar, and I have recently used the NMMAPS data set to explore alternative approaches to data analysis (Moolgavkar, SH, McClellan, RO, et al, Time-Series Analyses of Air Pollution and Mortality in the United States: A Subsampling Approach. *Environ. Health Perspectives* 121(1): 73-78, 2013.). I am concerned that in recent years the use of the NMMAPS data has been constrained.

Likewise, I applaud the National Institute of Occupational Safety and Health (NIOSH) and the National Cancer Institute (NCI) for seeking ways to make the Diesel Exhaust in Miners Study (DEMS) available to qualified investigators. Initiated in the early 1990s, DEMS was completed in 2012 with the publication of five exposure assessment papers and two seminal epidemiological papers (Attfield et al, The Diesel Exhaust in Miners Study: A Cohort Mortality Study with Emphasis on Lung Cancer, *J Natl Cancer Inst* 104:1-15, 2012; Silverman et al, The Diesel Exhaust in Miners Study: A Nested Case-Control Study of Lung Cancer and Diesel Exhaust, *J Natl Cancer Inst* 104:855-868, 2012)). The complete data set acquired by federal employees and collaborators at a cost of over \$12 million needs to be made available and evaluated by other scientists before it is used to establish federal regulations and standards. I am pleased that NCI ultimately released the key exposure assessment data in response to a Freedom of Information Act request and that both NCI and NIOSH developed ways for qualified scientists to access the DEMS epidemiological data.

With leadership from my colleague, Dr. Kenny Crump, the exposure assessment that is a crucial component of DEMS has been evaluated with funding from a coalition of industry trade associations (Crump, K. and C. Van Landingham, Evaluation of an Exposure Assessment used in Epidemiological Studies of Diesel Exhaust and Lung Cancer in Underground Mines, *Crit. Reviews in Toxicol.* 42(7):599-812, 2012). Dr. Crump identified major flaws and uncertainties in the methodology used in the original exposure assessment. Subsequently, with funding from an industry coalition, Dr. Suresh Moolgavkar and Dr. Kenny Crump replicated the epidemiological analyses of the original DEMS investigation and, more importantly, conducted additional analyses using alternative methods and exposure assessments, which have been published in peer-reviewed journals (Moolgavkar et al, Diesel Engine Exhaust and Lung Cancer Mortality – Time Related Factors in Exposure and Risk, *Risk Analysis*, in press, 2015; Crump et al., Reanalysis of the DEMS Nested Case-Control Study of Lung Cancer and Diesel Exhaust: Suitability for Quantitative Risk Assessment, *Risk Analysis*, in press, 2015). These analyses revealed major uncertainties in estimates of excess lung cancer risk associated with exposures of

non-metal miners to diesel exhaust over and above that associated with the primary well-established risk factor – cigarette smoking.

The critical question now is how both the results of the original NIOSH/NCI investigators and the subsequent results of Drs. Moolgavkar and Crump, using the same DEMS data set, will be evaluated and used to inform subsequent scientific analyses, such as their potential use in quantitative risk analysis and to inform public policy decisions and regulatory actions by EPA, NIOSH, the Occupational Safety and Health Administration and the Mine Safety and Health Administration. I have urged that the results of all the analyses should be considered on a level playing field, irrespective of when they were conducted, who conducted the analyses, or if they were conducted with public or private funding. Other individuals have advanced the view that the analyses conducted with industry support should be viewed as secondary because the industry support was alleged to focus on obtaining particular outcomes. These questions are being addressed by a Panel organized by the Health Effects Institute, a non-profit entity jointly funded by EPA and the private sector, primarily the manufacturers of combustion engines. That Panel's report will be of special interest since the hurdle of access to data was cleared allowing the Panel to focus on evaluating the results of the original investigators and subsequent analyses by other independent scientists.

Before leaving my discussion of service on EPA Advisory Committees, I would like to briefly note an EPA Committee I did not serve on – the CASAC Ozone Panel whose deliberations started in the early 2000s and concluded in 2008. When the CASAC Ozone Panel was being formed, I was encouraged by the Chair of CASAC to self-nominate for service on the Panel. I did so. Some months later I received a call from a Reporter asking if I had seen the letter a prominent ENGO had sent to SAB concerning my services on the Panel. I said no. He said you need to see the comments; they are not very flattering. I promptly called the SAB offices and inquired about the letter. The SAB staffer acknowledged receipt of not one, but two letters concerning my potential service and that of two well-qualified colleagues. I asked if he would share the letters with me. His response was “I think you will need to file a Freedom of Information Act (FOIA) request.” I told him “That is ridiculous – my fax machine is available and if I did not receive the letters within an hour I will take the matter up with the Administrator and my elected Senators and Representatives.” I promptly received the letters via fax. The letters from two different ENGOs were virtually identical. They questioned how I could be considered for membership on a CASAC Panel when I had previously served as President and CEO of the Chemical Industry Institute of Toxicology, a research laboratory principally funded by the chemical industry. To top it off, they suggested I was not qualified professionally to serve on the Panel since – “he was trained as a Veterinarian.”

While I can appreciate that an agency may wish to solicit comments on nominees to particular Committees, I think it should be with the understanding that any comments received by the Agency will be shared with the nominee. Indeed, if an organization is moved to comment on a nominee, the organization should be willing to directly confront the nominee by sharing its concerns directly with the nominee. Appointments to scientific advisory committees should be made in an open and transparent manner and not influenced by *sub rosa* innuendos as to their qualifications. I will never know if those two letters influenced the Agency's decision to not appoint me to EPA's CASAC Ozone Panel.

I appreciate the Subcommittee on Super Fund, Waste Management and Regulatory Oversight of the Committee on Environment and Public Works holding this hearing and addressing the important topic of the processes by which EPA receives independent scientific advice, including the important role of the Science Advisory Board. I view this topic as part of a much bigger picture – how do we move the economy of the USA forward building on this nation’s remarkable pool of scientific talent?

Let me provide some context for this statement. I am regularly asked by fellow scientists, including those at regulatory agencies, as to what I think are the most important factors influencing human health. In some cases, the question is framed relative to revision of the National Ambient Air Quality Standards for particulate matter or ozone or some specific chemical. My answer is simple – in my opinion, the single most important risk factor for the health of the U.S. citizens and other populations around the world is their SOCIO-ECONOMIC STATUS (SES). Jobs and income matter! A study by Steenland et al (2004) showed that the mortality ratio for all-cause mortality for men in the lowest quartile of SES over the top quartile is about 2.00 (Steenland, K. and J. Walker, All-Cause and Cause-Specific Mortality by Socioeconomic Status Among Employed Persons in 27 US States, 1984-1997, *Am. J. Public Health* 94(6): 1037-1042, 2004). In other words, there is a doubling of the mortality rate for individuals in the lowest quartile of SES versus those in the top quartile. Putting it another way, moving from the bottom quartile to the second quartile reduced the mortality ratio to 1.69 and a move from the second to the third quartile reduced the mortality ratio to 1.25. In short, an optimal way to improve the health of Americans is to create employment – JOBS.

Some individuals reading this may argue that I am off track relative to the topic subject of this hearing. I am on track – let me explain.

The USA has a remarkable pool of scientific and engineering talent. We have excellent colleges and universities that attract students from around the world, including the world’s most rapidly advancing economy – China. Historically, well-educated individuals have found an abundance of job opportunities in the USA. Indeed, many students who came from abroad elected to stay in the USA for the opportunities it affords. The current job market for professionals in the USA is the softest I have seen during my professional career spanning a half century. While I am optimistic the situation can change, major change will require many small and seemingly insignificant changes.

One change that is required is to start using ALL of the USA’s scientific and engineering talent as candidates to serve as members or consultants on Scientific Advisory Committees such as those assembled by the EPA. In the past, EPA’s scientific advisory committees have been composed largely of academic scientist and engineers. Using information from the EPA SAB website, I note that for the standing SAB only 2 individuals are affiliated with commercial firms, 3 individuals are apparently private consultants, 3 individuals are with NGOs, 3 individuals are with State Agencies and 36 individuals are affiliated with academic institutions. The SAB has 7 Standing Committees listed on its website with a total of 115 members. Some of these individuals are also on the primary SAB. Only 3 of these individuals are affiliated with major commercial firms selling products or commercial services, eight individuals are independent

consultants or with consulting firms, 7 are affiliated with State agencies, and 100 members are affiliated with academic institutions. I know many of these academicians personally; they are first-rate scientists or engineers. Do they represent the best and brightest of all the scientists and engineers in the USA? The answer cannot be Yes, since that would mean the millions of scientists and engineers employed in the private sector somehow do not measure up to the academic scientists.

Some will quickly note that those in the private sector have financial conflicts of interest that preclude their service on EPA Advisory Committees because of requirements of the Federal Advisory Committee Act (FACA). If FACA is used to deny the EPA of the talents of individuals from the private sector, then I think the solution is quite simple – Congress should change FACA. Some academic scientists and EPA managers would argue that individuals in the private sector are biased – their primary motivation is making certain their employer does the right thing and stays profitable. I am glad they have that motivation, it is important. It is consistent with the best interests of the USA. I have worked with many private sector firms and employees. I can assure you they understand the importance of getting the science right to ensure long-term profitability. In other words, individuals employed or funded by the private sector are just as interested in the quality of scientific information and seeing it used properly as are academics.

One might ask why it is important to broaden the talent pool for service on EPA's Science Advisory Board and other Advisory Committees. One good reason is context. EPA's scientific committees deal with complex issues, not abstract scientific facts; it is science interpreted and used in the context of resolving complex issues. For example, the question is not just whether a chemical or technology is hazardous, but, also how can use of the chemical be changed or the technology advanced to reduce health hazards and increase efficiency and effectiveness. Private sector scientists and engineers deal with these concepts daily and could bring the concepts to bear in EPA Advisory Committee discussions. Everyone wins when all participants contribute to the dialogue on the issue under consideration and everyone takes something home to their university or private sector job.

In this regard, I think the remarkable advances made in diesel engine technology over the last several decades are an excellent example, as covered in a paper I co-authored (McClellan, R.O., T.W. Hesterberg and J. C. Wall, Evaluation of Carcinogenic Hazard of Diesel Engine Exhaust Needs to Consider Revolutionary Changes in Diesel Technology, *Regulatory Toxicol. Pharmacol.* 63: 225-258, 2012). In the 1970s and 1980s, new toxicological and epidemiological evidence emerged pointing to the potential lung cancer hazard of exposure to diesel engines using high-sulfur fuels. There was no question that exposure to high levels of exhaust were hazardous to health. However, there was considerable debate over whether the scientific knowledge was sufficiently robust to develop quantitative estimates of risk. In the face of uncertainty, EPA made a policy decision to move forward with stringent regulations for reduced diesel engine emissions of particulate matter and nitrogen oxides, and mandated the marketing of ultra-low sulfur fuel. The engine manufacturers and fuel refiners responded to the challenge. The diesel engines marketed today meet the new standards and, in combination with use of ultra-low sulfur fuel, are contributing to cleaner air. A quantitative estimate of the lung cancer risk of the old technology was not needed to advance the technology. The question now is how rapidly

the new technology will be deployed to replace old technology on the road and in off-road applications.

In preparation for this hearing, I reviewed the SAB website to determine the status of recent activities of the Board and its seven standing Committees [Chemical Assessment Advisory, Drinking Water, Ecological Processes and Effects, Environmental Economics Advisory, Environmental Engineering, Exposure and Human Health, and Radiation Advisory Committees].

A new Agricultural Science Committee is being formed. I hope its membership will be truly representative of America's substantial agricultural enterprise. Quite frankly, I was surprised by the size of the SAB staff, the modest number of reports completed over the last decade, the infrequent meetings of some of the Standing Committees, and the relative absence of any activities that were initiated by the SAB. If I were to encounter this situation in a private sector organization I was advising, I would suggest it was time for a rigorous retrospective assessment of the entire SAB operation and its processes. This would include assessing what has been done well, what is not working, and how the SAB can be best organized and managed to provide the EPA sound, independent scientific advice to inform policies and regulations that have substantial impact on the American people and the American economy.

The Bill, S 543, "EPA Science Advisory Board Reform Act of 2015" includes provisions that will strengthen the independent role of the SAB. However, the changes required by provisions in S. 543 will need to be augmented by substantial changes initiated by EPA management to create a more efficient and effective SAB to better serve the American public.

I will be pleased to address any questions you may have now or wish to forward to me.

Disclosure

The foregoing statement was prepared by me and represents my independent views and advice. I gratefully acknowledge financial support provided to me by Tronox Corporation to cover my expenses related to participation in this Hearing. I advise Tronox Corporation on air quality issues. Tronox Corporation is committed to using the best available scientific information to guide its operations and to endorsing the use of the best available scientific information to inform federal policies and regulations.

BIOGRAPHY

ROGER O. McCLELLAN, DVM, MMS, DSc (Honorary),
Dipl-ABT, ABVT, Fellow-ATS
Advisor: Inhalation Toxicology and Human Health Risk Analysis
13701 Quaking Aspen NE
Albuquerque, NM 87111-7168, USA
Tel: (505) 296-7083; Cell: (505) 850-9190; Fax: (505) 296-9573
e-mail: roger.o.mcclellan@att.net

ROGER O. McCLELLAN serves as an advisor to public and private organizations on issues concerned with inhalation toxicology, comparative medicine, and human health risk analysis focusing on issues of air quality in the ambient environment and work place. He has over three decades of experience studying the human health hazards of exposure to diesel exhaust and promoting advances in diesel technology to minimize any health hazards. He received his Doctor of Veterinary Medicine degree with Highest Honors from Washington State University in 1960 and a Master of Management Science degree from the University of New Mexico in 1980. He is a Diplomate of the American Board of Toxicology and the American Board of Veterinary Toxicology and a Fellow of the Academy of Toxicological Sciences.

He served as Chief Executive Officer and President of the Chemical Industry Institute of Toxicology (CIIT) in Research Triangle Park, NC from 1988 through 1999. CIIT continues today as The Hamner Institute for Health Sciences. During his tenure, the organization achieved international recognition for development of scientific information under-girding important environmental and occupational health decisions and regulations. Prior to his CIIT appointment, Dr. McClellan was Director of the Inhalation Toxicology Research Institute, and President of the Lovelace Biomedical and Environmental Research Institute, Albuquerque, New Mexico. The Institute continues today as a core element of the Lovelace Respiratory Research Institute. During 22 years with the Lovelace organization, he provided leadership for development of one of the world's leading research programs concerned with the health hazards of airborne radioactive and chemical materials. Prior to joining the Lovelace organization, he was a scientist with the Division of Biology and Medicine, U.S. Atomic Energy Commission, Washington, DC (1965-1966), and Hanford Laboratories, General Electric Company, Richland, WA (1959-1964). In those assignments, he conducted and managed research directed toward understanding the human health risks of internally deposited radionuclides.

Dr. McClellan is an internationally recognized authority in the fields of inhalation toxicology, aerosol science, comparative medicine, and human health risk analysis. He has authored or co-authored over 350 scientific papers and reports and edited 10 books. In addition, he frequently speaks on risk assessment and air pollution issues in the United States and abroad. He is active in the affairs of a number of professional organizations, including past service as President of the Society of Toxicology and the American Association for Aerosol Research. He serves in an editorial role for a number of journals, including service since 1987 as Editor of Critical Reviews in Toxicology. He serves or has served on the Adjunct Faculty of 8 universities.

Dr. McClellan has served in an advisory role to numerous public and private organizations. He has served on senior advisory committees for the major federal agencies concerned with human health. This included services as past Chairman of the Clean Air Scientific Advisory Committee, Environmental Health Committee, Research Strategies Advisory Committee, and Member of the Executive Committee,

Science Advisory Board, U. S. Environmental Protection Agency; Member, National Council on Radiation Protection and Measurements; Member, Advisory Council for Center for Risk Management, Resources for the Future; Member, Health Research Committee, Health Effects Institute; and service on National Academy of Sciences/National Research Council Committees on Toxicology (served as Chairman for 7 years), Risk Assessment for Hazardous Air Pollutants, Health Risks of Exposure to Radon, Research Priorities for Airborne Particulate Matter, as well as the Committee on Environmental Justice of the Institute of Medicine. He has served on the Board of Scientific Councilors for the Center for Environmental Health Research of the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry and on the National Institutes of Health Scientific Advisory Committee on Alternative Toxicological Methods. He currently serves on the National Aeronautics and Space Administration Lunar Airborne Dust Toxicity Advisory Group.

Dr. McClellan's contributions have been recognized by receipt of a number of honors, including election in 1990 to membership in the Institute of Medicine of the National Academy of Sciences. He is a Fellow of the Society for Risk Analysis, the American Association for Aerosol Research, the Health Physics Society, and the American Association for the Advancement of Science. In 1998, he received the International Achievement Award of the International Society of Regulatory Toxicology and Pharmacology for outstanding contributions to improving the science used for decision making and the International Aerosol Fellow Award of the International Aerosol Research Assembly for outstanding contributions to aerosol science and technology. In 2002, he was inducted into the University of New Mexico Anderson School of Management Hall of Fame for contributions to the effective management of multi-disciplinary research organizations. He received the Society of Toxicology Merit Award in 2003 for a distinguished career in toxicology and the Society's Founders Award in 2009 for contributions to science-based safety/risk decision-making. In 2012, he received the Outstanding Career Achievement Award of the International Dose-Response Society for contributions to understanding dose-response relationships and the David Sinclair Award of the American Association for Aerosol Research for sustained excellence in aerosol research and technology.

In 2005, The Ohio State University awarded him an Honorary Doctor of Science degree for his contributions to comparative medicine and the science under-girding improved air quality. In 2006, he received the New Mexico Distinguished Public Service Award. In 2008, Washington State University presented Dr. McClellan the Regents Distinguished Alumnus Award, the highest recognition the University can bestow on an Alumnus.

Dr. McClellan has a long-standing interest in environmental and occupational health issues, especially those involving risk assessment, and air quality and in the management of multidisciplinary research organizations. He is a strong advocate of science-based decision-making and the need to integrate data from epidemiological, controlled clinical, laboratory animal and cell studies to assess human health risks of exposure to toxic materials and to inform policy makers in developing standards and guidance to protect public health.

**Oversight of Scientific Advisory Panels and Processes at the Environmental
Protection Agency
Subcommittee on Superfund, Waste Management, and Regulatory Oversight
Committee on Environment and Public Works
United States Senate**

**Testimony of
Terry F. Yosie, President and CEO
World Environment Center**

May 20, 2015

Thank you, Mr. Chairman, for the opportunity to testify today on the issue of the management of scientific advisory panels at the U.S. Environmental Protection Agency and their role in public health and environmental decision making. I appear in a personal capacity as my employer, the World Environment Center, is a non-profit organization that conducts no advocacy activities and takes no positions on public policy issues.

My comments today will reflect several experiences. From 1981-1988 I served as the Director of EPA's Science Advisory Board during the Administration of Ronald Reagan. Between 1988-1992, I was Vice President for Health and Environment at the American Petroleum Institute and from 1999-2005 I was a Vice President at the American Chemistry Council responsible for environment, health, safety and security. During all the years of my post-government employment, up to the present time, I have actively served on a number of scientific advisory panels advising the U.S. government, including Boards and Committees of the National Academy of Sciences.

Effective management of scientific advisory processes at EPA should embody several important principles that I believe are also consistent with the law and best practices as implemented in both Republican and Democratic administrations. These principles include:

- ***The advice provided by scientific advisory committees should only be advisory in nature.*** Both the Federal Advisory Committee Act and the Environmental Research, Development, and Demonstration Authorization Act of 1978 (that legislatively established the EPA Science Advisory Board) embody this principle. In practice, this means that advisory committee reports should be explicitly taken into account during

the policymaking process, but they are not binding. The reason for such a principle is simple and compelling: many other factors in addition to science must be taken into account in finalizing a public policy decision such as economics and implementation feasibility. Neither the professional training of scientists, nor their subsequent careers, prepares them to offer specific insight or expertise concerning these non-scientific factors.

- ***Appointments to scientific advisory panels should be made on the basis of merit rather than institutional affiliation, quotas or other factors.*** In 1982, President Ronald Reagan vetoed legislation that would have undermined this principle by requiring that appointments to EPA's Science Advisory be based on representation of specific interests rather than scientific merit. If I may quote President Reagan, "this requirement runs counter to the basic premise of modern scientific thought as an objective undertaking...the purpose of the Science Advisory Board is to apply the universally accepted principles of scientific peer review to the research conclusions that will form the basis for EPA regulations, a function that must remain above interest group politics." I believe that President Reagan's words echo across the subsequent decades and are directly relevant to the discussion we're having today.
- ***Scientists can never answer all of the scientific questions, but they can help policymakers focus on the important questions.*** I believe that EPA Administrators, members of Congress and stakeholders frequently have very unrealistic expectations about what scientists and scientific peer review can deliver. I once worked for a very distinguished EPA Administrator who was upset that EPA's Clean Air Scientific Advisory Committee did not recommend a specific numerical limit for him to establish the national ambient air quality standard for particulate matter. Both environmental and industry groups frequently petition for the re-opening of scientific reviews even when no significantly new information is available. This leads to worse case outcomes such as the twenty years it took EPA to conduct its dioxin risk assessment.
- ***Most potential conflict of interest issues can be resolved by appropriate transparency—but not all of them.*** I personally would take a dim view of any scientist who refuses to disclose the source of his/her research funding or who believes there is no conflict issue in reviewing one's own published work that may have an important bearing in a risk assessment. On the other hand, I believe that scientists from industry, environmental groups and other institutions have important expertise that needs to be represented on scientific advisory panels. So long as no single interest group has disproportionate representation on an advisory committee and has representatives that

qualify for appointment based on merit, I believe the Federal Advisory Committee Act's requirement for "balanced points of view" can be effectively met.

- ***Priorities for peer review panels should remain focused on research and scientific assessment.*** Throughout the long history of peer review, executive branch policymakers, Congress, and interest groups have sometimes sought to expand the scope of scientific peer reviews beyond the scope of relevant scientific information. These have included requests for to review proposed standards in addition to the science underlying proposed standards, or recommendations that advisory panels review public comments along with scientific research and assessments. In my professional experience, these attempts at expanding the scope and priorities of the review process distort the concept and practice of scientific review, and are outside the purview of the capabilities of scientists serving on such panels.
- ***Scientists are under no obligation to serve on scientific advisory panels. Adding further non-scientific responsibilities to peer review panels will make the recruitment of qualified, independent scientists even more difficult.*** This is a continuing challenge given the many commitments that talented scientists already have. Requiring scientists to review public comments, in addition to EPA assessment documents, or to burden scientists with additional information requirements, will only further hinder the ability to recruit scientists to scientific review panels.

With these principles in mind, I have several specific comments to offer regarding S. 543. They include:

- Section 2(B) states that "at least ten percent of the membership of the Board are from State, local or tribal governments." This is similar to a provision that was the basis for President Reagan's veto of similar legislation in 1982. The proposed legislation substitutes a quota for merit as the basis for a significant percentage of advisory committee appointments. In practice, this will distort the peer review process. Let me provide an example. In 1986, the Science Advisory Board reviewed a draft EPA risk assessment to evaluate the potential health and environmental effects of stratospheric ozone depletion. The chemicals of concern at that time were chlorofluorocarbons (CFC). Various substitutes have replaced CFCs in commerce, yet some of these substitutes are now implicated in public health and environmental risks. If EPA were to ask the Science Advisory Board to review the risk assessment for any of the current substitutes, it would be required, under the proposed legislation, to recruit representatives of State, local and tribal governments for the peer review panel. There are many issues where

expertise from such constituencies is valuable and necessary, but I do not believe that their expertise in CFC substitutes is a main competency. Thus, the proposed legislation would substitute a quota for merit without added an informed perspective on the critical scientific issues under review.

- Section 2(E) states that members “may not participate in advisory activities that directly or indirectly involve review or evaluation of their own work, unless fully disclosed to the public and the work has been externally peer-reviewed.” In other words, the proposed legislation would permit scientists to review their own work. I believe this provision will result in compromising the integrity of the scientific review process—and here’s why. Many risk assessment are highly dependent upon only a very few studies published by a small number of scientists. If one of the major study authors also serves on the advisory panel reviewing a risk assessment that relies upon his/her work, how is the integrity of the process then not compromised?
- Section 3(D) of S. 543 requires the filing of a “written report disclosing financial relationships and interests” including EPA grants, contracts, etc. I believe that more extensive financial disclosures about personal investments and portfolios will greatly discourage scientists from even considering participation in advisory panels. Scientists are like you and me—they don’t want government officials having access to their private investment portfolio data. Another important disclosure factor that is not considered by the legislation is the need to report whether the scientist on an EPA advisory panel is also under contract to advise any other institution on the same issues that come before the panel for review. In addition, it’s important not only to disclose EPA grants but also grants or contracts supported by other federal agencies, private industry or other institutions.
- In reviewing public participation, S. 543 proposes that “prior to conducting major advisory activities, the Board shall hold a public information-gathering session to discuss the state of the science related to the advisory activity.” As a point of reference, the Science Advisory Board conducted approximately 60-80 annual scientific reviews during the latter period of my tenure in the Reagan Administration. Had the S. 543 language been in effect during that time, I would have been required to organize 60-80 information-gathering sessions. The question I pose to this Subcommittee is: when would I have been able to actually organize the scientific reviews for which the Science Advisory Board is constituted? S. 543 adds a new, intrusive and expensive layer of bureaucracy to the scientific review process that would result in its breakdown and paralysis and directly undermine the peer review process.

- The proposed legislation also would require that public comments during Science Advisory Board reviews “shall not be limited by an insufficient or arbitrary time restrictions.” I’ve had a great deal of professional experience in integrating public comments into the scientific review process. Public comments can provide valuable information or perspective bearing on important scientific issues, and they deserve to be heard by advisory panels. Public comments can also provide input that is not related to the purpose of the scientific review, or they can be duplicative across the various business or environmental organizations that seek formal time on the agenda. One characteristic of many public requests for comments from both industry and environmental groups is that they seek to “flood the zone.” This means that multiple organizations with a common interest will make individual requests for comments on similar issues rather than coordinating their comments. By providing unlimited time for public comments, S. 543 creates the perverse incentive of driving scientific advisory panels away from their focus on the underlying science and towards a role of referee among competing interest groups. This provision of S. 543 should be removed.

In summary, as I reviewed the provisions of S. 543, I’m having a tremendous case of déjà vu that recalls my experience as Science Advisory Board Director during President Ronald Reagan’s Administration. Then, as now, Congress proposed legislation that substituted quotas for scientific merit in the appointment of advisory committee members. Then, as now, proposed legislation would add burdensome new requirements to the operation of scientific advisory panels that compete with and diminish their ability to focus on their core purpose—to provide independent evaluation of the quality of research and the scientific basis of proposed criteria, risks assessments and proposed policies and standards. Enactment of this proposed legislation will waste of taxpayer dollars and will further divert the focus away from the critical need of ensuring that scientific panels advising the EPA deliver qualified, timely and effective scientific advice.

(C) the environmental, energy, and economic impact of such processes, procedures, and methods.

(g) Assessment of risks to ecosystems

The Administrator may assess the risks to ecosystems from exposure to criteria air pollutants (as identified by the Administrator in the Administrator's sole discretion).

(h) RACT/BACT/LAER clearinghouse

The Administrator shall make information regarding emission control technology available to the States and to the general public through a central database. Such information shall include all control technology information received pursuant to State plan provisions requiring permits for sources, including operating permits for existing sources.

(July 14, 1955, ch. 360, title I, § 108, as added Pub. L. 91-604, § 4(a), Dec. 31, 1970, 84 Stat. 1678; amended Pub. L. 95-95, title I, §§ 104, 105, title IV, § 401(a), Aug. 7, 1977, 91 Stat. 689, 790; Pub. L. 101-549, title I, §§ 108(a)-(c), (o), 111, Nov. 15, 1990, 104 Stat. 2465, 2466, 2469, 2470; Pub. L. 105-362, title XV, § 1501(b), Nov. 10, 1998, 112 Stat. 3294.)

CODIFICATION

November 15, 1990, referred to in subsec. (e), was in the original "enactment of the Clean Air Act Amendments of 1989", and was translated as meaning the date of the enactment of Pub. L. 101-549, popularly known as the Clean Air Act Amendments of 1990, to reflect the probable intent of Congress.

Section was formerly classified to section 1857c-3 of this title.

PRIOR PROVISIONS

A prior section 108 of act July 14, 1955, was renumbered section 115 by Pub. L. 91-604 and is classified to section 7415 of this title.

AMENDMENTS

1998—Subsec. (f)(3), (4). Pub. L. 105-362 struck out par. (3), which required reports by the Secretary of Transportation and the Administrator to be submitted to Congress by Jan. 1, 1993, and every 3 years thereafter, reviewing and analyzing existing State and local air quality related transportation programs, evaluating achievement of goals, and recommending changes to existing programs, and par. (4), which required that in each report after the first report the Secretary of Transportation include a description of the actions taken to implement the changes recommended in the preceding report.

1990—Subsec. (e). Pub. L. 101-549, § 108(a), inserted first sentence and struck out former first sentence which read as follows: "The Administrator shall, after consultation with the Secretary of Transportation and the Secretary of Housing and Urban Development and State and local officials and within 180 days after August 7, 1977, and from time to time thereafter, publish guidelines on the basic program elements for the planning process assisted under section 7505 of this title."

Subsec. (f)(1). Pub. L. 101-549, § 108(b), in introductory provisions, substituted present provisions for provisions relating to Federal agencies, States, and air pollution control agencies within either 6 months or one year after Aug. 7, 1977.

Subsec. (f)(1)(A). Pub. L. 101-549, § 108(b), substituted present provisions for provisions relating to information prepared in cooperation with Secretary of Transportation, regarding processes, procedures, and methods to reduce certain pollutants.

Subsec. (f)(3), (4). Pub. L. 101-549, § 111, added pars. (3) and (4).

Subsec. (g). Pub. L. 101-549, § 108(o), added subsec. (g). Subsec. (h). Pub. L. 101-549, § 108(c), added subsec. (h). 1977—Subsec. (a)(1)(A). Pub. L. 95-95, § 401(a), substituted "emissions of which, in his judgment, cause or contribute to air pollution which may reasonably be anticipated to endanger public health or welfare" for "which in his judgment has an adverse effect on public health or welfare".

Subsec. (b)(1). Pub. L. 95-95, § 104(a), substituted "cost of installation and operation, energy requirements, emission reduction benefits, and environmental impact of the emission control technology" for "technology and costs of emission control".

Subsec. (c). Pub. L. 95-95, § 104(b), inserted provision directing the Administrator, not later than six months after Aug. 7, 1977, to revise and reissue criteria relating to concentrations of NO₂ over such period (not more than three hours) as he deems appropriate, with the criteria to include a discussion of nitric and nitrous acids, nitrites, nitrates, nitrosamines, and other carcinogenic and potentially carcinogenic derivatives of oxides of nitrogen.

Subsecs. (e), (f). Pub. L. 95-95, § 105, added subsecs. (e) and (f).

EFFECTIVE DATE OF 1977 AMENDMENT

Amendment by Pub. L. 95-95 effective Aug. 7, 1977, except as otherwise expressly provided, see section 406(d) of Pub. L. 95-95, set out as a note under section 7401 of this title.

MODIFICATION OR RESCISSION OF RULES, REGULATIONS, ORDERS, DETERMINATIONS, CONTRACTS, CERTIFICATIONS, AUTHORIZATIONS, DELEGATIONS, AND OTHER ACTIONS

All rules, regulations, orders, determinations, contracts, certifications, authorizations, delegations, or other actions duly issued, made, or taken by or pursuant to act July 14, 1955, the Clean Air Act, as in effect immediately prior to the date of enactment of Pub. L. 95-95 [Aug. 7, 1977] to continue in full force and effect until modified or rescinded in accordance with act July 14, 1955, as amended by Pub. L. 95-95 [this chapter], see section 406(b) of Pub. L. 95-95, set out as an Effective Date of 1977 Amendment note under section 7401 of this title.

§ 7409. National primary and secondary ambient air quality standards

(a) Promulgation

(1) The Administrator—

(A) within 30 days after December 31, 1970, shall publish proposed regulations prescribing a national primary ambient air quality standard and a national secondary ambient air quality standard for each air pollutant for which air quality criteria have been issued prior to such date; and

(B) after a reasonable time for interested persons to submit written comments thereon (but no later than 90 days after the initial publication of such proposed standards) shall by regulation promulgate such proposed national primary and secondary ambient air quality standards with such modifications as he deems appropriate.

(2) With respect to any air pollutant for which air quality criteria are issued after December 31, 1970, the Administrator shall publish, simultaneously with the issuance of such criteria and information, proposed national primary and secondary ambient air quality standards for any such pollutant. The procedure provided for in paragraph (1)(B) of this subsection shall apply to the promulgation of such standards.

(b) Protection of public health and welfare

(1) National primary ambient air quality standards, prescribed under subsection (a) of this section shall be ambient air quality standards the attainment and maintenance of which in the judgment of the Administrator, based on such criteria and allowing an adequate margin of safety, are requisite to protect the public health. Such primary standards may be revised in the same manner as promulgated.

(2) Any national secondary ambient air quality standard prescribed under subsection (a) of this section shall specify a level of air quality the attainment and maintenance of which in the judgment of the Administrator, based on such criteria, is requisite to protect the public welfare from any known or anticipated adverse effects associated with the presence of such air pollutant in the ambient air. Such secondary standards may be revised in the same manner as promulgated.

(c) National primary ambient air quality standard for nitrogen dioxide

The Administrator shall, not later than one year after August 7, 1977, promulgate a national primary ambient air quality standard for NO₂ concentrations over a period of not more than 3 hours unless, based on the criteria issued under section 7408(c) of this title, he finds that there is no significant evidence that such a standard for such a period is requisite to protect public health.

(d) Review and revision of criteria and standards; independent scientific review committee; appointment; advisory functions

(1) Not later than December 31, 1980, and at five-year intervals thereafter, the Administrator shall complete a thorough review of the criteria published under section 7408 of this title and the national ambient air quality standards promulgated under this section and shall make such revisions in such criteria and standards and promulgate such new standards as may be appropriate in accordance with section 7408 of this title and subsection (b) of this section. The Administrator may review and revise criteria or promulgate new standards earlier or more frequently than required under this paragraph.

(2)(A) The Administrator shall appoint an independent scientific review committee composed of seven members including at least one member of the National Academy of Sciences, one physician, and one person representing State air pollution control agencies.

(B) Not later than January 1, 1980, and at five-year intervals thereafter, the committee referred to in subparagraph (A) shall complete a review of the criteria published under section 7408 of this title and the national primary and secondary ambient air quality standards promulgated under this section and shall recommend to the Administrator any new national ambient air quality standards and revisions of existing criteria and standards as may be appropriate under section 7408 of this title and subsection (b) of this section.

(C) Such committee shall also (i) advise the Administrator of areas in which additional knowledge is required to appraise the adequacy

and basis of existing, new, or revised national ambient air quality standards, (ii) describe the research efforts necessary to provide the required information, (iii) advise the Administrator on the relative contribution to air pollution concentrations of natural as well as anthropogenic activity, and (iv) advise the Administrator of any adverse public health, welfare, social, economic, or energy effects which may result from various strategies for attainment and maintenance of such national ambient air quality standards.

(July 14, 1955, ch. 360, title I, §109, as added Pub. L. 91-604, §4(a), Dec. 31, 1970, 84 Stat. 1679; amended Pub. L. 95-95, title I, §106, Aug. 7, 1977, 91 Stat. 691.)

CODIFICATION

Section was formerly classified to section 1857c-4 of this title.

PRIOR PROVISIONS

A prior section 109 of act July 14, 1955, was renumbered section 116 by Pub. L. 91-604 and is classified to section 7416 of this title.

AMENDMENTS

1977—Subsec. (c). Pub. L. 95-95, §106(b), added subsec. (c).

Subsec. (d). Pub. L. 95-95, §106(a), added subsec. (d).

EFFECTIVE DATE OF 1977 AMENDMENT

Amendment by Pub. L. 95-95 effective Aug. 7, 1977, except as otherwise expressly provided, see section 406(d) of Pub. L. 95-95, set out as a note under section 7401 of this title.

MODIFICATION OR RESCISSION OF RULES, REGULATIONS, ORDERS, DETERMINATIONS, CONTRACTS, CERTIFICATIONS, AUTHORIZATIONS, DELEGATIONS, AND OTHER ACTIONS

All rules, regulations, orders, determinations, contracts, certifications, authorizations, delegations, or other actions duly issued, made, or taken by or pursuant to act July 14, 1955, the Clean Air Act, as in effect immediately prior to the date of enactment of Pub. L. 95-95 [Aug. 7, 1977] to continue in full force and effect until modified or rescinded in accordance with act July 14, 1955, as amended by Pub. L. 95-95 [this chapter], see section 406(b) of Pub. L. 95-95, set out as an Effective Date of 1977 Amendment note under section 7401 of this title.

TERMINATION OF ADVISORY COMMITTEES

Advisory committees established after Jan. 5, 1973, to terminate not later than the expiration of the 2-year period beginning on the date of their establishment, unless, in the case of a committee established by the President or an officer of the Federal Government, such committee is renewed by appropriate action prior to the expiration of such 2-year period, or in the case of a committee established by the Congress, its duration is otherwise provided for by law. See section 14 of Pub. L. 92-463, Oct. 6, 1972, 86 Stat. 776, set out in the Appendix to Title 5, Government Organization and Employees.

ROLE OF SECONDARY STANDARDS

Pub. L. 101-549, title VIII, §817, Nov. 15, 1990, 104 Stat. 2697, provided that:

“(a) REPORT.—The Administrator shall request the National Academy of Sciences to prepare a report to the Congress on the role of national secondary ambient air quality standards in protecting welfare and the environment. The report shall:

“(1) include information on the effects on welfare and the environment which are caused by ambient

concentrations of pollutants listed pursuant to section 108 [42 U.S.C. 7408] and other pollutants which may be listed;

“(2) estimate welfare and environmental costs incurred as a result of such effects;

“(3) examine the role of secondary standards and the State implementation planning process in preventing such effects;

“(4) determine ambient concentrations of each such pollutant which would be adequate to protect welfare and the environment from such effects;

“(5) estimate the costs and other impacts of meeting secondary standards; and

“(6) consider other means consistent with the goals and objectives of the Clean Air Act [42 U.S.C. 7401 et seq.] which may be more effective than secondary standards in preventing or mitigating such effects.

“(b) SUBMISSION TO CONGRESS; COMMENTS; AUTHORIZATION.—(1) The report shall be transmitted to the Congress not later than 3 years after the date of enactment of the Clean Air Act Amendments of 1990 [Nov. 15, 1990].

“(2) At least 90 days before issuing a report the Administrator shall provide an opportunity for public comment on the proposed report. The Administrator shall include in the final report a summary of the comments received on the proposed report.

“(3) There are authorized to be appropriated such sums as are necessary to carry out this section.”

§ 7410. State implementation plans for national primary and secondary ambient air quality standards

(a) Adoption of plan by State; submission to Administrator; content of plan; revision; new sources; indirect source review program; supplemental or intermittent control systems

(1) Each State shall, after reasonable notice and public hearings, adopt and submit to the Administrator, within 3 years (or such shorter period as the Administrator may prescribe) after the promulgation of a national primary ambient air quality standard (or any revision thereof) under section 7409 of this title for any air pollutant, a plan which provides for implementation, maintenance, and enforcement of such primary standard in each air quality control region (or portion thereof) within such State. In addition, such State shall adopt and submit to the Administrator (either as a part of a plan submitted under the preceding sentence or separately) within 3 years (or such shorter period as the Administrator may prescribe) after the promulgation of a national ambient air quality secondary standard (or revision thereof), a plan which provides for implementation, maintenance, and enforcement of such secondary standard in each air quality control region (or portion thereof) within such State. Unless a separate public hearing is provided, each State shall consider its plan implementing such secondary standard at the hearing required by the first sentence of this paragraph.

(2) Each implementation plan submitted by a State under this chapter shall be adopted by the State after reasonable notice and public hearing. Each such plan shall—

(A) include enforceable emission limitations and other control measures, means, or techniques (including economic incentives such as fees, marketable permits, and auctions of emissions rights), as well as schedules and timetables for compliance, as may be necessary or appropriate to meet the applicable requirements of this chapter;

(B) provide for establishment and operation of appropriate devices, methods, systems, and procedures necessary to—

(i) monitor, compile, and analyze data on ambient air quality, and

(ii) upon request, make such data available to the Administrator;

(C) include a program to provide for the enforcement of the measures described in subparagraph (A), and regulation of the modification and construction of any stationary source within the areas covered by the plan as necessary to assure that national ambient air quality standards are achieved, including a permit program as required in parts C and D of this subchapter;

(D) contain adequate provisions—

(i) prohibiting, consistent with the provisions of this subchapter, any source or other type of emissions activity within the State from emitting any air pollutant in amounts which will—

(I) contribute significantly to nonattainment in, or interfere with maintenance by, any other State with respect to any such national primary or secondary ambient air quality standard, or

(II) interfere with measures required to be included in the applicable implementation plan for any other State under part C of this subchapter to prevent significant deterioration of air quality or to protect visibility,

(ii) insuring compliance with the applicable requirements of sections 7426 and 7415 of this title (relating to interstate and international pollution abatement);

(E) provide (i) necessary assurances that the State (or, except where the Administrator deems inappropriate, the general purpose local government or governments, or a regional agency designated by the State or general purpose local governments for such purpose) will have adequate personnel, funding, and authority under State (and, as appropriate, local) law to carry out such implementation plan (and is not prohibited by any provision of Federal or State law from carrying out such implementation plan or portion thereof), (ii) requirements that the State comply with the requirements respecting State boards under section 7428 of this title, and (iii) necessary assurances that, where the State has relied on a local or regional government, agency, or instrumentality for the implementation of any plan provision, the State has responsibility for ensuring adequate implementation of such plan provision;

(F) require, as may be prescribed by the Administrator—

(i) the installation, maintenance, and replacement of equipment, and the implementation of other necessary steps, by owners or operators of stationary sources to monitor emissions from such sources,

(ii) periodic reports on the nature and amounts of emissions and emissions-related data from such sources, and

(iii) correlation of such reports by the State agency with any emission limitations

Membership Balance Plan

ENVIRONMENTAL PROTECTION AGENCY
1. FEDERAL ADVISORY COMMITTEE NAME <i>State the legal name of the FAC</i>
Clean Air Scientific Advisory Committee (CASAC)
2. AUTHORITY <i>Identify the authority for establishing the FAC</i>
<p>Statutory: Section 109 of the Clean Air Act (CAA) enacted on August 7, 1977 (42 U.S.C. § 7409), specifically directs the EPA Administrator to review the air quality criteria published under section 108 and the national ambient air quality standards (NAAQS) promulgated under section 109 and to make such revisions in such criteria and standards and promulgate such new standards as may be appropriate no later than every five years. Section 109 also directs the Administrator to establish this committee to review the criteria and standards promulgated, and provide other related scientific and technical advice.</p>
3. MISSION/FUNCTION <i>Describe the mission/function of the FAC</i>
<p>The CASAC is identified as a scientific/technical advisory committee. As required by CAA section 109(d), the CASAC will: (a.) review the criteria published under section 108 of the Clean Air Act and the national primary and secondary ambient air quality standards and recommend to the Administrator any new national ambient air quality standards and revisions of existing criteria and standards as may be appropriate; (b.) advise the Administrator of areas in which additional knowledge is required to appraise the adequacy and basis of existing, new, or revised national ambient air quality standards; (c.) describe the research efforts necessary to provide the required information; (d.) advise the Administrator on the relative contribution to air pollution concentrations of natural as well as anthropogenic activity; and (e.) advise the Administrator of any adverse public health, welfare, social, economic, or energy effects which may result from various strategies for attainment and maintenance of such national ambient air quality standards.</p>
4. POINTS OF VIEW <i>Based on understanding the purpose of the FAC,</i> <i>(a) describe the process that will be used to ensure the committee is balanced, and identify the categories</i> <i>(b) consider identifying an anticipated relative distribution of candidates across the categories; and</i> <i>(c) explain how a determination was made to appoint any individuals as Special Government Employees or Representative members</i>
<p>CASAC will be composed of seven (7) members. The Administrator will appoint a Chairperson and six members including, as required by CAA section 109(d), at least one member of the National Academy of Sciences (NAS), one physician, and one person representing State air pollution control agencies. Members shall be persons who have demonstrated high levels of competence, knowledge, and</p>

expertise in the scientific/technical fields relevant to air pollution and air quality issues. Members will generally serve as Special Government Employees (SGE).

5. OTHER BALANCE FACTORS

List any other factors EPA identifies as important in achieving a balanced FAC

Geographic location may be considered.

6. CANDIDATE IDENTIFICATION PROCESS

Summarize the process intended to be used to identify candidates for the FAC, key resources expected to be tapped to identify candidates and the key persons (by position, not name) who will evaluate FAC balance. The summary should:

- (a) describe the process*
- (b) identify EPA key staff involved (by position, not name)*
- (c) briefly describe how FAC vacancies, if any, will be handled by EPA*
- (d) state the membership term limit of FAC members, if applicable*

Prior to the expiration of committee members' terms, the Designated Federal Officer (DFO) meets with EPA's Federal Advisory Committee Management Division (FACMD) to discuss the outreach plan, establish a timeline, and other issues concerning the membership package. After approval of the outreach plan the DFO conducts outreach for new members in accordance with the plan. The DFO also solicits candidates through a Federal Register solicitation.

After a review of the pool of nominees, a determination is made to consider whether additional outreach is needed. Each SGE candidate is researched to determine whether the person is a federally registered lobbyist. In addition, SGE candidates are screened for the absence of financial conflicts of interest as well as the absence of an appearance of a lack of impartiality. The DFO develops a draft grid of nominees, including at least one alternate candidate for each point of view for the function the committee is to perform.

A balance review of the proposed membership is then conducted by FACMD and the Office of General Counsel. Different levels of EPA managers then review the draft package for questions or comments before the final package is prepared.

Formal letters of invitation to serve on the CASAC will be extended by the Administrator or Deputy Administrator of EPA. This cycle will be repeated for any occurring vacancies. CASAC members are usually appointed for a three-year term. Generally, members may be reappointed for a total of 6 years.

7. SUBCOMMITTEE BALANCE

Subcommittees subject to FACA should either state that the process for determining FAC member balance on subcommittees is the same as the process for the parent FAC, or describe how it is different*

**This is relevant to those agencies that require their subcommittees to follow all FACA requirements.*

EPA plans to use the process that is used to determine advisory committee member balance for the parent (Tier1) Federal advisory committee for any Tier 2 subcommittee(s) that may be created.

8. OTHER

Provide any additional information that supports the balance of the FAC

Not applicable.
9. DATE PREPARED/UPDATED
April 14, 2017

Membership Balance Plan

ENVIRONMENTAL PROTECTION AGENCY
1. FEDERAL ADVISORY COMMITTEE NAME <i>State the legal name of the FAC</i>
EPA Board of Scientific Counselors
2. AUTHORITY <i>Identify the authority for establishing the FAC</i>
Agency Authority
3. MISSION/FUNCTION <i>Describe the mission/function of the FAC</i>
<p>The EPA Board of Scientific Counselors (BOSC) will provide advice and recommendations on all aspects (technical and management) of the Office of Research and Development's (ORD) research program. As appropriate, the BOSC will consult and coordinate its work with the EPA Science Advisory Board. The major objectives are to provide advice and recommendations on:</p> <ul style="list-style-type: none"> a. ORD's research programs and research management practices, and actions to improve research program quality, relevance, and performance, as well as program structure, scientific leadership, research coordination, communication, and outcomes; b. ORD's program development, progress, and research program balance, which may include evaluation of ORD's Strategic Research Action Plans and Cross-cutting Research Roadmaps; c. Use of peer review within ORD to sustain and enhance the quality of science in EPA; d. Scientific and management issues specific to ORD Offices, National Laboratories, and Centers; and e. ORD's human resources planning, such as scientist career development and rotational assignment programs, and the appropriate scope and design of training programs for environmental research professionals.
4. POINTS OF VIEW <i>Based on understanding the purpose of the FAC,</i> <i>(a) describe the process that will be used to ensure the committee is balanced, and identify the categories</i> <i>(b) consider identifying an anticipated relative distribution of candidates across the categories; and</i> <i>(c) explain how a determination was made to appoint any individuals as Special Government Employees or Representative members</i>
<p>The BOSC will be composed of approximately twenty (20) members who will serve as Special Government Employees (SGEs). In selecting members, EPA will consider candidates from the environmental scientific and technical fields, human health care professions, academia, industry, public and private research institutes and organizations, and other relevant interest areas.</p>

5. OTHER BALANCE FACTORS

List any other factors EPA identifies as important in achieving a balanced FAC

Balances in disciplines, work sector (i.e., academia, government – federal/state/local, industry, environmental associations), diversity, and geographic distribution area are also considered.

6. CANDIDATE IDENTIFICATION PROCESS

Summarize the process intended to be used to identify candidates for the FAC, key resources expected to be tapped to identify candidates and the key persons (by position, not name) who will evaluate FAC balance.

The summary should:

- (a) describe the process*
- (b) identify EPA key staff involved (by position, not name)*
- (c) briefly describe how FAC vacancies, if any, will be handled by EPA*
- (d) state the membership term limit of FAC members, if applicable*

Approximately 8 months prior to expiration of committee members' terms the DFO meets with EPA's Federal Advisory Committee Management (FACM) staff to discuss the outreach plan, establish a timeline, and address other issues concerning the membership package. After approval of the outreach plan, the DFO conducts outreach for new members in accordance with the plan.

The DFO solicits candidate names through a Federal Register notice and from individuals who are actively engaged in interests relating to environmental scientific and technical fields, human health care professions, academia, industry, public and private research institutes and organizations, and other relevant interest areas.

After a review of the pool of nominees, a determination is made to consider whether additional outreach is needed. Each candidate is researched to determine whether the person is a federally registered lobbyist. In addition, candidates are screened for the absence of conflicts of interest and other ethics issues. The DFO develops a draft grid of nominees, including at least one additional candidate for each point of view for the function the committee is to perform.

A balance review of the proposed membership is then conducted by FACM staff and the Office of General Counsel FACA Attorney. Different levels of EPA managers then review the draft package for questions or comments before the final package is prepared.

Formal letters of invitation to serve on the BOSC will be extended by the Administrator or Deputy Administrator of EPA. This cycle will be repeated for any occurring vacancies. Members are usually appointed for a three-year term. Generally, members may be reappointed for a total of 6 years.

7. SUBCOMMITTEE BALANCE

Subcommittees subject to FACA should either state that the process for determining FAC member balance on subcommittees is the same as the process for the parent FAC, or describe how it is different*

**This is relevant to those agencies that require their subcommittees to follow all FACA requirements.*

EPA plans to use the process that is used to determine advisory committee member balance for the parent (Tier 1) Federal advisory committee for any Tier 2 subcommittee(s) that may be created.

8. OTHER

Provide any additional information that supports the balance of the FAC

Not applicable.

February 29, 2016

FACA Essentials at EPA for Federal Advisory Committee Members

What is FACA and to whom does it apply?

Congress passed the Federal Advisory Committee Act (FACA), 5 U.S.C. App. 2, in 1972, to create an orderly procedure by which Federal agencies may seek collective advice from federal advisory committees. FACA establishes procedures for the management of federal advisory committees, ensures transparency of advisory committee decision-making, and ensures balanced representation on advisory committees. When a Federal agency establishes a group (or manages and controls a group established by a non-federal entity) to obtain collective advice, the agency may be required to comply with FACA if the group has one or more members who are not Federal government employees.

FACA ensures that committees convened to give group advice are accountable to the public by maximizing public access to advisory committee deliberations and minimizing the influence of special interests through balanced committee membership. In addition, the Act seeks to reduce wasteful expenditures and improve the overall administration of advisory committees.

Today, an average of 1000 advisory committees with more than 70,000 members advise the President and the Executive Branch agencies on a variety of issues. Advisory committees are established by one of four authorities – Presidential authority, statutory requirement, statutory authority, and Federal Agency discretion.

Federal advisory committees are an important tool within EPA for building consensus and providing input and recommendations from EPA's diverse customers, partners, and stakeholders. EPA manages approximately 22 committees, and 16 subcommittees, which play

a strategic role in the Agency to carry out its mission to protect human health and the environment.

In 2016, the Agency held 96 committee meetings. These meetings included approximately 720 scientists, public health officials, industry representatives, academics, citizens, Tribal groups, and stakeholders.

What are your responsibilities as a new federal advisory committee member?

The primary responsibilities of federal advisory committee members are to:

- Attend and participate in committee meetings.
- Study any review material in advance of the meetings.
- Be willing to engage in an exchange of views and perspectives and search for consensus solutions, where appropriate.
- Represent your constituent group if you are appointed as a representative member, or provide your best independent judgment if appointed as a special government employee.
- Comply with the applicable ethics in government laws if appointed as a special government employee.
- Cooperate with your committee's Designated Federal Officer.
- Serve on the committee for your appointed term, or if you find you cannot serve, resign from the committee.
- Refrain from any language or activities that would compromise the civility of the committee.

- Maintain an environment that promotes the participation of individuals regardless of race, color, national origin, age, sex, religion, disability, sexual orientation, genetic information, prior EEO activity, status as a parent or marital status.

What are the main requirements for committee operations under FACA?

Each committee must have a Designated Federal Officer (DFO) or Federal employee to attend each meeting. Meetings may not be conducted in the absence of that officer or employee. 5 U.S.C. App.2 § 10(e).

Committee meetings must be announced in advance and open to the public, unless designated as closed for national security, or other appropriate reasons. The public shall be provided an opportunity to voice comments to the committee. 5 U.S.C. App.2 § 10(a).

All committee documents provided to or prepared by the committee, including reports, transcripts, drafts, minutes, working papers, and agenda must be made available for public inspection and copying, unless they can be withheld under the Freedom of Information Act. 5 U.S.C. App.2 § 10(b).

The committees must be “fairly balanced” in the points of view represented for the functions to be performed. 5 U.S.C. App.2 § 5 (b)(2) & 5(c).

How does FACA impact collaborative processes at EPA?

EPA has been a leader among Federal agencies and departments in using collaborative approaches to environmental problem-solving. Collaborative processes can take many forms and can be either formal or informal.

In general, FACA applies to collaborative efforts when all of the following criteria are met:

- 1) EPA establishes (organizes or forms) or utilizes (exerts “actual management or control” of) a group;

- 2) The group includes one or more individuals who are not government employees;
- 3) The product of the collaboration is group advice for EPA, another federal agency, or the President.

What are the types of members appointed to federal advisory committees?

Your functions as a committee member may differ depending on the type of membership under which you were invited.

Representative members are selected to represent the point of view of a group. Representative Members may represent groups or organizations, such as industry, labor, consumers, or any other recognizable group of persons having an interest in matters before the committee.

Special Government Employee (SGE) members are appointed to provide the Agency with their own best independent judgment based on their individual expertise. As an SGE member, you are speaking for yourself as an expert in your field.

Regular Government Employee (RGE) members are individuals employed by the Federal Government 5 U.S.C. 2105.

Where can you find further information on FACA?

AGENCY: Office of Governmentwide Policy, GSA.

ACTION: Final rule.

SUMMARY: The General Services Administration (GSA) is revising Federal Property Management Regulations (FPMR) coverage on Federal advisory committee management and moving it into the Federal Management Regulation (FMR). A cross-reference is added to the FPMR to direct readers to the coverage in the FMR. The FMR coverage is written in plain language to provide agencies with updated regulatory material that is easy to read and understand. This action is necessary due to legislative and policy changes that have occurred, and judicial decisions that have been issued since the regulation was last updated. It is based also on suggestions for improvement from other Federal agencies and interested parties, and clarifies how the regulation applies or does not apply to certain situations.

EFFECTIVE DATE: August 20, 2001.

FOR FURTHER INFORMATION CONTACT: Charles F. Howton, Deputy Director, Committee Management Secretariat (202) 273–3561, or electronically at the following Internet address: charles.howton@gsa.gov.

SUPPLEMENTARY INFORMATION:

A. Background

GSA's authority for administering the Federal Advisory Committee Act (FACA), as amended, 5 U.S.C., App. (also referred to as "the Act"), is contained in section 7 of the Act and Executive Order 12024 (42 FR 61445; 3 CFR 1977 Comp., p. 158). Under Executive Order 12024, the President delegated to the Administrator of General Services all of the functions vested in the President by the Act. GSA's responsibilities for administering the Act have been delegated to the Associate Administrator for Governmentwide Policy and to the Director of the Committee Management Secretariat.

In a previous issue of the **Federal Register** (62 FR 31550, June 10, 1997), GSA published an Advance Notice of Proposed Rulemaking (ANPRM) and requested comments. Additional

comments were requested from the Interagency Committee on Federal Advisory Committee Management. GSA requested comments on: (1) Suggested issues to address; (2) specific recommendations about changes needed in the current Federal Advisory Committee Management subpart; (3) examples of situations where FACA was either a useful tool or a hindrance to public involvement; and (4) GSA's intent to include illustrative examples and principles. On January 14, 2000, GSA published a proposed rule in the **Federal Register** (65 FR 2504) and requested comments over a 60-day period ending on March 14, 2000. All comments received were considered in drafting this final rule.

This final rule provides administrative and interpretive guidelines and management controls for Federal agencies to implement the provisions of the Act, and is intended to improve the management and operation of Federal advisory committees in the executive branch.

B. Discussion of Comments

Twenty-six commenters responded to the invitation for comments, including twenty commenters from the executive branch and six commenters from non-Federal sources. Of the twenty comments received from executive branch sources, three comments were submitted by subcomponents of a Federal department or agency. A total of fifty-nine specific issues or recommendations were identified, of which seven were either fully supportive of the proposed rule or concerned typographical errors. GSA addressed the disposition of the remaining fifty-two issues or recommendations as follows:

The Final Rule Should Include More Guidance Relating to the Management of Advisory Committees, Including the Impact of Other Statutes and Issues on Day-to-Day Operations

Several commenters provided suggestions regarding the addition of guidance on issues that, although not addressed by the Act, likely would improve the management of advisory committees. For example, one commenter suggested that the final rule include a provision to encourage agencies to streamline their internal processes and procedures in order to expedite the establishment of advisory committees. Other commenters requested that GSA: (1) Provide more detailed provisions on the compensation of advisory committee members and staff, and experts and consultants; (2) expand the range of

information required to be listed in an advisory committee's charter to include the nature and disposition of records; and (3) incorporate new regulatory requirements for increasing access to advisory committee information, such as providing meeting notices, minutes, and reports via the Internet.

In response to these recommendations, GSA expanded the number of examples included within the final rule to illustrate how other statutes or issues potentially could affect the effective management of advisory committees.

In addition, GSA reorganized the examples and other guidance into appendices to avoid any ambiguity between actions required by the Act and the final rule, and actions that are suggested only within an implementing framework of "best practices." In the final rule, a "Key Points and Principles" appendix appears at the end of each subpart to which it relates.

In applying the "best practices" offered in the appendices, users of the final rule should continue to examine the extent to which other factors, including agency-specific statutory provisions and internal agency procedures, may affect a specific advisory committee or program. Although GSA believes that the examples contained in the appendices to the final rule represent the circumstances most commonly encountered during the day-to-day management of advisory committees, the listing is not exhaustive and must be supplemented based upon the unique requirements of the user.

Provide Additional Guidance Regarding What Advisory Committees and Their Subcommittees Must Do To Comply With the Act

Many commenters expressed concern over language contained in the preamble to the proposed rule relating to coverage of subcommittees under the Act. The preamble to the proposed rule noted that:

The applicability of the procedural requirements contained in FACA and this proposed rule to subcommittees of advisory committees has been clarified. GSA's current FACA regulation does not make clear that subcommittees reporting to a parent committee are not subject to FACA. Indeed, the regulation states just the opposite, providing that "[s]ubcommittees that do not function independently of the full or parent advisory committee" are subject to all requirements of FACA except the requirement for a charter. (See 41 CFR 101–6.1007(b)(3).) This provision is problematic for two reasons. First, it applies FACA more broadly than the statute itself requires. Second, it essentially creates a special type

of advisory committee that is subject to some, but not all of FACA's requirements, which has no foundation in the statute. Under FACA, a group is either an advisory committee subject to all of the statutory requirements, or it is not an advisory committee, and therefore not subject to any of its requirements. Because a subcommittee which reports to a parent committee is not an "advisory committee" under FACA, there is no legal basis for applying any of FACA's requirements to such a subcommittee.

In evaluating the comments received, GSA notes that there were no objections to the exclusions contained in § 102–3.185 of the proposed rule (now § 102–3.160 of the final rule), relating to "What activities of an advisory committee are not subject to the notice and open meeting requirements of the Act?" The exclusions in § 102–3.160 of the final rule continue to cover the types of activities routinely performed by subcommittees. By this reasoning GSA sought to bring into harmony these activities with those provisions in the proposed rule differentiating subcommittees reporting to a parent advisory committee from those reporting directly to a Federal officer or agency.

However, the preamble to the proposed rule did not explain and describe adequately the legal framework for GSA's decision to differentiate subcommittees that report only to a parent advisory committee more clearly from advisory committees that report directly to a Federal officer or agency. The Act defines the term "advisory committee" as "any committee, * * * or any subcommittee or other subgroup thereof which is established or utilized by the President or an agency in the interest of obtaining advice or recommendations for the President or one or more agencies or officers of the Federal Government". Under this definition, a subcommittee is an "advisory committee" subject to the Act if it provides advice to the President or a Federal officer or agency. Most subcommittees, however, report only to a parent advisory committee and it is the parent committee that is normally responsible for providing advice or recommendations to the Government. In this conventional scenario, the subcommittee is not subject to the Act because it is not providing advice to the Government.

Case law supports this conclusion. In *National Anti-Hunger Coalition v. Executive Committee*, 557 F.Supp. 524 (D.D.C.), *aff'd*, 711 F.2d 1071 (D.C. Cir. 1983), the question presented was whether the Act applied to task forces reporting to the Executive Committee of the President's Private Sector Survey on

Cost Control in the Federal Government. The task forces had no authority to make recommendations to agencies or to the President. Instead, their function was to do the "preliminary work of the survey, including fact-gathering, statistical evaluations, and the formulation of preliminary reports." (557 F.Supp. at 526). Although it was undisputed that the Executive Committee was subject to the Act, the court held that the Act did not apply to the task forces under the following reasoning:

There is no question that the task forces are intimately involved in the gathering of information about federal programs and the formulation of possible recommendations for consideration of the Committee. That is not enough to render them subject to the FACA. The Act itself applies only to committees "established or utilized by" the President or an agency "in the interest of obtaining advice or recommendations for the President or one or more agencies." The Act does not cover groups performing staff functions such as those performed by the so-called task forces. (557 F.Supp. at 529). (See also *Association of American Physicians and Surgeons v. Clinton*, 997 F.2d 898, 911–913 (D.C. Cir. 1993).)

GSA believes that as a result of this decision, subcommittees that report to a parent advisory committee generally are not subject to the Act. GSA also believes that subcommittees whose advice or recommendations are provided directly to a Federal officer or agency are subject to the Act. However, GSA further believes that this decision does not shield those subcommittees from coverage under the Act whose advice or recommendations are not subject to deliberation by their parent advisory committees.

From this reasoning, it is not permissible for parent advisory committees simply to "rubber-stamp" the advice or recommendations of their subcommittees, thereby depriving the public of its opportunity to know about, and participate contemporaneously in, an advisory committee's deliberations. Agencies are cautioned to avoid excluding the public from attending any meeting where a subcommittee develops advice or recommendations that are not expected to be reviewed and considered by the parent advisory committee before being submitted to a Federal officer or agency. These exclusions may run counter to the provisions of the Act that require contemporaneous access to the advisory committee deliberative process.

To address these issues more clearly, GSA strengthened language in the final rule by: (1) Adding a new § 102–3.35 that outlines policies relating to subcommittees; (2) clarifying language

in § 102–3.145 relating to subcommittee meetings; and (3) clarifying the examples contained in Appendix A to Subpart C.

Correct and Clarify the Definition of "Utilized"

Nine commenters recommended that GSA revise its definition of the term, "utilized" to conform to governing case law.

As noted by some of the commenters, the definition of the term "utilized" in § 102–3.30 of the proposed rule inadvertently misstated the applicable legal test. The proposed rule stated that a committee is "utilized within the meaning of the Act when the President or a Federal agency exercises actual management and control over its operation." This construction would require an agency both to have management of the committee and to exercise control over the committee before the committee can be deemed "utilized." The proper statement of the "utilized" test is whether an agency either has management of the committee or, in some fashion other than management, exercises control over the committee.

The controlling legal authority is *Washington Legal Foundation v. U. S. Sentencing Commission*, 17 F.3d 1446 (D.C. Cir. 1994). In that case, the appeals court gave structure to the U.S. Supreme Court's prior decision interpreting the term "utilized." (See *Public Citizen v. Department of Justice*, 491 U.S. 440 (1989).) The appeals court ruled that the word "utilized" indicates "something along the lines of actual management or control of the advisory committee." (17 F.3d at 1450). The operative criterion for determining whether a committee has sufficiently close ties to an agency in order to render it "utilized" is whether the agency has either *management* of the committee or exerts some other type of *control*, but not necessarily both.

Similarly, § 102–3.50(b) of the proposed rule (now § 102–3.185(b) of the final rule) used the phrase "actual management and control" with regard to section 15 of the Act. In explaining the relationship between Federal agencies and the National Academy of Sciences (NAS) and the National Academy of Public Administration (NAPA) covered by section 15 of the Act, § 102–3.50(b) of the proposed rule states that "[a]gencies must not manage or control the specific procedures adopted by each academy." However, committees covered by section 15 of the Act must be under *both* the actual management *and* the control of the academies, not that of a Federal agency. In this instance, the use of the conjunctive

word “and” is appropriate and indicates that the academies cannot relinquish *either* management or control of their committees to Federal agencies.

Accordingly, GSA revised the language contained in the final rule by changing *management and control* to *management or control* in the definition of the term “utilized,” now in § 102–3.25 of the final rule, and in those instances in which it appears in the “Key Points and Principles” guidance in the appendices to the final rule.

Clarify the Application of the Act to Agency Interactions With the Public

Several commenters noted that Federal agencies are increasingly reliant on local communities, individual citizens, and interested parties to obtain information, advice, or recommendations on which to base decisions. They expressed concerns that: (1) Uncertainty about the scope of the Act creates a disincentive for Federal officers and agencies wishing to engage in public outreach; (2) the requirements of the Act are being interpreted differently within and among agencies; and (3) GSA’s current regulations do not adequately differentiate between those groups and activities covered by the Act and others that are not. (See 41 CFR 101–6.10.)

GSA recognizes that the broad definition in the Act of an “advisory committee” might be interpreted to extend coverage by the Act to any gathering or two or more persons from whom the President or other Federal officers or agencies seek advice or recommendations. However, in the cases discussed above, the courts have rejected such a broad reading of “advisory committee.” GSA believes that the sections in the final rule on definitions and on groups not covered by the Act, §§ 102–3.25 and 102–3.40, respectively, clarify the limits of the coverage by, or scope of, the Act when applied together.

Within this group of comments, GSA noted a consistent theme related to the need for more information regarding public participation tools and techniques that would allow for more collaboration that is not subject to the Act. Although advisory committees support Federal decisions in a variety of situations, GSA believes that the ability of agencies to interact with the public in numerous other ways is particularly important because advisory committees are only one method for agencies to obtain the views of the public for their programs. Federal agencies may engage in continuous collaboration using diverse, but complimentary, tools, techniques, and methods. Whether or

not a selected approach includes the use of advisory committees, the potential or perceived applicability of the Act must not prevent constructive collaboration from taking place. Agencies are encouraged to contact GSA concerning not only the use of Federal advisory committees, but also for information about alternative forms of public involvement.

In GSA’s view, agencies have broad latitude to consult with the public using many different approaches that are not subject to the Act. Public consultation formats that generally fall outside of the scope of the Act include public meetings, information exchange forums, meetings initiated with or by non-governmental organizations, Federal participation on groups that are not established or utilized by the Government, and certain work products generated by contractors as a result of consultation with the public.

While FACA is not a public participation statute, it directly affects how the executive branch is held accountable for the use and management of Federal advisory committees as a major means of obtaining public involvement. Within this context, agencies wishing to consult with private individuals, non-governmental organizations, or with the public at large through other assemblages often must consider whether or not the Act applies to a given situation.

The number and range of scenarios presented by the commenters underscore the importance of presenting a clearer understanding of how advisory committees are established by Federal agencies or how the Government’s relationship with groups not established within the meaning of the Act may nevertheless become subject to the Act if they are *utilized*. Based upon the comments received, the circumstances under which advisory committees are *established* within the executive branch appear to be well understood. Accordingly, GSA retained the language contained in § 102–3.30 of the proposed rule in § 102–3.25 of the final rule and throughout subpart B.

However, as noted in the above discussion of the proposed rule’s treatment of the term “utilized,” agencies must determine whether or not their relationship with a group created by non-Federal entities constitutes *actual management or control* within the meaning of the Act. To help agencies make this determination, GSA has included within the final rule several new examples illustrating the application of the *actual management or control* test to different situations.

These additions are contained in the “Key Points and Principles” guidance in Appendix A to Subpart A.

Explain the Relationship Between Committees Established by the National Academy of Sciences (NAS) or the National Academy of Public Administration (NAPA) and the Act

The Federal Advisory Committee Act Amendments of 1997, Public Law 105–153, December 17, 1997, established separate procedures for committees that are managed and controlled by NAS or NAPA. Subpart E of the final rule contains implementing instructions for the new section 15 of FACA.

Clarify the Distinction Between Advisory Committees Subject to the Act and Operational Committees Not Covered by the Act

Five commenters suggested that further guidance in the final rule is necessary to assist agencies in differentiating an operational committee not covered by the Act from one that performs primarily advisory functions and is, therefore, subject to the Act. GSA added guidance within Appendix A to Subpart A listing those characteristics generally associated with committees having primarily operational, as opposed to advisory, functions.

Clarify the Applicability of the Act to Advisory Committee Meetings Conducted Through Electronic Means

Four commenters supported GSA’s language contained in the proposed rule extending the definition of “committee meeting” to meetings conducted in whole or part through electronic means. However, two commenters suggested additional clarifications, which GSA has adopted.

First, GSA slightly modified the definition of “committee meeting” contained in § 102–3.25 of the final rule to include a “gathering” of advisory committee members whether in person or through electronic means. This change was made to highlight coverage by the Act of both physical and “virtual” meetings conducted by such means as a teleconference, videoconference, the Internet, or other electronic medium.

Second, GSA amended the language contained in § 102–3.140 of the final rule to provide for adequate public access to advisory committee meetings that are conducted in whole or part through electronic means. This change complements existing policy covering advisory committee meetings that are held within a physical setting, such as a conference room, by ensuring that agencies adequately plan for public

participation by adding additional capability (such as a designated number of public call-in lines for a teleconference) to ensure access to committee deliberations.

Provide Additional Guidance on Balanced Representation and Selection of Members

One commenter expressed concern that the proposed rule did not contain sufficient guidance on balanced representation and the selection of members. GSA recognizes that the guidance contained in the proposed rule is limited to the language of the Act, but believes that the provisions of section 5(c) of the Act are broad enough to allow for agency discretion in determining advisory committee representation and membership relative to applicable statutes, Executive orders, and the needs of the agency responsible for the advisory committee.

However, GSA added a list of possible considerations within Appendix A to Subpart B that, while not comprehensive or universally applicable, may help in developing a plan for balancing an advisory committee's membership.

Emphasize the Importance of Maximizing an Advisory Committee's Independent Judgment

Five commenters offered various suggestions to address the requirement contained in section 5(b)(3) of the Act, which is intended to ensure that the work products of an advisory committee reflect the group's independent judgment.

Included among these suggestions were recommendations from the U.S. Office of Government Ethics (OGE) that GSA modify the language contained in § 102–3.155 of the proposed rule (now contained in Appendix A to Subpart C of the final rule) to clarify the applicability of conflict of interest statutes and other Federal ethics rules to advisory committee members. GSA adopted all of OGE's suggestions.

The remaining suggestions received concerned the appointment of advisory committee members, including a recommended change to § 102–3.155 of the proposed rule (now Appendix A to Subpart C) to clarify that: (1) An agency may appoint a member to an advisory committee based upon the recommendation of an organization to be represented; and (2) recommendations from an advisory committee may be a part of an agency's process to nominate new members. GSA adopted these changes and suggestions.

Provide Additional Guidance on the Management of Federal Records

GSA received suggestions from the National Archives and Records Administration (NARA) regarding three areas where additional guidance on records management issues could be useful. Specifically, NARA recommended that § 102–3.190 of the proposed rule: (1) Be expanded to include all recordkeeping requirements specified by the Act, not just those relating to advisory committee minutes; (2) include a statement that records should be scheduled for disposition before actual termination of the advisory committee; and (3) with regard to information that must be included within an advisory committee's charter, include a determination as to whether its records fall within the Presidential Records Act, 44 U.S.C. Chap 22.

GSA addressed these recommendations by expanding § 102–3.200 of the proposed rule (now Appendix A to Subpart D) to include additional guidance relating to records management and to highlight the applicability and importance of Federal recordkeeping statutes and policies to advisory committee operations. GSA decided to include this guidance within this appendix because the Act generally is silent on records management issues, with the exception of the responsibilities of the Committee Management Officer (CMO) in section 8(b)(2) of the Act.

Pursuant to the National Archives and Records Administration Act, 44 U.S.C. Chap. 21, the Archivist of the United States is responsible for records management in the Federal Government, including the issuance of regulations and guidance for records retention and disposition. The Archivist, working in conjunction with the agencies' Records Management Officers, also is responsible for identifying records that are appropriate for transfer to the permanent Archives of the United States and those that must be processed in accordance with the Presidential Records Act.

Strengthen Provisions Relating to the Public's Access to Advisory Committee Records

Two commenters suggested that the final rule contain more explicit guidance regarding the public's access to committee records under section 10(b) of the Act. In particular, the commenters recommended adding language describing the circumstances under which records may be withheld pursuant to the Freedom of Information Act (FOIA), as amended, 5 U.S.C. 552.

GSA believes that timely access to advisory committee records is an important element of the public access provisions of the Act and, therefore, agrees with these suggestions. GSA further believes that there are two separate, but equally important issues related to the availability of advisory committee records under section 10(b) of FACA: (1) The extent to which records may be protected from disclosure under FOIA; and (2) the extent to which agencies may require that requests for non-exempt records be processed under the request and review process established by section 552(a)(3) of FOIA.

Section 10(b) of the Act provides that:

Subject to section 552 of title 5, United States Code, the records, reports, transcripts, minutes, appendixes, working papers, drafts, studies, agenda, or other documents which were made available to or prepared for or by each advisory committee shall be available for public inspection and copying at a single location in the offices of the advisory committee or the agency to which the advisory committee reports until the advisory committee ceases to exist.

The purpose of section 10(b) of the Act is to provide for the contemporaneous availability of advisory committee records that, when taken in conjunction with the ability to attend advisory committee meetings, ensures that interested parties have a meaningful opportunity to comprehend fully the work undertaken by the advisory committee. Records covered by the exemptions set forth in section 552(b) of FOIA generally may be withheld. However, it should be noted that FOIA Exemption 5 generally cannot be used to withhold documents reflecting an advisory committee's internal deliberations.

An opinion of the Office of Legal Counsel, U.S. Department of Justice, 12 Op. O.L.C. 73, April 29, 1988, entitled "Disclosure of Advisory Committee Deliberative Materials," concludes that FOIA Exemption 5 "is not generally applicable to materials prepared by or for an advisory committee, but that it does extend to protect privileged documents delivered from the agency to an advisory committee." The opinion further states that:

This construction gives meaning to exemption 5 without vitiating Congress' enumeration of deliberative documents such as working papers and drafts as subject to disclosure. It is also supported by a close reading of exemption 5 itself. Because by its terms exemption 5 protects only inter-agency and intra-agency documents and because an advisory committee is not an agency, documents do not receive the protection of exemption 5 by virtue of the fact that they are prepared by an advisory committee. On

the other hand, documents prepared by an agency do not lose the protection of exemption 5 by virtue of the fact that they are delivered to an advisory committee.

In determining whether or not such records fall within these narrow exclusions, the OLC opinion provides that consideration should be given to determining whether or not section 10(b) of FACA is applicable in the first instance. As noted in the OLC opinion:

Section 10(b) itself applies only to materials made available to or prepared for or by an advisory committee established by statute or reorganization plan or established or utilized by the President or an agency. 5 U.S.C. app. I, 3(2), 10(b). Accordingly, in determining whether a document is to be disclosed the first issue is not whether it is subject to an exemption under 5 U.S.C. 552 but whether it meets this threshold definition.

In explaining this threshold determination of whether particular records are subject to the section 10(b) disclosure requirement, the OLC opinion states that:

The courts and this Office have construed the concept of advisory committees established or utilized by the President or an agency to preclude section 10(b)'s application to the work prepared by a staff member of an advisory committee or a staffing entity within an advisory committee, such as an independent task force limited to gathering information, or a subcommittee of the advisory committee that is not itself established or utilized by the President or agency, so long as the material was not used by the committee as a whole.

Although advisory committee records may be withheld under the provisions

of FOIA if there is a *reasonable expectation* that the records sought fall within the exemptions contained in section 552(b) of FOIA, agencies may not require members of the public or other interested parties to file requests for non-exempt advisory committee records under the request and review process established by section 552(a)(3) of FOIA.

In *Food Chemical News v. Department of Health and Human Services*, 980 F.2d 1468, 299 U.S. App. DC 25, the appeals court held that:

Under section 10(b) of FACA an agency is generally obligated to make available for public inspection and copying all materials that were made available to or prepared for or by an advisory committee. Except with respect to those materials that the agency reasonably claims to be exempt from disclosure pursuant to FOIA, a member of the public need not request disclosure in order for FACA 10(b) materials to be made available. Thus, whenever practicable, all 10(b) materials must be available for public inspection and copying before or on the date of the advisory committee meeting to which they apply.

Accordingly, GSA included language within § 102–3.170 of the final rule describing the policy to be followed in implementing section 10(b) of the Act, and included additional guidance in Appendix A to Subpart D concerning the applicability of FOIA to records covered by section 10(b) of FACA.

Improve the Organization of the Final Rule

During the course of evaluating comments received from all sources,

GSA conducted a review of the proposed rule's general organization and structure for the purpose of achieving greater clarity and consistency in presentation. This effort led to a number of changes, such as redesignating the "Key Points and Principles" sections following each subpart as appendices. Other changes were made throughout the final rule to improve alignment between section headings and the material that follows. Similar changes were made within the appendices in order to improve the linkage between the examples or questions and the corresponding guidance.

In addition, GSA reorganized the final rule to redesignate subpart B as subpart E to improve the flow of information distinguishing Federal advisory committees subject to the Act from those committees created by the National Academy of Sciences (NAS) or the National Academy of Public Administration (NAPA) which, if not *utilized* by the executive branch, are not subject to the Act's provisions. Section numbers previously assigned in the proposed rule affected by the redesignation of subpart B as subpart E, subpart C as subpart B, subpart D as subpart C, and subpart E as subpart D have been changed accordingly.

C. Technical and Procedural Comments

The final rule incorporates several technical and procedural recommendations made by a range of commenters, particularly in the following sections or appendices:

Section/Appendix	Modification
102–3.60	Specific procedures for consulting with the Secretariat have been eliminated. GSA will issue separate guidance to agencies covering the administration of the consultation requirement.
Appendix A to Subpart B	Addition of guidance relating to the achievement of "balanced" advisory committee membership.
Appendix A to Subpart B	Addition of guidance covering the legal duration of the charter of an advisory committee required by statute where Congress authorizes the advisory committee for a period exceeding two years.
Appendix A to Subpart C	Addition of guidance addressing the designation of an alternate Designated Federal Officer (DFO).
102–3.130	All references to compensation limits imposed by the Act have been updated, and references to alternative similar agency compensation systems other than the General Schedule have been included.
102–3.130	All references to the word, "handicapped," have been replaced with the phrase, "with disabilities."
Appendix A to Subpart D	Addition of guidance regarding activities that are not subject to the notice and open meeting requirements of the Act.
102–3.165	The requirement for the completion of advisory committee meeting minutes now requires the DFO to ensure certification within the time limit specified.

D. Consultation With Other Federal Agencies

Pursuant to section 7(d) of the Act, the guidelines contained in this final

rule with respect to uniform fair rates of compensation for comparable services of members and staff of, and experts and consultants to advisory committees have

been established after consultation with the U.S. Office of Personnel Management (OPM).

Although not required by the Act, the guidelines contained in this final rule that refer to the applicability of conflict of interest statutes and other Federal ethics rules to advisory committee members have been established after consultation with the U.S. Office of Government Ethics (OGE).

Although not required by the Act, the guidelines contained in this final rule that relate to the management of advisory committee records have been established after consultation with the National Archives and Records Administration (NARA).

E. Executive Order 12866

GSA has determined that this final rule is a significant rule for the purposes of Executive Order 12866 of September 30, 1993.

F. Regulatory Flexibility Act

GSA has determined that this final rule will not have a significant economic impact on a substantial number of small entities (including small businesses, small organizational units, and small governmental jurisdictions) within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* The rule does not impact small entities and applies only to Federal officers and agencies.

G. Paperwork Reduction Act

The Paperwork Reduction Act does not apply because this final rule does not contain any information collection requirements that require the approval of the Office of Management and Budget (OMB) under 44 U.S.C. 3501, *et seq.*

H. Small Business Regulatory Enforcement Fairness Act

This final rule is being submitted for Congressional review as prescribed under 5 U.S.C. 801.

List of Subjects in 41 CFR Parts 101-6 and 102-3

Advisory committees, Government property management.

Dated: July 5, 2001.

Stephen A. Perry,
Administrator of General Services.

For the reasons set forth in the preamble, GSA amends 41 CFR chapters 101 and 102 as follows:

CHAPTER 101—[AMENDED]

PART 101-6—MISCELLANEOUS REGULATIONS

1. Subpart 101-6.10 is revised to read as follows:

Subpart 101-6.10—Federal Advisory Committee Management

Authority: Sec. 205(c), 63 Stat. 390 (40 U.S.C. 486(c)); sec. 7, 5 U.S.C., App.; and E.O. 12024, 3 CFR, 1977 Comp., p. 158.

§ 101-6.1001 Cross-reference to the Federal Management Regulation (FMR) (41 CFR chapter 102, parts 102-1 through 102-220).

For Federal advisory committee management information previously contained in this subpart, see FMR part 102-3 (41 CFR part 102-3).

CHAPTER 102—[AMENDED]

2. Part 102-3 is added to subchapter A of chapter 102 to read as follows:

PART 102-3—FEDERAL ADVISORY COMMITTEE MANAGEMENT

Subpart A—What Policies Apply To Advisory Committees Established Within the Executive Branch?

Sec.

- 102-3.5 What does this subpart cover and how does it apply?
- 102-3.10 What is the purpose of the Federal Advisory Committee Act?
- 102-3.15 Who are the intended users of this part?
- 102-3.20 How does this part meet the needs of its audience?
- 102-3.25 What definitions apply to this part?
- 102-3.30 What policies govern the use of advisory committees?
- 102-3.35 What policies govern the use of subcommittees?
- 102-3.40 What types of committees or groups are not covered by the Act and this part?

Authority: Sec. 205(c), 63 Stat. 390 (40 U.S.C. 486(c)); sec. 7, 5 U.S.C., App.; and E.O. 12024, 3 CFR, 1977 Comp., p. 158.

Subpart A—What Policies Apply to Advisory Committees Established Within the Executive Branch?

§ 102–3.5 What does this subpart cover and how does it apply?

This subpart provides the policy framework that must be used by agency heads in applying the Federal Advisory Committee Act (FACA), as amended (or “the Act”), 5 U.S.C., App., to advisory committees they establish and operate. In addition to listing key definitions underlying the interpretation of the Act, this subpart establishes the scope and applicability of the Act, and outlines specific exclusions from its coverage.

§ 102–3.10 What is the purpose of the Federal Advisory Committee Act?

FACA governs the establishment, operation, and termination of advisory committees within the executive branch of the Federal Government. The Act defines what constitutes a Federal advisory committee and provides general procedures for the executive branch to follow for the operation of these advisory committees. In addition, the Act is designed to assure that the Congress and the public are kept informed with respect to the number, purpose, membership, activities, and cost of advisory committees.

§ 102–3.15 Who are the intended users of this part?

(a) The primary users of this Federal Advisory Committee Management part are:

- (1) Executive branch officials and others outside Government currently involved with an established advisory committee;
- (2) Executive branch officials who seek to establish or utilize an advisory committee;
- (3) Executive branch officials and others outside Government who have decided to pursue, or who are already engaged in, a form of public involvement or consultation and want to avoid inadvertently violating the Act; and
- (4) Field personnel of Federal agencies who are increasingly involved with the public as part of their efforts to increase collaboration and improve customer service.

(b) Other types of end-users of this part include individuals and organizations outside of the executive branch who seek to understand and interpret the Act, or are seeking additional guidance.

§ 102–3.20 How does this part meet the needs of its audience?

This Federal Advisory Committee Management part meets the general and

specific needs of its audience by addressing the following issues and related topics:

(a) *Scope and applicability.* This part provides guidance on the threshold issue of what constitutes an advisory committee and clarifies the limits of coverage by the Act for the benefit of the intended users of this part.

(b) *Policies and guidelines.* This part defines the policies, establishes minimum requirements, and provides guidance to Federal officers and agencies for the establishment, operation, administration, and duration of advisory committees subject to the Act. This includes reporting requirements that keep Congress and the public informed of the number, purpose, membership, activities, benefits, and costs of these advisory committees. These requirements form the basis for implementing the Act at both the agency and Governmentwide levels.

(c) *Examples and principles.* This part provides summary-level key points and principles at the end of each subpart that provide more clarification on the role of Federal advisory committees in the larger context of public involvement in Federal decisions and activities. This includes a discussion of the applicability of the Act to different decisionmaking scenarios.

§ 102–3.25 What definitions apply to this part?

The following definitions apply to this Federal Advisory Committee Management part:

Act means the Federal Advisory Committee Act, as amended, 5 U.S.C., App.

Administrator means the Administrator of General Services.

Advisory committee subject to the Act, except as specifically exempted by the Act or by other statutes, or as not covered by this part, means any committee, board, commission, council, conference, panel, task force, or other similar group, which is established by statute, or established or utilized by the President or by an agency official, for the purpose of obtaining advice or recommendations for the President or on issues or policies within the scope of an agency official's responsibilities.

Agency has the same meaning as in 5 U.S.C. 551(1).

Committee Management Officer (“CMO”), means the individual designated by the agency head to implement the provisions of section 8(b) of the Act and any delegated responsibilities of the agency head under the Act.

Committee Management Secretariat (“Secretariat”), means the organization established pursuant to section 7(a) of the Act, which is responsible for all matters relating to advisory committees, and carries out the responsibilities of the Administrator under the Act and Executive Order 12024 (3 CFR, 1977 Comp., p. 158).

Committee meeting means any gathering of advisory committee members (whether in person or through electronic means) held with the approval of an agency for the purpose of deliberating on the substantive matters upon which the advisory committee provides advice or recommendations.

Committee member means an individual who serves by appointment or invitation on an advisory committee or subcommittee.

Committee staff means any Federal employee, private individual, or other party (whether under contract or not) who is not a committee member, and who serves in a support capacity to an advisory committee or subcommittee.

Designated Federal Officer (“DFO”), means an individual designated by the agency head, for each advisory committee for which the agency head is responsible, to implement the provisions of sections 10(e) and (f) of the Act and any advisory committee procedures of the agency under the control and supervision of the CMO.

Discretionary advisory committee means any advisory committee that is established under the authority of an agency head or authorized by statute. An advisory committee referenced in general (non-specific) authorizing language or Congressional committee report language is discretionary, and its establishment or termination is within the legal discretion of an agency head.

Independent Presidential advisory committee means any Presidential advisory committee not assigned by the Congress in law, or by President or the President's delegate, to an agency for administrative and other support.

Non-discretionary advisory committee means any advisory committee either required by statute or by Presidential directive. A *non-discretionary advisory committee* required by statute generally is identified specifically in a statute by name, purpose, or functions, and its establishment or termination is beyond the legal discretion of an agency head.

Presidential advisory committee means any advisory committee authorized by the Congress or directed by the President to advise the President.

Subcommittee means a group, generally not subject to the Act, that reports to an advisory committee and not directly to a Federal officer or

agency, whether or not its members are drawn in whole or in part from the parent advisory committee.

Utilized for the purposes of the Act, does not have its ordinary meaning. A committee that is not established by the Federal Government is *utilized* within the meaning of the Act when the President or a Federal office or agency exercises actual management or control over its operation.

§ 102-3.30 What policies govern the use of advisory committees?

The policies to be followed by Federal departments and agencies in establishing and operating advisory committees consistent with the Act are as follows:

(a) *Determination of need in the public interest.* A discretionary advisory committee may be established only when it is essential to the conduct of agency business and when the information to be obtained is not already available through another advisory committee or source within the Federal Government. Reasons for deciding that an advisory committee is needed may include whether:

(1) Advisory committee deliberations will result in the creation or elimination of (or change in) regulations, policies, or guidelines affecting agency business;

(2) The advisory committee will make recommendations resulting in significant improvements in service or reductions in cost; or

(3) The advisory committee's recommendations will provide an important additional perspective or viewpoint affecting agency operations.

(b) *Termination.* An advisory committee must be terminated when:

(1) The stated objectives of the committee have been accomplished;

(2) The subject matter or work of the committee has become obsolete by the passing of time or the assumption of the committee's functions by another entity;

(3) The agency determines that the cost of operation is excessive in relation to the benefits accruing to the Federal Government;

(4) In the case of a discretionary advisory committee, upon the expiration of a period not to exceed two years, unless renewed;

(5) In the case of a non-discretionary advisory committee required by Presidential directive, upon the expiration of a period not to exceed two years, unless renewed by authority of the President; or

(6) In the case of a non-discretionary advisory committee required by statute, upon the expiration of the time explicitly specified in the statute, or implied by operation of the statute.

(c) *Balanced membership.* An advisory committee must be fairly balanced in its membership in terms of the points of view represented and the functions to be performed.

(d) *Open meetings.* Advisory committee meetings must be open to the public except where a closed or partially-closed meeting has been determined proper and consistent with the exemption(s) of the Government in the Sunshine Act, 5 U.S.C. 552b(c), as the basis for closure.

(e) *Advisory functions only.* The function of advisory committees is advisory only, unless specifically provided by statute or Presidential directive.

§ 102-3.35 What policies govern the use of subcommittees?

(a) In general, the requirements of the Act and the policies of this Federal Advisory Committee Management part do not apply to subcommittees of advisory committees that report to a parent advisory committee and not directly to a Federal officer or agency. However, this section does not preclude an agency from applying any provision of the Act and this part to any subcommittee of an advisory committee in any particular instance.

(b) The creation and operation of subcommittees must be approved by the agency establishing the parent advisory committee.

§ 102-3.40 What types of committees or groups are not covered by the Act and this part?

The following are examples of committees or groups that are not covered by the Act or this Federal Advisory Committee Management part:

(a) *Committees created by the National Academy of Sciences (NAS) or the National Academy of Public Administration (NAPA).* Any committee created by NAS or NAPA in accordance with section 15 of the Act, except as otherwise covered by subpart E of this part;

(b) *Advisory committees of the Central Intelligence Agency and the Federal Reserve System.* Any advisory committee established or utilized by the Central Intelligence Agency or the Federal Reserve System;

(c) *Committees exempted by statute.* Any committee specifically exempted from the Act by law;

(d) *Committees not actually managed or controlled by the executive branch.* Any committee or group created by non-Federal entities (such as a contractor or private organization), provided that these committees or groups are not actually managed or controlled by the executive branch;

(e) *Groups assembled to provide individual advice.* Any group that meets with a Federal official(s), including a public meeting, where advice is sought from the attendees on an individual basis and not from the group as a whole;

(f) *Groups assembled to exchange facts or information.* Any group that meets with a Federal official(s) for the purpose of exchanging facts or information;

(g) *Intergovernmental committees.* Any committee composed wholly of full-time or permanent part-time officers or employees of the Federal Government and elected officers of State, local and tribal governments (or their designated employees with authority to act on their behalf), acting in their official capacities. However, the purpose of such a committee must be solely to exchange views, information, or advice relating to the management or implementation of Federal programs established pursuant to statute, that explicitly or inherently share intergovernmental responsibilities or administration (see guidelines issued by the Office of Management and Budget (OMB) on section 204(b) of the Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1534(b), OMB Memorandum M-95-20, dated September 21, 1995, available from the Committee Management Secretariat (MC), General Services Administration, 1800 F Street, NW., Washington, DC 20405-0002);

(h) *Intragovernmental committees.* Any committee composed wholly of full-time or permanent part-time officers or employees of the Federal Government;

(i) *Local civic groups.* Any local civic group whose primary function is that of rendering a public service with respect to a Federal program;

(j) *Groups established to advise State or local officials.* Any State or local committee, council, board, commission, or similar group established to advise or make recommendations to State or local officials or agencies; and

(k) *Operational committees.* Any committee established to perform primarily operational as opposed to advisory functions. Operational functions are those specifically authorized by statute or Presidential directive, such as making or implementing Government decisions or policy. A committee designated operational may be covered by the Act if it becomes primarily advisory in nature. It is the responsibility of the administering agency to determine whether a committee is primarily operational. If so, it does not fall under

the requirements of the Act and this part.

Appendix A to Subpart A of Part 102–3—Key Points and Principles

This appendix provides additional guidance in the form of answers to frequently

asked questions and identifies key points and principles that may be applied to situations not covered elsewhere in this subpart. The guidance follows:

APPENDIX A TO SUBPART A

Key points and principles	Section(s)	Question(s)	Guidance
I. FACA applies to advisory committees that are either "established" or "utilized" by an agency.	102–3.25, 3.40(f), 102–3.40(d), 102–	<ol style="list-style-type: none"> 1. A local citizens group wants to meet with a Federal official(s) to help improve the condition of a forest's trails and quality of concessions. May the Government meet with the group without chartering the group under the Act? 2. May an agency official attend meetings of external groups where advice may be offered to the Government during the course of discussions? 3. May an agency official participate in meetings of groups or organizations as a member without chartering the group under the Act? 4. Is the Act applicable to meetings between agency officials and their contractors, licensees, or other "private sector program partners?" 	<p>A. The answer to questions 1, 2, and 3 is yes, if the agency does not either "establish" or "utilize" (exercise "actual management or control" over) the group. (i) Although there is no precise legal definition of "actual management or control," the following factors may be used by an agency to determine whether or not a group is "utilized" within the meaning of the Act: (a) Does the agency manage or control the group's membership or otherwise determine its composition? (b) Does the agency manage or control the group's agenda? (c) Does the agency fund the group's activities? (ii) Answering "yes" to any or all of questions 1, 2, or 3 does not automatically mean the group is "utilized" within the meaning of the Act. However, an agency may need to reconsider the status of the group under the Act if the relationship in question essentially is indistinguishable from an advisory committee established by the agency.</p> <p>B. The answer to question 4 is no. Agencies often meet with contractors and licensees, individually and as a group, to discuss specific matters involving a contract's solicitation, issuance, and implementation, or an agency's efforts to ensure compliance with its regulations. Such interactions are not subject to the Act because these groups are not "established" or "utilized" for the purpose of obtaining advice or recommendations.</p>
II. The development of consensus among all or some of the attendees at a public meeting or similar forum does not automatically invoke FACA.	102–3.25, 3.40(f), 102–3.40(d), 102–	<ol style="list-style-type: none"> 1. If, during a public meeting of the "town hall" type called by an agency, it appears that the audience is achieving consensus, or a common point of view, is this an indication that the meeting is subject to the Act and must be stopped? 	<p>A. No, the public meeting need not be stopped. (i) A group must either be "established" or "utilized" by the executive branch in order for the Act to apply. (ii) Public meetings represent a chance for individuals to voice their opinions and/or share information. In that sense, agencies do not either "establish" the assemblage of individuals as an advisory committee or "utilize" the attendees as an advisory committee because there are no elements of either "management" or "control" present or intended.</p>

APPENDIX A TO SUBPART A—Continued

Key points and principles	Section(s)	Question(s)	Guidance
III. Meetings between a Federal official(s) and a collection of individuals where advice is sought from the attendees on an individual basis are not subject to the Act.	102–3.40(e)	1. May an agency official meet with a number of persons collectively to obtain their individual views without violating the Act? 2. Does the concept of an “individual” apply only to “natural persons?”	A. The answer to questions 1 and 2 is yes. The Act applies only where a group is established or utilized to provide advice or recommendations “as a group.” (i) A mere assemblage or collection of individuals where the attendees are providing individual advice is not acting “as a group” under the Act. (ii) In this respect, “individual” is not limited to “natural persons.” Where the group consists of representatives of various existing organizations, each representative individually may provide advice on behalf of that person’s organization without violating the Act, if those organizations themselves are not “managed or controlled” by the agency.
IV. Meetings between Federal, State, local, and tribal elected officials are not subject to the Act.	102–3.40(g)	1. Is the exclusion from the Act covering elected officials of State, local, and tribal governments acting in their official capacities also applicable to associations of State officials?	A. Yes. The scope of activities covered by the exclusion from the Act for intergovernmental activities should be construed broadly to facilitate Federal/State/local/tribal discussions on shared intergovernmental program responsibilities or administration. Pursuant to a Presidential delegation, the Office of Management and Budget (OMB) issued guidelines for this exemption, authorized by section 204(b) of the Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1534(b). (See OMB Memorandum M–95–20, dated September 21, 1995, published at 60 FR 50651 (September 29, 1995), and which is available from the Committee Management Secretariat (MC), General Services Administration, 1800 F Street, NW, Washington, DC 20405–0002).
V. Advisory committees established under the Act may perform advisory functions only, unless authorized to perform “operational” duties by the Congress or by Presidential directive.	102–3.30(e), 102–3.40(k)	1. Are “operational committees” subject to the Act, even if they may engage in some advisory activities?	A. No, so long as the operational functions performed by the committee constitute the “primary” mission of the committee. Only committees established or utilized by the executive branch in the interest of obtaining advice or recommendations are subject to the Act. However, without specific authorization by the Congress or direction by the President, Federal functions (decisionmaking or operations) cannot be delegated to, or assumed by, non-Federal individuals or entities.

APPENDIX A TO SUBPART A—Continued

Key points and principles	Section(s)	Question(s)	Guidance
VI. Committees authorized by the Congress in law or by Presidential directive to perform primarily "operational" functions are not subject to the Act.	102–3.40(k)	<ol style="list-style-type: none"> 1. What characteristics are common to "operational committees?" 2. A committee created by the Congress by statute is responsible, for example, for developing plans and events to commemorate the contributions of wildlife to the enjoyment of the Nation's parks. Part of the committee's role includes providing advice to certain Federal agencies as may be necessary to coordinate these events. Is this committee subject to FACA? 	<p>A. In answer to question 1, non-advisory, or "operational" committees generally have the following characteristics: (i) Specific functions and/or authorities provided by the Congress in law or by Presidential directive; (ii) The ability to make and implement traditionally Governmental decisions; and (iii) The authority to perform specific tasks to implement a Federal program.</p> <p>B. Agencies are responsible for determining whether or not a committee primarily provides advice or recommendations and is, therefore, subject to the Act, or is primarily "operational" and not covered by FACA.</p> <p>C. The answer to question 2 is no. The committee is not subject to the Act because: (i) Its functions are to plan and implement specific tasks; (ii) The committee has been granted the express authority by the Congress to perform its statutorily required functions; and (iii) Its incidental role of providing advice to other Federal agencies is secondary to its primarily operational role of planning and implementing specific tasks and performing statutory functions.</p>

Subpart B—How Are Advisory Committees Established, Renewed, Reestablished, and Terminated?

§ 102–3.45 What does this subpart cover and how does it apply?

Requirements for establishing and terminating advisory committees vary depending on the establishing entity and the source of authority for the advisory committee. This subpart covers the procedures associated with the establishment, renewal, reestablishment, and termination of advisory committees. These procedures include consulting with the Secretariat, preparing and filing an advisory committee charter, publishing notice in the **Federal Register**, and amending an advisory committee charter.

§ 102–3.50 What are the authorities for establishing advisory committees?

FACA identifies four sources of authority for establishing an advisory committee:

(a) *Required by statute.* By law where the Congress establishes an advisory committee, or specifically directs the President or an agency to establish it (*non-discretionary*);

(b) *Presidential authority.* By Executive order of the President or other Presidential directive (*non-discretionary*);

(c) *Authorized by statute.* By law where the Congress authorizes, but does

not direct the President or an agency to establish it (*discretionary*); or

(d) *Agency authority.* By an agency under general authority in title 5 of the United States Code or under other general agency-authorizing statutes (*discretionary*).

§ 102–3.55 What rules apply to the duration of an advisory committee?

(a) An advisory committee automatically terminates two years after its date of establishment unless:

(1) The statutory authority used to establish the advisory committee provides a different duration;

(2) The President or agency head determines that the advisory committee has fulfilled the purpose for which it was established and terminates the advisory committee earlier;

(3) The President or agency head determines that the advisory committee is no longer carrying out the purpose for which it was established and terminates the advisory committee earlier; or

(4) The President or agency head renews the committee not later than two years after its date of establishment in accordance with § 102–3.60. If an advisory committee needed by the President or an agency terminates because it was not renewed in a timely manner, or if the advisory committee has been terminated under the provisions of § 102–3.30(b), it can be

reestablished in accordance with § 102–3.60.

(b) When an advisory committee terminates, the agency shall notify the Secretariat of the effective date of the termination.

§ 102–3.60 What procedures are required to establish, renew, or reestablish a discretionary advisory committee?

(a) *Consult with the Secretariat.* Before establishing, renewing, or reestablishing a discretionary advisory committee and filing the charter as addressed later in § 102–3.70, the agency head must consult with the Secretariat. As part of this consultation, agency heads are encouraged to engage in constructive dialogue with the Secretariat. With a full understanding of the background and purpose behind the proposed advisory committee, the Secretariat may share its knowledge and experience with the agency on how best to make use of the proposed advisory committee, suggest alternate methods of attaining its purpose that the agency may wish to consider, or inform the agency of a pre-existing advisory committee performing similar functions.

(b) *Include required information in the consultation.* Consultations covering the establishment, renewal, and reestablishment of advisory committees must, as a minimum, contain the following information:

(1) *Explanation of need.* An explanation stating why the advisory committee is essential to the conduct of agency business and in the public interest;

(2) *Lack of duplication of resources.* An explanation stating why the advisory committee's functions cannot be performed by the agency, another existing committee, or other means such as a public hearing; and

(3) *Fairly balanced membership.* A description of the agency's plan to attain fairly balanced membership. The plan will ensure that, in the selection of members for the advisory committee, the agency will consider a cross-section of those directly affected, interested, and qualified, as appropriate to the nature and functions of the advisory committee. Advisory committees requiring technical expertise should include persons with demonstrated professional or personal qualifications and experience relevant to the functions and tasks to be performed.

§ 102-3.65 What are the public notification requirements for discretionary advisory committees?

A notice to the public in the **Federal Register** is required when a discretionary advisory committee is established, renewed, or reestablished.

(a) *Procedure.* Upon receiving notice from the Secretariat that its review is complete in accordance with § 102-3.60(a), the agency must publish a notice in the **Federal Register** announcing that the advisory committee is being established, renewed, or reestablished. For the establishment of a new advisory committee, the notice also must describe the nature and purpose of the advisory committee and affirm that the advisory committee is necessary and in the public interest.

(b) *Time required for notices.* Notices of establishment and reestablishment of advisory committees must appear at least 15 calendar days before the charter is filed, except that the Secretariat may approve less than 15 calendar days when requested by the agency for good cause. This requirement for advance notice does not apply to advisory committee renewals, notices of which may be published concurrently with the filing of the charter.

§ 102-3.70 What are the charter filing requirements?

No advisory committee may meet or take any action until a charter has been filed by the Committee Management Officer (CMO) designated in accordance with section 8(b) of the Act, or by another agency official designated by the agency head.

(a) *Requirement for discretionary advisory committees.* To establish, renew, or reestablish a discretionary advisory committee, a charter must be filed with:

(1) The agency head;

(2) The standing committees of the Senate and the House of Representatives having legislative jurisdiction of the agency, the date of filing with which constitutes the official date of establishment for the advisory committee;

(3) The Library of Congress, Anglo-American Acquisitions Division, Government Documents Section, Federal Advisory Committee Desk, 101 Independence Avenue, SE., Washington, DC 20540-4172; and

(4) The Secretariat, indicating the date the charter was filed in accordance with paragraph (a)(2) of this section.

(b) *Requirement for non-discretionary advisory committees.* Charter filing requirements for non-discretionary advisory committees are the same as those in paragraph (a) of this section, except the date of establishment for a Presidential advisory committee is the date the charter is filed with the Secretariat.

(c) *Requirement for subcommittees that report directly to the Government.* Subcommittees that report directly to a Federal officer or agency must comply with this subpart and include in a charter the information required by § 102-3.75.

§ 102-3.75 What information must be included in the charter of an advisory committee?

(a) *Purpose and contents of an advisory committee charter.* An advisory committee charter is intended to provide a description of an advisory committee's mission, goals, and objectives. It also provides a basis for evaluating an advisory committee's progress and effectiveness. The charter must contain the following information:

(1) The advisory committee's official designation;

(2) The objectives and the scope of the advisory committee's activity;

(3) The period of time necessary to carry out the advisory committee's purpose(s);

(4) The agency or Federal officer to whom the advisory committee reports;

(5) The agency responsible for providing the necessary support to the advisory committee;

(6) A description of the duties for which the advisory committee is responsible and specification of the authority for any non-advisory functions;

(7) The estimated annual costs to operate the advisory committee in dollars and person years;

(8) The estimated number and frequency of the advisory committee's meetings;

(9) The planned termination date, if less than two years from the date of establishment of the advisory committee;

(10) The name of the President's delegate, agency, or organization responsible for fulfilling the reporting requirements of section 6(b) of the Act, if appropriate; and

(11) The date the charter is filed in accordance with § 102-3.70.

(b) The provisions of paragraphs (a)(1) through (11) of this section apply to all subcommittees that report directly to a Federal officer or agency.

§ 102-3.80 How are minor charter amendments accomplished?

(a) *Responsibility and limitation.* The agency head is responsible for amending the charter of an advisory committee. Amendments may be either minor or major. The procedures for making changes and filing amended charters will depend upon the authority basis for the advisory committee. Amending any existing advisory committee charter does not constitute renewal of the advisory committee under § 102-3.60.

(b) *Procedures for minor amendments.* To make a minor amendment to an advisory committee charter, such as changing the name of the advisory committee or modifying the estimated number or frequency of meetings, the following procedures must be followed:

(1) *Non-discretionary advisory committees.* The agency head must ensure that any minor technical changes made to current charters are consistent with the relevant authority. When the Congress by law, or the President by Executive order, changes the authorizing language that has been the basis for establishing an advisory committee, the agency head or the chairperson of an independent Presidential advisory committee must amend those sections of the current charter affected by the new statute or Executive order, and file the amended charter as specified in § 102-3.70.

(2) *Discretionary advisory committees.* The charter of a discretionary advisory committee may be amended when an agency head determines that technical provisions of a filed charter are inaccurate, or specific provisions have changed or become obsolete with the passing of time, and that these amendments will not alter the advisory committee's objectives and scope

substantially. The agency must amend the charter language as necessary and file the amended charter as specified in § 102–3.70.

§ 102–3.85 How are major charter amendments accomplished?

Procedures for making major amendments to advisory committee charters, such as substantial changes in

objectives and scope, duties, and estimated costs, are the same as in § 102–3.80, except that for discretionary advisory committees an agency must:

- (a) Consult with the Secretariat on the amended language, and explain the purpose of the changes and why they are necessary; and
- (b) File the amended charter as specified in § 102–3.70.

Appendix A to Subpart B of Part 102–3—Key Points and Principles

This appendix provides additional guidance in the form of answers to frequently asked questions and identifies key points and principles that may be applied to situations not covered elsewhere in this subpart. The guidance follows:

APPENDIX A TO SUBPART B

Key points and principles	Section(s)	Question(s)	Guidance
I. Agency heads must consult with the Secretariat prior to establishing a discretionary advisory committee.	102–3.60, 102–3.115	1. Can an agency head delegate to the Committee Management Officer (CMO) responsibility for consulting with the Secretariat regarding the establishment, renewal, or reestablishment of discretionary advisory committees?	A. Yes. Many administrative functions performed to implement the Act may be delegated. However, those functions related to approving the final establishment, renewal, or reestablishment of discretionary advisory committees are reserved for the agency head. Each agency CMO should assure that their internal processes for managing advisory committees include appropriate certifications by the agency head.
II. Agency heads are responsible for complying with the Act, including determining which discretionary advisory committees should be established and renewed.	102–3.60(a), 102–3.105	1. Who retains final authority for establishing or renewing a discretionary advisory committee?	A. Although agency heads retain final authority for establishing or renewing discretionary advisory committees, these decisions should be consistent with § 102–3.105(e) and reflect consultation with the Secretariat under § 102–3.60(a).
III. An advisory committee must be fairly balanced in its membership in terms of the points of view represented and the functions to be performed.	102–3.30(c), 102–3.60(b)(3) ..	1. What factors should be considered in achieving a "balanced" advisory committee membership?	A. The composition of an advisory committee's membership will depend upon several factors, including: (i) The advisory committee's mission; (ii) The geographic, ethnic, social, economic, or scientific impact of the advisory committee's recommendations; (iii) The types of specific perspectives required, for example, such as those of consumers, technical experts, the public at-large, academia, business, or other sectors; (iv) The need to obtain divergent points of view on the issues before the advisory committee; and (v) The relevance of State, local, or tribal governments to the development of the advisory committee's recommendations.
IV. Charters for advisory committees required by statute must be filed every two years regardless of the duration provided in the statute.	102–3.70(b)	1. If an advisory committee's duration exceeds two years, must a charter be filed with the Congress and GSA every two years?	A. Yes. Section 14(b)(2) of the Act provides that: Any advisory committee established by an Act of Congress shall file a charter upon the expiration of each successive two-year period following the date of enactment of the Act establishing such advisory committee.

Subpart C—How Are Advisory Committees Managed?

§ 102–3.90 What does this subpart cover and how does it apply?

This subpart outlines specific responsibilities and functions to be carried out by the General Services Administration (GSA), the agency head, the Committee Management Officer (CMO), and the Designated Federal Officer (DFO) under the Act.

§ 102–3.95 What principles apply to the management of advisory committees?

Agencies are encouraged to apply the following principles to the management of their advisory committees:

- (a) *Provide adequate support.* Before establishing an advisory committee, agencies should identify requirements and assure that adequate resources are available to support anticipated activities. Considerations related to support include office space, necessary supplies and equipment, Federal staff

support, and access to key decisionmakers.

- (b) *Focus on mission.* Advisory committee members and staff should be fully aware of the advisory committee's mission, limitations, if any, on its duties, and the agency's goals and objectives. In general, the more specific an advisory committee's tasks and the more focused its activities are, the higher the likelihood will be that the advisory committee will fulfill its mission.

(c) *Follow plans and procedures.* Advisory committee members and their agency sponsors should work together to assure that a plan and necessary procedures covering implementation are in place to support an advisory committee's mission. In particular, agencies should be clear regarding what functions an advisory committee can perform legally and those that it cannot perform.

(d) *Practice openness.* In addition to achieving the minimum standards of public access established by the Act and this part, agencies should seek to be as inclusive as possible. For example, agencies may wish to explore the use of the Internet to post advisory committee information and seek broader input from the public.

(e) *Seek feedback.* Agencies continually should seek feedback from advisory committee members and the public regarding the effectiveness of the advisory committee's activities. At regular intervals, agencies should communicate to the members how their advice has affected agency programs and decisionmaking.

§ 102–3.100 What are the responsibilities and functions of GSA?

(a) Under section 7 of the Act, the General Services Administration (GSA) prepares regulations on Federal advisory committees to be prescribed by the Administrator of General Services, issues other administrative guidelines and management controls for advisory committees, and assists other agencies in implementing and interpreting the Act. Responsibility for these activities has been delegated by the Administrator to the GSA Committee Management Secretariat.

(b) The Secretariat carries out its responsibilities by:

- (1) Conducting an annual comprehensive review of Governmentwide advisory committee accomplishments, costs, benefits, and other indicators to measure performance;
- (2) Developing and distributing Governmentwide training regarding the Act and related statutes and principles;
- (3) Supporting the Interagency Committee on Federal Advisory Committee Management in its efforts to improve compliance with the Act;
- (4) Designing and maintaining a Governmentwide shared Internet-based system to facilitate collection and use of information required by the Act;
- (5) Identifying performance measures that may be used to evaluate advisory committee accomplishments; and
- (6) Providing recommendations for transmittal by the Administrator to the

Congress and the President regarding proposals to improve accomplishment of the objectives of the Act.

§ 102–3.105 What are the responsibilities of an agency head?

The head of each agency that establishes or utilizes one or more advisory committees must:

- (a) Comply with the Act and this Federal Advisory Committee Management part;
- (b) Issue administrative guidelines and management controls that apply to all of the agency's advisory committees subject to the Act;
- (c) Designate a Committee Management Officer (CMO);
- (d) Provide a written determination stating the reasons for closing any advisory committee meeting to the public, in whole or in part, in accordance with the exemption(s) of the Government in the Sunshine Act, 5 U.S.C. 552b(c), as the basis for closure;
- (e) Review, at least annually, the need to continue each existing advisory committee, consistent with the public interest and the purpose or functions of each advisory committee;
- (f) Determine that rates of compensation for members (if they are paid for their services) and staff of, and experts and consultants to advisory committees are justified and that levels of agency support are adequate;
- (g) Develop procedures to assure that the advice or recommendations of advisory committees will not be inappropriately influenced by the appointing authority or by any special interest, but will instead be the result of the advisory committee's independent judgment;
- (h) Assure that the interests and affiliations of advisory committee members are reviewed for conformance with applicable conflict of interest statutes, regulations issued by the U.S. Office of Government Ethics (OGE) including any supplemental agency requirements, and other Federal ethics rules;
- (i) Designate a Designated Federal Officer (DFO) for each advisory committee and its subcommittees; and
- (j) Provide the opportunity for reasonable participation by the public in advisory committee activities, subject to § 102–3.140 and the agency's guidelines.

§ 102–3.110 What are the responsibilities of a chairperson of an independent Presidential advisory committee?

The chairperson of an independent Presidential advisory committee must:

- (a) Comply with the Act and this Federal Advisory Committee Management part;

(b) Consult with the Secretariat concerning the designation of a Committee Management Officer (CMO) and Designated Federal Officer (DFO); and

(c) Consult with the Secretariat in advance regarding any proposal to close any meeting in whole or in part.

§ 102–3.115 What are the responsibilities and functions of an agency Committee Management Officer (CMO)?

In addition to implementing the provisions of section 8(b) of the Act, the CMO will carry out all responsibilities delegated by the agency head. The CMO also should ensure that sections 10(b), 12(a), and 13 of the Act are implemented by the agency to provide for appropriate recordkeeping. Records to be kept by the CMO include, but are not limited to:

(a) *Charter and membership documentation.* A set of filed charters for each advisory committee and membership lists for each advisory committee and subcommittee;

(b) *Annual comprehensive review.* Copies of the information provided as the agency's portion of the annual comprehensive review of Federal advisory committees, prepared according to § 102–3.175(b);

(c) *Agency guidelines.* Agency guidelines maintained and updated on committee management operations and procedures; and

(d) *Closed meeting determinations.* Agency determinations to close or partially close advisory committee meetings required by § 102–3.105.

§ 102–3.120 What are the responsibilities and functions of a Designated Federal Officer (DFO)?

The agency head or, in the case of an independent Presidential advisory committee, the Secretariat, must designate a Federal officer or employee who must be either full-time or permanent part-time, to be the DFO for each advisory committee and its subcommittees, who must:

(a) Approve or call the meeting of the advisory committee or subcommittee;

(b) Approve the agenda, except that this requirement does not apply to a Presidential advisory committee;

(c) Attend the meetings;

(d) Adjourn any meeting when he or she determines it to be in the public interest; and

(e) Chair the meeting when so directed by the agency head.

§ 102–3.125 How should agencies consider the roles of advisory committee members and staff?

FACA does not assign any specific responsibilities to members of advisory

committees and staff, although both perform critical roles in achieving the goals and objectives assigned to advisory committees. Agency heads, Committee Management Officers (CMOs), and Designated Federal Officers (DFOs) should consider the distinctions between these roles and how they relate to each other in the development of agency guidelines implementing the Act and this Federal Advisory Committee Management part. In general, these guidelines should reflect:

(a) *Clear operating procedures.* Clear operating procedures should provide for the conduct of advisory committee meetings and other activities, and specify the relationship among the advisory committee members, the DFO, and advisory committee or agency staff;

(b) *Agency operating policies.* In addition to compliance with the Act, advisory committee members and staff may be required to adhere to additional agency operating policies; and

(c) *Other applicable statutes.* Other agency-specific statutes and regulations may affect the agency's advisory committees directly or indirectly. Agencies should ensure that advisory committee members and staff understand these requirements.

§ 102-3.130 What policies apply to the appointment, and compensation or reimbursement of advisory committee members, staff, and experts and consultants?

In developing guidelines to implement the Act and this Federal Advisory Committee Management part at the agency level, agency heads must address the following issues concerning advisory committee member and staff appointments, and considerations with respect to uniform fair rates of compensation for comparable services, or expense reimbursement of members, staff, and experts and consultants:

(a) *Appointment and terms of advisory committee members.* Unless otherwise provided by statute, Presidential directive, or other establishment authority, advisory committee members serve at the pleasure of the appointing or inviting authority. Membership terms are at the sole discretion of the appointing or inviting authority.

(b) *Compensation guidelines.* Each agency head must establish uniform compensation guidelines for members and staff of, and experts and consultants to an advisory committee.

(c) *Compensation of advisory committee members not required.* Nothing in this subpart requires an agency head to provide compensation to

any member of an advisory committee, unless otherwise required by a specific statute.

(d) *Compensation of advisory committee members.* When an agency has authority to set pay administratively for advisory committee members, it may establish appropriate rates of pay (including any applicable locality pay authorized by the President's Pay Agent under 5 U.S.C. 5304(h)), not to exceed the rate for level IV of the Executive Schedule under 5 U.S.C. 5315, unless a higher rate expressly is allowed by another statute. However, the agency head personally must authorize a rate of basic pay in excess of the maximum rate of basic pay established for the General Schedule under 5 U.S.C. 5332, or alternative similar agency compensation system. This maximum rate includes any applicable locality payment under 5 U.S.C. 5304. The agency may pay advisory committee members on either an hourly or a daily rate basis. The agency may not provide additional compensation in any form, such as bonuses or premium pay.

(e) *Compensation of staff.* When an agency has authority to set pay administratively for advisory committee staff, it may establish appropriate rates of pay (including any applicable locality pay authorized by the President's Pay Agent under 5 U.S.C. 5304(h)), not to exceed the rate for level IV of the Executive Schedule under 5 U.S.C. 5315, unless a higher rate expressly is allowed by another statute. However, the agency head personally must authorize a rate of basic pay in excess of the maximum rate of basic pay established for the General Schedule under 5 U.S.C. 5332, or alternative similar agency compensation system. This maximum rate includes any applicable locality payment under 5 U.S.C. 5304. The agency must pay advisory committee staff on an hourly rate basis. The agency may provide additional compensation, such as bonuses or premium pay, so long as aggregate compensation paid in a calendar year does not exceed the rate for level IV of the Executive Schedule, with appropriate proration for a partial calendar year.

(f) *Other compensation considerations.* In establishing rates of pay for advisory committee members and staff, the agency must comply with any applicable statutes, Executive orders, regulations, or administrative guidelines. In determining an appropriate rate of basic pay for advisory committee members and staff, an agency must give consideration to the significance, scope, and technical complexity of the matters with which

the advisory committee is concerned, and the qualifications required for the work involved. The agency also should take into account the rates of pay applicable to Federal employees who have duties that are similar in terms of difficulty and responsibility. An agency may establish rates of pay for advisory committee staff based on the pay these persons would receive if they were covered by the General Schedule in 5 U.S.C. Chapter 51 and Chapter 53, subchapter III, or by an alternative similar agency compensation system.

(g) *Compensation of experts and consultants.* Whether or not an agency has other authority to appoint and compensate advisory committee members or staff, it also may employ experts and consultants under 5 U.S.C. 3109 to perform work for an advisory committee. Compensation of experts and consultants may not exceed the maximum rate of basic pay established for the General Schedule under 5 U.S.C. 5332 (that is, the GS-15, step 10 rate, excluding locality pay or any other supplement), unless a higher rate expressly is allowed by another statute. The appointment and compensation of experts and consultants by an agency must be in conformance with applicable regulations issued by the U. S. Office of Personnel Management (OPM) (See 5 CFR part 304.).

(h) *Federal employees assigned to an advisory committee.* Any advisory committee member or staff person who is a Federal employee when assigned duties to an advisory committee remains covered during the assignment by the compensation system that currently applies to that employee, unless that person's current Federal appointment is terminated. Any staff person who is a Federal employee must serve with the knowledge of the Designated Federal Officer (DFO) for the advisory committee to which that person is assigned duties, and the approval of the employee's direct supervisor.

(i) *Other appointment considerations.* An individual who is appointed as an advisory committee member or staff person immediately following termination of another Federal appointment with a full-time work schedule may receive compensation at the rate applicable to the former appointment, if otherwise allowed by applicable law (without regard to the limitations on pay established in paragraphs (d) and (e) of this section). Any advisory committee staff person who is not a current Federal employee serving under an assignment must be appointed in accordance with applicable agency procedures, and in consultation with the DFO and the

members of the advisory committee involved.

(j) *Gratuitous services.* In the absence of any special limitations applicable to a specific agency, nothing in this subpart prevents an agency from accepting the gratuitous services of an advisory committee member or staff person who is not a Federal employee, or expert or consultant, who agrees in advance and in writing to serve without compensation.

(k) *Travel expenses.* Advisory committee members and staff, while engaged in the performance of their

duties away from their homes or regular places of business, may be allowed reimbursement for travel expenses, including per diem in lieu of subsistence, as authorized by 5 U.S.C. 5703, for persons employed intermittently in the Government service.

(l) Services for advisory committee members with disabilities. While performing advisory committee duties, an advisory committee member with disabilities may be provided services by a personal assistant for employees with disabilities, if the member qualifies as

an individual with disabilities as provided in section 501 of the Rehabilitation Act of 1973, as amended, 29 U.S.C. 791, and does not otherwise qualify for assistance under 5 U.S.C. 3102 by reason of being a Federal employee.

Appendix A to Subpart C of Part 102-3—Key Points and Principles

This appendix provides additional guidance in the form of answers to frequently asked questions and identifies key points and principles that may be applied to situations not covered elsewhere in this subpart. The guidance follows:

APPENDIX A TO SUBPART C

Key points and principles	Section	Question(s)	Guidance
I. FACA does not specify the manner in which advisory committee members and staff must be appointed.	102-3.105, 102-3.130(a)	1. Does the appointment of an advisory committee member necessarily result in a lengthy process?	A. No. Each agency head may specify those policies and procedures, consistent with the Act and this part, or other specific authorizing statute, governing the appointment of advisory committee members and staff. B. Some factors that affect how long the appointment process takes include: (i) Solicitation of nominations; (ii) Conflict of interest clearances; (iii) Security or background evaluations; (iv) Availability of candidates; and (v) Other statutory or administrative requirements. C. In addition, the extent to which agency heads have delegated responsibility for selecting members varies from agency to agency and may become an important factor in the time it takes to finalize the advisory committee's membership.
II. Agency heads retain the final authority for selecting advisory committee members, unless otherwise provided for by a specific statute or Presidential directive.	102-3.130(a)	1. Can an agency head select for membership on an advisory committee from among nominations submitted by an organization? 2. If so, can different persons represent the organization at different meetings?	A. The answer to question 1 is yes. Organizations may propose for membership individuals to represent them on an advisory committee. However, the agency head establishing the advisory committee, or other appointing authority, retains the final authority for selecting all members. B. The answer to question 2 also is yes. Alternates may represent an appointed member with the approval of the establishing agency, where the agency head is the appointing authority.
III. An agency may compensate advisory committee members and staff, and also employ experts and consultants.	102-3.130(d), 102-3.130(g), 102-3.130(e),	1. May members and staff be compensated for their service or duties on an advisory committee? 2. Are the guidelines the same for compensating both members and staff? 3. May experts and consultants be employed to perform other advisory committee work?	A. The answer to question 1 is yes. (i) However, FACA limits compensation for advisory committee members and staff to the rate for level IV of the Executive Schedule, unless higher rates expressly are allowed by other statutes. (ii) Although FACA provides for compensation guidelines, the Act does not require an agency to compensate its advisory committee members.

APPENDIX A TO SUBPART C—Continued

Key points and principles	Section	Question(s)	Guidance
			<p>B. The answer to question 2 is no. The guidelines for compensating members and staff are similar, but not identical. For example, the differences are that: (i) An agency "may" pay members on either an hourly or a daily rate basis, and "may not" provide additional compensation in any form, such as bonuses or premium pay; while (ii) An agency "must" pay staff on an hourly rate basis only, and "may" provide additional compensation, so long as aggregate compensation paid in a calendar year does not exceed the rate for level IV of the Executive Schedule, with appropriate proration for a partial calendar year.</p> <p>C. The answer to question 3 is yes. Other work not part of the duties of advisory committee members or staff may be performed by experts and consultants. For additional guidance on the employment of experts and consultants, agencies should consult the applicable regulations issued by the U. S. Office of Personnel Management (OPM). (See 5 CFR part 304.)</p>
IV. Agency heads are responsible for ensuring that the interests and affiliations of advisory committee members are reviewed for conformance with applicable conflict of interest statutes and other Federal ethics rules..	102–3.105(h)	<p>1. Are all advisory committee members subject to conflict of interest statutes and other Federal ethics rules?</p> <p>2. Who should be consulted for guidance on the proper application of Federal ethics rules to advisory committee members?</p>	<p>A. The answer to question 1 is no. Whether an advisory committee member is subject to Federal ethics rules is dependent on the member's status. The determination of a member's status on an advisory committee is largely a personnel classification matter for the appointing agency. Most advisory committee members will serve either as a "representative" or a "special Government employee" (SGE), based on the role the member will play. In general, SGEs are covered by regulations issued by the U. S. Office of Government Ethics (OGE) and certain conflict of interest statutes, while representatives are not subject to these ethics requirements.</p> <p>B. The answer to question 2 is the agency's Designated Agency Ethics Official (DAEO), who should be consulted prior to appointing members to an advisory committee in order to apply Federal ethics rules properly.</p>
V. An agency head may delegate responsibility for appointing a Committee Management Officer (CMO) or Designated Federal Officer (DFO); however, there may be only one CMO for each agency..	102–3.105(c), 102–3.105(i)	1. Must an agency's CMO and each advisory committee DFO be appointed by the agency head?	A. The answer to question 1 is no. The agency head may delegate responsibility for appointing the CMO and DFOs. However, these appointments, including alternate selections, should be documented consistent with the agency's policies and procedures.

APPENDIX A TO SUBPART C—Continued

Key points and principles	Section	Question(s)	Guidance
VI. FACA is the principal statute pertaining to advisory committees. However, other statutes may impact their use and operations..	102–3.125(c)	<p>2. May an agency have more than one CMO?</p> <p>1. Do other statutes or regulations affect the way an agency carries out its advisory committee management program?</p>	<p>B. The answer to question 2 also is no. The functions of the CMO are specified in the Act and include oversight responsibility for all advisory committees within the agency. Accordingly, only one CMO may be appointed to perform these functions. The agency may, however, create additional positions, including those in its sub-components, which are subordinate to the CMO's agencywide responsibilities and functions.</p> <p>A. Yes. While the Act provides a general framework for managing advisory committees Governmentwide, other factors may affect how advisory committees are managed. These include: (i) The statutory or Presidential authority used to establish an advisory committee; (ii) A statutory limitation placed on an agency regarding its annual expenditures for advisory committees; (iii) Presidential or agency management directives; (iv) The applicability of conflict of interest statutes and other Federal ethics rules; (v) Agency regulations affecting advisory committees; and (vi) Other requirements imposed by statute or regulation on an agency or its programs, such as those governing the employment of experts and consultants or the management of Federal records.</p>

Subpart D—Advisory Committee Meeting and Recordkeeping Procedures

§ 102–3.135 What does this subpart cover and how does it apply?

This subpart establishes policies and procedures relating to meetings and other activities undertaken by advisory committees and their subcommittees. This subpart also outlines what records must be kept by Federal agencies and what other documentation, including advisory committee minutes and reports, must be prepared and made available to the public.

§ 102–3.140 What policies apply to advisory committee meetings?

The agency head, or the chairperson of an independent Presidential advisory committee, must ensure that:

(a) Each advisory committee meeting is held at a reasonable time and in a manner or place reasonably accessible to the public, to include facilities that are readily accessible to and usable by persons with disabilities, consistent with the goals of section 504 of the Rehabilitation Act of 1973, as amended, 29 U.S.C. 794;

(b) The meeting room or other forum selected is sufficient to accommodate advisory committee members, advisory committee or agency staff, and a

reasonable number of interested members of the public;

(c) Any member of the public is permitted to file a written statement with the advisory committee;

(d) Any member of the public may speak to or otherwise address the advisory committee if the agency's guidelines so permit; and

(e) Any advisory committee meeting conducted in whole or part by a teleconference, videoconference, the Internet, or other electronic medium meets the requirements of this subpart.

§ 102–3.145 What policies apply to subcommittee meetings?

If a subcommittee makes recommendations directly to a Federal officer or agency, or if its recommendations will be adopted by the parent advisory committee without further deliberations by the parent advisory committee, then the subcommittee's meetings must be conducted in accordance with all openness requirements of this subpart.

§ 102–3.150 How are advisory committee meetings announced to the public?

(a) A notice in the **Federal Register** must be published at least 15 calendar days prior to an advisory committee meeting, which includes:

(1) The name of the advisory committee (or subcommittee, if applicable);

(2) The time, date, place, and purpose of the meeting;

(3) A summary of the agenda, and/or topics to be discussed;

(4) A statement whether all or part of the meeting is open to the public or closed; if the meeting is closed state the reasons why, citing the specific exemption(s) of the Government in the Sunshine Act, 5 U.S.C. 552b(c), as the basis for closure; and

(5) The name and telephone number of the Designated Federal Officer (DFO) or other responsible agency official who may be contacted for additional information concerning the meeting.

(b) In exceptional circumstances, the agency or an independent Presidential advisory committee may give less than 15 calendar days notice, provided that the reasons for doing so are included in the advisory committee meeting notice published in the **Federal Register**.

§ 102–3.155 How are advisory committee meetings closed to the public?

To close all or part of an advisory committee meeting, the Designated Federal Officer (DFO) must:

(a) *Obtain prior approval.* Submit a request to the agency head, or in the case of an independent Presidential

advisory committee, the Secretariat, citing the specific exemption(s) of the Government in the Sunshine Act, 5 U.S.C. 552b(c), that justify the closure. The request must provide the agency head or the Secretariat sufficient time (generally, 30 calendar days) to review the matter in order to make a determination before publication of the meeting notice required by § 102–3.150.

(b) *Seek General Counsel review.* The General Counsel of the agency or, in the case of an independent Presidential advisory committee, the General Counsel of GSA should review all requests to close meetings.

(c) *Obtain agency determination.* If the agency head, or in the case of an independent Presidential advisory committee, the Secretariat, finds that the request is consistent with the provisions in the Government in the Sunshine Act and FACA, the appropriate agency official must issue a determination that all or part of the meeting be closed.

(d) *Assure public access to determination.* The agency head or the chairperson of an independent Presidential advisory committee must make a copy of the determination available to the public upon request.

§ 102–3.160 What activities of an advisory committee are not subject to the notice and open meeting requirements of the Act?

The following activities of an advisory committee are excluded from the procedural requirements contained in this subpart:

(a) *Preparatory work.* Meetings of two or more advisory committee or subcommittee members convened solely to gather information, conduct research, or analyze relevant issues and facts in preparation for a meeting of the advisory committee, or to draft position papers for deliberation by the advisory committee; and

(b) *Administrative work.* Meetings of two or more advisory committee or subcommittee members convened solely to discuss administrative matters of the advisory committee or to receive administrative information from a Federal officer or agency.

§ 102–3.165 How are advisory committee meetings documented?

(a) The agency head or, in the case of an independent Presidential advisory committee, the chairperson must ensure that detailed minutes of each advisory committee meeting, including one that is closed or partially closed to the public, are kept. The chairperson of each advisory committee must certify the accuracy of all minutes of advisory committee meetings.

(b) The minutes must include:

(1) The time, date, and place of the advisory committee meeting;

(2) A list of the persons who were present at the meeting, including advisory committee members and staff, agency employees, and members of the public who presented oral or written statements;

(3) An accurate description of each matter discussed and the resolution, if any, made by the advisory committee regarding such matter; and

(4) Copies of each report or other document received, issued, or approved by the advisory committee at the meeting.

(c) The Designated Federal Officer (DFO) must ensure that minutes are certified within 90 calendar days of the meeting to which they relate.

§ 102–3.170 How does an interested party obtain access to advisory committee records?

Timely access to advisory committee records is an important element of the public access requirements of the Act. Section 10(b) of the Act provides for the contemporaneous availability of advisory committee records that, when taken in conjunction with the ability to attend committee meetings, provide a meaningful opportunity to comprehend fully the work undertaken by the advisory committee. Although advisory committee records may be withheld under the provisions of the Freedom of Information Act (FOIA), as amended, if there is a *reasonable expectation* that the records sought fall within the exemptions contained in section 552(b) of FOIA, agencies may not require members of the public or other interested parties to file requests for non-exempt advisory committee records under the request and review process established by section 552(a)(3) of FOIA.

§ 102–3.175 What are the reporting and recordkeeping requirements for an advisory committee?

(a) *Presidential advisory committee follow-up report.* Within one year after a Presidential advisory committee has submitted a public report to the President, a follow-up report required by section 6(b) of the Act must be prepared and transmitted to the Congress detailing the disposition of the advisory committee's recommendations. The Secretariat shall assure that these reports are prepared and transmitted to the Congress as directed by the President, either by the President's delegate, by the agency responsible for providing support to a Presidential advisory committee, or by the responsible agency or organization designated in the charter of the

Presidential advisory committee pursuant to § 102–3.75(a)(10). In performing this function, GSA may solicit the assistance of the President's delegate, the Office of Management and Budget (OMB), or the responsible agency Committee Management Officer (CMO), as appropriate. Reports shall be consistent with specific guidance provided periodically by the Secretariat.

(b) *Annual comprehensive review of Federal advisory committees.* To conduct an annual comprehensive review of each advisory committee as specified in section 7(b) of the Act, GSA requires Federal agencies to report information on each advisory committee for which a charter has been filed in accordance with § 102–3.70, and which is in existence during any part of a Federal fiscal year. Committee Management Officers (CMOs), Designated Federal Officers (DFOs), and other responsible agency officials will provide this information by data filed electronically with GSA on a fiscal year basis, using a Governmentwide shared Internet-based system that GSA maintains. This information shall be consistent with specific guidance provided periodically by the Secretariat. The preparation of these electronic submissions by agencies has been assigned interagency report control number (IRCN) 0304–GSA–AN.

(c) *Annual report of closed or partially-closed meetings.* In accordance with section 10(d) of the Act, advisory committees holding closed or partially-closed meetings must issue reports at least annually, setting forth a summary of activities and such related matters as would be informative to the public consistent with the policy of 5 U.S.C. 552(b).

(d) *Advisory committee reports.* Subject to 5 U.S.C. 552, 8 copies of each report made by an advisory committee, including any report of closed or partially-closed meetings as specified in paragraph (c) of this section and, where appropriate, background papers prepared by experts or consultants, must be filed with the Library of Congress as required by section 13 of the Act for public inspection and use at the location specified § 102–3.70(a)(3).

(e) *Advisory committee records.* Official records generated by or for an advisory committee must be retained for the duration of the advisory committee. Upon termination of the advisory committee, the records must be processed in accordance with the Federal Records Act (FRA), 44 U.S.C. Chapters 21, 29–33, and regulations issued by the National Archives and Records Administration (NARA) (see 36 CFR parts 1220, 1222, 1228, and 1234),

or in accordance with the Presidential Records Act (PRA), 44 U.S.C. Chapter 22.

Appendix A to Subpart D of Part 102–3—Key Points and Principles

This appendix provides additional guidance in the form of answers to frequently

asked questions and identifies key points and principles that may be applied to situations not covered elsewhere in this subpart. The guidance follows:

APPENDIX A TO SUBPART D

Key points and principles	Section(s)	Question(s)	Guidance
I. With some exceptions, advisory committee meetings are open to the public.	102–3.140, 102–3.145(a), 102–3.155.	1. Must all advisory committee and subcommittee meetings be open to the public?	A. No. Advisory committee meetings may be closed when appropriate, in accordance with the exemption(s) for closure contained in the Government in the Sunshine Act, 5 U.S.C. 552b(c). (i) Subcommittees that report to a parent advisory committee, and not directly to a Federal officer or agency, are not required to open their meetings to the public or comply with the procedures in the Act for announcing meetings. (ii) However, agencies are cautioned to avoid excluding the public from attending any meeting where a subcommittee develops advice or recommendations that are not expected to be reviewed and considered by the parent advisory committee before being submitted to a Federal officer or agency. These exclusions may run counter to the provisions of the Act requiring contemporaneous access to the advisory committee deliberative process.
II. Notices must be published in the Federal Register announcing advisory committee meetings.	102–3.150	1. Can agencies publish a single Federal Register notice announcing multiple advisory committee meetings?	A. Yes, agencies may publish a single notice announcing multiple meetings so long as these notices contain all of the information required by § 102–3.150. (i) "Blanket notices" should not announce meetings so far in advance as to prevent the public from adequately being informed of an advisory committee's schedule. (ii) An agency's Office of General Counsel should be consulted where these notices include meetings that are either closed or partially closed to the public.

APPENDIX A TO SUBPART D—Continued

Key points and principles	Section(s)	Question(s)	Guidance
III. Although certain advisory committee records may be withheld under the Freedom of Information Act (FOIA), as amended, 5 U.S.C. 552, agencies may not require the use of FOIA procedures for records available under section 10(b) of FACA.	102–3.170	1. May an agency require the use of its internal FOIA procedures for access to advisory committee records that are not exempt from release under FOIA?	A. No. Section 10(b) of FACA provides that: Subject to section 552 of title 5, United States Code, the records, reports, transcripts, minutes, appendixes, working papers, drafts, studies, agenda, or other documents which were made available to or prepared for or by each advisory committee shall be available for public inspection and copying at a single location in the offices of the advisory committee or the agency to which the advisory committee reports until the advisory committee ceases to exist. (i) The purpose of section 10(b) of the Act is to provide for the contemporaneous availability of advisory committee records that, when taken in conjunction with the ability to attend advisory committee meetings, provide a meaningful opportunity to comprehend fully the work undertaken by the advisory committee. (ii) Although advisory committee records may be withheld under the provisions of FOIA if there is a reasonable expectation that the records sought fall within the exemptions contained in section 552(b) of FOIA, agencies may not require members of the public or other interested parties to file requests for non-exempt advisory committee records under the request and review process established by section 552(a)(3) of FOIA. (iii) Records covered by the exemptions set forth in section 552(b) of FOIA may be withheld. An opinion of the Office of Legal Counsel (OLC), U.S. Department of Justice concludes that: FACA requires disclosure of written advisory committee documents, including predecisional materials such as drafts, working papers, and studies. The disclosure exemption available to agencies under exemption 5 of FOIA for predecisional documents and other privileged materials is narrowly limited in the context of FACA to privileged “inter-agency or intra-agency” documents prepared by an agency and transmitted to an advisory committee. The language of the FACA statute and its legislative history support this restrictive application of exemption 5 to requests for public access to advisory committee documents. Moreover, since an advisory committee is not itself an agency, this construction is supported by the express language of exemption 5 which applies only to inter-agency or intra-agency materials. (iv) Agencies first should determine, however, whether or not records being sought by the public fall within the scope of FACA in general, and section 10(b) of the Act in particular, prior to applying the available exemptions under FOIA. (See OLC Opinion 12 Op. O.L.C. 73, dated April 29, 1988, which is available from the Committee Management Secretariat (MC), General Services Administration, 1800 F Street, NW., Washington, DC 20405–0002.)

APPENDIX A TO SUBPART D—Continued

Key points and principles	Section(s)	Question(s)	Guidance
IV. Advisory committee records must be managed in accordance with the Federal Records Act (FRA), 44 U.S.C. Chapters 21, 29–33, and regulations issued by the National Archives and Records Administration (NARA) (see 36 CFR parts 1220, 1222, 1228, and 1234), or the Presidential Records Act (PRA), 44 U.S.C. Chapter 22.	102–175(e)	1. How must advisory committee records be treated and preserved?	<p>A. In order to ensure proper records management, the Committee Management Officer (CMO), Designated Federal Officer (DFO), or other representative of the advisory committee, in coordination with the agency's Records Management Officer, should clarify upon the establishment of the advisory committee whether its records will be managed in accordance with the FRA or the PRA.</p> <p>B. Official records generated by or for an advisory committee must be retained for the duration of the advisory committee. Responsible agency officials are encouraged to contact their agency's Records Management Officer or NARA as soon as possible after the establishment of the advisory committee to receive guidance on how to establish effective records management practices. Upon termination of the advisory committee, the records must be processed in accordance with the FRA and regulations issued by NARA, or in accordance with the PRA.</p> <p>C. The CMO, DFO, or other representative of an advisory committee governed by the FRA, in coordination with the agency's Records Management Officer, must contact NARA in sufficient time to review the process for submitting any necessary disposition schedules of the advisory committee's records upon termination. In order to ensure the proper disposition of the advisory committee's records, disposition schedules need to be submitted to NARA no later than 6 months before the termination of the advisory committee.</p> <p>D. For Presidential advisory committees governed by the PRA, the CMO, DFO, or other representative of the advisory committee should consult with the White House Counsel on the preservation of any records subject to the PRA, and may also confer with NARA officials.</p>

Subpart E—How Does This Subpart Apply to Advice or Recommendations Provided to Agencies by the National Academy of Sciences or the National Academy of Public Administration?

§ 102–3.180 What does this subpart cover and how does it apply?

This subpart provides guidance to agencies on compliance with section 15 of the Act. Section 15 establishes requirements that apply only in connection with a funding or other written agreement involving an agency's use of advice or recommendations provided to the agency by the National Academy of Sciences (NAS) or the National Academy of Public Administration (NAPA), if such advice or recommendations were developed by use of a committee created by either academy. For purposes of this subpart,

NAS also includes the National Academy of Engineering, the Institute of Medicine, and the National Research Council. Except with respect to NAS committees that were the subject of judicial actions filed before December 17, 1997, no part of the Act other than section 15 applies to any committee created by NAS or NAPA.

§ 102–3.185 What does this subpart require agencies to do?

(a) *Section 15 requirements.* An agency may not use any advice or recommendation provided to an agency by the National Academy of Sciences (NAS) or the National Academy of Public Administration (NAPA) under an agreement between the agency and an academy, if such advice or recommendation was developed by use of a committee created by either academy, unless:

(1) The committee was not subject to any actual management or control by an agency or officer of the Federal Government; and

(2) In the case of NAS, the academy certifies that it has complied substantially with the requirements of section 15(b) of the Act; or

(3) In the case of NAPA, the academy certifies that it has complied substantially with the requirements of sections 15(b) (1), (2), and (5) of the Act.

(b) *No agency management or control.* Agencies must not manage or control the specific procedures adopted by each academy to comply with the requirements of section 15 of the Act that are applicable to that academy. In addition, however, any committee created and used by an academy in the development of any advice or recommendation to be provided by the

academy to an agency must be subject to both actual management and control by that academy and not by the agency.

(c) *Funding agreements.* Agencies may enter into contracts, grants, and cooperative agreements with NAS or NAPA that are consistent with the requirements of this subpart to obtain advice or recommendations from such academy. These funding agreements require, and agencies may rely upon, a written certification by an authorized

representative of the academy provided to the agency upon delivery to the agency of each report containing advice or recommendations required under the agreement that:

(1) The academy has adopted policies and procedures that comply with the applicable requirements of section 15 of the Act; and

(2) To the best of the authorized representative's knowledge and belief, these policies and procedures

substantially have been complied with in performing the work required under the agreement.

Appendix A to Subpart E of Part 102-3—Key Points and Principles

This appendix provides additional guidance in the form of answers to frequently asked questions and identifies key points and principles that may be applied to situations not covered elsewhere in this subpart. The guidance follows:

APPENDIX A TO SUBPART E

Key points and principles	Section(s)	Question(s)	Guidance
I. Section 15 of the Act allows the National Academy of Sciences (NAS) and the National Academy of Public Administration (NAPA) to adopt separate procedures for complying with FACA.	102-3.185(a)	1. May agencies rely upon an academy certification regarding compliance with section 15 of the Act if different policies and procedures are adopted by NAS and NAPA?	A. Yes. NAS and NAPA are completely separate organizations. Each is independently chartered by the Congress for different purposes, and Congress has recognized that the two organizations are structured and operate differently. Agencies should defer to the discretion of each academy to adopt policies and procedures that will enable it to comply substantially with the provisions of section 15 of the Act that apply to that academy.
II. Section 15 of the Act allows agencies to enter into funding agreements with NAS and NAPA without the academies' committees being "managed" or "controlled".	102-3.185(c)	1. Can an agency enter into a funding agreement with an academy which provides for the preparation of one or more academy reports containing advice or recommendations to the agency, to be developed by the academy by use of a committee created by the academy, without subjecting an academy to "actual management or control" by the agency?	A. Yes, if the members of the committee are selected by the academy and if the committee's meetings, deliberations, and the preparation of reports are all controlled by the academy. Under these circumstances, neither the existence of the funding agreement nor the fact that it contemplates use by the academy of an academy committee would constitute actual management or control of the committee by the agency.

[FR Doc. 01-17350 Filed 7-18-01; 8:45 am]

BILLING CODE 6820-34-U

FEDERAL ADVISORY COMMITTEE ACT

FEDERAL ADVISORY COMMITTEE ACT

5 U.S.C. app.

As Amended

§1. Short title

This Act may be cited as the "Federal Advisory Committee Act Amendments."

§2. Findings and purpose

(a) The Congress finds that there are numerous committees, boards, commissions, councils, and similar groups which have been established to advise officers and agencies in the executive branch of the Federal Government and that they are frequently a useful and beneficial means of furnishing expert advice, ideas, and diverse opinions to the Federal Government.

(b) The Congress further finds and declares that--

- (1) the need for many existing advisory committees has not been adequately reviewed;
- (2) new advisory committees should be established only when they are determined to be essential and their number should be kept to the minimum necessary;
- (3) advisory committees should be terminated when they are no longer carrying out the purposes for which they were established;
- (4) standards and uniform procedures should govern the establishment, operation, administration, and duration of advisory committees;
- (5) the Congress and the public should be kept informed with respect to the number, purpose, membership, activities, and cost of advisory committees; and
- (6) the function of advisory committees should be advisory only, and that all matters under their consideration should be determined, in accordance with law, by the official, agency, or officer involved.

§3. Definitions

For the purpose of this Act--

- (1) The term "Administrator" means the Administrator of General Services.
- (2) The term "advisory committee" means any committee, board, commission, council, conference, panel, task force, or other similar group, or any subcommittee or other subgroup thereof (hereafter in this paragraph referred to as "committee"), which is--
 - (A) established by statute or reorganization plan, or
 - (B) established or utilized by the President, or
 - (C) established or utilized by one or more agencies,

FEDERAL ADVISORY COMMITTEE ACT

in the interest of obtaining advice or recommendations for the President or one or more agencies or officers of the Federal Government, except that such term excludes (i) any committee that is composed wholly of full-time, or permanent part-time, officers or employees of the Federal Government, and (ii) any committee that is created by the National Academy of Sciences or the National Academy of Public Administration.

(3) The term "agency" has the same meaning as in section 551(1) of Title 5, United States Code.

(4) The term "Presidential advisory committee" means an advisory committee which advises the President.

§4. Applicability; restrictions

(a) The provisions of this Act or of any rule, order, or regulation promulgated under this Act shall apply to each advisory committee except to the extent that any Act of Congress establishing any such advisory committee specifically provides otherwise.

(b) Nothing in this Act shall be construed to apply to any advisory committee established or utilized by--

(1) the Central Intelligence Agency;

(2) the Federal Reserve System; or

(3) the Office of the Director of National Intelligence, if the Director of National Intelligence determines that for reasons of national security such advisory committee cannot comply with the requirements of this Act.

(c) Nothing in this Act shall be construed to apply to any local civic group whose primary function is that of rendering a public service with respect to a Federal program, or any State or local committee, council, board, commission, or similar group established to advise or make recommendations to State or local officials or agencies.

§5. Responsibilities of Congressional committees; review; guidelines

(a) In the exercise of its legislative review function, each standing committee of the Senate and the House of Representatives shall make a continuing review of the activities of each advisory committee under its jurisdiction to determine whether such advisory committee should be abolished or merged with any other advisory committee, whether the responsibilities of such advisory committee should be revised, and whether such advisory committee performs a necessary function not already being performed. Each such standing committee shall take appropriate action to obtain the enactment of legislation necessary to carry out the purpose of this subsection.

(b) In considering legislation establishing, or authorizing the establishment of any advisory committee, each standing committee of the Senate and of the House of Representatives shall determine, and report such determination to the Senate or to the House of Representatives, as the case may be, whether the functions of the proposed advisory committee are being or could be performed by one or more agencies or by an advisory committee already in existence, or by enlarging the mandate of an existing advisory committee. Any such legislation shall--

(1) contain a clearly defined purpose for the advisory committee;

(2) require the membership of the advisory committee to be fairly balanced in terms of the points of view represented and the functions to be performed by the advisory committee;

(3) contain appropriate provisions to assure that the advice and recommendations of the advisory committee will not be inappropriately influenced by the appointing authority or by

FEDERAL ADVISORY COMMITTEE ACT

any special interest, but will instead be the result of the advisory committee's independent judgment;

(4) contain provisions dealing with authorization of appropriations, the date for submission of reports (if any), the duration of the advisory committee, and the publication of reports and other materials, to the extent that the standing committee determines the provisions of section 10 of this Act to be inadequate; and

(5) contain provisions which will assure that the advisory committee will have adequate staff (either supplied by an agency or employed by it), will be provided adequate quarters, and will have funds available to meet its other necessary expenses.

(c) To the extent they are applicable, the guidelines set out in subsection (b) of this section shall be followed by the President, agency heads, or other Federal officials in creating an advisory committee.

§6. Responsibilities of the President; report to Congress; annual report to Congress; exclusion

(a) The President may delegate responsibility for evaluating and taking action, where appropriate, with respect to all public recommendations made to him by Presidential advisory committees.

(b) Within one year after a Presidential advisory committee has submitted a public report to the President, the President or his delegate shall make a report to the Congress stating either his proposals for action or his reasons for inaction, with respect to the recommendations contained in the public report.

(c) [Annual report] Repealed by the Federal Reports Elimination and Sunset Act of 1995, Pub. L. No. 104-66, § 3003, 109 Stat. 707, 734-36 (1995), amended by Pub. L. No. 106-113, § 236, 113 Stat. 1501, 1501A-302 (1999) (changing effective date to May 15, 2000).

§7. Responsibilities of the Administrator of General Services; Committee Management Secretariat, establishment; review; recommendations to President and Congress; agency cooperation; performance guidelines; uniform pay guidelines; travel expenses; expense recommendations

(a) The Administrator shall establish and maintain within the General Services Administration a Committee Management Secretariat, which shall be responsible for all matters relating to advisory committees.

(b) The Administrator shall, immediately after October 6, 1972, institute a comprehensive review of the activities and responsibilities of each advisory committee to determine--

(1) whether such committee is carrying out its purpose;

(2) whether, consistent with the provisions of applicable statutes, the responsibilities assigned to it should be revised;

(3) whether it should be merged with other advisory committees; or

(4) whether it should be abolished.

The Administrator may from time to time request such information as he deems necessary to carry out his functions under this subsection. Upon the completion of the Administrator's review he shall make recommendations to the President and to either the agency head or the Congress with respect to action he believes should be taken. Thereafter, the Administrator shall carry out a similar review annually. Agency heads shall cooperate with the Administrator in making the reviews required by this subsection.

(c) The Administrator shall prescribe administrative guidelines and management controls applicable to advisory committees, and, to the maximum extent feasible, provide advice, assistance, and

FEDERAL ADVISORY COMMITTEE ACT

guidance to advisory committees to improve their performance. In carrying out his functions under this subsection, the Administrator shall consider the recommendations of each agency head with respect to means of improving the performance of advisory committees whose duties are related to such agency.

(d)(1) The Administrator, after study and consultation with the Director of the Office of Personnel Management, shall establish guidelines with respect to uniform fair rates of pay for comparable services of members, staffs, and consultants of advisory committees in a manner which gives appropriate recognition to the responsibilities and qualifications required and other relevant factors. Such regulations shall provide that--

(A) no member of any advisory committee or of the staff of any advisory committee shall receive compensation at a rate in excess of the rate specified for GS-18 of the General Schedule under section 5332 of Title 5, United States Code;

(B) such members, while engaged in the performance of their duties away from their homes or regular places of business, may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of Title 5, United States Code, for persons employed intermittently in the Government service; and

(C) such members--

(i) who are blind or deaf or who otherwise qualify as handicapped individuals (within the meaning of section 501 of the Rehabilitation Act of 1973 (29 U.S.C. §794)), and

(ii) who do not otherwise qualify for assistance under section 3102 of Title 5, United States Code, by reason of being an employee of an agency (within the meaning of section 3102 (a)(1) of such Title 5),

may be provided services pursuant to section 3102 of such Title 5 while in performance of their advisory committee duties.

(2) Nothing in this subsection shall prevent--

(A) an individual who (without regard to his service with an advisory committee) is a full-time employee of the United States, or

(B) an individual who immediately before his service with an advisory committee was such an employee,

from receiving compensation at the rate at which he otherwise would be compensated (or was compensated) as a full-time employee of the United States.

(e) The Administrator shall include in budget recommendations a summary of the amounts he deems necessary for the expenses of advisory committees, including the expenses for publication of reports where appropriate.

§8. Responsibilities of agency heads; Advisory Committee Management Officer, designation

(a) Each agency head shall establish uniform administrative guidelines and management controls for advisory committees established by that agency, which shall be consistent with directives of the Administrator under section 7 and section 10. Each agency shall maintain systematic information on the nature, functions, and operations of each advisory committee within its jurisdiction.

(b) The head of each agency which has an advisory committee shall designate an Advisory Committee Management Officer who shall--

FEDERAL ADVISORY COMMITTEE ACT

- (1) exercise control and supervision over the establishment, procedures, and accomplishments of advisory committees established by that agency;
- (2) assemble and maintain the reports, records, and other papers of any such committee during its existence; and
- (3) carry out, on behalf of that agency, the provisions of section 552 of Title 5, United States Code, with respect to such reports, records, and other papers.

§9. Establishment and purpose of advisory committees; publication in Federal Register; charter: filing, contents, copy

(a) No advisory committee shall be established unless such establishment is--

- (1) specifically authorized by statute or by the President; or
- (2) determined as a matter of formal record, by the head of the agency involved after consultation with the Administrator, with timely notice published in the Federal Register, to be in the public interest in connection with the performance of duties imposed on that agency by law.

(b) Unless otherwise specifically provided by statute or Presidential directive, advisory committees shall be utilized solely for advisory functions. Determinations of action to be taken and policy to be expressed with respect to matters upon which an advisory committee reports or makes recommendations shall be made solely by the President or an officer of the Federal Government.

(c) No advisory committee shall meet or take any action until an advisory committee charter has been filed with (1) the Administrator, in the case of Presidential advisory committees, or (2) with the head of the agency to whom any advisory committee reports and with the standing committees of the Senate and of the House of Representatives having legislative jurisdiction of such agency. Such charter shall contain the following information:

- (A) the committee's official designation;
- (B) the committee's objectives and the scope of its activity;
- (C) the period of time necessary for the committee to carry out its purposes;
- (D) the agency or official to whom the committee reports;
- (E) the agency responsible for providing the necessary support for the committee;
- (F) a description of the duties for which the committee is responsible, and, if such duties are not solely advisory, a specification of the authority for such functions;
- (G) the estimated annual operating costs in dollars and man-years for such committee;
- (H) the estimated number and frequency of committee meetings;
- (I) the committee's termination date, if less than two years from the date of the committee's establishment; and
- (J) the date the charter is filed.

A copy of any such charter shall also be furnished to the Library of Congress.

FEDERAL ADVISORY COMMITTEE ACT

§10. Advisory committee procedures; meetings; notice, publication in Federal Register; regulations; minutes; certification; annual report; Federal officer or employee, attendance

(a)(1) Each advisory committee meeting shall be open to the public.

(2) Except when the President determines otherwise for reasons of national security, timely notice of each such meeting shall be published in the Federal Register, and the Administrator shall prescribe regulations to provide for other types of public notice to insure that all interested persons are notified of such meeting prior thereto.

(3) Interested persons shall be permitted to attend, appear before, or file statements with any advisory committee, subject to such reasonable rules or regulations as the Administrator may prescribe.

(b) Subject to section 552 of Title 5, United States Code, the records, reports, transcripts, minutes, appendixes, working papers, drafts, studies, agenda, or other documents which were made available to or prepared for or by each advisory committee shall be available for public inspection and copying at a single location in the offices of the advisory committee or the agency to which the advisory committee reports until the advisory committee ceases to exist.

(c) Detailed minutes of each meeting of each advisory committee shall be kept and shall contain a record of the persons present, a complete and accurate description of matters discussed and conclusions reached, and copies of all reports received, issued, or approved by the advisory committee. The accuracy of all minutes shall be certified to by the chairman of the advisory committee.

(d) Subsections (a)(1) and (a)(3) of this section shall not apply to any portion of an advisory committee meeting where the President, or the head of the agency to which the advisory committee reports, determines that such portion of such meeting may be closed to the public in accordance with subsection (c) of section 552b of Title 5, United States Code. Any such determination shall be in writing and shall contain the reasons for such determination. If such a determination is made, the advisory committee shall issue a report at least annually setting forth a summary of its activities and such related matters as would be informative to the public consistent with the policy of section 552(b) of Title 5, United States Code.

(e) There shall be designated an officer or employee of the Federal Government to chair or attend each meeting of each advisory committee. The officer or employee so designated is authorized, whenever he determines it to be in the public interest, to adjourn any such meeting. No advisory committee shall conduct any meeting in the absence of that officer or employee.

(f) Advisory committees shall not hold any meetings except at the call of, or with the advance approval of, a designated officer or employee of the Federal Government, and in the case of advisory committees (other than Presidential advisory committees), with an agenda approved by such officer or employee.

§11. Availability of transcripts; "agency proceeding"

(a) Except where prohibited by contractual agreements entered into prior to the effective date of this Act, agencies and advisory committees shall make available to any person, at actual cost of duplication, copies of transcripts of agency proceedings or advisory committee meetings.

(b) As used in this section "agency proceeding" means any proceeding as defined in section 551(12) of Title 5, United States Code.

§12. Fiscal and administrative provisions; record-keeping; audit; agency support services

(a) Each agency shall keep records as will fully disclose the disposition of any funds which may be at the disposal of its advisory committees and the nature and extent of their activities. The

FEDERAL ADVISORY COMMITTEE ACT

General Services Administration, or such other agency as the President may designate, shall maintain financial records with respect to Presidential advisory committees. The Comptroller General of the United States, or any of his authorized representatives, shall have access, for the purpose of audit and examination, to any such records.

(b) Each agency shall be responsible for providing support services for each advisory committee established by or reporting to it unless the establishing authority provides otherwise. Where any such advisory committee reports to more than one agency, only one agency shall be responsible for support services at any one time. In the case of Presidential advisory committees, such services may be provided by the General Services Administration.

§13. Responsibilities of Library of Congress; reports and background papers; depository

Subject to section 552 of Title 5, United States Code, the Administrator shall provide for the filing with the Library of Congress of at least eight copies of each report made by every advisory committee and, where appropriate, background papers prepared by consultants. The Librarian of Congress shall establish a depository for such reports and papers where they shall be available to public inspection and use.

§14. Termination of advisory committees; renewal; continuation

(a)(1) Each advisory committee which is in existence on the effective date of this Act shall terminate not later than the expiration of the two-year period following such effective date unless--

(A) in the case of an advisory committee established by the President or an officer of the Federal Government, such advisory committee is renewed by the President or that officer by appropriate action prior to the expiration of such two-year period; or

(B) in the case of an advisory committee established by an Act of Congress, its duration is otherwise provided for by law.

(2) Each advisory committee established after such effective date shall terminate not later than the expiration of the two-year period beginning on the date of its establishment unless--

(A) in the case of an advisory committee established by the President or an officer of the Federal Government such advisory committee is renewed by the President or such officer by appropriate action prior to the end of such period; or

(B) in the case of an advisory committee established by an Act of Congress, its duration is otherwise provided for by law.

(b)(1) Upon the renewal of any advisory committee, such advisory committee shall file a charter in accordance with section 9(c).

(2) Any advisory committee established by an Act of Congress shall file a charter in accordance with such section upon the expiration of each successive two-year period following the date of enactment of the Act establishing such advisory committee.

(3) No advisory committee required under this subsection to file a charter shall take any action (other than preparation and filing of such charter) prior to the date on which such charter is filed.

(c) Any advisory committee which is renewed by the President or any officer of the Federal Government may be continued only for successive two-year periods by appropriate action taken by the President or such officer prior to the date on which such advisory committee would otherwise terminate.

FEDERAL ADVISORY COMMITTEE ACT

§15. Requirements relating to the National Academy of Sciences and the National Academy of Public Administration

(a) In General- An agency may not use any advice or recommendation provided by the National Academy of Sciences or National Academy of Public Administration that was developed by use of a committee created by that academy under an agreement with an agency, unless--

(1) the committee was not subject to any actual management or control by an agency or an officer of the Federal Government;

(2) in the case of a committee created after the date of the enactment of the Federal Advisory Committee Act Amendments of 1997, the membership of the committee was appointed in accordance with the requirements described in subsection (b)(1); and

(3) in developing the advice or recommendations, the academy complied with--

(A) subsection (b)(2) through (6), in the case of any advice or recommendation provided by the National Academy of Sciences; or

(B) subsection (b)(2) and (5), in the case of any advice or recommendation provided by the National Academy of Public Administration.

(b) Requirements- The requirements referred to in subsection (a) are as follows:

(1) The Academy shall determine and provide public notice of the names and brief biographies of individuals that the Academy appoints or intends to appoint to serve on the committee. The Academy shall determine and provide a reasonable opportunity for the public to comment on such appointments before they are made or, if the Academy determines such prior comment is not practicable, in the period immediately following the appointments. The Academy shall make its best efforts to ensure that (A) no individual appointed to serve on the committee has a conflict of interest that is relevant to the functions to be performed, unless such conflict is promptly and publicly disclosed and the Academy determines that the conflict is unavoidable, (B) the committee membership is fairly balanced as determined by the Academy to be appropriate for the functions to be performed, and (C) the final report of the Academy will be the result of the Academy's independent judgment. The Academy shall require that individuals that the Academy appoints or intends to appoint to serve on the committee inform the Academy of the individual's conflicts of interest that are relevant to the functions to be performed.

(2) The Academy shall determine and provide public notice of committee meetings that will be open to the public.

(3) The Academy shall ensure that meetings of the committee to gather data from individuals who are not officials, agents, or employees of the Academy are open to the public, unless the Academy determines that a meeting would disclose matters described in section 552 (b) of Title 5, United States Code. The Academy shall make available to the public, at reasonable charge if appropriate, written materials presented to the committee by individuals who are not officials, agents, or employees of the Academy, unless the Academy determines that making material available would disclose matters described in that section.

(4) The Academy shall make available to the public as soon as practicable, at reasonable charge if appropriate, a brief summary of any committee meeting that is not a data gathering meeting, unless the Academy determines that the summary would disclose matters described in section 552 (b) Title 5, United States Code. The summary shall identify the committee members present, the topics discussed, materials made available to the committee, and such other matters that the Academy determines should be included.

FEDERAL ADVISORY COMMITTEE ACT

(5) The Academy shall make available to the public its final report, at reasonable charge if appropriate, unless the Academy determines that the report would disclose matters described in section 552 (b) of Title 5, United States Code. If the Academy determines that the report would disclose matters described in that section, the Academy shall make public an abbreviated version of the report that does not disclose those matters.

(6) After publication of the final report, the Academy shall make publicly available the names of the principal reviewers who reviewed the report in draft form and who are not officials, agents, or employees of the Academy.

(c) Regulations- The Administrator of General Services may issue regulations implementing this section.

§16. Effective Date

Except as provided in section 7 (b), this Act shall become effective upon the expiration of ninety days following October 6, 1972.

Subject: POLITICO's Morning Energy: Did Pruitt skate by? — EPA prepping Oversight docs — McConnell tries for West Virginia redemption

By Kelsey Tamborrino | 04/27/2018 10:01 AM EDT

With help from Anthony Adragna

DID PRUITT SKATE BY? EPA Administrator Scott Pruitt had a simple task Thursday: Keep his conservative backers happy - and in turn, keep the president happy. And he may have managed to do just that. While Democrats and environmentalists panned Pruitt's performance, the EPA chief, who is facing a heavy stack of ethical and spending quandaries, left most Republicans pleased enough with his performance that he's probably salvaged his job for now.

But of course, President Donald Trump has yet to weigh in on Pruitt's performance. And on a day that saw Trump's nominee for Veterans Affairs withdraw, triggering a long Trump rant on "Fox & Friends," that could be good news for the EPA chief, POLITICO's Nancy Cook reports. "As long as [Pruitt's] explanations hold and there are no crazy discrepancies or smoking gun or anything like that, I don't think that creates any red flags for Pruitt," said one Republican close to the White House, who predicted Pruitt would survive the scrutiny.

Still, Pruitt's shifting answers about what he knew about controversial raises for two close aides raised a lot of concerns that he hadn't been completely forthright during his interview with Fox News earlier this month. Under lawmakers' questioning, he acknowledged that he had authorized his chief of staff to award pay increases to his aides - but said he did not know how high they would be or that they would circumvent the White House's disapproval. That's different than what he told Fox's Ed Henry when he said he hadn't known about the raises until after the fact and that he did not know who authorized them.

Pruitt used the two hearings to blame his torrent of scandals on career staff, as POLITICO's Anthony Adragna, Annie Snider and Alex Guillén reported, while maintaining the headlines surrounding him aren't painting an accurate picture. "Let me be very clear: I have nothing to hide as it relates to how I've run the agency for the past 16 months," Pruitt said. (In case you missed it, POLITICO's Energy team has the full recap of the key moments here.)

But all in all, his critical audience of House Republicans exited two separate hearings Thursday believing that Pruitt fared well. "I found his responses credible," said Rep. Mike Simpson, a House appropriator. Meanwhile, Rep. Ken Calvert, the chairman of the House Appropriations Interior-Environment subcommittee, said Pruitt did "fine." "He answered our questions," he said. "... He's doing well, he's very professional, he's doing his job." And Illinois' John Shimkus, who chaired Pruitt's first hearing, said he thought Pruitt handled himself well and that Republican members were tough in their questions, Anthony recaps. "Some of it was accountability for policy, so I don't know what more [critics] want," Shimkus said. "I think that he answered the questions in the best way that he could answer them."

Of course, Pruitt's performance did not please everyone. "I think the opprobrium that you've generated on some of these spending decisions is actually warranted," GOP Rep. Ryan Costello, who is retiring from Congress, told Pruitt. Ana Unruh Cohen, managing director of government affairs at the Natural Resources Defense Council said the EPA administrator "demonstrated beyond any doubt that he is unqualified" to lead his

agency. "He should be fired before sundown," she said. And Rep. Marcy Kaptur, a Democratic member of the Appropriations subcommittee that questioned Pruitt, used the term "evasive" to describe the performance. "For someone who has been in the job a year and a half, he didn't seem to command a lot of the details," she said. "... I don't think we know the full extent of what he's done yet."

WHAT COMES NEXT? Keep in mind: Pruitt's under multiple investigations that have yet to fully play out. "We have a committee that's looking into these charges and we'll have a resolution," Calvert said of Pruitt's ongoing scandals. "We'll see what comes of it." Today, for one, marks the deadline set by House Oversight Chairman Trey Gowdy in his expanded probe into the embattled EPA chief's activities. He's called for a host of documents to be delivered and interviews to be scheduled by today. An EPA official said the agency is currently in the process of providing the documents, Anthony reports. The official said the documents will respond to the allegations of lavish spending and unethical conduct and may negate the need for several aides to appear for interviews.

WELCOME TO FRIDAY! I'm your host Kelsey Tamborrino, and no one guessed Alabama - the home state of the first officially designated Democratic floor leader, Oscar Underwood. For today: Name the only senator to be preceded by both of his or her parents. POLITICO's Ben White is bringing Morning Money to the Milken Institute Global Conference to provide coverage of the day's events and evening happenings. The newsletter will run April 29 - May 2. **Sign up to keep up with your daily conference coverage.**

PRUITT RAISES UNDONE AFTER FOX INTERVIEW: Amid the deluge of news coming out of the hearings, Pro's Emily Holden and Nick Juliano reported via documents released by EPA that the agency reversed raises for the two top aides to Pruitt the day after his interview with Fox News. Pruitt told Fox he had "corrected them" after finding out about them. A day later, on April 5, Pruitt's chief of staff Ryan Jackson signed personnel forms reverting the aides to their previous pay grades, according to copies of the forms reviewed by POLITICO. Read more here.

McCONNELL'S WEST VIRGINIA REDEMPTION: Amid an increasingly tense GOP primary battle for Democratic Sen. Joe Manchin's seat, coal baron Don Blankenship has focused his efforts into a relentless slash-and-burn campaign targeting Majority Leader Mitch McConnell. Blankenship - who spent a year in prison following the deadly 2010 Upper Big Branch mine disaster - compared his current battle against the McConnell-led Republican establishment to his past legal fight against the federal government, POLITICO's Alex Isenstadt writes. But as the May 8 primary inches closer, McConnell is fighting back with an avalanche of attacks from a super PAC aligned with the Senate leader, among other efforts.

Blankenship's attacks have grown intensely personal. During an interview with POLITICO, Blankenship said that McConnell "has a lot of connections in China," adding that the GOP leader's wife is Transportation Secretary Elaine Chao. And during an appearance on a local radio show, Blankenship described Chao's father as a "wealthy Chinaperson," who was "well-connected in China." Read more.

DOE TO ANNOUNCE FUNDS FOR ADVANCED NUCLEAR: Energy Secretary Rick Perry will announce today the selection of 13 projects that will receive about \$60 million in funding to support cost-shared research and development in advanced nuclear technologies. The selections - broken down into categories pertaining to nuclear demonstration readiness, advanced reactor development, and regulatory assistance grants - are the first under the Office of Nuclear Energy's "U.S. Industry Opportunities for Advanced Nuclear Technology Development" funding opportunity announcement. "Making these new investments is an important step to reviving and revitalizing nuclear energy, and ensuring that our nation continues to benefit from this clean, reliable, resilient source of electricity," Perry said in a statement.

ALL IN THE TIMING: The Office of Management and Budget completed its review of EPA's proposed "secret science" rule Wednesday, E&E News' Sean Reilly reports, even though Pruitt had already signed it by then. The policy that bars the agency from relying on studies that don't publicly disclose all their data got Pruitt's signature on Tuesday, but the Reginfo.gov site showed the review completion date as Wednesday. "While OMB is sometimes slow to update the site, it was unclear why Pruitt would have signed a rule before the review was completed," Reilly writes. EPA spokeswoman Liz Bowman suggested to E&E the fault lay with OMB. "Interagency review concluded before this proposal was signed," she said in a statement. Reilly later tweeted: "[@OMBPress](https://twitter.com/OMBPress) has now changed the date on the <http://Reginfo.gov> site to show that the review of this proposed #EPA rule was completed on April 23, not April 25. A #OMB spokesman won't discuss the reason for the change on the record."

TESTER TESTS TRUMP: The president is coming after Democratic Sen. Jon Tester, in what could be a problematic move for the Montanan as he fights to win reelection. Trump was enraged over Tester's work documenting allegations of malfeasance by Rear Adm. Ronny Jackson, provoking a series of inquiries that ultimately led to Jackson withdrawing his nomination to be VA secretary. POLITICO's Burgess Everett reports Tester is now at a turning point in his relationship with Trump, who railed against him on Thursday morning. "The incident and its fallout underscores how the burly, plain-spoken Tester hasn't exactly tacked to the center in an election year," Burgess writes. "Perhaps he feels emboldened after dodging a big-name opponent; after Ryan Zinke was drafted into the Trump administration and the state attorney general passed on the race, Tester's opposition is made up of lesser known opponents that will compete in a June primary." Read more.

SENATE MAKES POMPEO OFFICIAL: The Senate narrowly confirmed Mike Pompeo on Thursday, shifting him from CIA director to secretary of State. Pompeo was confirmed 57-42, ultimately winning support from Democrats Heidi Heitkamp, Manchin, Joe Donnelly, Bill Nelson, Claire McCaskill and Doug Jones. Supreme Court Justice Samuel Alito swore in Pompeo shortly after the vote Thursday, formally installing Pompeo, who has previously doubted climate science - a point greens jumped onto ahead of the vote. "There's some who think we're warming, there's some who think we're cooling," Pompeo said in 2013.

"Democrats that jumped ship to support this dangerous climate denier must and will be held accountable by the people," Food & Water Watch Executive Director Wenonah Hauter said in a statement. But others cheered the move: Competitive Enterprise Institute director of the Center for Energy and Environment, Myron Ebell, said in a statement he was "pleased." Pompeo, he said, "understands the importance of affordable, reliable energy to Americans' health and ability to provide for our families." Pompeo will be a "forceful advocate" of Trump's decision to remove the U.S. from the Paris climate agreement, Ebell said.

MANCHIN TRIES AGAIN: Manchin sent another letter this week urging Perry and Defense Secretary Jim Mattis to examine use of the Defense Production Act to protect coal-fired power plants. "The ability to produce reliable electricity and to recover from disruptions to our grid are critical to ensuring our nation's security against the various threats facing our nation today - whether those threats be extreme weather events or adversarial foreign actors," he writes. Earlier this month, Manchin similarly wrote to the president on the issue, although, as Pro's Eric Wolff reported, it faces an uphill battle on many fronts. Read the letter.

WATCH: House Speaker Paul Ryan was asked about climate change Thursday - by the 7-year-old daughter of E&E News' Scott Waldman. See it here.

PRUITT FOCUS OF NEW AD: The opposition research firm American Bridge is scheduled to air an ad this morning on "Fox and Friends" focusing on Pruitt's swirling scandals and his previous criticism of the president. Watch it here.

DEMOCRATS COME OUT IN FULL FORCE FOR CPP: Ahead of the comment deadline, eight Democratic senators signed onto a letter led by EPW ranking member Tom Carper opposing EPA's proposal to repeal the Clean Power Plan. The senators write that the law is instrumental in fighting climate change and say

that rescinding it "ignores scientific evidence on the risks of climate change and puts generations of Americans at grave health and economic risk."

- **A coalition of 16 attorneys general and municipalities** submitted a supplemental comment letter to EPA with evidence of what they say are due process violations and ethical issues due to Pruitt's involvement. The group previously wrote to EPA, claiming Pruitt had not had an open mind on CPP. "Since then, the evidence continues to grow that Administrator Pruitt should have been disqualified from participating in this rulemaking before it began," they write. "His involvement has irreparably tainted the current administrative process, and as a result, EPA must withdraw the proposed CPP repeal." Read it [here](#).

MAIL CALL! WE NEED AN EXTENSION: Sens. [Ron Wyden](#) and [Jeff Merkley](#) and Reps. [Peter DeFazio](#) and [Jared Huffman](#) wrote to Interior Secretary Ryan Zinke and Agriculture Secretary Sonny Perdue on Thursday, urging an extension on interim mineral withdrawal protections for the Chetco River in southwest Oregon. Read it [here](#).

- **Sixteen senators, led by Democratic Sen. Tom Udall**, sent [this letter](#) to Zinke asking him to pause any plans for the management of Bears Ears and Grand Staircase-Escalante national monuments until legal challenges related to the president are resolved.

- **The House Biofuel Caucus sent a letter** to Pruitt objecting to Renewable Fuel Standard waivers issued by EPA, demanding Pruitt "immediately cease all waiver activity" and provide lawmakers a "full list" with further details. Read it [here](#).

CSB TO INVESTIGATE HUSKY EXPLOSION: The Chemical Safety Board said Thursday it is sending a four-person investigative team to Superior, Wis., to the scene of the Husky Energy explosion that injured several Thursday morning. The refinery was shutting down in preparation for a five-week turnaround, CSB said, when the explosion occurred. The Superior Police Department [evacuated](#) areas within miles of the explosion, including a small hospital nearby as a precaution. As of the latest count, at least 11 people were injured in the explosion, the Associated Press [reports](#).

CHA-CHING: Following a House Natural Resources hearing Thursday on offshore energy revenue sharing for Gulf-producing states, Interior announced it would disburse nearly \$188 million to four states: Alabama, Louisiana, Mississippi and Texas, as well as their coastal political subdivisions. It is the first disbursement of funds under Phase II of the Gulf of Mexico Energy Security Act of 2006, which comes from oil and gas leasing revenues on the Outer Continental Shelf, according to DOI. See the **massive** check [here](#).

Hi,

Deliberative Process / Ex. 5

Thanks,

Ranking Member Carper:

10: OP/OCSPP: EPA's Science Advisory Board provides independent scientific and technical review, advice and recommendations to the Administrator on the science forming the basis for EPA's actions. In June, the Board wrote to former-Administrator Pruitt announcing that it would like to review the science forming the basis for six controversial rules before they are finalized. The request included the basis for the rule regulating greenhouse gas emissions from cars and SUVs, the rule exempting polluting glider trucks from emissions standards, the rule designed to curb greenhouse gas emissions from the oil and gas industry, the Clean Power Plan, the rule setting greenhouse gas emission standards for power plants, and EPA's proposed

“secret science” rule to ignore some of the world’s best scientific studies when writing regulations.

- a. Will you commit to making sure that the EPA Science Advisory Board gets access to any materials it needs to complete its reviews? If not, why not?
- b. Will you commit to wait to receive and review the advice the Board gives you *before* EPA finalizes any of these rules? If not, why not?

In our July 17, 2018 private meeting, I expressed my concerns about the manner in which EPA is implementing the Toxic Substances Control Act (TSCA). It is my belief that if EPA does not immediately reverse course, it risks having the majority of its TSCA implementation efforts overturned in litigation. I have several questions regarding some of my concerns. The attachments referenced in these questions consist of EPA technical assistance provided to Congress while the law was being negotiated, and are available at <https://www.epw.senate.gov/public/cache/files/f/0/f0729f1a-4385-453f-b7f8-442825a0721c/A681AA266D5CC024C98FCC85A944EB5E.senator-carper-questions-for-the-record-to-epa-nominees.pdf>.

47: OP: Environmental protection requires the use of sound science. The EPA’s own mission states that “national efforts to reduce environmental risks are based on the best available scientific information.” Science is the beating heart of the EPA’s work. You can imagine my concern in April when former Administrator Scott Pruitt proposed a “secret science” rule—or more properly named “censoring science.” Because this proposal would prevent the EPA from using scientific studies that include data that aren’t publicly available.

If the EPA can’t use public health studies that include confidential participant data, it will not be able to properly implement numerous environmental laws under EPA’s jurisdiction, like the Clean Air Act which requires the use of the best available science for implementation. Under the Administrative Procedure Act, the EPA cannot refuse to consider any comment submitted to the agency—including scientific findings based on confidential data. This proposed “censored science” rule allows for such refusal, and it wouldn’t hold up in court.

- a. Will you commit to withdrawing then-Secretary Pruitt’s proposed “censored science” rule, which is a violation of numerous laws?

It appears that EPA staff have been dissuaded from communicating to the public and to other scientists about climate risks. In October 2017, an EPA scientist, research fellow, and consultant withdrew from planned speeches at a workshop about the health of the Narragansett Bay and Watershed. Though former Administrator Pruitt responded to the October 31, 2017 letter sent by New England members of Congress expressing our concern,

that reply was vague.^[1] In this response letter, it was indicated that “[p]rocedures have been put in place to prevent such an occurrence in the future.” When another set of follow-up questions was asked to clarify that statement, the answers provided on May 10, 2018 were incomplete.

- b. What are the exact procedures put in place to ensure that EPA scientists continue to be able to speak at public events about climate science?
- c. How have you evaluated whether these new procedures are successful and staff are not discouraged from participating in similar scientific forums? If no evaluation has been made, why not?

May 15, 2018

The Honorable E. Scott Pruitt, Administrator
U. S. Environmental Protection Agency
1200 Pennsylvania Avenue NW
Mail Code 1101A
Washington, D.C. 20460

Re: Comments regarding the U.S. Environmental Protection Agency's proposed rule, "Strengthening Transparency in Regulatory Science", published April 30, 2018 at 83 FR 18768, Docket ID No. EPA-HQ-OA-2018-0259

Dear Administrator Pruitt:

The Minnesota Pollution Control Agency (MPCA) and Minnesota Department of Health (MDH) are deeply disappointed in, and troubled by, the U.S. Environmental Protection Agency's (EPA) proposed rule, "Strengthening Transparency in Regulatory Science," published April 30, 2018, at 83 FR 18768, under Docket ID No. EPA-HQ-OA-2018-0259. This proposed rule to "strengthen transparency" does not provide transparency or clarity at all — rather, it causes confusion and mistrust, and it will threaten the lives of real people. EPA should withdraw this dangerous proposal.

As regulatory agencies whose missions are to protect and improve Minnesota's environment and human health, the MPCA and MDH are appalled by the specious and brazen attack on health sciences research and the field of epidemiology. The proposed rule was clearly designed to undermine and disparage the important epidemiological studies that support public health protection from all pollutants, be they in the air, water, or soil. Simply stated, the proposal was written with the intent to cast doubt on EPA's prior judgement of, and dependence on, health research — and to create suspicion significant enough to deter future use of health-based studies in regulatory decision-making. EPA's proposal flagrantly ignores the reasons for the privacy of health data used for epidemiological studies. Privacy of health data is a foundational ethic for the medical and health science research fields.

While nothing in the proposed rule compels disclosure of personal identifying information (e.g., name, address), disclosure of analytic data sufficient to fully replicate study analysis would effectively breach confidentiality requirements upheld by public and private research through Institutional Review Boards (IRB). It is well documented that privacy assurances are essential to including people in health studies.

From a risk assessment perspective, not including epidemiology studies in regulatory science is not sound or prudent. Laboratory, toxicology, and epidemiology are complementary and necessary pieces of understanding and quantifying effects of a pollutant on human health. Excluding evidence from one of these three essential disciplines threatens the science basis for regulatory decisions and actions. The proposed rule would put regulators tasked with protecting human health in an impossible situation of relying primarily on animal models or in-vivo models that cannot be directly extrapolated to human dose-response estimates.

Minnesota supports open data access and is a national leader in science and regulatory transparency. Our agencies are at the forefront of making environmental and health surveillance data available, providing technical assistance for using data, and engaging partners across communities and research institutions

around effective dissemination and data utilization. Our agencies host multiple platforms for accessing high-quality health surveillance and environmental monitoring data, while protecting privacy and providing essential risk communication and prevention strategies. Detailed data are similarly available for research uses, under the approval and guidance of state IRBs.

Based on the lack of meaningful information and articulated or demonstrated need for the proposed rule, EPA has not made the case for a new regulation at 40 CFR Part 30.

The promulgation of this proposed rule would set a dangerous and potentially life-threatening precedent regarding the use of health-based data, modeling, and research in regulatory decision-making. As proposed, the rule is arbitrary, capricious, unethical, and intellectually dishonest. The EPA should immediately announce that it is withdrawing this proposal.

Our agencies will be submitting additional, substantive comments to the rulemaking record.

Sincerely,

John Linc Stine, Commissioner
Minnesota Pollution Control Agency

All,

I just spoke with Joe and it looks like 4:30 PM on Monday will work best at the moment for the most parties. I will be sending around a calendar invite with call in information shortly.

Thank you all for the quick turnaround and for your flexibility on this.

All,

Richard has requested that we set up a time next week with House Science Committee majority to discuss the HONEST Act. Below are some potential times that might work, please let me know what times might work for you and once we have an option I will offer that to HSST. The intention is for this to be a phone call to the Hill.

According to Scheduling Assistant, I potentially see:

Monday at 4:30PM
Wednesday at 12:00PM-1:00PM or 4:00PM
Friday at 10:00 AM or 4:00PM

If none of these times work for you, please let me know at your earliest convenience so I can work to see what else might be available.

Thank you,

Christian Rodrick

Pentagon, Other Agencies Still Face Possible CR, Even Shutdown

Excerpts taken from CQ.com

The Defense Department stands a 50-50 chance of operating under the constraints of a continuing resolution for at least the first couple months of fiscal 2019 and quite possibly beyond, a number of Washington insiders predict. What's more, analysts and lobbyists say, one or more government shutdowns are not out of the question.

If the Pentagon had to operate under a CR, it would be the tenth year in a row that the department's operations would be hamstrung for some or all of the fiscal year. The military brass has vocally opposed CRs because they do not allow new programs to be launched and funding must stay at current levels.

Despite lawmakers' unusual progress lately in passing appropriations bills for fiscal 2019, which starts on Oct. 1, none of those funding measures has been finalized. In just over a month, Congress will likely have to send President Donald Trump a CR for fiscal 2019 that will almost certainly cover multiple departments, such as Commerce, Homeland Security and State, whose funding bills neither chamber has even taken up. That CR may also include the Pentagon, some say, mainly because of the lack of time on the congressional calendar in September to finish a House-Senate conference on Defense appropriations and then vote on it in both chambers.

The all-but-inevitable CR is likely to last until Thanksgiving or even Christmas, experts say, and another, even longer, CR may follow that one. In fact, some analysts think the CR or CRs may not even become law, at least not right away, because the president may shut the government down instead, despite his recent indications to the contrary. His point would be to insist that Congress send him money to build his long-sought wall on the U.S.-Mexico border.

The House has passed six of the 12 spending bills for fiscal 2019, and the Senate has approved nine of them. As for the Pentagon bill ([HR 6157](#)), the House passed its version on June 28, while the Senate passed on Aug. 23 a measure combining its Defense money bill with its Labor-HHS-Education measure. Even before the Senate passed its Defense bill, appropriations aides from both chambers had been working for many weeks to reconcile the Senate and House measures. The two bills have widely different dollar allocations for defense procurement and research, particularly for initiatives such as hypersonics, F-35 fighter jets and shipbuilding. The Senate, unlike the House, would cut billions in aid for foreign militaries.

The differences are hardly irreconcilable, and House and Senate negotiators contend they have made progress on the Pentagon measure. The limited time between now and Oct. 1 is a factor increasing the odds of a CR for most of the government, including possibly the Pentagon. There are just 11 legislative days in September. None of the appropriations bills has made it through conference, and several will not even start a conference.

Congress is eyeing votes in September, if all goes as planned, on three packages of appropriations conference reports. In addition to the Defense and Labor-HHS-Education measure, conferees are working on a second bundle of bills covering Energy-Water, Legislative Branch and Military Construction-VA ([HR 5895](#)) and a third for Agriculture, Transportation-HUD and Financial Services and Interior-Environment bills ([HR 6147](#)).

But debating and voting on the nomination of Judge Brett Kavanaugh to serve as a justice on the Supreme Court will devour much of the Senate's floor time and energy in September. A farm bill conference report is also supposed to come up. If a CR or even final spending bills are presented to the president, it is not clear he will sign them into law, though the Defense bill would be the hardest for him to veto because of GOP support for that measure.

ECOS Meets To Debate Key EPA Policies For States

The Environmental Council of the States (ECOS)—the body that represents state environment commissioners, is holding its fall meeting this week, with a focus on EPA's relationship with states, and in particular several water policy issues. The meeting runs from August 27—30 in Stowe, VT. Open panels are scheduled on drinking water contamination from per- and polyfluoroalkyl substances (PFAS), oil and gas drilling, and cross-cutting issues like cooperative federalism.

Pentagon Challenges 'Secret Science' Proposal

Excerpts taken from E&E News

Add the Defense Department to the ranks of those expressing concern about EPA's plans to restrict the use of scientific research in writing new regulations. "While we agree that public access to information is very important, we do not believe that failure of the agency to obtain a publication's underlying data from an author external to the agency should negate its use," Patricia Underwood, a senior Pentagon official in the Office of the Assistant Secretary of Defense for Energy, Installations and Environment, wrote in recent comments on the EPA proposal. Because it's "improbable" EPA would always be able to obtain such underlying data, Underwood added, "this should not impede the use of otherwise high-quality studies."

The proposed rule — "Strengthening Transparency in Regulatory Science" — would generally limit EPA to using studies for which the underlying research data "are publicly available in a manner sufficient for independent validation," according to the text.

In unveiling the plan this spring, then-EPA Administrator Scott Pruitt touted it as a confidence booster in agency decision making. Critics view that premise as a smokescreen for thwarting consideration of research that would help justify stricter regulations.

After Pruitt resigned last month under White House pressure, an array of advocacy groups opposed to the proposed rule have urged acting EPA Administrator Andrew Wheeler to scrap it (*Greenwire*, Aug. 15). In an interview last month, Wheeler said that he would take "a hard look" at the proposal but added that he believed "the more information we put out to the public as far as what we're basing our regulations on, the better our regulations will be" (*Greenwire*, July 13).

The Defense Department, the largest federal agency when measured by its budget and the size of its civilian workforce, is also a prime sponsor of scientific research. Underwood's comments were among more than a half-million that EPA received on the proposed rule by an Aug. 16 deadline; they were added late last week to the online docket on the Regulations.gov website. Under the draft rule, the EPA administrator could grant exceptions to the data access requirements under specified conditions.

Alongside a host of more technical concerns with the draft rule, Underwood urged EPA to allow for such exemptions when "underlying study data may be difficult to obtain from authors outside the agency." She also suggested that EPA "grandfather" existing analyses unless those studies "are being updated or challenged."

EPA's Kevin Minoli is Leaving the Agency

Kevin Minoli, the Agency's principal deputy general counsel and designated agency ethics official, has announced that he will depart at the end of September for a job in the private sector. Minoli came under the spotlight over the past year as various ethics controversies swirled around former Administrator Scott Pruitt, who resigned last month.

Minoli will join the law firm Alston & Bird LLP as a partner in its environmental law practice in Washington, D.C. Minoli, who has been at EPA for about 18 years, faced questions over actions by agency ethics officials related to Pruitt. He was often called upon to sign off on travel and housing for Pruitt, which would later draw scrutiny. Minoli gave a retroactive written approval in one memo for Pruitt and his staff to take a charter jet from Denver to Durango, Colo., in August last year. He had earlier given his verbal approval on the day of the flight, which is allowed under federal guidelines.

He also drafted two ethics memos regarding Pruitt's rent part of last year of a Capitol Hill condo that was linked to a lobbyist with business before EPA. He wrote the second memo after noting ethics officials were missing "factual information" when he wrote the first. The process behind the two memos seemed to be a bit chaotic, with reporters pouncing on yet another Pruitt scandal.

As EPA's top ethics official, Minoli had to keep track of the growing list of accusations against Pruitt for excessive spending and misuse of his office. Minoli would refer additional allegations against Pruitt to investigators at the EPA Office of Inspector General, according to a letter he sent to the Office of Government Ethics.

Minoli has been part of EPA since the summer of 1999, when he joined the agency as a law clerk. He later held several positions in EPA's law office and was named acting general counsel by the Obama administration to serve during the transition to the Trump administration.

Minoli worked on diversity and inclusion issues for EPA's workforce while at the agency, according to his official biography. He was part of the general counsel's Diversity Dialogue Group and helped recruit the office's first program manager for lesbian, gay, bi-sexual and transgender employees.

SCIENCE ADVISORY BOARD STAFF OFFICE

Established by Congressional directive in 1978 to provide scientific advice to the Administrator, the Science Advisory Board is authorized to:

- *review the quality and relevance of the scientific and technical information being used by the EPA or proposed as the basis for Agency regulations;*
- *review EPA research programs and plans;*
- *provide science advice as requested by the EPA Administrator, and*
- *advise the agency on broad scientific matters.*

Most (though not all) preliminary work of the SAB is done by subcommittees or panels focused on various environmental science topics. These groups are chaired by SAB members. Recommendations of subcommittees and panels are transmitted to the SAB for discussion and deliberation. Recommendations are forwarded to EPA only if the SAB determines that it is appropriate.

GAO Request: The Government Accountability Office (GAO) contacted SABSO to request clarification and an explanation on the peer review process SABSO follows during its review of IRIS assessments as part of its field research under GAO engagement on the Environmental Protection Agency's (EPA) Chemical Management Strategies—code 102673. Earlier this week, GAO sent SABSO eight questions regarding the management of the IRIS program's peer review process. The SABSO will provide written response to these questions. The GAO plans to have a follow up conference call after reviewing the written responses to questions. SABSO has coordinated with NCEA staff regarding the GAO's self-initiated inquiry into demonstrated progress for assessing chemicals through the IRIS program.

UPDATE: Public Meeting: Chartered Science Advisory Board (SAB) Teleconference Meeting September 26, 2018—APPROVED—FRN TO BE PUBLISHED

The SAB Staff Office will host a public teleconference for the Chartered SAB on September 26, 2018, from 1:00pm to 5:00pm. Agenda items include two reviews. The Board will conduct a quality review of the finalized report on: 1) the draft SAB review of Ethyl Tertiary Butyl Ether and Draft Toxicological Review of tert-Butyl Alcohol; and 2) the draft SAB review of EPA's Framework for Assessing Biogenic Carbon Dioxide Emissions from Stationary Sources (2014). The Board will also receive briefings on SAB projects and future topics from EPA program staff.

OFFICE OF RESEARCH AND DEVELOPMENT

Science at EPA provides the foundation for credible decision-making to safeguard human health and ecosystems from environmental pollutants. The Office of Research and Development (ORD) is the scientific research arm of EPA, whose leading-edge research helps provide the solid underpinning of science and technology for the Agency.

ORD supports six research programs that identify the most pressing environmental health research needs with input from EPA offices, partners and stakeholders. Strategic Research Action Plans outline the research under way in the programs. The research is conducted by ORD's three national laboratories, four national centers, and two offices located in 14 facilities across the country and in Washington, D.C.

This week ORD and OW, in partnership with the Association of State Drinking Water Administrators, is hosting the 15th *Annual EPA Drinking Water Workshop: Small Systems Challenges and Solutions*, in Cincinnati, OH. Richard Yamada is attending the workshop. ORD scientists and managers will be delivering several technical presentations and moderating sessions.

Chris Robbins and Jennifer Orme-Zavaleta are in Stowe, VT this week at the 2018 Environmental Council of the States (ECOS) Silver Anniversary Meeting where ORD is showcasing two methods for easily accessing research products (EPA Research website and enhanced Science Inventory). The Environmental Research Institute of the States (ERIS) Board will also meet this week. Agenda topics include feedback on the near final draft ORD Strategic Plan, example proposed outputs to address state needs, and next steps for state engagement in ORD's strategic research planning.

List of the 75 PFAS Selected for Initial Testing by EPA and NTP Released on the EPA CompTox Dashboard

EPA and NTP are collaborating to develop a risk-based approach for conducting PFAS toxicity testing to facilitate PFAS human health assessments. A targeted subset of 75 PFAS were selected for initial testing based on multiple factors including cross-Agency interest, compounds within targeted categories, structural diversity, exposure considerations, procurability and testability, and availability of existing toxicity data.

EPA Gears Up for Final PFAS Community Engagement Event in Leavenworth, Kansas Next Week

WASHINGTON (August 30, 2018) – Yesterday, the U.S. Environmental Protection Agency (EPA) released the full agenda for the final per- and polyfluoroalkyl substances (PFAS) community engagement event. The event will take place on September 5, 2018, at the Riverfront Community Center, 123 S. Esplanade, Leavenworth, Kansas. The event is open to the public and includes presentations from EPA experts about PFAS, research, and an overview of PFAS in Kansas, Missouri, Iowa and Nebraska. Starting at 3:30 p.m. CST, EPA will host a community listening session to hear directly from Heartland communities, states, local governments, and tribes about their experiences with PFAS.

“EPA has received more than 60,000 public comments regarding PFAS since our National Summit in Washington, D.C., in May. The Leavenworth event is EPA’s fifth and final community engagement event held in locations across the country. While the Heartland states have seen fewer cases of PFAS contamination compared to other parts of the country, we are looking forward to hearing from our stakeholders and community members as we work together to manage PFAS,” said EPA Regional Administrator Jim Gulliford.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON D.C. 20460

OFFICE OF THE ADMINISTRATOR
SCIENCE ADVISORY BOARD

June 28, 2018

EPA-SAB-18-003

The Honorable E. Scott Pruitt
Administrator
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue, NW
Washington, D.C. 20460

Subject: Science Advisory Board (SAB) Consideration of EPA Proposed Rule:
Strengthening Transparency in Regulatory Science

Dear Administrator Pruitt:

As part of its statutory duties, the Environmental Protection Agency's (EPA) Science Advisory Board (SAB) met on May 31, 2018, to discuss whether to review the adequacy of the scientific and technical basis of the planned regulatory actions in the 2017 Unified Regulatory Agendas, as authorized by section (c) of the Environmental Research, Development and Demonstration Authorization Act of 1978 (ERDDAA). During this meeting, the SAB also discussed possible review of the science supporting the proposed rule *Strengthening Transparency in Regulatory Science (RIN 2080-AA14)*. The SAB found that the proposed rule deals with issues of scientific practice and proposes constraints to the use of scientific studies in particular contexts. The proposed rule solicits comment on a number of scientific issues that would benefit from expert advice and comment from the SAB.

Initiating the Screening Review

The ERDDAA requires the EPA to make available to the SAB proposed criteria documents, standards, limitations, or regulations provided to any other Federal agency for formal review and comment, together with the relevant scientific and technical information upon which the proposed action is based. The SAB may then make available to the Administrator, within the time specified by the Administrator, its advice and comments on the adequacy of the scientific and technical basis of the proposed action.

EPA's usual process is to provide the SAB with information about the publication of the semi-annual regulatory agenda and to provide descriptions of major planned actions that are not yet proposed but appear in the semi-annual regulatory agenda, augmented to include proposed regulations, criteria documents, standards, or limitations that are expected to undergo interagency review¹. The EPA's descriptions provide available information regarding the science that is informing these agency actions.

SAB members and the SAB Staff Office were made aware of a proposed rule entitled *Strengthening Transparency in Regulatory Science* (RIN 2080-AA14) through an April 25, 2018, press event and an April 30, 2018, *Federal Register* notice, as well as news articles. The EPA announced the proposed rulemaking with a 30-day public comment period. SAB members had no information regarding the timeline for finalizing the rule and the proposed rule was not identified as a major action in either of the Spring 2017 or Fall 2017 semi-annual Regulatory Agendas.

An SAB Work Group met by teleconference on May 3, 2018, to discuss its recommendations on major planned actions in the Fall 2017 semi-annual regulatory agenda and included the proposed rule *Strengthening Transparency in Regulatory Science* (RIN 2080-AA14) as part of the discussion. That Work Group provided the SAB with a memorandum² documenting the discussions and recommending that the proposed rule merits review by the SAB. Subsequently the SAB became aware that the proposed rule was included in the Spring 2018 semi-annual Regulatory Agenda published on May 9, 2018. A second *Federal Register* notice was published May 25, 2018 extending the public comment period to August 16, 2018 and announcing a public hearing to be held in Washington, DC on July 17, 2018.

The SAB Should Consider the Proposed Rule's Scientific and Technical Basis

During the meeting on the May 31, 2018, the full SAB agreed with the Work Group that the proposed rule merits review by the Board and discussed the scientific issues that should be considered. For example, there are important scientific considerations needed for transparency. The Board recognizes that the long-term trend in most scientific fields is for authors to supply public access to data and analytic methods after scientific findings are published. Such transparency may help to ensure scientific integrity and facilitate robust analysis, as well as allowing supplementary lines of knowledge to be developed from the same data. Some fields of science are moving faster than others in the direction of transparency. For studies published many years ago, it may not be feasible to deliver public access to data and analytic methods.

¹ EPA Memorandum: Coordination with the Science Advisory Board Regarding Proposed Criteria Documents, Standards, Limitations and Regulations. (See page 9 of Attachment A in the Fall 2017 memorandum available at: [https://yosemite.epa.gov/sab/sabproduct.nsf/9263940BB05B89A885258291006AC017/\\$File/WG_Memo_Fall17_RegRevAitsABC.pdf](https://yosemite.epa.gov/sab/sabproduct.nsf/9263940BB05B89A885258291006AC017/$File/WG_Memo_Fall17_RegRevAitsABC.pdf))

² Preparations for Chartered Science Advisory Board (SAB) Discussions of Proposed Rule: Strengthening Transparency in Regulatory Science RIN (2080-AA14) Available at: [https://yosemite.epa.gov/sab/sabproduct.nsf/E21FFAE956B548258525828C00808BB7/\\$File/WkGrp_memo_2080-AA14_final_05132018.pdf](https://yosemite.epa.gov/sab/sabproduct.nsf/E21FFAE956B548258525828C00808BB7/$File/WkGrp_memo_2080-AA14_final_05132018.pdf)

There are also sensitive situations where public access may infringe on legitimate confidentiality and privacy interests, and where exceptions from complete public access may be appropriate. In addition, there are considerations associated with the cost and effort that would be required in making large and complex existing datasets available within Institutional Review Board requirements, including the issue of who would be responsible for implementing the rule and any additional obligations. Thus, the development of guidelines and rules in this arena requires careful collaboration with the scientific community.

Although the proposed rule cites several valuable publications that support enhanced transparency, the precise design of the proposed rule appears to have been developed without a public process for soliciting input specifically from the scientific community. Nor does the preamble to the rule describe precisely how the proposal builds on previous efforts to promote transparency such as the Information Quality Act and EPA's Information Quality Guidelines.

Other key science issues associated with the proposed rule to increase transparency that may benefit from SAB advice are:

- Considerations related to the use of epidemiologic studies and methods that are based on confidential human subject data while also providing transparency in the underlying data;
- Consideration of the multiple existing methods to assess the validity of prior epidemiologic studies, that do not provide public access to data and analytic methods;
- Consideration of the selection of dose-response models and factors such as biological plausibility, mode of action, or mechanism of action to identify the most scientifically-appropriate model(s);
- The need to clearly define crucial sound science concepts such as “replication” and “validation”; and
- The identification and evaluation of mechanisms used by expert panels in vetting science that do not engage in reanalysis of original data with original methods, yet entail a rigorous review process that goes beyond typical journal peer review procedures.

The SAB recognizes that the EPA has already received thousands of public comments in addition to the large number of comments from grassroots write-in campaigns. The SAB urges the Agency to fully consider those comments and request, receive, and review scientific advice from the SAB before revising the proposed rule.

The EPA has long been a leader in the use of science in decision-making. The proposed rule, *Strengthening Transparency in Regulatory Science*, would focus on the EPA's foundational policies related to the use of science in rulemaking and policy development. Further, the rule has the potential to influence policy development and guidance across the government. The SAB looks forward to defining the set of scientific and technical issues upon which the proposed rule rests and developing a charge for an SAB work group to provide advice and comments on those issues.

On behalf of the SAB, I thank you for the opportunity to support EPA through consideration of the science supporting actions in the Agency's regulatory agenda.

Sincerely,

/s/

Dr. Michael Honeycutt, Chair
Science Advisory Board

Enclosure
(1) Roster of SAB Members

NOTICE

This report has been written as part of the activities of the EPA Science Advisory Board (SAB), a public advisory group providing extramural scientific information and advice to the Administrator and other officials of the Environmental Protection Agency. The SAB is structured to provide balanced, expert assessment of scientific matters related to problems facing the Agency. This report has not been reviewed for approval by the Agency and, hence, the contents of this report do not necessarily represent the views and policies of the Environmental Protection Agency, nor of other agencies in the Executive Branch of the Federal government, nor does mention of trade names of commercial products constitute a recommendation for use. Reports of the SAB are posted on the EPA Web site at <http://www.epa.gov/sab>

U.S. Environmental Protection Agency Science Advisory Board

CHAIR

Dr. Michael Honeycutt, Division Director, Toxicology Division, Texas Commission on Environmental Quality, Austin, TX

MEMBERS

Dr. Rodney Andrews, Director, Center for Applied Energy Research, UK Research, University of Kentucky, Lexington, KY

Dr. Deborah Hall Bennett, Professor and Interim Chief, Environmental and Occupational Health Division, Department of Public Health Sciences, School of Medicine, University of California, Davis, Davis, CA

Dr. Frederick Bernthal, President Emeritus and Senior Advisor to the Board of Trustees, Universities Research Association, Washington, DC

Dr. Bob Blanz, Chief Technical Officer, Arkansas Department of Environmental Quality, North Little Rock, AR

Dr. Todd Brewer, Senior Manager, Partnership Programs, American Water Works Association, Denver, CO

Dr. Joel G. Burken, Curator's Professor and Chair, Civil, Architectural, and Environmental Engineering, College of Engineering and Computing, Missouri University of Science and Technology, Rolla, MO

Dr. Janice E. Chambers, William L. Giles Distinguished Professor and Director, Center for Environmental Health and Sciences, College of Veterinary Medicine, Mississippi State University, Starkville, MS

Dr. Samuel Cohen, Professor, Pathology and Microbiology, University of Nebraska Medical Center, Omaha, NE

Dr. Louis Anthony (Tony) Cox, Jr., President, Cox Associates, Denver, CO
Also Member: CASAC

Dr. Alison C. Cullen, Professor, Daniel J. Evans School of Public Policy and Governance, University of Washington, Seattle, WA

Dr. Otto C. Doering III, Professor, Department of Agricultural Economics, Purdue University, W. Lafayette, IN

Dr. Joel J. Ducoste, Professor, Department of Civil, Construction, and Environmental Engineering, College of Engineering, North Carolina State University, Raleigh, NC

Dr. Susan P. Felter, Research Fellow, Global Product Stewardship, Procter & Gamble, Mason, OH

Dr. R. William Field, Professor, Department of Occupational and Environmental Health and Department of Epidemiology, College of Public Health, University of Iowa, Iowa City, IA

Dr. H. Christopher Frey, Glenn E. Futrell Distinguished University Professor, Department of Civil, Construction and Environmental Engineering, College of Engineering, North Carolina State University, Raleigh, NC

Dr. Joseph A. Gardella, SUNY Distinguished Professor and John and Frances Larkin Professor of Chemistry, Department of Chemistry, College of Arts and Sciences, University at Buffalo, Buffalo, NY

Dr. John D. Graham, Dean, School of Public and Environmental Affairs, Indiana University, Bloomington, IN

Dr. Steven P. Hamburg, Chief Scientist, Environmental Defense Fund, Boston, MA

Dr. Cynthia M. Harris, Director and Professor, Institute of Public Health, Florida A&M University, Tallahassee, FL

Dr. Merlin R. Lindstrom, Vice President Technology, Phillips 66 Research Center, Bartlesville, OK

Dr. Robert E. Mace, The Meadows Center for Water and the Environment, Texas State University, San Marcos, TX

Dr. Clyde F. Martin, Horn Professor of Mathematics, Emeritus, Department of Mathematics and Statistics, Texas Tech University, Crofton, MD

Dr. Sue Marty, Senior Toxicology Leader, Toxicology & Environmental Research, The Dow Chemical Company, Midland, MI

Dr. Kristina D. Mena, Associate Professor, Epidemiology, Human Genetics and Environmental Sciences, School of Public Health, University of Texas Health Science Center at Houston, El Paso, TX

Dr. Surabi Menon, Director of Research, ClimateWorks Foundation, San Francisco, CA

Mr. Robert W. Merritt, Independent Consultant, Houston, TX

Dr. Larry Monroe, Independent Consultant, Braselton, GA

Dr. Thomas F. Parkerton, Senior Environmental Associate, Toxicology & Environmental Science Division, ExxonMobil Biomedical Science, Houston, TX

Dr. Robert Phalen, Professor, Air Pollution Health Effects Laboratory, Medicine, Department of

Medicine, University of California-Irvine, Irvine, CA

Mr. Richard L. Poirot, Independent Consultant, Burlington, VT

Dr. Kenneth M. Portier, Independent Consultant, Athens, GA

Dr. Robert Puls, Owner/Principal, Robert Puls Environmental Consulting, Hilton Head Island, SC

Dr. Kenneth Ramos³, Associate Vice-President of Precision Health Sciences and Professor of Medicine, Arizona Health Sciences Center, University of Arizona, Tucson, AZ

Dr. Tara L. Sabo-Attwood, Associate Professor and Chair, Department of Environmental and Global Health, College of Public Health and Health Professionals, University of Florida, Gainesville, FL

Dr. William Schlesinger, President Emeritus, Cary Institute of Ecosystem Studies, Millbrook, NY

Dr. Anne Smith, Managing Director, NERA Economic Consulting, Washington, DC

Dr. Richard Smith, Professor, Department of Statistics and Operations Research, University of North Carolina, Chapel Hill, NC

Dr. Jay Turner, Associate Professor and Vice Dean for Education, Department of Energy, Environmental and Chemical Engineering, School of Engineering & Applied Science, Washington University, St. Louis, MO

Dr. Jeanne M. VanBriesen, Duquesne Light Company Professor of Civil and Environmental Engineering, and Director, Center for Water Quality in Urban Environmental Systems (Water-QUEST), Department of Civil and Environmental Engineering, Carnegie Mellon University, Pittsburgh, PA

Dr. Donald vanderVaart, Independent Consultant, Raleigh, NC

Dr. Kimberly White, Senior Director, Chemical Products and Technology Division, American Chemistry Council, Washington, DC

Dr. Peter J. Wilcoxon, Laura J. and L. Douglas Meredith Professor for Teaching Excellence, Director, Center for Environmental Policy and Administration, The Maxwell School, Syracuse University, Syracuse, NY

Dr. S. Stanley Young, Chief Executive Officer, CGStat, Raleigh, NC

SCIENCE ADVISORY BOARD STAFF

Mr. Thomas Carpenter, Designated Federal Officer, U.S. Environmental Protection Agency, Science Advisory Board Washington, DC

³ Dr. Ramos did not attend the May 31-June 1 meeting.

Subject: POLITICO's Morning Energy: What's happening with WOTUS — Keystone fight far from over — Wheeler to Michigan

By Kelsey Tamborrino | 08/17/2018 10:00 AM EDT

With help from Annie Snider, Ben Lefebvre and Alex Guillén

A COUNTRY DIVIDED: Which streams and wetlands are protected under the Clean Water Act? As of Thursday, the answer depends on where you're standing. After a South Carolina District Court [ruling](#) overturning the Trump administration's attempted delay of the Obama administration's Waters of the U.S. rule for failing to offer the public a proper opportunity to comment, the 2015 rule is now officially on the books in 26 states — but not in the other 24 states where other district court injunctions are in place.

"**The agencies refused to engage** in a substantive reevaluation of the definition of the 'waters of the United States' even though the legal effect of the Suspension Rule is that the definition of 'waters of the United States' ceases to be the definition under the WOTUS rule and reverts to the definition under the 1980s regulation," Judge David Norton wrote in Thursday's ruling. "An illusory opportunity to comment is no opportunity at all."

Environmental groups hailed the decision, with Jon Devine of the Natural Resources Defense Council calling it a "sharp rebuke to the Trump administration." Meanwhile, Zippy Duvall, president of the American Farm Bureau Federation, one of the fiercest critics of the Obama-era rule, called on the Trump administration to "to take immediate steps to limit the impact of this dangerous court decision."

But will it hold? The Justice Department is reviewing the decision, a spokesman said, and players on both sides broadly expect an appeal. Separately, EPA said in a statement it and the Army Corps of Engineers "will review the order as the agencies work to determine next steps." But the fate of the delay rule could ultimately become moot if the federal district judge in Texas grants a nationwide injunction request.

And don't forget, this is just the warm-up fight. The battle royale will be over the Trump administration's rule to repeal the 2015 rule, which the agency has not finalized. Geoff Gisler, the Southern Environmental Law Center attorney who brought yesterday's case on behalf of local environmental groups, argued that Thursday's South Carolina court decision has implications for that fight and "should give the agencies pause" as they move forward. "The agencies just aren't telling the public what they're doing," he argued. "What this decision said was you can't just have a comment period, it has to be a meaningful comment period."

WE MADE IT TO FRIDAY! I'm your host, Kelsey Tamborrino. Simon and Company's Jen Covino named the eight senators who formerly served as mayors: [Dianne Feinstein](#), [Cory Booker](#), [Jim Inhofe](#), [Bob Corker](#), [Bernie Sanders](#), [Tim Kaine](#), [Mike Enzi](#) and [Bob Menendez](#). For today: Who are the three current House lawmakers who previously served as ambassadors? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseyam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

FAR FROM OVER: A federal judge's order directing the State Department to conduct a supplemental environmental review for the Keystone XL pipeline's updated path through Nebraska is another setback in nearly a decade full of them for TransCanada. The order is sure to stall construction of the pipeline for months, Pro's Ben Lefebvre [reports](#). Plaintiffs in the case said the review would involve public hearings in Nebraska and consultations with Native American tribes whose land the pipeline would traverse.

Pipeline opponents are hoping to use the new review to push for a broader study of the project, Ben reports. Doug Hayes, a lawyer for the Sierra Club and one of the plaintiffs in the case, said the judge's ruling that the "entire pipeline remains interrelated and requires one [environmental review] to understand the functioning of the entire unit" could open the door for them to seek a new review for the pipeline's entire route. "If they are going back to do a supplemental environmental impact statement, our position is they would need to evaluate all the new impacts of the pipeline," Hayes said. "That would take definitely months."

WHERE'S WHEELER? Acting EPA Administrator Andrew Wheeler travels to Michigan today to discuss issues plaguing the Great Lakes and meet with GOP Rep. Tim Walberg, a member of the Energy and Commerce Committee, and officials from the Michigan Department of Natural Resources and Department of Environmental Quality.

WHEELER DELIVERS MESSAGE ON HARASSMENT: Wheeler reaffirmed EPA's policy against harassment in a memorandum sent to staff Thursday. Wheeler wrote that he expects "all individuals working at the EPA — employees, supervisors and non-employees — will not engage in or be subjected to unlawful and prohibited harassment."

MURKOWSKI: FERC NOMINEE SHOULD GO LITMUS TEST-FREE: Senate Energy Chairman Lisa Murkowski wouldn't comment on POLITICO's report that DOE's Bernard McNamee will be nominated to FERC. But the Alaska Republican said she believes that the next nominee shouldn't face a litmus test over their view of the Trump administration's efforts to prop up coal and nuclear power plants, Pro's Darius Dixon reports. "I worry that this is going to be viewed as, 'If you don't commit to voting against or voting for, then you're not going to have my support,'" Murkowski said. "That's not the way that we should be selecting commissioners for the FERC."

GET YOUR COMMENTS IN: American Petroleum Institute's Frank Macchiarola reiterated the need for Renewable Fuel Standard reform on a call with reporters Thursday outlining the group's comments for EPA's proposed biofuel blending requirements for the coming year under the RFS. "Very simply what we want is an end to this program by 2022," he said. Macchiarola said API is "willing to compromise" on certain policies like a waiver for summertime sales of E15, but only if the program will sunset by 2022. "The problem again is that the ethanol industry has been dug in to not doing anything," Macchiarola said. He added legislation is being drafted to reform the program in both chambers, but noted challenges and lengthy debate are likely ahead. Comments are due today on EPA's proposed volumes, with the final rule due to be released by Nov. 30.

— **API is also looking at the proposed plan** by EPA and the Department of Transportation to freeze fuel efficiency standards for cars and trucks. "It is a very complex proposal to a very complex program," Macchiarola said. "We will say that we appreciate the administration's relooking at CAFE in the light of changing energy market realities."

SECRET'S OUT: Thursday was the last day for comments on EPA's proposed "secret science" rule, which would ban the use of studies that don't publicly disclose all their data. Getting their thoughts in under the wire, Sens. Sheldon Whitehouse, Brian Schatz, Maggie Hassan, Jeff Merkley, Ed Markey, Tammy Duckworth, Kirsten Gillibrand, Tom Carper and Kamala Harris banded together to make their opposition known. "The proposed rule is illegal because it is arbitrary and capricious," they write, adding that "the proposed rule is illegal because it is the result of an effective delegation of rulemaking authority to private interests."

The American Chemistry Council, meanwhile, applauded the proposal in its comment Thursday. "EPA's proposal codifies an important good governance principle — that government agencies should be as transparent as possible, within the bounds of the law, about scientific information relied upon and the justifications for the significant regulatory decisions they make." Still, the trade association also highlighted that implementation of the plan would benefit from better historical context and applicability, and that greater clarity is required on key definitions and regulatory text, among other recommendations.

FIGHTING FIRE WITH A FEDERAL PLAN: The Agriculture Department released a new, aggressive approach to fighting wildfires Thursday, with proactive steps. During a bipartisan press conference, Secretary Sonny Perdue unveiled a plan that emphasizes increased collaboration with states, implementation of mapping and remote sensing tools, and management practices such as prescribed burns and timber sales, Pro's Liz Crampton reports. Though Perdue brushed aside specific questions on climate change's role, he said Interior Secretary Ryan Zinke is on board with the plan and noted further details and costs will be forthcoming from the U.S. Forest Service. "Really a lot of people ... when you talk about climate change, they want to talk about what the causes are," Perdue said. "[What] we're trying to talk about is the impact."

FERC RESTARTS PART OF PIPELINE: FERC modified a stop work order for the Mountain Valley Pipeline this week, allowing construction to restart for around 77 miles of the pipeline's West Virginia route with the exception of a 7-mile area surrounding the Weston and Gauley Bridge Turnpike Bridge Trail, MVP said Thursday. However, the company said about half of its construction workforce has been released due to continued delays. MVP said that it "remains committed to the earliest possible in-service date," though it noted that is now expected to arrive during the fourth quarter of 2019.

GREENS CALL FOR FERC REVIEW: The Southern Environmental Law Center and Appalachian Mountain Advocates petitioned the 4th U.S. Circuit Court of Appeals on Thursday to review FERC's approval of the Atlantic Coast Pipeline. The suit was filed on behalf of 13 other conservation groups. "FERC ordered the ACP construction stopped because the 4th Circuit determined that permits were issued without proper scrutiny," SELC attorney Greg Buppert said in a statement. "On the very same day, FERC rejected a rehearing request in which the conservation groups asserted that it also rushed through its decision to permit a pipeline that we don't need." The 4th Circuit last week vacated two permits issued for the project by the U.S. Fish and Wildlife Service and the National Park Service.

GREENS FILE FOIA SUIT: Environmental group Friends of the Earth filed a lawsuit Thursday against the Interior Department for lack of response to a Freedom of Information Act request. The lawsuit seeks to compel DOI to produce documents related to senior members of the department and the industries they regulate. The suit points to David Bernhardt's work as a lawyer and lobbyist for oil and gas companies and Vincent DeVito's time working as an energy industry representative. Friends of the Earth is being represented by the law firm Meyer Glitzenstein & Eubanks LLP.

AD-ING IT UP: Ahead of Wyoming's gubernatorial primaries Tuesday, a partnership between the Wyoming Wildlife Federation and Rocky Mountain Farmers Union, dubbed the Wyoming Conservation Legacy, will launch a five-figure ad campaign asking candidates to support conservation. The campaign will begin on Saturday and run through Aug. 21 with full-page print ads in the Casper Star Tribune and the Wyoming Tribune Eagle, separate radio buys on Wyoming Public Media programs, and digital ads across the state. See the ads here.

MAIL CALL! ON THE FARM: The National Biodiesel Board sent a letter to farm bill conference committee lawmakers reiterating its support for the inclusion of biodiesel programs in the five-year bill.

STAR-STUDDERED SUMMIT: Attendees of the Global Climate Action Summit in San Francisco in September will hear from former White House officials, including former Vice President Al Gore and Secretary of State John Kerry. The summit announced Thursday night that new delegates will join the event, including Executive Secretary of the United Nations Framework Convention on Climate Change Patricia Espinosa and U.N. Special Envoy for Climate Action Michael Bloomberg. Actor Alec Baldwin and chimpanzee expert Jane Goodall will also attend.

GO NUCLEAR: The American Nuclear Society this week launched a nuclear science educational program for middle schoolers that covers topics like fission and fusion, and detecting radiation. The "Navigating Nuclear:"

Energizing Our World" program is aligned with the Next Generation Science Standards framework, which provides an evidence-based foundation for scientific research.

MOVER, SHAKERS: Jack Cramton, policy adviser for Sen. Bill Cassidy (R-La.), will start Monday as a legislative affairs adviser at the Department of Energy's Congressional and Intergovernmental Affairs Office.

QUICK HITS

- "U.S. energy chief applauds Mexico's plan to end fuel imports," Reuters.
- "Trump's CO2 rule is coming, and industries wonder who's next," E&E News.

Subject: POLITICO's Morning Energy: Trump's not-so simple math — Judge orders update of Keystone XL study — States' rights get tricky over water

By Kelsey Tamborrino | 08/16/2018 10:00 AM EDT

With help from Ben Lefebvre and Annie Snider

A NUMBERS GAME: The White House's plan to rewrite the Obama administration's cornerstone climate rule for power plants may be based on some fuzzy math, setting up a potentially brutal court battle for the Justice Department. The legally risky strategy, POLITICO's Alex Guillén and Emily Holden report, calls for redoing the calculations of how much the rule would cost and who would benefit.

EPA's proposed replacement plan is expected to be unveiled any day now and will likely downplay a key feature of the Obama-era greenhouse rule: the money saved by using less electricity. Some expect EPA will also count only a fraction of the improvements in public health from reduced smog and soot pollution, Alex and Emily report, and it won't consider any benefits from slowing climate change outside the U.S.

In doing so, President Donald Trump's EPA will argue that the Obama-era rule had higher costs and fewer benefits than previously stated, a change to help improve the comparison when it unveils its own proposal. The Obama administration had estimated that the benefits from its rule would outstrip the costs by \$26 billion to \$45 billion by 2030, though supporters of that version say those net benefits could be even higher now.

In fact, math could become vital to the success or failure of several of Trump's rules. Critics say similarly fuzzy math underlies other Trump administration proposals to reverse or stymie action on climate change, such as a recent plan by EPA and the Department of Transportation to halt a planned tightening of fuel efficiency standards for cars and trucks. "They are cooking the books on technical analysis to try to justify preconceived conclusions that these regulations are bad," said David Doniger, senior strategic director of the Natural Resources Defense Council's climate program who was influential in the Obama EPA's crafting of the original rule. Read more.

GOOD THURSDAY MORNING! I'm your host, Kelsey Tamborrino. Many of you knew, but ClearView Energy Partners' Mitch Huber was the first to correctly answer that it's Loretta and Linda Sanchez who were the first and only sisters to serve simultaneously in Congress. For today: How many current senators are also former mayors? Bonus points if you can name them. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

DO THAT AGAIN: The Trump administration was ordered Wednesday to update an environmental study of the Keystone XL pipeline despite its contention the alternative route picked last year by Nebraska regulators didn't require an updated environmental impact statement. Instead, Judge Brian Morris of the U.S. District Court for Montana ordered the State Department to go back to its 2014 EIS to take into account the new route, Alex reports for Pros. Morris said the State Department still has a "meaningful opportunity to evaluate" the alternative route that was picked in Nebraska. However, he declined environmentalists' request that Trump's permit be vacated.

STATES' RIGHTS GET TRICKY OVER WATER: The roiling debate over states' right to halt development projects over their water quality effects heads to the Senate Environment and Public Works Committee today. The panel will hold a legislative hearing on a bill from Chairman John Barrasso, S. 3303 (115), the Water Quality Certification Improvement Act of 2018. The measure would limit states' authority under Section 401 of the Clean Water Act, which requires states to certify that projects won't harm their water quality standards before the federal government issues a permit. In recent years a handful of Democratic-led states have used that authority to block natural gas pipelines. Republican Maryland Gov. Larry Hogan is also using the authority to try to force Exelon Corp. to clean up nutrient pollution flowing through one of its dams that harms the Chesapeake Bay.

GOP lawmakers have backed earlier efforts to limit or remove the authority, including in this year's House Appropriations bill, House and Senate energy legislation and standalone bills. But the Western Governors Association, which represents a number of Republican governors, has come out in opposition to reining in states' authority, and the Environmental Council of the States warned Wednesday that such moves could have unintended consequences. **If you go:** The hearing begins at 10 a.m. in 406 Dirksen.

NOMINATIONS ON TAP: Two nominees to the Energy Department will testify before the Senate Energy and Natural Resources Committee this morning: Bill Cooper to be general counsel and Lane Genatowski for director of the Advanced Research Projects Agency-Energy, which the Trump administration has sought to eliminate.

Who are they? Cooper serves as senior counsel and director of the McConnell Valdés law firm. Prior to that he was a subcommittee staff director for House Natural Resources, with a particular policy focus on the National Environmental Policy Act that the White House has sought to change up. Cooper also previously was president of the Center for Liquefied Natural Gas and counsel to the House Energy and Commerce Committee. His credentials have earned him the backing of industry groups, including the Air-Conditioning, Heating, and Refrigeration Institute, the Interstate Natural Gas Association of America, and the Electric Reliability Coordinating Council.

— **Genatowski hails from** a banking background. He's managing partner in investments at Dividend Advisors, a firm he founded in 2012. Genatowski before that was an energy investment banker at JPMorgan Chase and other Wall Street giants. His résumé lines up with others in Rick Perry's Energy Department, which has focused more on businessmen with energy-sector experience. **If you go:** The hearing kicks off at 10 a.m. in 366 Dirksen.

RESCISSIONS — TAKE TWO: The Trump administration is once again weighing a so-called rescissions package to force Congress to roll back federal spending, with just weeks to go until the next budget deadline, Pro's Sarah Ferris and John Bresnahan report. Senate Appropriations Chairman Richard Shelby said Wednesday he was told about the idea: "I heard they were thinking about one, but I haven't seen it." But a Senate leadership source said OMB chief Mick Mulvaney has already begun moving ahead on the effort.

FLORIDA DRILLING BITS: To drill or not to drill off the Florida coast is a question once again heating up the state's election campaigns. Gwen Graham, the current front-runner in the Democratic gubernatorial primary field, sent out a message titled "Drilling 75 Miles off Florida's Beaches is Insane" after a POLITICO report highlighted the idea as one that oil industry lobbyists are pushing to have included in the Interior Department's upcoming offshore drilling plan. Sunshine State Democratic Sen. Bill Nelson took the story to the Senate floor to try to whack current Gov. Rick Scott, who is running to replace him and earlier this year got help from Trump on the drilling issue.

REMEMBRANCE OF TARBALLS PAST: Former Florida Lt. Gov. Jeff Kottkamp is catching heat for his statement at a pro-drilling rally in Tallahassee that oil from the Deepwater Horizon spill "didn't even reach the shores of Florida." The remark, as first reported in the Florida Phoenix, may have surprised those who

remember former Gov. Charlie Crist squatting over oil-stained beaches in Pensacola. Kottkamp, who was speaking as co-chair of Explore Offshore Florida, went on to say "tarballs are naturally occurring." Earthjustice staff attorney Bradley Marshall called it "absurd to claim the Deepwater Horizon spill did not reach Florida" given the damage the state experienced. "That's why so many of Florida's leaders, regardless of what political party they belong to, have been so protective of our coasts all these years," he said in a statement.

WHAT'S THE RISK? EPA acting Administrator Andrew Wheeler delivered a video address at the National Environmental Justice Advisory Council's public meeting in Boston on Wednesday where he acknowledged the need for improvement in risk communication and noted the agency owes it to the American public to improve. "How well or how poorly we communicate risk disproportionately impacts those on the lower end of the socioeconomic ladder," he said. "We have fallen short in the past from our response to the Gold King Mine in Colorado, to the Kanawha River in West Virginia, to Flint, Mich." Watch it here.

CASE CLOSED: Interior's Office of Inspector General has closed its investigation into an allegation made against National Park Service officials. The claim centered around references to human-caused climate change in a report on sea-level rise and storm surge projections that officials allegedly sought to remove. The watchdog office said Wednesday that shortly after it opened the investigation, the NPS "published the report with all original references to human-caused climate change," thus prompting it to close its probe.

'SECRET' AGENTS: Comments are due today on EPA's proposed "scientific transparency" rule, which would ban the use of studies that don't publicly disclose all their data. Experts have said that plan could prohibit the use of vital studies on how pollutants affect human health because researchers typically promise to keep subjects' health information confidential. But conservatives have long accused the agency of relying on "secret science," prompting former Administrator Scott Pruitt to unveil the proposal in the name of transparency.

Under the wire: With the comment deadline approaching, nearly 80 groups, including the Union of Concerned Scientists, Sierra Club and Moms Clean Air Force, signed onto a letter Wednesday calling on Wheeler to withdraw the so-called secret science proposal. Separately, 66 health and medical organizations sent comments to Wheeler in opposition to the proposed rule. That's not to say there isn't support for the proposal; several comments posted Wednesday echoed the refrain that scientists should be required to "show your work."

AFTER THE STORM: The nonprofit Environmental Integrity Project released a new report today leading up to the one-year anniversary of Hurricane Harvey's widespread destruction in Texas. Using records from the Texas Commission on Environmental Quality, the report looks at air pollution during and after the storm as well as the government's and industries' response, and makes recommendations for the future. The "Preparing for the Next Storm" report found that all five of the largest industrial air pollution releases during Harvey were in the Houston area — with the Magellan Galena Park Terminal the biggest polluter, releasing 2,472,402 pounds of air pollution.

Harvey also triggered the release of at least 8.3 million pounds of unpermitted air pollution from petrochemical plants, according to the EIP report. And in the nine months after Harvey, "18 companies revised their air pollution reports to the state to erase 1.7 million pounds of unpermitted emissions during Hurricane Harvey," the report found.

LET'S MAKE A DEAL: Trump might soon strike a deal with Mexico on NAFTA, even as a trade war plays out with the rest of the world, POLITICO's Megan Cassella reports. The apparent turnaround after months of stalemate arrives as Mexican Secretary of Economy Ildefonso Guajardo visited Washington on Wednesday to hammer out some of the most contentious issues on NAFTA. "Both U.S. and Mexican officials now say they could be on the verge of announcing a preliminary agreement on everything from complicated automotive rules to environmental regulations by the end of August," Megan reports.

CATCHING FIRE: Agriculture Secretary Sonny Perdue will join Senate Energy ranking member [Maria Cantwell](#) and Sens. [Steve Daines](#) and [Ron Wyden](#) to unveil a new federal plan for addressing wildfires. Earlier this year, Perdue and Cantwell [worked together](#) on a commitment to use unmanned aircraft technology this fire season, and the Washington Democrat will likely highlight similar tools and technology today. Watch the [livestream here](#).

POLL: CLIMATE A FACTOR FOR MOST: Slightly more than half (53 percent) of U.S. voters believe climate change is a factor in making the ongoing California wildfires more extreme, while 39 percent say it's not, according to a new poll from Quinnipiac University [released](#) Wednesday. Sixty-four percent of voters said they think the country is not doing enough to address climate change, the national poll found. Eighteen percent of voters say the U.S. is doing enough to address the issue, while 10 percent say the U.S. is doing too much.

— **On a related note**, the Natural Resources Defense Council launched [a tracker](#) this week to see where every state's lawmakers stand on offshore drilling.

Subject: EPA Administrator Pruitt Proposes Rule To Strengthen Science Used In EPA Regulations

U.S. ENVIRONMENTAL PROTECTION AGENCY
NEWS RELEASE
WWW.EPA.GOV/NEWSROOM

EPA Administrator Pruitt Proposes Rule To Strengthen Science Used In EPA Regulations

WASHINGTON (April 24, 2018) - Today, U.S. Environmental Protection Agency (EPA) Administrator Scott Pruitt signed a proposed rule to strengthen the science used in regulations issued by EPA. The rule will ensure that the regulatory science underlying Agency actions is fully transparent, and that underlying scientific information is publicly available in a manner sufficient for independent validation.

“The era of secret science at EPA is coming to an end,” **said EPA Administrator Scott Pruitt.** “The ability to test, authenticate, and reproduce scientific findings is vital for the integrity of rulemaking process. Americans deserve to assess the legitimacy of the science underpinning EPA decisions that may impact their lives.”

This proposed rule is in line with the scientific community’s moves toward increased data sharing to address the “replication crisis”—a growing recognition that a significant proportion of published research may not be reproducible. The proposal is consistent with data access requirements for major scientific journals like *Science*, *Nature*, and *Proceedings of the National Academy of Sciences* as well as recommendations from the Bipartisan Policy Center’s *Science for Policy Project* and the Administrative Conference of the United States’ *Science in the Administrative Process Project*.

The proposed rule builds upon President Trump’s executive orders on regulatory reform and energy independence:

- » **Executive Order 13777**, issued in March 2017, provides that regulatory reform efforts shall attempt to identify “those regulations that rely in whole or in part on data, information, or methods that are not publicly available or that are insufficiently transparent to meet the standard of reproducibility.”
- » **Executive Order 13783**, also issued in March 2017, provides that “It is the policy of the United States that necessary and appropriate environmental regulations comply with the law, are of greater benefit than cost, when permissible, achieve environmental improvements for the American people, and are developed through transparent processes that employ the best available peer-reviewed science and economics.”

Chairman Lamar Smith (R-TX): “Administrator Pruitt’s announcement ensures that data will be secret no more. For too long, the EPA has issued rules and regulations based on data that has been withheld from the American people. It’s likely that in the past, the data did not justify all regulations. Today, Administrator Pruitt rightfully is changing business as usual and putting a stop to hidden agendas.”

Senator Mike Rounds (R-SD): “Sound, reliable science is vital to helping us make important policy decisions that impact the health of American families and their livelihoods. Inserting new levels of transparency in the EPA rulemaking process will help make the agency more accountable to the American people and help everyone understand the impact of EPA’s decisions. Today’s directive is a significant step toward making sure these decisions are not made behind closed doors with information accessible only to those writing the regulations, but rather in the full view of those who will be affected.”

Dr. Edward J. Calabrese, Professor, Environmental Health Sciences, University of Massachusetts: “The proposal represents a major scientific step forward by recognizing the widespread occurrence of non-linear dose responses in toxicology and epidemiology for chemicals and radiation and the need to incorporate such data in the risk assessment process.”

Dr. Louis Anthony (Tony) Cox, President, Cox Associates; Member, National Academy of Engineering; and Editor-in-Chief of the Journal *Risk Analysis*: “I believe that transparency and independent reproducibility of analyses and conclusions are bedrock principles of sound science. Some commentators have expressed concerns that making the data behind policy conclusions and recommendations accessible and transparent might threaten the privacy of individuals. But this concern can be fully met by applying current privacy-protection techniques for data analysis. These techniques have been developed and used successfully for years at the Census Bureau and elsewhere. Thus, we can have the scientific benefits of accessible data while protecting individual privacy.”

Dr. Jason Scott Johnston, Director, Olin Law and Economics Program, University of Virginia School of Law: “EPA’s proposed rule, Strengthening Transparency in Regulatory

Science, is badly needed “Best practice among peer-edited scientific journals is to require that data and statistical routines used in published papers be posted online and/or made publicly available. To apply the same standards to research that EPA says justify regulations affecting billions of dollars in economic activity and millions of human lives is essential for those regulations to truly be scientifically based.”

Bruno Pigott, Commissioner of the Indiana Department of Environmental Management (IDEM): “IDEM supports transparency in rulemaking. Good, sound science leads to better regulations.”

Dr. George Wolff, Principal Scientist, Air Improvement Resource, Inc., and former Chairman of EPA's Clean Air Scientific Advisory Committee (1992 - 1996): “In the development of regulations based on environmental studies, numerous subjective assumptions and choices must be made regarding the selection of data and models that have a profound impact on the strength of any statistical associations and even whether the associations are positive or negative. The appropriateness of the assumptions and choices are not adequately evaluated in the standard peer review process. That is why it is essential that the data and models be placed in the public domain for a more rigorous evaluation by qualified experts. The proposed regulation, Strengthening Transparency in Regulatory Science, will provide an opportunity for such evaluations.”

Subject: POLITICO's Morning Energy: Pruitt's watershed moment — 'Secret science' policy coming — Blankenship slipping

By Kelsey Tamborrino | 04/24/2018 10:00 AM EDT

With help from Emily Holden

PRUITT'S WATERSHED MOMENT: EPA Administrator Scott Pruitt is approaching his two separate House committee hearings this week with sagging support on the hill. The make-or-break moment is approaching as once-stalwart backers begin to express concern about the controversies that have swirled in recent weeks. Republican Sen. Jim Inhofe (Okla.) - perhaps Pruitt's staunchest ally in Congress - told Pro's Anthony Adragna he thinks it's "appropriate to have a hearing in so far as any accusation having to do with his office is concerned," and he cited a report in The New York Times detailing a sweetheart deal Pruitt received on an Oklahoma City home previously owned by a lobbyist.

Sen. Shelley Moore Capito (R-W.Va.) also thought Thursday's hearings before the House Energy and Commerce and Appropriations committees would prove pivotal for Pruitt's long-term future in the administration. "It's really important," Capito said. "He's going to have to answer some tough questions. I'm sure they'll be put to him by both sides and we'll see what his response is."

And Sen. John Boozman joined his two Republican colleagues in supporting hearings by the Environment and Public Works Committee. Meanwhile, sources told Bloomberg that administration officials privately cautioned lawmakers and other conservative allies to pump the brakes on their defenses of Pruitt.

Publicly, however, the White House stands firm in its commitment to Pruitt. Press secretary Sarah Huckabee Sanders told reporters the administration is "continuing to review a number of the reports" about Pruitt, but noted the EPA chief "has done a good job of implementing the president's policies," particularly on deregulation and energy dominance. White House legislative affairs director Marc Short was more direct earlier Monday: "I think Scott Pruitt is doing a great job and we look forward to keeping him there as EPA administrator," he told MSNBC.

More to come? Earlier Monday, five senior congressional Democrats asked House Oversight Chairman Trey Gowdy to obtain further documents and hold hearings after obtaining new records they say raise "troubling" new questions about Pruitt's security expenditures. EPW ranking member Tom Carper told Anthony he had a good conversation with Gowdy regarding Pruitt, but said there was no formal bipartisan agreement to work together on an investigation. "I just gave him plenty of encouragement that he's doing the right thing," Carper said. Read more.

WELCOME TO TUESDAY! I'm your host Kelsey Tamborrino. Congrats to the Nuclear Energy Institute's Robert Powers, who was first to correctly guess Mary Walker was the first woman to receive the Medal of Honor. For today: Who is the last former senator to appear on a U.S. postage stamp? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter @kelseytam, @Morning_Energy and @POLITICOPro.

POLITICO's Ben White is bringing Morning Money to the Milken Institute Global Conference to provide coverage of the day's events and evening happenings. The newsletter will run April 29 - May 2. **Sign up to keep up with your daily conference coverage.**

BLINDED WITH SCIENCE: EPA's Pruitt is expected to unveil his new science policy that restricts the agency from relying on research that doesn't make public all its available data, a source briefed on the announcement tells Pro's Emily Holden. The proposed rule, which the agency submitted to the White House for review last week, will mirror legislation from House Science Chairman Lamar Smith (R-Texas).

Pruitt argues the change will bolster transparency, but scientists and health advocates say it is an effort to constrain rulemaking. The rollout has been delayed as agency officials tried to determine how to treat industry research used to evaluate the safety of pesticides and toxic chemicals, as Pro's Annie Snider reported last week. While academic studies often can't disclose data that includes personal health records, corporations can't reveal proprietary information either.

SCIENTISTS REACT: Close to 1,000 scientists signed onto a letter to Pruitt Monday, calling on the administrator to reverse course on his plans to revise how the agency considers outside research. "EPA can only adequately protect our air and water and keep us safe from harmful chemicals if it takes full advantage of the wealth of scientific research that is available to the agency," write the scientists, including some former EPA career staffers. Read it here.

A BLANK SLIP: GOP establishment attacks on former coal baron Don Blankenship seem to be taking hold, POLITICO's Alex Isenstadt reports via new polling. With the West Virginia Senate primary a mere two weeks away, a poll out Monday found Blankenship falling behind his more mainstream rivals, GOP Rep. Evan Jenkins and state Attorney General Patrick Morrisey. The poll found Morrisey leading with 24 percent, followed by Jenkins with 20 percent, and Blankenship trailing with 12 percent.

National Republicans have scrambled to intervene in the race, concerned that a Blankenship primary win would destroy their prospects of defeating Democratic Sen. Joe Manchin in November. Blankenship, who spent a year in jail following the deadly 2010 explosion at his Upper Big Branch Mine, has poured nearly \$2 million of his own money into a slash-and-burn style campaign savaging Jenkins and Morrisey as pawns of the establishment, Alex writes. Blankenship has also used the Senate run as a path to clear his name. So far, much of his campaign has been geared toward portraying himself as the casualty of the Obama-era Justice Department, which he says was bent on locking him up.

The new survey, which was conducted April 17-April 19 and has a margin of error of 4.9 percentage points, precedes a GOP debate today, and another that will be hosted by Fox News next week for a nationally televised audience. Read more.

SPECIAL ELECTION TODAY: Arizona voters will decide today who will pick up the seat left vacant by Rep. Trent Franks' departure in the state's 8th District. While neither candidate highlights specific environmental issues on her campaign website, Republican Debbie Lesko and Democrat Hiral Tipirneni have markedly different takes on climate change. Tipirneni's site says she believes "climate change is real and that we need to reduce carbon emissions." Meanwhile, Lesko said during a debate earlier this year that "certainly not the majority" of climate change is human-caused. "I think it just goes through cycles and it has to do a lot with the sun. So no, I'm not a global warming proponent," she said.

RULES TO MEET ON COLUMBIA RIVER BILL: The House Rules Committee will meet at 5 p.m. to formulate a rule on H.R. 3144 (115), which would void the environmental impact statement process for altering the hydropower system along the Columbia and Snake rivers. Earlier this month, the 9th Circuit Court of Appeals sided with the state of Oregon, the Nez Perce tribe and conservation groups, ruling that dam operations on the Columbia and Snake rivers must forgo hydropower production during key times of the year to protect

endangered salmon. An environmental impact statement for the system has been the subject of congressional fights, with Rep. Cathy McMorris Rodgers filing the legislation to void that process.

COAL ASH HEARING TODAY: EPA holds a public hearing today on its proposal to roll back the Obama-era regulation for the cleanup and disposal of coal ash. The hearing will begin at 9 a.m. in Arlington, Va., where there will be three sessions: 9 a.m. until noon; another beginning at 1 p.m. and ending at 4 p.m.; and a final session beginning at 5 p.m. and ending at 8 p.m.

PROMISES, PROMISES: Senate spending leaders vowed to restore chamber-wide debate on amendments to individual appropriations bills, Pro's Sarah Ferris and Kaitlyn Burton report. It's a risky move, ME readers may recall, considering how Democrats blocked a largely noncontroversial Energy and Water bill in 2016 because of a proposed amendment on Iran, and in 2015, House Republicans' Interior-Environment bill was tripped up by an unrelated rider on the Confederate flag. But Senate Appropriations Chairman Richard Shelby and his Democratic counterpart Patrick Leahy told committee members in a closed-door meeting Monday that leadership has agreed to allow amendments on the Senate floor for every individual spending bill. And the two have met with Majority Leader Mitch McConnell and Minority Leader Chuck Schumer in recent days about opening up the floor for debate on spending bills.

JUDGE: ENBRIDGE PIPELINE SHOULD STICK TO PLAN : An administrative law judge recommended on Monday that Minnesota regulators approve Enbridge Energy's proposal for replacing its Line 3 crude oil pipeline. But the court stipulated that the pipeline should follow the existing route, not the company's preferred route, which would carry Canadian tar sands crude from Alberta across areas in the Mississippi River, the Associated Press reports. Administrative Law Judge Ann O'Reilly's recommendation to the Public Utilities Commission sets up further disputes, "because the existing line crosses two Ojibwe reservations where tribal governments have made it clear that they won't consent and want the old line removed altogether." Read more.

A METHANE TO THE MADNESS: The comment period on the Bureau of Land Management's proposal to reverse the Methane Waste Prevention Rule ended Monday, drawing thousands of far-reaching comments. The left-leaning Center for Western Priorities analyzed a random sample of 2,000 comments, it said, finding 99.8 percent of them were opposed to the proposal. The Independent Petroleum Association of America and Western Energy Alliance meanwhile submitted joint comments applauding the move. "We were pleased to see workable changes are being considered to the rule that more accurately represent the scope of power and authority given to the BLM for regulating this type of activity," IPAA's Dan Naatz said in a statement. And, E2, an affiliate of the Natural Resources Defense Council, sent a letter to Interior Secretary Ryan Zinke on Monday, expressing its opposition to BLM's proposal. Close to 400 businesses signed onto that letter, which calls BLM's proposal "a net negative for the American public." Read it here.

MAIL CALL! IN HONOR OF NATIONAL PARKS WEEK: League of Conservation Voters organized 122 groups - including the American Civil Liberties Union and the Human Rights Campaign - in a letter to members of Congress opposing the administration's moves on public lands. National monuments "have helped make our public lands more inclusive," the letter states, before calling on lawmakers to "reject any legislation that would limit the president's authority under the Antiquities Act or codify any unlawful rollbacks of existing national monuments." Read it here.

FOR YOUR RADAR: The House will vote to overhaul the 1988 Stafford Act this week, Pro's Budget & Appropriations team reports. The three-decade-old bill is the main piece of legislation overseeing federal disaster-relief efforts, with proposed tweaks that include new incentives to build "smarter and stronger to better withstand disasters in the future," according to GOP Majority Leader Kevin McCarthy's office. That could equate to big changes on how states spend disaster relief money.

ICYMI: ZINKE DRAWS OLIVER'S IRE: The Interior secretary got the full treatment from HBO host John Oliver on "Last Week Tonight" on Sunday. Oliver hit Zinke for referring to himself as a geologist and said he

"has a real flair for creative license." Of course, Zinke is not the first to draw scrutiny from the HBO host. A judge recently dismissed a defamation lawsuit brought by coal magnate Bob Murray against Oliver, who referred to Murray as a "geriatric Dr. Evil." Watch the Zinke video [here](#).

STATE NEWS - CUOMO INTRODUCES PLASTIC BAG BILL: New York Gov. Andrew Cuomo introduced a [bill](#) Monday to ban the use of plastic bags throughout the state, Pro New York's Danielle Muoio reports. The legislation - a long-sought promise from Cuomo - would give the state Department of Environmental Conservation jurisdiction over all matters concerning plastic bags and recycling, but comes with caveats that left some environmental advocates saying it isn't far-reaching enough. Read [more](#).

Subject: POLITICO's Morning Energy, presented by Anheuser-Busch: Zinke's turn on the Hill — EPA watchdog: Aides slow to turn over docs — House to take up Yucca bill today

By Kelsey Tamborrino | 05/10/2018 10:00 AM EDT

With help from Eric Wolff, Alex Guillén, Anthony Adragna and Jennifer Haberkorn

ZINKE HEADS TO THE HILL: Interior Secretary Ryan Zinke faces his Senate appropriators today to discuss his department's budget request for fiscal 2019. Expect Democrats to bring up familiar topics, such as his plans to reorganize the department and last year's decision to shrink national monuments in Utah. Subcommittee ranking member Tom Udall plans to tell Zinke that until courts weigh in on whether his move was legal, "I believe that moving forward with land management plans that will open these iconic areas to development is reckless."

Subcommittee Chair Lisa Murkowski may be interested in hearing more about Zinke's plans for oil and gas development in Alaska, after Interior kicked off its environmental review of potential drilling in part of the Arctic National Wildlife Refuge thanks to language she got included in last year's tax bill. And Sen. Lamar Alexander, another member of the subcommittee, can follow up on the maintenance backlog for the national parks, an issue the two discussed when Zinke visited Tennessee last week.

Ahead of the hearing, the Coalition to Protect America's National Parks is sending a letter to Zinke, with signatures from current and former employees of the National Park Service, calling on him to support permanent reauthorization of the Land and Water Conservation Fund, an issue with support in both parties.

If you go: The Senate Appropriations Interior-Environment Subcommittee hearing begins at 9:30 a.m. in 138 Dirksen.

- But first: Zinke will join Agriculture Secretary Sonny Perdue at USDA headquarters for an 8 a.m. briefing on the forecast for this year's wildfire season.

WATCHDOG: EPA AIDES SLOW TO SEND DOCS: EPA's internal watchdog complained last year that Administrator Scott Pruitt's aides were taking their sweet time handing over documents related to a probe into their boss' travels, new emails show. Although the standoff between the inspector general's office and Pruitt's staff was resolved a month later, the incident illustrates tensions between political appointees and career oversight officials that developed early on. The IG's office is in the process of conducting multiple reviews into Pruitt's actions.

The new emails, released under a FOIA request from California's Justice Department, show the IG's office was seeking information for its probe of Pruitt's frequent travel to Oklahoma on EPA business, Pro's Alex Guillén reports. That same probe was later expanded to include a wider swath of Pruitt's travel practices, including his first-class flights that cost more than \$100,000. (The investigation is slated to be completed this summer.)

At the time, the agency's assistant inspector general for audits, Kevin Christensen, wrote to a top career official in EPA's finance office to warn of a "potential situation" with the travel audit just two weeks after it began, the emails show. Christensen flagged messages showing Pruitt's chief of staff Ryan Jackson was

"screening" documents before releasing them to the Office of Inspector General. "This does not fit the definition of unfettered access or comply with the Administrator memo on access and providing information to the OIG," Christensen wrote to Jeanne Conklin, EPA's controller who oversees financial management and reporting. "When we are denied access to information until approved for release, it raises the question as to what is being withheld and approved for release."

The emails spotlight concerns about the lack of transparency atop the agency since Pruitt joined. And other emails released to California's Department of Justice also show career ethics officials warning Pruitt's aides about accepting industry awards and attending political events, further exemplifying internal tensions as Pruitt's external problems grow. Read more from Alex [here](#).

- Related reporting: Amid ongoing scrutiny, Pruitt met with industry representatives Wednesday, where a reporter asked if he still had the confidence of the White House. Pruitt said: "I think they've spoken very clearly," Bloomberg [reports](#).

WELCOME TO THURSDAY! I'm your host Kelsey Tamborrino. Bracewell's Frank Maisano was the first to correctly identify Detroit as home to the first paved roadway. Woodward Avenue carries the designation M-1 for its status as the first place to pour a 1-mile patch of concrete roadway. For today: Name the state first lady who simultaneously served as a member of the House. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

TRUMP EXTENDS OLIVE BRANCH: President Donald Trump called coal baron Don Blankenship Wednesday to exchange pleasantries and offer up congratulations for waging his campaign, POLITICO's Alex Isenstadt reports. The conversation was described as straightforward, polite and cordial, and comes days after Trump tweeted that voters shouldn't vote for Blankenship in the West Virginia Republican primary. Blankenship also published an [open letter](#) to Trump on Wednesday that in part blamed the president for his loss. "Your interference in the West Virginia election displayed a lack of understanding of the likely outcome of the upcoming general election," Blankenship wrote. But he ended with a note of optimism: "I look forward to meeting with you in the near future." Alex reported the president had also reached out to Rep. [Evan Jenkins](#), who also lost in Tuesday's primary, but had yet to connect with the Republican party's winner, Patrick Morrisey, as of Wednesday evening. Read [more](#).

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks. The zero-emission trucks will be able to travel between 500 and 1,200 miles. Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025. [Learn more](#). **

HOUSE GOES NUCLEAR: The House will take up the long-awaited [H.R. 3053 \(115\)](#), the "Nuclear Waste Policy Amendments Act of 2018," for consideration today, with votes expected between 10:45 a.m. and 11:45 a.m. The bipartisan legislation would update how the U.S. handles nuclear waste and promote development of the Yucca Mountain repository in Nevada, among other provisions. The legislation is expected to pass, although it will face a much shakier Senate reception with Sen. [Dean Heller](#) facing a tough re-election race this year. Rep. [John Shimkus](#), who introduced the comprehensive nuclear waste package, previously said he hadn't had any recent talks with Senate counterparts about potentially moving the bill across the Capitol. Still, its appearance today is a victory for Shimkus: [Greg Walden](#) told reporters this week that Shimkus had sent handwritten letters to the homes of every member of leadership during recess encouraging the bill to come up, praising his tenacity.

COURT SAYS CRA IS A-OK: A federal judge in Alaska Wednesday [dismissed](#) an environmental group's lawsuit that called the Congressional Review Act unconstitutional. The Center for Biological Diversity specifically challenged the CRA [resolution](#) successfully passed by Congress last spring that nullified an Interior Department rule regarding hunting in Alaska wildlife refuges.

Judge Sharon Gleason of the U.S. District Court for Alaska, an Obama appointee, noted that both the CRA itself and this specific resolution were passed by both chambers and signed by the president, fulfilling the constitutional requirements for creating laws. Other parts of CBD's argument similarly failed to hold water. "The Court finds that even construing all the facts in favor of CBD, CBD's constitutional claims fail to adequately allege a plausible basis for relief," Gleason wrote.

SUNNY CALIFORNIA: The California Energy Commission voted unanimously Wednesday to require solar panels be installed for all newly built single-family homes and multifamily buildings less than three stories starting in 2020. A CEC study found that installing solar would increase home prices, but that would be more than offset by lower utility bills, according to the Los Angeles Times. The move has been anticipated for years and was supported by much of the home building industry. More from the LAT [here](#).

STEELWORKERS SAY YES TO RFS: The United Steelworkers are supporting Trump's recent decisions on the Renewable Fuel Standard, which include expanding sales of 15 percent ethanol fuels and having EPA and USDA workout some kind of program for biofuel credits on exported ethanol. "While it will continue to review the details, [USW] supports a deal brokered by the President that appears to address the long-running conflict between ethanol producers and oil refiners over federal biofuels mandates," the union said in a press release.

HOUSE GOP DROPS RESCISSIONS PACKAGE: House Majority Leader [Kevin McCarthy](#) unveiled the chamber's batch of [spending cuts](#) Wednesday. Similar to the White House's [request](#), the package makes cuts to Energy Department loan guarantee programs for clean energy and vehicle technologies. The bill is expected to [go directly to the House floor for a vote](#), Pro's Sarah Ferris [reports](#). Senate GOP leaders have said they will consider the bill if and when it passes the House.

MEANWHILE IN BONN: Things aren't going as planned for the second week of climate talks in Bonn, Germany, punting further discussions to another meeting in September. The U.N. Framework Convention on Climate Change [said](#) Wednesday that there would be an additional meeting from Sept. 3-8 in Bangkok amid a stalemate centered in part around clarity on climate finance between developed and developing countries. The new date underscores the pressure negotiators are under to advance talks enough for ministers to strike a deal later this year at the COP24 in Katowice, Poland. "We need to resolve differences on finance, accounting and transparency," Alden Meyer of the Union of Concerned Scientists [told POLITICO Europe's](#) Kalina Oroschakoff.

CALVERT: EPA-INTERIOR COMING SHORTLY: Rep. [Ken Calvert](#), who oversees EPA and Interior on the Appropriations Committee, told ME to expect their fiscal 2019 bill "pretty soon" as work's going well. "We're working on final details now," he said. As for the perennial question, yes, Calvert expects policy riders to be in play: "There's always riders," he quipped.

AUTOMAKERS WANT MORE FUEL EFFICIENCY: The Alliance of Automobile Manufacturers and the Global Automakers, trade associations which together represent most of the automakers who sell cars in the U.S., will tell Trump that they most definitely want increases in fuel efficiency standards, contra that zero increase preference of the Department of Transportation. They also want the federal government to work out a single national standard with California, rather than face either a bifurcated market or a long legal battle. "Automakers are deeply committed to increased fuel economy and safety measures that meet the needs of our customers, and we expect to share the importance of government policies that provide certainty to the auto sector, continue to reduce greenhouse gas emissions, reflect what consumers will buy and result in a national policy that includes California," the two groups said in a statement.

FOLLOW THE MONEY: The Environmental Integrity Project released a database Wednesday of political contributions from companies and conservative organizations that met with Pruitt between Feb. 21, 2017, and April 13 of this year. The database was compiled via EPA calendars, FEC reports and data from the Center for Responsive Politics. See it [here](#).

SAVE THE DATE: BLM scheduled meetings to discuss its plans for an environmental review of planned oil and gas leases in ANWR. Several will be held in Alaska, including one each in Fairbanks and Anchorage on May 29 and May 30, respectively. Another meeting is scheduled for Washington D.C. on June 15. For those who can't make the hearings, BLM plans to live stream the Fairbanks and Anchorage dates.

MAIL CALL! ISN'T IT IRONIC? Six Democratic senators wrote to Office of Information and Regulatory Affairs Administrator Neomi Rao on the office's review and evaluation process for EPA's proposed "secret science" proposal to ban the use of studies that don't publicly disclose all their data. "The review process and rollout of this rule appears to have been rushed and secretive - which is particularly ironic for a proposal that purportedly aims to improve agency transparency and decision-making processes," they write.

Separately, bipartisan Reps. Ryan Costello and Paul Tonko sent a letter to the National Academy of Sciences asking for its input on the proposed rule, which was discussed when Pruitt testified before the House E&C Committee. Read the letter here.

Of course, Pruitt seems pleased with the proposal: Bloomberg's Ari Natter snapped a photo of new signs at EPA that tout the agency's "Strengthening Transparency in Regulatory Science."

ROCK STARS: Access Fund and American Alpine Club are sponsoring their annual "Climb the Hill" event today with professional rock climbers and outdoor recreation advocacy groups, who will hit the Hill today to talk outdoor recreation and public lands. Sen. Maria Cantwell will attend a reception with the group at 3 p.m. in 385 Russell. High-profile members of the rock-climbing community and executives from REI, Patagonia and The North Face will attend.

QUICK HITS

- Pair of investor-pushed resolutions pass at Kinder Morgan, Axios.
- Saudis pledge to "mitigate" loss of Iranian oil exports from U.S. sanctions. But crude prices rise anyway, The Washington Post.
- Emails: Perdue's donors, agency coordinated on biomass, E&E News.
- Hugh Hewitt used his MSNBC gig to praise efforts to weaken a law that his firm's client is accused of violating, Media Matters.
- Emails show Heritage Foundation offered Pruitt flights, hotel, and talking points for its conference, ThinkProgress.

THAT'S ALL FOR ME!

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks from the pioneer in hydrogen-electric renewable technology, Nikola Motor Company. The zero-emission trucks - which will be able to travel between 500 and 1,200 miles and be refilled within 20 minutes, reducing idle time - are expected to be integrated into Anheuser-Busch's dedicated fleet beginning in 2020.

Through this agreement Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025.

"At Anheuser-Busch we're continuously searching for ways to improve sustainability across our entire value chain and drive our industry forward," said Michel Doukeris, CEO of Anheuser-Busch. "The transport industry

is one that is ripe for innovative solutions and Nikola is leading the way with hydrogen-electric, zero-emission capabilities. We are very excited by the possibilities our partnership with them can offer."

Subject: POLITICO's Morning Energy, presented by Anheuser-Busch: Returning to the battlefield over California car rules — Pruitt screens friendly questions — Art of the RFS deal

By Kelsey Tamborrino | 05/09/2018 10:00 AM EDT

With help from Anthony Adragna

IF AT FIRST YOU DON'T SUCCEED: The looming fight between the Trump administration and the state of California over climate change rules for cars will cover some familiar terrain - where the liberal state and its environmentalist allies have won major legal battles in the past, Pro's Alex Guillén reports. The White House strategy appears to mirror the approach that automakers and dealers unsuccessfully pursued more than a decade ago in an attempt to reverse California's strict limits on vehicles' greenhouse gas emissions.

This again? California - which has a waiver under the Clean Air Act to enact stricter standards - is hoping things play out the same way it did the last time around, when two federal district courts upheld its rules, which other states also can choose to follow. "It's sort of déjà vu because it's going to be basically round two," said Kevin Leske, who was an assistant attorney general in Vermont in 2007 when the state fought off an industry lawsuit seeking to block the greenhouse gas rules for cars.

The details: At issue is the interplay between the long-standing Corporate Average Fuel Economy standards that were established under the 1975 Energy Policy and Conservation Act, and the relatively new emissions standards enforced nationally for the first time under the Obama administration. The Trump administration is expected to nullify the waiver granted to California and then try to circumvent any questions by arguing that EPCA preempts California from enforcing its auto emissions standards - essentially the same argument automakers and dealers deployed in multiple lawsuits over a decade ago.

But keep in mind: That strategy fell short the first time around. A U.S. district court judge in California concluded that greenhouse gas standards are too different from fuel economy regulations to fall under EPCA's "related to" preemption language. However, the cases were never appealed after a larger political deal was reached on the car rules, but advocates of the Trump administration's approach say they hope to take the issue to a higher court this time around. Read [more](#).

GOOD WEDNESDAY MORNING! I'm your host Kelsey Tamborrino. Andrew Fasoli of the American Chemistry Council was the first to correctly guess that former President Ronald Reagan was first to watch a major league baseball game from the dugout, at a Baltimore Orioles game. For today: In what city did the nation's first paved roadway appear? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

BEGS THE QUESTION: EPA Administrator Scott Pruitt and his staff sought extensive control over questions that could be asked to the administrator when he toured the country speaking to industry groups, POLITICO's Anthony Adragna and Emily Holden report. Even seemingly friendly questions got axed by the agency, like, "How often do you get back to Oklahoma?" That question was crossed off a proposed list of questions without an explanation ahead of Pruitt's appearance in December at an event in Iowa, internal emails made public by the Sierra Club through a public records lawsuit show. (At the time, EPA's inspector general was already investigating Pruitt's frequent trips back home.) The emails offer new insight into EPA staff's desires to limit

access by independent journalists, pre-screen questions from friendly interviewers and coordinate Pruitt's message with lobbyists ahead of gatherings with conservative or industry groups. Read the details [here](#).

WHAT HAPPENED AT THAT BIOFUELS POWWOW: President Donald Trump appears to have brokered a deal in the long-running fight between ethanol producers and oil refiners over federal biofuels mandates. At a White House meeting Tuesday with Pruitt, Agriculture Secretary Sonny Perdue and a few Republican senators. Trump reiterated his pledge to allow 15 percent ethanol fuels year-round and rejected a price cap on biofuel credits, called Renewable Identification Numbers. Those are both big wins for the corn crowd, Pro's Eric Wolff [reports](#). But ethanol producers grouched about another proposed aspect of the deal that would lower compliance costs for refiners: allowing ethanol exports to qualify for RINs. Refiners, meanwhile, were wary of a separate proposal for EPA to require large refiners to take on the ethanol-blending requirements for which it issued dozens of waivers to smaller refiners.

IT'S KIND OF INFRASTRUCTURE WEEK: Close to none of Trump's big-ticket [proposals](#) to streamline environmental rules made it into the first major bill infrastructure bill introduced in Congress since his election. America's Water Infrastructure Act of 2018, as the Senate bill is called, is so far the "most significant step lawmakers have taken to help fulfill the president's marquee campaign promise to revitalize the country's transportation arteries," Pro's Annie Snider writes. The bill's authors purposefully set their sights on bipartisanship in light of the fast-approaching midterm elections. "We focus on the 80 percent where we have general agreement, and we're going to get something done," said Sen. [Tom Carper](#) (D-Del.), the top Democrat on the panel and a cosponsor of the measure. Read [more](#).

MORRISEY WINS: West Virginia Attorney General Patrick Morrisey came out on top Tuesday, clinching the Republican nomination to take on Democratic Sen. [Joe Manchin](#) come November. Coal baron Don Blankenship, who was running a controversial campaign against the Republican establishment and Mitch McConnell, ended up in third place in the most-watched race of the night. Blankenship, who was convicted in 2015 of conspiring to skirt mine standards after 29 miners were killed at Massey Energy's Upper Big Branch facility, only [received](#) 19.9 percent of the vote to Morrisey's 34.9 percent, and 29.3 percent for Rep. [Evan Jenkins](#), the other major candidate in the race. Read more on all of Tuesday's primaries [here](#).

NEW DETAILS IN PRUITT SAGA: EPA worked closely with groups such as the Heartland Institute and the CO2 Coalition - both of which dispute the scientific consensus on climate change - when planning Pruitt's proposed "red team, blue team" debate over climate science, The New York Times [reports](#) via new documents released by the NRDC. The emails show that EPA scientists were not involved in the discussion, and that political aides continued to work on the idea even after White House chief of staff John Kelly tried to squelch the plan, according to the Times. In a separate report, the Times got a hold of documents that shed new light on the day security officers, fearing for Pruitt's safety, smashed down his condo door. Read it [here](#).

- **Pruitt's former security chief** Pasquale "Nino" Perrotta told the House Oversight Committee that Pruitt and his staff missed a connecting flight on a trip to Morocco because his security detail's weapons and gear couldn't be transferred between the planes in time, the Associated Press reports, citing anonymous committee aides. The delay forced Pruitt to spend more than 24 hours in Paris, and Perrotta's version of events calls into question the official rationale given by EPA. Read that story [here](#).

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks. The zero-emission trucks will be able to travel between 500 and 1,200 miles. Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025. [Learn more](#). **

BARRASSO: 'CLOSELY MONITORING' PRUITT SITUATION: EPW Chairman [John Barrasso](#) told ME he's "closely monitoring" the ongoing ethical woes of Pruitt and continuing with unspecified "oversight" of the

agency. "The job that he's doing - in terms of the job assigned by the president to roll back regulations and overreach by the federal government - he continues to do well," Barrasso said. "We want to make sure taxpayer money is being well spent and appropriately spent." But Barrasso wouldn't specify if he'd sent additional letters to the agency, again deferring to the White House's vague, ongoing review of the situation.

Wait and see: Senior House Republicans overseeing the EPA also appeared to be publicly sticking with Pruitt as well. Rep. John Shimkus, who oversees the EPA on the House Energy and Commerce Committee, told ME he didn't have plans for additional oversight on his subcommittee but deferred to Chairman Greg Walden on whether it was appropriate. Shimkus acknowledged his lack of oversight plans "might disappoint some of my colleagues," including some Republicans who questioned Pruitt's spending at a hearing several weeks ago. A spokesman for the committee didn't respond to requests for comments on its oversight plans.

HEWITT KNEW IT: Conservative radio host Hugh Hewitt responded Tuesday on his radio show to a POLITICO report about a meeting set up by Hewitt between Pruitt and a water utility that sought a Superfund distinction in his hometown - which it ultimately received. "I knew it was going to show up in the FOIA request," Hewitt said of the meeting request. "I just didn't think it was a story." Separately, the liberal media watchdog group Media Matters reported Tuesday, that The Washington Post's Editorial Page Editor Fred Hiatt had not known of ties between EPA and Hewitt's law firm. "Hewitt, who has not written about Pruitt since September, has agreed not to write about him going forward and has assured us that similar incidents won't occur in the future," Hiatt said in an email to the group.

PERRY PULLS UP: Energy Secretary Rick Perry will testify this morning before the House Science Committee on his department's overall budget for fiscal 2019. Members will likely discuss funding for Advanced Research Projects Agency-Energy and Department's Loan Programs, which are terminated under the budget, as well as Perry's recent moves on coal plants. "Termination of these programs will save over \$300 million in FY 2019 alone while significantly reducing financial risk to the taxpayer moving forward," Perry is expected to say. **If you go:** The hearing kicks off at 9 a.m. in 2318 Rayburn. Watch the livestream here.

AT THE SAME TIME: The House Energy and Commerce Committee is slated to hold a markup on five cybersecurity, small-scale LNG bills this morning. Included in the docket: The bipartisan H.R. 5175 (115), the "Pipeline and LNG Facility Cybersecurity Preparedness Act." The slate of bills - which also includes H.R. 4606 (115), H.R. 5174 (115), H.R. 5239 (115), H.R. 5240 (115) - were approved by the subpanel in April. H.R. 4606 - which would allow the expedited approval of small-scale shipments of liquefied natural gas - got a vote of 19-14 over the objections of most Democrats.

CHATTERJEE SEES CHALLENGES: FERC Commissioner Neil Chatterjee called out natural gas pipeline permitting in New York Tuesday, while speaking at the at the Independent Power Producers of New York conference. "The gravest threat we face to resilience and fuel security is in New England and that's not the result of coal and nuke retirements but because of gas constraints due to a lack of adequate infrastructure," Chatterjee told reporters. Read more from Pro New York's Marie French here.

INTERIOR FACES FOIA SUIT: The Wilderness Society will file a lawsuit today to compel Interior to release documents related to the administration's environmental protection plans on public lands. The group says it filed 21 requests under the Freedom of Information Act for documents related to orders issued by Trump and DOI in March 2017 aimed at removing "potential burdens" to energy development on public lands. TWS says it only received responses to two of those requests.

MAIL CALL! The Environmental Protection Network sent this letter to EPA requesting a public hearing and an extension of the 30-day public comment period on the agency's "secret science" proposal to ban the use of studies that don't publicly disclose all their data. "The proposal is far too complex, with effects too broad and indeterminate, and requests comment on far too many issues, for a thirty-day response period," the letter says.

WATCH IT: The American Council for Capital Formation released a new ad on Tuesday calling on the president to uphold the investor-state dispute settlement mechanism in any negotiation of NAFTA. Watch it [here](#).

E2 LAUNCHES CLEAN JOBS CAMPAIGN: Environmental Entrepreneurs launched a nationwide campaign Tuesday, dubbed [Clean Jobs Count](#), "to advance awareness and support of America's fastest-growing energy sector." The campaign includes digital ads in Michigan, Ohio, Illinois and Colorado, and additional ad campaigns are planned throughout the rest of the year in at least half a dozen more states.

MOVER, SHAKER: Exelon [announced](#) Constellation CEO Joseph Nigro was promoted to Exelon senior executive vice president and CFO, succeeding Jack Thayer, who becomes senior executive vice president and chief transformation officer. ComEd President and CEO Anne Pramaggiore was promoted to CEO of Exelon Utilities, succeeding Denis O'Brien. And Joseph Dominguez, the executive vice president of governmental and regulatory affairs and public policy, was promoted to CEO of ComEd Chicago.

- **Power Ledger**, a blockchain-powered renewable energy trading platform, announced Dante Disparte was appointed its strategic adviser and ambassador.

QUICK HITS

- Thousands of Puerto Ricans are still in the dark while U.S. agencies leave, [Bloomberg](#).
- Cassidy charts own course on climate change, [E&E News](#).
- Poll: Majority of voters oppose Trump offshore drilling plan, [The Hill](#).
- Trump's pick for top U.N. migration job gave misleading answers on tweets critical of climate change, [CNN](#).
- EPA's "secret science" rule could undermine agency's "war on lead," [Science](#).
- Due to climate change, hurricanes are raining harder and may be growing stronger faster, [The Washington Post](#).

THAT'S ALL FOR ME!

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks from the pioneer in hydrogen-electric renewable technology, Nikola Motor Company. The zero-emission trucks - which will be able to travel between 500 and 1,200 miles and be refilled within 20 minutes, reducing idle time - are expected to be integrated into Anheuser-Busch's dedicated fleet beginning in 2020.

Through this agreement Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025.

"At Anheuser-Busch we're continuously searching for ways to improve sustainability across our entire value chain and drive our industry forward," said Michel Doukeris, CEO of Anheuser-Busch. "The transport industry is one that is ripe for innovative solutions and Nikola is leading the way with hydrogen-electric, zero-emission capabilities. We are very excited by the possibilities our partnership with them can offer."

Subject: POLITICO's Morning Energy, presented by Anheuser-Busch: Conservative talker has pull with Pruitt — It's primary day in coal country — Trump meets with ethanol

By Kelsey Tamborrino | 05/08/2018 10:00 AM EDT

With help from Eric Wolff and Anthony Adragna

PRUITT GETS TO IT FOR HEWITT: New emails emerged Monday that provide previously unknown details in the ongoing raft of controversies that have plagued EPA Administrator Scott Pruitt - and provide more ammo for onlookers who worry Pruitt spends too much time currying favor with his political allies.

Conservative commentator Hugh Hewitt brokered a meeting that ultimately ended with a polluted California area on Pruitt's personal priority list of Superfund sites, POLITICO's Emily Holden and Anthony Adragna report. Hewitt lives in Orange County, where the Superfund site sits, and has a son who works in EPA's press office. The TV and radio host emailed Pruitt back in September to set up a meeting between Pruitt and the law firm Larson O'Brien, which employs Hewitt and represents the Orange County Water District. "I'll join if the Administrator would like me too or can catch up later at a dinner," Hewitt wrote in the email, which was obtained under a FOIA lawsuit by the Sierra Club. He added that the issues surrounding the Superfund site were "Greek to me but a big deal in my home county."

Weeks later, the Orange County North Basin site in question appeared on Pruitt's list of 21 contaminated areas to address. Pruitt then proposed listing the site on the agency's National Priorities List, making it potentially eligible for long-term federal cleanup funding. Since the meet-up, Hewitt has been a staunch defender of Pruitt, dismissing his recent controversies as "nonsense scandals" on MSNBC in early April. EPA spokesman Jahan Wilcox confirmed that Hewitt helped arrange the meeting at the request of the water district but didn't attend.

The meeting adds to environmentalists' concerns about Pruitt. "The biggest fear we have is that No. 1 the administrator's political priorities and personal ambitions, political ambitions become the primary criteria for action under this program instead of science and health," said Elgie Holstein, senior director for strategic planning at the Environmental Defense Fund who has been tracking EPA's Superfund actions. [Read the story here.](#)

FIRST CLASS MEMO: EPA on Monday also released a copy of a memo written by the former head of Pruitt's security detail justifying his first class flights. "We have observed and increased awareness and at times lashing out from passengers which occurs while the Administrator is seated in coach with [his security detail] not easily accessible to him due to uncontrolled full flights," Pasquale "Nino" Perrotta wrote in the May 1, 2017, memo. "Therefore, we believe that the continued use of coach seats for the Administrator would endanger his life and therefore respectfully ask that he be placed in either business and or first class accommodations." The Washington Post and E&E obtained copies of the memo via a FOIA request. Perrotta retired from the agency last week.

WELCOME TO TUESDAY! I'm your host Kelsey Tamborrino. Congrats to Cummins Inc.'s Patrick Wilson, who was first to identify former House Speaker Nathaniel Banks of Massachusetts as the representative who served 11 terms and ran for election on five different party tickets. He was successful in all but the Liberal

Republican ticket. For today: What president was first to watch a major league baseball game from the dugout? Bonus points if you can name the team. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

BLANKENSHIP'S BIG DAY: We should know by tonight who will face Sen. [Joe Manchin](#) in a West Virginia Senate race that Republicans see as one of their biggest pickup opportunities of the year - that is, unless coal baron Don Blankenship scores a surprise upset in the surprisingly tight GOP primary. President Donald Trump [tweeted](#) Monday that Blankenship "can't win the General Election in your State," though he didn't endorse one of his opponents. That likely didn't ease fears that the two other major candidates - Rep. [Evan Jenkins](#) and state Attorney General Patrick Morrisey - will split the anti-Blankenship vote evenly and allow the former Massey Energy CEO to come out ahead. Blankenship recently was released from a year in jail following an explosion at the Upper Big Branch Mine that killed 29 workers. Blankenship has called the Upper Big Branch disaster the "worst tragedy" of his life, and is working to have his [conviction thrown out](#). (He has previously lost on appeal and failed to convince the Supreme Court to take the case.) For his part, Blankenship said Monday he was confident he would win, POLITICO's Alex Isenstadt [reports](#) from Mount Hope, W. Va.

That's not all: The Mountain State is not alone in kicking the 2018 midterms into gear. Statewide primary elections also are happening today in Ohio and Indiana and North Carolina, including solar energy entrepreneur and Democrat Dan McCready, who is running in North Carolina's 9th District. Vox nicely breaks down today's big races nationwide [here](#) and POLITICO has 7 things to watch [here](#).

SCHNEIDERMAN RESIGNS: New York Attorney General Eric Schneiderman, who has sued Exxon Mobil and fought the Trump administration's deregulatory agenda, [announced](#) his resignation Monday night in the wake of a report from the [New Yorker](#) that four women had accused him of abuse in previous romantic relationships. Two of the women who went on the record "say that they eventually sought medical attention after having been slapped hard across the ear and face, and also choked," according to the magazine. In a statement, Schneiderman disputed the allegations but said they "will effectively prevent me from leading the office's work at this critical time." The resignation takes effect at the close of business today.

Before the New Yorker story broke, Schneiderman and the attorneys general from seven other states called on Pruitt to withdraw his "secret science" proposal to ban the use of studies that don't publicly disclose all their data. Read the letter [here](#).

CHOPPING BLOCK: The White House on Monday [outlined](#) its package of proposed spending cuts, rescinding \$4.3 billion from the Energy Department's Advanced Technology Vehicles Manufacturing loan program, which supports the production of fuel-efficient, advanced technology vehicles. It was part of an overall request for \$15 billion worth of rescissions from previously appropriated funds from prior years. Another package going after the FY18 omnibus is expected later this year. More [here](#).

ON THE GRID: Puerto Rico's electric grid - which failed to provide power for much of the island for several months after last year's hurricanes - will be the focus of a Senate Energy and Natural Resources hearing this morning. The CEO of the Puerto Rico Electric Power Authority Walter Higgins and Bruce Walker, assistant Energy secretary for electricity delivery and energy reliability, are among the names set to testify. "The end goal is a modern and intelligent energy system that can serve as the resilient engine for Puerto Rico's economic revitalization," Walker is expected to say. Officials [say](#) close to 95 percent of power has now been restored on the island. **If you go:** The [hearing](#) kicks off at 10 a.m. in 366 Dirksen.

- **Forty-seven U.S. and international scientific groups** sent a [letter](#) to Puerto Rico Gov. Ricardo Rosselló on Monday, urging him to keep the island's statistical agency, the Puerto Rico Institute of Statistics, and its board of directors fully independent. "To address the challenges posed by its decade-long economic recession and the devastation of back-to-back hurricanes, Puerto Rico must chart its path toward sustainable recovery using reputable and reliable data and statistical methods," the letter says.

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks. The zero-emission trucks will be able to travel between 500 and 1,200 miles. Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025. [Learn more](#). **

ENERGY-WATER BILL ADVANCES: The House Appropriations Energy-Water subpanel swiftly approved its \$44.7 billion energy and water spending bill on a voice vote Monday, sending the measure to the full committee for consideration. The appropriations bill largely ignores the president's budget request, earning the approval of Democrats, who applauded the boost in funding for the Army Corps of Engineers and DOE thanks to the bipartisan agreement to lift spending caps. [Read more](#).

TRUMP MEETS WITH SENATORS ON RFS: In what could perhaps be the final time, Trump plans to meet today with at least Sens. [Chuck Grassley](#), [Joni Ernst](#), [Ted Cruz](#) and [Pat Toomey](#) to discuss their dueling priorities around federal ethanol policy. Who else will be in the room remains unclear, as sources told ME conflicting stories: An ethanol source said neither Pruitt, nor the Ag secretary, would be present, while a Republican Senate aide said both would be there.

A source said Team Ethanol's main goal is to get Trump to affirm his commitment to year-round sales of 15 percent ethanol, but the rest of the agenda seems to be unclear. A biofuels source said they expect Trump to kick the biofuels battle to Congress, where Sen. [John Cornyn](#) and Rep. [John Shimkus](#) have been trying to write a bill to overhaul the RFS. Cruz said at a Capitol Hill rally last week that he would view that decision as doing nothing. Cruz and Toomey are still seeking Renewable Fuel Standard changes to dramatically lower the program's compliance costs for refineries. Trump is scheduled to meet with Republican senators at 11:15 this morning, according to his public schedule.

- Continuing their push for year-round sales of E15, fuel retailers from 11 states sent a letter to Trump on Monday, calling on him to instruct EPA to immediately follow up on a pledge to allow the year-round sale of E15 before summer restrictions kick in on June 1. [Read the letter here](#). Eighteen other groups, including the Sierra Club and Earthjustice, signed [onto their own letter](#) expressing concern with the administration's openness to the year-round sale of E15. And the American Energy Alliance launched a digital ad campaign Monday urging for the repeal of the RFS. [Watch that ad here](#).

EXPECTING BIG THINGS: Shimkus is expecting broad support from the House when his comprehensive nuclear waste package [H.R. 3053 \(115\)](#) gets a vote Thursday. "I think people are ready to do something rather than nothing," he told reporters Monday. Shimkus said it's been a months-long process to educate members about the importance of the legislation and added he sent texts to Speaker [Paul Ryan](#) and Majority Leader [Kevin McCarthy](#) thanking them for finally bringing the package to the floor.

But he's not crazy: Shimkus said he hadn't had any recent talks with Senate counterparts about potentially moving the bill across the Capitol and he didn't expect they would this year with one of their most vulnerable incumbents (and ardent Yucca opponent), Sen. [Dean Heller](#), locked in a competitive reelection.

WHERE'S PERRY? Perry is slated to speak today during the Washington Conference on the Americas, where Commerce Secretary Wilbur Ross and Deputy Secretary of State John Sullivan, among others, are set to also appear. Perry will deliver remarks on "energy integration in the Americas" at 3:15 p.m. See the full agenda [here](#).

E&C TACKLES EVs: The House Energy and Commerce Environment Subcommittee will listen to discussion today on how fuel vehicles and electric vehicles will coexist as electric vehicles become more popular. The hearing begins at 10:15 a.m. in 2322 Rayburn, or stream it [here](#).

MAIL CALL: A diverse coalition of energy groups - including Advanced Energy Economy, the American Petroleum Institute and the American Wind Energy Association - on Monday urged Perry not to bail out coal and nuclear plants. Read their [letter](#).

INHOFE BACKS JACKSON: An Axios [report](#) that Pruitt chief of staff Ryan Jackson has been frozen out of the EPA chief's inner circle didn't sound right to his former boss, Sen. [Jim Inhofe](#). "I've known him well since he was 18 years old and I don't think they'd be capable of sidelining him," he told ME. Inhofe admitted that if the report is true - "that's an if I'm not willing to accept," he cautioned - it would be deeply concerning.

PRUITT MEETS MOTHERS ON CHEMICAL BAN: Two mothers will meet today with Pruitt, where they will press the administrator to ban paint strippers containing methylene chloride after their sons died using products with the chemical, according to the Environmental Defense Fund. On former President Barack Obama's last day in office, his administration proposed using the updated Toxic Substances Control Act to ban the use of the chemical in most commercial paint removers. Pruitt [told lawmakers](#) recently that he thinks EPA can make a decision on its proposed ban by the end of the year.

QUICK HITS

- Pruitt's Rome trip: More time on tourism than official business, [The Daily Beast](#).
- Steel town that voted for Trump banks on renewables, [E&E News](#).
- Interior sending officers to assist patrolling the U.S., Mexico border, [The Hill](#).
- EPA proposal pushed by ex-coal lobbyist could transform agency's use of science, [S&P Global](#).
- Booming tourism emits 8 percent of greenhouse gases, study shows, [Reuters](#).
- Old-boys' club that ran power world cracking with its model, [Bloomberg](#).

THAT'S ALL FOR ME!

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks from the pioneer in hydrogen-electric renewable technology, Nikola Motor Company. The zero-emission trucks - which will be able to travel between 500 and 1,200 miles and be refilled within 20 minutes, reducing idle time - are expected to be integrated into Anheuser-Busch's dedicated fleet beginning in 2020.

Through this agreement Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025.

"At Anheuser-Busch we're continuously searching for ways to improve sustainability across our entire value chain and drive our industry forward," said Michel Doukeris, CEO of Anheuser-Busch. "The transport industry is one that is ripe for innovative solutions and Nikola is leading the way with hydrogen-electric, zero-emission capabilities. We are very excited by the possibilities our partnership with them can offer."

Subject: Science Transparency rule

Hello, this is Annalee Armstrong from S&P Global. The EPA's recently released Science Transparency rule cited the journals Science and Nature as sources of your new policy, and yet those publications have specifically pushed back against the methods adopted by Administrator Pruitt (See editorial from [Science here](#), and [Nature here](#)).

Can you please provide me with comment on whether the EPA consulted experts from these journals, or any scientists in developing the new rule? Do you have any specific response to some of the criticisms leveled by Nature or Science? Science, specifically said of the proposal: "Here, a push for transparency appears actually to be a mechanism for suppressing important scientific evidence in policy-making, thereby threatening the public's well-being."

My deadline for this information will be Monday morning at 10 a.m. Thank you.

Annalee Armstrong

Subject: POLITICO's Morning Energy: Heightened vetting for Pruitt-related FOIAs — EPA narrows air permitting guidelines — Coolant industry: Global warming industry is so cool it's hot

By Kelsey Tamborrino | 05/04/2018 10:00 AM EDT

With help from Anthony Adragna, Eric Wolff and Emily Holden

ALL FOIA ONE, ONE FOIA ALL: You may need to have a little patience if you're waiting for EPA to ship over any documents about Administrator Scott Pruitt's activities. Freedom of Information Act requests that relate to Pruitt get an extra layer of vetting before they are released to the public, new internal emails obtained by POLITICO show. Top aides to the administrator, including chief of staff Ryan Jackson, perform the "awareness reviews" on all or most document requests related to Pruitt - on top of the reviews done by career experts. And that is contributing to the slow flow of information released under records requests at EPA, Pro's Alex Guillén reports.

The new vetting processes described in the emails are done before the agency releases essentially any documents involving the administrator. And the emails show Pruitt's political appointees chastising career employees who released documents in accordance with FOIA without letting them screen the records first.

In one exchange from last August, Jackson and Liz Bowman - the head of EPA's Office of Public Affairs who announced on Thursday she was stepping down - expressed concern about documents related to comments Pruitt made on CNBC disputing that carbon dioxide from human activities was the primary cause of climate change. "Why did Kevin Bogardus from E&E all of a sudden get a response to a FOIA today, without any awareness from our FOIA office?" Bowman wrote on Aug. 2, adding later that the deadline wasn't until the end of the month.

ME readers will recall from February that EPA has been flooded with FOIA requests under Pruitt, forcing many groups to sue for the release of documents. But the new emails, which EPA gave to the Natural Resources Defense Council following legal action, shed new light on the cloud of secrecy that surrounds the agency.

While Obama-era EPA officials said the agency sometimes used awareness reviews during their time at the agency when career staff thought documents would generate a lot of interest, FOIA experts say the extra vetting of documents appears to be on the rise under Pruitt. "This does look like the most burdensome review process that I've seen documented," said Nate Jones, director of the FOIA Project at George Washington University's National Security Archive. Read more.

HAPPY FRIDAY! I'm your host Kelsey Tamborrino, and the American Petroleum Institute's Khary Cauthen correctly guessed that Roger Taney - who was nominated for Treasury secretary - was rejected by the Senate, 18-28, in 1834. Not all hope was lost, however, as Taney went on to become a Supreme Court justice. For today: Who was the only member of the Continental Congress to sign all four of the great state papers? Bonus points if you can name all four papers. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

EPA NARROWS GUIDELINES: EPA will alter its interpretation of when related facilities are considered a single source for air permitting purposes in a way that could ease their permitting requirements, Alex reports.

The April 30 memo was sent by EPA air chief Bill Wehrum concerning the so-called common control designation, which says plants located near each other should be aggregated for permitting purposes and subject to stricter standards if they are operated by the same entity. Under the new guidance, that will include entities that can "dictate decisions of the other that could affect the applicability of, or compliance with, relevant air pollution regulatory requirements." The memo concerns a Pennsylvania landfill and nearby biogas processing facility that are owned by different companies. Read more.

ADD ADELSON'S NAME TO THE LIST: Yet another high-profile political ally emerged Thursday to have helped Pruitt arrange an international trip: GOP mega-donor Sheldon Adelson. According to new documents obtained by The Washington Post, Adelson arranged parts of Pruitt's canceled trip to Israel - where he was in part scheduled to unveil an agreement with Water-Gen, an Israeli water purification company championed by Adelson. Read the full report here.

MORE INFO PLEASE: Four senior House Energy and Commerce Democrats - Frank Pallone, Paul Tonko, Diana DeGette and Kathy Castor - sent a letter to Pruitt Thursday asking for the names of three people Steven Hart - a lobbyist who was also married to the EPA chief's landlord - recommended for slots on the agency's Scientific Advisory Board. "Despite your earlier claims that J. Steven Hart had no clients with business before EPA, it is now clear that Mr. Hart did represent clients with business before your agency and, in fact, lobbied you on their behalf," they wrote.

MORE TIME PLEASE: Sixty-four Democrats signed onto a letter to Pruitt calling for a 90-day comment period on a his recent "secret science" proposal to ban the use of studies that don't publicly disclose all their data. "Given the large response from scientists and stakeholders before the rule was officially proposed, a comment period of 30 days will not allow for meaningful engagement from stakeholders," the letter states. Read it here.

'NOT OKAY': Interior's inspector general found a male National Park Service regional office official made unwanted sexual advances toward a female employee on consecutive days that she told him were "not okay." The official retired before a scheduled interview and stopped responding to the IG. Read the report here.

CLOVIS OUT ... AGAIN: Sam Clovis, a former Trump campaign aide who had been serving as the Agriculture Department's liaison to the White House, is departing the department and will return home to Iowa, a USDA official confirmed to POLITICO's Liz Crampton. The president had previously nominated him to be USDA undersecretary for research, education and economics, where he faced backlash for his lack of science credentials and ultimately withdrew his name from consideration for that position in November. Greens had also particularly focused on Clovis for his comments that he did not believe in man-made climate change. Read more.

COOLANT INDUSTRY: GLOBAL WARMING INDUSTRY IS SO COOL IT'S HOT: The White House now has evidence that a global warming treaty limiting coolants would generate thousands of new jobs, and now it must decide whether to send the treaty to the Senate for ratification. A report released Thursday by the Air Conditioning Heating and Refrigeration Institute and the Alliance for Responsible Atmospheric Policy said that the amendment to the Montreal Protocol limiting use of hydrofluorocarbons, a greenhouse gas, would help American manufacturers who produce the bulk of the world's supply of advanced coolants. Ratifying the treaty would produce 33,000 additional jobs and an extra \$12.5 billion of annual manufacturing output.

The report is considered critical to help presidential aides persuade President Donald Trump to advance the treaty to the Senate, despite the president's aversion to multilateral treaties, his predecessor's accomplishments, and anything involving global warming. "U.S. ratification of the Kigali Amendment is good for American jobs, good for the economy, and crucial for maintaining U.S. leadership across the globe," said John Hurst, Chairman of The Alliance, and Vice President of Lennox International. He added, "Over 30 countries have ratified the amendment. America cannot afford to be on the sideline. America must continue to lead."

ZINKE HIRES GOP ADVISER FOR NPS: Interior Secretary Ryan Zinke hired Chuck Laudner, a Iowa Republican political consultant who was an adviser to Trump's campaign, for a position with the National Park Service, an Interior spokeswoman confirmed to Pro's Ben Lefevre. Laudner previously worked with Rick Santorum's presidential campaign in Iowa in 2012 and was executive director for the Iowa Republican Party from 2007-08. Interior hired Laudner "a few weeks ago," spokeswoman Heather Swift said, though she did not say what job he had taken.

MAY THE FOURTH BE WITH YOU: Zinke teased out some "Star Wars" related news on Thursday. In a video featuring the secretary walking alongside motorized BB-8 and R2-D2 toys, the droid rolls over an Interior logo. Zinke tweeted the video with a message: "Tomorrow is a big day. More to come. #MayTheFourthBeWithYou." See it.

BLANKENSHIP ATTACKS McCONNELL'S "CHINA FAMILY": West Virginia GOP Senate hopeful Don Blankenship released another ad on Thursday attacking Majority Leader Mitch McConnell. This time, the spot claims "Swamp Captain Mitch McConnell has created millions of jobs for China people." The ad, which POLITICO's Alex Isenstadt reports on here, is expected to start airing today. It closes with a shot of Blankenship holding two young children, one on each arm as he pronounces, "I will beat Joe Manchin and ditch cocaine Mitch for the sake of the kids." The ad arrives days ahead of the state's May 8 primary.

FOIA WHAT IT'S WORTH: The Montana-based Western Values Project filed a FOIA request to EPA in an effort to make public any communication about Zinke. The request includes all communications between select EPA employees that contain "Zinke," "RZ" or "Interior Secretary" and comes in response to a report in The Atlantic that alleges an EPA press employee planted stories about Zinke in order to distract from his boss. EPA spokesman Jahan Wilcox in a statement to the Atlantic called the allegations "categorically false."

CLIMATE LAWMAKERS REBUT CARBON LEGISLATION: The Citizens' Climate Lobby released a rebuttal to Rep. Steve Scalise's concurrent resolution, H. Con. Res. 119 (115), which expresses the sense of Congress that a carbon tax would be detrimental to the U.S. economy. The climate lobby refutes the resolution, claiming that if done correctly, a tax or fee on carbon could boost the economy. Read the rebuttal here and the bill text here.

MAIL CALL! BIOFUELS WRITE TO EPA ON STRATEGY: A coalition of Midwest biofuels associations sent a letter Thursday to EPA asking it to move administrative time and staff away from Renewable Fuel Standard exemptions and instead toward approvals for cellulosic ethanol. "The discrepancy between the way EPA is handling RFS exemptions and cellulosic ethanol pathway approvals tells you everything you need to know about how this EPA is treating the RFS," said Iowa Renewable Fuels Association Executive Director Monte Shaw in a statement. Read the letter.

- **The Business Council for Sustainable Energy**, a coalition of companies and trade associations, wrote to members of Congress on Thursday, asking that they reauthorize energy title programs in the farm bill, H.R. 2 (115). "It is essential that a healthy, robust bipartisan energy title continue as part of new comprehensive agriculture legislation," writes the group's president, Lisa Jacobson. The letter also lays out potential improvements to the programs. Read it here.

- **Congressional Western Caucus Chairman Paul Gosar led 18 lawmakers** in a letter requesting Pruitt reverse course and proceed with an intention to withdraw the Obama-era EPA's preemptive veto of the Pebble Limited Partnership mining project under Section 404(c) of the Clean Water Act. They write that EPA's January decision not to overturn the preemptive vote "has sowed tumult for interested parties."

VW'S WINTERKORN CHARGED: Former Volkswagen AG leader Martin Winterkorn was charged with conspiracy and wire fraud in connection with the company's long-running emissions cheating scheme, according to an indictment unsealed Thursday by the Justice Department. The indictment, issued by a federal

grand jury sitting in the Eastern District of Michigan, charged Winterkorn with four counts of violating federal law. The first count charges that he conspired with other senior executives and Volkswagen employees to defraud customers, the United States and violate the Clean Air Act by making false representations about the company's supposedly "clean diesel" vehicles. The other three counts concern wire fraud tied to the scheme. More from Pro's Lauren Gardner [here](#).

GOING OUT WEST: New Mexico Sen. [Martin Heinrich](#) delivers a keynote address today at the [Outdoor Economics Conference](#), and he's [expected to discuss](#) his legislation to establish the White Sands National Monument as a national park, as well as discuss the outdoor recreation industry in the region. Watch it live [here](#).

REPORT: GRID RESILIENCY IN THE FACE OF NUCLEAR CLOSURES: A new IHS Markit report released Thursday examines the effect of five nuclear closures in the PJM Interconnection, finding the closures will reduce annual net benefits for consumers from PJM grid-based electricity by about \$8 billion per year over 2013-2016. That "translates into a consumer net benefit per kilowatt-hour of PJM nuclear generation of about 3 cents per kWh," the report found. The report was prepared for Nuclear Matters, an industry-funded organization. Read it [here](#).

MOVER, SHAKER: The Joseph Rainey Center for Public Policy, a think tank focused on sustainable politics and inclusive governance, has named Sarah Hunt its founding CEO. Hunt previously was director at the Center for Innovation and Technology at the American Legislative Exchange Council.

HITTING THE ROADMAP: The Delta Institute released a "Coal Plant Redevelopment Roadmap" on Thursday to provide insight into coal-impacted municipalities and their transition processes. Modules in the roadmap will show economic and environmental impacts, as well as provide information on engagement strategies for such communities, among other topics. See it [here](#).

ON THE POD: NPR's podcast, Embedded, released a new episode Thursday on coal in Buchanan County, Va. Listen [here](#).

Subject: FW: Meeting Material Request approved for the Web site

I need some guidance. This is a memo from a working group of the EPA SAB related to their assessment of the EPA regulatory agenda and the need for the SAB to discuss this rule. This memo is on the SAB website at [https://yosemite.epa.gov/sab/sabproduct.nsf/E21FFAE956B548258525828C00808BB7/\\$File/WkGrp_memo_2080-AA14_final_05132018.pdf](https://yosemite.epa.gov/sab/sabproduct.nsf/E21FFAE956B548258525828C00808BB7/$File/WkGrp_memo_2080-AA14_final_05132018.pdf)

What are the standard operating procedures for including this in the official docket? How is it categorized?

Thanks

start your
day.

**Bloomberg
Environment**

The Environment & Energy Report is brought to you by the EPA National Library Network. Please note, these materials may be copyrighted and should not be forwarded outside of the U.S. EPA. If you have any questions or no longer wish to receive these messages, please email epalibrarynetwork@epa.gov.

Energy Primaries • 'Secret Science' • Fire Retardant Explained

By [Chuck McCutcheon](#)

Energy-producing giants Alaska and Wyoming hold primaries today, with large fields of candidates for governor in both states.

In Alaska, incumbent Gov. Bill Walker, an independent, is seeking re-election. His recent restructuring of the Permanent Fund—the annual payout that Alaskans get from the state's oil wealth—dramatically reduced the budget deficit and restored the state's credit rating, he says.

Seven Republicans are seeking the state chief executive's job, with ex-Lt. Gov. Mead Treadwell—a former chairman of the U.S. Arctic Research Commission—and former state Sen. Mike Dunleavy seen as the leading candidates. Both have spoken out against future cutting of Permanent Fund dividends, and each has promised to promote new oil exploration.

Former U.S. Sen. Mark Begich is running in the Democratic primary for governor, vowing to market Alaska as “a global leader” in addressing climate change.

In Wyoming, six Republicans are running to replace term-limited GOP Gov. Matt Mead. Several—including businessman Sam Galeotos, state Treasurer Mark Gordon, and natural-resources lawyer Harriet Hageman—have drawn oil and gas industry support.

One of the GOP candidates, party megadonor Foster Friess, has come out against transferring federal public lands to the state—a hot-button issue in the rural West. He argues it will be easier for special interests to lobby the state to turn public-access lands into privately controlled ones.

Wyoming’s lone House member, GOP Rep. Liz Cheney, faces two primary challengers but is strongly favored. Likewise, Republican Sen. John Barrasso, who heads the Senate’s environment committee, has five token opponents. Bloomberg Government’s [Greg Giroux](#) is monitoring.

SECRET SCIENCE: The EPA’s controversial plan to limit the types of science it uses to back up regulations has won plaudits from industry and states—but even some of them say the idea needs work.

Then-EPA Administrator Scott Pruitt unveiled the proposal in April to bar the use of scientific research including data that isn’t or can’t be made public. Pruitt called it an effort to remove “secret science” from the agency’s decision-making.

The Texas Commission on Environmental Quality, which backs the proposal’s intention, says the EPA should create a work group or review panel of experts to help develop crucial details about the plan. Two steel associations supporting the proposal also are calling for the EPA’s rulemaking process to be “vetted through a rigorous analytical process.”

[Sylvia Carignan](#) has more details in a [story](#) out today.

OTHER STORIES WE’RE COVERING

- EPA Acting Administrator Andrew Wheeler at 10 a.m. holds a press briefing to unveil the administration’s replacement for the Clean Power Plan. [Abby Smith](#) and Bloomberg News are tracking.
- CVS’s infamously long receipts have been the butt of jokes, but the pharmacy giant also is being held up as a poster child for an issue

spanning the entire retail sector: toxic chemicals used on cash-register paper, [Adam Allington](#) says in a [story](#) out today.

- The Senate's energy committee [explores](#) the energy efficiency of blockchain and similar technologies and the cybersecurity possibilities for energy industry applications. [Rebecca Kern](#) is covering.
- Heavy hitters in the air pollution and climate change fields meet in Baltimore for an Air & Waste Management Association [conference](#). Steven Winberg, assistant secretary of fossil fuel programs at the Energy Department, and Mandy Gunasekara, a top official at the EPA's air office (and one of the Trump administration's first appointees to the agency early last year), are expected to speak. [David Schultz](#) is tracking.

QUOTE OF THE DAY

"Unless Andrew Wheeler significantly changes the way EPA has been doing business in this administration, he can expect more of the same from the courts."

—Georgetown law professor Lisa Heinzerling, a former Obama-era EPA official, [assessing](#) the agency's three recent legal losses.

ALL ABOUT: FIRE RETARDANT

A firefighting plane drops retardant at the Holy Fire near Lake Elsinore, Calif., on Aug. 7.
Photographer: David McNew/AFP/Getty Images

Soot and ash aren't the only things California's wildfires are leaving behind—the red fire retardant dropped from planes is coating homes and cars.

The retardant affects a wildfire's progress by coating vegetation and lowering the temperature of plants that could become fuel, reducing the fire's intensity and speed. The color makes the retardant more visible to firefighters.

A widely used retardant, known by the brand name Phos-Chek, washes off vehicles and isn't known to cause long-term health effects, according to the manufacturer, Perimeter Solutions of St. Louis. The ingredients can irritate eyes and skin and be fatal to some aquatic life. The EPA has rated the retardant

“practically non-toxic” for humans and other mammals.

The main ingredient in one of Phos-Chek’s retardants, diammonium phosphate, is also the world’s most widely used phosphorus fertilizer, according to potash and fertilizer producer Mosaic Co.

The U.S. Forest Service maps out environmentally sensitive areas—including waterways, reservoirs, and endangered species habitats—that firefighters must avoid when dropping fire retardant from aircraft. Certain concentrations of ammonia can create algae blooms and disfigure or kill fish, according to a 2011 Forest Service report. —*Sylvia Carignan*

AROUND THE WEB

- Flushing [old contact lenses](#) in the toilet, or down the sink, could add to the growing problem of microplastic pollution.
- Bitcoin’s [annual carbon footprint](#) is equal to that of Ireland’s.
- Texas’ environmental commission names ex-commissioner [Toby Baker](#) as executive director and former EPA Region 6 official [Emily Lindley](#) as a commissioner.

TODAY’S EVENTS

- **All Day • Nuclear** • The Nuclear Energy Institute opens its [Regulatory Affairs Forum](#) in Bethesda, Md. Nuclear industry representatives will discuss federal regulation and the Nuclear Regulatory Commission’s “transformation” efforts. NRC officials will speak, but NEI spokesman John Keeley told Bloomberg Environment that the forum is closed to reporters.
- **9:30 a.m. • Pentagon** • Senate Armed Services Committee [holds hearing](#) on several Pentagon nominees, including Alex Beehler to be assistant secretary of the Army for energy, installations, and environment.
- **2:30 p.m. • Cyber** • Senate Judiciary Committee’s crime and terrorism panel [holds hearing](#) on cyber threats to infrastructure.

By Kelsey Tamborrino | 06/07/2018 05:41 AM EDT

With help from Darius Dixon, Anthony Adragna and Annie Snider

ANOTHER MESS FOR PRUITT: Scott Pruitt has an appetite for food from the White House mess — a U.S. Navy-run restaurant for use only by White House officials, Cabinet members and other dignitaries. In fact, he loves eating there so

much, the White House asked him to stop coming by so often, POLITICO's Emily Holden, Andrew Restuccia and Anthony Adragna report.

The message was clear, according to one person close to Pruitt: "We love having Mr. Pruitt, but it's not meant for everyday use." A member of the White House's Cabinet affairs team told agency chiefs of staff last year that their bosses shouldn't treat the mess like their personal dining hall — a comment that came in response to Pruitt's recurring use of the restaurant, sources said.

Pruitt's allies privately disputed that the warning about overuse of the mess was aimed squarely at him, but nobody contests that he's a frequent presence at the establishment in the basement of the West Wing. The White House did not respond when asked about his lunch habits, and EPA declined to comment.

A billing statement from July 2017 offered a glimpse into Pruitt's trips to the mess, racking up a bill of \$400 over nine trips that month — a relative bargain in downtown Washington considering the menu. A cheeseburger at the White House runs just \$6.35, according to Pruitt's bill. Compare that to the \$17 you'd pay for a burger from another favorite Pruitt spot, French bistro Le Diplomate. Read more.

Support for Pruitt is also falling on Capitol Hill, Anthony and Emily report, in the wake of this week's news that Pruitt sought to buy a used mattress from the Trump Hotel and inquired about securing a Chick-fil-A franchise for his wife. Two more top aides to Pruitt — scheduler Millan Hupp and counsel Sarah Greenwalt — also are leaving the agency. "I'm not going to come down here, just because he happens to be a nominee of a president I support or a nominee from my party, and try to defend the indefensible," Sen. John Neely Kennedy said. More here.

On the other hand, Cory Gardner, who heads the Senate GOP campaign arm, told reporters he doesn't think Pruitt's ongoing ethics woes will harm his party in the midterms. "The states like Missouri, Indiana, North Dakota have benefited from a regulatory approach this administration has taken," Gardner said.

Environmentalists' "Boot Pruitt" campaign will gather a "group of cows" outside the Capitol South Metro station today from 8 a.m. to 9:15 a.m. to hand out fake Chick-fil-A coupons for a free chicken sandwich with a donation to Pruitt's legal defense fund. They'll hold signs reading: "Breeth Mor Carhun" and "What the Cluck, Pruitt?"

VIRGIN ISLANDS BOSS PLAYS UP ZINKE RELATIONSHIP: The head of the Virgin Islands Republican Party suggested his fundraising group's longstanding relationship with Interior Secretary Ryan Zinke helped improve the department's response to last year's hurricanes that struck the island territory, Pro's Ben Lefebvre reports. John Canegata said he had direct access to Interior officials after the storm thanks to money his group raised for Zinke when he was a member of Congress.

Calling Zinke a "close friend," Canegata boasted of his connections in a televised appearance that aired in the Virgin Islands last month but has not received widespread attention outside of the territory. While numerous officials played a role in helping the islands recover from hurricanes Maria and Irma,

"behind the scenes, trust me, a lot of telephone calls, a lot of maneuvering was going on because, I think, some of the relationships we built," Canegata said of Zinke.

Interior acknowledged that officials contacted Canegata after the hurricanes but said they did so as part of a wider effort to contact business leaders based in the territory and Zinke did not call him personally. Canegata works for Cruzan Rum, but a company representative told Ben he was not involved in coordinating its relief efforts. Interior expedited the reimbursement of taxes on Virgin Islands rum following the storms, but it was unclear whether Canegata influenced that decision; he did not respond to a request for comment.

For his part, Zinke has known Canegata since at least 2015, Ben reports. The secretary previously came under fire for a fundraiser for the VIGOP, as the group is known, during an official trip to the islands in his first month in President Donald Trump's Cabinet. Read more.

IT'S THURSDAY! I'm your host Kelsey Tamborrino. NRECA's Dan Riedinger correctly identified John Tyler as the only president to have not been a resident of the U.S. when he died. Tyler resided in Virginia at the time, which was part of the Confederate States of America. Today's question: Which Congress had the largest number of veterans in office? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

MURRAY DELIVERED EXECUTIVE ORDERS TO TRUMP: Coal magnate Bob Murray handed off drafts of six executive orders that would roll back Obama-era environmental regulations to Trump during the beginning of his administration, according to documents from DOE released under FOIA. The documents include a letter to Energy Secretary Rick Perry from Murray praising Trump's March 2017 energy independence executive order, and included a note where Murray wrote, "we have developed the enclosed materials for your review and consideration, consisting of: six (6) Executive Orders further rescinding anti-coal regulations of the Obama administration; and one (1) memorandum outlining the legal rationale for each of these action, and others."

While Trump did not sign those exact orders, the administration has moved to enact similar policies, Pro's Darius Dixon reports. The documents, which were

sent to DOE the day Trump signed his energy independence order and one day before Murray met with Perry and DOE chief of staff Brian McCormack, also included concepts about grid security and "resiliency" that Perry later touted as part of his push to stop coal power plants from closing. Read more.

BAILOUT ON HIS MIND: In private remarks given during his visit to FEMA headquarters Wednesday, Trump mentioned a slew of topics that had nothing to do with hurricanes, The Washington Post reports, while only briefly mentioning Puerto Rico. Trump instead encouraged Perry to make an announcement about rescuing economically struggling coal and nuclear power plants, the Post reports. "I'd love to put it out — 'clean coal, nuclear,' it's a very important message," he said, telling Perry he needed to hold a news conference.

WRDA MOVES AHEAD: The House passed the Water Resources Development Act of 2018 (H.R. 8 (115)) last night, marking the first major piece of infrastructure legislation to move under the Trump administration, Pro's Annie Snider reports. Lawmakers signed off on the measure on a broadly bipartisan vote of 408-2. The bill — markedly narrower than the Senate's measure — would authorize six new Army Corps of Engineers projects and enact a suite of policy reforms at the red tape-laden agency.

What about the Senate? For those wondering, EPW Chairman John Barrasso told ME he'd not yet locked down a time for the Senate to consider its broader version of the water resources infrastructure legislation. Separately, Sen. Tammy Baldwin sent this letter to Trump, calling on him to urge Congress to include a permanent Buy America provision in the legislation.

MUM'S THE WORD: Barrasso, whose state produces a lot of coal and uranium, told ME he isn't ready to back Trump's proposed bailout for coal and nuclear power plants. "I've read the article but I want to actually see what the proposal is," he said. DOE is still formulating the details of how it would intervene to save the struggling plants.

RESCISSIONS VOTE TODAY: The House is set to vote today on Trump's \$15 billion rescissions bill, Pro's Sarah Ferris reports. The House Rules Committee teed up the bill, H.R. 3 (115), on Wednesday, a quick turnaround that surprised even some GOP lawmakers.

ALL ABOARD: After the rescissions package, the House is ready to start debate on its "minibus" appropriations package, which includes energy and water, legislative branch and military construction-VA spending bills, Pro's Kaitlyn Burton reports. The Rules Committee has set up floor votes on 50 amendments to the energy and water title. A final vote on the overall bill is expected Friday.

SHIMKUS SPEAKS: Rep. John Shimkus, one of the most ardent Yucca Mountain champions in Congress, said his loud floor dispute with Paul Ryan on Tuesday was simply a dispute over "strategy going forward." Other members suggested it had to do with the timing of the Energy-Water bill, since Shimkus thinks delaying until after the midterms might allow Yucca language to make it into the title. The Senate has avoided tackling Yucca due to Sen. Dean Heller's close reelection contest.

POWER OF THE PEN: The House Appropriations Committee agreed to bar EPA from spending more than \$50 on a fountain pen. The amendment — an apparent reference to the \$1,560 Pruitt spent on a dozen fancy writing implements — passed on a voice vote at Wednesday's markup. The panel cleared its version of the fiscal 2019 EPA-Interior bill, on a vote of 25-20. Committee Republicans blocked an effort from Democrats to boost EPA's Office of Inspector General by \$12 million, but approved an amendment that would change revenue sharing for drilling in the Arctic National Wildlife Refuge. And while the pen amendment passed, the committee shot down another amendment from Democratic Rep. Mike Quigley related to Pruitt's travel.

MEETING WITH A FULL DECK: The last time the leadership of FERC and the Nuclear Regulatory Commission got together, there were just enough commissioners between the two agencies to fill one five-member board. Fast-forward to today, and it's a full house for the first time in years thanks to confirmation of two new NRC leaders last month. The get-together is slated to run for just over two hours. An agenda hasn't been released but the meetings usually involve staff presentations on grid reliability — and how it might be impacted by the retirement of nuclear plants — and cybersecurity regulations. Finding the areas where an economic regulator overlaps with a safety watchdog isn't always obvious. The meeting is slated to run from 9 a.m. to 11:15 a.m. at FERC headquarters, and will be webcast.

ROYALTY RUMPUS: Interior's Royalty Policy Committee approved recommendations Wednesday aimed at expanding energy lease sales and lowering royalty rates, Ben recaps. But during the advisory committee's meeting, two members questioned whether it had the power to suggest changes to federal environmental review. "NEPA is not referred to in the [committee] charter," Rod Eggert, a professor at the Colorado School of Mines, said during the meeting. "The text in the charter refers to royalties and collections of royalties." Read more here.

Later Wednesday, BLM sent out a memo instructing field offices to look for ways to speed up permit processing, including by using categorical exclusions, Ben reports.

— **Meanwhile, the Central Arizona Project will meet today** on proposals for sourcing cheaper power to run the Navajo Generating Station. The Bureau of Land Reclamation last week sought to delay the coal-fired power plant's closure, arguing that a 1968 law gives Zinke the authority to require the Arizona water project buy energy from the power plant. Reuters has the rundown here.

GROUPS WARY OF INTERIOR DRAFT BILL: A coalition of sportsmen's groups is concerned about draft legislation that appeared before the House Natural Resources Energy Subcommittee on Wednesday. According to the draft bill, it would enable Interior to recover the costs of administrative protests to oil and gas lease sales, drilling permits and other applications. The bill, they say, would make it more difficult for sportsmen and women to comment on oil and gas lease sales on public land.

BLANKENSHIP IS BACK: Former coal baron Don Blankenship hasn't given up hope to take on the establishment and earn himself a spot in the Senate. After

losing a primary bid to West Virginia Attorney General Patrick Morrisey, Blankenship's campaign announced Wednesday it is petitioning to gain ballot access for the general election as the nominee for the Constitution Party.

BIPARTISAN LETTER ASKS PRUITT TO DROP 'SECRET SCIENCE':

More than 100 lawmakers — including Republican Reps. Brian Fitzpatrick, Carlos Curbelo, Ryan Costello and Ileana Ros-Lehtinen — signed onto a letter to Pruitt today, asking him to withdraw EPA's so-called secret science proposal to bar EPA from using studies that don't make public all their data. Read the letter here.

DEMS WARN AGAINST E15: Democratic Sens. Tom Udall and Peter Welch are calling on EPA to abide "by all legal and regulatory requirements" as the Trump administration weighs the year-round sale of 15 percent ethanol blends of gasoline. "We are very concerned that career EPA officials may be being directed to reverse over 25 years of the agency's position to manufacture legal and scientific justifications for a politically-directed decision on E15," they write. Read the letter.

MAIL CALL! RELEASE THE STUDY: A coalition of environmental groups will send this letter today to HHS Secretary Alex Azar, calling on him to release the controversial federal chemical pollution study blocked by EPA officials.

— **Nineteen environmental groups filed a letter** to the House in opposition of H.R. 5895 (115), the so-called minibus, which they say sets up an improper use of water and natural resources, and undermines safe nuclear waste disposal. Read it here.

FOR YOUR RADAR: The International Wildlife Conservation Council, which came under fire for the big-game trophy hunters added to its ranks, will hold its next meeting June 19 in Atlanta, according to the Federal Register.

ON THE WEB: The Center for American Progress is launching a new website today that is dedicated to tracking legal challenges to the Trump administration's conservation agenda. See it here.

QUICK HITS

— The heat is back on high: May smashes U.S. temperature records, Associated Press.

— Man dies at Randolph County mine, Charleston Gazette-Mail.

— Hurricanes are traveling more slowly — which makes them even more dangerous, The Washington Post.

— Trump falsely claims "We're now exporting energy for the first time," The New York Times.

— Trump's move to please farmers on biofuels reform draws refinery union ire, Reuters.

HAPPENING TODAY

8:00 a.m. — Exchange Monitor holds Decommissioning Strategy Forum, Nashville

8:30 a.m. — New Energy Update holds U.S. Offshore Wind conference, Boston

9:00 a.m. — The Atlantic Council and the American Council on Renewable Energy discussion on "The State of America's Energy Transition: Renewable Energy Policy Network for the 21st Century Renewable Global Status Report," 1030 15th Street NW

9:00 a.m. — Industry Exchange holds Mexico Gas Summit, San Antonio, Texas

9:00 a.m. — The Federal Energy Regulatory Commission and the Nuclear Regulatory Commission joint meeting, 888 First Street NE

11:00 a.m. — House Energy and Commerce Committee hearing on "Improving the Hydropower Licensing Process," 2123 Rayburn

11:00 a.m. — House Transportation Coast Guard and Maritime Transportation Subcommittee hearing on "Maritime Transportation in the Arctic: The U.S. Role," 2167 Rayburn

12:00 p.m. — Hill briefing on "The Export Subsidy RIN: A Valueless Dead End," 608 Dirksen

12:30 p.m. — Women of Renewable Industries and Sustainable Energy lunch and learn, 1501 M St NW

1:00 p.m. — House Science Energy Subcommittee hearing on the electric grid, 2318 Rayburn

2:00 p.m. — House Natural Resources Oversight Subcommittee hearing on "Wildfire Risk, Forest Health, and Associated Management Priorities of the U.S. Forest Service," 1324 Longworth

Another mess for Pruitt: Overstaying his White House welcome at lunch
[Back](#)

By Emily Holden, Andrew Restuccia and Anthony Adragna | 06/06/2018 10:17 PM EDT

EPA Administrator Scott Pruitt loves eating at the White House mess, an exclusive U.S. Navy-run restaurant open only to White House officials, Cabinet members and other dignitaries.

But apparently he liked it too much, and the White House asked him to please eat elsewhere sometimes.

In response to Pruitt's recurring use of the restaurant next to the Situation Room in the basement of the West Wing, a member of the White House's Cabinet affairs team told agency chiefs of staff in a meeting last year that Cabinet members shouldn't treat the mess as their personal dining hall, according to three people with knowledge of the issue.

The message was clear, according to one person close to Pruitt: "We love having Mr. Pruitt, but it's not meant for everyday use." Another person added that the White House asked Cabinet members to visit the mess only occasionally because there are few tables available.

A renovation to update the West Wing HVAC last August included the mess kitchen and may have limited space, one person said. The renovation came shortly after the president tapped John Kelly as chief of staff, and he implemented several day-to-day changes to bring order to the White House.

The White House did not respond to a request for comment and EPA declined to comment. Pruitt's allies privately disputed that the warning about overuse of the mess was aimed squarely at him, but nobody contests that he's a frequent presence at the White House for lunch.

Pruitt has been known to complain that EPA headquarters has no cafeteria of its own and no private dining quarters, according to multiple sources, who said Pruitt still often heads to the White House for lunch. One source said EPA officials called the White House to explain that Pruitt didn't have a place to eat at EPA and would like to continue to visit. Pruitt's EPA office is only a few blocks up Pennsylvania Avenue from the White House.

A billing statement from July 2017 offered a glimpse into Pruitt's use of the mess, showing the EPA chief or people linked to him dined at the mess at least nine times that month, racking up a bill of \$400, a relative bargain in downtown Washington. Pruitt and his guests dined on dishes like "cowboy" skirt steak, popcorn chicken and waffles, spinach strawberry salad and beer-braised brisket tacos.

While the food is considered to be top-notch, the prices are a real bargain. Skirt steak runs just \$10.25, while coriander beef kabobs were just \$11.95 each. And a cheeseburger runs just \$6.35, according to his bill. The burger at another of Pruitt's haunts, French bistro Le Diplomate, runs \$17.

Records obtained through a Sierra Club Freedom of Information Act request also show Pruitt often sought to bring friends from Oklahoma to the White House mess.

Five friends from Tulsa — Charlie Polston, Carlyn Mattox, David Mattox, Bob Wagoner and Jerry Dillon — were invited for a September lunch there with him, though it didn't appear in Pruitt's detailed calendar obtained through FOIA.

That lunch came just two weeks after Pruitt made a lunch date there with Bob Funk, a wealthy Oklahoma Republican with whom he bought a major stake in the minor league Oklahoma City RedHawks baseball team back in 2003.

"Please have Mr. Funk arrive at EPA building at 11:40am to ride with Administrator Pruitt to the WH," Lincoln Ferguson, a senior adviser for public affairs, wrote in an email. There was no entry in Pruitt's calendar for the time when the lunch was to have taken place.

Calendars from Pruitt's senior aides show he made frequent use of the space in the month following his February 2017 Senate confirmation. He dined there on Feb. 27, March 2 and met with Ivanka Trump, the president's daughter and West Wing adviser, on March 13. Chief of staff Ryan Jackson's calendar also lists a lunch in the "Mess" on March 16.

Pruitt also hosted representatives from the Oklahoma Farm Bureau on March 29, according to Jackson's calendar. And he returned for lunch with Mike Catanzaro, a senior White House energy aide, and several senior aides on April 7.

Pruitt and his guests also seemed to have a sweet tooth, partaking of a dessert called "Chocolate Freedom" on multiple occasions. As POLITICO reported in January 2017, the dish — a molten cake made with imported French chocolate that must be ordered at the beginning of lunch because of the baking time — was also popular among Obama administration staffers on their way out the door.

Chocolate Freedom has garnered rave reviews online, and once prompted comedian Zach Galifianakis to ask whether it was also the staff's nickname for former President Barack Obama.

Also available to diners: boxes of red, white and blue M&Ms featuring the presidential seal.

Alex Guillén contributed to this report.

Pruitt wanted to buy 'old mattress' from Trump International Hotel [Back](#)

By Anthony Adragna | 06/04/2018 10:43 AM EDT

Two senior House Oversight Democrats are demanding Chairman Trey Gowdy (R-S.C.) subpoena Scott Pruitt for documents after one of his closest aides told congressional investigators the EPA administrator had her book a personal flight

to the Rose Bowl, search for housing for him and try to buy him an "old mattress" from the Trump International Hotel.

Ranking member Elijah Cummings (D-Md.) and Gerry Connolly (D-Va.) demanded that Gowdy compel Pruitt to turn over all documents related to the potential mattress purchase, efforts to secure personal flights, and work that agency employees performed on non-EPA tasks for Pruitt that have been withheld from an earlier April Democratic request. That followed a May 18 transcribed interview with Millan Hupp, Pruitt's scheduler.

"If Ms. Hupp's statements to the Committee are accurate, Administrator Pruitt crossed a very clear line and must be held accountable," they wrote. "Federal ethics laws prohibit Administrator Pruitt from using his official position for personal gain and from requesting and accepting services from a subordinate employee that are not part of that employee's official duties."

As part of its investigation into Pruitt, the Oversight Committee said it has conducted several transcribed interviews and obtained 2,350 pages of documents, and a spokeswoman criticized the release of Hupp's testimony.

"Selectively releasing portions of witness interview transcripts damages the credibility of our investigation and discourages future witnesses from coming forward. The Committee will continue conducting a serious, fact-driven investigation, and therefore will wait until the conclusion of our investigation to release our findings," committee spokeswoman Amanda Gonzalez said in a statement.

White House Press Secretary Sarah Huckabee Sanders said Monday the administration is "looking into" the issues in the Democrats' letter, but didn't outline any more specific steps.

"I couldn't comment on the specifics of the furniture use in his apartment and certainly would not attempt to," she said, referring to Pruitt's interest in the mattress.

According to the Democrats' letter, Hupp told Oversight staff she worked with the managing director of the Trump International Hotel in hopes of securing an old mattress. She said Pruitt had told her someone at the hotel indicated he could purchase the mattress, though she did not know why he wished to do so and did not know if he ultimately bought it.

In addition, Hupp said she sent several emails to real estate agents over a period of several months last summer during work hours to help Pruitt find housing after he verbally asked for her help. She said she visited a "probably more than 10" properties during her lunch hour over the course of several months. Hupp said she didn't use work email for the searches and was not paid for her efforts.

Pruitt and his wife ultimately settled on an apartment on 13th and U streets, but left it shortly afterwards because "they were not comfortable in the area," according to Hupp.

Democratic lawmakers have honed in on Pruitt's admission during a May 16 Senate subcommittee hearing that Hupp had searched for housing for him without pay on her own personal time.

"It doesn't cut it that they're a friend or that kind of thing," Sen. Tom Udall (D-N.M.) told Pruitt at the hearing, because having a subordinate staff member voluntarily conduct tasks on personal time would constitute a gift.

"That's in violation of federal law," Udall told Pruitt.

An EPA spokesman said the agency continued to give the information it was seeking.

"We are working diligently with Chairman Gowdy and are in full cooperation in providing the Committee with the necessary documents, travel vouchers, receipts and witnesses to his inquiries." EPA spokesman Jahan Wilcox said in a statement.

According to the Democrats' letter, Hupp said around Christmas she used a personal credit card from Pruitt in her possession to arrange his personal trip to the Rose Bowl in California to watch the Oklahoma Sooners football team play. She did not know why Pruitt, who sent her the details for the trip, and couldn't book the flight on his own.

"He just sent me the flights details and asked me to book for him," Hupp said.

Hupp indicated she considered Pruitt a personal friend, which was why she did these tasks for him. She said the two had met for dinners that were attended by just the two of them.

"We worked very closely together and spent a lot of time together," she said. "I traveled with him, so naturally a friendship developed."

Republicans losing patience with scandal-scarred Pruitt [Back](#)

By Anthony Adragna and Emily Holden | 06/06/2018 05:37 PM EDT

Republicans on Capitol Hill are growing frustrated with EPA Administrator Scott Pruitt — and many are now publicly questioning whether he can hang on to his job amid the unending stream of scandals.

Several GOP lawmakers said their patience was running thin after this week's news that Pruitt sought to buy to buy a used mattress from the Trump Hotel and inquired about securing a Chick-fil-A franchise for his wife. And Pruitt's circle of confidantes inside the agency appeared to be shrinking as well, with two of his closest aides set to depart in the coming days.

"The constant drip needs to stop so the agency can get its footing and focus back," House Energy and Commerce Chairman Greg Walden (R-Ore.) told reporters. "They're doing some really good work in the environmental front, but this needs to stop."

"Sometimes people get tripped up on other things besides the core mission, and I think that's what you're seeing," Sen. Shelley Moore Capito (R-W. Va.) told reporters.

Pruitt's scheduler, Millan Hupp, is resigning following her interview by the House Oversight Committee during which she disclosed that she helped her boss find housing and inquired about purchasing a used mattress for him from the Trump International Hotel.

And his top legal counsel, Sarah Greenwalt, will also depart, according to sources. Both women had worked for Pruitt in the Oklahoma attorney general's office and both were among the staff that received raises that had been rejected by the White House.

"I think it's extremely fair to say her and Millan both are tired of the daily grind here," one EPA official said. "Everybody is painfully aware of that."

While acknowledging that President Donald Trump would ultimately make any decision about Pruitt's job, several Republicans indicated Pruitt's support was waning in their conference.

"I'm not going to come down here, just because he happens to be a nominee of a president I support or a nominee from my party, and try to defend the indefensible," Sen. John Kennedy (R-La.) said. "I thought that Mr. Pruitt would have learned his lesson."

Kennedy added: "I said the same thing about Tom Price," referring to Trump's former HHS secretary who resigned after spending lavishly on military and private jets.

Trump reaffirmed his support for Pruitt on Wednesday when they participated in a briefing on the 2018 hurricane season with several Cabinet officials.

"EPA is doing really, really well," Trump said. "You know, somebody has to say that about you a little bit. You know that, Scott."

But even staunch Pruitt allies like Sen. Jim Inhofe (R-Okla.) said the mounting scandals had them rethinking their support.

"Some are true, some are not true. Whether he can weather the storm, I'm not sure," Inhofe said. "The accusations are all troubling. They are."

A few Republicans stood by Pruitt, arguing he's been targeted by an environmental community and press corps eager to take him down.

"I like him," Sen. Roger Wicker (R-Miss.) said. "He is a target because he's keeping the president's campaign promises."

But a more common view among GOP lawmakers was the collective stream of scandals were taking their toll and making Pruitt's position untenable.

"Take a thousand cuts and [there's] not much energy left," Senate Appropriations Chairman Richard Shelby (R-Ala.) told reporters.

Rep. John Shimkus (R-Ill.), who leads the Energy and Commerce subcommittee overseeing EPA, joked he "can't keep up" with the flood of allegations and said he's concerned they haven't stopped.

"These unforced errors are unforced errors," he said. "I don't like being asked all the time about this."

But he raised a possible reason why Republicans weren't abandoning Pruitt: getting a replacement confirmed by the Senate would be nearly impossible.

"Are you going to promise me we could even get an administrator?" he said. "I think that's another concern."

In a video posted by a Nexstar Wednesday, Pruitt defended his attempts to set his wife up with a Chick-fil-A franchise Wednesday, while the president reaffirmed his support in the administrator.

Pruitt said that his wife is "an entrepreneur herself" and that the pair loved the fast-food franchise. As he has in the past, Pruitt dismissed criticism of his behavior as being driven by opposition to the Trump administration's deregulatory policies.

"With great change comes, I think, opposition," he said in a clip the reporter posted to Twitter.

Pruitt did not directly address whether he had asked an EPA aide to reach out to Chick-fil-A President Dan Cathy to inquire about his wife opening up her own restaurant, as the Washington Post first reported Tuesday.

"Chick-fil-A is a franchise of faith and it's one of the best in the country, so that was something we were very excited about," he told the Nextstar reporter Wednesday. "We need more of them in Tulsa, [Okla.]. We need more of them across the country."

Kelsey Tamborrino contributed to this report.

Trump's Interior chief 'hopping around from campaign event to campaign event' [Back](#)

By Ben Lefebvre and Esther Whieldon | 10/05/2017 05:01 AM EDT

Republican donors paid up to \$5,000 per couple for a photo with Interior Secretary Ryan Zinke at a fundraiser held during a taxpayer-funded trip to the U.S. Virgin Islands, according to documents reviewed by POLITICO — raising questions about his habit of mixing official government business with political activism.

The new details about Zinke's March trip to the Caribbean, including the previously undisclosed invitation to the Virgin Islands Republican Party fundraiser, emerged after weeks of scrutiny of the former Montana GOP congressman's travels. The nearly two-hour event was one of more than a half-dozen times Zinke has met with big donors or political groups while on department-paid trips, Interior travel records and other documents show.

Ethics watchdogs say Zinke is combining politics with his Interior duties so frequently that he risks tripping over the prohibitions against using government resources for partisan activity, even though his appearance at the Virgin Islands event seems to have been legal. Democrats have also seized on the issue, including 26 House members who wrote in a letter Tuesday that Zinke's travels "give the appearance that you are mixing political gatherings and personal destinations with official business."

Zinke has said all his actions have obeyed the law, dismissing concerns about his travel as "a little BS."

But some ethics advocates say Zinke's attendance at a fundraiser during his first month as secretary is not in line with past administrations' conduct, even if he crossed no legal red lines.

"It happens on occasion with other Cabinet secretaries, perhaps even a little more often as you get near the election, but it is not a very common practice for Cabinet members to be hopping around from campaign event to campaign event like we're seeing with Zinke," said Craig Holman, government affairs specialist for government watchdog Public Citizen.

The secretary is already under investigation by his department's inspector general over his use of taxpayer-funded private planes for some of the trips, and the Office of Special Counsel is looking into an activist group's allegations that he violated the Hatch Act, the law limiting political activism by federal employees. The White House has cracked down on Cabinet members' travel habits following former HHS Secretary Tom Price's resignation on Friday, which occurred after POLITICO reported on his own expensive flights.

Zinke visited the Virgin Islands from March 30 to April 1 on an official trip related to the Interior Department's role overseeing the U.S. territory. On his first day, following a "veterans meet and greet" and a reception with Gov. Kenneth Mapp, he appeared in his personal capacity at a March fundraiser for the local

Republican Party at the patio bar of the Club Comanche Hotel St. Croix, department records show.

Tickets for the fundraiser ranged from \$75 per person to as much as \$5,000 per couple to be an event "Patron," according to Zinke's official calendar and a copy of the invitation. Patrons and members of the host committee, who paid \$1,500 per couple, could get a photo with Zinke at the start of the event, which was attended by local party members and elected officials.

The following day, Zinke took a \$3,150 flight on a private plane, paid for by the department, from St. Croix to official functions on St. Thomas and returned later that evening. Interior Department officials said there was no other way to accommodate his schedule, which included official events on both islands commemorating the 100th anniversary of the Dutch government transferring control of the islands to the United States.

Zinke is allowed to engage in partisan political activity in a "purely personal (not official) capacity," so long as he does not use government resources, according to Interior Department guidelines on the Hatch Act and other federal laws. The invitation to the GOP fundraiser did not identify Zinke by his official title and included a disclaimer that the money is being solicited by the local party and "not by any federal official."

All told, Zinke has spent around \$20,000 for three charter flights as secretary, nowhere near the \$1 million tab Price racked up on non-commercial trips. But he has on numerous occasions attended political receptions, spoken to influential conservative groups or appeared alongside past campaign donors during trips has taken outside of Washington, D.C., for official department business.

In one instance, Zinke gave a motivational speech for a professional hockey team owned by a major campaign contributor that he said was official business — and which required him to charter a \$12,000 flight to Montana for an appearance at the Western Governors Association the next day.

In another case, during a speech to the Western Conservative Summit in Denver, he was introduced via a recorded voice as the Interior secretary and Zinke proceeded to talk about the agency's priorities. The summit was organized by the Centennial Institute, which bills itself as Colorado Christian University's think tank and is a part of the State Policy Network of organizations that collectively push for conservative state-level legislation.

An Interior spokeswoman said Zinke always follows the law but declined to answer specific questions about his appearance at the Virgin Islands fundraiser, nor say whether he would keep raising political money. The agency also has yet to post Zinke's trip expenses involving any of the political events.

"The Interior Department under the Trump Administration has always and will always work to ensure all officials follow appropriate rules and regulations when traveling, including seeking commercial options at all times appropriate and feasible, to ensure the efficient use of government resources," spokeswoman Heather Swift said in a statement.

Swift did not respond to questions about whether the department had gotten reimbursement for the political portion of Zinke's three-day Virgin Islands trip, as the head of one watchdog group says it should have.

"Some of this travel is clearly political and that part of the travel should have been paid for by the RNC, NRCC, state political parties, a campaign committee or Zinke personally," said Daniel Stevens, executive director of the Campaign for Accountability.

No payments to the department are listed in the Virgin Islands Republican Party's FEC records.

Zinke is not the first Interior secretary, or Cabinet member, to have his activities questioned.

In 2012, a watchdog group called Cause of Action urged the Office of Special Counsel to investigate whether President Barack Obama's then- Interior Secretary Ken Salazar had violated the Hatch Act while taking an Obama reelection campaign RV tour of Colorado with a couple of lawmakers and the state lieutenant governor. Local organizers of one stop on that tour had billed Salazar on its online events calendar as attending the political rally in his official role. OSC would not say whether its investigation uncovered any problems, but travel records Interior has posted show that one of Salazar's aides had told the tour's coordinator the schedule "should not refer to (Salazar as) 'secretary.'" Salazar did not respond to a request for comment.

A former Salazar aide, who was not authorized to speak on the record, said the Obama administration generally tried to avoid scheduling political events that coincided with official travel because it was difficult to divvy up what expenses should be reimbursed by a campaign.

The special counsel's office found Obama HHS Secretary Kathleen Sebelius in violation of the Hatch Act in 2012, saying she had made "extemporaneous partisan remarks" by endorsing a candidate for North Carolina governor during a speech she made in her official capacity. Sebelius tried to scrub the violation by reclassifying the appearance as political and reimbursing the Treasury Department for costs associated with the trip.

Sally Jewell, who was Interior secretary during Obama's second term, said Zinke was within his rights to appear at the fundraiser in the Virgin Islands. Jewell said she once appeared at a fundraiser for Democratic Sen. Maria Cantwell while in Obama's Cabinet, though she paid her own way to Washington state and was not identified by her official title.

"If he had legitimate business while he's on the island, to do a political thing on the side, I don't think that is that unusual," Jewell said in an interview.

EPA Administrator Scott Pruitt canceled his scheduled appearance at a fundraiser for the Oklahoma Republican Party in April because an invitation had identified him by his official title and said he would discuss his work at the agency. EPA ethics officials said he would have been cleared to attend the event if not for that language on the invitation.

Watchdog groups say Zinke's behavior fits a pattern for Trump's Cabinet.

"These government resources have been abused by this administration," said Virginia Canter, an executive branch ethics counsel for Citizens for Responsibility and Ethics in Washington who previously worked as an ethics official for Presidents George H.W. Bush, George W. Bush and Obama. "To the extent that some of that supports their political ambitions is inconsistent with the intent of this authority."

The Campaign for Accountability called on Interior's inspector general and the Office of Special Counsel to investigate whether Zinke violated the Hatch Act or department ethics rules with his speech to the hockey team, which the group said appeared to be a favor for a donor. Interior's IG office announced its investigation earlier this week, and OSC told the Campaign for Accountability that it was looking into the group's complaint, according to an email shared with POLITICO. The OSC declined to comment.

Reps. Raúl Grijalva (D-Ariz.) and Donald McEachin (D-Va.) have asked Interior's IG to also look into any trips on which the secretary was accompanied by his wife, Lola Zinke, who is chairing the campaign of Montana Republican Troy Downing, a candidate to unseat Democratic Sen. Jon Tester next year. Swift said Lola Zinke was not in the Virgin Islands and has paid her own way whenever she has traveled with her husband on official trips.

Many who know him see Zinke's travels as an attempt to keep in touch with political contacts as he contemplates what he will do after leaving the Trump administration. Back home, the 55-year-old former Montana congressman is seen as an attractive candidate for the open-seat governor's race in 2020, when Democratic Gov. Steve Bullock will have to step down because of term limits.

"I think he's definitely got political aspirations; that's one of the reasons why he is where he is at right now," said Land Tawney, executive director of Backcountry Hunters and Anglers, a Montana-based sportsman group that supported Zinke's bid for Interior secretary. "You don't go from being a Montana legislator to a first-term congressman to [Interior] secretary without having ambition."

The Virgin Islands trip was Zinke's first interaction with big donors or influential conservative groups during his travel as Interior secretary.

A weeklong trip in May that took Zinke through Montana, Utah and California also offered a chance to squeeze in some political events.

Zinke delivered the keynote speech at the RNC spring meeting on May 11 in Coronado, Calif. Zinke had flown to California the previous night, after several days touring monuments in Utah, and the RNC speech was his only event in the state aside from a meeting earlier that afternoon with Rep. Amata Radewagen, the Republican delegate from American Samoa, and members of the American Tunaboat Association.

The next day, Zinke flew back to Montana, where he joined Sen. Steve Daines (R-Mont.) and Vice President Mike Pence to tour a coal mine on the Crow Indian reservation operated by the Westmoreland Coal Co.

The trip offered Zinke and Pence an opportunity to tout the Trump administration's work to promote new coal mining on federal lands — and it allowed them to make a brief detour to promote Zinke's congressional replacement. That Friday night, Zinke, Pence and Daines attended a political rally for GOP candidate Greg Gianforte, and Zinke attended a get-out-the vote event for the Montana GOP the next day.

Zinke apparently paid for his return trip to Washington out of his own pocket — it was marked "personal travel" on his calendar, a designation not applied to the other flights on that trip.

Gianforte, whose wife is a major political donor in Montana, won the May 25 special election to take over Zinke's House seat.

Greg and Susan Gianforte donated more than \$10,000 to Zinke's 2016 congressional campaign and another \$10,000 to a joint Zinke-Daines PAC, according to federal records. The couple donated \$5,000 for his earlier run for Congress.

Zinke met with big influencers and donors in June as well.

On June 25, he flew from D.C. to Reno, Nev., where his only scheduled event was a meeting of the Rule of Law Defense Fund, a group of Republican attorneys general that has been linked to the Koch brothers, where he spoke and took questions for about 30 minutes, according to his schedule.

After his remarks, he sat at a dinner table with Montana's attorney general, the government relations specialist for the Venetian Resort Hotel Casino and Las Vegas Sands, and Koch Industries lobbyist Allen Richardson, Interior documents show.

The next day, Zinke flew to Las Vegas for an event on public lands in nearby Pahrump, Nev., and a speech that night to the National Hockey League's Vegas Golden Knights. Bill Foley, the team owner and chairman of Fidelity, introduced Zinke. Foley donated \$7,800 to Zinke's 2014 campaign, while employees and PACs associated with Fidelity and related companies gave another \$180,000. Interior officials said the speech to the NHL team was part of Zinke's official duties, and they pointed to scheduling conflicts it created to justify his use of a \$12,000 private plane to get to a Western Governors Association meeting in Montana the next day.

In July, Zinke spoke to several conservative groups in Colorado during a three-day trip that also included tours of Interior Department facilities in the state. He flew into Denver on July 20 so he could appear that evening at a closed-door reception for the American Legislative Exchange Council, a group of conservative state legislators, lobbyists and industry groups that has pushed for more state control over federal lands.

And over the next two days, he was a featured speaker at a Republican committee roundtable and attended the Western Conservative Summit in Denver.

Eric Wolff contributed to this report.

Zinke's political ties to Virgin Islands improved Interior's hurricane response, party boss says [Back](#)

By Ben Lefebvre | 06/07/2018 05:11 AM EDT

The top GOP official in the U.S. Virgin Islands suggested his fundraising group's "behind the scenes" relationship with Interior Secretary Ryan Zinke helped influence the department's response to last year's hurricanes in the island territory.

John Canegata, the head of the Virgin Islands Republican Party, said he had direct access to Interior officials after the storm thanks to money his group raised for Zinke, whom he described as a "close friend." Zinke, a former congressman, has known Canegata since at least 2015, and the secretary was at a [fundraiser](#) for the VIGOP, as the group is known, during an official trip to the islands in his first month in President Donald Trump's Cabinet.

Interior officials acknowledged reaching out to Canegata, who also works for a major rum distiller in the territory, although they said it was part of a wider effort to contact business leaders based in the territory and Zinke did not call him personally. However, a representative of the distiller said Canegata was not involved in their relief efforts, and a spokesman for the Virgin Islands' House delegate disputed Canegata's involvement in the hurricane response.

The department expedited reimbursements of rum taxes as part of its response to the hurricanes, although it's unclear whether Canegata's connection influenced that decision. Interior has jurisdiction over U.S. territories including the Virgin Islands but not Puerto Rico, which suffered more extensive devastation.

Disaster response experts say it would be inappropriate for Canegata's political connections to influence Interior's efforts in the Virgin Islands.

"These are processes that are supposed to be transparent and supposed to be above the board," said Eric LeCompte, executive director of Jubilee USA, an anti-poverty group that has been involved in hurricane disaster relief efforts. "So, it would not be something a political party would be part of."

VIGOP is not a typical political party and faces frequent inquiries from the FEC to better explain its fundraising practices and expenses. Some critics, including past Republican clients, say the group bilks conservative donors with promises to fight Democrats while spending the bulk of its money on overhead instead of political advocacy. The group spends the [vast majority of its money](#) on a small group of Washington-area political consultants who have also done work for Zinke's campaign and leadership PACs.

Zinke was introduced to the VIGOP in 2015 by a Washington fundraising consultant who also did work for his campaigns, and as a member of Congress he

has traveled to at least two political conferences in the Virgin Islands sponsored by the group, POLITICO reported last year. Zinke and Canegata are seen together during a prior trip in a photo posted to Facebook.

Canegata boasted about his Zinke ties in a televised appearance on WTJX Virgin Islands Public Broadcasting that aired last month but has not received widespread attention outside of the territory.

"We were in direct connection with the Department of Interior," Canegata said in the broadcast.

"Secretary Zinke, happens to be, I wouldn't say a personal friend, but a close friend," Canegata continued. "Prior to him being the secretary of Interior, we spent some time in Washington, we spent some time here in the Virgin Islands. We supported him when he was a congressman and, behold, he becomes the secretary of Interior."

While Canegata credited other officials with their part in aiding the island's response, he said the pre-existing connection to Zinke was key.

"Obviously, we have our congresswoman, our governor doing their job," Canegata continued. "But behind the scenes, trust me, a lot of telephone calls, a lot of maneuvering was going on because, I think, some of the relationships we built."

The Office of Special Counsel on Tuesday closed its investigation into Zinke's appearance at the Virgin Islands fundraiser in March 2017, finding that he had not violated the Hatch Act because he was there in his official capacity and VIGOP reimbursed Interior for its expenses. Interior's inspector general also recently said the appearance at the fundraiser was not inappropriate. It is unclear whether either of those investigations addressed any link between VIGOP and Interior's hurricane response; both offices declined to comment.

Interior's Office of Insular Affairs, which oversees the Virgin Islands, "reached out to dozens of local government employees as well as major private sector employers in the USVI to check their power status and to see how the office could help," Interior spokeswoman Heather Swift said in an email. Canegata "was contacted by those Insular Affairs officials because he works for one of those major private employers, Cruzan Rum."

Canegata, a supply chain specialist at the rum distillery, had no role in the company's disaster relief efforts, according to Cruzan Rum human resources manager Ayanda Daniels.

"He wasn't part of the coordination," Daniels told POLITICO. "Maybe he had a conversation with someone in order to do something, but we had another team for company response."

James Norton, a former Department of Homeland Security Deputy official during the George W. Bush administration, said it is important for disaster response efforts to be handled through the appropriate channels.

"As a matter of proper procedure, it would only be appropriate for all federal actions to be dealt with solely with official authorities at the Department of Defense, Interior, Homeland Security, FEMA, etc., and those local officials on the ground," said Norton, who is now head of the consulting agency Play-Action Strategies. "Anything other than raising awareness and reaching out to get an update on what's happening would be inappropriate, as a political party or other organization doesn't have command and control authority, nor would they be the designated principal federal official on the ground directing rescue operations."

A spokesman for Stacey Plaskett, the Democratic House delegate from the Virgin Islands, disputed Canegata's version of events.

"I cannot honestly remember hearing them or seeing them do anything to that effect," Plaskett's spokesman Mike McQuerry said. "The congresswoman was the person here in D.C. that worked extremely hard during that time to get those funds to the Virgin Islands."

Canegata did not respond to a request for comment this week.

Interior expedited reimbursement of \$223 million in taxes on Virgin Islands rum imported into the mainland and provided a \$567,500 grant to help with a post-hurricane finance audit. Other hurricane relief funds would have come from FEMA, an Insular Affairs spokesperson said.

Otherwise, Zinke and Insular Affairs head Doug Domenech met with Virgin Islands Gov. Kenneth Mapp to discuss recovery efforts, the Insular Affairs spokesperson said. In November, Domenech also met representatives of Cruzan Rum's parent company, Beam Suntory, to discuss the rum tax reimbursements Interior makes to the territory. Beam Suntory donated \$1.5 million to hurricane relief efforts the previous month.

Swift said Zinke did not personally reach out to Canegata. "The only official in the USVI the Secretary called was Governor Mapp," she said.

Murray had early access to Perry to share coal plan [Back](#)

By Eric Wolff | 12/07/2017 04:22 PM EDT

Coal magnate Bob Murray pitched Energy Secretary Rick Perry on his plan to throw an economic lifeline to coal companies less than a month before Perry set in motion plans to aid the industry, according to newly disclosed photographs that show the two meeting.

The liberal magazine In These Times obtained pictures of Murray and Perry from a March 29 meeting at Energy Department headquarters, less than a month after

Perry was sworn in. Several other officials were in attendance, including Andrew Wheeler, who at the time was a lobbyist for Murray and has since been nominated as EPA's No. 2 official.

The meeting puts Murray and Perry together at a crucial moment in the timeline of the Trump administration's push to save the struggling coal industry, an effort that would benefit Murray Energy in particular while hiking electricity prices for potentially millions of people. A month before the meeting, one of Murray's biggest customers, FirstEnergy Corp., had told investors it was seriously considering sending its merchant division, FirstEnergy Solutions, into bankruptcy, a move which would likely void its supply contracts with Murray's coal mines.

Three weeks after Murray's visit, Perry would order a grid study that later became part of the justification for a proposed rule to reward coal and nuclear power plants for providing "grid resiliency." FERC, which has jurisdiction over the proposal, must make a decision on it by Monday.

At the time of the meeting, Wheeler was already the leading candidate to become the deputy administrator for EPA. Wheeler, who represented Murray as a lobbyist for Faegre Baker Daniels, would not be officially nominated for months. Wheeler, who has acknowledged participating in meetings on Murray's coal plan at DOE and on Capitol Hill, cleared committee last week and is awaiting Senate confirmation.

Murray is an outspoken supporter of President Donald Trump and held a fundraiser for him during the 2016 campaign.

DOE did not dispute the validity of the photos.

"Industry stakeholders visit the Department of Energy on a daily basis," DOE spokeswoman Shaylyn Hynes said, when asked about the meeting. "The DOE proposal to FERC was about the future and resiliency of the nation's power supply, an issue much bigger than one industry or company."

The photographs show Perry sitting at the head of a table in the Department of Energy, with Bob Murray, CEO of Murray Energy, to his left, and Wheeler down the table from Murray.

"Enclosed is an Action Plan for achieving reliable and low cost electricity ... and to assist in the survival of our Country's coal industry, which ... power grid reliability and low cost electricity," Murray writes in a cover letter to Perry, parts of which are visible in one photo from the meeting.

Though the document has never been publicly released, DOE critics say Murray's plan appears to have inspired DOE's grid study and the proposed rule Perry sent FERC in September. Copies are visible at the seats of most of the participants, including Perry and Murray. Wheeler, who told members of the Senate Environment Committee he had only seen the memo briefly, is not holding a copy in the photos obtained by In These Times. Murray told Greenwire in November he "didn't have any involvement" in writing the rule.

Murray has acknowledged sharing the plan with Trump.

"I gave Mr. Trump what I called an action plan very early," Murray said in a recent [PBS Frontline](#) documentary on EPA. "It's about three-and-a-half pages and — of what he needed to do in his administration. He's wiped out page one."

The meeting appears to have been successful for all. [One of the photos](#) shows Perry and Murray in a big bear hug.

Murray delivered executive orders on coal rules to Trump administration

[Back](#)

By Darius Dixon | 06/06/2018 07:05 PM EDT

Coal magnate Bob Murray delivered six draft executive orders ready for President Donald Trump to sign to roll back Obama-era environmental regulations in the early weeks of the administration, according to newly released Energy Department documents.

The [documents](#) released Wednesday after a Freedom of Information Act request include a letter to Energy Secretary Rick Perry from Murray praising Trump's March 2017 energy independence executive order, which largely aimed to help the coal industry. And to bolster that effort, Murray wrote, "we have developed the enclosed materials for your review and consideration, consisting of: six (6) Executive Orders further rescinding anti-coal regulations of the Obama administration; and one (1) memorandum outlining the legal rationale for each of these action, and others."

Those executive orders were also sent to EPA Administrator Scott Pruitt, whose agency had jurisdiction over most of the issues they involved, such as ozone rules and regulations on coal ash.

Trump has not signed executive orders resembling Murray's, but the administration has moved to enact the policies, such as pulling U.S. out of the Paris climate agreement. The documents, which were sent to DOE the day Trump signed his energy independence order and one day before Murray met with Perry and DOE chief of staff Brian McCormack, also included concepts about grid security and "resiliency" that Perry later touted as part of his push to stop coal power plants from closing.

"The Department of Energy ("DOE") must issue an emergency directive to have an immediate study done of the security and resiliency of our electric power grids," the document states. "DOE will direct that no power plants having an available fuel supply of at least forty-five (45) days be closed during the study period, or a minimum of two (2) years."

Perry later ordered his staff to write a study about the electric grid that was eventually tied to a regulatory proposal that FERC create financial rewards for

power plants with a 90-day supply of fuel on-site. That condition would have overwhelmingly benefited coal and nuclear generators, but it was shot down by FERC in January.

Critics have said Murray would be the biggest beneficiary of Trump's efforts, since his company supplies coal to many of the power plants at risk of closing because of stiff competition from cheap natural gas and renewable power as well as lagging electricity demand from consumers.

Murray spokesman Gary Broadbent confirmed the company had submitted the documents to Perry "to assist in the reversal of the illegal, job-killing, anti-coal regulations of the Obama Administration."

"Mr. Murray has always sought to secure reliable, low-cost electricity for all Americans, as well as to preserve and protect the jobs and family livelihoods of thousands of coal mining families," he said in a statement. "We applaud the actions taken by President Trump's Administration, to date, to protect these jobs and to advance the energy security of the United States."

Murray has repeatedly called on DOE to issue must-run orders for FirstEnergy power plants that consume his coal, and he blasted the FERC commissioners who opposed the on-site fuel proposal.

On Tuesday, a top DOE official said the agency is still formulating a plan to keep struggling coal and nuclear power plants from closing, and it had no deadline to meet Trump's demand to rescue them.

"We are evaluating options," Energy Undersecretary Mark Menezes told reporters. Last week, Trump called on DOE to take "immediate steps" to stop a wave of coal and nuclear power plant retirements, and like Perry, he cast the shutdowns as a threat to national security.

House passes WRDA bill [Back](#)

By Annie Snider | 06/06/2018 09:42 PM EDT

The House has overwhelmingly approved the Water Resources Development Act of 2018, H.R. 8 (115), the first major infrastructure legislation to move under the Trump administration.

Lawmakers signed off on the measure on a broadly bipartisan vote of 408-2. The bill would authorize six new Army Corps of Engineers projects and enact a suite of policy reforms at the red tape-laden agency. It is significantly narrower than the Senate's measure, which would also make changes to EPA drinking water and wastewater programs.

And it includes a provision that could stir some controversy with the Senate, ordering a study of whether the Army Corps' civilian work should remain within the Department of Defense.

But House leaders dodged provisions that could have derailed the bill by blocking controversial amendments from floor consideration. Those included efforts to repeal the Obama administration's Waters of the U.S. rule, allow firearms at Army Corps recreational sites and exempt pesticide spraying from Clean Water Act permitting requirements.

WHAT'S NEXT: The Senate is expected to consider its version of the WRDA bill, America's Water Infrastructure Act of 2018, [S. 2800 \(115\)](#), this summer.

Trump calls for coal, nuclear power plant bailout [Back](#)

By Eric Wolff | 06/01/2018 02:29 PM EDT

President Donald Trump pressed for a quick regulatory bailout for struggling coal power plants on Friday — a move that would buoy a mining industry that offered him crucial support in 2016, but is riling other energy companies and even some free-market conservatives.

The White House called on Energy Secretary Rick Perry to take immediate steps to keep both coal and nuclear power plants running, backing Perry's claim that plant closures threaten national security. An administration strategy to do that laid out in a memo to the National Security Council circulated widely among industry groups on Friday, but it was not clear that intervention could survive the inevitable political and legal challenges.

It was the latest step in more than a year of efforts by the administration to compel power companies to keep operating the money-losing plants that are suffering from the rise of competing energy sources like natural gas. Those proposals have drawn opposition from most utilities, along with environmentalists, gas producers, power grid operators and conservatives who say it would be an unwarranted intrusion to the energy markets.

The White House statement calling for action came after days of Trump making similarly aggressive moves on international trade, slapping tariffs on the European Union, Canada and Mexico to protect U.S. industries like aluminum and steel. In this case, the president is acting on behalf of what he likes to call "beautiful, clean coal," a once-dominant fuel that still plays a major role in his stump speeches.

Trump "has directed Secretary of Energy Rick Perry to prepare immediate steps to stop the loss of these resources," White House press secretary Sarah Huckabee Sanders said in a statement Friday, referring to coal and nuclear plants.

She added that Trump believes "keeping America's energy grid and infrastructure strong and secure protects our national security... Unfortunately, impending retirements of fuel-secure power facilities are leading to a rapid depletion of a critical part of our nation's energy mix, and impacting the resilience of our power grid."

The statement came five months after federal energy regulators rejected Perry's call that they adopt his proposal to keep the struggling coal and nuclear power plants operating. That proposal would have overwhelmingly benefited mining magnate Bob Murray, an outspoken Trump supporter whose operations supply coal to several endangered plants in the Midwest and Northeast, according to a POLITICO analysis.

Trump's National Security Council gathered Friday to discuss the draft memo that lays out arguments why the administration should use federal authority to keep the money-losing power plants open — despite the assurances from some of the nation's grid operators that no such emergency exists.

"Any federal intervention in the market to order customers to buy electricity from specific power plants would be damaging to the markets and therefore costly to consumers," said the PJM Interconnection, which operates the nation's largest power grid and stretches from the Midwest the Atlantic Coast, in a statement. "There is no need for any such drastic action."

A broad swath of trade associations representing oil and gas, wind and solar power, consumer groups and advanced energy technologies slammed the plan, and they were joined by some congressional Democrats.

"This would be an egregious abuse of power," Sen. Ron Wyden (D-Ore.) said in a statement. "I fought this proposal before, and I will continue to fight this corrupt scheme to prop up the coal industry at the expense of American consumers."

That new 41-page memo, first revealed by Bloomberg News on Thursday evening, says that under the 2015 highway and transit bill known as the FAST Act, DOE must identify critical energy infrastructure, a process the agency is undertaking now with the help of its national labs. But because that is likely to take two years, DOE in the meantime should use the 1950 Defense Production Act and the Federal Power Act to require the plants to keep operating, the memo says.

Power sector experts have said using the two laws to keep specific plants operating would stretch both those measures, and would certainly trigger a major legal fight. Critics of the administration's strategy said the memo appears to signal that the White House is preparing for a fight.

"One way to view the release of this draft is that it is a trial balloon to see how fierce and fast the opposition will be," said Dena Wiggins, CEO of the industry lobby group Natural Gas Supply Association, which opposes the DOE plan. "We've known for some time that all of these federal authorities ... were in play, so the fact that we've now seen it in writing doesn't really change anything. It does, however, underscore how hard it is to cobble together a sound legal rationale to bail out otherwise uneconomic coal and nuclear plants."

And critics say the push to bail out the plants is simply Trump's effort to reward backers like Murray, the coal baron, and live up to his campaign promise to revive coal country. Perry first began work on the power plant issue in March 2017, when he met with Murray at DOE, and Trump himself personally directed Perry to take action on the issue since last summer.

Murray's coal mines have been a major supplier for power plants owned by FirstEnergy Solutions, a unit of Ohio-based utility giant FirstEnergy that sank into bankruptcy this spring. FirstEnergy Solutions has said it plans to close or sell five of its money-losing coal and nuclear power plants.

But the Federal Energy Regulatory Commission and the grid operator have said that even with the planned closures, the region has ample power to supply the market's needs. Stagnant power consumption growth, coupled with the rise of natural gas and renewable power sources like wind, has displaced many of the older coal and nuclear facilities in the markets.

The memo also calls for establishing a new requirement for the electric grid based on "resilience," a term Perry injected into the regulatory conversation last fall with a proposed rule that would have rewarded plants that could keep 90 days of fuel on site. FERC rejected that rule, but it also created a new proceeding to try to define "resilience," which some in the industry say pertains to the grid's ability to withstand and recover from a physical or cyberattack.

The memo largely focuses on the issue of resilience, which it says would suffer if coal and nuclear power plants retire. It specifically targets natural gas as a weakness, because the plants that burn the fuel rely on pipelines that could be disrupted, while coal and nuclear power plants can keep months' worth of fuel on site.

"Natural gas pipelines are increasingly vulnerable to cyber and physical attacks," the memo says. "The incapacitation of certain pipelines through the United States would have severe effects on electric generation necessary to supply critical infrastructure facilities."

House to vote Thursday on Trump's spending cuts plan [Back](#)

By Sarah Ferris | 06/06/2018 05:32 PM EDT

President Donald Trump's prized deficit-reduction package is rolling toward the House floor this week, though its prospects in the Senate remain in doubt — with little time to spare.

House leaders have set a vote Thursday on the Trump administration's roughly \$15 billion rescissions bill, according to a GOP aide, nearly a full month after the proposal was first delivered to Capitol Hill.

The House Rules Committee will tee up the bill, [H.R. 3 \(115\)](#), on Wednesday evening, a lightning turnaround that surprised even some GOP lawmakers.

The last-minute scheduling change comes after the White House [agreed this week](#) not to slash hundreds of millions of dollars from politically sensitive programs, like Hurricane Sandy aid, which helped [secure votes](#) from numerous GOP holdouts.

Even with some of those unpopular cuts reversed, several House Republicans remain anxious about the plan's optics — specifically, cuts to the ultra-popular Children's Health Insurance Program.

At a closed-door meeting of House Republicans Wednesday, several GOP lawmakers stood up to complain that the kids' health cuts could hit hard on the campaign trail, despite assurance from neutral budget experts that the cuts wouldn't harm the program.

In fact, the vast majority of the White House's proposed spending cuts would exist only on paper. The bill would save only \$1 billion over a decade, [according](#) to the CBO, which is far less than 1 percent of the size of Congress' last spending bill, [H.R. 1625 \(115\)](#).

Next, the White House will have to sell the bill to the Senate, where a single Republican "no" vote could sink the package.

Budget chief Mick Mulvaney has already met with Sen. [Lisa Murkowski](#), an Alaska Republican who has raised issues with the cuts to CHIP. Sen. [Susan Collins](#) of Maine, another GOP moderate, has not yet said whether she supports the bill.

If the House clears the bill Thursday, the Senate will have roughly two weeks to send the measure to Trump's desk before its filibuster-proof powers expire June 22.

Minibus spending package ready for House floor action [Back](#)

By Kaitlyn Burton | 06/06/2018 07:46 PM EDT

The House Rules Committee today teed up a three-bill spending bundle for floor consideration as soon as Thursday.

All in all, the panel approved 50 Energy-Water amendments, 22 Military Construction-VA amendments and seven Legislative Branch amendments, setting them up for floor votes.

While the minibus, [H.R. 5895 \(115\)](#), will likely pass, House Democratic leaders threw a wrench in things when they urged lawmakers to oppose the bill, POLITICO [reported](#) Tuesday evening.

Votes on the package are expected to come after a separate [Thursday vote](#) on the White House's rescissions measure, [H.R. 3 \(115\)](#). Conservatives, including the Republican Study Committee, asked for the spending cuts to be taken up first, according to a House GOP aide. The Rules Committee teed up the rescissions proposal in a 9-3 vote tonight, allowing no amendment votes.

The minibus would be the first House-passed fiscal 2019 funding measure.

Sarah Ferris contributed to this alert.

House appropriators advance \$35B Interior-EPA spending package [Back](#)

By Alex Guillén | 06/06/2018 05:04 PM EDT

The House Appropriations Committee today approved its \$35 billion Interior-EPA spending bill by a party-line vote of 25-20.

Committee Republicans [blocked](#) an effort from Democrats to boost EPA's Office of Inspector General by \$12 million, saying the watchdog already has "robust" appropriations. The bill funds the OIG at \$12 million less than his request, but higher than the amount requested by the White House.

The committee voted down an [amendment](#) that would have required EPA's administrator and deputy administrator to report public details of travel costs within 10 days of a trip, along with various amendments targeting a repeal of the Waters of the U.S. rule and other policy riders, along with EPA's proposed science transparency policy, offshore drilling and other standard policy disputes.

Lawmakers approved an [amendment](#) that would change revenue sharing for drilling in the Arctic National Wildlife Refuge. The approved amendment would send 50 percent of revenue to the federal government, 47 percent to the state and 3 percent to the Alaskan Native claims settlement fund.

They also backed a tongue-in-cheek [amendment](#) from Rep. [Marcy Kaptur](#) (D-Mich.) that would limit EPA from spending more than \$50 on any one fountain pen, a response to a recent Washington Post [report](#) that Pruitt spent \$1,560 for a dozen personalized fountain pens. The amendment passed with no "nay" votes.

WHAT'S NEXT: Lawmakers hope to have the bill before the full House sometime this summer, but it is unclear whether the Senate will act on a similar

timeframe. Like most other appropriations bills in recent years, Congress has passed an omnibus rather than conferencing directly.

GOP blocks funding increase for EPA watchdog probing Pruitt activities

[Back](#)

By Alex Guillén | 06/06/2018 03:06 PM EDT

House Republicans today blocked a Democratic effort to increase funding for EPA's Office of Inspector General to help the watchdog deal with the increased workload stemming from Administrator Scott Pruitt's spending and ethics scandals.

Rep. [Mark Pocan](#) (D-Wis.) and a bloc of Democrats on the House Appropriations Committee pushed an [amendment](#) that would have boosted OIG funding for fiscal 2019. It ultimately was voted down on a party-line vote of 21-26.

"It's hard to imagine that there is a more overworked inspector general than at the EPA these days," Pocan said. "This is not a Democrat/Republican thing, this should be a good government thing."

Interior-EPA Appropriations Chairman [Ken Calvert](#) (R-Calif.) said the bill "already includes robust support for EPA's inspector general."

The House Interior-EPA spending package would provide the OIG funding of just over \$50 million, about flat with 2018's level. Most of that is appropriated directly, though some of it is pulled from the Superfund program for OIG's work on Superfund-specific issues. Pocan's amendment would have drawn the extra \$12 million from EPA's "workforce reshaping" account inside the \$2.5 billion environmental programs.

In a February [letter](#), EPA Inspector General Arthur Elkins said the president's proposed OIG budget of \$46 million would "substantially inhibit the OIG from performing the duties of the office." He asked instead for a budget of \$62 million. That request came before an avalanche of congressional requests to review various Pruitt-related issues on spending and ethics.

WHAT'S NEXT: The committee will vote later today on the full spending bill.

Interior advisory committee recommends streamlining environmental reviews for drilling [Back](#)

By Ben Lefebvre | 06/06/2018 06:31 PM EDT

An Interior Department advisory board on Wednesday approved a slew of recommendations aimed at expanding energy lease sales and lowering royalty rates, even as some members questioned whether it had the power to suggest changes to federal environmental reviews.

The Royalty Policy Committee wrapped up its latest meeting in New Mexico after approving nine recommendations for Secretary Ryan Zinke to change how the department collects payments from energy production on federal land. Most of the suggestions would benefit oil and gas companies operating on federal acres, while two recommendations were aimed at boosting renewable energy production.

Two committee members disagreed with a recommendation for the Bureau of Land Management to issue "categorical exclusions" for certain oil and gas projects, allowing those projects to forgo full environmental reviews under the National Environmental Protection Act.

"NEPA is not referred to in the [committee] charter," Rod Eggert, a professor at the Colorado School of Mines, said during the meeting. "The text in the charter refers to royalties and collections of royalties."

Committee member Monte Mills of the University of Montana agreed that recommending categorical exclusions fell outside of the committee's scope.

Western Energy Alliance President Kathleen Sgamma, another member of the committee, defended the recommendation, saying it would increase royalty payments to Interior by making it easier for companies to drill on public land.

"We're trying to increase competitiveness of federal lands," Sgamma said during the meeting. "NEPA is often the aspect of the federal process that takes the longest and decreases the competitiveness of public lands the most."

Ultimately, the committee approved the recommendation and deferred further discussion about the scope of its charter until its next meeting, yet to be scheduled.

The committee also suggested Interior make it easier for companies to pay lower royalty rates for mature oil and gas wells and those "difficult" to operate. And it recommended Zinke ask Congress to amend the Outer Continental Shelf Lands Act with language allowing Interior to hold offshore energy project lease sales in Guam and other U.S. territories.

The committee's two renewable power suggestions were that Interior offer annual lease sales for 2 gigawatts of offshore wind power every year for a decade starting in 2024; and to instruct BLM to reduce fees and streamline permit requirements for solar projects.

BLM tells field office to expedite drilling permit reviews [Back](#)

By Ben Lefebvre | 06/06/2018 08:20 PM EDT

The Bureau of Land Management instructed field offices to prioritize the use of old environmental reviews or categorical exclusions to expedite drilling permit applications for sites where work is already underway, according to a memo released today.

The bulletin posted on the BLM website said those methods will allow officials to process the applications "in the most expeditious and appropriate manner" under the National Environmental Policy Act.

The BLM bulletin directed its field offices that existing environmental analysis for new projects proposed for old sites "should be used to the greatest extent possible" instead of starting a new environmental review process.

If the old analysis isn't sufficient, field offices should determine whether the application falls under an existing categorical exclusion, meaning a new NEPA review would not be required. Criteria to determine whether an exclusion would be available include whether a similar project has already occurred on the same site within the previous five years.

BLM posted its memo soon after Interior's Royalty Policy Committee recommended earlier today that the agency increase its use of categorical exclusions.

WHAT'S NEXT: The environmental review priority list goes into effect immediately.

White House, EPA headed off chemical pollution study [Back](#)

By Annie Snider | 05/14/2018 12:43 PM EDT

Scott Pruitt's EPA and the White House sought to block publication of a federal health study on a nationwide water-contamination crisis, after one Trump administration aide warned it would cause a "public relations nightmare," newly disclosed emails reveal.

The intervention early this year — not previously disclosed — came as HHS' Agency for Toxic Substances and Disease Registry was preparing to publish its

assessment of a class of toxic chemicals that has contaminated water supplies near military bases, chemical plants and other sites from New York to Michigan to West Virginia.

The study would show that the chemicals endanger human health at a far lower level than EPA has previously called safe, according to the emails.

"The public, media, and Congressional reaction to these numbers is going to be huge," one unidentified White House aide said in an email forwarded on Jan. 30 by James Herz, a political appointee who oversees environmental issues at the OMB. The email added: "The impact to EPA and [the Defense Department] is going to be extremely painful. We (DoD and EPA) cannot seem to get ATSDR to realize the potential public relations nightmare this is going to be."

More than three months later, the draft study remains unpublished, and the HHS unit says it has no scheduled date to release it for public comment. Critics say the delay shows the Trump administration is placing politics ahead of an urgent public health concern — something they had feared would happen after agency leaders like Pruitt started placing industry advocates in charge of issues like chemical safety.

Sen. Maggie Hassan (D-N.H.) called the delay "deeply troubling" on Monday, urging Pruitt and President Donald Trump "to immediately release this important study."

"Families who have been exposed to emerging contaminants in their drinking water have a right to know about any health impacts, and keeping such information from the public threatens the safety, health, and vitality of communities across our country," Hassan said, citing POLITICO's reporting of the issue. Details of the internal discussions emerged from EPA emails released to the Union of Concerned Scientists under the Freedom of Information Act.

Sen. Jeanne Shaheen, a fellow New Hampshire Democrat, called the delay "an egregious example of politics interfering with the public's right to know. ... [I]t's unconscionable that even the existence of this study has been withheld until now."

The emails portray a "brazenly political" response to the contamination crisis, said Judith Enck, a former EPA official who dealt with the same pollutants during the Obama administration — saying it goes far beyond a normal debate among scientists.

"Scientists always debate each other, but under the law, ATSDR is the agency that's supposed to make health recommendations," she said.

The White House referred questions about the issue to HHS, which confirmed that the study has no scheduled release date.

Pruitt's chief of staff, Ryan Jackson, defended EPA's actions, telling POLITICO the agency was helping "ensure that the federal government is responding in a uniform way to our local, state, and Congressional constituents and partners."

Still, Pruitt has faced steady criticism for his handling of science at the agency, even before the recent spate of ethics investigations into his upscale travels and dealings with lobbyists. In his year leading EPA, he has overhauled several scientific advisory panels to include more industry representatives and recently ordered limits on the kinds of scientific studies the agency will consider on the health effects of pollution.

On the other hand, Pruitt has also called water pollution one of his signature priorities.

The chemicals at issue in the HHS study have long been used in products like Teflon and firefighting foam, and are contaminating water systems around the country. Known as PFOA and PFOS, they have been linked with thyroid defects, problems in pregnancy and certain cancers, even at low levels of exposure.

The problem has already proven to be enormously costly for chemicals manufacturers. The 3M Co., which used them to make Scotchguard, paid more than \$1.5 billion to settle lawsuits related to water contamination and personal injury claims.

But some of the biggest liabilities reside with the Defense Department, which used foam containing the chemicals in exercises at bases across the country. In a March report to Congress, the Defense Department listed 126 facilities where tests of nearby water supplies showed the substances exceeded the current safety guidelines.

A government study concluding that the chemicals are more dangerous than previously thought could dramatically increase the cost of cleanups at sites like military bases and chemical manufacturing plants, and force neighboring communities to pour money into treating their drinking water supplies.

The discussions about how to address the HHS study involved Pruitt's chief of staff and other top aides, including a chemical industry official who now oversees EPA's chemical safety office.

Herz, the OMB staffer, forwarded the email warning about the study's "extremely painful" consequences to EPA's top financial officer on Jan. 30. Later that day, Nancy Beck, deputy assistant administrator for EPA's Office of Chemical Safety and Pollution Prevention, suggested elevating the study to OMB's Office of Information and Regulatory Affairs to coordinate an interagency review. Beck, who worked as a toxicologist in that office for 10 years, suggested it would be a "good neutral arbiter" of the dispute.

"OMB/OIRA played this role quite a bit under the Bush Administration, but under Obama they just let each agency do their own thing...", Beck wrote in one email that was released to UCS.

Beck, who started at OMB in 2002, worked on a similar issue involving perchlorate, an ingredient in rocket fuel — linked with thyroid problems and other ailments — that has leached from defense facilities and manufacturing sites into the drinking water of at least 20 million Americans. Beck stayed on at OMB into the Obama administration, leaving the office in January 2012 and going to work

for the American Chemistry Council, where she was senior director for regulatory science policy until joining EPA last year.

Yogin Kothari, a lobbyist with the Union of Concerned Scientists, called Beck's January email "extremely troubling because it appears as though the White House is trying to interfere in a science-based risk assessment."

Environmentalists say such interference was routine during the Bush administration.

"It's why the Obama administration issued a call for scientific integrity policies across the federal government," Kothari said in an email to POLITICO. "Dr. Beck should know firsthand that the Bush administration sidelined science at every turn, given that she spent time at OMB during that time."

Soon after the Trump White House raised concerns about the impending study, EPA chief of staff Ryan Jackson reached out to his HHS counterpart, as well as senior officials in charge of the agency overseeing the assessment to discuss coordinating work among HHS, EPA and the Pentagon. Jackson confirmed the outreach last week, saying it is important for the government to speak with a single voice on such a serious issue.

"EPA is eager to participate in and, contribute to a coordinated approach so each federal stakeholder is fully informed on what the other stakeholders' concerns, roles, and expertise can contribute and to ensure that the federal government is responding in a uniform way to our local, state, and Congressional constituents and partners," Jackson told POLITICO via email.

Pruitt has made addressing per- and polyfluoroalkyl substances, or PFAS, a priority for EPA. The unpublished HHS study focused on two specific chemicals from this class, PFOA and PFOS.

States have been pleading with EPA for help, and experts say that contamination is so widespread, the chemicals are found in nearly every water supply that gets tested.

In December, the Trump administration's nominee to head the agency's chemical safety office, industry consultant Michael Dourson, withdrew his nomination after North Carolina's Republican senators said they would not support him, in large part because of their state's struggles with PFAS contamination. Dourson's previous research on the subject has been criticized as too favorable to the chemical industry.

Shortly after Dourson's nomination was dropped, Pruitt announced a "leadership summit" with states to discuss the issue scheduled for next week.

In 2016, the agency published a voluntary health advisory for PFOA and PFOS, warning that exposure to the chemicals at levels above 70 parts per trillion, total, could be dangerous. One part per trillion is roughly the equivalent of a single grain of sand in an Olympic-sized swimming pool.

The updated HHS assessment was poised to find that exposure to the chemicals at less than one-sixth of that level could be dangerous for sensitive populations like infants and breastfeeding mothers, according to the emails.

Dave Andrews, a senior scientist with the Environmental Working Group, said those conclusions line up with recent studies on the health effects of PFAS.

"They are looking at very subtle effects like increased risk of obesity for children exposed in womb, lowered immune response, and childhood vaccines becoming not as effective," Andrews said.

The HHS document at issue is called a toxicological profile, which describes the dangers of a chemical based on a review of previous scientific studies. It would carry no regulatory weight itself, but could factor into cleanup requirements at Superfund sites.

EPA scientists, including career staffers, were already talking with the HHS researchers about the differences in their two approaches to evaluating the chemicals when officials at the White House raised alarm in late January, the emails show. Those differences, according to the correspondence, stemmed from the agencies' use of different scientific studies as a basis, and from taking different approaches to accounting for the harm that the chemicals can do to the immune system — an area of research that has burgeoned in the two years since EPA issued its health advisory.

Enck, the former EPA official, said she sees one troubling gap in the emails: They make "no mention of the people who are exposed to PFOA or PFOS, there's no health concern expressed here."

House Republicans on Scott Pruitt: We're With Him

By Rebecca Leber, 4/26/18, 4:18 PM

One of the reasons Scott Pruitt has probably survived this long at the Environmental Protection Agency is that he still has key Republican support in Congress. It was clear Thursday that House Republicans were still willing to defend him, when Pruitt appeared before the House Energy and Commerce and the House Appropriations subcommittees.

The hearings followed a pattern. Democrats grilled Pruitt on the ethical problems surrounding his administration—or spent their remaining time with monologues about his actions. Republicans were less interested in getting answers from Pruitt on what subcommittee chair Rep. John Shimkus (R-Ill.) called his “stewardship” of the agency, and spent more time focusing on the “policy” they agreed with. Despite Pruitt’s innumerable and well-documented ethical violations and questionable spending patterns, many Republicans in the hearing used their time to offer support for the embattled EPA head.

“It’s shameful today that this hearing has turned into a personal attack hearing and a shameful attempt to denigrate the work that’s being done at the EPA,” Rep. Bill Johnson (R-Ohio) said.

Rep. Gregg Harper, (R-Miss.) complained of the “political bloodsport to destroy anyone who is affiliated with this administration.”

Rep. Joe Barton (R-Texas) called Pruitt a “victim” of Washington politics. “If you can’t debate the policies in Washington, you attack the personality. And that’s what’s happening to you.”

“I apologize for the abrasiveness of some of my colleagues who would rather tarnish your reputation than address the problems facing the nation,” Rep. Jeff Duncan (R-S.C.) said after a heated line of questioning from the other side of the aisle.

And as the Huffington Post pointed out, Rep. David McKinley called the criticism a “classic display of innuendo and McCarthyism.”

“I have, high, high, high confidence in his personal integrity,” Rep. Tom Cole (R-Ok), who comes from Pruitt’s home state, added in the second hearing of the day.

In between the hearings, Shimkus told reporters Pruitt’s answers were “a little vague” but maintained that only the White House had the power to decide the EPA administrator’s fate.

Washington Examiner

<https://www.washingtonexaminer.com/policy/energy/republicans-mostly-hold-their-fire-on-scott-pruitt-stand-by-him-in-nod-to-trump>

Republicans mostly hold their fire on Scott Pruitt, stand by him in nod to Trump

By Josh Siegel, 4/26/18, 6:40 PM

One Republican apologized to embattled Environmental Protection Agency Administrator Scott Pruitt.

"I apologize for the abrasiveness of some of my colleagues trying to tarnish your image," said Rep. Jeff Duncan, R-S.C., a conservative in the House Freedom Caucus.

Another cleared him of wrongdoing, as more than 10 federal investigations into Pruitt's spending and ethics continue.

"The greatest sin you have committed is you have actually done what President Trump ran on," said Rep. Kevin Cramer, R-N.D., who is running for Senate in his red state and who was Trump's energy adviser during his presidential campaign.

More than a few GOP lawmakers described Pruitt as a victim, blaming his critics for his problems.

"You're not the first person to be a victim of Washington politics," said Rep. Joe Barton, R-Texas. "That is what is happening to you."

An old friend from back home was chummy, reflecting on their shared history.

"I have known the administrator for over 20 years and I have high, high confidence in his personal integrity and ability, and certainly if a mistake was made, I'm sure it will be acknowledged and corrected because I've seen you do it over and over again over the course of a long and very distinguished career of public service," said Rep. Tom Cole, R-Okla.

And many others thanked Pruitt for his work on "saving" coal jobs, rolling back former President Barack Obama's Clean Power Plan and the Waters of the U.S. rule, and promoting "transparency" with his "secret science" rule.

Republicans who questioned Pruitt Thursday during his first testimony on Capitol Hill since a swirl of scandals put his job in jeopardy showed again why the EPA administrator may survive.

Even as some Republicans question Pruitt's fiscal integrity and judgment, his die-hard supporters — who share the constituents that form Trump's base — stand by him because he is carrying out Trump's deregulatory agenda.

Perhaps Rep. Evan Jenkins, a Republican from the coal state of West Virginia, best exemplified the competing impulses of a GOP party that prides itself on fiscal discipline but also abhors government regulations that harm industry.

Jenkins, seated next to Pruitt at a conference table in the more intimate setting of the second of two House subcommittee hearings, swiveled his body right and looked the EPA administrator in the eye, thanking him for beginning to roll back Obama-era environmental rules targeting coal-fired power plants.

"Your administration is restoring hope to the people of West Virginia," Jenkins said during an afternoon hearing held by the House Appropriations interior subcommittee. "I'm not apologizing for any of the actions you have taken with regards to secure communications or travel. Those are issues you will have to be held accountable for and address. The litany of misdeeds [by the prior administration] put us out of business in West Virginia. Today, we are back in business because of this administration. I appreciate the fact you are respecting the rule of law."

To be sure, Pruitt did not emerge unbruised from his hearings.

"Did he pay a price today? Half the questions were about his stewardship [of the EPA]," Rep. John Shimkus, R-Ill., who is chairman of the House Energy and Commerce subcommittee that hosted the first hearing, said in a huddle with reporters after it ended.

Shimkus noted that some of Pruitt's answers to questions were "a little vague."

"It's never a good idea to blame your staff," he said.

Pruitt opened his morning testimony vowing to "take responsibility" for various ethics and spending accusations, assuring lawmakers he will "make changes."

But he ended up downplaying his role, often blaming career staff for acting without his knowledge or approval.

The roster of issues under federal investigation include Pruitt's \$50-per-night condo rental deal with the wife of an energy lobbyist who had business before the EPA, his spending of more than \$3 million on security, his \$43,000 secure phone booth, frequent first-class travel, and allegations that he retaliated against employees who questioned his judgment.

Those problems drew criticism from several Republicans.

"You have not demonstrated the requisite good judgment of an elected official," said Rep. Ryan Costello, R-Pa., specifically referring to Pruitt's use of EPA security for personal travel.

"When folks read about trips to Disney or the Rose Bowl, and a security detail related to that, that doesn't sit well with a lot of people."

Rep. Leonard Lance, R-N.J., challenged Pruitt about the EPA's purchase of the \$43,000 phone booth for his office, which the Government Accountability Office said violated federal law.

"I do not think it was appropriate, and I think it was a waste of funds," Lance said. "I am concerned about what I believe is overspending."

Pruitt replied that he agreed the spending was excessive, but said he did not approve the purchase. He said he would have stopped the transaction if he knew about it.

The EPA administrator later said there is "no truth" to the reports that some EPA employees have faced retaliation after disagreeing with his spending or management decisions.

"I'm not aware of that ever happening," he said.

One Republican was not happy with that answer.

"Even the implication of retaliation can harm morale [at the EPA]," said Rep. Gregg Harper, R-Miss.

When Pruitt's full day of reckoning was nearly over, Rep. Betty McCollum, D-Minn., ended her questioning as several Democrats before her had, telling Pruitt he should resign.

The few Republicans left sitting around Pruitt at the conference table could be seen chuckling at that unlikely prospect.

Politico

<https://www.politicopro.com/energy/whiteboard/2018/04/inhofe-reassured-by-pruitts-congressional-testimony-1127258>

Inhofe 'reassured' by Pruitt's congressional testimony

By Anthony Adragna, 4/27/18, 12:27 PM

Sen. Jim Inhofe (R-Okla.) said in a statement today he feels "reassured" about EPA Administrator Scott Pruitt's behavior following the two congressional hearings held on Thursday.

"After a full day of mudslinging and partisan questioning from the Democratic members of the committees, it is clear that the only fault they could find with Scott Pruitt is that he's successfully ending the EPA's history of overreach and overregulation," Inhofe said in a statement.

Inhofe, along with multiple other colleagues on the Senate Environment and Public Works Committee, said they favored holding a hearing with Pruitt after a report in the New York Times alleging the EPA chief got a sweetheart deal on an Oklahoma City home while serving in the state legislature. Those allegations were not discussed at length during Thursday's congressional hearings.

Washington Examiner

<https://www.washingtonexaminer.com/policy/energy/scott-pruitt-says-courts-struck-down-climate-rules-he-is-repealing>

Scott Pruitt says courts 'struck down' climate rules he is repealing

By John Siciliano, 4/26/18, 6:28 PM

Environmental Protection Agency chief Scott Pruitt said Thursday that the courts had struck down President Barack Obama-era climate rules for coal power plants, despite a midnight Thursday deadline for filing comments on the agency's proposal to repeal those very rules.

"There were two efforts made by the previous administration to regulate CO2, and both of them were struck down by the courts," Pruitt said at an afternoon hearing of the House Appropriations Committee's interior subcommittee.

Rep. Chellie Pingree, D-Maine, fired back, thinking he was talking about fuel efficiency and greenhouse gas rules for cars, known as the CAFE standards.

"CAFE standards were not struck down by the courts," Pingree said.

"That's not the issue we're talking about here," Pruitt said. "The tailoring rule that the previous administration adopted with respect to CO2, and then the Clean Power Plan."

It became clear that Pruitt, Oklahoma's former attorney general, had conflated a Supreme Court stay of the power plan with it actually being struck down. The Clean Power Plan was "stayed by the U.S. Supreme Court," which "was unprecedented," he said.

Although Pruitt and others had read the February 2016 stay as a victory on the merits of the case, the Supreme Court's action did not address any of their arguments. It is still up to the lower D.C. Circuit Court of Appeals to address the actual legal arguments made by 28 states, including Oklahoma.

The D.C. Circuit agreed to hold its ruling in abeyance as Pruitt moves forward with his plan to repeal the regulation, which the EPA is looking to replace with a yet-to-be-determined new rule.

The deadline for submitting comments on the proposed repeal of the plan ends at midnight. Both proponents of repeal and defenders of the climate plan have dumped tens of thousands of comments into the EPA's online docket.

Pingree said the legal status of the rules "doesn't allow us to say we're not going to deal with this issue."

Pruitt fired back, "I haven't said that," explaining that he "can only take the steps that Congress authorizes me to take." He said the fault of the Obama administration was it tried to get around Congress and decide the climate strategy for the U.S. through regulation.

"I have actually introduced an advanced notice of proposed rulemaking in the marketplace to solicit comment on our authority to regulate [greenhouse gas emissions]," he said.

Pruitt will seek to craft a rule through a narrow interpretation of section 111(d) of the Clean Air Act, which governs existing power plant emissions. The Obama EPA used the section to regulate emissions on a state-by-state basis, instead of a plant-by-plant basis. Oklahoma and other states argued in the D.C. Circuit that the interpretation of the law was an illegal overreach. None of that has been settled by the courts.

Politico

<https://www.politicopro.com/energy/whiteboard/2018/04/epa-delivers-first-batch-of-travel-documents-to-gowdys-panel-1126819>

EPA delivers first batch of travel documents to Gowdy's panel

By Anthony Adragna, 4/27/18, 11:48 AM

EPA has delivered copies of travel vouchers of the EPA employees who took overseas trips with Administrator Scott Pruitt to the House Oversight Committee, which expects a second production of documents later today, according to a committee spokeswoman.

EPA is expected to give the panel a "much larger batch of documents" responding to Chairman Trey Gowdy's (R-S.C.) April 13 request later today, spokeswoman Amanda Gonzalez told POLITICO.

Not included in the agency's initial response were travel records for Pruitt's security detail that came along on the trips to Italy and Morocco, though EPA "said they will allow Committee staff to review those documents at EPA, as they are security sensitive," according to Gonzalez.

A senior agency official told POLITICO on Thursday the agency's response to Gowdy's request would show the allegations made by former senior EPA aide Kevin Chmielewski contained "exaggerations" that might mitigate the need for transcribed interviews with four senior EPA aides. Gowdy had requested those aides sit for interviews in his April 13 letter.

Gowdy has been the Republican most aggressively looking into a host of allegations of lavish spending and unethical behavior dogging Pruitt. He requested the documents be provided and interviews scheduled no later than today.

In the most recent letter, Gowdy demanded records related to the decision to increase Pruitt's security to round-the-clock protection, contracts to sweep Pruitt's office for electronic surveillance, his trips to Italy and Morocco and the hiring of an Italian security firm, among others. He's also been investigating Pruitt's prior first-class travel arrangements and \$50-a-night Capitol Hill condo agreement with a Washington lobbyist couple.

E&E News PM

<https://www.eenews.net/eenewspm/2018/04/26/stories/1060080243>

First-class travel became 'distraction' — Pruitt

By Kevin Bogardus, 4/26/18

EPA Administrator Scott Pruitt tried to win lawmakers' confidence today with assurances that he's already made changes in response to allegations of pricey travel and security expenses.

Appearing before the House Environment, Interior and Related Agencies Appropriations Subcommittee this afternoon, Pruitt went through a litany of stories about his time at EPA. Asked by Chairman Ken Calvert (R-Calif.) to respond to the charges, Pruitt addressed many directly, saying he wanted to make sure that process is followed at the agency.

"I commit to make those changes prospectively to ensure they are followed in the future," Pruitt said.

The EPA chief said he's no longer looking to fly first class and noted he was flying coach early in his time at the agency. Given the number of threats against him, it was recommended he sit in the front of the plane when he travels.

"That was something that was predicated on a security assessment," Pruitt said on why he flew first class. "That dictated changes in my travel."

The administrator said the media focus on his more expensive flights had become "a distraction" and it was better to return to economy class.

"I recently made changes to that because I felt like from an optics and perception standpoint, it was creating a distraction, and I thought it was best to go in another direction," Pruitt said.

The administrator also said he has taken back pay raises given to two of his aides that attracted scrutiny. Pruitt also said he would have not have gone forward with the installation of a secure phone booth in his office if he was aware of the cost.

"The expenditure of \$43,000 on secure communication should not have been made, and I would not have made the decision if I was aware of it," he said.

As he did in this morning's hearing before the House Energy and Commerce Environment Subcommittee, Pruitt again faced criticism from Democrats over various alleged ethical lapses at EPA (Greenwire, April 26).

"Your decisions and actions have displayed a disregard for the ethical standards to which all public officials should adhere," said Rep. Betty McCollum (D-Minn.), the subcommittee's ranking member.

Rep. Nita Lowey (D-N.Y.), the full committee's ranking member, took issue with President Trump's fiscal 2019 budget plan for EPA of \$6.15 billion, which would be a nearly \$2 billion cut from the agency's fiscal 2018 funds. She said in turn Pruitt had upped his own costs while looking to cut EPA's budget.

"It is shocking to me that you're not sparing any expense to spend on yourself," said Lowey on his first-class travel and "a glorified phone booth."

Several Republicans stuck to policy questions for this afternoon's hearing. Some, like Rep. Tom Cole (R-Okla.), praised Pruitt for his work at EPA.

Cole said he had high confidence in the administrator.

"I'm sure if a mistake was made that you will correct it accordingly, which you have done over a long and distinguished career," Cole said.

Pruitt Says Attacks Are Driven by Opposition to Trump

By Heidi Vogt and Louise Radnofsky, 4/26/18, 6:52 PM

WASHINGTON— Scott Pruitt, the head of the Environmental Protection Agency, fought back Thursday against Democratic criticism of his spending and policies, asserting that the attacks were driven by opposition to President Donald Trump's agenda.

In largely partisan House subcommittees hearings, Mr. Pruitt said he recognized the "very troubling reports" on his travel, housing and personnel actions, but that much of what had been reported was twisted. "Let me be clear, I have nothing to hide," he said.

The EPA administrator is under investigation for his spending on office furnishings, personnel moves, travel costs and destinations, security practices and the link between his rental housing in Washington and a lobbyist. The White House, inspector general of the EPA, House oversight committee and Government Accountability Office have been looking at the issues.

Mr. Pruitt, who as the Oklahoma attorney general sued the Obama administration over its environmental policies, was tapped for the EPA post to lead the rollback of regulations Republicans deemed burdensome.

On Thursday, Mr. Pruitt said he reversed course on several of the issues now under investigation when he became fully aware of them or if they became a distraction.

On his first-class air travel, he reiterated it had been dictated by security threats—some of which he read aloud— but subsequently opted to stop it after concluding it was creating a distraction for reasons of "optics."

Challenged about a \$43,000 secure phone booth he had installed in his office, Mr. Pruitt said that he had simply told staff he needed a method of secure communication. He said it had been agency career staff members who decided to spend the money and made the judgment it wasn't necessary to notify Congress. He said he wouldn't have made the decision if he had been aware of the cost.

He maintained that he was "not at any time aware" of the amounts involved or the process used to award pay raises that now are under scrutiny as they didn't go through the normal approval process by the White House. He added that when found out the details, he rescinded them

Where Mr. Pruitt was unapologetic, Democrats were unforgiving.

"Your actions are an embarrassment to President Trump and distract from the EPA's ability to effectively carry out the president's mission," said Rep. Frank Pallone (D-N.J.) "And if I were the president I wouldn't want your help, I'd just get rid of you."

Rep. Tom Cole, a fellow Oklahoman, said he had high confidence in Mr. Pruitt's integrity and he believed the president's confidence in Mr. Pruitt would remain intact.

"He really performs for the president; that's a presidential decision," Mr. Cole said after the second hearing. "I don't think anything that happened today would undermine that."

Mr. Trump has been supportive of Mr. Pruitt, including publicly, though some administration officials have been more skeptical. On Thursday, an administration official was critical of Mr. Pruitt's performance in the two hearings, but said he probably benefited from attention being directed at Ronny Jackson's withdrawal from the Veterans Affairs secretary nomination and an interview the president gave on Fox News Thursday morning.

"It wasn't necessarily a forest fire—more like a small little burn," the official said of Mr. Pruitt's hearings.

Mr. Pruitt chalked up some of his missteps to a learning curve but said that responsibility for identifying and making changes “rests with me and nobody else,” He also said that the criticisms targeted toward him largely stemmed from policies he had pursued.

“They want to attack and derail the president’s agenda,” he said. “I am simply not going to let that happen.”

At both hearings, Republicans came to his defense while Democrats offered sharp-edged critiques of his policy priorities at the agency and Mr. Pruitt’s actions.

“You’re not sparing any expense on yourself,” said Rep. Nita Lowey of New York, who is the top Democrat on the Appropriations Committee. That panel’s environment subcommittee questioned Mr. Pruitt later on Thursday.

“You have failed as a steward of American taxpayer dollars and our environment,” Mr. Tonko said at the earlier hearing.

But Republican David McKinley of West Virginia decried what he called a “classic display of innuendo and McCarthyism” in criticisms of Mr. Pruitt.

GOP Rep. Joe Barton of Texas also said that he believed Mr. Pruitt was being subjected to ad hominem attacks, “a victim, for lack of a better word, of Washington politics.”

Where Republicans did address ethical issues, they did so in a relatively friendly fashion.

Mr. Barton asked Mr. Pruitt if his condo lease in Washington, which critics have said was improperly below market rates and had ties to an energy lobbyist, was cleared by his agency’s ethics officer, or if he had done anything illegal by flying first class on commercial airliners. Mr. Pruitt said the housing arrangement had been approved twice, and that his travel was also cleared by two teams at the EPA, but that he had subsequently made changes.

Mr. Pruitt emphasized EPA ethics officials cleared his lease. The ethics office has since said it is revisiting the issue. He compared his spending to numerous Obama administration officials to make the argument he has been thrifty, saying many of them had spent more on international travel than he.

A number of Democratic lawmakers asked Mr. Pruitt about the recently proposed rule to require that any study used in shaping EPA regulation must include raw data. Many scientists have panned the move, saying it would exclude much needed research. “This was an effort to ensure transparency,” Mr. Pruitt said.

Mr. Tonko asked whether Mr. Pruitt had confidence in the American Association for the Advancement of Science, which has criticized the rule. “I’m sure their opinion is credible,” he said, but “the actions that we take at the agency are different from their responsibilities.”

'Embarrassment' or 'McCarthyism': Key moments as Pruitt faces lawmakers

By Quint Forgey, Anthony Adragna, Alex Guillen, and Annie Snider, 4/26/18, 1:40 PM, Updated 5:10 PM

Scott Pruitt, the scandal-ridden administrator of the Environmental Protection Agency, appeared on Capitol Hill on Thursday for back-to-back House committee hearings on his agency’s budget request.

But the only spending most lawmakers wanted to discuss were reports of Pruitt’s taxpayer-funded air travel, the sweetheart condo lease he secured from a lobbyist, and the numerous other allegations of misappropriating funds and unethical management that have tarred his tenure at the EPA.

Here are key moments from the contentious hearings, held by subcommittees of the House Energy and Commerce and House Appropriations committees:

A defiant Pruitt says he has nothing to hide. The former Oklahoma attorney general argued his critics were simply attempting to undercut the “transformational change” he’s making at the agency on behalf of President Donald Trump. “Let’s have no illusions about what’s really going on here: Those who have attacked the EPA and attacked me are doing so because they want to attack and derail the president’s agenda and undermine this administration’s priorities,” he said at the outside of the day’s first hearing, in front of a House Energy and Commerce subcommittee. “I’m simply not going to let that happen.” Pruitt maintained had “nothing to hide,” and suggested some of the reports regarding his behavior were inaccurate. “Facts are facts and fiction are fiction,” he said. “And a lie doesn’t become truth just because it appears on the front page of a newspaper.”

Pruitt acknowledged he authorized pay raises for his key aides. But he said he didn’t know how much they were, or that his chief of staff — who took the blame for signing off on the salary hikes — circumvented the White House to award them. “I was not aware of the amount, nor was I aware of the bypassing or the [Presidential Personnel Office] process not being respected,” Pruitt told lawmakers. Pruitt had earlier said on Fox News that he hadn’t known about the raises and that the aides should not have received them. A preliminary report from EPA’s inspector general found that chief of staff Ryan Jackson signed off on multiple large raises using Safe Drinking Water Act authority, which allows the agency to move forward without White House sign-off. The raises totaled as much as 72.3 percent.

But he blamed EPA’s career staff for his \$43,000 privacy booth. He said career employees signed off on the expensive soundproof phone booth installed in his office — and maintained he would have refused it if he’d known about the cost. “I did have a phone call that came in of a sensitive nature and I did not have access to secure communication,” he said. “I gave direction to my staff to address that and out of that came a \$43,000 expenditure that I did not approve.” The Government Accountability Office has said the agency violated spending laws by not informing Congress about the booth beforehand. To Pruitt’s critics, the booth has come a prominent symbol of his reputation for high-spending and extreme secrecy. Pruitt later said he uses the booth only “rarely,” and that “it depends on the nature of the call and how urgent the call is.”

Pruitt also had trouble explaining the expensive biometric locks recently installed in his office. They require a code for him to enter, but he wouldn’t say whether the locks feature fingerprint scanners or some other type of identification system. When Pruitt said career staffers made the decision to install the locks, Rep. Peter Welch (D-Vt.) wasn’t impressed. “It’s really starting to seem like there’s something on the desk with a motto, ‘The buck stops nowhere,’” he quipped.

It’s still not clear whether one of Pruitt’s top aides came to work for three months. “I’m not aware that she did or did not appear for work. So that’s something that is being reviewed at this point,” Pruitt said of Samantha Dravis, the associate administrator in charge of EPA’s Office of Policy. Sen. Tom Carper (D-Del.) has alleged that Dravis largely did not work the months of November through January, and EPA’s inspector general has agreed to review her attendance. Dravis said several weeks ago that she planned to resign, and her last day was reportedly April 20. Pruitt’s comments Thursday were a shift from EPA’s past statements that the no-show accusation is “completely baseless and absurd.”

Democrats pounded him early and often. Those included top Energy and Commerce Democrat Frank Pallone of New Jersey, who said the scandals enveloping Pruitt are “an embarrassment to President Trump and distract from the EPA’s ability to effectively carry out the president’s mission. And if I were the president, I wouldn’t want your help. I’d get rid of you.”

Some Republicans also warned Pruitt he needs to answer questions. Environment subcommittee Chairman John Shimkus (R-Ill.) said he considered much of the media narrative surrounding the EPA chief’s scandals to be “a distraction,” but the committee “cannot ignore” reports of Pruitt’s impropriety. “As public servants, our jobs are not based solely on the things we do, or the things we have done, but also on the way we conduct our business,” Shimkus said in his opening statement. “It is no secret that there have been many stories in the press about the management and

operations of the agency and your dealings with potentially regulated sectors.” And full Energy and Commerce Chairman Greg Walden (R-Ore.) expressed concerns that Pruitt’s progress on policy is being “undercut” by the allegations. “These issues are too persistent to ignore,” said Walden, a member of House Republican leadership.

But other GOP lawmakers came to his rescue, and one likened the criticism to “McCarthyism.” Rep. Joe Barton, a former Energy and Commerce chairman, and Rep. David McKinley (R-W.Va.), a staunch Pruitt ally, blamed Democrats and toxic partisanship for Pruitt’s precarious professional standing. “If you can’t debate the policies in Washington, you attack the personality, and that’s what’s happening to you,” Barton lamented. McKinley accused Democrats on the panel of not being able to “resist the limelight” and said Pruitt’s detractors were simply grandstanding. “I think this has been a lot of classic display of innuendo and McCarthyism that we’re seeing too often here in Washington, that I think unfortunately works against civility and respect for people in public office,” McKinley said.

Rep. Bill Johnson (R-Ohio) also jumped to shield Pruitt. “I think it’s shameful today that this hearing has turned into a personal attack hearing and a shameful attempt to denigrate the work that’s being done at the EPA and with this administration,” he said. Public officials should have ethical standards “beyond reproach,” Johnson said, “but so should members of Congress.”

Staffers moved or dismissed under Pruitt weren’t being punished, he said. “There’s no truth to the assertion that decisions have been made about reassignments or otherwise as far as employment status based upon the things you reference. I’m not aware of that ever happening, and it’s something I want to make very, very clear,” Pruitt said, vowing he would not retaliate against civil servants who flag wrongdoing. The New York Times reported this month that several top staffers were reassigned or demoted after questioning Pruitt, and POLITICO reported that the agency’s deputy homeland security chief was dismissed after signing off on a report questioning Pruitt’s security spending.

One Republican ripped into Pruitt with particular gusto. “I think the opprobrium that you’ve generated on some of these spending decisions is actually warranted,” Ryan Costello (R-Pa.), who is retiring from Congress, told the EPA chief. “I’ve reviewed your answers and I find some of them lacking or insufficient. And I believe you’ve not demonstrated the requisite good judgment required of an appointed executive branch official on some of these spending items.” He went on to ask specifically about reports of retaliation against employees who questioned Pruitt, as well as whether security threats against him were “warranted or credible.”

Pruitt: I only took that controversial trip to Morocco because the country’s ambassador invited me. “There was a free trade agreement that is in existence with Morocco and the ambassador of Morocco invited me to Morocco to negotiate the environmental chapter on that free trade agreement,” Pruitt told lawmakers. The EPA administrator’s December jaunt to the North African nation came under intense scrutiny when the agency, in a news release after the fact, described the trip as dual-purpose: to discuss updates to a U.S.-Morocco Free Trade Agreement “and the potential benefit of liquified [sic] natural gas (LNG) imports on Morocco’s economy.” Later on Thursday, Pruitt attempted to downplay his role in promoting American natural gas exports. “There was a lot of reference made to LNG only because the ambassador [of Morocco] asked me to share that with individuals when I was in country,” he said.

Pruitt the leaker? After facing questions about the severity of the threats the EPA chief has faced in office — which the agency has cited to justify his pricey security budget — Pruitt read part of a report from the inspector general’s office that documented threats directed at him and his family. Asked whether EPA Inspector General Arthur Elkins Jr. had written the report he cited, Pruitt replied, “I’m looking at the document that says inspector general.” But a spokeswoman for the IG’s office said Thursday that it came from another official, not Elkins himself. “It was an internal memo from Assistant IG for Investigations Patrick Sullivan,” OIG spokeswoman Tia Elbaum said in an email. “It was leaked without authorization. It will be released in the near future as part of an OIG FOIA response.”

By the time Pruitt was finished, Shimkus was “just glad he showed up.” The Illinois Republican, who chaired Pruitt’s first hearing, said he thought the administrator handled himself well and that GOP members were suitably tough in their questioning. “Some of it was accountability for policy, so I don’t know what more [critics] want,” Shimkus told POLITICO of Pruitt’s performance. “I think that he answered the questions in the best way that he could answer them.” Shimkus declined to speculate about potential next steps the House Energy and Commerce Committee or the Environment

subcommittee would take, and didn't specifically state whether he thought questions remain unanswered after today's grilling. "I knew it would be painful," he said.

Grilled by U.S. lawmakers, Trump's EPA chief calls ethics scandals lies

By Valerie Volcovici, 4/26/18, 1:07 AM, Updated 8:00 PM

WASHINGTON (Reuters) - U.S. Environmental Protection Agency chief Scott Pruitt on Thursday rejected a litany of ethics complaints against him as lies intended to derail President Donald Trump's agenda, and put much of the blame for any agency missteps on his staff.

During two tense congressional hearings, Pruitt faced tough questions from Democrats and even some fellow Republicans in marathon high-stakes testimony as he seeks to avoid becoming the latest in a long list of Cabinet members and senior White House officials to have either been fired by Trump or quit.

"Facts are facts and fiction is fiction," the embattled agency chief told a House of Representatives panel. "And a lie doesn't become true just because it appears in the front page of the newspaper."

"Those who attack the EPA and attack me are doing so because they want to attack and derail the president's agenda and undermine this administration's priorities," Pruitt testified.

The hearings were scheduled to discuss the EPA budget, but mainly focused on Pruitt's performance.

Trump's inner circle has become frustrated by the torrent of news reports about Pruitt including his costly first-class air travel and around-the-clock security, pay raises given to aides and his rental of a room in a high-end Washington condo linked to an energy lobbyist.

Pruitt remained even-tempered and unapologetic throughout more than five hours of testimony, often avoiding being pinned down on specifics or deflecting responsibility for clear missteps onto his staff - a strategy that drew mixed reviews.

It remains to be seen how Trump will view his performance.

"It's never good to blame your staff. If you do it, do it behind closed doors," said Republican Representative John Shimkus of Illinois after the first hearing.

Democrats were more blunt. "You are unfit to hold public office," Representative Frank Pallone of New Jersey told Pruitt.

Democratic Representative Paul Tonko of New York ripped Pruitt for his "seemingly endless misconduct" and "what appears to be a propensity for graft." Democrats also castigated Pruitt for rolling back environmental regulations the Trump administration has said hinder economic growth.

There are nearly a dozen pending investigations of Pruitt's conduct covering a range of allegations. The Government Accountability Office completed one this month that said the EPA violated two laws by installing a \$43,000 soundproof phone booth for his office without telling lawmakers first.

Pruitt testified he requested the secure line, but said his staff never told him the cost and that he would not have made the expenditure had he known.

Pruitt has been among Trump's most controversial Cabinet members. He has drawn praise from conservatives and scorn from environmentalists for rolling back Democratic former President Barack Obama's policy to curb greenhouse gas emissions from power plants and other green regulations opposed by industry.

The tumult in the Trump administration was underscored on Thursday when the president's physician Ronny Jackson withdrew from consideration to head the Department of Veterans Affairs amid allegations of misconduct.

Some 170 Democratic lawmakers have demanded Pruitt's resignation. Five Republican lawmakers joined the call in recent days. But several Republicans expressed support for Pruitt at the hearings, praising his EPA accomplishments.

Representative David McKinley of West Virginia called the criticism of Pruitt a "classic display of innuendo and McCarthyism," a reference to a 1950s-era campaign to root out communists.

Fellow Republican Gregg Harper of Mississippi decried the "political bloodsport" of going after Trump administration officials. But Harper, like several Democrats, raised concerns about reports that whistleblowers who brought some of Pruitt's spending issues to light were removed or reassigned.

"There's no truth to the assertion that positions have been reassigned. I'm not aware of that ever happening," Pruitt said.

Republicans Ryan Costello of Pennsylvania and Leonard Lance of New Jersey quizzed Pruitt on EPA spending for his first-class flights - estimated to have cost taxpayers more than \$100,000 - and security team.

"I've reviewed your answers and find some of them have been lacking or insufficient," Costello said.

Pruitt said he recently decided to stop flying first-class despite the EPA previously saying it was a necessary measure to protect him from the public. And he justified his 24-hour security team by reciting some of the personal threats he has received. He said the EPA inspector general's office has documented the threats and deemed them "unprecedented."

Pruitt also deflected a flurry of questions about his role in granting big raises to two of his aides - one of them amounting to more than 50 percent - over objections from the White House. Pruitt said he had given his chief of staff authority hand out salary increases without White House approval under an obscure provision of a clean water regulation, but was unaware of any of the other specifics.

Regarding his \$50-per-night condo lease from an energy lobbyist's wife, Pruitt said the arrangement received ethics approval and noted that the EPA inspector general's office had found it to be roughly market rate.

The EPA's inspector general's office has since said its review was based on incomplete information, and did not address the question of whether the lease broke other federal ethics regulations.

During the second hearing, Ohio Democrat Marcy Kaptur raised Pruitt's first-class 2017 travels to Italy and Morocco, and questioned why he declined an invitation to visit Ohio to discuss pollution in Lake Erie.

"Do you know how much a flight to Toledo costs?" Kaptur asked.

Scott Pruitt, on Capitol Hill, Deflects Blame for Ethical Lapses

By Coral Davenport and Lisa Friedman, 4/26/18

WASHINGTON — Scott Pruitt, the Environmental Protection Agency chief, had an easier time than expected on Capitol Hill on Thursday as he deflected Democrats' pointed questions about accusations of ethical infractions and lavish personal spending at the taxpayers' expense.

He insisted that the charges were false and that decisions involving illegal actions had been made by his staff members without his knowledge.

"I have nothing to hide," Mr. Pruitt said. Republicans were largely sympathetic.

His performance, supporters said, may have saved his job and his standing with President Trump.

"It's an audience of one, and Pruitt acquitted himself well," said Frank V. Maisano, a principal at the law firm Bracewell, which represents energy companies that lobby the E.P.A.

Mr. Pruitt, whose job security has appeared perilous recently as allegations of ethical improprieties have increased, gave a restrained performance before two House committees. His responses, however, rarely offered direct answers to questions about accusations of excessive spending or conflicts of interest.

While Democrats, who have called for his resignation, sought to force Mr. Pruitt to accept culpability for a variety of ethical missteps, he denied knowledge of or responsibility for the actions in question. Republicans, after briefly chastising Mr. Pruitt in their opening remarks, asked friendly questions that appeared calculated to allow him to talk about his policy proposals.

As reports about Mr. Pruitt have continued to increase, some White House staff members have urged Mr. Trump to fire the E.P.A. chief. Some Republican leaders have called for his resignation, and many in Mr. Pruitt's own party have called for investigations into his actions. But analysts who watched his performance on Thursday said he did well.

Representative Ken Calvert, Republican of California and chairman of the appropriations subcommittee where Mr. Pruitt testified in the afternoon, called the administrator's appearance "very professional."

Asked if Mr. Pruitt should resign he said, "No."

Ultimately, of course, the only opinion about Mr. Pruitt's fate that matters is the president's.

"I think his effort will be well received by the president," Mr. Maisano said. He has more explaining to do, but it was a good effort to mend fences. There were no lethal blows."

Mr. Pruitt is now the subject of 10 federal investigations, including questions about his office's illegal purchase of a secure phone booth, his condominium rental agreement with the wife of an energy lobbyist, and accusations that he demoted or sidelined E.P.A. employees who questioned his actions.

Committee Democrats queried him sharply about the reports of his ethical lapses and pressed Mr. Pruitt on his rollbacks of environmental rules, in particular, a new policy, proposed this week, that would limit the E.P.A.'s use of scientific research in crafting new health and environmental rules. Scientists have deplored the proposed rule, saying that it would significantly limit the agency's use of rigorous science.

“Administrator Pruitt has brought secrecy, conflicts of interest and scandal to the E.P.A.,” said Representative Frank Pallone Jr. of New Jersey, the ranking Democrat on the House Energy and Commerce Committee, where Mr. Pruitt testified Thursday morning. “You are unfit to hold public office and undeserving of the public trust,” he said. “Every indication we have is you really should resign.”

Greg Walden, Republican of Oregon and the chairman of the House Energy committee, offered light criticism before moving on to praising Mr. Pruitt for his efforts to roll back environmental regulations. “I am concerned that the good progress being made on the policy front is being undercut by allegations of your management of the agency and use of its resources,” he said. “These issues are too persistent to ignore.”

Conservative lawmakers from fossil-fuel producing states, who have long pushed for the rollback of E.P.A. regulations, bypassed even slight criticism of Mr. Pruitt, attributing the scrutiny on his actions to a political witch hunt.

Representative David B. McKinley, Republican of West Virginia, told Mr. Pruitt sympathetically that the attacks on him “have an echo of McCarthyism.”

In many ways, the past 14 months of Mr. Pruitt’s tenure has been building to this moment.

As Oklahoma’s attorney general, he made a name for himself aggressively battling the agency he now leads. Mr. Pruitt’s confirmation was fiercely opposed by Democrats, environmentalists and even E.P.A. employees. Since taking the helm of the agency, Mr. Pruitt has worked to strip the E.P.A. of funding, reduce its staff and curb its ability to develop new regulations on fossil fuel pollution.

No E.P.A. director in history has achieved Mr. Pruitt’s level of notoriety. Since the agency was formed, its administrators have been second-tier Washington figures. But Mr. Pruitt’s antagonism toward climate science has made him a nationally-prominent and divisive figure.

Critics said that more than the ethical and spending issues, the real damage to the E.P.A. has been Mr. Pruitt’s systematic weakening of the agency’s ability to protect the environment and public health. While Mr. Pruitt’s performance in Thursday’s hearings may make or break his future within the Trump administration, many said his legacy was already set.

“It’s just been a flagrant, shameless series of calculated decisions to dismantle the country’s most successful domestic enterprise,” William K. Reilly, who led the E.P.A. under the first President George Bush, said of Mr. Pruitt’s leadership. “It’s really a national tragedy,” he said.

At Thursday morning’s hearing, Representative Joe Barton of Texas, who has long denied the overwhelming evidence of human effects on climate change, offered sympathy. “Mr. Pruitt, you’re not the first victim of Washington politics,” he said.

Democrats unsuccessfully sought to pin down Mr. Pruitt on questions about his expenditures, and to force him to accept culpability for some the actions now under investigation.

Representative Tony Cárdenas, a California Democrat, asked about Mr. Pruitt’s soundproof booth, installed in his E.P.A. office at a cost of \$43,000. The Government Accountability Office has ruled that the expenditure broke the law.

“I was not aware of the approval of the \$43,000,” Mr. Pruitt told him, “and if I had known about it, congressman, I would not have approved it.”

Mr. Cárdenas responded that “if someone was spending \$43,000 in my office, I would know about it.”

Representative Diana DeGette, a Colorado Democrat, launched into questions about Mr. Pruitt's involvement in real estate deals in Oklahoma that have been reported in The New York Times, referring to the purchaser of his home as a "shell company."

"It's not a shell company," he said quickly, and added that such financial structures were commonly used to purchase real estate in Oklahoma.

She then asked Mr. Pruitt whether he had paid taxes on rent he received. He said the issue had been handed over to an accountant.

"I'm not doing this to hassle you. I'm doing this as an elected official," Ms. DeGette said as she ended her questions. "Everything we do has to be to the highest ethical standards."

Representative Paul Tonko, the ranking Democrat on the House Energy's subcommittee on the Environment, pressed Mr. Pruitt on his claims that he was unaware that the E.P.A. had used an obscure legal provision to grant hefty raises to political appointees, bypassing approval by the White House. Mr. Pruitt has said the decision was taken by his chief of staff, Ryan Jackson.

"Did you authorize Mr. Jackson to sign those documents for you?" Mr. Tonko asked.

"I was not aware of the amount and I was not aware of the bypassing that was going on," Mr. Pruitt replied.

Even some Republicans criticized Mr. Pruitt for repeatedly blaming his staff.

"If you say give me a phone booth, and your staff does it, you should say, I'm at fault," said Representative John Shimkus, Republican of Illinois, the chairman of the House Energy subcommittee, speaking to reporters after the morning hearing. "It's never good to blame your staff. Or at least do it behind closed doors."

And Representative Anna G. Eshoo, a California Democrat, used her turn at questioning to try to get Mr. Pruitt to accept culpability. "You have a solid record of violating ethics rules from the state level to the federal government," she told Mr. Pruitt. "I think it's an embarrassment." And then she asked, "Do you have any remorse? Yes or no?"

Mr. Pruitt responded: "I think there are changes I've made already. I've made a change from first class to coach travel." Ms. Eshoo returned to her call for a yes-or-no answer, and asked Mr. Pruitt whether he would reimburse the government. He launched into a long response, but she cut him off.

"With all due respect, I may be elected, but I'm not a fool," she said. "This is not 'dodge-question' day."

Washington Post

https://www.washingtonpost.com/news/energy-environment/wp/2018/04/26/scott-pruitt-braces-for-tough-questions-at-double-hearings-on-capitol-hill/?utm_term=.3a2ff128b3e1

Scott Pruitt admits little culpability in EPA controversies, mostly blames aides and staff

By Brady Dennis and Juliet Eilperin, 4/26/18, 10:37 PM

Scott Pruitt gave little ground Thursday as he testified before two House panels about controversial spending and management decisions he has made while at the helm of the Environmental Protection Agency, blaming aides for exorbitant spending and saying career officials signed off on other controversial decisions.

Bolstered by Republican lawmakers, who praised his push to unravel Obama-era regulations and cut the agency's workforce, Pruitt suggested that the censure he's faced in recent months stems largely from opponents who want to stall President Trump's environmental policies.

"Those who have attacked the EPA and attacked me are doing so because they want to derail the president's agenda. I'm not going to let that happen," Pruitt told members of the House Energy and Commerce environment subcommittee during the morning. "A lie doesn't become true just because it appears on the front page of the newspaper."

Whether Pruitt's composed performance will be enough to preserve his job remains unclear, but there were few signs Thursday that House Republicans were ready to abandon him. Few GOP lawmakers — among them, Rep. Ryan Costello (Pa.), who is retiring, and Rep. Leonard Lance (N.J.), who is locked in a tough reelection fight — criticized Pruitt during more than five hours of questioning.

Three White House officials said Pruitt's testimony — while "not good," in the words of one — did not deliver a knockout blow to his tenure. The EPA chief has little support among senior aides there, and the president has voiced more concern as allegations and investigations involving Pruitt have accelerated. Multiple probes are underway by the agency's inspector general, as well as by the House Oversight Committee, the Government Accountability Office and the White House itself.

Trump did not watch much of the administrator's testimony live, one official with direct knowledge of his schedule said, but will likely view segments later along with media coverage.

Democratic lawmakers pushed Pruitt hard on several fronts, prompting him to concede that he had known in advance of an aide's pay hike, that he had not sought an ethics ruling on his rental of a condo from a lobbyist and that a costly soundproof phone booth installed in his office did not constitute the kind of secure communications facility commonly used by federal officials for classified discussions.

"I'm not afraid to admit that it has been a learning process," he said.

Pruitt repeatedly faulted staff for spending decisions that have drawn intense heat and denied that he had reassigned or demoted anyone who questioned those expenditures. Several people — including Pruitt's former deputy chief of staff for operations, Kevin Chmielewski — have charged that they faced retaliation after challenging plans to spend taxpayer funds on first-class travel, office upgrades and other perks for him.

The EPA chief insisted there was "no truth" to such reports, adding, "I'm not aware of that ever happening."

He also said he had no idea that his request to install a secure phone line in his office would lead to the customized phone booth costing \$43,000. "I was not aware of the approval of the \$43,000," Pruitt said at one point, "and if I had known about it, congressman, I would not have approved it."

Mid-afternoon, Pruitt moved over to a House Appropriations subcommittee and was again pressed on how that phone booth came about. The decision to install it "should not have been made," he said.

Referring more broadly to management and spending missteps at the agency, Pruitt told the panel, "If there are processes that have not been followed internally . . . I commit to make those changes prospectively."

He addressed questions about his first-class travel by saying that, even with ongoing security concerns, he had returned this year to flying coach. "I recently made changes to that because I felt like, from an optics and perception standpoint, it was creating a distraction," he said.

He said he was aware of the move to give agency senior counsel Sarah Greenwalt a raise but did not push for it. She and another staffer received significant raises this spring over the objections of officials in the White House Personnel Office. "I was aware of one of those individuals" receiving a raise, Pruitt told Costello.

Greenwalt got a 52 percent increase last month, while Millan Hupp, director of scheduling and advance, got a 33 percent boost. The Washington Post first reported last week that Greenwalt had emailed a colleague in EPA's human resources department that the raises had been "discussed" with the administrator in advance. Each woman had worked for Pruitt in Oklahoma before coming to Washington.

Earlier, when Rep. Paul Tonko (D-N.Y.) asked Pruitt if he had authorized chief of staff Ryan Jackson to sign the raises, Pruitt had replied, "I was not aware of the amount, nor was I aware of the [Personnel Office] process not being respected." He said he had delegated authority to Jackson to review and approve such personnel actions — a move that was documented by a March 2017 memo the agency released Thursday.

Jackson reversed both raises on April 5, according to EPA documents.

While Costello and Lance bore in on his spending on security and travel, other Republicans lauded his aggressive actions to roll back regulations, most prominently the Obama administration's signature effort to cut carbon emissions from power plants.

"The greatest sin you've committed, if any, is you've actually done what President Trump ran on, won on and what he's commissioned you to do," Rep. Kevin Cramer (R-N.D.) told Pruitt during the first hearing.

Rep. Joe Barton (R-Tex.) mounted a defense on Pruitt's behalf. "You're not the first person to be the victim, for lack of a better term, of Washington politics," the lawmaker told him. Referring to the fact that the administrator frequently traveled in first class during his first year at EPA, Barton inquired, "Is it illegal to fly first class?"

Pruitt said that those tickets had been approved by the agency's travel and security offices, prompting Barton to reply, "But it's not illegal. It may look bad, but it's not illegal."

Rep. David B. McKinley (R-WVa.) described the myriad allegations Pruitt faces as "a classic display of innuendo and McCarthyism," adding that he was disappointed his colleagues across the aisle couldn't restrict their questions to ones about policy. "Some just can't resist the limelight, the opportunity to grandstand," he accused.

The EPA's press office issued a news release shortly before the second hearing, with quotes from Pruitt's congressional supporters, including Cramer's comment: "I never cease to be impressed by the level of detail you know."

But Democrats were unsparing in their criticism. Tonko, the House Energy and Commerce subcommittee's top Democrat, delivered a fusillade as Pruitt looked on impassively. After ticking off several allegations about the administrator's personal financial dealings and professional decisions, the lawmaker said, "In almost all cases, the more we have learned, the worse they get."

He concluded by telling Pruitt, "You have failed as a steward of American taxpayer dollars and of the environment."

Rep. Frank Pallone Jr. (N.J.), the Energy and Commerce's top Democrat, was even harsher. "You are unfit to hold public office, and you are undeserving of the public trust," he told Pruitt.

Pallone pressed Pruitt on whether he had retaliated against employees who questioned some of his spending decisions. "Has it always been your practice to fire people who disagree with you?" he asked.

Pruitt rebutted the charge. "I don't ever recall a conversation to that end," he said.

The administrator did retreat some during an exchange with Rep. Diana DeGette (D-Colo.). Previously, EPA officials had likened the privacy phone booth to a Sensitive Compartmented Information Facility (SCIF) that Pruitt needed for secure conversations with the White House and other officials. A recent GAO report did not assess the booth's security merits but said Pruitt violated federal spending laws by spending more than \$5,000 upgrading his office without advance notice to Congress.

The phone booth “is actually not a SCIF,” Pruitt said, even as he rejected the GAO’s conclusion. He acknowledged that he has only used the booth sparingly. “It’s for confidential communications, and it’s rare,” he added.

At times, he professed to be unfamiliar with some of the technology his aides had installed in his office.

“What is a biometric lock?” Rep. Peter Welch (D-Vt.) asked.

“I don’t know,” the administrator replied. “I just put a code in.”

At hearings, EPA chief seeks to divert blame for ethics woes

By Michael Biesecker and Ellen Knickmeyer, 4/27/18

WASHINGTON (AP) — Environmental Protection Agency chief Scott Pruitt, yet another Trump administration official with his job on the line over ethical concerns, took heat from lawmakers over his profligate spending and lobbyist ties and tried to divert responsibility to underlings.

The EPA administrator said “twisted” allegations against him were meant to undermine the administration’s anti-regulatory agenda, and he denied knowing details of some of the extraordinary spending done on his behalf at the agency.

The public grilling at back-to-back House hearings on Thursday, convened to consider EPA’s budget, came as support has appeared to erode for Pruitt among fellow Republicans after revelations about unusual security spending, first-class flights, a sweetheart condo lease and more. Even Republicans who heartily support Pruitt’s policy agenda said his apparent lapses had to be scrutinized.

Democrats excoriated him.

“You are unfit to hold public office,” said Rep. Frank Pallone of New Jersey.

“You’ve become the poster child for the abuse of public trust,” said Rep. John Sarbanes of Maryland.

Although most of the Republican lawmakers at the hearings rallied around Pruitt, reviews were mixed. Rep. John Shimkus of Illinois, chairman of the first panel that questioned Pruitt, said afterward the EPA chief was “a little vague,” adding, “It’s never a good idea to blame your staff in public.”

Democratic lawmakers assailed EPA chief Scott Pruitt on Thursday for the ethics and spending scandals that have prompted multiple calls for his ouster. The chairman of the panel that is questioning Pruitt called the allegations a “distraction but one this committee cannot ignore.” (April 26)

Asked whether Pruitt should resign, he said that’s not his call and suggested it’s up to President Donald Trump.

Thursday’s hearings were Pruitt’s first major appearance since a Fox News interview in early April that was widely considered to be disastrous within the West Wing.

Before Congress, the administrator demonstrated his background as a lawyer, giving clipped answers and sticking to repeating rehearsed talking points.

He visibly bristled as Democrats pressed about the many financial allegations against him, then relaxed when Republicans on the panel gave him openings to expand on his policy steps at EPA.

Mocking Pruitt's opponents, Republican Rep. Kevin Cramer of North Dakota said that as far as the EPA chief's critics were concerned, "I think the greatest sin you've done is you've actually done what President Trump ran on."

"It's shameful that this day has turned into a personal attack," GOP Rep. Bill Johnson of Ohio said.

Trump has stood by his EPA chief, but behind closed doors, White House officials concede Pruitt's job is in serious jeopardy.

Pruitt has faced a steady trickle of revelations involving pricey trips in first-class seats and unusual security spending, including a \$43,000 soundproof booth for making private phone calls. He also demanded 24-hour-a-day protection from armed officers, resulting in a 20-member security detail that blew through overtime budgets and racked up expenses approaching \$3 million.

The EPA chief acknowledged under sharp questioning that he did, in fact, know something about huge pay raises given to two women on his staff, at least one of them a friend, after insisting weeks ago that he didn't approve the raises and didn't know who did. After his initial denial, documents emerged showing that EPA chief of staff Ryan Jackson signed off on the raises and indicating he had Pruitt's consent.

Pruitt said Thursday he delegated authority to Jackson to give the raises but didn't know the exact amounts. Senior legal counsel Sarah Greenwalt received a raise of more than \$66,000, bringing her salary to \$164,200, and scheduling director Millian Hupp saw her salary jump from \$48,000 to \$114,590.

Under questioning, Pruitt appeared to acknowledge that Hupp helped him find accommodations in the capital but said her search apparently did not cost taxpayers. "I'm not aware of any government time being used," he said. "She is a friend."

As he has previously, Pruitt sought to deflect questions about any missteps by blaming subordinates.

—On the communications booth: "I was not involved in the approval of the \$43,000, and if I had known about it, Congressman, I would not have approved it."

—On flying first class at taxpayer expense: "Security decisions at the agency are made by law enforcement personnel, and I have heeded their counsel."

—On the pay raises to the two women: "I was not aware of the amount provided or the process that was used in providing that."

At several points, he spoke of decisions made by "career individuals at the agency."

"You're the guy in charge," Democratic Rep. Peter Welch of Vermont countered. "It really seems like there's something on your desk with the motto: 'The buck stops nowhere.'"

Pruitt drew an unusual rebuke from the office of EPA's inspector general, Arthur Elkins, while he was still testifying. A spokesman for Elkins, Kentia Elbaum, said he never signed off on an internal review of security threats that Pruitt cited at the hearing to explain why he needed unusual arrangements for his safety.

Elbaum said the summary was prepared by Patrick Sullivan, an assistant inspector general, and provided to Pruitt's security team but said it was later "leaked without authorization."

Pruitt read aloud from two security threats, one from a man who tweeted that he planned to shoot Pruitt. Investigators determined that the person who wrote the tweet "is currently believed to be living in India."

Democratic Rep. Betty McCollum of Minnesota was unmoved, saying: "We all receive threats on our Facebook page."

The same document Pruitt cited also recounted similar threats against Obama EPA Administrator Gina McCarthy, who routinely flew in coach and didn't require full-time protection.

Pruitt's troubles began in earnest last month, when ABC News first reported he had leased a Capitol Hill condo last year for just \$50 a night that was co-owned by the wife of a veteran fossil fuels lobbyist whose firm had sought regulatory rollbacks from EPA.

Both Pruitt and the lobbyist, Steven Hart, denied he had conducted any recent business with EPA. But Hart was forced to admit last week he had met with Pruitt at EPA headquarters last summer after his firm, Williams & Jensen, revealed he had lobbied the agency on a required federal disclosure form.

Asked Thursday whether he had received any other gifts from lobbyists seeking favors from EPA, Pruitt replied, "I'm not aware of any instances."

Pruitt's Capitol Hill Defense: Don't Blame Me

By Jennifer A Dlouhy and Ari Natter, 4/26/18, 4:00 AM, Updated 4/27/18, 4:00 AM

Environmental Protection Agency Administrator Scott Pruitt made it through nearly six hours of grilling on Capitol Hill on Thursday by mostly blaming subordinates for the swirl of ethics allegations that have endangered his tenure.

The EPA chief asserted in back-to-back House hearings that he was not aware of the size of the pay raises that were granted to two top aides over White House objections; didn't ask to fly first-class; and didn't know that the secure phone booth installed in his office was going to cost \$43,000.

"If I had known about it, I would not have approved it," Pruitt said when asked about the phone booth.

He stayed calm and lawyerly, managing to avoid any gaffes that could further jeopardize his job. But he didn't appear to win any converts who could aid his political survival. White House officials have cautioned Republican lawmakers and other conservative allies to temper their defense of Pruitt, in a sign administration support for him may be waning.

"It's never good to blame your staff," Illinois Representative John Shimkus, the Republican chairman of the House Energy and Commerce environment subcommittee, told reporters after the hearing. "Or you do it behind closed doors and you talk to them -- but not publicly."

Pruitt, 49, has drawn fire -- and at least nine formal investigations -- for frequent travel to his home state of Oklahoma; questionable spending decisions at the EPA; the raises, which amounted to tens of thousands of dollars; and allegations that some employees were sidelined after questioning his decisions.

Democrats dinged Pruitt for not being able to definitively say whether he had paid taxes on earnings tied to Oklahoma real estate or whether an associate administrator had reliably shown up for work before resigning earlier this month.

"For someone who has been in the job for a year and half, he didn't seem to be in command of a lot of details," Representative Marcy Kaptur, an Ohio Democrat, observed after the afternoon appropriations subcommittee hearing with Pruitt.

Representative Betty McCollum, a Democrat from Minnesota, came right out at the hearing and told him he should resign.

"He could have taken personal responsibility," McCollum said afterward.

Representative Anna Eshoo, a Democrat from California, ticked through the allegations before asking Pruitt: "Do you have any remorse?"

Pruitt cast aside the controversies as "a distraction to our agenda," and called them "half truths, or, at best, stories that are so twisted they do not represent reality."

"Those who attack the EPA and attack me are doing so because they want to attack and derail the president's agenda and undermine this administration's priorities," Pruitt said. "I have nothing to hide with how I ran the agency over the past 16 months."

Pruitt stressed he has made changes in response to some concerns, such as returning to flying coach when his first-class airline travel drew criticism. He said the costlier fares were chosen by security officials concerned about threats against him.

Travel Optics

"I felt like from an optics and perception standpoint it was creating a distraction," Pruitt said, in explaining the downgrade.

Some -- but not all -- Republicans provided a friendlier welcome, with several extolling Pruitt's performance at the EPA, at least one apologizing for colleagues' "abrasive" questions and two casting the deluge of accusations against the administrator as McCarthyism.

"It appears that it has become a political blood sport to try and destroy anybody with the Trump administration," observed Representative Gregg Harper, a Republican from Mississippi.

Representative David McKinley, a West Virginia Republican, said Pruitt had been the target of a "classic display of innuendo and McCarthyism that we're seeing too often here in Washington." Some lawmakers "just can't resist the limelight, the opportunity to grandstand," McKinley said.

Representative Leonard Lance, a Republican from New Jersey, said he was troubled by the allegations of overspending and singled out the phone booth acquisition. The EPA building in Washington already has a secure room where classified information can be shared, so why did we need to spend taxpayer funds on another, Lance asked. "I think it was a waste of funds."

"I gave a simple communication to my leadership team" asking for a secure phone line, Pruitt explained. "It turned into a 40,000-plus expenditure on this phone booth."

From beginning to end, that purchase was handled by EPA career staff, Pruitt said. "Those were all career individuals that were part of that process," Pruitt said.

Some Republicans said Pruitt deftly fielded questions, answering them about as well as he could have. "I think he did fine. I see no reason to change," said Representative Ken Calvert, a California Republican. "We have a committee that is looking into these charges and we'll have a resolution to it."

EPA prepping documents in response to Oversight probe

By Anthony Adragna, 4/26/18, 8:11 PM

EPA staff is in the process of providing documents to the House Oversight Committee that it believes will respond to allegations of lavish spending and unethical conduct by Administrator Scott Pruitt and may negate the need for several aides to appear for interviews, according to a senior EPA official.

The agency staffers believe the documents will show former Trump campaign aide Kevin Chmielewski, who served as a senior aide to Pruitt, made a number of “exaggerations” when he spoke with Democratic and Republican lawmakers, according to the official.

Senior staffers at the agency are also willing to sit for interviews with Oversight staff if desired, the official said. Those officials include: Pasquale “Nino” Perrotta, Pruitt’s security chief; Ryan Jackson, Pruitt’s chief of staff; Millan Hupp, a scheduling and advance aide; and Sarah Greenwalt, a senior counsel to Pruitt.

House Oversight Chairman Trey Gowdy (R-S.C.) expanded his probe into the embattled EPA chief’s activities one day after his staff sat down with Chmielewski. In an April 13 letter, Gowdy requested a host of documents and that the interviews be scheduled by April 27.

In addition, an Oversight Committee aide said earlier this week the committee had informally requested on April 16 that Samantha Dravis, formerly one of Pruitt’s closest aides, appear for a transcribed interview with committee staff. Dravis had not been included in Gowdy’s original letter because it was thought she left the agency, but her resignation was actually effective April 20, according to the aide.

A spokeswoman for the Oversight Committee did not respond to request for comment today.

Daily Caller

SCOOP: EPA Memo Suggests Pruitt Did Not Lie To Fox News About Staff Raises

By Michael Bastasch, 4/27/18, 10:43 AM

Environmental Protection Agency Administrator Scott Pruitt told Congress he “delegated” authority over controversial raises to his chief of staff, and some reporters took that as a subtle admission he lied.

However, an EPA memo obtained by The Daily Caller News Foundation shows Pruitt delegated personnel authority to Chief of Staff Ryan Jackson more than one year ago, not around the time of the controversial raises. TheDCNF first revealed the existence of the EPA memo in a Thursday tweet.

Based on the document and Pruitt’s testimony, he was not saying he gave Jackson authority to grant the two raises in question.

Democratic lawmakers grilled Pruitt during two hearings on Thursday, including on reports he authorized big salary raises for two close aides over White House objections. Democratic New York Rep. Paul Tonko’s exchange with Pruitt got the most attention.

Tonko asked Pruitt for a response to reports in The Atlantic he, or his staff, authorized raises for two staffers who followed the administrator from Oklahoma. The raises were rejected by White House staffers, so EPA used a provision of federal law to go around the oval office.

“Those were delegated to Mr. Jackson and the Inspector General did reference that in his management alert,” Pruitt responded to Tonko.

“There were delegations giving him that authority,” Pruitt added.

Fox News correspondent John Roberts interpreted Pruitt’s delegation of authority to Jackson as “contradicting what he told” Fox’s Ed Henry earlier in April.

Pruitt told Henry he’d only found out about the raises given to two staffers when The Atlantic reported on the incident the day before, on April 3. Pruitt also told Henry he did not know who on his staff authorized the pay raises over White House objections.

The Atlantic reported that Pruitt himself approached the White House about the raises for two staffers, the authorized the raises using a provision of the Safe Drinking Water Act after PPO shot him down.

Roberts and others claimed this showed Pruitt changed his story on the raises, essentially lying to Fox News a few weeks earlier.

But the memo obtained by TheDCNF shows he delegated Jackson authority over personnel decisions under the Safe Drinking Water Act in March 2017 — one year before EPA approached the White house about the raises.

The “delegated” authority Pruitt referred to happened months ago, not as the raises for two staffers were being sought, based on the memo.

Jackson later admitted he authorized the pay raises, and EPA’s Office of Inspector produced a report showing Jackson did indeed sign off on them “for Scott Pruitt.” According to the memo, Pruitt had given Jackson the authority to make such personnel decisions about one year earlier.

Documents: EPA reversed raises one day after Pruitt’s Fox interview

By Emily Holden and Nick Juliano, 4/26/18, 6:45 PM

EPA reversed raises for two top aides to Administrator Scott Pruitt the day after his interview with Fox News, according to documents shared by the agency today.

Pruitt told Fox his staff had authorized the raises and he had “corrected them.” A day later, on April 5, Pruitt’s chief of staff, Ryan Jackson, signed personnel forms reverting the aides to their previous pay grades, according to copies of the forms reviewed by POLITICO. Jackson signed the documents “for Scott Pruitt,” as he had on forms authorizing the initial pay bumps a few days earlier, according to documents previously released by EPA’s inspector general.

Sarah Greenwalt, senior counsel to Pruitt, received a \$56,765 increase in her annual salary on April 1, and Millan Hupp, director of scheduling and advance, saw a \$28,130 increase that same day, according to the earlier IG documents.

Jackson reversed those moves on April 5, bumping Greenwalt's salary back to \$109,900 per year, and Hupp's to \$88,450, according to the new documents.

Pruitt signed a memo in March 2017 delegating to Jackson the ability to make hiring and salary decisions using a special section of the Safe Drinking Water Act.

"Administrator Pruitt has consistently said he was not aware of the amount of the raises or the process that was used, as he said both today and in prior interviews," EPA spokesman Jahan Wilcox said in a statement. "He was aware one of the individuals was receiving changes to job responsibilities and might be asking for a raise, but had no further involvement in the discussions, negotiations or approvals, because he had authorized his Chief of Staff and other EPA officials to handle all personnel matters."

Politico

<https://www.politicopro.com/energy/whiteboard/2018/04/epa-says-chief-of-staff-had-authority-to-raise-salaries-without-pruitts-review-1123943>

EPA says chief of staff had authority to raise salaries without Pruitt's review

By Emily Holden, 4/26/18, 4:18 PM

EPA chief of staff Ryan Jackson has had blanket authorization since the beginning of Administrator Scott Pruitt's tenure to handle hiring and raises under the Safe Drinking Water Act, according to an agency document shared by spokesman Jahan Wilcox.

In a memo dated March 7, 2017, Pruitt delegates to Jackson "the authority to approve all personnel actions for personnel appointed under the Safe Drinking Water Act." According to the memo, Pruitt says he will "retain the right to exercise or withdraw" that authority.

The law has allowed EPA to hire and increase salaries for political appointees without White House consent. Pruitt, under fire after key aides got raises of up to 72 percent, has said he was unaware of the specifics of the salary changes.

He acknowledged to lawmakers on the House Energy and Commerce Environment Subcommittee earlier today that he had delegated authority to Jackson but did not say when.

Pruitt also said staffers were responsible for his \$43,000 secure phone booth and biometric locks installed in his office. He said his security team made decisions about his air travel, which has cost at least \$163,000, including first-class, charter and military flights.

Politico

<https://www.politicopro.com/energy/whiteboard/2018/04/mccollum-questions-pruitt-justification-for-security-costs-1123434>

McCollum questions Pruitt justification for security costs

By Alex Guillen, 4/26/18, 4:50 PM

Rep. Betty McCollum (D-Minn.) questioned the severity of the threats EPA Administrator Scott Pruitt has faced in office, which the agency has cited to justify his heavy spending on security.

At a House Energy and Commerce subcommittee hearing this morning, Pruitt cited a report from the inspector general's office that documented threats directed at him and his family in social media posts, emails and letters. The document was first reported earlier this month by CBS.

Later, at Pruitt's second hearing of the day, before a House Appropriations subcommittee, McCollum said the IG's office had disputed Pruitt's characterization of the document and expressed skepticism about the seriousness of its findings.

"We all receive death threats on our Facebook page," McCollum said after Pruitt read aloud a threat sent to his daughter via social media.

McCollum asked Pruitt whether EPA Inspector General Arthur Elkins Jr. had written the report he cited. "I'm looking at the document that says inspector general," Pruitt replied.

But a spokeswoman for the IG's office said today said it came from another official, not Elkins himself.

"It was an internal memo from Assistant IG for Investigations Patrick Sullivan," OIG spokeswoman Tia Elbaum said in an email. "It was leaked without authorization. It will be released in the near future as part of an OIG FOIA response."

After the hearing, McCollum said she was disappointed with Pruitt.

"He could have taken personal responsibility and really meant it," she told reporters. "Instead he messed up in that he got caught up in thinking he needed more security than he needed, and that when employees pushed back on him, he did retaliate."

Politico

<https://www.politicopro.com/energy/whiteboard/2018/04/pruitt-distances-himself-from-lng-promotion-on-morocco-trip-1122333>

Pruitt distances himself from LNG promotion on Morocco trip

By Anthony Adragna, 4/26/18, 3:38 PM

EPA Administrator Scott Pruitt today downplayed the role promoting liquefied natural gas exports played in his December trip to Morocco, saying he was there for negotiations over the environmental chapter of a free trade agreement with that country.

While EPA at the time described the purpose of the trip as twofold, Pruitt told members of Congress today that promoting LNG was not his idea.

"There was a lot of reference made to LNG only because the ambassador [of Morocco] asked me to share that with individuals when I was in country," Pruitt told Rep. Chellie Pingree (D-Maine) at an Appropriations subcommittee hearing, his second appearance on Capitol Hill of the day.

EPA did not announce Pruitt's trip in advance, but a press release announcing it after the fact said he discussed both the trade agreement and "the potential benefit of liquified [sic] natural gas (LNG) imports on Morocco's economy."

Critics argue the trip fell well-outside the portfolio of the EPA administrator.

"I can't for the life of me imagine why an EPA administrator would be over there promoting energy sales," Pingree said. "We have a Department of Energy."

Washington Examiner

<https://www.washingtonexaminer.com/policy/energy/scott-pruitt-blames-ambassador-for-talking-up-energy-exports-in-morocco>

Scott Pruitt blames ambassador for talking up energy exports in Morocco

By John Siciliano, 4/26/18, 4:17 PM

Environmental Protection Agency chief Scott Pruitt downplayed his trip to Morocco last year, saying the only reason he discussed natural gas exports there was because he was asked to by the Moroccan ambassador to the United States.

The primary purpose of the trip was to hash out the environmental component of a free-trade deal the U.S. finalized with Morocco in February, he said at a hearing Thursday afternoon before the House Appropriations Committee's interior subcommittee.

"There is a free-trade agreement, the ambassador of Morocco actually met with me in advance of the free-trade agreement that was being negotiated and completed in February of this year," Pruitt explained, after being prodded by Democratic Rep. Chellie Pingree of Maine on why an EPA chief would be promoting fossil fuels in another country.

"We were there in December to defend the environmental chapter" of the trade deal, Pruitt said. The EPA inspector general is investigating the trip's costs, which amounted to \$40,000.

The inspector general's office added the Morocco trip to a previous investigation it was undertaking on Pruitt's lavish domestic travel and security costs in response to a letter by Sen. Tom Carper of Delaware, the top Democrat on the Environment and Public Works Committee. Carper also asked the EPA watchdog to probe the focus of Pruitt's trip and his focus on liquefied natural gas exports from the United States.

"Well, it's certainly been portrayed in another way and it's certainly raised a lot of concerns," Pingree said after hearing Pruitt's response. "I would not like to think that you were promoting fossil fuels or fossil fuel sales outside the country."

The EPA issued a press release on Dec. 12, after his visit, that stated that he was in Morocco to outline "U.S. environmental priorities for updating the environmental work plan under the U.S.-Morocco Free Trade Agreement and the potential benefit of liquefied natural gas (LNG) imports on Morocco's economy. "

Some media reports have noted that the energy lobbyist whose wife Pruitt rented a Capitol Hill condo from was a lobbyist for Cheniere Energy, a top exporter of LNG.

The Hill

<http://thehill.com/policy/energy-environment/385065-ig-threat-memo-cited-by-pruitt-isnt-from-ig>

IG: Threat memo cited by Pruitt isn't from IG

By Timothy Cama, 4/26/18, 4:13 PM

The Environmental Protection Agency's (EPA) Office of Inspector General (OIG) pushed back Thursday against EPA head Scott Pruitt, saying he misrepresented a memo about the threats against him in testimony to the House.

In two separate hearings Thursday, Pruitt presented to lawmakers a "threat assessment" that he said came from Inspector General Arthur Elkins detailing various death threats against him.

He used the memo to justify his security costs, including the purchase of first-class airline tickets and the employment of a 24/7 security detail.

But the OIG says the document wasn't from Elkins.

"The memo that he read from was not from Inspector General Elkins. It was an internal memo from Assistant IG for Investigations Patrick Sullivan," OIG spokeswoman Kentia Elbaum said in a statement.

"It was leaked without authorization," Elbaum said, adding that the OIG plans to release it soon in response to a Freedom of Information Act (FOIA) request.

Elbaum's statement described Pruitt as "waving a document he said was from the Inspector General."

At the afternoon hearing with the House Appropriations Committee's subcommittee with authority over the EPA's budget, Rep. Betty McCollum (Minn.), the subpanel's top Democrat, repeatedly asked Pruitt whether the document was from Elkins.

"The document says 'inspector general,'" Pruitt replied. He similarly claimed earlier to the House Energy and Commerce Committee that the inspector general wrote the report.

Sullivan has told multiple news outlets that Pruitt has gotten far more death threats than previous EPA administrators.

"We have at least four times — four to five times the number of threats against Mr. Pruitt than we had against Ms. [Gina] McCarthy," he told CNN.

The New York Times reported this month that Sullivan was spotted drinking at a bar near the EPA's headquarters with Pasquale "Nino" Perrotta, the head of Pruitt's security detail and the impetus behind much of Pruitt's high-level security.

That spurred Citizens for Responsibility and Ethics in Washington to ask that the OIG look into their relationship and whether Sullivan should be involved with investigations involving Pruitt or Perrotta.

Highlights from Pruitt's marathon day on Capitol Hill

By Stephanie Ebbs and Lucien Bruggeman, 4/26/18, 7:53 PM

Environmental Protection Agency chief Scott Pruitt insisted he has "nothing to hide" and shifted blame for some of the agency's spending decisions to staffers during six hours of grilling on Capitol Hill Thursday.

Asked how the White House viewed Pruitt's performance, one administration official told ABC News that he still "has no support in the building except from the president."

Some Republicans defended Pruitt, saying that Democratic critics were trying to shoot the messenger and that he was a victim of "Washington politics" while Pruitt himself said some of the accusations of ethical misconduct were just untrue.

Pruitt faced an array of questions about his decisions to roll back environmental policies since taking over the agency, whether he granted controversial raises to two of his aides and the cost of his security detail and travel.

Pruitt had addressed some of the allegations and ongoing investigations in a Fox News interview that aired earlier this month but Thursday was the first time he was questioned about reports that he retaliated against EPA employees that

expressed concerns about his spending at the agency as well as claims from an EPA whistleblower, described in a letter from Democrats, that his security detail exaggerated threats against him to justify increased spending and first-class seating on flights.

Pruitt appeared before a House Energy and Commerce subcommittee Thursday morning and then before a House Appropriations subcommittee in the afternoon.

Here are some highlights from the two hearings.

A member of the House Appropriations subcommittee raised questions about one of Pruitt's trips abroad, a recent visit to Morocco during which Pruitt promoted U.S. natural gas exports – typically within the Energy Department's purview.

"I can't for the life of me imagine why an EPA administrator would be over there promoting energy sales," Rep. Chellie Pingree, D-Maine, said.

Pruitt defended the trip as a preliminary meeting for the U.S.-Morocco Free Trade Agreement where "there was a lot of reference to LNG" – shorthand for liquefied natural gas – "only because the ambassador asked me to share that with individuals while I was in country."

It wasn't immediately clear which ambassador Pruitt was referring to.

ABC News has previously reported that Pruitt recorded only one meeting on the first day of the costly trip to the Saharan country.

An initial agenda for the trip reviewed by ABC News included four redacted pages.

The afternoon hearing began much in the same way as the Energy and Commerce subcommittee's morning hearing ended, with Democratic ranking member Rep. Betty McCollum, D-Minn., holding Pruitt's feet to the fire about security and travel expenditures.

As Pruitt read aloud threats made against him – referring to a document he says was provided to him by the EPA's inspector general – in an effort to justify higher security costs – McCollum pushed back, telling Pruitt that "we all receive death threats on our Facebook page."

McCollum revealed that the committee reached out to the EPA's inspector general ahead of the hearing and said the inspector general, Arthur Elkins, "disputed" some of Pruitt's claims.

Pruitt insisted the document was from the inspector general, and McCollum asked that the document be submitted for the hearing's official record.

When ABC News reached out to the inspector general's office, a spokesperson confirmed Rep. McCollum's assertion that Elkins disputed Pruitt's claim.

"The memo that [Pruitt] read from was not from Inspector General Elkins," a spokesperson for the inspector general said, adding, "It was an internal memo from Assistant IG for Investigations Patrick Sullivan. It was leaked without authorization. It will be released in the near future as part of an OIG FOIA response."

After nearly four hours of questioning, the House Energy and Commerce subcommittee hearing ended the way it began, with exasperated Democratic lawmakers peppering Pruitt with questions about reports of unethical behavior and lavish spending – and criticizing Republicans on the panel for refraining from doing so.

Asked whether he has any remorse for what Rep. Anna Eshoo, D-Calif., called “excessive spending,” Pruitt said he’s already made changes, citing his decision to fly in coach after reports emerged that Pruitt flew in first class.

“This is not a dodge question day... I don’t really find you forthcoming,” Eshoo added.

Vermont Democrat Peter Welch again questioned Pruitt about the purchase of a \$43,000 soundproof phone booth, pointing to the two secure spaces already within the EPA to communicate sensitive information.

Pruitt reiterated that his staff coordinated the purchase of the secure phone booth, adding that the two other secure spaces are “not that close to my office.”

With regard to his chain of command and delegating the phone booth purchase to staff, Pruitt conceded that “in this instance, the process failed.”

In the waning moments of the hearing, Rep. Kathy Castor, D-Fla., expressed disappointment in her Republican colleagues for letting Pruitt “off the hook” by avoiding questions about his conduct.

“It’s embarrassing that most of the Republicans refuse to take this committee’s oversight responsibility seriously,” Castor said.

Pruitt shifted blame onto “career EPA officials” for erecting a private phone booth in the administrator’s office that cost more than \$43,000.

“I did not have access to secure communications, I gave directions to my staff to address that,” Pruitt said, adding that staffers had “made expenditures that I did not approve.”

The EPA spent more than \$43,000 to install a “secure phone booth” in Pruitt’s office last year, according to agency documents obtained by American Oversight, a watchdog group founded by former Obama administration officials.

Pruitt confirmed that the phone booth was not certified as a SCIF – a facility used for secure communications to discuss classified information. The EPA already has two SCIFs elsewhere in its headquarters, according to the GAO report.

Earlier this month, the Government Accountability Office found that the EPA violated federal law by failing to notify Congress before spending more than \$5,000 on the phone booth.

In a letter to the GAO, the EPA also argued that spending on the booth did not need to comply with the appropriations law because it was not an “aesthetic improvement,” but an expense to facilitate agency business. A decision by EPA’s general counsel disagreed with that finding, saying that it was a functional improvement and not just aesthetic.

Pruitt said the EPA is investigating that matter internally.

Pruitt told the committee that he gave a top aide permission to give at least two EPA employees big raises, deviating from how he characterized authorization for these raises in the past.

A report from the EPA’s internal watchdog found that it was Pruitt’s chief of staff, Ryan Jackson, who signed off on raises for 30-year-old senior legal counsel Sarah Greenwalt and 26-year-old scheduling director Millian Hupp under a little-known provision of the Safe Drinking Water Act.

Thursday, Pruitt confirmed that he delegated that authority to Jackson.

In an interview that aired on Fox News earlier this month, Pruitt said he didn’t know anything about the raises and that he has taken action to reverse the decision.

ABC News previously reported that two sources confirmed Pruitt pushed for the raises of two staffers but has not confirmed the amounts paid to these employees.

A small number of protesters wielding signs in the hearing room gallery disrupted the hearing.

Environmental subcommittee chairman Rep. John Shimkus stopped a line of hearing to address the protesters, warning them to remain quiet or get kicked out.

Protesters quieted when Capitol Police officers approached the gallery.

The Energy and Commerce Committee's ranking member, Rep. Frank Pallone, D.N.J., called Pruitt's conduct in office "an embarrassment" when referring to reports that Pruitt has acted in retaliation against EPA officials who disagreed with his agenda or questioned the legitimacy of threats against the administrator.

In response to Rep. Pallone's line of questioning, Pruitt said he did not recall taking retaliatory action against aides.

But the committee's vice chairman, Rep. Joe Barton, R-Texas, defended Pruitt, saying that he's a victim of "Washington politics," and Rep. David McKinley, R-W.Va., scolded his Democratic colleagues for "grandstanding" and engaging in "McCarthyism" by attacking Pruitt over news reports.

In the second hearing of the day a Republican from West Virginia, Rep. Evan Jenkins, said that the EPA's decisions under Pruitt and President Donald Trump have brought his state "back to life."

"When you don't like the message, you shoot the messenger," Jenkins said.

Administrator Pruitt addressed the slew of media reports directed at his conduct as agency chief in opening remarks to the committee.

"I recognize there have been very troubling media reports over the last few weeks," Pruitt said, deviating from the prepared remarks released by the Committee on Wednesday. "I promise you that I, more than anyone, want to address the questions surrounding these reports."

Pruitt called the media reports an attack on the administration and an effort to derail the agency's agenda.

"A lie doesn't become truth just because it's on the front page of the newspaper," Pruitt said.

The Hill

<http://thehill.com/policy/energy-environment/385105-five-takeaways-from-pruitts-day-of-testimony>

Five takeaways from Pruitt's big testimony

By Miranda Green and Timothy Cama, 4/26/18, 7:17 PM

Scott Pruitt, the administrator of the Environmental Protection Agency (EPA), faced a barrage of tough questions from lawmakers Thursday as he testified in front of two House committees.

Pruitt, who has been embroiled in controversy for weeks, fought back aggressively against his critics and dismissed the negative headlines about his tenure as "fiction."

Here are five takeaways from his big day on Capitol Hill.

He escaped disaster.

Pruitt testified for nearly six hours, a grueling task for any Cabinet member, and seemed to mostly escape unscathed.

The hearings lacked fireworks, even as Democrats took turns excoriating the EPA chief and, in some cases, calling for him to resign.

Pruitt came prepared to answer questions about his spending and other ethics controversies. He tackled reports of his costs head-on in his opening statement, blaming the media for taking attention away from his regulatory work.

"Facts are facts and fiction is fiction. A lie doesn't just become the truth because it's on the front page of a newspaper," Pruitt said in both of his opening statements.

The former Oklahoma attorney general appeared to have an answer prepared for every question thrown at him, ranging from his use of a privacy booth to his spending on his round-the-clock security team to raises approved for EPA staffers.

Pruitt didn't once raise his voice or appear to be frazzled by the round of at times rapid-fire questions thrown at him.

But by the final panel, lawmakers appeared to run out of steam, at times referring, and yielding, to answers Pruitt gave at the day's earlier hearing.

If any lawmakers were expecting apologies or contrition from Pruitt, they didn't get it.

Pruitt shifted blame for the controversies at the EPA to other people, including for his use of first-class travel, his unauthorized staff raises, his construction of a privacy booth and his use of a 24/7 security detail.

Speaking in the afternoon to lawmakers on the House Appropriations Committee subpanel, Pruitt said he decided to change from flying coach to first-class due to threats against his life.

Pruitt cited two examples written in a leaked memo from the deputy inspector general as to why his around-the-clock security team was necessary. Two members of his security team sat directly behind him in the hearing room during the testimony, one wearing an earpiece.

The administrator suggested that he no longer flies first-class, calling news surrounding it "a distraction." He said he made a change.

On the agency's approval to provide substantial pay raises to two EPA staffers who had moved from Oklahoma with Pruitt — one who Pruitt described at the earlier hearing as a "close friend" — the chief said he was not aware of the type or amount of the raises. He admitted, however, that he was aware of the raises, contradicting what he'd previously said in an interview to Fox News.

Pruitt said after media reports surfaced, he directed his chief of staff, Ryan Jackson, to stop the raises. Jackson has previously taken responsibility for the pay increases. The EPA released a document during Pruitt's hearings that showed the administrator had in March 2017 transferred authority to Jackson to hire employees under the Safe Drinking Water Act.

Pruitt also asserted that he was not aware of the nearly \$43,000 cost of a privacy booth installed in his office last year. He said he had mentioned to staff not being able to take a phone call securely, but did not sign off on the booth and blamed "career staffers" who were involved "from the beginning to the end."

The Government Accountability Office (GAO) last week found that the privacy booth's construction yielded a number of violations.

Pruitt pledged to ensure that the EPA avoids further missteps.

"My objective to speak with you today is to provide confidence, and recognize faults where they have occurred and make sure they don't happen in the future," he said.

It wasn't all a walk in the park for Pruitt when it came to questioning from Republican lawmakers. While many focused their questions on policy decisions, others offered up harsh criticism over proposed EPA budget cuts that would gut or severely diminish a number of key programs in their states.

Rep. Ken Calvert (R-Calif.) opened the Appropriations Committee hearing by sharply criticizing Pruitt's proposal to cut around 25 percent from the EPA's budget.

"While some reductions may be in order, cuts of this magnitude put important programs at risk," the chairman of the subcommittee said, pointing to eliminations or cuts the Trump administration is proposing to state grants, programs to clean up major waterways and grants to clean up diesel pollution.

For those lawmakers who did venture to question Pruitt about the controversies, they focused on his spending.

Rep. Ryan Costello (R-Pa.) expressed concerns over the costs of Pruitt's security detail.

"When folks read about trips to Disneyland, professional basketball games, the Rose Bowl, and the additional security detail related to that, that doesn't sit well with a lot of people," Costello said.

Costello, who is leaving Congress after this year, said he thought the EPA chief lacked "good judgment."

"I believe you've not demonstrated the requisite degree of good judgment required of an appointed executive branch official on some of these spending items."

Rep. Gregg Harper (R-Miss.) asked Pruitt to promise that he would take whistleblower concerns seriously.

"Assure me and employees of EPA that all whistleblower complaints will be taken seriously at EPA," Harper asked Pruitt.

Pruitt responded: "This is not one of those situations, but absolutely that is something I can commit to you and will commit to you."

Numerous Republicans rushed to Pruitt's defense, not just applauding him for his work at the EPA, but portraying him as the victim.

Rep. David McKinley (R-W.Va.) called the Democrats' rhetoric "a classic display of innuendo and McCarthyism that unfortunately ... I think works against civility and respect."

"I'm hoping we would be able to stay on policy as much as we could, but some, I see, just can't resist the limelight, the opportunity to grandstand," he added.

Rep. Joe Barton (R-Texas) said it was another case of "Washington politics."

"Republicans do it when it's a Democratic president, Democrats do it when it's a Republican president," he said.

Rep. Jeff Duncan (R-S.C.) apologized to Pruitt.

"I apologize for the abrasiveness of some of my colleagues who would rather tarnish your character than really try to delve into the issues facing this great nation."

Some of his statements could come back to haunt him

Pruitt made a number of statements that contrasted with his past statements and those of others.

For example, Pruitt testified that he knew about controversial raises given to two close aides, but said he didn't know the amount nor that his chief of staff bypassed White House procedures to approve them.

Pruitt previously told Fox News's Ed Henry during a combative interview that he didn't know about the raises and that it was all done by a member of his staff without his knowledge.

In another instance, defending his security detail, Pruitt quoted the text of a letter that he said was an official "threat assessment" from the inspector general's (IG) office. And he stayed by his claims, despite questioning from Rep. Betty McCollum (D-Minn.) about whether the letter did come directly from EPA Inspector General Arthur Elkins.

Elkins's office has since disputed that, saying the letter Pruitt used was instead from Patrick Sullivan, the assistant inspector general for investigations. The office also said the letter was leaked without authorization.

Pruitt also said he did not sign off on the \$43,000 soundproof booth installed in his office, nor did he know its cost.

"Career individuals at the agency took that process through and signed off on it all the way through," Pruitt told Rep. Tony Cárdenas (R-Calif.). "I was not involved in the approval of the \$43,000, and if I'd known about it, congressman, I would have refused it."

The White House Office of Management and Budget and the EPA's IG are both looking into the booth purchase.

"If something happens in my office, especially to the degree of \$43,000, I know about it before, during and after," Cárdenas said.

The Hill

<http://thehill.com/opinion/energy-environment/385134-christine-todd-whitman-scott-pruitt-is-unfit-to-run-the-epa>

Christine Todd Whitman: Scott Pruitt is unfit to run the EPA (*Op-Ed)

By Christine Todd Whitman, 4/27/18, 7:30 AM

Scott Pruitt's ethical tone deafness has, ironically, come across loud and clear. The rule he signed this week targeting what he called "secret science" serves as yet further evidence of his inability to run the Environmental Protection Agency (EPA) with ethical integrity. In fact, the new rule is a surefire way to kill science at the agency as it de-incentivizes the private sector to share proprietary studies with the EPA.

This may sound counterintuitive and does not fit within the sound bite media culture in which we currently find ourselves. By touting "transparency" at the agency, the untrained observer might think he was doing something good for the future of the EPA and by extension, human health and the environment. But proprietary studies and scientific data from the private sector act as a balance for the agency's scientific data. The EPA needs these studies to prove or disprove its own hypotheses and establish sound, well-informed regulations.

Regulations from the EPA are not based on politics (though I'd argue that Pruitt's term as administrator has varnished the EPA in political bias). On the contrary, regulations from the EPA are rooted in science, and the agency needs sound scientific data — including proprietary studies — to make informed decisions and enact regulations that protect the environment and human health.

Pruitt's proposed rule — requiring the EPA to publish the underlying scientific data used to support the studies that inform the agency's clean air and clean water regulations — unleashes a host of issues. The rule will compromise patient privacy with regard to medical studies, and private sector companies will be deterred from sharing proprietary studies with the agency.

Most importantly, the EPA won't be able to come forward with new regulations because they won't have enough data. And that's just what the administration wants. No new regulations. This idea of "open science" will actually shut down science. This rule will turn the agency on its head and render it completely ineffective, which poses an extraordinary threat to science, to the environment, and to human health at large. Contrary to what the current administration might like us to believe, the EPA's regulations aren't just red tape for businesses and industries; they're enacted to protect the health of our citizens.

This new rule is just one of the many sound policies that Pruitt has dismantled as administrator of the EPA. He has revised authority for the Clean Water Act — taking what was previously in the hands of regional EPA administrators and consolidating in his office. He rolled back the Clean Power Plan, which was also aiming to reduce the very pollution that harms our most vulnerable citizens in particular. He lifted fuel economy and emissions standards that keep cars from further polluting our air. Pollution kills three times more people than AIDS, malaria and tuberculosis put together and yet Pruitt is making it easier for automakers to pollute and American citizens to get sick.

In addition to his policy dismantling, Pruitt's ethical lapses not only make him a questionable spokesperson, but also a detriment to the agency. His private phone booth creates an atmosphere of distrust. He sequesters himself, interacting only with a select group of people, and he doesn't engage with staff. On one hand, Pruitt touts "open science" and on the other hand he fosters an environment of secrecy and distrust. Even the "secret science" rule was announced while limiting access to reporters and scientists at the event.

Scott Pruitt is unfit to run the EPA because he lacks ethical integrity — a quality that is of the utmost importance when entrusted with protecting the environment and public health.

Christine Todd Whitman is the former administrator of the Environmental Protection Agency under President George W. Bush. She previously served as the governor of New Jersey and now runs her own consulting firm.

Washington Post

https://www.washingtonpost.com/news/opinions/wp/2018/04/27/scott-pruitts-feisty-defense-of-himself-may-have-been-good-enough-to-save-his-job-of-destroying-the-earth/?utm_term=.455af6fd9efe

Scott Pruitt's feisty defense of himself may have been good enough to save his job of destroying the earth! (*Op-Ed)

By Tom Toles, 4/27/18, 8:55 AM

There are times when what you are watching is so far out of line with what is actually happening and what actually matters that you know that somebody is screamingly bonkers.

Watching the testimony of Environmental Protection Agency Executioner Scott Pruitt yesterday was one of those times, although "those times" are just about "all the time" these days. Here you had a hours-long examination of the top environmental official in which the largest environmental crisis of human history is not the subject. The United States has removed the "environ" part of this environmental case, leaving just a mental case.

Pruitt deflected blame. Booyah. Deflected so well he may have saved his job. Huh? Is this really the story? The ceaseless pouring of a gas into the atmosphere that is known and recognized by all the world's scientists to be putting catastrophe squarely in the path of humanity's future, and we're doing a fine calibration of how effectively one of the principal bad actors deflected blame in a minor tawdry bit of official corruption? Hey, Trump likes a combative attitude! Pruitt scored some points for himself! Stop it! Please, just please make this stop!

The United States is pathetic. Just pathetic. The rest of the world watches us the way one watches a multi-car pileup to see our indulgence of infantile, make-believe posturing, diversion, evasion and lies that nobody believes. Foreign leaders come here and see how best to baby-talk to our baby-king. Does he like flattery? Holding hands? Don't make him too angry!

Congress is pathetic. The media, to the degree that we don't headline the climate disaster until we address it, is pathetic.

When does this bad dream end? It's about a half-year now until November.

Washington Post

https://www.washingtonpost.com/opinions/robert-redford-the-biggest-scott-pruitt-scandal-is-the-one-right-in-front-of-us/2018/04/26/849085f0-498c-11e8-8b5a-3b1697adcc2a_story.html?utm_term=.6c7b0f200235

Robert Redford: The biggest Scott Pruitt scandal is the one right in front of us

By Robert Redford, 4/26/18, 7:36 PM

Robert Redford is an actor, director, producer and trustee of the Natural Resources Defense Council.

President Trump should follow the suggestion of many — including some within his own party, and reportedly even his chief of staff — and replace Environmental Protection Agency Administrator Scott Pruitt.

Pruitt's conduct as head of the EPA is beyond disappointing; it's disgraceful. The list of indefensible actions grows each week: from sweetheart condo deals with the wife of an energy lobbyist, to unfair raises for favored appointees and apparent punishments for those who defy him, to a \$43,000 soundproof phone booth.

These seemingly daily revelations dominate the headlines. But Pruitt's failings in ethics and judgment are only part of a much larger problem: Pruitt has failed at the core responsibility of his job.

He's not protecting the environment. Pruitt has become a one-man public-health risk to the air we breathe, the water we drink and the food we eat. From day one, he has worked to gut the EPA and hamstring its ability to protect the environment and public health. He works on behalf of the fossil-fuel industry and other industrial polluters, not the American people. That's the greatest scandal — and the reason, first and foremost, he's got to go.

And he actively promotes one of the gravest threats to our future — misinformation. To hear Pruitt tell it, the rising seas, widening deserts and raging wildfires Americans are experiencing are reasons to debate the science on climate change, not take action against it.

Pruitt led Trump's charge to withdraw the United States from the 2015 Paris climate accord. I was in Paris when that agreement was reached. It was a triumph of American leadership. We were doing what was best for our country: cutting carbon pollution today so our kids would have a more predictable climate and a better future. The Trump administration has broken our promise to the world by announcing that we will back out of the Paris accords.

Unfortunately, that's not all. Pruitt has been working to weaken standards designed to clean up dirty power plants and to walk back fuel standards for cars. He has put a hold on vital safeguards that would limit the amount of mercury, arsenic, lead and other toxic chemicals that industry can spew into the air or dump into our rivers. Speaking of water, he's working to repeal the clean water rule that ensures protection for wetlands, rivers and streams that provide drinking water to a third of all Americans.

Meanwhile, he has ignored research from scientists at the agency and refused to ban dangerous chemicals, such as the pesticide chlorpyrifos. Instead, he hired a lobbyist connected with one of the manufacturers of the chemical and then reduced fines levied against the company for violating regulations.

He also attacked science itself, proposing policies in the guise of transparency that would limit the research that the agency could use to make decisions.

Americans deserve better. The EPA was established to protect the environment and public health for everyone. It's something America got right, and it is up to us to defend it.

Pruitt should be replaced by a principled leader who will do what the EPA was intended to do: protect America from men such as Pruitt.

Daily Caller

<http://dailycaller.com/2018/04/26/scott-pruitt-inconvenient-truth-obama-carbon-emissions/>

Pruitt Points Out 'An Inconvenient Truth' About Obama's Attempts To Regulate Carbon Emissions

By Tim Pearce, 4/26/18, 4:51 PM

Environmental Protection Agency Administrator Scott Pruitt pointed out a seldom discussed issue on Wednesday with former-President Barack Obama's climate policy.

Pruitt sat before the House Committee on Appropriations to defend the EPA's 2019 budget Wednesday afternoon after getting grilled in another hearing that morning. Democrat Rep. Chellie Pingree questioned Pruitt's stance on climate change and rebuked the EPA administrator for rolling back regulations intended to cut carbon emissions.

In the debate on carbon regulations, arguments over economics and the fate of the world usually take the forefront. Emissions regulations overly burden businesses and are less effective than market-driven technological advancement, Republicans generally argue. Democrats tend to stress the need for action to combat climate change and protect the Earth from irreparable harm from severe weather events and rising oceans.

During a line of questioning from Pingree, Pruitt took a different tact. He focused on the process through which the EPA enacts regulations and the extent of the EPA's authority.

Early in the exchange, Pingree began reading letters from children in her district lamenting their futures if climate change continues unabated. One child said his family tradition of camping out and eating lobster on one of Maine's islands would soon be impossible because of climate change.

"If the oceans keep warming and pushing lobsters north, there will most likely not be the same island culture that there is today," Pingree quoted. "Lobster fishermen will be replaced by tourists, and there will be no reason for me to return to the island with my children."

"That might be through the eyes of children; but if you're not going to listen to scientists, who are you going to listen to?" The congresswoman asked.

"What's lost in this discussion is what authority does the EPA have to regulate," Pruitt said.

"There were two efforts made by the previous administration to regulate CO2, and both of them were struck down by the courts," Pruitt continued. "The tailoring rule that the previous administration adopted with respect to CO2 and the

Clean Power Plan was stayed by the U.S. Supreme Court, and it was unprecedented. That had never happened for the U.S. Supreme Court to issue a stay while a case was pending at a lower court level."

"That does not allow us to say we are not going to deal with this issue," Pinegree responded.

"I can only take the steps that Congress authorizes me to take," Pruitt said, faulting the Obama administration for trying to "pinch-hit" for Congress.

The congresswoman followed up, saying what was done in the past is irrelevant to the present, and she wanted action from Pruitt. Pruitt has made statements in the past regarding climate change, she also pointed out and took issue with what those implied about the action(s) he would take to combat it going forward.

New Source Review rulemaking possible — Pruitt

By Sean Reilly, 4/27/18

EPA is contemplating an overhaul of its perennially contentious New Source Review permitting program, Administrator Scott Pruitt said yesterday.

"What we want to do is provide clarity," Pruitt told Rep. Bill Johnson (R-Ohio) at the hearing of the House Energy and Commerce Subcommittee on Environment. "Overall, we're looking at a comprehensive rule that will address New Source Review." The purpose, he continued, is to assure companies that they "are not going to face new permitting requirements under the Clean Air Act" as they make investments to reduce pollution.

Pruitt, who also termed New Source Review "one of the greatest issues" facing EPA, did not give a timetable for the undertaking. Late last year, he had announced "an assessment of opportunities" to streamline the program, but stopped short of saying he would attempt a major rewrite.

Asked today for more details, EPA spokeswoman Liz Bowman in an emailed response appeared to hedge: "We are taking a comprehensive look at the program and plan to make a number of targeted changes that, altogether, will produce significant improvement."

The New Source Review (NSR) program, a pillar of the act, requires manufacturers, utilities and other industries to get preconstruction permits before building a new plant or embarking on major changes to an existing facility.

Businesses have long complained that NSR requirements are a drag on economic development and may even discourage efforts to curb emissions. The program "is impeding modernization and growth in the U.S. manufacturing sector," Paul Noe, a top official of the American Forest and Paper Association, said at a February hearing of the same subcommittee.

NSR defenders, pointing to the economy's current health, say major changes could lead to more pollution and that industry in any case is laying out a false choice. Clean air and growth "go hand in hand," George Washington University environmental law professor Emily Hammond said at the February hearing.

Relaxing NSR requirements is also a long-standing priority for EPA air chief Bill Wehrum. After pursuing sweeping changes with mixed success during an earlier stint at the agency during the George W. Bush administration, Wehrum said in December that he planned a more "targeted" strategy.

"Last time around, we swung for the fences," he told EPA's Clean Air Act Advisory Committee, resorting to a baseball analogy. "This time around, what I'd like to do is hit a bunch of singles and maybe a couple of doubles, and if we keep that up, we're going to start scoring some runs."

It was not immediately clear how Wehrum's small-ball game plan would jibe with the broader revamp that Pruitt suggested yesterday is in the works. Environmental groups are already alarmed by two changes to NSR requirements imposed by Pruitt in recent months in guidance memos that sidestepped public notice-and-comment requirements that would accompany a formal rulemaking.

Under the first, EPA no longer challenges the preconstruction estimates of expected emissions increase from a particular project (Greenwire, Dec. 8, 2017). The second condenses the emissions forecasting process for planned plant expansions or other significant changes to a major industrial emitter (E&E News PM, March 13).

Still more contentious has been Wehrum's decision to drop the "once in, always in" policy that — while not directly related to NSR — had maintained strict hazardous air pollutant standards for major pollution sources even after their releases fell below the thresholds that originally triggered those standards (Greenwire, Jan. 26).

The state of California and an array of environmental groups are now suing to reverse Wehrum's decision. In a letter earlier this week, Rep. Debbie Dingell (D-Mich.) and 86 other House Democrats urged Pruitt to reinstate the policy (E&E Daily, April 26).

At yesterday's E&C Environment Subcommittee hearing, Dingell queried Pruitt on whether the agency had done any advance analysis of the potential health effects of the decision to scrap the policy on children, pregnant women and other groups. "That's something we'll have to assess and provide," Pruitt responded.

EPA Working on Legal Basis for Year-Round Biofuels Sales: Pruitt

By Jennifer A Dlouhy, 4/27/18

EPA Administrator Scott Pruitt said the agency is working to justify issuing a waiver that would allow year-round sales of gasoline containing 15 percent ethanol.

The Environmental Protection Agency is "trying to ensure the legal basis is sound, because there will be litigation," Pruitt told Rep. Dave Loebsack (D-Iowa) in a House Energy and Commerce subcommittee hearing. "I intend to finish that process very soon."

The EPA regulates the vapor pressure of gasoline sold at retail stations from June 1 to Sept. 15 to reduce emissions and mitigate the effects of ozone-related health problems.

More than 25 waivers have been issued to small refineries exempting them from 2018 renewable fuel quotas so far, Pruitt said.

Applications are still pending in 2018, but "it's over that number for 2018 as I understand it," he told Loebsack.

Pruitt said he wasn't sure if CVR Energy Inc., a refiner majority owned by billionaire Carl Icahn, sought a waiver exempting any of its refineries.

Under the federal Renewable Fuel Standard, about 38 refineries that use no more than 75,000 barrels of crude a day are eligible for those waivers, regardless of the size of their parent companies; a federal court ruling last year made it easier to get waivers.

Pruitt leaves door open to Lake Erie TMDL

By Annie Snider, 4/26/18, 5:03 PM

EPA Administrator Scott Pruitt left the door open to issuing a pollution diet for Lake Erie, a controversial step that farmers across the Great Lakes region have fought vehemently.

In response to questioning today from Rep. Marcy Kaptur (D-Ohio), Pruitt said that there has been a commitment to dealing with Lake Erie's phosphorus problem "through cooperation," but admitted that "certain states need to do more." Pruitt was testifying to a House Appropriations subcommittee, his second congressional hearing of the day.

"I think that we have to look at TMDL opportunities to address that if states refuse to take the steps that they're supposed to take," Pruitt said, referring to Total Maximum Daily Loads that would likely place a greater burden on farmers in the watershed to reduce their polluted runoff.

Great Lakes environmental groups have sought a TMDL for Lake Erie akin to the landmark Chesapeake Bay cleanup plan. The lake suffers annual toxic algae blooms, including one in the summer of 2014 that fouled the water intake for the city of Toledo for a full weekend.

The state of Ohio initially refused to list its portion of Lake Erie as impaired, the first step towards drafting a TMDL, but backtracked earlier this year following a lawsuit from environmentalists and pressure from EPA.

Under the Clean Water Act, states are supposed to draft TMDLs for all impaired waters, but because the process is complex and time-consuming, there is a large backlog.

Pruitt and His Air Chief Diverge on Industrial Expansion Permits

By Jennifer Lu, 4/27/18

The EPA is looking at a "comprehensive rule" to address air permits for facilities that plan to expand or upgrade their operations, Administrator Scott Pruitt said April 26.

The EPA chief made the comment during a House Energy and Commerce subcommittee hearing that mainly focused on Pruitt's spending and ethics issues. His emphasis on an air permit rulemaking appears to depart from earlier statements by his air chief who said the agency would be relying on non-binding guidance.

Pruitt didn't elaborate on when or how the Environmental Protection Agency would move forward with a rule on the permitting program, known as New Source Review. The program governs what pollution controls are required when power plants, industrial boilers, and other pollution sources make operational modifications that go beyond routine maintenance.

Changing Tune

His assertion that a rule was planned diverges from earlier statements of his air chief, William Wehrum, who recently told Bloomberg Environment that the agency would rely on guidance to address what are called “preconstruction permits.”

“We can provide clear guidance through guidance,” Wehrum said in an April 13 interview with Bloomberg Environment. “Our strategy is to tell people sooner rather than later how we think the program should be implemented.”

The EPA under Pruitt has changed how facilities tally upgrade-related emissions that trigger new pollution controls under the program.

Costly Controls, Expanded Plants

The permit program requires factories and power plants to install costly new air pollution controls when they expand or make modifications that increase their emissions. Industry groups sought changes that in many cases would exclude them from having to add the controls.

So far, the EPA has made the changes in three non-binding guidance documents released in December, March, and April.

Although relying on guidance can effect changes quickly, another administration can easily reverse them.

Environmental critics have said that making policy through guidance circumvents the public notice and comments process that's required in rulemaking.

If, as Pruitt indicated, the agency does pursue a rulemaking, it could run into obstacles set by legal precedents that reversed some of Wehrum's rulemaking efforts when he served as acting air chief during the George W. Bush administration. The U.S. Court of Appeals for the District of Columbia Circuit revoked most of the changes made during those rulemaking efforts.

The Daily Signal

<https://www.dailysignal.com/2018/04/26/scott-pruitts-effort-to-expose-secret-science-has-environmentalists-scared-stiff/>

Scott Pruitt's Effort to Expose 'Secret Science' Has Environmentalists Scared Stiff

By Diane Katz, 4/26/18

A proposed rule announced Tuesday by Scott Pruitt, administrator of the Environmental Protection Agency (EPA), is intended to bring much-needed transparency to agency rulemaking.

The environmental lobby is positively apoplectic about the proposal (naturally), even though it aligns perfectly with their long-held commitment to the public's “right to know” principle.

The proposed regulation would require EPA to ensure that the scientific data and research models “pivotal” to significant regulation are “publicly available in a manner sufficient for validation and analysis.”

Despite existing rules on government use of scientific research, federal agencies routinely mask politically driven regulations as scientifically based imperatives. The supposed science underlying these rules is often hidden from the general public and unavailable for vetting by experts. But credible science and transparency are necessary elements of sound policy.

The opposition from greens and much of the media greeting Pruitt's announcement is, frankly, hypocritical in the extreme. Opponents claim that EPA's regulatory power would be unduly restricted if the agency is forced to reveal the scientific data and research methodologies used in rulemaking.

But that is precisely the point. The EPA should no longer enjoy free rein to impose major regulations based on studies that are unavailable for public scrutiny.

Their claim that research subjects' privacy would be violated is groundless. Researchers routinely scrub identifying information when aggregating data for analysis. Nor is personal information even relevant in agency rulemaking.

Meanwhile, the EPA and other federal agencies are duty-bound to protect proprietary information.

Transparency in rulemaking is vital to evaluating whether regulation is justified and effective. It is also essential to testing the "reproducibility" of research findings, which is a bedrock principle of the scientific method.

It takes real chutzpah for the champions of environmental "right-to-know" laws to now claim that the EPA should not be required to make public the scientific material on which regulations are based.

The public's "right to know" was their rallying cry in lobbying for a variety of public disclosure requirements on the private sector as well as state and local governments, including informational labeling; emissions reporting; workplace safety warnings; beach advisories; environmental liabilities; and pending enforcement actions, to name a few.

The proposed rule is hardly radical. It aligns with the Data Access Act, which requires federal agencies to ensure that data produced under grants to (and agreements with) universities, hospitals, and non-profit organizations is available to the public through the Freedom of Information Act.

However, the implementation guidance from the Office of Management and Budget has unduly restricted application of the act.

Moreover, the Information Quality Act requires the Office of Management and Budget "to promulgate guidance to agencies ensuring the quality, objectivity, utility, and integrity of information (including statistical information) disseminated by federal agencies."

However, the act's effectiveness has been limited by a lack of agency accountability. Courts have ruled that the act does not permit judicial review of an agency's compliance with its provisions. The proposed rule is also consistent with the Office of Management and Budget's Information Quality Bulletin for Peer Review.

The proposal also mirrors legislation passed by the House last year to prohibit EPA from "proposing, finalizing, or disseminating a covered action unless all scientific and technical information relied on to support such action is the best available science, specifically identified, and publicly available in a manner sufficient for independent analysis and substantial reproduction of research results."

A Senate companion measure failed to advance to a vote.

EPA regulation has expanded exponentially every decade since the 1970s at tremendous expense to the nation. Secret science underlies some of the most expansive regulatory initiatives.

President Donald Trump has focused significant attention on re-establishing the constitutional and statutory boundaries routinely breached by the agency. The special interests that thrive on gloom and ever-increasing government powers are attempting to block the administration's reforms at every turn.

But their opposition to the proposed transparency rule sets a new low for abject hypocrisy.

OMB backdates completion date for 'secret science' review

By Sean Reilly, 4/27/18

The White House has altered an official timeline to show that a required review of a proposed EPA science rule was finished one day before agency Administrator Scott Pruitt signed it this past Tuesday.

The Reginfo.gov site had previously shown that the proposal cleared Office of Management and Budget on Wednesday, indicating Pruitt went forward with the signing before the interagency review was complete.

OMB backdated that to Monday after E&E News reported the discrepancy yesterday (Greenwire, April 26).

Coalter Baker, a spokesman for the budget office, would not provide an on-the-record explanation as to the reason for the change. At EPA, spokeswoman Liz Bowman had earlier said in a statement that the review was finished before the signing, adding that "any questions about the management" of the Reginfo.gov site should be addressed to OMB.

"This is all highly irregular," Paul Billings, senior vice president for advocacy at the American Lung Association, said later in an interview. "Either it speaks to a significant lack of competence at EPA or OMB, or there is some sort of funny business or cover-up going on." The association, which has been critical of the proposal, closely tracks EPA rulemakings related to air quality issues.

The proposed rule, which has already sparked considerable controversy, would effectively bar EPA from using scientific research in crafting new regulations unless the underlying data are made public.

"I think it enhances transparency and the confidence of the American people as we do rulemaking," Pruitt said in the proposal's defense at a hearing yesterday of the House Energy and Commerce Subcommittee on Environment.

Critics say the aim is to keep EPA from tapping studies that could signal the need for tighter pollution regulations.

"The result will be policies and practices that will ignore significant risks to the health of every American," almost 1,000 scientists and technical experts said in a letter to Pruitt earlier this week released by the Union of Concerned Scientists.

Lawmakers on both sides of the aisle quizzed Pruitt on the proposal at yesterday's hearing, with Republicans praising his approach and Democrats panning it. EPA is set to open a 30-day public comment period on the draft rule Monday, according to an upcoming Federal Register notice.

The purpose of the OMB reviews is to get feedback on regulatory proposals from other agencies and outside groups. The Reginfo.gov site serves as a clearinghouse on the status of rulemakings across government.

At a separate hearing two weeks ago, Sen. Maggie Hassan (D-N.H.) had sought to pin down Neomi Rao, head of the Office of Information and Regulatory Affairs, on her views of the appropriate handling of scientific research (E&E Daily, April 13). Asked by Hassan whether she would "generally support agencies changing their procedures in ways that prevent them from using the best available evidence in making these decisions," Rao responded, "No, I would not."

Assuming that the revised completion date on the site is now accurate, however, Rao's office hustled the proposed science rule back to EPA only four days after receiving it on April 19 (Greenwire, April 20.) Under the long-standing executive order that governs the reviews, they can typically last as long as 90 days. Of the half-dozen other EPA

regulatory measures still at OMB, most have been under review for approximately two weeks or more, according to the Reginfo.gov site.

Hassan is "deeply concerned" that Rao signed off so quickly on a draft regulation that "could have far-reaching impacts" on the public and the environment, spokeswoman Ricki Eshman said in a statement yesterday. She "will continue urging Pruitt to reconsider this senseless proposal."

Baker, the OMB spokesman, did not reply to an emailed request for comment.

The Hill

<http://thehill.com/policy/energy-environment/385230-epa-approved-aide-to-work-for-gop-consultancy-firm-and-florida>

EPA approved aide to work for GOP firm, Florida lawmaker

By Miranda Green, 4/27/18, 2:56 PM

The Environmental Protection Agency (EPA) approved one of Administrator Scott Pruitt's political aides to do outside consulting work for a Republican firm, internal documents obtained in a Freedom of Information Act (FOIA) request show.

EPA ethics officials approved John Konkus to work for Jamestown Associates, a Washington, D.C.-based political consulting firm, and a Florida state representative while he was still employed at the agency, E&E News first reported Friday.

EPA did not release the name of the Florida lawmaker. Jamestown Associates boasts on its website that it helped Donald Trump's presidential campaign win and buoyed Chris Christie's 2013 New Jersey gubernatorial race.

The document dated Aug. 1, 2017, from EPA ethics official Justina Fugh approved Konkus's request to partake in the paid outside work. The letter also acknowledged the Konkus had plans to add additional clients in the "next six months." The letter stated that Konkus could not earn more than \$27,765 through outside compensation.

"We have determined that providing consolatory media advice is not a fiduciary role, and you will be providing those services directly as opposed to through any corporation," the letter read.

The ethics office approved Konkus to advise clients about "strategy, mail and media production."

Another internal letter obtained by E&E news found that Konkus never performed outside work in 2017.

In a public financial disclosure report for Konkus's 2017 wages, Fugh wrote a note on April 25, 2018, that read, "Even though Mr. Konkus had sought prior approval of anticipated outside activity, he indicated that he did not in fact engage in any outside activity at all during calendar year 2017. Therefore, he has no outside income or position to report."

Konkus's arrangement was first revealed in a letter the EPA sent in January to Rep. Frank Pallone Jr. (N.J.), the top Democrat on the House Energy and Commerce Committee.

But the agency redacted the names of the clients Konkus was approved to work for.

At the time, Pallone and his Democratic colleagues questioned whether Konkus's outside employment raised a conflict of interest.

"A political appointee cutting millions of dollars in funding to EPA grant recipients on what appears to be a politically motivated basis, while at the same time being authorized to serve as a paid media consultant to unnamed outside

clients, raises serious concerns of potential conflicts of interest," Pallone wrote along with Democratic Reps. Diana DeGette (Colo.), Paul Tonko (N.Y.) and Kathy Castor (Fla.).

E&E Daily

<https://www.eenews.net/eedaily/stories/1060080271/search?keyword=konus>

Pruitt aide approved to work for GOP firm, Fla. lawmaker

By Kevin Bogardus, 4/27/18

John Konkus, one of EPA Administrator Scott Pruitt's political aides, was approved by ethics officials to work outside the agency for a Republican political consulting firm and a Florida state representative.

E&E News won a Freedom of Information Act appeal to reveal that Konkus' "two likely clients" were a former employer, Jamestown Associates, and an unnamed state lawmaker from the Sunshine State, according to an unredacted copy of the ethics memo approving his outside activity.

Under the memo dated last August, Konkus, the deputy associate administrator in EPA's public affairs office, was allowed to advise clients about "strategy, mail and media production."

Other EPA records obtained by E&E News, however, indicate that Konkus never did any work for his prospective clients.

"Even though Mr. Konkus had sought prior approval of anticipated outside activity, he indicated that he did not in fact engage in any outside activity at all during calendar year 2017. Therefore, he has no outside income or position to report," reads a note from Justina Fugh, EPA's senior counsel for ethics, on Konkus' financial disclosure report for 2018.

In addition, in an email sent to Konkus last Friday, Fugh memorialized a conversation with him from earlier that day.

"Your report will not include any income from any outside clients because, as we discussed today, you never did engage in any outside activity for any clients in [calendar year] 2017," Fugh said.

"I approved you for the possibility of outside activity, but given the demands of your EPA duties, you never took on any clients at all. What you will be reporting in your [financial disclosure report] is that fact that you never had any clients after all, so have nothing to enter as additional income or outside positions on your financial disclosure report."

In addition, Konkus' approval from EPA to do work outside the agency has now been pulled back.

"You informed me that you simply do not have any time or inclination to consider any outside activity in the future. Thus, this note confirms that you no longer need the prior approval of outside activity. We will consider that approval to be rescinded since it's unnecessary," Fugh said in her April 20 email to Konkus.

EPA spokeswoman Liz Bowman said, "As the EPA ethics officer indicated, John followed the law, and furthermore never did any outside work."

Konus declined to comment for this story when contacted by E&E News, including when asked who the Florida state representative was as one of his "likely clients."

Barney Keller, a partner with Jamestown Associates, confirmed to E&E News that Konkus has done no work for the firm.

"You're correct that John does no work for Jamestown since joining the Trump administration," Keller said. "As far as the state representative, I can't disclose that. But I am sure he wants to make America great again!"

Keller also told E&E News last month that Konkus had not worked for the firm after leaving it for federal service (Greenwire, March 5).

Also now unredacted in the memo is the name of another firm. Konkus was told not to contact the federal government on its behalf.

"You cannot contact the US government on behalf of Saint Luke Solutions LLC or any of your clients," said the EPA memo, which was also signed by Fugh. Konkus is a registered agent for a Saint Luke Solutions in Palm Harbor, Fla., according to state records.

Konkus' initial redacted memo approving his outside work attracted scrutiny from Democrats on Capitol Hill.

Last month, members of the House Energy and Commerce Committee sent a letter to Pruitt asking the EPA chief for the names of Konkus' clients and questioned whether he could be impartial in his service at EPA.

The lawmakers — Reps. Frank Pallone (D-N.J.), Diana DeGette (D-Colo.), Paul Tonko (D-N.Y.) and Kathy Castor (D-Fla.) — also noted his prior work at Jamestown Associates and noted that President Trump's 2016 campaign was one of the firm's clients.

Konkus, the Florida Panhandle field office manager for Trump's presidential campaign, also served as Pruitt's "media sherpa" for the incoming administration's transition team. Konkus joined EPA and in an unusual move for a political appointee was put in charge of reviewing its grant solicitations.

EPA, under the Trump administration, has had other financial ties to Republican consulting firms.

Go BIG Media Inc., which has worked on behalf of GOP campaigns and groups, contracted with EPA to help draft the agency's year-end report praising Pruitt.

Definers Corp., a Republican-run public affairs firm, also signed a media clipping services contract with EPA that was canceled after it garnered attention (Greenwire, March 9).

Daily Caller

<http://dailycaller.com/2018/04/26/free-market-groups-end-clean-power-plan/>

Free Market Groups Call For Clean Power Plan To End

By Jason Hopkins, 4/26/18, 6:24 PM

The Competitive Enterprise Institute, along with a host of other libertarian and free market organizations, came out in strong support of the EPA's bid to repeal the Clean Power Plan, releasing a detailed report Thursday regarding issues the Obama-era regulation has wrought onto the energy industry.

"The Clean Power Plan results in more potential harms than benefits for Americans and should be repealed. By undermining states' authority over their energy markets, the CPP traps Americans under a harmful policy that will raise their electricity bills and eliminate interstate competition that enables citizens to vote with their feet and escape burdensome regulatory and tax policies," wrote CEI senior fellow Marlo Lewis, who served as the report's lead author.

"And for what?" Lewis continued. "The CPP's climate impact is vanishingly small — a hypothetical and likely undetectable 0.018°C reduction in average global temperatures by 2100. Such a small change would make no discernible difference in weather patterns, sea levels, or even polar bear populations by century's end. The climate 'benefits' in 2030 at the end of the CPP compliance period would be even more miniscule."

The 42-page report goes into meticulous detail on why CPP is “unlawful, economically destructive, and attempts to make the EPA into a national climate policy legislator and energy czar.”

CEI was joined by numerous like-minded groups, including Americans for Prosperity, Freedom Works, Americans for Tax Reform, among others. All of their leaders had long sought an end to the Clean Power Plan, but their wishes have come closer to reality with the entrance of President Donald Trump’s administration, where officials have announced they will be undoing it.

The outgoing regulation was a hallmark of former President Obama’s climate legacy. The 44th president first proposed the rule in 2014 and finalized it in 2015. CPP places a limit on the amount of greenhouse gases power plants can emit and aims to reduce carbon dioxide emissions from power plants 32 percent below 2005 levels by 2030. CPP is regarded by the fossil fuel industry as needlessly stringent, placing harsh demands on producers while resulting in negligible environmental gains. Critics have also referred to the rule as a part of Obama’s “war on coal.”

Environmental Protection Agency administrator Scott Pruitt would sign a proposed rule to repeal the CPP, the administrator announced on October 10, 2017. Undoing the rule will save Americans \$33 billion in compliance costs, despite the previous administration claiming it would only cost \$8.4 billion and save millions through public health benefits, according to EPA estimations.

Although the current administration is moving ahead, the federal regulatory process will likely slow finalization of repeal for a couple of years. The process could take longer if environmental groups successfully block a rollback in court.

Los Angeles Times

<http://www.latimes.com/politics/la-na-pol-mileage-20180427-story.html>

Trump administration aims to block California on fuel economy targets

By Evan Halper, 4/27/18, 10:20 AM

The Trump administration is speeding toward all-out war with California over fuel economy rules for cars and SUVs, proposing to revoke the state's long-standing authority to enforce its own, tough rules on tailpipe emissions.

The move forms a key part of the Environmental Protection Agency's fuel economy proposal, which the agency plans to submit to the White House for review within days.

The EPA plan would freeze fuel economy targets at the levels required for vehicles sold in 2020, and leave those targets in place through 2026, according to federal officials who have reviewed the plan. That would mark a dramatic retreat from the existing law, which aimed to get the nation's fleet of cars and light trucks to an average fuel economy of 55 miles per gallon by 2025.

The EPA plan remains a draft, and White House officials could decide to back away from a direct fight with California and like-minded states.

EPA spokesperson Liz Bowman declined to comment on the details of the draft plan, which the agency is writing together with the National Highway Transportation Safety Agency.

"The Agency is continuing to work with NHTSA to develop a joint proposed rule and is looking forward to the interagency process," she wrote in an email.

Environmental groups and California officials already have vowed to fight the administration in court. But if the EPA plan prevails, it would be a crippling blow to efforts in California and other states to meet aggressive goals for climate action as well as for cleaning their air.

Under federal law, California has long been allowed to set tougher tailpipe emission rules than the federal government. Other states are allowed to adopt California's standards, and a dozen states currently do. Those states account for more than a third of cars and trucks in the country.

The administration proposal would revoke the ability of any state, including California, to impose rules different from those made in Washington.

The radical rollback of mileage targets the draft document envisions being imposed nationwide goes further even than the auto industry has sought, and it threatens to disrupt their business. The plan would be destined for years of costly litigation, creating uncertainty for carmakers.

"Rather than pursuing a reasonable compromise, the Trump administration is crafting a proposal that is dramatically weaker than any automobile manufacturer has requested and that also deliberately seeks to embark on a legal collision course with the state of California — a scenario that automakers, lawmakers and the state of California have all repeatedly urged the administration to avoid," said Sen. Tom Carper (D-Del.), the ranking member of the Environment and Public Works Committee.

"If enacted, this proposal would be a loss for the environment, a loss for consumers, a loss for the state of California and a loss for the auto industry, which is why all parties must come together immediately to find a workable solution that we know is very much within reach."

The Hill

<http://thehill.com/policy/energy-environment/385240-dem-states-say-pruitt-must-recuse-himself-from-climate-rule-repeal>

Dem AGs renew call for Pruitt to recuse himself from climate rule repeal process

By Timothy Cama, 4/27/18, 3:10 PM

Democratic state attorneys general are renewing their call for Environmental Protection Agency (EPA) head Scott Pruitt to recuse himself from the process of repealing the agency's climate change rule for power plants.

The group of AGs representing 16 states, cities and counties argue Pruitt has demonstrated that he doesn't have an open mind on the Clean Power Plan, thus violating the expectations of due process and fairness in regulatory proceedings.

"The American people are entitled to an impartial decision-maker. EPA Administrator Pruitt simply cannot be that person," California Attorney General Xavier Becerra (D), who is leading the charge, said in a statement.

"He must be recused from any involvement in the EPA's attempt to repeal the Clean Power Plan."

Before taking the helm of the EPA last year, Pruitt was attorney general of Oklahoma where he led numerous initiatives to fight the Obama administration's EPA, including lawsuits against the Clean Power Plan.

Becerra's coalition previously asked Pruitt to recuse himself in January from the deregulatory process, renewing their call this week for him to do so.

The newest filing, made late Thursday, cites new evidence to back up their claim, like Pruitt saying the EPA "acted outside of rule of law, and they acted outside of the scope of authority given to them by the U.S. Congress" in February and saying just this week that "by repealing and replacing the so-called Clean Power Plan, we are ending a one-size-fits-all regulation on energy providers and restoring the rule of law."

The EPA did not respond to a request for comment.

Thursday marked the deadline for the public and stakeholders to file comments on the EPA's plan to repeal its climate change rule for power plants.

The Hill

<http://thehill.com/policy/energy-environment/385163-new-york-threatens-to-sue-trump-over-epa-climate-rule-repeal>

New York threatens to sue Trump over EPA climate rule repeal

By Timothy Cama, 4/27/18, 10:29 PM

New York state will sue the Trump administration if it carries out its proposal to repeal the Environmental Protection Agency's (EPA) climate-change rule for power plants.

Eric Schneiderman (D), New York's attorney general, led a coalition of 26 Democratic states, cities and counties late Thursday in filing formal comments objecting to EPA head Scott Pruitt's plan to repeal the Clean Power Plan.

"The law and the science are clear. The Trump EPA's efforts to dismantle this vital measure once again demonstrate that they're more committed to pleasing the fossil fuel industry than protecting the health, safety, and wallets of New Yorkers and Americans," Schneiderman said in a statement Friday.

"As we've made clear, if the Trump EPA refuses to protect those they serve and abandons this unlawful and unsupported repeal of the Clean Power Plan, we'll see them in court."

New York and other Democratic states have sued the Trump administration over numerous policy changes.

They have had a number of successes in the energy and environmental policy space, with lawsuits seeking to stop rollbacks or delays of policies on methane emissions, energy efficiency, vehicle fuel efficiency and more.

In the coalition letter filed on Thursday — the deadline for public comments on the EPA's proposal — the states, cities and counties argued that the EPA is obligated to aggressively regulate greenhouse gas emissions from power plants, as it did in the Clean Power Plan.

"The statute requires EPA to set limits on carbon pollution from existing power plants, yet the agency is proposing to repeal the Clean Power Plan without replacing it with any alternative rule, much less a substitute that requires equivalent or greater pollution reductions," they wrote.

In proposing the repeal in October 2017, the EPA argued that the Obama administration exceeded its legal authority when it wrote the original rule.

Pruitt is separately proposing to replace the Clean Power Plan with a more industry-friendly alternative focused on smaller emissions reductions that coal plants could make.

The Hill

<http://thehill.com/homenews/administration/385127-epa-removes-international-priorities-page-from-site>

EPA removes 'international priorities' page from site

By Julia Manchester, 4/26/18, 10:35 PM

The Environmental Protection Agency (EPA) removed an "international priorities" page from its website in December, according to a report released this week by the Environmental Data & Governance Initiative (EDGI).

The page had listed climate change, clean air, clean water, e-waste, toxic chemicals, and strong environmental institutions among its international priorities.

EDGI also reports the agency removed its "International Grants and Cooperative Agreements" and "International Cooperation" pages.

The "International Cooperation" page said the EPA sought to "promote sustainable development, protect vulnerable populations, facilitate commerce, and engage diplomatically around the world" with "global and bilateral partners."

An EPA spokesperson told Think Progress that the agency continually updates its website to reflect new initiatives.

"Of course the site will be reflective of the current administration's priorities – with that said, all the content from the previous administration is still easily accessible and publicly available through the banner across the top of the main page of the site," the spokesperson said.

This is not the first time the agency has removed references from its website, with the EPA under the Trump administration removing various references to climate change from its website in the past.

AP

<https://apnews.com/0f4d70467f0c4ffe967777df355bc757/Smoke-from-Wisconsin-refinery-explosion-poses-health-risk>

Smoke from Wisconsin refinery explosion poses health risk

By Matthew Brown, 4/27/18

An explosion and asphalt fire at a Wisconsin oil refinery sent huge plumes of smoke into the air that pollution experts said almost certainly contained large amounts of toxins, posing a serious health risk to those living downwind.

Asphalt is a petroleum product that when burned emits chemicals in gaseous form and small particles that can linger long after the smoke dissipates, said Wilma Subra, a chemist with the Louisiana Environmental Action Network who has examined past refinery accidents.

The gases include so-called volatile organic compounds, or VOCs, which can cause symptoms ranging from dizziness, breathing problems and nausea to liver damage and cancer, depending on the level and length of exposure, according to the U.S. Environmental Protection Agency.

Also present in asphalt smoke are microscopic particles of chemicals that stick together as visible smoke.

Those particles carry cancer-causing benzene and other contaminants that can lodge deep in the lungs when inhaled. From there, they can pass directly into a person's bloodstream, said Neil Carman, a former refinery inspector for the Texas Commission on Environmental Quality, now with the Sierra Club.

"Anybody breathing that stuff should be very concerned about what's getting into deep tissue, into the bloodstream," Carman said. "When you see that kind of smoke, it means you're getting a lot of unburned hydrocarbons. ... Those particles are loaded with carcinogens."

Officials ordered an evacuation of a wide area around the Husky Energy refinery to reduce the public's exposure to the plume. The fire Thursday was later put out, and residents were told they could return to their homes. But then authorities announced the evacuation order would remain and be re-evaluated throughout the night.

Government agencies planned to conduct air monitoring tests to gauge the hazard, refinery manager Kollin Schade said during an evening press conference.

The duration and extent of the toxic hazard depends on a variety of factors, such as wind direction and speed, proximity to the refinery and weather events that can trap pollution close to the ground, said Elena Craft, senior health scientist for the Environmental Defense Fund.

Federal officials did not immediately respond to questions about the health risks from the smoke. A spokeswoman for the Wisconsin Department of Health Services referred questions to local officials in Douglas County, who could not be reached for comment.

Tesla's Foe in Fight Over Electric Vehicle Rebate: Utilities

By John Lippert and Mark Chediak, 4/27/18, 7:13 AM

Early adopters of the electric car often band together in what can seem, in the age of Donald Trump and resurgent sport utility vehicles, like a lonely defense of an unloved technology. But today in California, the state doing the most to cultivate emission-free driving through lucrative incentives, the businesses trying to profit from electric vehicles will be fighting each other.

At issue during a California Air Resources Board hearing in Sacramento on Friday will be rebates the state pays to EV buyers using proceeds from the sale of Low Carbon Fuel Standard credits. Under the program, energy producers who fail to meet the state's low-carbon fuel targets buy credits from those who've already complied. Following state guidelines, the sellers use a portion of the proceeds to pay rebates that range from \$50 to \$599 for each electric vehicle, which are paid out by the utilities who provide electricity for residential and workplace recharging.

Tesla Inc. and Ford Motor Co. have urged the state's powerful emissions regulator to let automakers pay out the rebate at the moment they sell the car, as a way to boost sales, instead of making consumers wait for a check from their utility or a credit on their bill. Ken Morgan, Tesla's director of business development, said the electric carmaker might even boost the rebate beyond what utilities offer.

Tesla's proposal comes as Model 3 production delays are draining its cash and the company is close to exhausting the availability of a \$7,500 federal tax credit. But whoever doles out the rebates would be required to use all money earmarked for low-carbon rebates to pay consumers or associated expenses. "This gives us no direct benefit other than to help everybody sell more electric cars," Morgan said in an interview.

Even so, passing out free money is a great way to build brand loyalty, and Tesla and utilities are elbowing each other hard for the privilege. Eileen Tutt, executive director of a trade association whose board includes California utilities, said she's "adamantly opposed" to letting automakers pay out the rebates. She said the utilities should continue doing so, though she's meeting with Tesla and others to discuss possible improvements.

California certainly wants to help Tesla, Ford and other automakers sell EVs—and already levies stiff penalties if they don't. But utilities have also emerged as aggressive advocates of electric transportation, since ratepayer-funded charging stations represent their first big new revenue opportunity in decades.

Tutt said she's opposed to letting automakers pay out the rebates because, for one thing, their financial disclosures are skimpy compared to those of heavily regulated utilities. "The automakers are saying, 'Just trust us,'" said Tutt, executive director of the California Electric Transportation Coalition in Sacramento.

In a report last month, the ARB staff sided with utilities. But Sam Wade, chief of the agency's transport fuels program, said he likes the idea of distributing rebates when people are at showrooms buying cars and hopes to work with Tesla and utilities to make this happen. Eventually, he said, the state's low-carbon rebates for battery-only cars could reach \$1,500.

At Friday's meeting, ARB will vote on whether the staff should change direction on this and other issues during a formal rulemaking. A final vote is scheduled for September.

California started on a path toward writing its own clean-air rules in 1972 when Mary Nichols, now the ARB chair, argued the first federal lawsuit to make the U.S. Environmental Protection Agency enforce the Clean Air Act. A dozen other states have opted to model their own clean-air rules after California. This has prompted the current EPA administrator, Scott Pruitt, to warn that California shouldn't be allowed to "dictate" clean air policies for the rest of the nation.

Tesla has been a major beneficiary of California's clean-energy push, which also targets automakers. Since 2008, the company has sold more than \$1.3 billion in regulatory credits to other automakers who don't meet the state's requirements for zero-emission vehicles or greenhouse-gas emission reductions.

The debate comes as California prepares its first major update to its low-carbon fuels standard since 2009. Among other things, the state wants to boost the required low-carbon content of its transport fuels to 20 percent by 2030, from 5 percent this year. This would take the state about a tenth of the way toward its legislative mandate of cutting overall carbon dioxide emissions by 40 percent from 1990 levels by 2030.

Companies comply with the standard by blending low-carbon fuels into their existing gasoline or diesel supplies, or by buying credits from those who don't need them. The credits are getting more expensive as California's emission targets get tougher. On March 20, the credits sold for a record \$152 per metric ton, about five times more than the price three years earlier, according to ARB data.

By 2030, the program could be generating credits worth \$3.75 billion a year, up from \$1.4 billion this year, according to Jeremy Martin, an analyst with the Union of Concerned Scientists in Washington, D.C. Since 2009, this potential windfall has helped spark investments worth \$2 billion in low-carbon fuels, said Simon Mui, director of clean vehicles and fuels at the Natural Resources Defense Council.

California policies have started changing the state's fuel supply. Renewable sources like biomass and bio-methane now make up about 20 percent of all diesel sales, state figures show. Corn-based ethanol producers are switching to natural gas and other lower-carbon heat sources, and as a result the carbon intensity of this fuel has dropped by 21 percent. Aera Energy LLC and GlassPoint Solar Inc. are building the state's largest solar farm to generate steam for oil extraction near Bakersfield. By 2030, the state plans to triple the amount of low-carbon electricity used as a transport fuel.

Drivers of conventional vehicles have felt the impact. Gasoline costs about \$3.60 per gallon in California, or 80 cents more than the national average, according to AAA. The low-carbon credits account for about a dime's worth of this difference, state figures show.

Critics include the Western States Petroleum Association. "These standards are still too aggressive," wrote Catherine Reheis-Boyd, the group's president, in a filing prior to Friday's hearing. Poet LLC, a South Dakota-based ethanol producer, has been battling the low-carbon credits in court for years, accusing the state of undercounting nitrogen oxide emissions from low-carbon diesel. As a result, the state plans to delay further increases in the diesel portion of the requirement for about a year.

The rest of the state's low-carbon regime will get tougher, though, even as President Trump attacks what he calls California's "out of control" state policies. California Governor Jerry Brown will wrap up his final term in January, and his replacement will be left with the task of overseeing regulations for low-carbon jet fuel and for carbon capture and storage at ethanol plants—measures that would be new even in California, which is at the vanguard of U.S. environmental policy.

With the EPA currently sidelined by Trump's anti-regulatory agenda, California will play an even greater role in providing a model to other states such as Oregon—and even countries such as Canada and Brazil—that are now writing their own low-carbon fuel mandates, Martin said.

Ronny Jackson drama overshadows Pompeo success for White House

By Nancy Cook, 4/26/18, 6:05 PM

White House aides were reveling in the pomp of French President Emmanuel Macron's state visit, viewing it as a welcome reprieve from the chaos of Cabinet confirmations, an intensifying Russia probe and a boss with a short fuse. Then reality hit.

President Donald Trump's pick for Veterans Affairs Secretary Ronny Jackson finally withdrew from the confirmation process amid escalating allegations of misconduct, and Trump called into the TV show Fox and Friends to deliver an unscripted interview touching on everything from the Russia probe and the investigation of his personal attorney Michael Cohen to fan-tweets from Kanye West—all before 10 a.m.

The day also included the confirmation of Mike Pompeo, previously Trump's CIA director, as secretary of state—an unexpectedly hard-fought victory that was overshadowed by routine House hearings featuring testimony from EPA Administrator Scott Pruitt, who has been accused of a string of ethics violations.

"The state visit was cool for folks in the White House and fun distraction for one hour from stories about Scott Pruitt or Michael Cohen before everyone got back to the shitshow," said one former White House official.

The president often publicly frames these hectic junctures as a White House unduly under siege from the press or other opponents. About Jackson's nomination, Trump said on Thursday: "He's a great man, and he got treated very, very unfairly. He got treated really unfairly. And he's a hell of a man."

The lack of vetting and Trump's tendency to name top-level nominees with little scrutiny dates back to the presidential transition in the fall of 2016. It's a pattern that surprises few insiders, even as it creates headaches for the White House and the nominees.

"Generally, White House aides are blaming the president from shooting from the hip and without giving it any thought, but this is how every decision he has made has gone," said the former White House official.

On Wednesday, the night before Jackson dropped out of consideration, a number of administration aides and Republicans close to the White House gathered at the Trump International Hotel for after-work drinks—and a few aides kept hoping aloud that Jackson would announce he was dropping out on TV, so no one would have to run back to the White House and everyone could keep drinking, according to one attendee.

The biggest beneficiary of this week's chaos was Pruitt, who started out the week under great scrutiny and disdain from several disparate circles of White House staffers and then ultimately skated through his two Capitol Hill hearings with

little incident. Earlier in the week, those hearings were seen as a make-or-break moment for the EPA Administrator and ones that the president would pay attention to.

“As long as his explanations hold and there are no crazy discrepancies or smoking gun or anything like that, I don’t think that creates any red flags for Pruitt,” said one Republican close to the White House, who predicted Pruitt would survive the scrutiny.

What helps Pruitt and other Cabinet nominees who frustrate the White House or Trump is the math in the Senate. The Republicans do not have a large or cohesive enough majority to easily confirm new Cabinet secretaries , and the drama surrounding Jackson’s departure puts a damper on creating any new vacancies to fill.

“In the ideal situation, the only headlines coming out of the agencies are the policy decisions advancing the president’s agenda,” said one senior administration aide, speaking about the spate of bad headlines surrounding Pruitt’s leadership at the EPA. “That is the clear direction from the top, and we’ve communicated that.”

But many White House officials—and the president himself—have adopted the view that the administration is unfairly maligned, no matter what it does.

Many aides were surprised that Pompeo’s confirmation process seemed so shaky at certain points, given the White House’s huge, upcoming foreign policy decisions on meeting with North Korea, keeping troops in Syria, and deciding the fate of the U.S.’s role in the Iran deal. The White House’s Director of Legislative Affairs Marc Short devoted most of his time over the past few weeks to ensuring Pompeo got confirmed.

“We can only pick so many battles, and Pompeo has got to get done as quickly as possible,” said one White House official.

Washington Times

Rep. Steve King: Democrats raised the standards too high for Cabinet appointments

By Sally Persons, 4/27/18

Rep. Steve King said Friday that Democrats have raised the standards too high for Cabinet appointments.

“The standards have been raised to a place here that I would say to the Democrats you better remember how you’re conducting yourselves today because one day you might well be back in the majority and trying to confirm and sustain appointments to the Cabinet for a Democrat president,” Mr. King, Iowa Republican, said on CNN.

He was referring to Environmental Protection Agency Administrator Scott Pruitt who appeared on Capitol Hill on Thursday. Mr. Pruitt answered questions for his behavior including pay raises for friends of his in the department.

Mr. King said Mr. Pruitt did not come out of the hearing “unseared,” but he said Democrats ought to keep in mind that they are setting the standard for future Cabinet appointments and secretaries.

“If these standards are applied to the next president, it’s going to be really hard to get anybody to serve in the next administration,” Mr. King said.

Mr. Pruitt has also faced questions about his housing arrangement in Washington, where he was renting a nightly room from an energy lobbyist, and his travel expenses.

Subject: Morning Energy: Interior rejected staff advice on casino, docs show — Pruitt's science directive slowed by industry concerns — Francis Brooke: Rookie of the year

By Kelsey Tamborrino | 04/20/2018 05:43 AM EDT

With help from Anthony Adragna

YOU NEVER KNOW WHAT YOU'RE GONNA GET: Interior officials reversed course on plans from two American Indian tribes to build a casino last year, new documents show. The heavily redacted documents released via FOIA show officials rejected recommendations from federal experts on Indian gaming, Pro's Nick Juliano reports, raising further questions about whether Interior Secretary Ryan Zinke and his political appointees caved to lobbying pressure from MGM Resorts International.

The tribes' treatment is now the subject of an Interior inspector general investigation, a spokeswoman told Nick. And while the documents don't reveal the contents of the internal deliberations by the staff of the Bureau of Indian Affairs' Office of Indian Gaming, they do show that the career staffers were circulating what they labeled as "approval" letters just 48 hours before their bosses refused to either OK or reject the tribes' application, leaving the casino in legal limbo.

No direct effort by MGM to lobby experts in BIA's Indian gaming office can be seen in the docs, but they show a timeline that indicates Interior officials closest to gaming issues were ready to side with the tribes after about six weeks of internal review. The department arrived at the opposite conclusion less than 48 hours after their recommendations went to Associate Deputy Secretary James Cason, a veteran of three Republican administrations, who was one of President Donald Trump's first hires at the department.

The emails also indicate even Interior career staff were unsure how they would explain the sudden about-face from higher-ups. "As for why we didn't approve the Mohegan compact amendment, you say the letter speaks for itself," Troy Woodward, a senior policy adviser in the Office of Indian Gaming, wrote to a colleague who wondered how he should answer questions. And "like Forrest Gump, say: 'that's all I've got to say about that.'" Read more.

WELCOME TO FRIDAY! I'm your host Kelsey Tamborrino, and NRECA's Kirk Johnson knew all the states with just one representative in the House: Alaska, Delaware, North Dakota, South Dakota, Montana, Vermont and Wyoming. For today: Who was the Senate majority leader whose father served as chief justice? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

POLITICO Space is our new weekly briefing on the policies and personalities shaping the second space age. Sign up today.

CONCERN ON ALL FRONTS: Scientists aren't the only ones expressing concern with EPA Administrator Scott Pruitt's plans to revise how the agency considers outside research, emails show. As the administrator weighs next steps on a scientific transparency directive announced earlier this year — which is expected to require that the raw data for all studies be publicly available and peer-reviewed — members of Pruitt's staff expressed concern it could block their own use of industry data, Pro's Annie Snider reports.

Emails between EPA officials obtained by the Union of Concerned Scientists show that Nancy Beck, the top political official in the agency's chemicals office, voiced concerns after she received a draft of the not-yet-released policy on Jan. 31. The directive in question has origins in legislation introduced by Rep. Lamar Smith during the Obama administration, but its requirements would exclude a great deal of data about pesticides and toxic chemicals that Beck's office considers when determining whether a substance is safe or must be restricted. "These data will be extremely valuable, extremely high quality, and NOT published," Beck wrote in an email to an official in EPA's office of research and development. "The directive needs to be revised." Read more here.

THE ROOKIE: The energy industry is unsure what to make of the relatively unknown Francis Brooke, who will soon replace Mike Catanzaro as the top White House energy aide. A 28-year-old former baseball pitcher, Brooke spent the last year in Vice President Mike Pence's office serving in a junior role to Catanzaro and George David Banks. But Pro's Ben Lefebvre and Eric Wolff report energy lobbyists worry his promotion could leave them without steady hands to steer the White House as big decisions on the coal industry, biofuels and energy trade pile up — especially in the crucial run-up to the midterm elections. "It shows you this administration doesn't care about these issues," said one lobbyist who works extensively with the administration on energy policy. "I expect agencies are now going to have to play a bigger role. There's not going to be a lot of policy issues that will be determined over the next eight months or so." Read more.

WHAT'S THE HOLD UP? House Natural Resources Chairman Rob Bishop says a comprehensive GOP energy bill is "being held up" until the Pentagon weighs how offshore drilling near Florida could affect national security, following backlash from the offshore proposal that led two Florida Republicans to pursue a permanent moratorium. A pending energy bill, H.R. 4239 (115), is one potential vehicle to extend that moratorium. Bishop told Anthony he is waiting for a Defense Department report on how expanded drilling near Florida would affect "mission compatibility." A committee spokeswoman said the results of the study would help determine next steps on the moratorium.

— **On the anniversary of the Deepwater Horizon oil spill**, New Jersey Gov. Phil Murphy is expected to sign into law today a bill that bans offshore drilling in state waters. The Center for American Progress, in anticipation of the legislation, cheered the move. Florida Sen. Bill Nelson, meanwhile, marked the anniversary by joining legislation Thursday intended to block the oil industry from rolling back Interior drilling safety rules adopted in response to the spill.

TRAVEL COMPANIONS: In preparation for a planned trip that was later canceled because of Hurricane Harvey, Pruitt spent nearly \$45,000 to fly five people to Australia, according to Reuters. While not a violation of government policy, Reuters reports two of Pruitt's aides and three security agents flew on business-class tickets costing roughly \$9,000 to set up advance meetings for the administrator. Pruitt was scheduled to participate in environment-related meetings with Australian officials.

Agency officials did not dispute the figures. EPA spokesman Jahan Wilcox told Reuters Hurricane Harvey, which caused major flooding in Texas, caused him to cancel the trip and instead go to Corpus Christi to assess the agency's relief efforts. "This is not news," he said, adding Pruitt's team was "adhering to the federal government's travel policy."

WHAT ABOUT HIS EMAILS? EPA told Senate Environment and Public Works Chairman John Barrasso that all of Pruitt's four emails were searched whenever there was a FOIA records request, but that a "full review" is being conducted just to make sure. "As long as EPA Administrators have had secondary email accounts, EPA staff have routinely searched requested accounts in response to FOIA and Congressional inquiries," Steve Fine, EPA's deputy chief information officer, wrote in a letter released by Barrasso.

DEMS WADE INTO WEST VIRGINIA PRIMARY: Republicans aren't the only ones trying to meddle in West Virginia's Senate primary. National Democrats are also jumping into the game, POLITICO's Alex Isenstadt reports, with an effort launched Thursday that could be designed to help coal baron Don Blankenship

win the Republican nomination. Washington-based super PAC Duty and Country has begun airing ads hitting the other two GOP contenders in the field: Rep. [Evan Jenkins](#) and state Attorney General Patrick Morrisey, ahead of the state's May 8 primary. But Blankenship was notably omitted from their target list, Alex writes. [Read more.](#)

— **Fox News Channel announced Thursday** its "America's Election Headquarters 2018" midterm election series would kick-off in West Virginia, with a GOP Senate primary debate on May 1. Candidates will need to reach a 10 percent threshold in a Fox poll next week to be invited to the debate.

ABOUT THAT CRA THREAT: Sen. [Lisa Murkowski](#) doesn't sound super gung-ho about using the Congressional Review Act on a 2016 plan from the Bureau of Land Management (that GAO [concluded](#) last year met the definition of a federal rule). "Obviously, we've got some issues that need to be resolved in the Tongass and whether this is the best way to do it is something we've been analyzing," she told reporters. Of course, floor time in the Senate is a valuable commodity so carving out time for the Alaska-centric issue may be a heavier lift. Background [here](#) on the Senate Republicans' new novel push to undo federal rules.

IT'S ALMOST EARTH DAY: Sunday marks Earth Day, where the Earth Day Network is using the date to promote its goal of [ending plastic pollution](#). The organization says more than 1 billion people from 192 countries will take part in the event on April 22. For its part, EPA promotes a list of Earth Day events [here](#).

CFA FLAGS FUNDRAISER AT PRUITT CONDO: Washington-based watchdog group Campaign for Accountability filed a complaint Thursday with the FEC against GOP Sen. [Mike Crapo](#) and Vicki Hart, the lobbyist co-owner of the controversial condo where Pruitt lived. The complaint alleges Crapo and Hart violated the Federal Election Campaign Act and FEC regulations when they failed to disclose improper in-kind contributions. Read it [here](#).

GOING PUBLIC: The Sierra Club filed a lawsuit for documents related to EPA's Office of Public Affairs after EPA failed to respond to its FOIA requests concerning whether the agency improperly — and potentially illegally — used the Office of Public Affairs' staff time to promote topics outside the scope of the office. Read it [here](#).

MAIL CALL! BIRD IS THE WORD: Sixty-two Democrats, led by Rep. [Alan Lowenthal](#), sent a letter to Zinke on Thursday regarding Interior's interpretation of the Migratory Bird Treaty Act. "We ask that you continue to enforce this foundational bird conservation law as every administration from across the political spectrum has done for more than forty years," the [letter](#) says.

— **Thirty-one outdoor businesses** will send [this letter](#) to Zinke today, calling on DOI to acknowledge the role of the outdoor recreation industry in its proposal to reverse the Methane Waste Prevention Rule. They request best practices are implemented to improve air quality in oil fields across the country, among other issues.

SPEAKING OF METHANE: Earlier this week BP released its "[advancing the energy transition](#)" report, [committing](#) to near-term carbon reductions and setting a target methane intensity of 0.2 percent and holding it below 0.3 percent. The Environmental Defense Fund [highlights](#) the report Thursday in a post arguing on the next frontier of methane targets, as annual shareholder resolution meetings are on the horizon.

SOLAR BILL SPOTLIGHT: Democratic Rep. [Jacky Rosen](#) introduced the bipartisan "Protecting American Solar Jobs Act," [H.R. 5571 \(115\)](#) this week, which would repeal tariffs introduced by the Trump administration on imported solar panels. It would undo increases in duty and a tariff-rate quota on certain crystalline silicon photovoltaic cells.

QUICK HITS

Stories from POLITICO Pro

Zinke's agency held up Indians' casino after MGM lobbying [Back](#)

By Nick Juliano | 02/01/2018 05:00 AM EDT

Two casino-owning American Indian tribes are accusing Interior Secretary Ryan Zinke of illegally blocking their plans to expand operations in Connecticut — a delay that stands to benefit politically connected gambling giant MGM Resorts International.

The Interior Department's refusal to sign off on the tribes' plans for a third Connecticut casino came after Zinke and other senior department officials held numerous meetings and phone calls with MGM lobbyists and the company's Republican supporters in Congress, according to a POLITICO review of Zinke's schedule, lobbying registrations and other documents. The documents don't indicate whether they discussed the tribes' casino project.

Federal law gives Interior just 45 days to issue a yes-or-no verdict after a tribe submits proposed changes to its gaming compact with a state, as the Mohegan and Mashantucket Pequot tribes note in a suit they filed against Zinke and the department. But the department declined to make any decision in this case, an inaction that raises questions about whether an intensive lobbying campaign by one of the gambling industry's biggest players muscled aside the interests of both the tribes and the state of Connecticut.

"I think the Department of Interior has been derelict in failing to give approval" to the tribes' request, Sen. Richard Blumenthal (D-Conn.) told POLITICO. "We asked for a meeting, but they were unresponsive. They never even responded."

Meanwhile, MGM and its allies had direct access to Interior. Zinke had multiple conversations last year with Sen. Dean Heller and Rep. Mark Amodei — two Nevada Republicans whose state is a major center of employment for MGM, and who have each tried to impede the tribes' casino plans. The company also doubled its lobbying spending and assembled a team that includes Bush-era Interior Secretary Gale Norton and Florida-based Trump fundraiser Brian Ballard.

The proposed Connecticut casino would sit on non-tribal land just across the border from a billion-dollar casino that MGM is planning in Springfield, Massachusetts. The Pequot tribe's Foxwoods Casino in Connecticut previously provoked the ire of former New Jersey casino owner Donald Trump, who complained during a 1993 congressional hearing that "they don't look like Indians to me."

An Interior spokeswoman did not respond to requests for comment, but the department is due to respond by next week to the suit the tribes filed in November. MGM has sought to join the suit on Interior's side.

MGM and its supporters say the tribes are trying to circumvent restrictions on "off-reservation" gambling while still maintaining their exclusive access to Connecticut's lucrative casino market, and that the new property would provide unfair competition to its Springfield project.

Interior officials sent the tribes encouraging signals as recently as May. But by mid-September the department reversed course, saying it would be premature to either approve or reject the plans.

"It's 100 percent about delaying us for as long as they possibly can," said Andrew Doba, a spokesman for the joint enterprise the tribes created for their new project.

The case is far from the first legal dispute to arise from Interior's role as the overseer of Indian tribes' gambling agreements with the states. Clinton-era Secretary Bruce Babbitt faced a special prosecutors' investigation after Interior rejected three Wisconsin tribes' plans for a casino that other, Democrat-supporting tribes opposed — though he ultimately was cleared. Indian gambling also played a key role in the George W. Bush-era Jack Abramoff scandal.

In the Connecticut case, the tribes have been operating two casinos — the Pequot tribe's Foxwoods and the Mohegan Sun — since the early 1990s. Their success in the market between Boston and New York provided competition to casinos in Atlantic City, including the formerly Trump-owned Taj Mahal.

As gambling spread across the U.S. in recent decades, MGM and other casino developers — including Trump — pursued projects in Connecticut but were ultimately unsuccessful. State law there limits casino ownership to the two in-state tribes and their new joint venture.

The tribes say they are fully complying with state law and the federal Indian Gaming Regulatory Act, which allows federally recognized tribes to operate casinos on their reservations or lands held in trust by the federal government. The casino they want to open is technically a commercial project that would be operated by MMCT Venture, a company jointly owned by the tribes that owns the casino site in East Windsor and entered into a development agreement with the town.

Connecticut Gov. Dannel Malloy and the state legislature signed off on that arrangement last year, so long as the tribes agreed to amend their gaming compacts that guaranteed a certain share of slot revenues would go to the state. The Indian Gaming Regulatory Act requires Interior to approve such compact amendments after a brief review window, unless the amendments violate the terms of the federal law.

The lawsuit seeks to force approval of the contract, arguing that the law does not allow Interior to refuse to render a verdict.

"IGRA and its implementing regulations leave the Secretary with no discretion to proceed in any other manner," Connecticut and the tribes argue in their lawsuit, filed in U.S. District Court for the District of Columbia on Nov. 29.

At one point, Interior seemed inclined to agree with the tribes' interpretation of the law. In a May 12 technical guidance letter to the tribes, Associate Deputy Interior Secretary James Cason acknowledged that the Indian Gaming Regulatory Act provides for a 45-day review period for compact amendments and that the department may disapprove them only for violating the act, other federal laws or trust obligations to the tribes.

While Cason stressed that his advice was nonbinding and did not constitute a preliminary decision, he endorsed earlier guidance from the Obama administration that the Connecticut amendment reflected the "unique circumstances" at play and that opening a new casino would not affect the tribes' exclusivity agreement with the state.

But the tribes' request drew opposition from out-of-state lawmakers like Heller and Amodei.

"Under that framework, the tribes seek to expand off-reservation gaming without going through the procedures mandated by" the Indian Gaming Regulatory Act, Amodei wrote in a July 28 letter to Cason, following up on a discussion earlier that day. Amodei asked whether Interior planned to allow the 45-day review period to lapse, which would allow the amendments to be "deemed approved."

Ultimately, Interior decided against approval. Acting Assistant Secretary for Indian Affairs Michael Black told the tribes in a Sept. 15 letter that approving or disapproving the amendment to their gaming compact was "premature and likely unnecessary," and said Interior had "insufficient information" to make a decision. However, he did not cite any legal justification for that move, nor did he outline what additional information the department would need.

Interior has on at least one occasion returned a gaming compact amendment rather than make a yes-or-no decision, although the circumstances were slightly different at the time. In 2013, the department told the Cheyenne-Arapaho tribes in Oklahoma that it could not process their amendments because of incomplete information. But in that case, the department replied in less than 30 days rather than wait for the entire review period to elapse, and it cited specific regulations and outlined what additional information it needed from the tribes.

Black copied Amodei and Heller on his letter but did not include any Connecticut lawmakers. (He did say a separate letter was going to Malloy, the Connecticut governor.) Zinke and Heller also spoke on the phone on Sept. 15, according to an entry on Zinke's calendar. And the day before Black sent the letter, Zinke and Cason were scheduled to meet at the White House with deputy chief of staff Rick Dearborn, although Zinke's calendar does not list the subject of the meeting.

Ahead of the decision, MGM "participated in Interior's review" through meetings and correspondence in which the company urged Interior to either return the amendments without making a decision or to disapprove them for violating the Indian Gaming Regulatory Act, according to a statement filed in court by Uri Clinton, MGM's senior vice president and legal counsel.

MGM brought on heavyweights including Norton — who disclosed her work for the company just last month — as well as Ballard, a lobbyist who has helped raise millions for Trump's campaign. MGM's spending on lobbyists for all issues more than doubled last year, to \$1.5 million spread across five outside firms and its own newly formed in-house team.

An affiliated company, MGM Public Policy LLC, also paid \$270,000 last year to hire a team of lobbyists from Brownstein Hyatt Farber Schreck LLP to work on issues including gaming. That's the firm at which Deputy Interior Secretary David Bernhardt worked until he joined the administration last year, though he has agreed to recuse himself from matters involving former clients of his firm without prior authorization.

"MGM Resorts last year established a public policy office in Washington to engage more directly on Federal legislative and policy issues," an MGM spokesman said in a statement. "Our advocacy activity reflected that increased engagement. As the largest employer in Nevada, part of that advocacy is routinely engaging our elected representatives."

Heller and Amodei each had multiple meetings and phone calls with Zinke last year, according to the secretary's calendar, although it's unclear whether they discussed the Connecticut casinos. On one occasion, Zinke joined Heller for dinner at a Las Vegas steakhouse on July 30, when he was in the state touring national monuments, one of several pieces of Interior's portfolio of interest to Nevada.

A Heller spokeswoman did not respond to a request for comment. But the senator has tried to advance MGM's interests in the past: In 2016, he offered an amendment to a defense bill that would have prevented Indian tribes from operating commercial casinos in the same state where they operate casinos on the reservation — precisely what the Connecticut tribes are trying to do. The amendment never came to a vote, and Heller does not appear to have ever discussed it publicly.

MGM employees and the company's political action committee have given \$96,000 this cycle to Heller's reelection campaign and leadership PAC, making the company his largest single source of contributions, according to the Center for Responsive Politics. Amodei has received no donations from company employees or its PAC.

Interior's Sept. 15 decision came two weeks after Zinke invited several lobbyists for MGM to join him and other guests for a social visit on his office balcony, which overlooks the National Mall. They included, according to Zinke's calendar, Ballard and other lobbyists from his firm Florida-based firm Ballard Partners, which opened its first Washington, D.C., office in 2017. Also present were Zinke's former family attorney and a major GOP fundraiser, according to copies of the secretary's calendar.

MGM hired Ballard in March and paid the firm \$270,000 last year, according to disclosure filings. Ballard was Florida finance chairman for Trump's 2016 campaign and helped organize a fundraiser at the Trump International Hotel in Washington last summer at which donors gave \$35,000 to attend or \$100,000 to join the host committee.

Ballard declined to discuss his work for MGM or any other client and said he could not recall the details of that particular meeting, which took place Aug. 29, according to Zinke's calendar. But Ballard said he had met Zinke and thinks "the world of him."

In October, MGM brought on Norton, who served as Interior secretary from 2001 to 2006, to lobby on issues related to the Connecticut tribes. Norton began lobbying for MGM on Oct. 25, according to disclosures filed Jan. 19.

The next day, Oct. 26, Interior officials spoke to the tribes and asked them to explain why the department was obligated to weigh in on their casino since it was being built by a commercial entity and not on tribal land.

In a brief interview last week, Norton said she did not know why her disclosure form was filed so late — lobbyists are required to file disclosures within 45 days — and she did not respond to follow-up inquiries.

Meanwhile, a new state legislative session begins in February in Connecticut. MGM plans to ask legislators there to allow an open bidding process for new casinos in the state, arguing that Interior's refusal to act shows that the state's attempt to limit casino ownership to the tribes would not work.

Interior rejected staff advice when scuttling tribes' casino, documents suggest [Back](#)

By Nick Juliano | 04/20/2018 05:02 AM EDT

Trump administration officials rejected recommendations from federal experts on Indian gaming policy when they blocked two American Indian tribes from opening a casino last year, documents obtained by POLITICO indicate.

The heavily blacked-out documents add to questions about whether Interior Secretary Ryan Zinke and his political appointees buckled to lobbying pressure from MGM Resorts International, a gambling industry giant that is planning its own casino just 12 miles from the project proposed by the Mohegan and Mashantucket Pequot tribes.

Interior's inspector general is investigating the department's handling of the tribes' casino application, a spokeswoman told POLITICO, after Connecticut lawmakers asked the internal watchdog to look into the matter.

The documents, released under the Freedom of Information Act, don't reveal the contents of the internal deliberations by the staff of the Bureau of Indian Affairs' Office of Indian Gaming. But they show that the career staffers were circulating what they labeled "approval" letters just 48 hours before their political bosses reversed course and refused to either OK or reject the tribes' application — a nondecision that left the Indians' East Windsor project in legal limbo.

To fight off the potential competition, MGM [spent heavily on lobbyists](#), including George W. Bush-era Interior Secretary Gale Norton and firms with ties to the Trump administration, while enlisting the assistance of friendly lawmakers such as Sen. [Dean Heller](#) and Rep. [Mark Amodei](#). MGM lobbyists and the two Nevada Republicans

held a handful of meetings and conversations with Associate Deputy Secretary James Cason in the months and days before he edited Interior's letter holding up the tribes' plans.

A spokesman for the tribes' casino project said they were caught off guard by Interior's about-face and are glad to see the department's internal watchdog probing the matter.

"We are grateful there's an IG investigation into this issue because since last fall, none of the department's actions have passed the smell test," said Andrew Doba, a spokesman for MMCT Venture, the company the tribes formed to own and operate the new casino. "Something clearly happened to pollute the process, which should be problematic for an administration that promised to drain the swamp."

The tribes have also sued, arguing that Zinke ignored his responsibilities under the Indian Gaming Regulatory Act to either approve or reject their application in a timely manner and to act to protect the tribes' interests.

Cason and spokespeople for Interior and the Bureau of Indian Affairs did not respond to requests for comment this week.

But the emails show that even Interior's career staff was unsure how they would explain the sudden about-face.

"As for why we didn't approve the Mohegan compact amendment, you say the letter speaks for itself," Troy Woodward, a senior policy adviser in the Office of Indian Gaming, wrote in a Sept. 26 email to a colleague who anticipated having to answer questions about it at a gaming industry conference. And "like Forrest Gump, say: 'that's all I've got to say about that.'"

The dispute is complicated by the peculiarities of federal law on Indian gaming, which seeks to promote tribes' economic development but also discourages the spread of off-reservation gambling. The two Connecticut tribes, which already operate two lucrative casinos on their reservations, are exploring a gray area with their proposed third casino, which a jointly owned private company would operate on nonreservation land.

MGM, which plans to open a casino later this year in nearby Springfield, Mass., says the tribes' approach would set a worrisome precedent for other states.

"This is an unusual situation, and we're kind of pushing the bounds on IGRA," says Kathryn Rand, dean of the University of North Dakota School of Law and a co-director of its Institute for the Study of Tribal Gaming Law and Policy. Rand is not affiliated with MGM or the Connecticut tribes.

The newly released documents do not show any effort by MGM to make its case to experts in BIA's Indian gaming office. They also indicate that Interior officials closest to Indian gaming issues were ready to side with the tribes after about six weeks of internal review.

Instead, Interior reversed course with little official explanation less than 48 hours after their recommendations went to Cason, a veteran of the previous three Republican administrations who was one of President Donald Trump's first hires at the department.

On Sept. 11, Woodward emailed around copies of "the edited letters for Pequot and Mohegan," which he said had "been through the surname process," a system for internal review. The contents of the letters were redacted, but each was about two pages long, and file names referred to both as "draft approval" letters.

The following day, Woodward alerted colleagues that "Jim wants some changes," referring to Cason. But on Sept. 13, Woodward still sent "approval" letters "for Mike Black's signature," referring to the then-acting

assistant secretary for Indian affairs, along with a notice the department was required to publish in the Federal Register. Again, the attachments were redacted, but each was two pages long.

A day later, "Jim's edits" came back, and the documents were no longer referred to as "approval" letters.

Instead, Black signed a one-page letter on Sept. 15 informing the tribes that it would be "premature and likely unnecessary" to weigh in on their gaming applications at all.

Returning the applications without approving or disapproving them appears to be an option Interior officials did not consider until earlier that day. A pair of redacted memos circulated that morning, including one "regarding Secretarial Authority to not act on a compact," according to its title.

It is unclear precisely what happened over those days, but by then Cason had received ample input from MGM and its allies. As early as June, Cason met with a senior adviser to Zinke and a lobbyist from Ballard Partners, a Trump-connected firm MGM hired last year, to discuss issues related to the company, according to his calendars. And he was in touch with MGM supporters several more times over the intervening months up to the days before Interior's response was being finished.

On Sept. 13, Cason met with Amodei, and the following day he had a teleconference with Heller, according to Cason's calendar. MGM is a major employer in Nevada, and both lawmakers had previously raised concerns about the Connecticut tribes' proposals and the potential expansion of off-reservation gambling.

Cason's Sept. 14 meeting with Heller included some officials who were working on the Connecticut case, according to his calendar and the BIA emails. Later that day, Cason joined Zinke at a meeting at the White House with Rick Dearborn, Trump's deputy chief of staff for policy.

The president has his own history of clashes with the Mashantucket Pequot, whose Foxwoods Casino competed with his Atlantic City properties to draw gamblers from New York City. "They don't look like Indians to me," Trump infamously declared in a 1993 congressional hearing.

Several weeks after Interior released its decision, Norton sent Zinke a 24-page memo outlining legal arguments in support of the decision on behalf of MGM. Among the evidence she cited was Trump's congressional testimony, though not that particular phrase.

"Supreme Court precedent and President Trump's testimony counsel against approving Connecticut's discriminatory framework, the sole function of which is to grant MMCT, a private corporation, a monopoly over commercial, off-reservation, state-regulated gaming," the former Interior secretary wrote in her Oct. 30 memo to Zinke.

Black's ambiguous Sept. 15 letter, which Cason had edited, left the tribes unable to proceed with their planned casino.

The tribes' lawsuit is pending in U.S. District Court for the District of Columbia, and MGM has asked to intervene in the case, although both Interior and the tribes say it does not have standing to do so.

The case hinges on dueling interpretations of the goals of the Indian gaming law — essentially, whether more weight should be given to IGRA's goal of supporting tribes' economic prospects or its prohibitions on off-reservation gaming in most circumstances.

In court filings, Interior has also stressed the importance of procedural differences between the two tribes' prior gaming agreements, which it says should prevent the Mashantucket Pequot from participating in the case at all.

While the Mohegan tribe was operating under a state gaming compact, the Mashantucket were never able to reach an agreement with Connecticut officials back in the 1980s — so Foxwoods has been operating under the terms of "secretarial procedures" authorized under a different section of the law.

The law says amendments to gaming compacts, such as the Mohegan's, must be approved within 45 days unless Interior can demonstrate that their terms violate federal law or the department's trust responsibilities to the tribe. But it contains no such deadline for secretarial procedures such as the Mashantucket Pequot's.

Interior and MGM say that because the department has no obligation to act on the Pequot's proposed amendment, the entire case is effectively moot. However, the newly disclosed emails suggest that career officials were aware of that distinction throughout their review and did not see it as a reason to deny the tribes' request.

Rand, the law school dean, said courts have not previously grappled with the issue. "That I think is a real interesting and open question that we wouldn't have a whole lot to go on," she said.

This case is also unusual because of the nature of the two tribes at issue and the lucrative market the two sides are battling over.

"That might be a bit implicit in MGM's arguments — that the Mohegans and the Pequots aren't acting like tribal governments in this enterprise, they're operating like competitors. And because of their status ... they don't need the protection that other tribes do," Rand said in an interview this week. "The counterargument, of course, is that tribal sovereignty doesn't depend on whether the tribe needs the federal government's help. Tribal sovereignty is just a fact."

Black's Sept. 15 letter also does not mention the procedural difference between the tribes as a factor in deciding to return the applications without acting on them.

EPA emails show industry worries slowed new science policy [Back](#)

By Annie Snider | 04/19/2018 05:01 PM EDT

EPA's rollout of a controversial new transparency policy that would severely restrict the scientific research the agency can rely on when drafting new regulations has been slowed down by political officials' fears that it could have major unintended consequences for chemical makers, according to newly released EPA documents.

The issue of scientific transparency has been high on the agenda of House Science Chairman [Lamar Smith](#) (R-Texas), who has found strong support from EPA Administrator Scott Pruitt — much to the consternation of public health advocates and green groups, who view the effort as backdoor attack on the agency's ability to enact environmental regulations.

Since Pruitt announced plans for the new policy last month, researchers and public health proponents have raised alarms that it could restrict the agency's ability to consider a broad swath of data about the effects of pollution on human health. But documents released under the Freedom of Information Act show that top EPA

officials are more worried the new restrictions would prevent the agency from considering industry studies that frequently support their efforts to justify less stringent regulations.

Emails between EPA officials obtained by the Union of Concerned Scientists show that Nancy Beck, the top political official in the agency's chemicals office who came to the agency after serving as a key expert for the chemical industry's lead lobbying group, voiced major concerns after she received a draft of the not-yet-released policy on Jan. 31.

The new scientific transparency directive is expected to require that the raw data for all studies EPA relies on be publicly available, and that the studies be peer-reviewed. But Beck said these requirements would exclude a great deal of industry data about pesticides and toxic chemicals that her office considers when determining whether a substance is safe or must be restricted.

It costs companies "millions of dollars to do these studies," Beck wrote in an email to Richard Yamada, the political official in EPA's office of research and development who is spearheading work on the new scientific policy and is also a former staffer for the House Science Committee chairman.

"These data will be extremely valuable, extremely high quality, and NOT published," Beck wrote. "The directive needs to be revised."

Moreover, much of this data, Beck noted, is considered proprietary by companies. It is dubbed confidential business information, and even though EPA can consider it as part of its regulatory review, the data cannot legally be made public.

Yamada replied to thank Beck for the heads up. "Yes, thanks this is helpful - didn't know about the intricacies of CBI," he wrote. "We will need to thread this one real tight!"

The term "confidential business information" primarily applies to industry information. That data is separate from the personal medical information that public health researchers worry could block consideration of their work.

Yogin Kothari, a lobbyist for the Union of Concerned Scientists, said the emails show the Trump administration's EPA has been "trying to stack the deck in favor of the industries they're supposed to be regulating."

"They want to potentially create exemptions for industry, but if you look at this entire set of documents ... you will see that there's not a single consideration for the impacts on public health data, on long-term health studies, on studies that EPA does after public health disasters like the BP oil spill," he said.

EPA spokeswoman Liz Bowman emphasized the policy is not yet finalized.

"These discussions are part of the deliberative process; the policy is still being developed. It's important to understand; however, that any standards for protecting [confidential business information] would be the same for all stakeholders," she said in a statement.

The emails indicate Pruitt wanted the new science policy rolled out at the end of February, and teased his plans in an interview with conservative outlet The Daily Caller in mid-March. But the agency has yet to finalize the policy.

The transparency directive has its origins in legislation introduced by Smith during the Obama administration, that had the backing of a number of industry groups, including the American Chemistry Council. The House

Science Committee chairman frequently charged that the Obama EPA used "secret science" to justify "costly new regulations."

Although versions of the measure were approved by the House multiple times, the Senate never took it up. CBO estimated that one version of Smith's legislation would cost EPA \$250 million a year, at least in the initial years, and a leaked staff response to questions from the budget office said a later version would be even more costly, would endanger confidential medical and business information, and "would prevent EPA from using the best available science."

But Smith found an ally in Pruitt. The emails indicate that Smith met with Pruitt in early January and show that Pruitt's staff quickly began working on a directive to "internally implement" the legislation.

Industry's backing for the new scientific approach began to waiver under the Trump administration, though. When a top American Chemistry Council scientist testified before Smith's committee in February 2017, she emphasized the need to protect industry information if the transparency initiative moved forward.

"One of the things that we do need to take into consideration as making that data publicly available is that there are adequate protections for confidential business information to ensure that we keep innovation and competitiveness available for the marketplace," Kimberly White told the committee.

Industry has historically claimed that a wide range of information about chemicals, ranging from the processes by which they are produced, to the locations of manufacturing plants, to their very identities, must be kept confidential in order to keep competitors from learning trade secrets. Environmental and public health advocates argue that industry claims this exemption in many cases where it's not necessary and that it often keeps important health and safety information from public view.

The issue was a key point of debate when Congress considered a major overhaul of the nation's primary chemical safety law passed 2016 and has reemerged as Pruitt's EPA sets about implementing the law.

Asked for comment on EPA's new effort to implement the scientific transparency approach internally, American Chemistry Council spokesman Scott Openshaw said the group looks forward to reviewing the directive once it's finalized.

"It is critical that any final directive properly protect confidential business information and competitive intelligence," he said in a statement.

The internal emails show that EPA political staff were particularly attuned to this concern. In a Feb. 23 email to colleagues, Beck forwarded language from a 2005 White House document that laid out narrow exemptions from its requirement that all "important scientific information" disseminated by the federal government go through peer review.

"[Y]ou may need to tweak but hopefully there is something helpful here that can be borrowed/adopted," she wrote.

Richard Denison, lead senior scientist for the Environmental Defense Fund, said that EPA's access to industry data is indeed important to its ability to review the safety of new chemicals and pesticides, but said the internal EPA communications show that Pruitt's EPA wants to "have their cake and eat it too" with the new directive.

"They're trying to force peer review studies done by academic scientists to disclose every last detail, while at the same time allowing industry studies to be kept private or aspects of those to still be kept private," he said.

He pointed out that the concerns Beck raised about the burden the new policy would place on industry are the very same ones that the CBO report said the policy would place on EPA.

Energy industry puzzles over new White House adviser [Back](#)

By Ben Lefebvre and Eric Wolff | 04/19/2018 07:14 PM EDT

The appointment of a 28-year-old former congressional staffer as the top White House energy aide left many industry lobbyists scratching their heads — and nervous that the new hire may have trouble filling the shoes of the more experienced adviser he's replacing.

The relatively unknown [Francis Brooke](#) will step into the role as replacement for Mike Catanzaro, who will exit the White House next week. Catanzaro and NSC energy adviser George David Banks, another energy adviser who departed earlier this year, have been the top two energy experts in the White House, and they'll take with them decades of experience.

Brooke spent the last year in Vice President Mike Pence's office serving in a junior role to Catanzaro and Banks. But energy lobbyists worry his elevation will leave them without steady hands in the White House just as the administration confronts big decisions on the coal industry, an intra-party biofuels fight and thorny energy trade issues. Putting a relative rookie into the role also shows that the administration may not devote as much attention to energy issues in the run-up to the 2018 elections, sources said.

"It shows you this administration doesn't care about these issues," said one lobbyist who works extensively with the administration on energy policy, but who requested anonymity to discuss people he expects to work with. "I expect agencies are now going to have to play a bigger role. There's not going to be a lot of policy issues that will be determined over the next eight months or so."

Brooke joins the White House with far less energy-sector experience than Banks and Catanzaro, who came to their jobs with long histories in industry and government. He started his career as an intern for Mick Mulvaney in October 2012 when the White House budget director was a South Carolina congressman. After that, he had stints as a staff assistant for Rep. [Andy Barr](#) (R-Ky.) and legislative aide for Senate Majority Leader [Mitch McConnell](#) (R-Ky.). Pence's office tapped him to be associate director of policy in February 2017.

His family was involved in international politics in the previous decade. His father, [Francis Brooke Sr.](#), helped foster the relationship between officials in the George W. Bush administration and Ahmed Chalabi, the controversial Iraqi exile who helped convince the U.S. to invade his country.

Pence's office confirmed Brooke's biographical information but did not offer further details about his time working with the vice president.

McConnell's office did not respond to questions about Brooke. A spokeswoman for Barr said Brooke had been "one of the Congressman's most trusted legislative assistants and handled a wide variety of issues including energy, environment, and health care."

Previous to that, Brooke's biggest notice came from pitching 97 innings in the 2012 season with Northwestern University, making 13 starts and ending with a 2.51 earned run average. He would later serve as a coach to the Republicans' congressional baseball team, and he was on the Arlington, Va., practice field when a gunman shot Rep. Steve Scalise of Louisiana.

Lobbyists say they worry that with the departures of Catanzaro and Banks, Brooke will not be able to help the White House navigate complex energy issues with technical details that can be headache-inducing.

"There is angst downtown that without Mike there, no one knows who is going to make the trains run on time," said Andeavor's Stephen Brown said before Brooke was officially named to the position. "Mike was always the adult in the room on energy issues with substantive knowledge, not just a political perspective."

Brooke, along with Wells Griffith, an Energy Department official on a three-month loan to the White House, will have almost no time to get acclimated to their jobs. The Department of Energy is grappling with whether to try to use emergency authority to keep economically distressed coal-fired power plants running. And the two new staffers may need to help Trump navigate the dispute between refiners seeking changes to the Renewable Fuel Standard and corn farmers who are counting on the president to live up to his promise to protect ethanol.

They will also have to cope with White House officials on trade issues, such as the steel tariffs that oil and gas companies have complained could hamper the construction of new pipelines.

But some current and former administration officials say they have confidence Brooke is up to the job. They say he worked closely with Banks and Catanzaro on all their key issues, including traveling with Banks to the U.N. climate conference at Bonn, Germany, as a key adviser.

"He knows all the players, he's been in all the meetings," said one administration source. "He has the right temperament, the right judgment. People get into these jobs and they use them for vanity tours. Brooke doesn't do that. He's going to be great."

Banks, who left the White House in February, agreed.

"I think that he's ready for the role," said Banks, former adviser to Trump on the NSC. "Francis has been deeply engaged in all of the major energy environment [initiatives]. Some people wouldn't have the experience he's had in working these issues for over a year in the White House. He's incredibly bright, disciplined person."

Critics of the administration's energy policy rollbacks hoped Brooke's lack of experience would depoliticize some of the big decisions before the administration.

"Of course it's weird that there's no senior person covering energy issues," said John Morton, former senior director for energy and climate change on the NSC during the Obama administration. "Though with this administration, it's often a blessing in disguise when a policy area gets neglected by Trump appointees, as it allows more talented career staff to manage affairs."

Bishop: Drilling moratorium holding up energy bill vote in House [Back](#)

By Anthony Adragna | 04/19/2018 05:32 PM EDT

House Natural Resources Chairman [Rob Bishop](#) says a wide-ranging GOP energy bill is "being held up" until the Pentagon weighs in on how offshore drilling near Florida could affect national security.

The Trump administration earlier this year proposed allowing drilling in the Eastern Gulf of Mexico after an existing moratorium expires in 2022. Although Interior Secretary Ryan Zinke [quickly backed away](#) from the idea, the resulting firestorm led two Florida Republicans to pursue [a permanent moratorium](#), which they said has the backing of Speaker [Paul Ryan](#).

A pending energy bill, [H.R. 4239 \(115\)](#), is one potential vehicle to extend the moratorium. But Bishop, a strong supporter of the oil industry, did not include any limits on offshore drilling when the bill passed out of his committee last year.

The Utah Republican told POLITICO this week he is waiting for the Defense Department report on how expanded drilling near Florida would affect "mission compatibility." A committee spokeswoman said the report's findings would influence "how to move forward on a potential agreement regarding the future of the Eastern Gulf once the moratorium expires in 2022."

Oil and gas leasing within 125 miles off the Florida coastline and areas of the Gulf of Mexico is currently off limits until 2022.

Bishop said in the interview Wednesday that the absence of House Majority Whip [Steve Scalise](#) (R-La.), lead sponsor of the legislation, for surgery is an additional factor in getting the bill floor time.

WHAT'S NEXT: When the measure will get floor consideration remains unclear.

Report: EPA spent \$45,000 on Australia trip Pruitt canceled [Back](#)

By Emily Holden | 04/19/2018 05:34 PM EDT

Five EPA employees spent \$45,000 traveling to Australia last year to prepare for a trip by EPA Administrator Scott Pruitt that was ultimately canceled, Reuters [reported](#) today.

The two advance team aides and three security agents spent about \$9,000 each on business-class tickets to fly to Australia in August, an expense that is permitted under government rules on flights lasting 14 hours or more. The two EPA staffers were advance director Millan Hupp, the Oklahoma aide who followed Pruitt to Washington and has drawn scrutiny for receiving a large raise, and Kevin Chmielewski, the former deputy chief of staff for operations who was dismissed and is now acting as a whistleblower to lawmakers about Pruitt's spending habits.

Agency officials did not dispute the figures. EPA spokesman Jahan Wilcox said Pruitt did not go to Australia because of Hurricane Harvey. Pruitt traveled from his home in Tulsa, Okla. to Corpus Christi, Texas, to assess relief efforts on Aug. 30, according to his schedule and flight records.

Pruitt spent at least \$105,000 on first class flights and at least \$3 million on a round-the-clock [security detail](#). Records show about one-quarter of the \$120,000 costs for a trip to Italy in June for a G-7 environment meeting was to cover Pruitt's security. EPA's inspector general and various other government officials are investigating Pruitt's travel and spending.

Flight vouchers EPA has shared with lawmakers show Pruitt originally intended to travel to Sydney and Melbourne from Aug. 31 through Sept. 8 to "discuss best practices regarding the environmental operations" within the country.

EPA tells Barrasso all Pruitt's emails searched for FOIA [Back](#)

By Alex Guillén | 04/19/2018 05:24 PM EDT

EPA today told Senate Environment and Public Works Chairman [John Barrasso](#) (R-Wyo.) that all four of Administrator Scott Pruitt's emails were searched whenever there was a Freedom of Information Act records request, but that a "full review" is being conducted just to make sure.

"As long as EPA Administrators have had secondary email accounts, EPA staff have routinely searched requested accounts in response to FOIA and Congressional inquiries. That practice has not changed under Administrator Pruitt's leadership," Steve Fine, EPA's deputy chief information officer, wrote in a [letter](#) released today by Barrasso.

Fine added: "However, in response to your concern, my office is conducting a full review of the searches conducted regarding FOIA requests seeking Administrator Pruitt's records. If additional documents exist, we will contact the relevant requesters, and we will update you once our review is complete."

"I look forward to receiving the findings of the agency's full review that's being conducted in response to my letter," Barrasso said in a statement.

WHAT'S NEXT: Fine did not say how long EPA's review of FOIA request fulfillment will take.

Democrats meddle in West Virginia's GOP Senate primary [Back](#)

By Alex Isenstadt | 04/19/2018 04:23 PM EDT

National Democrats launched a campaign Thursday to intervene in the upcoming West Virginia Senate GOP primary — an effort that could be designed to help recently imprisoned coal baron Don Blankenship win the Republican nomination.

Duty and Country, a Washington-based Super PAC, began airing TV and web ads savaging the two mainstream Republican candidates, Rep. Evan Jenkins and state Attorney General Patrick Morrisey, who are competing in the May 8 primary. Left off the group's target list, however, was Blankenship, who spent one year in prison following the 2010 explosion at his Upper Big Branch Mine that killed 29 workers.

In propping up Blankenship, the Democratic Party is wading into an intensifying GOP civil war. Republicans are growing increasingly worried about Blankenship, who has been gaining traction in the primary. GOP officials in Washington are concerned that if Blankenship wins the nomination, he'll ruin the party's prospects of defeating Democratic Sen. Joe Manchin in November.

Last week, national Republicans launched a super PAC named Mountain Families PAC aimed at stopping Blankenship. The organization, which is staffed by consultants who've previously worked for a political group aligned with Senate Majority Leader Mitch McConnell, has begun airing TV commercials accusing Blankenship of contaminating drinking water by pumping toxic slurry while setting up a separate piping system to his mansion.

The Democratic group is spending over \$380,000 to air the commercials. One of the [TV spots](#) says that as the former head of West Virginia State Medical Association, Jenkins pushed doctors to use an insurance company that overcharged, allowing his organization to profit. Another [ad](#) describes Morrisey as a carpetbagger, calling him a "millionaire New Yorker and former lobbyist who came down here and ran for office with no idea of the real challenges West Virginians face."

The Democratic group has also begun sending out mailers describing Jenkins as "part of the swamp, part of the problem."

A Duty and Country spokesman, Mike Plante, said the group had no plans to go after Blankenship and was instead focused on his two rivals.

"We made the strategic decision based on data that shows that either Patrick Morrisey or Evan Jenkins is more likely to be the nominee, so that's where we're focusing our attention," he said.

Duty and Country appears to have close ties to the national Democratic Party. In its federal filings, it lists the same downtown Washington address as other major party groups, including Senate Majority PAC, the main Democratic super PAC devoted to electing Senate Democrats.

In another twist, West Virginia attorney Booth Goodwin, who served as U.S. attorney in the case against Blankenship, is listed as the group's treasurer.

GOP maneuver could roll back decades of regulation [Back](#)

By Zachary Warmbrodt | 04/17/2018 10:16 AM EDT

Republicans are preparing to open a new front in their push to roll back regulations across the government, using a maneuver that could enable them to strike down decisions by federal agencies that reach back decades.

As soon as Tuesday, GOP senators, backed by President Donald Trump, will use the Congressional Review Act to topple safeguards issued by the CFPB in 2013 that were intended to discourage discrimination in auto lending.

While Republicans in the Trump era have already taken advantage of the 1996 law to remove more than a dozen recently issued rules, this would be the first time that Congress will have used it to kill a regulatory policy that is several years old.

Now, actions going back to President Bill Clinton's administration could be in play under the procedure GOP lawmakers are undertaking, forcing numerous agencies to reconsider how they roll out new regulations.

"It's a hugely important precedent," Sen. Pat Toomey (R-Pa.), the architect of the effort, said in an interview. "It's potentially a big, big opening."

While conservatives are applauding the effort as a way to rein in rogue bureaucrats and boost the economy, consumer advocates are warning that the consequences could be dire.

"This takes an already incredibly dangerous law and cranks it up to 11," said James Goodwin, senior policy analyst at the Center for Progressive Reform.

Republicans are leveraging two key provisions of the Congressional Review Act.

They're again taking advantage of fast-track authority that allows a simple majority of the Senate to pass a resolution rolling back a rule if the vote occurs within a window that's open for no more than a few months. The provision enables senators to avoid a filibuster.

But the more novel use lies in the law's requirement that federal agencies submit rules to Congress for their potential disapproval. Republicans have landed on a way to target a wide array of decisions — including regulatory guidance — that haven't typically been implemented as formal rules under the Administrative Procedure Act.

"You have this unimaginably large universe of stuff that is now eligible for repeal under the CRA," Goodwin said, citing a hypothetical Occupational Safety and Health Administration workplace safety poster as a potential example. "Agencies don't submit all this stuff because it would be an administrative nightmare."

In the case of the auto-lending policy, the CFPB released it as a guidance document rather than a formal rule governed by the notice-and-comment requirements of the APA. As such, it wasn't technically submitted to lawmakers for the purposes of the Congressional Review Act. That means the clock for congressional review never started.

That changed last year. For advocates of deregulation, the stars had aligned thanks to the ascendance of a Republican president eager to roll back rules and the Republicans retaining control of Congress.

Toomey, the former president of the conservative Club for Growth, went on the hunt for ways the GOP could take advantage of its congressional majority to eliminate federal rules.

He found a way to wield the power that the Congressional Review Act gives a majority of the Senate to sidestep obstruction via filibuster when it comes to years-old regulatory actions.

To do so, he asked the Government Accountability Office to determine whether the CFPB auto-lending guidance qualified as a rule for the purposes of the Congressional Review Act. In December, GAO told him that

it did in fact satisfy the legal definition of a rule, starting the clock for Republicans to undo it without having to seek any help from Democrats.

"When regulators regulate by guidance rather than through the process they're supposed to use, which is the Administrative Procedure Act and do a proper rulemaking, they shouldn't be able to get away with that," Toomey said. "If we can get a determination that the guidance rises to the significance of being a rule, then from that moment the clock starts on the CRA opportunity."

Amit Narang, regulatory policy advocate at Public Citizen, said it "is really going to open up a Pandora's box." Public Citizen and 60 other advocacy groups covering the gamut of finance, the environment, labor and gay rights are calling on Congress to oppose the CFPB rollback, saying it would set a dangerous precedent.

They warned it would put at risk not only protections for workers, consumers, minorities and the environment, but also regulatory certainty for businesses.

"Expanding the power of the CRA to overturn guidance from decades ago will threaten protections hardworking families rely on, making it harder for middle class Americans to get ahead and responsible businesses to follow the law," Sen. Sherrod Brown (D-Ohio) said.

Critics have also questioned the need to undo the CFPB auto-lending guidance because the bureau is now led by a Trump appointee, acting Director Mick Mulvaney, who could eliminate it himself. Mulvaney told lawmakers last week he was reviewing the policy. The National Automobile Dealers Association and the American Financial Services Association are supporting the rollback of the anti-discrimination measure, arguing that the way the CFPB crafted the guidance was flawed.

The Senate opened debate on the bill Tuesday following a 50-47 procedural vote. Sen. Joe Manchin (D-W.Va.) was the only Democrat to support moving forward with the legislation.

Other lawmakers have begun to test the waters. In November, GAO in a response to a request from Sen. Lisa Murkowski (R-Alaska) confirmed that a 2016 plan from the Bureau of Land Management was a rule for the purposes of review under the CRA. A spokeswoman for Murkowski did not respond to a request for comment.

Paul Larkin, a senior legal research fellow at the Heritage Foundation, has been advocating for Congress to take advantage of this deregulatory pathway in the Congressional Review Act, saying it could force agencies to comply with formal rulemaking requirements and help the economy by cutting red tape.

"This would indicate that Congress believes it can reach back beyond what the conventional wisdom was," he said.

Subject: Re: Contributor - PRUITT DEFENSE

Here's my edited version. Will have a link and time for you soon.

President Donald Trump is standing by his embattled Environmental Protection Agency (EPA) Administrator Scott Pruitt, according to reports. Let's be clear, that is good thing for both Trump and the country. Pruitt is one of the shining stars of the Trump administration, and no one who supports the president's "Make America Great Again" agenda should want him replaced.

Current complaints about Pruitt's living arrangements in Washington, D.C., are mostly politically motivated. As the designated agency ethics official for the EPA explained:

"Entering into the lease was consistent with federal ethics regulations regarding gifts, and use of the property in accordance with the lease agreement did not constitute a gift as defined in those regulations."

Yet some hope that by attacking Pruitt on fake ethics charges, the media-created scandal will cause the Trump White House to either foolishly force Pruitt out or cause him to throw up his hands in disgust and resign.

This would be a disaster for President Trump and all of us who care about his success.

EPA Administrator Pruitt has been instrumental in taking on the difficult task of rolling back Obama era regulations and in his first year has already completed 22 deregulatory actions, saving more than a billion dollars in regulatory costs.

Something as benign as Pruitt's recently announced effort to make certain that the methodology of the science the EPA uses to make regulatory determinations is transparent and the results are repeatable, has come under fire from former Obama-era EPA administrators Gina McCarthy and Janet McCabe called it, "his latest effort to cripple the agency."

It would seem that making sure the science behind major economy-shattering regulations is actually accurate and that the data is available for public scrutiny should be standard. Yet, incredibly, Pruitt is having to fight for the sake of establishing sound science that meets the basic criteria of the scientific method in order to restore valid underpinnings for environmental regulations.

Pruitt is even having to re-evaluate the Obama administration's controversial and arbitrary fuel efficiency standard that set a car and light truck fleet average of 50 miles per gallon by 2025, regardless of whether it was technologically possible to achieve it. Effectively, this policy would force auto makers to sell expensive-to-produce electric vehicles to consumers at a loss in order to be able to sell customers the trucks and other gasoline-consuming vehicles that they want at significantly increased prices.

The changes announced by the EPA have left open what the fuel efficiency standards will be, and likely will end the state of California's waiver to federal law allowing the rogue state to compel stricter standards under the Clean Air Act.

President Trump can expect to hear an uproar from states like California and New York over Pruitt's smart decision on Corporate Average Fuel Economy (CAFE) standards, but when Administrator Pruitt prevails on this issue, it will help the president achieve his goal of putting the American auto industry back on top. Pruitt is doing the hard work to achieve the Trump agenda and taking the political and personal attacks that are part of battling the environmental industry driving American manufacturing to the breaking point.

We are talking about more than angry letter writing. In fact, Pruitt and his family have been subjected to a significant stream of personal threats from radical environmentalists. The threats have become so severe that the EPA inspector general, who is tasked with the physical safety of the administrator, now provides 24/7 protection for him and his family.

Incredibly, Pruitt gets zero credit from the left for increasing Superfund clean-up efforts designed to restore polluted sites to usability. He gets zero credit for enforcement actions that resulted in the second highest level of civil and administrative fine collections in the past decade, falling short of only FY 2016 which included a massive BP settlement. He gets zero credit because these critics are less concerned with cleaning up legitimate messes, than strangling the American manufacturing sector today and into the future.

President Donald Trump can and should be proud of his administrator's efforts at the EPA. Scott Pruitt is moving the Trump agenda forward and ensuring that the environment remains protected while our economic engines roar back to life.

Scott Pruitt is excelling at his job, and that is why he is the target of those who want to see the Trump administration fail. The president needs to recognize this and stand by his chief general in the war against the regulatory stranglehold that was left by Obama. To be persuaded to make a personnel change at the EPA would be a disastrous mistake for his policy agenda. Most importantly, it would be a bad, bad decision for America's future.

Scott Pruitt's EPA leadership should make Trump proud

By Rick Manning

President Donald Trump has come under fire for supposed turmoil in his administration, yet those who are trying to create this negative narrative are among those attempting to undermine Scott Pruitt, and his continuance as EPA Administrator.

Let's be clear. Scott Pruitt is one of the shining stars of the Trump Administration, and no one who backed the President's "Make America Great Again" agenda and his presidential run could possibly want him replaced.

The fact is that complaints against Pruitt are largely politically motivated. In one case, the left tried to make a big deal out of his living arrangements in D.C., even though the designated agency ethics official for the EPA wrote, "Entering into the lease was consistent with federal ethics regulations regarding gifts, and use of the property in accordance with the lease agreement did not constitute a gift as defined in those regulations."

Yet some hope that by attacking Pruitt on fake ethics charges, the created media scandal will cause the Trump White House to either foolishly force Pruitt out or cause him to throw up his hands in disgust and resign.

This would be a disaster for President Trump and all of us who care about his success.

EPA Administrator Pruitt has been instrumental in taking on the difficult task of rolling back Obama era regulations and in his first year has already completed 22 deregulatory

actions<[https://www.epa.gov/sites/production/files/2018-](https://www.epa.gov/sites/production/files/2018-03/documents/year_in_review_3.5.18.pdf)

[03/documents/year_in_review_3.5.18.pdf](https://www.epa.gov/sites/production/files/2018-03/documents/year_in_review_3.5.18.pdf)>, saving more than a billion dollars in regulatory costs.

Something as innocent as Pruitt's recently announced

effort<.././AppData/Local/Microsoft/Windows/INetCache/AppData/Local/Microsoft/Windows/INetCache/Content.Outlook/QY7RQOYQ/Daily%20Caller%20interview> to make certain that the methodology of the science the EPA uses to make regulatory determinations is transparent and the results are repeatable, have come under fire from Obama's EPA head Gina

McCarthy<<http://thehill.com/policy/energy-environment/380451-former-epa-heads-dont-be-fooled-by-secret-science-argument>> who called it, "his latest effort to cripple the agency."

It would seem that making certain that underlying science behind major economy shattering regulations is actually accurate should be a bare minimum standard. Yet, incredibly, Pruitt is having to fight those with a radical agenda in favor of re-establishing sound science that meets the basic criteria of the scientific method in order to restore valid underpinnings for environmental regulations.

Pruitt is even having to re-evaluate the Obama Administration's controversial and arbitrary fuel efficiency standard<<http://www.autonews.com/article/20180402/OEM11/180409926/trump-epa-cafe-standards>> that set a car and light truck fleet average of 50 miles per gallon by 2025 regardless of whether it was technologically possible to achieve it. The Obama sub-rosa goal was to force auto makers to sell expensive to produce electric vehicles to consumers at a significant loss in order to be able to sell customers trucks and other gasoline consuming vehicles that they want at significantly increased prices.

The changes announced by the EPA have left open what the fuel efficiency standards will be, and likely will end the state of California's waiver to federal law allowing the rogue formerly golden state to compel stricter standards under the Clean Air Act.

President Trump can expect to hear an uproar from California and New York over Pruitt's smart decision on Corporate Average Fuel Economy (CAFE) standards, but when Administrator Pruitt prevails on this issue, it will help the President achieve his goal of making the American auto industry great again. Just another example of Pruitt doing the hard work to achieve the Trump agenda and taking the political and personal attacks that are part of battling the environmental industrial complex which has driven American manufacturing to the breaking point.

And the environmental warriors who Pruitt has offended are not simply letter writers. Instead, Pruitt and his family have been subjected to a significant stream of personal threats from radical environmentalists. The threats have become so severe that the EPA Inspector General who is tasked with the physical safety of the Administrator has begun to provide 24/7

protection<<https://www.politico.com/story/2018/02/15/scott-pruitt-first-class-travel-epa-351669>> for him and his family. That's right, even Scott Pruitt's family has been threatened by the environmental mob. Yet, he continues fighting to end the massive overreach by the former administration.

Incredibly, Pruitt gets zero credit from the left for increasing Superfund clean-up efforts<<https://www.epa.gov/newsreleases/epa-announces-2017-annual-environmental-enforcement-results>> designed to restore polluted sites to usability. He gets zero credit for enforcement actions that resulted in the second highest level of civil and administrative fine collections in the past decade<<https://www.epa.gov/newsreleases/epa-announces-2017-annual-environmental-enforcement-results>>, falling short of only FY 2016 which included a massive BP settlement. He gets zero credit because these so-called environmentalists are less concerned with cleaning up legitimate messes, than strangling the American manufacturing sector today and into the future.

President Donald Trump can and should be proud of his Administrator's efforts at the EPA. Scott Pruitt is moving the Trump agenda forward and ensuring that the environment remains protected while our economic engines roar back to life.

Scott Pruitt is excelling at his job, and that is why he has come under withering attack from those who want to see President Trump fail. The President needs to recognize this and stand by his chief general in the war against the regulatory stranglehold that was left by Obama, including ending the war on coal, and not be tricked into making a change due to the fake news tactics that his critics so often use against him. That would be a disastrous mistake that would make #NeverTrumpers laugh out loud while dismaying the President's friends. Most importantly, it would be a bad, bad decision for America's future.

Pruitt Testifies at Two Closely Watched Hearings on Capitol Hill

U.S. EPA Administrator Scott Pruitt testified yesterday at two hearings in the House of Representatives to respond to questions surrounding agency funding and policy as well as personal ethics. Appearing before the Appropriations Interior, Environment, & Related Agencies Subcommittee and the Energy & Commerce Environment Subcommittee on the agency's FY19 budget, Pruitt defended himself against criticism regarding certain management and spending practices. He also touched on policy issues including the new proposed rule to strengthen science used in regulations (see related story) and the suite of [FY18 Brownfields Grants](#) announced this week.

In addition, Pruitt addressed actions on the horizon, noting that EPA soon will announce a Waters of the U.S. replacement rule and proposed revisions to EPA's light-duty vehicle greenhouse gas standards. In response to a lawmaker's question about coal combustion residuals, Pruitt noted that few states have filed state coal ash implementation plans pursuant to the new federal policy but that the program is still nascent and EPA is working

with several states to assist in their development of permit program applications.

Pruitt's written testimony included a listing of his top priorities: enhancing drinking water and wastewater infrastructure; accelerating the remediation and revitalization of the most contaminated land; improving air quality through reductions in the number of areas not in attainment with the National Ambient Air Quality Standards; and meeting all the statutory deadlines outlined in the amended Toxic Substances Control Act. In addition, the testimony notes support for flexibility for states to address priorities and for cooperative federalism activities through the multipurpose grants program.

The testimony also includes an EPA proposal to increase compliance assistance through new voluntary oil and chemical facility compliance assistance fees allowing EPA to conduct walkthroughs and provide recommendations to facilities. It further notes that while EPA's budget request does not include plans to close Regional offices, the agency will continue "to prioritize efforts that save taxpayer dollars through space consolidation...." [McAleer/Graves/Parisien]

Pruitt Signs Proposed Rule to Eliminate 'Secret Science'

U.S. EPA Administrator Scott Pruitt signed Tuesday a proposed rule to eliminate "secret science" used in regulations issued by the agency. According to EPA, the rule seeks to ensure that all regulatory science underlying EPA actions is fully transparent, publicly available, and sufficient for independent validation. EPA says the rule aligns with the scientific community's push for increased data sharing and reproducible research.

The proposed rule has drawn mixed reviews, with opponents arguing that it skirts statutory mandates to use the best available science and address confidential trade secrets. Some express concern as to whether the policy will prevent use of studies that rely on confidential business information (CBI) or limit EPA's access to health studies, which are subject to patient confidentiality requirements. While the rule does not specifically address these points, it states that the agency believes "that concerns about access to confidential

or private information can, in many cases, be addressed through the application of solutions commonly in use across some parts of the [f]ederal government.”

EPA soon will accept public comment on a number of the proposed rule’s provisions, including authorities to address implementation issues (including CBI) and what criteria the agency should use to justify any exceptions. [Longworth]

U.S. EPA Announces First WIFIA Loan to King County, Washington

Last week, U.S. EPA issued its first loan under the Water Infrastructure Finance and Innovation Act (WIFIA) to King County, Washington.

The loan will help finance the Georgetown Wet Weather Treatment Station, which will collect and treat up to 70 million gallons of wastewater and stormwater per day. During heavy rains the combined sewer pipes spill into the Duwamish River, which drains into Puget Sound. The estimated project cost is \$275 million, and the WIFIA loan will finance nearly half of it.

For more information about the WIFIA program and the Georgetown Wet Weather Treatment Station, click [here](#). [Piper]

Need-to-Know News in Air & Environmental Justice

U.S. EPA Announces Funding to Reduce Emissions from Diesel Engines Nationwide

Area of Focus: Air

On April 24, U.S. EPA announced the availability of grant funding to modernize the nation's diesel fleet by retrofitting or replacing vehicles with cleaner, more efficient diesel engines.

EPA anticipates awarding approximately \$40 million in Diesel Emission Reduction Program (DERA) grant funding to eligible applicants, subject to the availability of funds.

EPA anticipates awarding between 20 and 80 assistance agreements to projects that significantly reduce diesel emissions and exposure, especially from fleets operating at goods movements facilities in areas designated as having poor air quality. Priority for funding will be given to projects that engage and benefit local communities and applicants that demonstrate their ability to promote and continue efforts to reduce emissions after the project has ended.

Project proposals are due **June 5**. [Poole]

U.S. EPA Environmental Justice FY2017 Progress Report Notes ECOS Publication

Area of Focus: Environmental Justice

On April 19, U.S. EPA issued its Environmental Justice FY2017 Progress Report. Marking the 25th anniversary of the establishment of the Office of Environmental Justice, the FY2017 report highlights EPA's ongoing environmental justice work focused on demonstrating tangible results in minority, low-income, tribal and indigenous communities.

The report focuses on the themes of delivering environmental results; cooperative federalism; rule of law and fair process; and building community capacity and engagement.

Notably, the report cites the ECOS Green Report on State Approaches to Community Engagement and Equity Considerations in Permitting as an example of cooperative federalism and best practices regarding community involvement and equity in state permitting programs. [Poole]

U.S. EPA Launches Mobile App for EJSCREEN

Area of Focus: Environmental Justice

On April 24, U.S. EPA launched its mobile version of EJSCREEN, the agency's nationally

acclaimed environmental justice screening and mapping tool. This new version makes accessing EJSCREEN easier for those working on the ground in communities.

The mobile version offers most of the same key functions and features as the full online version, but does so in a more compact and accessible layout. Some of the features included are the ability to select locations; access reports; and map environmental, demographic and EJ indicators. [Poole]

Career Opportunities

Massachusetts DEP Seeks Deputy Director, Municipal Services

The Massachusetts Department of Environmental Protection's Bureau of Water Resources seeks applicants for the position of Deputy Director, Municipal Services. The position entails the identification of priority areas for investment of Clean Water and Drinking Water State Revolving Fund financing.

Upcoming Events

ECOS Calls

ERIS on Research Needs

In an effort to prioritize states' research needs, ECOS and affiliate Environmental Research Institute of the States is conducting media-specific calls to gather information to inform future planning and contribute to the development of the U.S. EPA Office of Research and Development (ORD) Strategic Research Action Plan.

The water and air-focused calls were held this week. The remaining two calls are scheduled as follows:

- **Waste - April 30: 2-3 p.m. Eastern**
<http://epawebconferencing.acms.com/ecoswastecommittee/>
- **Cross-Media - May 3: 3-4 p.m. Eastern**
<http://epawebconferencing.acms.com/ecoscrossmediacall/>

The call-in number for both calls is (866) 299-3188, with access code (202) 564-6669.

ECOS members and state staff are invited to participate in the calls, and are asked to be prepared to answer the following questions: Are states' priorities the same or different from those identified in the [2016 ERIS survey of state research needs](#)? What emerging issues/challenges should ORD consider in its next Action Plan?

As the calls are held, PowerPoint presentations will be posted on ECOS' website [here](#). States are encouraged to provide comments after the calls to further inform strategic research planning. Please send comments to [Sarah Grace Longworth](#) of ECOS by May 11. [Longworth]

ERIS on State Science Contacts

ERIS will host its bimonthly State Science Contacts call on **May 4 at 11 a.m. Eastern**. The purpose of these calls is to share relevant information on science and research, receive input from states on state science needs, and provide state perspective on various

research activities.

An agenda for the call will be sent next week. If you are interested in participating, email [Sarah Grace Longworth](#) of ECOS. [Longworth]

Webinars

U.S. EPA on Emerging Sensor Technologies Report

U.S. EPA's Air and Energy National Research Program will host two webinar sessions to update stakeholders on its Emerging Sensor Technologies 2014-2018 Progress Report. The identical sessions will be held on **April 30 at 8:30-11:30 a.m. Eastern and 1:30-4:30 p.m. Eastern**, and will summarize general findings across a broad base of the agency's air sensor research activities over the past several years.

The first two hours of each session will feature presentations by EPA Sensor Performance Evaluation and Application Research team members on topics such as sensor evaluations, data analytics, ammonia detection, citizen science, and detection of select emission sources. The final portion of each session will be a question and answer period.

To register, see [here](#). [Longworth]

U.S. EPA on Lead Exposure Modeling and Research

U.S. EPA will host its monthly Tools and Resources webinar on **April 30 at 3-4 p.m. Eastern** to discuss multimedia modeling of lead exposure in children and water lead monitoring research to inform public health decisions. Specifically, EPA's Office of Research and Development (ORD) will highlight its innovative exposure-dose [modeling approach](#) to better understand the relationship between drinking water lead concentrations and children's blood lead levels considering exposures from water, soil, dust, food, and air. ORD will then discuss the future data needs to apply the approach at state and local

levels, and will report on water lead monitoring research relevant to state priorities.

To register, see [here](#). [Longworth]

ITRC on Bioavailability of Contaminants in Soil

The Interstate Technology & Regulatory Council (ITRC) will hold an online training course on Bioavailability of Contaminants in Soil: Considerations for Human Health Risk Assessment on **May 3 at 1-3:15 p.m. Eastern**.

The basis for this training course is the ITRC guidance: [Bioavailability of Contaminants in Soil: Considerations for Human Health Risk Assessment \(BCS-1\)](#). This guidance describes the general concepts of the bioavailability of contaminants in soil, reviews the state of the science, and discusses how to incorporate bioavailability into the human health risk assessment process. Training course participants will learn to apply the decision-making process to determine when a site-specific bioavailability assessment may be appropriate; consider factors that affect arsenic, lead, and PAH bioavailability; select appropriate methods to evaluate soil bioavailability; and use tools to develop site-specific soil bioavailability estimates and incorporate them into human health risk assessment

Learn more and register [here](#). [Bodi]

E-Enterprise Facility Integration Project Team on Opportunities for Involvement

The E-Enterprise Facility Integration Team Co-Chairs will host a webinar on **May 8 at 1-2:30 p.m. Eastern** to report on the team's Phase II accomplishments and plans for Phase III, which is about to begin. Co-Chairs Ron Evans and Susan Joan Smiley (U.S. EPA), Joshua Kalfas (Oklahoma), and Ben Way (Wyoming DEQ) will lead webinar presentations and answer any questions related to the Facility work.

The Facility Integration Team is currently seeking states, tribes and local governments to

partner in Phase III. Partnership opportunities will be discussed on the webinar.

Register [here](#) and learn more [here](#). [McAleer]

U.S. EPA on Business Innovations in Reducing Food Waste

U.S. EPA will host a webinar on **May 17 at 10-11:30 a.m. Eastern** to highlight business innovations to reduce food loss and waste. Presenters include three [Food Loss and Waste 2030 Champions](#) who are leading the way in helping the country reach its 50 percent food loss and waste reduction goal. Speakers from each company will share best practices, tools, and resources to prevent food from going to waste. They will address how shifts in company culture have changed operations as well as the critical role of food waste measurement in achieving their goals.

Subject: POLITICO's Morning Energy: What's happening with WOTUS — Keystone fight far from over — Wheeler to Michigan

By Kelsey Tamborrino | 08/17/2018 10:00 AM EDT

With help from Annie Snider, Ben Lefebvre and Alex Guillén

A COUNTRY DIVIDED: Which streams and wetlands are protected under the Clean Water Act? As of Thursday, the answer depends on where you're standing. After a South Carolina District Court [ruling](#) overturning the Trump administration's attempted delay of the Obama administration's Waters of the U.S. rule for failing to offer the public a proper opportunity to comment, the 2015 rule is now officially on the books in 26 states — but not in the other 24 states where other district court injunctions are in place.

"**The agencies refused to engage** in a substantive reevaluation of the definition of the 'waters of the United States' even though the legal effect of the Suspension Rule is that the definition of 'waters of the United States' ceases to be the definition under the WOTUS rule and reverts to the definition under the 1980s regulation," Judge David Norton wrote in Thursday's ruling. "An illusory opportunity to comment is no opportunity at all."

Environmental groups hailed the decision, with Jon Devine of the Natural Resources Defense Council calling it a "sharp rebuke to the Trump administration." Meanwhile, Zippy Duvall, president of the American Farm Bureau Federation, one of the fiercest critics of the Obama-era rule, called on the Trump administration to "to take immediate steps to limit the impact of this dangerous court decision."

But will it hold? The Justice Department is reviewing the decision, a spokesman said, and players on both sides broadly expect an appeal. Separately, EPA said in a statement it and the Army Corps of Engineers "will review the order as the agencies work to determine next steps." But the fate of the delay rule could ultimately become moot if the federal district judge in Texas grants a nationwide injunction request.

And don't forget, this is just the warm-up fight. The battle royale will be over the Trump administration's rule to repeal the 2015 rule, which the agency has not finalized. Geoff Gisler, the Southern Environmental Law Center attorney who brought yesterday's case on behalf of local environmental groups, argued that Thursday's South Carolina court decision has implications for that fight and "should give the agencies pause" as they move forward. "The agencies just aren't telling the public what they're doing," he argued. "What this decision said was you can't just have a comment period, it has to be a meaningful comment period."

WE MADE IT TO FRIDAY! I'm your host, Kelsey Tamborrino. Simon and Company's Jen Covino named the eight senators who formerly served as mayors: [Dianne Feinstein](#), [Cory Booker](#), [Jim Inhofe](#), [Bob Corker](#), [Bernie Sanders](#), [Tim Kaine](#), [Mike Enzi](#) and [Bob Menendez](#). For today: Who are the three current House lawmakers who previously served as ambassadors? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseyam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

FAR FROM OVER: A federal judge's order directing the State Department to conduct a supplemental environmental review for the Keystone XL pipeline's updated path through Nebraska is another setback in nearly a decade full of them for TransCanada. The order is sure to stall construction of the pipeline for months, Pro's Ben Lefebvre [reports](#). Plaintiffs in the case said the review would involve public hearings in Nebraska and consultations with Native American tribes whose land the pipeline would traverse.

Pipeline opponents are hoping to use the new review to push for a broader study of the project, Ben reports. Doug Hayes, a lawyer for the Sierra Club and one of the plaintiffs in the case, said the judge's ruling that the "entire pipeline remains interrelated and requires one [environmental review] to understand the functioning of the entire unit" could open the door for them to seek a new review for the pipeline's entire route. "If they are going back to do a supplemental environmental impact statement, our position is they would need to evaluate all the new impacts of the pipeline," Hayes said. "That would take definitely months."

WHERE'S WHEELER? Acting EPA Administrator Andrew Wheeler travels to Michigan today to discuss issues plaguing the Great Lakes and meet with GOP Rep. Tim Walberg, a member of the Energy and Commerce Committee, and officials from the Michigan Department of Natural Resources and Department of Environmental Quality.

WHEELER DELIVERS MESSAGE ON HARASSMENT: Wheeler reaffirmed EPA's policy against harassment in a memorandum sent to staff Thursday. Wheeler wrote that he expects "all individuals working at the EPA — employees, supervisors and non-employees — will not engage in or be subjected to unlawful and prohibited harassment."

MURKOWSKI: FERC NOMINEE SHOULD GO LITMUS TEST-FREE: Senate Energy Chairman Lisa Murkowski wouldn't comment on POLITICO's report that DOE's Bernard McNamee will be nominated to FERC. But the Alaska Republican said she believes that the next nominee shouldn't face a litmus test over their view of the Trump administration's efforts to prop up coal and nuclear power plants, Pro's Darius Dixon reports. "I worry that this is going to be viewed as, 'If you don't commit to voting against or voting for, then you're not going to have my support,'" Murkowski said. "That's not the way that we should be selecting commissioners for the FERC."

GET YOUR COMMENTS IN: American Petroleum Institute's Frank Macchiarola reiterated the need for Renewable Fuel Standard reform on a call with reporters Thursday outlining the group's comments for EPA's proposed biofuel blending requirements for the coming year under the RFS. "Very simply what we want is an end to this program by 2022," he said. Macchiarola said API is "willing to compromise" on certain policies like a waiver for summertime sales of E15, but only if the program will sunset by 2022. "The problem again is that the ethanol industry has been dug in to not doing anything," Macchiarola said. He added legislation is being drafted to reform the program in both chambers, but noted challenges and lengthy debate are likely ahead. Comments are due today on EPA's proposed volumes, with the final rule due to be released by Nov. 30.

— **API is also looking at the proposed plan** by EPA and the Department of Transportation to freeze fuel efficiency standards for cars and trucks. "It is a very complex proposal to a very complex program," Macchiarola said. "We will say that we appreciate the administration's relooking at CAFE in the light of changing energy market realities."

SECRET'S OUT: Thursday was the last day for comments on EPA's proposed "secret science" rule, which would ban the use of studies that don't publicly disclose all their data. Getting their thoughts in under the wire, Sens. Sheldon Whitehouse, Brian Schatz, Maggie Hassan, Jeff Merkley, Ed Markey, Tammy Duckworth, Kirsten Gillibrand, Tom Carper and Kamala Harris banded together to make their opposition known. "The proposed rule is illegal because it is arbitrary and capricious," they write, adding that "the proposed rule is illegal because it is the result of an effective delegation of rulemaking authority to private interests."

The American Chemistry Council, meanwhile, applauded the proposal in its comment Thursday. "EPA's proposal codifies an important good governance principle — that government agencies should be as transparent as possible, within the bounds of the law, about scientific information relied upon and the justifications for the significant regulatory decisions they make." Still, the trade association also highlighted that implementation of the plan would benefit from better historical context and applicability, and that greater clarity is required on key definitions and regulatory text, among other recommendations.

FIGHTING FIRE WITH A FEDERAL PLAN: The Agriculture Department released a new, aggressive approach to fighting wildfires Thursday, with proactive steps. During a bipartisan press conference, Secretary Sonny Perdue unveiled a plan that emphasizes increased collaboration with states, implementation of mapping and remote sensing tools, and management practices such as prescribed burns and timber sales, Pro's Liz Crampton reports. Though Perdue brushed aside specific questions on climate change's role, he said Interior Secretary Ryan Zinke is on board with the plan and noted further details and costs will be forthcoming from the U.S. Forest Service. "Really a lot of people ... when you talk about climate change, they want to talk about what the causes are," Perdue said. "[What] we're trying to talk about is the impact."

FERC RESTARTS PART OF PIPELINE: FERC modified a stop work order for the Mountain Valley Pipeline this week, allowing construction to restart for around 77 miles of the pipeline's West Virginia route with the exception of a 7-mile area surrounding the Weston and Gauley Bridge Turnpike Bridge Trail, MVP said Thursday. However, the company said about half of its construction workforce has been released due to continued delays. MVP said that it "remains committed to the earliest possible in-service date," though it noted that is now expected to arrive during the fourth quarter of 2019.

GREENS CALL FOR FERC REVIEW: The Southern Environmental Law Center and Appalachian Mountain Advocates petitioned the 4th U.S. Circuit Court of Appeals on Thursday to review FERC's approval of the Atlantic Coast Pipeline. The suit was filed on behalf of 13 other conservation groups. "FERC ordered the ACP construction stopped because the 4th Circuit determined that permits were issued without proper scrutiny," SELC attorney Greg Buppert said in a statement. "On the very same day, FERC rejected a rehearing request in which the conservation groups asserted that it also rushed through its decision to permit a pipeline that we don't need." The 4th Circuit last week vacated two permits issued for the project by the U.S. Fish and Wildlife Service and the National Park Service.

GREENS FILE FOIA SUIT: Environmental group Friends of the Earth filed a lawsuit Thursday against the Interior Department for lack of response to a Freedom of Information Act request. The lawsuit seeks to compel DOI to produce documents related to senior members of the department and the industries they regulate. The suit points to David Bernhardt's work as a lawyer and lobbyist for oil and gas companies and Vincent DeVito's time working as an energy industry representative. Friends of the Earth is being represented by the law firm Meyer Glitzenstein & Eubanks LLP.

AD-ING IT UP: Ahead of Wyoming's gubernatorial primaries Tuesday, a partnership between the Wyoming Wildlife Federation and Rocky Mountain Farmers Union, dubbed the Wyoming Conservation Legacy, will launch a five-figure ad campaign asking candidates to support conservation. The campaign will begin on Saturday and run through Aug. 21 with full-page print ads in the Casper Star Tribune and the Wyoming Tribune Eagle, separate radio buys on Wyoming Public Media programs, and digital ads across the state. See the ads here.

MAIL CALL! ON THE FARM: The National Biodiesel Board sent a letter to farm bill conference committee lawmakers reiterating its support for the inclusion of biodiesel programs in the five-year bill.

STAR-STUDDER SUMMIT: Attendees of the Global Climate Action Summit in San Francisco in September will hear from former White House officials, including former Vice President Al Gore and Secretary of State John Kerry. The summit announced Thursday night that new delegates will join the event, including Executive Secretary of the United Nations Framework Convention on Climate Change Patricia Espinosa and U.N. Special Envoy for Climate Action Michael Bloomberg. Actor Alec Baldwin and chimpanzee expert Jane Goodall will also attend.

GO NUCLEAR: The American Nuclear Society this week launched a nuclear science educational program for middle schoolers that covers topics like fission and fusion, and detecting radiation. The "Navigating Nuclear:"

Energizing Our World" program is aligned with the Next Generation Science Standards framework, which provides an evidence-based foundation for scientific research.

MOVER, SHAKERS: Jack Cramton, policy adviser for Sen. Bill Cassidy (R-La.), will start Monday as a legislative affairs adviser at the Department of Energy's Congressional and Intergovernmental Affairs Office.

QUICK HITS

- "U.S. energy chief applauds Mexico's plan to end fuel imports," Reuters.
- "Trump's CO2 rule is coming, and industries wonder who's next," E&E News.
- "California fire risk won't abate until November, U.S. warns," Bloomberg.
- "Zinke said he would never sell public land. But Interior is considering it," The Washington Post.
- "Elon Musk confronts a fateful tweet and an 'excruciating' year," The New York Times.

THAT'S ALL FOR ME!

U.S. EPA Holds National Leadership Summit on PFAS

U.S. EPA convened its Per- and Poly-fluoroalkyl Substances (PFAS) [National Leadership Summit](#) this week in Washington, DC. The Summit brought together over 200 representatives from 40 states, tribes, and territories, 20 federal agencies, Congressional offices, state associations, industry groups, and non-governmental organizations to share information about efforts to identify and characterize PFAS, brainstorm near-term actions to mitigate its challenges, and discuss risk communication strategies to address public concerns of contamination.

The first day of the Summit, open to all participants, specifically brought to light the importance of finding near-term solutions in the absence of a federally-enforceable standard for PFAS analytes such as PFOA and PFOS. Highlights included presentations

from ECOS members Craig Butler (OH) and Heidi Grether (MI), as well as an address from EPA Administrator Scott Pruitt, who outlined the agency's four-step action plan. The plan is:

- To evaluate the need for a maximum contaminant level for PFOA and PFOS by working through regulatory determinations of the Safe Drinking Water Act;
- To explore the designation of PFOA and PFOS as hazardous substances under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA);
- To develop groundwater and contaminated site cleanup goals for PFOA and PFOS; and
- To generate toxicity values for GenX and PFBS.

The second day of the Summit was open only to state and federal participants. In small group dialogue, state and federal partners discussed how they can collaborate to address some identified including standards, methodologies, and risk communication.

This summer, EPA will travel to states and tribal lands with communities impacted by PFAS to hear directly from the public on how the agency can help states and local officials address this issue. EPA plans to use information from the Summit, community engagements, and [public comment](#) to develop a PFAS Management Plan that will be released later this year.

ECOS will distribute to states detailed notes of the Summit, and will keep states informed of its efforts to address concerns of PFAS. [Longworth]

Comment Period for Science Transparency Rule Extended

Public Hearing Scheduled

Thursday, U.S. EPA announced the extension to **August 17, 2018** of the comment period for the proposed rule, "[Strengthening Transparency in Regulatory Science](#)". When the

proposed rule was initially announced, comments were due by May 30, 2018. Comments should be submitted to www.regulations.gov under [Docket ID No. EPA-HQ-OA-2018-0259](#).

EPA will hold a public hearing on the proposed rule on **July 17, 2018** in Washington, DC. The hearing will allow interested parties to present data, views, and arguments regarding the proposal. To provide oral testimony at the hearing, register by **July 15** [here](#). [Hanson]

Register Now for ECOS Silver Anniversary Fall Meeting in Vermont

Registration is open for the August 27-30 Silver Anniversary Fall Meeting in Stowe, Vermont. With a theme of *25 Years of Progress*, the meeting will be keynoted by ECOS Founding Executive Director Robbie Roberts and current Executive Director Sam Sankar, Vermont Governor Phil Scott, and Green Mountain Power President & CEO Mary Powell.

The gathering will showcase an array of environmental successes and lessons learned over the past quarter century. Planned roundtables are: *Earth, Sea, and Sky – Taking Stock of 25 Years of Progress*; *Greening Our States to Bring in the Green – Environmental Improvement as a Driver of Economic Development*; and *Applying Past Lessons to PFAS and Other Emerging Challenges*. Also planned are a point-counterpoint on acceptable science, a mini session on social media, and a group problem-solving session. And sure to be a highlight are video presentations by ECOS members along with live voting for the 2018 State Program Innovation Awards (see next story).

ECOS members will hold closed sessions with U.S. EPA leadership to discuss Cooperative Federalism 2.0 progress and PFAS. In addition, the Cooperative Federalism Oversight Workgroups, Shale Gas Caucus, Federal Facilities Forum, Data Management Workgroup, Environmental Research Institute of the States, and Executive Committee will meet. Networking opportunities include an ice cream icebreaker, an ECOS anniversary trivia contest, a Taste of Vermont reception, and a 25th Anniversary Gala & Awards Ceremony.

Register by **July 12** to receive the early bird registration rate, and reserve a hotel room without delay at Stowe Mountain Lodge!

See the draft agenda, registration, and hotel details [here](#). For agenda and sponsorship questions, contact [Lia Parisien](#) or [MC Murphy](#). For registration questions, contact [Sarah Grace Longworth](#) of ECOS. For hotel questions, contact [Megan Swanson](#) of ECOS. [Parisien]

Reminder: ECOS Asks States to Submit an Innovation Videos by July 12

In honor of the 25th anniversary of ECOS, the association is changing up the process for selecting recipients of its annual State Program Innovation Awards bestowed at the Fall Meeting. This year's nominations will be presented via member video and selected through a live vote by all attendees.

ECOS hopes to receive one nomination video from each state. Each submission should contain: the name of your program; an overview of your innovative program or approach; and results to date. Be as creative with the video as you'd like. You are welcome to report from the field, add video feed and music or sound effects, and involve your staff.

We only ask that the ECOS member appear at least briefly on camera to describe the innovation, limit the video to between 90 seconds and two minutes, and submit just one video on one innovation. To ensure a video quality, shoot in HD (720p minimum) with a horizontal frame; use a tripod for stability; ensure clear lighting and high-quality audio; and avoid reading from a paper with your head tilted downward.

Please send your submission to [Nia Duke](#) of ECOS by **July 12** and contact her with any questions. Thanks in advance for your participation! [Parisien]

ERIS, ORD Meet to Continue Cooperative Federalism Work

This week, ERIS Board members and ECOS Vice President Becky Keogh met with U.S. EPA Office of Research and Development (ORD) leadership and staff at EPA's lab in Gulf Breeze, Florida to discuss recent accomplishments and plan future work. ERIS and ORD have worked for several years to improve the two-way flow of information between states and EPA around science research. As identified in [*Cooperative Federalism 2.0*](#), EPA conducts important research that most states do not have the capacity to replicate or replace.

In response to ERIS requests on behalf of the states for a clearinghouse of ORD research products, ORD has redesigned their [*Science Inventory*](#). Based on a demonstration at this week's meeting, the ERIS Board is excited for states to use the new version of the Inventory.

Meeting attendees also discussed ongoing outreach by ORD to the states through efforts such as regional gatherings of states at ORD labs, monthly webinars, and including state scientists in ORD networking events. Gathering state research needs and getting them incorporated into EPA's research plans was another topic addressed. [Hanson]

Check Out Last Week's Most-Read *ECOSWIRE* Story

Last week, ECOS staff were treated to a musical performance by Mike Morris of the Wyoming Department of Environmental Quality's Air Quality Division. While the *Hamilton*-inspired rap on air regulation is not yet on YouTube, you can check out last week's [most-read article](#) to learn more. [Longworth]

ITRC Provides Trainings on Fractured Rock and Petroleum Vapor Intrusion

Last week, the Interstate Technology and Regulatory Council (ITRC) partnered with the Missouri Waste Control Coalition to hold a one-day seminar on Characterization and Remediation of Fractured Rock. Close to 115 participants attended the Kansas City, MO training, bringing together stakeholders from across the country!

ITRC is also hosting a 2-day classroom training on Petroleum Vapor Intrusion: Fundamentals of Screening, Investigation, and Management in Seattle, Washington on **October 10 - 11**. Learn more and register here. [Olonoff]

Career Opportunities

New Hampshire Department of Environmental Services

The New Hampshire Department of Environmental Services (DES) is hiring a Director for its Water Division. This individual is expected to lead the largest division of the DES by developing and advocating for public policy and regulatory objectives, providing oversight of planning and budgets, and representing DES at the state and federal levels. For a detailed description and information on how to apply, see here. [Longworth]

Upcoming Events

ECOS Calls

SMM Workgroup

The next ECOS Sustainable Materials Management Workgroup call will take place on **May 29 at 3-4 p.m. Eastern**. The call will cover different perspectives on the regulation and beneficial use of coal combustion residuals.

An agenda with dial-in information will be sent prior to the call. For more information about the call or to join the workgroup, email [Connor MacCartney](#) of ECOS.

Webinars

ECHO: How Do I Search For ... ??

States are invited to join U.S. EPA for its next Enforcement and Compliance History Online (ECHO) webinar on **June 12 at 1:30 - 2:30 p.m. Eastern**. This webinar will provide an overview of the data in ECHO and guide attendees through the site to answer environmental enforcement and compliance questions. The webinar will consist of short, step-by-step demonstrations geared toward both new and experienced users. [ECHO Facility Search](#) and other features will be demonstrated to answer questions such as:

- How do I search for a specific facility?
- How do I search for facilities in my community?
- How do I search for facilities releasing a pollutant?

Please [register](#) to attend the webinar. If you are unavailable at that time, it will be recorded and posted on the [ECHO Training page](#). For more information, contact [Rebecca Kane](#).
[Graves]

Save the Date: HABs and PFAS Risk Communication Webinars

ECOS and the Association of State and Territorial Health Officials (ASTHO) will host two webinars in June to highlight state-level risk communication of waterborne contaminants.

June 14 at 2 p.m. Eastern: Per- and Polyfluoroalkyl Substances (PFAS) ([Register here](#))

June 21 at 2 p.m. Eastern: Harmful Algal Blooms (HABs) ([Register here](#))

In early 2018, ECOS and ASTHO interviewed health and environmental agency staff from 13 states regarding their risk communication strategies and lessons learned for either PFAS contamination or HABs. Results were compiled into brief case studies that outline the states' overall efforts, risk communication efforts, relevant resources, key messages for the public, and challenges in the states' programs or communications. The webinars will provide key findings from the case studies and offer potential considerations to others seeking to implement or improve their risk communication practices. [Longworth]

U.S. EPA on Environmental Sampling and Analytical Methods

U.S. EPA will host its monthly Tools and Resources Webinar on **June 20 at 3 - 4 p.m.**

Eastern. The topic is [Environmental Sampling and Analytical Methods](#) (ESAM), a suite of online tools that support the environmental characterization process for chemical, radiochemical, biotoxin, and pathogen contamination incidents. This webinar will highlight the functionality of ESAM's tools and include case studies and real world examples, including the recent ricin incident response in Colorado. To register, go [here](#). E&E News: Judge revives WOTUS in 26 states

A federal judge in South Carolina has issued a nationwide injunction on the Trump administration's delay of the Clean Water Rule. The decision in the U.S. District Court for the District of South Carolina means the Clean Water Rule is now the law of the land in 26 states where district court judges have not stayed the regulation.

CNN: 'What did we do?' Families anxious about chemicals found in tap water

It's been about three weeks since Tammy Cooper last drank water from her tap. That's when she saw a warning on Facebook for residents of her small Western Michigan town to stop drinking the water. In Michigan, water main breaks aren't unusual, although they're more common in winter. It didn't immediately strike Cooper as out of the ordinary to not be able to drink the water. But the Facebook message made no mention of the run-of-the-mill breaks or chloroform warnings; rather, the city's July 26 post said, "We have just been informed this afternoon by the [Michigan Department of Environmental Quality] that the PFAS level in a City well is 1400 ppt. The limit being 70 ppt."

Washington Examiner: With a quarter million comments in, EPA set to move on contentious 'secret science' rule

The Environmental Protection Agency is set to take a big step forward Thursday toward implementing a contentious "secret science" rule, a move that critics fear will undermine the scientific process in favor of cherry-picking research that supports specific outcomes. The "Strengthening Transparency in Regulatory Science" rulemaking, as it is formally titled, would require EPA's scientific studies to be independently verified through a peer-reviewed process outside the agency. It wouldn't address any one issue or regulation, but rather would undergird the science behind much of what the agency does.

E&E News: EPA wanted its logo removed from the controversial rollback

EPA is the harsh teacher, and the Transportation Department is the struggling student. That's the dynamic at play in regulatory comments submitted this week on the Trump administration's proposal to weaken Obama-era clean car rules. In dozens of instances throughout the document, EPA career staffers criticize DOT political appointees for making faulty assumptions in order to justify the rollback. Chief among their concerns is that freezing the car rules could mean more deaths from vehicle crashes — not fewer, as DOT claims.

Politico: The key to Trump's climate reversal? New math

The Trump administration's attempt to reverse Barack Obama's most sweeping climate regulation rests on a legally risky strategy — redoing the calculations of how much the rule would cost and who would benefit. The EPA's proposed replacement is expected to downplay the money that people and businesses would save from using less electricity, a key feature of the Obama-era greenhouse rule for power plants. People tracking the issue also expect that the agency will count only a fraction of the improvements in public health from reduced smog and soot pollution, and won't consider any benefits from slowing climate change outside the U.S.

E&E News: Lead concerns drive record demand for EPA loans

Demand for EPA's low-interest loans for water infrastructure improvements has hit a record high, the agency said. EPA received 61 letters of interest from municipalities requesting \$9.1 billion in loans from the Water Infrastructure Finance and Innovation Act program. The request is nearly double the agency's lending capacity for 2018, which Office of Water head David Ross said demonstrates "the critical need for investment in our nation's water infrastructure and strong support for EPA's Water Infrastructure Finance and Innovation Act program."

National News Highlights: 8.16.18

The New York Times: Special Report: Children Poisoned by Lead on U.S. Army Bases as Hazards Ignored

FORT BENNING, Georgia — Army Colonel J. Cale Brown put his life on the line in two tours of duty in Afghanistan, earning a pair of Bronze Stars for his service. In between those deployments, Brown received orders to report to Fort Benning, the sprawling Georgia base that proudly describes itself as the century-old home of the U.S. infantry. He was pleased. His wife, Darlena, was pregnant with their second child, and the Browns owned a home in the area. Their 10-month-old son, John Cale Jr, was a precocious baby, babbling a dozen words and exploring solid foods. Cale's duties as a battalion commander required him to live on base. So instead of moving into their own house, in 2011 the Browns rented a place inside Fort Benning. The 80-year-old white stucco home had hosted generations of officers.

The Washington Post: Numerous children have been poisoned by lead in homes approved by D.C. housing inspectors

She was giving Alonzo, then 3, a bath in a tub that her landlord had just painted to pass a housing inspection. She turned to find a washcloth, and when she swiveled back, she found the boy with bits of peeling paint in his mouth. She tried get it out, but it was too late. The lead tests came back positive: Alonzo had more than double what the government defines as "elevated," and he hasn't been the same since. Between March 2013 and March 2018, at least 41 families discovered that their homes, subsidized by a housing voucher and approved by city inspectors, contained lead contaminants, according to a tabulation requested by The Washington Post through the Freedom of Information Act.

Judge revives WOTUS in 26 states

Ariel Wittenberg, 8/16/18

A federal judge in South Carolina has issued a nationwide injunction on the Trump administration's delay of the Clean Water Rule.

The decision in the U.S. District Court for the District of South Carolina means the Clean Water Rule is now the law of the land in 26 states where district court judges have not stayed the regulation.

The Trump administration finalized its delay of the Clean Water Rule, also known as Waters of the U.S., or WOTUS, rule in February. The regulation redefined which wetlands and small waterways are covered by the Clean Water Act.

Green groups, including the Southern Environmental Law Center, and states immediately sued the administration, arguing it rushed through the rulemaking.

Ruling in the SELC's case, Judge David Norton found that the Trump administration violated the Administrative Procedure Act in proposing and finalizing the rule.

'What did we do?' Families anxious about chemicals found in tap water

By Nadia Kounang, 8/16/18

It's been about three weeks since Tammy Cooper last drank water from her tap. That's when she saw a warning on Facebook for residents of her small Western Michigan town to stop drinking the water.

In Michigan, water main breaks aren't unusual, although they're more common in winter. It didn't immediately strike Cooper as out of the ordinary to not be able to drink the water.

But the Facebook message made no mention of the run-of-the-mill breaks or chloroform warnings; rather, the city's July 26 post said, "We have just been informed this afternoon by the [Michigan Department of Environmental Quality] that the PFAS level in a City well is 1400 ppt. The limit being 70 ppt."

It advised using bottled water for cooking, drinking and making baby formula.

"I immediately felt really sick," Cooper said.

PFAS, or per- and polyfluoroalkyl substances, are a family of more than 4,000 synthetic chemicals that degrade very slowly, if at all, in the environment. Some of the best-known chemicals are PFOS, PFOA and GenX.

It's not the first time Michigan has dealt with toxic tap water; the legacy of Flint is not far behind. But unlike in the Flint lead crisis, it's unknown how long the water in Parchment has been contaminated with PFAS.

Now, all Cooper could see were toxins all over her house, poisoning her nearly 3-year-old daughter, Jillian, who has lived in Parchment most of her life.

"You look around and you have sippy cups around," she said. Every cup of water -- in fact, anything using the water -- became suspect.

A persistent problem

The chemicals have been used for decades on military bases and in industrial areas in the manufacturing of thousands of consumer items including food packaging materials, water-resistant fabrics, nonstick cooking pans and firefighting foams.

"They're extremely strong, and they are extremely persistent, and that's what makes them so good for nonstick, waterproof and stain-repellant products," said Tom Bruton, a scientist with the Green Science Policy Institute in Berkeley, California.

The chemicals are no longer manufactured in the United States. In 2002, 3M, the primary US manufacturer of PFOS, voluntarily phased out production of the chemical. In 2006, eight major companies in the PFAS industry agreed to stop production of PFOA and PFOA-related chemicals by 2015.

But they can still be found all around us, including in the water.

"I think that people should be concerned about the amount of PFOA and PFOS that is in our environment," Susan M. Pinney, a professor in the Department of Environmental Health at the University of Cincinnati, wrote in an email.

"These are chemicals with long half-lives," meaning they can persist in the environment as well as the body.

According to the federal Agency for Toxic Substances and Disease Registry, they can stay in the body two to nine years. "Exposure in utero may have the greatest effect on developing children ... and effects may last into adulthood," Pinney said, adding that the research is early and so is not definitive.

According to the US Environmental Protection Agency, PFAS exposure has been linked to low birth weight, immunological disorders, cancer and thyroid hormone disruption.

And that is what exactly worries Cooper. She can't help but wonder whether the more than two years her family has lived in Parchment have been the root of their health issues.

"You just start thinking, 'well, we were sick a lot,' " she said.

Is it the water? Could it be breast milk?

Cooper and her husband David prioritize healthy living: They buy organic food; they wash their hands often; they diligently use laundry detergent "free and clear" of unnecessary chemicals; she breastfed her daughter for nearly 3 years. So could there be a connection to the water? After all, her thyroid hormone levels went down after her pregnancy. "It causes all these questions," she said.

Her biggest concern is Jillian. She was small, measuring in the 10th percentile for weight when they moved to Parchment when she was 6 months old. A year later, she had dropped below the 1st percentile in weight. After Cooper focused on feeding her a higher-fat and -protein diet, Jillian's weight is now in the 4th percentile.

"Is it the water?" Cooper wonders. Could it have been her breast milk? "She's nursed the entire duration that we've lived here. Everything that I've read, if you're nursing a child, you're passing it on to them."

PFOS and PFOA are found in blood and at lower levels in breast milk and umbilical cord blood, according to the Centers for Disease Control and Prevention's National Center for Environmental Health.

Cooper reached out to Jillian's pediatrician immediately after she read the Facebook announcement. Her doctor is concerned there could be a connection between the water and Jillian's growth, but there is little to nothing they can do about it now.

Since the city's announcement, Cooper decided to wean her daughter off breastfeeding. "I didn't want it to end this way. The last thing I want to remember is this special thing to be terminated because of this thing in the water," she said.

"Maybe I don't have any health issues from the water, but there's a major cost to your mental health, because you're in charge of this little person, and you feel like you're failing."

It's an anxiety that has occupied many other parents in the area, like Sara Dean.

Dean and her husband settled in Parchment three years ago after searching for a place to raise their children. They worried that their hometown of Chicago was too busy and potentially too violent of a place to raise a family. Parchment was beautiful. Neighbors spoke to one another. It seemed like a great place to start a family.

"We moved to a state associated with healthy living, pure water -- all the things with the Pure Michigan campaign -- and now we're like, what did we do? Would we have been better off starting a family in Chicago? At least the water is safe. There is a lot of questioning if we made the right decision three years ago."

A national problem

What's happening in Parchment isn't unique. The state of Michigan has confirmed at least 34 sites that have been contaminated with the chemicals. The state has been testing potential sites across Michigan since 2017.

On July 29, Michigan declared a state of emergency over Parchment's water. Although a specific source of the PFAS contamination has not been identified, the state Department of Environmental Quality has tested an area where PFAS might have been used. The state is also testing private residential tests to understand how far the contamination has spread.

The Environmental Working Group and Northwestern University have mapped 94 sites across the country affected by PFAS. The US Department of Defense has listed 36 contaminated military installations.

The EPA has called PFAS a national priority.

The contaminant became a political lightning rod this year when internal White House emails revealed that the Trump administration tried to withhold a US Department of Health and Human Services report on the chemicals' health risks because it could be a "potential public relations nightmare." The report, which was eventually released in June, found that the current EPA-recommended level was seven to 10 times higher than it should be.

In May, the agency held a national leadership summit on PFAS but blocked several media outlets, including CNN, from attending.

This summer, the EPA hosted "community engagement" events in Exeter, New Hampshire; Horsham, Pennsylvania; Colorado Springs, Colorado; and Fayetteville, North Carolina -- all communities affected by contaminated water.

At the event this week in Fayetteville, the agency addressed residents who have found elevated levels of the chemical GenX, a second-generation PFAS, in private drinking water wells.

John Pate, a resident of the area, told CNN affiliate WRAL that it's not just the immediate impact he's concerned about. "We could be still looking at, 20 years down the road, people coming up with things. We don't know," Pate said.

Bruton, of the Green Science Policy Institute, expects the number of affected communities to continue to grow. "The more we monitor water supplies, the more widespread we find these chemicals to be," he said.

Dean can't help but wonder what the impact of Parchment's water has been on her 2-year-old boy and the child with which she is 30 weeks pregnant. Like Jillian, Dean's son, Patrick, is on the smaller side, and her baby is measuring smaller in the womb.

"Do I make small babies," Dean questions, "or do I make small babies because I drink poisoned water?"

Within hours of hearing the news of the elevated levels, the city of Parchment quickly set up a bottled water distribution system. City officials are currently working to connect residents to the nearby Kalamazoo water system.

According to the CDC's National Center for Environmental Health, the major pathway for PFAS exposure is ingestion. Aside from contaminated drinking water, PFAS can be found around the house, Bruton said. It's in the dust from stain-treated carpets and upholstery, in some packaged foods and in foods cooked in nonstick pans.

Parchment's water advisory says it's safe to use the water for cleaning and washing purposes. Bathing is also fine because absorption of PFAS through the skin is slow and insignificant.

But when Dean takes a dish out of the dishwasher, she will run bottled water over it "for peace of mind." Dean and her husband have also installed a reverse-osmosis water filter in their home. Reverse osmosis filters certified by NSF International can reduce PFAS levels to below levels set by the EPA.

It's something Don Rome is also considering. It's well worth the cost to protect his wife, their 13-year-old daughter and 17-year-old son, and their pets, he said.

"I'm not sure I'll be going back to drinking directly from the tap without filters. So there is some uncertainty there. It's all a new frontier," Rome said.

And when Rome swims in their pool or takes a shower, there's always some thought about it in the back of his mind. "You don't intend to drink the water, but it gets in your mouth. ... Things happen."

Rome has a lot of confidence in the city. He feels that officials have done a good job of communicating actions taken to keep residents safe, including the efforts to connect to the Kalamazoo system.

But there is no question in Rome's mind that the water has impacted all parts of the city.

Rome tracks real estate in Parchment in his job. He noticed the pace of home sales has slowed since the PFAS announcement.

"There has been a slowdown in interest and foot traffic," he said.

For Cooper, the impact of the PFAS contamination has been significant. Her house is being used as one of the city's testing sites. It has created a sense of distrust that wasn't there before.

"You backtrack on everything that you ever believed in, everything about your safety," she said.

"If you can't trust the government about water, what can you trust them about?"

Washington Examiner

<https://www.washingtonexaminer.com/policy/energy/with-a-quarter-million-comments-in-epa-set-to-move-on-contentious-secret-science-rule>

With a quarter million comments in, EPA set to move on contentious 'secret science' rule

By John Siciliano, 8/16/18

The Environmental Protection Agency is set to take a big step forward Thursday toward implementing a contentious "secret science" rule, a move that critics fear will undermine the scientific process in favor of cherry-picking research that supports specific outcomes.

The "Strengthening Transparency in Regulatory Science" rulemaking, as it is formally titled, would require EPA's scientific studies to be independently verified through a peer-reviewed process outside the agency. It wouldn't address any one issue or regulation, but rather would undergird the science behind much of what the agency does.

The rule would help the industry contain the cost of new regulation by giving them the ability to question the basis of new pollution standards, especially if the "public is likely to bear the cost of compliance" with those regulations, according to the EPA.

The deadline to receive input from the public on the rule closes at midnight, and already it has garnered nearly a quarter of a million comments.

The comment deadline was extended from May 30 to Aug. 16 due to increased interest in the rulemaking and the potential significant harm that critics say it will pose to the scientific integrity of the EPA.

The Natural Resources Defense Council, in its formal request to extend the comment period, said environmental groups' meetings to discuss the rule at the White House were canceled, while industry groups were given unabated access in the rule's early development stages.

"The exclusion of environmental groups from these preliminary discussions is cause for significant concern," wrote John Walke, the environmental group's clean air director. "In light of this imbalance, EPA should extend the comment deadline to ensure that the public is fairly represented in the rulemaking process."

However, tens of thousands of the comments arriving in the EPA's inbox are from private citizens, not major trade associations or environmental groups, arguing both for and against the regulation.

Most of the comments are not substantive and read more like tweets than formal comments on policy. "[C]ut the crap epa – showyourwork — no secrets!" reads one comment from a private citizen.

Climate change skeptics say the rule is critical to reining in the agency under the administration's broader deregulation agenda.

"Given the Environmental Protection Agency's constrained mission, flawed paradigm, political pressures to chase the impossible goal of zero risk, and evidence of actual corruption, we can have no confidence in any science it produces in justification of its regulations," the Heartland Institute said in its comments. The group argued that new guardrails for

EPA science are necessary because of the agency's lack of transparency and integrity and its "culture of disrespect for the scientific method and independent peer review."

Other comments raised more practical, economic concerns for increasing scientific oversight at the agency. The Sacramento-based construction company Delta submitted comments that detailed how the company was forced to close because of the EPA's use of a scientific study to form the basis of pollution rules.

"Facing bankruptcy of my 73 year family business due to the imposition that I must replace all of my previously owned and once legal diesel 'assets' with new, I closed my doors in June 2017," wrote Norman R. "Skip" Brown, owner of both Delta Construction Company, Inc. and Asphalt Consulting Services, LLC.

"My equipment was sold at auction and employees ranging to 40 years with me lost their jobs," Brown said. He sees merit in the science rule by giving industry a voice when a single study can mean life or death for a business. In his case, it was a 1995 study on the harmful effects of soot from diesel engines.

Larger industry trade associations like the American Petroleum Institute, the largest oil and natural gas industry association, see similar reasons for supporting the science rule, but appears to be walking a careful line on how far it thinks EPA should go in implementing the regulations.

In a preview of the group's opinion, Ted Steichen, API senior policy adviser, told the EPA at a public hearing last month that "[s]cience used when developing policy and regulations impacts all aspects of API member business," but that they are simultaneously "dedicated to continuous efforts to improve the compatibility of their operations with the environment."

The API supports the use of sound and transparent science in public policy making, said Steichen, outlining ways the EPA can ensure the science it uses is able to be reproduced by outside parties. His remarks were submitted to the EPA comment docket, but other more substantive comments are expected to also be submitted on Thursday. Meanwhile, environmental groups are pressuring the agency to withdraw the proposed regulations as an affront to science.

The Clean Air Task Force said it is "concerned about EPA's current attitude towards science," senior scientist David McCabe said at a public hearing. He said the Trump administration's recent approach to environmental rulemakings "show the Agency's disregard for objective information and the scientific process, and its move to rely on analysis that supports particular outcomes."

McCabe said this should be of "great concern for all Americans, whose health and welfare depend upon effective environmental regulation," according to the remarks submitted to EPA.

EPA wanted its logo removed from the controversial rollback

By Maxine Joselow, 8/16/18

EPA is the harsh teacher, and the Transportation Department is the struggling student.

That's the dynamic at play in regulatory comments submitted this week on the Trump administration's proposal to weaken Obama-era clean car rules.

In dozens of instances throughout the document, EPA career staffers criticize DOT political appointees for making faulty assumptions in order to justify the rollback.

Chief among their concerns is that freezing the car rules could mean more deaths from vehicle crashes — not fewer, as DOT claims.

In another section, EPA chastises DOT for making an inaccurate comparison regarding the standards' effect on vehicle prices, saying, "These sentences are comparing apples to oranges."

EPA staffers also accuse DOT of misrepresenting the findings of researchers Mark Jacobsen and Arthur van Benthem, saying, "The comment about Jacobsen & Van Benthem's finding is the opposite of what they find."

EPA submitted the regulatory comments to the White House Office of Management and Budget in June. They were uploaded on Tuesday to the rulemaking's docket on regulations.gov.

The revelations came two weeks after the Trump administration signaled that it plans to freeze fuel economy standards at 2020 levels, meaning that new car models would travel on average about 30 mpg of gas rather than 36 mpg.

In the regulatory comments released this week, the phrase "EPA does not agree" appears 19 times.

For example, next to a DOT paragraph about how the rollback could encourage more sales of new vehicles, EPA career staff wrote: "EPA does not agree with this conclusion. It's also inconsistent with the argument, above, that consumers consider the lifetime of fuel economy in their purchase decisions."

Jeff Alson, a former staffer in EPA's Office of Transportation and Air Quality, said he heard from former colleagues that DOT political appointees manipulated the findings in their rush to finalize the proposal.

"These political folks had all the answers they wanted. They cooked the books," said Alson, who served as a senior engineer and policy adviser in the transportation office for 40 years before retiring three months ago.

EPA career staffers were shut out of the process by DOT political appointees, who refused to invite them to meetings for months, Alson said. EPA career staffers tried to signal to OMB that their concerns about DOT's technical analysis didn't make it into the final proposal, he said.

Indeed, EPA stated in separate regulatory comments, "This Preliminary [Regulatory Impact Analysis] is a work product of DOT and NHTSA, and was not authored by EPA. ... EPA's name and logo should be removed." The agency was referring to the National Highway Traffic Safety Administration.

EPA spokesman John Konkus pushed back on the notion that there was infighting between the agencies as they sought to craft the proposal.

"These emails are but a fraction of the robust dialogue that occurred during interagency deliberations for the proposed rule," Konkus said in an email to E&E News. "EPA is currently soliciting comments on eight different alternative standards and we look forward to reviewing any new data and information."

Alson said EPA's top political brass would have trouble defending the administration's car proposal if it's challenged in court.

"Right now there's this EPA leadership that chose to rubber-stamp the NHTSA analysis justifying weakening the greenhouse gas emission standards," he said. "And then there's EPA career staff who are the world's experts on greenhouse gas emission standards who were shut out. I assume any reasonable judge would say, 'Wow, EPA political leadership is proposing to weaken the standards, and they didn't even ask the career staff.'"

DOT and EPA have joint jurisdiction over the clean car rules. EPA is responsible for promulgating tailpipe greenhouse gas emissions standards with attention to public health and climate change. DOT is responsible for promulgating corporate average fuel economy standards, with a focus on driver safety.

Tension is bound to arise when two agencies are jointly responsible for one rulemaking, said Bill Reilly, who served as EPA administrator under President George H.W. Bush.

Reilly recalled working with the Coast Guard — then a division of DOT — in the aftermath of the 1989 Exxon Valdez oil spill.

After a tanker spilled 10.8 million gallons of oil into Alaska's Prince William Sound, Bush tasked Reilly and then-Transportation Secretary Sam Skinner with producing a report on the spill and future protection of the nation's harbors.

"I remember talking to Transportation Secretary Sam Skinner, and he later thanked me for my objections," Reilly said. "I didn't go public with my criticism of his report, but we certainly had it. That sort of negotiation is not uncommon, I suspect, when two agencies have jurisdiction."

The key to Trump's climate reversal? New math

By Alex Guillen and Emily Holden, 8/15/18

The Trump administration's attempt to reverse Barack Obama's most sweeping climate regulation rests on a legally risky strategy — redoing the calculations of how much the rule would cost and who would benefit.

The EPA's proposed replacement is expected to downplay the money that people and businesses would save from using less electricity, a key feature of the Obama-era greenhouse rule for power plants. People tracking the issue also expect that the agency will count only a fraction of the improvements in public health from reduced smog and soot pollution, and won't consider any benefits from slowing climate change outside the U.S.

The upshot: President Donald Trump's EPA will argue that the Obama administration's rule had more costs and fewer benefits than previously stated, a change to help improve the comparison when it unveils its own, much less ambitious power plant proposal as soon as next week.

The Obama administration had estimated that the benefits from its 2015 rule would outstrip the costs by \$26 billion to \$45 billion by 2030.

Supporters of the Obama version say those net benefits could be even higher now, because states are on track to meet the climate goals and the costs of clean energy have continued to plummet. And they warn that repealing the regulation could keep older, more expensive coal-fired power plants in operation, adding to consumers' costs.

The math could be crucial to the success or failure of a number of Trump rules. That could make the rollbacks legally vulnerable when environmental advocates and states sue to overturn Trump's action, critics of the new proposals say.

"They are cooking the books on technical analysis to try to justify preconceived conclusions that these regulations are bad," said David Doniger, the senior strategic director of the Natural Resources Defense Council's climate program who was influential in the Obama EPA's crafting of the original rule.

EPA did not respond to a request for comment on Wednesday.

Trump administration lawyers reviewing the replacement are already struggling with how to defend a rule that could cost electricity users money but would not do much to address climate change or air pollution, according to a person aware of conversations between the White House and the Justice Department. DOJ would be charged with defending the rule in court.

POLITICO has examined a portion of the agency's unpublished draft of the new rule, which would allow states to write their own modest regulations for coal plants or even let plant operators seek to opt out entirely, according to a source with knowledge of the broader proposal.

The proposed rewrite of the power plant rule is part of a pattern: Critics say similarly fuzzy math underlies other Trump administration proposals to reverse or stymie action on climate change, such as a recent plan by EPA and the Department of Transportation to halt a planned tightening of fuel efficiency standards for cars and trucks.

Sean Donahue, an environmental lawyer who has represented groups like the Environmental Defense Fund, said he would expect a court to be "very skeptical" of any effort that looks as though EPA is trying to evade its obligation to regulate greenhouse gases. But he conceded that will depend on the details of EPA's power plant proposal.

"If it were one or two technical judgments where there's a difference between this administration and the last one, or this administration and prior consistent practice, that would be one thing," Donahue said. "But it's many, many things all pointing the same way, all pointing toward rolling back greenhouse gas mitigation efforts."

Trump has repeatedly expressed doubts about man-made climate change, and much of his Cabinet shares a similar view. In contrast, the federal government's own scientific assessment finds that human-caused climate change will not only raise temperatures but also make extreme weather more dangerous and lift sea levels by one to four feet by the end of the century.

Kate Larsen, director of the economic research firm Rhodium Group, said the Trump administration's justifications for unraveling climate change policies are symptomatic of its broader governing principles.

"A decision we make today is narrowly focused on the impacts to myself and my immediate neighbor in the next week, but you're not taking into account impacts next year and the following year to yourself, your neighbor, the entire community," she said.

Environmental experts are also scrutinizing the auto rule proposal, released earlier this month, which would freeze the Obama administration's aggressive fuel economy standards after 2020 and dial back EPA greenhouse gas rules to match.

EPA and DOT's National Highway Traffic Safety Administration argued that the freeze would save billions of dollars in costs. Critics say the administration overestimated compliance costs of the Obama-era auto targets by as much as fourfold, which could significantly tip the cost-benefit analysis in their favor. Another claim that the Trump rollback would save more than 1,000 lives per year — yielding benefits of \$77 billion — has also drawn skepticism. On Tuesday, EPA released a June memo that showed agency staff criticizing a number of "unrealistic" aspects of NHTSA's modeling. They disagreed with the proposals fatality figures, with EPA staff estimating deaths would increase slightly under the freeze. And they thought the rule overestimated compliance costs and the time needed to recoup those costs in fuel savings, all factors that boosted benefits and lowered costs for the proposed freeze. Both EPA and NHTSA dismissed the memo as only one part of a complex review process.

The administration and industry groups have blasted the Obama administration's use of "co-benefits" — the benefits in improved health or reduced pollution that arise even when they're not the primary aim of a regulation. (One example: Cutting coal plants' carbon dioxide pollution under the power plant regulation wouldn't do much directly to improve people's health, but it would also reduce smog.) But Donahue argued that Trump's regulators sometimes lean on co-benefits to help build the case for their rollbacks.

For example, NHTSA's modeling credits changes in consumer behavior as the overwhelming factor behind all the lives that the Trump administration contends its auto rollback would save. The agencies argue that under the previous Obama rule, drivers would be more likely to remain in older, more dangerous cars than purchase more expensive, safer ones.

That "would seem to be a co-benefits argument, since the EPA doesn't have, and NHTSA doesn't have, the authority to regulate used cars," said Donahue, who called the paradox "sort of entertaining."

Counting co-benefits is a long-standing practice for federal regulators, but energy industry groups and Republican state officials grew incensed by the Obama administration's use of it to justify major regulations.

"The co-benefits thing has ballooned into the biggest scandal in environmental regulation," said the conservative Competitive Enterprise Institute's Myron Ebell, who led Trump's post-election transition team at EPA. "You get very small direct benefits, but you make up, essentially, a lot of co-benefits."

Still, he contended that EPA's withdrawal of Obama's power plant rule would eliminate a huge amount of costs in the coming years, saying Obama's regulation represented "just the first emissions cuts."

"There were going to be more beyond that if the Obama administration had been succeeded by the Clinton administration," Ebell said. He added: "By cutting it off in the way that they're doing, we're avoiding immense future costs."

Lead concerns drive record demand for EPA loans

Ariel Wittenberg, 8/16/18

Demand for EPA's low-interest loans for water infrastructure improvements has hit a record high, the agency said.

EPA received 61 letters of interest from municipalities requesting \$9.1 billion in loans from the Water Infrastructure Finance and Innovation Act program.

The request is nearly double the agency's lending capacity for 2018, which Office of Water head David Ross said demonstrates "the critical need for investment in our nation's water infrastructure and strong support for EPA's Water Infrastructure Finance and Innovation Act program."

"EPA looks forward to reviewing the letters of interest we received as we advance the President's infrastructure agenda and help communities better protect public health and water quality," he said.

Established by Congress in 2014, WIFIA has been extremely popular among municipalities and lawmakers alike. This year, EPA received letters of interest from 24 states, the District of Columbia and Guam.

More than half of the proposed projects would either reduce exposure to lead in drinking water or update aging infrastructure, or both.

Special Report: Children Poisoned by Lead on U.S. Army Bases as Hazards Ignored

By Reuters, 8/16/18

FORT BENNING, Georgia — Army Colonel J. Cale Brown put his life on the line in two tours of duty in Afghanistan, earning a pair of Bronze Stars for his service. In between those deployments, Brown received orders to report to Fort Benning, the sprawling Georgia base that proudly describes itself as the century-old home of the U.S. infantry.

He was pleased. His wife, Darlena, was pregnant with their second child, and the Browns owned a home in the area. Their 10-month-old son, John Cale Jr, was a precocious baby, babbling a dozen words and exploring solid foods.

Cale's duties as a battalion commander required him to live on base. So instead of moving into their own house, in 2011 the Browns rented a place inside Fort Benning. The 80-year-old white stucco home had hosted generations of officers.

Like most family housing on U.S. bases today, the home wasn't owned and operated by the military. It was managed by Villages of Benning, a partnership between two private companies and the U.S. Army, whose website beckons families to "enjoy the luxuries of on-post living."

The symptoms began suddenly. At 18 months, JC would awake screaming. He began refusing food, stopped responding to his name and lost most of his words.

"He was disappearing into an isolated brain," Darlena recalls.

For nearly a year, doctors probed: Was it colic? Autism? Ear infections? Then, in late 2012, came a call from JC's pediatrician: He had high levels of lead in his blood. When Darlena told Villages of Benning of his poisoning, contractors ordered home testing.

The results: At least 113 spots in the home had lead paint, including several peeling or crumbling patches, requiring \$26,150 in lead abatement. Villages of Benning moved the Browns into another old house next door.

The heavy metal had stunted JC's brain, medical records reviewed by Reuters show. At age two, he was diagnosed with a developmental disorder caused by lead. Now eight, JC has undergone years of costly therapy. He excels at reading and swimming, but still struggles with speech, hyperactivity and social interactions.

When a reporter met JC last year, the boy looked away and repeated a phrase from a children's TV show: "Max, what did you do? Max, what did you do?" Later, JC sat outside and watched sunlight gliding through his fingers, seemingly lost in reverie.

"I'm sad that my son lost his future," Darlena said. "It was because of where we were that this happened."

This wasn't supposed to happen to families like the Browns, who move often between posts for the U.S. armed forces, trusting base landlords and military brass to provide safe shelter for children and spouses.

Cale Brown, a 46-year-old active-duty colonel, now works on detail to the White House on the National Security Council, helping to protect the country from complex threats like North Korea's nuclear program.

For years, he has told the Army of failures to defend children on U.S. bases from lead poisoning, a preventable household health hazard. Ingesting the heavy metal can severely affect mental and physical development, especially in children, causing brain damage and other potentially lifelong health impacts. But poisoning is avoidable if old homes containing lead paint are properly monitored and maintained.

"There is no acceptable number of children that the Army can allow to be so egregiously hurt," Cale wrote in a letter to the Army Office of the Inspector General last year, describing the poisoning of JC and hundreds of other military kids he was aware of. He hasn't received a response to the letter's concerns.

The Browns' story and others, told publicly for the first time here, reveal a toxic scourge inside homes on military bases. Previously undisclosed military and state health records, and testing by Reuters for lead in soldiers' homes, show problems at some of America's largest military installations.

Federal law defines lead-based paint as containing 0.5 percent or more lead by weight. Sales have been banned since 1978. But many older homes still contain lead paint, which is particularly dangerous when it peels, chips or turns to dust – easy for kids to swallow or breathe in.

Reuters tested five homes at Benning, using a methodology designed with a Columbia University geochemist. All five contained hazardous levels of deteriorating lead paint within reach of children, in one case exceeding the federal threshold by a factor of 58.

Testing turned up problems elsewhere as well. At West Point, New York, home of the United States Military Academy, paint chips falling from a family's front door contained lead at 19 times the federal threshold.

At Kentucky's Fort Knox, whose vaults hold much of America's gold reserves, Reuters found paint peeling from a covered porch where small kids play. It contained 50 percent lead by weight, or 100 times the threshold.

The Army requires

http://www.campbell.army.mil/Installation/Environmental_Handbook/Documents/LBPMManagementPlan_DEC2014.pdf abatement when certified testing identifies deteriorating lead paint in base homes. Yet it also "discourages" this type of lead-paint inspection, in part because lead abatement can be costly.

These homes put military kids at risk. Reuters obtained medical data from the Army showing that at least 31 small children tested high for lead at a Fort Benning hospital over a recent six-year period. All tested above the U.S. Centers for Disease Control and Prevention's threshold for elevated lead levels – 5 micrograms per deciliter of blood. Any child who tests high warrants a public health response, the CDC says.

Army data from other clinics showed at least 77 more high blood-lead tests for children at Fort Polk in Louisiana, Fort Riley in Kansas, and Fort Hood and Fort Bliss in Texas.

From 2011 to 2016, Brooke Army Medical Center in Texas – which processes blood tests from many bases nationwide – registered more than 1,050 small children who tested above the CDC's elevated threshold, the center's records show.

The thousand-plus blood results, obtained from Army bases through Freedom of Information Act requests, provide only a glimpse of the problem. A \$10 finger-prick test can spot a child exposed to lead, yet millions of U.S. children are never screened. Just how many are tested across all military bases isn't clear. But for those who are, the results often go unreported to state public health agencies that attend to poisoned kids.

Reuters found that Fort Benning in Georgia was not reporting lead results for small children tested at the base's hospital. Nor was Brooke Army Medical Center in Texas. Georgia and Texas, like most states, require the reporting of all these lead testing results to state health authorities.

The Army declined to comment on the lead hazards Reuters detected at base homes. Asked about the broader findings of this article, a spokeswoman said the Army conducts yearly visits to ensure housing is safe and follows the recommendations of the CDC and the American Academy of Pediatrics when responding to children with high lead tests. Housing managers classify resident complaints about lead paint as "urgent" and seek to respond within hours, she said.

"We are committed to providing a safe and secure environment on all of our installations," Army spokeswoman Colonel Kathleen Turner said in a written statement, "and to providing the highest quality of care to our service members, their families, and all those entrusted to our care."

The two contractors that operate Villages of Benning – Clark Realty Capital and Michaels Management Services – didn't respond to requests for comment.

The military's lapses in lead safeguards leave legions of kids at risk. Private contractors house some 700,000 Americans at more than 100 military installations nationwide, including an estimated 100,000 children ages 0 through 5.

Benning alone is home to some 2,000 small children. Of its 4,001 family homes, 2,274 "have lead-based paint present in them," according to a Villages of Benning memo from November 2017. The mere presence of lead paint doesn't make a home dangerous, but when the paint deteriorates, it is a "hazard and needs immediate attention," the U.S. Environmental Protection Agency says.

"These are families making sacrifices by serving," said Dr. Bruce Lanphear, a toxicity researcher at Simon Fraser University in British Columbia who reviewed Reuters' findings. "It appears that lead poisoning is sometimes the cost of their loyalty to the military."

Reuters began examining lead poisoning at U.S. bases last year, and in April began seeking interviews with Army officials. The Army declined to talk at the time.

After Reuters informed the Army and families that reporters had found hazards on bases, Fort Benning's garrison commander, Colonel Clinton W. Cox, wrote to residents that "unknown persons" were seeking to test homes for lead and advised them not to cooperate. In a June 30 "Resident Safety Alert," Cox told families to call 911 or base security to report such "suspicious behavior."

Cox said he was unaware of who had done lead testing in base homes when he sent the letter. "What we're most concerned about is our residents' security," he said in a brief phone interview.

But behind the scenes, the Army also began quietly addressing some of the problems.

After reporters asked why it often wasn't informing state health departments about poisoned children, the Army overhauled its practices to comply with state laws. When Reuters found unsafe conditions at Fort Knox, contractors announced a neighborhood-wide lead abatement program. After reporters found the neurotoxin in a child's bedroom at Benning, base command approved the family's move to another home.

A HISTORY OF NEGLECT

For most military families, living on base is an option, not a requirement, though it can be enticing. The gated enclaves are considered safe havens that build esprit de corps. They offer support for spouses of deployed troops, access to military schools, lodging for low-income families. About 30 percent of service families live on bases.

By the 1990s, the U.S. stock of military family housing – nearly 300,000 homes in all service branches – was decaying and starved of funding. "Continuing to neglect these issues runs the risk of collapsing the force," the Department of Defense warned in a 1996 briefing document presented to a congressional sub-committee.

The same year, the military began privatizing its homes. The initiative was the largest-ever corporate takeover of federal housing. It was meant to rid bases of substandard accommodations and save taxpayers billions by having contractors foot the rebuilding bill. In return, contractors would enjoy a steady flow of rental income over 50-year leases.

The military knew hazards lurked in its housing. In 2005, the Army released an environmental study that said 75 percent of its 90,000 homes nationwide didn't meet its own standards of quality or safety. Of Benning, it said: "As homes deteriorate, the risk of children's being exposed to hazardous materials ... would increase."

Twenty years after privatization began, in 2016, a DOD Inspector General report found that poor maintenance and oversight left service families vulnerable to "pervasive" health and safety hazards.

An increase in Pentagon housing funds – \$133 million – was earmarked this fiscal year, largely for overseas bases, where the military still owns its housing. Meanwhile, in recent years the Defense Department has reduced the housing subsidies that fund upkeep of privatized homes on U.S. bases, leading to fewer maintenance staff, the Army has noted.

The age and condition of base homes vary, and lead hazards are hardly exclusive to military housing. A two-year Reuters investigation <https://www.reuters.com/investigates/special-report/usa-lead-newyork> identified more than 3,800 neighborhoods nationwide – mostly in civilian settings – with alarming levels of poisoning.

Military families can face special difficulties if they complain about hazards in their homes, however. They are taking on landlords who are in business with their employer. Among the 60 interviewed for this story, more than half expressed fear that being identified could hurt a military member's career.

But in private, some trade stories about unsafe homes. Darlena Brown helped create a private Facebook group with nearly 700 members. Many have shared photos of peeling paint, mold or other toxins at home and tales of unresponsive base landlords.

Reuters devised a plan to test for hazards in the homes and yards of some of these concerned families. Working with Columbia University scientists, reporters provided home lead testing to 11 families on seven bases. Eight homes had blatant hazards in children's play areas – visibly peeling patches of lead-based paint.

Deteriorating paint from these houses – in Georgia, Texas, New York and Kentucky – had "very high" or "extremely high" lead content that puts children at immediate risk, said Alexander van Geen, a research professor of geochemistry who oversaw the lab analysis at Columbia's Lamont Earth Observatory.

The true number of children exposed on bases is hidden by factors including the military's spotty blood-testing and lapses in reporting to civilian authorities.

To prevent further exposure, most state health departments track lead-poisoned children and mandate inspections in their homes.

Yet when Georgia health officials repeatedly sought test results from Benning, the base refused to share them, alluding to exemptions for federal facilities, state email records show. No such exemptions exist.

"They do not report to us," the head of Georgia's lead-poisoning prevention program, Christy Kuriatnyk, vented about Fort Benning in an internal email to colleagues last year. "I've tried to get them to voluntarily report but that went nowhere."

In April, Reuters presented the Army with evidence of its reporting lapses. In late July, the Army said it had "instituted new procedures to ensure that all reporting requirements are properly observed" nationwide.

'NOTHING TO WORRY ABOUT'

At Benning, private contractors took over the base's family housing in 2006. They pledged to demolish thousands of dilapidated homes and build almost 3,200 new ones within 10 years. Estimated cost: \$602 million. At the time, 99 percent of Benning homes predated the 1978 U.S. ban on lead paint.

The contractors were also required to maintain nearly 500 historic Benning homes, and agreed to control lead, asbestos, mold, basement flooding and other risks.

In 2011, a Villages of Benning agent took the Browns on a home walk-through before they moved in. Darlena expressed concern about lead paint.

"You have nothing to worry about, Mrs. Brown," she recalled being told. "We've never had any problem with lead."

The same year, Benning Martin Army Community Hospital recorded seven high lead results for small children, hospital records show. The hospital says it doesn't know whether children tested there lived on or off base.

After moving in, Darlena asked maintenance to fix paint chipping around windows, but was told by a supervisor that the crew couldn't work on historic windows, she said.

In 2012, JC and as many as five other children had high lead tests at Benning's hospital.

After JC was poisoned, Cale Brown pleaded with base leaders to enforce regular home inspections, test more kids and scrutinize contractors. "A few small changes could mean the difference between a child having life-altering developmental problems or being completely healthy," he wrote Benning's garrison command in December 2012.

"Bottom line, we will do everything necessary to make sure this is addressed thoroughly and quickly," Colonel Jeffrey Fletcher, the garrison commander at the time, responded in an email. Fletcher declined to comment.

The next year, 2013, Benning's hospital recorded seven more high lead-test results for children. One child had lead levels more than double JC's, hospital records show.

Villages of Benning began replacing some old leaded windows and garage doors around the base that year, but left others in place, state and Army records show.

STALKED BY LEAD, GOING TO COURT

Even after the Browns moved to another Benning home, JC wasn't safe.

In 2013, he began special education preschool classes at Benning's Dexter Elementary School. Months later, Darlena received a frightening note on Defense Department letterhead: Drinking water taps in JC's classroom had tested high for lead.

One had 2,200 parts per billion lead – 147 times an EPA safety threshold and higher than all but a few of the worst taps found during the recent water crisis in Flint, Michigan. It isn't clear how many students may have been exposed. Benning didn't require or recommend they get screened.

The Army said the contamination was limited to individual taps around the base and didn't affect the underlying water system. The tainted taps were shut, and parents who wanted testing for their children were given the option, the Army said.

In 2014, the Browns filed suit in Georgia federal court against Benning's housing contractors, alleging their negligence caused JC's poisoning and seeking compensation for his disability. The contractors denied any wrongdoing and contested the suit.

Cale deployed to Afghanistan the same year. There, he pushed for housing repairs at U.S. bases in a meeting that November with Katherine Hammack, the Army's top official in charge of military installations.

She seemed to favor bold action, Cale said: preventing small children from living in older base homes altogether. Cale said his follow-ups went unanswered.

Hammack, who left the Army last year, told Reuters she explored such a plan, but Army lawyers said it could be discriminatory against families with children. "It is up to the soldier to make a choice," she said.

Families who rent pre-1978 housing on bases are given lead disclosure forms before signing a lease, as required of all U.S. landlords by federal law, and can opt to live elsewhere, the Army said.

Two days before Christmas 2014, Darlena learned that JC's lead levels, which had declined over time, were rising again. Her younger son's levels were up, too, though below the CDC's elevated threshold. The agency says there is no safe level of lead in children's blood.

She removed the boys from their second Benning home that night. Nine time zones away, Cale boarded a chopper out of Forward Operating Base Gamberi in eastern Afghanistan. He was granted emergency home leave to help his family resettle.

The next year, in 2015, the Defense Department's Inspector General found that a Clark and Michaels partnership had failed to correct lead paint hazards in homes at Fort Belvoir in Virginia. The Army pledged to address the issue with contractors, IG records show.

At Benning, meanwhile, children had 14 more high lead tests.

DANGER ON RAINBOW AVENUE

Fort Benning's Rainbow Avenue seems a perfect spot for families, the yards of its 1920s homes filled with toys, American flags fluttering from front porches.

Behind this idyll, children face poisoning risks.

Since 2015, state lead inspectors have visited at least three of the 33 houses on the street in response to calls from worried residents, state environmental records show. "The homes all have high levels of lead," inspectors wrote in an internal memo last year.

In one Rainbow home, they found leaded dust at 93 times the EPA's hazard level.

In another, inspector William Spain of the state Environmental Protection Department visited a mother of three in 2016. He found paint chips throughout the home and later emailed colleagues: "Her youngest will be 5 in July and did not appear normal."

The mother had grown concerned after the mysterious deaths of family pets. But she hesitated when the state offered additional help, pleading with Spain not to conduct lead testing in the home or to speak with neighbors.

Spain, who has since retired, said in an interview that Benning families expressed concern that notifying outsiders might anger commanders and harm careers.

"Something became obvious to me as I worked there," he said. "You and your family cannot make trouble for base command."

State environmental records show that Jana Martin, another mother on the block, had a four-year-old son who suffered for months from severe vomiting and belly pain – common symptoms of lead exposure. She and the doctors were mystified. "I couldn't even get a job because my kid was so sick," Martin said. She had put in two maintenance requests to fix chipping paint, but Villages of Benning didn't respond for months, Martin said.

When Martin's husband met Cale Brown, the colonel urged the family to act. The Martins bought testing swabs online. They lit up bright red, indicating exposed lead paint.

Finally, in October 2016, housing managers moved the Martins out temporarily and replaced their windows. State inspectors only learned about the case when Martin called seeking assistance.

By the time Rainbow resident Dana Sackett left a voicemail on a state lead hotline last year, inspectors knew the street well.

"Another Rainbow row site at Ft. Benning," one wrote.

Sackett, a mother of two, is a PhD toxicologist. Her husband is a lawyer with the Army Rangers. After moving to the street, she spotted paint hazards and complained.

Villages of Benning initially declined to fix them, state files say. Then mold spread in an upstairs closet, and repairs for that problem went ahead while Sackett and her girls temporarily relocated. She demanded the workers address paint hazards, too.

The landlords hired workers to scrape lead paint off the home. They lacked the required safety certifications and protective gear to conduct lead abatement, Army records show.

The Army says it has since taken steps to ensure all Benning workers dealing with lead paint are properly certified.

Last fall, Villages of Benning told Sackett the work was done and her family could move back. She found paint scrapings and dust, the records show, and refused to return unless housing managers could show the home wouldn't poison her girls.

Days later, Villages of Benning declared the property a "contamination area" and had Sackett sign papers promising not to enter. "It was one of the most stressful things I've been through," she said.

Six months later, 103 Rainbow Avenue stood vacant. At another Rainbow Avenue home, paint was peeling from doors and a window by a child's bed. A bathroom faucet leaked brown goop. A pizza-sized black mold bloom covered a ceiling. Outside, old paint crumbled from window frames, steps and a garage.

Lab testing at Columbia showed four of six paint samples from the home exceeded lead safety standards, including one from beside the child's bed. The family reported the findings to Benning officials and is now moving.

'SILENCED VERSION'

About a mile from Rainbow Avenue lies Perkins Village, a cluster of drab mid-century homes that isn't supposed to exist.

Benning's development plans called for all 180 Perkins houses to be razed years ago and replaced with 228 new Mission-style homes. Just a handful of the old homes were torn down, and none of the new ones have been built. Reuters tested two homes in Perkins Village. Both had visibly deteriorating paint with lead above federal safety standards.

The Benning contractors wound up building just over half of the 3,185 new homes that were promised back when the housing was privatized. As a result, records show, nearly three out of five Benning homes still contain lead.

The Army said it's satisfied with the results of the building project. It said it doesn't know whether any children living in Benning's older homes have tested high for lead in recent years. The base's data system can't track where children with elevated lead levels were living when they were tested.

Darlana Brown said Villages of Benning wasn't aware of JC's poisoning, either, until she spoke up.

Court records show the Browns' lawsuit was settled earlier this year. As a precondition of settlement talks, the Benning contractors demanded the Browns stop communicating with Reuters and stop mentioning the dispute publicly.

This January, on the private Facebook page where military families share their worries, Darlena Brown revised an earlier post. It still recounts her son's poisoning but omits any mention of the landlords.

She changed the title, too. It's now called "Darlana's Story (The silenced version)."

https://www.washingtonpost.com/local/social-issues/many-children-have-been-poisoned-by-lead-in-homes-approved-by-dc-housing-inspectors/2018/08/14/5633a144-9b24-11e8-8d5e-c6c594024954_story.html?utm_term=.6cef09d92218

Numerous children have been poisoned by lead in homes approved by D.C. housing inspectors

By Terrence McCoy, 8/15/18

She was giving Alonzo, then 3, a bath in a tub that her landlord had just painted to pass a housing inspection. She turned to find a washcloth, and when she swiveled back, she found the boy with bits of peeling paint in his mouth. She tried get it out, but it was too late.

The lead tests came back positive: Alonzo had more than double what the government defines as “elevated,” and he hasn’t been the same since.

Between March 2013 and March 2018, at least 41 families discovered that their homes, subsidized by a housing voucher and approved by city inspectors, contained lead contaminants, according to a tabulation requested by The Washington Post through the Freedom of Information Act.

The District Department of Energy and Environment, which performed the count and the testing, said it inspected about half of the homes because a child living at the property, or visiting it often, had tested positive for elevated levels of lead; the other homes were investigated following a tip about possible lead hazards. The agency said that the list wasn’t exhaustive and that there may be more.

The findings again highlight key weaknesses in federal guidelines established by the U.S. Department of Housing and Urban Development, which the District and other cities follow. Many rental properties supported by housing vouchers in the city receive inspections under these standards. But they require only visual inspections for peeling paint and don’t mandate lead testing, unlike states such as Maryland and Rhode Island.

“You cannot detect with any certainty that a house does not contain toxic lead dust without doing a dust test, period,” said Ruth Ann Norton, president of Baltimore’s Green & Healthy Homes Initiative and one of the nation’s foremost experts on lead-poisoning prevention.

Since 2013, the District has subsidized and inspected more than 18,900 properties, all while it tries to meet a crisis in homelessness and affordable housing. In the first seven months of 2018, the D.C. Department of Human Services placed 367 homeless families — nearly three times as many as it did in 2013, according to city statistics.

Rick White, a spokesman for the District Housing Authority, which performs many of the inspections for subsidized properties, said that most of the voucher properties in the tabulation were overseen by the agency. After hazardous lead was found in the homes, some families moved out when their landlords did not abate the contamination. Other landlords cleared the properties of lead hazards and provided documentation to city authorities, and the families stayed. It is the landlords’ responsibility, he said, to ensure that the homes are free of hazardous lead.

“I do not want you, or your newspaper, mistakenly believing or inaccurately reporting that DCHA is not fully meeting its legal obligations,” he said, adding that the city is also reviewing how cities that have made strides in lead remediation, such as Baltimore, conduct their lead inspections. “Rest assured that if federal laws or regulations are amended, then we will adjust our operating practices accordingly. . . . In all cases, DCHA immediately takes appropriate actions against any private property owner where a DCHA inspector identifies peeling paint.”

The fix for peeling paint, however, often includes another coat of paint. But superficial and cosmetic fixes, according to housing advocates, lawyers and tenants, do little to address more significant and underlying issues, such as plumbing problems or leaking roofs, that can cause paint to crack and peel again. And that’s when lead paint, effectively banned in 1978, becomes dangerous.

“Sometimes families chose housing that may not be great because they feel like they don’t have any other options,” said Kathy Zeisel of the Children’s Law Center. “They may believe the coat of paint has resolved the issue, but by the end of the month, the paint is peeling all over again, and the water is coming through the walls.”

It was a problem for Donna Black. She moved into a house on Rittenhouse Street in Northwest Washington with her housing voucher in 2013, while she was pregnant. When she first saw the home, she didn’t feel good about it but didn’t want to seem “choosy.” Plus, the inspectors had said it was okay, so she assumed it was safe.

“That was very false,” she said.

The roof started leaking. The paint started peeling. She gave birth. She named the baby Damion.

A year later, his blood carried twice the amount of lead the government calls elevated, although most advocates and scientists say any trace of lead in a child’s system can lead to diminished cognitive function.

Four years after that, Black is homeless, living in a Holiday Inn Express with Damion, whose needs her life revolves around. “My son is not a normal 3-year-old,” she said.

A lot of days, she’s filled with anger.

“We’re very upset with the city,” she said. “The city is the number one reason why this has happened to my son. . . . They let our family move in there, and it was fixed up to the point where it could look like it was okay, but it really wasn’t.”

Mattocks, too, has trouble understanding how to raise a child who is different from her seven other children. Alonzo, now 7, is always behind in his schooling, and she worries about what sort of life he will have. “I’m worried that, as an African American male, they’re already having so many issues with police brutality and being discriminated against that I’m fearful . . . that this will be another barrier that he’ll have to try to get through.”

Mattocks and Black filed lawsuits against the housing authority and their landlords in District Superior Court in 2016, but the housing authority was dismissed from the cases after arguing that it wasn’t liable, although that decision is being appealed. “There really should be stricter standards to protect the children,” said Alan Mensh, the attorney representing the two.

Scott Muchow, the landlord for Mattocks’s property, declined to address specific questions about Alonzo’s lead poisoning. “In late 2016, I received notice of a lawsuit for lead paint related issues at the property from Ms. Mattocks, but during discovery, Ms. Mattocks chose to voluntarily dismiss the case,” Muchow said in a statement.

The lawsuit against Black’s landlord, Jerome Lindsey, who could not be reached to comment, is pending.

Mattocks and Black said they were less interested in money than a sense of justice. They moved into homes that were supposed to be safe but turned out to be anything but, and now they’re raising children whose needs exceed their means. And no one, they say, wants to take responsibility.

“So who do we hold responsible?” Mattocks said. “We have to hold the city accountable, and the landlords accountable, we have to hold all of these people accountable . . . so that the children we call our future, we take care of these children. . . . But how do we do that if we don’t hold them accountable?”

E&E News: Judge revives WOTUS in 26 states

A federal judge in South Carolina has issued a nationwide injunction on the Trump administration's delay of the Clean Water Rule. The decision in the U.S. District Court for the District of South Carolina means the Clean Water Rule is now the law of the land in 26 states where district court judges have not stayed the regulation.

CNN: 'What did we do?' Families anxious about chemicals found in tap water

It's been about three weeks since Tammy Cooper last drank water from her tap. That's when she saw a warning on Facebook for residents of her small Western Michigan town to stop drinking the water. In Michigan, water main breaks aren't unusual, although they're more common in winter. It didn't immediately strike Cooper as out of the ordinary to not be able to drink the water. But the Facebook message made no mention of the run-of-the-mill breaks or chloroform warnings; rather, the city's July 26 post said, "We have just been informed this afternoon by the [Michigan Department of Environmental Quality] that the PFAS level in a City well is 1400 ppt. The limit being 70 ppt."

Washington Examiner: With a quarter million comments in, EPA set to move on contentious 'secret science' rule

The Environmental Protection Agency is set to take a big step forward Thursday toward implementing a contentious "secret science" rule, a move that critics fear will undermine the scientific process in favor of cherry-picking research that supports specific outcomes. The "Strengthening Transparency in Regulatory Science" rulemaking, as it is formally titled, would require EPA's scientific studies to be independently verified through a peer-reviewed process outside the agency. It wouldn't address any one issue or regulation, but rather would undergird the science behind much of what the agency does.

E&E News: EPA wanted its logo removed from the controversial rollback

EPA is the harsh teacher, and the Transportation Department is the struggling student. That's the dynamic at play in regulatory comments submitted this week on the Trump administration's proposal to weaken Obama-era clean car rules. In dozens of instances throughout the document, EPA career staffers criticize DOT political appointees for making faulty assumptions in order to justify the rollback. Chief among their concerns is that freezing the car rules could mean more deaths from vehicle crashes — not fewer, as DOT claims.

Politico: The key to Trump's climate reversal? New math

The Trump administration's attempt to reverse Barack Obama's most sweeping climate regulation rests on a legally risky strategy — redoing the calculations of how much the rule would cost and who would benefit. The EPA's proposed replacement is expected to downplay the money that people and businesses would save from using less electricity, a key feature of the Obama-era greenhouse rule for power plants. People tracking the issue also expect that the agency will count only a fraction of the improvements in public health from reduced smog and soot pollution, and won't consider any benefits from slowing climate change outside the U.S.

E&E News: Lead concerns drive record demand for EPA loans

Demand for EPA's low-interest loans for water infrastructure improvements has hit a record high, the agency said. EPA received 61 letters of interest from municipalities requesting \$9.1 billion in loans from the Water Infrastructure Finance and Innovation Act program. The request is nearly double the agency's lending capacity for 2018, which Office of Water head David Ross said demonstrates "the critical need for investment in our nation's water infrastructure and strong support for EPA's Water Infrastructure Finance and Innovation Act program."

The New York Times: Special Report: Children Poisoned by Lead on U.S. Army Bases as Hazards Ignored

FORT BENNING, Georgia — Army Colonel J. Cale Brown put his life on the line in two tours of duty in Afghanistan, earning a pair of Bronze Stars for his service. In between those deployments, Brown received orders to report to Fort Benning, the sprawling Georgia base that proudly describes itself as the century-old home of the U.S. infantry. He was pleased. His wife, Darlena, was pregnant with their second child, and the Browns owned a home in the area. Their 10-

month-old son, John Cale Jr, was a precocious baby, babbling a dozen words and exploring solid foods. Cale's duties as a battalion commander required him to live on base. So instead of moving into their own house, in 2011 the Browns rented a place inside Fort Benning. The 80-year-old white stucco home had hosted generations of officers.

The Washington Post: Numerous children have been poisoned by lead in homes approved by D.C. housing inspectors
She was giving Alonzo, then 3, a bath in a tub that her landlord had just painted to pass a housing inspection. She turned to find a washcloth, and when she swiveled back, she found the boy with bits of peeling paint in his mouth. She tried get it out, but it was too late. The lead tests came back positive: Alonzo had more than double what the government defines as "elevated," and he hasn't been the same since. Between March 2013 and March 2018, at least 41 families discovered that their homes, subsidized by a housing voucher and approved by city inspectors, contained lead contaminants, according to a tabulation requested by The Washington Post through the Freedom of Information Act.

Judge revives WOTUS in 26 states

Ariel Wittenberg, 8/16/18

A federal judge in South Carolina has issued a nationwide injunction on the Trump administration's delay of the Clean Water Rule.

The decision in the U.S. District Court for the District of South Carolina means the Clean Water Rule is now the law of the land in 26 states where district court judges have not stayed the regulation.

The Trump administration finalized its delay of the Clean Water Rule, also known as Waters of the U.S., or WOTUS, rule in February. The regulation redefined which wetlands and small waterways are covered by the Clean Water Act.

Green groups, including the Southern Environmental Law Center, and states immediately sued the administration, arguing it rushed through the rulemaking.

Ruling in the SELC's case, Judge David Norton found that the Trump administration violated the Administrative Procedure Act in proposing and finalizing the rule.

'What did we do?' Families anxious about chemicals found in tap water

By Nadia Kounang, 8/16/18

It's been about three weeks since Tammy Cooper last drank water from her tap. That's when she saw a warning on Facebook for residents of her small Western Michigan town to stop drinking the water.

In Michigan, water main breaks aren't unusual, although they're more common in winter. It didn't immediately strike Cooper as out of the ordinary to not be able to drink the water.

But the Facebook message made no mention of the run-of-the-mill breaks or chloroform warnings; rather, the city's July 26 post said, "We have just been informed this afternoon by the [Michigan Department of Environmental Quality] that the PFAS level in a City well is 1400 ppt. The limit being 70 ppt."

It advised using bottled water for cooking, drinking and making baby formula.

"I immediately felt really sick," Cooper said.

PFAS, or per- and polyfluoroalkyl substances, are a family of more than 4,000 synthetic chemicals that degrade very slowly, if at all, in the environment. Some of the best-known chemicals are PFOS, PFOA and GenX.

It's not the first time Michigan has dealt with toxic tap water; the legacy of Flint is not far behind. But unlike in the Flint lead crisis, it's unknown how long the water in Parchment has been contaminated with PFAS.

Now, all Cooper could see were toxins all over her house, poisoning her nearly 3-year-old daughter, Jillian, who has lived in Parchment most of her life.

"You look around and you have sippy cups around," she said. Every cup of water -- in fact, anything using the water -- became suspect.

A persistent problem

The chemicals have been used for decades on military bases and in industrial areas in the manufacturing of thousands of consumer items including food packaging materials, water-resistant fabrics, nonstick cooking pans and firefighting foams.

"They're extremely strong, and they are extremely persistent, and that's what makes them so good for nonstick, waterproof and stain-repellant products," said Tom Bruton, a scientist with the Green Science Policy Institute in Berkeley, California.

The chemicals are no longer manufactured in the United States. In 2002, 3M, the primary US manufacturer of PFOS, voluntarily phased out production of the chemical. In 2006, eight major companies in the PFAS industry agreed to stop production of PFOA and PFOA-related chemicals by 2015.

But they can still be found all around us, including in the water.

"I think that people should be concerned about the amount of PFOA and PFOS that is in our environment," Susan M. Pinney, a professor in the Department of Environmental Health at the University of Cincinnati, wrote in an email.

"These are chemicals with long half-lives," meaning they can persist in the environment as well as the body.

According to the federal Agency for Toxic Substances and Disease Registry, they can stay in the body two to nine years. "Exposure in utero may have the greatest effect on developing children ... and effects may last into adulthood," Pinney said, adding that the research is early and so is not definitive.

According to the US Environmental Protection Agency, PFAS exposure has been linked to low birth weight, immunological disorders, cancer and thyroid hormone disruption.

And that is what exactly worries Cooper. She can't help but wonder whether the more than two years her family has lived in Parchment have been the root of their health issues.

"You just start thinking, 'well, we were sick a lot,' " she said.

Is it the water? Could it be breast milk?

Cooper and her husband David prioritize healthy living: They buy organic food; they wash their hands often; they diligently use laundry detergent "free and clear" of unnecessary chemicals; she breastfed her daughter for nearly 3 years. So could there be a connection to the water? After all, her thyroid hormone levels went down after her pregnancy. "It causes all these questions," she said.

Her biggest concern is Jillian. She was small, measuring in the 10th percentile for weight when they moved to Parchment when she was 6 months old. A year later, she had dropped below the 1st percentile in weight. After Cooper focused on feeding her a higher-fat and -protein diet, Jillian's weight is now in the 4th percentile.

"Is it the water?" Cooper wonders. Could it have been her breast milk? "She's nursed the entire duration that we've lived here. Everything that I've read, if you're nursing a child, you're passing it on to them."

PFOS and PFOA are found in blood and at lower levels in breast milk and umbilical cord blood, according to the Centers for Disease Control and Prevention's National Center for Environmental Health.

Cooper reached out to Jillian's pediatrician immediately after she read the Facebook announcement. Her doctor is concerned there could be a connection between the water and Jillian's growth, but there is little to nothing they can do about it now.

Since the city's announcement, Cooper decided to wean her daughter off breastfeeding. "I didn't want it to end this way. The last thing I want to remember is this special thing to be terminated because of this thing in the water," she said.

"Maybe I don't have any health issues from the water, but there's a major cost to your mental health, because you're in charge of this little person, and you feel like you're failing."

It's an anxiety that has occupied many other parents in the area, like Sara Dean.

Dean and her husband settled in Parchment three years ago after searching for a place to raise their children. They worried that their hometown of Chicago was too busy and potentially too violent of a place to raise a family. Parchment was beautiful. Neighbors spoke to one another. It seemed like a great place to start a family.

"We moved to a state associated with healthy living, pure water -- all the things with the Pure Michigan campaign -- and now we're like, what did we do? Would we have been better off starting a family in Chicago? At least the water is safe. There is a lot of questioning if we made the right decision three years ago."

A national problem

What's happening in Parchment isn't unique. The state of Michigan has confirmed at least 34 sites that have been contaminated with the chemicals. The state has been testing potential sites across Michigan since 2017.

On July 29, Michigan declared a state of emergency over Parchment's water. Although a specific source of the PFAS contamination has not been identified, the state Department of Environmental Quality has tested an area where PFAS might have been used. The state is also testing private residential tests to understand how far the contamination has spread.

The Environmental Working Group and Northwestern University have mapped 94 sites across the country affected by PFAS. The US Department of Defense has listed 36 contaminated military installations.

The EPA has called PFAS a national priority.

The contaminant became a political lightning rod this year when internal White House emails revealed that the Trump administration tried to withhold a US Department of Health and Human Services report on the chemicals' health risks because it could be a "potential public relations nightmare." The report, which was eventually released in June, found that the current EPA-recommended level was seven to 10 times higher than it should be.

In May, the agency held a national leadership summit on PFAS but blocked several media outlets, including CNN, from attending.

This summer, the EPA hosted "community engagement" events in Exeter, New Hampshire; Horsham, Pennsylvania; Colorado Springs, Colorado; and Fayetteville, North Carolina -- all communities affected by contaminated water.

At the event this week in Fayetteville, the agency addressed residents who have found elevated levels of the chemical GenX, a second-generation PFAS, in private drinking water wells.

John Pate, a resident of the area, told CNN affiliate WRAL that it's not just the immediate impact he's concerned about. "We could be still looking at, 20 years down the road, people coming up with things. We don't know," Pate said.

Bruton, of the Green Science Policy Institute, expects the number of affected communities to continue to grow. "The more we monitor water supplies, the more widespread we find these chemicals to be," he said.

Dean can't help but wonder what the impact of Parchment's water has been on her 2-year-old boy and the child with which she is 30 weeks pregnant. Like Jillian, Dean's son, Patrick, is on the smaller side, and her baby is measuring smaller in the womb.

"Do I make small babies," Dean questions, "or do I make small babies because I drink poisoned water?"

Within hours of hearing the news of the elevated levels, the city of Parchment quickly set up a bottled water distribution system. City officials are currently working to connect residents to the nearby Kalamazoo water system.

According to the CDC's National Center for Environmental Health, the major pathway for PFAS exposure is ingestion. Aside from contaminated drinking water, PFAS can be found around the house, Bruton said. It's in the dust from stain-treated carpets and upholstery, in some packaged foods and in foods cooked in nonstick pans.

Parchment's water advisory says it's safe to use the water for cleaning and washing purposes. Bathing is also fine because absorption of PFAS through the skin is slow and insignificant.

But when Dean takes a dish out of the dishwasher, she will run bottled water over it "for peace of mind." Dean and her husband have also installed a reverse-osmosis water filter in their home. Reverse osmosis filters certified by NSF International can reduce PFAS levels to below levels set by the EPA.

It's something Don Rome is also considering. It's well worth the cost to protect his wife, their 13-year-old daughter and 17-year-old son, and their pets, he said.

"I'm not sure I'll be going back to drinking directly from the tap without filters. So there is some uncertainty there. It's all a new frontier," Rome said.

And when Rome swims in their pool or takes a shower, there's always some thought about it in the back of his mind. "You don't intend to drink the water, but it gets in your mouth. ... Things happen."

Rome has a lot of confidence in the city. He feels that officials have done a good job of communicating actions taken to keep residents safe, including the efforts to connect to the Kalamazoo system.

But there is no question in Rome's mind that the water has impacted all parts of the city.

Rome tracks real estate in Parchment in his job. He noticed the pace of home sales has slowed since the PFAS announcement.

"There has been a slowdown in interest and foot traffic," he said.

For Cooper, the impact of the PFAS contamination has been significant. Her house is being used as one of the city's testing sites. It has created a sense of distrust that wasn't there before.

"You backtrack on everything that you ever believed in, everything about your safety," she said.
"If you can't trust the government about water, what can you trust them about?"

Washington Examiner

<https://www.washingtonexaminer.com/policy/energy/with-a-quarter-million-comments-in-epa-set-to-move-on-contentious-secret-science-rule>

With a quarter million comments in, EPA set to move on contentious 'secret science' rule

By John Siciliano, 8/16/18

The Environmental Protection Agency is set to take a big step forward Thursday toward implementing a contentious "secret science" rule, a move that critics fear will undermine the scientific process in favor of cherry-picking research that supports specific outcomes.

The "Strengthening Transparency in Regulatory Science" rulemaking, as it is formally titled, would require EPA's scientific studies to be independently verified through a peer-reviewed process outside the agency. It wouldn't address any one issue or regulation, but rather would undergird the science behind much of what the agency does.

The rule would help the industry contain the cost of new regulation by giving them the ability to question the basis of new pollution standards, especially if the "public is likely to bear the cost of compliance" with those regulations, according to the EPA.

The deadline to receive input from the public on the rule closes at midnight, and already it has garnered nearly a quarter of a million comments.

The comment deadline was extended from May 30 to Aug. 16 due to increased interest in the rulemaking and the potential significant harm that critics say it will pose to the scientific integrity of the EPA.

The Natural Resources Defense Council, in its formal request to extend the comment period, said environmental groups' meetings to discuss the rule at the White House were canceled, while industry groups were given unabated access in the rule's early development stages.

"The exclusion of environmental groups from these preliminary discussions is cause for significant concern," wrote John Walke, the environmental group's clean air director. "In light of this imbalance, EPA should extend the comment deadline to ensure that the public is fairly represented in the rulemaking process."

However, tens of thousands of the comments arriving in the EPA's inbox are from private citizens, not major trade associations or environmental groups, arguing both for and against the regulation.

Most of the comments are not substantive and read more like tweets than formal comments on policy. "[C]ut the crap epa – showyourwork — no secrets!" reads one comment from a private citizen.

Climate change skeptics say the rule is critical to reining in the agency under the administration's broader deregulation agenda.

"Given the Environmental Protection Agency's constrained mission, flawed paradigm, political pressures to chase the impossible goal of zero risk, and evidence of actual corruption, we can have no confidence in any science it produces in justification of its regulations," the Heartland Institute said in its comments. The group argued that new guardrails for EPA science are necessary because of the agency's lack of transparency and integrity and its "culture of disrespect for the scientific method and independent peer review."

Other comments raised more practical, economic concerns for increasing scientific oversight at the agency.

The Sacramento-based construction company Delta submitted comments that detailed how the company was forced to close because of the EPA's use of a scientific study to form the basis of pollution rules.

"Facing bankruptcy of my 73 year family business due to the imposition that I must replace all of my previously owned and once legal diesel 'assets' with new, I closed my doors in June 2017," wrote Norman R. "Skip" Brown, owner of both Delta Construction Company, Inc. and Asphalt Consulting Services, LLC.

"My equipment was sold at auction and employees ranging to 40 years with me lost their jobs," Brown said. He sees merit in the science rule by giving industry a voice when a single study can mean life or death for a business. In his case, it was a 1995 study on the harmful effects of soot from diesel engines.

Larger industry trade associations like the American Petroleum Institute, the largest oil and natural gas industry association, see similar reasons for supporting the science rule, but appears to be walking a careful line on how far it thinks EPA should go in implementing the regulations.

In a preview of the group's opinion, Ted Steichen, API senior policy adviser, told the EPA at a public hearing last month that "[s]cience used when developing policy and regulations impacts all aspects of API member business," but that they are simultaneously "dedicated to continuous efforts to improve the compatibility of their operations with the environment."

The API supports the use of sound and transparent science in public policy making, said Steichen, outlining ways the EPA can ensure the science it uses is able to be reproduced by outside parties. His remarks were submitted to the EPA comment docket, but other more substantive comments are expected to also be submitted on Thursday. Meanwhile, environmental groups are pressuring the agency to withdraw the proposed regulations as an affront to science.

The Clean Air Task Force said it is "concerned about EPA's current attitude towards science," senior scientist David McCabe said at a public hearing. He said the Trump administration's recent approach to environmental rulemakings "show the Agency's disregard for objective information and the scientific process, and its move to rely on analysis that supports particular outcomes."

McCabe said this should be of "great concern for all Americans, whose health and welfare depend upon effective environmental regulation," according to the remarks submitted to EPA.

<https://www.eenews.net/climatewire/2018/08/16/stories/1060094235>

EPA wanted its logo removed from the controversial rollback

By Maxine Joselow, 8/16/18

EPA is the harsh teacher, and the Transportation Department is the struggling student.

That's the dynamic at play in regulatory comments submitted this week on the Trump administration's proposal to weaken Obama-era clean car rules.

In dozens of instances throughout the document, EPA career staffers criticize DOT political appointees for making faulty assumptions in order to justify the rollback.

Chief among their concerns is that freezing the car rules could mean more deaths from vehicle crashes — not fewer, as DOT claims.

In another section, EPA chastises DOT for making an inaccurate comparison regarding the standards' effect on vehicle prices, saying, "These sentences are comparing apples to oranges."

EPA staffers also accuse DOT of misrepresenting the findings of researchers Mark Jacobsen and Arthur van Benthem, saying, "The comment about Jacobsen & Van Benthem's finding is the opposite of what they find."

EPA submitted the regulatory comments to the White House Office of Management and Budget in June. They were uploaded on Tuesday to the rulemaking's docket on regulations.gov.

The revelations came two weeks after the Trump administration signaled that it plans to freeze fuel economy standards at 2020 levels, meaning that new car models would travel on average about 30 mpg of gas rather than 36 mpg.

In the regulatory comments released this week, the phrase "EPA does not agree" appears 19 times.

For example, next to a DOT paragraph about how the rollback could encourage more sales of new vehicles, EPA career staff wrote: "EPA does not agree with this conclusion. It's also inconsistent with the argument, above, that consumers consider the lifetime of fuel economy in their purchase decisions."

Jeff Alson, a former staffer in EPA's Office of Transportation and Air Quality, said he heard from former colleagues that DOT political appointees manipulated the findings in their rush to finalize the proposal.

"These political folks had all the answers they wanted. They cooked the books," said Alson, who served as a senior engineer and policy adviser in the transportation office for 40 years before retiring three months ago.

EPA career staffers were shut out of the process by DOT political appointees, who refused to invite them to meetings for months, Alson said. EPA career staffers tried to signal to OMB that their concerns about DOT's technical analysis didn't make it into the final proposal, he said.

Indeed, EPA stated in separate regulatory comments, "This Preliminary [Regulatory Impact Analysis] is a work product of DOT and NHTSA, and was not authored by EPA. ... EPA's name and logo should be removed." The agency was referring to the National Highway Traffic Safety Administration.

EPA spokesman John Konkus pushed back on the notion that there was infighting between the agencies as they sought to craft the proposal.

"These emails are but a fraction of the robust dialogue that occurred during interagency deliberations for the proposed rule," Konkus said in an email to E&E News. "EPA is currently soliciting comments on eight different alternative standards and we look forward to reviewing any new data and information."

Alson said EPA's top political brass would have trouble defending the administration's car proposal if it's challenged in court.

"Right now there's this EPA leadership that chose to rubber-stamp the NHTSA analysis justifying weakening the greenhouse gas emission standards," he said. "And then there's EPA career staff who are the world's experts on greenhouse gas emission standards who were shut out. I assume any reasonable judge would say, 'Wow, EPA political leadership is proposing to weaken the standards, and they didn't even ask the career staff.'"

DOT and EPA have joint jurisdiction over the clean car rules. EPA is responsible for promulgating tailpipe greenhouse gas emissions standards with attention to public health and climate change. DOT is responsible for promulgating corporate average fuel economy standards, with a focus on driver safety.

Tension is bound to arise when two agencies are jointly responsible for one rulemaking, said Bill Reilly, who served as EPA administrator under President George H.W. Bush.

Reilly recalled working with the Coast Guard — then a division of DOT — in the aftermath of the 1989 Exxon Valdez oil spill.

After a tanker spilled 10.8 million gallons of oil into Alaska's Prince William Sound, Bush tasked Reilly and then-Transportation Secretary Sam Skinner with producing a report on the spill and future protection of the nation's harbors.

"I remember talking to Transportation Secretary Sam Skinner, and he later thanked me for my objections," Reilly said. "I didn't go public with my criticism of his report, but we certainly had it. That sort of negotiation is not uncommon, I suspect, when two agencies have jurisdiction."

The key to Trump's climate reversal? New math

By Alex Guillen and Emily Holden, 8/15/18

The Trump administration's attempt to reverse Barack Obama's most sweeping climate regulation rests on a legally risky strategy — redoing the calculations of how much the rule would cost and who would benefit.

The EPA's proposed replacement is expected to downplay the money that people and businesses would save from using less electricity, a key feature of the Obama-era greenhouse rule for power plants. People tracking the issue also expect that the agency will count only a fraction of the improvements in public health from reduced smog and soot pollution, and won't consider any benefits from slowing climate change outside the U.S.

The upshot: President Donald Trump's EPA will argue that the Obama administration's rule had more costs and fewer benefits than previously stated, a change to help improve the comparison when it unveils its own, much less ambitious power plant proposal as soon as next week.

The Obama administration had estimated that the benefits from its 2015 rule would outstrip the costs by \$26 billion to \$45 billion by 2030.

Supporters of the Obama version say those net benefits could be even higher now, because states are on track to meet the climate goals and the costs of clean energy have continued to plummet. And they warn that repealing the regulation could keep older, more expensive coal-fired power plants in operation, adding to consumers' costs.

The math could be crucial to the success or failure of a number of Trump rules. That could make the rollbacks legally vulnerable when environmental advocates and states sue to overturn Trump's action, critics of the new proposals say.

"They are cooking the books on technical analysis to try to justify preconceived conclusions that these regulations are bad," said David Doniger, the senior strategic director of the Natural Resources Defense Council's climate program who was influential in the Obama EPA's crafting of the original rule.

EPA did not respond to a request for comment on Wednesday.

Trump administration lawyers reviewing the replacement are already struggling with how to defend a rule that could cost electricity users money but would not do much to address climate change or air pollution, according to a person aware of conversations between the White House and the Justice Department. DOJ would be charged with defending the rule in court.

POLITICO has examined a portion of the agency's unpublished draft of the new rule, which would allow states to write their own modest regulations for coal plants or even let plant operators seek to opt out entirely, according to a source with knowledge of the broader proposal.

The proposed rewrite of the power plant rule is part of a pattern: Critics say similarly fuzzy math underlies other Trump administration proposals to reverse or stymie action on climate change, such as a recent plan by EPA and the Department of Transportation to halt a planned tightening of fuel efficiency standards for cars and trucks.

Sean Donahue, an environmental lawyer who has represented groups like the Environmental Defense Fund, said he would expect a court to be "very skeptical" of any effort that looks as though EPA is trying to evade its obligation to regulate greenhouse gases. But he conceded that will depend on the details of EPA's power plant proposal.

"If it were one or two technical judgments where there's a difference between this administration and the last one, or this administration and prior consistent practice, that would be one thing," Donahue said. "But it's many, many things all pointing the same way, all pointing toward rolling back greenhouse gas mitigation efforts."

Trump has repeatedly expressed doubts about man-made climate change, and much of his Cabinet shares a similar view. In contrast, the federal government's own scientific assessment finds that human-caused climate change will not only raise temperatures but also make extreme weather more dangerous and lift sea levels by one to four feet by the end of the century.

Kate Larsen, director of the economic research firm Rhodium Group, said the Trump administration's justifications for unraveling climate change policies are symptomatic of its broader governing principles.

"A decision we make today is narrowly focused on the impacts to myself and my immediate neighbor in the next week, but you're not taking into account impacts next year and the following year to yourself, your neighbor, the entire community," she said.

Environmental experts are also scrutinizing the auto rule proposal, released earlier this month, which would freeze the Obama administration's aggressive fuel economy standards after 2020 and dial back EPA greenhouse gas rules to match.

EPA and DOT's National Highway Traffic Safety Administration argued that the freeze would save billions of dollars in costs. Critics say the administration overestimated compliance costs of the Obama-era auto targets by as much as fourfold, which could significantly tip the cost-benefit analysis in their favor. Another claim that the Trump rollback would save more than 1,000 lives per year — yielding benefits of \$77 billion — has also drawn skepticism.

On Tuesday, EPA released a June memo that showed agency staff criticizing a number of "unrealistic" aspects of NHTSA's modeling. They disagreed with the proposals fatality figures, with EPA staff estimating deaths would increase slightly under the freeze. And they thought the rule overestimated compliance costs and the time needed to recoup those costs in fuel savings, all factors that boosted benefits and lowered costs for the proposed freeze. Both EPA and NHTSA dismissed the memo as only one part of a complex review process.

The administration and industry groups have blasted the Obama administration's use of "co-benefits" — the benefits in improved health or reduced pollution that arise even when they're not the primary aim of a regulation. (One example: Cutting coal plants' carbon dioxide pollution under the power plant regulation wouldn't do much directly to improve people's health, but it would also reduce smog.) But Donahue argued that Trump's regulators sometimes lean on co-benefits to help build the case for their rollbacks.

For example, NHTSA's modeling credits changes in consumer behavior as the overwhelming factor behind all the lives that the Trump administration contends its auto rollback would save. The agencies argue that under the previous Obama rule, drivers would be more likely to remain in older, more dangerous cars than purchase more expensive, safer ones.

That "would seem to be a co-benefits argument, since the EPA doesn't have, and NHTSA doesn't have, the authority to regulate used cars," said Donahue, who called the paradox "sort of entertaining."

Counting co-benefits is a long-standing practice for federal regulators, but energy industry groups and Republican state officials grew incensed by the Obama administration's use of it to justify major regulations.

"The co-benefits thing has ballooned into the biggest scandal in environmental regulation," said the conservative Competitive Enterprise Institute's Myron Ebell, who led Trump's post-election transition team at EPA. "You get very small direct benefits, but you make up, essentially, a lot of co-benefits."

Still, he contended that EPA's withdrawal of Obama's power plant rule would eliminate a huge amount of costs in the coming years, saying Obama's regulation represented "just the first emissions cuts."

"There were going to be more beyond that if the Obama administration had been succeeded by the Clinton administration," Ebell said. He added: "By cutting it off in the way that they're doing, we're avoiding immense future costs."

Lead concerns drive record demand for EPA loans

Ariel Wittenberg, 8/16/18

Demand for EPA's low-interest loans for water infrastructure improvements has hit a record high, the agency said.

EPA received 61 letters of interest from municipalities requesting \$9.1 billion in loans from the Water Infrastructure Finance and Innovation Act program.

The request is nearly double the agency's lending capacity for 2018, which Office of Water head David Ross said demonstrates "the critical need for investment in our nation's water infrastructure and strong support for EPA's Water Infrastructure Finance and Innovation Act program."

"EPA looks forward to reviewing the letters of interest we received as we advance the President's infrastructure agenda and help communities better protect public health and water quality," he said.

Established by Congress in 2014, WIFIA has been extremely popular among municipalities and lawmakers alike. This year, EPA received letters of interest from 24 states, the District of Columbia and Guam.

More than half of the proposed projects would either reduce exposure to lead in drinking water or update aging infrastructure, or both.

Special Report: Children Poisoned by Lead on U.S. Army Bases as Hazards Ignored

By Reuters, 8/16/18

FORT BENNING, Georgia — Army Colonel J. Cale Brown put his life on the line in two tours of duty in Afghanistan, earning a pair of Bronze Stars for his service. In between those deployments, Brown received orders to report to Fort Benning, the sprawling Georgia base that proudly describes itself as the century-old home of the U.S. infantry.

He was pleased. His wife, Darlena, was pregnant with their second child, and the Browns owned a home in the area. Their 10-month-old son, John Cale Jr, was a precocious baby, babbling a dozen words and exploring solid foods.

Cale's duties as a battalion commander required him to live on base. So instead of moving into their own house, in 2011 the Browns rented a place inside Fort Benning. The 80-year-old white stucco home had hosted generations of officers.

Like most family housing on U.S. bases today, the home wasn't owned and operated by the military. It was managed by Villages of Benning, a partnership between two private companies and the U.S. Army, whose website beckons families to "enjoy the luxuries of on-post living."

The symptoms began suddenly. At 18 months, JC would awake screaming. He began refusing food, stopped responding to his name and lost most of his words.

"He was disappearing into an isolated brain," Darlena recalls.

For nearly a year, doctors probed: Was it colic? Autism? Ear infections? Then, in late 2012, came a call from JC's pediatrician: He had high levels of lead in his blood. When Darlena told Villages of Benning of his poisoning, contractors ordered home testing.

The results: At least 113 spots in the home had lead paint, including several peeling or crumbling patches, requiring \$26,150 in lead abatement. Villages of Benning moved the Browns into another old house next door.

The heavy metal had stunted JC's brain, medical records reviewed by Reuters show. At age two, he was diagnosed with a developmental disorder caused by lead. Now eight, JC has undergone years of costly therapy. He excels at reading and swimming, but still struggles with speech, hyperactivity and social interactions.

When a reporter met JC last year, the boy looked away and repeated a phrase from a children's TV show: "Max, what did you do? Max, what did you do?" Later, JC sat outside and watched sunlight gliding through his fingers, seemingly lost in reverie.

"I'm sad that my son lost his future," Darlena said. "It was because of where we were that this happened."

This wasn't supposed to happen to families like the Browns, who move often between posts for the U.S. armed forces, trusting base landlords and military brass to provide safe shelter for children and spouses.

Cale Brown, a 46-year-old active-duty colonel, now works on detail to the White House on the National Security Council, helping to protect the country from complex threats like North Korea's nuclear program.

For years, he has told the Army of failures to defend children on U.S. bases from lead poisoning, a preventable household health hazard. Ingesting the heavy metal can severely affect mental and physical development, especially in children, causing brain damage and other potentially lifelong health impacts. But poisoning is avoidable if old homes containing lead paint are properly monitored and maintained.

"There is no acceptable number of children that the Army can allow to be so egregiously hurt," Cale wrote in a letter to the Army Office of the Inspector General last year, describing the poisoning of JC and hundreds of other military kids he was aware of. He hasn't received a response to the letter's concerns.

The Browns' story and others, told publicly for the first time here, reveal a toxic scourge inside homes on military bases. Previously undisclosed military and state health records, and testing by Reuters for lead in soldiers' homes, show problems at some of America's largest military installations.

Federal law defines lead-based paint as containing 0.5 percent or more lead by weight. Sales have been banned since 1978. But many older homes still contain lead paint, which is particularly dangerous when it peels, chips or turns to dust – easy for kids to swallow or breathe in.

Reuters tested five homes at Benning, using a methodology designed with a Columbia University geochemist. All five contained hazardous levels of deteriorating lead paint within reach of children, in one case exceeding the federal threshold by a factor of 58.

Testing turned up problems elsewhere as well. At West Point, New York, home of the United States Military Academy, paint chips falling from a family's front door contained lead at 19 times the federal threshold.

At Kentucky's Fort Knox, whose vaults hold much of America's gold reserves, Reuters found paint peeling from a covered porch where small kids play. It contained 50 percent lead by weight, or 100 times the threshold.

The Army requires

http://www.campbell.army.mil/Installation/Environmental_Handbook/Documents/LBPManagementPlan_DEC2014.pdf
abatement when certified testing identifies deteriorating lead paint in base homes. Yet it also "discourages" this type of lead-paint inspection, in part because lead abatement can be costly.

These homes put military kids at risk. Reuters obtained medical data from the Army showing that at least 31 small children tested high for lead at a Fort Benning hospital over a recent six-year period. All tested above the U.S. Centers for Disease Control and Prevention's threshold for elevated lead levels – 5 micrograms per deciliter of blood. Any child who tests high warrants a public health response, the CDC says.

Army data from other clinics showed at least 77 more high blood-lead tests for children at Fort Polk in Louisiana, Fort Riley in Kansas, and Fort Hood and Fort Bliss in Texas.

From 2011 to 2016, Brooke Army Medical Center in Texas – which processes blood tests from many bases nationwide – registered more than 1,050 small children who tested above the CDC's elevated threshold, the center's records show.

The thousand-plus blood results, obtained from Army bases through Freedom of Information Act requests, provide only a glimpse of the problem. A \$10 finger-prick test can spot a child exposed to lead, yet millions of U.S. children are never screened. Just how many are tested across all military bases isn't clear. But for those who are, the results often go unreported to state public health agencies that attend to poisoned kids.

Reuters found that Fort Benning in Georgia was not reporting lead results for small children tested at the base's hospital. Nor was Brooke Army Medical Center in Texas. Georgia and Texas, like most states, require the reporting of all these lead testing results to state health authorities.

The Army declined to comment on the lead hazards Reuters detected at base homes. Asked about the broader findings of this article, a spokeswoman said the Army conducts yearly visits to ensure housing is safe and follows the recommendations of the CDC and the American Academy of Pediatrics when responding to children with high lead tests. Housing managers classify resident complaints about lead paint as "urgent" and seek to respond within hours, she said.

"We are committed to providing a safe and secure environment on all of our installations," Army spokeswoman Colonel Kathleen Turner said in a written statement, "and to providing the highest quality of care to our service members, their families, and all those entrusted to our care."

The two contractors that operate Villages of Benning – Clark Realty Capital and Michaels Management Services – didn't respond to requests for comment.

The military's lapses in lead safeguards leave legions of kids at risk. Private contractors house some 700,000 Americans at more than 100 military installations nationwide, including an estimated 100,000 children ages 0 through 5.

Benning alone is home to some 2,000 small children. Of its 4,001 family homes, 2,274 "have lead-based paint present in them," according to a Villages of Benning memo from November 2017. The mere presence of lead paint doesn't make a home dangerous, but when the paint deteriorates, it is a "hazard and needs immediate attention," the U.S. Environmental Protection Agency says.

"These are families making sacrifices by serving," said Dr. Bruce Lanphear, a toxicity researcher at Simon Fraser University in British Columbia who reviewed Reuters' findings. "It appears that lead poisoning is sometimes the cost of their loyalty to the military."

Reuters began examining lead poisoning at U.S. bases last year, and in April began seeking interviews with Army officials. The Army declined to talk at the time.

After Reuters informed the Army and families that reporters had found hazards on bases, Fort Benning's garrison commander, Colonel Clinton W. Cox, wrote to residents that "unknown persons" were seeking to test homes for lead and advised them not to cooperate. In a June 30 "Resident Safety Alert," Cox told families to call 911 or base security to report such "suspicious behavior."

Cox said he was unaware of who had done lead testing in base homes when he sent the letter. "What we're most concerned about is our residents' security," he said in a brief phone interview.

But behind the scenes, the Army also began quietly addressing some of the problems.

After reporters asked why it often wasn't informing state health departments about poisoned children, the Army overhauled its practices to comply with state laws. When Reuters found unsafe conditions at Fort Knox, contractors announced a neighborhood-wide lead abatement program. After reporters found the neurotoxin in a child's bedroom at Benning, base command approved the family's move to another home.

A HISTORY OF NEGLECT

For most military families, living on base is an option, not a requirement, though it can be enticing. The gated enclaves are considered safe havens that build esprit de corps. They offer support for spouses of deployed troops, access to military schools, lodging for low-income families. About 30 percent of service families live on bases.

By the 1990s, the U.S. stock of military family housing – nearly 300,000 homes in all service branches – was decaying and starved of funding. "Continuing to neglect these issues runs the risk of collapsing the force," the Department of Defense warned in a 1996 briefing document presented to a congressional sub-committee.

The same year, the military began privatizing its homes. The initiative was the largest-ever corporate takeover of federal housing. It was meant to rid bases of substandard accommodations and save taxpayers billions by having contractors foot the rebuilding bill. In return, contractors would enjoy a steady flow of rental income over 50-year leases.

The military knew hazards lurked in its housing. In 2005, the Army released an environmental study that said 75 percent of its 90,000 homes nationwide didn't meet its own standards of quality or safety. Of Benning, it said: "As homes deteriorate, the risk of children's being exposed to hazardous materials ... would increase."

Twenty years after privatization began, in 2016, a DOD Inspector General report found that poor maintenance and oversight left service families vulnerable to "pervasive" health and safety hazards.

An increase in Pentagon housing funds – \$133 million – was earmarked this fiscal year, largely for overseas bases, where the military still owns its housing. Meanwhile, in recent years the Defense Department has reduced the housing subsidies that fund upkeep of privatized homes on U.S. bases, leading to fewer maintenance staff, the Army has noted.

The age and condition of base homes vary, and lead hazards are hardly exclusive to military housing. A two-year Reuters investigation <https://www.reuters.com/investigates/special-report/usa-lead-newyork> identified more than 3,800 neighborhoods nationwide – mostly in civilian settings – with alarming levels of poisoning.

Military families can face special difficulties if they complain about hazards in their homes, however. They are taking on landlords who are in business with their employer. Among the 60 interviewed for this story, more than half expressed fear that being identified could hurt a military member's career.

But in private, some trade stories about unsafe homes. Darlena Brown helped create a private Facebook group with nearly 700 members. Many have shared photos of peeling paint, mold or other toxins at home and tales of unresponsive base landlords.

Reuters devised a plan to test for hazards in the homes and yards of some of these concerned families. Working with Columbia University scientists, reporters provided home lead testing to 11 families on seven bases. Eight homes had blatant hazards in children's play areas – visibly peeling patches of lead-based paint.

Deteriorating paint from these houses – in Georgia, Texas, New York and Kentucky – had "very high" or "extremely high" lead content that puts children at immediate risk, said Alexander van Geen, a research professor of geochemistry who oversaw the lab analysis at Columbia's Lamont Earth Observatory.

The true number of children exposed on bases is hidden by factors including the military's spotty blood-testing and lapses in reporting to civilian authorities.

To prevent further exposure, most state health departments track lead-poisoned children and mandate inspections in their homes.

Yet when Georgia health officials repeatedly sought test results from Benning, the base refused to share them, alluding to exemptions for federal facilities, state email records show. No such exemptions exist.

"They do not report to us," the head of Georgia's lead-poisoning prevention program, Christy Kuriatnyk, vented about Fort Benning in an internal email to colleagues last year. "I've tried to get them to voluntarily report but that went nowhere."

In April, Reuters presented the Army with evidence of its reporting lapses. In late July, the Army said it had "instituted new procedures to ensure that all reporting requirements are properly observed" nationwide.

'NOTHING TO WORRY ABOUT'

At Benning, private contractors took over the base's family housing in 2006. They pledged to demolish thousands of dilapidated homes and build almost 3,200 new ones within 10 years. Estimated cost: \$602 million. At the time, 99 percent of Benning homes predated the 1978 U.S. ban on lead paint.

The contractors were also required to maintain nearly 500 historic Benning homes, and agreed to control lead, asbestos, mold, basement flooding and other risks.

In 2011, a Villages of Benning agent took the Browns on a home walk-through before they moved in. Darlena expressed concern about lead paint.

"You have nothing to worry about, Mrs. Brown," she recalled being told. "We've never had any problem with lead."

The same year, Benning Martin Army Community Hospital recorded seven high lead results for small children, hospital records show. The hospital says it doesn't know whether children tested there lived on or off base.

After moving in, Darlena asked maintenance to fix paint chipping around windows, but was told by a supervisor that the crew couldn't work on historic windows, she said.

In 2012, JC and as many as five other children had high lead tests at Benning's hospital.

After JC was poisoned, Cale Brown pleaded with base leaders to enforce regular home inspections, test more kids and scrutinize contractors. "A few small changes could mean the difference between a child having life-altering developmental problems or being completely healthy," he wrote Benning's garrison command in December 2012.

"Bottom line, we will do everything necessary to make sure this is addressed thoroughly and quickly," Colonel Jeffrey Fletcher, the garrison commander at the time, responded in an email. Fletcher declined to comment.

The next year, 2013, Benning's hospital recorded seven more high lead-test results for children. One child had lead levels more than double JC's, hospital records show.

Villages of Benning began replacing some old leaded windows and garage doors around the base that year, but left others in place, state and Army records show.

STALKED BY LEAD, GOING TO COURT

Even after the Browns moved to another Benning home, JC wasn't safe.

In 2013, he began special education preschool classes at Benning's Dexter Elementary School. Months later, Darlena received a frightening note on Defense Department letterhead: Drinking water taps in JC's classroom had tested high for lead.

One had 2,200 parts per billion lead – 147 times an EPA safety threshold and higher than all but a few of the worst taps found during the recent water crisis in Flint, Michigan. It isn't clear how many students may have been exposed. Benning didn't require or recommend they get screened.

The Army said the contamination was limited to individual taps around the base and didn't affect the underlying water system. The tainted taps were shut, and parents who wanted testing for their children were given the option, the Army said.

In 2014, the Browns filed suit in Georgia federal court against Benning's housing contractors, alleging their negligence caused JC's poisoning and seeking compensation for his disability. The contractors denied any wrongdoing and contested the suit.

Cale deployed to Afghanistan the same year. There, he pushed for housing repairs at U.S. bases in a meeting that November with Katherine Hammack, the Army's top official in charge of military installations.

She seemed to favor bold action, Cale said: preventing small children from living in older base homes altogether. Cale said his follow-ups went unanswered.

Hammack, who left the Army last year, told Reuters she explored such a plan, but Army lawyers said it could be discriminatory against families with children. "It is up to the soldier to make a choice," she said.

Families who rent pre-1978 housing on bases are given lead disclosure forms before signing a lease, as required of all U.S. landlords by federal law, and can opt to live elsewhere, the Army said.

Two days before Christmas 2014, Darlena learned that JC's lead levels, which had declined over time, were rising again. Her younger son's levels were up, too, though below the CDC's elevated threshold. The agency says there is no safe level of lead in children's blood.

She removed the boys from their second Benning home that night. Nine time zones away, Cale boarded a chopper out of Forward Operating Base Gamberi in eastern Afghanistan. He was granted emergency home leave to help his family resettle.

The next year, in 2015, the Defense Department's Inspector General found that a Clark and Michaels partnership had failed to correct lead paint hazards in homes at Fort Belvoir in Virginia. The Army pledged to address the issue with contractors, IG records show.

At Benning, meanwhile, children had 14 more high lead tests.

DANGER ON RAINBOW AVENUE

Fort Benning's Rainbow Avenue seems a perfect spot for families, the yards of its 1920s homes filled with toys, American flags fluttering from front porches.

Behind this idyll, children face poisoning risks.

Since 2015, state lead inspectors have visited at least three of the 33 houses on the street in response to calls from worried residents, state environmental records show. "The homes all have high levels of lead," inspectors wrote in an internal memo last year.

In one Rainbow home, they found leaded dust at 93 times the EPA's hazard level.

In another, inspector William Spain of the state Environmental Protection Department visited a mother of three in 2016. He found paint chips throughout the home and later emailed colleagues: "Her youngest will be 5 in July and did not appear normal."

The mother had grown concerned after the mysterious deaths of family pets. But she hesitated when the state offered additional help, pleading with Spain not to conduct lead testing in the home or to speak with neighbors.

Spain, who has since retired, said in an interview that Benning families expressed concern that notifying outsiders might anger commanders and harm careers.

"Something became obvious to me as I worked there," he said. "You and your family cannot make trouble for base command."

State environmental records show that Jana Martin, another mother on the block, had a four-year-old son who suffered for months from severe vomiting and belly pain – common symptoms of lead exposure. She and the doctors were mystified. "I couldn't even get a job because my kid was so sick," Martin said. She had put in two maintenance requests to fix chipping paint, but Villages of Benning didn't respond for months, Martin said.

When Martin's husband met Cale Brown, the colonel urged the family to act. The Martins bought testing swabs online. They lit up bright red, indicating exposed lead paint.

Finally, in October 2016, housing managers moved the Martins out temporarily and replaced their windows. State inspectors only learned about the case when Martin called seeking assistance.

By the time Rainbow resident Dana Sackett left a voicemail on a state lead hotline last year, inspectors knew the street well.

"Another Rainbow row site at Ft. Benning," one wrote.

Sackett, a mother of two, is a PhD toxicologist. Her husband is a lawyer with the Army Rangers. After moving to the street, she spotted paint hazards and complained.

Villages of Benning initially declined to fix them, state files say. Then mold spread in an upstairs closet, and repairs for that problem went ahead while Sackett and her girls temporarily relocated. She demanded the workers address paint hazards, too.

The landlords hired workers to scrape lead paint off the home. They lacked the required safety certifications and protective gear to conduct lead abatement, Army records show.

The Army says it has since taken steps to ensure all Benning workers dealing with lead paint are properly certified.

Last fall, Villages of Benning told Sackett the work was done and her family could move back. She found paint scrapings and dust, the records show, and refused to return unless housing managers could show the home wouldn't poison her girls.

Days later, Villages of Benning declared the property a "contamination area" and had Sackett sign papers promising not to enter. "It was one of the most stressful things I've been through," she said.

Six months later, 103 Rainbow Avenue stood vacant. At another Rainbow Avenue home, paint was peeling from doors and a window by a child's bed. A bathroom faucet leaked brown goop. A pizza-sized black mold bloom covered a ceiling. Outside, old paint crumbled from window frames, steps and a garage.

Lab testing at Columbia showed four of six paint samples from the home exceeded lead safety standards, including one from beside the child's bed. The family reported the findings to Benning officials and is now moving.

'SILENCED VERSION'

About a mile from Rainbow Avenue lies Perkins Village, a cluster of drab mid-century homes that isn't supposed to exist.

Benning's development plans called for all 180 Perkins houses to be razed years ago and replaced with 228 new Mission-style homes. Just a handful of the old homes were torn down, and none of the new ones have been built. Reuters tested two homes in Perkins Village. Both had visibly deteriorating paint with lead above federal safety standards.

The Benning contractors wound up building just over half of the 3,185 new homes that were promised back when the housing was privatized. As a result, records show, nearly three out of five Benning homes still contain lead.

The Army said it's satisfied with the results of the building project. It said it doesn't know whether any children living in Benning's older homes have tested high for lead in recent years. The base's data system can't track where children with elevated lead levels were living when they were tested.

Darlana Brown said Villages of Benning wasn't aware of JC's poisoning, either, until she spoke up.

Court records show the Browns' lawsuit was settled earlier this year. As a precondition of settlement talks, the Benning contractors demanded the Browns stop communicating with Reuters and stop mentioning the dispute publicly.

This January, on the private Facebook page where military families share their worries, Darlena Brown revised an earlier post. It still recounts her son's poisoning but omits any mention of the landlords.

She changed the title, too. It's now called "Darlana's Story (The silenced version)."

The Washington Post

https://www.washingtonpost.com/local/social-issues/many-children-have-been-poisoned-by-lead-in-homes-approved-by-dc-housing-inspectors/2018/08/14/5633a144-9b24-11e8-8d5e-c6c594024954_story.html?utm_term=.6cef09d92218

Numerous children have been poisoned by lead in homes approved by D.C. housing inspectors

By Terrence McCoy, 8/15/18

She was giving Alonzo, then 3, a bath in a tub that her landlord had just painted to pass a housing inspection. She turned to find a washcloth, and when she swiveled back, she found the boy with bits of peeling paint in his mouth. She tried get it out, but it was too late.

The lead tests came back positive: Alonzo had more than double what the government defines as “elevated,” and he hasn’t been the same since.

Between March 2013 and March 2018, at least 41 families discovered that their homes, subsidized by a housing voucher and approved by city inspectors, contained lead contaminants, according to a tabulation requested by The Washington Post through the Freedom of Information Act.

The District Department of Energy and Environment, which performed the count and the testing, said it inspected about half of the homes because a child living at the property, or visiting it often, had tested positive for elevated levels of lead; the other homes were investigated following a tip about possible lead hazards. The agency said that the list wasn’t exhaustive and that there may be more.

The findings again highlight key weaknesses in federal guidelines established by the U.S. Department of Housing and Urban Development, which the District and other cities follow. Many rental properties supported by housing vouchers in the city receive inspections under these standards. But they require only visual inspections for peeling paint and don’t mandate lead testing, unlike states such as Maryland and Rhode Island.

“You cannot detect with any certainty that a house does not contain toxic lead dust without doing a dust test, period,” said Ruth Ann Norton, president of Baltimore’s Green & Healthy Homes Initiative and one of the nation’s foremost experts on lead-poisoning prevention.

Since 2013, the District has subsidized and inspected more than 18,900 properties, all while it tries to meet a crisis in homelessness and affordable housing. In the first seven months of 2018, the D.C. Department of Human Services placed 367 homeless families — nearly three times as many as it did in 2013, according to city statistics.

Rick White, a spokesman for the District Housing Authority, which performs many of the inspections for subsidized properties, said that most of the voucher properties in the tabulation were overseen by the agency. After hazardous lead was found in the homes, some families moved out when their landlords did not abate the contamination. Other landlords cleared the properties of lead hazards and provided documentation to city authorities, and the families stayed. It is the landlords’ responsibility, he said, to ensure that the homes are free of hazardous lead.

“I do not want you, or your newspaper, mistakenly believing or inaccurately reporting that DCHA is not fully meeting its legal obligations,” he said, adding that the city is also reviewing how cities that have made strides in lead remediation, such as Baltimore, conduct their lead inspections. “Rest assured that if federal laws or regulations are amended, then we will adjust our operating practices accordingly. . . . In all cases, DCHA immediately takes appropriate actions against any private property owner where a DCHA inspector identifies peeling paint.”

The fix for peeling paint, however, often includes another coat of paint. But superficial and cosmetic fixes, according to housing advocates, lawyers and tenants, do little to address more significant and underlying issues, such as plumbing problems or leaking roofs, that can cause paint to crack and peel again. And that’s when lead paint, effectively banned in 1978, becomes dangerous.

“Sometimes families chose housing that may not be great because they feel like they don’t have any other options,” said Kathy Zeisel of the Children’s Law Center. “They may believe the coat of paint has resolved the issue, but by the end of the month, the paint is peeling all over again, and the water is coming through the walls.”

It was a problem for Donna Black. She moved into a house on Rittenhouse Street in Northwest Washington with her housing voucher in 2013, while she was pregnant. When she first saw the home, she didn't feel good about it but didn't want to seem "choosy." Plus, the inspectors had said it was okay, so she assumed it was safe.

"That was very false," she said.

The roof started leaking. The paint started peeling. She gave birth. She named the baby Damion.

A year later, his blood carried twice the amount of lead the government calls elevated, although most advocates and scientists say any trace of lead in a child's system can lead to diminished cognitive function.

Four years after that, Black is homeless, living in a Holiday Inn Express with Damion, whose needs her life revolves around. "My son is not a normal 3-year-old," she said.

A lot of days, she's filled with anger.

"We're very upset with the city," she said. "The city is the number one reason why this has happened to my son. . . . They let our family move in there, and it was fixed up to the point where it could look like it was okay, but it really wasn't."

Mattocks, too, has trouble understanding how to raise a child who is different from her seven other children. Alonzo, now 7, is always behind in his schooling, and she worries about what sort of life he will have. "I'm worried that, as an African American male, they're already having so many issues with police brutality and being discriminated against that I'm fearful . . . that this will be another barrier that he'll have to try to get through."

Mattocks and Black filed lawsuits against the housing authority and their landlords in District Superior Court in 2016, but the housing authority was dismissed from the cases after arguing that it wasn't liable, although that decision is being appealed. "There really should be stricter standards to protect the children," said Alan Mensh, the attorney representing the two.

Scott Muchow, the landlord for Mattocks's property, declined to address specific questions about Alonzo's lead poisoning. "In late 2016, I received notice of a lawsuit for lead paint related issues at the property from Ms. Mattocks, but during discovery, Ms. Mattocks chose to voluntarily dismiss the case," Muchow said in a statement.

The lawsuit against Black's landlord, Jerome Lindsey, who could not be reached to comment, is pending.

Mattocks and Black said they were less interested in money than a sense of justice. They moved into homes that were supposed to be safe but turned out to be anything but, and now they're raising children whose needs exceed their means. And no one, they say, wants to take responsibility.

"So who do we hold responsible?" Mattocks said. "We have to hold the city accountable, and the landlords accountable, we have to hold all of these people accountable . . . so that the children we call our future, we take care of these children. . . . But how do we do that if we don't hold them accountable?"

Subject: Morning Energy: Trump's not-so simple math — Judge orders update of Keystone XL study — States' rights get tricky over water

By Kelsey Tamborrino | 08/16/2018 05:43 AM EDT

With help from Ben Lefebvre and Annie Snider

A NUMBERS GAME: The White House's plan to rewrite the Obama administration's cornerstone climate rule for power plants may be based on some fuzzy math, setting up a potentially brutal court battle for the Justice Department. The legally risky strategy, POLITICO's Alex Guillén and Emily Holden report, calls for redoing the calculations of how much the rule would cost and who would benefit.

EPA's proposed replacement plan is expected to be unveiled any day now and will likely downplay a key feature of the Obama-era greenhouse rule: the money saved by using less electricity. Some expect EPA will also count only a fraction of the improvements in public health from reduced smog and soot pollution, Alex and Emily report, and it won't consider any benefits from slowing climate change outside the U.S.

In doing so, President Donald Trump's EPA will argue that the Obama-era rule had higher costs and fewer benefits than previously stated, a change to help improve the comparison when it unveils its own proposal. The Obama administration had estimated that the benefits from its rule would outstrip the costs by \$26 billion to \$45 billion by 2030, though supporters of that version say those net benefits could be even higher now.

In fact, math could become vital to the success or failure of several of Trump's rules. Critics say similarly fuzzy math underlies other Trump administration proposals to reverse or stymie action on climate change, such as a recent plan by EPA and the Department of Transportation to halt a planned tightening of fuel efficiency standards for cars and trucks. "They are cooking the books on technical analysis to try to justify preconceived conclusions that these regulations are bad," said David Doniger, senior strategic director of the Natural Resources Defense Council's climate program who was influential in the Obama EPA's crafting of the original rule. GOOD THURSDAY MORNING! I'm your host, Kelsey Tamborrino. Many of you knew, but ClearView Energy Partners' Mitch Huber was the first to correctly answer that it's Loretta and Linda Sanchez who were the first and only sisters to serve simultaneously in Congress. For today: How many current senators are also former mayors? Bonus points if you can name them. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

DO THAT AGAIN: The Trump administration was ordered Wednesday to update an environmental study of the Keystone XL pipeline despite its contention the alternative route picked last year by Nebraska regulators didn't require an updated environmental impact statement. Instead, Judge Brian Morris of the U.S. District Court for Montana ordered the State Department to go back to its 2014 EIS to take into account the new route, Alex reports for Pros. Morris said the State Department still has a "meaningful opportunity to evaluate" the alternative route that was picked in Nebraska. However, he declined environmentalists' request that Trump's permit be vacated.

STATES' RIGHTS GET TRICKY OVER WATER: The roiling debate over states' right to halt development projects over their water quality effects heads to the Senate Environment and Public Works Committee today. The panel will hold a legislative hearing on a bill from Chairman John Barrasso, S. 3303 (115), the Water Quality Certification Improvement Act of 2018. The measure would limit states' authority under Section 401 of the Clean Water Act, which requires states to certify that projects won't harm their water quality standards before the federal government issues a permit. In recent years a handful of Democratic-led states have used that authority to block natural gas pipelines. Republican Maryland Gov. Larry Hogan is also using the authority to try to force Exelon Corp. to clean up nutrient pollution flowing through one of its dams that harms the Chesapeake Bay.

GOP lawmakers have backed earlier efforts to limit or remove the authority, including in this year's House Appropriations bill, House and Senate energy legislation and standalone bills. But the Western Governors Association, which represents a number of Republican governors, has come out in opposition to reining in states' authority, and the Environmental Council of the States warned Wednesday that such moves could have unintended consequences. **If you go:** The hearing begins at 10 a.m. in 406 Dirksen.

NOMINATIONS ON TAP: Two nominees to the Energy Department will testify before the Senate Energy and Natural Resources Committee this morning: Bill Cooper to be general counsel and Lane Genatowski for director of the Advanced Research Projects Agency-Energy, which the Trump administration has sought to eliminate.

Who are they? Cooper serves as senior counsel and director of the McConnell Valdés law firm. Prior to that he was a subcommittee staff director for House Natural Resources, with a particular policy focus on the National Environmental Policy Act that the White House has sought to change up. Cooper also previously was president of the Center for Liquefied Natural Gas and counsel to the House Energy and Commerce Committee. His credentials have earned him the backing of industry groups, including the Air-Conditioning, Heating, and Refrigeration Institute, the Interstate Natural Gas Association of America, and the Electric Reliability Coordinating Council.

— **Genatowski hails from** a banking background. He's managing partner in investments at Dividend Advisors, a firm he founded in 2012. Genatowski before that was an energy investment banker at JPMorgan Chase and other Wall Street giants. His résumé lines up with others in Rick Perry's Energy Department, which has focused more on businessmen with energy-sector experience. **If you go:** The hearing kicks off at 10 a.m. in 366 Dirksen.

RESCISSIONS — TAKE TWO: The Trump administration is once again weighing a so-called rescissions package to force Congress to roll back federal spending, with just weeks to go until the next budget deadline, Pro's Sarah Ferris and John Bresnahan report. Senate Appropriations Chairman Richard Shelby said Wednesday he was told about the idea: "I heard they were thinking about one, but I haven't seen it." But a Senate leadership source said OMB chief Mick Mulvaney has already begun moving ahead on the effort.

FLORIDA DRILLING BITS: To drill or not to drill off the Florida coast is a question once again heating up the state's election campaigns. Gwen Graham, the current front-runner in the Democratic gubernatorial primary field, sent out a message titled "Drilling 75 Miles off Florida's Beaches is Insane" after a POLITICO report highlighted the idea as one that oil industry lobbyists are pushing to have included in the Interior Department's upcoming offshore drilling plan. Sunshine State Democratic Sen. Bill Nelson took the story to the Senate floor to try to whack current Gov. Rick Scott, who is running to replace him and earlier this year got help from Trump on the drilling issue.

REMEMBRANCE OF TARBALLS PAST: Former Florida Lt. Gov. Jeff Kottkamp is catching heat for his statement at a pro-drilling rally in Tallahassee that oil from the Deepwater Horizon spill "didn't even reach the shores of Florida." The remark, as first reported in the Florida Phoenix, may have surprised those who

remember former Gov. Charlie Crist squatting over oil-stained beaches in Pensacola. Kottkamp, who was speaking as co-chair of Explore Offshore Florida, went on to say "tarballs are naturally occurring." Earthjustice staff attorney Bradley Marshall called it "absurd to claim the Deepwater Horizon spill did not reach Florida" given the damage the state experienced. "That's why so many of Florida's leaders, regardless of what political party they belong to, have been so protective of our coasts all these years," he said in a statement.

WHAT'S THE RISK? EPA acting Administrator Andrew Wheeler delivered a video address at the National Environmental Justice Advisory Council's public meeting in Boston on Wednesday where he acknowledged the need for improvement in risk communication and noted the agency owes it to the American public to improve. "How well or how poorly we communicate risk disproportionately impacts those on the lower end of the socioeconomic ladder," he said. "We have fallen short in the past from our response to the Gold King Mine in Colorado, to the Kanawha River in West Virginia, to Flint, Mich." Watch it here.

CASE CLOSED: Interior's Office of Inspector General has closed its investigation into an allegation made against National Park Service officials. The claim centered around references to human-caused climate change in a report on sea-level rise and storm surge projections that officials allegedly sought to remove. The watchdog office said Wednesday that shortly after it opened the investigation, the NPS "published the report with all original references to human-caused climate change," thus prompting it to close its probe.

'SECRET' AGENTS: Comments are due today on EPA's proposed "scientific transparency" rule, which would ban the use of studies that don't publicly disclose all their data. Experts have said that plan could prohibit the use of vital studies on how pollutants affect human health because researchers typically promise to keep subjects' health information confidential. But conservatives have long accused the agency of relying on "secret science," prompting former Administrator Scott Pruitt to unveil the proposal in the name of transparency.

Under the wire: With the comment deadline approaching, nearly 80 groups, including the Union of Concerned Scientists, Sierra Club and Moms Clean Air Force, signed onto a letter Wednesday calling on Wheeler to withdraw the so-called secret science proposal. Separately, 66 health and medical organizations sent comments to Wheeler in opposition to the proposed rule. That's not to say there isn't support for the proposal; several comments posted Wednesday echoed the refrain that scientists should be required to "show your work."

AFTER THE STORM: The nonprofit Environmental Integrity Project released a new report today leading up to the one-year anniversary of Hurricane Harvey's widespread destruction in Texas. Using records from the Texas Commission on Environmental Quality, the report looks at air pollution during and after the storm as well as the government's and industries' response, and makes recommendations for the future. The "Preparing for the Next Storm" report found that all five of the largest industrial air pollution releases during Harvey were in the Houston area — with the Magellan Galena Park Terminal the biggest polluter, releasing 2,472,402 pounds of air pollution.

Harvey also triggered the release of at least 8.3 million pounds of unpermitted air pollution from petrochemical plants, according to the EIP report. And in the nine months after Harvey, "18 companies revised their air pollution reports to the state to erase 1.7 million pounds of unpermitted emissions during Hurricane Harvey," the report found.

LET'S MAKE A DEAL: Trump might soon strike a deal with Mexico on NAFTA, even as a trade war plays out with the rest of the world, POLITICO's Megan Cassella reports. The apparent turnaround after months of stalemate arrives as Mexican Secretary of Economy Ildefonso Guajardo visited Washington on Wednesday to hammer out some of the most contentious issues on NAFTA. "Both U.S. and Mexican officials now say they could be on the verge of announcing a preliminary agreement on everything from complicated automotive rules to environmental regulations by the end of August," Megan reports.

CATCHING FIRE: Agriculture Secretary Sonny Perdue will join Senate Energy ranking member [Maria Cantwell](#) and Sens. [Steve Daines](#) and [Ron Wyden](#) to unveil a new federal plan for addressing wildfires. Earlier this year, Perdue and Cantwell [worked together](#) on a commitment to use unmanned aircraft technology this fire season, and the Washington Democrat will likely highlight similar tools and technology today. Watch the [livestream here](#).

POLL: CLIMATE A FACTOR FOR MOST: Slightly more than half (53 percent) of U.S. voters believe climate change is a factor in making the ongoing California wildfires more extreme, while 39 percent say it's not, according to a new poll from Quinnipiac University [released](#) Wednesday. Sixty-four percent of voters said they think the country is not doing enough to address climate change, the national poll found. Eighteen percent of voters say the U.S. is doing enough to address the issue, while 10 percent say the U.S. is doing too much.

— **On a related note**, the Natural Resources Defense Council launched [a tracker](#) this week to see where every state's lawmakers stand on offshore drilling.

QUICK HITS

Stories from POLITICO Pro

Exclusive: Draft details Trump's plan for reversing Obama climate rule [Back](#)

By Emily Holden | 08/14/2018 07:46 PM EDT

The Trump administration is preparing to unveil its plan for undoing Barack Obama's most ambitious climate regulation — offering a replacement that would do far less to reduce the greenhouse gas emissions that are warming the planet, according to POLITICO's review of a portion of the unpublished draft.

The new climate proposal for coal-burning power plants, expected to be released in the coming days, would give states wide latitude to write their own modest regulations for coal plants or even seek permission to opt out, according to the document and a source who has read other sections of the draft.

That's a sharp contrast from the aims of Obama's Clean Power Plan, a 2015 regulation that would have sped a shift away from coal use and toward less-polluting sources such as natural gas, wind and solar. That plan was the centerpiece of Obama's pledge for the U.S. to cut carbon dioxide emissions as part of the Paris climate agreement, which President Donald Trump has said he plans to exit.

The Environmental Protection Agency acknowledges that both carbon emissions and pollutants such as soot and smog would be higher under its new proposal than under the Clean Power Plan. And Trump's critics call it a recipe for abandoning the effort to take on one of the world's most urgent problems.

The proposal would be "another, more official, sign that the government of the United States is not committed to climate policy," said Janet McCabe, EPA's air chief under Obama.

McCabe said based on a description of the proposal, it would offer "a significant amount of discretion to states to decide that nothing at all needs to be done."

Many red states and several companies sued over the Clean Power Plan, and a federal appeals court was nearing a decision when Trump's EPA asked for time to rewrite the rule. McCabe said the proposal could be meant to eat up time and stall a future president from quickly regulating greenhouse gases.

EPA was widely expected to write a far less stringent replacement rule. Trump promised to nix the Clean Power Plan and exit the Paris deal during his campaign. But the draft offers the first look at the specifics since the agency released a broader notice that it would reconsider the rule in April.

The White House Office of Management and Budget has finished reviewing the draft and sent it back to EPA this week.

The rule would allow states to write rules to make coal plants more efficient, enabling them to burn less coal to produce the same amount of electricity. But that could be bad for the planet, people familiar with state air programs say, by making it cost-effective for power companies to run those plants more often.

EPA looked at the outcomes of various scenarios that could be possible from state-proposed plans in 2025, 2030 and 2035, implying that the plans could be in place before 2025.

Obama's plan was meant to see greenhouse gas emissions from the U.S. power sector fall to 32 percent below 2005 levels by 2030. The nation has already achieved much of that reduction because of trends such as the closures of dozens of older coal plants.

EPA intends to argue that the Obama administration rule illegally sought to regulate the broader power sector, beyond coal plants, and that the compliance costs would have been big and the climate benefits negligible, according to the draft POLITICO reviewed.

Environmental advocates and blue states plan to wage war on the proposal once it is final. But while the legal fights play out, the regulation will be a placeholder that could stall a future president from regulating power plants.

States will be able to present reasons for why they don't want to regulate coal plants, including considering how many more years they have left before they would probably shut down, according to a source who reviewed a different section of the document.

In another contentious portion of the proposal, EPA is looking at letting states decide whether they want to adopt changes to pollution reviews that kick in when a plant makes upgrades. Existing rules are meant to keep plants from making changes that cause more pollution.

Conservatives and industry groups have long argued that the review process, called New Source Review, makes it too expensive for operators to make improvements to plants.

The key to Trump's climate reversal? New math [Back](#)

By Alex Guillén and Emily Holden | 08/16/2018 05:06 AM EDT

The Trump administration's attempt to reverse Barack Obama's most sweeping climate regulation rests on a legally risky strategy — redoing the calculations of how much the rule would cost and who would benefit.

The EPA's proposed replacement is expected to downplay the money that people and businesses would save from using less electricity, a key feature of the Obama-era greenhouse rule for power plants. People tracking the issue also expect that the agency will count only a fraction of the improvements in public health from reduced smog and soot pollution, and won't consider any benefits from slowing climate change outside the U.S.

The upshot: President Donald Trump's Environmental Protection Agency will argue that the Obama administration's rule had more costs and fewer benefits than previously stated, a change to help improve the comparison when it unveils its own, much less ambitious power plant proposal as soon as next week.

The Obama administration had estimated that the benefits from its 2015 rule would outstrip the costs by \$26 billion to \$45 billion by 2030.

Supporters of the Obama version say those net benefits could be even higher now, because states are on track to meet the climate goals and the costs of clean energy have continued to plummet. And they warn that repealing the regulation could keep older, more expensive coal-fired power plants in operation, adding to consumers' costs.

The math could be crucial to the success or failure of a number of Trump rules. That could make the rollbacks legally vulnerable when environmental advocates and states sue to overturn Trump's action, critics of the new proposals say.

"They are cooking the books on technical analysis to try to justify preconceived conclusions that these regulations are bad," said David Doniger, the senior strategic director of the Natural Resources Defense Council's climate program who was influential in the Obama EPA's crafting of the original rule.

EPA did not respond to a request for comment on Wednesday.

Trump administration lawyers reviewing the replacement are already struggling with how to defend a rule that could cost electricity users money but would not do much to address climate change or air pollution, according to a person aware of conversations between the White House and the Justice Department. DOJ would be charged with defending the rule in court.

POLITICO has examined a portion of the agency's unpublished draft of the new rule, which would allow states to write their own modest regulations for coal plants or even let plant operators seek to opt out entirely, according to a source with knowledge of the broader proposal.

The proposed rewrite of the power plant rule is part of a pattern: Critics say similarly fuzzy math underlies other Trump administration proposals to reverse or stymie action on climate change, such as a recent plan by EPA and the Department of Transportation to halt a planned tightening of fuel efficiency standards for cars and trucks.

Sean Donahue, an environmental lawyer who has represented groups like the Environmental Defense Fund, said he would expect a court to be "very skeptical" of any effort that looks as though EPA is trying to evade its obligation to regulate greenhouse gases. But he conceded that will depend on the details of EPA's power plant proposal.

"If it were one or two technical judgments where there's a difference between this administration and the last one, or this administration and prior consistent practice, that would be one thing," Donahue said. "But it's many, many things, all pointing the same way, all pointing toward rolling back greenhouse gas mitigation efforts."

Trump has repeatedly expressed doubts about man-made climate change, and much of his Cabinet shares a similar view. In contrast, the federal government's own scientific assessment finds that human-caused climate change will not only raise temperatures but also make extreme weather more dangerous and lift sea levels by 1 to 4 feet by the end of the century.

Kate Larsen, director of economic research firm Rhodium Group, said the Trump administration's justifications for unraveling climate change policies are symptomatic of its broader governing principles.

"A decision we make today is narrowly focused on the impacts to myself and my immediate neighbor in the next week, but you're not taking into account impacts next year and the following year to yourself, your neighbor, the entire community," she said.

Environmental experts are also scrutinizing the auto rule proposal, released earlier this month, which would freeze the Obama administration's aggressive fuel economy standards after 2020 and dial back EPA greenhouse gas rules to match.

EPA and DOT's National Highway Traffic Safety Administration argued that the freeze would save billions of dollars in costs. Critics say the administration overestimated compliance costs of the Obama-era auto targets by as much as fourfold, which could significantly tip the cost-benefit analysis in their favor. Another claim that the Trump rollback would save more than 1,000 lives per year — yielding benefits of \$77 billion — has also drawn skepticism.

On Tuesday, EPA released a June memo that showed agency staff criticizing a number of "unrealistic" aspects of NHTSA's modeling. They disagreed with the proposal's fatality figures, with EPA staff estimating deaths would increase slightly under the freeze. And they thought the rule overestimated compliance costs and the time needed to recoup those costs in fuel savings, all factors that boosted benefits and lowered costs for the proposed freeze. Both EPA and NHTSA dismissed the memo as only one part of a complex review process.

The administration and industry groups have blasted the Obama administration's use of "co-benefits" — the benefits in improved health or reduced pollution that arise even when they're not the primary aim of a regulation. (One example: Cutting coal plants' carbon dioxide pollution under the power plant regulation would't do much directly to improve people's health, but it would reduce smog.) But Donahue argued that Trump's regulators sometimes lean on co-benefits to help build the case for their rollbacks.

For example, NHTSA's modeling credits changes in consumer behavior as the overwhelming factor behind all the lives that the Trump administration contends its auto rollback would save. The agencies argue that under the previous Obama rule, drivers would be more likely to remain in older, more dangerous cars than purchase more expensive, safer ones.

That "would seem to be a co-benefits argument, since the EPA doesn't have, and NHTSA doesn't have, the authority to regulate used cars," said Donahue, who called the paradox "sort of entertaining."

Counting co-benefits is a long-standing practice for federal regulators, but energy industry groups and Republican state officials grew incensed by the Obama administration's use of it to justify major regulations.

"The co-benefits thing has ballooned into the biggest scandal in environmental regulation," said the conservative Competitive Enterprise Institute's Myron Ebell, who led Trump's post-election transition team at EPA. "You get very small direct benefits, but you make up, essentially, a lot of co-benefits."

Still, he contended that EPA's withdrawal of Obama's power plant rule would eliminate a huge amount of costs in the coming years, saying Obama's regulation represented "just the first emissions cuts."

"There were going to be more beyond that if the Obama administration had been succeeded by the Clinton administration," Ebell said. He added: "By cutting it off in the way that they're doing, we're avoiding immense future costs."

Keystone XL pipeline wins green light in Nebraska — but may face new hurdles [Back](#)

By Ben Lefebvre | 11/20/2017 11:25 AM EDT

Nebraska regulators approved the Keystone XL pipeline Monday, but only if it is built along a new path that may force the project developer to jump through a new set of regulatory hoops.

The 3-2 vote by the Nebraska Public Service Commission gave the green light to a different route than the one preferred by Keystone developer TransCanada, moving it east to run partially alongside the original Keystone pipeline and through a portion of the state's ecologically sensitive Sandhills area as well across the Ogallala Aquifer.

The Trump administration is evaluating whether it would have to re-approve the controversial pipeline to account for the new route. But activists who have spent the better part of a decade fighting to block Keystone said the decision throws the whole project into jeopardy, while TransCanada, the company seeking to build the project, said only that it is evaluating its next steps.

"This decision today throws the entire project into a huge legal question mark," said Jane Kleeb, the activist who led the opposition to the pipeline and who is now Nebraska Democratic Party chair. "TransCanada will have to go back to the State Department because that route has never been reviewed by the feds."

The State Department said it is reviewing the PSC decision for just such a possibility.

"We won't know about any impacts until we learn precisely the extent of any changes, something we are currently engaged in," State Department spokesman Vincent Campos said.

TransCanada President and CEO Russ Girling said the company "will conduct a careful review of the Public Service Commission's ruling while assessing how the decision would impact the cost and schedule of the project."

Former President Barack Obama had blocked the permits for the pipeline in 2015, citing the oil sands' impact on climate change, but President Donald Trump quickly reversed that decision after taking office. Keystone XL is designed to transport up to 830,000 barrels per day of crude from Canada's oil sands and North Dakota's shale fields to oil refineries on the Gulf Coast.

The Nebraska PSC vote comes as TransCanada adds new crews to its cleanup operations in South Dakota, where the original Keystone Pipeline ruptured last week and released 210,000 gallons of oil. But Nebraska law bars the regulators from considering spills or pipeline safety in its decision-making process.

Environmentalists and landowners who opposed Keystone XL's construction have promised to try to overturn the commission's decision.

"We will appeal," Kleeb said. "We will challenge a foreign corporation being given eminent domain in the county courts, with every intent to bring it to the Supreme Court if needed."

Even with the approval, the project, whose costs to build the nearly 1,200 mile artery have ballooned to \$8 billion, is still not ready to be built since TransCanada is gauging the economics of the huge investment. Though prices for oil have rebounded moderately in recent months, and while TransCanada has said demand for space on the pipeline is strong, it's not yet clear that enough companies will commit to the 20-year contracts required to reserve space on it.

The opposition to Keystone XL had been a rallying cry for green activists who have long said mining Canada's oil sands would be a disaster for global climate change, releasing vast amounts of carbon dioxide into the atmosphere.

But supporters have said tapping the oil fields in Alberta is no worse than the oil production in Venezuela, where much of the heavy sour crude that is shipped to U.S. refineries comes from now.

Many in the oil industry, however, no longer see the Keystone XL pipeline as crucial to the U.S. refineries as they once did, especially since the railroad sector stepped in to offer a more flexible — though more expensive — way to ship the oil.

"There's not going to be a parade thrown, although everyone in the industry is going to be grateful," said Tyler Nelson, an energy lobbyist for Cornerstone Government Affairs. "It should have been done years ago. But now a lot of people want it to be over with and done and move on."

The pipeline may struggle to succeed in the oil business. Energy markets have made the Alberta oil sands less attractive, with ExxonMobil, ConocoPhillips and others pulling out of the region to concentrate on U.S. oil

shale development in Texas. Meanwhile, rival pipeline company Enbridge has expanded its pipeline system delivering Canadian crude to the U.S.

Critics have pointed to the recent shale oil boom as a reason that supply from the Canadian and North Dakota fields is in less demand, and they argue that much of the oil from Keystone XL could end up on tankers bound for export. U.S. oil production is on target to average more than 9 million barrels a day this year, nearly double what it was when TransCanada first proposed the massive pipeline.

If TransCanada gives its final approval to go ahead, construction would not start until 2019 at the earliest, Paul Miller, TransCanada's president of liquids pipelines, said during a conference call earlier this month.

The pipeline already is the focus of a court challenge stemming from Trump's State Department approving the project. A coalition of groups is arguing the State Department did not do due diligence before approving the cross-border pipeline in March. The case is still in the beginning stages, with a decision pending from the U.S. District Court of Montana on a Trump administration motion to dismiss.

Judge orders Trump administration to update Keystone XL environmental study [Back](#)

By Alex Guillén | 08/15/2018 08:17 PM EDT

A federal judge today ordered the Trump administration to update its environmental study of the Keystone XL pipeline.

Nebraska regulators last year picked an alternative route through the state after the pipeline was approved by President Donald Trump. Now the State Department must update its previous 2014 environmental impact statement to take that route into account, ruled Judge Brian Morris of the U.S. District Court for Montana.

The Trump administration argued that it did not need to update the EIS, despite Nebraska regulators' decision to pick the alternate route.

But Morris concluded that the State Department still has a "meaningful opportunity to evaluate" the alternative route that was picked in Nebraska. "Federal Defendants cannot escape their responsibility under NEPA to evaluate the Mainline Alternative route," he ruled.

The approved route differs from the one studied in the 2014 EIS by crossing different counties and bodies of water and requiring an extra pump station and electric infrastructure, Morris noted.

However, Morris declined environmentalists' request that Trump's permit be vacated, at least for now.

TransCanada does not plan to start construction before the second quarter of 2019, he said, giving the Trump administration sufficient time "to supplement the EIS in a manner that allows appropriate review before TransCanada's planned construction activities." Morris said he would revisit the issue if "circumstances change" and he is unable to review the new supplemental EIS before TransCanada begins construction.

WHAT'S NEXT: Morris ordered the State Department to propose a schedule to supplement the EIS.

Trump administration to make a second try on spending cutbacks [Back](#)

By Sarah Ferris and John Bresnahan | 08/15/2018 07:15 PM EDT

The Trump administration is eyeing a second attempt to force Congress to roll back federal spending, after its last attempt collapsed in the GOP-led Senate, according to the chairman of the Senate Appropriations Committee as well as a Senate leadership source.

The Office of Management and Budget is said to be considering a second package of so-called rescissions, with just weeks to go until Congress' next budget deadline.

OMB officials did not return a request for comment and it's not known yet what spending the White House might try to cut or eliminate this time around.

Senate Appropriations Chairman Richard Shelby said today he was told about the idea. "I heard they were thinking about one, but I haven't seen it," Shelby (R-Ala.) told POLITICO.

OMB chief Mick Mulvaney has already begun moving ahead, according to the Senate leadership source.

Budget hawks, led by Mulvaney, fought hard for the last package, H.R. 3 (115), which would have pulled back \$15 billion in already-approved federal dollars. That bill ultimately tanked in the Senate, coming up just one vote shy on a procedural vote.

If the White House moves quickly, its next rescissions package could arrive in the middle of a separate major funding fight on Capitol Hill. Lawmakers have until Sept. 30 to send roughly \$1.4 trillion in fiscal 2019 funding to President Donald Trump's desk or risk a funding lapse.

Oil companies ask Florida lawmakers to unlock offshore drilling [Back](#)

By Ben Lefebvre | 08/15/2018 05:01 AM EDT

Oil and gas companies are aggressively lobbying Florida lawmakers to agree to allow offshore drilling in the eastern Gulf of Mexico — seeking to break decades of bipartisan opposition in a state that has long viewed oil spills as an existential threat to its tourist economy.

The effort, which would potentially bring oil rigs as close as 75 miles to Florida beaches, comes just seven months after Interior Secretary Ryan Zinke promised that the state was "off the table" for offshore drilling. And it could complicate Republican Gov. Rick Scott's campaign to unseat Democratic Sen. Bill Nelson, whose opposition to drilling off the coast has been a main theme of his decades in Congress.

But the expansion would aid President Donald Trump's effort to increase U.S. oil and gas production, in what he calls a bid for American "energy dominance."

Gaining access to the millions of barrels of oil and natural gas off Florida's west coast is a top priority for Exxon Mobil, Chevron, Shell and other companies.

Energy lobbyists and trade associations believe Zinke left some wiggle room in his comments, and they are trying to persuade Florida lawmakers to sign on to possible compromises, including allowing drill rigs to operate up to 75 miles off the state's Gulf coast, lawmakers and industry sources said. That would be down from more than 200 miles under an existing drilling moratorium.

Zinke's tweet exempting Florida — which critics charge was simply a political gift for Scott's Senate campaign — and his subsequent statement that he was "removing Florida from consideration for any new oil and gas platforms" shouldn't be read as official Interior policy, said Randall Luthi, president of the trade group National Offshore Industry Association, which is pressing for access to the waters.

"Secretarial tweets and statements to Congress are outside the administrative process, but certainly are indicators of where the Secretary and evidently the White House might end up," Luthi said in a statement to POLITICO. "The Eastern Gulf of Mexico is ripe for some kind of a reasonable compromise."

The Gulf of Mexico Energy Security Act of 2006 put a moratorium on oil and gas exploration in the eastern Gulf until June 2022. Department of Defense offshore training zones put another large part of those waters out of contention for drilling.

Interior's first draft plan included opening up every acre of federal water to oil and gas companies, however. Zinke has implied in later conversations with coastal state governors, senators and trade associations that the final plan wouldn't necessarily include drilling off the coasts of New Jersey, Delaware, Maine, but his plan to announce a final decision this fall could delay unpopular decisions — including possibly opening up the waters off southern California and the Mid-Atlantic region — until after the midterm elections, sources said.

The most aggressive plan industry lobbyists have brought to lawmakers calls for allowing drilling platforms within 75 miles of Florida's Gulf coast, an idea that Interior itself floated in its draft plan. Buffer zones going out as far as 125 miles have also been discussed, sources said. Either could technically adhere to Zinke's promise not to open Florida's waters, since the state's jurisdiction only extends nine nautical miles from the shoreline. Interior proposed the use of so-called exclusion zones for the eastern Gulf of Mexico and the Atlantic coast in its draft plan.

One lobbyist working the issue told POLITICO that Zinke and Scott were careful to "not say the entire Eastern Gulf," was off the table during their press conference at the Tallahassee airport in January.

"There are some Republicans who are prepared to make a deal. Seventy-five miles is the expected buffer, but folks might be willing to throw it a little further," said the lobbyist, speaking anonymously to frankly discuss ongoing negotiations.

That reduced buffer zone would please the oil industry because most of the oil and gas reserves in the eastern Gulf are believed to be in the waters south of Alabama and the Florida Panhandle, said a person at one oil and gas company who was not authorized to discuss the draft plan.

"I think we could live with 75 miles," the person said. "I think that wouldn't hurt anyone."

The idea so far has failed to gain much traction with at least two Florida Republicans who said they have been inundated with industry requests to open the area to drilling.

Florida Republican Rep. Matt Gaetz said he opposes the idea on national security grounds, given that the Defense Department uses a large part of the eastern Gulf for training exercises.

"It seems every week the oil and gas industry is working to obtain permission to crack the Destin Dome," Gaetz said in an interview with POLITICO, referring to one offshore site believed to hold large amounts of natural gas. "That would be devastating to our national security. I don't have a nuanced view on this. I am opposed."

Gaetz said he has raised his concerns on several occasions with Zinke, who he said has not pushed for a specific policy but has espoused an expansion of oil and gas drilling in general.

"I've had meetings with the secretary on this," Gaetz said. "I've had spirited conversations with him. I would not say he was wedded to any particular plan. He was trying to advance the cause of energy exploration."

An Interior spokeswoman did not answer questions about Zinke's meetings with Florida lawmakers or the possibility of establishing a 75-mile buffer zone.

"Secretary Zinke regularly meets with and communicates with many members on both sides of the aisle, coastal and non-coastal," the spokeswoman said in a written statement. "Members often discuss relevant issues pertaining to their districts and states as appropriate."

Republican Rep. Francis Rooney, who opposed drilling off the Florida coast during his 2016 campaign, said the industry has also been reaching out to him. Industry representatives have suggested several compromises, including a 100-mile buffer zone, he said, though he has rejected that plan, saying currents could carry any spilled oil from that part of the Gulf onto state beaches.

Instead, Rooney, who had served on the board of the oil and gas company Laredo Petroleum, offered to allow drilling 200 miles off the coast, west of the area where the military conducts training.

"The oil people have brought up several different things and I have been pretty much recalcitrant in negotiating with them," Rooney told POLITICO. "I think we need a clear delineation of where they will drill and not drill, and we don't need them drilling east of that military mission line."

Environmentalists also oppose any drilling, saying a buffer zone wouldn't protect Florida's beaches and tourism economy.

"The Deepwater Horizon disaster that spoiled Florida's coastline was 200 miles from its shore," said Diane Hoskins, director of environmental group Oceana, referring to the 2010 deepwater gusher that took months to plug. "A 75-mile buffer would be a cold comfort for Floridians."

Alexandra Glorioso contributed to this report.

Trump delivers a Senate race sweetener to Scott [Back](#)

By Marc Caputo, Ben Lefebvre, Matt Dixon and Bruce Ritchie | 01/09/2018 11:24 PM EDT

Donald Trump delivered a big political contribution to Rick Scott on Tuesday as the Florida governor contemplates a bid for U.S. Senate: a pledge to spare Florida from administration plans to expand offshore oil drilling nationwide.

The surprise announcement from Secretary of Interior Ryan Zinke — who went to the trouble of flying to Tallahassee to stand beside Scott — outraged environmentalists and Democrats who insist the decision was a political ploy that unlawfully gave preferential treatment to Florida, a swing state that voted for Trump and that's home to his so-called "Winter White House" escape at Mar-a-Lago in Palm Beach.

Zinke made sure that the term-limited governor got all the credit. In response to a question about what was the final determining factor in his decision, Zinke said: "The governor."

"You have a tremendous governor that is straightforward, easy to work for, says exactly what he means. And I can tell you Florida is well-served," Zinke said.

Zinke's glowing endorsement of Scott has become de facto policy for Trump, who has tried for more than a year to woo Scott publicly and privately to run for U.S. Senate against Democratic incumbent Bill Nelson. The veteran senator is one of the most vocal opponents of offshore oil-drilling in Florida, an issue that typically enjoys broad bipartisan support in a state whose economy depends heavily on tourism and development along 1,300 miles of coastline.

Scott used to be an exception to the blanket opposition to offshore oil drilling. In 2010, the then-political newcomer voiced more support for oil exploration, but the position became a political liability in the state after the Deepwater Horizon oil spill coated some Florida beaches with tar balls and damaged tourism in parts of the Gulf.

A 2016 University of South Florida-Nelson poll found that 47 percent of state residents see offshore drilling as a move in the "wrong direction," a distinction that makes it one of the most unpopular policy proposals in the state.

So when Zinke announced last Thursday that the administration wanted to open vast new stretches of federal waters to oil and gas drilling, opposition was united in Florida — from liberal environmentalists to conservative lawmakers and even Scott, who issued a rare public denunciation of the policy.

At the time, Democrats and Nelson supporters highlighted the unpopular policy announcement by a president who's flagging in the polls. Nelson's campaign began fundraising off of the initial announcement to expand oil exploration.

One Republican insider, however, told POLITICO shortly after the initial announcement that the administration would scale the plan back somewhat to give Scott a political boost that would "be a big win, and it won't be Bill Nelson bringing it home."

As late as Tuesday, Nelson was still fundraising off the drilling announcement. "President Trump is about to hand a huge victory to the oil industry and put Florida's entire economy at risk," Nelson's campaign wrote. "He just announced plans to rollback offshore drilling regulations that were put in place after the 2010 Deepwater Horizon disaster, and open up nearly all federal waters to offshore oil drilling — including the eastern Gulf of Mexico."

But just before that email solicitation was sent out, Zinke was unexpectedly standing in Tallahassee's regional airport with Scott announcing the reversal to the Florida capital press corps.

Nelson said he was incredulous.

"I have spent my entire life fighting to keep oil rigs away from our coasts. But now, suddenly, Secretary Zinke announces plans to drill off Florida's coast and four days later agrees to 'take Florida off the table'? I don't believe it," Nelson said in a written statement. "This is a political stunt orchestrated by the Trump administration to help Rick Scott, who has wanted to drill off Florida's coast his entire career. We shouldn't be playing politics with the future of Florida."

Similarly, the Sierra Club of Florida said the decision was "a purely political move to aid the ambitions of Rick Scott." And the League of Conservation Voters called it a "publicity stunt."

Scott's spokesman, Jonathan Tupps, said oil-drilling opponents should not be upset.

"Senator Nelson and anyone else who opposes oil drilling off of Florida's coast should be happy that the governor was able to secure this commitment," he said. "This isn't about politics. This is good policy for Florida."

Tupps said that, contrary to claims by Scott's opponents, the governor and staff have frequently discussed Florida's opposition to more offshore oil drilling with the Interior Department. Scott personally raised the issue with Zinke in an October meeting in Washington, Tupps said.

Why Zinke suddenly reversed months of planning four days after announcing the new oil and gas exploration policy are unclear. Zinke also made his announcement via Twitter after a brief question-and-answer session with reporters in Tallahassee.

In reversing the policy for Florida, however, Zinke may have run afoul of the Administrative Procedure Act, critics said. That could give ammunition to California and Atlantic Coast states wanting to get on the same no-drill list -- the opposite of what President Donald Trump intended when he directed Zinke to expand oil companies' access to federal waters to boost U.S. energy production.

The American Petroleum Institute President Jack Gerard earlier in the day had applauded the Trump administration's plan to make all available federal waters available for drilling, saying "It represents a bold acknowledgement of the industry's advancements in technology to safely access U.S. energy resources."

Almost immediately after Zinke's announcement, lawmakers from other states took to Twitter to raise the specter of lawsuits, which could lead to courtroom entanglements for Interior's offshore drilling plan. The proposal was supposed to go into effect in 2019 and offer acres off the coast of Florida in late 2022 when a drilling moratorium officially ends.

"Under the Administrative Procedure Act, an agency can't act in an arbitrary and capricious manner. In this case, exempting Florida but not California (which has an even larger coastal economy) is arbitrary and capricious," Rep. Ted Lieu, a California Democrat and attorney, told POLITICO.

"So the agency would either have to not exempt Florida, or in the alternative, exempt Florida, California and any other state that can show the coasts are important to the state's tourism and economy."

California Attorney General Xavier Becerra also hammered that point on Twitter, echoing Scott's argument against drilling off the Florida coast to say "California is also 'unique' & our 'coasts are heavily reliant on tourism as an economic driver.' Our 'local and state voice' is firmly opposed to any and all offshore drilling. If that's your standard, we, too, should be removed from your list. Immediately."

In Virginia, U.S. Sen. Tim Kaine took a more low key approach. "Virginia's governor (and governor-elect) have made this same request [as Florida], but we have not received the same commitment. Wonder why..." he tweeted.

Pruitt touts science policy as transparency as Democrats slam him for secrecy [Back](#)

By Emily Holden and Annie Snider | 04/26/2018 03:17 PM EDT

Embattled EPA Administrator Scott Pruitt sought to fend off criticisms he had clouded his activities within the agency in secrecy, pointing during Thursday's congressional hearing to the new science policy rolled out this week that he said is boosting transparency around new rules.

But that new policy, long a conservative priority, had Democrats howling that Pruitt had effectively given himself carte blanche to conceal studies that would not support his rollback of Obama EPA rules.

"The type of studies you want to exclude are the same kind of scientific studies that were used to prove that lead in pipes and paints harm children and that secondhand smoke is a dangerous carcinogen," said Rep. [Raul Ruiz](#) (D-Calif.). "You have demonstrated a disregard of true science [and] the scientific process," he said.

The discussion was one of the most substantive policy issues at [the hearing](#) of the Energy and Commerce subcommittee that focused largely on the scandals that have erupted around Pruitt in recent weeks.

The draft rule, which was announced at a closed event at agency headquarters on Tuesday, could have far-reaching effects that limit EPA's ability to rely on studies that don't have publicly available raw data when making decisions about air and water regulations. Scientists and public health advocates have argued the change could keep the agency from updating health protections based on new science since those studies typically redact subjects' personal information.

Pruitt's GOP supporters on the panel praised the move as a way to ensure that scientific data used to support new regulations was available for everyone to review.

"I've had a lot of constituents over the years who've been very concerned about decisions ... that get made by administrators or the bureaucracy and in some cases they can't get access to the underlying data that underpins the decisions," said Rep. [Greg Walden](#) (R-Ore.), chairman of the Energy and Commerce Committee.

Rep. [Paul Tonko](#) (D-N.Y.) called Pruitt "hypocritical" because the proposed rule gives broad authority Pruitt to grant exemptions from the new requirements, which he said Pruitt could use "without any transparency or accountability" for his decisions.

Tonko pointed to internal emails between top EPA officials initially released under the Freedom of Information Act that show the agency's top chemicals official, a former leading chemicals industry expert, expressing concerns about the impact the policy could have on companies' confidential business information.

"If EPA was assessing the safety of a chemical, you alone would have the power to selectively block public health studies that do not support your political priorities and allow ones that favor your friends in industry. Not only does this open the door to special treatment for industry over the public health, but you could also pick winners and losers among the industry types," Tonko said.

Pruitt argued the restrictions will apply equally to "all third party studies." He said both business and personal health information could be redacted, which experts have argued would be time-consuming and expensive.

Yogin Kothari, a Washington representative for the Union of Concerned Scientists, which has opposed the change, said Democrats were right to highlight the hypocrisy of the policy that he said was really about restricting science.

"What it highlights is a lack of transparency at the agency because he hasn't really talked about this or explained this or explained his thinking about this," Kothari said.

Frank Maisano, a spokesman for the lobbying firm Bracewell who attended the hearing, said Republicans on the committee appeared to be interested in hearing more about the policy.

"It's a topic that is different from what Democrats are talking about, it's a topic that's substantive," Maisano said. "It's a topic that many in the business community and many in the conservative community have been focused on for years."

EPA's proposal, based on long-sought legislation from House Science Chairman Lamar Smith (R-Texas), also drew support from Rep. Kevin Cramer (R-N.D.) who said it undercut Democrats who attacked Pruitt for secrecy while defending the agency previous use of "secret science."

"You've also been accused of hypocrisy, a lack of transparency, by people who are in the same breath defending secret science as a means of carrying out their political philosophy ... the irony is rich beyond rich with me," he said.

Quint Forgey contributed to this report.

Mexico, U.S. may be heading toward NAFTA deal amid Trump's global trade war [Back](#)

By Megan Cassella | 08/15/2018 05:32 PM EDT

President Donald Trump could be poised to make a deal with Mexico on NAFTA even as he engages in a trade war with the rest of the world.

Mexican Economy Secretary Ildefonso Guajardo arrived in Washington on Wednesday — as he has every week for the past month — to hammer out some of the most contentious issues on NAFTA. U.S. and Mexican officials now say they could be on the verge of announcing a preliminary agreement on everything from complicated automotive rules to environmental regulations by the end of August.

The apparent turnaround after months of stalemate is a surprise outcome of discussions reaching their year anniversary on Thursday. And while the two sides have yet to bring Canada, the third partner in NAFTA, into the latest round, the negotiators' optimistic tone could signal that Trump may be ready to extinguish at least one trade conflagration before the midterms. That would placate Republicans who have been calling for a return to stability as the U.S. and China have been slapping tariffs on each other's exports, roiling international markets and burdening American farmers.

"We're settling in for the long haul with China, so we really need to release the pressure in our backyard," said Dan Ujcz, an international trade lawyer who specializes in Canada-U.S. matters. "I think that's a driving force for the U.S.' desire to get a deal right now."

To be sure, some major controversial issues remain unresolved, including the U.S. proposal to automatically terminate the pact after five years unless all three countries agree to renew it — an idea that Canada and Mexico have both rejected outright. And for the time being, at least, Canada still remains on the outside of the current talks.

But reaching even a bare-bones agreement on NAFTA before November's elections would hand a concrete victory to Trump, who would likely point to the revamped pact as a symbol that his strong-arm tactics have worked, industry sources and experts closely following the talks say. It would also allow U.S. trade officials to clear a major task off their agenda and dedicate more time to areas where U.S. Trade Representative Robert Lighthizer in particular has wanted to focus, primarily trade issues with China.

At the same time, Mexican negotiators are also under renewed pressure to get a deal after the country elected a new leader who takes office in December and who badly wants NAFTA to be signed and off his plate before then. Mexico has pointed to Aug. 25 as the date by which it must wrap up at least a preliminary agreement for outgoing President Enrique Peña Nieto to be able to sign the deal before he leaves office.

Those domestic politics have put Guajardo in a tough position, as he tries to appease the incoming Mexican administration and quickly wrap up a deal while still standing up firmly against some U.S. proposals that Mexico has repeatedly derided as unworkable.

"They're under a lot of pressure to just come up with anything, whatever it is," one source close to the talks said, requesting anonymity to speak freely about internal deliberations. "What I've been hearing from other Mexican parties is that Ildefonso was sort of distraught and frazzled by the fact that he's being asked to wrap it up, and that of course means making concessions that he wasn't ready to make. It lowers his negotiating potential."

Against that backdrop, sources close to the talks say Mexico appears to be poised to accept large swaths of a U.S. proposal involving the rules that govern North American-produced automobiles and dictate what percentage of each car must be sourced from within a NAFTA country to qualify for reduced duties under the agreement.

At the U.S.' urging, Mexico looks likely to agree to an increase in the overall amount of North American-sourced content that must be included in each automobile, and will accept a requirement that a certain percentage of each car must be produced by workers earning at least \$16 an hour, sources say. Mexico is also poised to accept mandates that a certain percentage of the steel, aluminum and plastic included in each vehicle is also sourced from a NAFTA country.

In exchange, the United States would be prepared to give up a controversial proposal that would have made it easier for American fruit and vegetable growers to make the case that Mexico is selling produce at unfairly low prices when crops are in season in a particular region, two sources with knowledge of the trade-off told POLITICO. The U.S. would also submit to Mexico's demand to leave a chapter largely untouched that contains rules on disputes between governments, one of the sources said.

"Essentially, there is a deal," one of the sources said.

At the same time, however, other major aspects of the renegotiation remain unfinished. Chief among them is the so-called sunset clause that the U.S. wants, which would end the pact after five years unless the parties opt to continue it. Several sources close to the talks say the sunset clause has hardly been discussed during the latest set of meetings between the U.S. and Mexico, and the two countries still remain on opposite sides.

And Canada will need to come to the table for a deal to be finalized. Officials from all three countries have sought to emphasize that the U.S.-Mexico engagement is not a sign of ill will toward Canada but is instead an attempt to work out bilateral issues before bringing Ottawa back into the fold.

But negotiators had expected that Washington and Mexico City would have made enough progress by now for Canadian Foreign Minister Chrystia Freeland to have joined the meetings in Washington. The more time that passes, the more likely it is that the strategy to put off a trilateral meeting could backfire, a source close to the talks said.

"Yes, there's U.S.-Mexico momentum — that's a positive message and great from Mexico's point of view," the source said. "But the longer it takes to bring in Canada, the less likely this is going to get done in the short term."

Still, any incremental progress, or even the fact that the U.S. and Mexico are continuing to engage in good-faith negotiations and regular meetings, has offered a signal of some hope to U.S. farmers, consumers and industry groups who have been worn out by months of uncertainty and pummeled by retaliatory tariffs imposed over the past few months.

Retailers and business groups are reluctant to throw their support at this point behind a deal that is still unfinished, particularly when a number of proposals that some have termed poison pills remain on the table.

But at the same time, "I think what all of our members want, what the business industry at large wants, is certainty," said Vanessa Sciarra, a former U.S. trade negotiator who now works as a vice president at the National Foreign Trade Council. "Anything that provides for greater clarity on trade relationships, particularly with Mexico and Canada ... would be helpful."

Adam Behsudi contributed to this report.

Attachments: EPA Top Achievements May-June_pocket card.docx

Ryan, I took what the program offices sent me for top accomplishments over the past month and put them into pocket card format. Is this what you're looking for?

Best,
Chris

EPA's Recent Achievements

Asbestos:

- On June 1, EPA released a significant new use rule (SNUR) proposal enabling the Agency to prevent new uses of asbestos – the first such action on asbestos ever proposed.

Science Transparency

- The era of “secret science” is over.
- EPA will only rely on outside science that is publicly available. This allows for third-parties to test, authenticate, and reproduce scientific findings.

Office of Continuous Improvement

- Prior to this administration, EPA was not systematically tracking vital processes like: the **amount of time to issue permits and legal deadlines imposed on EPA**
- This new office will coordinate agency-wide implementation of the new EPA Lean Management System.
- Permitting Reform Goal: All decisions, up or down, in **six months**.

PFAS

- EPA hosted the first ever National Leadership Summit on PFAS.
- EPA will use the information discussed at the summit, along with upcoming visits to communities, to develop a National PFAS Management Plan.

Infrastructure

- In April, EPA issued its first-ever WIFIA loan to King County, Washington.
- In 2017, EPA programs helped fund more than \$10 billion in projects that will fix local infrastructure problems, create jobs, and provide clean and safe water to communities large and small.

Added Sites to the National Priorities List

- In May, EPA announced its commitment to clean up **six new sites** by adding them to the Superfund Program's National Priorities List (NPL) and proposed to add another three hazardous waste sites to the NPL.
- In the first year of Adm. Pruitt's tenure, seven contaminated sites were deleted, substantially or entirely, from the National Priorities List (NPL); only two sites were removed the previous year.

Brownfields:

- In late April, EPA selected **144 communities** for brownfields environmental Assessment, Revolving Loan Fund, and Cleanup grants. The 221 grants totaling **\$54.3 million** will provide communities with funding to assess, clean up and redevelop underutilized properties while protecting public health and the environment.

Science Transparency Coverage

The Daily Caller: Scott Pruitt Will End EPA's Use of 'Secret Science' to Justify Regulations. Environmental Protection Agency (EPA) Administrator Scott Pruitt will soon end his agency's use of "secret science" to craft regulations. "We need to make sure their data and methodology are published as part of the record," Pruitt said in an exclusive interview with The Daily Caller News Foundation. "Otherwise, it's not transparent. It's not objectively measured, and that's important." Pruitt will reverse long-standing EPA policy allowing regulators to rely on non-public scientific data in crafting rules. Such studies have been used to justify tens of billions of dollars' worth of regulations. ([Daily Caller](#), 03/19/18)

Wall Street Journal: EPA Wants New Rules to Rely Solely on Public Data. The Environmental Protection Agency plans to restrict research used in developing regulations, the agency said Tuesday, a change that could affect rules governing everything from household products to power-plant emissions. The proposal follows years of complaints by conservatives that regulations such as emissions restrictions under the Obama administration sometimes went beyond what science could prove. The new proposal would exclude the many research studies that don't make their raw data public and limit the use of findings that can't be reproduced by others. The EPA said this would boost transparency. ([WSJ](#), 04/24/18)

The Washington Post: Pruitt Unveils Controversial 'Transparency' Rule Tuesday Limiting What Research EPA Can Use. Environmental Protection Agency Administrator Scott Pruitt proposed a rule Tuesday that would establish new standards for what science could be used in writing agency regulations, according to individuals briefed on the plan. The sweeping change, long sought by conservatives, could have significant implications for decisions on everything from the toxicity of household products to the level of soot that power plants can emit. The rule would only allow EPA to consider studies for which the underlying data are made available publicly. ([WaPo](#), 04/24/18)

Washington Examiner: Scott Pruitt Announces New EPA Rule to Combat 'Secret Science.' Environmental Protection Agency Administrator Scott Pruitt announced a proposed rule Tuesday that would block the agency from using scientific studies that do not make public the raw data used in the research. Pruitt argues the proposed rule, subject to a 30-day comment period, would improve transparency and ensure science used in policymaking can be independently verified. It fits with a policy he implemented last year to boot scientists from key advisory boards to the EPA. ([Washington Examiner](#), 04/24/18)

E&E News: Pruitt to Unveil 'Secret Science' Effort Today. Scott Pruitt is expected today to unveil his plans to restrict science used by EPA, multiple sources told E&E News. The EPA administrator is slated to release an order requiring that all underlying data used in scientific studies affecting regulations be made public. The move fulfills a long-standing wish of some conservatives who argue that EPA has been relying on "secret science" when crafting rules. ([E&E](#), 04/24/18)

ABC News: Pruitt Wants EPA to Stop Basing Rules on What He Calls 'Secret Science.' Environmental Protection Agency Administrator Scott Pruitt announced a new rule Tuesday that would limit what kind of science the EPA can consider in writing new environmental rules. Pruitt said the rule would ban the EPA from relying on what he called "secret science," research that didn't make the raw data behind it available to the general public, saying the new proposal makes the process more transparent. ([ABC News](#), 04/24/18)

Reuters: U.S. Environment Agency Proposes Limits to Science Used in Rulemaking. Under the new proposals, the EPA will no longer be able to rely on scientific research that is underpinned by confidential medical and industry data. The measure was billed by EPA Administrator Scott Pruitt as a way to boost transparency for the

benefit of the industries his agency regulates. But scientists and former EPA officials worry it will hamstring the agency's ability to protect public health by putting key data off limits. ([Reuters](#), 04/24/18)

The Hill: Pruitt Signs Proposed Rule to Erase 'Secret Science.' Speaking in front of a number of well-known climate change skeptics including the Competitive Enterprise Institute's Myron Ebell, Pruitt announced that the new rule would require science to "be transparent, reproducible and able to be analyzed by those in the marketplace." He also dubbed the current process which had, until now, allowed science to be peer reviewed rather than open to public scrutiny, "simply wrong headed." ([The Hill](#), 04/24/18)

Bloomberg: Pruitt Proposes Limits to Scientific Research Used by EPA Staff. The U.S. Environmental Protection Agency broke with four decades of practice Tuesday and proposed limits on the science used to develop policies protecting public health and the environment. The measure, backed by conservatives and some advisers to President Donald Trump who have warned of "junk science," would prevent the EPA from considering scientific research unless all methodological, technical and other information is publicly available. But critics fear the move would exclude such research as public-health studies containing anonymized patient data. ([Bloomberg](#), 04/24/18)

Daily Caller: Scott Pruitt's Transparency Rule Will Shed Light on A Key Aspect of EPA Regulations. Environmental Protection Agency Administrator Scott Pruitt's proposed rule requiring data transparency, if finalized, would be a major reform of the agency's scientific and regulatory process. Not only will Pruitt's proposal against "secret science" require data transparency, the rule will also require EPA officials to take a hard look at the scientific basis for models used in regulations to calculate the effects of changes in air pollutants. ([Daily Caller](#), 04/25/18)

The Hill: EPA Opts for Accountability and Transparency in Environmental Science (op-ed). Environmental Protection Agency Administrator Scott Pruitt signed a proposed rule to prevent the agency from relying on scientific studies that don't publish their underlying data. "The era of secret science at EPA is coming to an end," Pruitt said. "The ability to test, authenticate, and reproduce scientific findings is vital for the integrity of the rulemaking process. Americans deserve to assess the legitimacy of the science underpinning EPA decisions that may impact their lives." ([The Hill](#), 04/25/18)

The Daily Signal: Scott Pruitt's Effort to Expose 'Secret Science' Has Environmentalists Scared Stiff. A proposed rule announced Tuesday by Scott Pruitt, administrator of the Environmental Protection Agency (EPA), is intended to bring much-needed transparency to agency rulemaking. The environmental lobby is positively apoplectic about the proposal (naturally), even though it aligns perfectly with their long-held commitment to the public's "right to know" principle. The proposed regulation would require EPA to ensure that the scientific data and research models "pivotal" to significant regulation are "publicly available in a manner sufficient for validation and analysis." ([Daily Signal](#), 04/26/18)

The Washington Times: Reforming the Environmental Protection Agency (op-ed). EPA Administrator Scott Pruitt is getting a lot of push-back for his efforts to reform the Environmental Protection Agency and its rule-making process. His goal of making regulations work better for economic as well as environmental purposes is apparently a new way of doing business at the agency. A policy change recently announced by the administrator requires that all the data and methodology the EPA uses in the rule-making process from now on will become part of the public record and open to scrutiny. This policy shift is particularly important because it upsets the status quo of an agency that went off the rails years ago. ([Wash Times](#), 05/01/18)

The Washington Post: Many Mocked This Scott Pruitt Proposal. They Should Have Read It First (op-ed). When Environmental Protection Agency Administrator Scott Pruitt proposed a rule last month to improve

transparency in science used to make policy decisions, he was roundly criticized by interest groups and academics. Several researchers asserted that the policy would be used to undermine a litany of existing environmental protections. Former Obama administration EPA officials co-wrote a New York Times op-ed in which they said the proposal “would undermine the nation’s scientific credibility.” The Economist derided the policy as “swamp science.” But there is a lot to cheer about in the rule that opponents have missed. A careful reading suggests it could promote precisely the kind of evidence-based policy most scientists and the public should support. ([WaPo](#), 05/10/18)

REDEFINING EPA: Overhauling an agency and its mission -- Complete coverage

June 20, 2018

Latest News

EPA Raises Early Defenses Against Likely Suit Over Ash Program Approval

EPA is raising early legal defenses against environmentalists' promised legal challenge to the agency's approval of Oklahoma's first-of-its-kind coal ash disposal permit program, with EPA downplaying as irrelevant environmentalists' claims that the Sooner State lacks the resources to adequately implement its new permitting regime.

Observers Brace For Trump Reorganization Plan With EPA Impact Unclear

The Trump administration is expected to release as soon as June 21 a broad plan for reorganizing the federal government, though some observers doubt the plan will spur broad proposed changes at EPA, such as closing of regional offices, despite calls from some to do so.

CEQ Issues Advance Notice For Sweeping Update Of NEPA Regulations

The White House Council on Environmental Quality (CEQ) is publishing an advance notice of proposed rulemaking (ANPR) on a long-anticipated and potentially sweeping update of its National Environmental Policy Act (NEPA) implementing rules, opening the door to just the second amendment to the rules in 40 years.

Court Rejects Coal Lease NEPA Review Suit But Outlines Paths Forward

A federal appeals court panel is rejecting a long-running lawsuit seeking to force the Bureau of Land Management (BLM) to conduct a broad National Environmental Policy Act (NEPA) review to consider the climate impacts of its coal leasing program, but two of the three judges are outlining other options environmentalists can use to force such analysis.

'Secret Science' Policy's Impact On Pending NAAQS Review May Be Muted

EPA Administrator Scott Pruitt's proposed rule barring the agency from using confidential data in rulemakings might not have as dramatic an impact on pending national ambient air quality standards (NAAQS) as many fear because some of the most influential air pollution studies relevant to those reviews rely on publicly available data, sources say.

Inspector General Details Broad Review Of EPA Programs In Annual Plan

EPA's Office of Inspector General (OIG) is laying out a broad agenda for the remainder of fiscal year 2018 that ranges from reviews of the agency's regulatory oversight on key media and research programs to internal staffing and management as well as previously announced inquiries into Administrator Scott Pruitt's controversial security, spending and hiring.

Daily Feed

Top EPA union official announces retirement

John O'Grady is a long-time union representative of EPA employees who has been a public spokesman for many career staff concerned about the Trump administration.

Colorado to join backers of California vehicle GHG rules

Colorado will join a dozen states that have embraced California's vehicle GHG limits, just as the Trump administration is readying a plan roll back current standards and target states' ability to enforce their own rules.

Environmentalists detail issues in Superfund financial rule suit

Environmental groups suing over EPA's decision to drop a planned Superfund rule are questioning whether the agency's action is contrary to the administrative record and the law.

Ewire: EPA shifts grant reviews from public affairs office

In today's Ewire: As of last month, EPA requires regional administrators or assistant administrators of program offices to sign off on grants, replacing its old policy of reviews by a political aide in the public affairs office.

Auto industry-focused publication calls for Pruitt to resign

A "serious industry deserves a serious regulator, a public servant of proven integrity who lives by at least a baseline standard of propriety. Scott Pruitt is none of those things," *Automotive News* says in an editorial.

D.C. Circuit schedules argument in SO2 NAAQS designations suit

The U.S. Court of Appeals for the District of Columbia Circuit will hear oral argument Sept. 11 in consolidated litigation over EPA's 2010 sulfur dioxide air standard attainment designations.

EPA Embraces Automaker Claims In Bid To Weaken Vehicle GHG Standards

EPA's determination that its vehicle greenhouse gas standards are too stringent and needs to be eased broadly embraces a suite of auto industry arguments on cost, consumer tastes and technology challenges, setting the stage for a formal process to fill in the details of proposed changes to model year 2022-2025 limits that promises to be highly contentious.

Pruitt's Bid To End 'Secret Science' Faces Legal, Implementation Hurdles

EPA Administrator Scott Pruitt's pending plan to apply a sweeping new data transparency requirement at EPA is expected to face legal and implementation controversies likely as soon as it is released, agency watchers say, including potential violations of medical privacy protections, trade secret information and other data that form the basis for air quality standards, pesticide and chemical approvals and climate rules.

California Officials Reject Calls To Tighten 2035 Transportation GHG Targets

The California Air Resources Board (CARB) has adopted controversial 2035 transportation-related greenhouse gas targets for major metropolitan areas in the state, rejecting calls by environmentalists and civil rights groups to make the goals more stringent.

Climate Beat

Regulation: EPA announces plan to ease vehicle GHG standards

But California's waiver -- which allows the state to retain its standards -- is still being "reexamined," EPA says.

Biofuels: Group blames EPA waivers for falling ethanol demand

A new biofuels industry analysis of the effects of EPA's RFS waivers suggests the agency might not have to take short-term measures to curb compliance costs.

Loose Change: On condo scandal, Christie not sure if Pruitt can 'survive'

In today's news roundup: Former New Jersey Gov. Chris Christie (R) says he is not sure how Scott Pruitt can "survive" as EPA chief after he secured a \$50-per-night lease on a Capitol Hill condo connected to an energy lobbyist.

Subject: POLITICO's Morning Energy: Spotlight on FERC at Pro summit — Hitching a ride on the 'minibus' — 'Secret science' out in the open

By Kelsey Tamborrino | 07/17/2018 10:00 AM EDT

With help from Emily Holden, Anthony Adragna, Colin Wilhelm and Darius Dixon

SEE YOU THERE: Today's the day — POLITICO Pro is hosting its second annual Pro summit, featuring one-on-one conversations with newsmakers across the policy landscape, including two sessions on energy.

FERC Commissioner Cheryl LaFleur will sit down this afternoon with our own Darius Dixon, before the regulatory body is deadlocked next month following the exit of GOP Commissioner Rob Powelson. LaFleur, a Democrat, has served under presidents from both parties and experienced the agency in almost every configuration — whether it has all five commissioners in place, or just one. There's no shortage of topics to chew over: the potential impact of an Energy Department coal and nuclear rescue plan, the heated rhetoric against states that stand in the way of pipelines, and whether FERC is "on the wrong side of history" when it comes to climate change. Darius' interview with LaFleur starts around 2 p.m.

Also on tap: California Air Resources Board Chairwoman Mary Nichols, Murray Energy CEO Bob Murray and the Council on Foreign Relations' Amy Myers Jaffe will participate in a panel this morning on America's "energy future." Nichols, for one, has been heavily involved in discussions with the Trump administration over car rules that the White House is considering rolling back. Expect questions related to the administration's efforts to pare back regulations and increase oil, gas and coal production — and an in-depth conversation on what that means for free market forces and renewables.

See the full agenda [here](#) and watch the livestream [here](#).

WELCOME TO TUESDAY! I'm your host, Kelsey Tamborrino. Citizens' Climate Lobby's Brett Cease was first to correctly identify the two presidents who threw out the first pitch at an All-Star game in D.C.: Franklin D. Roosevelt in 1937 and John F. Kennedy in 1962. For today: Which state or states have just one consonant in its spelling? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseyam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

JUST RELEASED: [View the latest POLITICO/AARP poll](#) to better understand Arizona voters over 50, a voting bloc poised to shape the midterm election outcome. Get up to speed on priority issues for Hispanic voters age 50+, who will help determine whether Arizona turns blue or stays red.

HITCHING A RIDE ON THE 'MINIBUS': The House Rules Committee late Monday made 70 amendments to the EPA and Interior title of the spending minibuss, [H.R. 6147 \(115\)](#). The amendments focus on blocking a host of Obama-era environmental regulations even as the Trump administration is in the process of rolling back many of those. Some of the amendments that caught ME's eye:

— **Diesel emissions grants:** Rep. [Gary Palmer's amendment](#) would eliminate the popular bipartisan Diesel Emissions Reduction Grant program used to retrofit diesel engines like those in school buses,

— **WOTUS:** Rep. Don Beyer's amendment would remove language blocking the Obama administration's Waters of the U.S. regulation,

— **Obama-era methane rule:** Rep. Markwayne Mullin's amendment would block enforcement of the Obama-era regulation aimed at curbing methane emissions from new oil and gas sources, which the Trump administration is already reconsidering,

— **Social cost of carbon:** Another amendment from conservatives would bar the use of the social cost of carbon in rulemakings,

— **Trailer efficiency:** Reps. Barry Loudermilk and Morgan Griffith's amendment would bar EPA from applying stricter fuel efficiency and greenhouse gas emissions standards to certain truck trailers,

— **Chesapeake Bay:** Rep. Bob Goodlatte's effort would limit EPA's ability to go after states that miss Chesapeake Bay cleanup milestones,

— **Ozone:** Rep. Glenn Grothman's amendment would block implementation of EPA's 2015 tightened ozone standard,

— **Coal ash:** A Democratic amendment would block the Trump EPA from revisiting an Obama-era coal ash regulation,

— **Endangered Species Act riders:** Several measures would bar the administration from issuing or enforcing Endangered Species Act rules relating to species like the lesser prairie chicken and Preble's meadow jumping mouse,

— **Attorney fees:** An amendment from Reps. Jason Smith and Greg Gianforte would block attorney fees from being awarded in any Clean Air Act, Clean Water Act or Endangered Species Act settlement, and,

— **Inspectors general:** Nothing related to former Administrator Scott Pruitt was made in order, but the House will consider an amendment from Rep. Raúl Grijalva that would increase the budget of the Interior Department's inspector general by \$2.5 million.

Read the full list of amendments made in order to the measure here.

'SECRET SCIENCE' OUT IN THE OPEN: EPA's controversial proposal to consider only research with publicly available data gets a public hearing at agency headquarters today starting at 8 a.m. Nearly 70 health, medical, academic and science groups — including the American Lung Association, American Heart Association, American Medical Association and American Academy of Pediatrics — oppose the plan, which they say could hamstring public health and environment protections.

EPA's Science Advisory Board voted unanimously to review the proposal, which Pruitt said was meant to bolster transparency. Paul Billings, national senior vice president of advocacy at the American Lung Association, called the rule a "coordinated effort to ignore the science that is inconvenient to the EPA's agenda," and compared it to lobbying efforts by the tobacco industry in the 1990s to exclude studies that showed secondhand smoke could kill.

What's at stake? The proposal could move forward quickly enough to allow EPA to roll back certain air quality standards currently under review. According to the Natural Resources Defense Council, the plan could undercut computer models meant to test chemicals under the new Toxic Substances Control Act and could toss

out landmark studies that relied on personal health records following extraordinary events, including when Hiroshima and Nagasaki victims were tested over time to find out the effects of radiation on humans.

The meeting will run until 8 p.m. or an hour after the last of more than 100 registered speakers has commented. Speakers, aside from many environment and public health groups, include the American Petroleum Institute, the U.S. Chamber of Commerce, the American Chemistry Council, FreedomWorks Foundation and climate science critic Steve Milloy. Dan Byers of the Chamber of Commerce's Global Energy Institute is expected to applaud the agency's efforts and commend EPA for going through the formal public comment and rulemaking process. "It is one thing to be cavalier about transparency principles when their application has little or no import to public policy, but federal rules that impact millions of people and billions of dollars should be held to a higher standard," he is expected to say. Also registered are Reps. Paul Tonko, Suzanne Bonamici and Dan Lipinski. Comments can be submitted until Aug. 16.

Related reading: Competitive Enterprise Institute senior fellow Angela Logomasini looks at the science transparency rule in analysis published today. "The rule is actually far more modest and flexible than depicted by its critics, and its goals are in fact achievable," Logomasini writes. Read it here.

FOR THE RECORD: The House Rules Committee meets at 3 p.m. this afternoon to formulate a rule on an anti-carbon tax resolution, H. Con. Res. 119 (115), that calls a tax on carbon released from fossil fuels "detrimental to the United States economy." The Rules panel will tee up a vote later this week on the resolution, which is led by Majority Whip Steve Scalise and would put a range of lawmakers — most notably the Climate Solutions Caucus — on the record on the issue.

WHERE'S ZINKE? Interior Secretary Ryan Zinke will deliver remarks this morning at the first meeting of the "Made in America" Outdoor Recreation Advisory Committee. The committee is tasked with advising the secretary on "public-private partnerships across all public lands, with the goal of expanding access to and improving infrastructure on public lands and waterways." See the meeting agenda.

AMERICA'S PLEDGE STILL WORKING ON PLEDGES: Michael Bloomberg and California Gov. Jerry Brown, the co-chairs of climate organization "America's Pledge," have unveiled a preview of the report they will release at the Global Climate Action Summit in San Francisco in September, detailing "bottom-up" opportunities for climate action sans federal leadership. The list is familiar: boosting renewables, accelerating coal retirements, retrofitting buildings for energy efficiency, electrifying building energy use, accelerating electric vehicle adoption, phasing out HFCs, preventing methane leaks at the wellhead, reducing methane leaks in cities, reducing emissions from land and starting carbon markets.

Vice Chairman Carl Pope said the group still plans to debut a quantitative analysis outlining what state and local governments are already doing, what they have committed to and what they are keying up. "We have every reason to believe the rest of the world is watching this very closely," Pope said, noting that the U.N.'s top climate official, Patricia Espinosa, mentioned the group and summit by name at the Vatican earlier this month. Read it here.

ESA GETS ITS DAY: Proposed tweaks to the Endangered Species Act will be front and center at a Senate Environment and Public Works hearing this morning. The hearing will feature testimony from Wyoming Gov. Matt Mead, Colorado Parks and Wildlife's Bob Broscheid and Virginia's Secretary of Natural Resources Matthew J. Strickler, and will focus on a discussion draft released by Chairman John Barrasso earlier this month aimed at changing the statute. **If you go:** The hearing kicks off at 9:45 a.m. in 406 Dirksen. Livestream here.

TAKEN BY STORMWATER: The House on Monday passed by voice vote H.R. 3906 (115), the Innovative Stormwater Infrastructure Act of 2017, which would "establish centers of excellence" for stormwater control infrastructure. The legislation, introduced last year by Democratic Rep. Denny Heck, directs EPA to create a

stormwater infrastructure funding task force to make recommendations on the availability of public and private funding for stormwater infrastructure.

DOE ISSUES FIRST TRIBAL LOAN GUARANTEE: The Energy Department will issue its first solicitation for the Tribal Energy Loan Guarantee Program today. The program provides up to \$2 billion in partial loan guarantees to support energy development in Native American and Alaska Native communities. According to DOE, today's solicitation marks more than \$40 billion in energy infrastructure loans and loan guarantees from DOE's Loan Programs Office in five areas.

HOUSE PANEL TO HOLD GRID HEARING: House Natural Resources will hold a hearing on July 25 on Puerto Rico's electric grid recovery and possible improvements to make it more efficient and resilient to future hurricanes. On top of the devastation caused by Hurricane Maria last year, Puerto Rico's electric utility owes bondholders \$9 billion, and most of its leadership departed last week after clashes with Gov. Ricardo Rosselló over executive compensation and political control of the utility, which is quasi-governmental.

MAKING THE GRADE: The Environment America Research & Policy Center is out today with its state-by-state report card, "Renewables on the Rise," which details increases in solar, wind, energy efficiency, electric vehicles and battery storage. The report says the U.S. now produces almost six times as much renewable electricity from wind and solar than it did in 2008. It also found that in March of last year, wind and solar produced 10 percent of the United States' electricity — marking a first. On the state level, the report said California, Arizona, North Carolina, Nevada and Texas saw the greatest total increases from 2008 until 2017 in solar energy generation. See the report [here](#) and a state-by-state interactive map [here](#).

YOU DOWN WITH TIP? A bipartisan group of four senators wrote to Energy Secretary Rick Perry on Monday in support of the Western Area Power Administration's Transmission Infrastructure Program, which was axed under the Trump administration's fiscal 2019 budget proposal. "TIP is one of the few federal programs that directly supports new and upgraded electric transmission," according to the letter, signed by Sens. Catherine Cortez Masto, Martin Heinrich, Dean Heller and Cory Gardner.

HOUSE PLANS FLOOD INSURANCE VOTE: The House is planning to vote next week to extend the National Flood Insurance Program, ahead of its July 31 expiration, sources familiar with the matter tell Pro Financial Services' Zachary Warmbrodt. There are already a few options on the table for the program: one from Financial Services Chairman Jeb Hensarling, who has been trying to put together an extension bill that includes reforms, and a new bill introduced by Scalise and Rep. Tom MacArthur that would reauthorize the program through Nov. 30. Read [more](#).

FOR YOUR RADAR: Republican Sen. Chuck Grassley introduced bipartisan legislation on Monday targeting price fixing by OPEC. The bill would amend the Sherman Act to make oil-producing and exporting cartels illegal, and was co-sponsored by Sens. Amy Klobuchar, Mike Lee and Patrick Leahy. "It's long past time to put an end to illegal price fixing by OPEC," Grassley said in a statement. Read the legislation [here](#).

MAIL CALL! National Rural Electric Cooperative Association CEO Jim Matheson sent a letter to the leadership of the Energy and Commerce Environment Subcommittee on Monday in support of legislation to reform the New Source Review permitting program.

— **More than 100 Democrats** signed onto a letter to members of both House and Senate Armed Services committees today to urge them to oppose any provisions to the National Defense Authorization Act that would "have widespread, negative consequences for the conservation of our imperiled wildlife and public lands." Read the letter [here](#).

Subject: Pruitt plans to change EPA policy on scientific studies

By Alex Guillén

03/20/2018 10:38 AM EDT

EPA Administrator Scott Pruitt plans to change how the agency considers scientific information when writing regulations in a way that likely will exclude certain studies, he told the [Daily Caller](#).

Pruitt told the news site he will reverse longtime agency policy to require that any studies used to support regulations make their raw data available for review and replication by independent scientists.

"We need to make sure their data and methodology are published as part of the record," Pruitt said. "Otherwise, it's not transparent. It's not objectively measured, and that's important."

The changes are in line with legislation that House Science Chairman [Lamar Smith](#) (R-Texas) has pushed for years, but which was never been passed by the Senate. Democrats, environmentalists and scientific groups have long criticized that legislation as an attempt to cherry-pick data friendly to industry from the voluminous body of epidemiological science. And EPA already releases significant amounts of this data, they said.

CBO [said last year](#) the changes "would significantly reduce the number of studies that the agency relies on." And although EPA said it could make the changes at little to no cost, CBO estimated it would spend \$5 million from 2018 through 2022. EPA [previously told CBO](#) it would have to spend \$250 million a year scrubbing information from thousands of studies "to ensure the transparency of information and data supporting some covered actions."

WHAT'S NEXT: Pruitt did not say when he will issue a formal directive changing EPA's science policy.

Ban On "Secret Science" In EPA Regulation Makes Sense

Editorial

March 26, 2018

<http://newsok.com/article/5588210/ban-on-secret-science-in-epa-regulation-makes-sense>

The Environmental Protection Agency has announced it will now base new regulations only on the findings of scientific studies whose data and methodology are made public so they can be subjected to independent review. That's a sound move in line with basic scientific transparency and professionalism.

Yet it's being treated as a sign of impending apocalypse by some on the left, which says much about the questionable validity of that group's policy prescriptions.

In an interview with The Daily Caller News Foundation, Administrator Scott Pruitt said the EPA will end its use of studies that do not publish underlying data, only conclusions. "Otherwise, it's not transparent. It's not objectively measured, and that's important," Pruitt said.

In the past, the EPA has advanced air-quality regulations that imposed massive costs based primarily on the findings of two studies done in the 1990s that linked fine particulate pollution to premature death. Neither study made associated data public.

U.S. Rep. Lamar Smith, R-Texas and chairman of the House Committee on Science,

Space and Technology, has long criticized the use of “secret science” and authored legislation to curtail its use by regulators. Last year, Smith said the EPA had “routinely relied on questionable science based on nonpublic information that could not be reproduced, a basic requirement of the scientific method.”

“Americans deserve to see the science for themselves,” Smith said. “If the EPA has nothing to hide, why not make the scientific data it uses for its regulations publicly available? What was the EPA hiding?”

That will strike most people as a fair question. But to some activists, the idea that science should involve review and scrutiny is apparently anathema. In response to a prior effort to ban “secret science” at the EPA, Andrew Rosenberg, director of the Union of Concerned Scientists’ Center for Science and Democracy, said transparency would “gut the EPA at the expense of public health and safety.”

That same group has claimed release of data would require publicizing the confidential patient data of individuals. But Steve Milloy, publisher of JunkScience.com and a senior fellow at the Energy and Environmental Legal Institute, notes that California already makes similar data available in its “Public Use Death Files,” and that has been accomplished without violating patient privacy.

Other critics object that there are costs involved in scrubbing data sets so patient privacy is protected. Perhaps, but that doesn’t mean the public should be kept in the dark about the data and methods used to justify literally billions in new regulatory burden.

Scientific studies are as susceptible to human error and even outright fraud as any other endeavor — particularly when such studies are used in the political realm. Facilitating transparency and independent review will reduce the chances of bad science harming Americans with half-baked regulations, and should enhance the case for regulations when the underlying science has withstood independent scrutiny.

Given the stakes for public health and the national economy, Americans must be assured government regulations are based on sound science, not someone’s “trust me” assurances.

Pesticide Studies Won E.P.A.'s Trust, Until Trump's Team Scorned 'Secret Science'

Backed by agrochemical companies, the current administration and Congress are moving to curb the role of human health studies in regulation.

Aug. 24, 2018

A strawberry field in California's Salinas Valley, where a yearslong study, funded in part by the Environmental Protection Agency, has linked pesticides to ailments in children of farm workers. Carlos Chavarría for The New York Times

SALINAS, Calif. — José Camacho once worked the fields here in the Salinas Valley, known as “the Salad Bowl of the World” for its abundance of lettuce and vegetables. His wife still does.

But back in 2000, Mr. Camacho, who is 63, got an unusual phone call. He was asked if he wanted to work for a new project studying the effects of pesticides on the children of farm workers.

“This seemed really crazy,” he recalled saying at the time, since he barely spoke English. “A research study?”

The project, run by scientists from the University of California, Berkeley, and funded in part by the Environmental Protection Agency, is still going all these years later. Known as Chamacos, Spanish for “children,” it has linked pesticides sprayed on fruit and vegetable crops with respiratory complications, developmental disorders and lower I.Q.s among children of farm workers. State and federal regulators

have cited its findings to help justify proposed restrictions on everything from insecticides to flame-retardant chemicals.

But the Trump administration wants to restrict how human studies like Chamacos are used in rule-making. A government proposal this year, called Strengthening Transparency in Regulatory Science, could stop them from being used to justify regulating pesticides, lead and pollutants like soot, and undermine foundational research behind national air-quality rules. The E.P.A., which has funded these kinds of studies, is now labeling many of them “secret science.”

Studying disease trends in specific groups of people — a branch of medicine known as epidemiology — started to gain currency at the E.P.A. in recent years. These studies can be difficult because they require adjusting for all the various substances people are exposed to beyond pesticides. But researchers had amassed years of data from a wave of compelling chemical studies begun in the 1990s, giving regulators a new body of research to incorporate into their decision-making.

Under the Obama administration, the E.P.A., which had long favored tests on rats and other laboratory animals in its pesticide regulation, began considering epidemiological studies more seriously. The agency leaned on this type of research in proposing to ban an insecticide called chlorpyrifos in late 2016, and has been repeatedly prodded to take action on the chemical by federal courts.

But weeks after Donald J. Trump was elected president, CropLife America, the main agrochemical trade group, petitioned the E.P.A. to “halt regulatory decisions that are highly influenced and/or determined by the results of epidemiological studies” unless universities were forced to share more of their data.

José Camacho was asked in 2000 to participate in the study, which tracks families as they go about their normal lives. Such research was embraced by the E.P.A. during the Obama administration. Carlos Chavarría for The New York Times

Industry leaders aggressively challenged such studies in high-level meetings and emails with E.P.A. leaders, according to thousands of pages of documents obtained through Freedom of Information Act

requests. One trade group invited a top E.P.A. official to meet with its Washington lobbyist last year, complaining that “carefully controlled” animal studies were giving way to “conclusions reflected in epidemiological papers.”

Gary W. Van Sickle, executive director of the California Specialty Crops Council, wrote to the agency last September that “there have been serious flaws with E.P.A.’s conclusion to use these data.”

The council, representing growers of crops as diverse as carrots, garlic, pears and peppers, cited “inappropriate use of the epidemiology.”

The E.P.A., whose new leadership is seeded with industry veterans, has responded. In a mid-July assessment of atrazine, a widely used weed killer long banned in Europe, the agency reviewed and dismissed 12 recent epidemiological studies linking the herbicide to such ailments as childhood leukemia and Parkinson’s disease. It echoed the conclusions of research funded by Syngenta, atrazine’s manufacturer, finding the chemical unlikely to cause cancer.

Before scandals forced Scott Pruitt out last month as head of the E.P.A., he proposed the transparency regulation. It would ban many epidemiological studies, and other outside research, unless more data behind the studies was made public. In doing so, he revived a strategy advanced for years by congressional Republicans and corporate interests like tobacco companies.

“The era of secret science at E.P.A. is coming to an end,” Mr. Pruitt proclaimed at the time. The agency’s new acting administrator, Andrew R. Wheeler, says he’s moving forward with the proposal, as the agency re-evaluates a class of widely used insecticides, called organophosphates, that have been the subject of numerous epidemiological studies like Chamacos.

Nancy B. Beck, a chemical industry veteran who is the E.P.A.’s deputy assistant administrator, said there was no attempt to thwart epidemiology, adding that the agency was committed to “the best available science in the most transparent manner.”

But academics and state health officials say universities are being pressured to release data that would ultimately divulge the identities of study participants, a strategy once used by tobacco companies seeking to undermine research on the dangers of smoking. While participant data is shared with regulators in drug trials, academics fear that the E.P.A.’s proposal would additionally require divulging confidential personal information, potentially violating privacy regulations for federally funded research.

Ana Lilia Sanchez, a farm worker and the mother of a participant in the Salinas Valley study, said her family took precautions to avoid pesticide contamination. Carlos Chavarria for The New York Times

“It is a naked attempt to use a false claim that something nefarious is going on with these studies in an effort to allow industry to challenge conclusions that are not in their favor,” said James Kelly, a manager of environmental surveillance at the Minnesota Department of Health.

A Wave of Studies, an Uneasy Industry

An advertisement in a Nebraska student newspaper was looking for people who wanted to “earn extra money.” Thirty-six college student volunteers and others from the community who responded were paid \$460 to drink gelatin capsules filled with the pesticide chlorpyrifos, at up to 300 times levels the E.P.A. considered safe, without a full discussion of the risks.

Sponsored by Dow Chemical, this study, conducted in 1998, was one of the last of its kind. That year, the E.P.A. banned the use of studies exposing people to pesticides, and it continues to severely restrict them.

Epidemiology, which has been used to examine everything from the effects of climate change to childhood obesity, offered a way to continue studying disease trends, amid new legal requirements to examine how pesticides particularly affect infants and children. And it could do so by tracking people during their normal lives instead of treating them as if they were lab rats. Chamacos and other studies began almost immediately, although it took decades to collect sufficient data and study how participants changed over time.

One study by Columbia University researchers linked an insecticide to developmental delays in toddlers. Another, by scientists at the University of California, Los Angeles, connected pesticides to Parkinson's disease. Academics at the University of Rochester found that pesticides lower sperm counts in men, while researchers from the Harvard School of Public Health found lower fertility in women.

By 2015, there was a growing body of research, often funded in part by the E.P.A. The agency decided that year to consult epidemiology more seriously in its evaluation of glyphosate, the world's most popular weed killer and the active ingredient in Monsanto's Roundup.

"This is a watershed event in our Program, and one which I feel particularly proud to be a part (go epi!!)," Carol Christensen, then an E.P.A. epidemiologist, wrote in a 2015 email to a colleague — using "epi" as shorthand for epidemiology. "In the 35 year history of our program, this will be the FIRST time epi studies are actively considered in the decision making."

Yet even then, there was friction over what to make of studies aiming to determine whether glyphosate causes cancer.

One E.P.A. division, the Office of Research and Development, closely examined epidemiological research and came to believe either that glyphosate was likely to cause cancer or that there was at least some evidence suggesting a problem. But another division, the Office of Pesticide Programs, was dismissive of epidemiological studies and determined that glyphosate was not a carcinogen, a view that prevailed at the E.P.A., according to interviews, emails and an internal memo obtained by The New York Times. Those involved in the agency's debates on epidemiology spoke on the condition of anonymity because the discussions weren't public.

Monsanto said in a statement that "we cannot speak to the internal E.P.A. discussions" but emphasized the agency's ultimate finding that glyphosate was not likely to cause cancer.

The cancer question received renewed attention this month when a California jury awarded \$289 million to a groundskeeper who alleged that the chemical had sickened him. In his closing argument, the plaintiff's attorney, R. Brent Wisner, called epidemiology one of "the three pillars of cancer science" that the case relied on.

At the E.P.A., the debate swung in favor of epidemiology. While such studies are often complex and can be of varying quality, the agency was reluctant in the past to give them as much weight as lab experiments on animals. But by the Obama administration's final months, the agency moved for the first time to ban a pesticide largely because of epidemiological research.

The pesticide, chlorpyrifos, was the same one ingested years earlier by unwitting Nebraskans. It is applied to crops like apples, oranges and strawberries to combat insects like spider mites and sap-sucking bugs.

In California alone, chlorpyrifos was sprayed on 640,000 acres in 2016, according to state data. And research from Salinas, and the Chamacos study, became a central element in the E.P.A.'s recommendation.

“There is a breadth of information available on the potential adverse neurodevelopmental effects in infants and children as a result of prenatal exposure to chlorpyrifos,” the agency concluded in 2016, also citing epidemiological research from Columbia University and the Icahn School of Medicine at Mount Sinai.

The pesticide industry's reaction was loud and intense.

Monsanto, in emails with the E.P.A., was dismissive of critical epidemiological research related to Roundup, writing that “such studies are well known to be prone to a number of biases.”

A Trump administration proposal would prevent the E.P.A. from using many epidemiological studies, like the one in Salinas, unless more data behind them was made public. Carlos Chavarría for The New York Times

Dow Chemical said in reports submitted to the E.P.A. that “the evidence from these studies is insufficient” and called chlorpyrifos a “proven first-line of defense” against new pest outbreaks.

A month after taking over the E.P.A., Mr. Pruitt acted. He disregarded agency scientists and rejected the proposed chlorpyrifos ban, later calling for “a new day, a new future, for a common-sense approach to environmental protection.”

View From the Field

Ana Lilia Sanchez, 50, has worked in the fields in Salinas more than half her life, and one of her daughters has been a Chamacos study participant.

Ms. Sanchez has learned to watch for drifting droplets or the whir of a helicopter spraying overhead.

“Sometimes when we feel it, or we hear it, we start talking about it,” she said recently, sitting with her 5-month-old granddaughter at her home on a Salinas cul-de-sac. “Why wouldn’t they tell us, you know, to get out of here, to not come today?” she asked. “Women, they cover themselves, but men are working in short sleeves, so they are more exposed.”

Insecticides like chlorpyrifos are organophosphates, from the same chemical family as nerve agents like sarin and Novichok, the Russian-developed compound linked to recent attacks in Britain. While the safety of insecticides is extensively tested, long-term health impacts, or even how far pesticides drift, are the subject of continuing disagreement.

Ms. Sanchez showers after work, before touching her granddaughter.

“I also put my clothes aside,” she said. “We separate the clothes we use when we’re working, both my husband and I, and wash them separately so they’re not contaminated.”

While some human studies examine potential harm from pesticide residue found on fruits and vegetables, the Chamacos project is more personal, following hundreds of children in the heart of where American food is grown. California has the nation’s largest agricultural industry and uses more than 200 million pounds of pesticides annually.

Brenda Eskenazi, the director of the Salinas Valley project, said that “well-controlled epidemiologic studies” were essential for understanding “how things affect human health.” Carlos Chavarria for The New York Times

For locals, pesticides are part of life. “It’s a big difference from when I was working,” Mr. Camacho said, while standing in a strawberry field framed on three sides by distant hills. Men and women were bent over nearby, pulling weeds. “My supervisor would say: ‘That’s not dangerous. Just keep working.’ There was no information.”

Chamacos is built on an unsettling premise: What happens to children of pregnant mothers certain to have pesticides in their bloodstreams? The E.P.A. and other government agencies have spent millions of dollars funding Chamacos.

Half the Chamacos children have been tracked since before birth. Researchers have collected 350,000 samples of blood, urine, breast milk and even household dust and spent nearly two decades studying maturing children. They perform neurodevelopmental and physical assessments and study factors like diet and school performance. After nearly two decades, the study’s data appears in more than 160 academic papers.

During a visit to the Chamacos office in Salinas, Brenda Eskenazi, the director of the project and a professor of epidemiology at Berkeley, was testing out brain monitoring equipment, wearing what looked like a black swim cap strewn with knobs and wiring. She has long been fascinated with cognitive development, going back to when she saw a Woodstock reveler — one having a bad acid trip — dive into pavement.

“Why did he do that?” Ms. Eskenazi remembers wondering at the time. “What was he thinking? What’s going on in that brain?”

“Any science is imperfect,” she said, but stressed that “well-controlled epidemiologic studies” were essential for understanding “how things affect human health.” She added, “Otherwise you’re just making huge assumptions that a rodent is the same as a human.”

A Bitter Debate

The day after Mr. Pruitt made his March 2017 decision to reject a ban on chlorpyrifos, he hosted top executives from one of the nation’s largest farming and pesticide trade organizations for a closed-door conversation.

Near the top of the meeting agenda was “Epidemiology Study Policy” in the aftermath of the “chlorpyrifos matter,” according to internal records.

McKinnon Elementary School in Salinas. The pesticide industry contends that epidemiological studies are prone to biases and not as reliable as testing on lab animals. Carlos Chavarria for The New York Times

“There are no guideposts, if you will, for what is a legitimate, useful epidemiology study and what is not,” Jay Vroom, CropLife America’s president, said in an interview, explaining what he had told agency officials at this and other meetings.

In a subsequent letter to the E.P.A., a CropLife America lobbyist said the agency was relying on a “shortsighted approach,” and the group submitted formal proposals to curb the embrace of epidemiology the E.P.A. undertook under the Obama administration.

Mr. Pruitt responded with his proposal, made this past spring, to ban epidemiological and other studies that did not make study details public, including at least some information on study participants.

Academics have resisted previous requests to review their data, notably at Columbia University. In a 2016 letter to the agency, a university official wrote that it could not provide “extensive individual level data to E.P.A. in a way that ensures the confidentiality” of “our research subjects.”

David Michaels, an epidemiologist at George Washington University’s School of Public Health and head of the Occupational Safety and Health Administration during the Obama administration, said Mr. Pruitt’s plan was not about transparency but about discrediting studies that made pesticides look bad.

“The underlying justification for this ‘transparency’ proposal is a caricature of how science really works,” Mr. Michaels said at a recent hearing. “The cynical approach proposed by E.P.A. can be best described as ‘weaponized transparency.’”

It is no coincidence, he said, that the term “secret science” was also used in the 1970s when the tobacco industry was trying to forestall critical research about smoking.

Researchers have had wins. This month, a federal appeals court ordered the E.P.A. to ban chlorpyrifos, citing findings from human studies. The Trump administration is mulling whether to appeal.

But epidemiologists are unsettled. In mid-July, after nearly two decades of work on Chamacos, the E.P.A. emailed Ms. Eskenazi requesting “the original data” from her research, citing “uncertainty around neurodevelopmental effects associated” with pesticides she has studied. The agency made a similar request to Columbia.

Ms. Eskenazi, worried about her study participants’ privacy, alerted university lawyers. She is now concerned that the E.P.A. may try to undermine her study’s repeated findings that some pesticides may be harming children.

“I knew this was going to come sooner or later,” she said. “And here it is.”

Danny Hakim reported from Salinas, and Eric Lipton from Washington.

Subject: EPA's open secret science rule
Attachments: Inside Public Access May 10, 2018 EPAs open secret science rule.pdf

Here is a complimentary copy of the latest issue of *Inside Public Access*:

EPA's open secret science rule

By David Wojick, Ph.D.

Synopsis: EPA's proposed regulation more-or-less banning the Agency's use of so-called "secret science" has received a lot of attention. Most of this is negative and some of it is justified. What has largely been missed is the deep impact that this rule might have on the US Public Access Program and on open science generally.

Much work lies ahead. Happy to help EPA.

David

EPA's open secret science rule

By David Wojick, Ph.D.
(davidwojick@insidepublicaccess.com)

Synopsis: EPA's proposed regulation more-or-less banning the Agency's use of so-called "secret science" has received a lot of attention. Most of this is negative and some of it is justified. What has largely been missed is the deep impact that this rule might have on the US Public Access Program and on open science generally.

The proposed regulation can be found [here](#), along with supporting documents and comments to date. Comments are presently due by May 30, 2018 but many people are requesting that the present 30 day comment period be extended to 90 days. This is fairly typical for major rules like this one.

Even on the negative side the criticism has been rather too narrow. People are focusing on things like privacy and other reasons to keep some data confidential. Everyone seems to be thinking about US research.

But the harsh reality is that science is a global exercise and a lot of researchers in other countries will have no interest in complying with EPA's burdensome requirements. The open science advocates like to ignore the fact that making one's research replicable is a difficult and costly task. That simple fact, the burden of making research replicable, could wind up causing most global research to be ruled out by the EPA rule.

Leaving this deep problem aside, consider the positive aspects, at least for those who advocate open science. The EPA rule is likely to finally establish specific standards for openness. Moreover, these standards will set a potential precedent for other Federal Agencies, possibly even other Governments, or even for journals. In other words this relatively small action by EPA is potentially a very big pilot project for the world.

This in turn raises another big problem. The present proposal is completely and hopelessly vague when it comes to saying what is actually required. It reads as though the concept of replicability were already well defined, which it most certainly is not.

This is a common problem with ground breaking new laws and regulations. They use language which is clear in its way but which has no operational definition. Working out what these new rules mean is then a complex and difficult matter, often involving protracted litigation. I have been studying this messy phenomenon for 50 years, beginning with the 1968 National Environmental Policy Act. NEPA required all Federal Agencies to do Environmental Impact Statements for all physical projects. But it did not say what these looked like or how to do them; it took years of confusion to work these questions out. So I developed a taxonomy of 126 different rulemaking confusions.

EPA's open science rule has the same broad impact and the same degree of vagueness as NEPA did. A great deal of work will have to be done before we know what these new rule actually require in practice. Some of this hard work can be done by EPA in formulating its final rules. But much of it is probably going to be done by expensive trial and error. At some point EPA is going to have to say, on a very specific case by case basis, which research can be considered and which cannot. This is when the rules get very specific.

Quite frankly I cannot imagine how the Agency is going to do this job, which is a measure of the magnitude of the challenge. First they have to figure out what using a given research result even means. For example, proposed major rules are accompanied by a voluminous Technical Support Document. It may cite hundreds, or even thousands, of research journal articles. Does each of these have to meet the availability and replicability standard? If so then I can imagine EPA dropping this citation practice.

But assuming that these deep problems finally get worked out, consider what it does. It basically extends the access and availability requirements of the Public Access Program from research that is federally funded to research that is federally used. (In fact EPA specifically cites their Public Access Plan as a supporting document for this new regulation.) It does this for data as well as articles. The researcher is basically required to provide access to everything technical that is involved in getting the research result.

In the environmental field a lot of research is done with federal policy in mind so this is potentially a very broad mandate. It in effect creates the new category of "EPA usable research." A lot of researchers, or their institutions, are likely to want their work to be EPA usable, even if EPA does not fund it.

So all things considered this regulation is a big extension of Public Access. It is also a big step forward for open science. But it will be a big job for EPA and the research community to work out.

To: Jackson, Ryan [/o=ExchangeLabs/ou=Exchange Administrative Group (FYDIBOHF23SPDLT)/cn=Recipients/cn=38bc8e18791a47d88a279db2fec8bd60-Jackson, Ry]
Subject: POLITICO's Morning Energy, presented by Anheuser-Busch: Zinke's turn on the Hill — EPA watchdog: Aides slow to turn over docs — House to take up Yucca bill today

By Kelsey Tamborrino | 05/10/2018 10:00 AM EDT

With help from Eric Wolff, Alex Guillén, Anthony Adragna and Jennifer Haberkorn

ZINKE HEADS TO THE HILL: Interior Secretary Ryan Zinke faces his Senate appropriators today to discuss his department's budget request for fiscal 2019. Expect Democrats to bring up familiar topics, such as his plans to reorganize the department and last year's decision to shrink national monuments in Utah. Subcommittee ranking member Tom Udall plans to tell Zinke that until courts weigh in on whether his move was legal, "I believe that moving forward with land management plans that will open these iconic areas to development is reckless."

Subcommittee Chair Lisa Murkowski may be interested in hearing more about Zinke's plans for oil and gas development in Alaska, after Interior kicked off its environmental review of potential drilling in part of the Arctic National Wildlife Refuge thanks to language she got included in last year's tax bill. And Sen. Lamar Alexander, another member of the subcommittee, can follow up on the maintenance backlog for the national parks, an issue the two discussed when Zinke visited Tennessee last week.

Ahead of the hearing, the Coalition to Protect America's National Parks is sending a letter to Zinke, with signatures from current and former employees of the National Park Service, calling on him to support permanent reauthorization of the Land and Water Conservation Fund, an issue with support in both parties.

If you go: The Senate Appropriations Interior-Environment Subcommittee hearing begins at 9:30 a.m. in 138 Dirksen.

- But first: Zinke will join Agriculture Secretary Sonny Perdue at USDA headquarters for an 8 a.m. briefing on the forecast for this year's wildfire season.

WATCHDOG: EPA AIDES SLOW TO SEND DOCS: EPA's internal watchdog complained last year that Administrator Scott Pruitt's aides were taking their sweet time handing over documents related to a probe into their boss' travels, new emails show. Although the standoff between the inspector general's office and Pruitt's staff was resolved a month later, the incident illustrates tensions between political appointees and career oversight officials that developed early on. The IG's office is in the process of conducting multiple reviews into Pruitt's actions.

The new emails, released under a FOIA request from California's Justice Department, show the IG's office was seeking information for its probe of Pruitt's frequent travel to Oklahoma on EPA business, Pro's Alex Guillén reports. That same probe was later expanded to include a wider swath of Pruitt's travel practices, including his first-class flights that cost more than \$100,000. (The investigation is slated to be completed this summer.)

At the time, the agency's assistant inspector general for audits, Kevin Christensen, wrote to a top career official in EPA's finance office to warn of a "potential situation" with the travel audit just two weeks after it began, the emails show. Christensen flagged messages showing Pruitt's chief of staff Ryan Jackson was

"screening" documents before releasing them to the Office of Inspector General. "This does not fit the definition of unfettered access or comply with the Administrator memo on access and providing information to the OIG," Christensen wrote to Jeanne Conklin, EPA's controller who oversees financial management and reporting. "When we are denied access to information until approved for release, it raises the question as to what is being withheld and approved for release."

The emails spotlight concerns about the lack of transparency atop the agency since Pruitt joined. And other emails released to California's Department of Justice also show career ethics officials warning Pruitt's aides about accepting industry awards and attending political events, further exemplifying internal tensions as Pruitt's external problems grow. Read more from Alex [here](#).

- Related reporting: Amid ongoing scrutiny, Pruitt met with industry representatives Wednesday, where a reporter asked if he still had the confidence of the White House. Pruitt said: "I think they've spoken very clearly," Bloomberg [reports](#).

WELCOME TO THURSDAY! I'm your host Kelsey Tamborrino. Bracewell's Frank Maisano was the first to correctly identify Detroit as home to the first paved roadway. Woodward Avenue carries the designation M-1 for its status as the first place to pour a 1-mile patch of concrete roadway. For today: Name the state first lady who simultaneously served as a member of the House. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

TRUMP EXTENDS OLIVE BRANCH: President Donald Trump called coal baron Don Blankenship Wednesday to exchange pleasantries and offer up congratulations for waging his campaign, POLITICO's Alex Isenstadt reports. The conversation was described as straightforward, polite and cordial, and comes days after Trump tweeted that voters shouldn't vote for Blankenship in the West Virginia Republican primary. Blankenship also published an [open letter](#) to Trump on Wednesday that in part blamed the president for his loss. "Your interference in the West Virginia election displayed a lack of understanding of the likely outcome of the upcoming general election," Blankenship wrote. But he ended with a note of optimism: "I look forward to meeting with you in the near future." Alex reported the president had also reached out to Rep. [Evan Jenkins](#), who also lost in Tuesday's primary, but had yet to connect with the Republican party's winner, Patrick Morrisey, as of Wednesday evening. Read [more](#).

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks. The zero-emission trucks will be able to travel between 500 and 1,200 miles. Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025. [Learn more](#). **

HOUSE GOES NUCLEAR: The House will take up the long-awaited [H.R. 3053 \(115\)](#), the "Nuclear Waste Policy Amendments Act of 2018," for consideration today, with votes expected between 10:45 a.m. and 11:45 a.m. The bipartisan legislation would update how the U.S. handles nuclear waste and promote development of the Yucca Mountain repository in Nevada, among other provisions. The legislation is expected to pass, although it will face a much shakier Senate reception with Sen. [Dean Heller](#) facing a tough re-election race this year. Rep. [John Shimkus](#), who introduced the comprehensive nuclear waste package, previously said he hadn't had any recent talks with Senate counterparts about potentially moving the bill across the Capitol. Still, its appearance today is a victory for Shimkus: [Greg Walden](#) told reporters this week that Shimkus had sent handwritten letters to the homes of every member of leadership during recess encouraging the bill to come up, praising his tenacity.

COURT SAYS CRA IS A-OK: A federal judge in Alaska Wednesday [dismissed](#) an environmental group's lawsuit that called the Congressional Review Act unconstitutional. The Center for Biological Diversity specifically challenged the CRA [resolution](#) successfully passed by Congress last spring that nullified an Interior Department rule regarding hunting in Alaska wildlife refuges.

Judge Sharon Gleason of the U.S. District Court for Alaska, an Obama appointee, noted that both the CRA itself and this specific resolution were passed by both chambers and signed by the president, fulfilling the constitutional requirements for creating laws. Other parts of CBD's argument similarly failed to hold water. "The Court finds that even construing all the facts in favor of CBD, CBD's constitutional claims fail to adequately allege a plausible basis for relief," Gleason wrote.

SUNNY CALIFORNIA: The California Energy Commission voted unanimously Wednesday to require solar panels be installed for all newly built single-family homes and multifamily buildings less than three stories starting in 2020. A CEC study found that installing solar would increase home prices, but that would be more than offset by lower utility bills, according to the Los Angeles Times. The move has been anticipated for years and was supported by much of the home building industry. More from the LAT [here](#).

STEELWORKERS SAY YES TO RFS: The United Steelworkers are supporting Trump's recent decisions on the Renewable Fuel Standard, which include expanding sales of 15 percent ethanol fuels and having EPA and USDA workout some kind of program for biofuel credits on exported ethanol. "While it will continue to review the details, [USW] supports a deal brokered by the President that appears to address the long-running conflict between ethanol producers and oil refiners over federal biofuels mandates," the union said in a press release.

HOUSE GOP DROPS RESCISSIONS PACKAGE: House Majority Leader [Kevin McCarthy](#) unveiled the chamber's batch of [spending cuts](#) Wednesday. Similar to the White House's [request](#), the package makes cuts to Energy Department loan guarantee programs for clean energy and vehicle technologies. The bill is expected to [go directly to the House floor for a vote](#), Pro's Sarah Ferris [reports](#). Senate GOP leaders have said they will consider the bill if and when it passes the House.

MEANWHILE IN BONN: Things aren't going as planned for the second week of climate talks in Bonn, Germany, punting further discussions to another meeting in September. The U.N. Framework Convention on Climate Change [said](#) Wednesday that there would be an additional meeting from Sept. 3-8 in Bangkok amid a stalemate centered in part around clarity on climate finance between developed and developing countries. The new date underscores the pressure negotiators are under to advance talks enough for ministers to strike a deal later this year at the COP24 in Katowice, Poland. "We need to resolve differences on finance, accounting and transparency," Alden Meyer of the Union of Concerned Scientists [told POLITICO Europe's](#) Kalina Oroschakoff.

CALVERT: EPA-INTERIOR COMING SHORTLY: Rep. [Ken Calvert](#), who oversees EPA and Interior on the Appropriations Committee, told ME to expect their fiscal 2019 bill "pretty soon" as work's going well. "We're working on final details now," he said. As for the perennial question, yes, Calvert expects policy riders to be in play: "There's always riders," he quipped.

AUTOMAKERS WANT MORE FUEL EFFICIENCY: The Alliance of Automobile Manufacturers and the Global Automakers, trade associations which together represent most of the automakers who sell cars in the U.S., will tell Trump that they most definitely want increases in fuel efficiency standards, contra that zero increase preference of the Department of Transportation. They also want the federal government to work out a single national standard with California, rather than face either a bifurcated market or a long legal battle. "Automakers are deeply committed to increased fuel economy and safety measures that meet the needs of our customers, and we expect to share the importance of government policies that provide certainty to the auto sector, continue to reduce greenhouse gas emissions, reflect what consumers will buy and result in a national policy that includes California," the two groups said in a statement.

FOLLOW THE MONEY: The Environmental Integrity Project released a database Wednesday of political contributions from companies and conservative organizations that met with Pruitt between Feb. 21, 2017, and April 13 of this year. The database was compiled via EPA calendars, FEC reports and data from the Center for Responsive Politics. See it [here](#).

SAVE THE DATE: BLM scheduled meetings to discuss its plans for an environmental review of planned oil and gas leases in ANWR. Several will be held in Alaska, including one each in Fairbanks and Anchorage on May 29 and May 30, respectively. Another meeting is scheduled for Washington D.C. on June 15. For those who can't make the hearings, BLM plans to live stream the Fairbanks and Anchorage dates.

MAIL CALL! ISN'T IT IRONIC? Six Democratic senators wrote to Office of Information and Regulatory Affairs Administrator Neomi Rao on the office's review and evaluation process for EPA's proposed "secret science" proposal to ban the use of studies that don't publicly disclose all their data. "The review process and rollout of this rule appears to have been rushed and secretive - which is particularly ironic for a proposal that purportedly aims to improve agency transparency and decision-making processes," they write.

Separately, bipartisan Reps. Ryan Costello and Paul Tonko sent a letter to the National Academy of Sciences asking for its input on the proposed rule, which was discussed when Pruitt testified before the House E&C Committee. Read the letter here.

Of course, Pruitt seems pleased with the proposal: Bloomberg's Ari Natter snapped a photo of new signs at EPA that tout the agency's "Strengthening Transparency in Regulatory Science."

ROCK STARS: Access Fund and American Alpine Club are sponsoring their annual "Climb the Hill" event today with professional rock climbers and outdoor recreation advocacy groups, who will hit the Hill today to talk outdoor recreation and public lands. Sen. Maria Cantwell will attend a reception with the group at 3 p.m. in 385 Russell. High-profile members of the rock-climbing community and executives from REI, Patagonia and The North Face will attend.

QUICK HITS

- Pair of investor-pushed resolutions pass at Kinder Morgan, Axios.
- Saudis pledge to "mitigate" loss of Iranian oil exports from U.S. sanctions. But crude prices rise anyway, The Washington Post.
- Emails: Perdue's donors, agency coordinated on biomass, E&E News.
- Hugh Hewitt used his MSNBC gig to praise efforts to weaken a law that his firm's client is accused of violating, Media Matters.
- Emails show Heritage Foundation offered Pruitt flights, hotel, and talking points for its conference, ThinkProgress.

THAT'S ALL FOR ME!

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks from the pioneer in hydrogen-electric renewable technology, Nikola Motor Company. The zero-emission trucks - which will be able to travel between 500 and 1,200 miles and be refilled within 20 minutes, reducing idle time - are expected to be integrated into Anheuser-Busch's dedicated fleet beginning in 2020.

Through this agreement Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025.

"At Anheuser-Busch we're continuously searching for ways to improve sustainability across our entire value chain and drive our industry forward," said Michel Doukeris, CEO of Anheuser-Busch. "The transport industry

is one that is ripe for innovative solutions and Nikola is leading the way with hydrogen-electric, zero-emission capabilities. We are very excited by the possibilities our partnership with them can offer."

August 7, 2018

MEMORANDUM FOR THE WHITE HOUSE STAFF SECRETARY AND CABINET SECRETARY

FROM: Ryan Jackson, Chief of Staff, U.S. Environmental Protection Agency

SUBJECT: Environmental Protection Agency 90-Day Look Ahead for the Week of August 6, 2018

A. Events/Travel

- **July 16** – Travel to Western Pennsylvania (natural gas company, local chamber of commerce, Western Pennsylvania Conservancy, interview w/*Pittsburgh Post-Gazette*)
- **August 13** – Travel to Des Moines, IA
- **August 17** – Travel to Detroit, MI (Great Lakes and water infrastructure events, EPA Ann Arbor Office)
- **August 27** – Travel to Columbus and Zainesville, OH
- **September 7-8** – Travel to Butte, Montana (Superfund site, tribes)
- **September 10** – Travel to Denver (Superfund site, EPA Detroit Office)
- **September 14-16** – Camp David retreat
- **September 17-20** – G7 Environmental Ministers meeting
- **October 3-5** – Travel to West Coast (EPA San Francisco Office, EPA Seattle Office, Portland Harbor Superfund site, speaking engagement with American College of Environmental Lawyers)
- **October 15/16** – Speaking engagement with Louisiana Association of Business and Industry, RESTORE Counsel Meeting on the Gulf Coast)
- **October 19** – Event in Richmond, VA (mercury switch MOU)

B. Top News

- **Make Cars Great Again** (*Wall Street Journal*, 8/1/2018): “During a visit to Detroit last year, President Trump announced his administration would assess and correct the current vehicle fuel-economy standards, which impose significant costs on American consumers and eliminate jobs. The administration is continuing to deliver on that promise. On Thursday the Transportation Department and Environmental Protection Agency are announcing a joint proposal to update the national automobile fuel-economy and greenhouse-gas standards to give consumers greater access to safer, more affordable vehicles, while continuing to protect the environment.”
- **Trump Admin Encourages States To Take Over Water Permitting** (*Politico*, 8/7/18): “The Army Corps of Engineers and EPA are encouraging states to take over their controversial Clean Water Act permitting program and are boosting their process for allowing them to do so.”

C. Policy Updates

1. **GREENHOUSE GAS STANDARDS FOR LIGHT-DUTY VEHICLES:** In April 2018, Administrator Pruitt announced the start of a joint process with the National Highway Traffic Safety Administration (NHTSA) to develop a notice and comment rulemaking to set GHG emissions standards and Corporate Average Fuel Economy (CAFE) standards for light-duty vehicles model years 2021-2026. On August 1, the agencies issued a joint proposed seeking

public comment on a range of regulatory options, including a preferred alternative that locks in Model Year 2020 standards through 2026.

Timing: Comments will be due 60 days after the proposed rule is published in the Federal Register.

Contact: Bill Wehrum, Office of Air and Radiation, Wehrum.Bill@epa.gov

2. **SUPERFUND EMPHASIS LIST:** On December 8, 2017, EPA released an initial Superfund Emphasis List of Superfund sites in response to the Superfund Task Force Recommendations. On April 16, EPA released an updated Emphasis List. On August 3, EPA released the next revision of the list to remove eight sites: Centredale Manor Restoration Project, American Cyanamid Co., Ventron/Velsicol, Delaware Sand & Gravel Landfill, B.F. Goodrich, Mississippi Phosphates Corporation, Allied Paper, Inc./Portage Creek/Kalamazoo River, and Casmalia Resources.

Timing: EPA anticipates revising the list quarterly.

Contact: Nick Falvo, Falvo.Nick@epa.gov

3. **CLEAN POWER PLAN:** Consistent with Executive Order 13783, in March 2017, Administrator Pruitt announced EPA's review of the Clean Power Plan (CPP). In October, EPA issued a proposed rule to repeal the CPP. On December 18, EPA issued an Advanced Notice of Proposed Rulemaking (ANPRM) on a potential rule that would establish emission guidelines for states to establish performance standards for GHG emissions from existing Electric Generating Units (EGUs). On June 9, EPA sent a proposed rule revising the CPP to OMB. EPA is keeping its proposed CPP repeal open and will consider the public comments submitted on both proposals.

Timing: EPA plans to issue the June 9 proposed rule in August.

Contact: Mandy Gunasekara, Office of Air and Radiation, Gunasekara.Mandy@epa.gov

4. **OIL AND GAS NSPS:** Consistent with Executive Order 13783, in April 2017, Administrator Pruitt announced EPA's reconsideration of several aspects of the 2016 oil and gas New Source Performance Standards (NSPS). On March 1, 2018, EPA amended two provisions of the 2016 oil and gas NSPS to address immediate concerns with the fugitive emission requirements. On April 27, EPA sent a reconsideration proposed rule to OMB.

Timing: EPA plans to issue the proposed rule in August.

Contact: Mandy Gunasekara, Office of Air and Radiation, Gunasekara.Mandy@epa.gov

5. **TSCA FEES:** Under the amended TSCA, EPA is required to institute new fees on the chemical manufactures to fund the approval program for new chemicals. On February 8, 2018, EPA issued a proposed Fees Rule to provide funding for Lautenberg Act implementation, including risk evaluations and reviewing CBI.

Timing: EPA plans to send a final rule to OMB in late August before issuing the rule in September.

Contact: Nancy Beck, Office of Chemical Safety and Pollution Prevention, Beck.Nancy@epa.gov

6. **DEFINITION OF "WATERS OF THE UNITED STATES":** Consistent with Executive Order 13778, EPA and the U.S. Army Corps of Engineers are taking a multi-step approach to

reconsider the jurisdictional scope of the Clean Water Act. The agencies issued a proposed rule to withdraw the 2015 “Waters of the United States” (WOTUS) rule and re-codify the status quo in June 2017 and issued a supplemental notice seeking additional public comment in July 2018. In January 2018, the agencies issued a final rule to change the applicability date of the 2015 rule to February 2020. Lastly, the agencies are developing a revised definition of WOTUS, which was proposed in a rule sent to OMB for interagency review on June 15, 2018.

Timing: Comments on the supplemental notice are due August 13, 2018. EPA plans to issue the proposed rule revising the definition of WOTUS in September.

Contact: Dave Ross, Office of Water, Ross.DavidP@epa.gov

7. **LEAD AND COPPER RULE:** EPA is beginning the process of updating the Lead and Copper Rule (LCR) for drinking water to modernize and strengthen implementation of the rule. The LCR was first promulgated in 1991 and has not been substantially revised since that time. On January 8, 2018, EPA held its first federalism consultation meeting with stakeholders representing intergovernmental associations.

Timing: EPA plans to issue a proposed rule in September.

Contact: Dave Ross, Assistant Administrator, Office of Water, Ross.DavidP@epa.gov

8. **PSD/NSR PROJECT AGGREGATION:** Under the New Source Review (NSR) preconstruction permitting program, stationary sources undergoing modifications need to determine whether their physical or operational changes are a “major modification” based on the emissions increase that would result from the changes. The term “project aggregation” within the NSR program refers to the grouping of related physical and/or operational changes at a facility into a single project and combining the corresponding emission increases or decreases for purposes of determining NSR applicability. In January 2009, the EPA finalized an interpretation of existing NSR regulations that changes at a facility should be aggregated into a single project if they are “substantially related.” This 2009 action is currently under reconsideration.

Timing: EPA plans to issue a final reconsideration rule in September.

Contact: Bill Wehrum, Office of Air and Radiation, Wehrum.Bill@epa.gov

9. **COAL COMBUSTION RESIDUALS:** In response to petitions for rulemaking from the utility industry, EPA decided in September 2017 to reconsider provisions of the final 2015 rule regulating the disposal of coal combustion residuals (CCR) as nonhazardous waste in light of the issues raised in the petitions and the Water Infrastructure Improvements for the Nation Act (WIIN Act), which includes provisions authorizing state regulatory programs and providing EPA new oversight authority. EPA issued a proposed rule to modify several provisions of the 2015 CCR rule to respond to a June 2016 voluntary remand (“remand rule”). In addition to the specific issues subject to the remand, EPA has drafted additional proposed changes to the CCR rule as part of the remand rule to address many of the issues stakeholders raised in their petitions. On March 1, 2018, Administrator Pruitt proposed the first of two rules (Phases 1 and 2) that amend the 2015 CCR rule. On July 17, EPA issued the Phase 1 partial final rule.

Timing: EPA plans to send a Phase 2 proposed rule to OMB in September.

Contact: Byron Brown, Brown.Byron@epa.gov

10. **RFS VOLUME STANDARDS FOR 2019 AND BBD FOR 2020:** On June 26, EPA issued a proposed rule under the Renewable Fuel Standards (RFS) program that would set the minimum

amount of renewable fuels that must be supplied to the market in 2019, as well as the biomass-based diesel (BBD) volume standard for 2020.

Timing: Comments are due August 17, 2018. EPA plans to send a final rule to OMB in September before issuing the rule in October.

Contact: Mandy Gunasekara, Office of Air and Radiation, Gunasekara.Mandy@epa.gov

- 11. RISK MANAGEMENT PROGRAM:** The original Risk Management Program (RMP) rule was issued in 1996, and has been modified 5 times. The prior administration issued a rule to amend the RMP regulations that raised concerns related to national security, inconsistencies with the Process Safety Management (PSM) standards issued by OSHA, and unnecessary burdens on local communities. In March 2017, Administrator Pruitt granted reconsideration of the RMP rule in response to petitions from two industry groups and one from a group of states and issued a 90-day administrative stay of the rule. In June, EPA published a final rule to further delay the effective date of the rule until February 19, 2019. On May 17, EPA issued a reconsideration proposed rule. The proposed rule: (1) rescinds requirements for third-party audits, STAA, root cause analysis; (2) revises the requirements for local coordination and emergency exercises; (3) rescinds requirements for information availability while strengthening provisions that require a public meeting after an incident; and (4) extends compliance dates.

Timing: On July 24, EPA published a Federal Register notice of data availability (NODA) extending the comment period from July 30 to August 23. EPA plans to send a final rule to OMB in October.

Contact: Steven Cook, Office of Land and Emergency Management, Cook.Steven@epa.gov

- 12. COST-BENEFIT REFORM:** On April 10, 2018, Administrator Pruitt announced a forthcoming Advanced Notice of Proposed Rulemaking (ANPRM) to consider proposing regulations on cost-benefit reform. Under the Obama administration, EPA used questionable methods, like the social cost of greenhouse gases and relying on “co-benefits,” to inflate the purported benefits of its regulations and underestimate the true costs (as in the case of the Clean Power Plan). Additionally, several EPA statutes refer to the calculation of costs and benefits, but implementation has been inconsistent. This has led to EPA creating uncertainty for the regulated community. On June 7, EPA issued an ANPRM to solicit public input on whether and how to change the way it considers costs and benefits.

Timing: On July 3, EPA published a Federal Register notice extending the comment deadline for the proposed rule from July 13 to August 13.

Contact: Brittany Bolen, Office of Policy, Bolen.Brittany@epa.gov

- 13. SCIENCE TRANSPARENCY:** Consistent with Executive Orders 13777 and 13783, in April 2018, Administrator Pruitt signed a proposed rule to strengthen the science used in regulations issued by EPA. The rule would ensure that the regulatory science underlying agency actions is fully transparent, and will require that the underlying scientific information be publicly available, in a manner sufficient for independent validation. This action builds upon prior EPA actions in response to government-wide data access and sharing policies, as well as the experience of other federal agencies in this space.

Timing: On May 24, EPA published a Federal Register notice extending the comment deadline for the proposed rule from May 30 to August 16.

Contact: Richard Yamada, Office of Research and Development, Yamada.Richard@epa.gov

14. DUST-LEAD AND LEAD-BASED PAINT: In 2009, EPA was petitioned to lower dust-lead hazard standards and modify the definition of lead-based paint. On December 27, 2017, the Ninth Circuit granted a petition for writ of mandamus to compel EPA to issue a proposed rule by March 27, 2018. On March 26, EPA received a 90-day extension to issue a proposed rule by June 24. On June 22, EPA issued a proposed rule to change the dust-lead hazard standards from 40 µg/ft² and 250 µg/ft² to 10 µg/ft² and 100 µg/ft² on floors and window sills, respectively. In addition, EPA is proposing to make no change to the definition of lead-based paint because the Agency currently lacks sufficient information to support such a change.

Timing: Comments are due August 16, 2018.

Contact: Nancy Beck, Office of Chemical Safety and Pollution Prevention,
Beck.Nancy@epa.gov

15. PSD/NSR PROJECT EMISSIONS ACCOUNTING: Under the New Source Review (NSR) preconstruction permitting program, sources undergoing modifications need to determine whether their modification is considered a major modification and thus subject to NSR preconstruction permitting. A source owner determines if its source is undergoing a major modification under NSR using a two-step applicability test. The first step is to determine if there is a “significant emission increase” of a regulated NSR pollutant from the proposed modification (Step 1) and the second step is to determine if there is a “significant net emission increase” of that pollutant (Step 2). EPA plans to issue a rule that would consider emissions increases and decreases in Step 1.

Timing: EPA plans to send a proposed rule to OMB in October.

Contact: Bill Wehrum, Office of Air and Radiation, Wehrum.Bill@epa.gov

D. Grants

1. \$266,034 TO THE SACRAMENTO METROPOLITAN AIR QUALITY MANAGEMENT DISTRICT: This grant allows the State of Idaho to maintain an air quality program that meets the requirements of the federal Clean Air Act, to include plans and programs designed to achieve or maintain compliance with the National Ambient Air Quality Standards (NAAQS), conformity analysis, compliance with National Emission Standards for Hazardous Air Pollutants (NESHAPS) rules and regulations, stationary source compliance, emission inventory development, data collection, reporting and modeling.

Timing: EPA will issue a press release on August 8.

2. \$217,516 TO THE IDAHO DEPARTMENT OF ENVIRONMENTAL QUALITY: This grant allows the State of Idaho to maintain an air quality program that meets the requirements of the federal Clean Air Act, to include plans and programs designed to achieve or maintain compliance with the National Ambient Air Quality Standards (NAAQS), conformity analysis, compliance with National Emission Standards for Hazardous Air Pollutants (NESHAPS) rules and regulations, stationary source compliance, emission inventory development, data collection, reporting and modeling.

Timing: EPA will issue a press release on August 8.

3. **\$253,210 TO THE COOK COUNTY (ILLINOIS) DEPARTMENT OF ENVIRONMENTAL CONTROL:** The Cook County Department of Environmental Control (DEC) will continue monitoring activities to support the Illinois Environmental Protection Agency's Section 105 air pollution control program. Cook County DEC will maintain and operate a gaseous air monitoring network in Cook County, Illinois.
Timing: EPA will issue a press release on August 8.

E. Legal Actions

1. **STATE OF WEST VIRGINIA, ET AL. v. EPA, NO. 15-1363 (D.C. CIR.) – CLEAN POWER PLAN – CONTINUED ABEYANCE:** On April 28, 2016, the *en banc* court issued an order holding the litigation challenging the Clean Power Plan in abeyance and instructing the parties to file briefs on the question of whether the case should remain held in abeyance or whether the court should remand the rule to the Agency. On May 15, 2017, DOJ requested that the court hold the case in abeyance pending EPA's review of the rule. The rule's supporters have asked the court to remand the rule to EPA. On August 8, 2017, the D.C. Circuit ordered that the case remain in abeyance. The court directed EPA to continue to file status reports. The case remains in abeyance, and EPA continues to file status reports. EPA filed its most recent status report on July 26.
Timing: On June 26, 2018, the Court ordered that the case remain in abeyance for another 60 days, and that EPA file status reports every 30 days.
Contact: Matthew Leopold, General Counsel, Leopold.Matt@epa.gov
2. **OHIO VALLEY ENVIRONMENTAL COALITION v. PRUITT, NO. 17-1430 (4TH CIR.) – “CONSTRUCTIVE SUBMISSION” OF “NO TMDLS” BY WEST VIRGINIA – PETITION FOR REHEARING:** In February 2017, the District Court held that EPA must approve and/or disapprove West Virginia's "constructive submission" of no biological impairment/ionic toxicity Total Maximum Daily Loads (TMDLs) for 573 water bodies in the State. In June 2017, EPA and West Virginia negotiated a Memorandum of Agreement, which includes parameters under which the state will submit TMDLs for these water bodies. Relying on this agreement, EPA "conditionally approved" the submission of "no TMDLs," conditioned on the state meeting its obligations under the MOA, subject to the outcome of DOJ's appeal of the district court's determination in the Fourth Circuit. The case is now fully briefed. Various state-government and industry associations have filed *amicus* briefs in support of EPA's position. On appeal, EPA is arguing that (1) plaintiffs lacked standing to sue regarding all but 50 of the contested waters; (2) the district court misapplied the "constructive submission" doctrine to West Virginia, a state with a robust TMDL program that is working to complete the TMDLs at issue; and (3) the district court's decision was based on flawed factual assumptions about West Virginia's TMDL development efforts. Oral argument occurred on May 8, 2018 in Richmond, Virginia. The Court issued a decision on June 20, 2018.
Timing: On August 1, Plaintiffs-Appellees filed a petition for panel rehearing. On that same day, the Court stayed the mandate pending the petition for rehearing.
Contact: David Fotouhi, Deputy General Counsel, Fotouhi.David@epa.gov
3. **JULIANA v. UNITED STATES, NO. 15-01517 (D. OR.)/NO. 17-71692 (9TH CIR.). MANDAMUS PROCEEDINGS – CLIMATE-CHANGE LITIGATION WITH**

CONSTITUTIONAL CLAIMS – DISTRICT COURT PROCEEDING: This case is a broad-based challenge alleging that EPA and the US Government allowed excessive CO2 emissions from burning fossil fuel that have contributed to climate change. The district court denied the US motion to dismiss. On June 8, 2017, the district court denied our motion for interlocutory appeal and our request to stay the proceedings. On June 9, 2017, DOJ filed petition for mandamus with the Ninth Circuit seeking the same relief. On March 7, 2018, the Ninth Circuit denied the petition for a writ of mandamus. DOJ has filed motions for judgment on the pleadings and summary judgment for which oral argument was held on July 18, 2018. On July 5, DOJ filed a second petition for writ of mandamus and an emergency motion for a stay of discovery and trial with the Ninth Circuit. On July 17, the Ninth Circuit denied the request for a stay. On July 20, the Ninth Circuit denied the second petition for writ of mandamus. On July 17, DOJ filed an Application for Stay (or in the alternative a petition for mandamus or certiorari) with the Supreme Court, the plaintiffs filed their response on July 23. On July 30, the Supreme Court denied the requested stay.

Timing: District Court case is proceeding.

Contact: Justin Schwab, Deputy General Counsel, Schwab.Justin@epa.gov

4. **MASSACHUSETTS RIVERS ALLIANCE v. EPA, NO. 17-cv-11825 (D. MASS.)— APA 705 STAY OF MASS. MS4 PERMIT—CASE STAYED:** Massachusetts Rivers Alliance and nine other environmental groups filed a complaint against the EPA in U.S. District Court in Massachusetts with regards to EPA’s June 29, 2017 action under Section 705 of the Administrative Procedure Act (“APA”) to postpone the effective date of the Massachusetts small MS4 (municipal separate storm sewer system) general permit by one year, from July 1, 2017 to July 1, 2018. Multiple parties had already challenged the general permit in the First Circuit and the D.C. Circuit Court of Appeals; the cases have been transferred and consolidated in the D.C. Circuit, and we are now awaiting its decision on whether to hold those cases in abeyance indefinitely to allow for the parties to pursue court-sponsored alternative dispute resolution. Briefing concluded in January of 2018. A status conference occurred on July 30 after which time the court stayed the case until October. Petitioners have indicated that they intend to move for voluntary dismissal of the case at that time.

Timing: A status conference is set for October 22, 2018.

Contact: David Fotouhi, Deputy General Counsel, Fotouhi.David@epa.gov

5. **SAFER CHEMICALS HEALTHY FAMILIES v. EPA, No. 17-72260 (9TH Cir.) – CHALLENGE TO TSCA PRIORITIZATION RULE AND RISK EVALUATION RULE – RESPONSE BRIEF DUE:** On November 27, 2017, the Ninth Circuit denied EPA’s motion to transfer the petitions for review of the TSCA prioritization rule to the Fourth Circuit. The court consolidated the various challenges to the TSCA framework rules and then issued a briefing schedule. Petitioners filed their opening brief on April 16, 2018.

Timing: EPA’s response brief was filed on August 6.

Subject: moment to chat?

Hi, Jahan,

I'm working on a story looking into concerns by the scientific community that the Trump administration is marginalizing and dismissing science. The story looks at examples from across the federal government, but many of them are at the E.P.A.

What are the administrator's responses to the following questions on this? Looking for fresh reax or would welcome your pointing me to specific remarks he's made on these. Overall, interested in his remarks on the allegation that he has reduced or ignored the role of science at the agency.

- Scientists are concerned that Mr. Pruitt has made multiple public statements on climate change that are at odds with decades of research on climate change, including research by the E.P.A.'s own scientists. Mr. Pruitt has said that carbon dioxide is not a primary contributor to global warming, and that scientists don't know how much humans contribute to global warming -- both statements that have been contested by the scientific community. What's his response?

- Critics say the proposed new "secret science" rule would ultimately have the impact of reducing the amount of scientific evidence that is used to formulate

regulations that affect human health.
Does this concern him?

- Can he speak to the criticism that in his efforts to change the Scientific Advisory Board, he has reduced the role of academic science and replaced it with industry-funded scientists? And that even with its new composition, the SAB has proposed re-examining the scientific basis for some of his proposed rule-makings?

- Critics say Pruitt's NAAQs memo to the CASAC, which would order the committee to take economic impacts of regulations into account, is both an effort to skirt provisions of the Clean Air Act which require the committee to focus on the public health impacts of regulations, and could lead to looser pollution rules that are not based in scientific evidence on the impact of certain pollutants on human health.

Can you send answers to these and give a call to chat about the story?
Best,
Coral

EPA News Highlights 5.7.18

E&E News: EPA's self-reporting plan could be rolled out by summer

An EPA plan that'll waive or reduce penalties for companies that self-report air emissions violations could be in place by June. A senior official in the agency's enforcement and compliance office discussed the program with state oil and gas regulators gathered here for a meeting of the Interstate Oil and Gas Compact Commission. EPA on Friday posted a description of the program it's developing. The program is designed to address the emissions from storage tanks used to hold oil, petroleum liquids and wastewater, said Patrick Traylor, EPA deputy assistant administrator for enforcement and compliance. It's one of the biggest sources of pollution from oil and gas operations.

The Palladium-Item: EPA money will help Richmond identify contaminated properties

Just how many properties around Richmond have some kind of environmental contamination issue? A federal grant will help city officials to better answer that question. The U.S. Environmental Protection Agency has awarded Richmond \$300,000 to assess various sites and update the city's brownfields inventory. Having an up-to-date listing of Richmond's troubled properties is necessary so officials can be ready to go with potential projects when the EPA makes future grants available. "We have an existing inventory that hadn't been updated in several years so to be ready for the rapid financing program that the EPA puts out, we need to have an updated inventory," City Controller Beth Fields said. "The overall vision was to identify all of the sites and then prioritize those sites for remediation."

The Washington Examiner: The EPA's new 'secret science' rule makes sense from a risk-assessment perspective

Environmental Protection Agency Administrator Scott Pruitt's recent announcement that EPA will not use "secret science" — that is science for which the underlying data is not available — is challenging. Whereas EPA is routinely in receipt of unpublished toxicity studies for chemicals designed for commerce, not all important scientific findings are publishable. Nor do scientific journals generally have sufficient space to include all data. Much has been made in recent weeks of this new EPA policy, including an op-ed opposing it by former EPA Administrator Gina McCarthy and former acting Assistant Administrator Janet McCabe. The media coverage has focused attention on how science is considered acceptable and useful in EPA's rulemaking.

Politico: EPA clamps down on document requests linked to Pruitt

Top aides to Scott Pruitt at the Environmental Protection Agency are screening public records requests related to the embattled administrator, slowing the flow of information released under the Freedom of Information Act — at times beyond what the law allows. Internal emails obtained by POLITICO show that Pruitt's political appointees reviewed documents collected for most or all FOIA requests regarding his activities, even as he's drawn scrutiny for his use of first-class flights and undisclosed dealings with lobbyists. While past administrations have given similar heads-ups to political aides for certain records requests, FOIA experts say this high-level vetting at EPA appears to have increased compared with the Obama era.

Michigan Live: Wolverine tannery back in EPA crosshairs 5 years later

Full federal scrutiny is finally coming to bear on the polluted Wolverine World Wide tannery in downtown Rockford, five years after the Environmental Protection Agency stepped away from its initial investigation and left the site under state control. The EPA says new contamination testing will begin mid-month at the former manufacturing grounds, where, from 1908 to 2009, Wolverine churned out treated leather that helped the footwear company grow into a global business with \$2.4 billion in revenue last year. The testing will be more thorough than Wolverine desired. The EPA wants Wolverine to conduct extensive soil and groundwater sampling across the entire 15-acre property, which has been open to the public as an informal community green space used sporadically for downtown events since the buildings were razed in 2010.

The Daily Caller: Scott Pruitt's Head Bodyguard Takes On The 'False Dirty Laundry' Being Spread About EPA

Many of the accusations against Environmental Protection Agency Administrator Scott Pruitt and his close aides were concocted by "disgruntled employees" looking to damage the agency, the former head of Pruitt's security detail said. "I believe at the end of the day, these are disgruntled employees — staffers — who, for whatever reason, decided to air dirty laundry — false dirty laundry to the press," Nino Perrotta told The Daily Caller News Foundation in an exclusive interview. Perrotta served as the special agent in charge of Pruitt's security detail for about a year, leading the administrator's protective detail as accusations of overspending and ethical violations. Congress and EPA's Office of Inspector General have multiple investigations into Pruitt's actions.

National News Highlights 5.7.18

The Wall Street Journal: Oil Prices Reach Highest Level Since 2014 Ahead of Iran Deadline

Oil prices rallied to a 3½ year high on Monday, with the U.S. benchmark breaking above \$70 a barrel, as investors braced for the country's expected exit from the Iran nuclear deal this week. Brent crude, the global oil benchmark, was up 1% to \$75.59 a barrel on London's ICE Futures exchange having hit \$75.89 earlier, their highest level since 2014. On the New York Mercantile Exchange, West Texas Intermediate futures were trading up 1% at \$70.42 a barrel. Oil prices have risen over 10% in the past month as U.S. President Donald Trump has indicated it is likely the country will withdraw from a 2015 international agreement with Iran which eased sanctions in return for curbs to its nuclear program. A decision is due by May. 12.

The New York Times: Giuliani Says Trump Would Not Have to Comply With Mueller Subpoena

Rudolph W. Giuliani, reeling after a chaotic first week as President Trump's lawyer, tried again on Sunday to straighten out his client's story. But Mr. Giuliani raised new questions about whether Mr. Trump had paid hush money to other women and suggested the president might invoke the Fifth Amendment to avoid testifying in the special counsel's Russia investigation. Mr. Giuliani, a former federal prosecutor and New York City mayor hired by Mr. Trump to smooth communication between the White House and the special counsel, Robert S. Mueller III, instead painted Mr. Mueller as an out-of-control prosecutor bent on trapping Mr. Trump into committing perjury. The president, he said, could defy a subpoena to testify.

Politico: Trump defends CIA pick Haspel: 'Democrats want out because she is too tough on terror'

President Donald Trump issued an online vote of confidence Monday for Gina Haspel, his pick to be the next director of the CIA, and chided Democrats who have been critical of her for her role in waterboarding terrorism suspects at a secret agency prison. "My highly respected nominee for CIA Director, Gina Haspel, has come under fire because she was too tough on Terrorists," the president wrote on Twitter. "Think of that, in these very dangerous times, we have the most qualified person, a woman, who Democrats want OUT because she is too tough on terror. Win Gina!" Haspel is expected to be on Capitol Hill on Monday, meeting with senators ahead of confirmation hearings later this week.

EPA's self-reporting plan could be rolled out by summer

By Mike Lee, 5/7/18

An EPA plan that'll waive or reduce penalties for companies that self-report air emissions violations could be in place by June.

A senior official in the agency's enforcement and compliance office discussed the program with state oil and gas regulators gathered here for a meeting of the Interstate Oil and Gas Compact Commission. EPA on Friday posted a description of the program it's developing.

The program is designed to address the emissions from storage tanks used to hold oil, petroleum liquids and wastewater, said Patrick Traylor, EPA deputy assistant administrator for enforcement and compliance. It's one of the biggest sources of pollution from oil and gas operations.

The program is the latest move under the Trump administration and EPA Administrator Scott Pruitt to forge a collaborative relationship with the energy industry, although Traylor said EPA isn't completely abandoning tougher enforcement.

"We actually expect to have faster compliance through the use of this self-audit tool," he said. "This is one of our tools, not the only tool we'll be using in this sector."

Although it's not a formal rulemaking, EPA is taking comments on the proposal for 30 days, and it could go into effect soon after that, Traylor said.

If it's approved, the proposal would allow companies that acquire new oil and gas operations to self-audit their newly acquired properties and report any problems to EPA. The companies would then have a flexible timeline to fix the problems. In exchange, EPA would waive all or most of the civil and criminal penalties that would normally apply.

EPA has had a "new owner" program for traditional manufacturing plants since 2008. The agency has had difficulty applying it to the oil and gas industry because a typical oil field can include hundreds of tanks and other facilities.

Storage tanks are one of the major sources of pollution from the oil and gas industry. Volatile organic compounds such as benzene can leak from pressure-relief valves or from improperly secured hatches. In many cases, truck drivers open the tanks to the atmosphere when they measure the liquids that collect in tanks (Energywire, Aug. 22, 2017).

EPA plans to use a standard audit, based on a self-audit that the Texas-based gas producer Range Resources Corp. conducted in 2016 (E&E News PM, April 20).

It's similar to the approach that a half-dozen oil producing states have taken, sometimes through informal processes.

Texas and North Dakota have laws on the books that allow their state oil regulators to waive penalties for companies that report their own violations, state officials said during a roundtable discussion. Texas doesn't allow penalties to be waived, though, in cases that cause actual harm.

The Colorado Oil and Gas Conservation Commission adopted a similar policy in 2014, but it stipulates that the program doesn't apply to cases involving fraud, willful misconduct or gross negligence.

Environmentalists are likely to object to the program because it could encourage companies to flout the rules when they are developing new oil and gas fields, particularly if they plan to sell the field quickly.

That's unlikely to happen, Traylor said in an interview after his presentation.

"This shouldn't be interpreted as an incentive to not comply with the law," Traylor said.

EPA money will help Richmond identify contaminated properties

By Jason Truitt, 5/6/18

Just how many properties around Richmond have some kind of environmental contamination issue? A federal grant will help city officials to better answer that question.

The U.S. Environmental Protection Agency has awarded Richmond \$300,000 to assess various sites and update the city's brownfields inventory.

Having an up-to-date listing of Richmond's troubled properties is necessary so officials can be ready to go with potential projects when the EPA makes future grants available.

"We have an existing inventory that hadn't been updated in several years so to be ready for the rapid financing program that the EPA puts out, we need to have an updated inventory," City Controller Beth Fields said.

"The overall vision was to identify all of the sites and then prioritize those sites for remediation."

Richmond was one of five Indiana cities and one multi-town group awarded funding recently by the EPA. The others were Clarksville, Indianapolis, Jeffersonville and Michigan City and a regional planning commission in southern Indiana that represents six towns.

The city's grant can only be used for "developing inventories of brownfields, prioritizing sites, conducting community involvement activities, conducting site assessments and developing cleanup plans and reuse plans related to brownfield sites," according to the grant application.

Jack Cruse, director of Richmond's Department of Infrastructure and Development, said the city made the former Mechanics Laundry building on North E Street next to the depot the focal point of its application, but officials intend to look at sites throughout the city.

"We've got properties in the city of Richmond that have not been assessed but we know that they exist," he said.

"A lot of these are old places that either had petroleum products or were laundry areas."

This isn't the first time that the former Mechanics Laundry building has come up in city conversations.

Back in 2004, Richmond Common Council passed a resolution allowing the city to pursue a purchase of the building by getting a pair of environmental studies done on the property. Officials believed the site might be contaminated with a chemical used in dry cleaning.

The plan was to tear down the building and use the space for parking in the Historic Depot District, but the city never did buy the property.

In 2014, Roger Richert, then-owner of the former Pennsylvania Railroad Depot next door, got permission to clean up the outside of the laundry and have a mural painted on it depicting a train that looks as if it's approaching the station.

The Washington Examiner

<https://www.washingtonexaminer.com/opinion/op-eds/the-epas-new-secret-science-rule-makes-sense-from-a-risk-assessment-perspective>

The EPA's new 'secret science' rule makes sense from a risk-assessment perspective

By Michael L. Dourson, 5/6/18

Environmental Protection Agency Administrator Scott Pruitt's recent announcement that EPA will not use "secret science" — that is science for which the underlying data is not available — is challenging. Whereas EPA is routinely in receipt of unpublished toxicity studies for chemicals designed for commerce, not all important scientific findings are publishable. Nor do scientific journals generally have sufficient space to include all data.

Much has been made in recent weeks of this new EPA policy, including an op-ed opposing it by former EPA Administrator Gina McCarthy and former acting Assistant Administrator Janet McCabe.

The media coverage has focused attention on how science is considered acceptable and useful in EPA's rulemaking. But missing from this is the perspective of risk scientists charged with protecting public health. In the case of EPA, it is often not enough for any one positive study to be published in a peer-reviewed journal. Such work often needs replication because a positive finding occurs, on average, in one out of every 20 studies due to chance.

If a study cannot be replicated, then it at least needs to make sense within the pattern of available data. For pesticides regulated by EPA, these data are often from hundreds of studies done according to federal guidelines.

Studies that are not replicated or that do not make sense in an overall pattern are still considered, however. Risk scientists will often contact the authors to obtain additional information in order to conduct their own analysis, a common practice within EPA.

When such data are forthcoming, without the need to break confidentiality or disclose confidential business information, independent analyses can be conducted and the public health is better served. But when such information is withheld by the authors, government risk scientists are often left with a dilemma.

For example, imagine that a series of studies come out on a single human group that is exposed to a commonly used insecticide, and they show an unexpected effect at extremely low exposures. This finding has not been replicated and clashes with multiple animal and human studies that point to danger only at much higher exposures.

In this case, EPA scientists would ask the authors for the underlying data to confirm this unexpected low-dose effect. But let's say they can't get it. EPA is then left with neither confirmatory studies, nor information that makes sense in light of other studies, nor the ability to conduct its own analysis. Understandably, Pruitt has chosen a policy of not using such studies.

There is one sense in which McCarthy and McCabe are spot on. The judgment over which epidemiology and/or toxicology data to use for risk or safety assessment purposes should be left to risk scientists. But from my perspective as a risk scientist, Pruitt's decision is still correct. The public's interest is best served when science is replicable and consistent with other information. When studies cannot be replicated or are inconsistent with other information, access to their underlying data is vital to independent analysis. When the underlying data are not provided to a risk scientist, it is difficult to use this study to make a credible risk judgment, much less national rulemaking.

There is one sense in which McCarthy and McCabe are spot on. The judgment over which epidemiology and/or toxicology data to use for risk or safety assessment purposes should be left to risk scientists. But from my perspective as a risk scientist, Pruitt's decision is still correct. The public's interest is best served when science is replicable and consistent with other information. When studies cannot be replicated or are inconsistent with other information, access to their underlying data is vital to independent analysis. When the underlying data are not provided to a risk scientist, it is difficult to use this study to make a credible risk judgment, much less national rulemaking.

In short, the public is often worried about chemical exposure, as they should be when such exposure exceeds a safety level. But the public's interest is best served by trusting in experts dedicated to public health protection, not by withholding scientific data from independent analysis.

Politico

<https://www.politico.com/story/2018/05/06/pruitt-epa-document-requests-570289>

EPA clamps down on document requests linked to Pruitt

By Alex Guillen, 5/6/18

Top aides to Scott Pruitt at the Environmental Protection Agency are screening public records requests related to the embattled administrator, slowing the flow of information released under the Freedom of Information Act — at times beyond what the law allows.

Internal emails obtained by POLITICO show that Pruitt's political appointees reviewed documents collected for most or all FOIA requests regarding his activities, even as he's drawn scrutiny for his use of first-class flights and undisclosed dealings with lobbyists.

While past administrations have given similar heads-ups to political aides for certain records requests, FOIA experts say this high-level vetting at EPA appears to have increased compared with the Obama era.

"This does look like the most burdensome review process that I've seen documented," said Nate Jones, director of the FOIA Project at The George Washington University's National Security Archive.

The emails also show Pruitt's aides chastising career employees who released documents about the administrator without letting them screen the records first. Meanwhile, several environmental groups say the agency has told them that political staffers' document reviews have delayed releases past legal deadlines.

The new processes described in the emails involve "awareness reviews" or "senior management reviews" conducted by top political staffers before the agency releases essentially any documents involving the administrator. The emails also show Pruitt's political appointees chastising career employees who released documents in accordance with FOIA without letting them screen the records first.

EPA sometimes conducted those types of reviews under the Obama administration when career staff thought documents would generate a lot of interest, agency officials from that era told POLITICO. But under Pruitt, the vetting by EPA chief of staff Ryan Jackson and other key appointees of any documents linked to the administrator appears to be on the rise, according to FOIA experts who reviewed the emails.

The increased scrutiny comes as the agency faces a wave of accusations of excessive secrecy. EPA has declined to provide information about Pruitt's public appearances in advance — a practice at odds with those of many other Cabinet members and the White House. And the agency releases his detailed calendars only when compelled by lawsuits.

That secrecy has prompted a boom in FOIA requests filed with the agency and lawsuits challenging its resistance to releasing information to the public. As POLITICO reported in February, production of documents under FOIA requests from Pruitt's office is drastically lower than the rest of EPA.

The newly released emails, which EPA gave to the Natural Resources Defense Council following legal action, show Jackson created a pilot program to "centralize" requests that go through the various suboffices that make up EPA's Office of the Administrator. The emails show that the political aides weren't just concerned about streamlining the FOIA process — they wanted to know about any requests anywhere at EPA that involved Pruitt.

In one exchange from last August, Jackson and Liz Bowman, the head of EPA's Office of Public Affairs, expressed concern about documents related to comments Pruitt made on CNBC disputing that carbon dioxide from human activities was

the primary cause of climate change. Those documents had been released to E&E News without first going through their review.

"Why did Kevin Bogardus from E&E all of a sudden get a response to a FOIA today, without any awareness from our FOIA office?" Bowman wrote Aug. 2. She later added that the response "wasn't due until 8/30."

Officials quickly determined that the request had been filled by a career employee before Bowman had a chance to flag it "for attention." Although the request involved Pruitt, the records sought by E&E were kept at EPA's Office of Research and Development, and the request was routed there before being released by a FOIA expert from that office.

Anything related to Pruitt "will draw inquiries from press," Jackson replied, and he requested that he and the public affairs office be notified ahead of any Pruitt-related release from any EPA office.

The message was received loud and clear by EPA's career staff.

"I have instructed my staff that no [Office of the Administrator] requests are to be issued without the opportunity for an awareness review by you, [the Office of Public Affairs] and the senior leadership of any other affected offices," Becky Dolph, the head of a special team of FOIA experts in EPA's Office of General Counsel, wrote to Jackson later that day.

Emails sent later that month showed Jackson pressing staff on why documents related to a coal plant water pollution rule were already available online just one day after an awareness review began.

The documents were "inadvertently" posted, replied Kevin Minoli, then EPA's acting general counsel, who added that the process would be changed so that "nothing is uploaded at all until we have the final set of documents and their production has been authorized."

None of the emails given to the NRDC reveal exactly what actions the political staffers conducting these reviews took.

NRDC attorney Aaron Colangelo said he asked EPA for details about the reviews after an EPA attorney told him that "awareness reviews" were delaying the release of documents in other FOIA requests filed by the environmental group. Those requests were related to Pruitt's participation in ongoing legal cases that he'd previously been involved in during his time as Oklahoma's attorney general.

Colangelo and other FOIA experts said federal agencies have discretion to set up their own internal FOIA processes, and the political reviews are not illegal — unless the reviews caused EPA to miss deadlines for producing documents set out in the Freedom of Information Act.

"There's nothing necessarily wrong with political folks getting a heads-up before potentially sensitive documents are released," Colangelo said in an interview. "But we do have a legitimate objection if that political review delays compliance with deadlines in the law."

And that has happened for at least two of the NRDC's Pruitt-related FOIA requests, he said.

Another request from a coalition of environmental groups for documents about Pruitt's delay of a rule limiting water pollution from coal plants was held up over a "senior management review."

A judge mediating the lawsuit over that delay, Valerie Caproni of the U.S. District Court for the Southern District of New York, said during November proceedings that while EPA "can do whatever internal policies in particular they want on FOIA," the agency cannot use political reviews to justify missing legal deadlines.

EPA still has to "comply with the law, and that means they have to produce documents in a timely way," she said. EPA eventually handed over the documents in that case.

It's not clear exactly how many FOIA requests have been delayed by political reviews, but experts say it is clearly having an impact.

Several Obama-era EPA political officials said they too occasionally received "heads-up" awareness reviews on high-profile requests, but not necessarily to the degree that Pruitt's aides are doing them.

"It doesn't seem abnormal to me that some political would get a chance to have review for awareness of productions that are going out that involve the administrator," said one former official. But the close attention from top-ranking officials like Jackson and former policy chief Samantha Dravis seemed "a little bit odd," the former official added.

Instead, awareness reviews generally went to the head of the agency program office in question and to congressional affairs staffers so they could coordinate with any requests from lawmakers, the former official said.

One Obama-era awareness review that was included in the new documents showed that a large batch of documents related to the Flint, Michigan, lead crisis was flagged to political officials in the Office of Water and the congressional affairs office, as well as the general counsel, the regional administrator and a public affairs official.

Bowman, the EPA spokeswoman, did not comment on questions from POLITICO about the political oversight of FOIA requests, but she noted that the Trump administration was not the first to use them.

"Each EPA program and Region does their own FOIAs, so an awareness review allows the press office, Congressional Affairs Office and senior officials to be informed of documents being released in response to FOIA requests, to facilitate inter-office coordination, and to prepare responses to inquiries," she said.

Thomas Cmar, an Earthjustice attorney involved in multiple FOIA lawsuits with EPA, said the emails raise as many questions as they answer.

"Political staff appear to be keeping a very close eye on what information is being requested and released to the public," he said. "It raises concerns and it raises questions that need to be answered about whether EPA is living up to its obligations to make basic information about its activities available to the public that it's supposed to be serving."

Michigan Live

http://www.mlive.com/news/grand-rapids/index.ssf/2018/05/wolverine_tannery_epa_rockford.html **Wolverine tannery back in EPA crosshairs 5 years later**

By Garrett Ellison, 5/6/18

Full federal scrutiny is finally coming to bear on the polluted Wolverine World Wide tannery in downtown Rockford, five years after the Environmental Protection Agency stepped away from its initial investigation and left the site under state control.

The EPA says new contamination testing will begin mid-month at the former manufacturing grounds, where, from 1908 to 2009, Wolverine churned out treated leather that helped the footwear company grow into a global business with \$2.4 billion in revenue last year.

The testing will be more thorough than Wolverine desired.

The EPA wants Wolverine to conduct extensive soil and groundwater sampling across the entire 15-acre property, which has been open to the public as an informal community green space used sporadically for downtown events since the buildings were razed in 2010.

Data shows the property is fouled by arsenic, chromium and lead in addition to the per- and polyfluoroalkyl substances, or PFAS chemicals, that have sparked new site scrutiny.

The now-empty land where Wolverine reneged on a promise to build a downtown Rockford shoe store is back in federal crosshairs after extremely high PFAS levels were found at the tannery, Wolverine's House Street sludge dump and other places where the company cached toxic waste around northern Kent County.

The tannery scored high enough to warrant inclusion on the federal Superfund list of toxic sites, but the EPA acquiesced in 2012 to substantial pushback from Wolverine and community leaders who lobbied hard to keep the century-old factory grounds under a state-led, voluntary environmental cleanup program.

Whether the site attains Superfund status is an open question.

Although PFAS helped bring the EPA back to Rockford, the federal government doesn't have enforceable cleanup standards for the contamination caused by Wolverine's use of 3M Scotchgard to waterproof shoe leather. But the state of Michigan does.

This has resulted in a delicate state and federal coupling.

The EPA is focusing its probe on other contaminants besides PFAS at the tannery and federal investigators are picking up where they left off, when a site assessment identified historic contamination in places like "the pit," a 50-foot former maintenance basement area where toxic waste pooled and sometimes overflowed.

The EPA issued Wolverine an investigative subpoena for records related to the tannery and the House Streep dump in Plainfield Township in early December, prior to a Jan. 10 order that formally increased the federal role in the Wolverine investigation.

Those records are now under EPA examination.

Jeffrey Kimble, an EPA Region 5 on-scene coordinator assigned to the investigation, asked Wolverine to expand testing.

"They did not meet what I wanted them to do, so (the sampling plan) has been given back to Wolverine's consultant with directions from me," Kimble said. "I want this to be a complete extent of contamination survey, so we've had them adjust their approach."

Kimble is scrutinizing the site for contamination that could pose an immediate health risk and wants "a good number and spacing of actual soil samples, sediment samples in Rum Creek and adjacent Rogue River, and few more groundwater samples."

"I'm looking at what people could actually touch if they dug in the dirt, if they had to do excavation or what may migrate off site," he said.

Through a spokesperson, Wolverine confirmed that it received Kimble's feedback and subsequently modified its testing plan.

Wolverine said it is "diligently" working with regulators and anticipates its consultant Rose & Westra GZA beginning field work this summer.

In June, the company will allow the Rockford Start of Summer Celebration to use the tannery lawn for ballgames and festival fireworks viewing, but EPA says it's requiring the company test the surface soils used for backfill and grading first.

Although the property is fenced along the west side, the public has easy access because the rest of the fence was removed at the city's request in 2015. The EPA couldn't provide a date when more fencing and warning signs would go up, although both are stipulated.

Thad Beard, Rockford city manager, thinks the topsoil cap placed after demolition is enough to keep people safe.

"If you were to go dig a 10-foot hole and start eating the dirt, that would be a cause for concern," Beard said.

"From what I understand, there's no contaminants exposed to the public unless you were to dig below grade."

That may depend on the location. According to EPA testing, contamination above acceptable human contact levels exists "at or near the surface" of the tannery footprint along the heavily-used White Pine Trail, where "elevated levels of organic and inorganic contaminants have been detected in surficial soils."

That contamination data was collected several years before 2017 testing confirmed total PFAS at 532,000 parts per trillion in the groundwater at the tannery.

In the river nearby, sediment testing found elevated levels of arsenic, total chromium, hexavalent chromium, copper, lead, mercury and zinc. Wolverine used chromium in bulk to convert raw hides into leather. The hexavalent variety is a known carcinogen.

In a January memo, Kimble characterized both the House Street and tannery sites as "imminent and substantial" threats to public health and the environment. The memo notes that children have been observed swimming in the river downtown where "sediment and water contamination has been documented."

The EPA evaluated the site six years ago at the request of the Concerned Citizens for Responsible Remediation (CCRR), a local group which petitioned for federal involvement in 2011 after independently documenting contamination at the property.

Lynn McIntosh, a Rockford activist instrumental in bringing Wolverine's pollution to light, said she's spent years warning people enjoying the river downtown to "make sure they wash their kids' hands or wipe their kayak" afterwards.

On multiple occasions, McIntosh said she's quietly approached parents with children playing at the trailside canoe launch near the southwest corner of the former tannery site to warn them about elevated levels of mercury in the nearby riverbed.

"I shouldn't have to do that," she said.

McIntosh is pleased the EPA is back on the ground in Rockford after watching former elected officials like late city manager Michael Young and ex-state Sen. Mark Jansen lobby keep the tannery under Michigan Department of Environmental Quality oversight.

Both men wrote similarly-worded letters to regulators warning of "significant negative effect" on tannery redevelopment and downtown Rockford if EPA involvement were to continue; both citing their understanding that "there are no conditions at the property that present a health threat to the public."

Wolverine "has advised me that the remaining environmental issues at the property will be properly addressed by Wolverine with the DEQ," Young wrote to the EPA on April 19, 2012.

Both Young and Jansen asked that EPA "terminate" their involvement and let DEQ manage the site under the state's Part 201 law.

Under the state voluntary cleanup program, the DEQ has essentially allowed Wolverine to mothball the site, McIntosh argued.

Although Wolverine has done sampling and soil boring, little excavation and no bioremediation, containment, groundwater control or treatment has occurred under the state's oversight.

Rockford put "money and image over addressing a real possible public health and safety issue, and worked with the company to accomplish that," McIntosh said.

The DEQ counters that retaining control over the site has sped, not slowed, tannery cleanup work because it takes several years for a site to become Superfund listed. The site was designated an "Other Cleanup Authority" under state lead in 2012.

Were it placed on the National Priorities List, "it would have taken several more years to accomplish remedial investigation and remedial actions," said DEQ spokesperson Scott Dean.

"Wolverine has better defined the extent of soil and groundwater contamination and located leather and hide scraps buried on the 100-year-old tannery site" following the 2012 agreement, Dean said.

The state's oversight "made it possible for Wolverine to quickly begin monitoring for PFAS" after it became a concern in 2016, he said.

The company began testing for PFAS in August 2017.

"Although we have been frustrated by the pace of work at the tannery site, our primary focus has been on protecting the public," Dean said.

"We remain committed to holding Wolverine accountable for the contamination on their site and seeing it returned to productive use."

The Daily Caller

<http://dailycaller.com/2018/05/07/exclusive-epa-scott-pruitt-body-guard-nino-perrotta-false-dirty-laundry/>

Scott Pruitt's Head Bodyguard Takes On The 'False Dirty Laundry' Being Spread About EPA

By Michael Bastasch, 5/7/18

Many of the accusations against Environmental Protection Agency Administrator Scott Pruitt and his close aides were concocted by "disgruntled employees" looking to damage the agency, the former head of Pruitt's security detail said.

"I believe at the end of the day, these are disgruntled employees — staffers — who, for whatever reason, decided to air dirty laundry — false dirty laundry to the press," Nino Perrotta told The Daily Caller News Foundation in an exclusive interview.

Perrotta served as the special agent in charge of Pruitt's security detail for about a year, leading the administrator's protective detail as accusations of overspending and ethical violations. Congress and EPA's Office of Inspector General have multiple investigations into Pruitt's actions.

Perrotta retired at the end of April, ending his 14-year career at EPA amid investigations into Pruitt's security arrangements — including his 24/7 detail, hiring of more agents, and flying first class when traveling.

Former EPA official Kevin Chmielewski detailed many accusations against Pruitt, Perrotta and other top aides to congressional Democrats. Many of the accusations were "intentionally used to mislead the American people," Perrotta told TheDCNF.

Chmielewski was one of several EPA staffers allegedly sidelined for challenging Pruitt on spending decisions. However, Perrotta believes Chmielewski decided to come out against Pruitt after a January 2018 phone call.

During that call, Chmielewski vented to Perrotta about issues he was having with his pay, the former EPA security head said. Perrotta said he tried to help Chmielewski with his pay issue, but the former EPA official “began to threaten the EPA, specifically the administrator and the chief of staff, that he was going to talk to the press and everyone he could about,” using colorful language, “how f-ed up the EPA was and how f-ed up the administrator was and how f-ed up the chief of staff was.”

“I found that to be very, very bizarre,” Perrotta said. “If you have differences, it should be aired through your chain of command.”

Chmielewski called the next day, but given his tone and threatening statements on their previous call, Perrotta said he’d have to report the former EPA official. Perrotta filed the report with the agency.

Pruitt’s been increasingly mired in negative news stories — many of them likely the result of Chmielewski talking to the press and Congress. News reports have already called into question the veracity of many of Chmielewski’s claim.

For example, “a \$30,000 contract with private Italian security personnel entered into by” Perrotta ahead of Pruitt’s attendance of a G7 summit in Italy, Chmielewski told Congress. Perrotta would never have the authority to unilaterally enter into such a contract, the former EPA security head said.

“That is a false accusation,” Perrotta told TheDCNF. “A person at my level and grade in the agency would have the authority to do so.”

Chmielewski also told Democratic lawmakers “at least one security-related contract was awarded to an individual who works at Mr. Perrotta’s private security firm, and he believes that other contracts may also have been awarded to friends or associates of Mr. Perrotta’s.”

It’s true EPA hired Edwin Steinmetz to conduct a security sweep of Pruitt’s office in 2017, costing the agency \$3,000. Steinmetz is listed on the management team of Perrotta’s security firm he operates on the side, Sequoia Security Group.

Perrotta said he explained to superiors that Steinmetz, a security consultant, subcontracted through his side company, which EPA gave him approval to operate in 2013. EPA officials asked Perrotta in 2017 if he could recommend a company to conduct a security sweep of Pruitt’s office.

“The only reason that the vendor was selected,” Perrotta said, “is because there were issues within the agency of identifying a new vendor, which to me was bizarre.”

“It was clear to me, now, that certain people compared notes, shared information, and created this false narrative. And I believe the American people are going to see this, eventually,” Perrotta said.

You can watch TheDCNF’s entire interview with Perrotta here. And stay tuned for more.

The Wall Street Journal

<https://www.wsj.com/articles/oil-prices-continue-to-rise-fueled-by-iran-concerns-1525673680>

Oil Prices Reach Highest Level Since 2014 Ahead of Iran Deadline

By Sarah McFarlane and Biman Mukherji, 5/7/18

Oil prices rallied to a 3½ year high on Monday, with the U.S. benchmark breaking above \$70 a barrel, as investors braced for the country’s expected exit from the Iran nuclear deal this week.

Brent crude, the global oil benchmark, was up 1% to \$75.59 a barrel on London's ICE Futures exchange having hit \$75.89 earlier, their highest level since 2014. On the New York Mercantile Exchange, West Texas Intermediate futures were trading up 1% at \$70.42 a barrel.

Oil prices have risen over 10% in the past month as U.S. President Donald Trump has indicated it is likely the country will withdraw from a 2015 international agreement with Iran which eased sanctions in return for curbs to its nuclear program. A decision is due by May. 12.

"There is some scope for profit-taking now that prices are at 42-month highs but that is been overshadowed by the potential re-imposition of sanctions on Iran," said Dubai-based Ehsan Khoman, head of research for the Middle East and North Africa region at MUFG bank.

Previously, international sanctions have cut Iranian exports by around 1 million barrels a day, but MUFG expects the U.S. will "go it alone" if they impose sanctions, meaning the impact will be a loss of 250,000-350,000 barrels a day.

"The EU may not deem it necessary to reinstate sanctions on shipping insurance which were paramount in restricting Iranian crude exports last time around," said Mr. Khoman.

The U.S. doesn't import any Iranian crude but certain allies including Japan and South Korea which do, may switch to other suppliers to comply with the changed stance of the U.S., analysts said.

There were also signs of discord among members of the Organization of the Petroleum Exporting Countries after Iran's deputy oil minister Amir Hossein Zamaminia said a "suitable price" for oil is \$60 to \$65 a barrel in an interview with Bloomberg on Sunday. Iran's position differs from OPEC's top producer Saudi Arabia, which is seeking to push oil to \$80 a barrel to fund economic reforms.

This creates uncertainty for the prospects of an extension to the group's deal to cut production, initially struck to target reducing a glut in global oil stocks, which had ballooned because of rising U.S. shale output. Saudi Arabia is expected to push for the cuts to continue beyond 2018 to keep oil prices closer to their target.

Oil production in the U.S. is expected to continue its march higher with the number of rigs drilling for oil rising by 9 last week to a three-year high of 834 rigs, according to oil-field services firm Baker Hughes (BHGE) data published on Friday.

Nymex reformulated gasoline blendstock—the benchmark gasoline contract—up 0.7% to \$2.13 a gallon. ICE gasoil changed hands at \$660.50 a metric ton, up \$11.50 from the previous settlement.

Giuliani Says Trump Would Not Have to Comply With Mueller Subpoena

By Mark Landler and Noah Weiland, 5/6/18

Rudolph W. Giuliani, reeling after a chaotic first week as President Trump's lawyer, tried again on Sunday to straighten out his client's story. But Mr. Giuliani raised new questions about whether Mr. Trump had paid hush money to other women and suggested the president might invoke the Fifth Amendment to avoid testifying in the special counsel's Russia investigation.

Mr. Giuliani, a former federal prosecutor and New York City mayor hired by Mr. Trump to smooth communication between the White House and the special counsel, Robert S. Mueller III, instead painted Mr. Mueller as an out-of-control prosecutor bent on trapping Mr. Trump into committing perjury. The president, he said, could defy a subpoena to testify.

"We don't have to," Mr. Giuliani said in a rambling, 22-minute interview on ABC's "This Week" program. "He's the president of the United States. We can assert the same privileges other presidents have."

Mr. Giuliani, who met with the special counsel's office shortly after joining the legal team last month, said he and another lawyer, Jay Sekulow, agreed that the president should not speak to Mr. Mueller. But he acknowledged that he had little, if any, control over the president, who said as recently as Friday that he still wanted to speak to the special counsel.

"How can I ever be confident of that?" Mr. Giuliani said, when asked whether Mr. Trump would not invoke his right to avoid self-incrimination. "I'm facing a situation with the president and all the other lawyers are, in which every lawyer in America thinks he would be a fool to testify, I've got a client who wants to testify."

It was one of several startling admissions by Mr. Giuliani, during his first extended television appearance since Mr. Trump criticized him last week as not having his "facts straight" about payments made to a pornographic film actress, Stephanie Clifford. Mr. Giuliani said it was possible that Mr. Trump's personal attorney, Michael D. Cohen, had made additional payments to other women on the president's behalf.

"I have no knowledge of that," Mr. Giuliani said when asked about other payments, "but I would think if it was necessary, yes."

If Mr. Trump were to invoke the Fifth Amendment, he would undercut his longstanding claim that he has nothing to hide about his campaign's ties to Russia. During the presidential campaign, he ridiculed his Democratic opponent, Hillary Clinton, when some of her aides invoked the Fifth Amendment during a congressional investigation of Mrs. Clinton's use of a private email server.

"The mob takes the Fifth," Mr. Trump said at a campaign rally in Iowa in September 2016. "If you're innocent, why are you taking the Fifth Amendment?"

After his interview, Mr. Giuliani met with Mr. Trump at his golf club in Northern Virginia.

Mr. Giuliani told the ABC anchor, George Stephanopoulos, that he was still getting up to speed on Mr. Trump's legal issues — a fact that became apparent as the interview went on. As was the case during his interviews last week, Mr. Giuliani seemed to speak largely off the cuff. He speculated freely and contradicted himself, sometimes from one statement to the next.

He said, for example, that Mr. Mueller would be to blame if Mr. Trump refused to testify because his office had leaked a list of questions that the special counsel would like to ask him. But then he admitted he did not know who leaked the questions, which were reported by The New York Times.

Mr. Giuliani referred repeatedly to a federal judge's criticism of the special counsel's fraud case against Paul Manafort, the former chairman of the Trump campaign. The judge, T.S. Ellis III, said on Friday that the case seemed motivated by a desire to get Mr. Manafort to potentially incriminate Mr. Trump.

"There's no question that the amount of government misconduct is accumulating," Mr. Giuliani said. "Very embarrassing to my former Justice Department."

Mr. Giuliani created a furor on Wednesday when he contradicted the president about the payment to Ms. Clifford. Speaking on Fox News, Mr. Giuliani said Mr. Trump reimbursed Mr. Cohen for a \$130,000 payment that Mr. Cohen has said he made to Ms. Clifford, to keep her from making public a story about an affair she claims she had with Mr. Trump — a claim that he denies. When asked in April by reporters traveling on Air Force One whether he knew about the payment, Mr. Trump said he did not.

On Sunday, Mr. Giuliani said he was still trying to establish when Mr. Trump learned that Mr. Cohen had paid Ms. Clifford, whose stage name is Stormy Daniels. But he added that as a legal matter, it did not matter since the payment did not violate federal campaign finance rules.

Asked about the discrepancies between his account and the president's statement, Mr. Giuliani said: "Those don't amount to anything — what is said to the press. That's political."

Mr. Giuliani did not shed much new light on the nature of the payments themselves. He said Mr. Cohen "made payments for the president, or he conducted business for president, which means he had legal fees, moneys laid out and expenditures." But he characterized the sum Ms. Clifford received as a "nuisance" payment.

"I never thought \$130,000 was a real payment," Mr. Giuliani said. "People don't go away for \$130,000."

Mr. Giuliani accused Ms. Clifford of trying to make as much money as possible from her notoriety, noting that she made a cameo appearance during the opening skit on "Saturday Night Live."

Mr. Giuliani's admission on Wednesday caught Mr. Trump's staff off guard and prompted Mr. Trump to try to clarify the nature of payments he made to Mr. Cohen. The morning after Mr. Giuliani's comments, Mr. Trump said on Twitter that Mr. Cohen "received a monthly retainer, not from the campaign and having nothing to do with the campaign, from which he entered into, through reimbursement, a private contract between two parties, known as a non-disclosure agreement, or NDA."

A day later, he told reporters gathered outside the White House that Mr. Giuliani did not know the particulars of the case, even after Mr. Giuliani told The Times on Wednesday night that he had spoken with the president before and after his interview on Fox News, and that Mr. Trump and other lawyers on the team were aware of what he would say.

"Virtually everything said has been said incorrectly, and it's been said wrong, or it's been covered wrong by the press," Mr. Trump said on Friday. "He'll get his facts straight."

Seeming to chastise Mr. Giuliani, Mr. Trump added: "You know what? Learn before you speak. It's a lot easier."

Some of Mr. Trump's legal and political advisers believe Mr. Giuliani's comments could put the president in legal jeopardy, since federal officials are required to report liabilities of more than \$10,000 during the preceding year. Mr. Trump's last disclosure, which he signed last June, does not mention any debt to Mr. Cohen.

On Sunday, Mr. Giuliani tried to clarify what Mr. Trump called a "retainer."

"The retainer agreement was to repay expenses, which turns out to have included this one," Mr. Giuliani said.

Appearing after Mr. Giuliani on the same program, Ms. Clifford's lawyer, Michael Avenatti, called Mr. Giuliani's interview an "absolute unmitigated disaster" and "one of the worst TV appearances by any attorney on behalf of a client in modern times."

"He now expects the American people to believe that he doesn't really know the facts," Mr. Avenatti added. "I think it is obvious to the American people that this is a cover-up, that they are making it up as they go along."

Trump defends CIA pick Haspel: 'Democrats want out because she is too tough on terror'

By Louis Nelson, 5/7/18

President Donald Trump issued an online vote of confidence Monday for Gina Haspel, his pick to be the next director of the CIA, and chided Democrats who have been critical of her for her role in waterboarding terrorism suspects at a secret agency prison.

“My highly respected nominee for CIA Director, Gina Haspel, has come under fire because she was too tough on Terrorists,” the president wrote on Twitter. “Think of that, in these very dangerous times, we have the most qualified person, a woman, who Democrats want OUT because she is too tough on terror. Win Gina!”

Haspel is expected to be on Capitol Hill on Monday, meeting with senators ahead of confirmation hearings later this week. Whether she will be confirmed to lead the CIA remains an open question amid concern about her role running a CIA “black site” prison in Thailand where terrorism suspects were subjected to so-called “enhanced interrogation” techniques like waterboarding.

Haspel’s past involvement with practices labeled by many as torture has already cost her the support of Sen. Rand Paul (R-Ky.), meaning she will require the support of at least one Democrat in order to be confirmed.

According to a Washington Post report published over the weekend, Haspel offered late last week to withdraw herself from consideration to lead the CIA over concerns that confirmation hearings scheduled for Wednesday could prove damaging to agency’s reputation and to her own. She reportedly expressed a desire to avoid being “the next Ronny Jackson,” a reference to the White House’s former pick to lead the Department of Veterans Affairs whose candidacy was scuttled by allegations of misconduct.

White House press secretary Sarah Huckabee Sanders, who the Post reported was among the administration officials who met with Haspel last Friday at CIA headquarters in Virginia after she offered to withdraw, praised Haspel over the weekend as eminently qualified to lead the agency. That she would be the first woman to do so, Sanders wrote, should garner her further support, especially from Democrats.

“There is no one more qualified to be the first woman to lead the CIA than 30+ year CIA veteran Gina Haspel,” the press secretary wrote on Twitter on Saturday. “Any Democrat who claims to support women’s empowerment and our national security but opposes her nomination is a total hypocrite.”

EPA News Highlights 5.7.18

E&E News: EPA's self-reporting plan could be rolled out by summer

An EPA plan that'll waive or reduce penalties for companies that self-report air emissions violations could be in place by June. A senior official in the agency's enforcement and compliance office discussed the program with state oil and gas regulators gathered here for a meeting of the Interstate Oil and Gas Compact Commission. EPA on Friday posted a description of the program it's developing. The program is designed to address the emissions from storage tanks used to hold oil, petroleum liquids and wastewater, said Patrick Traylor, EPA deputy assistant administrator for enforcement and compliance. It's one of the biggest sources of pollution from oil and gas operations.

The Palladium-Item: EPA money will help Richmond identify contaminated properties

Just how many properties around Richmond have some kind of environmental contamination issue? A federal grant will help city officials to better answer that question. The U.S. Environmental Protection Agency has awarded Richmond \$300,000 to assess various sites and update the city's brownfields inventory. Having an up-to-date listing of Richmond's troubled properties is necessary so officials can be ready to go with potential projects when the EPA makes future grants available. "We have an existing inventory that hadn't been updated in several years so to be ready for the rapid financing program that the EPA puts out, we need to have an updated inventory," City Controller Beth Fields said. "The overall vision was to identify all of the sites and then prioritize those sites for remediation."

The Washington Examiner: The EPA's new 'secret science' rule makes sense from a risk-assessment perspective

Environmental Protection Agency Administrator Scott Pruitt's recent announcement that EPA will not use "secret science" — that is science for which the underlying data is not available — is challenging. Whereas EPA is routinely in receipt of unpublished toxicity studies for chemicals designed for commerce, not all important scientific findings are publishable. Nor do scientific journals generally have sufficient space to include all data. Much has been made in recent weeks of this new EPA policy, including an op-ed opposing it by former EPA Administrator Gina McCarthy and former acting Assistant Administrator Janet McCabe. The media coverage has focused attention on how science is considered acceptable and useful in EPA's rulemaking.

Politico: EPA clamps down on document requests linked to Pruitt

Top aides to Scott Pruitt at the Environmental Protection Agency are screening public records requests related to the embattled administrator, slowing the flow of information released under the Freedom of Information Act — at times beyond what the law allows. Internal emails obtained by POLITICO show that Pruitt's political appointees reviewed documents collected for most or all FOIA requests regarding his activities, even as he's drawn scrutiny for his use of first-class flights and undisclosed dealings with lobbyists. While past administrations have given similar heads-ups to political aides for certain records requests, FOIA experts say this high-level vetting at EPA appears to have increased compared with the Obama era.

Michigan Live: Wolverine tannery back in EPA crosshairs 5 years later

Full federal scrutiny is finally coming to bear on the polluted Wolverine World Wide tannery in downtown Rockford, five years after the Environmental Protection Agency stepped away from its initial investigation and left the site under state control. The EPA says new contamination testing will begin mid-month at the former manufacturing grounds, where, from 1908 to 2009, Wolverine churned out treated leather that helped the footwear company grow into a global business with \$2.4 billion in

revenue last year. The testing will be more thorough than Wolverine desired. The EPA wants Wolverine to conduct extensive soil and groundwater sampling across the entire 15-acre property, which has been open to the public as an informal community green space used sporadically for downtown events since the buildings were razed in 2010.

The Daily Caller: Scott Pruitt's Head Bodyguard Takes On The 'False Dirty Laundry' Being Spread About EPA

Many of the accusations against Environmental Protection Agency Administrator Scott Pruitt and his close aides were concocted by "disgruntled employees" looking to damage the agency, the former head of Pruitt's security detail said. "I believe at the end of the day, these are disgruntled employees — staffers — who, for whatever reason, decided to air dirty laundry — false dirty laundry to the press," Nino Perrotta told The Daily Caller News Foundation in an exclusive interview. Perrotta served as the special agent in charge of Pruitt's security detail for about a year, leading the administrator's protective detail as accusations of overspending and ethical violations. Congress and EPA's Office of Inspector General have multiple investigations into Pruitt's actions.

National News Highlights 5.7.18

The Wall Street Journal: Oil Prices Reach Highest Level Since 2014 Ahead of Iran Deadline

Oil prices rallied to a 3½ year high on Monday, with the U.S. benchmark breaking above \$70 a barrel, as investors braced for the country's expected exit from the Iran nuclear deal this week. Brent crude, the global oil benchmark, was up 1% to \$75.59 a barrel on London's ICE Futures exchange having hit \$75.89 earlier, their highest level since 2014. On the New York Mercantile Exchange, West Texas Intermediate futures were trading up 1% at \$70.42 a barrel. Oil prices have risen over 10% in the past month as U.S. President Donald Trump has indicated it is likely the country will withdraw from a 2015 international agreement with Iran which eased sanctions in return for curbs to its nuclear program. A decision is due by May. 12.

The New York Times: Giuliani Says Trump Would Not Have to Comply With Mueller Subpoena

Rudolph W. Giuliani, reeling after a chaotic first week as President Trump's lawyer, tried again on Sunday to straighten out his client's story. TRUMP TWEETS

EPA's self-reporting plan could be rolled out by summer

By Mike Lee, 5/7/18

An EPA plan that'll waive or reduce penalties for companies that self-report air emissions violations could be in place by June.

A senior official in the agency's enforcement and compliance office discussed the program with state oil and gas regulators gathered here for a meeting of the Interstate Oil and Gas Compact Commission. EPA on Friday posted a description of the program it's developing.

The program is designed to address the emissions from storage tanks used to hold oil, petroleum liquids and wastewater, said Patrick Traylor, EPA deputy assistant administrator for enforcement and compliance. It's one of the biggest sources of pollution from oil and gas operations.

The program is the latest move under the Trump administration and EPA Administrator Scott Pruitt to forge a collaborative relationship with the energy industry, although Traylor said EPA isn't completely abandoning tougher enforcement.

"We actually expect to have faster compliance through the use of this self-audit tool," he said. "This is one of our tools, not the only tool we'll be using in this sector."

Although it's not a formal rulemaking, EPA is taking comments on the proposal for 30 days, and it could go into effect soon after that, Traylor said.

If it's approved, the proposal would allow companies that acquire new oil and gas operations to self-audit their newly acquired properties and report any problems to EPA. The companies would then have a flexible timeline to fix the problems. In exchange, EPA would waive all or most of the civil and criminal penalties that would normally apply.

EPA has had a "new owner" program for traditional manufacturing plants since 2008. The agency has had difficulty applying it to the oil and gas industry because a typical oil field can include hundreds of tanks and other facilities.

Storage tanks are one of the major sources of pollution from the oil and gas industry. Volatile organic compounds such as benzene can leak from pressure-relief valves or from improperly secured hatches. In many cases, truck drivers open the tanks to the atmosphere when they measure the liquids that collect in tanks (Energywire, Aug. 22, 2017).

EPA plans to use a standard audit, based on a self-audit that the Texas-based gas producer Range Resources Corp. conducted in 2016 (E&E News PM, April 20).

It's similar to the approach that a half-dozen oil producing states have taken, sometimes through informal processes.

Texas and North Dakota have laws on the books that allow their state oil regulators to waive penalties for companies that report their own violations, state officials said during a roundtable discussion. Texas doesn't allow penalties to be waived, though, in cases that cause actual harm.

The Colorado Oil and Gas Conservation Commission adopted a similar policy in 2014, but it stipulates that the program doesn't apply to cases involving fraud, willful misconduct or gross negligence.

Environmentalists are likely to object to the program because it could encourage companies to flout the rules when they are developing new oil and gas fields, particularly if they plan to sell the field quickly.

That's unlikely to happen, Traylor said in an interview after his presentation.

"This shouldn't be interpreted as an incentive to not comply with the law," Traylor said.

Palladium-Item

<https://www.pal-item.com/story/news/local/2018/05/06/epa-money-help-richmond-identify-contaminated-properties/568006002/>

EPA money will help Richmond identify contaminated properties

By Jason Truitt, 5/6/18

Just how many properties around Richmond have some kind of environmental contamination issue? A federal grant will help city officials to better answer that question.

The U.S. Environmental Protection Agency has awarded Richmond \$300,000 to assess various sites and update the city's brownfields inventory.

Having an up-to-date listing of Richmond's troubled properties is necessary so officials can be ready to go with potential projects when the EPA makes future grants available.

"We have an existing inventory that hadn't been updated in several years so to be ready for the rapid financing program that the EPA puts out, we need to have an updated inventory," City Controller Beth Fields said.

"The overall vision was to identify all of the sites and then prioritize those sites for remediation."

Richmond was one of five Indiana cities and one multi-town group awarded funding recently by the EPA. The others were Clarksville, Indianapolis, Jeffersonville and Michigan City and a regional planning commission in southern Indiana that represents six towns.

The city's grant can only be used for "developing inventories of brownfields, prioritizing sites, conducting community involvement activities, conducting site assessments and developing cleanup plans and reuse plans related to brownfield sites," according to the grant application.

Jack Cruse, director of Richmond's Department of Infrastructure and Development, said the city made the former Mechanics Laundry building on North E Street next to the depot the focal point of its application, but officials intend to look at sites throughout the city.

"We've got properties in the city of Richmond that have not been assessed but we know that they exist," he said.

"A lot of these are old places that either had petroleum products or were laundry areas."

This isn't the first time that the former Mechanics Laundry building has come up in city conversations.

Back in 2004, Richmond Common Council passed a resolution allowing the city to pursue a purchase of the building by getting a pair of environmental studies done on the property. Officials believed the site might be contaminated with a chemical used in dry cleaning.

The plan was to tear down the building and use the space for parking in the Historic Depot District, but the city never did buy the property.

In 2014, Roger Richert, then-owner of the former Pennsylvania Railroad Depot next door, got permission to clean up the outside of the laundry and have a mural painted on it depicting a train that looks as if it's approaching the station.

The Washington Examiner

<https://www.washingtonexaminer.com/opinion/op-eds/the-epas-new-secret-science-rule-makes-sense-from-a-risk-assessment-perspective>

The EPA's new 'secret science' rule makes sense from a risk-assessment perspective

By Michael L. Dourson, 5/6/18

Environmental Protection Agency Administrator Scott Pruitt's recent announcement that EPA will not use "secret science" — that is science for which the underlying data is not available — is challenging. Whereas EPA is routinely in receipt of unpublished toxicity studies for chemicals designed for commerce, not all important scientific findings are publishable. Nor do scientific journals generally have sufficient space to include all data.

Much has been made in recent weeks of this new EPA policy, including an op-ed opposing it by former EPA Administrator Gina McCarthy and former acting Assistant Administrator Janet McCabe.

The media coverage has focused attention on how science is considered acceptable and useful in EPA's rulemaking. But missing from this is the perspective of risk scientists charged with protecting public health. In the case of EPA, it is often not enough for any one positive study to be published in a peer-reviewed journal. Such work often needs replication because a positive finding occurs, on average, in one out of every 20 studies due to chance.

If a study cannot be replicated, then it at least needs to make sense within the pattern of available data. For pesticides regulated by EPA, these data are often from hundreds of studies done according to federal guidelines.

Studies that are not replicated or that do not make sense in an overall pattern are still considered, however. Risk scientists will often contact the authors to obtain additional information in order to conduct their own analysis, a common practice within EPA.

When such data are forthcoming, without the need to break confidentiality or disclose confidential business information, independent analyses can be conducted and the public health is better served. But when such information is withheld by the authors, government risk scientists are often left with a dilemma.

For example, imagine that a series of studies come out on a single human group that is exposed to a commonly used insecticide, and they show an unexpected effect at extremely low exposures. This finding has not been replicated and clashes with multiple animal and human studies that point to danger only at much higher exposures.

In this case, EPA scientists would ask the authors for the underlying data to confirm this unexpected low-dose effect. But let's say they can't get it. EPA is then left with neither confirmatory studies, nor information that makes sense in light of other studies, nor the ability to conduct its own analysis. Understandably, Pruitt has chosen a policy of not using such studies.

There is one sense in which McCarthy and McCabe are spot on. The judgment over which epidemiology and/or toxicology data to use for risk or safety assessment purposes should be left to risk scientists. But from my perspective as a risk scientist, Pruitt's decision is still correct. The public's interest is best served when science is replicable and consistent with other information. When studies cannot be replicated or are inconsistent with other information, access to their underlying data is vital to independent analysis. When the underlying data are not provided to a risk scientist, it is difficult to use this study to make a credible risk judgment, much less national rulemaking.

There is one sense in which McCarthy and McCabe are spot on. The judgment over which epidemiology and/or toxicology data to use for risk or safety assessment purposes should be left to risk scientists. But from my perspective as a risk scientist, Pruitt's decision is still correct. The public's interest is best served when science is replicable and consistent with other information. When studies cannot be replicated or are inconsistent with other information, access to their underlying data is vital to independent analysis. When the underlying data are not provided to a risk scientist, it is difficult to use this study to make a credible risk judgment, much less national rulemaking.

In short, the public is often worried about chemical exposure, as they should be when such exposure exceeds a safety level. But the public's interest is best served by trusting in experts dedicated to public health protection, not by withholding scientific data from independent analysis.

Politico

<https://www.politico.com/story/2018/05/06/pruitt-epa-document-requests-570289>

EPA clamps down on document requests linked to Pruitt

By Alex Guillen, 5/6/18

Top aides to Scott Pruitt at the Environmental Protection Agency are screening public records requests related to the embattled administrator, slowing the flow of information released under the Freedom of Information Act — at times beyond what the law allows.

Internal emails obtained by POLITICO show that Pruitt's political appointees reviewed documents collected for most or all FOIA requests regarding his activities, even as he's drawn scrutiny for his use of first-class flights and undisclosed dealings with lobbyists.

While past administrations have given similar heads-ups to political aides for certain records requests, FOIA experts say this high-level vetting at EPA appears to have increased compared with the Obama era.

"This does look like the most burdensome review process that I've seen documented," said Nate Jones, director of the FOIA Project at The George Washington University's National Security Archive.

The emails also show Pruitt's aides chastising career employees who released documents about the administrator without letting them screen the records first. Meanwhile, several environmental groups say the agency has told them that political staffers' document reviews have delayed releases past legal deadlines.

The new processes described in the emails involve "awareness reviews" or "senior management reviews" conducted by top political staffers before the agency releases essentially any documents involving the administrator. The emails also show Pruitt's political appointees chastising career employees who released documents in accordance with FOIA without letting them screen the records first.

EPA sometimes conducted those types of reviews under the Obama administration when career staff thought documents would generate a lot of interest, agency officials from that era told POLITICO. But under Pruitt, the vetting by EPA chief of staff Ryan Jackson and other key appointees of any documents linked to the administrator appears to be on the rise, according to FOIA experts who reviewed the emails.

The increased scrutiny comes as the agency faces a wave of accusations of excessive secrecy. EPA has declined to provide information about Pruitt's public appearances in advance — a practice at odds with those of many other Cabinet members and the White House. And the agency releases his detailed calendars only when compelled by lawsuits.

That secrecy has prompted a boom in FOIA requests filed with the agency and lawsuits challenging its resistance to releasing information to the public. As POLITICO reported in February, production of documents under FOIA requests from Pruitt's office is drastically lower than the rest of EPA.

The newly released emails, which EPA gave to the Natural Resources Defense Council following legal action, show Jackson created a pilot program to "centralize" requests that go through the various suboffices that make up EPA's Office of the Administrator. The emails show that the political aides weren't just concerned about streamlining the FOIA process — they wanted to know about any requests anywhere at EPA that involved Pruitt.

In one exchange from last August, Jackson and Liz Bowman, the head of EPA's Office of Public Affairs, expressed concern about documents related to comments Pruitt made on CNBC disputing that carbon dioxide from human activities was the primary cause of climate change. Those documents had been released to E&E News without first going through their review.

"Why did Kevin Bogardus from E&E all of a sudden get a response to a FOIA today, without any awareness from our FOIA office?" Bowman wrote Aug. 2. She later added that the response "wasn't due until 8/30."

Officials quickly determined that the request had been filled by a career employee before Bowman had a chance to flag it "for attention." Although the request involved Pruitt, the records sought by E&E were kept at EPA's Office of Research and Development, and the request was routed there before being released by a FOIA expert from that office.

Anything related to Pruitt "will draw inquiries from press," Jackson replied, and he requested that he and the public affairs office be notified ahead of any Pruitt-related release from any EPA office.

The message was received loud and clear by EPA's career staff.

"I have instructed my staff that no [Office of the Administrator] requests are to be issued without the opportunity for an awareness review by you, [the Office of Public Affairs] and the senior leadership of any other affected offices," Becky Dolph, the head of a special team of FOIA experts in EPA's Office of General Counsel, wrote to Jackson later that day.

Emails sent later that month showed Jackson pressing staff on why documents related to a coal plant water pollution rule were already available online just one day after an awareness review began.

The documents were "inadvertently" posted, replied Kevin Minoli, then EPA's acting general counsel, who added that the process would be changed so that "nothing is uploaded at all until we have the final set of documents and their production has been authorized."

None of the emails given to the NRDC reveal exactly what actions the political staffers conducting these reviews took.

NRDC attorney Aaron Colangelo said he asked EPA for details about the reviews after an EPA attorney told him that "awareness reviews" were delaying the release of documents in other FOIA requests filed by the environmental group. Those requests were related to Pruitt's participation in ongoing legal cases that he'd previously been involved in during his time as Oklahoma's attorney general.

Colangelo and other FOIA experts said federal agencies have discretion to set up their own internal FOIA processes, and the political reviews are not illegal — unless the reviews caused EPA to miss deadlines for producing documents set out in the Freedom of Information Act.

"There's nothing necessarily wrong with political folks getting a heads-up before potentially sensitive documents are released," Colangelo said in an interview. "But we do have a legitimate objection if that political review delays compliance with deadlines in the law."

And that has happened for at least two of the NRDC's Pruitt-related FOIA requests, he said.

Another request from a coalition of environmental groups for documents about Pruitt's delay of a rule limiting water pollution from coal plants was held up over a "senior management review."

A judge mediating the lawsuit over that delay, Valerie Caproni of the U.S. District Court for the Southern District of New York, said during November proceedings that while EPA “can do whatever internal policies in particular they want on FOIA,” the agency cannot use political reviews to justify missing legal deadlines.

EPA still has to “comply with the law, and that means they have to produce documents in a timely way,” she said. EPA eventually handed over the documents in that case.

It’s not clear exactly how many FOIA requests have been delayed by political reviews, but experts say it is clearly having an impact.

Several Obama-era EPA political officials said they too occasionally received “heads-up” awareness reviews on high-profile requests, but not necessarily to the degree that Pruitt’s aides are doing them.

“It doesn’t seem abnormal to me that some political would get a chance to have review for awareness of productions that are going out that involve the administrator,” said one former official. But the close attention from top-ranking officials like Jackson and former policy chief Samantha Dravis seemed “a little bit odd,” the former official added.

Instead, awareness reviews generally went to the head of the agency program office in question and to congressional affairs staffers so they could coordinate with any requests from lawmakers, the former official said.

One Obama-era awareness review that was included in the new documents showed that a large batch of documents related to the Flint, Michigan, lead crisis was flagged to political officials in the Office of Water and the congressional affairs office, as well as the general counsel, the regional administrator and a public affairs official.

Bowman, the EPA spokeswoman, did not comment on questions from POLITICO about the political oversight of FOIA requests, but she noted that the Trump administration was not the first to use them.

“Each EPA program and Region does their own FOIAs, so an awareness review allows the press office, Congressional Affairs Office and senior officials to be informed of documents being released in response to FOIA requests, to facilitate inter-office coordination, and to prepare responses to inquiries,” she said.

Thomas Cmar, an Earthjustice attorney involved in multiple FOIA lawsuits with EPA, said the emails raise as many questions as they answer.

“Political staff appear to be keeping a very close eye on what information is being requested and released to the public,” he said. “It raises concerns and it raises questions that need to be answered about whether EPA is living up to its obligations to make basic information about its activities available to the public that it’s supposed to be serving.”

Michigan Live

Wolverine tannery back in EPA crosshairs 5 years later

By Garrett Ellison, 5/6/18

Full federal scrutiny is finally coming to bear on the polluted Wolverine World Wide tannery in downtown Rockford, five years after the Environmental Protection Agency stepped away from its initial investigation and left the site under state control.

The EPA says new contamination testing will begin mid-month at the former manufacturing grounds, where, from 1908 to 2009, Wolverine churned out treated leather that helped the footwear company grow into a global business with \$2.4 billion in revenue last year.

The testing will be more thorough than Wolverine desired.

The EPA wants Wolverine to conduct extensive soil and groundwater sampling across the entire 15-acre property, which has been open to the public as an informal community green space used sporadically for downtown events since the buildings were razed in 2010.

Data shows the property is fouled by arsenic, chromium and lead in addition to the per- and polyfluoroalkyl substances, or PFAS chemicals, that have sparked new site scrutiny.

The now-empty land where Wolverine reneged on a promise to build a downtown Rockford shoe store is back in federal crosshairs after extremely high PFAS levels were found at the tannery, Wolverine's House Street sludge dump and other places where the company cached toxic waste around northern Kent County.

The tannery scored high enough to warrant inclusion on the federal Superfund list of toxic sites, but the EPA acquiesced in 2012 to substantial pushback from Wolverine and community leaders who lobbied hard to keep the century-old factory grounds under a state-led, voluntary environmental cleanup program.

Whether the site attains Superfund status is an open question.

Although PFAS helped bring the EPA back to Rockford, the federal government doesn't have enforceable cleanup standards for the contamination caused by Wolverine's use of 3M Scotchgard to waterproof shoe leather. But the state of Michigan does.

This has resulted in a delicate state and federal coupling.

The EPA is focusing its probe on other contaminants besides PFAS at the tannery and federal investigators are picking up where they left off, when a site assessment identified historic contamination in places like "the pit," a 50-foot former maintenance basement area where toxic waste pooled and sometimes overflowed.

The EPA issued Wolverine an investigative subpoena for records related to the tannery and the House Streep dump in Plainfield Township in early December, prior to a Jan. 10 order that formally increased the federal role in the Wolverine investigation.

Those records are now under EPA examination.

Jeffrey Kimble, an EPA Region 5 on-scene coordinator assigned to the investigation, asked Wolverine to expand testing.

"They did not meet what I wanted them to do, so (the sampling plan) has been given back to Wolverine's consultant with directions from me," Kimble said. "I want this to be a complete extent of contamination survey, so we've had them adjust their approach."

Kimble is scrutinizing the site for contamination that could pose an immediate health risk and wants "a good number and spacing of actual soil samples, sediment samples in Rum Creek and adjacent Rogue River, and few more groundwater samples."

"I'm looking at what people could actually touch if they dug in the dirt, if they had to do excavation or what may migrate off site," he said.

Through a spokesperson, Wolverine confirmed that it received Kimble's feedback and subsequently modified its testing plan.

Wolverine said it is "diligently" working with regulators and anticipates its consultant Rose & Westra GZA beginning field work this summer.

In June, the company will allow the Rockford Start of Summer Celebration to use the tannery lawn for ballgames and festival fireworks viewing, but EPA says it's requiring the company test the surface soils used for backfill and grading first.

Although the property is fenced along the west side, the public has easy access because the rest of the fence was removed at the city's request in 2015. The EPA couldn't provide a date when more fencing and warning signs would go up, although both are stipulated.

Thad Beard, Rockford city manager, thinks the topsoil cap placed after demolition is enough to keep people safe.

"If you were to go dig a 10-foot hole and start eating the dirt, that would be a cause for concern," Beard said.

"From what I understand, there's no contaminants exposed to the public unless you were to dig below grade."

That may depend on the location. According to EPA testing, contamination above acceptable human contact levels exists "at or near the surface" of the tannery footprint along the heavily-used White Pine Trail, where "elevated levels of organic and inorganic contaminants have been detected in surficial soils."

That contamination data was collected several years before 2017 testing confirmed total PFAS at 532,000 parts per trillion in the groundwater at the tannery.

In the river nearby, sediment testing found elevated levels of arsenic, total chromium, hexavalent chromium, copper, lead, mercury and zinc. Wolverine used chromium in bulk to convert raw hides into leather. The hexavalent variety is a known carcinogen.

In a January memo, Kimble characterized both the House Street and tannery sites as "imminent and substantial" threats to public health and the environment. The memo notes that children have been observed swimming in the river downtown where "sediment and water contamination has been documented."

The EPA evaluated the site six years ago at the request of the Concerned Citizens for Responsible Remediation (CCRR), a local group which petitioned for federal involvement in 2011 after independently documenting contamination at the property.

Lynn McIntosh, a Rockford activist instrumental in bringing Wolverine's pollution to light, said she's spent years warning people enjoying the river downtown to "make sure they wash their kids' hands or wipe their kayak" afterwards.

On multiple occasions, McIntosh said she's quietly approached parents with children playing at the trailside canoe launch near the southwest corner of the former tannery site to warn them about elevated levels of mercury in the nearby riverbed.

"I shouldn't have to do that," she said.

McIntosh is pleased the EPA is back on the ground in Rockford after watching former elected officials like late city manager Michael Young and ex-state Sen. Mark Jansen lobby keep the tannery under Michigan Department of Environmental Quality oversight.

Both men wrote similarly-worded letters to regulators warning of "significant negative effect" on tannery redevelopment and downtown Rockford if EPA involvement were to continue; both citing their understanding that "there are no conditions at the property that present a health threat to the public."

Wolverine "has advised me that the remaining environmental issues at the property will be properly addressed by Wolverine with the DEQ," Young wrote to the EPA on April 19, 2012.

Both Young and Jansen asked that EPA "terminate" their involvement and let DEQ manage the site under the state's Part 201 law.

Under the state voluntary cleanup program, the DEQ has essentially allowed Wolverine to mothball the site, McIntosh argued.

Although Wolverine has done sampling and soil boring, little excavation and no bioremediation, containment, groundwater control or treatment has occurred under the state's oversight.

Rockford put "money and image over addressing a real possible public health and safety issue, and worked with the company to accomplish that," McIntosh said.

The DEQ counters that retaining control over the site has sped, not slowed, tannery cleanup work because it takes several years for a site to become Superfund listed. The site was designated an "Other Cleanup Authority" under state lead in 2012.

Were it placed on the National Priorities List, "it would have taken several more years to accomplish remedial investigation and remedial actions," said DEQ spokesperson Scott Dean.

"Wolverine has better defined the extent of soil and groundwater contamination and located leather and hide scraps buried on the 100-year-old tannery site" following the 2012 agreement, Dean said.

The state's oversight "made it possible for Wolverine to quickly begin monitoring for PFAS" after it became a concern in 2016, he said.

The company began testing for PFAS in August 2017.

"Although we have been frustrated by the pace of work at the tannery site, our primary focus has been on protecting the public," Dean said.

"We remain committed to holding Wolverine accountable for the contamination on their site and seeing it returned to productive use."

The Daily Caller

<http://dailycaller.com/2018/05/07/exclusive-epa-scott-pruitt-body-guard-nino-perrotta-false-dirty-laundry/>

Scott Pruitt's Head Bodyguard Takes On The 'False Dirty Laundry' Being Spread About EPA

By Michael Bastasch, 5/7/18

Many of the accusations against Environmental Protection Agency Administrator Scott Pruitt and his close aides were concocted by "disgruntled employees" looking to damage the agency, the former head of Pruitt's security detail said.

"I believe at the end of the day, these are disgruntled employees — staffers — who, for whatever reason, decided to air dirty laundry — false dirty laundry to the press," Nino Perrotta told The Daily Caller News Foundation in an exclusive interview.

Perrotta served as the special agent in charge of Pruitt's security detail for about a year, leading the administrator's protective detail as accusations of overspending and ethical violations. Congress and EPA's Office of Inspector General have multiple investigations into Pruitt's actions.

Perrotta retired at the end of April, ending his 14-year career at EPA amid investigations into Pruitt's security arrangements — including his 24/7 detail, hiring of more agents, and flying first class when traveling.

Former EPA official Kevin Chmielewski detailed many accusations against Pruitt, Perrotta and other top aides to congressional Democrats. Many of the accusations were "intentionally used to mislead the American people," Perrotta told TheDCNF.

Chmielewski was one of several EPA staffers allegedly sidelined for challenging Pruitt on spending decisions. However, Perrotta believes Chmielewski decided to come out against Pruitt after a January 2018 phone call.

During that call, Chmielewski vented to Perrotta about issues he was having with his pay, the former EPA security head said. Perrotta said he tried to help Chmielewski with his pay issue, but the former EPA official “began to threaten the EPA, specifically the administrator and the chief of staff, that he was going to talk to the press and everyone he could about,” using colorful language, “how f-ed up the EPA was and how f-ed up the administrator was and how f-ed up the chief of staff was.”

“I found that to be very, very bizarre,” Perrotta said. “If you have differences, it should be aired through your chain of command.”

Chmielewski called the next day, but given his tone and threatening statements on their previous call, Perrotta said he’d have to report the former EPA official. Perrotta filed the report with the agency.

Pruitt’s been increasingly mired in negative news stories — many of them likely the result of Chmielewski talking to the press and Congress. News reports have already called into question the veracity of many of Chmielewski’s claim.

For example, “a \$30,000 contract with private Italian security personnel entered into by” Perrotta ahead of Pruitt’s attendance of a G7 summit in Italy, Chmielewski told Congress. Perrotta would never have the authority to unilaterally enter into such a contract, the former EPA security head said.

“That is a false accusation,” Perrotta told TheDCNF. “A person at my level and grade in the agency would have the authority to do so.”

Chmielewski also told Democratic lawmakers “at least one security-related contract was awarded to an individual who works at Mr. Perrotta’s private security firm, and he believes that other contracts may also have been awarded to friends or associates of Mr. Perrotta’s.”

It’s true EPA hired Edwin Steinmetz to conduct a security sweep of Pruitt’s office in 2017, costing the agency \$3,000. Steinmetz is listed on the management team of Perrotta’s security firm he operates on the side, Sequoia Security Group.

Perrotta said he explained to superiors that Steinmetz, a security consultant, subcontracted through his side company, which EPA gave him approval to operate in 2013. EPA officials asked Perrotta in 2017 if he could recommend a company to conduct a security sweep of Pruitt’s office.

“The only reason that the vendor was selected,” Perrotta said, “is because there were issues within the agency of identifying a new vendor, which to me was bizarre.”

“It was clear to me, now, that certain people compared notes, shared information, and created this false narrative. And I believe the American people are going to see this, eventually,” Perrotta said.

You can watch TheDCNF’s entire interview with Perrotta here. And stay tuned for more.

The Wall Street Journal

<https://www.wsj.com/articles/oil-prices-continue-to-rise-fueled-by-iran-concerns-1525673680>

Oil Prices Reach Highest Level Since 2014 Ahead of Iran Deadline

By Sarah McFarlane and Biman Mukherji, 5/7/18

Oil prices rallied to a 3½ year high on Monday, with the U.S. benchmark breaking above \$70 a barrel, as investors braced for the country's expected exit from the Iran nuclear deal this week.

Brent crude, the global oil benchmark, was up 1% to \$75.59 a barrel on London's ICE Futures exchange having hit \$75.89 earlier, their highest level since 2014. On the New York Mercantile Exchange, West Texas Intermediate futures were trading up 1% at \$70.42 a barrel.

Oil prices have risen over 10% in the past month as U.S. President Donald Trump has indicated it is likely the country will withdraw from a 2015 international agreement with Iran which eased sanctions in return for curbs to its nuclear program. A decision is due by May. 12.

"There is some scope for profit-taking now that prices are at 42-month highs but that is been overshadowed by the potential re-imposition of sanctions on Iran," said Dubai-based Ehsan Khoman, head of research for the Middle East and North Africa region at MUFG bank.

Previously, international sanctions have cut Iranian exports by around 1 million barrels a day, but MUFG expects the U.S. will "go it alone" if they impose sanctions, meaning the impact will be a loss of 250,000-350,000 barrels a day.

"The EU may not deem it necessary to reinstate sanctions on shipping insurance which were paramount in restricting Iranian crude exports last time around," said Mr. Khoman.

The U.S. doesn't import any Iranian crude but certain allies including Japan and South Korea which do, may switch to other suppliers to comply with the changed stance of the U.S., analysts said.

There were also signs of discord among members of the Organization of the Petroleum Exporting Countries after Iran's deputy oil minister Amir Hossein Zamaminia said a "suitable price" for oil is \$60 to \$65 a barrel in an interview with Bloomberg on Sunday. Iran's position differs from OPEC's top producer Saudi Arabia, which is seeking to push oil to \$80 a barrel to fund economic reforms.

This creates uncertainty for the prospects of an extension to the group's deal to cut production, initially struck to target reducing a glut in global oil stocks, which had ballooned because of rising U.S. shale output. Saudi Arabia is expected to push for the cuts to continue beyond 2018 to keep oil prices closer to their target.

Oil production in the U.S. is expected to continue its march higher with the number of rigs drilling for oil rising by 9 last week to a three-year high of 834 rigs, according to oil-field services firm Baker Hughes (BHGE) data published on Friday.

Nymex reformulated gasoline blendstock—the benchmark gasoline contract—up 0.7% to \$2.13 a gallon. ICE gasoil changed hands at \$660.50 a metric ton, up \$11.50 from the previous settlement.

Giuliani Says Trump Would Not Have to Comply With Mueller Subpoena

By Mark Landler and Noah Weiland, 5/6/18

Rudolph W. Giuliani, reeling after a chaotic first week as President Trump’s lawyer, tried again on Sunday to straighten out his client’s story. But Mr. Giuliani raised new questions about whether Mr. Trump had paid hush money to other women and suggested the president might invoke the Fifth Amendment to avoid testifying in the special counsel’s Russia investigation.

Mr. Giuliani, a former federal prosecutor and New York City mayor hired by Mr. Trump to smooth communication between the White House and the special counsel, Robert S. Mueller III, instead painted Mr. Mueller as an out-of-control prosecutor bent on trapping Mr. Trump into committing perjury. The president, he said, could defy a subpoena to testify.

“We don’t have to to,” Mr. Giuliani said in a rambling, 22-minute interview on ABC’s “This Week” program. “He’s the president of the United States. We can assert the same privileges other presidents have.”

Mr. Giuliani, who met with the special counsel’s office shortly after joining the legal team last month, said he and another lawyer, Jay Sekulow, agreed that the president should not speak to Mr. Mueller. But he acknowledged that he had little, if any, control over the president, who said as recently as Friday that he still wanted to speak to the special counsel.

“How can I ever be confident of that?” Mr. Giuliani said, when asked whether Mr. Trump would not invoke his right to avoid self-incrimination. “I’m facing a situation with the president and all the other lawyers are, in which every lawyer in America thinks he would be a fool to testify, I’ve got a client who wants to testify.”

It was one of several startling admissions by Mr. Giuliani, during his first extended television appearance since Mr. Trump criticized him last week as not having his “facts straight” about payments made to a pornographic film actress, Stephanie Clifford. Mr. Giuliani said it was possible that Mr. Trump’s personal attorney, Michael D. Cohen, had made additional payments to other women on the president’s behalf.

“I have no knowledge of that,” Mr. Giuliani said when asked about other payments, “but I would think if it was necessary, yes.”

If Mr. Trump were to invoke the Fifth Amendment, he would undercut his longstanding claim that he has nothing to hide about his campaign’s ties to Russia. During the presidential campaign, he ridiculed his Democratic opponent, Hillary Clinton, when some of her aides invoked the Fifth Amendment during a congressional investigation of Mrs. Clinton’s use of a private email server.

“The mob takes the Fifth,” Mr. Trump said at a campaign rally in Iowa in September 2016. “If you’re innocent, why are you taking the Fifth Amendment?”

After his interview, Mr. Giuliani met with Mr. Trump at his golf club in Northern Virginia.

Mr. Giuliani told the ABC anchor, George Stephanopoulos, that he was still getting up to speed on Mr. Trump's legal issues — a fact that became apparent as the interview went on. As was the case during his interviews last week, Mr. Giuliani seemed to speak largely off the cuff. He speculated freely and contradicted himself, sometimes from one statement to the next.

He said, for example, that Mr. Mueller would be to blame if Mr. Trump refused to testify because his office had leaked a list of questions that the special counsel would like to ask him. But then he admitted he did not know who leaked the questions, which were reported by The New York Times.

Mr. Giuliani referred repeatedly to a federal judge's criticism of the special counsel's fraud case against Paul Manafort, the former chairman of the Trump campaign. The judge, T.S. Ellis III, said on Friday that the case seemed motivated by a desire to get Mr. Manafort to potentially incriminate Mr. Trump.

"There's no question that the amount of government misconduct is accumulating," Mr. Giuliani said. "Very embarrassing to my former Justice Department."

Mr. Giuliani created a furor on Wednesday when he contradicted the president about the payment to Ms. Clifford. Speaking on Fox News, Mr. Giuliani said Mr. Trump reimbursed Mr. Cohen for a \$130,000 payment that Mr. Cohen has said he made to Ms. Clifford, to keep her from making public a story about an affair she claims she had with Mr. Trump — a claim that he denies. When asked in April by reporters traveling on Air Force One whether he knew about the payment, Mr. Trump said he did not.

On Sunday, Mr. Giuliani said he was still trying to establish when Mr. Trump learned that Mr. Cohen had paid Ms. Clifford, whose stage name is Stormy Daniels. But he added that as a legal matter, it did not matter since the payment did not violate federal campaign finance rules.

Asked about the discrepancies between his account and the president's statement, Mr. Giuliani said: "Those don't amount to anything — what is said to the press. That's political."

Mr. Giuliani did not shed much new light on the nature of the payments themselves. He said Mr. Cohen "made payments for the president, or he conducted business for president, which means he had legal fees, moneys laid out and expenditures." But he characterized the sum Ms. Clifford received as a "nuisance" payment.

"I never thought \$130,000 was a real payment," Mr. Giuliani said. "People don't go away for \$130,000."

Mr. Giuliani accused Ms. Clifford of trying to make as much money as possible from her notoriety, noting that she made a cameo appearance during the opening skit on "Saturday Night Live."

Mr. Giuliani's admission on Wednesday caught Mr. Trump's staff off guard and prompted Mr. Trump to try to clarify the nature of payments he made to Mr. Cohen. The morning after Mr. Giuliani's comments, Mr. Trump said on Twitter that Mr. Cohen "received a monthly retainer, not from the campaign and having nothing to do with the campaign, from which he entered into, through reimbursement, a private contract between two parties, known as a non-disclosure agreement, or NDA."

A day later, he told reporters gathered outside the White House that Mr. Giuliani did not know the particulars of the case, even after Mr. Giuliani told The Times on Wednesday night that he had spoken

with the president before and after his interview on Fox News, and that Mr. Trump and other lawyers on the team were aware of what he would say.

“Virtually everything said has been said incorrectly, and it’s been said wrong, or it’s been covered wrong by the press,” Mr. Trump said on Friday. “He’ll get his facts straight.”

Seeming to chastise Mr. Giuliani, Mr. Trump added: “You know what? Learn before you speak. It’s a lot easier.”

Some of Mr. Trump’s legal and political advisers believe Mr. Giuliani’s comments could put the president in legal jeopardy, since federal officials are required to report liabilities of more than \$10,000 during the preceding year. Mr. Trump’s last disclosure, which he signed last June, does not mention any debt to Mr. Cohen.

On Sunday, Mr. Giuliani tried to clarify what Mr. Trump called a “retainer.”

“The retainer agreement was to repay expenses, which turns out to have included this one,” Mr. Giuliani said.

Appearing after Mr. Giuliani on the same program, Ms. Clifford’s lawyer, Michael Avenatti, called Mr. Giuliani’s interview an “absolute unmitigated disaster” and “one of the worst TV appearances by any attorney on behalf of a client in modern times.”

“He now expects the American people to believe that he doesn’t really know the facts,” Mr. Avenatti added. “I think it is obvious to the American people that this is a cover-up, that they are making it up as they go along.”

Politico

<https://www.politico.com/story/2018/05/07/trump-cia-gina-haspel-571566>

Trump defends CIA pick Haspel: 'Democrats want out because she is too tough on terror'

By Louis Nelson, 5/7/18

President Donald Trump issued an online vote of confidence Monday for Gina Haspel, his pick to be the next director of the CIA, and chided Democrats who have been critical of her for her role in waterboarding terrorism suspects at a secret agency prison.

“My highly respected nominee for CIA Director, Gina Haspel, has come under fire because she was too tough on Terrorists,” the president wrote on Twitter. “Think of that, in these very dangerous times, we have the most qualified person, a woman, who Democrats want OUT because she is too tough on terror. Win Gina!”

Haspel is expected to be on Capitol Hill on Monday, meeting with senators ahead of confirmation hearings later this week. Whether she will be confirmed to lead the CIA remains an open question amid concern about her role running a CIA “black site” prison in Thailand where terrorism suspects were subjected to so-called “enhanced interrogation” techniques like waterboarding.

Haspel's past involvement with practices labeled by many as torture has already cost her the support of Sen. Rand Paul (R-Ky.), meaning she will require the support of at least one Democrat in order to be confirmed.

According to a Washington Post report published over the weekend, Haspel offered late last week to withdraw herself from consideration to lead the CIA over concerns that confirmation hearings scheduled for Wednesday could prove damaging to agency's reputation and to her own. She reportedly expressed a desire to avoid being "the next Ronny Jackson," a reference to the White House's former pick to lead the Department of Veterans Affairs whose candidacy was scuttled by allegations of misconduct.

White House press secretary Sarah Huckabee Sanders, who the Post reported was among the administration officials who met with Haspel last Friday at CIA headquarters in Virginia after she offered to withdraw, praised Haspel over the weekend as eminently qualified to lead the agency. That she would be the first woman to do so, Sanders wrote, should garner her further support, especially from Democrats.

"There is no one more qualified to be the first woman to lead the CIA than 30+ year CIA veteran Gina Haspel," the press secretary wrote on Twitter on Saturday. "Any Democrat who claims to support women's empowerment and our national security but opposes her nomination is a total hypocrite."

MEMORANDUM FOR THE WHITE HOUSE STAFF SECRETARY AND CABINET SECRETARY

FROM: Ryan Jackson, Chief of Staff, U.S. Environmental Protection Agency

SUBJECT: Environmental Protection Agency 30-Day Look Ahead for the Week of May 21, 2018

A. Events/Travel

- **May 22** – PFAS National Dialogue Meeting (DC)
- **May 23** – Speaking Engagement: Aerospace Industries Association (WV)
- **June 1** – Speaking Engagement: Delta Council (MS)
- **June 4** – Speaking Engagement: American Agri-Women DC Fly-In (DC)
- **June 8** – Speaking Engagement: Faith & Freedom Coalition Conference (DC)
- **June 8** – Speaking Engagement: Western Conservatives Summit (CO)
- **June 15** – Weirton Brownfields Grant, Mine Visit (WV)
- **June 25-26** – CEC Council Session: Mexican, American, and Canadian Environmental Ministers Annual Meeting Hosted by U.S.

B. Top News

- **Summit, state visits will lead to national plan to manage PFAS** ([Detroit Free Press](#), 5/22/18): “Today, I will kick off the agency’s first-of-its-kind National Leadership Summit on PFAS at EPA headquarters in Washington, D.C. Representatives from more than 35 states – including Michigan – more than 20 federal partners, several tribes, dozens of industry, non-governmental groups and other national organizations will share valuable recommendations for how EPA should deal with PFAS in communities and communicate the risks associated with PFAS. Our summit gives states, tribes and stakeholders a key voice in the EPA’s efforts. It also gives our federal partners an opportunity to share their expertise and coordinate actions.”
- **EPA adds defunct San Antonio facility site to cleanup priority list** ([Fox San Antonio](#), 5/15/18): “The Environmental Protection Agency is working on a plan to clean up a hazardous waste site on the west side. The EPA says there are very high levels of chromium in the groundwater under a piece of land on Potranco Road about a mile outside Loop 1604. The site has been added to the EPA’s National Priority List, which is part of the Superfund program. Patillo estimates anywhere from 300 to 400 people live in the neighborhood.”
- **EPA sends air quality monitors to Hawaii Island** ([West Hawaii Today](#), 5/17/18): “The U.S. Environmental Protection Agency has deployed emergency responders and air monitoring equipment to Hawaii Island as part of the Federal Emergency Management Agency’s response to the Kilauea volcano eruption, according to a press release from the EPA. The EPA is also sending experts to analyze public health threats from volcanic gas emissions and to assist with data management support. The EPA is augmenting the multi-agency air monitoring efforts of acute threats to public health from the emission of volcanic gases. The agency is also working with the Hawaii Department of Health staff to evaluate

locations for additional air quality monitoring stations, as well as to integrate the multi-agency air quality data collection efforts by US Geological Survey/National Park Service, County of Hawaii, state Civil Defense and state Department of Health. EPA has deployed four staff and will mobilize additional equipment and personnel to support 12 monitoring stations for sulfur dioxide, hydrogen sulfide and particulates and support DOH requests for assistance in collecting, managing and interpreting air monitoring data.”

C. Policy Updates

1. **PFAS SUMMIT:** On May 22 and 23, EPA is hosting a National Leadership Summit on per- and poly-fluoroalkyl substances (PFAS). On the first day of the summit, Administrator Pruitt presented the keynote speech to announce EPA’s four-step action plan. First, EPA will initiate steps to evaluate the need for a maximum contaminant level (MCL) for PFOA and PFOS. Second, EPA is beginning the necessary steps to consider a proposal designating PFOA and PFOS as “hazardous substances” through one of the available statutory mechanisms, including potentially CERCLA Section 102. Third, EPA is currently developing groundwater cleanup recommendations for PFOA and PFOS at contaminated sites and will complete this task by fall of this year. Fourth, EPA is taking action in close collaboration with our federal and state partners to develop toxicity values for GenX and PFBS.

Contact: Lee Forsgren, Office of Water, Forsgren.Lee@epa.gov

2. **SCIENCE TRANSPARENCY:** Consistent with Executive Orders 13777 and 13783, on April 24, 2018, Administrator Pruitt signed a proposed rule to strengthen the science used in regulations issued by EPA. The rule would ensure that the regulatory science underlying agency actions is fully transparent, and will require that the underlying scientific information be publicly available, in a manner sufficient for independent validation. This action builds upon prior EPA actions in response to government-wide data access and sharing policies, as well as the experience of other federal agencies in this space.

Timing: This week, EPA plans to publish a Federal Register notice extending the comment deadline for the proposed rule from May 30 to August 16. The same notice will announce a public hearing on July 17 at EPA Headquarters.

Contact: Richard Yamada, Office of Research and Development, Yamada.Richard@epa.gov

3. **CLEAN POWER PLAN:** Consistent with Executive Order 13783, in March 2017, Administrator Pruitt announced EPA’s review of the Clean Power Plan (CPP). In October, EPA issued a proposed rule to repeal the CPP. On December 18, EPA issued an Advanced Notice of Proposed Rulemaking (ANPRM) on a potential rule that would establish emission guidelines for states to establish performance standards for GHG emissions from existing Electric Generating Units (EGUs).

Timing: EPA plans to send the proposed repeal to OMB in June.

Contact: Mandy Gunasekara, Office of Air and Radiation, Gunasekara.Mandy@epa.gov

4. **DEFINITION OF “WATERS OF THE UNITED STATES”:** Consistent with Executive Order 13778, EPA and the U.S. Army Corps of Engineers are using a three-step process to review the 2015 rule defining “Waters of the United States” (WOTUS). In Step 0, the

agencies extended the applicability date for the rule by 2 years. In Step 1, the agencies are withdrawing the rule and re-codifying the status quo. In Step 2, the agencies are reviewing and revising the definition consistent with this administration's policy. In June 2017, the agencies issued the Step 1 proposed rule. In November, the agencies issued the Step 0 proposed rule. In January, the agencies issued the Step 0 final rule. On April 11, the agencies sent a supplemental notice for the Step 1 proposed rule to OMB.

Timing: The agencies plan to issue the supplemental notice for the Step 1 proposed rule and send a Step 2 proposed rule to OMB in May.

Contact: Dave Ross, Office of Water, Ross.DavidP@epa.gov

- 5. RISK MANAGEMENT PROGRAM:** The original Risk Management Program (RMP) rule was issued in 1996, and has been modified 5 times. The prior administration issued a rule to amend the RMP regulations that raised concerns related to national security, inconsistencies with the Process Safety Management (PSM) standards issued by OSHA, and unnecessary burdens on local communities. In March 2017, Administrator Pruitt granted reconsideration of the RMP rule in response to petitions from two industry groups and one from a group of states, and issued a 90-day administrative stay of the rule. In June, EPA published a final rule to further delay the effective date of the rule until February 19, 2019. On May 17, EPA issued a reconsideration proposed rule. The proposed rule: (1) rescinds requirements for third-party audits, STAA, root cause analysis; (2) revises the requirements for local coordination and emergency exercises; (3) rescinds requirements for information availability while strengthening provisions that require a public meeting after an incident; and (4) extends compliance dates.

Timing: EPA plans to host a public hearing on the reconsideration proposed rule on June 14.

Contact: Steven Cook, Office of Land and Emergency Management, Cook.Steven@epa.gov

- 6. COAL COMBUSTION RESIDUALS:** In response to petitions for rulemaking from the utility industry, EPA decided in September 2017 to reconsider provisions of the final 2015 rule regulating the disposal of coal combustion residuals (CCR) as nonhazardous waste in light of the issues raised in the petitions and the Water Infrastructure Improvements for the Nation Act (WIIN Act), which includes provisions authorizing state regulatory programs and providing EPA new oversight authority. EPA issued a proposed rule to modify several provisions of the 2015 CCR rule to respond to a June 2016 voluntary remand ("remand rule"). In addition to the specific issues subject to the remand, EPA has drafted additional proposed changes to the CCR rule as part of the remand rule to address many of the issues stakeholders raised in their petitions. On March 1, 2018, Administrator Pruitt signed the first of two rules (Phases 1 and 2) that amend the 2015 CCR rule.

Timing: EPA plans to send a Phase 1 partial final rule to OMB in May.

Contact: Byron Brown, Brown.Byron@epa.gov

- 7. COST-BENEFIT REFORM:** On April 10, 2018, Administrator Pruitt announced a forthcoming Advanced Notice of Proposed Rulemaking (ANPRM) to consider proposing regulations on cost-benefit reform. Under the Obama administration, EPA used questionable methods, like the social cost of greenhouse gases and relying on "co-benefits," to inflate the purported benefits of its regulations and underestimate the true costs (as in the case of the Clean Power Plan). Additionally, several EPA statutes refer to the calculation of costs and

benefits, but implementation has been inconsistent. This has led to EPA creating uncertainty for the regulated community. On April 11, EPA sent the ANPRM to OMB.

Timing: EPA plans to issue the ANPRM on June 7, 2018.

Contact: Brittany Bolen, Office of Policy, Bolen.Brittany@epa.gov

- 8. MID-TERM EVALUATION (MTE) OF GREENHOUSE GAS STANDARDS FOR LIGHT-DUTY VEHICLES:** On April 2, 2018, Administrator Pruitt signed the new Midterm Evaluation (MTE) for the GHG emissions standards established for light-duty vehicles model years 2022-2025. The final determination found that, in light of recent data, the current standards are not appropriate and should be revised.

Timing: Administrator Pruitt announced the start of a joint process with the National Highway Traffic Safety Administration (NHTSA) to develop a notice and comment rulemaking to set more appropriate GHG emissions standards and Corporate Average Fuel Economy (CAFE) standards. The agencies plan to issue a joint proposed rule in the early summer.

Contact: Bill Wehrum, Office of Air and Radiation, Wehrum.Bill@epa.gov

- 9. OIL AND GAS NSPS:** Consistent with Executive Order 13783, in April 2017, Administrator Pruitt announced EPA's reconsideration of several aspects of the 2016 oil and gas New Source Performance Standards (NSPS). On March 1, 2018, EPA amended two provisions of the 2016 oil and gas NSPS to address immediate concerns with the fugitive emission requirements. On April 27, EPA sent the reconsideration proposed rule to OMB.

Timing: EPA plans to propose a technical package as part of the reconsideration of the 2016 oil and gas NSPS before it proposes a substantive policy package in June 2018.

Contact: Mandy Gunasekara, Office of Air and Radiation, Gunasekara.Mandy@epa.gov

- 10. TSCA PROBLEM FORMULATION DOCUMENTS:** Under the amended Toxic Substances Control Act (TSCA), EPA is required to release problem formulation documents that describe exposure scenarios and populations that will be included in risk evaluations for various chemicals.

Timing: Within the next few weeks, EPA will release for public comment the draft problem formulations for the first 10 chemicals undergoing risk evaluations: 1, 4 Dioxane, 1-Bromopropane, Asbestos, Carbon Tetrachloride, Cyclic Aliphatic Bromide Cluster (HBCD), Methylene Chloride, N-Methylpyrrolidone, Pigment Violet 29, Trichloroethylene, and Tetrachloroethylene.

Contact: Nancy Beck, Office of Chemical Safety and Pollution Prevention, Beck.Nancy@epa.gov

- 11. TSCA – LAUTENBERG ACT 2ND YEAR ANNIVERSARY:** Under the amended TSCA, EPA is required to meet more milestones which are coming due for its second anniversary of enactment, June 22, 2018. Those new milestones are the following:

- Mercury Use Reporting Rule: EPA will finalize reporting deadlines and requirements to assist in updating the inventory of mercury supply, use, and trade in the U.S.
- Alternative Animal Testing Strategy: EPA will issue a strategy to promote the development of alternative test methods to reduce vertebrate animal testing. On March 7, 2018, EPA released the draft strategy for public comment.

- Guidance on Generic Names: EPA will issue guidance regarding the determination of structurally descriptive generic names for chemicals.
- Policy on Unique Identifiers: EPA will issue a policy for assigning unique identifiers to chemicals and applying those identifiers to other information concerning the same chemical.
- Guidance on Confidential Business Information: EPA will issue guidance on expanding CBI access to states, tribes, and local governments; health and environmental professionals; and first responders.

Contact: Nancy Beck, Office of Chemical Safety and Pollution Prevention,
Beck.Nancy@epa.gov

12. TSCA – LAUTENBERG ACT FEES: Under the amended TSCA, EPA is required to institute new fees on the chemical manufactures to fund the approval program for new chemicals. On February 8, 2018, EPA issued a proposed Fees Rule to provide funding for Lautenberg Act implementation, including risk evaluations and reviewing CBI.

Timing: The original comment deadline for the fees rule was extended from April 27 to May 24. EPA will continue to work with OMB to finalize the new fees rule. The President’s Budget and the Appropriations Act propose changes to the programs’ budget anticipating this new fee structure.

Contact: Nancy Beck, Office of Chemical Safety and Pollution Prevention,
Beck.Nancy@epa.gov

13. DUST-LEAD AND LEAD-BASED PAINT: In 2009, EPA was petitioned to lower dust-lead hazard standards and modify the definition of lead-based paint. On December 27, 2017, the Ninth Circuit granted a petition for writ of mandamus to compel EPA to issue a proposed rule by March 27, 2018. On March 26, EPA received a 90-day extension to issue a proposed rule by June 24.

Timing: EPA plans to send a proposed rule to OMB in May.

Contact: Nancy Beck, Office of Chemical Safety and Pollution Prevention,
Beck.Nancy@epa.gov

14. SUPERFUND: The Superfund National Priorities List (NPL) was codified as Appendix B to the National Oil and Hazardous Substances Pollution Contingency Plan (NCP) in 1983. The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA, commonly known as Superfund) requires that EPA maintain the NPL and update it at least annually. On May 15, EPA signed an NPRM adding 3 sites to the NPL (Donnelsville, OH; Penuelas, Puerto Rico; Grand Prairie, TX) and a final rule adding 6 sites (Hockessin, DE; Spencer, IN; Spring Park, MN; Cheraw, SC; Dallas, TX; San Antonio, TX).

Contact: Nick Falvo, Falvo.Nick@epa.gov

D. Loans/Grants

1. NEW WIFIA LOANS

A. \$280,000,000 TO THE BALTIMORE CITY DEPARTMENT OF PUBLIC WORKS: The Baltimore City Department of Public Works was selected to receive a

WIFIA loan to complete a set of projects to repair, rehabilitate, replace, and upgrade its wastewater collection and treatment, water treatment and distribution, and stormwater management systems. These projects will help improve the city's sanitary sewer collection system; ensure the reliability and performance of the drinking water and wastewater systems; and improve stormwater management to meet Clean Water Act permit requirements.

Timing: EPA plans to issue this loan in the summer.

Contact: Lee Forsgren, Office of Water, Forsgren.Lee@epa.gov

- B. \$436,000,000 TO THE INDIANA FINANCE AUTHORITY:** The Indiana Finance Authority was selected to receive a WIFIA loan to expand the reach of its Clean Water and Drinking Water State Revolving Fund programs and fund dozens of additional projects in communities across the state.

Timing: EPA plans to issue this loan in the summer.

Contact: Lee Forsgren, Office of Water, Forsgren.Lee@epa.gov

- C. \$69,000,000 TO THE CITY OF OMAHA:** The City of Omaha was selected to receive a WIFIA loan to construct a new retention treatment basin to address combined sewer overflows in the Saddle Creek Basin as required by the city's consent decree, Clean Water Act permit, and long-term control plan. This project will address water quality concerns in Papillion Creek and the Missouri River by removing an estimated 1.2 billion gallons of combined sewage discharged into the Little Papillion Creek and removing floatables and other solids from combined sewer overflows.

Timing: EPA plans to issue this loan in the early summer.

Contact: Lee Forsgren, Office of Water, Forsgren.Lee@epa.gov

- D. \$706,000,000 TO THE SAN FRANCISCO PUBLIC UTILITY COMMISSION:** The San Francisco Public Utility Commission was selected to receive a WIFIA loan to replace its existing, outdated 60-year old solids treatment facilities with infrastructure that produces higher-quality Class A biosolids; captures and treat odors more effectively; and maximizes biogas utilization and energy recovery. This project will provide a new efficient solids treatment system to maintain regulatory compliance; ensure treatment reliability by meeting current seismic standards and improving standard operations; and provide advanced odor control and reduce impact on the adjacent community.

Timing: EPA plans to issue this loan in July.

Contact: Lee Forsgren, Office of Water, Forsgren.Lee@epa.gov

- 2. \$285,744 TO THE COALITION TO RESTORE COASTAL COALITION:** These funds will help restore or enhance coastal swamp forest habitat near the city of New Orleans and provide volunteer opportunities that are accessible and accommodating to urban communities. This project will engage approximately 300 volunteers in adding 5,000 or more native swamp forest trees to restore or enhance at least 25 acres of cypress-tupelo swamp habitat.

Timing: EPA will issue a press release on May 23.

3. **\$267,100 TO THE ARKANSAS DEPARTMENT OF HEALTH:** The agreement assists the state of Arkansas to develop and implement a public water system supervision program to adequately enforce the National Primary Drinking Water Regulations and the requirements of the Safe Drinking Water Act. Specific activities include: developing state drinking water regulations no less stringent than the federal regulations, maintaining an inventory of drinking water systems, managing information on public water systems, ensuring that public participation occurs regarding drinking water systems, providing technical assistance to public water systems and enforcing drinking water regulations.
Timing: EPA will issue a press release on May 30.
4. **\$321,521 TO THE ARKANSAS DEPARTMENT OF ENVIRONMENTAL QUALITY:** This agreement will provide assistance to the Arkansas Department of Environmental Quality (ADEQ) in its efforts to implement air pollution control programs throughout the State of Arkansas, including continuing development and implementation of stationary source regulations; continuing promulgation and update of enhanced mobile source regulations; improvement of emission inventories for modeling simulations; and to operate a monitoring network that collects air data. These activities are to improve and maintain the public's air quality.
Timing: EPA will issue a press release on May 30.
5. **\$821,775 TO THE ARKANSAS DEPARTMENT OF ENVIRONMENTAL QUALITY:** This agreement provides funding to the State of Arkansas to carry out its program to maintain, protect, and improve the water quality of its rivers, lakes, streams, groundwater, and other waterbodies. The environmental benefits of this program include preventing degradation of unimpaired waterbodies and reducing the number of impaired waterbodies in the state. Activities include: monitoring, standard-setting, TMDLs, surface and ground water enforcement and compliance activities and other water quality-related activities.
Timing: EPA will issue a press release on May 30.
6. **\$2,170,000 TO THE NEW YORK STATE DEPARTMENT OF HEALTH:** The agreement assists the New York State Department of Health in the implementation of its program to oversee and enforce drinking water programs and systems across the state. This includes: conducting annual reviews and sanitary surveys at all public water systems, providing technical project assistance, enforcing compliance with safe drinking water regulations.
Timing: EPA will issue a press release on May 31.
7. **\$149,600 TO THE ST. REGIS MOHAWK TRIBE (NEW YORK):** This agreement provides ongoing funding to the Saint Regis Mohawk Tribe to conduct activities that are not assignable to specific sites, but will support the recipient's site-specific hazardous waste response program. This includes training, development of non-site-specific plans and procedures, and the acquisition of equipment and supplies.
Timing: EPA will issue a press release on June 6.

E. Legal Actions

- 1. AIR ALLIANCE HOUSTON, ET AL. v. EPA (D.C. CIR.) – TWO-YEAR DELAY OF EFFECTIVE DATE IN RISK MANAGEMENT PROGRAM AMENDMENTS RULE:** On March 23, the Court ordered EPA to submit a comprehensive list of pre-2017 examples where any federal agencies have issued final notice-and-comment regulations (i) that change the effective or compliance dates for an earlier final regulation and (ii) that explicitly justify the change to the effective or compliance dates because the agency is reconsidering its earlier final regulation. EPA’s response to the March 23 order was filed on April 6, 2018, and Petitioners’ filed a response on April 16.
Timing: Awaiting action by the court.
Contact: David Fotouhi, Deputy General Counsel, Fotouhi.David@epa.gov
- 2. JULIANA v. UNITED STATES (D. OR./9TH CIR). MANDAMUS PROCEEDINGS – CLIMATE-CHANGE LITIGATION WITH CONSTITUTIONAL CLAIMS:** This case is a broad-based challenge alleging that EPA and the US government allowed excessive CO2 emissions from burning fossil fuel that have contributed to climate change. On May 9, DOJ filed a motion for judgment on the pleadings, moved for a protective order, and moved to stay discovery.
Timing: Oral argument is set for May 23 via telephonic conference. A status conference is set for June 6, 2018 in Oregon.
Contact: Justin Schwab, Deputy General Counsel, Schwab.Justin@epa.gov
- 3. NATIONAL PARKS CONSERVATION ASSOCIATION v. EPA (D.D.C.) – TEXAS REGIONAL HAZE & INTERSTATE POLLUTION TRANSPORT:** Under two consent decrees entered in separate deadline/mandatory duty suits under the previous administration, EPA must either issue a Federal Implementation Plan (FIP) or approve a State Implementation Plan (SIP), to satisfy the Clean Air Act’s requirements for Texas’s obligations under (1) the Best Available Retrofit Technology (BART) prong of the Regional Haze program (the *National Parks* case), and (2) the “good neighbor” provision addressing interstate pollution transport (the *Sierra Club* case). EPA issued a FIP on September 29, 2017. Plaintiffs on October 13, 2017 filed a statement of position and motion to enforce the consent decree, arguing that the FIP did not satisfy EPA’s consent decree obligations. DOJ filed a response and a motion to terminate the consent decree on October 25, 2017. On March 6, 2018, the Court issued a Minute Order staying this case.
Timing: The Court will continue the stay in this case. EPA must notify the Court within a week of the publication of the notice of proposed rulemaking in the Federal Register, or file a status report on June 22, 2018 if nothing has been filed by that date.
Contact: Justin Schwab, Deputy General Counsel, Schwab.Justin@epa.gov
- 4. SAFER CHEMICALS HEALTHY FAMILIES v. EPA (9TH Cir.) – CHALLENGE TO TSCA PRIORITIZATION RULE AND RISK EVALUATION RULE:** On November 27, 2017, the Ninth Circuit denied EPA’s motion to transfer the petitions for review of the TSCA prioritization rule to the Fourth Circuit. The court consolidated the various challenges to the TSCA framework rules and then issued a briefing schedule. Petitioners filed their opening brief on April 16, 2018.

Timing: EPA's response brief is due on July 5, 2018.

Contact: David Fotouhi, Deputy General Counsel, Fotouhi.David@epa.gov

- 5. MEXICHEM FLUOR, INC. v. EPA (D.C. CIR.) – CHALLENGE TO 2015 CLEAN AIR ACT RULE ON SUBSTITUTES FOR OZONE-DEPLETING SUBSTANCES:** On July 20, 2015, EPA published a final rule, "Protection of Stratospheric Ozone: Change of Listing Status for Certain Substitutes under the Significant New Alternatives Policy Program." The rule was challenged by Mexichem and Arkema, two chemical producers. On August 8, 2017, in *Mexichem Fluor v. EPA*, the U.S. Court of Appeals for the D.C. Circuit remanded the rule in part and vacated the rule in part.

Timing: On March 12, 2018, the D.C. Circuit received notice from the U.S. Supreme Court that the time within which to file a petition for writ of certiorari has been extended to June 25, 2018.

- **Summit, state visits will lead to national plan to manage PFAS** (Detroit Free Press, 5/22/18): “Today, I will kick off the agency’s first-of-its-kind National Leadership Summit on PFAS at EPA headquarters in Washington, D.C. Representatives from more than 35 states – including Michigan – more than 20 federal partners, several tribes, dozens of industry, non-governmental groups and other national organizations will share valuable recommendations for how EPA should deal with PFAS in communities and communicate the risks associated with PFAS. Our summit gives states, tribes and stakeholders a key voice in the EPA’s efforts. It also gives our federal partners an opportunity to share their expertise and coordinate actions.”
- **EPA adds defunct San Antonio facility site to cleanup priority list** (Fox San Antonio, 5/15/18): “The Environmental Protection Agency is working on a plan to clean up a hazardous waste site on the west side. The EPA says there are very high levels of chromium in the groundwater under a piece of land on Potranco Road about a mile outside Loop 1604. The site has been added to the EPA’s National Priority List, which is part of the Superfund program. Patillo estimates anywhere from 300 to 400 people live in the neighborhood. ‘We have two wells here in this subdivision,’ said Patillo. ‘We’re not on San Antonio water. So we were concerned this was getting down into that water system.’”
- **EPA sends air quality monitors to Hawaii Island** (West Hawaii Today, 5/17/18): “The U.S. Environmental Protection Agency has deployed emergency responders and air monitoring equipment to Hawaii Island as part of the Federal Emergency Management Agency’s response to the Kilauea volcano eruption, according to a press release from the EPA. The EPA is also sending experts to analyze public health threats from volcanic gas

emissions and to assist with data management support. The EPA is augmenting the multi-agency air monitoring efforts of acute threats to public health from the emission of volcanic gases. The agency is also working with the Hawaii Department of Health staff to evaluate locations for additional air quality monitoring stations, as well as to integrate the multi-agency air quality data collection efforts by US Geological Survey/National Park Service, County of Hawaii, state Civil Defense and state Department of Health. EPA has deployed four staff and will mobilize additional equipment and personnel to support 12 monitoring stations for sulfur dioxide, hydrogen sulfide and particulates and support DOH requests for assistance in collecting, managing and interpreting air monitoring data.”

C. Policy Updates

1. **PFAS SUMMIT:** On May 22 and 23, EPA is hosting a National Leadership Summit on per- and poly-fluoroalkyl substances (PFAS). On the first day of the summit, Administrator Pruitt presented the keynote speech to announce EPA’s four-step action plan. First, EPA will initiate steps to evaluate the need for a maximum contaminant level (MCL) for PFOA and PFOS. Second, EPA is beginning the necessary steps to consider a proposal designating PFOA and PFOS as “hazardous substances” through one of the available statutory mechanisms, including potentially CERCLA Section 102. Third, EPA is currently developing groundwater cleanup recommendations for PFOA and PFOS at contaminated sites and will complete this task by fall of this year. Fourth, EPA is taking action in close collaboration with our federal and state partners to develop toxicity values for GenX and PFBS.

Contact: Lee Forsgren, Office of Water, Forsgren.Lee@epa.gov

2. **SCIENCE TRANSPARENCY:** Consistent with Executive Orders 13777 and 13783, on April 24, 2018, Administrator Pruitt signed a proposed rule to strengthen the science used in regulations issued by EPA. The rule would ensure that the regulatory science underlying agency actions is fully transparent, and will require that the underlying scientific information be publicly available, in a manner sufficient for independent validation. This action builds upon prior EPA actions in response to government-wide data access and sharing policies, as well as the experience of other federal agencies in this space.

Timing: This week, EPA plans to publish a Federal Register notice extending the comment deadline for the proposed rule from May 30 to August 16. The same notice will announce a public hearing on July 17 at EPA Headquarters.

Contact: Richard Yamada, Office of Research and Development, Yamada.Richard@epa.gov

3. **CLEAN POWER PLAN:** Consistent with Executive Order 13783, in March 2017, Administrator Pruitt announced EPA’s review of the Clean Power Plan (CPP). In October, EPA issued a proposed rule to repeal the CPP. On December 18, EPA issued an Advanced Notice of Proposed Rulemaking (ANPRM) to open a 60-day comment period on a potential rule that would establish emission guidelines for states to establish performance standards for GHG emissions from existing Electric Generating Units (EGUs). The comment period for the proposed repeal closed on April 26.

Timing: EPA plans to send the proposed repeal to OMB in June.

Contact: Mandy Gunasekara, Office of Air and Radiation, Gunasekara.Mandy@epa.gov

- 4. DEFINITION OF “WATERS OF THE UNITED STATES”:** Consistent with Executive Order 13778, EPA and the U.S. Army Corps of Engineers are using a three-step process to review the 2015 rule defining “Waters of the United States” (WOTUS). In Step 0, the agencies extended the applicability date for the rule by 2 years. In Step 1, the agencies are withdrawing the rule and re-codifying the status quo. In Step 2, the agencies are reviewing and revising the definition consistent with this administration’s policy. In June 2017, the agencies issued the Step 1 proposed rule. On November 16, the agencies issued the Step 0 proposed rule. In January, the agencies issued the Step 0 final rule in the Federal Register. On April 11, the agencies sent a supplemental notice for the Step 1 proposed rule to OMB. **Timing:** The agencies plan to sign the supplemental notice for the Step 1 proposed rule and send a Step 2 proposed rule to OMB in May. **Contact:** Dave Ross, Office of Water, Ross.DavidP@epa.gov
- 5. RISK MANAGEMENT PROGRAM:** The original Risk Management Program (RMP) rule was issued in 1996, and has been modified 5 times. The prior administration issued a rule to amend the RMP regulations that raised concerns related to national security, inconsistencies with the Process Safety Management (PSM) standards issued by OSHA, and unnecessary burdens on local communities. In March 2017, Administrator Pruitt granted reconsideration of the RMP rule in response to petitions from two industry groups and one from a group of states, and issued a 90-day administrative stay of the rule. In June, EPA published a final rule to further delay the effective date of the rule until February 19, 2019. On March 9, EPA sent a draft reconsideration proposed rule to OMB for interagency review. The proposed rule: (1) rescinds requirements for third-party audits, STAA, root cause analysis; (2) revises the requirements for local coordination and emergency exercises; (3) rescinds requirements for information availability while strengthening provisions that require a public meeting after an incident; and (4) extends compliance dates. **Timing:** EPA plans host a public hearing on the reconsideration proposed rule on June 14. **Contact:** Veronica Darwin, Office of Land and Emergency Management, Darwin.Veronica@epa.gov
- 6. COAL COMBUSTION RESIDUALS:** In response to petitions for rulemaking from the utility industry, EPA decided in September 2017 to reconsider provisions of the final 2015 rule regulating the disposal of coal combustion residuals (CCR) as nonhazardous waste in light of the issues raised in the petitions and the Water Infrastructure Improvements for the Nation Act (WIIN Act), which includes provisions authorizing state regulatory programs and providing EPA new oversight authority. EPA issued a proposed rule to modify several provisions of the 2015 CCR rule to respond to a June 2016 voluntary remand (“remand rule”). In addition to the specific issues subject to the remand, EPA has drafted additional proposed changes to the CCR rule as part of the remand rule to address many of the issues stakeholders raised in their petitions. On March 1, 2018, Administrator Pruitt signed the first of two rules (Phases 1 and 2) that amend the 2015 CCR rule. The comment period for the proposed rule closed on April 30. **Timing:** EPA plans to send a Phase 1 partial final rule to OMB in May. **Contact:** Byron Brown, Brown.Byron@epa.gov

7. **COST-BENEFIT REFORM:** On April 10, 2018, Administrator Pruitt announced a forthcoming Advanced Notice of Proposed Rulemaking (ANPRM) to consider proposing regulations on cost-benefit reform. Under the Obama administration, EPA used questionable methods, like the social cost of greenhouse gases and relying on “co-benefits,” to inflate the purported benefits of its regulations and underestimate the true costs (as in the case of the Clean Power Plan). Additionally, several EPA statutes refer to the calculation of costs and benefits, but implementation has been inconsistent. This has led to EPA creating uncertainty for the regulated community. On April 11, EPA sent the ANPRM to OMB.
Timing: EPA plans to issue the ANPRM on June 7, 2018.
Contact: Brittany Bolen, Office of Policy, Bolen.Brittany@epa.gov
8. **MID-TERM EVALUATION (MTE) OF GREENHOUSE GAS STANDARDS FOR LIGHT-DUTY VEHICLES:** On April 2, 2018, Administrator Pruitt signed the new Midterm Evaluation (MTE) for the GHG emissions standards established for light-duty vehicles model years 2022-2025. The final determination found that, in light of recent data, the current standards are not appropriate and should be revised.
Timing: Administrator Pruitt announced the start of a joint process with the National Highway Traffic Safety Administration (NHTSA) to develop a notice and comment rulemaking to set more appropriate GHG emissions standards and Corporate Average Fuel Economy (CAFE) standards. The agencies plan to issue a joint proposed rule in the early summer.
Contact: Bill Wehrum, Office of Air and Radiation, Wehrum.Bill@epa.gov
9. **OIL AND GAS NSPS:** Consistent with Executive Order 13783, in April 2017, Administrator Pruitt announced EPA’s reconsideration of several aspects of the 2016 oil and gas New Source Performance Standards (NSPS). On March 1, 2018, EPA amended two provisions of the 2016 oil and gas NSPS to address immediate concerns with the fugitive emission requirements. On April 27, EPA sent the reconsideration proposed rule to OMB.
Timing: EPA plans to propose a technical package as part of the reconsideration of the 2016 oil and gas NSPS before it proposes a substantive policy package in June 2018.
Contact: Mandy Gunasekara, Office of Air and Radiation, Gunasekara.Mandy@epa.gov
10. **TSCA PROBLEM FORMULATION DOCUMENTS:** Under the amended Toxic Substances Control Act (TSCA), EPA is required to release problem formulation documents that describe exposure scenarios and populations that will be included in risk evaluations for various chemicals.
Timing: Within the next few weeks, EPA will release for public comment the draft problem formulations for the first 10 chemicals undergoing risk evaluations: 1, 4 Dioxane, 1-Bromopropane, Asbestos, Carbon Tetrachloride, Cyclic Aliphatic Bromide Cluster (HBCD), Methylene Chloride, N-Methylpyrrolidone, Pigment Violet 29, Trichloroethylene, and Tetrachloroethylene.
Contact: Nancy Beck, Office of Chemical Safety and Pollution Prevention, Beck.Nancy@epa.gov

11. TSCA – LAUTENBERG ACT 2ND YEAR ANNIVERSARY: Under the amended TSCA, EPA is required to meet more milestones which are coming due for its second anniversary of enactment, June 22, 2018. Those new milestones are the following:

- Mercury Use Reporting Rule: EPA will finalize reporting deadlines and requirements to assist in updating the inventory of mercury supply, use, and trade in the U.S.
- Alternative Animal Testing Strategy: EPA will issue a strategy to promote the development of alternative test methods to reduce vertebrate animal testing. On March 7, 2018, EPA released the draft strategy for public comment.
- Guidance on Generic Names: EPA will issue guidance regarding the determination of structurally descriptive generic names for chemicals.
- Policy on Unique Identifiers: EPA will issue a policy for assigning unique identifiers to chemicals and applying those identifiers to other information concerning the same chemical.
- Guidance on Confidential Business Information: EPA will issue guidance on expanding CBI access to states, tribes, and local governments; health and environmental professionals; and first responders.

Contact: Nancy Beck, Office of Chemical Safety and Pollution Prevention,
beck.nancy@epa.gov.

12. TSCA – LAUTENBERG ACT FEES: Under the amended TSCA, EPA is required to institute new fees on the chemical manufactures to fund the approval program for new chemicals. On February 8, 2018, EPA issued a proposed Fees Rule to provide funding for Lautenberg Act implementation, including risk evaluations and reviewing CBI.

Timing: The original comment deadline for the fees rule was extended from April 27 to May 24. EPA will continue to work with OMB to finalize the new fees rule. The President's Budget and the Appropriations Act propose changes to the programs' budget anticipating this new fee structure.

Contact: Nancy Beck, Office of Chemical Safety and Pollution Prevention,
beck.nancy@epa.gov.

13. DUST-LEAD AND LEAD-BASED PAINT: In 2009, EPA was petitioned to lower dust-lead hazard standards and modify the definition of lead-based paint. On December 27, 2017, the Ninth Circuit granted a petition for writ of mandamus to compel EPA to issue a proposed rule by March 27, 2018. On March 26, EPA received a 90-day extension to issue a proposed rule.

Timing: EPA plans to send a proposed rule to OMB in May.

Contact: Nancy Beck, Office of Chemical Safety and Pollution Prevention,
Beck.Nancy@epa.gov

14. SUPERFUND: The Superfund National Priorities List (NPL) was codified as Appendix B to the National Oil and Hazardous Substances Pollution Contingency Plan (NCP) in 1983. The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA, commonly known as Superfund) requires that EPA maintain the NPL and update it at least annually. On May 15, EPA signed an NPRM adding 3 sites to the NPL (Donnelsville, OH; Penuelas, Puerto Rico; Grand Prairie, TX) and a final rule adding 6 sites (Hockessin, DE; Spencer, IN; Spring Park, MN; Cheraw, SC; Dallas, TX; San Antonio, TX).

Contact: Nick Falvo, Falvo.Nick@epa.gov

D. Grants/Loans

1. NEW WIFIA LOANS

- 2. \$285,744 TO THE COALITION TO RESTORE COASTAL COALITION:** These funds will help restore or enhance coastal swamp forest habitat near the city of New Orleans and provide volunteer opportunities that are accessible and accommodating to urban communities. This project will engage approximately 300 volunteers in adding 5,000 or more native swamp forest trees to restore or enhance at least 25 acres of cypress-tupelo swamp habitat.

Timing: EPA will issue a press release on May 23.

- 3. \$267,100 TO THE ARKANSAS DEPARTMENT OF HEALTH:** The agreement assists the state of Arkansas to develop and implement a public water system supervision program to adequately enforce the National Primary Drinking Water Regulations and the requirements of the Safe Drinking Water Act. Specific activities include: developing state drinking water regulations no less stringent than the federal regulations, maintaining an inventory of drinking water systems, managing information on public water systems, ensuring that public participation occurs regarding drinking water systems, providing technical assistance to public water systems and enforcing drinking water regulations.

Timing: EPA will issue a press release on May 30.

- 4. \$321,521 TO THE ARKANSAS DEPARTMENT OF ENVIRONMENTAL QUALITY:** This agreement will provide assistance to the Arkansas Department of Environmental Quality (ADEQ) in its efforts to implement air pollution control programs throughout the State of Arkansas, including continuing development and implementation of stationary source regulations; continuing promulgation and update of enhanced mobile source regulations; improvement of emission inventories for modeling simulations; and to operate a monitoring network that collects air data. These activities are to improve and maintain the public's air quality.

Timing: EPA will issue a press release on May 30.

- 5. \$821,775 TO THE ARKANSAS DEPARTMENT OF ENVIRONMENTAL QUALITY:** This agreement provides funding to the State of Arkansas to carry out its program to maintain, protect, and improve the water quality of its rivers, lakes, streams, groundwater, and other waterbodies. The environmental benefits of this program include preventing degradation of unimpaired waterbodies and reducing the number of impaired waterbodies in the state. Activities include: monitoring, standard-setting, TMDLs, surface and ground water enforcement and compliance activities and other water quality-related activities.

Timing: EPA will issue a press release on May 30.

- 6. \$2,170,000 TO THE NEW YORK STATE DEPARTMENT OF HEALTH:** The agreement assists the New York State Department of Health in the implementation of its

program to oversee and enforce drinking water programs and systems across the state. This includes: conducting annual reviews and sanitary surveys at all public water systems, providing technical project assistance, enforcing compliance with safe drinking water regulations.

Timing: EPA will issue a press release on May 31.

7. **\$35,397 TO THE DEPARTMENT OF PUBLIC HEALTH FOR DAYTON & MONTGOMERY COUNTY, OHIO:** The Regional Air Pollution Control Agency (RAPCA) will implement a comprehensive Air Pollution Control Program in Clark, Darke, Greene, Miami, Montgomery, and Preble counties. RAPCA will improve air quality by implementing measures to reduce stationary, area and mobile sources of air pollution in the RAPCA service counties with the goal of meeting the national ambient air quality standards. In addition, RAPCA will address air toxics, and support the State's air quality monitoring, enforcement, and permitting efforts.
Timing: EPA will issue a press release on June 4.
8. **\$45,865 TO THE HAMILTON COUNTY BOARD OF COMMISSIONERS (OHIO):** Hamilton County will implement a comprehensive Air Pollution Control Program in the County's program area. The recipient will improve air quality by implementing measures to reduce stationary, area and mobile sources of air pollution in Hamilton County with the goal of meeting the national ambient air quality standards. In addition, the recipient will address air toxics, and support the State's air quality compliance, enforcement, and permitting efforts.
Timing: EPA will issue a press release on June 4.
9. **\$43,150 TO THE OHIO DEPARTMENT OF NATURAL RESOURCES:** The Ohio Department of Natural Resources will utilize federal funding to conduct activities related to protecting underground water sources. Responsibilities and anticipated activities include permitting for conventional Class II injection wells, witnessing all cementing operations for Class II and Class III injection wells, inspecting Class II and Class III injection wells, maintaining the Underground Injection Control (UIC) enforcement database, and ensuring that UIC enforcement actions are completed in a timely manner.
Timing: EPA will issue a press release on June 4.
10. **\$149,600 TO THE ST. REGIS MOHAWK TRIBE (NEW YORK):** This agreement provides ongoing funding to the Saint Regis Mohawk Tribe to conduct activities that are not assignable to specific sites, but will support the recipient's site-specific hazardous waste response program. This includes training, development of non-site-specific plans and procedures, and the acquisition of equipment and supplies.
Timing: EPA will issue a press release on June 6.
11. **\$40,422 TO THE BAY MILLS INDIAN COMMUNITY (MICHIGAN):** This is a Performance Partnership Grant (PPG) to the Bay Mills Indian Community (BMIC) consisting of funds for the Clean Water Act (CWA) Section 106 and Section 319. This award will enable BMIC to build tribal environmental capacity, and implement the water resource and nonpoint source programs. These activities will protect human health and the environment.

Timing: EPA will issue a press release on June 11.

E. Legal Actions

- 1. STATE OF WEST VIRGINIA, ET AL. v. EPA, NO. 15-1363 (D.C. CIR.) – CLEAN POWER PLAN – CONTINUED ABEYANCE.** On April 28, 2016, the *en banc* court issued an order holding the litigation challenging the Clean Power Plan in abeyance and instructing the parties to file briefs on the question of whether the case should remain held in abeyance or whether the court should remand the rule to the Agency. On May 15, 2017, DOJ requested that the court hold the case in abeyance pending EPA’s review of the rule. The rule’s supporters have asked the court to remand the rule to EPA. On August 8, 2017, the D.C. Circuit ordered that the case remain in abeyance. The court directed EPA to continue to file status reports. The case remains in abeyance, and EPA continues to file status reports.
Timing: EPA filed its most recent status report on May 2, and asked the court to continue to hold the case in abeyance. On May 9, parties filed notices opposing EPA’s request for continued abeyance.
Contact: Erik Baptist, Senior Deputy General Counsel, baptist.erik@epa.gov.
- 2. OHIO VALLEY ENVIRONMENTAL COALITION v. PRUITT, NO. 17-1430 (4TH CIR.) – “CONSTRUCTIVE SUBMISSION” OF “NO TMDLS” BY WEST VIRGINIA – AWAITING ACTION BY THE COURT.** In February 2017, the District Court held that EPA must approve and/or disapprove West Virginia’s “constructive submission” of no biological impairment/ionic toxicity Total Maximum Daily Loads (TMDLs) for 573 water bodies in the State. In June 2017, EPA and West Virginia negotiated a Memorandum of Agreement, which includes parameters under which the state will submit TMDLs for these water bodies. Relying on this agreement, EPA “conditionally approved” the submission of “no TMDLs,” conditioned on the state meeting its obligations under the MOA, subject to the outcome of DOJ’s appeal of the district court’s determination in the Fourth Circuit. The case is now fully briefed. Various state-government and industry associations have filed *amicus* briefs in support of EPA’s position. On appeal, EPA is arguing that (1) plaintiffs lacked standing to sue regarding all but 50 of the contested waters; (2) the district court misapplied the “constructive submission” doctrine to West Virginia, a state with a robust TMDL program that is working to complete the TMDLs at issue; and (3) the district court’s decision was based on flawed factual assumptions about West Virginia’s TMDL development efforts. Oral argument occurred on May 8, 2018 in Richmond, Virginia.
Timing: Awaiting decision from the court.
Contact: David Fotouhi, Deputy General Counsel, fotouhi.david@epa.gov.
- 3. AIR ALLIANCE HOUSTON, ET AL. v. EPA, NO. 17-1155 (D.C. CIR.)—TWO-YEAR DELAY OF EFFECTIVE DATE IN RISK MANAGEMENT PROGRAM AMENDMENTS RULE — AWAITING ACTION BY THE COURT.** Petitioners, in consolidated cases, seek review of EPA’s final action titled “Accidental Release Prevention Requirements: Risk Management Programs Under the Clean Air Act; Further Delay of Effective Date.” at 82 Fed. Reg. 27,133 (June 14, 2017). Petitioners requested expedited consideration and summary vacatur or a stay of the delay rule. On August 30, 2017, the court denied the motion to stay or summarily vacate the rule. The court granted the motion to

expedite proceedings and ordered the court to set the case for oral argument. Briefing concluded on January 31, 2018. On March 9, 2018, EPA submitted to OMB for interagency review a proposed rule that, if finalized, would change certain provisions of the RMP Amendments Rule. Oral argument took place on March 16, 2018. On March 23, the Court ordered EPA to submit a comprehensive list of pre-2017 examples where any federal agencies have issued final notice-and-comment regulations (i) that change the effective or compliance dates for an earlier final regulation and (ii) that explicitly justify the change to the effective or compliance dates because the agency is reconsidering its earlier final regulation. EPA's response to the March 23 order was filed on April 6, 2018, and Petitioners' filed a response on April 16. EPA filed a 28(j) letter on May 17, 2018.

Timing: Awaiting action by the court.

Contact: David Fotouhi, Deputy General Counsel, fotouhi.david@epa.gov.

4. **SOUTHWESTERN ELECTRIC POWER CO. v. EPA, NO. 15-60821 (5TH CIR.)—2015 STEAM ELECTRIC ELG RULE—BRIEFING COMPLETED.** This is a challenge to EPA's 2015 steam electric effluent limitations guidelines rule. The case was held in abeyance while EPA determined which provisions of the rule it intends to reconsider. On August 14, 2017, DOJ asked the court to sever and hold in abeyance all proceedings relating to the portions of the 2015 Rule concerning the new, more stringent BAT limitations and PSES applicable to (1) bottom ash transport water, (2) FGD wastewater, and (3) gasification wastewater. The court granted DOJ's motion. Under the order, EPA will file status reports every 90 days. Industry petitioners will not press their claims in light of EPA's decision to reconsider parts of the rule. Environmental petitioners are proceeding with their claims against the 2015 rule. EPA filed a brief on claims not held in abeyance on December 15, 2017. Briefing completed on February 22, 2018. EPA filed status reports in November of 2017 as well as February and April of 2018. Oral argument has not yet been scheduled.
- Timing:** The parties are awaiting the scheduling of oral argument by the Court.
- Contact:** David Fotouhi, Deputy General Counsel, fotouhi.david@epa.gov.

5. **JULIANA v. UNITED STATES, NO. 15-01517 (D. OR.)/NO. 17-71692 (9TH CIR.). MANDAMUS PROCEEDINGS – CLIMATE-CHANGE LITIGATION WITH CONSTITUTIONAL CLAIMS – DISTRICT COURT PROCEEDING.** This case is a broad-based challenge alleging that EPA and the US Government allowed excessive CO2 emissions from burning fossil fuel that have contributed to climate change. The district court denied our motion to dismiss. On June 8, 2017, the district court denied our motion for interlocutory appeal and our request to stay the proceedings. On June 9, 2017, we filed petition for mandamus with the Ninth Circuit seeking the same relief. On March 7, 2018, the 9th Circuit denied the petition for a writ of mandamus. On March 16, all Plaintiffs filed a motion for a hearing status conference. The District Court held a status conference via telephone on March 26, 2018, and a hearing on April 12, 2018. On May 9, DOJ filed a motion for judgment on the pleadings, moved for a protective order, and moved to stay discovery. The District Court has set various dates related to trial.
- Timing:** DOJ in conjunction with EPA and other named federal agency defendants are considering options for further review of the district court's action at this time. Oral argument regarding scheduling is set for May 23 via telephonic conference. A status conference is set for June 6, 2018 in Oregon.

Contact: Justin Schwab, Deputy General Counsel, schwab.justin@epa.gov.

6. **AMERICAN LUNG ASSOCIATION v. EPA, NO. 17-1172 (D.C. CIR.) – NOW-WITHDRAWN OZONE DESIGNATION DELAY – AWAITING ACTION BY THE COURT.** This is a Clean Air Act petition for review of EPA’s June 28, 2017 Federal Register notice extending the deadline for area designations for the 2015 ozone NAAQS. On August 3, 2017, EPA published a Federal Register notice withdrawing the June 28 notice and clarifying that, going forward, it will exercise its designation-delay authority for those areas where technical, informational, and methodological questions make it impossible to designate by the statutory deadline. Challengers moved for summary vacatur of the deadline extension or, in the alternative, a stay of the extension pending judicial review of the merits. On August 3, 2017, DOJ moved the court to dismiss the challenge as moot, and challengers opposed. On October 6, 2017, the court granted the challengers’ alternative request to hold the litigation in abeyance and deferred consideration of the remaining motions pending further order of the court. On November 8, 2017, EPA filed a 28(j) letter informing the court of a final rule which made air quality designations for some areas. EPA then filed a status report on January 12, 2018 wherein EPA identified with “precision and specificity” when the Agency plans to file a final rule establishing air quality designations for the 2015 ozone NAAQS for areas that remain undesignated. EPA filed a Status Report on May 15, 2018 detailing the status of all final designations for the 2015 ozone national ambient air quality standards. (EPA finalized designations for all areas except San Antonio on April 30, pursuant to a court order entered in another case. San Antonio must be designated by July 17.)

Timing: The court has deferred action on pending motions.

Contact: Justin Schwab, Deputy General Counsel, schwab.justin@epa.gov.

7. **NATIONAL PARKS CONSERVATION ASSOCIATION v. EPA, NO. 11-cv-1548 (D.D.C.) & SIERRA CLUB v. EPA, NO. 10-cv-1541 (D.D.C.) – TEXAS REGIONAL HAZE & INTERSTATE POLLUTION TRANSPORT – CASE STAYED.** Under two consent decrees entered in separate deadline/mandatory duty suits under the previous administration, EPA must either issue a Federal Implementation Plan (FIP) or approve a State Implementation Plan (SIP), to satisfy the Clean Air Act’s requirements for Texas’s obligations under (1) the Best Available Retrofit Technology (BART) prong of the Regional Haze program (the *National Parks* case), and (2) the “good neighbor” provision addressing interstate pollution transport (the *Sierra Club* case). On August 18, 2017, EPA filed motions with both courts requesting extension of the consent decree deadlines to the end of 2018, attaching a Memorandum of Agreement between EPA and the state environmental agency, as well as a letter from Governor Abbott, laying out Texas’s commitment to develop and submit for EPA’s approval a SIP establishing an intrastate trading program to satisfy both the BART/haze requirements and the interstate transport requirements. The district court denied the request for a long-term extension. EPA issued a FIP on September 29, 2017. Plaintiffs on October 13, 2017 filed a statement of position and motion to enforce the consent decree, arguing that the FIP did not satisfy EPA’s consent decree obligations and requesting that the court order EPA to finalize within 30 days the previous administration’s proposed source-by-source BART FIP. DOJ filed a response and a motion to terminate the consent decree on October 25, 2017. This issue is now fully briefed. On March 6, 2018, the Court issued a Minute Order staying this case. The Court will hold in abeyance any decision on whether to

enforce or terminate the consent decree pending the resolution of plaintiffs' petition for reconsideration of the Rule promulgated by the EPA on October 17, 2017 and/or plaintiffs' appeal of that Rule in the Fifth Circuit. The parties filed joint status reports on May 3 and May 11, 2018.

Timing: The Court will continue the stay in this case. EPA must notify the Court within a week of the publication of the notice of proposed rulemaking in the Federal Register, or file a status report on June 22, 2018 if nothing has been filed by that date.

Contact: Justin Schwab, Deputy General Counsel, schwab.justin@epa.gov.

8. UTILITY SOLID WASTE ACTIVITIES GROUP V. EPA, NO. 15-1219 (D.C. CIR.) – CHALLENGE TO COAL COMBUSTION RESIDUAL (CCR) RULE – AWAITING DECISION.

Industry petitioners and environmental groups challenged EPA's final rule entitled "Hazardous and Solid Waste Management System; Disposal of Coal Combustion Residuals from Electric Utilities," 80 Fed. Reg. 21,302 (April 17, 2015). On May 12, 2017, USWAG submitted a Petition to reconsider provisions of the CCR Rule and to hold in abeyance the current challenge to the CCR Rule. The Administrator sent a letter to these petitioners on September 13, 2017 indicating that the Agency would reconsider the rule in light of the issues raised in the petitions and the Agency's new authority under the Water Infrastructure Improvements for the Nation ("WIIN") Act. On September 18, 2017, DOJ filed a motion to, among other things, hold the case in abeyance in light of this impending reconsideration. The court deferred ruling on EPA's request for abeyance, delayed oral argument, directed EPA to file a status report specifying which portions of the rule the agency intends to reconsider and the specific timeline for reconsideration, and directed the parties to file supplemental briefing addressing the relevance to this case of the WIIN Act. On November 7, 2017, DOJ filed a motion for voluntary remand of six provisions of the CCR rule that EPA intends to reconsider. EPA filed a status report regarding reconsideration on November 15, 2017, and oral argument occurred on November 20, 2017. Since that time, several 28(j) letters have been filed.

Timing: EPA is awaiting a decision.

Contact: David Fotouhi, Deputy General Counsel, fotouhi.david@epa.gov.

9. MASSACHUSETTS RIVERS ALLIANCE v. EPA, NO. 17-cv-11825 (D. MASS.)—APA 705 STAY OF MASS. MS4 PERMIT—MOTION FOR SUMMARY JUDGMENT FILED.

Massachusetts Rivers Alliance and nine other environmental groups filed a complaint against the EPA in U.S. District Court in Massachusetts with regards to EPA's June 29, 2017 action under Section 705 of the Administrative Procedure Act ("APA") to postpone the effective date of the Massachusetts small MS4 (municipal separate storm sewer system) general permit by one year, from July 1, 2017 to July 1, 2018. Multiple parties had already challenged the general permit in the First Circuit and the D.C. Circuit Court of Appeals; the cases have been transferred and consolidated in the D.C. Circuit, and we are now awaiting its decision on whether to hold those cases in abeyance indefinitely to allow for the parties to pursue court-sponsored alternative dispute resolution. Briefing concluded in January of 2018.

Timing: Awaiting action from the Court.

Contact: David Fotouhi, Deputy General Counsel, fotouhi.david@epa.gov.

10. MARYLAND v. PRUITT, NO. 17-2873 (D. MD.)— FAILURE TO TAKE ACTION ON MARYLAND’S CAA SECTION 126 PETITION—BRIEFING COMPLETE.

The State of Maryland, through the Maryland Department of the Environment, filed suit against the EPA alleging a failure to take mandatory duties associated with the State’s CAA Section 126 Petition. That petition asked the EPA to issue a finding that 36 electric generating units located in Indiana, Kentucky, Ohio, Pennsylvania, and West Virginia are in violation of the prohibition of 42 U.S.C. § 7410(a)(2)(D)(i), commonly referred to as the “good neighbor provision” (i.e., that emissions from these sources are contributing to air pollution issues in Maryland). The complaint alleges the agency failed to hold a hearing and failed to issue a decision within the statutory time limits.

Timing: The case is fully briefed. The court will either rule on the pleadings or schedule a hearing.

Contact: Justin Schwab, Deputy General Counsel, schwab.justin@epa.gov.

11. SAFER CHEMICALS HEALTHY FAMILIES v. EPA, No. 17-72260 (9TH Cir.) – CHALLENGE TO TSCA PRIORITIZATION RULE AND RISK EVALUATION RULE – RESPONSE BRIEF DUE.

On November 27, 2017, the Ninth Circuit denied EPA’s motion to transfer the petitions for review of the TSCA prioritization rule to the Fourth Circuit. The court consolidated the various challenges to the TSCA framework rules and then issued a briefing schedule. Petitioners filed their opening brief on April 16, 2018.

Timing: EPA’s response brief is due on July 5, 2018.

Contact: David Fotouhi, Deputy General Counsel, fotouhi.david@epa.gov.

12. CLEAN AIR COUNCIL V. UNITED STATES, No. 2:17-cv-04977 (E.D. Pa.)— CLIMATE-CHANGE LITIGATION WITH CONSTITUTIONAL CLAIMS – MOTION TO DISMISS BRIEFING.

The Clean Air Council and two minors represented by their guardians filed a complaint in the District Court for the Eastern District of Pennsylvania against the United States, President Trump, the EPA (and its Administrator), and the Department of Energy (and its Secretary), alleging that those entities have engaged in or initiated “rollbacks” of several initiatives related to climate change and the electric power sector. According to the plaintiffs, these actions violate two aspects of the U.S. Constitution: (1) A fundamental right to “a life-sustaining climate system and an atmosphere and oceans that are free from dangerous levels of anthropogenic CO₂,” embodied in the Fifth and Ninth Amendments; and (2) a federal “public trust doctrine” that is rooted in both common law and the Fifth and Ninth Amendments. The plaintiffs seek (1) declaratory relief that the federal defendants “cannot effectuate or promulgate any rollbacks” that exacerbate “the life-threatening effects of climate change based on junk science,” in such a way that would violate those alleged constitutional rights, as well as (2) any “other and further relief” the court deems just and proper. DOJ’s motion to dismiss Plaintiffs’ Amended Complaint has been fully briefed.

Timing: The pretrial conference date is yet to be determined. On May 3, 2018, the Court denied DOJ’s original motion to dismiss as moot. Briefing on DOJ’s supplemental motion to dismiss (filed per the amended complaint) is still ongoing.

Contact: Justin Schwab, Deputy General Counsel, schwab.justin@epa.gov.

13. STATE OF NEW YORK V. PRUITT, ET AL., No. 18-1030 (S.D.N.Y.); NATURAL RESOURCES DEFENSE COUNCIL, INC., ET AL. V. EPA, ET AL., No. 18-1048 (S.D.N.Y.); SOUTH CAROLINA COASTAL CONSERVATION LEAGUE, ET AL., V. PRUITT, ET AL., No. 18-330 (D.S.C.) - CHALLENGES TO THE APPLICABILITY DATE RULE FOR THE WATERS OF THE UNITED STATES RULE –MOTIONS TO TRANSFER PENDING.

To date, EPA has received three challenges to the Army Corps and EPA's rule adding an applicability date to the 2015 Rule defining "waters of the United States" under the Clean Water Act (CWA). Plaintiffs are seeking an order vacating the rule, claiming that the agencies promulgated the rule in excess of statutory authority and in violation of the Administrative Procedure Act (APA) and CWA. The complaints alleged that the agencies failed to consider or provide a meaningful opportunity for public comment on the implications of suspending the 2015 Rule and reinstating the pre-2015 regulatory scheme. Moreover, the complaints allege that the rationale for the rule is not supported by the record, and that the agencies acted arbitrarily and capriciously by, among other things, failing to consider how adding an applicability date would meet the CWA's objectives. On February 14 and 15, 2018 respectively, DOJ filed motions to transfer in all three cases. The contested motions each ask that the respective case be transferred to the Southern District of Texas. The Southern District of New York has not yet ruled on these motions to transfer. The District Court in South Carolina denied EPA's motion to transfer. On May 1 and May 3, Plaintiffs filed motions for summary judgment in the two Southern District of New York cases. DOJ filed an answer in all cases on May 18.

Timing: In the Southern District of New York, EPA's opposition to the motion for summary judgment is due 30 days from the date of the Court's opinion on the pending motions to transfer.

Contact: David Fotouhi, Deputy General Counsel, fotouhi.david@epa.gov.

14. MEXICHEM FLUOR, INC. v. EPA, No. 15-1328 (D.C. CIR.) – CHALLENGE TO 2015 CLEAN AIR ACT RULE ON SUBSTITUTES FOR OZONE-DEPLETING SUBSTANCES – PETITIONS FOR REHEARING DENIED.

On July 20, 2015, EPA published a final rule, *"Protection of Stratospheric Ozone: Change of Listing Status for Certain Substitutes under the Significant New Alternatives Policy Program."* The July 2015 Final Rule changed the listings of a number of hydrofluorocarbon (HFCs) from acceptable to unacceptable for use in some refrigeration, aerosol, and foam blowing uses. The rule was challenged by Mexichem and Arkema, two chemical producers. On August 8, 2017, in *Mexichem Fluor v. EPA*, the U.S. Court of Appeals for the D.C. Circuit remanded the rule in part and vacating the rule to the extent it requires anyone who is already using alternatives to ozone-depleting substances (ODS) (e.g., HFCs) in lieu of ODS to switch to another substance. The Court upheld the SNAP rule to the extent that it applies to anyone who is still using an ODS from moving into the HFCs whose listings were changed. Several parties petitioned the D.C. Circuit to rehear the case. On January 26, 2018, the Court denied those rehearing requests.

Timing: On March 12, 2018, the D.C. Circuit received notice from the U.S. Supreme Court that the time within which to file a petition for writ of certiorari has been extended to June 25, 2018.

Attachments: EPA 30-Day Look Ahead 05.21.2018.docx

Importance: High

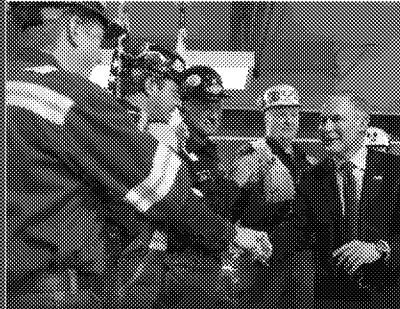

Lee, I need you to as soon as possible provide us with the WIFIA announcements coming between now and the end of July to add to the attached document.

Will, I have added some edits. Please use the attached.

Will, moving forward we need to shorten the cases substantially. They really don't change and could be summed up in just a few lines. Let me know before you send to WH Cabinet affairs. Thanks.

EPA Year in Review 2017-2018

**EPA'S
BACK-TO-BASICS
AGENDA**

- ✓ Protecting the **environment**
- ✓ Engaging with partners
- ✓ Sensible regulations for **economic growth**

E. SCOTT PRUITT
ADMINISTRATOR

Friends and Colleagues –

We have been hard at work enacting President Donald Trump's agenda during my first year as EPA Administrator. His courage and leadership have been key to our success. From his decision to exit the Paris Accord to his executive order empowering EPA to review and rescind the Clean Power Plan, the President is delivering on his promises and getting results for the American people.

We are following his lead. Days after being sworn in, I addressed EPA's employees and committed to listening and working cooperatively with states and stakeholders to tackle today's environmental challenges. In my first year, I traveled to 30 states and U.S. territories and met with 34 bipartisan governors and over 350 stakeholder groups. We are taking important actions in collaboration with – not opposition to – the states.

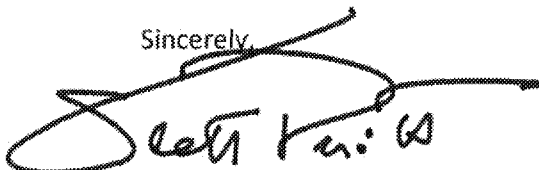

I committed to refocusing the Agency on its core mission. Today, we are focusing on cleaning up contaminated lands, improving air quality and rebuilding America's water infrastructure. Finally, I promised that we would restore the rule of law. We are rescinding and replacing the burdensome Waters of the U.S. rule, and we ended the harmful and wrongful practice of "sue and settle."

These are just a few examples of my commitment to fulfilling these promises. This report details EPA's accomplishments and what they mean for the American people and the environment. The sum of these actions is monumental: **In year one, EPA finalized 22 deregulatory actions, saving Americans more than \$1 billion in regulatory costs.**

We have made tremendous progress in year one to implement the President's vision. EPA today is more efficient, more effective and more transparent in carrying out its all-important task of protecting human health and the environment. Much work remains to be done though. We will help repair our nation's crumbling water infrastructure; we will continue to clean up and revitalize more Superfund sites; and we will work with states to continue to improve air quality. Thanks to our reforms and improvements in year one, we now have the framework and policies in place to tackle these problems head on.

I look forward to working together to accomplish even more progress in 2018.

Sincerely,

E. Scott Pruitt

Accomplishments

- ✓ Halted Job-Killing, Burdensome, Duplicative Regulations
- ✓ Eliminated Agency Backlogs, Improved Efficiency
- ✓ Increased Transparency, Accountability
- ✓ Returned to Cooperative Federalism
- ✓ Restored the Rule of Law, Process
- ✓ Improved Compliance and Assistance

In one year, EPA Administrator Scott Pruitt spearheaded 22 deregulatory actions that could save the American people more than \$1 billion in regulatory costs.

By the Numbers:

- ✓ IMPLEMENTING EXECUTIVE ORDERS (E.O.): EPA quickly acted on President Donald Trump's E.O. to review the 2015 definition of "Waters of the U.S.," President Trump's Energy Independence E.O. to propose a repeal of the so-called "Clean Power Plan," and President Trump's "Regulatory Reform" E.O. 13777 by finalizing two deregulatory actions for each regulatory action – with ZERO net costs to the U.S. economy.
- ✓ REGULATORY REFORM: 22 deregulatory actions were finalized, which could save more than \$1 billion in regulatory costs; EPA also initiated work on an additional 44 deregulatory actions and announced the reconsideration of over a dozen overreaching and burdensome regulations.
- ✓ OUTREACH: Administrator Pruitt consulted with 95 bipartisan members of Congress, 34 bipartisan governors, visited 30 states and U.S. territories, and met with over 350 stakeholder groups.
- ✓ AIR: EPA acted on 322 State Implementation Plans (SIPs) and turned one Federal Implementation Plan (FIP) into a SIP each month since March 1, 2017.
- ✓ WATER: 3,000 Total Maximum Daily Loads were approved and EPA focused on the priority water bodies selected by states. EPA also: cut the amount of time it took to review state water quality standards in half (from 120 days to 60); committed \$25 million in water infrastructure loans; disbursed \$8.9 billion in State Revolving Funds to improve our nation's water quality; and awarded \$100 million to Flint, Michigan for water infrastructure upgrades.
- ✓ LAND: Seven contaminated sites were eliminated, substantially or entirely, from the National Priorities List (NPL) of contaminated sites; only two sites were removed the previous year. EPA also awarded \$60 million in Brownfields cleanup grants to local communities.
- ✓ CHEMICALS: 600 new chemical submissions were stuck in the Agency's backlog as of January 2017; EPA cleared the backlog and ensured that all new chemicals coming to market received a safety determination within about 90 days.
- ✓ ENFORCEMENT: In FY17, \$1.6 billion was collected in administrative and civil judicial penalties, higher than any of the previous ten years, other than FY16, which included one \$5.7 billion action taken. EPA also celebrated an increase in the value of commitments by private parties to clean up land to more than \$1.2 billion, an increase in the total of criminal fines, restitution and mitigation to \$2.98 billion, and an increase in the value of actions to improve compliance to nearly \$20 billion.

Introduction

U.S. Environmental Protection Agency (EPA) plays a vital role in American society. It is a role that is clearly defined by Congress, its statutes, and – from time to time – the courts. EPA most-effectively protects the environment and human health when it operates within the bounds of its authority. However, when EPA strays outside that role, it encumbers both environmental protections and economic growth.

At the outset of EPA Administrator Scott Pruitt's tenure, he set forth a "back-to-basics agenda" centered on returning EPA to its proper role via three objectives:

- 1) **Refocusing the Agency back to its core mission**
- 2) **Restoring power to the states through cooperative federalism**
- 3) **Adhering to the rule of law and improving Agency processes**

In one year, EPA has made tremendous environmental progress in line with these goals, and it shows that the Agency can be both pro-environment and pro-growth.

The combination of a refocused Agency, cooperative federalism, and rule of law has unleashed new optimism throughout the nation. Americans can trust that environmental hazards will be addressed quickly and thoroughly; states and industry will be treated as partners, not opponents; and regulations will provide clarity, not confusion. The results are a cleaner, safer, and stronger America for all.

Core Mission

The first of the three pillars of Administrator Pruitt's "back-to-basics agenda" is to refocus the Agency on its core mission: clean air, land,

and water. EPA was founded in 1970 in order to consolidate the federal government's environmental efforts under one roof and better enforce the environmental laws passed by Congress. In recent years, however, EPA expanded its authority and jurisdiction into areas outside its core mission. In the process, central responsibilities of the Agency took a backseat to ideological crusades, allowing some environmental threats – like cleaning up toxic land – to go unaddressed. Administrator Pruitt returned the Agency to its core mission and prioritized issues at the heart of EPA's purpose: ensuring access to clean air and water, cleaning up contaminated lands and returning them to communities for reuse, improving water infrastructure, and ensuring chemicals entering the marketplace are reviewed for safety. In just one year, EPA made immense progress on these fronts, and the American people have seen real, tangible results.

AIR: Improve Air Quality

Clean Power Plan

The Clean Power Plan (CPP) appears to have far exceeded the Agency's statutory authority, while imposing massive regulatory burdens on affordable energy for hardworking American families. The U.S. Supreme Court issued an unprecedented stay of the rule in 2016. After calls for a review in President Trump's Energy Independence Executive Order, Administrator Pruitt proposed a repeal of the CPP on October 10, 2017. EPA's proposed action on CPP is estimated to save the U.S. economy up to \$33 billion in avoided compliance costs.

As part of the ongoing repeal process, the Agency heard directly from stakeholders and citizens most impacted by the rule, including a listening session in Charleston, West Virginia – the heart of coal country. Three additional listening sessions took place in Kansas City, Missouri; San Francisco, California; and Gillette, Wyoming.

"Consistent with our commitment to the rule of law, we've already set in motion an assessment of the previous administration's questionable legal basis in our proposed repeal of the Clean Power Plan. With a clean slate, we can now move forward to provide regulatory certainty. It ensures adequate and early opportunity for public comment from all stakeholders about next steps the Agency might take to limit greenhouse gases from stationary sources, in a way that properly stays within the law, and the bounds of the authority provided to EPA by Congress."

- EPA Administrator Scott Pruitt

In a separate but related action, EPA issued an Advance Notice of Proposed Rulemaking to solicit information from the public about a potential new rule regulating greenhouse gas emissions from power plants consistent with the Clean Air Act and proper relations between EPA and the states.

Ozone

EPA is committed to prioritizing air quality improvements and partnering with states to ensure more Americans are living and working in areas that meet our nation's stringent air quality standards. Under current measurements, roughly 40 percent of the nation fails to meet attainment standards set under the National Ambient Air Quality Standards (NAAQS). Under Administrator Pruitt's leadership, EPA is working with states to develop air quality plans and address underlying technical issues. In November 2017, consistent with Administrator Pruitt's pledge to be more responsive to local needs, EPA found that more than 2,600 counties – roughly 85 percent of the U.S. – met the stringent 2015 NAAQS for ground-level ozone. The Agency is now working to finalize designations for the remaining areas. Administrator Pruitt also established an Ozone Cooperative Compliance Task Force to develop additional flexibilities for states to comply with ozone standards.

State Implementation Plans

Rather than work cooperatively with states to implement clean air programs, President Obama's EPA imposed more than 50 FIPs – the equivalent of a top-down mandate – on states. EPA recognizes that states have an enormous role to play in environmental protection and the Agency can improve outcomes through collaboration, not federal dictates. Under Pruitt's leadership, EPA has turned an average of one FIP into a SIP every month. Since March 2017, EPA has worked with states to approve more than 200 SIPs. Under its FY18 – FY19

Agency Priority Goals, EPA, in close collaboration with states, will reduce the number of nonattainment areas by nearly 20 percent.

- During the Obama Administration, more than 50 FIPs were imposed on states, including nearly 20 under the Regional Haze program.
- Under the Trump Administration, with EPA Administrator Pruitt's leadership, EPA has turned at least one FIP into a SIP approximately every month.

Renewable Fuel Standard

As directed by the Clean Air Act, EPA finalized volume requirements for the Renewable Fuel Standard (RFS) maintaining renewable fuel volumes at levels comparable to the 2017 standards, recognizing limits to the growth of cellulosic and advanced biofuels, and understanding both market realities and consumer demand. Finalizing these volumes consistent with the statutory timeline helped stabilize the renewable fuels program and provide regulatory certainty.

Permitting Reform for New Source Review

Consistent with President Trump's priorities and under Administrator Pruitt's direction, EPA is taking steps to clarify, revise, and streamline preconstruction requirements under the New Source Review (NSR) permitting program. EPA's permitting requirements will no longer stifle a company's ability to invest in the latest and greatest technologies or make continued improvements to their operations. On December 7, 2017, EPA took an important step to achieving this goal by issuing a guidance

memorandum. The memo makes clear that, under current NSR regulations, the Agency is not to "second guess" an owner or operator's analysis, as long as it is done in a manner consistent with NRS requirements. It further clarified that the true environmental impacts of the project – via post-construction actual emissions data – will guide enforcement actions.

"Once In Always In" Is Out

In a 1995 memo, EPA established a "once in always in" policy that required any facility subject to major source standards for hazardous air pollutants to always remain subject to those standards, even if production processes changed or controls were implemented that eliminated or permanently reduced that facility's potential to emit hazardous air pollutants. This policy served as a disincentive for efforts to improve air quality and was also inconsistent with the Clean Air Act.

"This guidance is based on a plain language reading of the statute that is in line with EPA's guidance for other provisions of the Clean Air Act. It will reduce regulatory burden for industries and the states, while continuing to ensure stringent and effective controls on hazardous air pollutants."

**- EPA's Office of Air and Radiation
Assistant Administrator Bill Wehrum**

EPA issued a guidance memorandum in January 2018 withdrawing the "once in always in" policy. The memo from EPA's Office of Air and Radiation Assistant Administrator Bill Wehrum finds that EPA had no statutory authority under the Clean Air Act to place a time limit on when a facility may be determined to be an area source. Under the Clean Air Act, facilities can be reclassified as "area" (minor) sources once their potential to

emit hazardous air pollutants falls below the levels that define major sources. This action represents another major step by EPA to reduce burdens that deterred a core mission: improving air quality.

National Program for Greenhouse Gas Emissions and Fuel Economy Standards

EPA has taken multiple steps over the past year to review the regulatory overreach of the previous administration in the transportation sector.

Alongside U.S. Department of Transportation (DOT) Secretary Elaine Chao, Administrator Pruitt announced the agencies' intentions to reestablish the original timeline for public input for the Midterm Evaluation (MTE). This process is a key to assessing the appropriateness of the previous administration's standards for greenhouse gases and fuel economy for light-duty vehicles for Model Years 2022-2025. Under Administrator Pruitt's leadership, forward-looking actions will ensure that the program is beneficial for both consumers and the environment.

Administrator Pruitt traveled to Ypsilanti, Mich. with DOT Secretary Chao and President Trump to discuss CAFE standards.

EPA also reviewed, and then issued, a proposal to undo the regulatory overreach of the Phase II Fuel Efficiency Standards for medium- and

heavy-duty trucks as applied to the glider industry. Gliders are a specially manufactured type of heavy-duty highway vehicle. Proposing to repeal this provision is a direct result of Administrator Pruitt's commitment to regulate consistent with the rule of law as the previous administration's rule for gliders did not comply with the Clean Air Act.

Carbon Neutrality for Biomass

As directed by Congress and in conjunction with President Trump's Executive Order "Promoting Energy Independence and Economic Growth," a multi-agency effort has been initiated between EPA, the U.S. Department of Energy, and U.S. Department of Agriculture to establish a mechanism for federal cooperation and consistency on the use of biomass. EPA is working to develop a range of options in accordance with a carbon-neutral policy for biomass from forests and other lands and sectors as part of its ongoing review of the Clean Air Act permitting programs. Incorporating these sources into an "all of the above" energy portfolio will ensure biomass plays a key role in addressing the energy needs of the U.S. in an economically and environmentally beneficial way.

"For years, the federal government rendered most U.S. forestry producers ineligible for federal procurement projects and created confusion around biomass carbon neutrality. EPA is focused on clarifying regulations that were encumbering the industry."

- EPA Administrator Scott Pruitt

WATER: Provide for Clean and Safe Water

Waters of the United States (WOTUS)

On February 28, 2017, President Donald Trump issued an Executive Order directing EPA and the U.S. Army Corps of Engineers (Army Corps) to review this issue. Within a few months, the agencies proposed a rule to rescind the 2015 "Waters of the United States" rule to provide regulatory certainty to American farmers, landowners, and businesses, and put an end to one-size-fits-all regulations from Washington.

"We are taking significant action to return power to the states and provide regulatory certainty to our nation's farmers and businesses. This is the first step in the two-step process to redefine 'Waters of the U.S.' and we are committed to moving through this re-evaluation to quickly provide regulatory certainty, in a way that is thoughtful, transparent, and collaborative with other agencies and the public."

- EPA Administrator Scott Pruitt

In the interim, EPA and the Army Corps finalized a rule to postpone the applicability date of the 2015 WOTUS rule until February 6, 2020. This postponement provides regulatory certainty, will allow EPA to reevaluate the 2015 rule, and ensure the status quo is maintained until that process is complete.

Administrator Pruitt addresses members of the Tennessee Farm Bureau in Franklin, Tenn.

Administrator Pruitt talks with members of Nevada, Iowa Future Farmers of America.

Water Infrastructure

Our nation's water infrastructure is in dire need of repair. Roughly 700 water main breaks occur across the U.S. every day – over 200,000 annually. Not surprisingly, the American Society of Civil Engineers gave our nation's drinking water, wastewater, and hazardous waste infrastructure a "D" grade.

Then there's the problem of lead in our drinking water. EPA has taken important steps to support the State of Michigan in Flint's recovery and improve water infrastructure across the nation.

Flint, Michigan

In March 2017, EPA awarded a \$100 million grant to the Michigan Department of Environmental Quality to accelerate and expand its work to replace lead service lines and make other critical infrastructure improvements. Later in the year, EPA completed a periodic review of Michigan's drinking water program and released a report identifying key steps the state should take to ensure they are providing safe and clean drinking water.

In addition, EPA concurred with Michigan's plans to forgive Flint's past drinking water debt. Over the past year, EPA has worked in

partnership with the State of Michigan and the City of Flint to ensure that water quality continues to improve. This partnership has produced one of the most robust drinking water data sets in the country. EPA remains committed to working closely with the State of Michigan, Flint and local partners to protect public health and ensure that Flint's water quality continues to remain safe to drink.

BY THE NUMBERS:

\$100 Million grant to Michigan Department of Environmental Quality

\$1 Billion will be leveraged from WIFIA loans for water infrastructure upgrades

\$5.1 Billion in total water infrastructure investment estimated to be spurred from EPA grants and loans

WIFIA

Critical to improving the nation's water infrastructure is the Water Infrastructure Finance and Innovation Act (WIFIA). The selected projects – once finalized – will leverage more than \$1 billion in private capital and other funding sources, including EPA's State Revolving Fund (SRF) loans, to help finance a total of \$5.1 billion in water infrastructure investments.

Stream Electric Effluent Limitations Guidelines Rule

After careful reconsideration, EPA finalized a rule postponing certain compliance dates by two years for the effluent limitations guidelines and standards for steam electric power plants under the Clean Water Act. It had been estimated to cost an average of \$480 million annually including \$1.2 billion annually during the first five years of compliance.

From wastewater and drinking water to storm water and water recycling projects, WIFIA loans will finance water infrastructure improvements across the country

LAND: Revitalize Land for Reuse

Superfund

The number of toxic sites being added to EPA's National Priorities List (NPL) has increased under every administration since the first list was released under President Ronald Reagan. By the end of 2018, EPA will be on track to delete from the NPL, in whole or part, over 20 Superfund sites.

Ensuring the Superfund program and EPA's land and water cleanup efforts operate effectively and efficiently is a cornerstone of the Agency's core mission. In elevating EPA's focus on Superfund cleanup, Administrator Pruitt created a Superfund Task Force – comprised of Agency experts from the Office of Land and Emergency Management, Office of Enforcement and Compliance Assurance, Office of General Counsel, and Regional Offices – to streamline and improve the program.

Within a few months, the Superfund Task Force released its report providing 42 specific and detailed recommendations under the following overarching goals:

1. **Expediting Cleanup and Remediation**
2. **Re-Invigorating Responsible Party Cleanup and Reuse**
3. **Encouraging Private Investment**
4. **Promoting Redevelopment and Community Revitalization**
5. **Engaging Partners and Stakeholders**

Following the recommendations of the Superfund Task Force, Administrator Pruitt released two dynamic lists of Superfund sites on the NPL including an initial set of 21 sites targeted for immediate and intense attention and 31 sites with the greatest expected redevelopment and commercial potential.

East Chicago, Indiana:

As one of his first acts in office, Administrator Pruitt visited the USS Lead Superfund Site in East Chicago, Ind., a site that was listed on the NPL in 2009. In meetings with East Chicago residents, and federal, state, and local offices, he pledged improved coordination and communications as cleanup continues. The site is now on Administrator Pruitt's list of sites targeted for immediate and intense action.

West Lake, Missouri:

On February 1, 2018, after decades of inaction, EPA put forth its proposed plan to clean up the West Lake Landfill, a dumping ground for radioactive waste from the Manhattan Project. The plan calls for the removal of a majority of the most radiologically impacted material.

"We've gone without a decision at the site for 10 years, and it's time that we have direction," said Karen Nickel of the Just Moms St. Louis advocacy group. (*St. Louis' CBS Radio*, 02/01/18)

San Jacinto, Texas:

The cleanup plan to address highly toxic dioxin contamination at the San Jacinto Waste Pits Superfund site in Harris County was approved by Administrator Pruitt in the fall of 2017. By permanently addressing risks posed by the contamination, the plan provides certainty to both people living near the site and economic interests, including the businesses that rely on the San Jacinto River for navigation and the Interstate-10 transportation corridor.

"Not long after Hurricane Harvey battered Houston last summer, Environmental Protection Agency Administrator Scott Pruitt stood on the banks of the San Jacinto River and surveyed a decades-old toxic waste site as divers checked whether the storm had unearthed dangerous chemicals. Days later, he ordered two corporations to spend \$115 million to excavate the contamination rather than leaving it covered." (*Washington Post*, 01/23/18)

The first Superfund list includes sites that will benefit from Administrator Pruitt's direct engagement and have identifiable actions to protect human health and the environment. These are sites requiring timely resolution of specific issues to expedite cleanup and redevelopment efforts. Ultimately, this list is designed to spur action at sites where opportunities exist to act quickly and comprehensively.

Superfund redevelopment will help countless communities reclaim and reuse thousands of acres of formerly contaminated land. The redevelopment list easily directs interested developers and potential owners to some Superfund sites with redevelopment potential.

In 2017, EPA completed deletion activities at seven sites on the Superfund NPL in Administrator Pruitt's first year, up from two in 2016. These sites, spanning from Minnesota and Massachusetts to Wyoming and Nebraska, reflect Administrator Pruitt's commitment to accelerating progress, reducing risks at Superfund sites, and returning sites to productive use.

CERCLA Hardrock Mining

In January 2017, the previous administration proposed regulations under section 108(b) of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) that would have imposed additional financial responsibility requirements on certain hardrock mining facilities. After careful analysis of nearly 11,000 public comments, EPA announced in December 2017 that it would not finalize the proposed requirements. The risks associated with these facilities' operations are already addressed by existing federal and state programs and requirements and industry practice. Finalizing these requirements would have cost American businesses and the mining industry up to \$171 million annually.

"I urged then President-elect Trump to stop the EPA's overreach into state regulation harming Montana businesses. Instead of threatening the very industries that are a backbone of our Western economies, we need to support American families and American businesses to secure our mineral and energy independence. I am pleased the EPA has taken action."

**- U.S. Senate Western Caucus
Chairman Steve Daines (R-MT)**

Coal Ash

EPA's core mission reflects the belief that states play an integral role in environmental protection. In keeping with this notion, Administrator Pruitt provided Agency guidance to states for implementing state permitting programs to manage the safe disposal of coal combustion residuals (CCR), also known as "coal ash." The new state permitting authority – included in the Water Infrastructure Improvements for the Nation Act – allows flexibility in individual CCR permits that better reflect their environment and the continued beneficial use of coal ash.

EPA released this guidance to help states develop and submit permit programs that will put more states on track to obtain EPA approval of their CCR permitting program. The guidance outlines a framework of EPA's expected approval process and also provides checklists to aid states as they develop their programs.

CHEMICALS: Ensure Safety of Chemicals

Implemented the Updated Toxic Substances Control Act

EPA is working diligently to properly implement the 2016 Frank R. Lautenberg Chemical Safety for the 21st Century Act, which amended the Toxic Substances Control Act (TSCA), and ensure that the most modern and safe chemicals get to market quickly in order to provide regulatory certainty for manufacturers and confidence for American consumers.

Under the Lautenberg Chemical Safety Act – the first major update to an environmental statute in 20 years – EPA is responsible for reviewing and approving the safety of new chemicals intent on entering the U.S. marketplace. When Administrator Pruitt was confirmed, over 600 new chemicals were stuck in review. Within four months of being confirmed, EPA halved the backlog of new chemical submissions being reviewed under TSCA, and by August, Administrator Pruitt effectively eliminated the backlog.

In addition, EPA exceeded expectations and met its statutory responsibilities under TSCA on time and the one-year anniversary of the Lautenberg Chemical Safety Act. This included issuing three new framework rules, providing a guidance document for external parties, and releasing the scoping documents for the first 10 risk evaluations, under a reformed TSCA.

Chlorpyrifos

In 2007, EPA received a petition asking the Agency to revoke the tolerances for the pesticide chlorpyrifos. In March 2017, EPA denied the petition citing that: the Ninth Circuit would not provide additional time to review the issue; there were divergent views from cabinet departments; and the scheduled FIFRA

pesticide review process would be transparent, and allow more time to further evaluate the science.

On July 18, 2017, the Ninth Circuit ruled in EPA's favor, refusing to short-circuit the process established by Congress to challenge a denial of a petition to revoke a tolerance, affording EPA additional time to conduct a proper evaluation of the science and the studies on chlorpyrifos and provide greater certainty about the pesticide's safety to the American people.

Dicamba

On October 13, 2017, EPA reached an agreement with manufacturers on measures to further minimize the potential for dicamba drift to damage neighboring crops. New requirements for the use of dicamba "over the top" (application to growing plants) will allow farmers to make informed choices for seed purchases for the 2018 growing season. EPA worked cooperatively with states, land-grant universities, and pesticide manufacturers to examine the underlying causes of recent crop damage in certain regions and reach an agreement that will provide regulatory certainty for farmers.

TSCA MILESTONES:

- ✓ Swiftly implemented the Lautenberg Chemical Safety Act updates to TSCA
- ✓ Finalized 3 new framework rules
- ✓ Released scoping documents for first 10 risk evaluations
- ✓ Provided guidance on risk evaluation process
- ✓ Proposed final framework rule on TSCA fees

ENFORCEMENT

Enforcement of environmental protection laws is sustained by collaborative efforts of states, businesses, private citizens, and federal agencies like EPA. Within the last year, Administrator Pruitt implemented a two-pronged approach to enforcement: 1) ensuring the regulated community understands and complies with the law, and 2) vigorously holding bad actors accountable. This was achieved through a wide range of enforcement tools, including: compliance assistance, civil actions, administrative actions, informal actions, work-sharing with states, criminal fines, and incarceration where appropriate.

The Seattle Times

Amazon, EPA Reach \$1.2 Million Settlement
Over Online Sales of Illegal Pesticides

"Seattle-based Amazon has agreed to pay more than \$1.2 million in administrative penalties as part of an agreement with the U.S. Environmental Protection Agency that the agency says will protect consumers from hazards of illegal and misbranded pesticides sold by the online retail giant ...

"The penalty was one of the largest ever of its kind by the agency ...

"[A]s a result of the settlement, Amazon has indicated it is now 'committed to closely monitoring and removing illegal pesticides from its website,' [EPA Region 10 Administrator Chris] Hladick said in the agency's news release."

BY THE NUMBERS:

From January 20, 2017 through the end of FY17, EPA and the U.S. Department of Justice imposed:

- ✓ More than \$1.72 billion in civil penalties, cost recovery, natural resource damages, and other monetary recoveries;
- ✓ More than \$2.91 billion in criminal fines, restitution, and other assessments; and
- ✓ More than \$3.13 billion in injunctive relief and environmental mitigation projects.

Enforcement Actions Announced Since Close of FY17:

- ✓ ExxonMobil: \$300 million air pollution settlement with Exxon, 10/31/17
- ✓ PDC Energy: EPA, Colorado reached \$21 million-plus settlement with PDC, 10/31/17
- ✓ Indiana Harbor Coke Company: Settled with EPA and agreed to reduce annual emissions of pollutants from their coke ovens by 2,075 tons, 1/25/18
- ✓ Superfunds: In one case, EPA held 40 parties responsible to finance and perform a \$51.5 million EPA-approved cleanup, 10/13/17
- ✓ Silver Bow Creek Butte Area Superfund site: Reached an agreement in principle with responsible parties after languishing on the NPL for more than 35 years, 1/26/18
- ✓ Middletown, Ohio: EPA entered into agreement with the city to address the discharge of millions of gallons untreated sewage into the Great Miami River and Hydraulic Canal, 2/12/18

Cooperative Federalism and Public Participation

Under Administrator Pruitt's leadership, states are once again being treated as partners in efforts to protect the environment. In his first year, Administrator Pruitt worked to empower state and local partners to develop regulations that achieve positive environmental outcomes. Putting his words into action, Administrator Pruitt got out of Washington and heard directly from stakeholders in 30 states and territories.

Enhanced Shared Accountability

Governor Steve Bullock (D-MT): "The change in the federal administration offers us as governors the opportunity to develop new relationships and to build stronger state and federal relationships."

Administrator Pruitt meets with the bipartisan Western Governors Association with U.S. Department of Labor Secretary Alexander Acosta and U.S. Department of the Interior Secretary Ryan Zinke.

Governor Rick Scott (R-FL): "It is great to have a partner in Administrator Pruitt and the Trump Administration and I am glad to see their focus on protecting Florida's environment for future generations."

Governor Mark Dayton (D-MN): "Gov. Mark Dayton described a meeting Wednesday with EPA Administrator Scott Pruitt as 'productive and cordial' and said he's hopeful the Trump administration will eliminate some of the federal government red tape dealt to state agencies. 'We don't believe we need to be micromanaged by Region 5 in Chicago,' Dayton said during a news conference following a meeting at the Capitol that lasted more than an hour."

Governor Kim Reynolds (R-IA): "The governor said Pruitt indicated the new regulations would define what areas are not under federal jurisdiction. A court suspended the 'Waters of the U.S.' rules written by the Obama Administration before they took effect, but Reynolds said farmers delayed conservation measures and other land improvements because of the uncertainty about what might come next, which 'Dramatically had an impact on our ability to move forward with conservation practices for not only water quality, for soil health,' she said."

Leader Mitch McConnell (R-KY): "It's great to have an administrator of the EPA," McConnell said as he introduced Pruitt, "who's not afraid to come to Kentucky."

Administrator Pruitt hosts U.S. Department of Housing and Urban Development Secretary Ben Carson, U.S. Department of Labor Secretary Alexander Acosta, U.S. Department of Health and Human Services Deputy Secretary Eric Hargan and other members of the *President's Task Force on Environmental Risks and Safety Risks to Children* to address childhood lead exposure.

Stakeholder Engagement

Smart Sectors

In October 2017, EPA launched Smart Sectors, a voluntary partnership program between the Agency and regulated sectors that takes a collaborative approach to consider more forward-thinking ways to protect the environment and provide regulatory certainty. Since the program's official launch, the Smart Sectors team met with over 80 trade associations, companies, or stakeholder groups. The team conducted seven informational site visits with a variety of sectors including ports, iron and steel, oil and gas, chemical manufacturing, and agriculture and has many site visits planned for 2018. The Smart Sectors program maintains open dialogue with these partners and their environmental committees and is developing reports that profile the impact of each sector on the environment and the economy.

"The American Wood Council supports a smarter, more sensible and cost-effective regulatory process, such as the approach taken by EPA's Smart Sectors Program."

- Robert Glowinski, President and CEO of the American Wood Council

Grants

EPA awards over \$4 billion grants annually to states, tribes, and local communities. In FY17:

- ✓ \$20.2 million was provided through National Estuary Program grants to 32 communities
- ✓ \$56.8 million in Brownfields grants to 172 communities for revitalizing land
- ✓ \$33 million Clean Diesel Program grants to 72 communities

HEADLINES & HIGHLIGHTS

- ✓ EPA awarded \$1.2 million in competitive grants to 36 local-based community and tribal organizations for community-driven solutions to local health and environmental issues in minority, low-income, and tribal communities.
- ✓ EPA Announces \$7.2 Million in Brownfields Grants to Promote Economic Redevelopment Across the Pacific Southwest
- ✓ EPA Awards \$2.6 Million to Cut Diesel Emissions in New York and New Jersey
- ✓ EPA Awards \$4.4 Million to Restore Lake Champlain and Protect Against Harmful Algal Blooms
- ✓ EPA Awards \$173.5 million for California Drinking Water and Wastewater Projects
- ✓ EPA Awards \$32 Million for Tribal Environmental Programs in Alaska and the Pacific Northwest

Natural Disaster Preparedness, Response and Recovery

Throughout 2017, EPA worked closely with states and territories to prepare for and respond to a number of natural disasters including: Hurricanes Harvey, Irma, and Maria, and catastrophic wildfires in the West.

As a result of the continuing impacts on Gulf Coast-area refineries and disruption to the fuel distribution system caused by the 2017 hurricanes, Administrator Pruitt acted quickly to exercise EPA's emergency fuel waiver authority to help ensure adequate supply of fuel throughout the country by approving emergency fuel waivers for 38 states, Washington, D.C., and Puerto Rico. Governors across the country praised EPA's quick actions, which ensured there was no disruption in the fuel supply for power generators, evacuations and emergency response efforts.

Administrator Pruitt traveled to Houston, Texas to review the Agency's response efforts and meet with stakeholders monitoring cleanup efforts at the San Jacinto Waste Pits Superfund site (pictured above).

In the aftermath of Hurricane Maria, Administrator Pruitt joined President Trump in Puerto Rico to review the Agency's response efforts. EPA focused its efforts on environmental impacts and potential threats to human health in the affected areas by coordinating with local governments in Puerto Rico and U.S. Virgin Islands (USVI) to assess the conditions of drinking water, which includes sampling, analysis and lab support, and getting wastewater treatment systems up and running.

STATS AT A GLANCE

Hurricane Harvey:

- ✓ Conducted on-site assessments at approximately 625 drinking water and 440 wastewater treatment facilities
- ✓ Collected more than 1,000 orphan containers, which included drums and tanks found floated in or washed up near waterways
- ✓ Safely disposed of over 20 million cubic yards of debris

Hurricane Irma:

- ✓ Reviewed and secured 23 Superfund sites in Puerto Rico and USVI and 80 sites from Miami to North Carolina
- ✓ Extended fuel waiver for 38 states and D.C.

Hurricane Maria:

- ✓ Completed over 1,000 drinking water assessments in USVI
- ✓ Collected more than 225,000 items of household hazardous waste, goods and electronic waste in Puerto Rico and USVI
- ✓ Assessed close to 400 vessels in Puerto Rico and 500 in USVI with the U.S. Coast Guard

Rick Scott

Rule of Law

Agency Reform

Sue and Settle

Over the years, special interest groups skirted the regulatory process by using lawsuits that seek to force federal agencies – especially EPA – to issue regulations that advance their interests and priorities, on their specified timeframe. During this process, known as “sue and settle,” EPA would get sued by an outside party that asked the court to compel the Agency to take certain steps, either through change in a statutory duty or enforcing timelines set by the law, and then EPA would acquiesce through a consent decree or settlement agreement, affecting the Agency’s obligations under the statute.

“The days of regulation through litigation are over. We will no longer go behind closed doors and use consent decrees and settlement agreements to resolve lawsuits filed against the Agency by special interest groups where doing so would circumvent the regulatory process set forth by Congress. Additionally, gone are the days of routinely paying tens of thousands of dollars in attorney’s fees to these groups with which we swiftly settle.”

- EPA Administrator Scott Pruitt

“Sue and settle” cases establish Agency obligations without participation by states and/or the regulated community; foreclose meaningful public participation in rulemaking; effectively force the Agency to reach certain regulatory outcomes; and, cost the American taxpayer millions of dollars.

In fulfilling his promise to end the practice of regulation through litigation that has harmed

the American public, EPA Administrator Pruitt issued an Agency-wide directive in October 2017 designed to end “sue and settle” practices within the Agency, providing an unprecedented level of public participation and transparency in EPA litigation, in addition to consent decrees and settlement agreements.

Advisory Committees

EPA’s Federal Advisory Committees (FACs) provide invaluable, independent scientific advice to the Agency. However, according to EPA calculations, in just three years, members of three of EPA’s FACs – the Science Advisory Board (SAB), Clean Air Scientific Advisory Committee (CASAC), and the Board of Scientific Counselors (BOSC) – received upwards of \$77 million in direct EPA grant funding while concurrently serving on these committees.

Administrator Pruitt’s directive ensures that EPA’s FACs provide a diverse and independent range of perspectives. Members serving on an EPA FAC shall not simultaneously receive grants from the Agency. In addition, Administrator Pruitt called for more geographic diversity, more frequent rotation in membership, and greater involvement by state, local, and tribal officials. The new membership for SAB, CASAC, and BOSC hails from over 40 states and D.C., compared to the prior total of 30 states and D.C. EPA received more than 700 applications from interested individuals throughout the country to serve on EPA’s science boards.

Media Highlights

EDITORIALS

The Wall Street Journal: Pruitt's ends sue and settle practices also known as 'extortion by environmental lawsuit.' "Scott Pruitt continues to press reform at the Environmental Protection Agency, this week issuing a directive to curb the collusive Washington game of "sue and settle" lawsuits. This is a victory for democratic consent over legal extortion." (10/18/17)

The Wall Street Journal: Pruitt's clean power break. "The Trump Administration is giving the economy a boost with its deregulatory agenda, and the latest example comes Tuesday when Environmental Protection Agency chief Scott Pruitt will propose to repeal the Obama Administration's Clean Power Plan. Ending this power grab will uphold the letter of the law and restore cooperative federalism with the states." (10/08/17)

Washington Examiner: Praise for Pruitt's commitment to the Agency's core mission. "We applaud Pruitt's mission of restoring the EPA to its proper shape and size. And we hope he has the humility, the diligence, and the skill to pull it off, for the sake of the Constitution, the economy, and the environment." (09/18/17)

Denver Post: Pruitt Right to Pursue Funds for Gold King Mine Victims. "Scott Pruitt, head of the Environmental Protection Agency, is doing the right thing in his efforts to make whole the victims of the Gold King Mine spill that spewed 3 million of gallons of toxic water into the Animas River and downstream to New Mexico." (08/18/17)

Tulsa World: Pruitt gets out of Washington and 'talks to ordinary Americans.' "We prefer it when the people at the top of the nation's bureaucratic pyramid get out of the Beltway once in a while to talk to ordinary Americans. If Pruitt is coming home to see his friends, family, neighbors and some of the people he regulates, then good for him. That sounds like the acts of a balanced man who wants to know the thinking of the public, not just the pro-regulation lobbyists." (07/30/17)

The Oklahoman: Pruitt meets with stakeholders, including energy industry. "...the fact Pruitt regularly corresponded and dealt with energy industry officials as attorney general of a state where energy is the No. 1 industry should not be surprising nor should it, by itself, be considered nefarious." (06/21/17)

The Wall Street Journal: Cleaning up the Superfund mess. "One cost of making climate change a religion is that more immediate environmental problems have been ignored—not least by the Environmental Protection Agency. New EPA Administrator Scott Pruitt plans to address that in an underreported effort to clean up toxic waste sites under the so-called Superfund program." (06/12/17)

The Wall Street Journal: Highway from the endangerment zone. "Mr. Pruitt is a natural target for the left, but when conservatives are impugning one of the leaders of President Trump's economic deregulation project as a

sellout, maybe the problem is the critics, not Mr. Pruitt." (04/18/17)

Tulsa World: Congratulations, Scott Pruitt. "Pruitt is a serious, intelligent man who has worked hard for the people of Oklahoma. Like most Oklahomans, he is a genuine conservative. He has taken seriously his promises to voters that he would resist federal intrusions on state authority and personal freedom, and anyone who is surprised by that must not have been paying attention." (02/21/17)

ADMINISTRATOR PRUITT'S OP-EDs

USA Today: Clean air, land and water: Time for the EPA to start keeping its promises. "A few months ago, I promised the people of Missouri that I would make a decision and propose a cleanup plan for the West Lake Landfill. Recently, I made good on that commitment. On Feb. 1, the Environmental Protection Agency put forth its plan to clean up the West Lake Landfill ... In less than a year, this administration will solve a problem that previous administrations could not fix in the years since 1990, when the site was added to the Superfund priorities list." (02/14/18)

The Washington Times: Paving the path to U.S. energy dominance. "An energy-dominant America will export to markets around the world, increasing our global leadership and

influence. Becoming energy dominant means that we are getting government out of the way so that we can share our energy wealth with developing nations. For years, Washington stood in the way of our energy dominance. That changes now." (06/26/17)

The Washington Times: EPA is putting American workers first. "Americans who want a healthy and clean environment expect lawful, effective and economically sound regulation — the Clean Power Plan failed on all three counts. EPA can and should now focus on getting real results in the fight for clean air, land and water." (05/01/17)

USA Today: We're protecting jobs and the environment. "There's a phrase I've used often over the past several weeks — 'The future ain't what it used to be.' After my first full month serving as administrator to the Environmental Protection Agency, there's no question times are changing..." (03/20/17)

NATIONAL TV

Christian Broadcast Network: Unraveling the 'Weaponization' of the EPA is Top Priority for Scott Pruitt. "Actions taken by the executive branch were really actions that the legislative branch should have been taking or addressing and it impacted liberty," said Pruitt. "When you declare a 'war on coal' from a regulatory perspective, the question has to be asked: where's that in the statute? Where did Congress empower the EPA to declare a war on coal? ... There's a role for the EPA. There's a very important role for the agency. The problem is in the last several years that role has been morphed into something it's not," he added." (02/26/18)

Fox News' Justice with Judge Jeanine: Scott Pruitt talks changes to the EPA under Trump. "When you think about the last year, \$8 billion in cost savings with the deregulatory effort

Administration-wide. In our agency alone, \$1 billion of cost savings." (02/24/18)

CBS Evening News: Pruitt discussed the role of the EPA. "We should be about administering the statutes we're required to administer, but we shouldn't come in and say that the way forward in environmental protection is prohibition vs. stewardship. We can feed the world and we can power the world, and we should do that." (01/18/18)

Reuters TV: Trump's EPA aims to replace Obama-era climate, water regulations in 2018. "[Pruitt] said the agency was also planning to rewrite the Waters of the United States rule, another Obama-era regulation, this one defining which U.S. waterways are protected under federal law. Pruitt and Trump have said the rule marked an overreach by including streams that are shallow, narrow, or sometimes completely dry - and was choking off energy development." (01/08/18)

MSNBC's Morning Joe: Pruitt said the Paris agreement put our economy at a disadvantage. "When you look at what was agreed to in Paris, it put this country, our country, at a disadvantage economically." (06/07/17)

NBC's Meet the Press: Scott Pruitt: American carbon reductions predate Paris Climate Deal. "Paris is a bad deal for this country." (06/05/17)

ABC's This Week: Pruitt discussed how small businesses across the country are celebrating President Trump's decision to pull out of the Paris agreement. "Well, when you look at, even *The New York Times* had an article, I think, within the last couple of days that talked about small business celebrating, euphoria with respect to the president's decision." (06/04/17)

Fox News Sunday: Pruitt explained how the U.S. is the energy technology leader of the world. "If China and India want to reduce their CO2 footprint, they should learn from us," Pruitt told Fox News' Chris Wallace." (06/04/17)

CNBC: EPA takes aim at CAFE standards. "We can be both pro-growth, pro-jobs and pro-environment, says Scott Pruitt, EPA administrator, discussing the agency's new agenda and plans to roll back regulations and tackle fuel standards." (03/09/17)

NATIONAL PRINT

GQ Magazine: The 50 Most Powerful People in Trump's Washington. "#5 EPA Administrator Scott Pruitt: In a Cabinet that doesn't get much done, Pruitt has been dangerously effective." (02/22/18)

Wall Street Journal: Pruitt said West Lake sends a results-driven message. "This sends a message that we're actually going to get results," Mr. Pruitt said. "Frankly it's just what we ought to be doing." (02/01/18)

Washington Examiner: EPA's Scott Pruitt declares 'war on lead.' "EPA Administrator Scott Pruitt has begun an effort to 'eradicate' lead poisoning from drinking water, more than three years after the crisis in Flint, Michigan, started. Pruitt hosted a meeting Jan. 8 for state and local officials at agency headquarters in Washington to obtain feedback on ways to update the 1991 Lead and Copper Rule ... It has not been revised in more than a decade." (01/23/18)

Wall Street Journal: Pruitt aims to accelerate his efforts to remake the EPA. "Environmental Protection Agency chief Scott Pruitt plans to use his second year on the job to accelerate efforts to remake the agency, saying he wants to speed its permitting processes and

transform a culture he says is bureaucratic.” (01/17/18)

E&E News: Pruitt Meets with Moms Clean Air Force. Dominique Browning ... co-founder and senior director of Moms Clean Air Force, along with other officials from her organization, met last week with Pruitt and three members of his staff at EPA’s Washington, D.C., headquarters ... “Browning said her impression of Pruitt was that he is ‘determined’ as well as ‘intense, aggressive and focused. And the other thing on my impression is [he is] really, really smart,’ she added.” (1/15/18)

The Hill: EPA staffing falls to Reagan-era levels. “EPA’s staffing is now lower than it was in former President Reagan’s final year in office. An EPA spokeswoman said Tuesday that, as of Jan. 3, the agency had 14,162 employees, down from about 15,000 at the beginning of last year. That’s even lower than the 14,400 employees the agency had in fiscal year 1988, Reagan’s final year.” (01/09/18)

National Review: Scott Pruitt’s Reformation. “Stewardship, Pruitt says, is making responsible use of our national blessings, including our

natural resources: ‘Feed the world and fuel the world,’ he says, over and over. But the Left — and the EPA, which has long been dominated by it — is not interested in stewardship. It’s interested in prohibition, in a lot of Thou shalt and a whole heck of a lot more Thou shalt not. ‘You have two different approaches, two different worldviews, two very different sets of assumptions,’ Pruitt says.” (12/31/17)

The Washington Post: How Scott Pruitt turned the EPA into one of Trump’s most powerful tools. “... aggressiveness on issues from coal waste to vehicle emissions has made Pruitt one of Trump’s most high-profile and consequential Cabinet members. It also has made him one of the most controversial ... Yet, allies praise Pruitt for returning more power to individual states while scaling back what they see as the previous administration’s regulatory excesses.” (12/31/17)

The Weekly Standard: The Man They Love to Hate. “Pruitt lauded the president for his ‘unflinching commitment to put America first’ and followed with what has become the theme of his EPA tenure. The United States does ‘better than anyone in the world in striking the

balance between growing our economy, growing jobs while also being a good steward of our environment,' he said. Between 2000 and 2014, America reduced 'its carbon emissions by 18-plus percent. And this was accomplished not through government mandate, but accomplished through innovation and technology of the American private sector.'" (12/15/17)

Bloomberg: Administrator Pruitt lands on the list of 50 people defining global business in 2017. (11/30/17)

USA Today: Scott Pruitt on a mission to change the climate of the EPA. "He's on a mission to re-engineer the agency's culture by returning power to states and away from the Washington bureaucrats and coastal elites he said have led it astray." (11/26/17)

TIME: Inside Scott Pruitt's Mission to Remake the EPA. "Pruitt has pioneered a radically different approach to environmental regulation, weighing impact on job growth and the concerns of business groups on a level plane with environmental protection when the law allows." (10/26/17)

Bloomberg: EPA's Pruitt Vows to Get Tough on Polluters. "Scott Pruitt, the head of the Environmental Protection Agency, vowed that he will get tough on corporate polluters, dismissing critics who cast him as too cozy with industry. 'They don't know me,' Pruitt said, during an interview with Bloomberg News in his Washington office. 'I've led a grand jury. We are going to do enforcement, to go after bad actors and go after polluters.'" (10/25/17)

The Daily Signal: Trump's EPA Chief Charts a New Course. "My job is to enforce the laws as passed by whom? Congress. They give me my authority. That's the jurisdictional responsibilities that I have, and when litigation

is used to regulate...that's abusive. That's wrong." (10/20/17)

TIME: Administrator Pruitt on Enforcement: "I don't spend any time with polluters. I prosecute polluters." (10/20/17)

Talking Points Memo: Pruitt Talks About New 'Sue and Settle' Policy. "Pruitt pledged that the agency would no longer reimburse attorneys' fees in cases where it decides to avoid a lawsuit, arguing that both environmental and business groups had abused it to enrich themselves in the past. 'This is not particular to one type of plaintiff,' he said. 'There should be no attorneys' fees paid, period, no matter who the plaintiff is.'" (10/16/17)

Fox News: EPA moves to repeal Obama's Clean Power Plan coal regulations. "'That rule really was about picking winners and losers,' Pruitt said. 'The past administration was unapologetic, they were using every bit of power, authority to use the EPA to pick winners and losers on how we pick electricity in this country. That is wrong.'" (10/09/17)

The New York Times: EPA Announces Repeal of Major Obama-era Carbon Emissions Rule. "Mr. Pruitt, who had signaled the move at an event with coal miners in eastern Kentucky on Monday, said in a news release that his predecessors had departed from regulatory norms in writing the Clean Power Plan, which was finalized in 2015 and would have pushed states to move away from coal in favor of sources of electricity that produce fewer carbon emissions." (10/09/17)

Politico Top 50: #9 Scott Pruitt. "Donald Trump's pledge to unravel Barack Obama's climate agenda may be—in the long run—the single most significant action he takes as president. And there's one man tasked with

turning Trump's rhetoric into reality: Scott Pruitt." (09/01/17)

The Daily Caller: EPA's Scott Pruitt: What was so great about Obama's environmental record? "Everyone looks at the Obama administration as being the environmental savior. Really? He was the environmental savior...Well, he left us with more Superfund sites than when he came in. He had Gold King [the 2015 mine wastewater spill] and Flint, Michigan [drinking water crisis]. He tried to regulate CO2 twice and flunked twice. Struck out. So what's so great about that record? I don't know." (09/13/17)

Washington Examiner: Pruitt advances Back-to-Basics agenda. "Few Trump administration agency chiefs have moved as decisively to implement an agenda as Scott Pruitt, the administrator of the Environmental Protection Agency, and he's quite clear about what he wants to do. He calls it a 'back to the basics' agenda, removing the government from what he considers extraneous activity." (09/13/17)

The Washington Free Beacon: EPA workforce approaching lowest levels since Reagan. "We're giving long-serving, hard-working employees the opportunity to retire early," Pruitt said. "We're proud to report that we're reducing the size of government, protecting taxpayer dollars, and staying true to our core mission of protecting the environment and American jobs." (09/06/17)

The Washington Examiner: Scott Pruitt criticizes Obama as 'environmental savior,' moves EPA away from climate change. "Few Trump administration agency chiefs have moved as decisively to implement an agenda as Scott Pruitt, the administrator of the Environmental Protection Agency, and he's quite clear about what he wants to do. He calls it a 'back to the basics' agenda, removing the government from what he considers extraneous activity — namely, the climate change battle taken up by former President Barack Obama, who he questioned as an "environmental savior." (09/13/17)

Reuters: Pruitt gave a wide-ranging interview about protecting the environment and American jobs. "The past administration was all about words. This administration is all about action. Look at the actions this country has taken. We have reduced our greenhouse gas levels to pre-1994 levels primarily through technology and innovation, not through government mandate. We have nothing to be apologetic about with the rest of the world." (07/11/17)

Wall Street Journal: EPA to Unveil New Chemical Testing Rules. "The Environmental Protection Agency on Thursday will release new rules to clarify the agency's process of testing the chemicals used in everyday products and other commerce, a matter of deep importance to manufacturers, consumers and environmental advocates." (06/22/17)

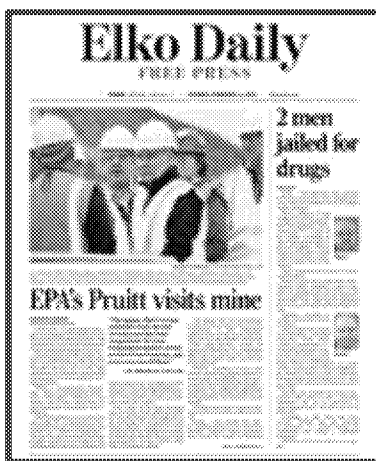

The Daily Caller: Trump Delays One of the Most Expensive EPA Regulations Ever. "The Trump administration announced Tuesday evening it would delay the implementation of a smog rule that's been called one of the costliest clean air regulations ever." (06/07/17)

The Washington Post: EPA head Scott Pruitt defends Paris exit. "When we joined Paris, the

rest of the world applauded ... because it put this country at disadvantage... It's a bad deal for this country. We're going to make sure as we make deals we're going to put the interests of America first." (06/04/17)

The Washington Post: Scott Pruitt, outspoken and forceful, moves to the center of power within the Trump administration. "Less than four months ago, Scott Pruitt arrived in Washington with few connections to President Trump's inner circle and took the helm of an agency where many employees were openly hostile to him. But the administrator of the Environmental Protection Agency has emerged as one of the most influential policy architects in the president's Cabinet, a skilled and sometimes brash lawyer who is methodically taking apart a slew of regulations and agreements affecting a range of issues, from manufacturing operations to landfills." (06/02/17)

Need to Know Network: Pruitt promises to put states back in the driver's seat on regulations. "Pruitt said during the interview that the Obama administration used the authority of Washington to walk over the states, and looked at states as mere vessels of federal will." (05/11/17)

The Hill: EPA seeks governors' input in rewriting Obama water rule. "EPA is restoring

states' important role in the regulation of water,' Pruitt said in a statement. 'Like President Trump, I believe that we need to work with our state governments to understand what they think is the best way to protect their waters, and what actions they are already taking to do so. We want to return to a regulatory partnership, rather than regulate by executive fiat.'" (05/09/17)

The Washington Examiner: EPA Head Pruitt: We hear East Chicago's concerns 'loud and clear.' "Environmental Protection Agency Administrator Scott Pruitt visited East Chicago on Wednesday to assure residents, state and local leaders that Washington is meeting its commitments to protect citizens from lead contamination. 'Their concerns were heard loud and clear, and I am committed to ensuring that the EPA works with our federal, state and local partners to find solutions that protect the health and safety of East Chicago,' Pruitt said." (04/19/17)

The Wall Street Journal: Scott Pruitt's Back-to-Basics Agenda for the EPA. "You might call him an EPA originalist... When Mr. Pruitt sat down Thursday for his first interview since his November nomination, he spent most of the time waxing enthusiastic about all the good his agency can accomplish once he refocuses it on its statutorily defined mission: working cooperatively with the states to improve water and air quality." (02/17/17)

NATIONAL RADIO & PODCAST

The Daily Signal Podcast: EPA Administrator Scott Pruitt explains how the Agency has changed under President Trump's leadership. "'The weaponization of the Environmental Protection agency is over,' says Administrator Scott Pruitt." (02/26/18)

The New York Times' 'The Daily': Pruitt discusses how he's focused on protecting the environment and human health. "The role of a regulator is to make things regular. To take a statue, to use its authority, to fairly enforce it." (02/02/18)

The Hugh Hewitt Show: EPA Administrator Scott Pruitt on 'so called' Clean Power Plan. "For the first time ever, the EPA took its authority and said we can dictate, really coerce states and utility companies across the country and tell them how to generate electricity. You know, when you look at how we generate electricity in this country, we obviously use multiple energy sources." (10/11/17)

ABC News "Powerhouse Politics Podcast:" Scott Pruitt talks about Hurricane Irma recovery efforts. "There's many issues, from drinking water to Superfund to debris management and landfills, that we're dealing with in this kind of situation." (09/08/17)

Fox News' Brian Kilmeade Show: EPA Chairman Scott Pruitt on potential ramifications of pulling out of the Paris Climate Agreement. "We are leading the world now, we are at pre-1994 levels with our CO-2 footprint, not because of Paris, not because of a government mandate but because of innovation and technology. For those who say we are going to lose our seat at the table, we are the United States, we don't lose our seat at the table." (05/19/17)

The Hugh Hewitt Show: EPA Administrator Scott Pruitt on new direction for science boards at the EPA. "You know, Hugh, as you know, the board of scientific counselors that we have at the EPA, they serve three year terms. And so those are reviewed every three years. Those same individuals can apply through the competitive process. And what's really been emphasized by Congress as I went through the confirmation process is geographical representation, because you want to ensure as you're dealing with rulemaking – air, water, whatever rulemaking we're doing, that the geographical uniqueness of our country as we're patching rules is taken in consideration." (05/11/17)

REGIONAL MEDIA

Reno KRNK-TV: Pruitt discusses his visit to Nevada. "Administrator of the Environmental Protection Agency Scott Pruitt sat down with News 4's Bill Frankmore on Monday morning to discuss his event with Governor Brian Sandoval at Anaconda Mine in Lyon County regarding future clean-up and his visit with miners at Coeur Rochester Mine in Lovelock." (02/05/18)

The St. Louis Post-Dispatch: Pruitt outlined his course of action to cleanup West Lake. "In a long-awaited decision that appears to be a compromise, the Environmental Protection Agency on Thursday recommended partial excavation of the West Lake Landfill in Bridgeton to remove radioactive waste linked to the Manhattan Project." (02/01/18)

St. Louis KMOX-TV: Just Moms STL was happy with Pruitt's decision regarding West Lake. "Dawn Chapman and Karen Nickel of the Just Moms STL advocacy group say at first, the group was worried a partial removal would mean only 5percent removed. With a 70percent or more removal — they are pleased. 'I can tell you that we are happy with this decision, and what this does for us is it gives us direction,' Nickel says. 'We've gone without a decision at the site for 10 years, and it's time that we have direction.'" (02/01/18)

Cedar Rapids Gazette: Pruitt wants to work hand in hand with states. "'What's important for us in Washington, D.C., to do is to learn and partner and work with folks at the state level to achieve good outcomes together. That just simply has not happened for a number of years,' said EPA Administrator Scott Pruitt, during a stop in Nevada." (12/01/17)

Des Moines Register: Pruitt called farmers the first "conservationists, environmentalists."

"Pruitt said the country needed to discuss what 'true environmentalism' means: 'We have been blessed with a bounty of natural resources. And some view that as 'We should simply not use them' — that we should put up fences and not use our natural resources. 'I don't buy that. We, as a country, have an obligation to feed the world and power the world,' he said, getting applause. 'When you have the natural resources like we do, we should use them to benefit our neighbors, our country and world.'" (12/01/17)

Louisville WHAS-TV: Pruitt will have changes to Obama's WOTUS. "The head of the United States Environmental Protection Agency was in Louisville Thursday with a promise of change to one of the most controversial environmental regulations for Kentucky farmers. Administrator Scott Pruitt told the Kentucky Farm Bureau's 98th Annual Meeting that the "Waters of the United States" regulation will be changed forever by mid-2018." (12/01/17)

The Chicago Tribune: Pruitt orders companies blamed for East Chicago contamination to pay for cleanup. "'We continue to make cleaning up East Chicago a priority, to protect the health and well-being of the residents who live in the impacted areas,' said EPA Administrator Scott Pruitt in a statement. The EPA estimated the companies will have to pay \$24 million for the remediation, according to the announcement, and \$2.25 million for the indoor dust cleaning.'" (10/18/17)

The Clarion Ledger: Pruitt addressed energy issues in Mississippi. "U.S. Environmental Protection Agency Administrator Scott Pruitt visited Mississippi Thursday to discuss proposed changes to the Waters of the United States rule, just days after announcing the repeal of the Clean Power Plan." (10/13/17)

Houston Chronicle: After Harvey, Pruitt vows bold response to polluted sites around Houston. "Environmental Protection Agency Administrator Scott Pruitt, who has visited Texas twice since Hurricane Harvey, vowed Thursday to have 'an answer' by next month for a permanent solution to clean up the San Jacinto River Waste Pits." (09/22/17)

Des Moines WHO-TV: EPA chief, a former baseball exec, wants 'world, world series.' "I think baseball is one of those sports we can actually truly have a world series, we can have a world competition. We've seen it in other instances and I think that's an opportunity that we need to be pursuing." (08/14/17)

Administrator Pruitt stands for the National Anthem at the Congressional Baseball game on June 15, 2017.

Des Moines WHO-TV: EPA Head Agrees That Des Moines Superfund Site Needs to Develop, But When? "Political Director Dave Price talked to Environmental Protection Agency Administrator Scott Pruitt about efforts to redevelop superfund sites, like Des Moines, all over the country." (08/08/17)

Radio Iowa: Pruitt visits Iowa to discuss WOTUS. "Pruitt said his goal is to provide 'regulatory clarity' with a new rule, so property owners will know where federal jurisdiction begins and ends. 'If you want to build a pond on your land,' Pruitt said, 'if you have natural springs on your land and you want to want to water your livestock and build (a retention) pond...and you're not really sure whether if you do that you're going to be subject to \$37,000-plus a day in fines if you don't get a permit and you find it out five years from now, what does that mean? You don't build the pond or you don't build the subdivision or you don't use your land the way you want.'" (08/08/17)

Denver KDVR-TV: Pruitt Gold King Mine on 2-Year Anniversary of Spill Caused by Agency. "Environmental Protection Agency Administrator Scott Pruitt and Colorado leaders will tour the site of the Gold King mine spill on Friday to mark the second anniversary of the spill that dumped 3 million gallons of tainted wastewater into the Animas River." (08/04/17)

Arkansas Democrat Gazette: Pruitt discusses WOTUS in Arkansas. "EPA Administrator Scott Pruitt visited with Arkansas Cabinet officials and agriculture representatives Thursday about changes they would like to see made to the nation's definition of protected water bodies." (07/21/17)

Minneapolis Star-Tribune: Pruitt Signals Welcome Support for Great Lakes Restoration Project. "Environmental Protection Agency Secretary Scott Pruitt's visit to Minnesota last week yielded an unexpected boon for those who care about clean water. In an interview with a Star Tribune reporter, Pruitt affirmed his support for federal funding of the Great Lakes Restoration Initiative, which provides landmark protections for Lakes Huron, Erie, Michigan, Ontario and, most treasured by Minnesotans, Superior." (07/21/17)

Minneapolis Star-Tribune: Pruitt is working hard to protect the Great Lakes. "Scott Pruitt, the nation's top environmental officer, said Wednesday he endorses continued federal funding for a landmark cleanup of the Great Lakes... 'It's a continuing need, and we have to see that it's adequately funded.'" (07/20/17)

Twin Cities WCCO-TV: Pruitt gave an in-depth interview about the EPA's Back-To-Basics Agenda. "EPA Administrator Scott Pruitt was in studio for an exclusive interview while he was in the state to meet with Gov. Mark Dayton. He's in Minnesota as part of his Back-To-Basics tour and talked about rolling back regulations." (07/19/17)

Deseret News: Pruitt visited Utah and talked about WOTUS. "EPA Administrator Scott Pruitt visited Utah as part of multistate tour to get input on how the agency can be more responsive to states' needs in general and in specific how the controversial Waters of the

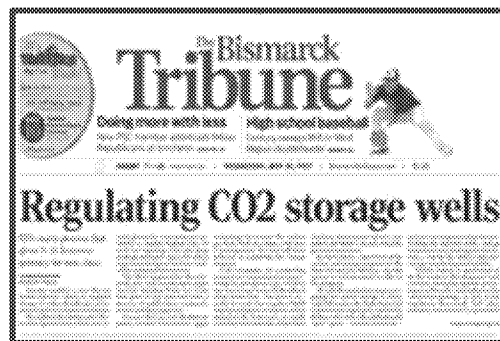

United States rule should be retooled." (07/18/17)

Salt Lake City KTVX-TV: Pruitt discusses his Back-To-Basics agenda. "EPA Administrator Scott Pruitt made his first stop on the State Action Tour here in Utah. This morning he sat down with Glen Mills on Good Morning Utah exclusively to talk about the tour." (07/18/17)

Tulsa World: EPA Chief Scott Pruitt says he's 'determined to prioritize Superfund cleanups.' "'It's important that we address state and tribal rights when protecting the environment and natural resources,' Pruitt said upon announcement of a new grant awarded the Quapaw Tribe." (05/31/17)

Tulsa World: EPA's Pruitt: Agency is 'doing what it's supposed to do' at Osage pollution site. "'This is just leadership,' Pruitt said. 'It's our agency doing what it's supposed to do, coming in, finding out what the source of the problem is, getting it corrected.'" (05/28/17)

Minot Daily News: Governor Burgum says Pruitt is good for North Dakota. "Burgum said he feels Scott Pruitt, the new administrator of the Environmental Protection Agency, will have the biggest single impact on North Dakota. Pruitt, an attorney, is a Republican politician from Oklahoma. He has been a leading advocate against the EPA's activist agenda, including suing the EPA to block its Clean Power Plan and Waters of the United States rule." (05/01/17)

WHAT THEY'RE SAYING

Air

Senator Tom Cotton, (R-Ark.): "It's decisions like this one that are slowly but surely rebuilding trust between rural America and the EPA. I'm glad to see the EPA focus on concrete problems, like haze and other forms of pollution, and also show respect for our state officials' authority. It's a much-needed corrective to the heavy-handed ways of the previous administration, and I look forward to our state developing its own implementation plan, working in cooperation with—not under the thumb of—the EPA." (01/29/18)

Becky Keogh, director, Arkansas Department of Environmental Quality: "Today we are pleased to accept an EPA grant to drive further innovative, cost-effective solutions and continuous improvement in Arkansas's air, which is critical for healthy communities and economic progress. Through cooperative efforts, Arkansas's state of air quality is one of the best in the nation—achieving all national air quality standards. Our progress is most effectively achieved through actions and support from local, state, and federal partners." (01/29/18)

Todd Sax, head, California Air Resources Board Enforcement Division: "California Air Resources Board rules are designed to protect public health by ensuring all Californians breathe clean air. We appreciate our partners at U.S. EPA who are helping to achieve federal air quality standards throughout the State." (11/29/17)

Denise Koch, director, Alaska Department of Environmental Conservation Division of Air Quality: "We are encouraged by the Borough's efforts to work with the community to reduce emissions and appreciate EPA's approval of the

moderate area plan. This will enable us to focus our efforts on developing the serious area plan and improving air quality in the area. The improved local ordinance, long running changeout program to provide funding to upgrade wood stoves and hydronic heaters to cleaner heating appliances, and the annual Fairbanks Clear the Air Forum and Expo are providing the local community with the information and tools needed to solve the air quality problem locally." (08/29/17)

Bryan Shaw, Ph.D., chairman, Texas Commission of Environmental Quality: "We are pleased with the improvement in air quality, and the Texas Commission on Environmental Quality will continue to monitor during on-going remediation activities to make sure compliance with federal standards continues." (06/29/17)

Chemicals and Pesticides

Angela Logomasini, Ph.D., senior fellow, Competitive Enterprise Institute: "Pruitt's action [to deny chlorpyrifos ban] sets an important pro-science approach to regulation that the agency should continue to follow." (08/10/17)

Cal Dooley, president and chief executive officer, American Chemistry Council: "We commend Administrator Pruitt for his attention to improving the efficiency of new chemical review under an amended TSCA. U.S. businesses, jobs, and competitiveness depend on a functioning new chemicals program. In just the last month, significant progress has been made to relieve the backlog, and we welcome the Administrator's commitment to have the program functioning smoothly again by the end of July." (06/05/17)

Mike Witt, corporate director of health and environmental research, Dow Chemical: "Administrator Pruitt and his team at the EPA have made great progress over a very short

period of time to accelerate new chemical reviews, providing American manufacturers with new and safe materials that will help drive innovation and manufacturing growth." (06/05/17)

The California Cotton Ginners and Growers Association: "EPA's denial of [the petition to ban chlorpyrifos] is based off of the foundation in which EPA was created on, relying on sound-science and a transparent process. EPA will now direct its efforts to updating and revising its human health assessment for chlorpyrifos under the standard procedures of the ongoing registration review process, scheduled for completion on October 1, 2022. This is great news for producers and shows the EPA's redirection towards supporting a scientific process!" (03/30/17)

Clean Power Plan

Senator John Barrasso (R-Wyo.), chairman, U.S. Senate Committee on Environment and Public Works: "The Trump administration is listening to the people of Wyoming. Today's announcement that the EPA will hold a listening session in Gillette, on the impacts of the so-called 'Clean Power Plan,' demonstrates the administration's commitment to hear directly from the people who would have been hurt most by this punishing regulation. The Clean Power Plan would have meant lost jobs for energy workers in Gillette and across Wyoming. I am thankful to EPA Administrator Scott Pruitt for his leadership on this important issue." (12/06/17)

Paul Bailey, president and chief executive officer, The American Coalition for Clean Coal Electricity: "The Clean Power Plan is the poster child for bad regulation. It is illegal, expensive, and ineffective, and we commend Administrator Pruitt for repealing it." (10/10/17)

Congressman Paul A. Gosar (R-Ariz.), chairman, Congressional Western Caucus: "The so-called 'Clean Power Plan...picked winners and losers at the expense of American job creators. I applaud Administrator and the Trump Administration for acting to rollback the unconstitutional and fundamentally-flawed Obama mandate." (10/10/17)

Jay Timmons, president and chief executive officer, National Association of Manufacturers: "Manufacturing workers can feel a tremendous sense of relief today. The Trump administration has made the right decision and ended a policy that threatened manufacturers' access to affordable, reliable energy and did not even adhere to existing law." (10/10/17)

Chrissy Harbin, vice president of external affairs, Americans for Prosperity: "This is a welcome departure from the Washington-first, Americans-last approach that characterized energy and environmental policy under the previous administration. The Clean Power Plan (CPP) was an overreach of executive power... It's great to see President Trump and EPA Administrator Pruitt rein in this sweeping mandate." (10/09/17)

Hal Quinn, president and chief executive officer, National Mining Association: "Administrator Pruitt will signal a decisive break with past policies that have used regulation of doubtful legality to circumvent the will of Congress, usurp States' authority and raise costs on American consumers. Repealing this Obama-era rule would close a chapter of regulatory overreach that set standards without regard to the steep costs or availability of technology necessary to meet them. The Clean Power Plan represented an unlawful attempt to transform the nation's power grid." (10/06/17)

Jim Matheson, chief executive officer, National Rural Electric Cooperative Association: "Affordable and reliable power is fundamental to a successful economy. We appreciate the Trump administration working to protect American families and businesses from the potentially devastating impacts of the Clean Power Plan." (03/28/17)

Cooperative Federalism

Amanda Bowen, executive director, Manufacturers Association of Florida: "The Manufacturers Association of Florida commends EPA Administrator Scott Pruitt's laser focus on ensuring the protection and conservation of Florida's unique natural resources and ecosystems, while also maintaining sustainable and economically productive communities." (02/05/18)

John L. Hoblick, president, Florida Farm Bureau: "I applaud Administrator Pruitt's visit to Florida and his willingness to listen to the concerns of our growers. These concerns often stem from an oppressive regulatory environment, and the EPA has taken encouraging steps to curb federal overreach, such as rescinding the 2015 'Waters of the United States' rule." (02/05/18)

Brian Kraft, owner, Alaska Sportsman's Lodge: "This is an encouraging step for many Alaskan businesses and families that depend on Bristol Bay salmon. The EPA made the right decision by listening to local people, dozens of Alaskan business owners, and sportsmen and women around the country." (01/26/18)

Chris Blankenship, commissioner, Alabama Department of Conservation and Natural Resources: "The State of Alabama welcomes EPA as the new Chairperson of the RESTORE Council. Alabama strongly supports the collaborative nature of the RESTORE Council between the five Gulf States and our federal

partners which is so foundational to restoration of the Alabama coast resulting from the impacts of the Deepwater Horizon oil disaster, as well as the cumulative effects of hurricanes on the sustainability of our important coastal resources and the people that rely on them." (12/06/17)

Mark Haney, president, Kentucky Farm Bureau: "We appreciate the EPA Administrator visiting our annual meeting to listen to farmers about their conservation efforts and concerns related to their operations. Administrator Pruitt, a fellow Kentuckian, knows the hard work our farmers put in on a daily basis to keep our farms financially and environmentally sustainable." (11/30/17)

Governor Phil Bryant, (R-Miss.): "Mississippi farmers are the original conservationists. I am grateful for Administrator Pruitt's commitment to working with us to develop strategies that will strengthen agriculture in Mississippi while protecting our environment." (10/12/17)

Evaristo Cruz, chairman, National Tribal Caucus: "The 1984 EPA Indian Policy is a critical instrument that provides both the EPA and Native American tribes with principles that illustrate the federal trust relationship. On behalf of the National Tribal Caucus we would like to thank Administrator Pruitt for upholding and honoring this legacy that EPA has instituted." (10/11/17)

Disaster Relief

Julia M. Nazario Fuentes, Mayor of Loíza: "This work in conjunction with the EPA is a great example of how our administration is building partnerships with federal, state and nonprofit organizations. It is important that our citizens follow the instructions provided by the EPA and our Recycling Office, so that we can keep Loíza clean. Our thanks to the EPA staff for the

speed with which we have worked on this project." (01/12/18)

Governor Greg Abbott, (R-Texas): "Both the EPA and the state are working closely and collaboratively [to monitor the Texas sites and make sure the public health is not imperiled]." (09/05/17)

Bob Dinneen, president and chief executive officer, Renewable Fuels Association: "The RFA applauds the EPA's decision to waive certain fuel regulations for 12 states and D.C. due to the fuel supply emergency caused by Hurricane Harvey. We believe the waiver has the potential to provide much-needed relief to consumers in these areas facing gasoline supply shortages and price spikes." (08/10/17)

Forestry

Bob Cleaves, president and chief executive officer, Biomass Power Association: "The biomass industry greatly appreciates Administrator Pruitt's strong commitment to create regulatory certainty for biomass power producers and all contributors to the wood supply chain." (02/14/18)

Jason Stock, executive director, New Hampshire Timberland Owners Association: "The New Hampshire Timberland Owners Association is pleased Administrator Pruitt took the time to come to New Hampshire to meet with timberland owners, and members of the forest products industry. As the second most forested state in the nation, New Hampshire's forests are an important part of our heritage, culture, and economy. Having a regulatory environment that promotes the growing, management and processing of timber will ensure this legacy continues." (02/14/18)

Fuel Economy Standards

Mitch Bainwol, president and chief executive officer, The Auto Alliance: "With this

announcement, the Administration is fulfilling its commitment to reinstate the midterm evaluation of future vehicle fuel economy and greenhouse gas standards. This review is important to consumers nationwide who want government to rely on the facts to drive improvements in fuel economy. We're delighted to see the two federal agencies align and coordinate their programs, and we thank Secretary Chao and Administrator Pruitt for working closely together to harmonize a review driven by the most current data, consumer preferences and marketplace realities. (8/10/17)

Peter Welch, president and chief executive officer, National Automobile Dealers Association: "NADA applauds the Trump Administration for reaffirming our shared commitment to a transparent, fair and data-driven midterm review of fuel-economy standards." (03/15/17)

International Cooperation

Gian Luca Galletti, Italian Minister of the Environment: "The protection of the environment and public health is a common goal for Italy and the United States. There are many themes that see our common commitment. The presence of Administrator Pruitt at the G7 Environment in Bologna has been a very important element that allowed us to start constructive dialogue on all environmental issues as well as to open new channels of business cooperation between our two countries." (06/11/17)

Brad Wall, Premier of Saskatchewan, Canada: "I was grateful for the chance to meet with Administrator Pruitt. Canada and the U.S. can work together on a continental approach to energy and the environment that focuses on technological innovation like CCS and clean coal initiatives without tax and regulatory policies that cost jobs." (04/04/17)

Regulatory Reform

Barry Hart, executive vice president and chief executive officer, Association of Missouri Electric Cooperatives: "We are encouraged to see that the Trump Administration understands the concerns of people in rural America and is committed to bringing the change they want. We look forward to working with Administrator Pruitt and other administration officials as they work to ensure Washington regulations don't harm the people who can least afford it — our members — and help rural communities create jobs." (04/20/17)

Mike Jackson, chief executive officer, Auto Nation: The Trump Administration is "absolutely doing the right thing" when it comes to rolling back environmental regulations from the Obama Administration. (02/16/17)

Senator Mitch McConnell (R-Ky.), U.S. Senate Majority Leader: "I applaud Administrator Scott Pruitt for his decision to delay this Obama Administration issued regulation. [The 2015 Ozone Standards were] yet another attack on the Middle Class by the Obama Administration and was forced through despite significant concern from communities across the country. Today's postponement will give states and municipalities relief in the interim while EPA continues to review NAAQS levels." (06/06/17)

Scientific Advisory Board Reforms

Howard Feldman, senior director for regulatory and scientific affairs, American Petroleum Institute: "Smart, science-based regulations are essential to our nation meeting its energy and environmental needs well into the future. Administrator Pruitt's actions today advance the administration's commitment to promoting American energy production, transportation, refining, and use while protecting the environment." (10/31/17)

Senator Jim Inhofe (R-Okla.), senior member, U.S. Senate Committee on Environment and Public Works: "Administrator Pruitt's directive to increase transparency and impartiality at the EPA is welcome news... The reforms implemented today will restore integrity to the science advisory boards and demonstrate a commitment to ensuring that diverse voices are heard from the scientific community and increasing participation from state, local and tribal governments." (10/31/17)

Congressman Lamar Smith (R-Tex.), chairman, U.S. House of Representatives Science, Space, and Technology Committee: "Today's announcement shows that we have an administrator with common sense, commitment and courage. Administrator Pruitt is restoring the EPA advisory boards to their original purpose – to provide the administrator objective advice on science and technology policies." (10/31/17)

Smart Sectors

Michael D. Bellaman, president and chief executive officer, Associated Builders and Contractors: "The Smart Sectors Program shows it's a new day at EPA—and that's good news for the environment and the economy. The nation's construction industry welcomes the opportunity to collaborate with regulators to ensure that environmental protection is streamlined and cost effective. That's the way government can help industry be more productive, create more jobs and grow the economy." (10/03/17)

John McKnight, senior vice president of government relations, National Marine Manufacturers Association: "We are thrilled to be part of the EPA's launch of its Smart Sectors Program and are proud to represent an industry that's always first in line when it comes

to partnering with EPA to improve its processes and benefits." (10/03/17)

Sue and Settle

Tom Donohue, president and chief executive officer, U.S. Chamber of Commerce: "The U.S. Chamber of Commerce applauded

Administrator Pruitt's announcement that he would end the so-called sue and settle scheme, which allowed special interest groups to sue EPA in an attempt to force it to take action on their pet issues." (11/13/17)

American Farm Bureau Federation: "In fulfilling his promise to end the practice of regulation through litigation that has harmed the American public, EPA Administrator Scott Pruitt issued an Agency-wide directive designed to end 'sue and settle' practice with the Agency, providing an unprecedented level of public participation and transparency in EPA consent decrees and settlement agreements." (10/16/17)

Richard Guebert, Jr., president, Illinois Farm Bureau: "We're pleased to see the U.S. EPA move away from the previous administration's closed-door dealings which directed agency policy and into a more transparent form of revisions and rule-making...We would like to thank EPA Administrator Scott Pruitt for working to increase transparency in the regulatory process and helping ensure that all stakeholders have a voice when new environmental rules are developed." (10/16/17)

Steve Milloy, senior policy fellow, Energy and Environmental Legal Institute: "By ending the Environmental Protection Agency's (EPA) 'Sue and Settle' practice as well as improving transparency in consent decrees and settlement agreements, EPA Administrator Scott Pruitt is following through on President Trump's promise to 'drain the swamp.'" (10/16/17)

William Yeatman, senior fellow, Competitive Enterprise Institute: "We agree with Administrator Pruitt's goal of ensuring that the agency—and not special interests—establish federal policymaking priorities." (10/16/17)

Superfund

Governor Brian Sandoval (R-Nev.): "The State of Nevada has secured a path forward to restore and reclaim the full Anaconda mine site on a predictable and transparent timeline...it was an honor to host Administrator Scott Pruitt in Weed Heights for this special announcement. This is a landmark day for those who have worked to accomplish a path toward achieving our shared goal of cleaning up the mine site and I am grateful for the trust of the EPA to defer management of the process to Nevada and the incredible partnership with Atlantic Richfield Company." (02/09/18)

Dawn Chapman, co-founder, Just Moms St. Louis: "We consider 70-plus percent removal of the waste [at the West Lake Landfill] a victory and step in the right direction. Our goals, along with relocating the residents, have always been getting the radioactive waste out of the Missouri River floodplain and away from the threat of the underground fire." (02/01/18)

Congresswoman Ann Wagner (R-Mo.): "After years of broken promises and inaction by previous administrations, Administrator Pruitt and the EPA are proposing a viable, permanent solution for cleaning up the West Lake Landfill. I commend them for delivering on this promise to our community and prioritizing Missourians who have lived in fear and uncertainty for too long." (02/01/18)

Maritza Lopez, East Chicago resident: "Administrator Pruitt recognized that the USS Lead Superfund site was important enough to serve as the first Superfund site that he visited.

His continued attention is appreciated. This should be the standard at all sites where residents are exposed to hazardous contamination." (05/31/17)

WOTUS

Michael Turner, president, Dallas Builders Association: "The Dallas Builders Association commends EPA Administrator Pruitt for holding this roundtable in Dallas to get direct feedback from home builders and developers who are affected by burdensome regulations that raise the cost of housing and harm small businesses. The nation's home builders support the administrator's efforts to enact a revised waters of the U.S. rule that will protect the environment without adding unnecessary regulatory burdens that will hurt housing and other industries in Texas that rely on a predictable permitting process." (08/10/17)

Senator Chuck Grassley (R-Iowa), chairman, Senate Judiciary Committee: "The federal government works for the people of Iowa and the rest of the United States. Administrator Pruitt is right to come to Iowa and hear firsthand how the WOTUS rule and other regulations affect the farmers on the ground who are good stewards of the land while feeding the world." (08/08/17)

Leslie Rutledge, Attorney General, Ark.: "Administrator Pruitt's decision last month to completely re-evaluate the WOTUS rule, minimizing the regulatory burden on countless landowners, demonstrates his commitment to building stronger relationships with state partners." (07/20/17)

Subject: Obama Official Supporting Science Transparency

<https://www.theregreview.org/2018/06/18/dudley-increasing-epas-scientific-transparency/>

Susan Dudley directs the George Washington University Regulatory Studies Center and served from 2007 to 2009 as the Administrator of the Office of Information and Regulatory Affairs within the Office of Management and Budget.

Increasing EPA's Scientific Transparency

Despite concerns, environmental agency's "transparent science" proposed rule supports existing guidelines.

The Regulatory Review
6/18/18

Contrary to what the strong reactions to the U.S. Environmental Protection Agency's (EPA) "transparent science" proposal might suggest, the proposal is not as dramatic as either supporters or detractors imply. Its core principles actually conform with guidelines adopted by previous administrations.

Principle #1: EPA will clearly identify and make publicly available the studies and science relied on for significant regulatory actions. When the Office of Information and Regulatory Affairs(OIRA) tallies up the estimated benefits of all federal regulations, EPA's rules compose 65 percent to 80 percent of the total. Given the significance of these estimates, documenting and making available for public review the underlying science supporting them is essential, as previous administrations have acknowledged.

In 2009, President Barack Obama issued a memorandum to agencies that encouraged "transparency in the preparation, identification, and use of scientific and technological information in policymaking" and affirmed that "scientific and technological information...should ordinarily be made available to the public." The Office of Management and Budget's (OMB) 2002 information quality guidelines directed agencies to make publicly available any relevant peer-reviewed studies that provide support for or contradict estimated effects.

Principle #2: EPA will make dose-response data and models underlying pivotal regulatory science publicly available for independent validation. The selection of the model used to estimate responses to exposures to contaminants can have significant impacts on estimated regulatory benefits. In 2007, OIRA and the Office of Science and Technology Policy (OSTP) observed that a "high degree of transparency with respect to data, assumptions, and methods will increase the credibility of the risk analysis, and will allow interested individuals, internal and external to the agency, to understand better the technical basis of the analysis."

In 2010, the OSTP directed agencies to develop policies to "facilitate the free flow of scientific and technical information, consistent with privacy and classification standards." President Obama's science advisor, John Holdren, instructed agencies to "expand and promote access to scientific and technological information"—including data and models underlying regulatory proposals—"by making it available online in open formats."

EPA's proposal to make the data and models underlying its pivotal regulatory science public also conforms with developments in scholarly journals. In 2013, for example, Nature took steps to ensure it reported key methodological details and prompted "authors to be transparent," by, for example, including the raw data used in their studies. The journal Science has also focused "on making data more open, easier to access, more discoverable, and more thoroughly documented."

EPA's proposal states that it would consider information to be "'publicly available in a manner sufficient for independent validation' when it includes the information necessary for the public to understand, assess, and replicate findings." This emphasis on replicability can encourage the process of challenge and validation that underscores the scientific method. The proposal conforms with OMB's 2002 information quality guidelines, which require that significant information disseminated to the public be "'capable of being substantially reproduced'...subject to an acceptable degree of imprecision."

Principle #3: EPA will describe and document its assumptions and methods and show how sensitive modeled results are to those and alternative assumptions. In 2010, the OSTP directed agencies to communicate scientific and technological findings to the public "by including a clear explication of

underlying assumptions; accurate contextualization of uncertainties; and a description of the probabilities associated with both optimistic and pessimistic projections, including best-case and worst-case scenarios where appropriate.”

Documentation and sensitivity analysis are important, because assumptions and judgments become embedded in predictions of health risk under different policy options and can—intentionally or not—influence the ultimate advice that researchers give to decision-makers and the public. Documenting these assumptions and estimating how predicted outcomes vary with alternative assumptions and judgments, could greatly improve the transparency and quality of EPA’s decisions. As a group of 19 regulatory analysis experts warned, “analyses that do not provide information on how sensitive the primary estimate is to assumptions, data, and models, and the range of outcomes possible under reasonable alternative analytic assumptions should raise questions.”

Principle #4: EPA will explicitly consider high-quality studies that offer new dose response information that may allow the agency to move away from default assumptions. In estimating adverse effects of exposure to many pollutants, EPA relies on a default linear, no-threshold dose-response model. Both theory and observation suggest that thresholds exist below which further reductions in exposure do not yield changes in mortality response. More accurate dose-response functions, however, are elusive. The default linear no-threshold assumption is convenient in that it allows EPA to estimate incremental health improvements in proportion to estimated reductions in exposure, but, if the assumption is inaccurate, it can lead to under- or over-estimates of risks at relevant exposure levels and to a misallocation of resources.

EPA’s proposed commitment to consider research that can help clarify the effect of low-dose exposure to key pollutants would not only improve short-term policy outcomes, but the commitment would also provide incentives for researchers to devote attention and resources to exploring and reducing this key uncertainty.

Principle #5: EPA will conduct independent peer review on all pivotal regulatory science used to support regulatory decisions. Peer review represents a fundamental component of the scientific process and EPA’s proposed approach conforms with OMB’s 2004 guidelines to all federal agencies and departments on using external peer review. When engaging experts in peer review, EPA should also consider the recommendations of recent interdisciplinary efforts in the context of scientific advisory panels. Such advisors can provide a necessary and valuable source of information and peer review for agency science, but care should be taken in both the composition of the panels and the charges they are given.

Principle #6: EPA will apply practices to protect privacy and confidentiality of information. EPA acknowledges concerns that increased transparency and public access to data may risk exposing confidential or private information. The agency, however, points to practices at other federal agencies and in scientific publishing that can ensure the protection of confidential or personally identifiable information. Depending on the situation and sensitivity of the information, data can be shared through a range of measures that allow access for replication and validation purposes while protecting personally identifiable information.

In conclusion, EPA’s proposed rule attempts to balance the competing public goals of ensuring policy decisions are transparent and based on the best available science, while protecting privacy and confidentiality. Building on existing guidelines, the rule includes reasonable principles that could improve the evidentiary basis for EPA’s regulatory policies and thus improve regulatory outcomes by targeting resources where the largest benefits can be achieved.

Constructive public comment on this proposal will be essential. As President Obama’s science advisor once observed, “Open communication among scientists and engineers, and between these experts and the public, accelerates scientific and technological advancement, strengthens the economy, educates the nation, and enhances democracy.”

Jennifer and Sam,

Per your request, I wanted to let you know that I have reviewed the draft response to Congressmen McNerney, Tonko, and Pallone. **Deliberative Process / Ex. 5** and support ORD signing the response, once it comes to ORD for signature after OCIR review.

Please let me know if you have any questions.

Thanks,
P. Grevatt

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON D.C. 20460

OFFICE OF THE ADMINISTRATOR
SCIENCE ADVISORY BOARD

June 28, 2018

EPA-SAB-18-003

The Honorable E. Scott Pruitt
Administrator
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue, NW
Washington, D.C. 20460

Subject: Science Advisory Board (SAB) Consideration of EPA Proposed Rule:
Strengthening Transparency in Regulatory Science

Dear Administrator Pruitt:

As part of its statutory duties, the Environmental Protection Agency's (EPA) Science Advisory Board (SAB) met on May 31, 2018, to discuss whether to review the adequacy of the scientific and technical basis of the planned regulatory actions in the 2017 Unified Regulatory Agendas, as authorized by section (c) of the Environmental Research, Development and Demonstration Authorization Act of 1978 (ERDDAA). During this meeting, the SAB also discussed possible review of the science supporting the proposed rule *Strengthening Transparency in Regulatory Science (RIN 2080-AA14)*. The SAB found that the proposed rule deals with issues of scientific practice and proposes constraints to the use of scientific studies in particular contexts. The proposed rule solicits comment on a number of scientific issues that would benefit from expert advice and comment from the SAB.

Initiating the Screening Review

The ERDDAA requires the EPA to make available to the SAB proposed criteria documents, standards, limitations, or regulations provided to any other Federal agency for formal review and comment, together with the relevant scientific and technical information upon which the proposed action is based. The SAB may then make available to the Administrator, within the time specified by the Administrator, its advice and comments on the adequacy of the scientific and technical basis of the proposed action.

EPA's usual process is to provide the SAB with information about the publication of the semi-annual regulatory agenda and to provide descriptions of major planned actions that are not yet proposed but appear in the semi-annual regulatory agenda, augmented to include proposed regulations, criteria documents, standards, or limitations that are expected to undergo interagency review¹. The EPA's descriptions provide available information regarding the science that is informing these agency actions.

SAB members and the SAB Staff Office were made aware of a proposed rule entitled *Strengthening Transparency in Regulatory Science* (RIN 2080-AA14) through an April 25, 2018, press event and an April 30, 2018, *Federal Register* notice, as well as news articles. The EPA announced the proposed rulemaking with a 30-day public comment period. SAB members had no information regarding the timeline for finalizing the rule and the proposed rule was not identified as a major action in either of the Spring 2017 or Fall 2017 semi-annual Regulatory Agendas.

An SAB Work Group met by teleconference on May 3, 2018, to discuss its recommendations on major planned actions in the Fall 2017 semi-annual regulatory agenda and included the proposed rule *Strengthening Transparency in Regulatory Science* (RIN 2080-AA14) as part of the discussion. That Work Group provided the SAB with a memorandum² documenting the discussions and recommending that the proposed rule merits review by the SAB. Subsequently the SAB became aware that the proposed rule was included in the Spring 2018 semi-annual Regulatory Agenda published on May 9, 2018. A second *Federal Register* notice was published May 25, 2018 extending the public comment period to August 16, 2018 and announcing a public hearing to be held in Washington, DC on July 17, 2018.

The SAB Should Consider the Proposed Rule's Scientific and Technical Basis

During the meeting on the May 31, 2018, the full SAB agreed with the Work Group that the proposed rule merits review by the Board and discussed the scientific issues that should be considered. For example, there are important scientific considerations needed for transparency. The Board recognizes that the long-term trend in most scientific fields is for authors to supply public access to data and analytic methods after scientific findings are published. Such transparency may help to ensure scientific integrity and facilitate robust analysis, as well as allowing supplementary lines of knowledge to be developed from the same data. Some fields of science are moving faster than others in the direction of transparency. For studies published many years ago, it may not be feasible to deliver public access to data and analytic methods.

¹ EPA Memorandum: Coordination with the Science Advisory Board Regarding Proposed Criteria Documents, Standards, Limitations and Regulations. (See page 9 of Attachment A in the Fall 2017 memorandum available at: [https://yosemite.epa.gov/sab/sabproduct.nsf/9263940BB05B89A885258291006AC017/\\$File/WG_Memo_Fall17_RegRevAitsABC.pdf](https://yosemite.epa.gov/sab/sabproduct.nsf/9263940BB05B89A885258291006AC017/$File/WG_Memo_Fall17_RegRevAitsABC.pdf))

² Preparations for Chartered Science Advisory Board (SAB) Discussions of Proposed Rule: Strengthening Transparency in Regulatory Science RIN (2080-AA14) Available at: [https://yosemite.epa.gov/sab/sabproduct.nsf/E21FFAE956B548258525828C00808BB7/\\$File/WkGrp_memo_2080-AA14_final_05132018.pdf](https://yosemite.epa.gov/sab/sabproduct.nsf/E21FFAE956B548258525828C00808BB7/$File/WkGrp_memo_2080-AA14_final_05132018.pdf)

There are also sensitive situations where public access may infringe on legitimate confidentiality and privacy interests, and where exceptions from complete public access may be appropriate. In addition, there are considerations associated with the cost and effort that would be required in making large and complex existing datasets available within Institutional Review Board requirements, including the issue of who would be responsible for implementing the rule and any additional obligations. Thus, the development of guidelines and rules in this arena requires careful collaboration with the scientific community.

Although the proposed rule cites several valuable publications that support enhanced transparency, the precise design of the proposed rule appears to have been developed without a public process for soliciting input specifically from the scientific community. Nor does the preamble to the rule describe precisely how the proposal builds on previous efforts to promote transparency such as the Information Quality Act and EPA's Information Quality Guidelines.

Other key science issues associated with the proposed rule to increase transparency that may benefit from SAB advice are:

- Considerations related to the use of epidemiologic studies and methods that are based on confidential human subject data while also providing transparency in the underlying data;
- Consideration of the multiple existing methods to assess the validity of prior epidemiologic studies, that do not provide public access to data and analytic methods;
- Consideration of the selection of dose-response models and factors such as biological plausibility, mode of action, or mechanism of action to identify the most scientifically-appropriate model(s);
- The need to clearly define crucial sound science concepts such as “replication” and “validation”; and
- The identification and evaluation of mechanisms used by expert panels in vetting science that do not engage in reanalysis of original data with original methods, yet entail a rigorous review process that goes beyond typical journal peer review procedures.

The SAB recognizes that the EPA has already received thousands of public comments in addition to the large number of comments from grassroots write-in campaigns. The SAB urges the Agency to fully consider those comments and request, receive, and review scientific advice from the SAB before revising the proposed rule.

The EPA has long been a leader in the use of science in decision-making. The proposed rule, *Strengthening Transparency in Regulatory Science*, would focus on the EPA's foundational policies related to the use of science in rulemaking and policy development. Further, the rule has the potential to influence policy development and guidance across the government. The SAB looks forward to defining the set of scientific and technical issues upon which the proposed rule rests and developing a charge for an SAB work group to provide advice and comments on those issues.

On behalf of the SAB, I thank you for the opportunity to support EPA through consideration of the science supporting actions in the Agency's regulatory agenda.

Sincerely,

/s/

Dr. Michael Honeycutt, Chair
Science Advisory Board

(1) Roster of SAB Members

NOTICE

This report has been written as part of the activities of the EPA Science Advisory Board (SAB), a public advisory group providing extramural scientific information and advice to the Administrator and other officials of the Environmental Protection Agency. The SAB is structured to provide balanced, expert assessment of scientific matters related to problems facing the Agency. This report has not been reviewed for approval by the Agency and, hence, the contents of this report do not necessarily represent the views and policies of the Environmental Protection Agency, nor of other agencies in the Executive Branch of the Federal government, nor does mention of trade names of commercial products constitute a recommendation for use. Reports of the SAB are posted on the EPA Web site at <http://www.epa.gov/sab>

³ Dr. Ramos did not attend the May 31-June 1 meeting.

APPROPRIATIONS & CROSSCUTTING WEEKLY NEWS

Office of Congressional and Intergovernmental Relations

Week Ending February 9, 2018

BIPARTISAN SENATE BUDGET DEAL REACHED

The Senate has reached a massive two-year budget deal that would increase spending levels for both defense and domestic programs. The deal is expected to increase budget caps by \$300 billion over the next two years. The bill includes some key things:

- Funds the government through March 23
- Raises the debt ceiling beyond the midterm elections
- Includes over \$81B in disaster aid funding
- Removes sequestration

The agreement, if passed, allows House and Senate Appropriations chairmen to finish an omnibus spending package, ending the cycle of short-term government funding bills, at least for a few months. The deal effectively deals with many stalled policy priorities that have stalled in the Senate for some time now.

Once passed in the Senate, the bill must go back to the House for a vote. Nancy Pelosi said Wednesday that Democrats would not support the two year package without a commitment from Speaker Paul Ryan to an open floor debate on immigration that includes a vote to protect Dreamers from deportation—similar to the promise made from Senate Majority Leader Mitch McConnell to democrats in his chamber.

Meanwhile, the current stopgap funding resolution expires at midnight on Thursday, February 8, and we will continue to monitor the funding saga as it unfolds.

Nominee for EPA Deputy Advances in Committee

The Senate Environment and Public Works Committee voted Wednesday, 11-10 along party lines, to approve the nomination of former fossil fuel lobbyist Andrew Wheeler to be EPA's Deputy Administrator. Wheeler's nomination had previously won committee approval in November, but didn't get a vote on the Senate floor. Democrats had threatened to block environmental nominees because they objected to the nomination of Kathleen Hartnett White to lead the Council on Environmental Quality. White withdrew her nomination on Sunday, clearing the way for Democrats to agree to a vote on Wheeler.

Earth Day 2018

It may be hard to imagine that before 1970, a factory could spew black clouds of toxic into the air or dump tons of toxic waste into a nearby stream, and that was perfectly legal. They could not be taken to court to stop it.

How was that possible? Because there was no EPA, no Clean Air Act, no Clean Water Act. There were no legal or regulatory mechanisms to protect our environment.

In 1970, President Richard Nixon and Congress established the U.S. EPA in response to the growing public demand for cleaner water, air, and land. EPA was tasked with monitoring, standard-setting, and enforcement activities to help protect our environment and to help Americans make a cleaner and safer environment. EPA research has been crucial to environmental legislature such as the Clean Air Act, the Clean Water Act, the Pollution Prevention Act, and the Safe Drinking Water Act.

In spring 1970, Senator Gaylord Nelson created Earth Day as a way to force this issue onto the national agenda. Twenty million Americans demonstrated in different U.S. cities, and it worked!

Although Earth Day is celebrated on April 22 each year, let's strive to make every day Earth Day!

2018 EPA Budget Symposium

The Team continues to move forward on planning EPA's first Budget Symposium for Congressional Authorizing Committees. The President's FY 2019 Budget Request is currently scheduled for February 12, 2018. The Symposium will be held onsite at EPA's Washington DC Headquarters. More information will be provided on the details of this historical event soon. Stay tuned!

Facilities and Space Consolidation

EPA is consolidating human resources support services into EPA owned buildings in Cincinnati, OH and Research Triangle Park, NC. This decision will save taxpayer dollars and streamline management layers. EPA staff will be given the opportunity to relocate to an EPA owned facility by the summer of 2018.

What does this mean? EPA delivers HR support to its workforce through a variety of organizations and support models, both centralized, through three HR shared service centers, and decentralized, with HR resources embedded in organizations.

Who is the customer? The goal is to continue to improve customer service, provide more consistent HR support, and foster increased confidence from customers. The change further illustrates the agency's commitment to providing service in the most efficient manner to customers across the agency, and this consolidation will positively impact staff coordination and service delivery.

The centers in Cincinnati and RTP will process personnel and benefits actions for the agency's employees. The move will be completed in the summer of 2018. Staff affected by this consolidation will be given the option to relocate to one of the other locations, retire, or separate from the Agency. The Agency will pay for relocation costs.

Congressional Inquiries

Homeland Security and Governmental Affairs: Agency Rulemakings

Senator Markey: Formaldehyde Risk Assessment Status Update

Interior Subcommittee on Appropriations/Environment & Public Works Committee: IRIS, National Academy of Sciences Review Process

House Science, Space, and Technology: Honest Act Implementation

White House Aide Resigns

White House staff secretary Rob Porter, a mostly unknown but deeply influential aide who spends almost every day by the President's side, said Wednesday he plans to resign following abuse allegations from his ex-wives.

In a pair of reports published by the Daily Mail, Porter's two ex-wives detailed episodes of verbal and physical abuse. The Daily Mail published a copy of a protective order obtained by Porter's wife in 2010 and later published photographs of Porter's first wife with a black eye she alleges came from Porter punching her.

Miscellaneous Tidbit

The President wants to have a military parade in DC. Not all lawmakers are on board with that idea, with Senator Lindsey Graham calling the idea "cheesy and shows a sign of weakness".

Program Spotlight This Week

ORD

Improved Usability of EPA Database Supporting TSCA Implementation

This week, EPA ORD is making available a significantly updated version of the Web-based Ecotoxicology Knowledgebase (ECOTOX), which serves as the source of toxicity effects data currently being used to evaluate the safety of existing chemicals under the Lautenberg Act. ECOTOX includes data on more than 11,000 chemicals and 12,000 species, and is available online to users all over the world. Each month, 6,000-10,000 unique users perform 150,000 to 200,000 data downloads. This database provides users with a cost-effective, non-duplicative means of locating high-quality ecological effects data to support chemical decision making across a wide range of uses. ECOTOX data are used for all ecological risk assessments supporting pesticide registrations and re-registrations, all ambient water quality criteria for chemicals published since 1985, and assessments used in emergency response. The updated version of ECOTOX is being released in beta form to gather feedback before becoming final. It includes new visualization tools and other improvements to help users better identify the most critical data from current outputs more quickly.

Building Statistical Capacity to Assess Waters in Virginia

On Monday, at a meeting organized by the Virginia Department of Environmental Quality, ORD's Karen Blocksom demonstrated a function she created in the R programming language to identify distinct taxa in water samples to a group of state and regional biologists. The R programming language is used for statistical analysis by many state programs using National Aquatic Resource Survey (NARS) approaches and tools to monitor and report on the condition of their waters. This technical support helps EPA better support states that might be struggling with R, which has a steep learning curve, while enabling EPA to learn about tools that states are developing that we may be able to use.

Moving from Contamination to Economic Revitalization in Great Lakes

ORD researchers will join federal and state partners Tuesday and Wednesday in Chicago, at the EPA Region 5 and EPA Great Lakes National Program Office-hosted Great Lakes Area of Concern (AOC) Revitalization Summit. Great Lakes AOCs were established in response to legacy contamination of heavy metals, polychlorinated biphenyls, and dioxin, as well as to combined sewage overflows and stormwater runoff from Great Lakes Coastal communities. There are 27 remaining AOCs on the U.S. side of the Great Lakes. The goals are to restore the beneficial uses of the aquatic ecosystems that have been impaired and, in many cases, to accomplish economic revitalization. NHEERL researchers have worked with partners to apply Remediation to Restoration to Revitalization in the St. Louis River estuary and plan to take lessons learned from that work to the summit. NRMRL has five active field projects within the Great Lakes AOCs that are venues for development of alternative monitoring technologies and innovative analysis approaches to evaluate remedy effectiveness.

Office of Congressional and Intergovernmental Relations

Week Ending April 27, 2018

FY 2019 BUDGET HEARINGS

April 26, 2018

House Energy and Commerce and House Appropriations

WASHINGTON DC—Administrator Pruitt appeared at back-to-back hearings by the House Energy and Commerce Committee's Energy Subcommittee and the House Appropriations Interior-Environment Subcommittee Thursday. He rejected a litany of ethics complaints against him as lies intended to derail President Donald Trump's agenda, and put much of the blame for any agency missteps on his staff.

During the two tense congressional hearings, the Administrator faced tough questions from Democrats and even some fellow Republicans in marathon high-stakes testimony. "Facts are facts and fiction is fiction," he told a House of Representatives panel. "And a lie doesn't become true just because it appears in the front page of the newspaper." "Those who attack the EPA and attack me are doing so because they want to attack and derail the president's agenda and undermine this administration's priorities," the Administrator testified.

Although the hearings were scheduled to discuss the EPA budget, they focused mainly on the Administrator's performance. Nonetheless, he was able to tout his accomplishments, highlighting "measurable achievements" that have thus far occurred since he has taken office, in addition to new regulatory reforms. "There is consequential and important work being done at the EPA since the beginning of the administration, both in terms of improved environmental outcomes as well as substantial regulatory reforms," Administrator Pruitt said. Topics raised in both hearings related to WIFIA, Hurricane Recovery, GHG & Corporate Average Fuel Economy (CAFE) standards, cooperative federalism with States, and Brownfields.

Hearing Transcripts are expected to be released next week. Questions for the Record are expected to be received from both committees within the next two weeks.

BUDGET HEARINGS:

Senate Appropriations Committee: May 15– Tentative

Senate Environment and Public Works: TBD

CONFIRMATION HEARING:

Assistant Administrator Charles McIntosh– Office of International and Tribal Affairs (OITA)- May 9

UPCOMING EVENTS:

PADs/Comms Directors Meeting - May 2-3, 2018

PUBLIC HAPPENINGS : Science Advisory Board Staff Office

Public Meeting: SAB CAAC-ETBE/tBA Panel Teleconference: Chartered Science Advisory Board (SAB) Meeting May 31-June 1, 2018: A Federal Register Notice was published on April 18th, 2018, announcing a public face to face meeting for the Chartered SAB on May 31-June 1, 2018. This will be the first face to face for the newly appointed board. The draft agenda proposes review of the finalized report on the risk and technology review for NESHAPs (National Emissions Standards for Hazardous Air Pollutants), discussion on the planned actions on the regulatory agenda, and briefings on the agency's efforts on the Lead Task Force and PFAS (perfluoroalkyl substances). A request for the Administrator to welcome the new Chartered Board was submitted.

Public Meeting: SAB CAAC-ETBE/tBA Panel Teleconference June 6, 2018: A follow up public teleconference of the SAB Chemical Assessment Advisory Committee (CAAC) augmented for ETBE and TBA Panel is in the planning stages. . A Federal Register Notice (FRN) package to announce the public teleconference is currently being prepared and will be submitted to the Office of Policy the week of April 30th. The purpose of the teleconference (to be held June 6, 2018) is to continue deliberation on the panel's draft report responding to the Agency's request for SAB Peer Review of the documents: *Toxicological Review for Ethyl Tertiary Butyl Ether (ETBE) (External Review Draft, dated June 2017)* and *Toxicological Review of tert-Butyl Alcohol (tert-butanol or tBA) (External Review Draft, dated June 2017)*.

SCIENCE HAPPENINGS: Office of Research and Development

Field Studies at Reynolds Metals Company Superfund Site, Troutdale, OR

This week, at the request of Region 10, NRMRL's Robert Ford, Steve Acree, and Randall Ross will travel to the Reynolds Metals Company Superfund Site to demonstrate tools for mapping groundwater and surface water interactions with lakes and rivers that border the site. The planned work will provide Region 10 and the Oregon Department of Environmental Quality with tools to evaluate where groundwater may be reaching above-ground levels and entering surface waters near the site. The Reynolds Metals Company site is the former location of the Reynolds/Alcoa aluminum smelter. Activities at the site generated metals-bearing wastes that contaminated soil, groundwater, surface water and sediment.

Interagency Collaborative for Environmental Modeling and Monitoring (ICEMM) Meeting

This week, in Rockville, Maryland, ICEMM will hold a meeting with the six federal agencies, including ORD, cooperating in the research and development of multimedia environmental models, software, and related databases. The public meeting will include information on developments in environmental modeling applications, tools and frameworks, and new operational initiatives among the participating agencies. Brenda Rashleigh, NHEERL's MI to the SSWR research program, will present on the history and priorities of the ICEMM. More information

Sharing Expertise in China

This week, NHEERL's Christopher Lau will present on "PFAS Toxicology and Recent Risk Assessment Activities," at the 2018 International Symposium on Chemical Risk Prediction and Management in Dalian, China. After the symposium, Dr. Lau will visit the School of Environmental Science and Technology at Dalian University of Technology and present a seminar on the same topic. NCCT scientist Maureen Gwinn was also invited to present at Dalian University of Technology on the use of new approach methodologies in chemical risk assessment in the US, specifically related to her work with other international collaborators through the Accelerating the Pace of Chemical Risk Assessment (APCRA) workshops. This effort is an important initiative to increase US and international interaction and engagement related to the safety of chemicals.

ASTM Waste Management Meeting to Develop Consensus Standards

Last week, NERL's Brian Schumacher and John Zimmerman hosted the American Society for Testing and Materials (ASTM) Waste Management Committee Meeting (i.e., ASTM Committee D34) at the NERL-Las Vegas facility. The meeting was attended by members representing EPA, states, and industry. Participants discussed and edited multiple consensus standards over the course of the two-day meeting. An ASTM consensus standard is developed by seeking the input of a cross-section of stakeholders with an interest in its use. ASTM technical committees, like ASTM Committee D34, meet as part of the process of standards development.

ECOS Air and Water Calls on Research Planning

In an effort to prioritize states' needs, ORD is coordinating media-specific calls with ECOS and its research arm – the Environmental Research Institute of the States (ERIS) – to gather information that will inform future planning and contribute to the development of ORD's Strategic Research Action Plans refresh. This week, two calls will be held focused on Air and Water research planning. For these initial project formulation calls, ORD will discuss proposed high level changes/priorities, and how the 2016 ERIS states' research priorities have informed ORD's research planning to date. State media associations have also been invited to participate, as well as EPA program and regional office representatives. The goal is to better connect state research needs with Agency priorities to ensure that ORD's research and development is useful and practical to help states address their on-the-ground problems.

Superfund Support

Last week, Jonathan Essoka, Felicia Barnett, Jan Szaro (OSP) and Dave Burden (NRMRL) discussed potential technical support needs related to passive groundwater and surface water sampling methods at the Central Chemical Superfund Site in Hagerstown, MD. The site is a former pesticide/fertilizer blending and packaging facility where plumes of agricultural pesticides have contaminated the surface and groundwater.

U.S. ENVIRONMENTAL PROTECTION AGENCY

NEWS RELEASE

WWW.EPA.GOV/NEWSROOM

EPA Administrator Pruitt Proposes Rule To Strengthen Science Used In EPA Regulations

WASHINGTON (April 24, 2018) – Today, U.S. Environmental Protection Agency (EPA) Administrator Scott Pruitt signed a proposed rule to strengthen the science used in regulations issued by EPA. The rule will ensure that the regulatory science underlying Agency actions is fully transparent, and that underlying scientific information is publicly available in a manner sufficient for independent validation.

“The era of secret science at EPA is coming to an end,” **said EPA Administrator Scott Pruitt.** “The ability to test, authenticate, and reproduce scientific findings is vital for the integrity of rulemaking process. Americans deserve to assess the legitimacy of the science underpinning EPA decisions that may impact their lives.”

This proposed rule is in line with the scientific community’s moves toward increased data sharing to address the “replication crisis”—a growing recognition that a significant proportion of published research may not be reproducible. The proposal is consistent with data access requirements for major scientific journals like [*Science*](#), [*Nature*](#), and [*Proceedings of the National Academy of Sciences*](#) as well as recommendations from the Bipartisan Policy Center’s [*Science for Policy Project*](#) and the Administrative Conference of the United States’ [*Science in the Administrative Process Project*](#).

The proposed rule builds upon President Trump’s executive orders on regulatory reform and energy independence:

Executive Order 13777, issued in March 2017, provides that regulatory reform efforts shall attempt to identify “those regulations that rely in whole or in part on data, information, or methods that are not publicly available or that are insufficiently transparent to meet the standard of reproducibility.”

Executive Order 13783, also issued in March 2017, provides that “It is the policy of the United States that necessary and appropriate environmental regulations comply with the law, are of greater benefit than cost, when permissible, achieve environmental improvements for the American people, and are developed through transparent processes that employ the best available peer-reviewed science and economics.”

Chairman Lamar Smith (R-TX): “Administrator Pruitt’s announcement ensures that data will be secret no more. For too long, the EPA has issued rules and regulations based on data that has been withheld from the American people. It’s likely that in the past, the data did not justify all regulations. Today, Administrator Pruitt rightfully is changing business as usual and putting a stop to hidden agendas.”

Senator Mike Rounds (R-SD): “Sound, reliable science is vital to helping us make important policy decisions that impact the health of American families and their livelihoods. Inserting new levels of transparency in the EPA rulemaking process will help make the agency more accountable to the American people and help everyone understand the impact of EPA’s decisions. Today’s directive is a significant step toward making sure these decisions are not made behind closed doors with information accessible only to those writing the regulations, but rather in the full view of those who will be affected.”

Colleagues:

It is likely the Administrator will be testifying before EPW on August 1 – as we found out today. This means we will need to put together a briefing binder very quickly for him and the team.

Can you please work with your respective program offices to update the fact sheets with the latest info? Attached, for your information and reference, is a file with the latest fact sheets that were used and approved for the previous round of hearings. We will need your updated (if appropriate) fact sheets no later than Noon Wednesday, July 25th. Earlier of course would be better if possible, but please note that this is an ironclad date.

Thank you and please let me know if you have any questions. If there are no updates to provide, please let me know that as well.

Subject: ECOS panel discussion on Transparency in Science

Hi –

Flagging for you a panel discussion in the works for the ECOS meeting in Stowe, VT:

Point-Counterpoint: State Perspectives on Acceptable Science

U.S. EPA recently proposed a rule requiring underlying data for all of the agency's scientific studies to be publicly available so that it can be independently validated. Supporters and critics alike believe the transparency rule will have far-reaching implications that will change how the agency regulates. In this session, ECOS members will explore the case for and against the proposed new approach, weighing potential benefits and drawbacks.

- ❖ Patrick McDonnell, ECOS Innovation & Productivity Committee Vice Chair and Secretary, Pennsylvania Department of Environmental Protection (moderator)
- ❖ Martha Rudolph, Director, Colorado Department of Public Health and the Environment
- ❖ Bryan Shaw, Chairman, Texas Commission on Environmental Quality (invited)

Current draft available at: <https://www.ecos.org/event/2018-ecos-fall-meeting/>

You may recall ECOS Past President John Linc Stine of MN penned a comment letter to EPA about this, back in May.

Thanks,

RE: Strengthening Transparency in Regulatory Science – Comment Deadline Extension Request

Dear Mr. Sinks:

On behalf of the states, we write to request a 60-day extension to the comment period for the Strengthening Transparency in Regulatory Science Proposed Rule 83 FR 18768 (April 30, 2018).

The stated intent of the proposed rule is to strengthen regulatory transparency associated with the science the Environmental Protection Agency (EPA) uses for regulatory decision making and to ensure the data and models underlying rules are publicly available in a manner sufficient for independent validation and analysis.

Increased transparency is a worthy goal that can enhance agency deliberations and the regulatory process. More co-regulatory discussions regarding the intent, scope, and implementation processes associated with this rule will improve the quality of the comments the agency receives. Extending the comment period would allow those discussions to occur.

As our state associations and individual states prepare our comments, we require adequate time to thoughtfully evaluate the likely effect of the proposed rule and assess the scope, potential consequences of the rule, and the manner in which it may impact and/or alter state programs, decisions, and actions.

Given the critical importance of this regulatory action, we respectfully submit that a 60-day extension on the comment period is necessary so that state environmental programs can provide the agency with thoughtful and well reasoned comments on the proposal. This extension is essential to EPA's evaluation of state impacts, and will contribute to an enhanced and improved final rule.

Thank you and we look forward to the Agency's response to this request. Should you have questions regarding this request, please contact Julia Anastasio, (janastasio@acwa-us.org, 202-756-0600) or any of the signatories below.

Sincerely,

Subject: FW: SIGNED: Strengthening Transparency in Regulatory Science

Yesterday today Administrator Pruitt announced this proposed rule. The proposed rule touches upon three aspects of OSA work – public access to EPA funded research, human subjects research protection, and scientific integrity. It has highly significant implications for EPA programs and regions in defining how access to research data is used in rulemaking.

I presume it will be released in the Federal Register shortly. The proposed rule seeks comments and I suspect your state, local, academic, industry, and NGO partners will be interested. Please feel free to distribute it to them.

Subject: SIGNED: Strengthening Transparency in Regulatory Science

Good afternoon

Today, the Administrator signed the proposed rule "Strengthening Transparency in Regulatory Science."

This proposed regulation is intended to strengthen the transparency of EPA regulatory science. The proposed regulation provides that when EPA develops regulations, including regulations for which the public is likely to bear the cost of compliance, with regard to those scientific studies that are pivotal to the action being taken, EPA should ensure that the data underlying those are publicly available in a manner sufficient for independent validation.

In this notice, EPA solicits comment on this proposal and how it can best be promulgated and implemented in light of existing law and prior Federal policies that already require increasing public access to data and influential scientific information used to inform federal regulation.

Attached is the signed and dated proposed rule. For your convenience, please go to p. 19 for the Administrator's signature.

Please contact me if you have any questions.

Sincerely,
Laura

Subject: FW: invitation to SEJ panel

This request was originally for the Chair of the Science Advisory Board to participate on the panel discussion topic of "Science in the Trump Administration." Ms. Shogren thought Dr. Honeycutt was the EPA Science Advisor. She was forwarded to me by Dr. Honeycutt's offices. I explained the SAB Chair is not the appropriate position and offered to forward her request to the Office of Public Affairs. Please see below for the Society's request for a panelist.

Subject: invitation to SEJ panel

Mr. Carpenter.

Thank you for speaking with me.

I'm moderating a panel on October 5 about science in Trump administration as part of the Society of Environmental Journalism's annual conference, which this year will be in Flint, Michigan.

I would greatly appreciate if Jennifer Orme-Zavaleta would participate in the panel.

The conference will be in Flint Michigan. Each panelist will be asked to give a brief opening statement and then we will field questions from the audience and I will likely ask some questions as well. Panelists will be encouraged to engage each other as well. Perhaps Orme-Zavaleta could speak briefly about why the Trump administration proposed its secret science rule: <https://www.epa.gov/newsreleases/epa-administrator-pruitt-proposes-rule-strengthen-science-used-epa-regulations>.

I would be very grateful if you would relay the invitation.

Thank you.

Best wishes,
Elizabeth Shogren

Subject: "Secret" science

Dear Administrator Pruitt-

As a scientist and a concerned citizen, I am writing to ask some questions about your recent remarks regarding "secret" and "sound" science, and to raise some concerns about what appears to be a pattern of a lack of respect for science and scientists from the highest levels of an agency that ostensibly exists to protect the environment.

Firstly, you seem very concerned about "secret" science, and in some sense, there is a shared concern for openness in methods and data in the scientific community as well. I applaud your concern for reproducibility in science, but I think your approach is misguided and perhaps better left to experts. By ignoring any science that doesn't make public the entire cache of unedited raw data or does not meet the requirements of the "Honest" act, it would preclude the use, for example, of any public health data that contains personal information about the study's subjects, any experiment that uses proprietary technology or methods, or any study that literally cannot be ethically reproduced, such as data collection after a natural disaster such as an oil spill. This is sound science, and there are ways of reproducing it or statistically verifying it using other methods or other subjects. A one-size-fits-all approach is not practical and it requires the EPA to ignore a lot of good data.

Of course, there are those who would argue that the whole point of this is, in fact, to allow the EPA to ignore a lot of good data. I can't imagine that that could be true though. How could anybody whose job it is to protect the environment want to ignore data that would allow them to do a better job of protecting the environment? They wouldn't want to make their job harder. So it would be in the best interest of anybody who is faithfully attempting to protect the environment to make use of as much data as possible. Furthermore, it is simply unimaginable that somebody whose job it is to protect the environment would ignore scientists, including such prestigious organizations as the AAAS and the Association of American Universities--whose job it is to interpret data--when they caution him about how his regulations on data use can lead to ideological cherry-picking, which is why I'm confident that you will take these concerns to heart and rethink your policy. Surely anybody whose job it is to protect the environment would listen to people who are experts on protecting the environment. And surely you would like to protect the environment. It is your job, after all. You were confirmed by 52 US Senators, who clearly believed that you were up to the task. If you don't believe in environmental protection, surely you would not have accepted the job, and if you had since found that science is outside your wheelhouse and you were not able to appropriately interpret the science that is required for your job, surely you would have resigned, as the environment is far too important to allow pride to interfere with its continued protection. So I don't know what I'm missing, but somehow none of these things are getting done, yet you are still on the job. It is your choice whether you would like to accomplish these these things or whether you would like to resign, but "none of the above" is not an acceptable choice. Your job is far too important for that.

Administrator Pruitt, I don't think you would disagree with my assertion that you are not a scientist. There is nothing wrong with that; there are many people with valid opinions on environmental protection who are not scientists. But if you're going to lead an agency tasked with protecting the environment without being a scientist yourself, then you're going to have to listen to scientists when their area of expertise comes up in policy. If you're not willing to do that, please allow somebody who is willing to do that to take your job. I'm sure there are several oil companies that would be thrilled to pay you a whole lot more than what the government does right now.

Thank you for reconsidering your ill-advised regulations on data.

-Alex

Washington, DC 20460
pruitt.scott@epa.gov

Re: Scorning Science Once Again

Dear Administrator Pruitt:

You announced today that the EPA would ignore scientific studies if they don't conform to a set of arbitrary and implausible specifications.

If adopted, this proposed regulation would mean the agency wouldn't consider many peer-reviewed research results when setting important health safeguards.

Your disdain for sound science and health protections knows no bounds. Just as you ignore the conclusions of climate scientists, you now want to disregard the robust scientific results that have helped us clean up our air and water since the toxic heyday of the 1970s.

It's time for a new direction at the EPA, one that accepts the simple scientific result that toxic pollutants like mercury and arsenic are dangerous to our own health and that of our children.

This has nothing to do with transparency and everything to do with helping out your industry benefactors.

Stop this arbitrary proposal from being adopted.

Examples

Medical studies, clinical reports, and real-world field studies all include data and information that cannot be made public without violating confidentiality and patient protection rules under HIPPA. Such studies are used by EPA to provide realistic credible information to the public, including consumers, manufacturers and businesses. For example:

- A landmark study in 1993 established that the tiniest particles of pollution (PM 2.5) can cause heart problems, lung cancer and early death. Industry critics, borrowing an argument they had used to try and prevent regulation of tobacco, decried the research as relying on "secret science." But there is nothing secret about it. In fact, after complaints from members of Congress in the 1990s, an industry-friendly science firm reanalyzed the data of that landmark Harvard Six Cities study and reconfirmed the basic results. Other scientists have also analyzed the same or other data since then and reached the same basic conclusion: Microscopic pollutants are dangerous to our health. If this proposed regulation is adopted, it

would deny EPA the ability to rely upon peer-reviewed studies like the Harvard Six Cities research, which involve commitments to patient confidentiality.

- Scientists reported that the highly toxic pesticide chlorpyrifos impairs brain development and function in children exposed prenatally. The Trump administration is doing the bidding of the agrochemical industry by permitting the use of the pesticide on food crops. The foundational research, published in numerous prestigious scientific journals, is under attack from industry. Pruitt's announcement undercuts EPA technical experts from using this critical evidence of harm to children.

EPA routinely relies upon models such as pollution projection models, economic models, health benefits models and other that inform EPA's rules and regulations. Many of these models including proprietary or confidential components.

Thank you for the opportunity to bring these remarks to your attention.

Yours sincerely,
Robert E. Rutkowski

23 April 2018

Scott Pruitt
Administrator
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue, NW
Washington, D.C. 20460

Dear Administrator Pruitt:

On behalf of the American Geophysical Union (AGU) and its 60,000 scientist members, I am writing to express concerns about planned policy changes at the Environmental Protection Agency (EPA) regarding transparency and accuracy of scientific information. We urge you to evaluate the unintended consequences of these policies and reconsider them.

Recent reports indicate that EPA is planning to implement new policies that would require the agency to use only scientific data and information that is publicly available when considering science in rule-making. The legislation this policy is based on, the HONEST Act¹, has received significant opposition from the scientific community and other organizations because of the potential for this policy to exclude data vital to informed decision-making.²

AGU is fully committed and would be willing to provide assistance to efforts to ensure that scientific information is communicated openly with policymakers and the public. However, it is critical that such scientific information undergo the peer review process, which remains the gold standard of academic achievement. Despite suggestions to the contrary,³ the peer review process affords the type of informed discourse necessary for the objectivity, rigor, and legitimacy of scientific information.

The Congressional Budget Office estimated that implementing a secret science policy like the one proposed by EPA would cost between an estimated \$5 million over five years to \$250 million annually.⁴ At a time when the Administration is proposing significant cuts to EPA funding, this policy would become an unnecessary burden on the agency and further hamstring its ability to protect public health and the environment. In general, to exclude vital scientific information from consideration would put our local communities' health and well-being at risk.

¹ H.R. 1430, sponsored by Rep. Lamar Smith (R-TX-21), passed the House on 29 March 2017.

⁴ <https://www.cbo.gov/publication/50025>

ADVANCING EARTH
AND SPACE SCIENCE

Of additional concern to AGU are reports that EPA has directed its employees to use talking points regarding climate change that are contrary to the robust scientific data and the consensus of scientists across the nation and the world.⁵ The reported guidance requires EPA employees to emphasize that “clear gaps remain including our understanding of the role of human activity and what we can do about it.” This is not only inaccurate, but also jeopardizes the ability of communities to respond appropriately to protect people’s health and well-being from challenges related to climate change.

AGU stands with the scientific community⁶ regarding the scientific consensus that climate change is occurring and is primarily driven by human activities.⁷ The data that supports this conclusion is not only strong but growing all the time. Failing to acknowledge and inform the public about this fact, as well as the ways in which the public can mitigate the effects and build resiliency is scientifically misleading, dangerous, and against the very mission of EPA. We as a nation need to ensure that we are addressing the pressing issues facing our communities by using and disseminating accurate, peer-reviewed and up-to-date scientific information.

AGU would welcome the opportunity to work with you on these critical issues and ensure that science can continue to appropriately inform decision-making and benefit the American public.

Respectfully,

A handwritten signature in black ink that reads 'Christine W McEntee'.

Subject: Walk back your latest dangerous attack on strong science

Jul 3, 2018

Administrator E. Scott Pruitt

Dear Administrator Pruitt,

I'm writing today gravely concerned about your recent proposal to restrict EPA's ability to use life-saving science.

This proposal doesn't roll back red tape. Instead, it binds the process of legitimate scientific inquiry with it. It will obstruct EPA's ability to use highly reliable scientific information, including data used to determine whether chemicals and pollutants cause cancer, heart disease, and other health problems.

This proposal will undermine EPA's ability to safeguard the health and well-being of American families. Please abandon this attack on strong science. America's communities are counting on an EPA that uses the best and latest science to protect us.

The tactic of confusing "secret science" with the need for patient confidentiality is cynical, willfully deceptive, and dangerous to the American people you swore an oath to protect. Shame on you

Irvin D. Godofsky M.D.

Thank you,

Dr. irvin godofsky

Administrator E. Scott Pruitt

Dear Administrator Pruitt,

Your phony attack on "secret science" is a smoke screen for violating Congress' intent in setting up the Environmental Protection Agency.

At the very least, the comment period should be extended. If this is such a great idea, it should stand up to public scrutiny.

Thank you,

Mr. William Baker

Subcommittee on Environment

NOT A S 30A

Attachment 1—Additional Questions for the Record

The Honorable John Shimkus

1. While some are interested in ensuring EPA actions to limit one or more FIFRA-regulated substances, I am more interested in all FIFRA related activities, particularly in view of the uncertainty about the future deployment of user fees now made available under the Pesticide Registration Improvement Act.

a. If PRIA fees were to expire:

- i. Would this mean the reinstatement of tolerance fees?

ANSWER – PRIA prohibits EPA from levying these tolerance fees, but with a lapse of PRIA, the prohibition would expire and EPA could take action to resume collection of these fees.

- ii. If yes, would the reinstatement of tolerance fees produce enough revenue to ensure the robustness reviews mandated by FIFRA?

ANSWER – While it is EPA’s goal that the robustness of EPA review would not change with a reduction in fees, it is likely that the time frames in which EPA conducts its reviews would be impacted. As the majority of maintenance fees collected go to support of pesticide registration review activities, this reduction in fees would severely impact EPA’s ability to meet the statutory deadline of completion of the 725 chemical cases by October 1, 2022. EPA’s performance reviewing other maintenance fee-supported activities such as fast-track amendments to registered products and notifications would also be impacted. In addition, registration service fee actions received after a lapse of PRIA would not receive statutorily-mandated decision review time frames.

b. What percentage of staffing expenses are covered by PRIA fees?

ANSWER - PRIA fees provide approximately 33 percent of the funding for EPA’s pesticide program activities. Currently operating under the third iteration of the statute, PRIA provides two funding sources to EPA’s pesticide program:

- **One time registration service fees (i.e., PRIA fees) for the evaluation of new applications submitted to the EPA; and**
- **Annual FIFRA maintenance fees assessed to products currently in the marketplace, a significant portion of which are used to support the re-evaluation of pesticides in order to meet the statutory deadline of October 1, 2022, for completing the first round of registration review.**

c. If PRIA fees expire:

- i. How many EPA employees – both FTE and contract workers – would be impacted, including through the loss of employment?

ANSWER – Activities reliant on maintenance fee and pesticide registration service fee funds could be supported for a duration of time after a lapse in PRIA relying on carryover registration service and maintenance fee money. Starting on October 1, 2020, EPA would not be able to support approximately 75 FTEs funded by the PRIA fund. Beginning on October 1, 2021, EPA would no longer be able to support an estimated additional 91 FTEs with FIFRA funds, bringing the total FTE count that EPA could no longer support with PRIA and FIFRA funds to approximately 166FTEs. For reference, the current “on-board” OPP count is right around 600 employees, down 42 from the start of FY 2017.

There are 32 contracts supported by PRIA pesticide user fees with 49 on-site contractors administering the functions of those contracts.

- ii. How much in budget resources would EPA need to transfer to OCSPP to make up for lost PRIA revenues for FIFRA activities?

ANSWER – EPA’s pesticide program activities through two fee funds. On average, EPA collects approximately \$46M in fees each year to support pesticide program activities. To continue to complete registration and registration review decision-making in current timeframes, in the absence of fees, funding for OCSPP’s pesticide activities would need to increase by \$46M. In addition, if PRIA were not reauthorized, \$2 million per year for worker protection activities, pesticide safety education programs, and partnership grants, monies that currently come from PRIA funds, would not be available and these programs would not be funded.

- iii. What is the impact on the pace of pesticide applications reviews? How much longer will they take?

ANSWER – Pesticide registration applications received prior to a lapse of PRIA would retain the decision time frames specified in FIFRA section 33. Applications received after the expiration of PRIA would not receive decision time frames. EPA would continue reviewing these applications as expeditiously as possible provided the resources available.

2. Legislation pending in Congress would provide PRIA fees for another 3 years, but also address other matters as well.

- a. Please explain the need for and characterize the significance of having, including in practical terms:

- i. \$500,000 in funding for efficacy guidelines for public health pesticides;

ANSWER – This proposed maintenance fee set-aside would provide EPA resources to develop and implement guidance and rulemaking for product performance data requirements to evaluate products claiming efficacy against pests of significant public health or economic importance. This effort, desired by the regulated community and of benefit to those who might be subject to vector-borne illnesses, would give EPA better information on how well a product works against public health pests and organisms, which is part of EPA’s evaluation in determining whether to allow a product onto the market. These products include hospital disinfectants as well as repellants and insecticides that control mosquitoes that are vectors of the Zika virus.

- ii. \$500,000 for good laboratory practices funding;

ANSWER – This proposed maintenance fee set-aside would be used to increase the number of laboratory inspections and data audits conducted in support of pesticide product registrations under PRIA, an outcome desired by the registrant community and important to the data integrity of the studies that EPA uses to support its regulatory decisions.

- iii. An increase in maintenance fees from \$27.8 to \$31 million for review and registration;

ANSWER – Raising maintenance fees by \$3.2 million annually would provide additional resources for registration review and other specified activities on which maintenance fees can be spent. These additional resources are important to helping EPA meet its statutory obligation to complete the first round of registration review by October 1, 2022.

- iv. Additional categories and deadlines for products reviewed; and

ANSWER – PRIA 4 proposes new fee for service categories as well as revisions to existing categories. To name a few examples, PRIA categories for antimicrobial products are revised to be consistent with subpart 158W, there are revisions to time frames and fees for antimicrobial and conventional new products and amendments to existing products that involve the review of product performance data for public health pests, new plant-incorporated protectant (PIP) categories are added, categories for safer inert ingredients are established, and a new category is created whereby applicants can receive a determination from EPA on whether or not a proposed product would be subject to registration requirements under FIFRA. These new categories better align time frames and fees to the resources it takes EPA to review those types of applications.

- v. Removal of FIFRA section 4(k)(2).

ANSWER – Maintenance fees are annual fees assessed to registrants to maintain their product registrations in the marketplace, and are deposited by EPA into the Reregistration and Expedited Processing Fund. These fees are primarily used to support the re-evaluation of pesticides as part of the statutorily-mandated registration review program, the first round of which FIFRA mandates is to be completed by October 1, 2022. These fees also support the agency’s review of inert ingredients, the expedited processing and review of certain applications for products that are substantially similar to registered product and products intended for public health, and the enhancement of information technology systems to improve the review of pesticide registration applications. An unspent balance of over \$40 million has built up in the fund due to decreases in staff levels administering functions that can be charged to the fund (due to attrition, a hiring freeze, and typical time lags involved in recruiting qualified staff to fill key scientific and regulatory positions), and the spending restriction in FIFRA section 4(k)(2)(A), commonly referred to as the “1-to-1” provision.

FIFRA section 4(k)(2)(A) states “moneys derived from fees may not be expended in any fiscal year to the extent such moneys derived from fees would exceed money appropriated for use by the Administrator and expended in such year . . .” This provision effectively limits the amount of fees that can be spent in any given fiscal year relative to the amount of annually appropriated dollars that are spent on the same functions in that fiscal year, and likewise prevents EPA from being able reduce the unspent balance of the maintenance fee fund unless appropriated spending exceeds maintenance fee collection in a given fiscal year. To the extent fee collections have exceeded appropriation spending on the specified functions, the unspent balance has continued to grow and EPA has not been able to reduce the unspent balance in the maintenance fee fund. The removal of FIFRA section 4(k)(2) is essential to EPA’s ability to access these funds paid by registrants in support of registration review and other specified activities.

- 3. Beginning in 2023, the agency will have more flexibility to set targets under the Renewable Fuel Standard (RFS). Given EIA projections of a 31 percent decrease in motor gasoline consumption between 2017 and 2050, based upon increases in fuel economy standards and electric vehicles market penetration:
 - a. Will EPA have authority in 2023 and subsequent years to reduce biofuel volume requirements below the existing statutory guidelines? Could this result in fewer gallons of biofuel in the market in the future than exist today?

ANSWER – EPA has broad authority under CAA 211(o)(2)(B)(ii) to determine the applicable volumes for years beyond 2023, including volumes lower than those provided in the statutory tables.

- b. Will EPA have authority in 2023 and subsequent years to allow a RIN to be generated by recharging an electric vehicle with electricity generated from a biogas power plant or other renewable energy source?

ANSWER – EPA’s authority to assess biofuel production pathways to determine if they satisfy the lifecycle greenhouse gas emissions reduction levels required in the statute for different types of renewable fuels is not modified for 2023 and subsequent years. Similarly, the requirement that renewable fuels be produced from renewable biomass remains unchanged. Accordingly, EPA will be authorized in 2023 to evaluate particular biofuel pathway, such as electricity derived from biogas that may be sourced from different locations and used as transportation fuel, to determine if the fuel satisfies the requirements of the statute.

- c. Will EPA have authority in 2023 and subsequent years to reorganize the program’s four existing nested categories?

ANSWER – The statute does not specifically grant EPA authority to reorganize these categories in 2023 and subsequent years. The nested categories are a result of statutorily defined categories of fuel, which are not modified for 2023 and subsequent years.

4. Is EPA engaged in planning for 2023 and subsequent years with regard to the agency’s reset authority and the RFS? If so, please describe the range of options that EPA is considering.

ANSWER – EPA is not currently engaged in any substantive planning process for determining the applicable volumes for 2023 and subsequent years.

5. The Folcroft Landfill (Operable Unit 2 of the Lower Darby Creek Superfund Site in Pennsylvania) was placed on the NPL in 2001, and the Remedial Investigation has not been finalized. The July 2017 Superfund Taskforce report recommends inquiry and additional resources for sites on the NPL for five years or more without a significant movement. What inquiries and additional resources have been directed to the Folcroft Landfill which has been on the NPL since 2001 without completion of the Remedial Investigation?

ANSWER – The schedule and length of time to complete the Remedial Investigation and Feasibility Study (RI/FS) for the Folcroft Landfill, Operable Unit 2 (OU2) of the Lower Darby Creek Area Superfund Site is not attributable to a lack of resources, nor does EPA believe that additional resources are necessary at this time. The duration of the RI is primarily due to lengthy negotiations with a group of potentially responsible parties (PRP Group) to finance and perform the RI/FS, as well as unanticipated findings during the RI/FS and challenging field conditions, as described in detail below.

The RI/FS at Folcroft Landfill is being performed by a PRP Group that consists of 14 companies that historically disposed of waste at the landfill. After listing the Site on the National Priorities List in 2001, EPA began negotiations with the PRP Group, which concluded in November 2006 with the signature of an Administrative Order on Consent (AOC) for the RI/FS. The duration of the negotiations was due to both the number of PRPs and technically complicated enforcement evidence.

Initial RI field activities were completed in 2008 by the PRP Group in accordance with EPA-approved RI/FS Work Plan. However, in May 2010, based on a review of the initial RI data, EPA identified contaminated groundwater outside of the boundary of the Folcroft Landfill that was not anticipated in the RI/FS Work Plan. The RI/FS Work Plan was subsequently amended in December 2011 to investigate groundwater contamination outside the boundary of the Folcroft Landfill. Significant technical challenges were encountered during the supplemental RI field work due to the location of the landfill in a tidal marsh area within the John Heinz National Wildlife Refuge. The supplemental RI field activities were completed in July 2016.

The PRP Group submitted the draft RI Report in May 2017, and the EPA has worked with the PRP Group for the past year to resolve outstanding issues. The PRP Group submitted the draft final RI Report on May 22, 2018, and EPA is currently reviewing the document to ensure that all remaining issues have been addressed. A scoping meeting for the FS was held on May 8, 2017, and subsequent FS discussions were held throughout 2017 and early 2018. EPA and the PRP Group, as well as other site stakeholders such as the Pennsylvania Department of Environmental Protection (PADEP) and US Fish and Wildlife Service (USFWS), met on June 18, 2018, to discuss next steps in the FS process.

6. The EPA Taskforce Report recommends the establishment of a clarification to the principles for groundwater restoration. What is the goal for groundwater remediation at the Folcroft Landfill (Operable Unit 2 of the Lower Darby Creek Superfund Site in Pennsylvania)?

ANSWER – The Record of Decision (ROD) for the Folcroft Landfill (Operable Unit 2 of the Lower Darby Creek Superfund Site in Pennsylvania) has not yet been issued; therefore, no groundwater cleanup level has been established. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) sets forth certain guiding principles for addressing groundwater, particularly “to return usable groundwaters to their beneficial uses wherever practicable, within a timeframe that is reasonable given the particular circumstances of the site.” The NCP further states that federal Maximum Contaminant Levels (MCLs) “shall be attained by remedial actions for ground or surface waters that are current or potential sources of drinking water.”

Contaminated groundwater within the boundary of the Folcroft Landfill is within a waste management area and is not considered a potential source of drinking water. However, the contaminated groundwater that extends outside of boundary of the Folcroft Landfill is considered a potential source of drinking water through a classification system by the State of Pennsylvania. Therefore, EPA anticipates that

federal MCLs will be evaluated as potential cleanup levels for contaminated groundwater outside of the boundary of the Folcroft Landfill.

7. This Operable Unit, which is owned by the Department of the Interior, is within the John Heinz Wildlife Refuge.
 - a. Do EPA's goals for groundwater restoration take into account the Department of Interior's long range plan for the Refuge?

ANSWER – EPA has coordinated extensively with the Department of the Interior (DOI) and the U.S. Fish and Wildlife Service (USFWS) with regard to Operable Unit 2 (OU2), Folcroft Landfill, throughout the Remedial Investigation (RI). Additionally, EPA entered into a Memorandum of Understanding with DOI in 2005 to clearly define the roles of both agencies at this OU. USFWS indicated in a letter dated February 23, 2018, that groundwater extraction for various uses is routinely permitted in refuges, if the refuge manager determines that it is appropriate to do so. Currently, the John Heinz National Wildlife Refuge (the Refuge) Comprehensive Conservation Plan (CCP) does not prohibit groundwater extraction on the Refuge, and the USFWS cannot eliminate the possibility that groundwater extraction may be necessary in the future. This is consistent with the State and EPA's position that groundwater at OU2 is considered a potential future source of drinking water.

- b. Is the Folcroft Landfill eligible for a Technical impracticability waiver for groundwater?

ANSWER – Any Superfund site is eligible for a technical impracticability (TI) waiver if it is demonstrated that it is technically impracticable, from an engineering perspective, of achieving applicable or relevant and appropriate requirements (ARARs), such as federal maximum contaminant levels (MCLs), throughout the groundwater contaminant plume. EPA and the Potentially Responsibility Party Group (PRP Group) at OU2 have discussed the possibility of a TI waiver at OU2. The PRP Group is currently evaluating the collection of additional groundwater data that would be required to support a TI waiver application.

- c. What is the process and standard to receive a TI waiver?

ANSWER – The detailed process for requesting a TI waiver is provided in the following the EPA guidance documents:

- **OSWER Directive 9234.2-25, Guidance for Evaluating Technical Impracticability of Groundwater Restoration September, 1993;**
- **OSWER Directive 9200.4-14, Consistent Implementation of the FY 1993 Guidance on Technical Impracticability of Groundwater Restoration at Superfund Sites, January 19, 1995;**

- **OLEM Directive 9200.3-117, Clarification of the Consultation Process for Evaluating the Technical Impracticability of Groundwater Restoration at CERCLA Sites, December 28, 2016.**

In general, in accordance with the guidance, the applicant is required to provide the following information in a TI waiver application:

- **Specific applicable or relevant and appropriate requirements (ARARs) or media cleanup standards for which TI determinations are sought;**
- **Spatial area over which the TI decision will apply;**
- **Conceptual model that describes site geology, hydrology, groundwater contamination sources, transport, and fate;**
- **An evaluation of the restoration potential of the site, including data and analyses that support any assertion that attainment of ARARs or media cleanup standards is technically impracticable from an engineering perspective. At a minimum, this generally should include a demonstration that contamination sources have been identified and have been, or will be, removed and contained to the extent practicable; an analysis of the performance of any ongoing or completed remedial actions; predictive analyses of the timeframes to attain required cleanup levels using available technologies; and a demonstration that no other remedial technologies (conventional or innovative) could reliably, logically, or feasibly attain the cleanup levels at the site within a reasonable timeframe;**
- **Estimates of the cost of the existing or proposed remedy options, including construction, operation, and maintenance costs;**
- **Any additional information or analyses that the EPA deems necessary for the TI evaluation.**

EPA will then evaluate the TI waiver application and decide if a TI waiver is warranted, and issue a Record of Decision documenting the TI waiver.

- d. How would changes to the process and standards for awarding a TI waiver, as recommended by the July 2017 EPA Taskforce Report, impact the Superfund process at the Folcroft Landfill?

ANSWER – To date, no changes to the groundwater restoration policy have resulted from the Superfund Task Force Recommendations. If changes to the groundwater restoration policy occur in the future, the groundwater cleanup approach at OU2 will be evaluated accordingly.

8. EPA's recently released proposed rule on increasing transparency in regulatory science states that the proposal is consistent with the requirements for major scientific journals like Science, Nature, and the Proceedings of the National Academy of Sciences.
 - a. Why are more journals and scientific institutions implementing these transparency policies?

ANSWER –The proposed rule is in line with the scientific community’s moves toward increased data sharing to allow for transparency and reproducibility. EPA believes that making regulatory science publicly available in a manner sufficient for independent validation will strengthen the integrity of EPA’s regulatory actions and its obligation to ensure the Agency is not arbitrary in its conclusions.

- b. Isn’t replication and verification a key step in the scientific process?

ANSWER – Replicating and verifying science and data are important ways to help ensure that the resulting data was not skewed or based on other factors outside the scientific process.

9. Despite the many claims made prior to the release of this proposal, would this proposed rule violate any existing federal laws on privacy?

ANSWER – EPA has sought to ensure that this proposed rule is consistent with existing privacy laws; as we note in the NPRM, the intention is to make data available in a manner consistent with statutory requirements for protection of privacy and confidentiality of research participants, protection of proprietary data and confidential business information, and other compelling interests.

10. What is this proposed rule’s impact on confidential business information (CBI)? Please state how you plan to ensure that in any final rule EPA will neither: be (1) prevented from using science that cannot be published (because it has CBI in it) nor forced into the default position that EPA should endeavor to publicly release all scientific data – including legally colorable CBI – so that this science can be used by the Agency?

ANSWER – The proposed rule is consistent with existing laws on CBI. EPA will follow all laws relating to CBI in developing the final rulemaking.

11. I understand the Agency is looking at its work force to see how it can better function.

- a. How many people does EPA have working full-time for the Agency in headquarters?

ANSWER – As of June 6, 2018, the EPA has a total of 7,266 full-time employees in its headquarters program offices. Of these, 4,444 work in the Washington, D.C.-area offices and 2,822 work in EPA’s field offices.

- b. How many people does EPA have working full-time for it in its regional offices?

ANSWER – As of June 6, 2018, the EPA has 6,574 full-time employees at its regional offices.

- c. How many contractors currently work for EPA? [if he doesn’t know what number ask him for a percentage. If that fails, ask him why not]?

ANSWER – As of June 6, the number of active EPA contractors with EPA contractor badges is 4,007 including 1,164 contractors in the Washington, D.C.-area offices, and 2,843 contractors in EPA regions and field offices ¹.

12. One of the priorities for the proposed budget includes an “EPA Reform Plan.” Projects under this plan include streamlining the permit review process, developing a Lean Management System, and reducing the reporting burden on the regulated community.

- a. Why were these areas made priorities?

ANSWER – EPA’s Reform Plan reflects a balance of improvements EPA must achieve to provide both better customer service to those we regulate and better mission outcomes for the American taxpayer who expects a return on their investment.

- b. What progress has been made so far on these efforts?

ANSWER – Before this Administration, EPA had no system to track the amount of time it took to issue permits. We have now established such a system and it is reviewed on a monthly basis as part of the Lean Management System (LMS). Using this data we have initiated several lean process improvement projects to shorten the amount of time it takes for EPA to issue permits in those areas with the longest lead time and highest volume. We have also established a working group to identify opportunities for reducing the reporting burden on the regulated community. This work is ongoing. As for developing EPA’s LMS, each national program and regional office now has a set of draft performance measures that they review during a monthly executive meeting and submit to the Chief of Operations. As a result, over 400 measures are reported in a standard red/yellow/green “bowling chart” showing whether monthly targets are being met. If a target is not met over several months, documentation is submitted stating what actions will be taken to get the measure back on track. The Administrator also holds Quarterly Performance Reviews with his leadership team to track progress on Strategic Measures and Reform Plan priority areas. Furthermore, EPA has developed a Readiness Assessment to prepare the entire agency for full-scale LMS deployment and has begun deploying in Region 7.

- c. Do you have benchmarks and timelines for the Reform Plan?

¹The count includes active contractors on active contracts where the individuals have been issued a badge in compliance with the requirements of Homeland Security Presidential Directive (HSPD) 12. HSPD 12 badges are issued when a contractor requires physical or logical access to EPA facilities or network for more than 6 months.

ANSWER – We are actively working on setting benchmarks and timelines for the Reform Plan. Many of the priority areas lacked data or comprehensive information from the previous administration.

13. What are the biggest obstacles to meaningfully reforming EPA to engage the 21st Century?

ANSWER – The biggest obstacle to reform is creating urgency in implementing institutional reforms and ensuring that leaders within EPA understand the importance of breaking with the status quo and addressing long needed institutional change.

14. The proposed budget has four Agency Priority Goals, including that EPA intends to meet statutory deadlines for chemical reviews under the Toxic Substances Control Act. In particular, EPA plans 100 percent compliance with “existing” chemicals and only 80 percent compliance certain “new” chemicals.

Under the law, EPA is the gatekeeper to innovation because these chemicals cannot go to onto the market until EPA decides they can and companies cannot work to improve these chemicals unless EPA says there is a problem.

As of April 17, 2018, EPA’s website was reporting that EPA had 449 pending applications for new chemicals. In addition, the EPA website claims the typical caseload for new chemicals under review is approximately 300 cases.

- a. Is the increase in pending applications – at one-third of EPA’s historical output, due to a higher number of new chemicals applications coming into the Agency at the same time or EPA falling behind again on getting them processed?

ANSWER – Although the Agency has not seen a significant increase in the number of notifications received, the current caseload number does not mean that EPA is “falling behind.” While the average caseload is around 300, that number can be higher or lower at any given time. Companies often voluntarily agree to suspend the review period to have technical discussions with EPA or to work on developing additional supporting information. Completing these reviews in a timely manner remains a top priority for the Agency. The Agency is taking several steps to address the immediate backlog, and to identify ways to increase overall efficiency for the program to maintain its viability over the long term. For example, we are continuing to increase the number of staff working in the new chemicals program. We’re also currently implementing process improvements identified through a recent LEAN event.

- b. What do you intend to do to eliminate the backlog and keep it at bay?

ANSWER – See response to question 14(a).

- c. One thing the EPA website does not give data on is just how long some of those applications have been sitting at EPA. The law is very clear 90 days and no more than 180 days to review and regulate.

- i. How many of the 449 new chemicals applications sitting at EPA are less than 90 days old?

ANSWER – It is important to note that companies often voluntarily agree to suspend the TSCA review period to have technical discussions with EPA or to work on developing additional supporting information. Thus, there is a difference between the time that has elapsed (A) since EPA’s receipt of a notice and (B) for purposes of the TSCA review period. For the responses below, EPA is providing statistics for the number of calendar days that a notice has been with EPA – not for purposes of the TSCA review period.

46 cases have been with EPA for less than 90 days.

- ii. How many of the 449 new chemical applications sitting at EPA are more than 90 days old, but less than 180 days?

ANSWER – 63 cases have been with EPA for less than 180 days.

- iii. How many of the 449 new chemical applications have been filed with EPA for more than 180 days and what is the range of time on them?

ANSWER – 340 cases have been with EPA for 180 days or more. The TSCA review period has been voluntarily suspended by the submitters for all of these cases. Of these 93 cases were reset on June 22, 2016, so they have been with EPA the longest. Of those 93 oldest cases:

- **40 are cases where the submitter is undertaking testing or gathering additional data;**
- **12 are cases involving Consent Orders that have not yet been signed by submitters; and**
- **41 cases involve various types of ongoing issues including: pending EPA issuance of Non-Order SNURs; company is exploring possible ways to mitigate identified risks; and company is in discussions with EPA about developing test protocols and other necessary testing information.**

15. Under TSCA section 26, the Agency has authority to set fees to defray the costs of chemical testing, new and existing chemical review and regulation and to offset related costs for processing confidential business information. For new chemicals, EPA moved the fee from \$2,500 to \$16,000 – a more than 6-fold increase – and for small manufacturing entities – EPA raised the fee for new chemicals from \$100 to \$2,800 – or a 28-fold increase.

- a. How much impact with these dramatic fee increases have on improving the speed at which the Agency is reviewing new chemicals?

ANSWER – The fees collected by the Agency under TSCA Section 26 are expected to improve our ability to effectively and efficiently administer the new chemicals program and improve the timeliness of our reviews. Additional fee revenue is expected to enable the Agency to increase the number of staff working in the new chemicals program, further enhance ongoing efforts to increase overall efficiency for the program to maintain its viability over the long term, and implement process improvements identified through a recent LEAN event.

b. If not much, then what is the problem?

ANSWER – See above. The Agency anticipates that fee revenues will help further efforts to improve the timeliness of new chemical reviews.

16. The proposed fee rule suggests EPA will see 10 percent fewer new chemical applications based on legal changes to how EPA is supposed to review new chemicals. What kind of new chemical applicant attrition is expected due to the combined fee increase and lack of generated revenue from the chemical?

ANSWER – The proposed fee rule includes a planning assumption that the Agency will receive 20% fewer new chemicals applications as a result of the increased fees. This assumption is based on the notion that companies may be more selective in terms of which chemicals they submit for review and the timing of those submissions given the higher upfront investment due to the increased fee.

17. Portland Harbor is complex site at which almost 100 potentially responsible parties (PRPs) have been identified. It is my understanding that on March 16, 2018, EPA sent all of the PRPs a letter indicating that EPA will be issuing Special Notice Letters for full performance of the remedial design/remedial action (RD/RA) at the Portland Harbor Site by the end of 2019. However, several of the PRPs have indicated that the allocation process will not be complete by that time, and that the issuance of Special Notice Letters will actually slow the clean-up, because companies will choose to litigate rather than potentially bear the full cost of the clean-up at that point. How will EPA balance the allocation process timeline and issuing the Special Notice Letters?

ANSWER – EPA is focused on getting the cleanup selected in the Record of Decision (ROD) underway at the Portland Harbor Superfund site as soon as possible. EPA is not privy to the allocation process among the PRPs at the Portland Harbor Superfund site and generally does not get involved in how responsible parties allocate costs among themselves. EPA issued the ROD at the Portland Harbor Site in January 2017. At Portland Harbor, the PRPs are conducting additional sampling to help design the remedy. That sampling also may be relevant to the PRP cost allocation, and is expected to be complete by early 2019.

Taking into account the ongoing sampling work and its potential relevance to the allocation process while still maintaining the overall goal to proceed with cleanup, on March 16, 2018, EPA sent a letter to the PRPs to notify them that EPA plans to issue

Special Notice letters to commence settlement negotiations, but not until the end of 2019. To maintain progress towards cleanup while the sampling is taking place, EPA also is working with parties to perform remedial design work at specific locations of the site. By the end of 2019, the PRPs should be able to proceed on a parallel path of presenting a plan to implement the Portland Harbor ROD even if there are remaining allocation issues.

The Honorable David B. McKinley

1. I appreciate your commitment to supporting cooperative federalism under the Coal Combustion Residuals (CCR) permitting program by working with states to develop, submit, and implement state CCR permit programs. How is EPA working with states as they develop and submit these plans, particularly those that are seeking to incorporate WIIN Act authorities rather than just adopting the current, self-implementing federal rule?

ANSWER – EPA has been actively working with states since the passage of the WIIN Act. The agency developed an interim final guidance outlining the process and procedures that the agency generally intends to use to review and make determinations on state Coal Combustion Residual (CCR) permit programs. This document provides guidance to the states for developing and submitting a program to EPA for approval. The guidance is divided into four chapters:

- **Chapter 1 provides an overview of the provisions of the Water Infrastructure Improvements for the Nation Act (WIIN Act).**
- **Chapter 2 contains the process and procedures the EPA is planning to use to review and make determinations on state CCR permit programs as well as the documentation EPA will ask states seeking approval of a program to submit.**
- **Chapter 3 contains a checklist of all the requirements of the current CCR rule at 40 CFR Part 257 subpart D.**
- **Chapter 4 provides a checklist of those items a state would submit when seeking approval of its CCR permit program.**

EPA encourages states who are or may be considering submitting a CCR permit program for approval to consult with the agency early in the process. Such consultations will enable EPA and the state to work through any areas where the state program may be different from the federal CCR regulation. The agency is currently working with about a dozen states and we look forward to working with these and other states and key stakeholders as we move forward in implementing the WIIN Act.

2. As states develop these programs, guidance from EPA will be important. With that in mind, Congress appropriated \$6 million to EPA for FY18 to develop its own federal permitting program for “non-participating states”. Please provide an update on and timeline for the development of that federal permit program.

ANSWER – EPA has several activities underway which support the development of a federal permit program. First, the agency has been engaged in modifications to the 2015 CCR rule which will provide the basis for both state and federal permit programs. EPA anticipates another rulemaking later this year, and as part of that, EPA hopes to further modify regulations for the federal permit program. In addition, EPA is developing draft templates for permit applications and also permits. Finally, EPA is working with our state partners to determine which states will be developing their own permit program and which will not, so that federal permitting efforts will not duplicate state efforts.

The National Association of Scholars recently published a report titled, “THE IRREPRODUCIBILITY CRISIS OF MODERN SCIENCE, Causes, Consequences, and the Road to Reform”. They state, “The Federal government should also consider instituting review commissions for each regulatory agency to investigate whether existing regulations are based on well-grounded, reproducible research. These should establish the scope of the problem by identifying those regulations that rely on un-replicated or irreproducible research, and recommending which regulations should be revoked.”

3. Will you commit the EPA to investigate whether existing regulations are based on well-grounded, reproducible research?

ANSWER – EPA supports efforts to ensure that the regulations it promulgates are based on well-grounded, reproducible research. In accordance with Executive Order 13777, EPA is taking steps to identify regulatory issues, including the basis for existing regulations (Section 3(d)(v) specifically addresses reproducibility), through ongoing regulatory reform efforts.

4. Will you commit the EPA to identify those regulations that rely on un-replicated or irreproducible research?

ANSWER – EPA supports efforts to ensure that the regulations it promulgates are based on well-grounded, reproducible research. As discussed above, per E.O. 13777, EPA is taking steps to identify regulatory issues through continuing regulatory reform efforts.

5. Will you provide a report to our committee and my office with the results of your investigation?

ANSWER – EPA is open to providing updates on its regulatory reform efforts as they continue. EPA provides ongoing information about its regulatory reform efforts at <https://www.epa.gov/laws-regulations/regulatory-reform>.

6. Will you provide a report to our committee and my office regarding if the endangerment finding for CO2 was based upon well-grounded, reproducible research?

ANSWER – EPA welcomes the opportunity to address specific issues with the committee, and encourages you to reach out to EPA staff to further discuss this request.

Administrator Pruitt, I know that the ethanol industry has recently attacked the EPA for granting small refinery hardship relief.

7. Does the Clean Air Act establish small refinery hardship relief?

ANSWER – Section 211(o)(9)(B) of the CAA and 40 CFR 80.1441(e)(2) allow EPA to grant an extension of a small refinery’s exemption from compliance with its renewable fuel volume obligations for a given year based on a small refinery’s demonstration of “disproportionate economic hardship” in that year. The statute also directs EPA to consult with the Department of Energy (DOE) in evaluating small refinery exemption petitions. EPA will grant a hardship exemption if we conclude, after review of available information and in consultation with DOE, that a refinery will experience disproportionate economic hardship that can be relieved in whole or in part by removing its RFS obligations for that year.

8. Has the Congress affirmed this on several occasions by directing the DOE to study this issue and, more recently, reminding the EPA that it did not intend for small refineries to bear a disproportionate regulatory burden?

ANSWER – In the Consolidated Appropriations Act of 2017, an explanatory statement directed EPA “to follow DOE’s recommendations which are based on the original 2011 Small Refinery Exemption study prepared for Congress and the conference report to division D of the Consolidated Appropriations Act of 2016.”

9. Did the DOE’s 2011 report for Congress predict that harm to small refineries would increase over time, not diminish?

ANSWER – DOE’s 2011 report did not make any predictions regarding whether the number of small refineries seeking relief would increase or decrease over time.

10. Did the 10th circuit decision last year instruct the EPA to grant small refinery hardship relief?

ANSWER – No. The 10th Circuit, in *Sinclair Wyoming Refining Company v. EPA*, 874 F.3d 1159 (2017), vacated EPA’s decisions to deny petitions for exemption from the Renewable Fuel Standard for 2014 for two of Sinclair’s small refineries and remanded those decisions back to EPA.

Some have made the argument that hardship relief results in “demand destruction” for ethanol by resulting in less blending. Regardless of if small refineries receive hardship relief, they are incentivized to blend ethanol for many economic reasons: 1) it is cheaper than gasoline, 2) they must meet their RVO, and 3) they can sell RINS not needed for compliance.

11. Was ethanol consumption up in the first quarter of 2018?

ANSWER – According to ethanol consumption data from the Energy Information Administration (EIA), ethanol consumption was 6% lower in the first quarter of 2018 relative to the fourth quarter of 2017, and 2% higher in the first quarter of 2018 relative to the first quarter of 2017.

12. Was it, in fact, higher than projected in November of 2017 when RINS were 80-90 cents a gallon?

ANSWER – According to ethanol consumption data from the EIA, the monthly average ethanol consumption in the first quarter of 2018 was 6% lower than ethanol consumption in November 2017.

13. Did ethanol consumption increase throughout 2017 despite hardship relief?

ANSWER – According to ethanol consumption data from the EIA, ethanol consumption increased through the first three quarters of 2017 (from 3.37 billion gallons in the first quarter to 3.66 billion gallons in the second quarter and 3.70 billion gallons in the third quarter) before decreasing in the 4th quarter (to 3.67 billion gallons).

President Obama used an EPA “veto” twice in unprecedented fashion. The Spruce Coal Mine located in West Virginia, had the required permits and approvals in hand, when the EPA “vetoed” the project. The project went through the entire regulatory process and was approved by ALL parties. Then the Obama Administration’s “War on Coal” went into high gear. The EPA vetoed the project. The second instance was the Pebble Mine in Alaska, where they vetoed the project prior to the approval process starting. Both instances of using the EPA veto are very dangerous if they are allowed to stay in place. A future administration can use the veto to shut down the entire coal mining industry if both precedents are not reversed by the EPA. I can think of no greater threat to the industry.

14. Will you consider revoking both the Spruce Mine and Pebble Mine vetoes?

ANSWER – Regarding Pebble Mine, the EPA has not made a Final Determination pursuant to Section 404(c). In 2014, the EPA issued a Proposed Determination pursuant to 404(c) regarding Pebble Mine. In 2017, the EPA considered withdrawing that Proposed Determination but, as outlined in its January 26, 2018, decision, the EPA suspended the proceeding to withdraw the Proposed Determination and left that Proposed Determination in place pending consideration of any other information that is relevant to the protection of the world-class fisheries contained in the Bristol Bay watershed in light of the permit application that has now been submitted to the U.S. Army Corps of Engineers by the mine proponent. The EPA’s January 2018 decision neither deters nor derails the Corps’ review of Pebble’s Section 404 permit application, which is currently ongoing. Regarding Spruce Mine, the EPA issued a Final Determination under 404(c) in 2011 that protected portions of the mine site with high ecological value from being adversely impacted by the mine’s development. The mine

proponent has been exploring development of revised proposals to expand mining at the site. If a revised proposal is developed and submitted to the EPA, the agency would review and consider it.

15. Do you believe that the EPA should have the authority to preemptively veto development projects under Section 404 of the Clean Water Act before any permit applications have been submitted to the Army Corps of Engineers?

ANSWER – EPA believes it has the authority to exercise its discretion under Section 404(c) to restrict, prohibit, or deny the discharge of dredged or fill material “whenever” it makes the requisite finding that the discharge will have an unacceptable adverse effect on municipal water supplies, shellfish beds and fishery, wildlife, or recreation areas, and EPA takes very seriously the authority it was provided by Congress pursuant to Section 404(c). As a general matter, EPA has policy concerns about issuing a final determination under Section 404(c) before the submission of a permit application to the Corps or the completion of an EIS. EPA’s decision whether to exercise such authority preemptively would involve considerations of basic fairness and due process.

16. President Trump, in his Infrastructure Initiative, has proposed legislation that eliminates entirely EPA’s authority to veto projects under the Clean Water Act. Why have you taken a position, by leaving in place the Pebble veto, that is different than the President’s policy?

ANSWER – The EPA’s January 26, 2018 decision suspends the proceeding to withdraw the Proposed Determination and leaves that Determination in place pending consideration of any other information that is relevant to the protection of the world-class fisheries contained in the Bristol Bay watershed in light of the permit application that has now been submitted to the Corps. This decision neither deters nor derails the Corps’ review of Pebble’s Section 404 permit application, which is currently ongoing.

In making the decision regarding whether to withdraw the 2014 Proposed Determination at this time, the EPA considered its relevant statutory authority, applicable regulations, and the input it received as part of the tribal consultation, Alaska Native Claims Settlement Act, Corporation consultation, and public comment periods regarding the agency’s reasons for its proposed withdrawal, as well as recent developments, including Pebble’s submittal of a Section 404 permit application to the U.S. Army Corps of Engineers in December of 2017. The EPA received more than one million public comments regarding its proposal to withdraw the 2014 Proposed Determination, the overwhelming majority of which expressed opposition to withdrawal.

17. Isn’t it correct that under the applicable regulations the Army Corps of Engineers cannot issue a permit to a project developer if the EPA has even begun the process of issuing a veto?

ANSWER – While it is true that the Army Corps cannot issue a permit while a pending 404(c) determination proceeding is ongoing, the Corps’ regulations allow it to

accept, review, and process a permit application for a proposed project even if EPA has an ongoing Section 404(c) review for that project. The Corps is processing Pebble's permit application consistent with its regulations, including developing an Environmental Impact Statement for the Pebble Project. EPA's decision to suspend the withdrawal process states that it will review and consider any relevant information that becomes available to inform future Section 404(c) decisions regarding the Pebble Project.

18. Is there any environmental harm that occurs whatsoever by allowing a permit application to be considered by the Army Corps of Engineers without a veto pending?

ANSWER – As a general matter, EPA has policy concerns about issuing a final determination under Section 404(c) before the submission of a permit application to the Corps or the completion of an EIS. EPA believes that a decision regarding whether to exercise its section 404(c) authority preemptively would involve considerations of basic fairness and due process. To be sure, the Corps' regulations allow it to accept, review, and process a permit application for a proposed project even if the EPA has an ongoing Section 404(c) review for that project. Pebble has now submitted its permit application to the Corps and the Corps has initiated its permit review process and begun taking steps to develop an EIS for this project. These actions resolve any potential uncertainty about Pebble's ability to submit a permit application and have that permit application reviewed by the Corps.

The EPA's January 26, 2018 decision to suspend the withdrawal process states that the EPA will review and consider any relevant information that becomes available. This will allow EPA to get the information needed to determine what specific impacts the proposed mining project will have on those critical resources.

19. Isn't it better to wait until the Army Corps of Engineers has decided whether to grant a permit before EPA issues a veto, if one is to be issued at all?

ANSWER – As a general matter, EPA has policy concerns about issuing a final determination under Section 404(c) before the submission of a permit application to the Corps or the completion of an EIS. EPA believes that a decision regarding whether to exercise its section 404(c) authority preemptively would involve considerations of basic fairness and due process. To be sure, the Corps' regulations allow it to accept, review, and process a permit application for a proposed project even if the EPA has an ongoing Section 404(c) review for that project. Pebble has now submitted its permit application to the Corps and the Corps has initiated its permit review process and begun taking steps to develop an EIS for this project. These actions resolve any potential uncertainty about Pebble's ability to submit a permit application and have that permit application reviewed by the Corps.

The EPA's January 26, 2018 decision to suspend the withdrawal process states that the EPA will review and consider any relevant information that becomes available. This will allow EPA to get the information needed to determine what specific impacts the proposed mining project will have on those critical resources.

20. Has EPA ever before issued a preemptive veto of the sort you have left in place with your decision not to withdraw the veto of the Pebble mine?

ANSWER – Of the 13 Final Determinations completed by the EPA, two involved circumstances where permit applications had not yet been submitted to the Corps, both of which were completed nearly thirty years ago. Although Section 404(c) actions are extremely rare, and rarer still in advance of the submittal of a permit application, the EPA’s 2014 Proposed Determination is not unprecedented.

21. In the Agency’s decision not to withdraw the preemptive Pebble veto, you cited the risk created by the project. In doing so, you are relying on the Bristol Bay Watershed Assessment, which many of the Agency’s own peer reviewers said was insufficient to support a regulatory decision. Why are you relying on science that has been discredited?

ANSWER – The EPA published its proposal to withdraw its CWA Section 404 (c) Proposed Determination in July 2017 and took public comment, held two public hearings in the Bristol Bay region, and consulted with tribal governments and Alaska Native Claims Settlement Act (ANCSA) Corporations from the Bristol Bay region. The EPA received more than a million public comments on its withdrawal proposal. In making its decision not to withdraw the Proposed Determination at this time, the EPA considered its relevant statutory authority, applicable regulations, and the input it received as part of the tribal consultation, ANCSA consultation, and public comment periods regarding the agency’s reasons for its proposing withdrawal as well as the recent developments (e.g., the submittal of Pebble’s permit application to the Army Corps).

The Honorable Gregg Harper

1. Does the Clean Air Act establish small refinery hardship relief?

ANSWER - Section 211(o)(9)(B) of the CAA and 40 CFR 80.1441(e)(2) allow EPA to grant an extension of a small refinery’s exemption from compliance with its renewable fuel volume obligations for a given year based on a small refinery’s demonstration of “disproportionate economic hardship” in that year. The statute also directs EPA to consult with the Department of Energy (DOE) in evaluating small refinery exemption petitions. EPA will grant a hardship exemption if we conclude, after review of available information and in consultation with DOE, that a refinery will experience disproportionate economic hardship that can be relieved in whole or in part by removing its RFS obligations for that year.

2. Has the Congress affirmed this on several occasions by directing the DOE to study this issue and, more recently, reminding the EPA that it did not intend for small refineries to bear a disproportionate regulatory burden?

ANSWER - In the Consolidated Appropriations Act of 2017, an explanatory statement directed EPA “to follow DOE’s recommendations which are based on the original 2011

Small Refinery Exemption study prepared for Congress and the conference report to division D of the Consolidated Appropriations Act of 2016.”

3. Did the DOE’s 2011 report for Congress predict that harm to small refineries would increase over time, not diminish?

ANSWER - DOE’s 2011 report did not make any predictions regarding whether the number of small refineries seeking relief would increase or decrease over time.

4. Do small refineries typically produce more diesel than gasoline?

ANSWER - Based on EIA data, most small refineries produce more gasoline than diesel.

5. Blending gasoline with ethanol to current standards will separate more RINs than blending the same volume of diesel. EPA’s RVO calculation, however, imposes the same proportional ethanol RIN obligation on all refiners even though some produce significantly less gasoline and more diesel than others. Even if they blend all their production, these diesel rich refiners cannot separate enough RINs to meet their total obligation while their gasoline rich competition will separate more than required. These refiners who produce more diesel are then forced to buy RINS.

Does the hardship process give EPA a tool to mitigate this structural discrimination against these small refineries?

ANSWER - One of the metrics that DOE uses when scoring small refinery hardship petitions is whether the small refinery has an above-average percentage of diesel production.

6. RFA has made the argument that hardship relief results in “demand destruction” for ethanol by resulting in less blending. Regardless of whether or not small refineries receive hardship relief, they are incentivized to blend ethanol for a number of economic reasons: 1) it is cheaper than gasoline, 2) they must meet their RVO, and 3) they can sell RINS not needed for compliance.

- a. Was ethanol consumption up in the first quarter of 2018?

ANSWER - According to ethanol consumption data from EIA, ethanol consumption was 6% lower in the first quarter of 2018 relative to the fourth quarter of 2017, and 2% higher in the first quarter of 2018 relative to the first quarter of 2017.

- b. Was it, in fact, higher than projected in November of 2017 when RINS were 80-90 cents a gallon?

ANSWER - According to ethanol consumption data from the EIA, the monthly average ethanol consumption in the first quarter of 2018 was 6% lower than ethanol consumption in November 2017.

- c. Did ethanol consumption increase throughout 2017 despite the EPA granting small refinery hardship relief?

ANSWER - According to ethanol consumption data from the EIA, ethanol consumption increased through the first three quarters of 2017 (from 3.37 billion gallons in the first quarter to 3.66 billion gallons in the second quarter and 3.70 billion gallons in the third quarter) before decreasing in the 4th quarter (to 3.67 billion gallons).

- 7. Some of my constituents have raised an issue regarding oil spill response training. I am told that the funding for certain training courses for federal and local responders involved in inland oil spill prevention and cleanup has been eliminated and that the EPA Environmental Response Team is no longer able to consistently make these courses available.
 - a. With an increase in oil production across the country, there remains a need for oil spill response training for local, state, and federal responders. Would you commit to looking into whether funding can and will be made available for this important training?

ANSWER - The agency will continue to provide oil spill inspector training to federal and state inspectors.

- 8. I want to applaud the work EPA is doing to streamline or eliminate unnecessarily costly regulations. And while most of the attention is focused on major rules like the Clean Power Plan or Waters of the United States, I am particularly pleased that under your leadership EPA is taking a second look at other regulations that may not be major but nonetheless have a serious impact on small businesses. In particular, I hear that EPA is reviewing the Obama era rule targeting wood heater manufacturers such as Hardy Manufacturing back in my district. But time is of the essence, as the regulatory deadlines are coming soon. Can you assure us that you will do all you can to provide timely regulatory relief for wood heater manufacturers?

ANSWER - EPA is considering steps to provide relief for manufacturers of certain types of wood-burning heaters while the agency works to ensure its New Source Performance Standards (NSPS) for Residential Wood Heaters are based on real-world conditions. The EPA expects to issue shortly a proposed rule which will set forth certain specific issues in the NSPS on which the agency is ready to take comment. In addition, the EPA expects to issue an advance notice of proposed rulemaking (ANPR) to take comment on additional issues. The EPA will use the comments received in response to the ANPR to develop a second proposed rule later this year covering these additional issues.

The Honorable Tim Walberg

1. This is a very technical issue but an extremely important one to manufacturers in Michigan. In 2011, EPA approved the use of Isobutane as a refrigerant and limited the amount of refrigerant that could be used in a refrigerator to 57 grams. This amount was based on a well-recognized safety standard limit at the time. However, the safety standard has since been updated to increase the allowable amount of refrigerant to 150 grams. These refrigerants are more environmentally friendly and supported by both industry and environmental advocates yet manufacturers are still in limbo as they await EPA's rulemaking.

a. Can you commit to working on this issue to recognize the updated safety standard so manufacturers can begin retooling and redesigning refrigeration products? Delay will only add cost to American workers and our manufacturing shop floors.

ANSWER - Yes, this past December, EPA issued a direct final rule (82 FR 58122; December 11, 2017) and companion proposal to incorporate by reference the revised UL safety standard that allows for a larger charge size for the approved flammable refrigerants in household refrigerators and freezers. Because we received adverse comment during the public comment period, we withdrew the direct final rule (83 FR 9703; March 7, 2018). EPA is moving forward to address the relevant comments in a subsequent final rule.

b. I know you have a lot of issues to deal with at the EPA, but I urge you to publish the technical correction without delay. It's my understanding refrigerator manufacturers have been working with your staff at the EPA for over a year now on this and would welcome the update.

ANSWER - We understand the interest and importance of this issue to the industry. EPA has been working with a number of equipment manufacturers and trade associations which has been very helpful.

2. ENERGY STAR is an important program and one that consumers in my district value. Over the past year, manufacturers in my state have stressed the need for the program to be reformed. In the FY18 Omnibus Appropriations package, EPA and DOE were directed to revisit the Obama era Memorandum of Understanding (MOU) that changed the way the program was managed and report back to Congress within 90 days.

a. The 2009 MOU for example moved home appliances out of DOE and over to EPA, where the products had never been managed before. DOE has the expertise in these products because they regulate them through the appliance standards program required by EPCA. It doesn't make sense to me to have duplicative programs built up within two agencies. From a good governance perspective and in the era of streamlining programs under the EPA's purview, I would like to hear from you on this specific topic.

ANSWER - As you acknowledge, language in the conference report for the Consolidated Appropriations Act of 2018 directed EPA to “work with the DOE to review the 2009 MOU and report to the Committees within 90 days of enactment of this Act on whether the expected efficiencies for home appliance products have been achieved.” EPA is currently working with DOE to review the 2009 MOU and to draft a report to Congress as directed. Prior to the signing of the 2009 MOU, EPA managed more than 50 product categories, including two appliances, and DOE managed seven product categories, including four appliances. In September 2009, EPA and DOE signed a Memorandum of Understanding (MOU) that redefined roles and responsibilities for EPA and DOE in response to industry concerns and to enhance and expand the various aspects of ENERGY STAR. The 2009 MOU realigned roles for the ENERGY STAR products program to capitalize on each Agency’s expertise. Under the MOU, EPA and DOE work together to implement the ENERGY STAR program. The division of responsibilities established by the MOU have resulted in significant improvements to the program including standardized program approaches, program enhancements, and reduced duplication of effort, benefiting American consumers, ENERGY STAR partners, and the environment. It also has helped resolve market confusion. EPA remains committed to improving the ENERGY STAR program in response to stakeholder feedback and to work closely with our industry partners to ensure the ENERGY STAR program continues to work well for those partners and American consumers.

- b. Would you support moving the ENERGY STAR program for home appliances back to DOE while still maintaining a majority of the management within EPA? It’s my understanding a broad set of industries are eager to work with your agency on these issues and I look forward to working with you to revisit the MOU.

ANSWER - As stated above, EPA is currently working with DOE to review the 2009 MOU and to draft a report to Congress, as directed, on whether the expected efficiencies for home appliance products have been achieved. The division of responsibilities established by the MOU have resulted in significant improvements to the program including standardized program approaches, program enhancements, and reduced duplication of effort, benefiting American consumers, ENERGY STAR partners, and the environment. It also has helped resolve market confusion. EPA remains committed to improving the ENERGY STAR program in response to stakeholder feedback and to work closely with our industry partners to ensure the ENERGY STAR program continues to work well for those partners and American consumers.

The Honorable Earl L. “Buddy” Carter

EPA Marine Engine Waivers

In a recent Energy & Commerce Committee hearing, you mentioned that you would now be personally involved in the marine engine waiver issue for pilot boats, after giving the commitment

to look into in your December testimony from the committee. This is a pressing issue that could have a wide-ranging impact on our port operations and growth.

1. Mr. Administrator, can you please provide a breakdown of the actions the EPA has taken to address the Tier 4 concerns?

ANSWER - EPA staff performed outreach with affected stakeholders including meeting with the Savannah Bar Pilots with specific questions about their concerns, as well as the pilot boat builder. After the April 26 hearing, EPA sent technical experts to Seattle to meet with the pilot boat builder to discuss technical issues in detail. EPA staff also met with seven marine engine manufacturers to better understand what Tier 4 engines are available now or will be available in the near future. EPA staff also spoke with NOAA to discuss the NOAA whale strike rule impacts on pilot boat operations. EPA will use information gathered in these meetings to inform a path forward.

2. Please provide a timeline of what the EPA has done and any upcoming actions that will be taken by the EPA to address this concern.

ANSWER - Since October 2017, EPA has engaged in technical outreach with industry stakeholders and NOAA, as described above. Currently, EPA is reviewing our options for moving forward.

3. After you send technical experts to California, what will need to be done?

ANSWER - EPA's technical experts have recently met with the boat builder in Seattle (not California). EPA will use information gathered in that meeting and other discussions to inform any future action.

4. Does the EPA have the authority to move forward with a waiver system? If not, what are your legal restrictions?

ANSWER - EPA regulations provide limited exemptions from the Tier 4 marine engine standards for specific circumstances such as national security. However, these exemptions would not apply in these circumstances. Additionally, there is no waiver process for Tier 4 marine engine standards where a compliant engine is not available that meets a boat operator's needs. Any potential waiver process for boat operators or other change to EPA's existing regulations would require a rulemaking.

Tier 4 Restrictions for Generators

1. Administrator Pruitt, I have a similar concern for the Tier 4 restrictions placed on large, 1-megawatt generators. It's my understanding that the Tier 4 restrictions are preventing Tier-4 generators from being sold in the market due to that and the portability restrictions. It's forecasted that there won't be a viable solution in the market until the early 2020s. Is this something you are working on?

ANSWER - Engine manufacturers had several years of lead time before the Tier 4 standards took effect, which provided ample time to develop compliant engines. Engine manufacturers have a low volume of sales in this power category and chose not to initially focus on developing Tier 4 engines. Engine manufacturers prepared their customers for the lag time in engine availability and have indicated that Tier 4 generators will be available soon.

2. What would need to be done by the EPA to remedy this situation and allow for the sale of currently developed generators?

ANSWER - Any revisions to the emission standards would need to go through notice and comment rulemaking. The emission standards would have to be revised. This likely could not be accomplished before Tier 4 generators become available, due to the need to undertake a notice and comment rulemaking. In addition, it would greatly disrupt the market to allow new Tier 2 generators to be sold, since some engine manufacturers have already invested resources to develop Tier 4 generators.

3. Is the EPA currently reviewing this concern or working on any changes that would remedy it?

ANSWER - EPA has reviewed this issue and does not currently believe that revisions to the regulations are warranted.

Biomass

I commend you for your policy statement clarifying biomass carbon neutrality on Monday, April 23 in my home state of Georgia. As you know, the Consolidated Appropriations Act of 2018 included language in Section 431 Policies Relating to Biomass Energy directing the Secretaries of Energy and Agriculture and the Administrator of the Environmental Protection Agency to establish clear and simple policies that reflect the carbon-neutrality of forest bioenergy and recognize biomass as a renewable energy source provided the use of forest biomass does not cause the conversion of forests to non-forest use.

1. What is the EPA's progress in implementing a regulation on carbon neutrality of biomass? What are the next steps?

ANSWER - As follow up to the April 23, 2018 memo regarding EPA's policy on the treatment of biogenic carbon dioxide emissions and to align with the Consolidated Appropriations Act of 2018, the EPA is considering how this policy may be implemented in EPA permitting programs and other parts of the Clean Air Act. In addition, the Agency is having a dialogue with USDA and DOE on how to best coordinate on this topic to align our policies.

The Honorable Jeff Duncan

Some of my corporate constituents are subject to complex and, at times, inconsistent regulation by the Environmental Protection Agency. Inconsistent actions or interpretations by EPA are

particularly burdensome to my constituents when the Agency's Policy and Enforcement Offices take positions that are at odds with each other. To that end, please explain whether, and to what extent, EPA's Office of Enforcement and Compliance Assurance ("OECA") consults with EPA's Office of Transportation and Air Quality ("OTAQ") prior to initiating any enforcement action involving a certification issued by OTAQ (for example, an enforcement action alleging uncertified engine parameters).

1. In addition, what steps can be taken by EPA to improve and streamline consultation between OTAQ and OECA to avoid unnecessary hardship on the regulated community?

ANSWER: EPA's Office of Enforcement and Compliance Assurance (OECA) consults with the Office of Transportation and Air Quality (OTAQ) on all significant enforcement actions. OECA staff and middle management have weekly meetings with their OTAQ counterparts on enforcement matters. This partnership ensures efficient use of government resources and consistent compliance expectations for the regulated community.

EPA believes the current process for coordination between OECA and OTAQ is appropriate.

During the last Administration, many Energy Star program operations were shifted from the Department of Energy, where they had been since 1996, to EPA. I understand from home appliance manufacturers that they would like Energy Star efforts related to home appliances transferred back to the DOE. One of these is Electrolux, a home appliance manufacturer that has a large presence in my district in Anderson, SC. This is an important issue for South Carolina as we have recently seen a great deal of investment in the home appliance industry. In Newberry, SC Samsung recently opened its first U.S. based home appliance manufacturing facility and is on track to create over 1,000 jobs by 2020.

1. With the Appliance Standard program at DOE and Energy Star at EPA, companies currently have two federal agencies attempting to coordinate changes in product specifications and test procedures on the same products. This creates unnecessary cost, confusion and uncertainty for manufacturers and does not appear to bring any benefit to consumers. **Administrator Pruitt**-are there any efforts to make such a change?

ANSWER - EPA and DOE work together to implement the ENERGY STAR program under an MOU jointly agreed upon in 2009. There is language in the conference report for the Consolidated Appropriations Act of 2018 that directs EPA to "work with the DOE to review the 2009 MOU and report to the Committees within 90 days of enactment of this Act on whether the expected efficiencies for home appliance products have been achieved." EPA is currently working with DOE to review the 2009 MOU and to draft a report to Congress as directed. Prior to the signing of the 2009 MOU, EPA managed more than 50 product categories, including two appliances, and DOE managed seven product categories, including four appliances. In September 2009, EPA and DOE signed a Memorandum of Understanding (MOU) that redefined roles and responsibilities for EPA and DOE in response to industry concerns and to enhance and expand the various aspects of ENERGY STAR. The 2009 MOU realigned roles for

the ENERGY STAR products program to capitalize on each Agency's expertise. The division of responsibilities established by the MOU resulted in significant improvements to the program including standardized program approaches, program enhancements, and reduced duplication of effort, benefiting American consumers, ENERGY STAR partners, and the environment. It also helped resolve market confusion. EPA remains committed to improving the ENERGY STAR program in response to stakeholder feedback and to work closely with our industry partners to ensure the ENERGY STAR program continues to work well for those partners and American consumers.

2. Wouldn't this change fit in with your desire to get EPA back to its core functions?

ANSWER - The ENERGY STAR program was established in 1992 under the authority of the Clean Air Act Section 103(g). Section 103(g) of the Clean Air Act directs EPA to "develop, evaluate, and demonstrate nonregulatory strategies and technologies for air pollution prevention... with opportunities for participation by [stakeholders]... including end-use efficiency" (42 USC Section 7403g). In 2005, Congress enacted the Energy Policy Act. Section 131 of the Act amended Section 324 of the Energy Policy and Conservation Act, and directed the Environmental Protection Agency and the Department of Energy to implement "a voluntary program to identify and promote energy-efficient products and buildings in order to reduce energy consumption, improve energy security, and reduce pollution through voluntary labeling of or other forms of communication about products and buildings that meet the highest energy efficiency standards" (42 USC Section 6294a).

The FY 2019 President's Budget includes a proposal to authorize the EPA to establish user fees for entities that participate in the ENERGY STAR program. By administering the ENERGY STAR program through the collection of user fees, the EPA would continue to provide a trusted resource for consumers and businesses who want to purchase products that save them money and help protect the environment.

The Honorable Frank Pallone, Jr.

During your appearance on April 26th, you stated that purchasing real estate through a Limited Liability Corporation, or LLC, is "normally how you buy real estate in Oklahoma." Your ownership stake in that LLC was not included in your financial disclosures at the time.

1. How often have you purchased real estate through an LLC?

ANSWER - Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. Therefore, EPA is not able to discuss your question with Mr. Pruitt to provide you with an answer.

2. Do you currently own property through an LLC or have a stake in an LLC that owns property?

ANSWER - Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. Therefore, EPA is not able to discuss your question with Mr. Pruitt to provide you with an answer.

3. Please list all property you have purchased and/or owned a stake in through an LLC.

ANSWER - Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. Therefore, EPA is not able to discuss your question with Mr. Pruitt to provide you with an answer.

4. Please explain why your ownership stake in Capital House, LLC was not listed in your financial disclosures at the time.

ANSWER - Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. Therefore, EPA is not able to discuss your question with Mr. Pruitt to provide you with an answer.

Also at the April 26th hearing, you disavowed knowledge of whether you had paid taxes on the income from your ownership stake in Capital House LLC. You said “you provide information to your accountant, they determine what you pay.”

5. Did you sign your tax filings for the years in question? Do you take responsibility for the accuracy of the information contained therein?

ANSWER - Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. Therefore, EPA is not able to discuss your question with Mr. Pruitt to provide you with an answer.

Extensive questions have been raised about your tax liability for the expenses of your security detail when they accompanied you on personal travel, including to Disney World and the Rose Bowl.

6. Did you pay taxes on that benefit?

ANSWER - Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. Therefore, EPA is not able to discuss your question with Mr. Pruitt to provide you with an answer.

It has been revealed that the EPA reimbursed your former landlord, Vicki Hart, for the repair of a door at your residence.

7. Did you reimburse the EPA for that expense?

ANSWER - Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. Therefore, EPA is not able to discuss your question with Mr. Pruitt to provide you with an answer.

8. If not, did you pay taxes on that income?

ANSWER - Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. Therefore, EPA is not able to discuss your question with Mr. Pruitt to provide you with an answer.

During the Administrator's April appearance before the Subcommittee, Chairman Walden underscored the importance of staffing and internal management issues at EPA, stating "it is essential that EPA have the staff with proper expertise, implementing and enforcing programs that correlate with their experience."

9. Please provide the Committee a copy of the EPA's reorganization plan submitted to OMB pursuant to Executive Order 13781, including any interim and final drafts submitted to OMB.

ANSWER – Following a briefing on this issue, the Agency has provided all relevant information on the reform plan to your staff in June of 2018.

10. Please provide the Committee a copy of the EPA reform plan.

ANSWER – Following a briefing on this issue, the Agency has provided all relevant information on the reorganization plan to your staff in June of 2018.

11. Explain the similarities and differences between the reform plan and the reorganization plan.

ANSWER – Following a briefing on this issue, the Agency has provided all relevant information on the reform plan to your staff in June of 2018.

12. Please provide the Committee a copy of the EPA's operating plan for new hires and indicate how many new employees EPA plans to hire in each program office.

ANSWER – Following a briefing on this issue in June of 2018, the Agency has provided all relevant information on this topic to your staff.

13. Please provide the Committee with the names of political and career members of the hiring review panel.

ANSWER - Career members of the panel: Mike Flynn, Donna Vizian, David Bloom, Jennifer Orme-Zavaleta, Michelle Pirzadeh, Cheryl Newton. Political Members of the panel: Henry Darwin.

- a. On what criteria were the panel members chosen?

ANSWER - The panel members represented a cross section of the agency career management including the senior career official at the agency.

- b. What procedures do the offices need to do to make a hiring request of the panel?

ANSWER - Offices completed a template summarizing their strategy for managing their interim FTE levels. The template included the current on-board FTE level: the FY18 interim FTE level: the number FTE over/under FY 18 interim level: the strategy to meet the new level by end of FY18 and any special requests to meet short term critical needs.

The panel is no longer operative since it was an interim mechanism until the agency received its 2018 operating plan.

14. When filling a position from within the agency, how is it determined a staff member possesses the technological skills appropriate for the office of which they are being transferred?

ANSWER - There are several factors considered when deciding whether an internal employee is qualified for a reassignment. The human resources specialist within a human resources shared service center in the Office of Administration and Resources Management reviews the position description of the position to which the employee will be reassigned and reviews the employees' resume to determine whether the employee possesses the requisite knowledge, skills and abilities to successfully perform the assigned major duties and responsibilities. The human resources specialist also reviews the employees' college/university transcripts when the position has a positive education requirement.

Attention should be bestowed to qualification reviews whereby the proposed reassignment moves the employee to a position with a positive education requirement. There are instances whereby the employee meets positive education requirements, but lacks the one year of specialized experience which would render the employee qualified for the reassignment. The management official, with support from the servicing HRSSC, has the flexibility to use OPM's In-service Placement Provisions whereby an employee who does not meet specialized experience may be reassigned to the position. Please note for positions with positive education requirements, the employee would need to meet education requirements under In-service Placement Provisions.

15. Please provide the following information:

- a. FTE on EPA payroll in regional offices and in HQ.

**FTE
As of July 2018**

This is attrition 01/01/2017 to 06/12/2018.

- c. Please provide a list of employees that have been moved to a new position within the agency, including their previous office, title, position description, and their new office, title, and position description.

ANSWER –Due to the personal nature of this question for career staff, the agency believes that QFRs are not the appropriate venue in which to respond to document requests of this nature and will seek to work with your staff on this request.

- d. The predetermined employee headcounts for each office.

ANSWER – The table provided shows onboard employees by office and division as of January 15, 2017 and June 18, 2018. It includes part-time and special government employees, i.e. Federal Advisory Committee Act (FACA) participants.

The Honorable Bobby L. Rush

During the question period I spoke to you about the widespread levels of lead that have been detected throughout homes in Chicago and I referenced a recent Tribune article entitled “Brain-damaging lead found in tap water in hundreds of homes tested across Chicago, results show” (April 12, 2018).

You agreed with me that this was a severe problem, nationally, and it would cost approximately \$45 billion to resolve. You mentioned that there was a program at the agency consisting of \$4 billion in grants, annually, for ten years that states could apply for to address this issue.

1. Can you provide more information regarding this program, including eligibility requirements, deadlines, and the dollar amounts available?

ANSWER - The program is the Water Infrastructure Finance and Innovation Act. The WIFIA program is authorized to provide and service direct federal loans to cover 49 percent of eligible costs for drinking water and wastewater infrastructure projects. Eligible assistance recipients include corporations and partnerships, municipal entities, and State Revolving Fund (SRF) programs. The WIFIA program received \$63 million in funding in the Consolidated Appropriations Act, 2018, that could potentially provide as much as \$5.5 billion in loans, leveraging over \$11 billion in water infrastructure projects when combined with other funding sources.

On May 5, 2018, EPA announced that the deadline for prospective borrowers to submit letters of interest for WIFIA loans has been extended to July 31, 2018. Administrator Pruitt also sent a letter highlighting the deadline extension to the governors of 56 states and territories as well as tribal leadership. This year's WIFIA Notice of Funding Availability highlights the importance of protecting public health, including reducing exposure to lead and other contaminants in drinking water systems and updating the nation's aging infrastructure.

For more information about the WIFIA program and the application process please visit www.epa.gov/wifia

2. Will you commit to work with my office to have staff from EPA Region 5 come into my district to discuss this program with state and local leaders, as well as other stakeholders concerned with this issue?

ANSWER - EPA's WIFIA team is available to meet with your staff and leaders and constituents in your district to discuss the program and to answer any questions.

The Honorable Diana DeGette

1. I questioned you about your legally dubious real estate transactions, but further information is needed in light of your incomplete answers and troubling new developments.²

In your testimony before the Subcommittee, you failed to disclose significant details concerning your 2003 purchase of a luxury home in Oklahoma City. According to a recent report in the *New York Times*, you purchased the home with Justin Whitefield, a registered lobbyist who, at the time, was pursuing business-friendly changes to Oklahoma's workers' compensation rules,

² House Committee on Energy and Commerce, *Hearing on the Fiscal Year 2019 Environmental Protection Agency Budget*, 115th Cong. (Apr. 26, 2017).

which you allegedly helped negotiate.³ Mr. Whitefield, yourself, and four other owners reportedly used a limited liability company, Capitol House L.L.C. (Capitol House), to purchase the home.⁴ The seller, Marsha Lindsey, was a telecommunications lobbyist for SBC Oklahoma, and sold the property at a significant discount of approximately \$100,000.⁵ SBC Oklahoma reportedly offset this amount in Ms. Lindsey's retirement package.⁶

Your incomplete testimony leaves key questions unanswered concerning this transaction. You allegedly paid for one-sixth of the purchase price, and according to reports, you purchased the home with Kenneth Wagner, who now serves as a political appointee at EPA and previously served as treasurer of your political action committee,⁷ as well as health care executive Jon Jiles.⁸ However, the identity of two additional owners remains unknown.

You also apparently failed to disclose your interest in Capitol House in your financial disclosure filings, and in your testimony could not confirm whether you paid taxes on rental income received for a room on the property rented to another Republican lawmaker.⁹

Given your history of real estate transactions with lobbyists both in Oklahoma during your tenure as a state legislator and in Washington, D.C. while serving as EPA Administrator, and in light of these troubling developments, I ask that you respond to the following requests:

- a. Please provide the names and corresponding ownership share of all owners of Capitol House.

ANSWER - Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. Therefore, EPA is not able to discuss your question with Mr. Pruitt to provide you with an answer.

³ *Pruitt's Coziness with Lobbyists Includes Secretly Buying a House with One*, New York Times (May 3, 2018).

⁴ *Pruitt's Coziness with Lobbyists Includes Secretly Buying a House with One*, New York Times (May 3, 2018).

⁶ *Pruitt's Coziness with Lobbyists Includes Secretly Buying a House with One*, New York Times (May 3, 2018).

⁷ *Pruitt's Friend Joins Agency as Senior Adviser*, E&E News (Apr. 13, 2017).

⁸ *Pruitt's Coziness with Lobbyists Includes Secretly Buying a House with One*, New York Times (May 3, 2018).

⁹ *Scott Pruitt Before the EPA: Fancy Homes, a Shell Company and Friends with Money*, New York Times (Apr. 21, 2018).

- b. Please provide documentation of your payment for and purchase of an ownership share in Capitol House, including the terms of the payment and the individual or entity who received the payment.

ANSWER - Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. Therefore, EPA is not able to discuss your question with Mr. Pruitt to provide you with an answer.

- c. Please provide copies of your financial disclosures disclosing your ownership interest in Capitol House.

ANSWER - Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. Therefore, EPA is not able to discuss your question with Mr. Pruitt to provide you with an answer.

- d. Please provide the name of the individual(s) who arranged for cash purchase of the Oklahoma City property and subsequent transfer of ownership to Capitol House.

ANSWER - Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. Therefore, EPA is not able to discuss your question with Mr. Pruitt to provide you with an answer.

- e. Please provide the name of the individual(s) who requested or arranged for Spirit Bank, where former EPA appointee Albert Kelly was chief executive, to approve a mortgage in the name of Capitol House.

ANSWER - Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. Therefore, EPA is not able to discuss your question with Mr. Pruitt to provide you with an answer.

- f. Please provide documentation demonstrating you paid taxes on all rental income received from Jim Dunlap or any other tenant who rented space on the property, including, but not limited to, Schedule K-1 tax forms.

ANSWER - Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. Therefore, EPA is not able to discuss your question with Mr. Pruitt to provide you with an answer.

- g. Please provide documentation of any proceeds you received for the 2005 sale of the property, including the amount and date received.

ANSWER - Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. Therefore, EPA is not able to discuss your question with Mr. Pruitt to provide you with an answer.

The Honorable Janice D. Schakowsky

1. **Speeches:** Please provide the date, location, name of event, and text for all speeches you have given to industry associations (e.g. Louisiana Chemical Association) in your capacity as EPA Administrator.

ANSWER –The agency believes that QFRs are not the appropriate venue in which to respond to broad document requests of this nature and will seek to work with your staff on this request.

2. **Official vehicle:** During the hearing, you stated that EPA staff “just asked for consultation” on the selection of your official vehicle. During this consultation, did you or people responding on your behalf express a preference for a larger vehicle, leather interior, bucket seats, Wifi, GPS navigation, or any other luxury features that were ultimately included in the vehicle selected?

ANSWER - Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. Therefore, EPA is not able to discuss your question with Mr. Pruitt to provide you with an answer.

3. **Samantha Dravis:**

- a. At any time during Samantha Dravis’s employment at EPA, was she employed or compensated using authority under the Safe Drinking Water Act?

ANSWER - No

- b. How much was Samantha Dravis compensated during the three months from November 2017 to January 2018?

ANSWER - Effective April 20, 2018, Samantha Dravis resigned from her position at the EPA and is no longer employed by the Agency. Due to an ongoing review by EPA OIG, it would be inappropriate to provide this information in QFR responses. EPA will seek to work with committee staff on this information request.

- c. According to the EPA’s own spokesperson, Ms. Dravis was a “senior leader at the EPA.” Do you have record of meetings attended in person or substantial projects completed by Samantha Dravis during the three months from November 2017 to January 2018? If so, please summarize. Please provide all records of meetings attended in person or substantial projects completed, as well as any emails between

Administrator Pruitt and Ms. Dravis concerning her attendance or departure from the EPA.

ANSWER - Effective April 20, 2018, Samantha Dravis resigned from her position at the EPA and is no longer employed by the Agency. The agency believes that QFRs are not the appropriate venue in which to respond to broad document requests of this nature and will seek to work with your staff on this request.

- d. Was Samantha Dravis approved for first class travel to or from Morocco in December 2017? If so, who at EPA approved first class travel and on what date?

ANSWER - No

The Honorable Paul Tonko

1. Strengthening Transparency in Regulatory Science Proposed Rule

- a. Please cite specific provisions in statute that require EPA to make the changes proposed in the Strengthening Transparency in Regulatory Science rule?

ANSWER – EPA’s authority for this rulemaking can be found in Section I.C. of the proposed rule, including its ability to promulgate rules under the Administrative Procedure Act.

- b. Do any of the statutory authorities identified by the proposed rule include the ability to grant exemptions to the treatment of science at the Administrator’s discretion to address issues on a case-by-case basis?

ANSWER – In developing the proposed rule, EPA drew from various authorities that generally speak to the need for transparency in scientific rulemaking. EPA specifically cited these sources in the proposed rulemaking to allow the public to review and better understand the basis for the proposed rule.

- c. What science organizations or stakeholder groups were involved in the development of this proposed rule? Please provide a list of all meetings, including teleconferences, with these organizations, including the date, and the name, title, and organizational affiliation of participants.

ANSWER – EPA has received numerous comments from various groups on the development of the rule. The proposed rule was open for public comment until August 16, 2018. Comments are available for viewing at <https://www.regulations.gov/docket?D=EPA-HQ-OA-2018-0259>. EPA also held a public hearing seeking feedback on the proposed rule on July 17, 2018.

- d. Previously, EPA analyzed legislation (The HONEST Act) that would have similar goals and estimated it would cost \$250 million annually to implement. Did EPA develop any cost estimates to implement the proposed rule?

ANSWER – The Notice of Proposed Rulemaking is much narrower in the scope than the HONEST Act in terms of the scope of data covered, the scope of decisions covered, and its proposed intent to take advantage of existing approaches and infrastructure being developed in conjunction with other government-wide open data initiatives. Moreover, as stated in the proposed rule, EPA believes the benefits of this proposed rule justify the costs. The benefits of EPA ensuring that dose response data and models underlying pivotal regulatory science are publicly available in a manner sufficient for independent validation are that it will improve the data and scientific quality of the Agency's actions and facilitate expanded data sharing and exploration of key data sets; this is consistent with the conclusions of the National Academies.

- e. If so, please provide any cost analysis completed regarding the proposed rule.

ANSWER – See response to (d) above.

- f. Why did EPA conclude this is not an economically significant rulemaking? Please explain EPA's analysis associated with this conclusion.

ANSWER – The proposed rule focuses on strengthening transparency of EPA's regulatory science. The rule is not expected to have an "economically significant" impact on the economy as defined by E.O. 12866 and guidance from OMB.

- g. Please provide a list of all key meetings and determinations made for this rulemaking during the Action Development Process, including the rulemakings tier, meeting dates and participants in any intra-agency work group meetings, and a list of EPA offices which participated in the development of the rulemaking. For each office, please provide the name, title, and office of each work group participant.

ANSWER – The proposed rule is being overseen by EPA's Office of Research and Development. The proposed rule continues to develop, including with the comments received, and the input from the public hearing held on July 17, 2018.

- h. Did EPA examine lost benefits or costs associated with EPA's inability to consider certain scientific studies as a result of this proposal?

ANSWER – As stated above and in the proposed rule, EPA believes the benefits of this proposed rule justify the costs. One recent analysis found that: "Improvements in reproducibility can be thought of as increasing the net benefits of regulation because they would avoid situations in which costs or benefits are wrongly estimated to occur or in which regulatory costs are

imposed without corresponding benefits....” They concluded that “an increase in existing net benefits from greater reproducibility, which, if it occurred, would cover the costs of obtaining the data and making the data available.”

<https://www.mercatus.org/system/files/Mercatus-Lutter-Public-Access-Data-v3.pdf>. With regard to concerns over lost benefits, EPA believes that concerns about access to confidential or private information can, in many cases, be addressed through the application of solutions commonly in use across some parts of the Federal government. EPA also seeks comments on potential exceptions to any requirements in the rule.

- i. If so, what analysis was done on costs or lost benefits, and what were the results?

ANSWER – See response to (h) above.

- j. Many older studies may rely on data that are no longer available. Does EPA have any estimates or analysis of how many studies would be disqualified to be used for major rulemakings under this proposal?

ANSWER – Since the rule is still under development, EPA cannot comment on the substance or effect of the rule until it is final. EPA is currently accepting public comment on the potential impact of the proposal.

- k. How long did the Office of Information and Regulatory Affairs (OIRA) take to complete its review of the proposed rule? Please provide the date OIRA accepted and began review, and the date OIRA completed review.

ANSWER – OMB received the proposed rule on April 19, 2018, and concluded its review on April 23, 2018.

- l. Did EPA or other executive officials have any communication with the Office of Information and Regulatory Affairs to accelerate this review? If so, please provide the name and title of these individuals.

ANSWER – OMB reviewed a draft of the proposed rule and indicated to EPA that it had completed its review of the draft on April 23, 2018. OMB and federal agencies routinely discuss the timing of interagency review.

- m. Was the Office of Information and Regulatory informed by any EPA official that Administrator Pruitt would be testifying before Congress one week after submitting this proposed rule?

ANSWER – Yes, Federal agencies routinely inform OMB of upcoming hearings and EPA did so in this case.

- n. Office of Information and Regulatory Affairs reviews of similarly complex rules often take months to complete. What specific factors allowed this review to be completed so quickly?

ANSWER – See response to (m) above.

- o. The proposed rule solicits comments in numerous areas, indicating it hopes to develop answers during the regulatory process. Proposals with so many outstanding questions are often released as Advanced Notice of Proposed Rule Makings. Why did EPA propose this as a Notice of Proposed Rulemaking with so many outstanding questions included?

ANSWER – EPA solicited comments from the public on various areas to better inform the development of the rule. Extending the comment period by roughly two and a half months and also holding a public hearing will provide an opportunity to receive additional useful information for the agency to consider.

- p. Did the Office of Information and Regulatory Affairs ask EPA to issue an Advanced Notice of Proposed Rulemaking instead? If so, when was this request made and who at OIRA made this request?

ANSWER – Various options for how to proceed with the rule were considered during EPA’s development of the draft NPRM.

2. Science Advisory Boards (SAB)

- a. How many current members of EPA Science Advisory Boards are expected to cycle off before the end of this year?

ANSWER – For the Science Advisory Board (SAB): Seven members are completing their second and final 3-year term, and eight members are completing their first 3-year term. For the Clean Air Scientific Advisory Committee (CASAC): One member is completing their second and final 3-year term, and three members are completing their first 3-year term.

- b. Since joining the agency, has Administrator Pruitt requested EPA career staff in the SAB Staff Office to provide recommendations for board appointments?

ANSWER – The career staff in the SAB Staff Office provided senior management with information and various options for the Administrator to consider for both SAB and CASAC appointments

- c. If so, how many of those recommendations have been accepted of the total amount of new appointees.

ANSWER – The senior management of the Agency considered the information and options.

- d. How many EPA Science Advisory Board members have been appointed without input by the SAB Staff Office?

ANSWER – The SAB Staff Office provided information on all nominated candidates for the Administrator to consider when making appointments.

- e. How many issues went before EPA Science Advisory Boards or the Clean Air Scientific Advisory Committee (CASAC) for review in each year for the past five years?

ANSWER – Number of advisory reports per year from the SAB and CASAC:

Year	SAB	CASAC
2013	7	6
2014	7	7
2015	14	2
2016	6	3
2017	8	4

- f. Does the Administrator plan to seek SAB or CASAC review of the recently proposed Strengthening Transparency in Regulatory Science rule?

ANSWER –Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. In general practice, the SAB and CASAC are regularly consulted for feedback on these issues and EPA intends to continue to use them in that capacity moving forward.

- g. Does the Administrator plan to seek SAB or CASAC review on any climate change issues?

ANSWER –Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. In general practice, the SAB and CASAC are regularly consulted for feedback on these issues and EPA intends to continue to use them in that capacity moving forward.

- h. Does the Administrator plan to seek SAB or CASAC review on any aspect of the long-term economic costs and benefits of any changes that have been made or are being proposed under his tenure at EPA?

ANSWER –Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. In general practice, the SAB and CASAC are regularly consulted for feedback on these issues and EPA intends to continue to use them in that capacity moving forward.

3. The Frank R. Lautenberg Chemical Safety for the 21st Century Act Implementation

- a. What steps has EPA taken to ensure new and existing chemical reviews include explicit considerations to protect vulnerable populations, as required by statute?

ANSWER – As required under TSCA, EPA continues to identify and give explicit consideration to “potentially exposed and susceptible subpopulations” for both new and existing chemical reviews. Although the explicit requirement in TSCA is new, the Agency has long given consideration to vulnerable subpopulations. See, for example, EPA's Policy on Evaluating Health Risks to Children (1995). The Agency has evaluated the risk of chemical substances to all sectors of the population, with particular attention to workers, indigenous peoples, pregnant women, children, infants, the elderly, environmental justice communities, and fence-line communities, among others. The Agency utilizes a number of existing guidance documents to evaluate risk at various life stages, and will continue to use and refine these processes to protect the most vulnerable.

EPA confirmed its commitment to meet this statutory requirement in the final Risk Evaluation framework rule, and in the scoping and problem formulation documents for the first ten chemical risk evaluations. The problem formulation documents refine the conditions of use and exposures presented in the scope of the risk evaluation and presents refinements to the conceptual models and analysis plan that describe how EPA expects to evaluate risks. EPA welcomes information from communities to further inform our risk evaluations.

EPA has sought input from specific populations and public health experts in implementing TSCA and will continue to do so. For example, EPA has had discussions on several occasions with the National Tribal Toxics Council (NTTC) to receive input on tribal lifeways and exposures. OPPT and the NTTC continue to collaborate on ways to consider tribes in conducting potentially exposed or susceptible subpopulations analyses for Draft Risk Evaluations. OPPT has also had several meetings with AFL-CIO about workers as potentially exposed or susceptible subpopulations and ways in which worker exposure information could be identified and provided for use in the risk evaluation process. OPPT has also sought advice and input regarding children as a susceptible subpopulation from the Children's Health Protection Advisory Committee (CHPAC) through a meeting and recommendations addressing the formal request from EPA for guidance on how risk evaluation should address children.

- b. In November, Administrator Pruitt and EPA staff attended an American Chemistry Council board meeting on South Carolina's Kiawah Island. The Administrator's schedule contains no details of that weekend. Please provide a list of all companies or lobbyists that met with the Administrator in South Carolina.

ANSWER –The agency believes that QFRs are not the appropriate venue in which to respond to broad document requests of this nature and will seek to work with your staff on this request.

- c. Please provide a list of all chemicals specifically discussed at meetings attended by the Administrator at this event.

ANSWER –The agency believes that QFRs are not the appropriate venue in which to respond to broad document requests of this nature and will seek to work with your staff on this request.

4. Formaldehyde Assessment

- a. Earlier this year, Administrator Pruitt was asked by Senator Ed Markey at the Senate Committee on Environment and Public Works hearing on 1/30/18 about the delayed formaldehyde assessment. At that hearing, Administrator Pruitt said, “Senator, I commit to you that I will look into that and make sure your office is aware of what we have and when we can release it.” Please provide an update on the status of the formaldehyde assessment.

ANSWER – We continue to discuss this assessment with our Agency partners and have no further updates to provide at this time.

- b. Has EPA concluded its intra-agency review process?

ANSWER – We continue to discuss this assessment with our Agency partners and have no further updates to provide at this time.

- c. What additional reviews are needed before it can be finalized?

ANSWER – We continue to discuss this assessment with our Agency partners and have no further updates to provide at this time.

- d. When does EPA expect the final report to be released?

ANSWER – We continue to discuss this assessment with our Agency partners and have no further updates to provide at this time.

5. EPA Year in Review 2017-2018 Report

- a. The “EPA Year in Review 2017-2018” report states, “In year one, EPA finalized 22 deregulatory actions, saving Americans more than \$1 billion in regulatory costs.” Please provide a list of each of these actions along with EPA’s analysis of the regulatory cost estimate for each action.

ANSWER – See attached spreadsheet. Note, costs in column D are in millions of dollars.

6. Lead and Copper Rule

- a. EPA undertook efforts to revise the Lead and Copper Rule more than 13 years ago. In October 2016, the EPA published a white paper on the revisions that included a pledge to issue a proposed rule by the end of 2017. That deadline has passed. When does EPA expect to issue a proposed rule?

ANSWER - EPA expects to publish proposed revisions to the Lead and Copper Rule by February 2019.

- b. Has EPA conducted any analysis on how the proposed “Strengthening Transparency in Regulatory Science” rule may impact its ability to regulate lead in drinking water?

ANSWER - EPA has not conducted an analysis of how this proposed regulation might impact regulations of lead in drinking water. However, consistent with Section 1412b(3)(A), EPA is committed to using the best available peer reviewed science and data collected in accordance with accepted practices to inform decision making under the Safe Drinking Water Act.

7. PFAS

- a. EPA announced a National Leadership Summit on Per- and Polyfluoroalkyl Substances (PFAS). What options has EPA discussed internally to regulate or reduce PFAS contamination in drinking water?

ANSWER - EPA is evaluating the need for a maximum contaminant level for PFOA and PFOS as noted at the National Leadership Summit on Per- and Polyfluoroalkyl Substances (PFAS).

- b. What options have been discussed by staff of EPA and the Department of Defense?

ANSWER - EPA staff regularly interacts with Department of Defense (DOD) officials and those of other interested Agencies as part of our coordination of clean-up of contamination at Federal Facilities. EPA has briefed DOD staff on the regulatory processes under the Safe Drinking Water Act including the Contaminant Candidate List, the Regulatory Determinations process and the process for developing National Primary Drinking Water Regulations.

- c. Has EPA conducted any analysis on how the proposed “Strengthening Transparency in Regulatory Science” rule may impact its ability to regulate PFAS in drinking water?

ANSWER - EPA has not conducted an analysis of how this proposed regulation might impact regulations of PFAS in drinking water. However, consistent with Section 1412.b.(3)(A), EPA is committed to using the best available peer

reviewed science and data collected in accordance with accepted practices to inform decision making under the Safe Drinking Water Act.

8. Funding for the Office of Inspector General

- a. The Fiscal Year 2019 budget request includes a significant proposed cut to the EPA Office of Inspector General (OIG). In November 2017, in OIG's Semiannual Report to Congress, it was reported that "OIG submitted an FY 2019 request for \$62 million to the agency for inclusion in the President's budget. Without seeking input from the OIG, the agency provided us with a request of \$42 million." In February, the White House requested only \$37.5 million for the OIG. What was the justification for reducing appropriations and FTEs in the FY 2019 budget request for EPA OIG?

ANSWER - The FY 2019 budget request for EPA OIG is \$46.2 million (\$37.5 million within the Inspector General appropriation and \$8.7 million with the Superfund transfer to the Office of Inspector General appropriation). The FY 2019 President's Budget meets the Budget Control Act's overall federal budget level and with few exceptions, EPA and Chemical Safety Board programs that the OIG reviews also saw reductions. The overall funding change for OIG was a result of an increase in base workforce costs for existing FTE and a corresponding non-pay reduction.

- b. Did the EPA defend its \$42 million request to the Office of Management and Budget?

ANSWER - Per Office of Management and Budget (OMB) Circular A-11, the President's Budget deliberation process is confidential.

9. Freedom of Information Act

- a. It has been reported that political appointees' role in reviewing documents requested under the Freedom of Information Act has increased significantly during Administrator Pruitt's tenure. Please describe the process for "awareness reviews" or "senior management reviews" conducted by political appointees before EPA releases documents involving Administrator Pruitt, including the names and titles of all EPA political appointees who participate.

ANSWER - In a July 15, 2018 letter to House Oversight and Government Reform Committee Ranking Member Elijah E Cummings, which has been shared with the staff of the Energy and Commerce Committee, Principal Deputy General Counsel & Designated Agency Ethics Official Kevin Minoli explains in great detail EPA's Freedom of Information Act (FOIA) response policy.

In his letter, Minoli explains that... "In addition to work on specific FOIA requests, the (FOIA Expert Assistance Team) also helped keep senior leaders informed of new requests that the agency received each week, coordinated

inter-agency review with the Executive Office of the President (EOP) where the EOP had equities in the responsive documents, and made senior leaders aware of impending FOIA productions. There are multiple benefits to making senior leaders – political and career – aware of productions before they are actually produced: the Office of Congressional and Intergovernmental Affairs can determine if the documents are also responsive to a Congressional request for information and, if so, ensure Congress receives the documents at the same time or slightly before the requestor; the Office of Public Affairs can prepare any communications materials deemed necessary based on the documents to be produced; when the documents are from or about a particular employee, keeping that employee informed throughout the process when appropriate, including at the response stage, can significantly increase their confidence in and respect for the FOIA Program into the future; and, while not meant as a quality control tool, to the extent a mistake is identified, it can be corrected. This ‘awareness review’ process does not itself violate FOIA and can be completed without causing undue delay.”

Please find the letter attached for additional information regarding the FOIA response process, and the FOIA Expert Assistance Team’s role within the agency.

- b. Please explain EPA Chief of Staff Ryan Jackson’s role in conducting awareness reviews. How many FOIA awareness reviews has Mr. Jackson completed, and in how many instances did Mr. Jackson instruct that information be withheld, redacted, or altered prior to public release?

ANSWER – See response to 9(a)

- c. Have any other political appointees ever sought to alter, redact, or withhold portions of a FOIA disclosure following an awareness review?

ANSWER – See response to 9(a)

- d. Please provide the start date, end date, and length of review for all awareness reviews conducted during Administrator Pruitt’s tenure at EPA.

ANSWER – See response to 9(a)

- e. Have any of these reviews resulted in a missed FOIA deadline to release documents? If so, please provide details for each instance.

ANSWER – See response to 9(a)

- f. Please explain the rationale for moving the National FOIA office into the Office of General Counsel.

ANSWER – See response to 9(a)

- g. Please explain the role of EPA political appointees Matthew Leopold, Eric Baptist, Marcella Burke, David Fatouhi, and Justin Schwab in the FOIA review process, including any instance where any of these individuals withheld, delayed, redacted, or altered prior to public release?

ANSWER – See response to 9(a)

10. International Travel

- a. According to EPA emails released under a Freedom of Information Act request, on July 10, 2017, Mr. Matthew Freedman was involved in the planning of the Administrator's potential trip to Australia. Mr. Freedman wrote to EPA staff, "[Richard Smotkin] and I will attend and will be present but will not be listed as members of the delegation." It has been reported that Mr. Richard Smotkin was also involved in the planning of the Administrator's December trip to Morocco. Did Mr. Smotkin meet with Administrator Pruitt or any EPA staff, in official meetings or otherwise, during the Administrator's trip to Morocco?

ANSWER - Former Administrator Pruitt traveled to Morocco on December 11-13, 2017 to promote U.S. energy and environmental technology exports. During that trip, he discussed U.S. priorities for updating the environmental cooperation workplan under the U.S.-Morocco Free Trade Agreement and promoted U.S. exports and business solutions, particularly for liquefied natural gas (LNG), biofuels, and waste management in meetings with Moroccan ministers and senior officials.

The Agency has received multiple Freedom of Information Act and Congressional oversight requests that relate to your specific questions. The Agency is in the process of responding to those requests and will provide this information to you once available.

- b. If so, please provide a full list of meetings between Mr. Smotkin and any EPA officials in Morocco, including any meetings with EPA officials and Moroccan government officials, during official business or otherwise.

ANSWER - See response to 10a.

- c. Please provide a list of all attendees for any meeting identified in (b).

ANSWER - See response to 10a.

- d. Recent press accounts indicated Administrator Pruitt and EPA staff missed their connecting flight to Morocco because his security detail's equipment and other gear could not be transferred to the connecting flight in time. This differs from earlier explanations from EPA that the connecting flight was missed due to weather. Please explain why Administrator Pruitt and EPA staff missed their connecting flight.

ANSWER - See response to 10a.

11. Security

- a. In March, Administrator Pruitt told CBS News, "The quantity and the type of threats I've faced are unprecedented." These threats have been used to justify costly security measures, including first-class travel and full-time protection by a 20-member security detail. How does EPA catalogue threats against officials, including the Administrator?

ANSWER - EPA collects information on potential threats against employees, including the Administrator, in several ways. EPA's Office of Inspector General (OIG) investigates instances of threats against EPA employees, including the Administrator. The Protective Service Detail (PSD) uses information from multiple sources, including open-source information and potential security threats from our federal/state/local law enforcement partners.

- b. What office is primarily responsible for identifying these threats?

ANSWER - EPA's Office of Criminal Enforcement and Forensics Training (OCEFT) in the Office of Enforcement and Compliance Assurance collects threat information from multiple sources as described below.

- c. What office is primarily responsible for investigating these threats and determining their legitimacy?

ANSWER - The OIG's Office of Investigations has authority to investigate threats against EPA employees. As you know, the OIG is an independent organization. We defer to the OIG to address any questions about their roles and responsibilities.

- d. Please describe the role in EPA security assessment, investigation, and response of each of the following offices: the Protective Security Detail, the Office of Homeland Security Intelligence Team, the Office of Inspector General, and any other EPA entity that has responsibilities related to the Administrator's security?

ANSWER - EPA's Office of Homeland Security (OHS) provides information on any potential national security threats – domestic or international – and shares this information with PSD. The OIG tracks instances of threats against EPA employees, reviews and investigates. The PSD uses information from multiple sources, including open-source information and potential security threats from our federal/state/local law enforcement partners to assesses the current security climate. OCEFT develops the operational security plan to provide protection for the Administrator.

- e. If threats are deemed to be serious, are they referred to the FBI or another law enforcement agency outside of EPA?

ANSWER - EPA's OIG investigates threats made against EPA employees. As you know, the OIG is an independent organization. We defer to the OIG to address any questions about their roles and responsibilities.

- f. Which EPA office determines whether or not to refer threats?

ANSWER - EPA's OIG makes these determinations. As you know, the OIG is an independent organization. We defer to the OIG to address any questions about their roles and responsibilities.

- g. On how many occasions did such a referral occur in 2017 and 2018?

ANSWER – We defer to the OIG to address questions about their roles and responsibilities.

- h. What spending decisions related to security require sign-off by the head of the Administrator's security detail?

ANSWER - The Special Agent in Charge (SAC) of the PSD manages the resources associated with the PSD's operational mission of protecting the Administrator. The SAC/PSD would be responsible for approving travel authorizations for PSD agents and routine expenses associated with managing the PSD including purchases of equipment, training and other associated expenses in accordance with Agency and OCEFT Delegations.

- i. When did Mr. Nino Perrotta take over the role referenced in (h)?

ANSWER - Mr. Perrotta became the Acting SAC/PSD in March 2017.

- j. Before Mr. Perrotta took over this role, who was responsible for those duties?

ANSWER - Eric Weese was the SAC/PSD prior to SAC Perrotta.

- k. Why and when was the previous head of the Administrator's security detail removed from that position?

ANSWER - SAC Weese was reassigned to a new position as the Senior Law Enforcement Intelligence Advisor within the Criminal Investigation Division in March 2017.

- l. If that employee continued to work at EPA, to where was he reassigned and what is his current employment status?

ANSWER - SAC Weese was reassigned to a new position as the Senior Law Enforcement Intelligence Advisor within the Criminal Investigation Division in March 2017 and continues in that role today.

- m. How many EPA security officials hit the \$160,000 annual salary cap due to overtime last year?

ANSWER – In FY 2017, ten EPA security officials earned more than the \$161,900 cap. The average (mean) of that overtime pay for all of FY 2017 was \$3,166.

- n. How does that compare to each of the previous 5 years?

ANSWER – In FY 2017, ten EPA security officials earned more than the \$161,900 cap. The average (mean) of that overtime pay for all of FY 2017 was \$3,166. In FY 2016, three EPA security officials earned more than the annual limit of \$161,300. In FY 2015, three EPA security officials earned more than the annual limit of \$158,700. In FY 2014, five EPA security officials earned more than the annual limit of \$157,100. In FY 2013, no one exceeded the annual pay limit. In FY 2012, two EPA security officials earned more than the annual limit of \$155,500.

- o. On May 1, 2017, Mr. Perrotta sent a memorandum requesting Administrator Pruitt be seated in first or business class on official travel. On how many instances before this memorandum did the Administrator travel in first or business class on official travel?

ANSWER – The Federal Travel Regulation states that “[w]hen exception security circumstances require other than coach-class airline accommodations,” an agency “may authorize/approve first class accommodations.” 41 C.F.R. section 301-10.123(a)(3). Due to security concerns, EPA approved former Administrator Pruitt’s use of other than coach-travel accommodations. For all trips prior to May 1, 2017, former Administrator Pruitt’s official travel authorizations were ticketed in the economy class.

- p. On how many instances after this memorandum did the Administrator travel in first or business class on official travel?

ANSWER – Between May 1, 2017 and February 14, 2018, former Administrator Pruitt conducted official business travel on thirty instances in which he was ticketed in other than coach-class accommodations.

- q. How many times and on what dates did EPA security officials travel with the Administrator for nonofficial business, where the Administrator paid for his own travel expenses?

ANSWER – Due to security protocol sensitivities, the agency believes that QFRs are not the appropriate venue in which to respond to information requests of this nature and will seek to work with your staff on this request.

- r. What was the total cost for security officials' airfare, hotel, and per diem for each of these instances?

ANSWER – The agency believes that QFRs are not the appropriate venue in which to respond to information requests of this nature and will seek to work with your staff on this request.

- s. Which EPA employee(s) approved the EPA payment to Mrs. Vicki Hart to compensate for a broken door at her condo?

ANSWER – The payment to reimburse Mrs. Hart for damages to her property was done in compliance with all applicable federal and agency policies and laws.

- t. Was Administrator Pruitt involved with or notified about that payment?

ANSWER – Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. Therefore, EPA is not able to discuss your question with Mr. Pruitt to provide you with an answer.

- u. It has been reported that EPA entered into a new vehicle lease for a Chevrolet Suburban at \$10,200 annually. This lease was reportedly for a more upscale LT model, instead of the LS model typically leased and included monthly charges of \$300 for luxury upgrades. What were the terms and rate of the previous vehicle used by the Administrator, and what was the rationale for these upgrades?

ANSWER – The contract for the 2018 Chevrolet Suburban was terminated and the Agency does not currently lease the vehicle referenced.

12. The Administrator's Housing Arrangement

- a. It has been reported that the Administrator's original lease with Mrs. Vicki Hart ended at the end of April 2017, but he did not move out of that condo until later in the year. What were the terms of extending the lease?

ANSWER - Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. Therefore, EPA is not able to discuss your question with Mr. Pruitt to provide you with an answer.

- b. On what date did Administrator Pruitt move out of the condo owned by Mrs. Hart?

ANSWER - Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. Therefore, EPA is not able to discuss your question with Mr. Pruitt to provide you with an answer.

The Honorable David Loeb sack

Administrator Pruitt, as I indicated to you at the hearing, I have a lot of concerns about the way in which the small refinery exemptions within the Renewable Fuel Standard (RFS) program have been handled by the Environmental Protection Agency (EPA). There needs to be much more transparency and public accountability in the with respect to the small refinery waiver exemptions. Please provide responses to the following questions regarding small refinery exemptions within the RFS.

1. What is the total number of refinery waiver applications that EPA received in each year from 2013 through 2017?

ANSWER - For the 2013 compliance year, EPA received 17 petitions for the RFS small refinery hardship exemption. For the 2014 compliance year, EPA received 15 petitions; 2015 compliance year, 15 petitions; 2016 compliance year, 20 petitions; 2017 compliance year, 33 petitions.

2. For each year from 2013 through 2017, how many waivers did the EPA grant?

ANSWER - For the 2013 compliance year, EPA granted RFS exemptions to 8 small refineries. For the 2014 compliance year, EPA granted 8 exemptions; 2015 compliance year, 7 exemptions; 2016 compliance year, 19 exemptions; 2017 compliance year, 29 exemptions. EPA is still evaluating 4 petitions for the 2017 compliance year.

3. What companies have received waivers for each year from 2013 through 2017?

ANSWER - Small refineries have claimed confidential business information protection for their hardship exemption petitions to EPA. For that reason, EPA does not disclose the names of the refineries or their parent companies.

4. What is the total volume of biofuel obligation represented by the waivers granted for each year 2013 through 2017?

ANSWER - In 2013, the total Renewable Volume Obligation (RVO) exempted through the small refinery hardship exemptions was approximately 190 million RINs. In 2014, approximately 210 million RINs; 2015, approximately 290 million RINs; 2016, approximately 790 million RINs; 2017, approximately 1.46 billion RINs.

5. What is the EPA process for confirming that each applicant falls beneath the 75,000-barrell throughput capacity?

ANSWER - EPA verifies that each applicant processed less than 75,000 barrels per day of crude oil by using annual refinery data from EIA.

6. Please confirm how the gallons waived under the small refinery exemption process are handled. Are the gallons reassigned to remaining obligated parties for blending? Are they reassigned within the same compliance year? If they are not reassigned to the remaining obligated parties, what is the disposition of those gallons relative to the overall renewable volume obligation set in the annual rule?

ANSWER - Small refinery exemptions that are granted before EPA establishes the RFS standards for a given compliance year are redistributed to the remaining obligated parties in that compliance year, consistent with EPA's formulas for calculating the percentage standards that apply to all obligated parties. Small refinery exemptions that are issued after the annual standards are established do not affect the standards for that particular year.

7. Did you inform President Trump or White House staff of the unusually large number of small refinery exemptions EPA was granting and of the potential effects on the renewable fuel market of exempting additional gallons and facilities and the fact that these actions would not be well received by the agricultural community?

ANSWER - Meetings with the White House regarding the RFS have included a range of stakeholders impacted by the program including representatives from USDA, EPA, Members of Congress, the agricultural community, and the refining community. A number of topics have been discussed, including the small refinery exemption program established by Congress under the Clean Air Act 211(o)(9)(B) and 40 CFR 80. 1441 (e)(2) . We strive to make decisions based on the full breadth and scope of impacted stakeholders and will continue to do so under the RFS.

8. EPA claimed recently that the Agency did not change the criteria for granting exemptions from those used in past years. Yet, numerous press reports indicate the Agency has granted almost double the amount of waivers than have been granted in past years. What is your explanation for the Agency's granting of an unusually high number of waivers under this program as compared to past years? If the Agency is applying different criteria, please provide an explanation of the changes and the justification for initiating the new criteria.

ANSWER - This question is the subject of ongoing litigation filed in the Court of Appeals for the DC Circuit. See Petition for Review, Advanced Biofuels Association v. EPA, filed in Court of Appeals for the DC Circuit on May 1, 2018. EPA does not comment on topics that are the subject of ongoing litigation.

9. Did EPA consult with the Department of Energy on each of the applications for a small refinery exemption for 2016 and 2017? For how many of the applications reviewed by DOE for these two compliance years did EPA disagree with DOE's recommendation to grant or deny the exemption?

ANSWER - Consistent with Clean Air Act requirements, EPA consulted with, and received a recommendation from DOE on every small refinery hardship petition that was submitted for 2016 and 2017. EPA's decision differed from DOE's recommendation in one case. In addition, EPA granted 100% exemptions in cases where DOE recommended 50% relief.

The Honorable Joseph Kennedy, III

1. What precipitated the need for a secure phone booth inside of your office? You repeatedly have placed blame at the feet of your staff for the exorbitant \$43,000 cost of the phone booth, but it was you yourself who instructed your staff to find a way to create a secure communications line in your office in the first place. Why do you need that secure line? What is the nature of the phone calls you are making that require an additional "secure" phone line while already in the privacy of your own office? If your office does not provide sufficient privacy, why is one of the two Secure Compartmented Information Facilities (SCIFs) inside the EPA headquarters not sufficient?

ANSWER - Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. Therefore, EPA is not able to discuss your question with Mr. Pruitt to provide you with an answer.

Attachment 2—Member Requests for the Record

During the hearing, Members asked you to provide additional information for the record, and you indicated that you would provide that information. For your convenience, descriptions of the requested information are provided below.

The Honorable Bill Johnson

1. I know that the EPA has expressed interest in finding a resolution to some of the concerns regarding EPA's current brick MACT rule which was issued in 2015. Would you commit to working with me and this committee in providing further information on this work and any potential possibilities?

ANSWER - We are currently working on a plan to assist facilities that are covered by the brick rule and need more time to comply to obtain a one-year extension of the rule's compliance deadline. Under the Clean Air Act, state permitting authorities can grant an additional year for compliance with a section 112 standard (providing a total of four years to comply with the rule). We continue to review the issues raised by the brick industry and anticipate reaching out to the industry for further discussions soon. We will be glad to provide further information as this process moves forward.

The Honorable Bill Flores

As the American people are well aware, the EPA under the Obama administration abused environmental regulatory process by ignoring congressional statutes any by circumventing the U.S. Constitution. Fortunately, the federal court system stepped in to protect American families from this abuse of the law. In this regard I have the following questions:

1. Can you provide this committee with a list of those overreaching and overturned regulations that were overturned by the court systems?

ANSWER – In response to this question, EPA provides the following four examples of EPA actions that were reversed or stayed by the courts:

- The 2015 Waters of the United States (WOTUS) rule has been preliminarily enjoined by two district courts in a total of 24 states. The rule was also stayed nationwide by the 6th Circuit (now dissolved because the Supreme Court thereafter held that the court lacked jurisdiction).
- In 2016, the U.S. Supreme Court issued a stay of the 2015 "Clean Power Plan" (CPP).
- The 2012 RFS cellulosic mandate was overturned by the DC Circuit in *API v. EPA* (D.C. Cir. 2013).
- The Tailoring Rule (one of the "four Ts" that followed the 2009 endangerment finding), which would have phased new and modified sources of GHGs into the Prevention of Significant Deterioration permitting regime under Clean Air Act Title I, Part C, was reversed in part by the Supreme Court in *UARG v. EPA*

(June 2014). The Court held that GHG emissions alone do not trigger application of PSD permitting requirements, and overturned EPA’s revisions to statutory emissions thresholds.

2. Can you provide this committee with the economic cost of those overturned regulations?

ANSWER – Please see the response to question 1 regarding the status of each of the following rules. In the Regulatory Impact Analysis (RIA) for the 2015 WOTUS rule, EPA estimated that the cost of the rule could have been as high as \$306.6 million. The RIA for the 2015 Clean Power Plan estimated the rules’ cost as falling between \$5.1 and \$8.4 billion by 2030. For the 2012 RFS cellulosic mandate, the DC Circuit found that EPA had set the mandate for cellulosic fuel at an excessively high level. If EPA had waived the cellulosic requirement and offered waiver credits as required by the Energy Independence and Security Act (EISA) of 2007, the compliance costs of that regulation could have amounted to approximately \$22.15 million. EPA did not quantify the costs of the Tailoring Rule.

3. Can you also inform the committee about EPA’s actions, if any, to modify those regulations so those overreaching regulations to conform with the rule of law?

ANSWER - EPA and the U.S. Army Corps of Engineers are taking a multi-step approach to reconsider the jurisdictional scope of the Clean Water Act. The agencies issued a final rule in January 2018 to change the applicability date of the 2015 rule to February 2020. The agencies proposed to rescind the 2015 rule and re-codify the status quo. The agencies issued this proposal in June 2017 and issued a supplemental notice seeking additional public comment in July 2018. Lastly, the agencies are developing a revised definition of WOTUS. On June 15, the agencies sent a proposed rule to the Office of Management and Budget for interagency review.

In October 2017, EPA issued a proposed rule to repeal the CPP. On December 18, 2017, EPA issued an Advanced Notice of Proposed Rulemaking (ANPRM) on a potential rule that would establish emission guidelines for states to establish performance standards for GHG emissions from existing Electric Generating Units (EGUs). EPA has recently sent a proposed new rule to OMB for interagency review.

In response to the DC Circuit’s decision, EPA rescinded the 2012 cellulosic mandate as well as the 2011 standard based on the same methodology. Additionally, EPA refunded money to obligated parties that had purchased cellulosic waiver credits from the Agency.

As noted in the Spring 2018 Unified Agenda of Regulatory and Deregulatory Actions, EPA intends to take additional action regarding revisions to the Prevention of Significant Deterioration and Title V greenhouse gas permitting regulations, including related to the establishment of a greenhouse gas “Significant Emissions Rate,” in order to address the court rulings on the tailoring rule.

The Honorable Richard Hudson

1. Was GenX used in a manner that was incompatible with the consent agreement under the Toxic Substances Control Act?

ANSWER - EPA is investigating the facility to determine whether terms of the 2009 Consent Order were complied with. EPA has not made any final determinations as to whether the use of GenX at the plant was incompatible with the TSCA consent order. EPA is continuing to assess the use of GenX at the plant under the consent order.

The Honorable Doris O. Matsui

1. You said the EPA has data supporting your decision to revise emission standards for light duty vehicles. Will you commit to providing that data to both side of the committee?

ANSWER - On April 2, 2018, I announced my determination that the standards for greenhouse gas emissions for model year 2022-2025 light-duty vehicles are not appropriate and therefore should be revised. The data and information supporting this determination is included in the docket at <https://www.regulations.gov/docket?D=EPA-HQ-OAR-2015-0827>. EPA is working in partnership with the Department of Transportation to initiate a notice and comment rulemaking to revise the standards, as appropriate. The data and information supporting this forthcoming proposal will be made available in docket EPA-HQ-OAR-2018-0283 upon publication of the proposed rule.

The Honorable John P. Sarbanes

1. Did Carl Ichan's company apply for a waiver from ethanol blending requirements for any of its refining facilities?

ANSWER - Small refineries have claimed confidential business information protection for their hardship exemption petitions to EPA. For that reason, EPA does not disclose the names of the refineries or their parent companies.

2. Did Carl Ichan's company receive a waiver for any of its refining facilities?

ANSWER - Small refineries have claimed confidential business information protection for their hardship exemption petitions to EPA. For that reason, EPA does not disclose the names of the refineries or their parent companies.

The Honorable Tony Cardenas

1. In regard to your lease, can you provide the written statement from the attorneys after reviewing it?

ANSWER - Effective July 6, 2018, former Administrator Pruitt resigned from his position as Administrator of the EPA and is no longer an employee of the Agency. Please forward your question to his personal counsel.

The Honorable Debbie Dingell

1. In regard to the January 25, 2018 guidance to reverse the longstanding once in, always in policy for major sources of hazardous air pollutants, did EPA determine the location of these sources?

ANSWER - The January 25, 2018 guidance memorandum discusses the definitions of “major source” in CAA section 112 (a)(1) and of “area source” in CAA section 112 (a)(2) and explains how those definitions provide that a major source becomes an area source at such time that the source takes an enforceable limit on its potential to emit (PTE) HAP below the major source thresholds (10 tpy of a single hazardous air pollutant or 25 tpy of any combination of HAP). Pursuant to those definitions, sources of HAP previously classified as “major sources” may be reclassified as “area” sources when the facility limits its PTE below major source thresholds using an enforceable mechanism.

2. Yes or no, did EPA conduct an analysis of the health effects including the potential increased risk of cancer of this decision before releasing the January 25th guidance memo?

ANSWER - As discussed in the 2018 Wehrum guidance memorandum, EPA will follow the January 25th issuance of the memorandum with a proposal to take comment on adding regulatory text to implement EPA’s plain language reading of the statute. We anticipate issuing a proposal for public review and comment in early 2019. As we proceed through the rulemaking process, we will prepare appropriate analyses and provide ample opportunity for interested parties to provide comment.

3. Yes or no, did EPA conduct an analysis of the potential health effects of this policy on children, babies, or pregnant women before releasing the January 25th?

ANSWER - As discussed in the 2018 Wehrum guidance memorandum, EPA will follow the January 25th issuance of the memorandum with a proposal to take comment on adding regulatory text to implement EPA’s plain language reading of the statute. We anticipate issuing a proposal for public review and comment in early 2019. As we proceed through the rulemaking process, we will prepare appropriate analyses and provide ample opportunity for interested parties to provide comment.

4. Yes or no, did EPA conduct an analysis of the potential health effects of this policy on older Americans or those with chronic health problems before releasing the January 25th guidance?

ANSWER - As discussed in the 2018 Wehrum guidance memorandum, EPA will follow the January 25th issuance of the memorandum with a proposal to take comment on adding regulatory text to implement EPA’s plain language reading of the statute. We anticipate issuing a proposal for public review and comment in early 2019. As we proceed through the rulemaking process, we will prepare appropriate analyses and provide ample opportunity for interested parties to provide comment.

5. Yes or no, did EPA conduct an analysis of the potential health effects of this policy on minority and low-income communities before releasing the January 25th?

ANSWER - As discussed in the 2018 Wehrum guidance memorandum, EPA will follow the January 25th issuance of the memorandum with a proposal to take comment on adding regulatory text to implement EPA's plain language reading of the statute. We anticipate issuing a proposal for public review and comment in early 2019. As we proceed through the rulemaking process, we will prepare appropriate analyses and provide ample opportunity for interested parties to provide comment.

Aaron,

Attached are the final cleared QFRs from the HAC hearing. A few are still undergoing clearance through OMB, such as Morocco trip QFR. I will send those when I have them.

Subject: 4/26 E&C Hearing QFRs
Importance: High

All,

We received the QFR's for the Administrator from the 4/26 Energy and Commerce hearing (attached). Not as many as last time thankfully, only about 25 pages worth (roughly 114 questions). We did an initial run through noting in front of each question which program office we believe would be best suited to fielding a draft response and inserting answers where we already had a cleared response from his previous SEPW QFRs. Considering the HAC-IE QFRs are already being worked on I think we will additional responses we can include and help reduce the amount of new work needed.

They've asked that we respond by Wednesday, June 13th. To that end, please disseminate to your respective programs and ask for them to expedite getting us back draft responses by this Friday so we can review, edit and have cleared both internally and by OMB next week if possible. I am under no illusion that we'll meet the next Wednesday deadline but would like to have these over to OMB next week so we can turn them around the week after.

Please let me know if you have any questions.

Thanks!

-Aaron

Attachments: 08-27-2018 - EPA_HEC_4.26_QFR_Pruitt_Responses_FINAL.docx

Attached with some very minor formatting changes.

(Shimkus Q7c – answer tabbed right.)
(Shimkus Q9 – deleted extra period at end.)
(Shimkus Q13 – answer tabbed left.)
(Degette Q1 d,e,f – paragraph break added after answer.)
(Degette Q7 b – paragraph break added after answer.)

Obviously I didn't thoroughly read each question for substance, but for formatting, everything else looks good to me.

Hey Kyle and Kristien,

Deliberative Process / Ex. 5

10 International Travel

- a. According to EPA emails released under a Freedom of Information Act request, on July 10, 2017, Mr. Matthew Freedman was involved in the planning of the Administrator's potential trip to Australia. Mr. Freedman wrote to EPA staff, "[Richard Smotkin] and I will attend and will be present but will not be listed as members of the delegation." It has been reported that Mr. Richard Smotkin was also involved in the planning of the Administrator's December trip to Morocco. Did Mr. Smotkin meet with Administrator Pruitt or any EPA staff, in official meetings or otherwise, during the Administrator's trip to Morocco?

ANSWER -

- b. If so, please provide a full list of meetings between Mr. Smotkin and any EPA officials in Morocco, including any meetings with EPA officials and Moroccan government officials, during official business or otherwise.

ANSWER -

- c. Please provide a list of all attendees for any meeting identified in (b).

ANSWER -

- d. Recent press accounts indicated Administrator Pruitt and EPA staff missed their connecting flight to Morocco because his security detail's equipment and other gear could not be transferred to the connecting flight in time. This differs from earlier explanations from EPA that the connecting flight was missed due to weather. Please explain why Administrator Pruitt and EPA staff missed their connecting flight.

ANSWER -

- e. On May 1, 2017, Mr. Perrotta sent a memorandum requesting Administrator Pruitt be seated in first or business class on official travel. On how many instances before this memorandum did the Administrator travel in first or business class on official travel?

ANSWER – Deliberative Process / Ex. 5

- f. On how many instances after this memorandum did the Administrator travel in first or business class on official travel?

ANSWER – Deliberative Process / Ex. 5

As always, many thanks,

Aaron,

Attached are the responses to QFRs that I've received so far. There are still a number outstanding, as listed below. Although programs are working on them, there are some that have been reassigned and some that still need to be drafted at the AO senior leadership level. I'm sending follow up emails to programs on my team and will reach out to Nancy and Helena to inquire about the QFRs they are assisting with as well. No need to make calls to elevate at this time please😊.

Good Afternoon,

Copies of The Honorable Scott Pruitt's additional questions for the record from the April 26, 2018, Subcommittee on Environment's hearing entitled "The Fiscal Year 2019 Environmental Protection Agency Budget," are attached to this email. You will also receive them in hard copy form by mail. Please contact me with any questions or concerns and thank you in advance for your help.

Thanks,

Kelly Collins | Legislative Clerk

U.S. House Committee on Energy and Commerce
(202) 225-2927 (main)

May 30, 2018

The Honorable Scott Pruitt
Administrator
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue, N.W.
Washington, DC 20460

Dear Administrator Pruitt:

Thank you for appearing before the Subcommittee on Environment on April 26, 2018, to testify at the hearing entitled "The Fiscal Year 2019 Environmental Protection Agency Budget."

Pursuant to the Rules of the Committee on Energy and Commerce, the hearing record remains open for ten business days to permit Members to submit additional questions for the record, which are attached. Also attached are Member requests made during the hearing. To facilitate the printing of the hearing record, please respond to these questions and requests with a transmittal letter by the close of business on Wednesday, June 13, 2018. Your responses should be mailed to Kelly Collins, Legislative Clerk, Committee on Energy and Commerce, 2125 Rayburn House Office Building, Washington, DC 20515 and e-mailed in Word format to kelly.collins@mail.house.gov.

Thank you again for your time and effort preparing and delivering testimony before the Subcommittee.

Sincerely,

John Shimkus
Chairman
Subcommittee on Environment

cc: The Honorable Paul Tonko, Ranking Member, Subcommittee on Environment

Attachments

Attachment 1—Additional Questions for the Record

The Honorable John Shimkus

1. While some are interested in ensuring EPA actions to limit one or more FIFRA-regulated substances, I am more interested in all FIFRA related activities, particularly in view of the uncertainty about the future deployment of user fees now made available under the Pesticide Registration Improvement Act.
 - a. If PRIA fees were to expire:
 - i. Would this mean the reinstatement of tolerance fees?
 - ii. If yes, would the reinstatement of tolerance fees produce enough revenue to ensure the robustness reviews mandated by FIFRA?
 - b. What percentage of staffing expenses are covered by PRIA fees?
 - c. If PRIA fees expire:
 - i. How many EPA employees – both FTE and contract workers – would be impacted, including through the loss of employment?
 - ii. How much in budget resources would EPA need to transfer to OCSPP to make up for lost PRIA revenues for FIFRA activities?
 - iii. What is the impact on the pace of pesticide applications reviews? How much longer will they take?
2. Legislation pending in Congress would provide PRIA fees for another 3 years, but also address other matters as well.
 - a. Please explain the need for and characterize the significance of having, including in practical terms:
 - i. \$500,000 in funding for efficacy guidelines for public health pesticides;
 - ii. \$500,000 for good laboratory practices funding;
 - iii. An increase in maintenance fees from \$27.8 to \$31 million for review and registration;
 - iv. Additional categories and deadlines for products reviewed; and
 - v. Removal of FIFRA section 4(k)(2).

3. Beginning in 2023, the agency will have more flexibility to set targets under the Renewable Fuel Standard (RFS). Given EIA projections of a 31 percent decrease in motor gasoline consumption between 2017 and 2050, based upon increases in fuel economy standards and electric vehicles market penetration:
 - a. Will EPA have authority in 2023 and subsequent years to reduce biofuel volume requirements below the existing statutory guidelines? Could this result in fewer gallons of biofuel in the market in the future than exist today?
 - b. Will EPA have authority in 2023 and subsequent years to allow a RIN to be generated by recharging an electric vehicle with electricity generated from a biogas power plant or other renewable energy source?
 - c. Will EPA have authority in 2023 and subsequent years to reorganize the program's four existing nested categories?
4. Is EPA engaged in planning for 2023 and subsequent years with regard to the agency's reset authority and the RFS? If so, please describe the range of options that EPA is considering.
5. The Folcroft Landfill (Operable Unit 2 of the Lower Darby Creek Superfund Site in Pennsylvania) was placed on the NPL in 2001, and the Remedial Investigation has not been finalized. The July 2017 Superfund Taskforce report recommends inquiry and additional resources for sites on the NPL for five years or more without a significant movement. What inquiries and additional resources have been directed to the Folcroft Landfill which has been on the NPL since 2001 without completion of the Remedial Investigation?
6. The EPA Taskforce Report recommends the establishment of a clarification to the principles for groundwater restoration. What is the goal for groundwater remediation at the Folcroft Landfill (Operable Unit 2 of the Lower Darby Creek Superfund Site in Pennsylvania)?
7. This Operable Unit, which is owned by the Department of the Interior, is within the John Heinz Wildlife Refuge.
 - a. Do EPA's goals for groundwater restoration take into account the Department of Interior's long range plan for the Refuge?
 - b. Is the Folcroft Landfill eligible for a Technical impracticability waiver for groundwater?
 - c. What is the process and standard to receive a TI waiver?
 - d. How would changes to the process and standards for awarding a TI waiver, as recommended by the July 2017 EPA Taskforce Report, impact the Superfund process at the Folcroft Landfill?

8. EPA's recently released proposed rule on increasing transparency in regulatory science states that the proposal is consistent with the requirements for major scientific journals like Science, Nature, and the Proceedings of the National Academy of Sciences.
 - a. Why are more journals and scientific institutions implementing these transparency policies?
 - b. Isn't replication and verification a key step in the scientific process?
9. Despite the many claims made prior to the release of this proposal, would this proposed rule violate any existing federal laws on privacy?
10. What is this proposed rule's impact on confidential business information (CBI)? Please state how you plan to ensure that in any final rule EPA will neither: be (1) prevented from using science that cannot be published (because it has CBI in it) nor forced into the default position that EPA should endeavor to publicly release all scientific data – including legally colorable CBI – so that this science can be used by the Agency?
11. I understand the Agency is looking at its work force to see how it can better function.
 - a. How many people does EPA have working full-time for the Agency in headquarters?
 - b. How many people does EPA have working full-time for it in its regional offices?
 - c. How many contractors currently work for EPA? [if he doesn't know what number ask him for a percentage. If that fails, ask him why not]?
12. One of the priorities for the proposed budget includes an "EPA Reform Plan." Projects under this plan include streamlining the permit review process, developing a Lean Management System, and reducing the reporting burden on the regulated community.
 - a. Why were these areas made priorities?
 - b. What progress has been made so far on these efforts?
 - c. Do you have benchmarks and timelines for the Reform Plan?
13. What are the biggest obstacles to meaningfully reforming EPA to engage the 21st Century?
14. The proposed budget has four Agency Priority Goals, including that EPA intends to meet statutory deadlines for chemical reviews under the Toxic Substances Control Act. In particular, EPA plans 100 percent compliance with "existing" chemicals and only 80 percent compliance certain "new" chemicals.

Under the law, EPA is the gatekeeper to innovation because these chemicals cannot go to onto the market until EPA decides they can and companies cannot work to improve these chemicals unless EPA says there is a problem.

[PAGE * MERGEFORMAT]

As of April 17, 2018, EPA's website was reporting that EPA had 449 pending applications for new chemicals. In addition, the EPA website claims the typical caseload for new chemicals under review is approximately 300 cases.

- a. Is the increase in pending applications – at one-third of EPA's historical output, due to a higher number of new chemicals applications coming into the Agency at the same time or EPA falling behind again on getting them processed?
 - b. What do you intend to do to eliminate the backlog and keep it at bay?
 - c. One thing the EPA website does not give data on is just how long some of those applications have been sitting at EPA. The law is very clear 90 days and no more than 180 days to review and regulate.
 - i. How many of the 449 new chemicals applications sitting at EPA are less than 90 days old?
 - ii. How many of the 449 new chemical applications sitting at EPA are more than 90 days old, but less than 180 days?
 - iii. How many of the 449 new chemical applications have been filed with EPA for more than 180 days and what is the range of time on them?
15. Under TSCA section 26, the Agency has authority to set fees to defray the costs of chemical testing, new and existing chemical review and regulation and to offset related costs for processing confidential business information. For new chemicals, EPA moved the fee from \$2,500 to \$16,000 – a more than 6-fold increase – and for small manufacturing entities – EPA raised the fee for new chemicals from \$100 to \$2,800 – or a 28-fold increase.
- a. How much impact with these dramatic fee increases have on improving the speed at which the Agency is reviewing new chemicals?
 - b. If not much, then what is the problem?
16. The proposed fee rule suggests EPA will see 10 percent fewer new chemical applications based on legal changes to how EPA is supposed to review new chemicals. What kind of new chemical applicant attrition is expected due to the combined fee increase and lack of generated revenue from the chemical?
17. Portland Harbor is complex site at which almost 100 potentially responsible parties (PRPs) have been identified. It is my understanding that on March 16, 2018, EPA sent all of the PRPs a letter indicating that EPA will be issuing Special Notice Letters for full performance of the remedial design/remedial action (RD/RA) at the Portland Harbor Site by the end of 2019. However, several of the PRPs have indicated that the allocation process will not be complete by that time, and that the issuance of Special Notice Letters will actually slow the clean-up, because companies will choose to litigate rather than potentially bear the full cost

of the clean-up at that point. How will EPA balance the allocation process timeline and issuing the Special Notice Letters?

The Honorable David B. McKinley

1. I appreciate your commitment to supporting cooperative federalism under the Coal Combustion Residuals (CCR) permitting program by working with states to develop, submit, and implement state CCR permit programs. How is EPA working with states as they develop and submit these plans, particularly those that are seeking to incorporate WIIN Act authorities rather than just adopting the current, self-implementing federal rule?
2. As states develop these programs, guidance from EPA will be important. With that in mind, Congress appropriated \$6 million to EPA for FY18 to develop its own federal permitting program for “non-participating states”. Please provide an update on and timeline for the development of that federal permit program.

The National Association of Scholars recently published a report titled, “THE IRREPRODUCIBILITY CRISIS OF MODERN SCIENCE, Causes, Consequences, and the Road to Reform”. They state, “The Federal government should also consider instituting review commissions for each regulatory agency to investigate whether existing regulations are based on well-grounded, reproducible research. These should establish the scope of the problem by identifying those regulations that rely on unreplicated or irreproducible research, and recommending which regulations should be revoked.”

3. Will you commit the EPA to investigate whether existing regulations are based on well-grounded, reproducible research?
4. Will you commit the EPA to identify those regulations that rely on un-replicated or irreproducible research?
5. Will you provide a report to our committee and my office with the results of your investigation?
6. Will you provide a report to our committee and my office regarding if the endangerment finding for CO2 was based upon well-grounded, reproducible research?

Administrator Pruitt, I know that the ethanol industry has recently attacked the EPA for granting small refinery hardship relief.

7. Does the Clean Air Act establish small refinery hardship relief?
8. Has the Congress affirmed this on several occasions by directing the DOE to study this issue and, more recently, reminding the EPA that it did not intend for small refineries to bear a disproportionate regulatory burden?
9. Did the DOE’s 2011 report for Congress predict that harm to small refineries would increase over time, not diminish?

10. Did the 10th circuit decision last year instruct the EPA to grant small refinery hardship relief?

Some have made the argument that hardship relief results in “demand destruction” for ethanol by resulting in less blending. Regardless of if small refineries receive hardship relief, they are incentivized to blend ethanol for many economic reasons: 1) it is cheaper than gasoline, 2) they must meet their RVO, and 3) they can sell RINS not needed for compliance.

11. Was ethanol consumption up in the first quarter of 2018?

12. Was it, in fact, higher than projected in November of 2017 when RINS were 80-90 cents a gallon?

13. Did ethanol consumption increase throughout 2017 despite hardship relief?

President Obama used an EPA “veto” twice in unprecedented fashion. The Spruce Coal Mine located in West Virginia, had the required permits and approvals in hand, when the EPA “vetoed” the project. The project went through the entire regulatory process and was approved by ALL parties. Then the Obama Administration’s “War on Coal” went into high gear. The EPA vetoed the project. The second instance was the Pebble Mine in Alaska, where they vetoed the project prior to the approval process starting. Both instances of using the EPA veto are very dangerous if they are allowed to stay in place. A future administration can use the veto to shut down the entire coal mining industry if both precedents are not reversed by the EPA. I can think of no greater threat to the industry.

14. Will you consider revoking both the Spruce Mine and Pebble Mine vetoes?

15. Do you believe that the EPA should have the authority to preemptively veto development projects under Section 404 of the Clean Water Act before any permit applications have been submitted to the Army Corps of Engineers?

16. President Trump, in his Infrastructure Initiative, has proposed legislation that eliminates entirely EPA’s authority to veto projects under the Clean Water Act. Why have you taken a position, by leaving in place the Pebble veto, that is different than the President’s policy?

17. Isn’t it correct that under the applicable regulations the Army Corps of Engineers cannot issue a permit to a project developer if the EPA has even begun the process of issuing a veto?

18. Is there any environmental harm that occurs whatsoever by allowing a permit application to be considered by the Army Corps of Engineers without a veto pending?

19. Isn’t it better to wait until the Army Corps of Engineers has decided whether to grant a permit before EPA issues a veto, if one is to be issued at all?

20. Has EPA ever before issued a preemptive veto of the sort you have left in place with your decision not to withdraw the veto of the Pebble mine?

21. In the Agency's decision not to withdraw the preemptive Pebble veto, you cited the risk created by the project. In doing so, you are relying on the Bristol Bay Watershed Assessment, which many of the Agency's own peer reviewers said was insufficient to support a regulatory decision. Why are you relying on science that has been discredited?

The Honorable Gregg Harper

1. Does the Clean Air Act establish small refinery hardship relief?
2. Has the Congress affirmed this on several occasions by directing the DOE to study this issue and, more recently, reminding the EPA that it did not intend for small refineries to bear a disproportionate regulatory burden?
3. Did the DOE's 2011 report for Congress predict that harm to small refineries would increase over time, not diminish?
4. Do small refineries typically produce more diesel than gasoline?
5. Blending gasoline with ethanol to current standards will separate more RINs than blending the same volume of diesel. EPA's RVO calculation, however, imposes the same proportional ethanol RIN obligation on all refiners even though some produce significantly less gasoline and more diesel than others. Even if they blend all their production, these diesel rich refiners cannot separate enough RINs to meet their total obligation while their gasoline rich competition will separate more than required. These refiners who produce more diesel are then forced to buy RINS.

Does the hardship process give EPA a tool to mitigate this structural discrimination against these small refineries?

6. RFA has made the argument that hardship relief results in "demand destruction" for ethanol by resulting in less blending. Regardless of whether or not small refineries receive hardship relief, they are incentivized to blend ethanol for a number of economic reasons: 1) it is cheaper than gasoline, 2) they must meet their RVO, and 3) they can sell RINS not needed for compliance.
 - a. Was ethanol consumption up in the first quarter of 2018?
 - b. Was it, in fact, higher than projected in November of 2017 when RINS were 80-90 cents a gallon?
 - c. Did ethanol consumption increase throughout 2017 despite the EPA granting small refinery hardship relief?
7. Some of my constituents have raised an issue regarding oil spill response training. I am told that the funding for certain training courses for federal and local responders involved in

inland oil spill prevention and cleanup has been eliminated and that the EPA Environmental Response Team is no longer able to consistently make these courses available.

- a. With an increase in oil production across the country, there remains a need for oil spill response training for local, state, and federal responders. Would you commit to looking into whether funding can and will be made available for this important training?
8. I want to applaud the work EPA is doing to streamline or eliminate unnecessarily costly regulations. And while most of the attention is focused on major rules like the Clean Power Plan or Waters of the United States, I am particularly pleased that under your leadership EPA is taking a second look at other regulations that may not be major but nonetheless have a serious impact on small businesses. In particular, I hear that EPA is reviewing the Obama era rule targeting wood heater manufacturers such as Hardy Manufacturing back in my district. But time is of the essence, as the regulatory deadlines are coming soon. Can you assure us that you will do all you can to provide timely regulatory relief for wood heater manufacturers?

The Honorable Tim Walberg

1. This is a very technical issue but an extremely important one to manufacturers in Michigan. In 2011, EPA approved the use of Isobutane as a refrigerant and limited the amount of refrigerant that could be used in a refrigerator to 57 grams. This amount was based on a well-recognized safety standard limit at the time. However, the safety standard has since been updated to increase the allowable amount of refrigerant to 150 grams. These refrigerants are more environmentally friendly and supported by both industry and environmental advocates yet manufacturers are still in limbo as they await EPA's rulemaking.
 - a. Can you commit to working on this issue to recognize the updated safety standard so manufacturers can begin retooling and redesigning refrigeration products? Delay will only add cost to American workers and our manufacturing shop floors.
 - b. I know you have a lot of issues to deal with at the EPA, but I urge you to publish the technical correction without delay. It's my understanding refrigerator manufacturers have been working with your staff at the EPA for over a year now on this and would welcome the update.
2. ENERGY STAR is an important program and one that consumers in my district value. Over the past year, manufacturers in my state have stressed the need for the program to be reformed. In the FY18 Omnibus Appropriations package, EPA and DOE were directed to revisit the Obama era Memorandum of Understanding (MOU) that changed the way the program was managed and report back to Congress within 90 days.
 - a. The 2009 MOU for example moved home appliances out of DOE and over to EPA, where the products had never been managed before. DOE has the expertise in these

products because they regulate them through the appliance standards program required by EPCA. It doesn't make sense to me to have duplicative programs built up within two agencies. From a good governance perspective and in the era of streamlining programs under the EPA's purview, I would like to hear from you on this specific topic.

- b. Would you support moving the ENERGY STAR program for home appliances back to DOE while still maintaining a majority of the management within EPA? It's my understanding a broad set of industries are eager to work with your agency on these issues and I look forward to working with you to revisit the MOU.

The Honorable Earl L. "Buddy" Carter

EPA Marine Engine Waivers

In a recent Energy & Commerce Committee hearing, you mentioned that you would now be personally involved in the marine engine waiver issue for pilot boats, after giving the commitment to look into in your December testimony from the committee. This is a pressing issue that could have a wide-ranging impact on our port operations and growth.

1. Mr. Administrator, can you please provide a breakdown of the actions the EPA has taken to address the Tier 4 concerns?
2. Please provide a timeline of what the EPA has done and any upcoming actions that will be taken by the EPA to address this concern.
3. After you send technical experts to California, what will need to be done?
4. Does the EPA have the authority to move forward with a waiver system? If not, what are your legal restrictions?

Tier 4 Restrictions for Generators

1. Administrator Pruitt, I have a similar concern for the Tier 4 restrictions placed on large, 1-megawatt generators. It's my understanding that the Tier 4 restrictions are preventing Tier-4 generators from being sold in the market due to that and the portability restrictions. It's forecasted that there won't be a viable solution in the market until the early 2020s. Is this something you are working on?
2. What would need to be done by the EPA to remedy this situation and allow for the sale of currently developed generators?
3. Is the EPA currently reviewing this concern or working on any changes that would remedy it?

Biomass

I commend you for your policy statement clarifying biomass carbon neutrality on Monday, April 23 in my home state of Georgia. As you know, the Consolidated Appropriations Act of 2018 included language in Section 431 Policies Relating to Biomass Energy directing the Secretaries of Energy and Agriculture and the Administrator of the Environmental Protection Agency to establish clear and simple policies that reflect the carbon-neutrality of forest bioenergy and recognize biomass as a renewable energy source provided the use of forest biomass does not cause the conversion of forests to non-forest use.

1. What is the EPA's progress in implementing a regulation on carbon neutrality of biomass? What are the next steps?

The Honorable Jeff Duncan

Some of my corporate constituents are subject to complex and, at times, inconsistent regulation by the Environmental Protection Agency. Inconsistent actions or interpretations by EPA are particularly burdensome to my constituents when the Agency's Policy and Enforcement Offices take positions that are at odds with each other. To that end, please explain whether, and to what extent, EPA's Office of Enforcement and Compliance Assurance ("OECA") consults with EPA's Office of Transportation and Air Quality ("OTAQ") prior to initiating any enforcement action involving a certification issued by OTAQ (for example, an enforcement action alleging uncertified engine parameters).

1. In addition, what steps can be taken by EPA to improve and streamline consultation between OTAQ and OECA to avoid unnecessary hardship on the regulated community?

During the last Administration, many Energy Star program operations were shifted from the Department of Energy, where they had been since 1996, to EPA. I understand from home appliance manufacturers that they would like Energy Star efforts related to home appliances transferred back to the DOE. One of these is Electrolux, a home appliance manufacturer that has a large presence in my district in Anderson, SC. This is an important issue for South Carolina as we have recently seen a great deal of investment in the home appliance industry. In Newberry, SC Samsung recently opened its first U.S. based home appliance manufacturing facility and is on track to create over 1,000 jobs by 2020.

1. With the Appliance Standard program at DOE and Energy Star at EPA, companies currently have two federal agencies attempting to coordinate changes in product specifications and test procedures on the same products. This creates unnecessary cost, confusion and uncertainty for manufacturers and does not appear to bring any benefit to consumers. **Administrator Pruitt**-are there any efforts to make such a change?
2. Wouldn't this change fit in with your desire to get EPA back to its core functions?

The Honorable Frank Pallone, Jr.

During your appearance on April 26th, you stated that purchasing real estate through a Limited Liability Corporation, or LLC, is “normally how you buy real estate in Oklahoma.” Your ownership stake in that LLC was not included in your financial disclosures at the time.

1. How often have you purchased real estate through an LLC?
2. Do you currently own property through an LLC or have a stake in an LLC that owns property?
3. Please list all property you have purchased and/or owned a stake in through an LLC.
4. Please explain why your ownership stake in Capital House, LLC was not listed in your financial disclosures at the time.

Also at the April 26th hearing, you disavowed knowledge of whether you had paid taxes on the income from your ownership stake in Capital House LLC. You said “you provide information to your accountant, they determine what you pay.”

5. Did you sign your tax filings for the years in question? Do you take responsibility for the accuracy of the information contained therein?

Extensive questions have been raised about your tax liability for the expenses of your security detail when they accompanied you on personal travel, including to Disney World and the Rose Bowl.

6. Did you pay taxes on that benefit?

It has been revealed that the EPA reimbursed your former landlord, Vicki Hart, for the repair of a door at your residence.

7. Did you reimburse the EPA for that expense?
8. If not, did you pay taxes on that income?

During the Administrator’s April appearance before the Subcommittee, Chairman Walden underscored the importance of staffing and internal management issues at EPA, stating “it is essential that EPA have the staff with proper expertise, implementing and enforcing programs that correlate with their experience.”

9. Please provide the Committee a copy of the EPA’s reorganization plan submitted to OMB pursuant to Executive Order 13781, including any interim and final drafts submitted to OMB.
10. Please provide the Committee a copy of the EPA reform plan.
11. Explain the similarities and differences between the reform plan and the reorganization plan.

12. Please provide the Committee a copy of the EPA's operating plan for new hires and indicate how many new employees EPA plans to hire in each program office.
13. Please provide the Committee with the names of political and career members of the hiring review panel.
 - a. On what criteria were the panel members chosen?
 - b. What procedures do the offices need to do to make a hiring request of the panel?
14. When filling a position from within the agency, how is it determined a staff member possesses the technological skills appropriate for the office of which they are being transferred?
15. Please provide the following information:
 - a. FTE on EPA payroll in regional offices and in HQ.
 - b. The number of employees that have left the EPA through attrition during 2017 and 2018, and the numbers from each office.
 - c. Please provide a list of employees that have been moved to a new position within the agency, including their previous office, title, position description, and their new office, title, and position description.
 - d. The predetermined employee headcounts for each office.

The Honorable Bobby L. Rush

During the question period I spoke to you about the widespread levels of lead that have been detected throughout homes in Chicago and I referenced a recent Tribune article entitled "Brain-damaging lead found in tap water in hundreds of homes tested across Chicago, results show" (April 12, 2018).

You agreed with me that this was a severe problem, nationally, and it would cost approximately \$45 billion to resolve. You mentioned that there was a program at the agency consisting of \$4 billion in grants, annually, for ten years that states could apply for to address this issue.

1. Can you provide more information regarding this program, including eligibility requirements, deadlines, and the dollar amounts available?
2. Will you commit to work with my office to have staff from EPA Region 5 come into my district to discuss this program with state and local leaders, as well as other stakeholders concerned with this issue?

The Honorable Diana DeGette

1. I questioned you about your legally dubious real estate transactions, but further information is needed in light of your incomplete answers and troubling new developments.¹

In your testimony before the Subcommittee, you failed to disclose significant details concerning your 2003 purchase of a luxury home in Oklahoma City. According to a recent report in the *New York Times*, you purchased the home with Justin Whitefield, a registered lobbyist who, at the time, was pursuing business-friendly changes to Oklahoma's workers' compensation rules, which you allegedly helped negotiate.² Mr. Whitefield, yourself, and four other owners reportedly used a limited liability company, Capitol House L.L.C. (Capitol House), to purchase the home.³ The seller, Marsha Lindsey, was a telecommunications lobbyist for SBC Oklahoma, and sold the property at a significant discount of approximately \$100,000.⁴ SBC Oklahoma reportedly offset this amount in Ms. Lindsey's retirement package.⁵

Your incomplete testimony leaves key questions unanswered concerning this transaction. You allegedly paid for one-sixth of the purchase price, and according to reports, you purchased the home with Kenneth Wagner, who now serves as a political appointee at EPA and previously served as treasurer of your political action committee,⁶ as well as health care executive Jon Jiles.⁷ However, the identity of two additional owners remains unknown.

You also apparently failed to disclose your interest in Capitol House in your financial disclosure filings, and in your testimony could not confirm whether you paid taxes on rental income received for a room on the property rented to another Republican lawmaker.⁸

Given your history of real estate transactions with lobbyists both in Oklahoma during your tenure as a state legislator and in Washington, D.C. while serving as EPA Administrator, and in light of these troubling developments, I ask that you respond to the following requests:

¹ House Committee on Energy and Commerce, *Hearing on the Fiscal Year 2019 Environmental Protection Agency Budget*, 115th Cong. (Apr. 26, 2017).

² *Pruitt's Coziness with Lobbyists Includes Secretly Buying a House with One*, New York Times (May 3, 2018).

³ *Pruitt's Coziness with Lobbyists Includes Secretly Buying a House with One*, New York Times (May 3, 2018).

⁴ *Pruitt's Coziness with Lobbyists Includes Secretly Buying a House with One*, New York Times (May 3, 2018).

⁵ *Pruitt's Coziness with Lobbyists Includes Secretly Buying a House with One*, New York Times (May 3, 2018).

⁶ *Pruitt's Friend Joins Agency as Senior Adviser*, E&E News (Apr. 13, 2017).

⁷ *Pruitt's Coziness with Lobbyists Includes Secretly Buying a House with One*, New York Times (May 3, 2018).

⁸ *Scott Pruitt Before the EPA: Fancy Homes, a Shell Company and Friends with Money*, New York Times (Apr. 21, 2018).

- a. Please provide the names and corresponding ownership share of all owners of Capitol House.
- b. Please provide documentation of your payment for and purchase of an ownership share in Capitol House, including the terms of the payment and the individual or entity who received the payment.
- c. Please provide copies of your financial disclosures disclosing your ownership interest in Capitol House.
- d. Please provide the name of the individual(s) who arranged for cash purchase of the Oklahoma City property and subsequent transfer of ownership to Capitol House.
- e. Please provide the name of the individual(s) who requested or arranged for Spirit Bank, where former EPA appointee Albert Kelly was chief executive, to approve a mortgage in the name of Capitol House.
- f. Please provide documentation demonstrating you paid taxes on all rental income received from Jim Dunlap or any other tenant who rented space on the property, including, but not limited to, Schedule K-1 tax forms.
- g. Please provide documentation of any proceeds you received for the 2005 sale of the property, including the amount and date received.

The Honorable Janice D. Schakowsky

1. **Speeches:** Please provide the date, location, name of event, and text for all speeches you have given to industry associations (e.g. Louisiana Chemical Association) in your capacity as EPA Administrator.
2. **Official vehicle:** During the hearing, you stated that EPA staff “just asked for consultation” on the selection of your official vehicle. During this consultation, did you or people responding on your behalf express a preference for a larger vehicle, leather interior, bucket seats, Wifi, GPS navigation, or any other luxury features that were ultimately included in the vehicle selected?
3. **Samantha Dravis:**
 - a. At any time during Samantha Dravis’s employment at EPA, was she employed or compensated using authority under the Safe Drinking Water Act?
 - b. How much was Samantha Dravis compensated during the three months from November 2017 to January 2018?

- c. According to the EPA's own spokesperson, Ms. Dravis was a "senior leader at the EPA." Do you have record of meetings attended in person or substantial projects completed by Samantha Dravis during the three months from November 2017 to January 2018? If so, please summarize. Please provide all records of meetings attended in person or substantial projects completed, as well as any emails between Administrator Pruitt and Ms. Dravis concerning her attendance or departure from the EPA.
- d. Was Samantha Dravis approved for first class travel to or from Morocco in December 2017? If so, who at EPA approved first class travel and on what date?

The Honorable Paul Tonko

1. Strengthening Transparency in Regulatory Science Proposed Rule

- a. Please cite specific provisions in statute that require EPA to make the changes proposed in the Strengthening Transparency in Regulatory Science rule?
- b. Do any of the statutory authorities identified by the proposed rule include the ability to grant exemptions to the treatment of science at the Administrator's discretion to address issues on a case-by-case basis?
- c. What science organizations or stakeholder groups were involved in the development of this proposed rule? Please provide a list of all meetings, including teleconferences, with these organizations, including the date, and the name, title, and organizational affiliation of participants.
- d. Previously, EPA analyzed legislation (The HONEST Act) that would have similar goals and estimated it would cost \$250 million annually to implement. Did EPA develop any cost estimates to implement the proposed rule?
- e. If so, please provide any cost analysis completed regarding the proposed rule.
- f. Why did EPA conclude this is not an economically significant rulemaking? Please explain EPA's analysis associated with this conclusion.
- g. Please provide a list of all key meetings and determinations made for this rulemaking during the Action Development Process, including the rulemakings tier, meeting dates and participants in any intra-agency work group meetings, and a list of EPA offices which participated in the development of the rulemaking. For each office, please provide the name, title, and office of each work group participant.
- h. Did EPA examine lost benefits or costs associated with EPA's inability to consider certain scientific studies as a result of this proposal?
- i. If so, what analysis was done on costs or lost benefits, and what were the results?

- j. Many older studies may rely on data that are no longer available. Does EPA have any estimates or analysis of how many studies would be disqualified to be used for major rulemakings under this proposal?
- k. How long did the Office of Information and Regulatory Affairs (OIRA) take to complete its review of the proposed rule? Please provide the date OIRA accepted and began review, and the date OIRA completed review.
- l. Did EPA or other executive officials have any communication with the Office of Information and Regulatory Affairs to accelerate this review? If so, please provide the name and title of these individuals.
- m. Was the Office of Information and Regulatory informed by any EPA official that Administrator Pruitt would be testifying before Congress one week after submitting this proposed rule?
- n. Office of Information and Regulatory Affairs reviews of similarly complex rules often take months to complete. What specific factors allowed this review to be completed so quickly?
- o. The proposed rule solicits comments in numerous areas, indicating it hopes to develop answers during the regulatory process. Proposals with so many outstanding questions are often released as Advanced Notice of Proposed Rule Makings. Why did EPA propose this as a Notice of Proposed Rulemaking with so many outstanding questions included?
- p. Did the Office of Information and Regulatory Affairs ask EPA to issue an Advanced Notice of Proposed Rulemaking instead? If so, when was this request made and who at OIRA made this request?

2. Science Advisory Boards (SAB)

- a. How many current members of EPA Science Advisory Boards are expected to cycle off before the end of this year?
- b. Since joining the agency, has Administrator Pruitt requested EPA career staff in the SAB Staff Office to provide recommendations for board appointments?
- c. If so, how many of those recommendations have been accepted of the total amount of new appointees.
- d. How many EPA Science Advisory Board members have been appointed without input by the SAB Staff Office?
- e. How many issues went before EPA Science Advisory Boards or the Clean Air Scientific Advisory Committee (CASAC) for review in each year for the past five years?

- f. Does the Administrator plan to seek SAB or CASAC review of the recently proposed Strengthening Transparency in Regulatory Science rule?
- g. Does the Administrator plan to seek SAB or CASAC review on any climate change issues?
- h. Does the Administrator plan to seek SAB or CASAC review on any aspect of the long-term economic costs and benefits of any changes that have been made or are being proposed under his tenure at EPA?

3. The Frank R. Lautenberg Chemical Safety for the 21st Century Act Implementation

- a. What steps has EPA taken to ensure new and existing chemical reviews include explicit considerations to protect vulnerable populations, as required by statute?
- b. In November, Administrator Pruitt and EPA staff attended an American Chemistry Council board meeting on South Carolina's Kiawah Island. The Administrator's schedule contains no details of that weekend. Please provide a list of all companies or lobbyists that met with the Administrator in South Carolina.
- c. Please provide a list of all chemicals specifically discussed at meetings attended by the Administrator at this event.

4. Formaldehyde Assessment

- a. Earlier this year, Administrator Pruitt was asked by Senator Ed Markey at the Senate Committee on Environment and Public Works hearing on 1/30/18 about the delayed formaldehyde assessment. At that hearing, Administrator Pruitt said, "Senator, I commit to you that I will look into that and make sure your office is aware of what we have and when we can release it." Please provide an update on the status of the formaldehyde assessment.
- b. Has EPA concluded its intra-agency review process?
- c. What additional reviews are needed before it can be finalized?
- d. When does EPA expect the final report to be released?

5. EPA Year in Review 2017-2018 Report

- a. The "EPA Year in Review 2017-2018" report states, "In year one, EPA finalized 22 deregulatory actions, saving Americans more than \$1 billion in regulatory costs." Please provide a list of each of these actions along with EPA's analysis of the regulatory cost estimate for each action.

6. Lead and Copper Rule

- a. EPA undertook efforts to revise the Lead and Copper Rule more than 13 years ago. In October 2016, the EPA published a white paper on the revisions that included a pledge to issue a proposed rule by the end of 2017. That deadline has passed. When does EPA expect to issue a proposed rule?
- b. Has EPA conducted any analysis on how the proposed “Strengthening Transparency in Regulatory Science” rule may impact its ability to regulate lead in drinking water?

7. PFAS

- a. EPA announced a National Leadership Summit on Per- and Polyfluoroalkyl Substances (PFAS). What options has EPA discussed internally to regulate or reduce PFAS contamination in drinking water?
- b. What options have been discussed by staff of EPA and the Department of Defense?
- c. Has EPA conducted any analysis on how the proposed “Strengthening Transparency in Regulatory Science” rule may impact its ability to regulate PFAS in drinking water?

8. Funding for the Office of Inspector General

- a. The Fiscal Year 2019 budget request includes a significant proposed cut to the EPA Office of Inspector General (OIG). In November 2017, in OIG’s Semiannual Report to Congress, it was reported that “OIG submitted an FY 2019 request for \$62 million to the agency for inclusion in the President’s budget. Without seeking input from the OIG, the agency provided us with a request of \$42 million.” In February, the White House requested only \$37.5 million for the OIG. What was the justification for reducing appropriations and FTEs in the FY 2019 budget request for EPA OIG?
- b. Did the EPA defend its \$42 million request to the Office of Management and Budget?

9. Freedom of Information Act

- a. It has been reported that political appointees’ role in reviewing documents requested under the Freedom of Information Act has increased significantly during Administrator Pruitt’s tenure. Please describe the process for “awareness reviews” or “senior management reviews” conducted by political appointees before EPA releases documents involving Administrator Pruitt, including the names and titles of all EPA political appointees who participate.
- b. Please explain EPA Chief of Staff Ryan Jackson’s role in conducting awareness reviews. How many FOIA awareness reviews has Mr. Jackson completed, and in

how many instances did Mr. Jackson instruct that information be withheld, redacted, or altered prior to public release?

- c. Have any other political appointees ever sought to alter, redact, or withhold portions of a FOIA disclosure following an awareness review?
- d. Please provide the start date, end date, and length of review for all awareness reviews conducted during Administrator Pruitt's tenure at EPA.
- e. Have any of these reviews resulted in a missed FOIA deadline to release documents? If so, please provide details for each instance.
- f. Please explain the rationale for moving the National FOIA office into the Office of General Counsel.
- g. Please explain the role of EPA political appointees Matthew Leopold, Eric Baptist, Marcella Burke, David Fatouhi, and Justin Schwab in the FOIA review process, including any instance where any of these individuals withheld, delayed, redacted, or altered prior to public release?

10. International Travel

- a. According to EPA emails released under a Freedom of Information Act request, on July 10, 2017, Mr. Matthew Freedman was involved in the planning of the Administrator's potential trip to Australia. Mr. Freedman wrote to EPA staff, "[Richard Smotkin] and I will attend and will be present but will not be listed as members of the delegation." It has been reported that Mr. Richard Smotkin was also involved in the planning of the Administrator's December trip to Morocco. Did Mr. Smotkin meet with Administrator Pruitt or any EPA staff, in official meetings or otherwise, during the Administrator's trip to Morocco?
- b. If so, please provide a full list of meetings between Mr. Smotkin and any EPA officials in Morocco, including any meetings with EPA officials and Moroccan government officials, during official business or otherwise.
- c. Please provide a list of all attendees for any meeting identified in (b).
- d. Recent press accounts indicated Administrator Pruitt and EPA staff missed their connecting flight to Morocco because his security detail's equipment and other gear could not be transferred to the connecting flight in time. This differs from earlier explanations from EPA that the connecting flight was missed due to weather. Please explain why Administrator Pruitt and EPA staff missed their connecting flight.

11. Security

- a. In March, Administrator Pruitt told CBS News, "The quantity and the type of threats I've faced are unprecedented." These threats have been used to justify costly security

measures, including first-class travel and full-time protection by a 20-member security detail. How does EPA catalogue threats against officials, including the Administrator?

- b. What office is primarily responsible for identifying these threats?
- c. What office is primarily responsible for investigating these threats and determining their legitimacy?
- d. Please describe the role in EPA security assessment, investigation, and response of each of the following offices: the Protective Security Detail, the Office of Homeland Security Intelligence Team, the Office of Inspector General, and any other EPA entity that has responsibilities related to the Administrator's security?
- e. If threats are deemed to be serious, are they referred to the FBI or another law enforcement agency outside of EPA?
- f. Which EPA office determines whether or not to refer threats?
- g. On how many occasions did such a referral occur in 2017 and 2018?
- h. What spending decisions related to security require sign-off by the head of the Administrator's security detail?
- i. When did Mr. Nino Perrotta take over the role referenced in (h)?
- j. Before Mr. Perrotta took over this role, who was responsible for those duties?
- k. Why and when was the previous head of the Administrator's security detail removed from that position?
- l. If that employee continued to work at EPA, to where was he reassigned and what is his current employment status?
- m. How many EPA security officials hit the \$160,000 annual salary cap due to overtime last year?
- n. How does that compare to each of the previous 5 years?
- o. On May 1, 2017, Mr. Perrotta sent a memorandum requesting Administrator Pruitt be seated in first or business class on official travel. On how many instances before this memorandum did the Administrator travel in first or business class on official travel?
- p. On how many instances after this memorandum did the Administrator travel in first or business class on official travel?

- q. How many times and on what dates did EPA security officials travel with the Administrator for nonofficial business, where the Administrator paid for his own travel expenses?
- r. What was the total cost for security officials' airfare, hotel, and per diem for each of these instances?
- s. Which EPA employee(s) approved the EPA payment to Mrs. Vicki Hart to compensate for a broken door at her condo?
- t. Was Administrator Pruitt involved with or notified about that payment?
- u. It has been reported that EPA entered into a new vehicle lease for a Chevrolet Suburban at \$10,200 annually. This lease was reportedly for a more upscale LT model, instead of the LS model typically leased and included monthly charges of \$300 for luxury upgrades. What were the terms and rate of the previous vehicle used by the Administrator, and what was the rationale for these upgrades?

12. The Administrator's Housing Arrangement

- a. It has been reported that the Administrator's original lease with Mrs. Vicki Hart ended at the end of April 2017, but he did not move out of that condo until later in the year. What were the terms of extending the lease?
- b. On what date did Administrator Pruitt move out of the condo owned by Mrs. Hart?

The Honorable David Loeb sack

Administrator Pruitt, as I indicated to you at the hearing, I have a lot of concerns about the way in which the small refinery exemptions within the Renewable Fuel Standard (RFS) program have been handled by the Environmental Protection Agency (EPA). There needs to be much more transparency and public accountability in the with respect to the small refinery waiver exemptions. Please provide responses to the following questions regarding small refinery exemptions within the RFS.

- 1. What is the total number of refinery waiver applications that EPA received in each year from 2013 through 2017?
- 2. For each year from 2013 through 2017, how many waivers did the EPA grant?
- 3. What companies have received waivers for each year from 2013 through 2017?
- 4. What is the total volume of biofuel obligation represented by the waivers granted for each year 2013 through 2017?

5. What is the EPA process for confirming that each applicant falls beneath the 75,000-barrell throughput capacity?
6. Please confirm how the gallons waived under the small refinery exemption process are handled. Are the gallons reassigned to remaining obligated parties for blending? Are they reassigned within the same compliance year? If they are not reassigned to the remaining obligated parties, what is the disposition of those gallons relative to the overall renewable volume obligation set in the annual rule?
7. Did you inform President Trump or White House staff of the unusually large number of small refinery exemptions EPA was granting and of the potential effects on the renewable fuel market of exempting additional gallons and facilities and the fact that these actions would not be well received by the agricultural community?
8. EPA claimed recently that the Agency did not change the criteria for granting exemptions from those used in past years. Yet, numerous press reports indicate the Agency has granted almost double the amount of waivers than have been granted in past years. What is your explanation for the Agency's granting of an unusually high number of waivers under this program as compared to past years? If the Agency is applying different criteria, please provide an explanation of the changes and the justification for initiating the new criteria.
9. Did EPA consult with the Department of Energy on each of the applications for a small refinery exemption for 2016 and 2017? For how many of the applications reviewed by DOE for these two compliance years did EPA disagree with DOE's recommendation to grant or deny the exemption?

The Honorable Joseph Kennedy, III

1. What precipitated the need for a secure phone booth inside of your office? You repeatedly have placed blame at the feet of your staff for the exorbitant \$43,000 cost of the phone booth, but it was you yourself who instructed your staff to find a way to create a secure communications line in your office in the first place. Why do you need that secure line? What is the nature of the phone calls you are making that require an additional "secure" phone line while already in the privacy of your own office? If your office does not provide sufficient privacy, why is one of the two Secure Compartmented Information Facilities (SCIFs) inside the EPA headquarters not sufficient?

Attachment 2—Member Requests for the Record

During the hearing, Members asked you to provide additional information for the record, and you indicated that you would provide that information. For your convenience, descriptions of the requested information are provided below.

The Honorable Bill Johnson

1. I know that the EPA has expressed interest in finding a resolution to some of the concerns regarding EPA's current brick MCT rule which was issued in 2015. Would you commit to working with me and this committee in providing further information on this work and any potential possibilities?

The Honorable Bill Flores

As the American people are well aware, the EPA under the Obama administration abused environmental regulatory process by ignoring congressional statutes any by circumventing the U.S. Constitution. Fortunately, the federal court system stepped in to protect American families from this abuse of the law. In this regard I have the following questions:

1. Can you provide this committee with a list of those overreaching and overturned regulations that were overturned by the court systems?
2. Can you provide this committee with the economic cost of those overturned regulations?
3. Can you also inform the committee about EPA's actions, if any, to modify those regulations so those overreaching regulations to conform with the rule of law?

The Honorable Richard Hudson

1. Was GenX used in a manner that was incompatible with the consent agreement under the Toxic Substances Control Act?

The Honorable Doris O. Matsui

1. You said the EPA has data supporting your decision to revise emission standards for light duty vehicles. Will you commit to providing that data to both side of the committee?

The Honorable John P. Sarbanes

1. Did Carl Ichan's company apply for a waiver from ethanol blending requirements for any of its refining facilities?
2. Did Carl Ichan's company receive a waiver for any of its refining facilities?

The Honorable Tony Cardenas

1. In regard to your lease, can you provide the written statement from the attorneys after reviewing it?

The Honorable Debbie Dingell

1. In regard to the January 25, 2018 guidance to reverse the longstanding once in, always in policy for major sources of hazardous air pollutants, did EPA determine the location of these sources?
2. Yes or no, did EPA conduct an analysis of the health effects including the potential increased risk of cancer of this decision before releasing the January 25th guidance memo?
3. Yes or no, did EPA conduct an analysis of the potential health effects of this policy on children, babies, or pregnant women before releasing the January 25th?
4. Yes or no, did EPA conduct an analysis of the potential health effects of this policy on older Americans or those with chronic health problems before releasing the January 25th guidance?
5. Yes or no, did EPA conduct an analysis of the potential health effects of this policy on minority and low-income communities before releasing the January 25th?

Aaron,

It was great to see you last week and appreciate the Administrator's time. Chairman Smith is very keen for our staff to get together to discuss further transparent science-based regulations at the EPA. We can meet at your earliest convenience with the appropriate EPA staff to discuss this matter further. When you have identified who is best to handle this matter moving forward please let me know and we can schedule some time to discuss. Hope to hear from you soon. Next week we are not in session so we should have a number of days and times available.

Thank you,
Joe

<20180607 EPA science transparency.pdf>

Congress of the United States

Washington, DC 20515

June 7, 2018

The Honorable Scott Pruitt
Administrator
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue NW
Washington, D.C. 20004

Dear Administrator Pruitt:

We write to express grave concerns about the Environmental Protection Agency's (EPA) proposed rule, published on April 30, 2018, titled Strengthening Transparency in Regulatory Science (Docket No. EPA-HQ-OA-2018-0259). Contrary to its name, the proposed rule would implement an opaque process allowing EPA to selectively suppress scientific evidence without accountability and in the process undermine bedrock environmental laws. We join nearly a thousand scientists^[1] and many leading scientific organizations^[2] in opposing this policy and urge you to withdraw the proposed rule.

The proposed rule suffers from significant procedural flaws including lack of supporting evidence, insufficient detail in the proposal itself, and conflicts with EPA's statutory obligations. The substance of the rule is also concerning. It appears to be targeted at excluding important public health studies while privileging industry-sponsored research. It also fails to adequately consider the costs of implementation and the potential privacy implications. Finally, the discretion it grants the Administrator to grant case-by-case exemptions completely undermines the stated goal of transparency.

Without any significant evidence supporting it, the proposed rule is a solution in search of a problem. The proposed rule fails to identify specific weaknesses in EPA's current scientific approach, which is grounded in peer review. Wendy Wagner, author of two of the studies EPA cites to rationalize the rule, said in response to the proposed rule: "They don't adopt any of our recommendations, and they go in a direction that's completely opposite, completely different."^[3] The proposed rule also invokes policies from *Nature*, *Science*, and the *Proceedings of the National Academies of Science*, but each of these organizations has argued against the rule.^[4] Additionally, EPA fails to cite any specific language providing authority for the rule and asks commenters where the authority may be found. Key issues including how data would be made available to the public and how private information would be protected are not addressed. This is a serious deficiency in a rule meant to increase access to data for the public.

^[1] <https://s3.amazonaws.com/ucs-documents/science-and-democracy/secret-science-letter-4-23-2018.pdf>

^[2] <https://blog.ucsusa.org/michael-halpern/a-list-of-scientific-organizations-that-have-supported-and-opposed-limiting-what-research-epa-can-use-to-make-decisions>

^[3] <https://www.theatlantic.com/science/archive/2018/04/how-the-epas-new-secret-science-rule/558878/>

^[4] <https://www.aaas.org/news/scientific-leaders-speak-out-epa-s-proposed-transparency-rule>

The proposed rule is inconsistent with EPA's statutory obligations to ground its actions on scientific evidence. The Toxic Substances Control Act (TSCA) and the Safe Drinking Water Act (SDWA) require that EPA use the "best available science." Courts have found this language to require that agencies "seek out and consider all existing scientific evidence" and not ignore existing data.^[5] This standard would be impossible to meet under the proposed rule.

The proposed rule requires that data underlying EPA's regulatory actions be made publicly available to allow for independent validation. Such a standard could exclude studies that utilize confidential industry and health data that are vital to understanding the nature of chemical pollutants, the impacts of pollution, and the most effective ways to protect the environment and public health. One such piece of health research is the "Six Cities" study,^[6] which followed more than 8,000 participants for nearly twenty years and was key in establishing a link between chronic air pollution exposure and increased mortality. The results of this study have stood up to extensive subsequent analysis, highlighting the strength of such research.^[7] This is just one example of an entire class of studies that the rule would remove from consideration. Excluding such health studies would hobble EPA's ability to implement laws like the Clean Air Act, SDWA, and TSCA and to fulfill its mission to protect public health and the environment.

Attempting to comply with the publication requirement and health privacy laws would place enormous burdens on EPA and researchers. According to an internal EPA analysis of the HONEST Act, which had a similar data-publishing requirement, the EPA would have to spend more than \$250 million annually to redact private health information before releasing study data to the public.^[8] EPA failed to provide a cost-benefit analysis of the proposed rule, only stating that EPA shall implement the provisions "in a manner that minimizes cost." Even with careful redaction, there is still a possibility of study participants being identified due to the amount of information that would have to be revealed under the proposed rule for the purposes of reproducibility. The rule is costly and a threat to the privacy of Americans.

Concerns with the proposed rule are not limited to the public health community. Dr. Nancy Beck, Deputy Assistant Administrator of the Office of Chemical Safety and Pollution Prevention, has expressed reservations about the publishing requirements of the proposed rule for industry as well.^[9] Industry representatives have expressed concerns about requiring public disclosure of data, such as Confidential Business Information, citing the potential for improper use of such data by competitors.^[10]

In addition, the proposal to allow the EPA Administrator to grant exemptions on a case-by-case basis would enable the Administrator to interfere in the rulemaking process in an arbitrary and capricious manner. The Administrator is not required to present the reasoning behind such

^[10] <https://www.bna.com/pesticide-makers-back-n57982091585/>

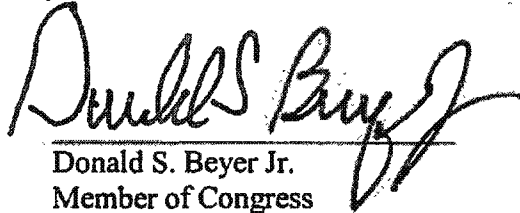

decisions. This waiver provision establishes an opaque process, completely at odds with the stated purpose of the rule, that would bring additional uncertainty to the regulatory process.

We support transparency and scientific integrity. However, the proposed rule will limit transparency and undermine the scientific integrity of EPA's rulemaking process. Given its numerous flaws and the lack of an underlying rationale, we urge you to withdraw the proposed rule.

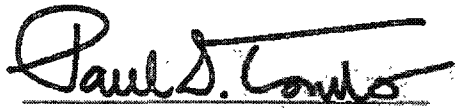

Sincerely,

Diana DeGette

Subject: Tomorrow's briefings

Will you all have any briefings for the meetings/calls tomorrow?

Lincoln Ferguson
Senior Advisor to the Administrator
U.S. EPA

Personal Matters / Ex. 6

**Meeting with
Chairman Lamar Smith (R-TX-21)
Tuesday, January 9th 2018
11:00AM, EPA HQ, Administrator's Office**

Main Topics of Discussion:

- HONEST Act, number one priority he wants to discuss
- Thanks you for SAB Reform and kind word in National Journal article

NOTE: Rep. Smith is the Chairman of the House Science, Space, and Technology Committee which has a limited jurisdiction over some of EPA science programs. Chairman Smith has announced he will not run for re-election.

Background: The HONEST Act, which would prohibit the Environmental Protection Agency from proposing, finalizing, or disseminating regulations or assessments based upon science that is not transparent or reproducible. This legislation has been a priority for Chairman Smith. It passed the House but is not likely to move in the Senate. The Congressman would like to discuss potential ways EPA could implement the principals of the bill without legislative action along the lines of the SAB reform effort recently undertaken.

Taking Points:

- **HONEST Act:** Happy to have our staff at EPA work with committee staff on identifying potential areas you think we might be able to implement the transparency initiatives outlined in the HONEST Act using our regulatory/guidance authority.

Decision Points/Objectives: This meeting is occurring at the request of Chairman Lamar Smith. His main objective for the meeting is to find a way to have the EPA implement the HONEST Act objectives outside of the legislative process since it is unlikely to pass in the Senate

Attendees:

Troy Lyons, AA OCIR
Aaron Ringel, DAA OCIR

Christian, Aaron and Kaitlyn,

Apologies for the delay in sending this over.

We were slammed with Farm Bill stuff last week and a few other things.

Attached is a short memo as well as the current RSVP list. We have had a few RSVP's still trickling in today so will pass along any others we get later this afternoon.

Meeting with your advance guy here in a few minutes.

Please let me know if you all have any questions or need anything else from us. Our members are looking forward to tomorrow.

Personal Matters / Ex. 6 is my cell.

Sincerely,

Jeff Small

*Executive Director | Congressional Western Caucus
Senior Advisor | Congressman Paul A. Gosar, D.D.S.*

MEMORANDUM

To: EPA Administrator Pruitt and Staff
Subject: 5.22.18 Western Caucus Members Only Lunch Meeting and Speaker Series

What:

Western Caucus Monthly Member-Only Meeting with EPA Administrator Scott Pruitt | Tuesday, May 22nd | 12:00-1:00 p.m. | 2247 RHOB | Catered lunch provided
EPA Administrator Pruitt will present, take questions and engage in discussion with our members on their priorities for the entirety of this lunch.

Background:

For the format, Congressional Western Caucus Chairman Paul Gosar kicks off with an update, then we go around the room and members introduce themselves. Then the Administrator will have 10-15 minutes to present. Then we open it up to questions or comments from members, generally limiting to one per member. Usually turns into more of a roundtable discussion. Always try and get a group picture for social media if we can. Our folks are pretty laid back and don't usually take any shots at these lunches.

The Congressional Western Caucus is a congressionally sanctioned organization that has existed since 1993 and currently comprised of 78 bipartisan members of the House. Kurt Schrader is currently the one Democrat. He is planning to attend the first 30 minutes of the meeting.

Western Caucus members are dedicated to:

- protecting private property rights
- strengthening local control
- fostering economic growth
- preserving multiple-use of public lands
- increasing energy independence
- managing healthy forests
- and ensuring safe domestic food production for American families

The Caucus was founded out West to fight federal overreach, promote rural values and preserve our uniquely American way of life. Over time, the Caucus has grown beyond the West, allying with Members of Congress from all across the country who share its values and vision of a stronger America. More info about the Caucus can be found on it's website at <https://westerncaucus.house.gov>.

Important Issues to the Members:

- **The Obama Administration's Waters of the United States (WOTUS) rule**
 - Western Caucus recently passed an amendment to the Farm Bill to repeal WOTUS. More [HERE](#). 13 Democrats voted in favor of the amendment.
- **Scrapping the Obama Administration's Preemptive Veto of the Pebble Project**
 - Members of the Western Caucus support cancelling the proposed preemptive veto for the Pebble Project and recently called on Administrator Pruitt to honor that pledge. More [HERE](#).
- **The Clean Power Plan**
 - Members of the Western Caucus support repeal of the Clean Power Plan. More [HERE](#).

MEMORANDUM

- **Ending Secret Science at the EPA**
 - Members of the Western Caucus support the proposed rule, “Strengthening Transparency in Regulatory Science”. Would be good to discuss in detail.
- **The Endangerment Finding**
 - Western Caucus Members support repealing the Obama Administration’s endangerment finding.
- **Obama Administration’s 2015 Ozone Rule**
 - Western Caucus Members support repeal and efforts to minimize harm from the Obama Administration’s 2015 Ozone Rule. More [HERE](#).
- **Members will also likely have district specific priorities that they pitch.**

Other Statements from the Western Caucus on EPA Matters:

Subject: Re: POSSIBLE MEETING: HONEST ACT -BREIFING REQUEST FOR HSST-TOMORROW

Sure -understandable.

I'll send a scheduler with a call in number.

Thanks you for your flexibility.

Best,
Laura

Troy and Aaron,

Christina and I would like to schedule a brief call with you both tomorrow morning (11 am) to discuss the recent briefing request for the HSST committee regarding the HONEST ACT.

As this involves many offices and there is historical background behind the subject matter we would like your perspective before we execute confirmations.

Please let me know whom to coordinate with regarding your availability.

Best,

Laura

EPA Announces Extended Comment Period and Public Hearing on Proposed Rule to Strengthen Science Transparency in EPA Regulations

WASHINGTON (May 24, 2018) - Today, the U.S. Environmental Protection Agency (EPA) announced an extension of the comment period on the proposed rule, "Strengthening Transparency in Regulatory Science." EPA is also announcing a public hearing for the proposed rule, which will be held on July 17, 2018, in Washington, D.C.

“EPA is committed to public participation and transparency in the rulemaking process,” said EPA Administrator Scott Pruitt. **“By extending the comment period for this rule and holding a public hearing, we are giving stakeholders the opportunity to provide valuable input about how EPA can improve the science underlying its rules.”**

On April 30, 2018, EPA announced the proposed rule with a 30-day comment period that was scheduled to close on May 30. With today’s extension, the comment period will now close on August 17. EPA is soliciting comments on all aspects of the proposal and specifically on the issues identified in Section III. The public hearing will provide a forum for interested parties to present data, views, and arguments regarding EPA’s proposed rule.

The proposed rule will strengthen the science used in regulations issued by EPA. It will require that underlying scientific information be publicly available. Also, this rule is consistent with data access requirements for major scientific journals and builds upon Executive Orders 13777 and 13783.

Comments should be identified by Docket ID No. is EPA-HQ-OA-2018-0259 and submitted through the Federal eRulemaking Portal: <http://www.regulations.gov>.
