The public hearing will be held at the U.S. Environmental Protection Agency Headquarters, William Jefferson Clinton East Building, Main Floor Room 1153, 1201 Constitution Avenue NW, in Washington, D.C. 20460. The public hearing will convene at 8:00 a.m. EST and continue until 8:00 p.m. EST. Parties interested in presenting oral testimony at the public hearing should register online by July 15, 2018, at <https://www.epa.gov/osa/strengthening-transparency-regulatory-science>.

Subject: EPA Administrator Pruitt Proposes Rule To Strengthen Science Used In EPA Regulations

U.S. ENVIRONMENTAL PROTECTION AGENCY
NEWS RELEASE
WWW.EPA.GOV/NEWSROOM

EPA Administrator Pruitt Proposes Rule To Strengthen Science Used In EPA Regulations

WASHINGTON (April 24, 2018) - Today, U.S. Environmental Protection Agency (EPA) Administrator Scott Pruitt signed a proposed rule to strengthen the science used in regulations issued by EPA. The rule will ensure that the regulatory science underlying Agency actions is fully transparent, and that underlying scientific information is publicly available in a manner sufficient for independent validation.

“The era of secret science at EPA is coming to an end,” **said EPA Administrator Scott Pruitt.** “The ability to test, authenticate, and reproduce scientific findings is vital for the integrity of rulemaking process. Americans deserve to assess the legitimacy of the science underpinning EPA decisions that may impact their lives.”

This proposed rule is in line with the scientific community’s moves toward increased data sharing to address the “replication crisis”—a growing recognition that a significant proportion of published research may not be reproducible. The proposal is consistent with data access requirements for major scientific journals like *Science*, *Nature*, and *Proceedings of the National Academy of Sciences* as well as recommendations from the Bipartisan Policy Center’s *Science for Policy Project* and the Administrative Conference of the United States’ *Science in the Administrative Process Project*.

The proposed rule builds upon President Trump’s executive orders on regulatory reform and energy independence:

- ⌘ **Executive Order 13777**, issued in March 2017, provides that regulatory reform efforts shall attempt to identify “those regulations that rely in whole or in part on data, information, or methods that are not publicly available or that are insufficiently transparent to meet the standard of reproducibility.”
- ⌘ **Executive Order 13783**, also issued in March 2017, provides that “It is the policy of the United States that necessary and appropriate environmental regulations comply with the law, are of greater benefit than cost, when permissible, achieve environmental improvements for the American people, and are developed through transparent processes that employ the best available peer-reviewed science and economics.”

Chairman Lamar Smith (R-TX): “Administrator Pruitt’s announcement ensures that data will be secret no more. For too long, the EPA has issued rules and regulations based on data that has been withheld from the American people. It’s likely that in the past, the data did not justify all regulations. Today, Administrator Pruitt rightfully is changing business as usual and putting a stop to hidden agendas.”

Senator Mike Rounds (R-SD): “Sound, reliable science is vital to helping us make important policy decisions that impact the health of American families and their livelihoods. Inserting new levels of transparency in the EPA rulemaking process will help make the agency more accountable to the American people and help everyone understand the impact of EPA’s decisions. Today’s directive is a significant step toward making sure these decisions are not made behind closed doors with information accessible only to those writing the regulations, but rather in the full view of those who will be affected.”

Dr. Edward J. Calabrese, Professor, Environmental Health Sciences, University of Massachusetts: “The proposal represents a major scientific step forward by recognizing the widespread occurrence of non-linear dose responses in toxicology and epidemiology for chemicals and radiation and the need to incorporate such data in the risk assessment process.”

Dr. Louis Anthony (Tony) Cox, President, Cox Associates; Member, National Academy of Engineering; and Editor-in-Chief of the Journal *Risk Analysis*: “I believe that transparency and independent reproducibility of analyses and conclusions are bedrock principles of sound science. Some commentators have expressed concerns that making the data behind policy conclusions and recommendations accessible and transparent might threaten the privacy of individuals. But this concern can be fully met by applying current privacy-protection techniques for data analysis. These techniques have been developed and used successfully for years at the Census Bureau and elsewhere. Thus, we can have the scientific benefits of accessible data while protecting individual privacy.”

Dr. Jason Scott Johnston, Director, Olin Law and Economics Program, University of Virginia School of Law: “EPA’s proposed rule, Strengthening Transparency in Regulatory

Science, is badly needed “Best practice among peer-edited scientific journals is to require that data and statistical routines used in published papers be posted online and/or made publicly available. To apply the same standards to research that EPA says justify regulations affecting billions of dollars in economic activity and millions of human lives is essential for those regulations to truly be scientifically based.”

Bruno Pigott, Commissioner of the Indiana Department of Environmental Management (IDEM): “IDEM supports transparency in rulemaking. Good, sound science leads to better regulations.”

Dr. George Wolff, Principal Scientist, Air Improvement Resource, Inc., and former Chairman of EPA's Clean Air Scientific Advisory Committee (1992 - 1996): “In the development of regulations based on environmental studies, numerous subjective assumptions and choices must be made regarding the selection of data and models that have a profound impact on the strength of any statistical associations and even whether the associations are positive or negative. The appropriateness of the assumptions and choices are not adequately evaluated in the standard peer review process. That is why it is essential that the data and models be placed in the public domain for a more rigorous evaluation by qualified experts. The proposed regulation, Strengthening Transparency in Regulatory Science, will provide an opportunity for such evaluations.”

The Daily Caller

Scott Pruitt Will End EPA's Use Of 'Secret Science' To Justify Regulations

Michael Bastasch

March 19, 2018

<http://dailycaller.com/2018/03/19/epa-scott-pruitt-secret-science/>

Environmental Protection Agency (EPA) Administrator Scott Pruitt will soon end his agency's use of "secret science" to craft regulations.

"We need to make sure their data and methodology are published as part of the record," Pruitt said in an exclusive interview with The Daily Caller News Foundation. "Otherwise, it's not transparent. It's not objectively measured, and that's important."

Pruitt will reverse long-standing EPA policy allowing regulators to rely on non-public scientific data in crafting rules. Such studies have been used to justify tens of billions of dollars worth of regulations.

EPA regulators would only be allowed to consider scientific studies that make their data available for public scrutiny under Pruitt's new policy. Also, EPA-funded studies would need to make all their data public.

"When we do contract that science out, sometimes the findings are published; we make that part of our rule-making processes, but then we don't publish the methodology and data that went into those findings because the third party who did the study won't give it to us," Pruitt added.

"And we've said that's fine — we're changing that as well," Pruitt told TheDCNF.

Conservatives have long criticized EPA for relying on scientific studies that published their findings but not the underlying data. However, Democrats and environmental activists have challenged past attempts to bring transparency to studies used in rule making.

Texas Republican Rep. Lamar Smith pushed legislation to end the use of what he calls "secret science" at EPA. Pruitt instituted another policy in 2017 backed by Smith against EPA-funded scientists serving on agency advisory boards.

"If we use a third party to engage in scientific review or inquiry, and that's the basis of rulemaking, you and every American citizen across the country deserve to know what's the data, what's the methodology that was used to reach that conclusion that was the underpinning of what — rules that were adopted by this agency," Pruitt explained.

Pruitt's pending science transparency policy mirrors Smith's HONEST Act, which passed the House in March 2017. Smith's office was pleased to hear Pruitt was adopting another policy the House Committee on Science, Space and Technology chairman championed.

"The chairman has long worked toward a more open and transparent rule-making process at EPA, and he looks forward to any announcement from Administrator Pruitt that would achieve that goal," committee spokeswoman Thea McDonald told TheDCNF.

Junk science crusader Steve Milloy also called on EPA to end its use of "secret science" in rule making, especially when it comes to studies on the toxicity of fine particulates in the air.

EPA has primarily relied on two 1990s studies linking fine particulate pollution to premature death. Neither studies have made their data public, but EPA used their findings to justify sweeping air quality regulations.

Reported benefits from EPA rules are “mostly attributable to the reduction in public exposure to fine particulate matter,” according to the White House Office of Management and Budget report. That’s equivalent to billions of dollars.

In fact, one of EPA’s most expensive regulation on the books, called MATS, derived most of its estimated benefits from reducing particulates not from reducing mercury, which the rule was ostensibly crafted to address.

EPA estimated MATS would cost \$8.2 billion but yield between \$28 billion to \$77 billion in public health benefits. It’s a similar story for the Clean Power Plan, which EPA estimated would cost \$8.4 billion and yield from \$14 billion to \$34 billion in health and climate benefits.

Democrats and environmentalists have largely opposed attempts to require EPA rely on transparent scientific data. Said data would restrict the amount of studies EPA can use, but a major objection is making data public would reveal confidential patient data, opponents argue.

“A lot of the data that EPA uses to protect public health and ensure that we have clean air and clean water relies on data that cannot be publicly released,” Union of Concerned Scientists representative Yogin Kothari told E&E News.

“It really hamstrings the ability of the EPA to do anything, to fulfill its mission,” Kothari said.

Milloy, however, countered and argued it’s a “red herring” to claim that forcing regulators to use public science data would harm patient privacy.

“The availability of such data sets is nothing new,” said Milloy, publisher of JunkScience.com and senior fellow at the Energy and Environmental Legal Institute.

“The state of California, for example, makes such data available under the moniker, ‘Public Use Death Files,’” Milloy said. “We used such data in the form of over two million anonymized death certificates in our recent California study on particulates and death.”

“Opponents of data transparency are just trying to hide the data from independent scrutiny,” Milloy added. “But the studies that use this data are taxpayer-financed, and they are used to regulate the public.”

To: Ringel, Aaron [/o=ExchangeLabs/ou=Exchange Administrative Group (FYDIBOHF23SPDLT)/cn=Recipients/cn=1654bdc951284a6d899a418a89fb0abf-Ringel, Aar]
Subject: Morning Energy: Spotlight on FERC at Pro summit — Hitching a ride on the 'minibus' — 'Secret science' out in the open

By Kelsey Tamborrino | 07/17/2018 05:43 AM EDT

With help from Emily Holden, Anthony Adragna, Colin Wilhelm and Darius Dixon

SEE YOU THERE: Today's the day — POLITICO Pro is hosting its second annual Pro summit, featuring one-on-one conversations with newsmakers across the policy landscape, including two sessions on energy.

FERC Commissioner Cheryl LaFleur will sit down this afternoon with our own Darius Dixon, before the regulatory body is deadlocked next month following the exit of GOP Commissioner Rob Powelson. LaFleur, a Democrat, has served under presidents from both parties and experienced the agency in almost every configuration — whether it has all five commissioners in place, or just one. There's no shortage of topics to chew over: the potential impact of an Energy Department coal and nuclear rescue plan, the heated rhetoric against states that stand in the way of pipelines, and whether FERC is "on the wrong side of history" when it comes to climate change. Darius' interview with LaFleur starts around 2 p.m.

Also on tap: California Air Resources Board Chairwoman Mary Nichols, Murray Energy CEO Bob Murray and the Council on Foreign Relations' Amy Myers Jaffe will participate in a panel this morning on America's "energy future." Nichols, for one, has been heavily involved in discussions with the Trump administration over car rules that the White House is considering rolling back. Expect questions related to the administration's efforts to pare back regulations and increase oil, gas and coal production — and an in-depth conversation on what that means for free market forces and renewables.

See the full agenda [here](#) and watch the livestream [here](#).

WELCOME TO TUESDAY! I'm your host, Kelsey Tamborrino. Citizens' Climate Lobby's Brett Cease was first to correctly identify the two presidents who threw out the first pitch at an All-Star game in D.C.: Franklin D. Roosevelt in 1937 and John F. Kennedy in 1962. For today: Which state or states have just one consonant in its spelling? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

JUST RELEASED: [View the latest POLITICO/AARP poll](#) to better understand Arizona voters over 50, a voting bloc poised to shape the midterm election outcome. Get up to speed on priority issues for Hispanic voters age 50+, who will help determine whether Arizona turns blue or stays red.

HITCHING A RIDE ON THE 'MINIBUS': The House Rules Committee late Monday made 70 amendments to the EPA and Interior title of the spending minibuss, [H.R. 6147 \(115\)](#). The amendments focus on blocking a host of Obama-era environmental regulations even as the Trump administration is in the process of rolling back many of those. Some of the amendments that caught ME's eye:

— **Diesel emissions grants:** Rep. [Gary Palmer's amendment](#) would eliminate the popular bipartisan Diesel Emissions Reduction Grant program used to retrofit diesel engines like those in school buses,

— **WOTUS:** Rep. Don Beyer's amendment would remove language blocking the Obama administration's Waters of the U.S. regulation,

— **Obama-era methane rule:** Rep. Markwayne Mullin's amendment would block enforcement of the Obama-era regulation aimed at curbing methane emissions from new oil and gas sources, which the Trump administration is already reconsidering,

— **Social cost of carbon:** Another amendment from conservatives would bar the use of the social cost of carbon in rulemakings,

— **Trailer efficiency:** Reps. Barry Loudermilk and Morgan Griffith's amendment would bar EPA from applying stricter fuel efficiency and greenhouse gas emissions standards to certain truck trailers,

— **Chesapeake Bay:** Rep. Bob Goodlatte's effort would limit EPA's ability to go after states that miss Chesapeake Bay cleanup milestones,

— **Ozone:** Rep. Glenn Grothman's amendment would block implementation of EPA's 2015 tightened ozone standard,

— **Coal ash:** A Democratic amendment would block the Trump EPA from revisiting an Obama-era coal ash regulation,

— **Endangered Species Act riders:** Several measures would bar the administration from issuing or enforcing Endangered Species Act rules relating to species like the lesser prairie chicken and Preble's meadow jumping mouse,

— **Attorney fees:** An amendment from Reps. Jason Smith and Greg Gianforte would block attorney fees from being awarded in any Clean Air Act, Clean Water Act or Endangered Species Act settlement, and,

— **Inspectors general:** Nothing related to former Administrator Scott Pruitt was made in order, but the House will consider an amendment from Rep. Raúl Grijalva that would increase the budget of the Interior Department's inspector general by \$2.5 million.

Read the full list of amendments made in order to the measure here.

'SECRET SCIENCE' OUT IN THE OPEN: EPA's controversial proposal to consider only research with publicly available data gets a public hearing at agency headquarters today starting at 8 a.m. Nearly 70 health, medical, academic and science groups — including the American Lung Association, American Heart Association, American Medical Association and American Academy of Pediatrics — oppose the plan, which they say could hamstring public health and environment protections.

EPA's Science Advisory Board voted unanimously to review the proposal, which Pruitt said was meant to bolster transparency. Paul Billings, national senior vice president of advocacy at the American Lung Association, called the rule a "coordinated effort to ignore the science that is inconvenient to the EPA's agenda," and compared it to lobbying efforts by the tobacco industry in the 1990s to exclude studies that showed secondhand smoke could kill.

What's at stake? The proposal could move forward quickly enough to allow EPA to roll back certain air quality standards currently under review. According to the Natural Resources Defense Council, the plan could undercut computer models meant to test chemicals under the new Toxic Substances Control Act and could toss

out landmark studies that relied on personal health records following extraordinary events, including when Hiroshima and Nagasaki victims were tested over time to find out the effects of radiation on humans.

The meeting will run until 8 p.m. or an hour after the last of more than 100 registered speakers has commented. Speakers, aside from many environment and public health groups, include the American Petroleum Institute, the U.S. Chamber of Commerce, the American Chemistry Council, FreedomWorks Foundation and climate science critic Steve Milloy. Dan Byers of the Chamber of Commerce's Global Energy Institute is expected to applaud the agency's efforts and commend EPA for going through the formal public comment and rulemaking process. "It is one thing to be cavalier about transparency principles when their application has little or no import to public policy, but federal rules that impact millions of people and billions of dollars should be held to a higher standard," he is expected to say. Also registered are Reps. Paul Tonko, Suzanne Bonamici and Dan Lipinski. Comments can be submitted until Aug. 16.

Related reading: Competitive Enterprise Institute senior fellow Angela Logomasini looks at the science transparency rule in analysis published today. "The rule is actually far more modest and flexible than depicted by its critics, and its goals are in fact achievable," Logomasini writes. Read it here.

FOR THE RECORD: The House Rules Committee meets at 3 p.m. this afternoon to formulate a rule on an anti-carbon tax resolution, H. Con. Res. 119 (115), that calls a tax on carbon released from fossil fuels "detrimental to the United States economy." The Rules panel will tee up a vote later this week on the resolution, which is led by Majority Whip Steve Scalise and would put a range of lawmakers — most notably the Climate Solutions Caucus — on the record on the issue.

WHERE'S ZINKE? Interior Secretary Ryan Zinke will deliver remarks this morning at the first meeting of the "Made in America" Outdoor Recreation Advisory Committee. The committee is tasked with advising the secretary on "public-private partnerships across all public lands, with the goal of expanding access to and improving infrastructure on public lands and waterways." See the meeting agenda.

AMERICA'S PLEDGE STILL WORKING ON PLEDGES: Michael Bloomberg and California Gov. Jerry Brown, the co-chairs of climate organization "America's Pledge," have unveiled a preview of the report they will release at the Global Climate Action Summit in San Francisco in September, detailing "bottom-up" opportunities for climate action sans federal leadership. The list is familiar: boosting renewables, accelerating coal retirements, retrofitting buildings for energy efficiency, electrifying building energy use, accelerating electric vehicle adoption, phasing out HFCs, preventing methane leaks at the wellhead, reducing methane leaks in cities, reducing emissions from land and starting carbon markets.

Vice Chairman Carl Pope said the group still plans to debut a quantitative analysis outlining what state and local governments are already doing, what they have committed to and what they are keying up. "We have every reason to believe the rest of the world is watching this very closely," Pope said, noting that the U.N.'s top climate official, Patricia Espinosa, mentioned the group and summit by name at the Vatican earlier this month. Read it here.

ESA GETS ITS DAY: Proposed tweaks to the Endangered Species Act will be front and center at a Senate Environment and Public Works hearing this morning. The hearing will feature testimony from Wyoming Gov. Matt Mead, Colorado Parks and Wildlife's Bob Broscheid and Virginia's Secretary of Natural Resources Matthew J. Strickler, and will focus on a discussion draft released by Chairman John Barrasso earlier this month aimed at changing the statute. **If you go:** The hearing kicks off at 9:45 a.m. in 406 Dirksen. Livestream here.

TAKEN BY STORMWATER: The House on Monday passed by voice vote H.R. 3906 (115), the Innovative Stormwater Infrastructure Act of 2017, which would "establish centers of excellence" for stormwater control infrastructure. The legislation, introduced last year by Democratic Rep. Denny Heck, directs EPA to create a

stormwater infrastructure funding task force to make recommendations on the availability of public and private funding for stormwater infrastructure.

DOE ISSUES FIRST TRIBAL LOAN GUARANTEE: The Energy Department will issue its first solicitation for the Tribal Energy Loan Guarantee Program today. The program provides up to \$2 billion in partial loan guarantees to support energy development in Native American and Alaska Native communities. According to DOE, today's solicitation marks more than \$40 billion in energy infrastructure loans and loan guarantees from DOE's Loan Programs Office in five areas.

HOUSE PANEL TO HOLD GRID HEARING: House Natural Resources will hold a hearing on July 25 on Puerto Rico's electric grid recovery and possible improvements to make it more efficient and resilient to future hurricanes. On top of the devastation caused by Hurricane Maria last year, Puerto Rico's electric utility owes bondholders \$9 billion, and most of its leadership departed last week after clashes with Gov. Ricardo Rosselló over executive compensation and political control of the utility, which is quasi-governmental.

MAKING THE GRADE: The Environment America Research & Policy Center is out today with its state-by-state report card, "Renewables on the Rise," which details increases in solar, wind, energy efficiency, electric vehicles and battery storage. The report says the U.S. now produces almost six times as much renewable electricity from wind and solar than it did in 2008. It also found that in March of last year, wind and solar produced 10 percent of the United States' electricity — marking a first. On the state level, the report said California, Arizona, North Carolina, Nevada and Texas saw the greatest total increases from 2008 until 2017 in solar energy generation. See the report [here](#) and a state-by-state interactive map [here](#).

YOU DOWN WITH TIP? A bipartisan group of four senators wrote to Energy Secretary Rick Perry on Monday in support of the Western Area Power Administration's Transmission Infrastructure Program, which was axed under the Trump administration's fiscal 2019 budget proposal. "TIP is one of the few federal programs that directly supports new and upgraded electric transmission," according to the letter, signed by Sens. Catherine Cortez Masto, Martin Heinrich, Dean Heller and Cory Gardner.

HOUSE PLANS FLOOD INSURANCE VOTE: The House is planning to vote next week to extend the National Flood Insurance Program, ahead of its July 31 expiration, sources familiar with the matter tell Pro Financial Services' Zachary Warmbrodt. There are already a few options on the table for the program: one from Financial Services Chairman Jeb Hensarling, who has been trying to put together an extension bill that includes reforms, and a new bill introduced by Scalise and Rep. Tom MacArthur that would reauthorize the program through Nov. 30. Read [more](#).

FOR YOUR RADAR: Republican Sen. Chuck Grassley introduced bipartisan legislation on Monday targeting price fixing by OPEC. The bill would amend the Sherman Act to make oil-producing and exporting cartels illegal, and was co-sponsored by Sens. Amy Klobuchar, Mike Lee and Patrick Leahy. "It's long past time to put an end to illegal price fixing by OPEC," Grassley said in a statement. Read the legislation [here](#).

MAIL CALL! National Rural Electric Cooperative Association CEO Jim Matheson sent a letter to the leadership of the Energy and Commerce Environment Subcommittee on Monday in support of legislation to reform the New Source Review permitting program.

— **More than 100 Democrats** signed onto a letter to members of both House and Senate Armed Services committees today to urge them to oppose any provisions to the National Defense Authorization Act that would "have widespread, negative consequences for the conservation of our imperiled wildlife and public lands." Read the letter [here](#).

— **Iowa's congressional delegation** invited acting EPA Administrator Andrew Wheeler to their state to discuss the Renewable Fuel Standard. Read it [here](#).

What role will Hispanic voters over 50 play in Arizona this Fall? Read POLITICO Magazine's new series "The Deciders" which focuses on this powerful voting bloc that could be the determining factor in turning Arizona blue.

House plans vote to keep flood insurance program going Back

By Zachary Warmbrodt | 07/16/2018 06:49 PM EDT

The House is planning to vote next week to extend the National Flood Insurance Program before leaving town ahead of the program's July 31 expiration, sources familiar with the matter said.

House Financial Services Chairman Jeb Hensarling (R-Texas) has been trying to put together an extension bill that includes reforms, sources said. Another option is a new bill introduced by House Majority Whip Steve Scalise (R-La.) and Rep. Tom MacArthur (R-N.J.) that would reauthorize the program through Nov. 30.

In a statement, Scalise said it was important to keep working on a long-term flood insurance reauthorization but that his bill would take concerns about a lapse off the table for the remainder of hurricane season.

While the House has passed a five-year reauthorization and overhaul, the Senate hasn't reached agreement on its own bill amid disputes over how to retool the program. It's unclear if the Senate would be able to pass anything other than a clean, short-term reauthorization at this stage. Sources said Sen. John Kennedy (R-La.) was planning to try to hotline an extension through January.

Ban On "Secret Science" In EPA Regulation Makes Sense

Editorial
March 26, 2018

ED_002389_00020777-00001

The Environmental Protection Agency has announced it will now base new regulations only on the findings of scientific studies whose data and methodology are made public so they can be subjected to independent review. That's a sound move in line with basic scientific transparency and professionalism.

Yet it's being treated as a sign of impending apocalypse by some on the left, which says much about the questionable validity of that group's policy prescriptions.

In an interview with The Daily Caller News Foundation, Administrator Scott Pruitt said the EPA will end its use of studies that do not publish underlying data, only conclusions. "Otherwise, it's not transparent. It's not objectively measured, and that's important," Pruitt said.

In the past, the EPA has advanced air-quality regulations that imposed massive costs based primarily on the findings of two studies done in the 1990s that linked fine particulate pollution to premature death. Neither study made associated data public.

U.S. Rep. Lamar Smith, R-Texas and chairman of the House Committee on Science, Space and Technology, has long criticized the use of "secret science" and authored legislation to curtail its use by regulators. Last year, Smith said the EPA had "routinely relied on questionable science based on nonpublic information that could not be reproduced, a basic requirement of the scientific method."

"Americans deserve to see the science for themselves," Smith said. "If the EPA has nothing to hide, why not make the scientific data it uses for its regulations publicly available? What was the EPA hiding?"

That will strike most people as a fair question. But to some activists, the idea that science should involve review and scrutiny is apparently anathema. In response to a prior effort to ban "secret science" at the EPA, Andrew Rosenberg, director of the Union of Concerned Scientists' Center for Science and Democracy, said transparency would "gut the EPA at the expense of public health and safety."

That same group has claimed release of data would require publicizing the confidential patient data of individuals. But Steve Milloy, publisher of JunkScience.com and a senior fellow at the Energy and Environmental Legal Institute, notes that California already makes similar data available in its "Public Use Death Files," and that has been accomplished without violating patient privacy.

Other critics object that there are costs involved in scrubbing data sets so patient privacy is protected. Perhaps, but that doesn't mean the public should be kept in the dark about the data and methods used to justify literally billions in new regulatory

burden.

Scientific studies are as susceptible to human error and even outright fraud as any other endeavor — particularly when such studies are used in the political realm. Facilitating transparency and independent review will reduce the chances of bad science harming Americans with half-baked regulations, and should enhance the case for regulations when the underlying science has withstood independent scrutiny.

Given the stakes for public health and the national economy, Americans must be assured government regulations are based on sound science, not someone's "trust me" assurances.

THE WALL STREET JOURNAL

The EPA Cleans Up Its Science

Now Congress Should Act To Lock In Place Data Transparency
Steve Milloy
March 26, 2018

The Environmental Protection Agency will no longer rely on “secret” scientific data to justify regulations, Administrator Scott Pruitt announced last week. EPA regulators and agency-funded researchers have become accustomed to producing unaccountable, dodgy science to advance a political agenda.

The saga began in the early 1990s, when the EPA sought to regulate fine particulate matter known as PM2.5—dust and soot smaller than 2.5 microns in diameter. PM2.5 was not known to cause death, but by 1994 EPA-supported scientists had developed two lines of research purporting to show that it did. When the studies were run past the EPA’s Clean Air Science Advisory Committee, it balked. It believed the studies relied on dubious statistical analysis and asked for the underlying data. The EPA ignored the request.

As the EPA prepared to issue its proposal for PM2.5 regulation in 1996, Congress stepped in. Rep. Thomas Bliley, chairman of the House Commerce Committee, sent a sharply written letter to Administrator Carol Browner asking for the data underlying studies. Ms. Browner delegated the response to a subordinate, who told Mr. Bliley the EPA saw “no useful purpose” in obtaining the data. Congress responded by inserting a provision in a 1998 bill requiring that data used to support federal regulation must be made available to the public via the Freedom of Information Act. But it was hastily written, and a federal appellate court held the law unenforceable in 2003.

The controversy went dormant until 2011, when a newly Republican Congress took exception to the Obama EPA’s antioil rules, which relied on the same PM2.5 studies. Again the EPA was defiant. Administrator Gina McCarthy refused requests for the data sets and defied a congressional subpoena.

Bills to resolve the problem died in the Senate. Democrats argued that requiring data for study replication is a threat to intellectual property and an invasion of medical privacy. In fact, the legislation would protect property by requiring a confidentiality agreement, and no personal medical data or information would have been released.

This sort of data is already routinely made public for research use. In 2012 I was desperate for a way around the Obama EPA’s secrecy on the PM2.5 issue, I found out in 2012 that I could get California death-certificate data in electronic form. The state’s Health Department calls this sort of data “Death Public Use Files.” They are scrubbed of all personal identifying and private medical information. Some of my colleagues used this data to prepare a 2017 study, which found PM2.5 was not associated with death.

The best part is that if you don’t believe the result, you can get the same data for yourself from California and run your own analysis. Then we’ll compare, contrast and debate. That’s how science is supposed to work.

It would be better if Congress would pass a law requiring data transparency. A future administrator may backslide on the steps Mr. Pruitt is taking. In the meantime, we have science in the sunshine.

Members of the Western Caucus Support Administrator Pruitt

WASHINGTON, D.C. – Today, Congressional Western Caucus Chairman **Paul A. Gosar D.D.S. (AZ-04)**, House Science, Space, and Technology Committee Chairman **Lamar Smith (TX-21)**, House Committee on Appropriations Subcommittee on Interior, Environment, and Related Agencies Chairman **Ken Calvert (CA-42)**, and Western Caucus Members **Doug LaMalfa (CA-01)**, **Louie Gohmert (TX-01)**, and **Markwayne Mullin (OK-02)** issued the following statements in support of Environmental Protection Agency (EPA) Administrator Scott Pruitt:

Congressman Gosar stated, “EPA Administrator Pruitt has proven himself one of the most effective Cabinet Members in the Trump Administration. His track record on energy, the environment, deregulation, the rule of law and science-based decision-making is exceptional. Because he is an important part of the ‘Make America Great Again’ agenda, it should come as no surprise that a lynch mob of opportunistic politicians and certain members of the media are doing everything they can to attempt to remove him from office. The job of a successful agency head should not be called into question due solely to allegations from political opponents when important underlying facts remain unknown. I stand with EPA Administrator Pruitt and am grateful for everything he has done for the American people to get our economy going again.”

“Administrator Pruitt has served America exceptionally well during his first year in office. He has implemented President Trump’s America First policies, rolled back burdensome and unnecessary regulations, increased the independence of agency advisory boards, and is working toward

making the agency's rulemaking process more open to the American people," said **Congressman Smith**. "Scott Pruitt has returned the EPA's focus to its rightful place – on ensuring clean air and water for all Americans through policies that are based on good science, not science fiction. I thank him for his work thus far, and I anticipate many more achievements from the EPA with Administrator Pruitt at the helm."

"Keeping our air and water clean with balanced and careful policies is a challenging task. I know EPA Administrator Pruitt and the Administration are working every day to achieve these important goals," stated **Congressman Calvert**.

"It's no surprise that many Democrats and left-leaning members of the media would like to see EPA Administrator Pruitt gone - that's because he's good at his job. His commitment to slashing unnecessary regulations and cleaning up the agency while simultaneously boasting a strong track record on energy and the environment is impressive, and it has made him one of the most effective members of the President's cabinet. The allegations against Administrator Pruitt leave a lot of questions unanswered, and it should not cost him his job - especially when far more serious allegations against former administrators were largely brushed aside. I stand with many of my colleagues in support of Administrator Pruitt," said **Congressman LaMalfa**.

Congressman Gohmert said, "Scott Pruitt is one of President Trump's most effective cabinet members. He has been uniquely effective in rolling back onerous regulations that are strangling our American economy and dramatically killing jobs. We all want and are getting cleaner air and water, but when red tape kills jobs and puts Americans in poverty for no discernible difference, we need Scott Pruitt. Not only has he blessed our economy and jobs in general, minorities' unemployment is at an all time historical low. It is no wonder the left is attempting to take him out, because he is doing far too much to help Americans in a Republican administration."

"As the head of the EPA, Administrator Pruitt is responsible for rolling back dozens of job-killing regulations put in place over the 8 years of the Obama Administration. By returning the EPA to its rightful role, Administration Pruitt's policies have significantly reduced regulatory costs for taxpayers and given farmers, ranchers, and small business owners a chance to thrive again. I support EPA Administrator Pruitt and the good work he will continue to do to bring regulatory relief to all Americans," concluded **Congressman Mullin**.

Background:

Today, Members of the Western Caucus issued statements in support of Environmental Protection Agency (EPA) Administrator Scott Pruitt, rejecting calls from opportunistic politicians and some members of the media for President Trump to remove the Administrator from office.

Scott Pruitt is the 14th Administrator of the EPA. During his short tenure, EPA Administrator Pruitt has established a strong track record on energy, environment, deregulation, the rule of law and science-based decision-making. He has also taken significant steps to clean up lawlessness and dysfunction within the agency.

The EPA's 2017-2018 Year in Review can be found [HERE](#). Highlights of the report include:

- In his first year, Pruitt finalized 22 deregulatory actions saving job creators and hard-working Americans more than \$1 billion in regulations costs.

- Administrator Pruitt also put an end to “sue and settle” practices within the EPA.
- Under Pruitt's leadership, the EPA also rejected the Obama Administration's new and unnecessary financial responsibility requirements for certain hardrock mining facilities.
- Pruitt also took numerous actions to benefit the environment including: eliminating seven contaminated sites and taking significant actions to clean up contaminated lands, improve water quality and ensure polluters were held accountable.

The Western Caucus also reminded those calling for the removal of Pruitt of ten major scandals involving the EPA during the Obama Administration. In the midst of those transgressions - most of which represented far greater malfeasance than any of the accusations levelled against EPA Administrator Pruitt - these same politicians and outlets largely failed to call for Obama EPA Administrators Jackson and McCarthy to be removed.

1. **“Richard Windsor (of course):** “The one, the only—Richard Windsor, a.k.a. Lisa Jackson. I mean, she corresponded exclusively in an alias. The only thing sketchier than that is what Hilary did.” Read more [here](#).
2. **“Text gate:** Here’s what we know: EPA Administrator Gina McCarthy conducted business via text and then destroyed the records of her correspondence, in blatant contravention of federal recordkeeping laws.” Read more [here](#) and [here](#).
3. **John Beale:** “John C. Beale masqueraded as a CIA agent to steal in total \$900,000 in government pay, bonuses and expenses.” “On April 30, 2013, [EPA Administrator Gina] McCarthy had cause to fire Beale, but instead elected to allow him to voluntarily retire with full benefits.” “A U.S. Senate [investigation](#) blasted McCarthy, [Beale’s] boss at the time at OAR, for not taking action for months after learning that Beale committed fraud.” Read more [here](#) and [here](#).
4. **EPA child molester:** “A child-molesting Environmental Protection Agency (EPA) official who was paid \$55,000 to retire is only one of many bad agency employees who skirted termination, according to a congressional committee. The Daily Caller [had more detail](#) on this situation, noting that this ‘convicted child molester — was on EPA’s payroll for years, even after EPA learned of his offense.” Read more [here](#).
5. **Acting Associate Administrator Peter Jutro:** “Mr. Jutro was the acting associate administrator for the EPA Office of Homeland Security, he also happens to be a serial sexual harasser. As a result of an inspector general investigation, we now know that Mr. Jutro sexually harassed at least 16 women while working at the EPA,” explained Chaffetz. “Even worse, EPA senior management was aware of his history of harassing women but continued to promote him.” Read more [here](#).
6. **WOTUS lobbying that broke the law:** “The Environmental Protection Agency engaged in ‘covert propaganda’ and violated federal law when it blitzed social media to urge the public to back an Obama administration rule intended to better protect the nation’s streams and surface waters, congressional auditors have concluded. The [ruling](#) by the Government Accountability Office, which opened its investigation after a [report](#) on the agency’s practices in The New York Times, drew a bright line for federal agencies experimenting with social media about the perils of going too far to push a cause. Federal laws prohibit agencies from engaging in lobbying and propaganda.” Read more [here](#).
7. **WOTUS rule generally:** According to a [182-page Committee Report](#), EPA Administrator Gina McCarthy shoved a terrible rule down the throats of the American people that was “rife with legal shortcuts, predetermined conclusions, and politically-driven timelines.” Amongst other flaws the EPA, “pushed the rule through on an accelerated timeline that appeared to have been

motivated by political considerations... made no effort to ensure the rule was based on sound science...pushed the rule through despite strong objections from senior Corps leadership...did not consider appropriate alternatives to the rule...did not fully consider public comments before finalizing the rule...failed to comply with various rulemaking obligations.” Read more [here](#).

8. **Flights of Obama EPA Administrators:** “Lisa Jackson, EPA director from 2009 to 2013, racked up more than \$332,000 on four overseas trips. Gina McCarthy, the chief in 2013-17, spent nearly \$630,000 on flights and security in her 10 international travels. None of which made headlines, even on the web — though their yearly average bill was a bit above Pruitt’s one-year total. Maybe Pruitt should pass on the junkets and save the taxpayers some money, but he’s not costing them any more than the Democrats who held the same job.” Read more [here](#).
9. **“Ignoring the Flint Water Crisis:** In April 2014, a state-appointed manager switched Flint’s drinking water source [to save money](#). Residents of the impoverished town soon started to complain about the new water’s color and odor: Testing showed it contained high levels of lead and other poisons in violation of the Safe Drinking Water Act. Although McCarthy’s EPA was first notified of the problem in April 2015, she did not declare a [state of emergency](#) until January 2016.” Read more [here](#).
10. **“Causing the Gold King Mine spill:** In 2015, EPA workers destroyed a plug that was holding water at the abandoned Gold King Mine in Colorado. Despite knowing the risk of a blowout (and [subsequently covering up](#) the fact they had that knowledge), the work continued at the abandoned mine until a breach unleashed three million gallons of toxic waste into the Animas River, polluting a waterway serving three Western states. While McCarthy [apologized for the disaster](#)—calling it a “tragic and unfortunate incident”—her agency [declined to accept full responsibility](#) and attempted to deflect any scrutiny from Congress and the media.” Read more [here](#).

Subject: DRAFT - recent media coverage

All – below and attached is the *initial* coverage we've captured. Molly will help with this tomorrow, as I'm on the road. Let us know what's missing thus far. Thanks!

NATIONAL ...

The Federalist: Scott Pruitt Is Trump's Biggest Asset. That's Why the Left Wants Him Gone. "After Donald Trump, the individual in DC with the biggest target on his back is Environmental Protection Agency Administrator Scott Pruitt. When he was attorney general of Oklahoma, he sued the EPA more than a dozen times to get the powerful regulatory agency to stay within its legal authority. His nomination was deeply concerning to radical environmentalists inside and outside the media. As a result, he and his team have been under a microscope since even before his confirmation in early 2017. Well-funded environmental groups, many with former EPA staffers, deluge the agency with FOIA requests to catch someone in a scandal. Unlike how they covered Obama-era EPA administrators, media outlets constantly request information about everything Pruitt does, from his schedule to his travel particulars. Whipped-up partisans have made unprecedented numbers of death threats against him and his family. Powerful liberals opine against him."

Red State: Why are people who are supposed to be conservative trying to torpedo Scott Pruitt? "Pruitt is a guy we should all be lining up to defend. Under Pruitt, the EPA accepted responsibility for the disastrous spill it created at the Gold King mine in Colorado. And he committed substantial resources to the clean-up. He's prioritized the clean-up of Super Fund sites that have lingered for decades. He has taken fire and sword to the onerous regulatory strait jacket the Obama administration tried to impose on the US economy. Pruitt had begun the repeal of Obama's Clean Power Plan coal regs and the Obama-era Clean Power Plan. Under Pruitt, an executive order was issued to rescind the EPA's overreaching Waters of the United States (WOTUS) rule that often allowed the EPA to claim jurisdiction over literal mudholes."

The Hill: EPA Chief Scott Pruitt Gets Results — That's Why He's A Target Of The Left. "President Donald Trump is standing by his embattled Environmental Protection Agency (EPA) Administrator Scott Pruitt, according to reports. Let's be clear, that is good thing for both Trump and the country. Pruitt is one of the shining stars of the Trump administration, and no one who supports the president's "Make America Great Again" agenda should want him replaced...Yet some hope that by attacking Pruitt on fake ethics charges, the media-created scandal will cause the Trump White House to either foolishly force Pruitt out or cause him to throw up his hands in disgust and resign. This would be a disaster for President Trump and all of us who care about his success."

The Resurgent: Firing Scott Pruitt Will Only Embolden the Left. "Scott Pruitt is being targeted because he is effective. The President needs to stand behind Pruitt. It is an open secret in Washington that a leftwing opposition research firm has hired investigators to dig into Trump Administration officials. It is no coincidence that many of the accusations, like with former Secretary of Health and Human Services Tom Price, involve private air travel and the like. It is what these investigators focus on to give the media easy stories."

The Daily Signal: 3 Reasons the Left Hates Scott Pruitt. "From the Clean Power Plan, which was all about Obama's climate agenda and which had nothing to do with creating clean air (we already have laws about that), to the Waters of the United States regulation which could turn a puddle in your front yard into environmentally-protected swamp land—Pruitt has been rolling back many of the regulations put in place by Obama's overzealous, power-grabbing, and arguably unconstitutional EPA."

The Washington Times: President Trump should stand by his man at EPA; Scott Pruitt deserves no less. "EPA Administrator Scott Pruitt has been the most effective cabinet secretary President Trump has had during his 14-month presidency. He has loyally carried out the president's aggressive agenda against out-of-control federal regulations that stifle economic growth and kill American jobs. Pruitt has faithfully fulfilled Trump's campaign promises by rolling back Obama-era environmental overreach and halting most new regulations that were in the pipeline when he inherited the bloated agency from his predecessor, Gina McCarthy. Pruitt has spearheaded Trump's agenda with impactful moves like pulling out of the Paris climate accords, reforming CAFE standards and rolling back the obtrusive way the EPA

administered the Clean Water Act. As the man willing to attack these sacred cows of the Left Pruitt has been rewarded with legitimate and specific death threats against himself and his family.”

The Washington Examiner: While media fixate on Scott Pruitt’s living arrangements, his EPA reforms are praiseworthy. “Pruitt’s efforts to alleviate the regulatory burden on average Americans while working to restore sound scientific practices within the EPA arguably rank among the Trump administration’s most significant policy achievements. EPA officials quoted in the press have said Pruitt’s living arrangements did not violate ethics rules. Even if there is no technical violation, appearances matter in Washington. That’s especially true for someone who has been remarkably effective up until now in advancing the Trump administration’s efforts to free the economy from centralized planning in Washington.”

The Daily Signal: Exclusive: EPA Chief Scott Pruitt Says Media Reports About Him Don’t Tell True Story. “‘We had a memo and a statement from career ethics officials here that have actually reviewed the lease, that actually reviewed comps—comparables of similar units,’ Pruitt, the former attorney general of Oklahoma, told The Daily Signal. ‘And I think what’s missed in this: I didn’t rent a unit,’ Pruitt said. ‘I didn’t rent an apartment. This was an Airbnb-type situation where I rented literally one room that was used in a temporary status, until I found more permanent residence.’”

USA Today: With President Trump in his corner, Scott Pruitt’s job at EPA looks safe – for now. “‘Why go and replace someone who’s doing a very good job (carrying out) the president’s agenda,’ said Jason Miller, a former senior communications adviser to the Trump campaign and transition team. ‘It hasn’t gone unnoticed that Administrator Pruitt is accomplishing a lot for the president and in a much quicker time period than anyone thought possible.’”

The Daily Caller: Conservative Pundits Rally to EPA’s Scott Pruitt as Dems Call for His Head. “Conservative allies have come to the aid of Environmental Protection Agency (EPA) Administrator Scott Pruitt as lawmakers, environmental activists and pundits call for his resignation... Wall Street Journal columnist Kimberley Strassel called the wave of anti-Pruitt stories “absurd,” pointing out that Obama EPA officials spent more on travel and that agency ethics officials approved of the administrator’s temporary living arrangement in the condo.”

The Washington Examiner: Embattled Scott Pruitt Rips ‘Toxic’ Washington, Says Critics ‘Will Resort To Anything’ To Stop Trump Agenda. “EPA Administrator Scott Pruitt on Tuesday forcefully pushed back against criticism that he won a short-term sweetheart rental deal from a lobbyist friend, claiming it’s just the latest attempt by his and the president’s attackers to ‘resort to anything’ to stop their agenda. ‘There are people that have long in this town done business a different way and this agency has been the poster child of it. And so do I think that because we are leading on this agenda that there are some who want to keep that from happening? Absolutely. And do I think that they will resort to anything to achieve that? Yes,’ he said in an interview with Secrets. ‘It’s toxic here in that regard,’ said Pruitt, one of a handful of President’s Trump’s agency heads who is scoring wins on his pro-jobs, anti-regulatory campaign. Pruitt, speaking confidently about his future, said that critics who have focused on his \$50 a night room rental in an Airbnb-style townhouse and his air travel are really out to stop the administration’s anti-regulatory effort that has saved \$8 billion overall and \$1 billion in reduced Environmental Protection Agency regulations.”

CNN: EPA’s Pruitt Fulfilling Trump’s Anti-Regulatory Agenda. “Environmental Protection Agency Administrator Scott Pruitt is drawing scrutiny for his housing situation and travel practices, but in his role as the nation’s top environmental official, he’s a reliable administration foot soldier, making good on President Donald Trump’s campaign promises for fewer environmental regulations and to withdraw from the Paris climate agreement. Since he was confirmed to the job last February, Pruitt has taken an aggressive approach to rolling back Obama-era regulations, most recently this week’s announcement that he would revise fuel efficiency rules designed to cut back on emissions of greenhouse gases. “This is another step in the President’s regulatory agenda, de-regulatory agenda ... a billion dollars in savings

with respect to over 22 significant regulatory actions that we've been involved in here at the agency," Pruitt said at EPA headquarters Tuesday."

E&E News: Conservatives Rally Behind Pruitt. "Conservatives are supporting U.S. EPA Administrator Scott Pruitt as he struggles with reports of premium travel, high-price security and ties to lobbyists. Myron Ebell, who led President Trump's EPA transition team, told E&E News that Pruitt has been consequential in achieving the president's goals. Pruitt has proposed repealing several Obama-era regulations, winning plaudits from free-market and business groups that have long battled with EPA. "We're getting the word out that Administrator Pruitt is doing a good job in implementing the president's agenda and Administrator Pruitt is a key part of that agenda," Ebell said. "We're trying to keep the free-market groups and the conservative groups together in support of the agenda." Ebell, director of the Competitive Enterprise Institute's Center for Energy and Environment, talked to E&E News on his way to EPA headquarters today to attend Pruitt's announcement of the rollback of Obama-era auto fuel efficiency standards. Ebell declined to speculate whether Pruitt's job is in jeopardy."

Hot Air: Pruitt talks streamlining the agency, RFS, and "the swamp." Administrator Pruitt does not admit to being a cryptozoological creature, nor can he confirm that he will be starring as a villain in an upcoming Marvel superhero movie. There's more about the EPA's move to only accept real science rather than secret science in their decision-making process as well as some hints at new regulatory moves on the horizon.

<image001.png>

<image002.png>

WHAT THEY ARE SAYING...

Daily Torch: If environmental radicals are in full panic mode over Scott Pruitt at EPA, that means he is doing a good job. "The left has spent over a decade trying to expand the influence and oversight of the Environmental Protection Agency (EPA), but the American people voted against this influence when they elected President Trump to prioritize economic advancement. Trump followed through on this promise by appointing Scott Pruitt as EPA Administrator. The left is now trying everything to destroy his position and defame his record, but Pruitt must power through, his job is far too important...Scott Pruitt has done his job, and he has done it well. All the left's continued attacks prove is that it is willing to dismiss facts in favor of pushing an agenda. Pruitt must continue charting the EPA's path toward a balance between environmental concerns and economic development and security, rather than be distracted by the baseless attacks from political opponents, and President Trump needs to stand behind this stalwart of his administration, who is big part of what is needed to make America great again."

Freedom Works: Continues to support the leadership of Administrator Scott Pruitt. "Adam Brandon: 'Scott Pruitt has worked hard to return the EPA to its core mission: protecting the environment as directed by Congress; instead of the rogue assault on the rule of law, freedom, and the economy that we saw in the prior administration.' Ken Cuccinelli: 'Unlike his predecessors, EPA Administrator Pruitt has core environmental accomplishments to his credit: like actually making progress on the long-dormant superfund sites and attacking the problem of lead in drinking water. These are basic responsibilities for the EPA, yet they were abject failures prior to Pruitt's arrival.'"

Subject: DRAFT - recent media coverage

All – below and attached is the *initial* coverage we've captured. Molly will help with this tomorrow, as I'm on the road. Let us know what's missing thus far. Thanks!

NATIONAL ...

The Federalist: **Scott Pruitt Is Trump's Biggest Asset. That's Why the Left Wants Him Gone.** "After Donald Trump, the individual in DC with the biggest target on his back is Environmental Protection Agency Administrator Scott Pruitt. When he was attorney general of Oklahoma, he sued the EPA more than a dozen times to get the powerful regulatory agency to stay within its legal authority. His nomination was deeply concerning to radical environmentalists inside and outside the media. As a result, he and his team have been under a microscope since even before his confirmation in early 2017. Well-funded environmental groups, many with former EPA staffers, deluge the agency with FOIA requests to catch someone in a scandal. Unlike how they covered Obama-era EPA administrators, media outlets constantly request information about everything Pruitt does, from his schedule to his travel particulars. Whipped-up partisans have made unprecedented numbers of death threats against him and his family. Powerful liberals opine against him."

Red State: Why are people who are supposed to be conservative trying to torpedo Scott Pruitt? “Pruitt is a guy we should all be lining up to defend. Under Pruitt, the EPA accepted responsibility for the disastrous spill it created at the Gold King mine in Colorado. And he committed substantial resources to the clean-up. He’s prioritized the clean-up of Super Fund sites that have lingered for decades. He has taken fire and sword to the onerous regulatory strait jacket the Obama administration tried to impose on the US economy. Pruitt had begun the repeal of Obama’s Clean Power Plan coal regs and the Obama-era Clean Power Plan. Under Pruitt, an executive order was issued to rescind the EPA’s overreaching Waters of the United States (WOTUS) rule that often allowed the EPA to claim jurisdiction over literal mudholes.”

The Hill: EPA Chief Scott Pruitt Gets Results — That’s Why He’s A Target Of The Left. “President Donald Trump is standing by his embattled Environmental Protection Agency (EPA) Administrator Scott Pruitt, according to reports. Let’s be clear, that is good thing for both Trump and the country. Pruitt is one of the shining stars of the Trump administration, and no one who supports the president’s “Make America Great Again” agenda should want him replaced...Yet some hope that by attacking Pruitt on fake ethics charges, the media-created scandal will cause the Trump White House to either foolishly force Pruitt out or cause him to throw up his hands in disgust and resign. This would be a disaster for President Trump and all of us who care about his success.”

The Resurgent: Firing Scott Pruitt Will Only Embolden the Left. “Scott Pruitt is being targeted because he is effective. The President needs to stand behind Pruitt. It is an open secret in Washington that a leftwing opposition research firm has hired investigators to dig into Trump Administration officials. It is no coincidence that many of the accusations, like with former Secretary of Health and Human Services Tom Price, involve private air travel and the like. It is what these investigators focus on to give the media easy stories.”

The Daily Signal: 3 Reasons the Left Hates Scott Pruitt. “From the Clean Power Plan, which was all about Obama’s climate agenda and which had nothing to do with creating clean air (we already have laws about that), to the Waters of the United States regulation which could turn a puddle in your front yard into environmentally-protected swamp land—Pruitt has been rolling back many of the regulations put in place by Obama’s overzealous, power-grabbing, and arguably unconstitutional EPA.”

The Washington Times: President Trump should stand by his man at EPA; Scott Pruitt deserves no less. “EPA Administrator Scott Pruitt has been the most effective cabinet secretary President Trump has had during his 14-month presidency. He has loyally carried out the president’s aggressive agenda against out-of-control federal regulations that stifle economic growth and kill American jobs. Pruitt has faithfully fulfilled Trump’s campaign promises by rolling back Obama-era environmental overreach and halting most new regulations that were in the pipeline when he inherited the bloated agency from his predecessor, Gina McCarthy. Pruitt has spearheaded Trump’s agenda with impactful moves like pulling out of the Paris climate accords, reforming CAFE standards and rolling back the obtrusive way the EPA administered the Clean Water Act. As the man willing to attack these sacred cows of the Left Pruitt has been rewarded with legitimate and specific death threats against himself and his family.”

The Washington Examiner: While media fixate on Scott Pruitt’s living arrangements, his EPA reforms are praiseworthy. “Pruitt’s efforts to alleviate the regulatory burden on average Americans while working to restore sound scientific practices within the EPA arguably rank among the Trump administration’s most significant policy achievements. EPA officials quoted in the press have said Pruitt’s living arrangements did not violate ethics rules. Even if there is no technical violation, appearances matter in Washington. That’s especially true for someone who has been remarkably effective up until now in advancing the Trump administration’s efforts to free the economy from centralized planning in Washington.”

The Daily Signal: Exclusive: EPA Chief Scott Pruitt Says Media Reports About Him Don’t Tell True Story. “We had a memo and a statement from career ethics officials here that have actually reviewed the

lease, that actually reviewed comps—comparables of similar units,’ Pruitt, the former attorney general of Oklahoma, told The Daily Signal. ‘And I think what’s missed in this: I didn’t rent a unit,’ Pruitt said. ‘I didn’t rent an apartment. This was an Airbnb-type situation where I rented literally one room that was used in a temporary status, until I found more permanent residence.’”

USA Today: With President Trump in his corner, Scott Pruitt’s job at EPA looks safe – for now. “‘Why go and replace someone who’s doing a very good job (carrying out) the president’s agenda,’ said Jason Miller, a former senior communications adviser to the Trump campaign and transition team. ‘It hasn’t gone unnoticed that Administrator Pruitt is accomplishing a lot for the president and in a much quicker time period than anyone thought possible.’”

The Daily Caller: Conservative Pundits Rally to EPA’s Scott Pruitt as Dems Call for His Head.

“Conservative allies have come to the aid of Environmental Protection Agency (EPA) Administrator Scott Pruitt as lawmakers, environmental activists and pundits call for his resignation... Wall Street Journal columnist Kimberley Strassel called the wave of anti-Pruitt stories “absurd,” pointing out that Obama EPA officials spent more on travel and that agency ethics officials approved of the administrator’s temporary living arrangement in the condo.”

The Washington Examiner: Embattled Scott Pruitt Rips ‘Toxic’ Washington, Says Critics ‘Will Resort To Anything’ To Stop Trump Agenda. “EPA Administrator Scott Pruitt on Tuesday forcefully pushed back against criticism that he won a short-term sweetheart rental deal from a lobbyist friend, claiming it’s just the latest attempt by his and the president’s attackers to ‘resort to anything’ to stop their agenda. ‘There are people that have long in this town done business a different way and this agency has been the poster child of it. And so do I think that because we are leading on this agenda that there are some who want to keep that from happening? Absolutely. And do I think that they will resort to anything to achieve that? Yes,’ he said in an interview with Secrets. ‘It’s toxic here in that regard,’ said Pruitt, one of a handful of President’s Trump’s agency heads who is scoring wins on his pro-jobs, anti-regulatory campaign. Pruitt, speaking confidently about his future, said that critics who have focused on his \$50 a night room rental in an Airbnb-style townhouse and his air travel are really out to stop the administration’s anti-regulatory effort that has saved \$8 billion overall and \$1 billion in reduced Environmental Protection Agency regulations.”

CNN: EPA’s Pruitt Fulfilling Trump’s Anti-Regulatory Agenda. “Environmental Protection Agency Administrator Scott Pruitt is drawing scrutiny for his housing situation and travel practices, but in his role as the nation’s top environmental official, he’s a reliable administration foot soldier, making good on President Donald Trump’s campaign promises for fewer environmental regulations and to withdraw from the Paris climate agreement. Since he was confirmed to the job last February, Pruitt has taken an aggressive approach to rolling back Obama-era regulations, most recently this week’s announcement that he would revise fuel efficiency rules designed to cut back on emissions of greenhouse gases. “This is another step in the President’s regulatory agenda, de-regulatory agenda ... a billion dollars in savings with respect to over 22 significant regulatory actions that we’ve been involved in here at the agency,” Pruitt said at EPA headquarters Tuesday.”

E&E News: Conservatives Rally Behind Pruitt. “Conservatives are supporting U.S. EPA Administrator Scott Pruitt as he struggles with reports of premium travel, high-price security and ties to lobbyists. Myron Ebell, who led President Trump’s EPA transition team, told E&E News that Pruitt has been consequential in achieving the president’s goals. Pruitt has proposed repealing several Obama-era regulations, winning plaudits from free-market and business groups that have long battled with EPA. “We’re getting the word out that Administrator Pruitt is doing a good job in implementing the president’s agenda and Administrator Pruitt is a key part of that agenda,” Ebell said. “We’re trying to keep the free-market groups and the conservative groups together in support of the agenda.” Ebell, director of the Competitive Enterprise Institute’s Center for Energy and Environment, talked to E&E

News on his way to EPA headquarters today to attend Pruitt's announcement of the rollback of Obama-era auto fuel efficiency standards. Ebell declined to speculate whether Pruitt's job is in jeopardy."

Hot Air: Pruitt talks streamlining the agency, RFS, and "the swamp." Administrator Pruitt does not admit to being a cryptozoological creature, nor can he confirm that he will be starring as a villain in an upcoming Marvel superhero movie. There's more about the EPA's move to only accept real science rather than secret science in their decision-making process as well as some hints at new regulatory moves on the horizon.

<image001.png>

NPR: Working with Scott Pruitt. Lawyer David Rivkin worked with Pruitt and talks with NPR's David Greene.

<image002.png>

WHAT THEY ARE SAYING...

Daily Torch: If environmental radicals are in full panic mode over Scott Pruitt at EPA, that means he is doing a good job. "The left has spent over a decade trying to expand the influence and oversight of the Environmental Protection Agency (EPA), but the American people voted against this influence when they elected President Trump to prioritize economic advancement. Trump followed through on this promise by appointing Scott Pruitt as EPA Administrator. The left is now trying everything to destroy his position and defame his record, but Pruitt must power through, his job is far too important...Scott Pruitt has done his job, and he has done it well. All the left's continued attacks prove is that it is willing to dismiss facts in favor of pushing an agenda. Subject: DRAFT - recent media coverage

All – below and attached is the initial coverage we've captured. Molly will help with this tomorrow, as I'm on the road. Let us know what's missing thus far. Thanks!

NATIONAL ...

The Federalist<<http://thefederalist.com/2018/04/04/scott-pruitt-is-trumps-biggest-asset-thats-why-the-left-wants-him-gone/>>: Scott Pruitt Is Trump's Biggest Asset. That's Why the Left Wants Him Gone. "After Donald Trump, the individual in DC with the biggest target on his back is Environmental Protection Agency Administrator Scott Pruitt. When he was attorney general of Oklahoma, he sued the EPA more than a dozen times to get the powerful regulatory agency to stay within its legal authority. His nomination was deeply concerning to radical environmentalists inside and outside the media. As a result, he and his team have been under a microscope since even before his confirmation in early 2017. Well-funded environmental

groups, many with former EPA staffers, deluge the agency with FOIA requests to catch someone in a scandal. Unlike how they covered Obama-era EPA administrators, media outlets constantly request information about everything Pruitt does, from his schedule to his travel particulars. Whipped-up partisans have made unprecedented numbers of death threats against him and his family. Powerful liberals opine against him.”

Red State:<<https://www.redstate.com/streiff/2018/04/04/people-supposed-conservative-trying-torpedo-scott-pruitt/>> Why are people who are supposed to be conservative trying to torpedo Scott Pruitt? “Pruitt is a guy we should all be lining up to defend. Under Pruitt, the EPA accepted responsibility for the disastrous spill it created at the Gold King mine in Colorado. And he committed substantial resources to the clean-up. He’s prioritized the clean-up of Super Fund sites that have lingered for decades. He has taken fire and sword to the onerous regulatory strait jacket the Obama administration tried to impose on the US economy. Pruitt had begun the repeal of Obama’s Clean Power Plan coal regs and the Obama-era Clean Power Plan. Under Pruitt, an executive order was issued to rescind the EPA’s overreaching Waters of the United States (WOTUS) rule that often allowed the EPA to claim jurisdiction over literal mudholes.”

The Hill:<<http://thehill.com/opinion/energy-environment/381508-epa-chief-scott-pruitt-gets-results-thats-why-hes-a-target-of-the>> EPA Chief Scott Pruitt Gets Results — That's Why He's A Target Of The Left. “President Donald Trump is standing by his embattled Environmental Protection Agency (EPA) Administrator Scott Pruitt, according to reports. Let’s be clear, that is good thing for both Trump and the country. Pruitt is one of the shining stars of the Trump administration, and no one who supports the president’s “Make America Great Again” agenda should want him replaced... Yet some hope that by attacking Pruitt on fake ethics charges, the media-created scandal will cause the Trump White House to either foolishly force Pruitt out or cause him to throw up his hands in disgust and resign. This would be a disaster for President Trump and all of us who care about his success.”

The Resurgent:<<https://www.themaven.net/theresurgent/erick-erickson/firing-scott-pruitt-will-only-embolden-the-left-98kPgKgnh06CbfWqAwBc9A/>> Firing Scott Pruitt Will Only Embolden the Left. “Scott Pruitt is being targeted because he is effective. The President needs to stand behind Pruitt. It is an open secret in Washington that a leftwing opposition research firm has hired investigators to dig into Trump Administration officials. It is no coincidence that many of the accusations, like with former Secretary of Health and Human Services Tom Price, involve private air travel and the like. It is what these investigators focus on to give the media easy stories.”

The Daily Signal:<<https://www.dailysignal.com/2018/04/04/3-reasons-left-hates-scott-pruitt/>> 3 Reasons the Left Hates Scott Pruitt. “From the Clean Power Plan, which was all about Obama’s climate agenda and which had nothing to do with creating clean air (we already have laws about that), to the Waters of the United States regulation which could turn a puddle in your front yard into environmentally-protected swamp land—Pruitt has been rolling back many of the regulations put in place by Obama’s overzealous, power-grabbing, and arguably unconstitutional EPA.”

The Washington Times<https://www.washingtontimes.com/news/2018/apr/3/president-trump-should-stand-his-man-epa-scott-pru/?utm_campaign=shareaholic&utm_medium=twitter&utm_source=socialnetwork>: President Trump should stand by his man at EPA; Scott Pruitt deserves no less. “EPA Administrator Scott Pruitt has been the most effective cabinet secretary President Trump has had during his 14-month presidency. He has loyally carried out the president’s aggressive agenda against out-of-control federal regulations that stifle economic growth and kill American jobs. Pruitt has faithfully fulfilled Trump’s campaign promises by rolling back Obama-era environmental overreach and

halting most new regulations that were in the pipeline when he inherited the bloated agency from his predecessor, Gina McCarthy. Pruitt has spearheaded Trump's agenda with impactful moves like pulling out of the Paris climate accords, reforming CAFE standards and rolling back the obtrusive way the EPA administered the Clean Water Act. As the man willing to attack these sacred cows of the Left Pruitt has been rewarded with legitimate and specific death threats against himself and his family."

The Washington Examiner<<https://www.washingtonexaminer.com/opinion/while-media-fixate-on-scott-pruitts-living-arrangements-his-epa-reforms-are-praiseworthy>>: While media fixate on Scott Pruitt's living arrangements, his EPA reforms are praiseworthy. "Pruitt's efforts to alleviate the regulatory burden on average Americans while working to restore sound scientific practices within the EPA arguably rank among the Trump administration's most significant policy achievements. EPA officials quoted in the press have said Pruitt's living arrangements did not violate ethics rules. Even if there is no technical violation, appearances matter in Washington. That's especially true for someone who has been remarkably effective up until now in advancing the Trump administration's efforts to free the economy from centralized planning in Washington."

The Daily Signal<<https://www.dailysignal.com/2018/04/03/ethics-officials-okd-bedroom-rental-epa-chief-says/>>: Exclusive: EPA Chief Scott Pruitt Says Media Reports About Him Don't Tell True Story. "'We had a memo and a statement from career ethics officials here that have actually reviewed the lease, that actually reviewed comps—comparables of similar units,' Pruitt, the former attorney general of Oklahoma, told The Daily Signal. 'And I think what's missed in this: I didn't rent a unit,' Pruitt said. 'I didn't rent an apartment. This was an Airbnb-type situation where I rented literally one room that was used in a temporary status, until I found more permanent residence.'"

USA Today:<<https://www.usatoday.com/story/news/politics/2018/04/04/president-trump-his-corner-scott-pruitts-job-epa-looks-safe-now/485083002/>> With President Trump in his corner, Scott Pruitt's job at EPA looks safe – for now. "'Why go and replace someone who's doing a very good job (carrying out) the president's agenda,' said Jason Miller, a former senior communicators adviser to the Trump campaign and transition team. 'It hasn't gone unnoticed that Administrator Pruitt is accomplishing a lot for the president and in a much quicker time period than anyone thought possible.'"

The Daily Caller<<http://dailycaller.com/2018/04/04/conservative-pundits-rally-to-epas-scott-pruitt-as-dems-call-for-his-head/>>: Conservative Pundits Rally to EPA's Scott Pruitt as Dems Call for His Head. "Conservative allies have come to the aid of Environmental Protection Agency (EPA) Administrator Scott Pruitt as lawmakers, environmental activists and pundits call for his resignation... Wall Street Journal columnist Kimberley Strassel called the wave of anti-Pruitt stories "absurd," pointing out that Obama EPA officials spent more on travel and that agency ethics officials approved of the administrator's temporary living arrangement in the condo."

The Washington Examiner<<https://www.washingtonexaminer.com/washington-secrets/scott-pruitt-washington-toxic-critics-trying-stop-trump-agenda>>: Embattled Scott Pruitt Rips 'Toxic' Washington, Says Critics 'Will Resort To Anything' To Stop Trump Agenda. "EPA Administrator Scott Pruitt on Tuesday forcefully pushed back against criticism that he won a short-term sweetheart rental deal from a lobbyist friend, claiming it's just the latest attempt by his and the president's attackers to 'resort to anything' to stop their agenda. 'There are people that have long in this town done business a different way and this agency has been the poster child of it. And so do I think that because we are leading on this agenda that there are some who want to keep that from happening? Absolutely. And do I think that they will resort to anything to

achieve that? Yes,' he said in an interview with Secrets. 'It's toxic here in that regard,' said Pruitt, one of a handful of President's Trump's agency heads who is scoring wins on his pro-jobs, anti-regulatory campaign. Pruitt, speaking confidently about his future, said that critics who have focused on his \$50 a night room rental in an Airbnb-style townhouse and his air travel are really out to stop the administration's anti-regulatory effort that has saved \$8 billion overall and \$1 billion in reduced Environmental Protection Agency regulations."

CNN:<<https://www.cnn.com/2018/04/03/politics/scott-pruitt-donald-trump-environment-policy/index.html>> EPA's Pruitt Fulfilling Trump's Anti-Regulatory Agenda. "Environmental Protection Agency Administrator Scott Pruitt is drawing scrutiny for his housing situation and travel practices, but in his role as the nation's top environmental official, he's a reliable administration foot soldier, making good on President Donald Trump's campaign promises for fewer environmental regulations and to withdraw from the Paris climate agreement. Since he was confirmed to the job last February, Pruitt has taken an aggressive approach to rolling back Obama-era regulations, most recently this week's announcement that he would revise fuel efficiency rules designed to cut back on emissions of greenhouse gases. "This is another step in the President's regulatory agenda, de-regulatory agenda ... a billion dollars in savings with respect to over 22 significant regulatory actions that we've been involved in here at the agency," Pruitt said at EPA headquarters Tuesday."

E&E News:<<https://www.eenews.net/stories/1060078051>> Conservatives Rally Behind Pruitt. "Conservatives are supporting U.S. EPA Administrator Scott Pruitt as he struggles with reports of premium travel, high-price security and ties to lobbyists. Myron Ebell, who led President Trump's EPA transition team, told E&E News that Pruitt has been consequential in achieving the president's goals. Pruitt has proposed repealing several Obama-era regulations, winning plaudits from free-market and business groups that have long battled with EPA. "We're getting the word out that Administrator Pruitt is doing a good job in implementing the president's agenda and Administrator Pruitt is a key part of that agenda," Ebell said. "We're trying to keep the free-market groups and the conservative groups together in support of the agenda." Ebell, director of the Competitive Enterprise Institute's Center for Energy and Environment, talked to E&E News on his way to EPA headquarters today to attend Pruitt's announcement of the rollback of Obama-era auto fuel efficiency standards. Ebell declined to speculate whether Pruitt's job is in jeopardy."

Hot Air:<<https://hotair.com/archives/2018/04/04/interview-scott-pruitt-talking-regulatory-reform-scandals-rfs-swamp-monsters/>> Pruitt talks streamlining the agency, RFS, and "the swamp." Administrator Pruitt does not admit to being a cryptozoological creature, nor can he confirm that he will be starring as a villain in an upcoming Marvel superhero movie. There's more about the EPA's move to only accept real science rather than secret science in their decision-making process as well as some hints at new regulatory moves on the horizon.

<image001.png>

NPR: Working with Scott Pruitt.<<https://www.npr.org/2018/04/04/599361744/working-with-scott-pruitt>> Lawyer David Rivkin worked with Pruitt and talks with NPR's David Greene.

<image002.png>

WHAT THEY ARE SAYING...

Daily Torch:<<http://dailytorch.com/2018/04/if-environmental-radicals-are-in-full-panic-mode-over-scott-pruitt-at-epa-that-means-he-is-doing-a-good-job/>> If environmental radicals are in full panic mode over Scott Pruitt at EPA, that means he is doing a good job. "The left has spent over a decade trying to expand the influence and oversight of the Environmental Protection Agency (EPA), but the American people voted against this influence when they elected President Trump

to prioritize economic advancement. Trump followed through on this promise by appointing Scott Pruitt as EPA Administrator. The left is now trying everything to destroy his position and defame his record, but Pruitt must power through, his job is far too important... Scott Pruitt has done his job, and he has done it well. All the left's continued attacks prove is that it is willing to dismiss facts in favor of pushing an agenda. Pruitt must continue charting the EPA's path toward a balance between environmental concerns and economic development and security, rather than be distracted by the baseless attacks from political opponents, and President Trump needs to stand behind this stalwart of his administration, who is big part of what is needed to make America great again."

Freedom Works<<http://www.freedomworks.org/content/freedomworks-foundation-praises-scott-pruitt%E2%80%99s-record-epa>>: Continues to support the leadership of Administrator Scott Pruitt. "Adam Brandon: 'Scott Pruitt has worked hard to return the EPA to its core mission: protecting the environment as directed by Congress; instead of the rogue assault on the rule of law, freedom, and the economy that we saw in the prior administration.' Ken Cuccinelli: 'Unlike his predecessors, EPA Administrator Pruitt has core environmental accomplishments to his credit: like actually making progress on the long-dormant superfund sites and attacking the problem of lead in drinking water. These are basic responsibilities for the EPA, yet they were abject failures prior to Pruitt's arrival.'"

THE WALL STREET JOURNAL

The EPA Cleans Up Its Science

Now Congress Should Act To Lock In Place Data Transparency

Steve Milloy

March 26, 2018

<https://on.wsj.com/2lV9LeH>

The Environmental Protection Agency will no longer rely on “secret” scientific data to justify regulations, Administrator Scott Pruitt announced last week. EPA regulators and agency-funded researchers have become accustomed to producing unaccountable, dodgy science to advance a political agenda.

The saga began in the early 1990s, when the EPA sought to regulate fine particulate matter known as PM2.5—dust and soot smaller than 2.5 microns in diameter. PM2.5 was not known to cause death, but by 1994 EPA-supported scientists had developed two lines of research purporting to show that it did. When the studies were run past the EPA’s Clean Air Science Advisory Committee, it balked. It believed the studies relied on dubious statistical analysis and asked for the underlying data. The EPA ignored the request.

As the EPA prepared to issue its proposal for PM2.5 regulation in 1996, Congress stepped in. Rep. Thomas Bliley, chairman of the House Commerce Committee, sent a sharply written letter to Administrator Carol Browner asking for the data underlying studies. Ms. Browner delegated the response to a subordinate, who told Mr. Bliley the EPA saw “no useful purpose” in obtaining the data. Congress responded by inserting a provision in a 1998 bill requiring that data used to support federal regulation must be made available to the public via the Freedom of Information Act. But it was hastily written, and a federal appellate court held the law unenforceable in 2003.

The controversy went dormant until 2011, when a newly Republican Congress took exception to the Obama EPA's antioil rules, which relied on the same PM2.5 studies. Again the EPA was defiant. Administrator Gina McCarthy refused requests for the data sets and defied a congressional subpoena.

Bills to resolve the problem died in the Senate. Democrats argued that requiring data for study replication is a threat to intellectual property and an invasion of medical privacy. In fact, the legislation would protect property by requiring a confidentiality agreement, and no personal medical data or information would have been released.

This sort of data is already routinely made public for research use. In 2012 I was desperate for a way around the Obama EPA's secrecy on the PM2.5 issue, I found out in 2012 that I could get California death-certificate data in electronic form. The state's Health Department calls this sort of data "Death Public Use Files." They are scrubbed of all personal identifying and private medical information. Some of my colleagues used this data to prepare a 2017 study, which found PM2.5 was not associated with death.

The best part is that if you don't believe the result, you can get the same data for yourself from California and run your own analysis. Then we'll compare, contrast and debate. That's how science is supposed to work.

It would be better if Congress would pass a law requiring data transparency. A future administrator may backslide on the steps Mr. Pruitt is taking. In the meantime, we have science in the sunshine.

Ban On "Secret Science" In EPA Regulation Makes Sense

Editorial

March 26, 2018

<http://newsok.com/article/5588210/ban-on-secret-science-in-epa-regulation-makes-sense>

The Environmental Protection Agency has announced it will now base new regulations only on the findings of scientific studies whose data and methodology are made public so they can be subjected to independent review. That's a sound move in line with basic scientific transparency and professionalism.

Yet it's being treated as a sign of impending apocalypse by some on the left, which says much about the questionable validity of that group's policy prescriptions.

In an interview with The Daily Caller News Foundation, Administrator Scott Pruitt said the EPA will end its use of studies that do not publish underlying data, only conclusions. "Otherwise, it's not transparent. It's not objectively measured, and that's important," Pruitt said.

In the past, the EPA has advanced air-quality regulations that imposed massive costs based primarily on the findings of two studies done in the 1990s that linked fine particulate pollution to premature death. Neither study made associated data public.

U.S. Rep. Lamar Smith, R-Texas and chairman of the House Committee on Science,

Space and Technology, has long criticized the use of “secret science” and authored legislation to curtail its use by regulators. Last year, Smith said the EPA had “routinely relied on questionable science based on nonpublic information that could not be reproduced, a basic requirement of the scientific method.”

“Americans deserve to see the science for themselves,” Smith said. “If the EPA has nothing to hide, why not make the scientific data it uses for its regulations publicly available? What was the EPA hiding?”

That will strike most people as a fair question. But to some activists, the idea that science should involve review and scrutiny is apparently anathema. In response to a prior effort to ban “secret science” at the EPA, Andrew Rosenberg, director of the Union of Concerned Scientists’ Center for Science and Democracy, said transparency would “gut the EPA at the expense of public health and safety.”

That same group has claimed release of data would require publicizing the confidential patient data of individuals. But Steve Milloy, publisher of JunkScience.com and a senior fellow at the Energy and Environmental Legal Institute, notes that California already makes similar data available in its “Public Use Death Files,” and that has been accomplished without violating patient privacy.

Other critics object that there are costs involved in scrubbing data sets so patient privacy is protected. Perhaps, but that doesn’t mean the public should be kept in the dark about the data and methods used to justify literally billions in new regulatory burden.

Scientific studies are as susceptible to human error and even outright fraud as any other endeavor — particularly when such studies are used in the political realm. Facilitating transparency and independent review will reduce the chances of bad science harming Americans with half-baked regulations, and should enhance the case for regulations when the underlying science has withstood independent scrutiny.

Given the stakes for public health and the national economy, Americans must be assured government regulations are based on sound science, not someone’s “trust me” assurances.

EPA'S WEEKLY REPORT

This week Environmental Protection Agency (EPA) Administrator Scott Pruitt sat down with more than a dozen reporters across all mediums to discuss the important work the Agency is doing to ensure regulatory certainty for America's farmers, ranchers, and businesses during National Agriculture Week. Pruitt also advanced the Trump Administration's infrastructure agenda with a push to eradicate lead from drinking water and convene a [national leadership summit](#) on PFAS to update America's crumbling water infrastructure.

NATIONAL NEWS ...

In an exclusive interview with the [Daily Caller](#), EPA Administrator Scott Pruitt laid out his plans to end the use of "secret science" to craft Agency regulations. "Pruitt will reverse long-standing EPA policy allowing regulators to rely on non-public scientific data in crafting rules. Such studies have been used to justify tens of billions of dollars worth of regulations. EPA regulators would only be allowed to consider scientific studies that make their data available for public scrutiny under Pruitt's new policy. Also, EPA-funded studies would need to make all their data public."

EPA Administrator Pruitt sat down with [AgDay](#) to talk about issues impacting farmers and ranchers including EPA's efforts to provide certainty by redefining "Waters of the U.S." According to Pruitt, a substitute or replacement definition will be issued sometime this year, a definition that will recognize private property ownership and the roles of states, and will answer the question of what exactly is a water of the United

States. 'We're going to get that right going forward, and the definition is going to provide clarity, objective measurements by which we know where federal jurisdiction begins and ends,' he said."

OP-ED ...

In the Washington Times, EPA Administrator Pruitt outlined the Agency's efforts to overhaul the permitting process to "rebuild and revitalize our nation's crumbling infrastructure." "The president's ambitious proposal calls for the U.S. Environmental Protection Agency to play a leading role in the administration's efforts ... America's infrastructure was once the envy of the world. The president's proposal will restore our roads, bridges and waterways to greatness and create a safer, stronger America. Through regulatory reforms and targeted investments, EPA will spearhead the much-needed repairs to infrastructure in a way that provides tangible environmental benefits to all Americans."

REGIONAL NEWS ...

The Detroit News reported that eradicating lead from drinking water is one of EPA Administrator Pruitt's top priorities. "I do think that what happened in Flint is something that could happen elsewhere. We just simply need to take steps to do all that we can to address it prospectively and proactively,' Pruitt said. Pruitt said President Donald Trump's \$1.5 trillion plan to bolster the nation's infrastructure over the next decade would include investments in aging water infrastructure."

While speaking with the New York Post, Pruitt called for a local, state, and federal response to the lead crisis in New York City and across the country. "EPA Administrator Scott Pruitt called for a 'coordinated' response between New York State and City officials to address the ongoing lead crisis."

In an interview with Newark Star-Ledger, Pruitt discussed efforts to make cleaning up Superfund sites a priority to advance the Agency's core mission. "The Environmental Protection Agency plans to step up efforts to get companies who dumped toxic waste at New Jersey's Superfund sites to pay to clean them up, Administrator Scott Pruitt said. Pruitt on Monday blamed a lack of urgency... New Jersey has 114 designated Superfund sites, the most in the nation, included three of Pruitt's 21 highest-priority locations."

Pruitt reiterated his commitment to prioritizing the Superfund program to clean up America's most contaminated sites, including Tar Creek, in an interview with the Tulsa World. "Administrator Scott Pruitt of the U.S. Environmental Protection Agency said his new push on the nation's Superfund program finally can provide clarity and accountability to the Tar Creek area, for decades one of the oldest, largest and most complex toxic sites in the nation. 'It is really unacceptable,' Pruitt said as he

recalled the history of the Tar Creek area in far northeastern Oklahoma, whose Superfund legacy dates back to 1983, as well as the amount of money and time deployed there."

At this week's regional roundtable, the [Albuquerque Journal](#) reported on progress the Trump Administration is making on claim stemming from the 2015 Gold King Mine spill. "Environmental Protection Agency Administrator Scott Pruitt said Monday that the federal government is close to finishing its assessment of roughly 400 claims for financial damages stemming from the 2015 Gold King Mine spill, which dumped toxic chemicals into waters in New Mexico, Colorado and Utah, and final recommendations could be ready by the end of the month."

RADIO ...

This week, Administrator Pruitt joined [WZFG 1100 AM The Flag - North Dakota](#) to talk about his first year accomplishments, including repeal and replacement of both "Waters of the U.S." rule and Clean Power Plan.

Administrator Pruitt also joined the [Lars Larson Show](#), based in Portland, Ore., and discussed how he's working to get the EPA back to basics and provide regulatory certainty for all Americans.

On the St. Louis, Missouri's own [Mark Reardon Show](#), Administrator Pruitt talked a little about baseball and a lot about the good work the Agency is doing to improve environmental outcomes across the country.

Scott Voorhees on [1110 KFAF-Omaha](#) had Administrator Pruitt on his show Wednesday to talk about what's to come at the EPA this year, including a continued focused on Superfund clean-up and regulatory transparency.

Cut down on the way home

Megan Piri holds a wedding photo of her and her husband, Joseph Piri, on Monday. Joe Piri, 32, died approximately a week after suffering injuries in a road-rage assault in Deepford Township on March 7. Lori M. Siskin, for South Jersey Times

Victim of deadly road rage, a devoted father 'came face-to-face with evil' during storm

Max Kury for South Jersey Times

Sitting on a couch in the living room of her Blackwood home, Megan Piri carefully recalled the last conversation she had with her husband.

Joe Piri was preparing to head home from work and wanted his wife to know he might be a little later than usual. It was March 7 and a nor'easter was dumping rain on the region, making for a drive fraught with peril.

"Just take your time and be careful," she told him. They ended their conversation with their traditional "I love you."

Joe Piri never made it home that night. Piri, 32, was killed in the face during a road-rage assault in Deepford Township that afternoon. He died of his injuries a week later.

"He just wanted to come home and he didn't make it home," his wife said, her voice cracking with grief.

Piri was able to speak to emergency responders and gave them his wife's phone number. By the time his family arrived at the hospital, they couldn't speak with him, explained Megan Piri's mother, Betty Jean Hampton.

"He was calm," she said. "He never cussed."

His injury was caused by the time they saw him. "It went from one side of his nose to the other side of his face," Hampton said. "We don't know what happened. No one knew a very good man was taken from all of us."

He remained on life support until Thursday.

Piri was on organ donor and "he saved some lives," she said, praising the doctors and nurses who cared for him at

4 who trafficked dogs for pit fights are sent to prison

Thomas Morley for South Jersey Times

Three South Jersey men were using four sentenced this month to years in federal prison for their roles in a criminal network person who sold trafficked dogs across state lines for bloody pit fights.

In the course of a sprawling multi-state investigation, the U.S. attorney's office said in a statement, federal agents discovered the basement of a defendant's home called in blood, evidence it had been used as a fighting pit. One man admitted his dog died on the way home after losing a fight.

Of the four defendants, Vladimir Vladimirovich "Manny" Gattuso and David Harris received sentences of 42 months and

37 months, respectively, for charges that included conspiracy and possessing a dog with the intent to use it in a dog fight.

Frank Nichols, of Millville, was sentenced to 37 months on charges that included being a felon in possession of a firearm. The fourth defendant, Pedro Carlos of Willow Springs, Illinois, received a year in prison after pleading guilty to a conspiracy charge.

All four of the men previously had pleaded guilty before U.S. District Judge Mary L. Casper in Trenton.

Prosecutors said their agents stumbled upon the operation in Camden Township, a court-ordered report suggesting dog fighting across multiple federal districts.

Court records show agents seized six pit

bulls when they served a search warrant at Gattuso's home in November 2015, and federal authorities have said a total of 44 dogs were recovered in New Jersey as part of the investigation. Investigators said they also seized thousands of dollars' worth of breeding stands — meant to restrain female dogs — as they built their case against the men.

Prosecutors said a fifth defendant, 42-year-old Aubrey Park resident Andre Atkinson, has also pleaded guilty and is scheduled to be sentenced on April 18. Other defendants remain awaiting trial.

STATEHOUSE

AG orders random drug tests for police

S.F. Sullivan for South Jersey Times

All police officers in New Jersey are now subject to random drug testing under a directive from the state's new attorney general.

Police departments are also required to implement "early warning systems" triggered by problem behaviors such as misconduct, excessive use of force, domestic abuse and excessive driving, under a separate directive announced by Attorney General Gurbir Grewal's office.

Grewal, who was appointed by Gov. Phil Murphy in January, said Tuesday that most police departments and county prosecutors already have such policies in place. The two new directives would mandate those standards.

"We support our officers in their difficult jobs, and at times that means intervening with a troubled officer to protect the public, the individual officer, and his or her fellow officers," he said in a statement announcing the move.

HOW IT WORKS

Under the new rules, every state, county and local law enforcement agency is required to conduct random drug screening in 2018 and perform such tests twice a year going forward.

Departments are required to report any failed tests — or officers who refuse a test — as well as any resulting discipline to the county prosecutor or other supervising agency.

The early warning system requirement spells out 15 "performance indicators" that

WASHINGTON

EPA to make polluters clean Superfund sites in N.J.

Jonathan D. Salant for South Jersey Times

The Environmental Protection Agency plans to step up efforts to get the companies that dumped toxic waste at New Jersey's Superfund sites to pay to clean them up, administration officials said.

Prior to Monday, Superfund sites were a mess of unregulated, not a lack of funding, for the slow progress to cleaning up the sites, New Jersey has 14 designated Superfund sites, the most in the nation, including three of the nation's highest priority locations.

"I'm going to get accountability with whomever it is on these Superfund sites and we will see every instance of enforcement to do so," Pruitt said. "I don't think we've done it as well as we should have historically and we're going to do better going forward."

While President Donald Trump has proposed cutting the EPA's budget, Pruitt said the agency will have the money it needs by ensuring that the companies responsible for the contamination clean it up.

"Most of our sites across the country have a responsible party," Pruitt said. "We have very few orphan sites."

A few gun owners brought their AR-15 rifles to the Las Cruces City Council meeting and stood against a resolution to ask the governor and state legislators to restrict semiautomatic weapon sales and ownership in New Mexico.

Cruces council tables gun restriction measure

Resolution intended to urge action against semiautomatic weapons

By ANGELA RODRIGUEZ

ALBUQUERQUE JOURNAL

LAS CRUCES — A standing-room-only crowd packed the Las Cruces City Council meeting

Monday, where supporters voted to table a resolution asking the governor and state legislators to restrict semiautomatic weapons. Representatives of local gun groups opposed the measure. "We're not members of the public," said one man, "we're not here to vote on this thing as a town," said Councilman Greg Smith, who introduced the resolution. Smith said the "legislation to focus attention on the safety of the

district to Las Cruces Schools" was in response to "parents and grandparents" who were concerned about incidents at local schools. Following threats made to the school, Smith said. "I would not consider to go on school," Roger L. Smith, a student at Las Cruces High School, told the council. The school students had in 2016

Residents smelled gas before fire

30 stay in shelter after fire destroys, damages SE Albuquerque apartments

By Doreen Medina

ALBUQUERQUE JOURNAL

Residents say a fire that destroyed or damaged a number of units at a Southeast Albuquerque apartment complex Sunday was caused by the same leaky gas meter that they

later to have responsibility reported to the apartment manager for more than a year. The apartment manager Tuesday denied making the report. About 20 people who lived in the apartment building in the 400 block of Georgia St. were temporarily relocated to the Manzanita Mesa Multigenerational Center, where they were housed overnight, and given food by the terms of Albuquerque and the Red Cross, said Anna Sanchez, director of the

city's Office of Senior Affairs. The center was placed in the public for being underfunded, and said the building would be open for several months and services today. In January, the city had been provided vouchers to some displaced families, which include its people under age 18, and it was at a local school, Sanchez said.

EPA close to settling claims on mine spill

\$1.2 billion in damages sought after toxic waste polluted rivers

By Doreen Medina

WASHINGTON

Environmental Protection Agency Administrator Scott Pruitt

said Monday that the federal government is close to settling claims for financial damage and claims for financial damage from the 2005 Gold King Mine spill, which caused toxic chemicals to flow into the Animas River, which flows into the Gulf of Mexico. Pruitt said the settlement would be ready by the end of the month.

Former EPA Administrator Gina McCarthy, an Obama-era appointee, intervened based on one of her reports in 2005 that the government would pay any damages to farmers and others harmed by the toxic spill, arguing it was an honor under the Governmental Tort Claims Act. But since President Donald Trump

APPROPRIATIONS & CROSSCUTTING WEEKLY NEWS

Office of Congressional and Intergovernmental Relations

Week Ending January 26, 2018

Budget Bottleneck Back in Play

Prospects for unclogging a budget bottleneck by next month went from bad to worse Wednesday, as an immigration fight threatened to delay any resolution until the spring.

It is possible that the government is likely to continue running on stopgap funding into the spring because any potential deal on new spending limits may have to await a deal on immigration. Democrats have made protection for immigrant "Dreamers," who were brought to the U.S. illegally as children, a prerequisite for any final budget deal.

In agreeing to that stopgap, congressional leaders had said they were hoping to get a deal on spending limits and immigration by the time the latest batch of funding expires. But some on the hill have put that timetable in further doubt Wednesday, pointing to the time needed to reach an immigration deal that satisfies Democrats could preclude a spending agreement within the next three weeks. If agreement cannot be reached on DACA, lawmakers run the risk of another shutdown, a yearlong CR through Sept. 30, or some type of hybrid measure with certain agencies' funding ending up in a CR.

Even if an agreement to raise spending limits were reached by early March, the appropriations committees typically need about three weeks from that point to write a catchall spending package for the remainder of the fiscal year. Congress could then take another week to get it passed.

Those time requirements suggest there may not be a final fiscal 2018 spending package, which was due last October, until late March or April.

HQ Staffing Announcements:

Science Advisory Board Staff Office (SABSO)

Tom Brennan was named as the Acting Director of the SAB Staff Office effective February 5, 2018. Tom will return to the SABSO to resume his new role after previously serving as the Deputy Director and more recently as Chief of Staff for the Office of Public Engagement and Environmental Education. The current director Chris Zarba, will retire February 2, 2018, after 38 years of service at EPA. His commitment, dedication and exuberance will be missed.

Office of the Chief Financial Officer (OCFO)

Diane Kelly, Chief of Staff—OCFO, will be attending the Federal Executive Institute's Leadership for a Democratic Society training program Feb 5—Mar 2, 2018. Meshell Jones-Peeler, Director of the Policy, Training and Accountability Division in the Office of the Controller, will serve as Acting OCFO Chief of Staff.

Malena Brookshire has been selected to serve as the Acting Deputy Controller, a position that is currently vacant. Malena currently serves as the Deputy Director for the Office of Planning, Analysis and Accountability. OPAA plans to issue a OCFO-wide Talent Hub announcement to advertise a competitive detail to fill the Deputy Director position while Malena is on detail.

President's FY19 Budget Request Delayed This Year

Without a final budget for fiscal 2018, the Trump administration announced plans Wednesday to proceed with a fiscal 2019 spending plan next month anyway. Under the 1974 budget act that created the modern budget process (PL 93-344), the president is required by statute to submit a budget request for each new fiscal year by the first Monday in February.

The administration plans to miss that deadline by a week, unveiling its request on Feb. 12. The Office of Management and Budget attributed the delay to the recent government shutdown. With no deal yet on spending limits, the Congressional Budget Office is delaying its annual 10-year projection of spending and revenue, normally released in January, until February or March.

The Government Accountability Office (GAO) today released the following:

PRESS RELEASE

GAO Adds Government-wide Personnel Security Clearance Process to "High Risk List"

January 25

Release: https://www.gao.gov/press/high_risk_security_clearance_process.htm

REPORT

Follow-Up Review: EPA Completed OIG Recommendations for Superfund Site in Libby, Montana

January 24, 2018

The EPA took corrective actions that enabled the Libby toxicity assessment to be completed with transparency and that provided stakeholders with important human exposure information. For more information, please click on the link above.

In Other News— On Tuesday, Jan 23, Sen. Edward Markey, D-MA, chairman of the Senate Climate Task Force and a member of the Senate Environment and Public Works Committee, held a discussion with former EPA staff on the "willful neglect of the mission" of the EPA to "provide basic enforcement and investigations of violations". Participants included Jeff Ruch, executive director of Public Employees for Environmental Responsibility, on behalf of Tom Ripp, formerly of the EPA's Compliance Assurance Program; Mike Walker, former director of the EPA's National Enforcement Training Institute; and Mustafa Santiago Ali, senior vice president of climate, environmental justice and community revitalization with the Hip Hop Caucus, former assistant associate administrator for environmental justice and senior adviser for environmental justice and community revitalization at the EPA.

A Budget Engagement in Brief

Announcing EPA's First Annual Budget Symposium

Traditionally, with the announcement of the Annual President's Budget Request each year, OCIR, along with program office staff, goes to the hill to brief Congressional committees on the Agency's budget. Unfortunately, this oftentimes involves multiple trips out of the office, to poorly attended briefings, during the height of preparation for upcoming budget hearings. To increase operational efficiencies and reduce workload redundancies, the Appropriations and CrossCutting Team has offered to lead the effort to host stakeholders by developing a budget symposium to be held onsite at the Agency's Washington, DC facilities during mid February. Additional information will be provided as more specific information becomes available.

WORKFLOW

LRMS:

RD-115-175: Justice talking points on HR 469 Internal deadline: 1/26 @ 10 am.

Budget Symposium: POC: C.Moody

OMB Review(s):

Report to Congress: Small Business Regulatory Enforcement Fairness Act (SBREFA) status of the EPA's provision of small entity compliance guides. *POC: T. Williams*

Report to Congress: IRIS Program. *POC: T. Williams*

Scheduling/Meetings/Congressional Briefing:

SEPW Minority staff requested a briefing on reported potential changes to the IRIS program budget and staffing.

Reducing Regulatory Burdens: EPA withdraws “once-in always-in” policy for major sources under Clean Air Act

WASHINGTON (January 25, 2018) – Today, the U.S. Environmental Protection Agency (EPA) issued a guidance memorandum withdrawing the “once-in always-in” policy for the classification of major sources of hazardous air pollutants under section 112 of the Clean Air Act. With the new guidance, sources of hazardous air pollutants previously classified as “major sources” may be reclassified as “area” sources when the facility limits its

This guidance is based on a plain language reading of the statute that is in line with EPA’s guidance for other provisions of the Clean Air Act,” **said Bill Wehrum, assistant administrator of EPA’s Office of Air and Radiation.** “It will reduce regulatory burden for industries and the states, while continuing to ensure stringent and effective controls on hazardous air pollutants.”

Today’s memo is another step by which EPA is reducing unnecessary regulatory burdens that deterred innovative efforts to improve the environment. The “once in always in” policy has been a longstanding disincentive for sources to implement voluntary pollution abatement and prevention efforts, or to pursue technological innovations that would reduce hazardous air pollution emissions. States, state organizations and industries have frequently requested rescission of this policy, which was one of the most commonly cited requests in response to President Trump’s Executive Order 13777. Today’s EPA action is an important step in furtherance of the president’s regulatory reform agenda while providing a meaningful incentive for investment in HAP reduction activities and technologies.

The Clean Air Act defines a “major source” as a one that emits, or has the potential to emit, 10 tons per year of any hazardous air pollutant, or 25 tons per year or more of any combination of hazardous air pollutants. Sources with emissions below this threshold are classified as “area sources.” Different control standards apply to the source depending on whether or not it is classified as a “major source” or an “area source.”

In a 1995 memo, EPA established a “once-in always-in” policy that determined that any facility subject to major source standards would always remain subject to those standards, even if production processes changed or controls were implemented that eliminated or permanently reduced that facility’s potential to emit hazardous air pollutants.

Today’s memo finds that EPA had no statutory authority under the Clean Air Act to place a time limit on when a facility may be determined to be an area source, and that a plain language reading of the Act must allow facilities to be reclassified as area sources once their potential to emit hazardous air pollutants falls below the levels that define major sources.

EPA anticipates that it will soon publish a Federal Register notice to take comment on adding regulatory text that will reflect EPA’s plain language reading of the statute as discussed in this memorandum.

More information is available online at <https://www.epa.gov/stationary-sources-air-pollution/national-emission-standards-hazardous-air-pollutants-neshap-9>

Subject: Management Workflow Report
Attachments: Weekly Report 2.9.18.docx; Weekly 2.9.18.pdf

Hello,

This team report is different from the ACC weekly sent out to the broader audience, in that it only tracks workflow for the team. I'm sending this to you as an quick informational resource for internal management, rather than to the regions, programs, and all of OCIR who probably have a 0% interest in the attached.

The Team Weekly report, however, has been sent out and serves as the broader informational venue for the team. I have attached as well.

Let me know if you have questions.

Thanks,

Hi Susan,

I'm in the process of editing the Admin's hearing transcript from his E&C testimony last month and Holly made me aware you might have some input. I've attached a copy we received from the committee with initial edits from OCIR in redline, our changes are not really substantive and mostly grammatical. They have given us a deadline of May 17th to return this so there is a little bit of time for your review. Let me know if you have any questions.

Ringel.Aaron@epa.gov

**Meeting with
Chairman Lamar Smith (R-TX-21)
Tuesday, January 9th 2018
11:00AM, EPA HQ, Administrator's Office**

Main Topics of Discussion:

- HONEST Act, number one priority he wants to discuss
- Potential invitation to testify before House Science, Space, and Technology Committee
- Thanks you for SAB Reform and kind word in National Journal article

NOTE: Rep. Smith is the Chairman of the House Science, Space, and Technology Committee which has a limited jurisdiction over some of EPA science programs.

Background: The HONEST Act, which would prohibit the Environmental Protection Agency from proposing, finalizing, or disseminating regulations or assessments based upon science that is not transparent or reproducible, has been a priority for Chairman Smith. It passed the House but is not likely to move in the Senate. The Congressman would like to discuss potential ways EPA could implement the principals of the bill without legislative action along the lines of the SAB reform effort recently undertaken.

Taking Points:

- **HONEST Act:** Happy to have our staff at EPA work with committee staff on identifying potential areas you think we might be able to implement the transparency initiatives outlined in the HONEST Act using our regulatory/guidance authority.
- **Invitation to Testify:** We have seen a number of our political appointees confirmed by the Senate recently and are happy to work with your staff on identifying witnesses for Committee Hearings.

Decision Points/Objectives: This meeting is occurring at the request of Chairman Lamar Smith. His main objective for the meeting is to find a way to have the EPA implement the HONEST Act objectives outside of the legislative process since it is unlikely to pass in the Senate.

Attendees:

Troy Lyons, AA OCIR

Aaron Ringel, DAA OCIR

https://www.washingtonpost.com/news/energy-environment/wp/2018/04/24/pruitt-to-unveil-controversial-transparency-rule-limiting-what-research-epa-can-use/?utm_term=.12eacce54b16

Pruitt unveils controversial 'transparency' rule Tuesday limiting what research EPA can use

By Juliet Eilperin and Brady Dennis, 4/24/18, 2:38 PM

Environmental Protection Agency Administrator Scott Pruitt proposed a rule Tuesday that would establish new standards for what science could be used in writing agency regulations, according to individuals briefed on the plan. The sweeping change, long sought by conservatives, could have significant implications for decisions on everything from the toxicity of household products to the level of soot that power plants can emit.

The rule would only allow EPA to consider studies for which the underlying data are made available publicly. Advocates describe this approach as an advance for transparency, but critics say it would effectively block the agency from relying on long-standing, landmark studies linking air pollution and pesticide exposure to harmful health effects.

"Today is a red-letter day. It's a banner day," Pruitt told a group of supporters at agency headquarters. "The science that we use is going to be transparent. It's going to be reproducible."

The move reflects a broader effort already underway to change how the agency conducts and uses science to guide its work. Pruitt has already changed the standards for who can serve on EPA's advisory committees, barring scientists who received EPA grants for their research while still allowing those funded by industry.

The rule will be subject to a 30-day comment period, EPA officials said. Pruitt, who had described the change during interviews with select media over the past month, said it will "enhance confidence in our decision-making" and prove "durable" because it will be issued as a regulation.

"This is not a policy," he said. "This is not a memo."

Many scientists argue that applying a standard to public health and environmental studies that is not currently required by peer-reviewed journals would limit the information the EPA could take into account.

Some researchers collect personal data from subjects but pledge to keep it confidential — as was the case in a major 1993 study by Harvard University that established the link between fine-particle air pollution and premature deaths, as well as more recent research that tapped a Medicare database available to any scientific group guaranteeing confidentiality of the personal information. That practice would not be allowed under the new rule.

In an interview Tuesday, former EPA Administrator Gina McCarthy said that requiring the kind of disclosure Pruitt envisions would have disqualified the federal government from tapping groundbreaking research, such as studies linking exposure to lead gasoline to neurological damage. Scientists will have trouble recruiting study participants if the rule is enacted, she predicted, even if they pledge to redact private information before handing it over to the government.

“The best studies follow individuals over time, so that you can control all the factors except for the ones you’re measuring,” said McCarthy, who now directs the Center for Climate, Health and the Global Environment at Harvard’s public health school. “But it means following people’s personal history, their medical history. And nobody would want somebody to expose all of their private information.”

House Science Committee Chairman Lamar Smith (R-Tex.) sought to establish a requirement similar to the one Pruitt has proposed, but his legislation, titled the Honest and Open New EPA Science Treatment Act, failed to pass both chambers.

Pruitt and Smith met at EPA headquarters on Jan. 9, according to Pruitt’s public calendar, and an email obtained under the Freedom of Information Act indicates that the lawmaker pressed the administrator to adopt the legislation’s goal as his own.

Smith made “his pitch that EPA internally implement the HONEST Act [so that] no regulation can go into effect unless the scientific data is publicly available for review,” Aaron Ringel, deputy associate administrator for congressional affairs at the EPA, wrote other agency staffers. His email was obtained by the Union of Concerned Scientists, a scientific advocacy organization.

Conservatives, such as Trump EPA transition team member Steve Milloy, have long tried to discredit independent research the agency used to justify limiting air pollution from burning coal and other fossil fuels. A series of studies has shown that fine particulate matter, often referred to as soot, enters the lungs and bloodstream and can cause illnesses such as asthma as well as premature death.

“During the Obama administration, the EPA wantonly destroyed 94 percent of the market value of the coal industry, killed thousands of coal mining jobs and wreaked havoc on coal mining families and communities,” Milloy said in a statement, “all based on data the EPA and its taxpayer-funded university researchers have been hiding from the public and Congress for more than 20 years.”

While the administration presses ahead, legal experts warn that the rule may be vulnerable to a court challenge. In unanimous decisions in 2002 and 2010, the U.S. Court of Appeals for the District of Columbia Circuit said the EPA is not legally obligated to obtain and publicize the data underlying the research it considers in crafting regulations.

In the 2002 case, brought by the American Trucking Associations, Inc., two judges appointed by Ronald Reagan and one named by Bill Clinton wrote that they agreed with the agency that such a requirement “would be impractical and unnecessary.” The government’s defense had noted that “EPA’s reliance on published scientific studies without obtaining and reviewing the underlying data is not only reasonable, it is the only workable approach.”

A range of scientific organizations are already campaigning to block the rule from being finalized. On Monday, 985 scientists signed a letter organized by the Union of Concerned Scientists, urging Pruitt not to forge ahead with the policy change.

“There are ways to improve transparency in the decision-making process, but restricting the use of science would improve neither transparency nor the quality of EPA decision-making,” they wrote. “If fully implemented, this proposal would greatly weaken EPA’s ability to comprehensively consider the scientific evidence across the full array of health studies.”

Under the proposed rule, third parties would be able to test and try to replicate the findings of studies submitted to EPA. But, the scientists wrote, “many public health studies cannot be replicated, as doing so would require intentionally and unethically exposing people and the environment to harmful contaminants or recreating one-time events.”

Gretchen Goldman, an expert on air pollution and research director for the organization’s Center for Science and Democracy, said the rule could put some scientists in a quandary: Keeping personal health data or propriety information private would mean having their work ignored by the EPA.

“We have this incredible science-based process that works, and it has worked, by and large, even in the face of tremendous political pressures to not go with a science-based decision,” Goldman said.

The Environmental Protection Network, a group of former EPA employees, issued a report Tuesday stating that many older studies — in which the original data sets were either not maintained or stored in outdated formats — would be eliminated under the proposed rule.

And while there is no estimate yet for how much it would cost EPA to obtain and disseminate studies’ underlying data, the Congressional Budget Office has projected that Smith’s measure, if enacted, would cost the agency \$250 million for initial compliance and then between \$1 million and \$100 million annually. A 2015 CBO analysis estimated that EPA would cut the number of studies it relies on by half because of the bill’s requirements.

Geophysicist Marcia McNutt, who is president of the National Academy of Sciences, said Tuesday that she is concerned the rule would prevent the EPA from relying on the best available scientific evidence.

“This decision seems hasty,” she wrote in an email. “I would be fearful that the very foundations of clean air and clean water could be undermined.”

Attachment 1—Additional Questions for the Record

The Honorable John Shimkus

1. **OCSPP** – While some are interested in ensuring EPA actions to limit one or more FIFRA-regulated substances, I am more interested in all FIFRA related activities, particularly in view of the uncertainty about the future deployment of user fees now made available under the Pesticide Registration Improvement Act.

a. If PRIA fees were to expire:

- i. Would this mean the reinstatement of tolerance fees?

ANSWER – Yes. PRIA prohibits EPA from levying these tolerance fees, but with a lapse of PRIA, the prohibition would expire and EPA would be able to start collecting these fees.

- ii. If yes, would the reinstatement of tolerance fees produce enough revenue to ensure the robustness reviews mandated by FIFRA?

ANSWER – According to a Congressional Research Service report titled “Pesticide Registration and Tolerance Fees: An Overview” dated 11/8/12, the average collection of tolerance fees between FY1985 to FY2003 was \$1.8 million. In contrast, EPA’s annual maintenance fee collection target under PRIA is \$27.8 million, and the average PRIA registration service fee collection over the past three years is \$18 million. While it is EPA’s goal that the robustness of EPA review would not change with a reduction in fees, it is likely that the time frames in which EPA conducts its reviews would be impacted. As the majority of maintenance fees collected go to support of pesticide registration review activities, this reduction in fees would severely impact EPA’s ability to meet the statutory deadline of completion of the 725 chemical cases by October 1, 2022. EPA’s performance reviewing other maintenance fee-supported activities such as fast-track amendments to registered products and notifications would also be impacted. In addition, registration service fee actions received after a lapse of PRIA would not receive statutorily-mandated decision review time frames.

- b. What percentage of staffing expenses are covered by PRIA fees?

ANSWER - SEPW 5/11 QFR CLEARED RESPONSE: PRIA provides approximately 33 percent of the funding for EPA’s pesticide program activities. Currently operating under the third iteration of the statute, PRIA provides two funding sources to EPA’s pesticide program:

- **One time registration service fees (i.e., PRIA fees) for the evaluation of new applications submitted to the EPA; and**
- **Annual FIFRA maintenance fees assessed to products currently in the marketplace, a significant portion of which are used to support the re-**

evaluation of pesticides in order to meet the statutory deadline of October 1, 2022, for completing the first round of registration review.

c. If PRIA fees expire:

- i. How many EPA employees – both FTE and contract workers – would be impacted, including through the loss of employment?

ANSWER – Activities reliant on maintenance fee and pesticide registration service fee funds could be supported for a duration of time after a lapse in PRIA relying on carryover registration service and maintenance fee money. Starting on October 1, 2020, EPA would not be able to support approximately 75 FTEs funded by the PRIA fund. Beginning on October 1, 2021, EPA would no longer be able to support an estimated additional 91 FTEs with FIFRA funds, bringing the total FTE count that EPA could no longer support with PRIA and FIFRA funds to approximately 166FTEs. For reference, the current “on-board” OPP count is right around 600 employees, down 42 from the start of FY 2017.

There are 32 contracts supported by PRIA pesticide user fees with 49 on-site contractors administering the functions of those contracts.

- ii. How much in budget resources would EPA need to transfer to OCSPP to make up for lost PRIA revenues for FIFRA activities?

ANSWER – EPA’s pesticide program activities through two fee funds. On average, EPA collects approximately \$46M in fees each year to support pesticide program activities. To continue to complete registration and registration review decision-making in current timeframes, in the absence of fees, funding for OCSPP’s pesticide activities would need to increase by \$46M. In addition, if PRIA were not reauthorized, \$2 million per year for worker protection activities, pesticide safety education programs, and partnership grants, monies that currently come from PRIA funds, would not be available and these programs would not be funded.

- iii. What is the impact on the pace of pesticide applications reviews? How much longer will they take?

ANSWER – Pesticide registration applications received prior to a lapse of PRIA would retain the decision time frames specified in FIFRA section 33. Applications received after the expiration of PRIA would not receive decision time frames. EPA would continue reviewing these applications as expeditiously as possible provided the resources available.

2. **OCSPP** Legislation pending in Congress would provide PRIA fees for another 3 years, but also address other matters as well.

a. Please explain the need for and characterize the significance of having, including in practical terms:

i. \$500,000 in funding for efficacy guidelines for public health pesticides;

ANSWER – This proposed maintenance fee set-aside would provide EPA resources to develop and implement guidance and rulemaking for product performance data requirements to evaluate products claiming efficacy against pests of significant public health or economic importance. This effort, desired by the regulated community and of benefit to those who might be subject to vector-borne illnesses, would give EPA better information on how well a product works against public health pests and organisms, which is part of EPA’s evaluation in determining whether to allow a product onto the market. These products include hospital disinfectants as well as repellants and insecticides that control mosquitoes that are vectors of the Zika virus.

ii. \$500,000 for good laboratory practices funding;

ANSWER – This proposed maintenance fee set-aside would be used to increase the number of laboratory inspections and data audits conducted in support of pesticide product registrations under PRIA, an outcome desired by the registrant community and important to the data integrity of the studies that EPA uses to support its regulatory decisions.

iii. An increase in maintenance fees from \$27.8 to \$31 million for review and registration;

ANSWER – Raising maintenance fees by \$3.2 million annually would provide additional resources for registration review and other specified activities on which maintenance fees can be spent. These additional resources are important to helping EPA meet its statutory obligation to complete the first round of registration review by October 1, 2022.

iv. Additional categories and deadlines for products reviewed; and

ANSWER – PRIA 4 proposes new fee for service categories as well as revisions to existing categories. To name a few examples, PRIA categories for antimicrobial products are revised to be consistent with subpart 158W, there are revisions to time frames and fees for antimicrobial and conventional new products and amendments to existing products that involve the review of product performance data for public health pests, new plant-incorporated protectant (PIP) categories are added, categories for safener inert ingredients are

established, and a new category is created whereby applicants can receive a determination from EPA on whether or not a proposed product would be subject to registration requirements under FIFRA. These new categories better align time frames and fees to the resources it takes EPA to review those types of applications.

v. Removal of FIFRA section 4(k)(2).

ANSWER – Maintenance fees are annual fees assessed to registrants to maintain their product registrations in the marketplace, and are deposited by EPA into the Reregistration and Expedited Processing Fund. These fees are primarily used to support the re-evaluation of pesticides as part of the statutorily-mandated registration review program, the first round of which FIFRA mandates is to be completed by October 1, 2022. These fees also support the agency’s review of inert ingredients, the expedited processing and review of certain applications for products that are substantially similar to registered product and products intended for public health, and the enhancement of information technology systems to improve the review of pesticide registration applications. An unspent balance of over \$40 million has built up in the fund due to decreases in staff levels administering functions that can be charged to the fund (due to attrition, a hiring freeze, and typical time lags involved in recruiting qualified staff to fill key scientific and regulatory positions), and the spending restriction in FIFRA section 4(k)(2)(A), commonly referred to as the “1-to-1” provision.

FIFRA section 4(k)(2)(A) states “moneys derived from fees may not be expended in any fiscal year to the extent such moneys derived from fees would exceed money appropriated for use by the Administrator and expended in such year . . .” This provision effectively limits the amount of fees that can be spent in any given fiscal year relative to the amount of annually appropriated dollars that are spent on the same functions in that fiscal year, and likewise prevents EPA from being able to reduce the unspent balance of the maintenance fee fund unless appropriated spending exceeds maintenance fee collection in a given fiscal year. To the extent fee collections have exceeded appropriation spending on the specified functions, the unspent balance has continued to grow and EPA has not been able to reduce the unspent balance in the maintenance fee fund. The removal of FIFRA section 4(k)(2) is essential to EPA’s ability to access these funds paid by registrants in support of registration review and other specified activities.

3. **OAR Beginning in 2023, the agency will have more flexibility to set targets under the Renewable Fuel Standard (RFS). Given EIA projections of a 31 percent decrease in motor gasoline consumption between 2017 and 2050, based upon increases in fuel economy standards and electric vehicles market penetration:**

- a. Will EPA have authority in 2023 and subsequent years to reduce biofuel volume requirements below the existing statutory guidelines? Could this result in fewer gallons of biofuel in the market in the future than exist today?
 - b. Will EPA have authority in 2023 and subsequent years to allow a RIN to be generated by recharging an electric vehicle with electricity generated from a biogas power plant or other renewable energy source?
 - c. Will EPA have authority in 2023 and subsequent years to reorganize the program's four existing nested categories?
4. **OAR** Is EPA engaged in planning for 2023 and subsequent years with regard to the agency's reset authority and the RFS? If so, please describe the range of options that EPA is considering.
5. **OLEM/Superfund** The Folcroft Landfill (Operable Unit 2 of the Lower Darby Creek Superfund Site in Pennsylvania) was placed on the NPL in 2001, and the Remedial Investigation has not been finalized. The July 2017 Superfund Taskforce report recommends inquiry and additional resources for sites on the NPL for five years or more without a significant movement. What inquiries and additional resources have been directed to the Folcroft Landfill which has been on the NPL since 2001 without completion of the Remedial Investigation?

ANSWER – The schedule and length of time to complete the Remedial Investigation and Feasibility Study (RI/FS) for the Folcroft Landfill, Operable Unit 2 (OU2) of the Lower Darby Creek Area Superfund Site is not attributable to a lack of resources, nor does EPA believe that additional resources are necessary at this time. The duration of the RI is primarily due to lengthy negotiations with a group of potentially responsible parties (PRP Group) to finance and perform the RI/FS, as well as unanticipated findings during the RI/FS and challenging field conditions, as described in detail below.

The RI/FS at Folcroft Landfill is being performed by a PRP Group that consists of 14 companies that historically disposed of waste at the landfill. After listing the Site on the National Priorities List in 2001, EPA began negotiations with the PRP Group, which concluded in November 2006 with the signature of an Administrative Order on Consent (AOC) for the RI/FS. The duration of the negotiations was due to both the number of PRPs and technically complicated enforcement evidence.

Initial RI field activities were completed in 2008 by the PRP Group in accordance with EPA-approved RI/FS Work Plan. However, in May 2010, based on a review of the initial RI data, EPA identified contaminated groundwater outside of the boundary of the Folcroft Landfill that was not anticipated in the RI/FS Work Plan. The RI/FS Work Plan was subsequently amended in December 2011 to investigate groundwater contamination outside the boundary of the Folcroft Landfill. Significant technical challenges were encountered during the supplemental RI field work due to the location

of the landfill in a tidal marsh area within the John Heinz National Wildlife Refuge. The supplemental RI field activities were completed in July 2016.

The PRP Group submitted the draft RI Report in May 2017, and the EPA has worked with the PRP Group for the past year to resolve outstanding issues. The PRP Group submitted the draft final RI Report on May 22, 2018, and EPA is currently reviewing the document to ensure that all remaining issues have been addressed. A scoping meeting for the FS was held on May 8, 2017, and subsequent FS discussions were held throughout 2017 and early 2018. EPA and the PRP Group, as well as other site stakeholders such as the Pennsylvania Department of Environmental Protection (PADEP) and US Fish and Wildlife Service (USFWS), will meet on June 18, 2018, to discuss next steps in the FS process.

6. **OLEM/Superfund** The EPA Taskforce Report recommends the establishment of a clarification to the principles for groundwater restoration. What is the goal for groundwater remediation at the Folcroft Landfill (Operable Unit 2 of the Lower Darby Creek Superfund Site in Pennsylvania)?

ANSWER – The Record of Decision (ROD) for the Folcroft Landfill (Operable Unit 2 of the Lower Darby Creek Superfund Site in Pennsylvania) has not yet been issued; therefore, no groundwater cleanup level has been established. However, in accordance with the National Oil and Hazardous Substances Pollution Contingency Plan (NCP), “EPA expects to return usable groundwaters to their beneficial uses wherever practicable, within a timeframe that is reasonable given the particular circumstances of the site.” The NCP further states that federal Maximum Contaminant Levels (MCLs) “shall be attained by remedial actions for ground or surface waters that are current or potential sources of drinking water.”

Contaminated groundwater within the boundary of the Folcroft Landfill is within a waste management area and is not considered a potential source of drinking water. However, the contaminated groundwater that extends outside of boundary of the Folcroft Landfill is considered a potential source of drinking water. Therefore, EPA anticipates that federal MCLs will be evaluated as potential cleanup levels for contaminated groundwater outside of the boundary of the Folcroft Landfill.

7. **OLEM/Superfund** This Operable Unit, which is owned by the Department of the Interior, is within the John Heinz Wildlife Refuge.
- a. Do EPA’s goals for groundwater restoration take into account the Department of Interior’s long range plan for the Refuge?

ANSWER – EPA has coordinated extensively with the Department of Interior (DOI) and the U.S. Fish and Wildlife Service (USFWS) with regard to Operable Unit 2 (OU2), Folcroft Landfill, throughout the Remedial Investigation (RI). Additionally, EPA entered into a Memorandum of Understanding with DOI in 2005 to clearly define the roles of both agencies at this OU. USFWS indicated in a letter dated February 23, 2018, that groundwater extraction for

various uses is routinely permitted in refuges, if the refuge manager determines that it is appropriate to do so. Currently, the John Heinz National Wildlife Refuge (the Refuge) Comprehensive Conservation Plan (CCP) does not prohibit groundwater extraction on the Refuge, and the USFWS cannot eliminate the possibility that groundwater extraction may be necessary in the future. This is consistent with the EPA's position that groundwater at OU2 is considered a potential future source of drinking water.

- b. Is the Folcroft Landfill eligible for a Technical impracticability waiver for groundwater?

ANSWER – Any Superfund site is eligible for a technical impracticability (TI) waiver if it is demonstrated that it is technically impracticable, from an engineering perspective, of achieving applicable or relevant and appropriate requirements (ARARs), such as federal maximum contaminant levels (MCLs), throughout the groundwater contaminant plume. EPA and the Potentially Responsibility Party Group (PRP Group) at OU2 have discussed the possibility of a TI waiver at OU2. The PRP Group is currently evaluating the collection of additional groundwater data that would be required to support a TI waiver application.

- c. What is the process and standard to receive a TI waiver?

ANSWER – The detailed process for requesting a TI waiver is provided in the following the EPA guidance documents:

- **OSWER Directive 9234.2-25, Guidance for Evaluating Technical Impracticability of Groundwater Restoration September, 1993;**
- **OSWER Directive 9200.4-14, Consistent Implementation of the FY 1993 Guidance on Technical Impracticability of Groundwater Restoration at Superfund Sites, January 19, 1995;**
- **OLEM Directive 9200.3-117, Clarification of the Consultation Process for Evaluating the Technical Impracticability of Groundwater Restoration at CERCLA Sites, December 28, 2016.**

In general, in accordance with the guidance, the applicant is required to provide the following information in a TI waiver application:

- **Specific applicable or relevant and appropriate requirements (ARARs) or media cleanup standards for which TI determinations are sought;**
- **Spatial area over which the TI decision will apply;**
- **Conceptual model that describes site geology, hydrology, groundwater contamination sources, transport, and fate;**
- **An evaluation of the restoration potential of the site, including data and analyses that support any assertion that attainment of ARARs or media cleanup standards is technically impracticable from an engineering perspective. At a minimum, this generally should include a demonstration that contamination sources have been identified and have been, or will be, removed and contained to the extent practicable; an analysis of the**

[PAGE * MERGEFORMAT]

performance of any ongoing or completed remedial actions; predictive analyses of the timeframes to attain required cleanup levels using available technologies; and a demonstration that no other remedial technologies (conventional or innovative) could reliably, logically, or feasibly attain the cleanup levels at the site within a reasonable timeframe;

- Estimates of the cost of the existing or proposed remedy options, including construction, operation, and maintenance costs;
- Any additional information or analyses that the EPA deems necessary for the TI evaluation.

EPA will then evaluate the TI waiver application and decide if a TI waiver is warranted, and issue a Record of Decision documenting the TI waiver.

- d. How would changes to the process and standards for awarding a TI waiver, as recommended by the July 2017 EPA Taskforce Report, impact the Superfund process at the Folcroft Landfill?

ANSWER – To date, no changes to the groundwater restoration policy have resulted from the Superfund Task Force Recommendations. If changes to the groundwater restoration policy occur in the future, the groundwater cleanup approach at OU2 will be evaluated accordingly.

8. **OP** EPA’s recently released proposed rule on increasing transparency in regulatory science states that the proposal is consistent with the requirements for major scientific journals like Science, Nature, and the Proceedings of the National Academy of Sciences.
- a. Why are more journals and scientific institutions implementing these transparency policies?

ANSWER –The proposed rule is in line with the scientific community’s moves toward increased data sharing to address the “replication crisis,” in which a significant proportion of published research may be false or not reproducible. EPA believes that making regulatory science publicly available in a manner sufficient for independent validation will improve the data and scientific quality underlying EPA’s actions.

- b. Isn’t replication and verification a key step in the scientific process?

ANSWER – Replicating and verifying science and data are important ways to ensure that the science and data are sound.

9. **OP** Despite the many claims made prior to the release of this proposal, would this proposed rule violate any existing federal laws on privacy?

ANSWER – EPA has sought to ensure that this proposed rule is consistent with existing privacy laws.

10. **OP** What is this proposed rule's impact on confidential business information (CBI)? Please state how you plan to ensure that in any final rule EPA will neither: be (1) prevented from using science that cannot be published (because it has CBI in it) nor forced into the default position that EPA should endeavor to publicly release all scientific data – including legally colorable CBI – so that this science can be used by the Agency?

ANSWER – The proposed rule is consistent with existing laws on CBI. EPA will follow all laws relating to CBI in developing the final rulemaking.

11. **OARM** I understand the Agency is looking at its work force to see how it can better function.

- a. How many people does EPA have working full-time for the Agency in headquarters?

ANSWER – As of June 6, 2018, the EPA has a total of 7,266 full-time employees in its headquarters program offices. Of these, 4,444 work in the Washington, D.C.-area offices and 2,822 work in EPA's field offices.

- b. How many people does EPA have working full-time for it in its regional offices?

ANSWER – As of June 6, 2018, the EPA has 6,574 full-time employees at its regional offices.

- c. How many contractors currently work for EPA? [if he doesn't know what number ask him for a percentage. If that fails, ask him why not]?

ANSWER – As of June 6, the number of active EPA contractors with EPA contractor badges is 4,007 including 1,164 contractors in the Washington, D.C.-area offices, and 2,843 contractors in EPA regions and field offices ¹.

12. **OCI** One of the priorities for the proposed budget includes an "EPA Reform Plan." Projects under this plan include streamlining the permit review process, developing a Lean Management System, and reducing the reporting burden on the regulated community.

- a. Why were these areas made priorities?
- b. What progress has been made so far on these efforts?
- c. Do you have benchmarks and timelines for the Reform Plan?

¹The count includes active contractors on active contracts where the individuals have been issued a badge in compliance with the requirements of Homeland Security Presidential Directive (HSPD) 12. HSPD 12 badges are issued when a contractor requires physical or logical access to EPA facilities or network for more than 6 months.

13. **OCI** What are the biggest obstacles to meaningfully reforming EPA to engage the 21st Century?

14. **OCSPP** The proposed budget has four Agency Priority Goals, including that EPA intends to meet statutory deadlines for chemical reviews under the Toxic Substances Control Act. In particular, EPA plans 100 percent compliance with “existing” chemicals and only 80 percent compliance certain “new” chemicals.

Under the law, EPA is the gatekeeper to innovation because these chemicals cannot go to onto the market until EPA decides they can and companies cannot work to improve these chemicals unless EPA says there is a problem.

As of April 17, 2018, EPA’s website was reporting that EPA had 449 pending applications for new chemicals. In addition, the EPA website claims the typical caseload for new chemicals under review is approximately 300 cases.

- a. Is the increase in pending applications – at one-third of EPA’s historical output, due to a higher number of new chemicals applications coming into the Agency at the same time or EPA falling behind again on getting them processed?

ANSWER – Although the Agency has not seen a significant increase in the number of notifications received, the current caseload number does not mean that EPA is “falling behind.” While the average caseload is around 300, that number can be higher or lower at any given time. Companies often voluntarily agree to suspend the review period to have technical discussions with EPA or to work on developing additional supporting information. Completing these reviews in a timely manner remains a top priority for the Agency. The Agency is taking several steps to address the immediate backlog, and to identify ways to increase overall efficiency for the program to maintain its viability over the long term. For example, we are continuing to increase the number of staff working in the new chemicals program. We’re also currently implementing process improvements identified through a recent LEAN event.

- b. What do you intend to do to eliminate the backlog and keep it at bay?

ANSWER – See response to question 14(a).

- c. One thing the EPA website does not give data on is just how long some of those applications have been sitting at EPA. The law is very clear 90 days and no more than 180 days to review and regulate.
- i. How many of the 449 new chemicals applications sitting at EPA are less than 90 days old?

ANSWER – It is important to note that companies often voluntarily agree to suspend the TSCA review period to have technical discussions with EPA or to work on developing additional supporting information.

Thus, there is a difference between the time that has elapsed (A) since EPA's receipt of a notice and (B) for purposes of the TSCA review period. For the responses below, EPA is providing statistics for the number of calendar days that a notice has been with EPA – not for purposes of the TSCA review period.

46 cases have been with EPA for less than 90 days.

- ii. How many of the 449 new chemical applications sitting at EPA are more than 90 days old, but less than 180 days?

ANSWER – 63 cases have been with EPA for less than 180 days.

- iii. How many of the 449 new chemical applications have been filed with EPA for more than 180 days and what is the range of time on them?

ANSWER – 340 cases have been with EPA for 180 days or more. The TSCA review period has been voluntarily suspended by the submitters for all of these cases. Of these 93 cases were reset on June 22, 2016, so they have been with EPA the longest. Of those 93 oldest cases:

- **40 are cases where the submitter is undertaking testing or gathering additional data;**
- **12 are cases involving Consent Orders that have not yet been signed by submitters; and**
- **41 cases involve various types of ongoing issues including: pending EPA issuance of Non-Order SNURs; company is exploring possible ways to mitigate identified risks; and company is in discussions with EPA about developing test protocols and other necessary testing information.**

15. **OCSPP** Under TSCA section 26, the Agency has authority to set fees to defray the costs of chemical testing, new and existing chemical review and regulation and to offset related costs for processing confidential business information. For new chemicals, EPA moved the fee from \$2,500 to \$16,000 – a more than 6-fold increase – and for small manufacturing entities – EPA raised the fee for new chemicals from \$100 to \$2,800 – or a 28-fold increase.

- a. How much impact with these dramatic fee increases have on improving the speed at which the Agency is reviewing new chemicals?

ANSWER – The fees collected by the Agency under TSCA Section 26 are expected to improve our ability to effectively and efficiently administer the new chemicals program and improve the timeliness of our reviews. Additional fee revenue is expected to enable the Agency to increase the number of staff working in the new chemicals program, and further enhance ongoing efforts identify ways to increase overall efficiency for the program to maintain its viability over the long term, and to implement process improvements identified through a recent LEAN event.

[PAGE * MERGEFORMAT]

b. If not much, then what is the problem?

ANSWER – See above. The Agency anticipates that fee revenues will help further efforts to improve the timeliness of new chemical reviews.

16. **OCSPP** The proposed fee rule suggests EPA will see 10 percent fewer new chemical applications based on legal changes to how EPA is supposed to review new chemicals. What kind of new chemical applicant attrition is expected due to the combined fee increase and lack of generated revenue from the chemical?

ANSWER – The proposed fee rule includes a planning assumption that the Agency will receive 20% fewer new chemicals applications as a result of the increased fees. This assumption is based on the notion that companies may be more selective in terms of which chemicals they submit for review and the timing of those submissions given the higher upfront investment due to the increased fee.

17. **OLEM/Superfund** Portland Harbor is complex site at which almost 100 potentially responsible parties (PRPs) have been identified. It is my understanding that on March 16, 2018, EPA sent all of the PRPs a letter indicating that EPA will be issuing Special Notice Letters for full performance of the remedial design/remedial action (RD/RA) at the Portland Harbor Site by the end of 2019. However, several of the PRPs have indicated that the allocation process will not be complete by that time, and that the issuance of Special Notice Letters will actually slow the clean-up, because companies will choose to litigate rather than potentially bear the full cost of the clean-up at that point. How will EPA balance the allocation process timeline and issuing the Special Notice Letters?

ANSWER – EPA is focused on getting the cleanup selected in the Record of Decision (ROD) underway at the Portland Harbor Superfund site as soon as possible. EPA is not privy to the allocation process among the PRPs at the Portland Harbor Superfund site and generally does not get involved in how responsible parties allocate costs among themselves. EPA issued the ROD at the Portland Harbor Site in January 2017. At Portland Harbor, the PRPs are conducting additional sampling to help design the remedy. That sampling also may be relevant to the PRP cost allocation, and is expected to be complete by early 2019.

Taking into account the ongoing sampling work and its potential relevance to the allocation process while still maintaining the overall goal to proceed with cleanup, on March 16, 2018, EPA sent a letter to the PRPs to notify them that EPA plans to issue Special Notice letters to commence settlement negotiations, but not until the end of 2019. To maintain progress towards cleanup while the sampling is taking place, EPA also is working with parties to perform remedial design work at specific locations of the site. By the end of 2019, the PRPs should be able to proceed on a parallel path of presenting a plan to implement the Portland Harbor ROD even if there are remaining allocation issues.

The Honorable David B. McKinley

1. **OLEM** I appreciate your commitment to supporting cooperative federalism under the Coal Combustion Residuals (CCR) permitting program by working with states to develop, submit, and implement state CCR permit programs. How is EPA working with states as they develop and submit these plans, particularly those that are seeking to incorporate WIIN Act authorities rather than just adopting the current, self-implementing federal rule?

ANSWER – EPA has been actively working with states since the passage of the WIIN Act. The agency developed an interim final guidance outlining the process and procedures that the agency generally intends to use to review and make determinations on state Coal Combustion Residual (CCR) permit programs. This document provides guidance to the states for developing and submitting a program to EPA for approval. The guidance is divided into four chapters:

- **Chapter 1 provides an overview of the provisions of the Water Infrastructure Improvements for the Nation Act (WIIN Act).**
- **Chapter 2 contains the process and procedures the EPA is planning to use to review and make determinations on state CCR permit programs as well as the documentation EPA will ask states seeking approval of a program to submit.**
- **Chapter 3 contains a checklist of all the requirements of the current CCR rule at 40 CFR Part 257 subpart D.**
- **Chapter 4 provides a checklist of those items a state would submit when seeking approval of its CCR permit program.**

EPA encourages states who are or may be considering submitting a CCR permit program for approval to consult with the agency early in the process. Such consultations will enable EPA and the state to work through any areas where the state program may be different from the federal CCR regulation. The agency is currently working with about a dozen states and we look forward to working with these and other states and key stakeholders as we move forward in implementing the WIIN Act.

2. **OLEM** As states develop these programs, guidance from EPA will be important. With that in mind, Congress appropriated \$6 million to EPA for FY18 to develop its own federal permitting program for “non-participating states”. Please provide an update on and timeline for the development of that federal permit program.

ANSWER – EPA has several activities underway which support the development of a federal permit program. First, the agency has been engaged in proposing modifications to the 2015 CCR rule which will provide the basis for both state and federal permit programs. EPA anticipates another proposal later this year, and as part of that, EPA hopes to develop and propose regulations for the federal permit program. In addition, EPA is developing draft templates for permit applications and also permits. Finally, EPA is working with our state

partners to determine which states will be developing their own permit program and which will not, so that federal permitting efforts will not duplicate state efforts.

The National Association of Scholars recently published a report titled, “THE IRREPRODUCIBILITY CRISIS OF MODERN SCIENCE, Causes, Consequences, and the Road to Reform”. They state, “The Federal government should also consider instituting review commissions for each regulatory agency to investigate whether existing regulations are based on well-grounded, reproducible research. These should establish the scope of the problem by identifying those regulations that rely on un-replicated or irreproducible research, and recommending which regulations should be revoked.”

3. **OP** Will you commit the EPA to investigate whether existing regulations are based on well-grounded, reproducible research?

ANSWER – EPA supports efforts to ensure that the regulations it promulgates are based on well-grounded, reproducible research. In accordance with Executive Order 13777, EPA is taking steps to identify regulatory issues, including the basis for existing regulations, through ongoing regulatory reform efforts.

4. **OP** Will you commit the EPA to identify those regulations that rely on un-replicated or irreproducible research?

ANSWER – EPA supports efforts to ensure that the regulations it promulgates are based on well-grounded, reproducible research. As discussed above, per E.O. 13777, EPA is taking steps to identify regulatory issues through continuing regulatory reform efforts.

5. **OP** Will you provide a report to our committee and my office with the results of your investigation?

ANSWER – EPA is open to providing updates on its regulatory reform efforts as they continue. EPA provides ongoing information about its regulatory reform efforts at <https://www.epa.gov/laws-regulations/regulatory-reform>.

6. **OP** Will you provide a report to our committee and my office regarding if the endangerment finding for CO2 was based upon well-grounded, reproducible research?

ANSWER – EPA welcomes the opportunity to address specific issues with the committee, and encourages you to reach out to EPA staff to further discuss this request.

Administrator Pruitt, I know that the ethanol industry has recently attacked the EPA for granting small refinery hardship relief.

7. **OAR** Does the Clean Air Act establish small refinery hardship relief?

Answer:

SEPW 5/11 QFR CLEARED RESPONSE: Section 211(o)(9)(B) of the CAA and 40 CFR 80.1441(e)(2) allow EPA to grant an extension of a small refinery's exemption from compliance with its renewable fuel volume obligations for a given year based on a small refinery's demonstration of "disproportionate economic hardship" in that year. The statute also directs EPA to consult with the Department of Energy (DOE) in evaluating small refinery exemption petitions. EPA will grant a hardship exemption if we conclude, after review of available information and in consultation with DOE, that a refinery will experience disproportionate economic hardship that can be relieved in whole or in part by removing its RFS obligations for that year.

8. **OAR** Has the Congress affirmed this on several occasions by directing the DOE to study this issue and, more recently, reminding the EPA that it did not intend for small refineries to bear a disproportionate regulatory burden?
9. **OAR** Did the DOE's 2011 report for Congress predict that harm to small refineries would increase over time, not diminish?
10. **OAR** Did the 10th circuit decision last year instruct the EPA to grant small refinery hardship relief?

Some have made the argument that hardship relief results in "demand destruction" for ethanol by resulting in less blending. Regardless of if small refineries receive hardship relief, they are incentivized to blend ethanol for many economic reasons: 1) it is cheaper than gasoline, 2) they must meet their RVO, and 3) they can sell RINS not needed for compliance.

11. **OAR** Was ethanol consumption up in the first quarter of 2018?
12. **OAR** Was it, in fact, higher than projected in November of 2017 when RINS were 80-90 cents a gallon?
13. **OAR** Did ethanol consumption increase throughout 2017 despite hardship relief?

President Obama used an EPA "veto" twice in unprecedented fashion. The Spruce Coal Mine located in West Virginia, had the required permits and approvals in hand, when the EPA "vetoed" the project. The project went through the entire regulatory process and was approved by ALL parties. Then the Obama Administration's "War on Coal" went into high gear. The EPA vetoed the project. The second instance was the Pebble Mine in Alaska, where they vetoed the project prior to the approval process starting. Both instances of using the EPA veto are very dangerous if they are allowed to stay in place. A future administration can use the veto to shut down the entire coal mining industry if both precedents are not reversed by the EPA. I can think of no greater threat to the industry.

14. **OW** Will you consider revoking both the Spruce Mine and Pebble Mine vetoes?

ANSWER – Regarding Pebble Mine, the EPA has not made a Final Determination pursuant to Section 404(c). In 2014, the EPA issued a Proposed Determination

[PAGE * MERGEFORMAT]

pursuant to 404(c) regarding Pebble Mine. In 2017, the EPA considered withdrawing that Proposed Determination but, as outlined in its January 26, 2018, decision, the EPA suspended the proceeding to withdraw the Proposed Determination and left that Proposed Determination in place pending consideration of any other information that is relevant to the protection of the world-class fisheries contained in the Bristol Bay watershed in light of the permit application that has now been submitted to the U.S. Army Corps of Engineers by the mine proponent. The EPA's January 2018 decision neither deters nor derails the Corps' review of Pebble's Section 404 permit application, which is currently ongoing. Regarding Spruce Mine, the EPA issued a Final Determination under 404(c) in 2011 that protected portions of the mine site with high ecological value from being adversely impacted by the mine's development. The mine proponent has been exploring development of revised proposals to expand mining at the site. If a revised proposal is developed and submitted to the EPA, the agency would review and consider it.

15. **OW** Do you believe that the EPA should have the authority to preemptively veto development projects under Section 404 of the Clean Water Act before any permit applications have been submitted to the Army Corps of Engineers?

ANSWER – EPA believes it has the authority to exercise its discretion under Section 404(c) to restrict, prohibit, or deny the discharge of dredged or fill material “whenever” it makes the requisite finding that the discharge will have an unacceptable adverse effect on municipal water supplies, shellfish beds and fishery, wildlife, or recreation areas, and EPA takes very seriously the authority it was provided by Congress pursuant to Section 404(c). As a general matter, EPA has policy concerns about issuing a final determination under Section 404(c) before the submission of a permit application to the Corps or the completion of an EIS. EPA’s decision whether to exercise such authority preemptively would involve considerations of basic fairness and due process.

16. **OW** President Trump, in his Infrastructure Initiative, has proposed legislation that eliminates entirely EPA’s authority to veto projects under the Clean Water Act. Why have you taken a position, by leaving in place the Pebble veto, that is different than the President’s policy?

ANSWER – The EPA’s January 26, 2018 decision suspends the proceeding to withdraw the Proposed Determination and leaves that Determination in place pending consideration of any other information that is relevant to the protection of the world-class fisheries contained in the Bristol Bay watershed in light of the permit application that has now been submitted to the Corps. This decision neither deters nor derails the Corps’ review of Pebble’s Section 404 permit application, which is currently ongoing.

In making the decision regarding whether to withdraw the 2014 Proposed Determination at this time, the EPA considered its relevant statutory authority, applicable regulations, and the input it received as part of the tribal consultation, Alaska Native Claims Settlement Act, Corporation consultation, and public comment periods regarding the agency’s reasons for its proposed withdrawal, as well as recent

developments, including Pebble's submittal of a Section 404 permit application to the U.S. Army Corps of Engineers in December of 2017. The EPA received more than one million public comments regarding its proposal to withdraw the 2014 Proposed Determination, the overwhelming majority of which expressed opposition to withdrawal.

17. **OW** Isn't it correct that under the applicable regulations the Army Corps of Engineers cannot issue a permit to a project developer if the EPA has even begun the process of issuing a veto?

ANSWER – While it is true that the Army Corps cannot issue a permit while a pending 404(c) determination proceeding is ongoing, the Corps' regulations allow it to accept, review, and process a permit application for a proposed project even if EPA has an ongoing Section 404(c) review for that project. The Corps is processing Pebble's permit application consistent with its regulations, including developing an Environmental Impact Statement for the Pebble Project. EPA's decision to suspend the withdrawal process states that it will review and consider any relevant information that becomes available to inform future Section 404(c) decisions regarding the Pebble Project.

18. **OW** Is there any environmental harm that occurs whatsoever by allowing a permit application to be considered by the Army Corps of Engineers without a veto pending?

ANSWER – As a general matter, EPA has policy concerns about issuing a final determination under Section 404(c) before the submission of a permit application to the Corps or the completion of an EIS. EPA believes that a decision regarding whether to exercise its section 404(c) authority preemptively would involve considerations of basic fairness and due process. To be sure, the Corps' regulations allow it to accept, review, and process a permit application for a proposed project even if the EPA has an ongoing Section 404(c) review for that project. Pebble has now submitted its permit application to the Corps and the Corps has initiated its permit review process and begun taking steps to develop an EIS for this project. These actions resolve any potential uncertainty about Pebble's ability to submit a permit application and have that permit application reviewed by the Corps.

The EPA's January 26, 2018 decision to suspend the withdrawal process states that the EPA will review and consider any relevant information that becomes available. This will allow EPA to get the information needed to determine what specific impacts the proposed mining project will have on those critical resources.

19. **OW** Isn't it better to wait until the Army Corps of Engineers has decided whether to grant a permit before EPA issues a veto, if one is to be issued at all?

ANSWER – As a general matter, EPA has policy concerns about issuing a final determination under Section 404(c) before the submission of a permit application to the Corps or the completion of an EIS. EPA believes that a decision regarding whether to exercise its section 404(c) authority preemptively would involve considerations of

basic fairness and due process. To be sure, the Corps' regulations allow it to accept, review, and process a permit application for a proposed project even if the EPA has an ongoing Section 404(c) review for that project. Pebble has now submitted its permit application to the Corps and the Corps has initiated its permit review process and begun taking steps to develop an EIS for this project. These actions resolve any potential uncertainty about Pebble's ability to submit a permit application and have that permit application reviewed by the Corps.

The EPA's January 26, 2018 decision to suspend the withdrawal process states that the EPA will review and consider any relevant information that becomes available. This will allow EPA to get the information needed to determine what specific impacts the proposed mining project will have on those critical resources.

20. **OW** Has EPA ever before issued a preemptive veto of the sort you have left in place with your decision not to withdraw the veto of the Pebble mine?

ANSWER – Of the 13 Final Determinations completed by the EPA, two involved circumstances where permit applications had not yet been submitted to the Corps, both of which were completed nearly thirty years ago. Although Section 404(c) actions are extremely rare, and rarer still in advance of the submittal of a permit application, the EPA's 2014 Proposed Determination is not unprecedented.

21. **OW** In the Agency's decision not to withdraw the preemptive Pebble veto, you cited the risk created by the project. In doing so, you are relying on the Bristol Bay Watershed Assessment, which many of the Agency's own peer reviewers said was insufficient to support a regulatory decision. Why are you relying on science that has been discredited?

ANSWER – The EPA published its proposal to withdraw its CWA Section 404 (c) Proposed Determination in July 2017 and took public comment, held two public hearings in the Bristol Bay region, and consulted with tribal governments and Alaska Native Claims Settlement Act (ANCSA) Corporations from the Bristol Bay region. The EPA received more than a million public comments on its withdrawal proposal. In making its decision not to withdraw the Proposed Determination at this time, the EPA considered its relevant statutory authority, applicable regulations, and the input it received as part of the tribal consultation, ANCSA consultation, and public comment periods regarding the agency's reasons for its proposing withdrawal as well as the recent developments (e.g., the submittal of Pebble's permit application to the Army Corps).

The Honorable Gregg Harper

1. **OAR** Does the Clean Air Act establish small refinery hardship relief?

Answer:

SEPW 5/11 QFR CLEARED RESPONSE: Section 211(o)(9)(B) of the CAA and 40 CFR 80.1441(e)(2) allow EPA to grant an extension of a small refinery's exemption from compliance with its renewable fuel volume obligations for a given year based on a small

refinery's demonstration of "disproportionate economic hardship" in that year. The statute also directs EPA to consult with the Department of Energy (DOE) in evaluating small refinery exemption petitions. EPA will grant a hardship exemption if we conclude, after review of available information and in consultation with DOE, that a refinery will experience disproportionate economic hardship that can be relieved in whole or in part by removing its RFS obligations for that year.

2. **OAR** Has the Congress affirmed this on several occasions by directing the DOE to study this issue and, more recently, reminding the EPA that it did not intend for small refineries to bear a disproportionate regulatory burden?
3. **OAR** Did the DOE's 2011 report for Congress predict that harm to small refineries would increase over time, not diminish?
4. **OAR** Do small refineries typically produce more diesel than gasoline?
5. **OAR** Blending gasoline with ethanol to current standards will separate more RINs than blending the same volume of diesel. EPA's RVO calculation, however, imposes the same proportional ethanol RIN obligation on all refiners even though some produce significantly less gasoline and more diesel than others. Even if they blend all their production, these diesel rich refiners cannot separate enough RINs to meet their total obligation while their gasoline rich competition will separate more than required. These refiners who produce more diesel are then forced to buy RINS.

Does the hardship process give EPA a tool to mitigate this structural discrimination against these small refineries?

6. **OAR** RFA has made the argument that hardship relief results in "demand destruction" for ethanol by resulting in less blending. Regardless of whether or not small refineries receive hardship relief, they are incentivized to blend ethanol for a number of economic reasons: 1) it is cheaper than gasoline, 2) they must meet their RVO, and 3) they can sell RINS not needed for compliance.
 - a. Was ethanol consumption up in the first quarter of 2018?
 - b. Was it, in fact, higher than projected in November of 2017 when RINS were 80-90 cents a gallon?
 - c. Did ethanol consumption increase throughout 2017 despite the EPA granting small refinery hardship relief?
7. **OLEM** Some of my constituents have raised an issue regarding oil spill response training. I am told that the funding for certain training courses for federal and local responders involved in inland oil spill prevention and cleanup has been eliminated and that the EPA Environmental Response Team is no longer able to consistently make these courses available.

- a. With an increase in oil production across the country, there remains a need for oil spill response training for local, state, and federal responders. Would you commit to looking into whether funding can and will be made available for this important training?

ANSWER - The agency will continue to provide oil spill inspector training to federal and state inspectors.

8. **OAR** I want to applaud the work EPA is doing to streamline or eliminate unnecessarily costly regulations. And while most of the attention is focused on major rules like the Clean Power Plan or Waters of the United States, I am particularly pleased that under your leadership EPA is taking a second look at other regulations that may not be major but nonetheless have a serious impact on small businesses. In particular, I hear that EPA is reviewing the Obama era rule targeting wood heater manufacturers such as Hardy Manufacturing back in my district. But time is of the essence, as the regulatory deadlines are coming soon. Can you assure us that you will do all you can to provide timely regulatory relief for wood heater manufacturers?

The Honorable Tim Walberg

1. **OAR** This is a very technical issue but an extremely important one to manufacturers in Michigan. In 2011, EPA approved the use of Isobutane as a refrigerant and limited the amount of refrigerant that could be used in a refrigerator to 57 grams. This amount was based on a well-recognized safety standard limit at the time. However, the safety standard has since been updated to increase the allowable amount of refrigerant to 150 grams. These refrigerants are more environmentally friendly and supported by both industry and environmental advocates yet manufacturers are still in limbo as they await EPA's rulemaking.
 - a. Can you commit to working on this issue to recognize the updated safety standard so manufacturers can begin retooling and redesigning refrigeration products? Delay will only add cost to American workers and our manufacturing shop floors.
 - b. I know you have a lot of issues to deal with at the EPA, but I urge you to publish the technical correction without delay. It's my understanding refrigerator manufacturers have been working with your staff at the EPA for over a year now on this and would welcome the update.
2. **OAR** ENERGY STAR is an important program and one that consumers in my district value. Over the past year, manufacturers in my state have stressed the need for the program to be reformed. In the FY18 Omnibus Appropriations package, EPA and DOE were directed to revisit the Obama era Memorandum of Understanding (MOU) that changed the way the program was managed and report back to Congress within 90 days.

- a. The 2009 MOU for example moved home appliances out of DOE and over to EPA, where the products had never been managed before. DOE has the expertise in these products because they regulate them through the appliance standards program required by EPCA. It doesn't make sense to me to have duplicative programs built up within two agencies. From a good governance perspective and in the era of streamlining programs under the EPA's purview, I would like to hear from you on this specific topic.
- b. Would you support moving the ENERGY STAR program for home appliances back to DOE while still maintaining a majority of the management within EPA? It's my understanding a broad set of industries are eager to work with your agency on these issues and I look forward to working with you to revisit the MOU.

The Honorable Earl L. "Buddy" Carter

EPA Marine Engine Waivers

In a recent Energy & Commerce Committee hearing, you mentioned that you would now be personally involved in the marine engine waiver issue for pilot boats, after giving the commitment to look into in your December testimony from the committee. This is a pressing issue that could have a wide-ranging impact on our port operations and growth.

1. **OAR** Mr. Administrator, can you please provide a breakdown of the actions the EPA has taken to address the Tier 4 concerns?
2. **OAR** Please provide a timeline of what the EPA has done and any upcoming actions that will be taken by the EPA to address this concern.
3. **OAR** After you send technical experts to California, what will need to be done?
4. **OAR** Does the EPA have the authority to move forward with a waiver system? If not, what are your legal restrictions?

Tier 4 Restrictions for Generators

1. **OAR** Administrator Pruitt, I have a similar concern for the Tier 4 restrictions placed on large, 1-megawatt generators. It's my understanding that the Tier 4 restrictions are preventing Tier-4 generators from being sold in the market due to that and the portability restrictions. It's forecasted that there won't be a viable solution in the market until the early 2020s. Is this something you are working on?
2. **OAR** What would need to be done by the EPA to remedy this situation and allow for the sale of currently developed generators?
3. **OAR** Is the EPA currently reviewing this concern or working on any changes that would remedy it?

Biomass

I commend you for your policy statement clarifying biomass carbon neutrality on Monday, April 23 in my home state of Georgia. As you know, the Consolidated Appropriations Act of 2018 included language in Section 431 Policies Relating to Biomass Energy directing the Secretaries of Energy and Agriculture and the Administrator of the Environmental Protection Agency to establish clear and simple policies that reflect the carbon-neutrality of forest bioenergy and recognize biomass as a renewable energy source provided the use of forest biomass does not cause the conversion of forests to non-forest use.

1. **OAR** What is the EPA's progress in implementing a regulation on carbon neutrality of biomass? What are the next steps?

The Honorable Jeff Duncan

Some of my corporate constituents are subject to complex and, at times, inconsistent regulation by the Environmental Protection Agency. Inconsistent actions or interpretations by EPA are particularly burdensome to my constituents when the Agency's Policy and Enforcement Offices take positions that are at odds with each other. To that end, please explain whether, and to what extent, EPA's Office of Enforcement and Compliance Assurance ("OECA") consults with EPA's Office of Transportation and Air Quality ("OTAQ") prior to initiating any enforcement action involving a certification issued by OTAQ (for example, an enforcement action alleging uncertified engine parameters).

1. **OECA/OAR** In addition, what steps can be taken by EPA to improve and streamline consultation between OTAQ and OECA to avoid unnecessary hardship on the regulated community?

ANSWER: EPA's Office of Enforcement and Compliance Assurance (OECA) consults with the Office of Transportation and Air Quality (OTAQ) on all significant enforcement actions. OECA staff and middle management have weekly meetings with their OTAQ counterparts on enforcement matters. This partnership ensures efficient use of government resources and consistent compliance expectations for the regulated community.

EPA believes the current process for coordination between OECA and OTAQ is appropriate.

During the last Administration, many Energy Star program operations were shifted from the Department of Energy, where they had been since 1996, to EPA. I understand from home appliance manufacturers that they would like Energy Star efforts related to home appliances transferred back to the DOE. One of these is Electrolux, a home appliance manufacturer that has a large presence in my district in Anderson, SC. This is an important issue for South Carolina as we have recently seen a great deal of investment in the home appliance industry. In Newberry, SC Samsung recently

opened its first U.S. based home appliance manufacturing facility and is on track to create over 1,000 jobs by 2020.

1. **OAR** With the Appliance Standard program at DOE and Energy Star at EPA, companies currently have two federal agencies attempting to coordinate changes in product specifications and test procedures on the same products. This creates unnecessary cost, confusion and uncertainty for manufacturers and does not appear to bring any benefit to consumers. **Administrator Pruitt**-are there any efforts to make such a change?
2. **OAR** Wouldn't this change fit in with your desire to get EPA back to its core functions?

The Honorable Frank Pallone, Jr.

During your appearance on April 26th, you stated that purchasing real estate through a Limited Liability Corporation, or LLC, is "normally how you buy real estate in Oklahoma." Your ownership stake in that LLC was not included in your financial disclosures at the time.

1. **IO/OGC** How often have you purchased real estate through an LLC?
2. **IO/OGC** Do you currently own property through an LLC or have a stake in an LLC that owns property?
3. **IO/OGC** Please list all property you have purchased and/or owned a stake in through an LLC.
4. **IO/OGC** Please explain why your ownership stake in Capital House, LLC was not listed in your financial disclosures at the time.

Also at the April 26th hearing, you disavowed knowledge of whether you had paid taxes on the income from your ownership stake in Capital House LLC. You said "you provide information to your accountant, they determine what you pay."

5. **IO/OGC** Did you sign your tax filings for the years in question? Do you take responsibility for the accuracy of the information contained therein?

Extensive questions have been raised about your tax liability for the expenses of your security detail when they accompanied you on personal travel, including to Disney World and the Rose Bowl.

6. **IO/OGC** Did you pay taxes on that benefit?

It has been revealed that the EPA reimbursed your former landlord, Vicki Hart, for the repair of a door at your residence.

7. **IO/OGC** Did you reimburse the EPA for that expense?

8. **IO/OGC** If not, did you pay taxes on that income?

During the Administrator's April appearance before the Subcommittee, Chairman Walden underscored the importance of staffing and internal management issues at EPA, stating "it is essential that EPA have the staff with proper expertise, implementing and enforcing programs that correlate with their experience."

9. **OCFO** Please provide the Committee a copy of the EPA's reorganization plan submitted to OMB pursuant to Executive Order 13781, including any interim and final drafts submitted to OMB.

10. **OCFO** Please provide the Committee a copy of the EPA reform plan.

11. **OCFO** Explain the similarities and differences between the reform plan and the reorganization plan.

12. **OARM** Please provide the Committee a copy of the EPA's operating plan for new hires and indicate how many new employees EPA plans to hire in each program office.

13. **OARM** Please provide the Committee with the names of political and career members of the hiring review panel.

a. On what criteria were the panel members chosen?

b. What procedures do the offices need to do to make a hiring request of the panel?

14. **OARM** When filling a position from within the agency, how is it determined a staff member possesses the technological skills appropriate for the office of which they are being transferred?

15. **OARM/OCFO** Please provide the following information:

a. FTE on EPA payroll in regional offices and in HQ.

b. The number of employees that have left the EPA through attrition during 2017 and 2018, and the numbers from each office.

c. Please provide a list of employees that have been moved to a new position within the agency, including their previous office, title, position description, and their new office, title, and position description.

d. The predetermined employee headcounts for each office.

The Honorable Bobby L. Rush

During the question period I spoke to you about the widespread levels of lead that have been detected throughout homes in Chicago and I referenced a recent Tribune article entitled “Brain-damaging lead found in tap water in hundreds of homes tested across Chicago, results show” (April 12, 2018).

You agreed with me that this was a severe problem, nationally, and it would cost approximately \$45 billion to resolve. You mentioned that there was a program at the agency consisting of \$4 billion in grants, annually, for ten years that states could apply for to address this issue.

1. **OW** Can you provide more information regarding this program, including eligibility requirements, deadlines, and the dollar amounts available?

ANSWER - The program is the Water Infrastructure Finance and Innovation Act. The WIFIA program is authorized to provide and service direct federal loans and loan guarantees to cover 49 percent of eligible costs for drinking water and wastewater infrastructure projects. Eligible assistance recipients include corporations and partnerships, municipal entities, and State Revolving Fund (SRF) programs. The WIFIA program received \$63 million in funding in the Consolidated Appropriations Act, 2018, that could provide as much as \$5.5 billion in loans, leveraging over \$11 billion in water infrastructure projects.

On May 5, 2018, EPA announced that the deadline for prospective borrowers to submit letters of interest for WIFIA loans has been extended to July 31, 2018. Administrator Pruitt also sent a letter highlighting the deadline extension to the governors of 56 states and territories as well as tribal leadership. This year’s WIFIA Notice of Funding Availability highlights the importance of protecting public health, including reducing exposure to lead and other contaminants in drinking water systems and updating the nation’s aging infrastructure.

For more information about the WIFIA program and the application process please visit www.epa.gov/wifia

2. **OW/OP/R5** Will you commit to work with my office to have staff from EPA Region 5 come into my district to discuss this program with state and local leaders, as well as other stakeholders concerned with this issue?

ANSWER - EPA’s WIFIA team is available to meet with your staff and leaders and constituents in your district to discuss the program and to answer any questions.

The Honorable Diana DeGette

1. **AO/OGC** I questioned you about your legally dubious real estate transactions, but further information is needed in light of your incomplete answers and troubling new developments.²

² House Committee on Energy and Commerce, *Hearing on the Fiscal Year 2019 Environmental Protection Agency Budget*, 115th Cong. (Apr. 26, 2017).

In your testimony before the Subcommittee, you failed to disclose significant details concerning your 2003 purchase of a luxury home in Oklahoma City. According to a recent report in the *New York Times*, you purchased the home with Justin Whitefield, a registered lobbyist who, at the time, was pursuing business-friendly changes to Oklahoma's workers' compensation rules, which you allegedly helped negotiate.³ Mr. Whitefield, yourself, and four other owners reportedly used a limited liability company, Capitol House L.L.C. (Capitol House), to purchase the home.⁴ The seller, Marsha Lindsey, was a telecommunications lobbyist for SBC Oklahoma, and sold the property at a significant discount of approximately \$100,000.⁵ SBC Oklahoma reportedly offset this amount in Ms. Lindsey's retirement package.⁶

Your incomplete testimony leaves key questions unanswered concerning this transaction. You allegedly paid for one-sixth of the purchase price, and according to reports, you purchased the home with Kenneth Wagner, who now serves as a political appointee at EPA and previously served as treasurer of your political action committee,⁷ as well as health care executive Jon Jiles.⁸ However, the identity of two additional owners remains unknown.

You also apparently failed to disclose your interest in Capitol House in your financial disclosure filings, and in your testimony could not confirm whether you paid taxes on rental income received for a room on the property rented to another Republican lawmaker.⁹

Given your history of real estate transactions with lobbyists both in Oklahoma during your tenure as a state legislator and in Washington, D.C. while serving as EPA Administrator, and in light of these troubling developments, I ask that you respond to the following requests:

- a. Please provide the names and corresponding ownership share of all owners of Capitol House.

³ *Pruitt's Coziness with Lobbyists Includes Secretly Buying a House with One*, New York Times (May 3, 2018).

⁴ *Pruitt's Coziness with Lobbyists Includes Secretly Buying a House with One*, New York Times (May 3, 2018).

⁵ *Pruitt's Coziness with Lobbyists Includes Secretly Buying a House with One*, New York Times (May 3, 2018).

⁶ *Pruitt's Coziness with Lobbyists Includes Secretly Buying a House with One*, New York Times (May 3, 2018).

⁷ *Pruitt's Friend Joins Agency as Senior Adviser*, E&E News (Apr. 13, 2017).

⁸ *Pruitt's Coziness with Lobbyists Includes Secretly Buying a House with One*, New York Times (May 3, 2018).

⁹ *Scott Pruitt Before the EPA: Fancy Homes, a Shell Company and Friends with Money*, New York Times (Apr. 21, 2018).

- b. Please provide documentation of your payment for and purchase of an ownership share in Capitol House, including the terms of the payment and the individual or entity who received the payment.
- c. Please provide copies of your financial disclosures disclosing your ownership interest in Capitol House.
- d. Please provide the name of the individual(s) who arranged for cash purchase of the Oklahoma City property and subsequent transfer of ownership to Capitol House.
- e. Please provide the name of the individual(s) who requested or arranged for Spirit Bank, where former EPA appointee Albert Kelly was chief executive, to approve a mortgage in the name of Capitol House.
- f. Please provide documentation demonstrating you paid taxes on all rental income received from Jim Dunlap or any other tenant who rented space on the property, including, but not limited to, Schedule K-1 tax forms.
- g. Please provide documentation of any proceeds you received for the 2005 sale of the property, including the amount and date received.

The Honorable Janice D. Schakowsky

- 1. **OPA/AO Speeches:** Please provide the date, location, name of event, and text for all speeches you have given to industry associations (e.g. Louisiana Chemical Association) in your capacity as EPA Administrator.
- 2. **OPA/AO Official vehicle:** During the hearing, you stated that EPA staff “just asked for consultation” on the selection of your official vehicle. During this consultation, did you or people responding on your behalf express a preference for a larger vehicle, leather interior, bucket seats, Wifi, GPS navigation, or any other luxury features that were ultimately included in the vehicle selected?
- 3. **OP/OPA/AO Samantha Dravis:**
 - a. At any time during Samantha Dravis’s employment at EPA, was she employed or compensated using authority under the Safe Drinking Water Act?
 - b. How much was Samantha Dravis compensated during the three months from November 2017 to January 2018?
 - c. According to the EPA’s own spokesperson, Ms. Dravis was a “senior leader at the EPA.” Do you have record of meetings attended in person or substantial projects completed by Samantha Dravis during the three months from November 2017 to January 2018? If so, please summarize. Please provide all records of meetings attended in person or substantial projects completed, as well as any emails between

Administrator Pruitt and Ms. Dravis concerning her attendance or departure from the EPA.

- d. Was Samantha Dravis approved for first class travel to or from Morocco in December 2017? If so, who at EPA approved first class travel and on what date?

The Honorable Paul Tonko

1. **OP/ORD** Strengthening Transparency in Regulatory Science Proposed Rule

- a. Please cite specific provisions in statute that require EPA to make the changes proposed in the Strengthening Transparency in Regulatory Science rule?

ANSWER – EPA’s authority for this rulemaking can be found in Section I.C. of the proposed rule, including its ability to promulgate rules under the Administrative Procedure Act.

- b. Do any of the statutory authorities identified by the proposed rule include the ability to grant exemptions to the treatment of science at the Administrator’s discretion to address issues on a case-by-case basis?

ANSWER – In developing the proposed rule, EPA drew from various authorities that generally speak to the need for transparency in scientific rulemaking. EPA specifically cited these sources in the proposed rulemaking to allow the public to review and better understand the basis for the proposed rule.

- c. What science organizations or stakeholder groups were involved in the development of this proposed rule? Please provide a list of all meetings, including teleconferences, with these organizations, including the date, and the name, title, and organizational affiliation of participants.

ANSWER – EPA has received numerous comments from various groups on the development of the rule. The proposed rule is open for public comment until August 16, 2018. Comments are available for viewing at [regulations.gov](https://www.regulations.gov). EPA will also hold a public hearing seeking feedback on the proposed rule on July 17, 2018.

- d. Previously, EPA analyzed legislation (The HONEST Act) that would have similar goals and estimated it would cost \$250 million annually to implement. Did EPA develop any cost estimates to implement the proposed rule?

ANSWER – As stated in the proposed rule, EPA believes the benefits of this proposed rule justify the costs. The benefits of EPA ensuring that dose response data and models underlying pivotal regulatory science are publicly available in a manner sufficient for independent validation are that it will improve the data

and scientific quality of the Agency's actions and facilitate expanded data sharing and exploration of key data sets; this is consistent with the conclusions of the National Academies. This action should be implemented in a cost-effective way and is consistent with recent activities of the scientific community and other federal agencies, which will help to lower costs of implementation.

- e. If so, please provide any cost analysis completed regarding the proposed rule.

ANSWER – See response to (d) above.

- f. Why did EPA conclude this is not an economically significant rulemaking? Please explain EPA's analysis associated with this conclusion.

ANSWER – The proposed rule focuses on strengthening transparency of EPA's regulatory science. The rule will not have an "economically significant" impact on the economy as defined by E.O. 12866 and guidance from OMB.

- g. Please provide a list of all key meetings and determinations made for this rulemaking during the Action Development Process, including the rulemakings tier, meeting dates and participants in any intra-agency work group meetings, and a list of EPA offices which participated in the development of the rulemaking. For each office, please provide the name, title, and office of each work group participant.

ANSWER – The proposed rule is being overseen by EPA's Office of Research and Development. The proposed rule continues to develop, including with the comment period open until August 16, 2018, and a public hearing scheduled July 17, 2018.

- h. Did EPA examine lost benefits or costs associated with EPA's inability to consider certain scientific studies as a result of this proposal?

ANSWER – As stated above and in the proposed rule, EPA believes the benefits of this proposed rule justify the costs. The benefits of EPA ensuring that dose response data and models underlying pivotal regulatory science are publicly available in a manner sufficient for independent validation are that it will improve the data and scientific quality of the Agency's actions and facilitate expanded data sharing and exploration of key data sets; this is consistent with the conclusions of the National Academies. This action should be implemented in a cost-effective way and is consistent with recent activities of the scientific community and other federal agencies, which will help to lower costs of implementation. One recent analysis found that: "Improvements in reproducibility can be thought of as increasing the net benefits of regulation because they would avoid situations in which costs or benefits are wrongly estimated to occur or in which regulatory costs are imposed without corresponding benefits...." They concluded that "an increase in existing net benefits from greater reproducibility, which, if it occurred, would cover the costs of obtaining the data and making the data available."

- i. If so, what analysis was done on costs or lost benefits, and what were the results?

ANSWER – See response to (h) above.

- j. Many older studies may rely on data that are no longer available. Does EPA have any estimates or analysis of how many studies would be disqualified to be used for major rulemakings under this proposal?

ANSWER – Since the rule is still in development, EPA cannot comment on the substance or effect of the rule until it is final. EPA is currently accepting public comment on the impact of the rule.

- k. How long did the Office of Information and Regulatory Affairs (OIRA) take to complete its review of the proposed rule? Please provide the date OIRA accepted and began review, and the date OIRA completed review.

ANSWER – OMB received the proposed rule on April 19, 2018, and concluded its review on April 23, 2018.

- l. Did EPA or other executive officials have any communication with the Office of Information and Regulatory Affairs to accelerate this review? If so, please provide the name and title of these individuals.

ANSWER – OMB reviewed a draft of the proposed rule and indicated to EPA that it had completed its review of the draft on April 23, 2018. It was OMB's discretion to decide when its review was complete.

- m. Was the Office of Information and Regulatory informed by any EPA official that Administrator Pruitt would be testifying before Congress one week after submitting this proposed rule?

ANSWER – OMB conducted its review of the proposed rule on its own timeline, and determined when its review was complete.

- n. Office of Information and Regulatory Affairs reviews of similarly complex rules often take months to complete. What specific factors allowed this review to be completed so quickly?

ANSWER – See response to (m) above.

- o. The proposed rule solicits comments in numerous areas, indicating it hopes to develop answers during the regulatory process. Proposals with so many outstanding questions are often released as Advanced Notice of Proposed Rule Makings. Why did EPA propose this as a Notice of Proposed Rulemaking with so many outstanding questions included?

ANSWER – EPA solicited comments from the public on various areas to better inform the development of the rule. Extending the comment period by roughly two and a half months and also holding a public hearing will provide an opportunity to receive additional useful information for the agency to consider.

- p. Did the Office of Information and Regulatory Affairs ask EPA to issue an Advanced Notice of Proposed Rulemaking instead? If so, when was this request made and who at OIRA made this request?

ANSWER – No request was made to issue an Advanced Notice of Proposed Rulemaking.

2. **OP/ORD Science Advisory Boards (SAB)**

- a. How many current members of EPA Science Advisory Boards are expected to cycle off before the end of this year?

ANSWER – For the Science Advisory Board (SAB): Seven members are completing their second and final 3-year term, and eight members are completing their first 3-year term. For the Clean Air Scientific Advisory Committee (CASAC): One member is completing their second and final 3-year term, and three members are completing their first 3-year term.

- b. Since joining the agency, has Administrator Pruitt requested EPA career staff in the SAB Staff Office to provide recommendations for board appointments?

ANSWER – The career staff in the SAB Staff Office provided senior management with information and various options for the Administrator to consider for both SAB and CASAC appointments

- c. If so, how many of those recommendations have been accepted of the total amount of new appointees.

ANSWER – The senior management of the Agency considered the information and options.

- d. How many EPA Science Advisory Board members have been appointed without input by the SAB Staff Office?

ANSWER – The SAB Staff Office provided information on all nominated candidates for the Administrator to consider when making appointments.

- e. How many issues went before EPA Science Advisory Boards or the Clean Air Scientific Advisory Committee (CASAC) for review in each year for the past five years?

ANSWER – Number of advisory reports per year from the SAB and CASAC:

Year	SAB	CASAC
2013	7	6
2014	7	7
2015	14	2
2016	6	3
2017	8	4

- f. Does the Administrator plan to seek SAB or CASAC review of the recently proposed Strengthening Transparency in Regulatory Science rule?

ANSWER – REFERED TO OP

- g. Does the Administrator plan to seek SAB or CASAC review on any climate change issues?

ANSWER – REFERED TO OP

- h. Does the Administrator plan to seek SAB or CASAC review on any aspect of the long-term economic costs and benefits of any changes that have been made or are being proposed under his tenure at EPA?

ANSWER – REFERED TO OP

3. OCSPP/AO The Frank R. Lautenberg Chemical Safety for the 21st Century Act Implementation

- a. What steps has EPA taken to ensure new and existing chemical reviews include explicit considerations to protect vulnerable populations, as required by statute?

ANSWER – As required under TSCA, EPA continues to identify and give explicit consideration to “potentially exposed and susceptible subpopulations” for both new and existing chemical reviews. Although the explicit requirement in TSCA is new, the Agency has long given consideration to vulnerable subpopulations. See, for example, EPA's Policy on Evaluating Health Risks to Children (1995). The Agency has evaluated the risk of chemical substances to all sectors of the population, with particular attention to workers, indigenous peoples, pregnant women, children, infants, the elderly, environmental justice communities, and fence-line communities, among others. The Agency utilizes a number of existing guidance documents to evaluate risk at various life stages, and will continue to use and refine these processes to protect the most vulnerable.

EPA confirmed its commitment to meet this statutory requirement in the final Risk Evaluation framework rule, and in the scoping and problem formulation documents for the first ten chemical risk evaluations. The problem formulation

[PAGE * MERGEFORMAT]

documents refine the conditions of use and exposures presented in the scope of the risk evaluation and presents refinements to the conceptual models and analysis plan that describe how EPA expects to evaluate risks. EPA welcomes information from communities to further inform our risk evaluations.

EPA has sought input from specific populations and public health experts in implementing TSCA and will continue to do so. For example, EPA has had discussions on several occasions with the National Tribal Toxics Council (NTTC) to receive input on tribal lifeways and exposures. OPPT and the NTTC continue to collaborate on ways to consider tribes in conducting potentially exposed or susceptible subpopulations analyses for Draft Risk Evaluations. OPPT has also had several meetings with AFL-CIO about workers as potentially exposed or susceptible subpopulations and ways in which worker exposure information could be identified and provided for use in the risk evaluation process. OPPT has also sought advice and input regarding children as a susceptible subpopulation from the Children's Health Protection Advisory Committee (CHPAC) through a meeting and recommendations addressing the formal request from EPA for guidance on how risk evaluation should address children.

- b. In November, Administrator Pruitt and EPA staff attended an American Chemistry Council board meeting on South Carolina's Kiawah Island. The Administrator's schedule contains no details of that weekend. Please provide a list of all companies or lobbyists that met with the Administrator in South Carolina.

ANSWER – OA providing answers to parts b. and c.

- c. Please provide a list of all chemicals specifically discussed at meetings attended by the Administrator at this event.

ANSWER – OA providing answers to parts b. and c.

4. **ORD** Formaldehyde Assessment

- a. Earlier this year, Administrator Pruitt was asked by Senator Ed Markey at the Senate Committee on Environment and Public Works hearing on 1/30/18 about the delayed formaldehyde assessment. At that hearing, Administrator Pruitt said, "Senator, I commit to you that I will look into that and make sure your office is aware of what we have and when we can release it." Please provide an update on the status of the formaldehyde assessment.

ANSWER – We continue to discuss this assessment with our Agency partners and have no further updates to provide at this time.

- b. Has EPA concluded its intra-agency review process?

ANSWER – We continue to discuss this assessment with our Agency partners and have no further updates to provide at this time.

- c. What additional reviews are needed before it can be finalized?

ANSWER – We continue to discuss this assessment with our Agency partners and have no further updates to provide at this time.

- d. When does EPA expect the final report to be released?

ANSWER – We continue to discuss this assessment with our Agency partners and have no further updates to provide at this time.

5. **OP** EPA Year in Review 2017-2018 Report

- a. The “EPA Year in Review 2017-2018” report states, “In year one, EPA finalized 22 deregulatory actions, saving Americans more than \$1 billion in regulatory costs.” Please provide a list of each of these actions along with EPA’s analysis of the regulatory cost estimate for each action.

ANSWER – See attached spreadsheet.

6. **OW** Lead and Copper Rule

- a. EPA undertook efforts to revise the Lead and Copper Rule more than 13 years ago. In October 2016, the EPA published a white paper on the revisions that included a pledge to issue a proposed rule by the end of 2017. That deadline has passed. When does EPA expect to issue a proposed rule?

ANSWER - EPA expects to publish proposed revisions to the Lead and Copper Rule by February 2019.

- b. Has EPA conducted any analysis on how the proposed “Strengthening Transparency in Regulatory Science” rule may impact its ability to regulate lead in drinking water?

ANSWER - EPA has not conducted an analysis of how this proposed regulation would impact regulations of lead in drinking water. However, consistent with Section 1412b(3)(A), EPA is committed to using the best available peer reviewed science and data collected in accordance with accepted practices to inform decision making under the Safe Drinking Water Act.

7. **OW** PFAS

- a. EPA announced a National Leadership Summit on Per- and Polyfluoroalkyl Substances (PFAS). What options has EPA discussed internally to regulate or reduce PFAS contamination in drinking water?

ANSWER - Administrator Pruitt committed to initiate steps to evaluate the need for a maximum contaminant level for PFOA and PFOS at the National Leadership Summit on Per- and Polyfluoroalkyl Substances (PFAS).

- b. What options have been discussed by staff of EPA and the Department of Defense?

ANSWER - EPA staff regularly interacts with Department of Defense (DOD) officials as part of our coordination of clean-up of contaminated drinking water at Federal Facilities. EPA has briefed DOD staff on the regulatory processes under the Safe Drinking Water Act including the Contaminant Candidate List, the Regulatory Determinations process and the process for developing National Primary Drinking Water Regulations. DOD staff have offered their opinions on various options, including that EPA should promulgate Maximum Contaminant Levels for PFOA and PFOS.

- c. Has EPA conducted any analysis on how the proposed “Strengthening Transparency in Regulatory Science” rule may impact its ability to regulate PFAS in drinking water?

ANSWER - EPA has not conducted an analysis of how this proposed regulation would impact regulations of PFAS in drinking water. However, consistent with Section 1412.b.(3)(A), EPA is committed to using the best available peer reviewed science and data collected in accordance with accepted practices to inform decision making under the Safe Drinking Water Act.

8. OCFO Funding for the Office of Inspector General

- a. The Fiscal Year 2019 budget request includes a significant proposed cut to the EPA Office of Inspector General (OIG). In November 2017, in OIG’s Semiannual Report to Congress, it was reported that “OIG submitted an FY 2019 request for \$62 million to the agency for inclusion in the President’s budget. Without seeking input from the OIG, the agency provided us with a request of \$42 million.” In February, the White House requested only \$37.5 million for the OIG. What was the justification for reducing appropriations and FTEs in the FY 2019 budget request for EPA OIG?
- b. Did the EPA defend its \$42 million request to the Office of Management and Budget?

9. AO/OEX Freedom of Information Act

- a. It has been reported that political appointees’ role in reviewing documents requested under the Freedom of Information Act has increased significantly during Administrator Pruitt’s tenure. Please describe the process for “awareness reviews” or “senior management reviews” conducted by political appointees before EPA releases documents involving Administrator Pruitt, including the names and titles of all EPA political appointees who participate.

- b. Please explain EPA Chief of Staff Ryan Jackson's role in conducting awareness reviews. How many FOIA awareness reviews has Mr. Jackson completed, and in how many instances did Mr. Jackson instruct that information be withheld, redacted, or altered prior to public release?
- c. Have any other political appointees ever sought to alter, redact, or withhold portions of a FOIA disclosure following an awareness review?
- d. Please provide the start date, end date, and length of review for all awareness reviews conducted during Administrator Pruitt's tenure at EPA.
- e. Have any of these reviews resulted in a missed FOIA deadline to release documents? If so, please provide details for each instance.
- f. Please explain the rationale for moving the National FOIA office into the Office of General Counsel.
- g. Please explain the role of EPA political appointees Matthew Leopold, Eric Baptist, Marcella Burke, David Fatouhi, and Justin Schwab in the FOIA review process, including any instance where any of these individuals withheld, delayed, redacted, or altered prior to public release?

10. **AO** International Travel

- a. According to EPA emails released under a Freedom of Information Act request, on July 10, 2017, Mr. Matthew Freedman was involved in the planning of the Administrator's potential trip to Australia. Mr. Freedman wrote to EPA staff, "[Richard Smotkin] and I will attend and will be present but will not be listed as members of the delegation." It has been reported that Mr. Richard Smotkin was also involved in the planning of the Administrator's December trip to Morocco. Did Mr. Smotkin meet with Administrator Pruitt or any EPA staff, in official meetings or otherwise, during the Administrator's trip to Morocco?
- b. If so, please provide a full list of meetings between Mr. Smotkin and any EPA officials in Morocco, including any meetings with EPA officials and Moroccan government officials, during official business or otherwise.
- c. Please provide a list of all attendees for any meeting identified in (b).
- d. Recent press accounts indicated Administrator Pruitt and EPA staff missed their connecting flight to Morocco because his security detail's equipment and other gear could not be transferred to the connecting flight in time. This differs from earlier explanations from EPA that the connecting flight was missed due to weather. Please explain why Administrator Pruitt and EPA staff missed their connecting flight.

11. **IO/OECA/OCFO (m&n)** Security

- a. In March, Administrator Pruitt told CBS News, "The quantity and the type of threats I've faced are unprecedented." These threats have been used to justify costly security measures, including first-class travel and full-time protection by a 20-member security detail. How does EPA catalogue threats against officials, including the Administrator?

ANSWER - EPA collects information on potential threats against employees, including the Administrator, in several ways. The EPA Office of Homeland Security (OHS) provides information on any potential national security threats – domestic or international – and shares this information with the Office of Criminal Enforcement, Forensics and Training's (OCEFT) Protective Service Detail (PSD). Likewise, the EPA office of Inspector General (OIG) tracks instances of threats against EPA employees. The PSD uses information from OHS and the OIG, as well as open-source information and potential security threats from our federal/state/local law enforcement partners. OIG is responsible for receiving and investigates threats directed toward Administrator Pruitt.

- b. What office is primarily responsible for identifying these threats?

ANSWER - OCEFT collects threat information from multiple sources as described above.

- c. What office is primarily responsible for investigating these threats and determining their legitimacy?

ANSWER - The OIG's Office of Investigations has authority to investigate threats against EPA employees. As you know, the OIG is an independent organization. We recommend that you direct any questions about their roles and responsibilities to the OIG directly.

- d. Please describe the role in EPA security assessment, investigation, and response of each of the following offices: the Protective Security Detail, the Office of Homeland Security Intelligence Team, the Office of Inspector General, and any other EPA entity that has responsibilities related to the Administrator's security?

ANSWER - EPA OHS provides information on any potential national security threats – domestic or international – and shares this information with OCEFT/PSD. The OIG tracks instances of threats against EPA employees, reviews and investigates. The PSD uses information from OHS and the OIG, as well as open-source information and potential security threats from our federal/state/local law enforcement partners to assesses the current security climate. OCEFT develops the operational security plan to provide protection for the Administrator.

- e. If threats are deemed to be serious, are they referred to the FBI or another law enforcement agency outside of EPA?

ANSWER - EPA's OIG investigates threats made against EPA employees. As you know, the OIG is an independent organization. We recommend that you direct any questions about their roles and responsibilities to the OIG directly.

- f. Which EPA office determines whether or not to refer threats?

ANSWER - EPA's OIG makes these determinations. As you know, the OIG is an independent organization. We recommend that you direct any questions about their roles and responsibilities to the OIG directly.

- g. On how many occasions did such a referral occur in 2017 and 2018?

ANSWER – We recommend that you direct this question to the OIG directly.

- h. What spending decisions related to security require sign-off by the head of the Administrator's security detail?

ANSWER - The Special Agent in Charge of the PSD manages the resources associated with the PSD's operational mission of protecting the Administrator. The SAC/PSD would be responsible for approving travel authorizations for PSD agents and routine expenses associated with managing the PSD including purchases of equipment, training and other associated expenses in accordance with Agency and OCEFT Delegations.

- i. When did Mr. Nino Perrotta take over the role referenced in (h)?

ANSWER - Mr. Perrotta became the Acting SAC/PSD in March 2017.

- j. Before Mr. Perrotta took over this role, who was responsible for those duties?

ANSWER - Eric Weese was the SAC/PSD prior to SAC Perrotta.

- k. Why and when was the previous head of the Administrator's security detail removed from that position?

ANSWER - SAC Weese was reassigned to a new position as the Senior Law Enforcement Intelligence Advisor within the Criminal Investigation Division in March 2017.

- l. If that employee continued to work at EPA, to where was he reassigned and what is his current employment status?

ANSWER - SAC Weese was reassigned to a new position as the Senior Law Enforcement Intelligence Advisor within the Criminal Investigation Division in March 2017 and continues in that role today.

- m. How many EPA security officials hit the \$160,000 annual salary cap due to overtime last year?

ANSWER – OCFO PULLING DATA

- n. How does that compare to each of the previous 5 years?

ANSWER – OCFO PULLING DATA

- o. On May 1, 2017, Mr. Perrotta sent a memorandum requesting Administrator Pruitt be seated in first or business class on official travel. On how many instances before this memorandum did the Administrator travel in first or business class on official travel?

ANSWER – NEED AO ANSWER

- p. On how many instances after this memorandum did the Administrator travel in first or business class on official travel?

ANSWER – NEED AO ANSWER

- q. How many times and on what dates did EPA security officials travel with the Administrator for nonofficial business, where the Administrator paid for his own travel expenses?

ANSWER – OCEFT CAN ANSWER BUT NEED INFO FROM AO ON WHICH TRIPS WERE PRIVATE (they are all official duty for us since we protect 24/7).

- r. What was the total cost for security officials' airfare, hotel, and per diem for each of these instances?

ANSWER – ONCE AO PROVIDES INFO OCEFT CAN PROVIDE TOTALS

- s. Which EPA employee(s) approved the EPA payment to Mrs. Vicki Hart to compensate for a broken door at her condo?

ANSWER – AO NEEDS TO ANSWER, OCEFT DID PAPERWORK BUT AO GAVE DIRECTION

- t. Was Administrator Pruitt involved with or notified about that payment?

ANSWER – NEED AO ANSWER

- u. It has been reported that EPA entered into a new vehicle lease for a Chevrolet Suburban at \$10,200 annually. This lease was reportedly for a more upscale LT model, instead of the LS model typically leased and included monthly charges of

\$300 for luxury upgrades. What were the terms and rate of the previous vehicle used by the Administrator, and what was the rationale for these upgrades?

ANSWER – NEED AO ANSWER

12. AO The Administrator's Housing Arrangement

- a. It has been reported that the Administrator's original lease with Mrs. Vicki Hart ended at the end of April 2017, but he did not move out of that condo until later in the year. What were the terms of extending the lease?
- b. On what date did Administrator Pruitt move out of the condo owned by Mrs. Hart?

The Honorable David Loebsack

Administrator Pruitt, as I indicated to you at the hearing, I have a lot of concerns about the way in which the small refinery exemptions within the Renewable Fuel Standard (RFS) program have been handled by the Environmental Protection Agency (EPA). There needs to be much more transparency and public accountability in the with respect to the small refinery waiver exemptions. Please provide responses to the following questions regarding small refinery exemptions within the RFS.

1. **QAR** What is the total number of refinery waiver applications that EPA received in each year from 2013 through 2017?
2. **QAR** For each year from 2013 through 2017, how many waivers did the EPA grant?
3. **QAR** What companies have received waivers for each year from 2013 through 2017?
4. **QAR** What is the total volume of biofuel obligation represented by the waivers granted for each year 2013 through 2017?
5. **QAR** What is the EPA process for confirming that each applicant falls beneath the 75,000-barrell throughput capacity?
6. **QAR** Please confirm how the gallons waived under the small refinery exemption process are handled. Are the gallons reassigned to remaining obligated parties for blending? Are they reassigned within the same compliance year? If they are not reassigned to the remaining obligated parties, what is the disposition of those gallons relative to the overall renewable volume obligation set in the annual rule?
7. **QAR** Did you inform President Trump or White House staff of the unusually large number of small refinery exemptions EPA was granting and of the potential effects on the renewable fuel market of exempting additional gallons and facilities and the fact that these actions would not be well received by the agricultural community?

8. **OAR** EPA claimed recently that the Agency did not change the criteria for granting exemptions from those used in past years. Yet, numerous press reports indicate the Agency has granted almost double the amount of waivers than have been granted in past years. What is your explanation for the Agency's granting of an unusually high number of waivers under this program as compared to past years? If the Agency is applying different criteria, please provide an explanation of the changes and the justification for initiating the new criteria.
9. **OAR** Did EPA consult with the Department of Energy on each of the applications for a small refinery exemption for 2016 and 2017? For how many of the applications reviewed by DOE for these two compliance years did EPA disagree with DOE's recommendation to grant or deny the exemption?

The Honorable Joseph Kennedy, III

1. **AO** What precipitated the need for a secure phone booth inside of your office? You repeatedly have placed blame at the feet of your staff for the exorbitant \$43,000 cost of the phone booth, but it was you yourself who instructed your staff to find a way to create a secure communications line in your office in the first place. Why do you need that secure line? What is the nature of the phone calls you are making that require an additional "secure" phone line while already in the privacy of your own office? If your office does not provide sufficient privacy, why is one of the two Secure Compartmented Information Facilities (SCIFs) inside the EPA headquarters not sufficient?

Attachment 2—Member Requests for the Record

During the hearing, Members asked you to provide additional information for the record, and you indicated that you would provide that information. For your convenience, descriptions of the requested information are provided below.

The Honorable Bill Johnson

1. **OAR** I know that the EPA has expressed interest in finding a resolution to some of the concerns regarding EPA's current brick MACT rule which was issued in 2015. Would you commit to working with me and this committee in providing further information on this work and any potential possibilities?

The Honorable Bill Flores

As the American people are well aware, the EPA under the Obama administration abused environmental regulatory process by ignoring congressional statutes any by circumventing the U.S. Constitution. Fortunately, the federal court system stepped in to protect American families from this abuse of the law. In this regard I have the following questions:

1. **OGC** Can you provide this committee with a list of those overreaching and overturned regulations that were overturned by the court systems?
2. **OP** Can you provide this committee with the economic cost of those overturned regulations?
3. **OP** Can you also inform the committee about EPA's actions, if any, to modify those regulations so those overreaching regulations to conform with the rule of law?

The Honorable Richard Hudson

1. **OCSPP** Was GenX used in a manner that was incompatible with the consent agreement under the Toxic Substances Control Act?

ANSWER - EPA is investigating the facility to determine whether terms of the 2009 Consent Order were complied with. EPA has not made any final determinations as to whether the use of GenX at the plant was incompatible with the TSCA consent order. EPA is continuing to assess the use of GenX at the plant under

The Honorable Doris O. Matsui

1. **OAR** You said the EPA has data supporting your decision to revise emission standards for light duty vehicles. Will you commit to providing that data to both side of the committee?

The Honorable John P. Sarbanes

1. **OAR** Did Carl Ichan's company apply for a waiver from ethanol blending requirements for any of its refining facilities?
2. **OAR** Did Carl Ichan's company receive a waiver for any of its refining facilities?

The Honorable Tony Cardenas

1. **OGC** In regard to your lease, can you provide the written statement from the attorneys after reviewing it?

The Honorable Debbie Dingell

1. **OAR** In regard to the January 25, 2018 guidance to reverse the longstanding once in, always in policy for major sources of hazardous air pollutants, did EPA determine the location of these sources?
2. **OAR** Yes or no, did EPA conduct an analysis of the health effects including the potential increased risk of cancer of this decision before releasing the January 25th guidance memo?
3. **OAR** Yes or no, did EPA conduct an analysis of the potential health effects of this policy on children, babies, or pregnant women before releasing the January 25th?
4. **OAR** Yes or no, did EPA conduct an analysis of the potential health effects of this policy on older Americans or those with chronic health problems before releasing the January 25th guidance?
5. **OAR** Yes or no, did EPA conduct an analysis of the potential health effects of this policy on minority and low-income communities before releasing the January 25th?

EPA

Ex-Trump nominee is a fan of science overhaul

Niina Heikkinen, E&E News reporter

Published: Friday, August 17, 2018

President Trump's controversial ex-nominee to head EPA's chemical safety office likes a proposal to limit which research the agency can use when crafting new rules.

Michael Dourson, director of science at the nonprofit group Toxicology Excellence for Risk Assessment, told E&E News in an interview that "overall," his group supports the agency's proposed rule, which would require that studies used in EPA rulemaking make their methodologies and data publicly available. The group submitted its opinion in writing to EPA yesterday during a public comment period.

The "Strengthening Transparency in Regulatory Science" proposal, known alternately as the "censored science" or "secret science" rule, has met with strong opposition from environmental groups who see it as a way for EPA to avoid drafting regulations on harmful pollutants.

But Dourson — like other fans of the overhaul — described the rule as a way to allow EPA to demand access to data, in much the same way the agency is already able to evaluate relevant data from the industries the agency regulates.

"There are aspects we support, and there are aspects we would like to see reworked," he said of the proposal. "EPA could have made it more clear that there are situations where they ask for data to do their own analysis and the authors have not given the data, and in that kind of situation, the EPA people are stuck."

More access to data, in turn, would help EPA make more informed decisions about whether it makes sense to proceed with future regulations, he said.

Dourson was nominated to head EPA's Office of Chemical Safety and Pollution Prevention in July 2017 but withdrew his name last December after facing fierce opposition from Senate Democrats and some Republicans. While awaiting confirmation, he worked for three months as a senior adviser to then-EPA Administrator Scott Pruitt under a special hiring authority. Both his presence at the agency without prior Senate approval and his connections to the chemical industry drew sharp scrutiny from critics.

Dourson said yesterday that during his time as Pruitt's adviser, he was given no authority to manage staff or make decisions and did not have access to offices containing confidential business information.

"It was basically to learn in office," he said of his role at the agency.

Critics of the EPA science proposal warn that the change strictly limits the types of research it could consider in rulemaking. They say EPA would not be able to consider landmark public health studies that rely on patient information, or on public health research on victims of disasters, where data cannot be ethically replicated. They say that excluding this research will mean the agency will underestimate the potential benefits of crafting new rules and that it would ultimately lead to more pollution.

However, Dourson said he did not think EPA would discount major epidemiological studies like the famous "Harvard Six Cities" research in drafting regulations. Instead, those studies would perhaps be used indirectly to develop hypotheses on what pollution or toxin levels should be used to then conduct animal research to more directly quantify the physical harm caused by the pollutants. That animal research data could then be "tied in" with epidemiological data to extrapolate the harm to human populations.

"It's an amazing amount of work," Dourson said.

The proposal also gives EPA's administrator the authority to waive the data requirements on a case-by-case basis, which has raised some concerns about what types of research may or may not face greater scrutiny.

"I like the idea of giving the administrator some latitude, but at the same time, if he's using his judgment there, he has to fully explain what he is doing," Dourson said.

Yesterday was the last day for the public to leave comments on the proposed rule.

While most of the comments on the proposal slammed EPA for considering it, EPA's plan also received a flurry of positive feedback over the past week. Supporters emphasized their right to know what the government was doing with taxpayer money, and repeatedly called for EPA to "show your work."

Dourson's group, TERA, called for EPA to have more access to data to better enable replication of and independent analysis of research.

"The public's interest is best served by trusting EPA's experts dedicated to public health protection. Withholding scientific data from EPA's independent analysis is not in the public's best interest," the comments from TERA read.

Colleagues:

It is likely the Administrator will be testifying before EPW on August 1 – as we found out today. This means we will need to put together a briefing binder very quickly for him and the team.

Can you please work with your respective program offices to update the fact sheets with the latest info? Attached, for your information and reference, is a file with the latest fact sheets that were used and approved for the previous round of hearings. We will need your updated (if appropriate) fact sheets no later than Noon Wednesday, July 25th. Earlier of course would be better if possible, but please note that this is an ironclad date.

Thank you and please let me know if you have any questions. If there are no updates to provide, please let me know that as well.

Hi Bruce - Please see attached for another review item that rolled in this afternoon. This is a draft response to a letter we received from Reps McNerney, Tonko, and Pallone regarding how the Scientific Transparency proposed rule would impact PFAS work.

OCIR drafted a response and Sam Linkins and Andy Gillespie edited it to be more consistent with other letters we've sent about the proposed rule. OW has also reviewed and this version reflects their edits. There is some discussion about whether ORD or OW would sign. The current version has Jennifer signing off.

Please let me know by COB tomorrow if you are okay with the response or have additional edits.

Thank you,
Megan

Congress of the United States

Washington, DC 20515

June 7, 2018

The Honorable Scott Pruitt
Administrator
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue NW
Washington, D.C. 20004

Dear Administrator Pruitt:

We write to express grave concerns about the Environmental Protection Agency's (EPA) proposed rule, published on April 30, 2018, titled Strengthening Transparency in Regulatory Science (Docket No. EPA-HQ-OA-2018-0259). Contrary to its name, the proposed rule would implement an opaque process allowing EPA to selectively suppress scientific evidence without accountability and in the process undermine bedrock environmental laws. We join nearly a thousand scientists^[1] and many leading scientific organizations^[2] in opposing this policy and urge you to withdraw the proposed rule.

The proposed rule suffers from significant procedural flaws including lack of supporting evidence, insufficient detail in the proposal itself, and conflicts with EPA's statutory obligations. The substance of the rule is also concerning. It appears to be targeted at excluding important public health studies while privileging industry-sponsored research. It also fails to adequately consider the costs of implementation and the potential privacy implications. Finally, the discretion it grants the Administrator to grant case-by-case exemptions completely undermines the stated goal of transparency.

Without any significant evidence supporting it, the proposed rule is a solution in search of a problem. The proposed rule fails to identify specific weaknesses in EPA's current scientific approach, which is grounded in peer review. Wendy Wagner, author of two of the studies EPA cites to rationalize the rule, said in response to the proposed rule: "They don't adopt any of our recommendations, and they go in a direction that's completely opposite, completely different."^[3] The proposed rule also invokes policies from *Nature*, *Science*, and the *Proceedings of the National Academies of Science*, but each of these organizations has argued against the rule.^[4] Additionally, EPA fails to cite any specific language providing authority for the rule and asks commenters where the authority may be found. Key issues including how data would be made available to the public and how private information would be protected are not addressed. This is a serious deficiency in a rule meant to increase access to data for the public.

^[1] <https://s3.amazonaws.com/ucs-documents/science-and-democracy/secret-science-letter-4-23-2018.pdf>

^[2] <https://blog.ucsusa.org/michael-halpern/a-list-of-scientific-organizations-that-have-supported-and-opposed-limiting-what-research-epa-can-use-to-make-decisions>

^[3] <https://www.theatlantic.com/science/archive/2018/04/how-the-epas-new-secret-science-rule/558878/>

^[4] <https://www.aaas.org/news/scientific-leaders-speak-out-epa-s-proposed-transparency-rule>

The proposed rule is inconsistent with EPA's statutory obligations to ground its actions on scientific evidence. The Toxic Substances Control Act (TSCA) and the Safe Drinking Water Act (SDWA) require that EPA use the "best available science." Courts have found this language to require that agencies "seek out and consider all existing scientific evidence" and not ignore existing data.^[5] This standard would be impossible to meet under the proposed rule.

The proposed rule requires that data underlying EPA's regulatory actions be made publicly available to allow for independent validation. Such a standard could exclude studies that utilize confidential industry and health data that are vital to understanding the nature of chemical pollutants, the impacts of pollution, and the most effective ways to protect the environment and public health. One such piece of health research is the "Six Cities" study,^[6] which followed more than 8,000 participants for nearly twenty years and was key in establishing a link between chronic air pollution exposure and increased mortality. The results of this study have stood up to extensive subsequent analysis, highlighting the strength of such research.^[7] This is just one example of an entire class of studies that the rule would remove from consideration. Excluding such health studies would hobble EPA's ability to implement laws like the Clean Air Act, SDWA, and TSCA and to fulfill its mission to protect public health and the environment.

Attempting to comply with the publication requirement and health privacy laws would place enormous burdens on EPA and researchers. According to an internal EPA analysis of the HONEST Act, which had a similar data-publishing requirement, the EPA would have to spend more than \$250 million annually to redact private health information before releasing study data to the public.^[8] EPA failed to provide a cost-benefit analysis of the proposed rule, only stating that EPA shall implement the provisions "in a manner that minimizes cost." Even with careful redaction, there is still a possibility of study participants being identified due to the amount of information that would have to be revealed under the proposed rule for the purposes of reproducibility. The rule is costly and a threat to the privacy of Americans.

Concerns with the proposed rule are not limited to the public health community. Dr. Nancy Beck, Deputy Assistant Administrator of the Office of Chemical Safety and Pollution Prevention, has expressed reservations about the publishing requirements of the proposed rule for industry as well.^[9] Industry representatives have expressed concerns about requiring public disclosure of data, such as Confidential Business Information, citing the potential for improper use of such data by competitors.^[10]

In addition, the proposal to allow the EPA Administrator to grant exemptions on a case-by-case basis would enable the Administrator to interfere in the rulemaking process in an arbitrary and capricious manner. The Administrator is not required to present the reasoning behind such

decisions. This waiver provision establishes an opaque process, completely at odds with the stated purpose of the rule, that would bring additional uncertainty to the regulatory process.

We support transparency and scientific integrity. However, the proposed rule will limit transparency and undermine the scientific integrity of EPA's rulemaking process. Given its numerous flaws and the lack of an underlying rationale, we urge you to withdraw the proposed rule.

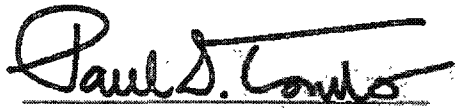

Sincerely,

Subject: CONFIRMED: EPA PRE-INTERNAL CALL : HONEST ACT IMPLEMENTATION

Attachments: BILLS-115hr1430rfs.pdf

Location: Personal Phone / Ex. 6

Start: 1/26/2018 7:00:00 PM

End: 1/26/2018 8:30:00 PM

Show Time As: Tentative

Purpose: To internally discuss EPA implementation of HR 1430 (ATTACHED)

This is an internal call in preparation for a briefing with Committee on House Science, Space and Technology (HSST). DAA Ringel (OCIR) will lead a discussion with respective program offices regarding the agency's implementation efforts of the HONEST ACT.

United States Senate
WASHINGTON, DC 20510

August 09, 2018

The Honorable Andrew Wheeler
Acting Administrator
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue NW
Washington, D.C. 20004

Dear Acting Administrator Wheeler:

We write to express our concerns with the Environmental Protection Agency's (EPA) proposed rule, published on April 30, 2018, titled "Strengthening Transparency in Regulatory Science" (Docket No. EPA-HQ-OA-2018-0259). We strongly urge you to withdraw it. EPA is already transparent in its use of peer-reviewed research in regulatory science. This particular proposal to "increase transparency" should not be used as a method to cast doubt on scientific consensus. In addition, the proposal lacks details on how its provisions would be implemented, specifically when it comes to privacy issues, reproducibility, and possible exemptions. It is also strongly opposed by nearly 70 public health, medical, academic, and scientific organizations.¹

One provision in the proposed rule gives the Administrator of the EPA the authority, on a case-by-case basis, to exempt some studies from the proposed rule if he or she determines that "it is not feasible to ensure that all dose response data and models underlying pivotal regulatory science are publicly available in a fashion that is consistent with law, protects privacy and confidentiality, and is sensitive to national and homeland security." The criteria for these exemptions is unclear. The proposed rule does not require the Administrator to present the reasoning behind his or her decisions. This process would only result in additional uncertainty in the regulatory process. These decisions, should they need to be made, should not be made by a political appointee, but instead by a scientist that is a subject matter expert.

Additionally, EPA regulatory decisions are based largely on human health studies that include patients' personal data and medical records, sometimes over the span of decades. These studies must comply with the Health Insurance Portability and Accountability Act of 1996 (HIPAA), making the release of this data illegal as well as unethical. Data in a medical chart, test results, and billing information all constitute federally identified personal health information that must be protected under HIPAA.

We realize that the proposed rule does make an attempt to address privacy issues while requiring increased transparency of scientific data. However, they are only addressed in a vague sense. The rule states that, "EPA believes that concerns about access to confidential or private information can, in many cases, be addressed through the application of solutions commonly in use across some parts of the Federal government," but it does not state what those solutions would be. It references simple data masking, coding, and de-identification techniques, but these methods will

¹ <https://www.apha.org/news-and-media/news-releases/apha-news-releases/2018/epa-transparency>

not sufficiently protect patient identity in studies such as those in which personal health information is integral to the study. We are concerned that this proposed rule has oversimplified the issue at hand, which will lead to difficulties in implementing this rule while maintaining EPA's commitment to using the best available science in its regulatory actions.

The phrase "best available science" is an important piece of this proposed rule. This proposed rule may be striving to improve regulatory science, but we fear that it could be a case in which the "best" is the enemy of the good. EPA cannot let their pursuit of "perfect science" lead them to disregard good scientific studies. Just as scientists cannot pick and choose the data they use for analysis, it is imperative that EPA use all available scientific studies to formulate its decisions. They should not ignore existing data.

To this point, five major scientific journals, including *Science*, *Nature*, *Cell*, *PLOS One*, and *Proceedings of the National Academy of Sciences* recently released a statement opposing this proposal. In it, they noted that many scientific journals already have policies to ensure transparency as much as possible. Additionally, in cases where such transparency is not possible, reviewers can be given confidential access to the raw data so that they can check and replicate the findings. The EPA proposal does not allow for such situations.²

We support transparency and scientific integrity. However, the proposed rule would limit transparency and undermine the scientific integrity of EPA's regulatory process. We strongly urge you to withdraw the proposed rule.

Sincerely,

Christopher A. Coons

Subject: Science at the EPA

Dear Mr. Pruitt:

Your policies and action as regards to science are meant to reject any input from independent research and analysis. Your actions regarding pollution of water, air, land will lead to much illness and death of American citizens, including the very wealthy as there is no way to run away from some of the pollution that will result.

Your family and friends might benefit financially in the short term but it is likely that your reputation will become the object of a great deal of approbation, scandal, and financial suits by the damage caused by your removal of EPA protections and denial of proper scientific analysis.

My husband, who served on many EPA advisory boards, commented that the "real" scientists had pretty much resigned from the advisory boards. Scientists at the EPA have been reassigned or fired.

It was President Nixon, a Republican, who established the EPA and hired real scientists as advisors. While he had his faults, there were many things he started that benefitted our country.

Please reconsider your actions, both for the sake of those residing in this great country and indeed the world, and for the sake of how you will be viewed by those who follow you in future administrations.

Sharon Johnson

14 May 2018

Scott Pruitt, Administrator
Environmental Protection Agency
1200 Pennsylvania Avenue, N.W.
Washington, DC 20460

Dear Administrator Pruitt,

On behalf of the American Meteorological Society (AMS), I urge you to reconsider your proposal to limit use of scientific evidence in rulemakings [Strengthening Transparency in Regulatory Science (April 30, 2018) – Docket ID No. EPA-HQ-OA-2018-0259].

Rulemaking must strive to include all of the best available information to the maximum extent possible; scientific evidence is a critical component of this information. We recognize the great effort and careful judgment needed as the agency works to ensure fair and responsive rulemaking. Subject matter specialists in the sciences are actively willing to participate in developing EPA assessments, as the agency carefully and comprehensively examines the available evidence, weighing that evidence based on merit.

AMS is on record supporting full and open access to data,¹ but recognizes that this is a complex issue. In the specific case of EPA rulemaking, the complexity often arises in the need for human subject data to be treated as confidential information. The proposed rule does not sufficiently account for these complexities and could compromise rulemaking by disallowing useful scientific insights that are critical to the comprehensive assessment of environmental issues.

It would be most appropriate to withdraw this proposal and initiate an independent examination of this issue. One option for doing so would be to work with the National Academies of Sciences, Engineering, and Medicine and request a study on the topic. Ultimately, however, no change in the rulemaking process should occur without careful analysis that ensures the best available knowledge and understanding is being applied for the protection of the public.

Sincerely,

Keith L. Seitter
Executive Director

Subject: protest against cutting any scientific info to protect us!

As a tax-paying citizen of the U. S, I want to fiercely protest Scott Pruitts' proposal to reduce the scientific input available about the toxins put out by industry that harm both humans and the environment. It is a short sighted attempt to cake to greed and reckless disregard for our children and future generations. It stuns me that he can be so small in his thinking and so committed to destruction. Bonnie Lawlor, North Bend WA

Re proposed rulemaking – Strengthening Transparency in Regulatory Science- Docket ID No.
EPA-HQ-OA-2018-0259

Dear Administrator Pruitt,

I support the Environmental Protection Agency's (EPA) proposed rulemaking, "Strengthening Transparency in Regulatory Science." The current state of science about dose-response supports this measure as do larger concerns about reproducibility in scientific research. Indeed, the larger concerns about reproducibility suggest that this measure should be applied generally within the Environmental Protection Agency and across the Federal Government.

I write as President of the National Association of Scholars (NAS). NAS is a network of scholars and citizens united by our commitment to academic freedom, disinterested scholarship, and excellence in higher education. As part of our mission, we support the highest standards of truth-seeking in the sciences, and seek to have government policy support and rely upon science that eschews political advocacy and subjects its own procedures to the strictest scrutiny.

The NAS is pleased that the EPA has chosen to prioritize the application of reproducibility reforms in the area of dose-response regulation. The NAS has long been concerned about politicized distortions of dose-response science. A notable example is the status of the linear no-threshold (LNT) dose-response model for the biological effects of nuclear radiation. The prominence of the model stems from the June 29, 1956 *Science* paper, "Genetic Effects of Atomic Radiation," authored by the NAS Committee on the Biological Effects of Atomic Radiation. This paper is now widely questioned and has been seriously critiqued in many peer-reviewed publications, including two detailed 2015 papers. These criticisms are being taken seriously around the world, as summarized in a December 2, 2015 *Wall Street Journal* commentary. This is a consequential matter that bears on a great deal of national public policy, as the LNT model has served as the basis for risk assessment and risk management of radiation and chemical carcinogens for decades. A reassessment of that model could profoundly alter many regulations from the Environmental Protection Agency, the Nuclear Regulatory Commission, and other government agencies.¹

¹ See <https://www.nas.org/images/documents/LNT.pdf>, which reproduces documents including Genetics Panel of the Biological Effects of Atomic Radiation (BEAR) I Committee of the National Academy of Sciences, "Genetic Effects of Atomic Radiation," *Science* 123 (29 June

In December 2015 the NAS called upon the National Academy of Sciences and the American Association for the Advancement of Science to revisit the 1956 *Science* paper. Both declined. In the Winter 2017 issue of our journal *Academic Questions*, Professor Edward J. Calabrese published a detailed account of the origins of the 1956 *Science* paper, raising serious questions about ethical improprieties that may have contributed to flawed and overstated conclusions in the paper. These matters are fairly well known. Yet due to the complacency of the scientific establishment and, no doubt, the prestige of some of the scientific bodies implicated in the cover-up, no one in a position of authority until now has been willing to challenge the linear no threshold dose-response orthodoxy.²

The NAS is pleased that the EPA has chosen to address increasing concerns about the irreproducibility crisis of modern science. The NAS has recently written a long report on how the improper use of statistics, arbitrary research techniques, lack of accountability, political groupthink, and a scientific culture biased toward producing positive results together have produced a reproducibility crisis that afflicts a wide range of scientific and social-scientific disciplines, from epidemiology to social psychology. Many supposedly scientific results cannot be reproduced in subsequent investigations. We have recommended extensive changes to scientific procedures and to the way government judges the science it uses to make policy—including measures such as this proposed rule, to require that government make policy only based on scientific research whose data and procedures are available for other scientists to reproduce.³

Ioannidis, "Why Most Published Research Findings Are False," *PLoS Med* 2, 8 (2005), <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC1182327/>; Joseph P. Simmons, et al., "False-Positive Psychology: Undisclosed Flexibility in Data Collection and Analysis Allows Presenting Anything as Significant," *Psychological Science* 22, 11 (2011), pp. 1359-66, <http://journals.sagepub.com/doi/pdf/10.1177/0956797611417632>; C. Glenn Begley and Lee M. Ellis, "Drug development: Raise standards for preclinical cancer research," *Nature* 483 (2012), pp. 531-33, <http://www.nature.com/nature/journal/v483/n7391/full/483531a.html?foxtrotcallback=true>; Open Science Collaboration [Brian Nosek, et al.], "Estimating the reproducibility of psychological science," *Science* 349 (2015), <http://science.sciencemag.org/content/349/6251/aac4716>.

In response to the EPA's solicitation for comment on its proposed rulemaking "Strengthening Transparency in Regulatory Science," we respectfully provide the following suggestions on ways to implement the principles of scientific reproducibility into the administrative practice of the EPA, and into the administrative practice of the Federal Government as a whole.

- 1) We recommend that the EPA draft a Reproducible Regulatory Science Guidance Document (RRSGD) that governs all administrative processes (regulatory decisions, proposed rules, promulgations, individual party adjudications, enforcement activities, permit proceedings, site-specific permitting actions, non-binding regulatory determinations, and all other agency actions with precedent-setting influence on future actions) undertaken by the EPA. The RRSGD should:
 - a. Define "best available science" to include only scientific research done using pre-registered protocols, whose research data, associated protocols, computer codes, recorded factual materials, and statistical analyses are archived and publicly available in a manner sufficient for continuing independent verification;
 - b. Explicitly rescind the "weight of evidence" standard for justifying regulatory policy, and replace it with a "best available reproducible science" (BARS) standard, which meets the definition of (a) above;
 - c. Require all *regulatory decisions*, meaning "significant regulatory actions" as defined by the Office of Management and Budget pursuant to Executive Order 12866, to be based on:
 - i. Scientific research that meets the "best available reproducible science" standard;
 - ii. At least one study on the effect of publication bias on this scientific research;
 - iii. At least one meta-analysis of this scientific research; and
 - iv. Explicit consideration of whether the corpus of scientific research has accounted for different aspects of the irreproducibility crisis, including flawed statistics, arbitrary research methods, publication bias, and disciplinary and/or political groupthink.
 - d. Direct all existing EPA risk assessments, guidance documents, etc., to be explicitly updated to include the RRSGD's standards;
 - e. Restrict all grant money for scientific research disbursed by the EPA to scientific research that meets the BARS standard;
 - f. Provide a set procedure for the EPA Administrator to waive the *regulatory decisions* requirements in (c) above on a case-by-case basis, and a set procedure for private individuals and organizations to challenge the waiver;
 - g. Provide strict criteria for the case-by-case waivers in (f) above, focused on the EPA Administrator's judgment that he must prevent immediate dangers to the health or life of American citizens;
 - h. Be drafted so that it may be used as a model for all Federal agencies that use scientific or social scientific research; and

- i. Be drafted so that it may be used as a model for Federal legislation to introduce reproducible science requirements throughout the Federal Government.
- 2) We recommend that the EPA call on Congress to enact a Reproducible Science Reform Act (RSRA) that codifies the principles and policies embodied by the RRS GD.
- 3) We recommend that the EPA prioritize its funding toward upgrading existing research data that does not meet the BARS standard; e.g., by anonymizing research data so as to preserve privacy, confidentiality, etc.
- 4) We recommend that the EPA also provide substantial funding for a “reproducibility architecture” of hardware and software to facilitate the production of reproducible science by all American scientists whose research informs the EPA’s decision-making.
- 5) We recommend that the EPA also provide substantial funding so as to make it possible—and then required—for all EPA notices, proposed rules, regulations, etc., to include easily accessible links to all scientific materials used to justify these EPA actions. These links should include all relevant scientific research that meets the BARS standard, but that does not support the proposed EPA action.
- 6) We recommend that the EPA, as it determines how best to implement the methodologies and technologies of a “reproducibility architecture” to facilitate the adoption of a BARS standard, consult with representatives of the Center for Open Science, the Meta-Research Innovation Center at Stanford (METRICS), and the Laura and John Arnold Foundation Research Integrity Initiative.⁴
- 7) We recommend that the EPA consult with the American Statistical Association about how to institute standard procedures that will ensure that all scientific research used or funded by the EPA is conducted according to the highest standards of statistical practice.
- 8) We recommend that each EPA granting program establish a funding category, with funding priority over all other categories, for meta-analysis and research into publication bias.
- 9) We recommend that the EPA institute a process by which to rescind existing regulations based upon irreproducible science. This process should include:
 - a. The establishment of a permanent investigatory commission to examine existing regulations and determine which are based on irreproducible science; and
 - b. The establishment of a process to rescind regulations based on irreproducible science, which provides a reasonable amount of time for researchers to make their science reproducible before the regulations are rescinded.

We at NAS are aware that significant numbers of scientists and prominent scientific organizations have voiced their disagreement with “Strengthening Transparency in Regulatory Science.” Responding in detail to their points is beyond the scope of this letter, but I will add that we have read their public statements carefully and we do not find them persuasive. Many of those who characterize the proposed rulemaking as unnecessary or counterproductive are the same people

⁴ Center for Open Science, <https://cos.io/>; Meta-Research Innovation Center at Stanford | METRICS, <https://metrics.stanford.edu/>; Laura and John Arnold Foundation Research Integrity Initiative, <http://www.arnoldfoundation.org/initiative/research-integrity/>.

and organizations implicated in publishing non-reproducible results and then standing in the way of reasonable and responsible independent efforts to verify important claims derived from those results.

To a woeful extent, the scientific establishment in the United States has proved to be a poor guardian of the quality of scientific research, especially in situations where (A) a large amount of federal research funding is in play, (B) significant public policy decisions hang in the balance, and (C) fixed ideological goals have been set forth. The combination of these three factors has given rise to advocacy-driven work that claims the authority of science while disregarding scientific methods and safeguards. "Strengthening Transparency in Regulatory Science" is a major step towards rectifying these problems.

NAS believes that these reforms will strengthen the Environmental Protection Agency's longstanding commitment to using only the most reliable science to inform its decision-making. We also believe these reforms will strengthen American science, by prompting researchers to incorporate and make routine in their practices the highest standards of reproducibility.

Sincerely yours,

Re: Proposal to Limit Use of Scientific Evidence in Rulemakings, 83 Fed. Reg. 18,768
(April 30, 2018) - Docket ID No. EPA-HQ-OA-2018-0259.

Dear Administrator Pruitt:

The undersigned Attorneys General are very concerned by the Environmental Protection Agency's (EPA) above-referenced April 30, 2018 proposal to adopt a regulation that would limit the body of scientific evidence that EPA can consider when adopting regulatory standards to protect public health and the environment. Our concern arises both from the truncated timeline under which EPA seeks to change fundamental agency policy and from the vagueness of the proposal. In light of the far-reaching impact the proposal could have on EPA's mission to protect public health and the environment, we ask that you withdraw the proposed rule and convene a process to first consult with the National Academy of Sciences and other independent scientists and science organizations before deciding whether any proposed changes to EPA's current use of scientific evidence are in order.

If you are unwilling to withdraw the proposal, we ask at a minimum that you extend the comment period by at least 150 days to provide for appropriate consultation with the National Academy of Sciences and other independent scientists and science organizations on the proposed changes to EPA's current use of scientific evidence. A full six-month comment period would be consistent with past practice for matters of similar importance and complexity, and is necessary to provide the public and other stakeholders a meaningful opportunity to evaluate the proposal and its implications for the agency's ability to meet its obligation to protect public health and the environment under federal environmental laws. Given the extremely broad impact of this proposal, thirty days is woefully insufficient to give the affected public adequate opportunity to participate in the rulemaking and comment on the proposal as required by the Administrative Procedure Act, 5 U.S.C. § 553(c). While under section (2)(b) of Executive Order 13563, a standard comment period should be at least sixty days, this tremendously consequential proposal calls for a much more deliberate pace given the profound potential impacts on the regulatory processes for all or nearly all of the statutes EPA implements and enforces. We therefore request that should EPA decline to withdraw the proposed rule, the agency instead extend the comment period by at least 150 days, until October 29, 2018.

We appreciate your consideration of this important matter and await your decision regarding our request.

Hi Andrea-

Please see the attached PDF and control slip for an assignment I received this week. MN Commissioner John Linc Stone addressed this to Admin. Pruitt and OEX is asking OCIR to consider writing a response. Let me know if you wish to write a response for Troy to sign or if you like to proceed in a different way.

Thank you,

Hi Everyone,

Chairman Smith of the House Science, Space and Technology Committee (HSST) recently met with the Administrator regarding the subject area of HONEST Act implementation. Resulting from that meeting OCIR will be coordinating a follow-up meeting with HSST committee staff.

In effort to plan for that follow up meeting, OCIR would like coordinate an internal EPA meeting together with your offices to discuss and plan for the Agency's follow up meeting with HSST committee staff. We'd like to set up two meetings- preferably via-phone to ease in the flexibility of everyone's schedules.

I'd like to set-up our first call for **FRIDAY-1/19**, with our second meeting for next week. This first initial call will be to give you more background on what we in OCIR know, and understand what you know from your AA-ship perspective. From there we will also decide on possible meeting dates with the HSST committee and draft up a potential delegate list who will attend.

To make things easier, I'd like coordinate schedules via-outlook, and set up an invitation with agenda and details. As I do this, please let me know whom else to include.

Happy to answer any questions or concerns.

Best,

Laura

April 30, 2018

The Honorable Scott Pruitt

Administrator

U.S. Environmental Protection Agency

1200 Pennsylvania Avenue, NW

Washington, DC 20460

Dear Administrator Pruitt:

I write to respectfully request that the Environmental Protection Agency (EPA) extend by 60-days the deadline for receiving comments on the proposed rule, “Strengthening Transparency in Regulatory Science”, which was published in the Federal Register on April 30, 2018.

The American Institute of Biological Sciences (AIBS) is concerned that the current 30-day comment period does not allow sufficient time for the scientific community to fully analyze the proposed rule. It is thus not possible to submit detailed and substantive comments on a complex proposal that has such far-reaching and long-lasting impacts on public and environmental health.

We are concerned by the agency’s proposal to stop the use of scientific studies that have underlying data that are not publicly available. Many studies that inform regulations rely on scientific data that cannot be made public for reasons such as patient privacy or industry confidentiality but are still important to consider when crafting rules. The data transparency requirement is also likely to impose a significant new cost on the taxpayer as new systems will be required to manage, store, present, and track down data, as well as redact sensitive personal information. This proposed rule change is likely to negatively impact the efficiency of the rulemaking process and result in increased costs to the taxpayer.

Please extend by 60 days the deadline for comments to allow for a more thorough and thoughtful rulemaking process.

Sincerely,

Robert Gropp, Ph.D.

Re: Public hearing and comment period extension request for proposed
rulemaking- Strengthening Transparency in Regulatory Science- Docket ID
No. EPA-HQ-OA-2018-0259

Dear Administrator Pruitt:

The American Lung Association respectfully requests the U.S.
Environmental Protection Agency hold a public hearing and extend the
comment deadline to July 30, 2018, specifically 60 days after the current
May 30, 2018, comment deadline on the proposed rule, "Strengthening
Transparency in Regulatory Science" -- Docket ID No. EPA-HQ-OA-2018-
0259.

Under the Clean Air Act, EPA must hold a public hearing on this proposal
because of the significant impact this rule could have on a wide range of
public health safeguards. The proposal would amend the substantive, long-
followed standards for decision-making for a host of actions covered by
Clean Air Act section 307 (d). Those actions include review of the National
Ambient Air Quality Standards (section 307 (d)(1)(A)); residual risk
determinations for hazardous air pollutants (section 307 (d) (1)(C));
standards for mobile source air toxics (section 307 (d)(1)(K)), and residual
risk standards for municipal solid waste combustors (section 307
(d)(1)(D)). Therefore, Clean Air Act sections 307 (d)(5)(ii) and (iv) require
the Administrator to hold a public hearing on his proposal and to keep the
record open for an additional thirty days after the hearing "to provide an
opportunity for submission of rebuttal and supplementary information."

Further, we request EPA to extend the public comment deadline to July 30,
2018. Under the current comment timeline, we and other commenters will
have difficulty completing detailed comments that fully analyze the

Advocacy Office:

1331 Pennsylvania Avenue NW, Suite 1425 North
Washington, DC 20004-1710
Ph: 202-785-3355 F: 202-452-1805

Corporate Office:

proposal, respond to the technical and scientific questions and address these far-reaching and long-lasting adverse impacts of this rule on the nation's air quality. Furthermore, a major federal holiday falls during the comment period that will limit the time available to review and comment.

Moreover, we note that EPA has failed to complete a regulatory impact analysis that explains the impacts of the proposal. Absent such analysis, we will have to pursue our own efforts to understand the anticipated implications of the proposal. That will require additional time to complete.

In light of the significant public health ramifications of the proposal and the challenge of the brief comment period with the proposal publication in the April 30, 2018 Federal Register, we respectfully request that the comment period be extended until July 30, 2018 to permit all stakeholders to provide comments on this proposal.

Thank you for your consideration of this request.

Sincerely,

A handwritten signature in black ink that reads "Harold Wimmer". The signature is written in a cursive, flowing style.

Subject: NESCAUM request for comment period deadline extenstion on public hearings

Dear Administrator Pruitt:

Please find attached a request by the Northeast States for Coordinated Air Use Management (NESCAUM) submitted to the EPA docket today asking for a comment deadline extension and public hearings on EPA’s proposed rule ‘Strengthening Transparency in Regulatory Science’ (EPA–HQ–OA–2018–0259).

Thank you for your consideration of our request.

Sincerely,

Paul J. Miller, Deputy Director & Chief Scientist

Attention: Docket ID No. EPA-HQ-OA-2018-0259

Re: *Request for 90-day comment period and public hearings for Proposed Rule on Strengthening Transparency in Regulatory Science*

Dear Administrator Pruitt:

The Northeast States for Coordinated Air Use Management (NESCAUM)¹ respectfully request an additional 60 days along with public hearings to comment on the US EPA proposed rule “Strengthening Transparency in Regulatory Science” (Docket ID No. EPA-HQ-OA-2018-0259). The April 30th Federal Register notice provides for only a 30-day comment period, which ends May 30, 2018 (83 Fed. Reg. 18768).

EPA’s proposal has far-reaching consequences on the future use of science by the Agency. For example, the proposed rule lacks specificity. If finalized as is, it could unnecessarily restrict the use of peer-reviewed scientific studies that would inform reviews of the National Ambient Air Quality Standards (NAAQS). This will impede setting NAAQS levels with an adequate margin of safety necessary for public health protection as required by the Clean Air Act.

In light of its vagueness, the proposal comment period of only 30 days is too short to give our states and the public a meaningful time window for consideration and comment, therefore we ask for an additional 60 days to provide a full 90-day comment period. In addition, we also request that EPA hold public hearings during the extended 90-day comment period. A 90-day comment period with public hearings provides our states and the public a more reasonable opportunity to comment in light of this proposal’s significant implications for public health and environmental protection.

Sincerely,

Paul J. Miller

Deputy Director and Chief Scientist

Subject: Request for Extension of Time and Public Hearings on Proposed Rulemaking – Docket ID No. EPA-HQ-OA-2018-0259

Dear Administrator Pruitt and Mr. Sinks,

On behalf of Nat Mund, Director of Federal Affairs at the Southern Environmental Law Center, and twenty-two other non-profit organizations from across the Southeast, please find attached a letter requesting that the EPA extend the comment period for Proposed Rulemaking – Strengthening Transparency in Regulatory Science, Docket ID No. EPA-HQ-OA-2018-0259 for a minimum of sixty days beyond the currently scheduled public comment deadline. We would also encourage you to schedule at least three public hearings in various locations across the country, including a hearing in the Southeast, in order to gather additional input from the public.

The proposed rule’s potential impact on science-based health and environmental safeguards is large and far-reaching, and the currently scheduled public comment period will not allow those potential impacts to be adequately addressed.

Thank you for your consideration.

Kym Hunter

**RE: Comment Period Extension Request for Proposed Rulemaking –
Strengthening Transparency in Regulatory Science, Docket ID No. EPA-HQ-
OA-2018-0259**

Dear Administrator Pruitt:

The Southern Environmental Law Center (“SELC”), Clean Air Carolina (“CAC”), Medical Advocates for Healthy Air (“MAHA”), the North Carolina Conservation Network (“NCCN”), Cape Fear River Watch, the Haw Riverkeeper Assembly (“HRA”), Sustain Charlotte, Carolina Wetlands Association, MountainTrue, Alabama Rivers Alliance, Altamaha Riverkeeper, Chattahoochee Riverkeeper (“CRK”), the Coosa River Basin Initiative (“CRBI”), the Virginia Conservation Network (“VCN”), Gasp, the James River Association (“JRA”), the Cahaba River Society, Student Action with Farmworkers (“SAF”), the Ogeechee Riverkeeper, Sound Rivers, and the Potomac Riverkeeper Network respectfully requests that the Environmental Protection Agency (“EPA”) extend the comment period for the above-referenced proposed rule for a minimum of sixty days beyond the currently scheduled public comment deadline. We would also encourage you to schedule at least three public hearings in various locations across the country, including a hearing in the Southeast, in order to gather additional input from the public. This proposed rule’s potential impact on science-based health and environmental safeguards is large and far-reaching, and the currently scheduled public comment period will not allow those potential impacts to be adequately addressed.

SELC is a nonprofit public interest law firm dedicated to the protection of natural resources, communities, and special places in a six-state region of the Southeast. SELC works in all three branches of government to help create, implement, and enforce the laws and policies that govern how our environment is protected. SELC advocates for clean energy and air, clean water, mountains and forests, land and community, coast and wetlands, and wildlife and special places. SELC has offices in Charlottesville, VA, Chapel Hill, NC, Asheville, NC, Atlanta, GA, Birmingham, AL, Charleston, SC, Nashville, TN, Richmond, VA, and Washington, DC and works with over 200 partner groups in the southeast.

CAC champions a statewide initiative to raise North Carolina's air quality to exceed that of scientific recommendations. Energized by the research-proven fact that even the smallest air pollutants are toxic to people's health, and by the urgency of pollution-induced climate change, CAC is a team driven to advance its mission to ensure cleaner air quality for all North Carolinians through education and advocacy and by working with its partners to reduce sources of pollution.

MAHA is a statewide network of medical and health professionals leading the call for cleaner air. MAHA members learn about the health impacts of air quality so that they can help their patients and advocate for strong, clean air policies.

NCCN is a statewide network of nearly 100 environmental, community, and environmental justice organizations focused on protecting North Carolina's environment and public health. NCCN supports, trains, and coordinates diverse groups throughout the state and directly advocates to achieve equitable and sustainable solutions for the environment.

Since 1993, Cape Fear River Watch has been working to protect and improve the water quality of the Lower Cape Fear River Basin through education, advocacy, and action. Cape Fear River Watch engages residents of its watershed through programs to preserve and safeguard the river. The Cape Fear Riverkeeper is a member of the Waterkeeper Alliance, an international clean water advocacy organization.

The Haw River Assembly is a nonprofit environmental organization promoting environmental education, conservation and pollution prevention. It is a member of Waterkeeper Alliance. HRA depends on its scientific partners to provide information on the quality of surface waters in order to protect the ecosystems and communities that depend on them.

Sustain Charlotte is a community-based nonprofit organization dedicated to educating, engaging and uniting citizens to solve Charlotte's sustainability challenges. Sustain Charlotte inspires choices that lead to a healthy, equitable and vibrant community for generations to come.

Carolina Wetlands Association, a nonprofit, is a nonpartisan, science-based organization advocating for wetlands. The Carolina Wetlands Association promotes the understanding, protection, restoration, and enjoyment of North and South Carolina's wetlands and associated ecosystems through science-based programs, education, and advocacy.

MountainTrue is committed to keeping its mountain region a beautiful place to live, work and play. Its members protect their forests, clean up their rivers, plan vibrant and livable communities, and advocate for a sound and sustainable future for all residents of WNC.

Alabama Rivers Alliance is a statewide network of groups working to protect and restore all of Alabama's water resources through building partnerships, empowering citizens and advocating for sound water policy and its enforcement.

The Altamaha Riverkeeper is dedicated to the protection, defense and restoration of Georgia's Altamaha River and its tributaries, the Ocmulgee, the Oconee and the Ohoopsee, and

three major lakes, Sinclair, Oconee and Jackson, within the Altamaha Watershed. The Riverkeeper works to fulfill the Clean Water Act's goal of fishable, swimmable, and drinkable waters for the communities and recreational users within this important ecological region. Altamaha Riverkeeper has more than 1,500 members, from Atlanta and Athens to the Golden Isles, and several thousand followers who support its work.

CRK is a nonprofit environmental advocacy organization dedicated to the protection and stewardship of the Chattahoochee River, its tributaries, lakes and watershed. CRK represents more than 8,600 members who use and enjoy the river system and depend on the Chattahoochee River and its lakes as a source of drinking water, recreation and economic prosperity.

CRBI is a nonprofit environmental advocacy organization headquartered in Rome, northwest Georgia with over 3,500 members in Georgia. Since 1992, CRBI has been working to protect, preserve, and restore the biologically diverse Coosa River Basin, including the Coosa River and its tributaries. To accomplish this, CRBI engages in educational efforts, research, advocacy, and legal action where necessary.

VCN began as a roundtable of major conservation groups and has grown to include over 120 Network Partners across the Commonwealth. VCN is committed to building a powerful, diverse, and highly-coordinated conservation movement focused on protecting the Commonwealth's natural resources today and for tomorrow.

Gasp is a health advocacy organization working to reduce air pollution in Alabama through education and advocacy.

JRA is a member-supported nonprofit organization founded in 1976 to serve as a guardian and voice for the James River. Throughout the James' 10,000-square mile watershed, JRA works towards its vision of a fully healthy river supporting thriving communities. With offices in Lynchburg, Richmond and Williamsburg, JRA is committed to protecting the James and connecting people to it.

The Cahaba River Society is a citizen advocacy group formed in 1989 to restore and protect the Cahaba River watershed and its rich diversity of life. The diverse lives depending on the Cahaba include the 600,000 people and numerous businesses in the Birmingham Water Board service area relying on the River as a major source of drinking water as well as its internationally significant diversity of freshwater wildlife.

SAF works with farmworkers, students, and advocates in the Southeast and nationwide to create a more just agricultural system. Since 1992, SAF has engaged thousands of students, farmworker youth, and community members in the farmworker movement.

The Ogeechee Riverkeeper's mission is to protect, preserve, and improve the water quality of the Ogeechee River watershed by building bridges between people and their local waterways. A proud Member of the Waterkeeper Alliance, the Ogeechee Riverkeeper works with over 300 organizations around the world to ensure that its waters are fishable, swimmable, and drinkable now and for future generations.

Sound Rivers is a private nonprofit organization that guards the health and natural beauty of the Neuse and Tar-Pamlico River Basins. It partners with concerned citizens to monitor, protect, restore and preserve the watersheds covering 23% of North Carolina's land mass. Sound Rivers' goal is to provide clean water to its communities for consumption, recreation, nature preservation and agricultural use.

Potomac Riverkeeper Network is a nonprofit organization with three regional Waterkeeper branches: Potomac Riverkeeper, Upper Potomac Riverkeeper, and Shenandoah Riverkeeper. Its mission is to protect the public's right to clean water in its rivers and streams. Potomac Riverkeeper Network stops pollution to promote safe drinking water, protect healthy habitats, and enhance public use and enjoyment.

EPA published a notice in the Federal Register of the proposed rule, titled "Transparency in Regulatory Decisionmaking" on April 30, 2018. 83 Fed. Reg. at 18,733 (proposed 30 C.F.R. § 30.3). By providing that, "when EPA develops regulations... with regard to those scientific studies that are pivotal to the action being taken, EPA should ensure that the data underlying those are publicly available in a manner sufficient for independent validation," 83 Fed. Reg. at 18,768, the proposed rule would dramatically alter how EPA uses science in its regulatory decisionmaking process. This change would affect all significant EPA decisions; it requires careful, considered, and in-depth analysis by a broad range of stakeholders. Additionally, since EPA did not provide any of its own analysis of the potential effects of its proposed rule on environmental regulation or the scientific studies underlying previously enacted rules, the public must undertake that task themselves. Thirty days is clearly insufficient to meaningfully assess the potential impact of the proposed rule.

Given the unmistakable complexity of the proposed rule and its potential to have a significant effect on EPA's ability to fully protect the public from environmental and public health hazards such as air pollution and unsafe chemicals, we urge EPA to extend the comment period by a minimum of sixty days and to schedule at least three public hearings.

Thank you for your consideration of this request. We would appreciate acknowledgement of this letter and look forward to your reply.

Sincerely,

Secretary Scott Pruitt
Environmental Protection Agency, Mail Code 1101A
1200 Pennsylvania Avenue, N.W.
Washington, D.C. 20460

OFFICE OF THE
EXECUTIVE SECRETARIAT

Dear Secretary Pruitt,

I am writing to ask that you reconsider a proposal to introduce a regulation that would only allow studies with public data to influence writing regulations. While this proposal sounds good, it would severely limit the pool of scientific research that the Environmental Protection Agency uses to base its rules. For example, an insistence that data be "reproducible" will prevent the EPA from looking at data from events that are impossible or unethical to simulate—such as the BP oil spill or lead in children's drinking water. The EPA should cast a broad and wide net in looking to scientific data for information that impacts human health and safety and the health of our environment.

The Union of Concerned Scientists, an organization I trust, opposes this regulation. Groups such as the oil and gas lobbyists, who are in favor of this regulation, appear to have a serious conflict of interest. The organization you oversee is the Environmental PROTECTION Agency. Please act accordingly.

I look forward to hearing from you.

Respectfully,

Cynthia Winfield

RECEIVED

Re: Request for a Comment Period Extension, a Hearing, and CASAC Review for EPA's Proposal entitled "Strengthening Transparency in Regulatory Science", 83 Fed. Reg. 18768 (April 30, 2018); Docket No. EPA-HQ-OA-2018-0259

Dear Mr. Pruitt,

I am writing on behalf of the Environmental Protection Network, an organization of former EPA employees and others concerned about the future of the agency, to request an extension of time for public comment, the scheduling of a public hearing or hearings, and other actions.

Our reasons are supported by examples drawn from multiple statutes administered by EPA and will be presented as such.

General concerns supporting an extension of time. The proposal is far too complex, with effects too broad and indeterminate, and requests comment on far too many issues, for a thirty-day response period.

First, although the proposal suggests it will apply to eight environmental statutes, it does not identify any statutory or regulatory provisions requiring the use of science such that the rule will affect their implementation (or effectively amend them). Potential commenters will have to locate and pore through each such provision for themselves in order to assess the proposal's likely effect, *before* they can prepare comments addressing it.

Second, the astonishing breadth of the request for comments also requires extending the comment period. The notice requests comments on a host of general questions, with enough variations or alternatives to bring the total to more than fifty. In many cases, the notice simply identifies the potential comment topics, with no analysis, and no indication which approach the final rule will adopt.

Third, any proposal must meet the obligation to include sufficient, specific information to enable commenters to identify, understand, and respond to the supporting evidence advanced by the agency. This obligation is particularly weighty in a proposal with such sweeping, multi-statutory impact and ambitious, potentially unprecedented scope of change. Yet most of the footnotes are so general and unspecific as to be uninformative (see fn. 8-12, 16-21), or are conclusory without supporting evidence (see fn. 13, part fn. 3).

The amorphousness and breadth of the request for comments, combined with the absence of information about the potential statutory and regulatory provisions the proposal will affect, and the lack of specific information

www.EnvironmentalProtectionNetwork.org

info@EnvironmentalProtectionNetwork.org

202-656-6229

review. The SAB is then to review and comment on the proposal, which the Administrator is to consider, although the Administrator is not required to obtain SAB approval for any final action. See H. Rep. No. 95-722 (95th Cong. 1st Sess. (1977) (Conference Report)).

Further examples of statutory provisions which appear inconsistent with and are not addressed by the proposal

A 30 day comment period is inadequate time to identify and analyze the provisions of multiple statutes administered by EPA with language that will have implications for the actions contemplated by this proposal. Section I.C. of the preamble to this proposal asserts authority for this proposal by identifying, in a very general sense, provisions in several statutes dealing with science and research. The proposal nowhere acknowledges, identifies, or addresses many provisions in these statutes which govern regulatory decision-making and direct how the Administrator is to use science in such decision-making. A couple of illustrative examples drawn from the many relevant provisions raise serious questions as to whether the Administrator has the authority to promulgate such a sweeping, multi-statute rule without addressing the particular, distinctive requirements for regulatory decision-making Congress imposed in each statute. These are issues that would be addressed in an adequate proposal. Because they are not, the proposal in effect tries to shift the burden to commenters to try to make sense of the proposal in the context of statutory language. That is impossible to achieve in 30 days.

Toxic Substances Control Act (TSCA):

While TSCA Section 26 is not identified in the proposal, it includes provisions that raise questions about EPA's authority for and potential application of the proposal. Section 26(h), "Scientific Standards", states that "to the extent that the Administrator makes a decision based on science, the Administrator shall use scientific information, technical procedures, measures, methods, protocols, methodologies, or models, employed in a manner consistent with the best available science." EPA must consider each of these factors "as applicable." The availability of sufficient underlying data to "validate" or "reproduce" study results is *not* among the relevant factors that EPA must consider.

Similarly, section 26(i) addresses WEIGHT OF SCIENTIFIC EVIDENCE directing that:—"The Administrator shall make decisions under sections 4, 5, and 6 based on the weight of the scientific evidence." This requires the Administrator to evaluate the totality of available scientific evidence and make a judgment about its "weight"—not excluding evidence based solely on the availability of data sufficient for its validation.

These subsections indicate, at a minimum, that this proposal to require that "*dose response data and models underlying pivotal regulatory science* are publicly available in a manner sufficient for independent validation.... [w]hen promulgating significant regulatory actions" may not be consistent with the scientific standards and methodology for decision-making Congress prescribed for such actions under TSCA Section 26.

Safe Drinking Water Act (SDWA):

Similarly, although unacknowledged in the proposal including its request for comments, SDWA's standard-setting section, §1412 (42 U.S.C. § 300g-1), addresses the use of science in decisionmaking under that authority:

§1412(b)(3)(A) Use of science in decisionmaking.— In carrying out this section, and, to the degree that an Agency action is based on science, the Administrator shall use—

- (i) the best available, peer-reviewed science and supporting studies conducted in accordance with sound and objective scientific practices; and
- (ii) data collected by accepted methods or best available methods (if the reliability of the method and the nature of the decision justifies use of the data).

So long as the data used is otherwise collected, assessed, and presented "in accordance with sound and objective scientific practices," Congress did not give the Administrator discretion to ignore the "best available, peer-reviewed science and supporting studies" based on any factor relating to the public availability or unavailability of data, as this proposal would seek to compel. Further, the Report of the Senate Committee on Environment and Public Works – whose language in this provision on the use of science was adopted verbatim in P.L. 104-182 – directs that the "Administrator has a duty to seek and rely upon the best available science and information to support... [m]any of the most important activities including selecting contaminants for regulation, setting standards, designing analytical methods and structuring waivers, variances and exemptions" (Rpt. 104-169, at 28).

These fundamental omissions illustrate the proposal's inadequacy to identify or address its own implications for the statutory authorities that authorize EPA's programs. These examples, and many more that could be cited, bolster the imperative to withdraw this proposal and grapple meaningfully with these questions in an ANPRM or better fleshed out proposed rule with greater opportunities for exploration and discussion of them via public hearings. Failing that, the agency should at least extend the comment period to 90 days to enable commenters to compile and submit analyses of these questions that EPA has not examined.

The Environmental Protection Network will continue to inventory other statutes and regulations that will be affected by this rulemaking. But even where there are no requirements for a formal hearing or coordination, this proposed rule would change the regulatory framework for determining standards and requirements with no acknowledgement or identification of inconsistencies or conflicts with existing statutory or regulatory requirements or processes, and no opportunity for the public to comment on the specific changes. That makes it imperative to maximize opportunities for the public to review and comment on the regulatory changes being made in this proposal by extending the comment period.

We look forward to your affirmative response to this request.

Attn: EPA-HQ-OA-2018-0259

Re: Comment of the Environmental Defense Fund on the Environmental Protection Agency's Proposed Rule: *Strengthening Transparency in Regulatory Science*, 83 Fed. Reg. 18768 (Apr. 30, 2018) ("Proposal")

Environmental Defense Fund ("EDF") submits the following comments on EPA's April 30, 2018 proposed rule, "Strengthening Transparency in Regulatory Science" (the "Proposal").¹ Representing over two million members and supporters, EDF applies science, economics, and the law to solve our most urgent public health and environmental problems. EDF regularly engages in policy advocacy, regulatory proceedings, and litigation to secure and defend protections for human health and the environment under the Clean Air Act ("CAA"), Toxic Substances Control Act ("TSCA"), and other statutes administered by EPA—protections that save lives, improve well-being, and provide a more vibrant economy for all Americans, including our members. EDF and our members therefore have a profound stake in ensuring that EPA actions are anchored in the best available science, and are not distorted by policies and practices that seek to unjustifiably limit EPA's use of science for the purpose of weakening health and environmental protections.

For the reasons explained below, the Proposal would violate EPA's substantive and procedural obligations, is arbitrary and capricious, and must be withdrawn. Indeed, the Proposal is the classic wolf in sheep's clothing. Cloaked in vague platitudes about scientific quality and promoting "transparency," the Proposal would establish a sweeping new regulatory requirement prohibiting EPA from considering public health studies for which underlying data cannot be made "publicly available in a manner sufficient for independent validation."² This requirement would bar EPA from considering many vital public health studies that are based on confidential patient information that cannot be legally or ethically disclosed, and have been rigorously vetted using time-tested approaches that are widely accepted in the scientific community. Nowhere does the Proposal document what deficiencies in existing EPA regulatory science it is trying to solve, much less why such draconian restrictions on the use of science would improve the quality of EPA decision-making.

This wolf's true nature, however, cannot be covered up: the Proposal is in fact directed at excluding the best available science demonstrating significant health and welfare effects from

¹ *Strengthening Transparency in Regulatory Science*, 83 Fed. Reg. 18,768 (Apr. 30, 2018).

² *Id.* at 18,773 (proposed 40 C.F.R. § 30.5).

agency decision-making in order to thwart the agency's ability to protect the public health and welfare. As our comments document, the Administration hastily concocted this Proposal as a way of unilaterally implementing failed legislative proposals backed by prominent opponents of accepted climate change science and patterned on proposals put forward by the tobacco industry in the 1990s. According to records obtained from EPA through the Freedom of Information Act when this Administration's own political staff discovered that earlier versions of the Proposal might also restrict industry-funded science supporting the registration of pesticides and other chemicals, it decided to "thread this one real tight!" to ensure that *only* those studies supporting public health regulations would be subject to this new "transparency" rule.³

Ultimately, this Proposal does not "strengthen science." EPA's Science Advisory Board ("SAB") and the scientific community were not even consulted in its development, and a host of scientific authorities—including members of the SAB, editors of the nation's leading scientific journals, the National Academies, and numerous scientific and medical organizations—have raised fundamental concerns about the Proposal. Rather than strengthen science, the Proposal grants the Administrator vague and manipulable authority to *censor* science that by any scientific definition is the best simply because it conflicts with this Administration's political goals. We urge EPA to abandon this deeply destructive and misguided Proposal.

TABLE OF CONTENTS

OVERVIEW	7
Terminology.....	9
I. EPA’s Proposed Rule Violates Numerous Substantive Statutory Requirements.....	13
A. EPA Does Not Have Authority to Issue the Proposed Rule.	13
B. The Proposed Rule Violates EPA’s Statutory Authorities.....	14
1. EPA’s statutory authorities generally require the agency to consider <i>all</i> available data when undertaking significant rulemakings.	15
2. The proposal violates these statutory commands by requiring EPA to ignore science when undertaking significant rulemakings.	16
3. By prohibiting EPA from considering all valid and relevant studies when undertaking significant rulemakings, the proposed rule would prevent EPA from complying with an array of statutory provisions governing EPA’s consideration of available science.....	22
4. EPA’s proposed exemption provision does not remedy the unlawfulness of prohibiting EPA from considering valid and relevant studies due to the public unavailability of underlying data and methods.	32
C. EPA’s Proposed Rule Would Violate the Information Quality Act.....	34
II. EPA’s Proposed Rule is Unreasonable and Arbitrary and Capricious.....	35
A. EPA Failed to Consider the Legitimate Reasons That Underlying Data May Not be Made Publicly Available, or to Propose Solutions to Remedy These Actual Limitations.	36
1. There are multiple reasons why underlying data are not publicly available for all studies.	36
2. The Proposal fails to propose any actual solutions to remedy the legitimate reasons for why data may not be made publicly available.	40
B. The Proposal Will Not Advance the Supposed Cause of “Transparency” Upon Which it is Based.	48
1. Where there are lower hurdles to making data publicly available, this is already commonly occurring, with support from various initiatives.....	48
2. EPA’s proposed approach does not require researchers to make underlying data publicly available.	49
C. The Proposal does not Acknowledge, Much Less Examine, its Likely Actual Effect—Reducing the Quality and Quantity of Studies upon which Regulatory Decisions are Based.	51
1. EPA fails to recognize that forcing the disclosure of all data and models would have harmful effects on the quality and quantity of scientific research used by EPA.	51

2.	Because EPA will be barred from using many valid scientific studies with nonpublic data, the net effect of this proposal will be to harm, not strengthen, EPA’s use of science in the regulatory process.	52
D.	EPA’s Policy Rationales for its Proposal are Arbitrary and Capricious	64
1.	EPA arbitrarily fails to provide a reasoned explanation for why the proposed rule is needed.	64
2.	EPA arbitrarily fails to offer a reasoned explanation for its departure from existing policies that broadly require the agency to consider all available scientific information when undertaking rulemakings.....	67
3.	EPA’s Proposal arbitrarily fails to consider and deviates from best practices in scientific review, which support using a broad array of information, informed by a “weight of the evidence” approach, rather than arbitrarily excluding certain studies up front.	68
4.	EPA irrationally conflates scientific “validity” and “transparency” with data availability, incorrectly assuming that eliminating the use of studies without publicly available data will improve scientific validity and transparency.....	70
5.	EPA arbitrarily attempts to bolster one element of scientific transparency, while ignoring significant other transparency-related concerns.	75
6.	EPA’s justification of the proposal is incoherent and lacks almost any evidentiary support.....	75
7.	EPA has failed to explain why it has singled out dose response studies to be excluded if their underlying data and models are not publicly available, but has not similarly targeted any other types of studies commonly used by EPA.....	79
8.	EPA arbitrarily failed to consider the implications of this proposal on interagency coordination.	80
9.	EPA’s proposal irrationally excludes proceedings that tend to benefit industry interests, even though these proceedings are far less transparent than the rulemakings EPA has targeted.	81
E.	EPA’s Proposal is Arbitrary Because it is Inconsistent With Long-Standing EPA and Federal Government Policies and Ongoing Efforts to Strengthen Science Quality in a Measured and Balanced Way through EPA’s Existing Science Policies.	85
1.	Instead of providing a reasoned explanation for its change in policy, EPA wrongfully claims the Proposal is consistent with existing EPA, federal government, and third-party practices and policies.	86
2.	EPA’s Proposal fails to consider important implementation problems that existing EPA and federal government policies place at the forefront.	91
III.	The Proposed Rule’s Peer Review Provisions Raise Numerous Concerns.....	94
A.	EPA Has Failed to Consider the Costs of Making OMB Peer Review Requirements Judicially Enforceable.....	94
B.	EPA Must Clarify that Studies that Have Already Been Adequately Peer-Reviewed by Third Parties Need Not be Re-Reviewed by EPA.	95

C.	EPA Must Clarify the Intent of the Exemption Provision with Respect to Peer Review Requirements and Confirm that the OMB Peer Review Bulletin’s Waiver Provision Would Remain in Effect for EPA.	95
D.	EPA Must Clarify How the Proposed Rule Would Impact EPA’s Existing Peer Review Handbook.	96
IV.	The Proposal Would Impose Arbitrary and Inappropriate Methods for Assessing Health Risks.	97
A.	EPA’s Proposal Seeks to Undermine Key Scientific and Public Health Tenets Relating to Dose-Response and the Use of Defaults.	97
1.	The proposal arbitrarily dismisses linear (i.e., non-threshold) dose-response relationships.	98
2.	The proposal improperly dismisses defaults.	100
3.	The Proposal arbitrarily promotes studies that include a variety of dose-response models.	101
4.	The proposed rule provides no justification for codifying scientific approaches into regulation.	101
V.	EPA Fails to Adequately Consider Costs and Benefits of the Proposal.	101
VI.	EPA Fails to Comply with the Paperwork Reduction Act.	108
VII.	The Circumstances Surrounding the Proposed Rule Indicate that it Was Based on a Desire to Suppress Vital Public Health Science for the Benefit of Certain Regulated Industries.	110
A.	The Proposed Rule is an Attempt by EPA to Implement an Unenacted Congressional Bill, The HONEST Act.	111
1.	Available information on the development of the proposal illustrate its industry origins.	115
B.	EPA’s Proposed Rule Mirrors Policies That the Tobacco Industry Advocated for in the 1990’s to Suppress Unfavorable Science.	117
C.	EPA, Under the Trump Administration, Has a History Of Suppressing Science and Transparency, Undermining the Purported Justifications for the Proposal.	118
VIII.	The Proposal Violates Procedural Requirements of the APA, CAA, and Other Statutes and Executive Orders.	121
A.	The Proposed Rule is a Binding, Legislative Rule and Subject to the Requirements of the APA.	122
B.	The Proposal is Subject to the Procedural Requirements of the Clean Air Act.	123
C.	EPA Has Failed to Provide a Properly Developed Docket and Record as Required by the APA and CAA and Has Thereby Violated the Notice Requirements of these Statutes ...	124
D.	The Proposal is too Vague for Meaningful Comment.	128
E.	EPA Must Comply With Other Requirements of the Clean Air Act	131
F.	EPA Failed to Submit the Proposal to the SAB or to Consult with the Scientific and Technical Community	132

G.	EPA’s Proposal Fails to Meet the Procedural Requirements of FIFRA	133
H.	EPA’s Proposal Fails to Meet the Procedural Requirements of the Safe Drinking Water Act, 42 U.S.C. § 300f Et Seq.	134
I.	EPA Unlawfully Failed to Consult with Other Agencies as Required by TSCA.	134
J.	EPA Has Failed to Consult with the Science Advisory Committee on Chemicals	135
K.	EPA Has Failed to Provide Documents in Response to EDF’s FOIA Requests	135
L.	The OIRA Review Process for the Proposal Was Too Rushed to be Meaningful and EPA Has Not Sufficiently Coordinated with Other Federal Agencies	135
	Appendix A. Analysis of Sources Cited to in the Proposal	138
	Appendix B. Provisions of Federal Environmental Statutes Requiring EPA to Consult With Other Federal Agencies in Implementing Key Programs	183

OVERVIEW

The Proposal acknowledges that “[t]he best available science must serve as the foundation of EPA’s regulatory actions.”⁴ But it then requires EPA to systematically ignore the best available science when it regulates to protect human health and welfare. This is counter to EPA’s statutory mandates to use “best available science,” and the proposal is a transparent attempt not to *strengthen* science, but rather to *censor* science that is inconvenient to the current Administration’s political goals.

Since EPA was established nearly half a century ago, the Agency and its leadership—under Administrations of both parties—have recognized the central role that rigorous science plays in fulfilling the Agency’s mission of protecting human health and the environment.⁵ EPA’s obligation to consider the best available science is not only a policy commitment that flows from the Agency’s mission; it is a legal obligation enshrined in many of the fundamental public health and environmental statutes that EPA is charged with administering. The agency has established an array of mechanisms over the last five decades—including “rigorous review” by its scientific advisory boards “that goes beyond the typical journal peer review procedures”⁶—to ensure that the Agency’s decisions are grounded in the best available science.

The Administrator’s proposal does not build on this strong foundation; to the contrary, it crumbles it. The purpose and effect of the proposal would be to *degrade* the quality of science in EPA’s decision making. While the proposal suggests that its aim is to improve transparency by increasing public availability of data, in actuality it proposes none of the steps that a proposal seriously aimed at that goal would propose, such as increasing funding for EPA grantees to undertake this effort, or proposing solutions to real concerns about patient confidentiality. Instead, the heart of the proposal is a bar on considering science simply because the underlying data is not publicly available, regardless of whether the science has been peer reviewed, reproduced, or contains other hallmarks of scientific quality. Indeed, the agency’s recent communication to the Congressional Budget Office that a similar Congressional proposal could be implemented at “no cost” proves the point: EPA’s aim here is not to make more data available (which costs money), but to rely on less science in decisionmaking.

The agency’s arbitrary, single-minded focus on considering studies for which certain data and models are publicly available (but only the dose-response studies relevant to health

⁴ 83 Fed. Reg. at 18,769.

⁵ Brady Dennis, *Outgoing EPA chief: Science is ‘fundamental to absolutely everything we do’*, Washington Post (Dec. 21, 2016) (quoting former EPA Administrator Gina McCarthy as saying, “Science is everything. Almost every action we take is bounded by what the science tells us. It’s based on a factual record of where the world is today and what is our obligation under our mission. Science needs to be protected. Any effort to undermine that science in a way that would give undue influence to folks that aren’t scientists is a really big problem.”), https://www.washingtonpost.com/news/energy-environment/wp/2016/12/21/outgoing-epa-chief-science-is-everything-it-is-fundamental-to-absolutely-everything-we-do/?utm_term=.6f1e45472169; Christine Todd Whitman, *No room for science in Trump Administration*, CNN (May 15, 2017), <https://www.cnn.com/2017/05/15/opinions/no-science-in-trump-administration-whitman/index.html> (describing Administrator Pruitt’s actions as a “trend away from science as the backbone of the EPA and other key federal agencies”).

⁶ Memorandum by Alison Cullen, Chair, SAB Work Group on EPA Planned Actions for SAB Consideration of the Underlying Science 4 (May 12, 2018) (observing that the Proposal “fails to mention that EPA has mechanisms for vetting science through several expert panels,” including the SAB and others).

protective regulation, not the ones supporting registration of chemicals) stands in stark contrast to the way the scientific community validates research findings. The scientific community, and scientific journals look to a range of attributes when assessing the quality of a scientific study, including whether the study has been peer reviewed, whether the scientists used rigorous scientific methods, and whether the study's results have been reproduced or replicated. While scientific journals and other institutions have encouraged making data and models publicly available, there is widespread recognition in the scientific community that doing so is often legitimately constrained due to legal and ethical protections on the confidentiality and privacy of data, or because the data is unavailable. Moreover, no scientist or scientific organization supports the Proposal's approach of *excluding* research for which the underlying data cannot be disclosed. Indeed, *none* of the materials EPA cites support such an extreme approach. To the contrary, the scientific community recognizes that the quality of a study is not determined by whether the underlying data is publicly available and has long utilized a variety of tools for ensuring the integrity and rigor of research findings.⁷

For all these reasons, numerous representatives of the scientific community—including editors of the very scientific journals whose policies EPA cites to in the Proposal, the American Association for the Advancement of Science, members of the SAB, and other scientists cited to by EPA—have already voiced serious concerns about the Proposal.⁸ As these experts have recognized, it is not consistent with good scientific practice, and certainly not consistent with the Agency's responsibility to utilize “best available science,” to deem certain scientific studies unworthy of consideration simply because these studies cannot meet an arbitrary public availability requirement.⁹ Far from promoting the integrity of Agency decisions, the Proposal's simplistic approach would impoverish the Agency's decision-making by excluding the consideration of scientific studies that, standing alone or in combination with other studies, have significant bearing on vital public health and environmental protections. This, in turn, would result in regulations that are *not* based on “best available science” and that will provide inadequate protection for the very public health and welfare that EPA has been charged by Congress to safeguard.

⁷ See *id.* at 4 (“The proposed rule fails to mention that there are various ways to assess the validity of prior epidemiologic studies without public access to data and analytic methods.”).

⁸ E.g., Anne Q. Hoy, *Scientific Leaders Speak Out on EPA's Proposed “Transparency Rule,”* <https://www.aaas.org/news/scientific-leaders-speak-out-epa-s-proposed-transparency-rule>; Jeremy Berg et al., *Joint Statement on EPA Proposed Rule and Public Availability of Data*, *Science* (Apr. 30, 2018), <http://science.sciencemag.org/content/early/2018/04/30/science.aau0116>; Letter to Acting Administrator Wheeler from Marcia McNutt, President of the National Academy of Sciences, C.D. Mote, Jr., President of the National Academy of Engineering, and Victor J. Dzau, President of the National Academy of Medicine (July 16, 2018) (Warning that “overly stringent requirements for transparency may cause valid evidence to be discarded and thereby pose a threat to the credibility of regulatory science,” and stating that “The National Academies have developed a long-standing body of work that demonstrates scientific literature can be evaluated in a transparent and objective manner without complete disclosure of the underlying data.”).

⁹ See John Ioannidis, *All science should inform policy and regulation*, 15 *PLOS* 5 (May 3, 2018) (“Past collected and analyzed information can and should still be used for decision-making, taking into account any relevant imperfections. While fully transparent and reproducible information should certainly be valued more highly, studies with weaknesses can still offer insights.”).

That, of course, appears to be the current Administration's goal. A close examination of the history of this Proposal confirms that its purpose is not to strengthen science at EPA, but to undermine public health and environmental protections by arbitrarily blinding the agency to vital research. Indeed, the Proposal resembles proposals advanced by the tobacco industry for the specific purpose of suppressing public health science warning about the dangers of tobacco smoke.¹⁰ The Proposal also resembles failed legislation in Congress that was similarly advanced by industry interests seeking to undermine public health and environmental protections, and criticized by scientific experts.¹¹ EPA documents released in response to Freedom of Information Act (FOIA) requests relating to the Proposal show that Trump Administration appointees deliberately tailored the scope of the Proposal in order to promote industry interests.

EPA's purpose and mission is to protect human health and welfare, *not* to promote the agendas of the worst polluters and their allies in order to weaken health and welfare protections. EPA should withdraw this misguided and harmful proposal.

Terminology

At the outset, it is useful to review relevant terminology, which the Proposal appears to confuse and conflate. A recent National Academy of Sciences workshop produced the following definitions of "reanalysis," "replication," and "reproduction," each of which has a different scientific meaning and different applications and implications.¹² Let's consider each of these definitions separately.

A reanalysis is when you conduct a further analysis of data. A person doing a reanalysis of data may use the same programs and statistical methodologies that were originally used to analyze the data or may use alternative methodologies, but the point is to analyze exactly the same data to see if the same result emerges from the analysis.

A reanalysis does validate or invalidate a study findings. If all credible methods of reanalysis yield effectively the same results as the original analysis, this does strengthen the original findings. The use of differing statistical models should be assessed with care and demonstrate that the assumptions supporting a new method of analysis is significantly more credible than the original analysis. It is easy to develop methods of analysis that can demonstrate

¹⁰ Emily Atkin, *The EPA is Acting Like Big Tobacco*, The New Republic (Apr. 26, 2018), <https://newrepublic.com/article/148126/epa-acting-like-big-tobacco> (describing the role of Steve Milloy, a leading public proponent of the Proposal who has taken credit for its existence, in crafting similar policy proposals on behalf of the tobacco industry-funded Advancement of Sound Science Coalition).

¹¹ Letter by U.S. Science, Engineering, and Academic Institutions to Kevin McCarthy, House Majority Whip (Mar. 16, 2015) (opposing "Secret Science Reform Act, H.R. 1030"), <https://sciencepolicy.agu.org/files/2013/07/AAAS-Secret-Science-letter-McCarthy-2015.pdf>; Letter by Barry Nussbaum, American Statistical Association to Sen. Mike Rounds and Sen. Kamala Harris (May 25, 2017) (opposing HONEST Act, H.R. 1430), https://www.amstat.org/asa/files/pdfs/POL-HONEST_ActLetter.pdf.

¹² National Academies of Sciences, Engineering, and Medicine, *Principles and obstacles for sharing data from environmental health research: Workshop summary*, The National Academies Press (2016), <https://www.nap.edu/catalog/21703/principles-and-obstacles-for-sharing-data-from-environmental-health-research>.

a different finding, but are created solely for that purpose and these should not be given greater weight in evaluating a particular study.

***Replication** means that you actually repeat a scientific experiment or a trial to obtain a consistent result. The second experiment uses exactly the same protocols and statistical programs but with different data from a different population¹³. The goal is to see if the same results hold with data from a different population.*

Replication predominantly applies to laboratory studies and randomized control trials since you are able to control almost all of the experimental details making replication possible. Replication does not enhance transparency. In environmental epidemiology, randomized control trials are not feasible or ethical, and replication of observational studies is virtually impossible since it is not possible to create the same conditions as seen in the original study. Even in laboratory experiments, replication can be difficult due to uncontrolled factors like genetic drift in cell lines and animal strains. Finally, if you do have replicate studies and one has a positive finding and another has a negative finding, there would have to be additional criteria used to determine which study was correct; thus a failure to replicate should not immediately lead to the conclusion that there is no effect. Rather than replicating a study, it is far better to develop a better study that replicates the results while providing greater insight into the basis underlying any toxicity.

*And then, finally, when you **reproduce** a scientific experiment, you are producing something that is very similar to that research, but it is in a different medium or context. For example, a researcher who is reproducing an experiment addresses the same research question but from a different angle than the original researcher did.*

Here, reproduction refers to a body of evidence addressing the same hypothesis, but using different populations, methods, etc. Reproduction does not enhance transparency. The majority of research on the health effects of environmental hazards fall into this category. Here, a series of studies that address the same hypothesis and give the same basic result does indeed strengthen findings of toxicity.

None of these concepts discusses the scientific quality of the study; this is critical. The ability to replicate a study with very poor scientific quality does not strengthen the scientific belief that any toxicity is present. Similarly, studies that attempt to reproduce the same findings must have their quality clearly established before comparisons can be made across the multiple studies.

An example of how some of these different techniques work in practice is the scientific evidence on air pollution and premature death which include the Harvard Six Cities Study and the American Cancer Society Cancer Prevention Study II (ACS CPSII). The extent to which these studies have been reanalyzed and reproduced is extraordinary and by no means necessary. But they provide a good case study of how these techniques work in practice.

¹³ “Different population” in this context means a different set of the same test subjects (e.g., same animal species and strain, same cell lines).

The original Harvard Six Cities and ACS CPSII studies on mortality were published in 1993 and 1995 respectively.

- The Harvard Six Cities study assessed the long-term effects of fine particle pollution (PM_{2.5}) over 12 to 14 years (1974–1989) on premature mortality among 8,111 adult participants who lived in 6 different cities: Watertown, MA; Harriman, TN; St. Louis, MO; Steubenville, OH; Portage, WI; and Topeka, KS. After accounting for cigarette smoking, level of education, body mass index, and occupational exposure to dusts, gases, and fumes, the authors of this study found that for members of the same age and sex group there was a 26% higher risk of premature mortality between the study participants living in the city with the highest levels of particles (Steubenville) and the city with the lowest levels (Portage).¹⁴
- The investigators of the Harvard Six Cities study, along with others, **reproduced** their finding in a separate assessment of the association between fine particle levels and mortality among 295,223 adults who lived in 50 metropolitan areas across the United States, over a period of 7 years (1979–1983) in the ACS CPSII study. After accounting for smoking, education, body mass index, alcohol consumption, and self-reported occupational exposure to a number of substances, the scientists found that for participants of the same age, race and sex there was a 17% increased risk of mortality with every 25.4 microgram per meter cube change in PM_{2.5}.¹⁵

The Harvard Six Cities Study and the ACS CPSII were **reanalyzed** by the Health Effects Institute, a nonprofit independent research corporation funded by EPA and the motor vehicle industry, under a data sharing agreement. A research team evaluated the consistency and accuracy of the data and then undertook a series of comprehensive analyses to test the validity of the findings first using the same statistical analyses and then testing the robustness of the original findings and interpretations to alternative analytic approaches. The results of the reanalysis were resoundingly similar to the original studies. For the Harvard Six cities study the reanalysis found a 28% increased risk of mortality per 18.6 microgram per meter cube of PM_{2.5} in comparison to 26% found in the original study. For the ACS CPSII study the showed that for every 25.4 microgram per meter cube change in PM_{2.5} there was an associated 18% increased risk of mortality (results of the independent reanalysis) vs 17% reported by the original study.¹⁶

¹⁴ Dockery, D.W., Pope, C.A., Xu, X., Spengler, J.D., Ware, J.H., Fay, M.E., Ferris Jr, B.G. and Speizer, F.E., *An Association Between Air Pollution and Mortality in Six US Cities*, 329(24) New England Journal of Medicine 1753–1759 (1993).

¹⁶ Krewski, Daniel, et al., *Reanalysis of the Harvard Six Cities Study and the American Cancer Society Study of particulate air pollution and mortality*, footnote on 249 Health Effects Institute (2000). See also Letter to Andrew Wheeler from Harvard University (Docket ID No. EPA-HQ-OA-2018-0259) (reanalysis and “releasing raw data will not improve the quality of the resulting report/study/analysis, and therefore will do nothing to render any individual study ‘better.’”).

A large body of literature also shows that this association of fine particle pollution and mortality has been **reproduced** in different populations across the globe,¹⁷ over different periods of time, contexts and using different methods. Most recently, a study of 61 million elderly people enrolled in Medicare across the entire United States followed over 13 years found a strong association between particle pollution and increased risk of mortality, at even the current levels of air pollution and below the current air quality standards for PM_{2.5}.¹⁸ It is this accumulation of evidence of reproducible effects in multiple studies that is critical in determination of causality and validation of an effect and is already an integral part of the EPA process of supporting causality.¹⁹

Through these different methods, the original findings of the Harvard Six Cities Study have been validated many times over, and they have been used to inform countless EPA rule makings that address particulate matter pollution. Notably, however, the Proposal would appear to preclude EPA from using them because—while the Study has been reanalyzed and reproduced—the underlying data is not publicly available because of patient confidentiality protections bound by individual contractual agreements between the scientists and the research participants and by the Health Insurance Portability and Accountability Act. These reasons are unrelated to the validity, integrity or quality of the Harvard Six Cities Study. Indeed, the Office of Management and Budget’s data quality guidelines specifically point to the Harvard Six Cities Study as an example of how data may be validated or corroborated without public release of the underlying raw data.²⁰ It is critically important to note that reanalysis projects are not simple or inexpensive.²¹ The reanalysis of just the Harvard Six Cities Study and the ACS CPSII took three years to complete and cost \$899,046 in direct expenditures,²² without accounting for costs incurred by Health Effects Institute for oversight and review as well as staff compensation.

In summary, reanalysis is a tool to demonstrate the robustness of an effect to changes in the statistical model underlying an analysis of a single data set. However, it is easy to develop methods of reanalysis that can demonstrate a different finding. Therefore, care must be taken to understand the assumptions underlying models applied in reanalysis in order to judge their relevance. Replication in the environmental health context is primarily limited to laboratory studies and, without additional information to guide a decision, provides little information that can be used to decide between replicate studies with differing results. Reproducing effects in multiple studies that are not identical is the basis for almost all scientific decisions on environmental issues and should be the focus of the EPA’s approach to regulatory science. Finally, none of these issues address other key aspects of scientific quality such as

generalizability and bias; how these characteristics of any scientific study are assessed by the EPA directly relate to the transparency of any decisions they might make.

I. EPA's Proposed Rule Violates Numerous Substantive Statutory Requirements.

A. EPA Does Not Have Authority to Issue the Proposed Rule.

Agencies are creatures of Congress; “an agency literally has no power to act . . . unless and until Congress confers power upon it.” *Louisiana Pub. Serv. Comm'n v. FCC*, 476 U.S. 355, 374 (1986); *see Am. Library Ass'n v. FCC*, 406 F.3d 689, 691 (D.C. Cir. 2005) (“It is axiomatic that administrative agencies may issue regulations only pursuant to authority delegated to them by Congress.”). EPA points to a smattering of statutes as allegedly authorizing the Proposal.²³ None of these authorities, however, authorize EPA to promulgate a one-size-fits-all regulation governing how the agency will consider science under its various statutory authorities, which is perhaps why EPA solicits comment on whether additional authorities might exist to authorize its Proposal. The varied statutes that the Proposal cites have different requirements as to the agency's obligations when considering science. *Compare* CAA § 108(a) (standards must “reflect the latest scientific knowledge useful in indicating” health and welfare effects)²⁴ *with* TSCA § 4(f) (Administrator must consider “*any other information available*”)²⁵ *with* Safe Drinking Water Act (“SDWA”) § 1412(b)(1)(B)(ii)(II) (Administrator must consider “the best available public health information”).²⁶ The Proposal gives no explanation of how *any* of the provisions it cites provide authority for the Proposal, much less how all of them authorize identical requirements.

For example, EPA cites the Clean Air Act, § 301, 42 U.S.C. § 7601, as purportedly granting authority for the Proposal.²⁷ The authority granted by section 301(a), however, applies only to the Clean Air Act and, in any event, is not broad enough to encompass this Proposal. Section 301 provides that “[t]he Administrator is authorized to prescribe such regulations subject to section 307(d) as are *necessary* to carry out his [or her] functions under this Act.”²⁸ The courts have consistently “decline[d] to read . . . open-ended power into section 301,”²⁹ and instead have required that regulations promulgated under section 301 be both necessary and appropriate.³⁰ As

²³ 83 Fed. Reg. at 18769.

²⁴ 42 U.S.C. § 7408(a).

²⁵ 15 U.S.C. § 2603(f).

²⁶ 42 U.S.C. § 300g-1(b)(1)(B)(ii)(II), (b)(1)(A)(i); *see also*, 42 U.S.C. § 300g-1(b)(3)(A)(i) (“the Administrator shall use . . . the best available, peer-reviewed science and supporting studies conducted in accordance with sound and objective scientific practices”).

²⁷ 83 Fed. Reg. at 18769.

²⁸ 42 U.S.C. § 7601(a)(1) (emphasis added).

²⁹ *Nat. Res. Def. Council v. Reilly*, 976 F.2d 36, 41 (D.C. Cir. 1992).

³⁰ *E.g., Alabama Power Co. v. Costle*, 636 F.2d 323, 403 (D.C. Cir. 1979) (finding an EPA rule unauthorized under section 301, and concluding that “[a]n extension of PSD permit requirements beyond the wording of the Act is therefore neither necessary nor appropriate to carry out EPA's functions under the Act.”); *Nat. Res. Def. Council v. EPA*, 22 F.3d 1125, 1148 (D.C. Cir. 1994) (“[S]ection 301 does not provide the Administrator ‘*carte blanche*’ authority to promulgate any rules, on any matter relating to the Clean Air Act, in any manner that the Administrator wishes,” and instead “allow[s] the promulgation of rules that are necessary and reasonable to effect the purposes of

discussed in more detail below, EPA's Proposal here is not necessary, and instead directly conflicts with several other provisions of the Clean Air Act. It is axiomatic that a "general grant of authority cannot trump specific statutory provisions."³¹

Nor does Congressional authorization to *conduct* or *fund* research authorize EPA to *ignore* research in regulatory decision-making. Accordingly, provisions like TSCA § 10, which directs that the "Administrator shall ... conduct such research, development, and monitoring as is necessary to carry out the purposes of this [Act],"³² and CAA § 103, which authorizes the agency to conduct and support research,³³ plainly do not authorize the Proposal.

B. The Proposed Rule Violates EPA's Statutory Authorities.

Not only is there no authority for EPA's pan-statutory Proposal, the Proposal would violate explicit statutory commands. Though EPA admits that "[t]he best available science must serve as the foundation of EPA's regulatory actions,"³⁴ proposed section 30.5 would *prohibit* EPA from considering high quality and critically important scientific studies—precisely that "best available science"—when undertaking regulatory actions. Specifically, section 30.5 would prevent EPA from considering any scientific study for which the underlying "dose response data and models" are not "publicly available in a manner sufficient for independent validation."³⁵ This would be true even if that scientific study constituted "information available to the Administrator" in a TSCA § 4(f) rulemaking, 15 U.S.C. § 2603(f)(2); "reflect[ed] the latest scientific knowledge useful in indicating" health and welfare effects in a CAA § 108 rulemaking, 42 U.S.C. § 7408(a)(2); or reflected "the best available public health information" in a SDWA rulemaking, 42 U.S.C. § 300g-1(b)(1)(B)(ii)(II). Accordingly, this proposed prohibition would contravene an array of statutes governing EPA's consideration of science when promulgating rules, such as requirements to consider the "best available science" when setting environmental protection standards. *See, e.g.*, SDWA, 42 U.S.C. § 300g-1(b)(3)(A) (EPA must use "[t]he best available, peer-reviewed science and supporting studies conducted in accordance with sound and objective scientific practices" and "[d]ata collected by accepted methods or best available methods"); TSCA, 15 U.S.C. § 2625(h) ("[T]he Administrator shall use scientific information, technical procedures, measures, methods, protocols, methodologies, or models, employed in a manner consistent with the best available science."); CAA, 42 U.S.C. § 7408(a) (EPA shall establish air quality criteria that "shall accurately reflect the latest scientific knowledge useful in indicating the kind and extent of all identifiable effects on public health or welfare which may be

the Act.") (quoting *Citizens to Save Spencer County v. EPA*, 600 F.2d 844, 873 (D.C. Cir. 1979)); *Nat. Res. Def. Council v. EPA*, 749 F.3d 1055, 1063 (D.C. Cir. 2014) ("[W]e have consistently held that EPA's authority to issue ancillary regulations is not open-ended, particularly when there is statutory language on point."); *North Carolina v. EPA*, 531 F.3d 896, 922 (D.C. Cir. 2008), *on reh'g in part*, 550 F.3d 1176 (D.C. Cir. 2008) (striking down a regulation promulgated under Section 301 because EPA could not demonstrate that it was "necessary" to fulfill the purposes of the Act).

³¹ *Nat. Res. Def. Council v. EPA*, 749 F.3d 1055, 1063-64 (D.C. Cir. 2014); *API v. EPA*, 52 F.3d 1113, 1119 (D.C. Cir. 1995) (same).

³² 15 U.S.C. § 2609(a), cited at 83 Fed. Reg. at 18769.

³³ 42 U.S.C. § 7403, cited at 83 Fed. Reg. at 18769.

³⁴ 83 Fed. Reg. at 18769.

³⁵ 83 Fed. Reg. at 18773-74.

expected from the presence of such pollutant in the ambient air, in varying quantities.”). And, by excluding science that meets these statutory criteria from supporting regulations to protect public health and welfare, the Proposal would frustrate Congress’s policy in these statutes and frustrate EPA from achieving its fundamental mission.³⁶

1. EPA’s statutory authorities generally require the agency to consider *all* available data when undertaking significant rulemakings.

As just noted, EPA’s statutory authorities mandate a variety of requirements for what scientific information EPA must consider in rulemaking. These statutes are discussed in detail, *infra* at Section I.B.3. To take one example that appears in numerous statutes, including TSCA, CAA, SDWA, and the Endangered Species Act, Congress has often required agencies to act on the “best available science.” For an agency to comply with this obligation, the agency must at least consider all available scientific information. “Best” means “of the most excellent, effective, or desirable type or quality.”³⁷ “Available” means “able to be used or obtained.”³⁸ And “science” means “the intellectual and practical activity encompassing the systematic study of the structure and behavior of the physical and natural world through observation and experiment.”³⁹ Assessing which science is “best” requires consideration of the overall quality of the science, and the public availability of underlying data is, at best, one of many aspects that should inform that assessment of overall quality.

An agency “cannot ignore available. . . information.”⁴⁰ Numerous courts have indicated that a plaintiff or petitioner can establish a violation of the “best available science” requirement by “point[ing] to any scientific evidence that the agency failed to consider.”⁴¹ “The best available data requirement. . . prohibits [an agency] from disregarding available scientific evidence that is in some way better than the evidence [it] relies on.”⁴² “An agency does. . . have an obligation to deal with newly acquired evidence in some reasonable fashion.”⁴³ EPA’s proposal will result in EPA precluding itself from considering certain studies that are “available,” thus violating the requirement that EPA rely on the best available science.

In addition, the requirement that agencies use “best available” science or information often means that the agency must act *even if* the available science or information is imperfect.

³⁶ See, e.g., *Shays v. FEC*, 528 F.3d 914, 919 (D.C. Cir. 2008) (“[W]e ‘must reject administrative constructions of [a] statute that frustrate the policy that Congress sought to implement.’”) (quoting *Cont’l Air Lines, Inc. v. Dep’t of Transp.*, 843 F.2d 1444, 1453 (D.C. Cir. 1988)).

⁴² *Kern Cty. Farm Bureau v. Allen*, 450 F.3d 1072, 1080 (9th Cir. 2006) (quoting *Sw. Ctr. for Biological Diversity v. Babbitt*, 215 F.3d 58, 60 (D.C. Cir. 2000)).

⁴³ *Catawba County v. EPA*, 571 F.3d 20, 45 (D.C. Cir. 2009) (quoting *American Iron & Steel Institute v. EPA*, 115 F.3d 979, 1007 (D.C. Cir. 1991)).

“Even if the available scientific and commercial data were quite inconclusive, [the agency] may—indeed must—still rely on it” when the agency has a duty to act.⁴⁴ “[W]here the information is not readily available, we cannot insist on perfection.”⁴⁵ Just as the Courts have recognized that they cannot expect perfection, agencies cannot choose to ignore certain studies or sources of information based solely on whether the data is publicly available—especially where the validity of those studies has been established using techniques that do not rely on public availability of underlying data.

EPA cannot reasonably elevate the interest in public availability of all underlying information above all other factors in assessing the “best available science.” Textually, EPA’s approach is unlawful.

2. The proposal violates these statutory commands by requiring EPA to ignore science when undertaking significant rulemakings.

In direct violation of statutory requirements to consider, for example, “any other information available” or “the latest scientific knowledge [that is] useful” or “best available science,” the Proposal would *prohibit* EPA from considering relevant and high quality science whenever the underlying data for a study is not publicly available. Through the Proposal, EPA unlawfully tries to engraft an additional statutory requirement onto each of these statutes, requiring that to be considered a study’s underlying data must be publicly available.⁴⁶ For EPA’s Proposal to succeed, EPA must demonstrate that a study *cannot* be “other information available to the Administrator” or the “latest scientific knowledge useful in indicating” health or welfare effects or the “best available science,” or any of a number of other statutory formulations if the underlying data is not publicly available. EPA’s Proposal fails to do so, and it could not do so.

As explained *infra* at Section II.A.1, there are many reasons that underlying study data may not be available that have no bearing on the quality or validity of the study. These include legal restrictions or concerns about privacy (especially with respect to studies involving human subjects), confidentiality, confidential business information, or national security. Further, if this requirement were applied retroactively to existing studies, it may no longer be possible to make underlying data and models publicly available. EPA acknowledges these impediments in proposed section 30.9, which provides the Administrator with discretion—but not an obligation—to allow the agency to consider a study for which underlying data or models are not publicly available if he determines that public disclosure is infeasible. But where the Administrator fails to exercise his discretion to grant an exemption pursuant to proposed section 30.9, or where data or models are unavailable for reasons that do not satisfy the infeasibility standard, proposed section 30.5 would prohibit EPA from considering such studies, regardless of whether they meet the statutory criteria for consideration.

The only way that this prohibition could comport with EPA’s statutory obligations is if a study for which underlying data is not available *cannot* be, for example, “other information

⁴⁴ *Southwest Ctr. for Biological Diversity v. Babbitt*, 215 F.3d 58, 60 (D.C. Cir. 2000) (quoting *City of Las Vegas v. Lujan*, 891 F.2d 927, 933 (D.C. Cir. 1989)).

⁴⁵ *San Luis*, 747 F.3d at 602.

⁴⁶ See *Nat’l Ass’n of Homebuilders v. Defenders of Wildlife*, 551 U.S. 644, 663-64 (2007).

available” or “the latest scientific knowledge [that is] useful” or “best available science”—i.e., if the public unavailability of a study’s underlying dose response data and models makes the study ineligible to meet these criteria, regardless of whether the study has been peer reviewed, is based on rigorous methodologies, or has been published in a leading journal, and regardless of the reason for the public unavailability. EPA makes no such demonstration—nor could it. There is simply no support for such a proposition; to the contrary, all of the evidence shows that studies may be “best available science,” and certainly “other information available” regardless of whether the data underlying them is publicly available.

What the Proposal fails to recognize is that disclosure of data addresses only *one* method of validating scientific research—and a relatively less important aspect at that. Disclosure of data for a given study—the focus of the Proposal—permits independent researchers to determine whether the data and methodology *used in that study* can be applied to generate the *same* results. This may help protect against sources of error or misrepresentation in a particular study. However, both EPA and independent researchers have recognized that such reanalysis does not by itself *validate* a particular study.⁴⁷ Rather, a study’s evidentiary weight rests both on the strength of its methodology, as well as whether similar results can be obtained by applying the study’s methodology to a relevant, but *different* dataset or population, or by using a distinct methodology to interrogate the same hypothesis.⁴⁸

a) The scientific community

Publication in a peer-reviewed scientific journal is the way that scientists communicate their findings to other scientists and is considered the hallmark of scientific quality. Notably, the editors in chief of the world’s top scientific journals have notified EPA that “[i]t does not strengthen policies based on scientific evidence to limit the scientific evidence that can inform them; rather, it is paramount that the full suite of relevant science vetted through peer review, which includes ever more rigorous features, inform the landscape of decision making.”⁴⁹ In response to EPA’s Proposal, the editors-in-chief of *Science* and *Nature*, and other leading scientists explained that though “[d]ata sharing is a feature that contributes to the robustness of published scientific results. . . in not every case can all data be fully shared.”⁵⁰ For example, full

⁴⁷ See EPA, *Preamble to the Integrated Science Assessment* at 20 (2015) (“An inference of causality is strengthened when a pattern of elevated risks is observed across several independent studies. *The reproducibility of findings constitutes one of the strongest arguments for causality.* . . .”) (emphasis added); National Academies, *Principles and Obstacles for Sharing Data From Environmental Health Research* 6 (2016) (quoting researcher Lynn Goldman’s observation that reproducibility and replicability across independent studies – as distinct from reanalysis of a single set of data using the same methodology – are the most convincing ways of validating a research finding); Lynn R. Goldman & Ellen Silbergeld, *Correspondence on Access to Chemical Data Used in Regulatory Decision Making*, 121 *Environmental Health Perspectives* A111 (Apr. 2013), <https://ehp.niehs.nih.gov/wp-content/uploads/121/4/ehp.1206438.pdf> (“Replication in science is quite different; it involves performance of an independent study with the same hypothesis and then testing the extent to which this independent study reaches the same conclusions. . . Designing and conducting a replication study does not require access to raw data from the original study; this would abrogate the concept of independence.”)

⁴⁸ See National Academies, *Principles and Obstacles* at 6.

⁴⁹ Jeremy Berg et al., *Joint Statement on EPA Proposed Rule and Public Availability of Data*, *Science* (Apr. 30, 2018), <http://science.sciencemag.org/content/early/2018/04/30/science.aau0116>.

⁵⁰ *Id.*

sharing is not possible when data sets include “personal identifiers.”⁵¹ The scientists confirm that even under circumstances where underlying data cannot be made generally available, it is possible to evaluate the merits of a study, explaining:

Importantly, the merits of studies relying on data that cannot be made publicly available can still be judged. Reviewers can have confidential access to key data and as a core skill, scientists are trained in assessing research publications by judging the articulation and logic of the research design, the clarity of the description of the methods used for data collection and analysis, and appropriate citation of previous results.⁵²

They conclude that EPA’s proposal to exclude relevant studies from EPA’s consideration based solely on the fact that underlying data or methods cannot be made available to the public “will adversely affect decision-making processes.”⁵³

In a letter filed in this docket, the Presidents of the National Academies of Science, Engineering, and Medicine similarly observe that the public availability of data is not necessary to ensure the integrity of regulatory science and is not a sufficient criterion for excluding a particular study from consideration. The Presidents’ letter notes: “The National Academies have developed a long-standing body of work that demonstrates scientific literature can be evaluated in a transparent and objective manner without complete disclosure of the underlying data.”⁵⁴ The letter goes on to explain: “If the study data are not available, their absence may affect how the study is rated and used in the [agency’s] analysis, but the study should not necessarily be eliminated from the assessment.”⁵⁵

b) EPA policy and practice

EPA has previously stated in several different forums that a scientific study can be valid even if the underlying dose response data and models are not publicly available. For example, EPA recently explained in its own *Plan to Increase Access to Results of EPA-Funded Scientific Research* that even though “some research data cannot be made fully available to the public but instead may need to be made available in more limited ways,” the lack of full public availability “does not affect the validity of the scientific conclusions from peer-reviewed research publications.”⁵⁶ Under the plan, EPA must make publications resulting from EPA-funded research publicly accessible on National Institute of Health’s PubMed Central (PMC).⁵⁷ The plan

⁵⁷ *Id.* at 8.

aims to “maximize access, by the general public and without charge, to digitally formatted data resulting from EPA funded research, *while protecting confidentiality and personal privacy, recognizing proprietary interests, business confidential information and intellectual property rights, and preserving the balance between the relative benefits and costs of long-term preservation and access.*”⁵⁸ The plan recognizes important exceptions for when “the research data cannot be released due to one or more constraints, such as requirements to protect confidentiality, personal privacy, proprietary interest, or property rights.”⁵⁹ It specifically declares: “The validity of scientific conclusions drawn from research publications or their associated research data, or EPA’s ability to consider those conclusions and data in its actions, does not depend on compliance with this Plan.”⁶⁰

Likewise, EPA’s Science Policy Council explains in *A Summary of General Assessment Factors for Evaluating the Quality of Scientific and Technical Information* that EPA’s determination as to the quality and reliability of a particular scientific study does not depend on one single factor (e.g., the public availability of underlying data), but instead turns on the agency’s consideration of five general factors.⁶¹ Congress implicitly endorsed this approach by including a directive for EPA to use these same five factors in evaluating science under the Toxic Substances Control Act Amendments passed in 2016,⁶² and just last year this Administration included these same factors in a recent regulation implementing TSCA.⁶³ The factors comprise: (1) soundness; (2) applicability and utility; (3) clarity and completeness; (4) uncertainty and variability; and (5) evaluation and review.⁶⁴ Of these, the only ones with any possible direct relevance to EPA’s proposed approach are the third and fifth factors, but neither supports the elevation of public availability of data above all other considerations or the exclusion of studies with non-public data. The third factor, “clarity and completeness” requires EPA to consider “[t]he degree of clarity and completeness with which the data, assumptions, methods, quality assurance, sponsoring organizations and analyses employed to generate the information are documented.” The fifth factor, “evaluation and review,” requires EPA to consider “[t]he extent of independent verification, validation and peer review of the information or of the procedures, measures, methods or models.” Even clear and complete “documentation” of the data used does not require that the data be made publicly available. Nor does factor five require either that a study’s findings must have been replicated using the same data, or that the data must be available

⁶² *Id.* at 7.

⁶³ EPA Science Policy Council, *A Summary of General Assessment Factors for Evaluating the Quality of Scientific and Technical Information*; 15 U.S.C. § 2625(h)(1)-(5); 82 Fed. Reg. 33,726, 33,731 (July 20, 2017), 42 U.S.C. § 300g-1(b)(3)(A).

⁶⁴ Note that TSCA and the regulations do not include the headers for the five factors (“soundness,” “applicability and utility,” etc.) included in the Science Policy Council guidance, but the description of each factor to be considered is largely identical.

to allow for such replication. Moreover, these are only portions of two of five key factors to consider.⁶⁵

Similarly, EPA's *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility and Integrity of the Information Disseminated by the Environmental Protection Agency*,⁶⁶ ("EPA Information Quality Guidelines") issued pursuant to Section 515(a) of the Treasury and General Government Appropriations Act for Fiscal Year 2001 (Public Law 106-554; H.R. 5658) (the "Data Quality Act") make it clear that the public unavailability of underlying data or models does not render a study inappropriate for EPA's consideration. Specifically, the EPA Information Quality Guidelines acknowledge that even with respect to science that will have "a clear and substantial impact on important public policies or private sector decisions," there will be circumstances where "access to data and methods cannot occur due to compelling interests such as privacy, trade secrets, intellectual property, and other confidentiality protections."⁶⁷ Significantly, the Guidelines do not instruct EPA to ignore such science. Rather, the Guidelines instruct that if underlying data or methods are unavailable, "EPA should, to the extent practicable, apply especially rigorous robustness checks to analytic results and carefully document all checks that were undertaken."⁶⁸ The Guidelines further explain: "Original and supporting data may not be subject to the high and specific degree of transparency provided for analytic results; however, EPA should apply, to the extent practicable, relevant Agency policies and procedures to achieve reproducibility, given ethical, feasibility, and confidentiality constraints."⁶⁹

Far from instructing EPA not to consider scientific studies for which underlying data or models are unavailable, the EPA Information Quality Guidelines expressly acknowledge that EPA must balance a variety of important aims to fulfill its statutory obligations to protect public health and the environment. EPA explains in the guidelines that "most environmental statutes obligate EPA to act to prevent adverse environmental and human health impacts" and that "[f]or many of the risks that we must address, data are sparse and consensus about assumptions is rare."⁷⁰ Thus, rather than set rigid rules regarding what science and information EPA can rely upon in its rulemakings, EPA "seek[s] to strike a balance among fairness, accuracy, and efficient implementation."⁷¹ EPA states: "Refusing to act until data quality improves can result in substantial harm to human health, safety, and the environment."⁷²

As discussed *infra* at Section I.B.3.b)ii, even this Administration, in the context of promulgating regulations under TSCA, has adopted a regulatory definition of "best available

science” expressly incorporating a multi-factor analysis, and that definition recognizes that public unavailability of data does not render a study incapable of being “best available science.”

c) The courts

As EPA acknowledges in footnote 3 of the Proposal, in at least two instances the D.C. Circuit Court of Appeals has recognized that studies for which underlying data is not publicly available may constitute “best available science.”⁷³ The D.C. Circuit’s decisions in these cases further demonstrate that the public unavailability of a study’s underlying data does not render a study incapable of constituting “best available science” otherwise unworthy of EPA’s consideration.

In *American Trucking Associations v. EPA*, the petitioner challenged EPA’s reliance on scientific studies for which underlying data was not publicly available in deciding to strengthen the national ambient air quality standards for particulate matter.⁷⁴ The Court held that the Clean Air Act did not require EPA to make public underlying data where EPA relied on the study itself and not the raw data underlying the study. The Court agreed with EPA’s position that requiring agencies to obtain and publicize the data underlying all studies on which they rely “would be impractical and unnecessary.”⁷⁵ Importantly, the Court concluded that:

If EPA and other governmental agencies could not rely on published studies without conducting an independent analysis of the enormous volume of raw data underlying them, *then much plainly relevant scientific information would become unavailable to EPA for use in setting standards to protect public health and the environment.* . . . Such data are often the property of scientific investigators and are often not readily available because of . . . proprietary interests. . . or because of [confidentiality] arrangements [with study participants].⁷⁶

The court accordingly recognized that ignoring relevant scientific information simply because the underlying data is not available would violate EPA’s obligations to consider “best available science.” *Coalition of Battery Recyclers Association v. EPA* involved another challenge to EPA’s reliance on a scientific study for which the underlying data was not publicly available.⁷⁷ In that case, EPA had relied upon the study in question to determine the “concentration-response relationship between blood lead levels and IQ changes.”⁷⁸ The D.C. Circuit again upheld EPA’s reliance on studies without making the underlying data publicly available and explained, “raw data often is unavailable due to proprietary interests of a study’s scientific investigators or confidentiality agreements with study participants.”⁷⁹ Likewise, in *City of Waukesha v. EPA* the

D.C. Circuit concluded that agency peer review satisfies the requirement to use best, peer-reviewed science and supporting studies.⁸⁰

d) The Proposal

Finally, even the Proposal appears to concede that studies for which data is not publicly available could constitute the “best available science” that EPA is statutorily required to consider. The proposed exemption provision in section 30.9 makes it clear that EPA does not consider a study to be invalid or unsuitable for EPA’s consideration based only on the public unavailability of underlying data or models. Specifically section 30.9 would give the Administrator discretion to authorize consideration of a scientific study where “[i]t is not feasible to ensure that all dose response data and models underlying pivotal regulatory science is publicly available.” Of course, EPA could not have intended for proposed section 30.9 to provide the Administrator with discretion to take a study that is not “best available science” into consideration when promulgating a rulemaking. If the Administrator has discretion to allow consideration of a study for which it is infeasible to make the study’s underlying data and models publicly available, then it obviously is not necessary for such underlying data and models to be publicly available for a scientific study to constitute “best available science.” Yet, unless the Administrator elects to exercise his discretion under proposed section 30.9 and find that it is “infeasible” to make a study’s underlying data and models publicly available, proposed section 30.5 broadly prohibits EPA from relying on the study in support of “significant regulatory actions.”

Moreover, while proposed section 30.5’s prohibition would apply to “pivotal regulatory science” used for “significant regulatory actions,” the proposed rule says nothing to prohibit EPA’s reliance on these studies for other agency purposes, such as in permitting, enforcement, or regulatory actions that do not qualify as “significant.” Thus, EPA clearly does not believe that a study cannot be “best available science” based solely on the fact that underlying data and models are not publicly available.

In sum, if finalized, EPA’s proposed rule would restrict EPA’s ability to consider “best available science” when undertaking significant rulemakings, contrary to the numerous statutory directives discussed in detail below.

3. By prohibiting EPA from considering all valid and relevant studies when undertaking significant rulemakings, the proposed rule would prevent EPA from complying with an array of statutory provisions governing EPA’s consideration of available science.

a) The Proposal Contravenes the Clean Air Act

⁸⁰ 320 F.3d 228, 247 (D.C. Cir. 2003).

Under Clean Air Act section 108(a),⁸¹ EPA must establish air quality criteria for each air pollutant that serves as the basis for setting the national ambient air quality standards. Such criteria “shall accurately reflect the latest scientific knowledge useful in indicating the kind and extent of all identifiable effects on public health or welfare which may be expected from the presence of such pollutant in the ambient air, in varying quantities.”⁸² As explained above, the scientific community, EPA, and the courts have all concluded that lack of public availability of underlying data does not render the study invalid. And, consideration of such studies can be essential for EPA to fulfill Clean Air Act section 108(a)’s directive that it consider “the latest scientific knowledge” in establishing air quality criteria, that it consider studies “useful” in indicating effects of pollutants on ambient air, and in providing an adequate margin of safety in the standard itself.⁸³ Thus, EPA’s proposal to bar EPA from considering such studies would prevent EPA from complying with its statutory obligation under Clean Air Act section 108(a).

Section 108(a)(2) says nothing about excluding information—its evident purpose is to be inclusive as to information to be considered. EPA’s historic practice reflects this broad directive: each NAAQS review evaluates virtually all studies in the area, excluding none, but assigning appropriate weight based on study-by-study evaluation. Since the NAAQS provisions were enacted in 1970, EPA has conducted many NAAQS rulemakings. The agency does not establish *per se*, *a priori* rules regarding study inclusion or exclusion, but rather evaluates each of the individual studies—and there are thousands typically evaluated for each NAAQS review—on their merits based on reasoned criteria. While details of the development and review of the criteria and standards have evolved over time, in practice, EPA has endeavored to include all relevant scientific studies in the process, even providing provisional assessments of relevant literature that appears after the formal scientific review has been completed. Over the years, tens of thousands of peer-reviewed studies of health effects, exposure, and atmospheric interactions, and monitoring have been included in reviews of criteria and standards. A requirement that they must be excluded from consideration unless the raw data and full methodologies are made available for all of them is inconsistent with the legislative mandate and EPA’s practice over the last 40 years.

Thus, a science regulation that applies to the NAAQS is unlawful unless EPA can show that the new standard can be established and implemented consistent with the applicable statutory requirements. To do so, EPA must prove that public unavailability of data means that a study does not constitute “latest scientific knowledge useful” in indicating effects on human health or welfare.⁸⁴ EPA’s Proposal neither acknowledges this requirement nor explains how the Proposal would not violate this statutory command.

⁸¹ 42 U.S.C. § 7408(a).

⁸² 42 U.S.C. § 7408(a)(2).

⁸³ *Id.*

⁸⁴ 42 U.S.C. § 7408(a)(2).

For example, in past NAAQS reviews, EPA has considered the Harvard Six Cities study⁸⁵ and American Cancer Society studies⁸⁶, despite the fact that the data underlying these studies is not publicly available. These studies, however, are plainly “useful in indicating the kind and extent of all identifiable effects on public health or welfare.”⁸⁷ These seminal studies have been part of the air quality criteria since the mid-1990s—they have thus been accepted as “useful” by separate panels of CASAC, and by EPA, in three separate NAAQS reviews. Their use has been upheld by the D.C. Circuit.⁸⁸ Both studies have been reanalyzed and validated by highly competent third-party reviewers (the Health Effects Institute) with access to the underlying data.⁸⁹ The study results have been reproduced many times over.⁹⁰ Extended follow-up analyses of the ACS and Harvard Six Cities studies provide consistent and stronger evidence of an association with PM 2.5 and mortality at even lower air quality distributions than had previously been observed.⁹¹ This type of cumulative weight of evidence is highly probative in assessing both causality and in establishing the level of the NAAQS.⁹² The proposal says almost nothing about any of these other attributes that not only make these studies “useful,” but indeed make them particularly high quality and reliable.

The primary ozone NAAQS provides further examples of the pernicious effects the proposal would have. Among the key controlled human exposure studies demonstrating that exposure to ozone causes adverse health effects in even healthy subjects at levels below the level of the then-current NAAQS are Adams (2006) and Schelegle (2009).⁹³ These studies were sponsored by the American Petroleum Institute, which controls access to the underlying data. The American Petroleum Institute refused an EPA researcher access to the data of a related

⁹¹ See EPA, *Policy Assessment for the Review of the Particulate Matter National Ambient Air Quality Standard* (EPA 452/R-11-003), 2-31 to 33 (Apr. 2011). See also Memorandum by Alison Cullen, Chair, SAB Work Group on EPA Planned Actions for SAB Consideration of the Underlying Science at 4 (May 12, 2018) (noting that “additional studies have confirmed the basic findings” of the Six Cities and American Cancer Society studies and that “the rigorous form of peer review and independent reanalysis” applied “has accomplished a measure of confidence in findings without public access to data and analytic methods.”).

⁹² *State of Mississippi v. EPA*, 744 F.3d 1334, 1344 (D.C. Cir. 2013) (endorsing EPA’s weight of evidence approach, and stating that “incremental (and arguably duplicative) studies are valuable precisely because they confirm or quality previous findings or otherwise decrease uncertainty”).

⁹³ See EPA, *Policy Assessment for the Review of the Ozone National Ambient Air Quality Standards* (EPA -452/R-14-006, 3-27, 4-10 (Aug. 2014).

Adams study it sponsored (Adams (1998)).⁹⁴ So not only would these evidently “useful” (under CAA section 108(a)(1)) studies be barred from consideration under the Proposal, but the Proposal creates a perverse incentive for industry to refuse access to study data. The published studies— peer reviewed—would obviously be providing information “useful” in indicating effects of air pollution, but the Proposal would not only bar their consideration but create an incentive for industry never to provide underlying data for any industry-sponsored study with a result not to industry’s liking.

The most recent premiere long-term cohort study for PM is Domenici (2017) which found even greater effects of fine particles at levels below EPA’s current standards.⁹⁵ This study used a Medicare database available to any research group that can guarantee confidentiality of personal data.⁹⁶ Yet the proposal could evidently bar consideration of this powerful study.⁹⁷

NAAQS must be requisite to protect the public health, and to provide an “adequate margin of safety” in doing so.⁹⁸ The proposal violates this central statutory requirement. NAAQS are required to provide this margin of safety “to build a buffer to protect against uncertain and unknown dangers to human health.”⁹⁹ EPA’s Proposal would build a buffer against using the very studies necessary to guard against these dangers.¹⁰⁰

b) EPA’s Proposal contravenes the Toxic Substances Control Act (TSCA).

i. TSCA expressly requires that EPA consider reasonably available information and EPA’s proposal would preclude EPA from considering some reasonably available information.

When Congress amended TSCA through passage of the Frank R. Lautenberg Chemical Safety for the 21st Century Act (Lautenberg Act), Congress provided a number of detailed instructions on how EPA should consider scientific information with respect to chemical substances; EPA’s proposal contradicts Congress’s carefully crafted scheme. In particular, Congress included a provision specifically requiring that EPA consider all “reasonably available

⁹⁴ See EPA, *First External Review Draft Integrated Science Assessment for Ozone and Related Photochemical Oxidants* (EPA/600/R-10/076A), 6-7 n. 1 (Feb. 2011).

⁹⁵ Qian Di et. al., *Air Pollution and Mortality in the Medicare Population*, 376 *New England Journal of Medicine* 2513 (2017), <https://www.nejm.org/doi/pdf/10.1056/NEJMoa1702747>.

⁹⁷ See 83 Fed. Reg. 18768, 18773, Proposed section 30.5 final sentence (“where data is controlled by third parties, EPA shall work with those parties to endeavor to make the data available in a manner that complies with this section”). There appears to be some interaction required before third party studies are considered to be publicly available.

⁹⁸ CAA section 109(b); 42 U.S.C. § 7409(b).

⁹⁹ *State of Mississippi*, 744 F.3d at 1353.

¹⁰⁰ See *American Farm Bureau v. EPA*, 559 F.3d 512, 525-26 (D.C. Cir. 2009) (remanding primary Particulate Matter NAAQS because inadequate consideration of certain epidemiologic studies resulted in a standard lacking an adequate margin of safety).

information.”¹⁰¹ When making decisions about testing or the risk evaluation or regulation of new or existing chemicals, “the Administrator shall take into consideration *information* relating to a chemical substance or mixture, including hazard and exposure information, under the conditions of use, *that is reasonably available to the Administrator*.” 15 U.S.C. § 2625(k) (emphases added). But under EPA’s proposed rule, EPA would often be precluded from considering such reasonably available information if all the underlying data and models were not publicly available. *See* 83 Fed. Reg. at 18,769 n.3 (stating that proposal “would preclude [EPA] from using [non-public] data in future regulatory actions”). EPA’s proposal violates the plain language of TSCA § 26(k), as well as Congress’s clear purpose of ensuring that EPA consider all reasonably available information relating to a chemical when making a decision about the chemical.

Under its plain language, “available” means “able to be used or obtained; at someone’s disposal.”¹⁰² Congress chose this standard to ensure that EPA would make decisions based on all reasonably available information. S. Rep. No. 114-67 at 9 (June 18, 2015) (“The section ... requires EPA to consider reasonably available information about potential hazards and exposures of a chemical substance under the conditions of use when making decisions under TSCA.... The Committee intends that EPA systematically search for and identify relevant information that is available to inform safety assessments and determinations.”); Oversight of the Environmental Protection Agency’s Progress in Implementing Inspector General and Government Accountability Office Recommendations: Hearing before the Subcomm. on Superfund, Waste Management, and Regulatory Oversight of the S. Comm. on Environment and Public Works, 114th Cong. at 63 (June 14, 2016) (“[F]or the EPA to properly evaluate and regulate toxic substances, it is essential that they have the most up-to-date chemical and toxicity data available.”). Congress also selected this standard to avoid paralysis by analysis—Congress wanted EPA to act on available information and not to postpone action waiting for new or perfect information to become available. *See, e.g.*, 162 Cong. Rec. S3511, S3517 (daily ed. June 7, 2016) (referring to “information reasonably available to EPA” as “ensur[ing] that such considerations do not require additional information to be collected or developed”). “Congress recognized the need to use available studies, reports and recommendations for purposes of chemical assessments rather than creating them from whole cloth.” *Id.* at S3522. And Congress intended for EPA to consider studies even when they had not undergone all possible forms of vetting. “[I]n instances where there were other studies and reports unavailable at the time of the [National Academy of Sciences] recommendations, EPA should take advantage of those studies and reports in order to ensure that the science used for chemical assessments is the best available and most current science.” *Id.* at S3522. Congress intended for EPA to consider all reasonably available information, and EPA’s proposal would thwart that clear purpose.

Notably, this Administration has adopted two regulations under the amended TSCA defining reasonably available information. These regulations generally provide that:

Reasonably available information means information that EPA possesses or can reasonably generate, obtain, and synthesize for use in risk evaluations, considering the deadlines specified in TSCA [for action]. Information that meets the terms of the

¹⁰¹ Pub. L. No. 114-182, § 17(k), 130 Stat. 448, 502 (June 22, 2016) (codified at 15 U.S.C. § 2625(k)).

¹⁰² *Oxford American Dictionary* 111 (3d ed. 2010).

preceding sentence is reasonably available information whether or not the information is confidential business information, that is protected from public disclosure under TSCA section 14.

40 C.F.R. § 702.33; *see also* 40 C.F.R. § 702.3 (similar definition for prioritization decisions). This bears no resemblance to the limitations put forward in the Proposal. Indeed, EPA has defined “reasonably available information” to include information EPA withholds as Confidential Business Information (CBI) under TSCA § 14. 15 U.S.C. § 2613. If the proposed rule forecloses EPA from considering information that cannot be fully disclosed, as it appears to do, then EPA cannot comply with both these regulations and the proposed rule.

EPA’s proposal also violates other provisions of TSCA that expressly require EPA to act on “available information.” For example, in preparing risk evaluations for existing chemicals, EPA “shall integrate and assess *available information* on hazards and exposures for the conditions of use of the chemical substance, including information that is relevant to specific risks of injury to health or the environment and information on potentially exposed or susceptible subpopulations identified as relevant by the Administrator.”¹⁰³ Under the proposed rule, EPA would not be able to integrate and assess available information where all underlying data has not been disclosed. Similarly, when developing regulations for existing chemicals, EPA “shall consider and publish a statement based on *reasonably available information* with respect to” a number of factors, including the effects of the chemical on health and the environment.¹⁰⁴ But under the proposed rule, EPA cannot consider all reasonably available information when assessing those health and environmental effects.

Indeed, TSCA § 4(f) imposes a duty upon EPA to initiate regulation in response to any available information that meets certain substantive standards. However, if all the underlying information were not available, EPA’s proposed rule would then foreclose EPA from considering that information during the resulting rulemaking. Congress would not have created a scheme where EPA *must* act in response to certain information but then cannot consider that information in taking action. Specifically, under TSCA § 4(f):

Upon the receipt of—(1) *any information* required to be submitted under this Act, or (2) *any other information available* to the Administrator—which indicates to the Administrator that there may be a reasonable basis to conclude that a chemical substance or mixture presents a significant risk of serious or widespread harm to human beings, the Administrator shall, ... initiate applicable action under section 5, 6, or 7 to prevent or reduce to a sufficient extent such risk or publish in the Federal Register a finding, made without consideration of costs or other nonrisk factors, that such risk is not unreasonable.¹⁰⁵

Thus if “any ... information available” to EPA provides a reasonable basis to conclude that a chemical “presents a significant risk of serious or widespread harm to human beings,” then EPA must initiate action to regulate the chemical. But under EPA’s proposed rule, EPA would then be

¹⁰³ 15 U.S.C. § 2605(b)(4)(F)(i) (emphasis added).

¹⁰⁴ *Id.* § 2605(c)(2)(A) (emphasis added).

¹⁰⁵ 15 U.S.C. § 2603(f) (emphases added).

required to ignore the information triggering this duty when crafting the final regulation unless the source of the information fully disclosed all underlying data. That result clearly contradicts Congress's intent, which was to create a duty for EPA to react to any available information meeting the substantive standard of TSCA § 4(f).

In sum, Congress repeatedly directed EPA to consider all reasonably available information when making decisions under TSCA. The proposed rule would illegally preclude EPA from considering available information. The two cannot be reconciled, and the rule is unlawful.

ii. TSCA requires an agency to act on the “best available science,” meaning that EPA must consider all available science and assess the quality of the science based on a variety of factors.

EPA's proposed blanket prohibition against basing a rulemaking on science for which underlying data or models are not publicly available would be particularly hard to reconcile with the “best available science” standard as articulated in TSCA, which clearly contemplates a case-by-case analysis in which EPA weighs a variety of factors when identifying the best available science. The relevant provision of TSCA requires that:

- (h) Scientific standards. In carrying out sections 4, 5, and 6, to the extent that the Administrator makes a decision based on science, the Administrator shall use scientific information, technical procedures, measures, methods, protocols, methodologies, or models, employed in a manner consistent with the *best available science*, and shall consider *as applicable*—
 - (1) the extent to which the scientific information, technical procedures, measures, methods, protocols, methodologies, or models employed to generate the information are reasonable for and consistent with the intended use of the information;
 - (2) the extent to which the information is relevant for the Administrator's use in making a decision about a chemical substance or mixture;
 - (3) *the degree of clarity and completeness* with which the data, assumptions, methods, quality assurance, and analyses employed to generate the information *are documented*;
 - (4) the extent to which the variability and uncertainty in the information, or in the procedures, measures, methods, protocols, methodologies, or models, are evaluated and characterized; and
 - (5) *the extent of independent verification or peer review* of the information or of the procedures, measures, methods, protocols, methodologies, or models.¹⁰⁶

Thus, Congress provided EPA with factors to guide its consideration of the “best available science,” and Congress did not make the public disclosure of all underlying data a requirement for material to be the “best available science.” Quite the opposite; Congress included aspects of disclosure and independent review as parts of factors to be considered when weighing scientific information. But these are just aspects of five different factors to be weighed “as applicable,” and

¹⁰⁶ 15 U.S.C. § 2625(h) (emphases added).

Congress clearly contemplated that EPA would sometimes rely on science that does not meet the proposed rule's requirement of full disclosure of all underlying data.

First, Congress directed EPA to consider these factors when weighing particular information; Congress specifically did not develop (or direct EPA to develop) bright-line criteria for eliminating information from consideration entirely. Thus, each factor includes the phrase “degree of” or “extent to which,” without identifying any threshold that would be disqualifying.¹⁰⁷ This shows that Congress intended these factors to help EPA assess the weight information should be given based on its relative scientific reliability, not to create minimum thresholds of reliability below which information must be ignored by EPA altogether. For EPA to insert a screen on top of these factors—excluding information where the underlying data and models are not publicly available as required by the proposed rule—contradicts Congress's unambiguous intent about how EPA should approach its assessment of the best available science.

Second, Congress made the “degree of clarity and completeness” with which the underlying data is documented to be part of one factor for EPA to consider in evaluating whether a particular study is the “best available science.”¹⁰⁸ But EPA must also consider “the degree of clarity and completeness” with which “assumptions, methods, quality assurance, and analyses” are documented as well.¹⁰⁹ Thus, Congress contemplated that EPA would still rely on some studies that did *not* document completely all the underlying data, much less disclose all of that information.

Third, Congress made “the extent of independent verification *or* peer review of the information *or* of the procedures, measures, methods, protocols, methodologies, or models” another factor to be weighed when considering whether information is the “best available.”¹¹⁰ Notably, Congress's choice of the disjunctive “or” reflects that “peer review” can be an adequate alternative to “independent verification,” and Congress did not require that either “independent verification *or* peer review” be accomplished through public availability of data as required in the proposed rule. Moreover, Congress contemplated scenarios where EPA would give more weight to evidence even if the “information” had not undergone “independent verification or peer review” based on the extent to which the “procedures, measures, methods, protocols, methodologies, or models” had done so.

Fourth and most importantly, EPA cannot rationally elevate the interest in public disclosure of all underlying data above all the other factors that Congress expressly required EPA to consider in evaluating science. Congress required EPA to consider these five factors “as applicable” when weighing information, and Congress did not make full public availability of underlying data one of the factors, much less a decisive or absolute one.

¹⁰⁷ See, e.g. 15 U.S.C. § 2625(h)(1) (“*the extent to which* the scientific information...[are] consistent with the intended use of the information”) (emphasis added).

¹⁰⁸ 15 U.S.C. § 2625(h)(3).

¹⁰⁹ *Id.*

¹¹⁰ 15 U.S.C. § 2625(h)(5).

This administration recently adopted a regulatory definition of “best available science” for purposes of TSCA which expressly incorporated consideration of these five factors and was otherwise inspired by use of the term in the Safe Drinking Water Act (SDWA).¹¹¹ EPA defined the phrase:

Best available science means science that is reliable and unbiased. Use of best available science involves the use of supporting studies conducted in accordance with sound and objective science practices, including, when available, peer reviewed science and supporting studies and data collected by accepted methods or best available methods (if the reliability of the method and the nature of the decision justifies use of the data). Additionally, EPA will consider as applicable:

[TSCA § 26(h)(1)(5) factors]¹¹²

According to EPA in selecting this definition, “the Agency is remaining consistent with the current approach already used Agency-wide, while also acknowledging the specific standards under TSCA.”¹¹³ Notably, this definition does not require public disclosure of all underlying data for science to be the “best available science,” yet many studies that meet this definition of “best available science” would be excluded under EPA’s proposed rule.

EPA’s Proposal cannot be reconciled with EPA’s existing definition of best available science, with decades of court and agency precedent, or with text of the statute. When a statute requires the agency to make a decision based on the “best available science,” it would be unlawful to follow EPA’s proposed rule.

iii. EPA’s proposed rule also contradicts TSCA’s requirement that decisions be made based on the weight of the scientific evidence.

TSCA § 26(i) requires EPA to make decisions regarding testing and regulating new and existing chemicals “based on the weight of the scientific evidence.”¹¹⁴ If EPA excludes certain information, as proposed, then EPA will not be able to weigh the evidence as a whole.

Indeed, this administration recently adopted a regulation defining “weight of scientific evidence” to mean “a systematic review method . . . that uses a pre-established protocol to *comprehensively*, objectively, transparently, and consistently, identify and evaluate *each stream of evidence*, including strengths, limitations, and relevance of *each* study and to integrate evidence as necessary and appropriate based upon strengths, limitations, and relevance.”¹¹⁵ Systematic reviews consider the entire body of scientific evidence, but EPA’s proposed rule would prevent EPA from conducting true systematic review because it would prohibit the Agency from considering studies where the data were not publicly available and it would

¹¹¹ See 82 Fed. Reg. 33,726, 33,731 (July 20, 2017), 42 U.S.C. § 300g-1(b)(3)(A).

¹¹² 40 C.F.R. § 702.33.

¹¹³ 82 Fed. Reg. at 33,731.

¹¹⁴ 15 U.S.C. § 2625(i).

¹¹⁵ 40 C.F.R. § 702.33 (emphases added).

eliminate studies based on criteria other than their “strengths, limitations, and relevance.”¹¹⁶ If the proposed rule forecloses EPA from considering information that cannot be fully disclosed, as it appears to do, then EPA cannot comply with this regulation and the proposed rule.

In sum, EPA’s proposed rule is inconsistent with TSCA’s plain text. EPA should not adopt the proposed rule because it cannot be reconciled with the agency’s duties under TSCA.

iv. Section 10 of TSCA does not authorize this proposal.

Nothing in Toxic Substances Control Act (TSCA) § 10 authorizes EPA to exclude scientific information during rulemakings on any basis. Section 10 authorizes EPA to research and develop information for purposes of carrying out TSCA.¹¹⁷ Section 10 also authorizes EPA to develop systems to collect and disseminate information about chemical substances.¹¹⁸ But TSCA § 10 is silent regarding rulemaking or EPA’s use of scientific information in rulemaking. It does not authorize EPA to exclude scientific information on *any* basis; if anything, TSCA § 10 reflects a congressional judgment that EPA should be prepared to use any and all “toxicological and other scientific information which could be useful to the Administrator in carrying out the purposes of this [Act].”¹¹⁹

c) EPA’s Proposal contravenes the Safe Drinking Water Act.

The Safe Drinking Water Act requires EPA to issue national drinking water regulations setting required purity levels for water from public water supply systems.¹²⁰ Before regulating, the Administrator must conclude that the contaminant at issue “may have” an adverse effect on the health of persons.¹²¹ In regulating, the Administrator must consider “the best available public health information”¹²² The section adds that in setting regulations, the Administrator “shall use ...the best available, peer-reviewed science and supporting studies conducted in accordance with sound and objective scientific practices” and in addition “data collected by accepted methods or best available methods.”¹²³ When Congress promulgated these statutory requirements in 1996, the Senate Committee on Environment and Public Works¹²⁴ explained that the “Administrator has a *duty* to seek and rely upon the best available science and information to support.... [m]any

¹¹⁶ *Id.*

¹¹⁷ See 15 U.S.C. § 2609(a) (“The Administrator shall ... conduct such research, development, and monitoring as is necessary to carry out the purposes of this [Act].”); see also 15 U.S.C. § 2609(c), (d), (e).

¹¹⁸ See 15 U.S.C. § 2609(b), (c), (g).

¹¹⁹ 15 U.S.C. § 2609(b)(2)(A).

¹²⁰ 42 U.S.C. § 300g-1.

¹²¹ *Id.* at (b)(1)(A)(i).

¹²² *Id.* at (b)(1)(B)(ii)(II).

¹²³ 42 U.S.C. § 300g-1(b)(3)(A). See *City of Waukesha v. EPA*, 320 F.3d at 247-48 (D.C. Cir. 2003) (holding that agency peer review satisfies requirement to use best, peer-reviewed science and supporting studies); *City of Portland v. EPA*, 507 F.3d 706, 716 (D.C. Cir. 2002) (same).

¹²⁴ The Report of the Senate Committee on Environment and Public Works is authoritative on these provisions, as the language adopted in the Committee bill (S.1316) on the use of science was adopted verbatim in Pub. L. 104-182. See S. Rep. 104-169 at p. 121 and Pub. L. 104-182 at §103.

of the most important activities including selecting contaminants for regulation, setting standards, designing analytical methods and structuring waivers, variances and exemptions.”¹²⁵

By restricting EPA to considering only those scientific studies for which underlying data, models, and other information is publicly available, EPA’s proposal prevents EPA from complying with the SDWA directive that it consider the “best available” public health information and science when setting SDWA standards. Specifically, as explained above, the public will not necessarily have access to the underlying information used to produce the “best available, peer-reviewed science and supporting studies.”¹²⁶ Nowhere does the SDWA authorize EPA to ignore such studies based on the public unavailability of underlying information. Thus, regardless of the merits of the core objective of EPA’s proposal—“to ensure that the regulatory science underlying its actions is publicly available in a manner sufficient for independent validation” (proposed § 30.1 “What is the purpose of this subpart?”), EPA’s attempt to elevate this objective above the agency’s statutory obligation to consider the “best available” science when promulgating SDWA standards is unlawful.¹²⁷

4. EPA’s proposed exemption provision does not remedy the unlawfulness of prohibiting EPA from considering valid and relevant studies due to the public unavailability of underlying data and methods.

Though the proposed exemption provision in section 30.9 would grant the EPA Administrator discretion to authorize the agency to consider studies for which underlying data or models are not publicly available, this provision is insufficient to remedy the proposed rule’s unlawfulness and detrimental impacts. It is well established that existence of a waiver or exemption mechanism cannot be used to justify a provision otherwise beyond an agency’s legal authority. *Dimension Financial Corp. v. Board of Governors of Federal Reserve System*, 744 F.2d 1402, 1410 (10th Cir. 1984) (“The possible exception to the initial impact of Regulation Y (Part 225.21(B)(4)) contains requirements with no objective standard and thus unbounded agency discretion. This as a device to meet objections to the new regulation cannot cure the exercise of powers denied by Congress or not provided for by Congress. *Public Utilities Comm. of Calif. v. United States*, 355 U.S. 534 (1958); *In re Surface Mining Regulation Litigation*, 627 F.2d 1346 (D.C. Cir. 1980); *ALLTEL Corp. v. FCC*, 838 F.2d 551, 561 (D.C. Cir. 1988) (“The FCC cannot save an irrational rule by tacking on a waiver procedure. ‘The very essence of waiver is the assumed validity of the general rule’”(citing *WAIT Radio v. FCC*, 418 F.2d 1153, 1158 (D.C. Cir. 1969)); *United States Telecom Ass’n v. FCC*, 359 F.3d 554, 571 (D.C. Cir. 2004) (“Moreover, even if the FCC had adopted some lawful mechanism for making exemptions from its general national rule, it could not necessarily rely on the existence of that mechanism as the sole justification for not adopting a more narrowly tailored rule. . . . [T]he mere existence of a safety valve does not cure an irrational rule.”))

¹²⁵ S. Rep. 104-169 at 28 (emphasis added).

¹²⁶ 42 U.S.C. § 300g-1(b)(3)(A).

¹²⁷ 83 Fed. Reg. at 18773.

First, while the statutory provisions described above *require* EPA to consider best available science and other relevant information when making regulatory decisions, *see, e.g.*, Safe Drinking Water Act, 42 U.S.C Section 300g-1(b)(3)(A)(i) (“The Administrator *shall* use the best available, peer reviewed science.”), the Administrator has discretion over whether to grant an exception. *See* Proposed § 30.9 (“The Administrator *may* grant an exemption to this subpart on a case-by-case basis...”)(emphasis added).¹²⁸ Where a statute requires that the agency consider certain information in reaching a decision, EPA cannot promulgate a rule that gives the Administrator discretion over whether to allow such consideration.

Second, the only basis on which the Administrator may grant an exemption under Proposed § 30.9 is that it “is not feasible” to “ensure that all dose response data and models underlying pivotal regulatory science is publicly available” as the rule requires.¹²⁹ However, the Proposal does not explain how “feasibility” is to be determined in this context—or even whether the term encompasses practical feasibility, cost-effectiveness, or other considerations. Moreover, there can easily be situations where it is theoretically “feasible” to make underlying data publicly available, but this information is nonetheless not publicly available. For example, a scientist who intends to rely on the same data to publish multiple papers may be disinclined to make that data available to competitors.¹³⁰ Yet, because it is technically “feasible” to make the underlying data publicly available, the proposed rule would not even provide the Administrator with authority to grant an exemption authorizing such consideration, thus forcing the Administrator to violate the law.

Third, even if it were lawful for EPA to ignore relevant science, the exemption provision is arbitrary, as it does not define sufficient criteria or process steps by which the Administrator may decide to exempt a study. The provision instructs the Administrator to rely on a handful of broad (and highly manipulable) policy considerations in determining whether it would be infeasible to make data and methods publicly available.¹³¹ These factors could be applied broadly to give the Administrator nearly absolute discretion. From the face of the Proposal, it is not even clear that the Administrator would be required to provide a public, written explanation of his decision to grant (or deny) a waiver. This lack of accountability could lead to the arbitrary exclusion of studies the Administrator unilaterally chooses to not exempt.

¹²⁸ 83 Fed. Reg. at 18774.

¹²⁹ 83 Fed. Reg. at 18774.

¹³⁰ Or in cases where companies jointly funded research it may be unclear who owns the data and has the right to share it, and companies may be reluctant to share it with competitors. *See, e.g.*, National Academies of Sciences, Engineering, and Medicine, *Principles and obstacles for sharing data from environmental health research: Workshop summary*, 45 The National Academies Press (2016), <https://www.nap.edu/catalog/21703/principles-and-obstacles-for-sharing-data-from-environmental-health-research>. (“As you can imagine. . . not all competitors play nicely together. Some even resort to gamesmanship to try to exclude competitors from the market. Things can get nasty and messy in a hurry in these discussions.”).

¹³¹ *See* 83 Fed. Reg. at 18774. Under §30.9(a), the Administrator should consider whether it is infeasible “in a fashion that is consistent with law, protects privacy, confidentiality, confidential business information, and is sensitive to national and homeland security.” §30.9(b) references 70 Fed. Reg. 2664, which exempts peer review in situations of “disseminations of sensitive information related to certain national security, foreign affairs, or negotiations involving international treaties and trade where compliance with this Bulletin would interfere with the need for secrecy or promptness.”

Finally, the exemption provision is impractical and likely could not be implemented effectively. According to the Congressional Budget Office, EPA “relies on about 50,000 scientific studies annually to perform its mission,” and at times, relies on thousands of studies for one action.¹³² Many of the studies that would be affected by this rule are complex and include large datasets that would lead to an extensive decision-making process under the exemption provision. EPA does not include any rationale in the proposal justifying how the Administrator could reasonably decide to exempt studies on a case-by-case basis given the tens of thousands of studies EPA considers each year. This provision could create a large backlog, which would result in important studies being effectively removed from EPA consideration because of the need to finalize a regulation before an exemption for every relevant study is granted. Accordingly, the exemption provision fails to safeguard against the unlawful exclusion of valid science from EPA’s regulatory process.

C. EPA’s Proposed Rule Would Violate the Information Quality Act.

EPA’s proposed rule is also unlawful because it exceeds EPA’s authority under Section 515(a) of the Treasury and General Government Appropriations Act for Fiscal Year 2001 (Public Law 16-554; H.R. 5658), commonly referred to as the Information Quality Act.¹³³ Specifically, the Information Quality Act requires EPA promulgate data quality guidelines that are consistent with those promulgated by the Office of Management and Budget. Contrary to EPA’s assertion in the preamble to the proposal, the Proposed Rule is not consistent with OMB’s data quality regulations.

The OMB Guidelines recognize that data availability is not necessary to high quality science, but is one among many factors. While imposing high standards of quality, objectivity, utility, and integrity of information disseminated by Federal Agencies, the Guidelines recognize the need to implement controls “flexibly, and in a manner appropriate to the nature . . . of the information to be disseminated.”¹³⁴ As part of ensuring “objectivity” these guidelines encourage agencies that disseminate influential scientific, financial, or statistical information, “to include a high degree of transparency about data and methods to facilitate the reproducibility of such information by qualified third parties.”¹³⁵ However, they emphasize the need to treat certain data differently, due to privacy and confidentiality concerns.¹³⁶ In fact, the OMB Regulations specifically declare that “[w]ith regard to original and supporting data related thereto, *agency guidelines shall not require that all disseminated data be subjected to a reproducibility requirement.*”¹³⁷ Rather, the OMB Guidelines instruct that agencies “identify, in consultation with the relevant scientific and technical communities, those particular types of data that can

¹³² Congressional Budget Office, *Cost Estimate: H.R. 1430* 2-3 (March 29, 2017), <https://www.cbo.gov/system/files/115th-congress-2017-2018/costestimate/hr1430.pdf>.

¹³³ Codified at 44 U.S.C. 3504(d)(1) and 3516.

¹³⁴ OMB’s *Guidelines Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information*, 67 Fed. Reg. 8,452, 8,453 (Feb. 22, 2002).

¹³⁵ 67 Fed. Reg. at 8460.

¹³⁶ OMB’s *Guidelines Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information*, 67 Fed. Reg. 8, 452, 8,460 (Feb. 22, 2002) (interest in making data publicly available “does not override other compelling interests such as privacy, trade secrets, intellectual property, and other confidentiality protections”).

¹³⁷ 67 Fed. Reg. at 8460 (emphasis added).

practicable [sic] be subjected to a reproducibility requirement, given ethical, feasibility, or confidentiality constraints.”¹³⁸ The OMB Regulations further explain that while “[m]aking the data and methods publicly available will assist in determining whether analytic results are reproducible...*the objectivity standard does not override other compelling interests such as privacy, trade secrets, intellectual property, and other confidentiality protections.*”¹³⁹ OMB explains that “where public access to data and methods will not occur due to other compelling interests, agencies shall apply especially rigorous robustness checks to analytic results and document what checks were undertaken.”¹⁴⁰

By outright prohibiting EPA from relying on a study to support a significant rulemaking if that study’s underlying data and models are not publicly available, EPA’s proposed rule departs from OMB’s unambiguous language instructing agencies that they “shall not” require that all data and models be subject to the reproducibility requirement, and that “the objectivity standard does not override other compelling interests.”¹⁴¹ The fact that EPA’s proposed rule includes a discretionary “exemption” provision does not correct this problem, as that provision would not require the Administrator even to consider whether an exemption is warranted, let alone grant such an exemption under appropriate circumstances.

Because Congress expressly granted OMB the authority to set guidelines for data quality and instructed agencies like EPA to follow OMB’s lead, EPA lacks statutory authority to adopt a regulation that is contrary to OMB’s guidelines. Accordingly, EPA’s proposed regulation violates the Information Quality Act and must be withdrawn.¹⁴²

II. EPA’s Proposed Rule is Unreasonable and Arbitrary and Capricious.

In addition to violating the requirements of the various statutes that EPA administers or is subject to, the Proposal suffers from a total failure to consider important dimensions of the profound shift in policy that it implements. In the Proposal, EPA neglects to consider the many legitimate reasons why a study’s underlying data may not be publicly available—reasons that have nothing to do with the quality of the study—and fails to offer solutions consistent with these legitimate limitations. EPA makes vague gestures to various guidelines and practices issued by other agencies and scientific organizations, none of which actually support the Proposal’s radical position that EPA should exclude consideration of studies that rely upon confidential data. EPA does not even establish that there is a real problem that the Proposal would actually address: nowhere in the Proposal does EPA identify any prior agency action that has been called into serious question due to a failure to release study data. EPA’s utter failure “to consider an important aspect of the problem” and to provide an explanation for the Proposal

¹³⁸ 67 Fed. Reg. at 8460. There is no indication that EPA consulted with the scientific and technical community—or even its own Science Advisory Board—before proposing to require that the underlying data and models be made publicly available for all pivotal regulatory science regardless of ethical, feasibility, or confidentiality constraints.

¹³⁹ 67 Fed. Reg. at 8460 (emphasis added).

¹⁴⁰ 67 Fed. Reg. at 8460.

¹⁴¹ See 67 Fed. Reg. at 8460.

¹⁴² *Prime Time Int’l Co. v. Vilsack*, 599 F.3d 678, 685 (D.C. Cir. 2010) (“[B]ecause Congress delegated to OMB authority to develop binding guidelines implementing the IQA, we defer to OMB’s reasonable construction of the statute.”)

that is consistent with the evidence before the agency renders the Proposal wholly arbitrary and capricious. *See Motor Vehicle Mfrs. Ass'n. v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 43 (1983). Likewise, EPA's failure to explain its 180-degree change in position from its former belief that the lack of publicly-available data does not render a study inappropriate for consideration in regulating is a hallmark of arbitrary and capricious decision-making. *FCC v. Fox Telev. Stations, Inc.*, 556 U.S. 502, 515-16 (2009).

A. EPA Failed to Consider the Legitimate Reasons That Underlying Data May Not be Made Publicly Available, or to Propose Solutions to Remedy These Actual Limitations.

1. There are multiple reasons why underlying data are not publicly available for all studies.

There are legal and ethical requirements that restrict making public the data underlying studies, including rules to shield private personal information, requirements to maintain confidential business information, situations where obtaining the necessary permissions to release data are logistically difficult or impossible, and situations in which researchers have made significant investments in developing datasets that they intend to continue to work with for future studies. Not all of these barriers can be overcome, nor can they be overcome in every case. While there are ways potentially to address some of them, they can be extremely costly and burdensome, and/or may harm the prospects for further research. Accordingly, while the scientific community has made efforts to make more data publicly available, to the best of our knowledge all of the policies adopted by government and academic journals recognize that data is not, and need not be, publicly available to evaluate their quality.

a) Strong legal and ethical requirements limit the release of data in human subjects studies.

Particularly with respect to human subjects, there are strong legal and ethical privacy and confidentiality protections, which researchers are bound to respect.¹⁴³ In some cases, researchers would be subject to civil or criminal penalties for violations.¹⁴⁴

The environmental health dose response studies targeted by EPA's proposal are likely to include human population studies (or epidemiological studies). Often the best available epidemiological studies contain extensive and sensitive data on individuals, such as environmental exposures, medical history (such as infant reproductive developmental abnormalities, children's behavioral and development problems, heart attacks or dementia among the elderly), dates of birth, residential address, drug use, race, socio-economic status (income,

¹⁴³ See, e.g., The National Commission for the Protection of Human Subjects of Biomedical and Behavioral Research, *The Belmont Report* (Apr. 18, 1979), <https://www.hhs.gov/ohrp/sites/default/files/the-belmont-report-508c-FINAL.pdf>; *Federal Policy for the Protection of Human Subjects; Final Rule*, 82 Fed. Reg. 7,149 (Jan. 19, 2017); HIPAA Privacy Rule, 45 C.F.R. §§ 160, 164.102-06, 164.500-534.

¹⁴⁴ See, The Health Insurance Portability and Accountability Act of 1996 (HIPAA), Public Law 104-191 (enacted Aug. 21, 1996) (providing for criminal and civil penalties for violations).

education), status of subjects' marriages, employment history, etc. For example, air pollution studies commonly use residential address information to assign air pollution exposures and link them to health effects.¹⁴⁵ Other studies focused on genetically susceptible populations may also be linked to genetic databases or contain information on key genetic mutations that are strongly predictive of serious health risks, such as risk of Alzheimer's disease, and are thus very sensitive.¹⁴⁶

To conduct these studies, investigators must obtain informed consent from the study participants to collect protected health information, and investigators must sign documents promising to protect the privacy of this individually identifiable health information. Absent complex, difficult and costly de-identification and redaction techniques, these data simply cannot be released publicly. As discussed below in section II.A.2.b), in some cases such techniques are simply not applicable or still leave significant risk of breach of privacy.

Additional protections apply to specific types of human subject information. For example, medical records are subject to strict requirements governing the use and disclosure of such information under the Health Insurance Portability and Accountability Act of 1996 (HIPAA).¹⁴⁷ HIPAA requires researchers to protect identifiable information, and it provides that such information may only be disclosed for research purposes with the written consent of the person providing the information.¹⁴⁸

Another limitation on public availability of data is the requirement under the Federal Policy for the Protection of Human Subjects (also known as the Common Rule) that for all federally funded studies involving human research subjects, researchers must first obtain Institutional Review Board (IRB) approval and informed consent from study participants.¹⁴⁹

An IRB reviews each human subjects research project to ensure that the specific research protocol protects individual rights. Participants must be notified about the degree to which the confidentiality of their records will be maintained, and must receive appropriate notification and

¹⁴⁵ See, e.g., Kaufman, Joel D., et al., *Association between air pollution and coronary artery calcification within six metropolitan areas in the USA (the Multi-Ethnic Study of Atherosclerosis and Air Pollution): a longitudinal cohort study*, 388.10045 *The Lancet* 696-704 (2016).

¹⁴⁶ See, e.g., Richardson JR, Roy A, Shalat SL, von Stein RT, Hossain MM, Buckley B, Gearing M, Levey AI, German DC, *Elevated serum pesticide levels and risk for Alzheimer disease*, 71(3) *JAMA Neurology* 284-90 (Mar. 1, 2014).

¹⁴⁷ Public Law 104 – 191.

¹⁴⁸ National Research Council, *Expanding Access to Research Data: Reconciling Risks and Opportunities*, The National Academies Press (2005).

¹⁴⁹ 45 C.F.R. §§ 46.101-124 is the U.S. Department of Health and Human Services ("HHS") citation for the Common Rule. A total of 18 federal agencies have adopted it; each agency has its own separate entry in the Code of Federal Regulations. This federal rule governs ethical constraints that federally funded studies must follow, including academic research, responding to earlier concerns of ethical lapses in medical research. See, e.g., Jerry Menikoff, *Could Tuskegee happen Today?*, 1 *St. Louis U. J. Health L. & Pol'y* 311, 312-16 (2008) (describing the Congressional response to public outcry when the details of the Tuskegee experiment were brought to light). The thrust of the Common Rule is to address such matters of research ethics as informed consent, informational risk, and institutional oversight when research involves human subjects.

give consent if study data is to be shared outside the research team.¹⁵⁰ The IRB also considers risks to the participants and how use of the information obtained may adversely impact the rights and welfare of the subjects.¹⁵¹ Most institutions have committed to comply with the Common Rule for all of their research, even when it is not federally-funded.¹⁵²

For studies that had received IRB approval prior to finalization of this proposed rule, there may be no practical opportunity to make the data publicly available. Even for new studies going forward, it may be extremely difficult, require additional (often unavailable) funding for elaborate protective measures, or simply impossible to obtain IRB approval for protocols that would allow the data to be made publicly available.

EPA's own Science Advisory Board voiced these concerns that EPA was discounting the challenges to making even limited releases of data, saying:

The proposed rule oversimplifies the argument that “concerns about access to confidential or private information can, in many case, be addressed through the application of solutions commonly in use across some parts of the Federal government.” For studies already completed or underway, the participation of human subjects is undertaken according to terms approved by the cognizant IRB. These terms can vary from study to study. In some cases, the data cannot be released simply by redacting portions of it. For example, data may have been collected with an assurance to the participating individuals that their data would be kept confidential.¹⁵³

Some researchers might respond by choosing to work only on public administrative datasets, but this would harm rather than strengthen science quality by curtailing scientific inquiry. Thus, the effects of EPA's proposed approach would cause some researchers to choose not to pursue research with human subjects, stifling scientific discovery, while others would forgo compliance with EPA's regulatory requirements and have their research ignored by EPA. As a result, EPA's proposal would both discourage the development of best available science as well as EPA's use of it.

b) There are especially significant barriers to public release of underlying data and models from studies that have already been completed.

With respect to studies that have already been completed, there are additional formidable barriers to public release of underlying data and models. Particularly, with older studies, simply finding the data sets and determining ownership may be expensive or impossible. For older studies with human subjects, obtaining consent to release of data may be practically impossible,

¹⁵⁰ See, 82 Fed. Reg. 7,149-7,274.

¹⁵¹ *Id.*

¹⁵² HHS, *Federalwide Assurance (FWA) for the Protection of Human Subjects*, <https://www.hhs.gov/ohrp/register-irbs-and-obtain-fwas/fwas/fwa-protection-of-human-subjectt/index.html> (last accessed Aug. 13, 2018).

¹⁵³ Memorandum by Alison Cullen, Chair, SAB Work Group on EPA Planned Actions for SAB Consideration of the Underlying Science (May 12, 2018).

and the data may have been collected in ways that would make protecting privacy with release difficult or impossible.¹⁵⁴

For some studies, administrative issues related to the data could be the most difficult barrier to overcome in providing for public release. Larger and more costly studies are often performed by groups of researchers within a university, across multiple institutions, or across multiple individual companies. Over time, the data itself may become lost or misplaced, or it may become unclear who actually owns and controls access to the data. Academics move among institutions, companies merge and spin off, and the initial agreements were not always clear in the first instance. Obtaining consent from multiple institutional players takes extensive time and resources, at minimum, and simply may no longer be possible in some instances.¹⁵⁵

These problems are exacerbated with respect to human subject studies. Researchers are legally and ethically obliged either to protect the privacy of the individual study subjects or attain each subject's consent to share data.¹⁵⁶ This can be impractical for older studies and virtually impossible for larger studies, and extremely burdensome. For example, the Harvard Six cities study was started in 1975 and had 8,111 participants.¹⁵⁷ The ACS CPSII extended analysis by Krewski in 2009, which is central to PM_{2.5} NAAQS standards, was initiated in 1979 and encompassed data from 500,000 study participants who lived in 116 metropolitan areas.¹⁵⁸ For these types of situations, tracking down participants (or where the participants have passed away, their family members) to get consent is simply not realistically possible.

Even in situations where investigators might theoretically be able to attain consent, it would require extensive financial and human resources, which are usually simply not available, especially to academic researchers or to EPA. EPA ignores this prohibitive constraint and makes no attempt to address it.

- c) There are additional significant barriers to public release of data in some situations, even for prospective studies.

Even with respect to prospective application of EPA's proposal, providing for public release of underlying data and models is costly and resource intensive, creating a serious disincentive for researchers to meet EPA's proposed requirements. Investigators willing to make their study underlying data publicly available would still face the logistical hurdle of making the data and models available in a manner sufficient for independent validation by the public. In

addition to the cost of thoughtful and effective deidentification or redaction of sensitive information, the proposed text would likely require researchers to prepare annotated manuals including precise detail as to what variables were collected, how information was collected, and the rationale for each step taken. Some manuals alone run into hundreds of pages. One press account noted the example of publicly available datasets from the National Center for Health Statistics, which can come with 100-page manuals; researchers would need to hire additional staff to meet such requirements.¹⁵⁹ Yet EPA fails even to recognize (much less propose any means to address) the cost to researchers in time and money, on top of the constraints on academic research already imposed by the very limited funding available for this type of work.

In addition, there are other barriers to public release of underlying data. Studies conducted on behalf of industry or with industry cooperation may contain confidential business information, the release of which could jeopardize a company's competitiveness.

Also, in some instances, researchers cannot make their data sets public without losing much of the value to the researcher of these laboriously and meticulously collected sets of information. Research, especially those studies that include large numbers of human subjects, are incredibly human and capital intensive endeavors. Moreover researchers may base years of work and multiple papers on unique datasets they developed and hold, and many scientists build their careers on carefully harvesting information from single large studies for years to come. It is not only unreasonable, but also unfair, to expect academic scientists to turn over their intellectual property and research investments, forgoing potential earnings and career advancements. Moreover, EPA's myopic and inflexible approach to data access gives no consideration to data sharing arrangements between researchers and the agency that could be developed to support EPA's consideration and integration of research.

If scientists are forced to choose between giving away their hard-earned data or forgoing any regulatory impact, it will discourage scientists from engaging in critical science that is targeted to help prevent disease and disability in our population. It appears that in many cases, scientists will choose to retain their datasets, with a worst-of-both-worlds result—EPA will be deprived of valid scientific information and the scientific community will be discouraged from contributing their critical expertise to policy-making. EPA's Proposal does not consider the real-world implications of forcing such choices on researchers.

The agency's failure to consider or examine any of these legitimate reasons for not making data publicly available is arbitrary and capricious.

2. The Proposal fails to propose any actual solutions to remedy the legitimate reasons for why data may not be made publicly available.

In the proposal EPA blithely and irrationally ignores or assumes away the real and significant issues raised above, suggesting that existing mechanisms and techniques can be used

¹⁵⁹ Alessandra Potenza and Rachel Becker, *Scott Pruitt's new 'secret science' proposal is the wrong way to increase transparency. Here's what scientists think a science transparency rule should include*, The Verge (May 1, 2018, 8:30am EDT), <https://www.theverge.com/2018/5/1/17304298/epa-science-transparency-rule-scott-pruitt-data-sharing>.

to protect privacy and confidentiality while making underlying research data publicly available. In fact, the evidence (including several of the sources that EPA cites) indicates that the potential mechanisms alluded to by EPA would only have the potential to address some of the barriers cited above, have serious limitations even for those, and are actually becoming less effective as it becomes easier to combine and manipulate public data sets.

- a) EPA vaguely references a range of possible approaches to protecting privacy and confidentiality, but provides no evidence that any of these are sufficient to address the legitimate concerns raised above.

EPA vaguely claims “concerns about access to confidential or private information can, in many cases, be addressed through the application of solutions commonly in use across some parts of the Federal government.”¹⁶⁰ EPA claims that there are examples from the Department of Health and Human Services, the National Institute of Standards and Technology, the Department of Education, and the Census Bureau. Unfortunately, apart from a reference to HHS guidance on data de-identification (discussed below), EPA does not actually identify or cite to any specific examples from these agencies in the proposed rule itself, making it impossible to discern what examples EPA believes exist or to meaningfully comment upon the degree to which such examples, if they exist, might suggest that these issues are manageable. The additional hyperlinks added to the docket on May 25, 2018, weeks into the comment period, also link to examples that provide no further assurance that this proposal can be implemented without implicating privacy concerns, and as discussed in detail below, the vaguely referenced other agencies’ “solutions” are unlikely to be of much help.

The “solutions” EPA might have in mind do not address the issues raised by the Proposal because no other agency has tried to implement a requirement such as the one EPA proposes. Other agencies provide guidance and techniques to protect privacy during data collection and disclosure to allow more use of data collected by the *government*, not to mandate that data collected by academic or industry researchers be publicly available for purposes of replicating analyses. The Department of Education, for example, has shared techniques for institutions to provide data on students and schools to meet reporting requirements without compromising privacy.¹⁶¹ They recognize that each technique “requires some loss of information.”¹⁶² While de-identified information may still be useful, e.g., to show overall school progress, in the context of the Education Department, it is not clear these techniques are transferable to other contexts.

EPA links to a document of the Privacy Technical Assistance Center, *Data De-identification: An Overview of Basic Terms*, which provides a high-level overview of key terms and practices to help educational agencies and institutions comply with the Family Educational Rights and Privacy Act (FERPA).¹⁶³ This document is concerned with data disclosure that occurs

¹⁶⁰ 83 Fed. Reg. 18,770.

¹⁶¹ National Center for Education Statistics, *SLDS Technical Brief: Statistical Methods for Protecting Personally Identifiable Information in Aggregate Reporting* (Dec. 2010), <https://nces.ed.gov/pubs2011/2011603.pdf>.

“when schools, districts, or states publish reports on student achievement or share students’ data with external researchers” not to make underlying data publicly available for independent validation.¹⁶⁴ Thus, it is unclear that methods used to de-identify but preserve data for those purposes would be adequate in this context. For example, one of the methods that the U.S. Department of Education uses for disclosure avoidance for tabular data is to not release information for any cell that has a size below some minimum, which essentially means not disclosing information where there are small numbers in a certain cell.¹⁶⁵ Thus, it is quite possible that techniques that result in a loss of information would prevent researchers from repeating the experiment. Yet EPA fails to acknowledge the nuances and limitations of these policies.

EPA links to a NIST document entitled *De-Identification of Personal Information* by Simson L. Garfinkel (NISTIR 8053), which discusses de-identification, but not in the context of making research data publicly available for independently validating scientific studies. The document instead notes that “that there is a trade-off between the amount of de-identification and the utility of the resulting data” and that “[i]t is thus the role of the data controller, standards bodies, regulators, lawmakers and courts to determine the appropriate level of security, and thereby the acceptable trade-off between de-identification and utility.”¹⁶⁶ It further notes that “de-identification approaches based on suppressing or generalizing specific fields in a database cannot provide absolute privacy guarantees, because there is always a chance that the remaining data can be re-identified using an auxiliary dataset.”¹⁶⁷

EPA’s reference to the U.S. Census Bureau is similarly unhelpful. Here EPA provides a link to a website titled *Data Ingest and Linkage* that details the U.S. Census Bureau’s approach to linking data across many records they hold.¹⁶⁸ The Website links to a working paper that describes the method by which the Census assigns a unique person identifier to records it holds that enables it to link records together to create the final file.¹⁶⁹ It is totally unclear how this process on linking together records is a solution that EPA could implement to protect privacy of individuals when disclosing data as it concerns how to identify data with specific people—not protecting privacy.

While other agencies are clearly grappling with the issue of how to make government-collected data available, they have also highlighted the many challenges in protecting privacy and confidentiality while doing so—such as the ability for de-identified data to be re-identified—and these agencies accept that there is more work to be done before these concerns are fully

addressed.¹⁷⁰ The letter filed in this docket by the Presidents of the National Academies of Science, Engineering and Medicine underscores these difficulties, specifically noting the National Academies' previous work finding that "statistical analyses of data sets that generate highly precise results—such as geographic specificity or other characteristics that identify respondents—may result in privacy breaches . . . This presents a new challenge that federal statistical agencies are just beginning to address."¹⁷¹ EPA does not even acknowledge, much less try to address, these gaps in agencies' abilities to protect sensitive data.

EPA cursorily mentions a range of options for facilitating secure access to confidential data, including: "[r]equiring applications for access; restricting access to data for the purposes of replication, validation, and sensitivity evaluation; establishing physical controls on data storage; online training for researchers; and nondisclosure agreements."¹⁷² EPA does not indicate whether it would deem providing access with these types of controls in place sufficient to meet EPA's proposed requirement "publicly available in a manner sufficient for independent validation." EPA also fails to recognize the significant costs associated with implementing most of these options or the risks to privacy that remain even if these methods are employed.

b) EPA cites to one example—the technique of deidentification—but fails to acknowledge, let alone address, the significant costs and limitations of this approach.

As already discussed, it is legally and ethically necessary to ensure the privacy of the individuals whose data have been collected, as some of these data, such as medical history or employment data, can be quite sensitive. EPA suggests deidentification and redaction of sensitive information can be used to protect privacy when study data is made public. EPA fails to recognize that these techniques are generally burdensome and costly, and may lose too much information for replication purposes. EPA also ignores the real concerns, based in empirical evidence, about reidentification of individuals through cross linking with existing public datasets and the ensuing breach of privacy.¹⁷³

¹⁷⁰ See, e.g., Simson L. Garfinkel, *De-Identification of Personal Information* (NISTIR 8053), NIST (Oct. 2015) (detailing methods of re-identification and challenges to de-identifying information, concluding "there is comparatively little known about the underlying science of de-identification" and "there is a clear need for standards and assessment techniques that can measurably address the breadth of data and risks described in this paper.").

¹⁷² 83 Fed. Reg. 18,771.

¹⁷³ "Recently, a peer reviewed study examined the identifiability of records from an environmental health study in Northern California. Using data considered by HIPAA to be sufficiently de-identified to be made public, which involved far fewer variables than would be required to make public in the cohort studies, they were able to correctly identify over 25% of the participants. Another study searched the Lexis-Nexis database for stories that mentioned hospitalization, and by matching that with age, race, sex and Zip code from a supposedly anonymized hospital admissions data base was able to match 43% of the people named in the news stories to their medical records." Comments of the International Society for Environmental Epidemiology on EPA's proposed rule on Strengthening Transparency in Regulatory Science (EPA-HQ-OA2018-0259-0001), <https://www.regulations.gov/document?D=EPA-HQ-OA-2018-0259-1973> (citing Sweeney L, Yoo JS, Perovich L, Boronow KE, Brown P and JG B., *Re-identification Risks in HIPAA Safe Harbor Data: A study of data from one*

Indeed, experts have observed that even the disclosure of redacted or “de-identified” data sets has become more fraught as public health studies have become more rigorous, because these studies are relying upon greater quantities of ever more granular personal information.¹⁷⁴

i. Deidentification is complicated and costly.

EPA states that “[o]ther federal agencies have developed tools and methods to deidentify private information,” but then cites to only one source, which does not address the concerns raised here.¹⁷⁵ EPA cites to the U.S. Department of Health and Human Services’ *Guidance Regarding Methods for De-identification of Protected Health Information in Accordance with the Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule*.¹⁷⁶ This guidance provides two methods for de-identifying data: (1) expert determination method, where an expert determines that, after application of statistical and scientific principals and methods, the risk is very small that the information alone or with other available information could be used to identify the subject; and (2) the safe harbor method, requiring that a number of identifiers are removed.¹⁷⁷ The first method requires case-by-case work, and EPA has provided no information regarding how EPA or others could potentially implement it or how much it might cost. In addition, there is no indication of how broadly this technique might be applicable to adequately de-identify data. *I.e.*, EPA must provide its views on whether this technique is likely to be applicable to the majority of studies relevant to EPA with non-public data, some studies, or only a handful. The second method requires removal of much information that may be necessary to be able to reanalyze or reproduce the research results, so it is unclear whether it would satisfy EPA’s requirements in the Proposal. The second method is also costly, which EPA also completely disregards. Furthermore, even the safe harbor method has been shown to provide potentially insufficient privacy protections due to the mosaic effect, discussed more below.

EPA further states: “The National Academies have noted that simple data masking, coding, and de-identification techniques have been developed over the last half century. . . ,” seemingly suggesting that data can easily be modified to address privacy concerns.¹⁷⁸ This is incorrect. The National Academies in fact recognizes that complex, evolving, and yet undeveloped techniques are needed to resolve these concerns: “Initially, relatively simple data masking techniques, such as top coding income amounts. . . were used to generate restricted data

environmental health study, Technology Science (2017) and Sweeney L., *Only You, Your Doctor, and Many Others May Know*, Technology Science (2015)).

¹⁷⁴ See Letter from Daniel S. Greenbaum, Health Effects Institute, to Lek Kadeli, Environmental Protection Agency 3 (Aug. 27, 2013) (describing the use of increasingly fine-grained community-level and zip code-level data in public health studies, and noting that “these characteristics – which have in general enhanced the quality and the sensitivity of the studies – increase the difficulty of providing a fully “de-identified” data set while also enabling a different investigator to conduct a full replication and sensitivity analysis of the original study results.”).

¹⁷⁸ 83 Fed. Reg. at 18,771.

products [,] [d]uring the last decade the increasing risks of confidentiality breaches have led researchers to develop increasingly sophisticated methodologies for restricted data products.”¹⁷⁹ They state, “more research is clearly needed to assess the relative ability of different masking methods, and of synthetic data, to reduce the risk of disclosure while preserving data utility.”¹⁸⁰ They recognize the current limitations of producing restricted data that sufficiently limits identifiability to allow it to be made publicly available in a useful form. They note that “well-informed policy making” requires “[r]esearch using detailed confidential data” that cannot be made public—which the Proposal fails to acknowledge to the detriment of the quality of EPA’s policy decisions.¹⁸¹ In the meantime, the National Academies state that more work is needed to allow “[h]igh-quality public-use files” that still assure “the inferential validity of the data while safeguarding their confidentiality.”¹⁸²

ii. Ongoing developments in data analytics make data deidentification more difficult to conduct and less likely to adequately protect privacy and confidentiality.

In pointing to the option of deidentification and redaction techniques, EPA also fails even to mention, let alone address, the increasing risk of re-identification through data analysis using multiple data sets. The so-called “mosaic effect” makes even very limited, redacted releases of data to the public a threat to the privacy of study subjects. OMB has recognized the threat to privacy from the mosaic effect, which it describes as “when the information in an individual dataset, in isolation, may not pose a risk of identifying an individual (or threatening some other important interest such as security), but when combined with other available information, could pose such risk.”¹⁸³ OMB specifically highlighted the complicated nature of this threat and the need for agencies to address it carefully, particularly as they may not possess the needed expertise.¹⁸⁴

Studies show the reality and scope of the re-identification threat. For example, Dr. Latanya Sweeney, professor of government and technology in residence at Harvard University, has examined deidentified datasets and combined them with other public data sets to test this concern. She was able to use information in medical information and a voter list, such as birth date, gender, and zip code, to identify individuals in the deidentified Massachusetts Group Health Insurance Commission dataset in 1997, including the then Massachusetts Governor,

¹⁸⁴ *Id.* at 9-10 (“Agencies should note that the mosaic effect demands a risk-based analysis, often utilizing statistical methods whose parameters can change over time, depending on the nature of the information, the availability of other information, and the technology in place that could facilitate the process of identification. Because of the complexity of this analysis and the scope of data involved, agencies may choose to take advantage of entities in the Executive Branch that may have relevant expertise, including the staff of Data.gov.”)

William Weld.¹⁸⁵ Studies have indicated that between 63% and 87% of the population of the United States could be uniquely identified by using only gender, ZIP code, and date of birth.¹⁸⁶ Dr. Sweeney was also able to link data in the Personal Genome Project to names and contact information, identifying between 84 to 97% of profiles.¹⁸⁷ In 2011 she was able to identify 43% of individuals in a department of health in Washington state hospital discharge database using newspaper stories.¹⁸⁸ Another study¹⁸⁹ showed how “data on air and dust samples from 50 homes in two communities in California could be combined with data released under the Safe Harbor provisions of the Health Insurance Portability and Accountability Act (HIPAA) to ‘uniquely and correctly identify [in one community] 8 of 32 (25 percent) by name and 9 of 32 (28 percent) by address.’”¹⁹⁰

The Commission on Evidence-Based Policymaking, which EPA also cites in the Proposal¹⁹¹, also stresses the dangers of re-identification of data that has been stripped of direct identifiers. They note: “No existing statistical disclosure limitation method. . . is able to completely eliminate the risk of re-identification,” despite increasingly complex techniques that have been developed since the 1970s.¹⁹² They also note the threat posed by the “cumulative amount of information available about individuals and businesses that could be used for re-identification,”¹⁹³ with the threat increasing as available information grows and technology to allow re-identification improves.¹⁹⁴

Further, the National Academies note, “data that are most useful to legitimate researchers typically have characteristics that pose substantial risk of disclosure.”¹⁹⁵ This includes information such as:

- detailed geographic information;
- repeated data collection from the same subjects;
- outliers, such as people with very high incomes;
- many attribute variables; and

- complete census data rather than a survey of a small sample of the population.¹⁹⁶

There is increased vulnerability in “[d]ata with geographic detail, such as census block data” and longitudinal data obtained in panel surveys, which is often salient in environmental research.¹⁹⁷

iii. Deidentification may make data sets unusable for reanalysis purposes.

Work by other experts in this area suggests that deidentification can be carried out and help protect privacy, but it may produce datasets that have lost vital information needed for specific analyses.¹⁹⁸ Even the HIPAA guidelines document states: “Of course, de-identification leads to information loss which may limit the usefulness of the resulting health information.”¹⁹⁹ Such results limit the utility of deidentified data sets and would not meet the requirements of the proposed rule which state that “*EPA will ensure that the data and models underlying the science is publicly available in a manner sufficient for validation and analysis.*”

Further, even if it may be technically possible to release some amount of data while preserving privacy in some cases, doing so imposes substantial additional costs.²⁰⁰ The preamble of the proposed rule suggests that privacy concerns can be addressed through mechanisms such as data masking, coding, and de-identification techniques—all of which would impose additional costs on researchers. The preamble also indicates that requirements for dose response data and availability may differ and involve a range of mechanisms such as deposition in public data repositories, and controlled access in federal research data centers—which would require EPA funding to maintain the facilities.²⁰¹ As discussed further in Section V of these comments, the proposed rule fails to acknowledge these costs, let alone provide any information about them or suggest ways to provide for them. Nevertheless, the costs can be significant, and even smaller costs could be prohibitive for many researchers.

At a time when federal funding for research in environmental and public health-related fields has largely flat-lined, academic researchers, in particular, are likely to have few additional

²⁰¹ See, The National Academies, *Improving Access to and Confidentiality of Research Data: Report of a Workshop*, National Academies Press 48 (2000) (At present, [costs for federal research data centers] are being covered partly by federal agency budgets and partly by user fees. The Census Bureau’s research data centers have been supported in part by grants from the National Science Foundation and NIA, but may eventually have to recover more of their costs from users.”).

funds available to undertake these activities.²⁰² This raises additional concerns—if researchers funded by industry are generally able to support the additional costs of making data publicly available, while academic researchers are far less likely to be able to do so, EPA’s proposed approach could institutionalize a dangerous bias in the source of studies that EPA is allowed to use for regulatory activity.

With respect to the potentially very large costs that would accrue to EPA, EPA’s proposal provides no indication that any funding to support such activities would be available. EPA funding is at its lowest level since the 1980s.²⁰³ Absent a significant change in Congressional priorities, any EPA expenditures for the purposes of supporting making data publicly available would necessarily require cutbacks in other critical areas of environmental protection, which might include supporting additional research, conducting inspections, issuing permits, setting standards, or many other activities. EPA’s Proposal includes no discussion of whether funds would be made available, nor whether other activities would be sacrificed, whether these trade-offs would make any sense, and what the overall impacts might be on public health and the environment.

B. The Proposal Will Not Advance the Supposed Cause of “Transparency” Upon Which it is Based.

The Proposal does not present or support the case that public accessibility to underlying data is necessary to vet scientific research—which, as discussed above, it is not—but even if it was, as discussed above, the scientific community is already taking steps to make underlying data publicly available where feasible, with the widespread understanding that this is neither necessary nor appropriate in all cases.²⁰⁴ The Proposal does not examine the policies and practices that are already working to make data publicly available where feasible, the extent to which existing policies may already be sufficient to meet EPA’s alleged transparency goals, or the reasons why some data is still not released publicly. Still less does EPA question whether this proposal would add anything to the current efforts, or whether it would have any effect whatsoever in increasing public accessibility of data.

1. Where there are lower hurdles to making data publicly available, this is already commonly occurring, with support from various initiatives.

²⁰² See, American Association for the Advancement of Science, *Trends in Federal Research by Discipline FY 1970-2017*, chart, (last updated July 2018), http://mcnprowdaas.s3.amazonaws.com/s3fs-public/Disc-1_0.jpg?RrBDGaSpG5edeDsiBRyoQyApdamjOs4O.

²⁰³ Compare FY 2018 budget of \$5.655 billion (EPA, *FY 2018 Budget in Brief* (May 2017)) and projected FY 2019 EPA budget of \$6.146 billion (EPA News Release, *EPA FY 2019 Budget Proposal Released* (Feb. 12, 2018), <https://www.epa.gov/newsreleases/epa-fy-2019-budget-proposal-released>) with fiscal year 2017’s budget of \$8.058 billion and historical budgets (*EPA’s Budget and Spending*, <https://www.epa.gov/planandbudget/budget> (last accessed July 26, 2018)).

²⁰⁴ See National Academies of Sciences, Engineering, and Medicine, *Principles and obstacles for sharing data from environmental health research: Workshop summary*, The National Academies Press (2016), <https://www.nap.edu/catalog/21703/principles-and-obstacles-for-sharing-data-from-environmental-health-research>.

There are already various ongoing initiatives to make scientific data and models more commonly publicly available, where appropriate, as discussed more below. For example, EPA cites the ongoing implementation of the 2016 *Plan to Increase Access to Results of EPA-Funded Scientific Research*.²⁰⁵ This Plan aims to maximize access to “research data underlying a publication” resulting from EPA-funded research.²⁰⁶ It is worth emphasizing the Plan also exempts “research data [that] cannot be released due to one or more of constraints, such as requirements to protect confidentiality, personal privacy, proprietary interest, or property rights.”²⁰⁷ There is also a 12-month embargo period before publications are made publicly available.²⁰⁸ The Plan also explicitly indicates that

[i]t is important to recognize that some research data cannot be made fully available to the public but instead may need to be made available in more limited ways, e.g., establishing data use agreements with researchers that respect necessary protections. *Whether research data are fully available to the public or available to researchers through other means does not affect the validity of the scientific conclusions from peer-reviewed research publications.*²⁰⁹

EPA also mentions the data availability policies or requirements of many scientific journals (although EPA does not specifically discuss any of these policies or indicate how or why they are not sufficient to address EPA’s concerns).²¹⁰ Thus, where there are not significant barriers due to costs, or confidentiality or other concerns, there are increasing mechanisms to encourage scientists to make their data meaningfully and responsibly publicly available, and in response to these mechanisms, scientists frequently do so already.²¹¹

2. EPA’s proposed approach does not require researchers to make underlying data publicly available.

There are multiple real and significant barriers to the public release of underlying data from some studies, and the Proposal cites no reason to believe that, in the majority of cases where data is not already released, one or more of those barriers are not present. Because those barriers are significant, this is not a situation where creating an incentive to private action is likely to be sufficient to drive such action where it is not already occurring.

²¹⁰ 83 Fed. Reg. at 18,770 (stating that the policies and recommendations EPA considered were “informed by the policies recently adopted by some major scientific journals and cites to “related policies from the Proceedings of the National Academy of Sciences, PLOS ONE, Science, and Nature.”); 83 Fed. Reg. at 18,771 n. 20 (claiming the “policies or recommendations of publishers Taylor & Francis, Elsevier, PLOS, and Springer Nature” support the Proposal because they require authors to deposit the data underlying their studies in public data repositories).

²¹¹ Jeremy Berg, *Obfuscating with transparency*, 360 Science 133 (Apr. 13, 2018), <http://science.sciencemag.org/content/360/6385/133/tab-pdf> (“Increasingly, many publications, including those from the Science family of journals, are linked to underlying data in accessible forms in repositories where they are readily available to interested parties, particularly those who seek to reproduce results or extend the analysis.”).

Yet, with respect to release of data, the Proposal would only create an incentive for private action, not an actual requirement that data be released. First, this Proposal addresses data produced and held by external scientists, not data held by EPA itself or that EPA has authority to gain access to. Where EPA holds data, it is already governed by the Information Quality Act, OMB Circular A-110, and the Freedom of Information Act.²¹² The Shelby Amendment required OMB to amend Circular A-110 to require that federal agencies provide “research data relating to published research findings produced under an award that were used by the Federal Government in developing an agency action that has the force and effect of law” to the public through the Freedom of Information Act.²¹³ Importantly, the term “research data” excludes “[t]rade secrets, commercial information, materials necessary to be held confidential by a researcher until they are published, or similar information which is protected under law” as well as “[p]ersonnel and medical information and similar information the disclosure of which would constitute a clearly unwarranted invasion of personal privacy, such as information that could be used to identify a particular person in a research study.”²¹⁴ Many voiced concerns that even this provision could compromise scientific research and personal privacy.²¹⁵ This Proposal presumably is also not directed at studies funded by EPA, where the researchers must generally make data publicly available as a condition of receiving funding.²¹⁶ There are already mechanisms by which EPA is making research data publicly available where it has the authority and access to do so, and only after carefully ensuring that doing so will not compromise privacy interests.

Second, EPA has no authority to regulate the authors of studies or the scientific journals in which the studies are published, and EPA makes no attempt to regulate them directly. The preamble to the proposed rule states: “EPA should ensure that the data and models underlying scientific studies that are pivotal to the regulatory action are available to the public.”²¹⁷ It further states that the proposed regulation is “designed to provide a mechanism to increase access to dose response data and models underlying pivotal regulatory science...”²¹⁸ The proposed regulations then state that for significant regulatory actions EPA “shall ensure that dose response data and models underlying pivotal regulatory science are publicly available in a manner

²¹² OMB Circular A-110 Revised 11/19/93 As Further Amended 9/30/99 36(d)(1) (“In addition, in response to a Freedom of Information Act (FOIA) request for research data relating to published research findings produced under an award that were used by the Federal Government in developing an agency action that has the force and effect of law, the Federal awarding agency shall request, and the recipient shall provide, within a reasonable time, the research data so that they can be made available to the public through the procedures established under the FOIA.”); See also, Lynn R. Goldman & Ellen K. Silbergeld, *Assuring Access to Data for Chemical Evaluation*, 121 *Environmental Health Perspectives* 149 (Feb. 2013), <https://ehp.niehs.nih.gov/wp-content/uploads/121/2/ehp.1206101.pdf> (noting the numerous feasibility concerns that would arise were EPA to be required to make raw underlying data available for studies not governed by these mechanisms, given the large number of studies it usually relies on and that fact that EPA is usually not in possession of the raw data, in addition to funding and ethical limitations).

²¹³ OMB Circular A-110 (36)(d)(1).

²¹⁴ OMB Circular A-110 (36)(d)(2)(i).

²¹⁶ U.S. EPA, *Plan to Increase Access to Results of EPA-Funded Scientific Research* (Nov. 29, 2016), <https://www.epa.gov/sites/production/files/2016-12/documents/epascientificresearchtransparencyplan.pdf>.

²¹⁷ 83 Fed. Reg. at 18769.

²¹⁸ 83 Fed. Reg. at 18770.

sufficient for independent validation.”²¹⁹ But (apart from studies that EPA funds) EPA has no authority to require those data and models to be made public.

Hence, this proposal would regulate not the scientists, but EPA itself. EPA would “ensure” that data and models underlying scientific studies “pivotal” to regulatory action are publicly available *simply by barring EPA’s own use in regulatory actions of any studies for which the authors do not make the data and models publicly available*. The “mechanism” mentioned in the preamble is not technical assistance or funding to encourage greater availability of data; it is simply the pressure generated by EPA’s refusal to consider the results of a study if the authors do not release publicly the underlying data and models. The obvious question that EPA has neither asked nor attempted to answer in the Proposal is whether such a ban would be sufficient to incentivize study authors to make their data and models publicly available, where they have not already done so, or whether the ban will largely result in just limiting the studies available to EPA. Most of the significant barriers to release detailed above are not a matter of the researcher’s preference, but rather take the form of legal and ethical constraints, significant costs, large time investments, or the loss of proprietary data critical to a researcher’s future career prospects. While it seems plausible that having their research applied in a regulatory context would be viewed as an incentive by some, or perhaps many, researchers, there is no reason to believe that such an incentive would be sufficient to overcome the significant barriers to public release of data where those barriers exist. Indeed, the party most likely to be incentivized by EPA’s proposed requirements is the regulated community which has vested financial interests in regulatory actions the agency may take—a situation that almost certainly will lead to significant bias and conflicts of interests in the scientific evidence that the agency considers.

Yet EPA barely acknowledges the nature of the “mechanism” it is proposing, and EPA certainly does not explore in any way how the mechanism would operate or whether it would be effective in driving release of data. Still less does EPA admit that the primary effect of this approach is very likely to be the exclusion of critical valid scientific studies from EPA’s consideration. Finally, EPA utterly fails to contemplate what the effect of such exclusion would be on EPA’s ability to adopt regulatory standards that protect public health and the environment.

C. The Proposal does not Acknowledge, Much Less Examine, its Likely Actual Effect—Reducing the Quality and Quantity of Studies upon which Regulatory Decisions are Based.

1. EPA fails to recognize that forcing the disclosure of all data and models would have harmful effects on the quality and quantity of scientific research used by EPA.

Although it appears highly unlikely that this proposal would drive additional data to be released, EPA presumes otherwise, and fails to recognize the harms that would likely result if EPA actually were successful in finalizing the rule. One reason researchers are particularly cautious about releasing human subjects data is that they understand that public willingness to

²¹⁹ 83 Fed. Reg. 18773.

participate in research studies depends upon protecting the privacy of the participants. Risks of privacy breaches and researchers' inability to control use of subject data will undermine potential participants' confidence in scientists' ability to protect their information.²²⁰ This will likely reduce participation in studies or even lead to biases in responses from participants.²²¹ It could also result in attrition of participation by select subpopulations, particularly those who may be most vulnerable, such as children or people with disabilities or disease, or those with the most to protect, such as high socioeconomic populations. Reduced participation and particularly reduced participation among select subpopulations will reduce scientists' ability to draw meaningful inferences from their results to broader populations, the whole of which EPA is charged with protecting.

In addition, the prospect that their research would not be used if researchers were unable to make their data public is likely to deter researchers from even engaging in environmental health research, particularly research involving human subjects.²²² Lynn Goldman and Ellen Silbergeld conclude that a requirement by EPA that researchers release raw data underlying studies reviewed for rulemakings on pesticides and chemicals "would not be tenable" and would in fact "have a chilling effect on the engagement of the global scientific community in research relevant to the protection of human health and the environment."²²³ Overall, the result will be to diminish and undermine the strength of the scientific information available to EPA.

2. Because EPA will be barred from using many valid scientific studies with nonpublic data, the net effect of this proposal will be to harm, not strengthen, EPA's use of science in the regulatory process.

The most damaging aspect of EPA's proposal is that it will bar EPA from using many valid scientific studies that provide critically important information supporting regulatory standards and requirements. This will significantly harm, not strengthen, EPA's use of science in the regulatory process—especially since the public availability of data is neither necessary nor sufficient to ensure the validity of the studies EPA relies upon. It is clearly arbitrary and

Privacy concerns could influence what science gets done and what does not. Lines of scientific inquiry that would have been pursued may not be. The quality of data may be poorer than it otherwise would have been."); Augusta Wilson, *Big Tobacco's Smoke and Mirrors Revived by Pruitt's Science Transparency Policy*, The Hill (June 4, 2018, 5:00 PM), <http://thehill.com/opinion/energy-environment/390638-big-tobaccos-smoke-and-mirrors-revived-by-pruitts-science> ("Good scientists may understandably hesitate to pursue important lines of scientific inquiry if doing so will make them targets for regulators, interest groups and legislators who seek to impugn their credibility and troll through their emails looking for ways to publicly embarrass them.").

²²³ Lynn R. Goldman & Ellen K Silbergeld, *Assuring Access to Data for Chemical Evaluation*, 121 Environmental Health Perspectives 149, 150 (Feb. 2013), <https://ehp.niehs.nih.gov/wp-content/uploads/121/2/ehp.1206101.pdf>.

capricious for EPA to sacrifice the agency's use of the best available science under these circumstances.

- a) The prohibition on using studies with underlying nonpublic data will operate to exclude quality research results from EPA's regulatory process.

The next subsection provides an extensive discussion of some of the types of studies and specific studies that EPA would be unable to use under the Proposal.²²⁴ Prior analyses by the Congressional Budget Office of related legislative proposals have also concluded that public availability requirements would significantly reduce the number of studies EPA relies upon—perhaps by as much as one-half.²²⁵ Bizarrely, however, EPA does not even mention this probable effect of the Proposal, let alone provide information on which particular studies or types of studies would be excluded (absent a case-by-case exemption). Further, EPA utterly fails to consider what the effects of such exclusions could be on EPA's ability to develop and support standards to protect public health and the environment. There are many areas where these effects might be extremely damaging, as the examples below detail.

Not only would this proposal exclude valid studies, but it may well disproportionately exclude high quality studies. Some of the most robust and informative environmental health studies are human subjects studies with a large number of geographically distributed participants who are tracked over very long periods of time. These attributes make the results of these studies especially useful in regulatory decision making, since they are more representative of the population being addressed and provide information on exposure and health effects over a period of time. But these are also the attributes that make public release of the underlying data most difficult, and frequently impossible, as discussed above in Section II.A.1. Excluding these studies is highly likely to distort and undermine regulatory decision making by removing support for standards that are actually health protective. EPA has not identified any harms it is aiming to address through this Proposal, but whatever they are perceived to be, it is hard to see how they could outweigh the harm from barring EPA from considering the best available scientific information.

This Proposal also could be particularly harmful to EPA's ability to act in areas where the science is less developed, such as emerging threats. If there are a relatively small number of studies, the inability to consider some or all of them could cripple EPA's ability to act. This is

²²⁴ Note that EPA has proposed to allow the Administrator to grant exemptions to the prohibition on a case-by-case basis, but the hurdle of requiring case-by-case determinations is so high (EPA relies on roughly 50,000 studies per year according to the CBO) and the criteria are sufficiently stringent (public availability must be "not feasible," which may well exclude, e.g., cost concerns) that it appears most plausible to assume that many studies will not be granted an exemption. *See* Section I.B.4 for further discussion.

²²⁵ *See* Susanne S. Mehlman, Jon Sperl & Amy Petz, Cong. Budget Office, H.R. 1030: Secret Science Reform Act of 2015 at 2-3 (2015) ("CBO expects that EPA . . . would base its future work on fewer scientific studies . . . CBO expects that the agency would probably cut the number of studies it relies on by about one-half . . ."); Jon Sperl & Amy Petz, Cong. Budget Office, H.R. 1430: Honest and Open New EPA Science Treatment (HONEST) Act of 2017 at 1-2 (2017) ("EPA officials have explained to CBO that the agency would implement H.R. 1430 with minimal funding . . . That approach to implementing the legislation would significantly reduce the number of studies that the agency relies on . . .").

precisely the type of situation where a proactive early response could avoid extensive contamination (which is expensive to address) and multiple exposures (which are impossible to reverse), and the resulting adverse outcomes. Yet, apart from a question about how to apply the proposed rule to existing administrative records such as for the NAAQS, the closest EPA comes to hinting at the possibility of the regulatory and public health effects of excluding valid studies is when EPA asks the public to comment “on the effects of this proposed rule on individual EPA programs.” None of these extremely consequential impacts of the Proposal are acknowledged or explored in any depth in the Proposal.

b) Examples of scientific studies that would be excluded

The proposed rule seeks to “ensure that dose response data and models underlying pivotal regulatory science are publicly available in a manner sufficient for independent validation.”²²⁶ The proposal indicates that “[i]nformation is considered ‘publicly available in a manner sufficient for independent validation’ when it includes the information necessary for the public to understand, assess, and replicate findings.”²²⁷ Further, footnote three of the proposal states:

Historically, EPA has not consistently observed the policies underlying this proposal, and courts have at times upheld EPA’s use [sic] non-public data in support of its regulatory actions. *See Coalition of Battery Recyclers Ass’n v. EPA*, 604 F.3d 613, 623 (D.C. Cir. 2010); *American Trucking Ass’n v. EPA*, 283 F.3d 355, 372 (D.C. Cir. 2002). EPA is proposing to exercise its discretionary authority to establish a policy that would preclude it from using such data in future regulatory actions.²²⁸

Taken together, EPA is proposing to prohibit the use of studies involving dose response data and models in significant regulatory decisions where the underlying data are not publicly available. Such a prohibition would affect virtually all pending and future regulatory actions and, if applied retrospectively, past regulatory actions. Regulatory actions would not reflect the best available science, leading to inadequate or absent critical public health and environmental protections.

Eight examples of pending, past, and future regulatory actions that are themselves put at risk from the proposed regulation, or cite to studies that under the Proposal may not be able to be utilized in future actions, explained in more detail below, include:

- **proposed bans of trichloroethylene (TCE) for use in vapor degreasing, aerosol degreasing, and spot cleaning in dry cleaning facilities under TSCA section 6(a);**²²⁹

- NAAQS for ozone under the CAA;²³⁴
- forthcoming proposed National Primary Drinking Water Regulation for perchlorate in development under the SDWA;²³⁵ and
- future regulatory action on the perfluoroalkyl substances (PFASs) perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS) under SDWA and Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).²³⁶

Explanations of the likely effect of EPA's Proposal on these regulatory activities are described below.

Proposed bans of TCE for use in vapor degreasing, aerosol degreasing, and spot cleaning in dry cleaning facilities under TSCA section 6(a)

EPA has proposed two regulations under TSCA section 6(a) to ban the use of TCE in vapor degreasing, aerosol degreasing and spot cleaning in dry cleaning facilities.²³⁷ Exposure to TCE is linked to several adverse health outcomes, including liver and kidney issues, developmental effects, and several forms of cancer.²³⁸ The scientific basis for these proposed regulations is provided in the agency's 2014 risk assessment: *TSCA Work Plan Chemical Risk Assessment, Trichloroethylene: Degreasing, Spot Cleaning and Arts & Crafts Uses*²³⁹ which

²³⁹ EPA, Office of Chem. Safety & Pollution Prevention, EPA Doc. No. 740-R1-4002, "TSCA Work Plan Chemical Risk Assessment: Trichloroethylene: Degreasing, Spot Cleaning and Arts & Crafts Uses" (2014) [hereinafter TCE Work Plan Risk Assessment], https://www.epa.gov/sites/production/files/2014-11/documents/tce_opptworkplanchemra_final_062414.pdf.

drew heavily from the 2011 EPA Integrated Risk Information System (IRIS) Toxicological Review of TCE.²⁴⁰ As noted in the 2014 work plan risk assessment,

EPA/OPPT's work plan risk assessment for TCE is based on the hazard and dose-response information published in the toxicological review that the U.S. EPA's [IRIS] published in 2011. EPA/OPPT used the TCE IRIS assessment as the preferred data source for toxicity information. . . . The TCE IRIS assessment used a weight-of-evidence approach, the latest scientific information and physiologically-based pharmacokinetic (PBPK) modeling to develop hazard and dose-response assessments for TCE's carcinogenic and non-carcinogenic health effects. . . . Development of TCE's hazard and dose-response assessments considered the principles set forth by the various risk assessment guidelines issued by the National Research Council and the U.S. EPA.²⁴¹

EPA clearly found the TCE IRIS assessment to be scientifically rigorous. EPA made this determination without the data underlying the key, peer-reviewed studies²⁴² used in the assessment being publicly available. EPA's proposed science rule would preclude the use of these studies, severely jeopardizing the fate of the proposed TCE bans and allowing high-risk uses of TCE to continue.

Proposed ban of methylene chloride for use in paint and coating removal under TSCA section 6(a)

EPA has proposed a ban on the use of methylene chloride in paint and coating removers.²⁴³ Methylene chloride is associated with a number of hazardous health effects, including impaired visual and motor functions, respiratory irritation, headaches, nausea, and death.²⁴⁴ The scientific basis for this proposed regulation is provided in the agency's 2014 risk assessment, *TSCA Work Plan Chemical Risk Assessment: Methylene Chloride: Paint Stripping Use*.²⁴⁵ The work plan risk assessment for methylene chloride identified both cancer and non-cancer risks resulting from exposure to the use of methylene chloride in paint and coating

Health Persp. 289 (2003). The key studies used by EPA to derive the cancer toxicity values for TCE are B. Charbotel et al., *Case-control Study on Renal Cell Cancer and Occupational Trichloroethylene Exposure in the Arve Valley (France)* (2006); and Ole Raaschou-Nielsen et al., *Cancer Risk Among Workers at Danish Companies Using Trichloroethylene: A Cohort Study*, 158 Am. J. Epidemiology 1182 (2003).

²⁴³ 82 Fed. Reg. at 7464.

²⁴⁴ *Id.* at 7468.

²⁴⁵ EPA, Office of Chem. Safety & Pollution Prevention, EPA Doc. No. 740-R1-4003, *TSCA Work Plan Chemical Risk Assessment: Methylene Chloride: Paint Stripping Use* (2014) [hereinafter *Methylene Chloride Work Plan Risk Assessment*], https://www.epa.gov/sites/production/files/2015-09/documents/dcm_opptworkplanra_final.pdf.

removers. As detailed in the work plan assessment, the proposed ban notes that liver toxicity and central nervous system effects are the most sensitive non-cancer endpoints for chronic and acute exposure, respectively.²⁴⁶ Accordingly, these endpoints were used to evaluate the extent of risk resulting from exposure to methylene chloride using a margin of exposure (MOE) approach. The raw data underlying key studies used to derive the benchmark MOE for chronic exposure²⁴⁷ and acute²⁴⁸ exposures to methylene chloride are not publicly available. As with TCE, EPA's proposed regulation would preclude the agency from using these key studies to support the proposed rule to ban methylene chloride in paint and coating removers. The effect would be to severely jeopardize the finalization of this life-saving ban.

Final rule setting formaldehyde emission standards for composite wood products under TSCA title VI

In 2016, EPA issued a final rule establishing federal formaldehyde emission standards for composite wood products.²⁴⁹ Formaldehyde exposure is associated with several adverse health impacts, including respiratory issues, eye and nose irritation, and lung and nasopharyngeal cancers.²⁵⁰ As part of the rulemaking process, EPA conducted an economic analysis to determine which of several prospective regulatory actions would result in the largest net benefit after weighing the compliance costs that firms would incur and the public health benefits that would result from reduced formaldehyde exposure.²⁵¹ The monetary benefit that would result from the alleviation of adverse health outcomes associated with formaldehyde exposure was a core component of the economic analysis. Specifically, EPA calculated the annual estimated monetary benefits of avoided cases of eye irritation and nasopharyngeal cancer.

²⁵⁰ *Id.* at 89,677–78.

²⁵¹ EPA, *Economic Analysis of the Formaldehyde Standards for Composite Wood Products Act Final Rule* (2016) [hereinafter *Formaldehyde Standards Econ. Analysis*], Docket ID: EPA-HQ-OPPT-2016-0461-0037.

EPA relied on several robust, peer-reviewed studies to demonstrate the relationship between exposure to formaldehyde and these endpoints. For nasopharyngeal cancer, EPA referenced the highly regarded U.S. National Toxicology Program (NTP) Report on Carcinogens (RoC).²⁵² The U.S. NTP concluded that chronic exposure to formaldehyde increases risk of nasopharyngeal cancer as evidenced by several key human epidemiological studies.²⁵³ For eye irritation, EPA relied on two epidemiological studies that examined residential exposure to formaldehyde.²⁵⁴ Both these studies showed that the prevalence of eye irritation increases with heightened exposure to formaldehyde. The data underlying key, peer-reviewed studies that identify nasopharyngeal cancer and eye irritation resulting from formaldehyde exposure are not publicly available. EPA would have been forced ignore these studies were the proposed rule in place at the time the formaldehyde rule was developed. If the proposed rule is applied retrospectively, the formaldehyde rule will be at significant risk.

National Primary Drinking Water Regulation (NPDWR) for arsenic under the Safe Drinking Water Act (SDWA)

In 2001, EPA published a final rule, pursuant to its obligations under the Safe Drinking Water Act, establishing a new maximum contaminant level (MCL) for arsenic.²⁵⁵ Ingestion of high levels of arsenic can result in death, and even low-level ingestion can lead to severe health impacts, including skin diseases.²⁵⁶ As part of the rulemaking process, EPA requested that the National Research Council (NRC) review the agency's prior standards and risk assessments for arsenic as well as the available scientific data regarding the risks of arsenic exposure and ingestion.²⁵⁷ Among the critical studies that the NRC analyzed were two epidemiological studies performed in the 1960s and 1970s that documented the relationship between arsenic in well water and skin diseases of an affected community in Taiwan.²⁵⁸ The studies found that ingestion of high levels of arsenic through well water correlated to a higher likelihood of developing skin

Nat'l Cancer Inst. 453 (1968)).

cancer and other skin diseases. NRC's report concluded that based on the available evidence, EPA's previous standard for arsenic was inadequate for protecting the public health.²⁵⁹

Following the NRC report, EPA finalized a MCL of 10 ppb for arsenic, which was based on the two epidemiological studies from Taiwan.²⁶⁰ Both studies were peer reviewed, published in prestigious health and environmental journals, and have been cited numerous times by other researchers. Yet it is unlikely the data from these studies could be made publicly available, as the data are four to five decades old and include confidential individual health information. If applied retroactively, or if EPA re-evaluates the MCL for arsenic, the proposed rule would likely mean that EPA could not rely on these studies.

National Ambient Air Quality Standards (NAAQS) for oxides of nitrogen under the Clean Air Act (CAA)

In 2004, EPA awarded a grant to the University of Washington to study the effects of long-term air pollution on the development of cardiovascular disease. More than 6,000 patients across the nation participated in the 10-year study, called the Multi-Ethnic Study of Atherosclerosis Air Pollution Study ("MESA Air").²⁶¹ Results from the initial study showed that long-term exposure to oxides of nitrogen (NO_x) and fine particulate matter contributes to cardiovascular disease.²⁶² MESA Air was the first study to show the negative health effects of long-term exposure to air pollution. Through funding from EPA, the National Institutes of Health, and the Health Effects Institute, MESA Air research is ongoing.²⁶³

On April 18, 2018, EPA published a final rule maintaining the current NAAQS for NO_x.²⁶⁴ As part of the rulemaking process, EPA published the *Integrated Science Assessment for Oxides of Nitrogen – Health Criteria*.²⁶⁵ This assessment incorporated research from MESA Air, including research related to modeling and statistical techniques, and was relied on by EPA in maintaining the NAAQS for NO_x in 2018. Yet because confidential health data comprises most of the research's data, as well as other identifying data such as ages and addresses, it is extremely unlikely the underlying data can be made publicly available. Researchers seeking to use the study's data must formally request and be granted access to de-identified datasets and are prohibited from further distributing data received.²⁶⁶ Despite initially funding the research, under the proposed rule, EPA would be restricted from relying on this research in future rulemakings.

NAAQS for ozone under the CAA

In October of 2015, EPA strengthened the NAAQS for ozone,²⁶⁷ which is the main component of smog. Ozone pollution is linked to asthma and other respiratory health problems, and it is particularly dangerous for children and the elderly. As part of the rulemaking process, EPA published the *Integrated Science Assessment for Ozone and Related Photochemical Oxidants* in 2013, which reviewed the available science to build the scientific basis for the NAAQS.²⁶⁸ In the Integrated Science Assessment, EPA relied on recent epidemiological studies demonstrating the causal relationship between ozone and childhood asthma as well as other developmental effects.²⁶⁹ These studies were peer-reviewed and are invaluable to ensuring that all people, and especially children and older adults, are protected from the dangerous impacts of smog. However, the studies include individual demographic and genetic data. It is unlikely the data could be made publicly available. Under the proposed rule, when EPA reviews the ozone NAAQS, the agency would likely be unable to rely on these studies.

Forthcoming proposed NPDWR for perchlorate in development under the SDWA

In 2011, EPA made a regulatory determination to develop a national primary drinking water regulation for perchlorate under the SDWA, based on the conclusion that “there is a substantial likelihood that perchlorate will occur in public water systems with a frequency and at levels of public health concern.”²⁷⁰ Underlying this conclusion is a body of literature detailing the health risks associated with perchlorate, namely the chemical’s interference with normal thyroid function by inhibiting uptake of iodide into the thyroid gland. Iodide is essential to making thyroid hormones that regulate the body’s metabolism and orchestrate fetal and infant brain development. In its determination, EPA cited a study by Michael Zimmermann, which reviews the adverse effects that iodine deficiency has on children’s health.²⁷¹

Currently EPA is using peer-reviewed studies²⁷² to develop the dose-response model central to deriving the maximum contaminant level goal (MCLG) for perchlorate in drinking water. These studies demonstrate that perchlorate exposure during pregnancy results in low

maternal level of the thyroid hormone T4 leading to neurodevelopmental problems in children.²⁷³ As with the Zimmermann study, the data underlying these studies are not publicly available. Under EPA's Proposal, the agency would be unlikely to rely on these studies putting at risk both the 2011 regulatory determination itself and EPA's ongoing work to develop the perchlorate NPDWR.

Future regulatory action on PFOA and PFOS under the SDWA and CERCLA

In May 2018, EPA announced that the agency will begin the process of developing, under the SDWA, maximum contaminant levels (MCLs) for perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS), in addition to designating these chemicals as "hazardous substances," possibly under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).²⁷⁴

EPA developed health advisories for PFOA and PFOS in 2016. The supplementary documents²⁷⁵ provided with these advisories detail the various sources of evidence that EPA considered in its characterization of the health impacts of PFOA and PFOS. Among the sources of health effect information was the C8 Health Project,²⁷⁶ a community-wide assessment of approximately 69,000 individuals living in or near Parkersburg, West Virginia, that was mandated as part of a lawsuit following a major release of PFOA from the DuPont Washington Works production plant into the area's drinking water. Based on this data set and other relevant studies, the researchers leading the C8 Health Project concluded that there was a probable link between PFOA exposure and several harmful health effects, including thyroid disease, ulcerative colitis, kidney cancer, and testicular cancer.²⁷⁷

The presiding judge sealed the data from the C8 Health Project to protect participant privacy.²⁷⁸ Under EPA's proposed rule, when the Agency is developing regulations for PFOA—as it intends to do in the near future—it would not consider publications from the C8 Health

Project because the raw underlying data are not publicly available. In failing to consider such crucial case studies, EPA would be ignoring best available science, thereby undermining its own attempt to protect Americans from emerging health threats such as PFOA and PFOS.

- c) Prominent scientists and leaders in public health agree that this Proposal would harm science-based public health protections.

Leading experts in public health, science, and environmental policy agree that the proposed rule would have far-reaching, detrimental impacts on public health and would constrain EPA's decision-making capabilities. By limiting the scientific studies that EPA may consider, the proposed rule would lead to less effective environmental policies and weaker public health protections. Experts have said the following:

- “[The proposed rule] will threaten the lives of real people.” – Commissioners of the Minnesota Pollution Control Agency and Department of Health²⁷⁹
- “If the proposed rule is approved, science will be practically eliminated from all decision-making processes. Regulation would then depend uniquely on opinion and whim.” – John P. A. Ioannidis, C.F. Rehnborg Chair in Disease Prevention at Stanford University²⁸⁰
- “It does not strengthen policies based on scientific evidence to limit the scientific evidence that can inform them. . . . Excluding relevant studies simply because they do not meet rigid transparency standards will adversely affect decision-making processes.” – Editors of *Science* family of journals, *Nature*, *Public Library of Science* journals, *Proceedings of the National Academic of Sciences*, and *Cell*.²⁸¹
- “Without access to the restricted data, regulatory programs could become more or less stringent than they otherwise would be, with consequences for both regulatory costs and benefits. . . . [the proposed rule] could have the effect of removing legal, ethical, and peer-reviewed studies of health effects as sources to support the agency's regulatory efforts.” – Members of the Science Advisory Board²⁸²
- “[The proposed rule] would prevent the best science from informing policy decisions and result in weaker health safeguards.” – Harold P. Wimmer, National President and CEO of the American Lung Association²⁸³

²⁸² Memorandum from Alison Cullen, Chair of SAB Work Group on EPA Planned Actions for SAB Consideration of the Underlying Science to the Members of the Chartered SAB and SAB Liaisons (May 12, 2018), [https://yosemite.epa.gov/sab/sabproduct.nsf/E21FFAE956B548258525828C00808BB7/\\$File/WkGrp_memo_2080-AA14_final_05132018.pdf](https://yosemite.epa.gov/sab/sabproduct.nsf/E21FFAE956B548258525828C00808BB7/$File/WkGrp_memo_2080-AA14_final_05132018.pdf).

²⁸³ Press Release, Am. Lung Ass'n, American Lung Association Strongly Opposes EPA's Proposed Rule to Limit Critical Health Science (Apr. 24, 2018), <http://www.lung.org/about-us/media/press-releases/epa-propose-limit-health-science.html>.

- “If [the proposed rule] had been in effect 20 years ago, the nation might have forgone programs that are preventing over 50,000 premature deaths each year.” – Environmental Protection Network²⁸⁴
- “[The proposed rule] would greatly weaken EPA’s ability to comprehensively consider the scientific evidence across the full array of health effects studies. This would negatively impact EPA public protections that reduce levels of lead, harmful chemicals, and fine particle pollution, among others.” – 985 scientists in a joint letter to Administrator Pruitt²⁸⁵
- “[The proposed rule] would severely hamstring the agency when it comes to developing and enforcing public health rules by limiting the kinds of research the EPA can use in crafting rules.” – Union of Concerned Scientists²⁸⁶
- “[Administrator] Pruitt is moving to rid the EPA of the science needed for effective regulation. . . . Its potential impact goes well beyond the EPA’s regulatory effectiveness to the underlying role of science in American society.” – Dr. Bernard Goldstein, Professor Emeritus of Environmental and Occupational Health at the University of Pittsburgh and former EPA Assistant Administrator for Research and Development.²⁸⁷

Additionally, when the U.S. House of Representatives passed similar legislation in 2017, H.R. 1430, numerous professional organizations raised concerns about the implications of the proposed legislation.²⁸⁸ The Environmental Data & Governance Institute (EDGI) found that:

A bill that provided genuine provisions for public data access and usability, and did not focus on mandating the reproducibility of studies and on prohibiting the use of any data that could not be divulged to the general public in its entirety, would not be expected to hamper the EPA in a significant way. EDGI’s analysis of H.R. 1430 shows that it does not achieve its stated goals. Instead, our research shows that H.R. 1430 would not promote transparency and that its passage would instead block the EPA from using the data it needs to fulfill its mission of protecting public health and the environment.²⁸⁹

D. EPA's Policy Rationales for its Proposal are Arbitrary and Capricious

1. EPA arbitrarily fails to provide a reasoned explanation for why the proposed rule is needed.

In essence, EPA's proposed regulation is a solution in search of a problem—a problem that does not exist. The administrative record for the Proposal fails to show that the Agency's past regulatory decisions inappropriately relied on scientific information of questionable value. In fact, EPA fails to point to a single example of a case in which, in developing regulations, EPA relied upon a study or studies later found to be questionable or invalid. Having failed to address this foundational question, EPA also misses the questions that would build on that—even if EPA actually had used invalid science in some instance, EPA would still have to ask whether the underlying data for that study had been made publicly available, and if not, if the problems with the study could have been avoided through having made the data publicly available.

The Proposal neither acknowledges the mechanisms EPA already uses to ensure the integrity of science in decision-making nor establishes that there is a problem that the Proposal is needed to solve. The reality is that both Congress and EPA have established an array of mechanisms and safeguards over the last five decades to ensure that the Agency's decisions are grounded in best available science. These mechanisms include review of agency science and decisions by EPA's scientific advisory boards, including the Science Advisory Board (SAB), the Clean Air Scientific Advisory Committee, Board of Scientific Counselors, the Science Advisory Committee on Chemicals, and the Federal Insecticide, Fungicide, and Rodenticide Act Scientific Advisory Panel²⁹⁰—a process that a work group of the SAB recently described as a “rigorous review process that goes beyond the typical journal peer review procedures,”²⁹¹ and that the National Research Council recognized as playing an “important role in helping EPA to ensure the credibility and quality of . . . science-based decisions.”²⁹² The Proposal also ignores EPA's use of independent peer review processes to evaluate certain studies used in regulatory decisions;²⁹³ the use of transparent literature surveys that are themselves subject to peer review

²⁹⁰ See 42 U.S.C. § 4365 (establishing the Science Advisory Board and requiring that EPA seek its review of, among other things, certain rulemakings under the Clean Air Act, Federal Water Pollution Control Act, Resource Conservation and Recovery Act, Noise Control Act, Toxic Substances Control Act, and Safe Drinking Water Act); 42 U.S.C. § 7409 (requiring the Clean Air Scientific Advisory Committee to advise EPA on matters relating to the National Ambient Air Quality Standards); 7 U.S.C. § 136w (requiring EPA to seek comments from the FIFRA Science Advisory Panel on certain rulemakings under FIFRA, and to seek advice on operating guidelines for scientific analyses by EPA that lead to actions carrying out FIFRA);

²⁹¹ Memorandum by Alison Cullen, Chair, SAB Work Group on EPA Planned Actions for SAB Consideration of the Underlying Science 4 (May 12, 2018) (observing that the Proposal “fails to mention that EPA has mechanisms for vetting science through several expert panels,” including the SAB and others).

²⁹² Nat'l Research Council, *Science for Environmental Protection: The Road Ahead* 181 (2012) (“External advisory groups—including SAB, BOSC, and NACEPT—play an important role in helping EPA to ensure the credibility and quality of its scientific studies and science-based decisions.”).

²⁹³ See, e.g., EPA Sci. and Tech. Policy Council, *Peer Review Handbook* xiii, 15 (4th ed. 2015) (noting that EPA has a “long-standing history of peer review” and providing for peer review of internally generated studies designated as “Influential Scientific Information” or “Highly Influential Scientific Assessments”); Nat'l Research Council,

and public comment, such as the Integrated Science Assessments (ISA) that inform the National Ambient Air Quality Standards,²⁹⁴ and independent review of EPA science programs and risk assessment practices by authorities such as the National Research Council.²⁹⁵ Major regulatory decisions—and the underlying scientific bases for those decisions—are also subject to public comment and judicial review, which serves as an important check on agency decisions that fail to properly account for the best available science.

Thanks to these multiple and overlapping safeguards, the quality of the science underlying EPA decisions is robust.²⁹⁶ More to the point, there is no indication that EPA science suffers from the so-called “replication crisis” that the Proposal identifies as the principal reason for requiring the public disclosure of underlying data or models for studies used in EPA decisions.²⁹⁷ It is telling that the sources EPA cites in support of its claims of a “replication crisis”²⁹⁸ call into question its existence²⁹⁹ and in many instances promote solutions that do not involve access to underlying data³⁰⁰—such as looking at cumulative evidence using a variety of methods instead of over-emphasizing the results of a single study.³⁰¹ It is even more telling that

Science for Environmental Protection: The Road Ahead 180 (2012) (“In rule-making processes that rely on extensive reviews of scientific information, EPA generally imposes a strong preference for reliance on published, peer-reviewed studies. The agency’s peer review policy states that ‘peer review of all scientific and technical information that is intended to inform or support Agency decisions is encouraged and expected.’”).

²⁹⁴ See EPA, EPA/600/R-15/067, *Preamble to the Integrated Science Assessments* 5-25 (2015) (describing the steps EPA undertakes in preparing an Integrated Science Assessment, including extensive and transparent compilation and screening of relevant literature; public comment and independent review by the CASAC; and EPA’s application of recognized frameworks in evaluating public health causation relationships).

²⁹⁵ See, e.g., Nat’l Research Council, *Review of EPA’s Integrated Risk Information System (IRIS) Process* 3 (2014) (describing the charge of the authoring committee as encompassing a review of recent changes to EPA’s IRIS program as well as to “review current methods for evidence-based reviews and recommend approaches for weighing scientific evidence for chemical hazard and dose-response assessments.”); Nat’l Research Council, *Science for Environmental Protection: The Road Ahead* at x (explaining that EPA asked authoring committee “to assess independently the overall capabilities of the agency to develop, obtain, and use the best available scientific and technologic information and tools to meet persistent, emerging, and future mission challenges and opportunities”).

²⁹⁶ See Nat’l Research Council, *Science for Environmental Protection: The Road Ahead* at 13 (“For over 40 years, EPA has been a national and world leader in addressing the scientific and engineering challenges of protecting the environment and human health.”); Wendy Wagner, *Science in Regulation: A Study of Agency Decisionmaking Approaches* 29 (2013) (describing EPA’s NAAQS review process as “exemplary” and a “five-star process for incorporating science into regulatory policy”).

²⁹⁷ 83 Fed. Reg. at 18770.

²⁹⁸ It is additionally unclear what EPA means by “replication crisis,” and EPA appears to be misusing the term, as the source it cites to describes a “reproducibility crisis,” Marcus R. Munafò et. al, *A Manifesto for Reproducible Science*, 1 *Nature Human Behavior* 1 (2017), and another source details how “[a]s the movement to examine and enhance the reliability of research expands, it is important to note that some of its basic terms—reproducibility, replicability, reliability, robustness, and generalizability—are not standardized,” Steven N. Goodman et al., *What Does Research Reproducibility Mean?*, 8 *Sci. Translation Med.* 1 (2016).

²⁹⁹ Munafò et. al, *A Manifesto for Reproducible Science*, 1 *Nature Human Behavior* 1 (2017) (“Whether ‘crisis’ is the appropriate term to describe the current state or trajectory of science is debatable. . . .”)

³⁰⁰ See, e.g., Marcia McNutt, *Reproducibility*, 343 *Science* 229 (2014) (“[J]ournals can only do so much to assure readers of the validity of the studies they publish. The ultimate responsibility lies with authors to be completely open with their methods, all of their findings, and the possible pitfalls that could invalidate their conclusions.”).

³⁰¹ John P.A. Ioannidis, *Why Most Published Research Findings Are False*, 2 *PLoS Med.* 0696, 0700–01 (2005) (“Second, most research questions are addressed by many teams, and it is misleading to emphasize the statistically significant findings of any single team. What matters is the totality of the evidence.”).

the Proposal identifies *no* EPA actions that have been called into question because the science underlying those actions cannot be validated or replicated. In any event, the Proposal does not require replication of studies and only limits the cumulative evidence and context in which to interpret any given study—only hampering EPA’s reliance on more robust scientific findings even if such a crisis were to exist.³⁰²

In addition, numerous independent reviews of EPA’s science-based actions by the courts, as well as the consistency with which the Agency has solicited and relied on the advice and approval of its external Science Advisory Board committees have added to the credibility of EPA’s decisions. The Proposal provides no information supporting the notion that the overarching processes of EPA assessment of relevant scientific studies and subsequent peer review of such assessments, as well risk and policy assessments that EPA has developed and improved over time, are in any way insufficient to address the concerns that are allegedly the main focus of the proposal.

EPA’s failure to identify a problem or inadequacy that new regulations are needed to address is not only arbitrary—it is also contrary to the directive of E.O. 12866 which states that:

[f]ederal agencies should promulgate only such regulations as are required by law, are necessary to interpret the law, or are made necessary by compelling public need, such as material failures of private markets to protect or improve the health and safety of the public, the environment, or the well-being of the American people. In deciding whether and how to regulate, agencies should assess all costs and benefits of available regulatory alternatives, including the alternative of not regulating.³⁰³

E.O. 12866 further directs each agency to “identify the problem that it intends to address (including, where applicable, the failures of private markets or public institutions that warrant new agency action) as well as assess the significance of that problem.”³⁰⁴ Before proceeding any further with this proposal, EPA should clearly identify the problem it is trying to solve, provide evidence that there is, in fact, a problem, and allow for public comment on whether a problem exists that could be addressed through EPA regulation.

This is not to say that EPA’s use of science cannot be improved or strengthened—of course continued improvement is always desirable. But to improve upon current practices it is necessary to identify what is deficient, why, how it can be corrected and the potential effects of such deficiency and any proposed changes to practice. EPA does none of these.

³⁰² Marcus R. Munafò & George Davey Smith, *Repeating Experiments Is Not Enough*, 553 *Nature* 399, 399–400 (2018), <https://www.nature.com/articles/d41586-018-01023-3#ref-CR3> (noting that “[i]f a study is skewed and replications recapitulate that approach, findings will be consistently incorrect or biased” and suggesting that instead, “an essential protection against flawed ideas is triangulation,” or “the strategic use of multiple approaches to address one question”).

³⁰³ Exec. Order No. 12,866, 58 Fed. Reg. 51,735 (Oct. 4, 1993).

³⁰⁴ *Id.*

2. EPA arbitrarily fails to offer a reasoned explanation for its departure from existing policies that broadly require the agency to consider all available scientific information when undertaking rulemakings.

In addition to the statutes discussed in Section I.B.3 that require EPA to use the best available science when making regulatory decisions, a number of EPA's own policies embed this requirement as well. By arbitrarily limiting the science EPA considers when making regulatory decisions, the Proposal contravenes these policies, injuring the scientific integrity of EPA's actions. As discussed in more detail in Section II.E because EPA is changing course from established policy, EPA must fully acknowledge and justify its decision, which it has failed to do in the Proposal.

EPA's own existing Scientific Integrity Policy states:

To support a culture of scientific integrity within the Agency, this policy. . . [r]ecognizes . . . policy makers within the Agency weigh the best available science, along with additional factors such as practicality, economics, and societal impact, when making policy decisions.³⁰⁵

The Proposal conflicts with this policy by restricting what may be the best available science on a given topic from EPA's consideration solely because the underlying data cannot be made public. As described above, public availability of data is neither necessary nor sufficient to ensure that studies constitute "best available science." The Proposal does not acknowledge this departure from the agency's Scientific Integrity Policy, much less explain why such a departure is reasonable.

Likewise, the Proposal is in tension with EPA's Information Quality Guidelines, developed in response to OMB guidelines issued under Section 515(a) of the Treasury and General Government Appropriations Act for Fiscal Year 2001, which require EPA to ensure the objectivity of influential scientific information it disseminates by using "the best available science and supporting studies conducted in accordance with sound and objective scientific practices."³⁰⁶ EPA considers information to be disseminated when EPA prepares and distributes information to support an Agency decision or regulation or when EPA distributes information in a way that suggests EPA agrees with it, that it supports EPA's viewpoint, or if in the distribution EPA proposes to use it to support or formulate a regulation or agency decision.³⁰⁷ Thus, the Proposal conflicts with the Guidelines by restricting scientific studies that EPA may use to support regulations, which may cause it to disseminate other information to support its regulations that is not based on the best available science.

³⁰⁵ EPA, Scientific Integrity Policy 3-4.

³⁰⁷ *Id.* at 15-16.

EPA's Peer Review Handbook similarly acknowledges that "EPA strives to ensure that the scientific and technical bases of its decisions meet two important criteria: (1) they are based upon the best current knowledge from science, engineering, and other domains of technical expertise; and (2) they are credible."³⁰⁸ EPA's Science Policy Council Handbook on Risk Characterization also requires reasonableness in the agency's risk assessments, which is achieved when "the characterization is based on the best available scientific information."³⁰⁹ These policies clearly impact EPA's regulatory actions, and thus will be impacted by the Proposal. Yet EPA completely fails to analyze the impact the Proposal will have on its ability to comply with these policies and fails to explain why it is changing course or justify its decision to do so. Indeed, the Proposal fails to even acknowledge that the agency *is* changing positions.

3. EPA's Proposal arbitrarily fails to consider and deviates from best practices in scientific review, which support using a broad array of information, informed by a "weight of the evidence" approach, rather than arbitrarily excluding certain studies up front.

There is broad agreement in the scientific literature, reflected in EPA's own guidance, that a "weight of the evidence" approach is an optimal way to analyze and synthesize an array of scientific information in a decision-making context.³¹⁰ This approach, which is described in more detail below, calls for scientific assessments to be based on a broad array of studies—reflecting multiple lines of inquiry, where appropriate—each of which is carefully weighted based on various indicia of credibility. This careful and rigorous process is incompatible with the requirements of the Proposal, which would bar EPA from considering even highly credible, persuasive studies based solely on whether the underlying data is available. Yet the Proposal never acknowledges the conflict between its requirements and EPA's proven practices for scientific assessments, and never provides any good reasons for this change of course.

One prominent example of this "weight of the evidence" approach is contained in EPA's *Preamble to the Integrated Science Assessments*.³¹¹ The *Integrated Science Assessments* are pollutant-specific reports that EPA produces as the scientific basis for establishing and updating

See also EPA Science Policy Council, *A Summary of General Assessment Factors for Evaluating the Quality of Scientific and Technical Information* at 2 (June 2003) (describing EPA's guidance for carcinogen risk assessment and ecological risk assessment as additional examples of the agency's "weight-of-evidence" approach).

³¹¹ EPA, Preamble to the Integrated Science Assessments (ISA) (EPA/600/R-15/067) (2015).

EPA's National Ambient Air Quality Standards (NAAQS), which establish health-based standards for critical air pollutants. The Integrated Science Assessments are intended to implement the Clean Air Act's directive to "accurately reflect the latest scientific knowledge useful in indicating the kind and extent of identifiable effects on public health and welfare which may be expected from the presence of [a] pollutant in the ambient air."³¹² These are some of the most consequential scientific evaluations that EPA performs, in terms of the health, environmental, and economic impacts of the resulting standards, and they must withstand the highest level of technical and legal scrutiny.³¹³ Thus, EPA uses the very best and most defensible scientific methods to produce them, which are described in the *Preamble to the Integrated Science Assessments*.

The *Preamble to the Integrated Science Assessments* is an "overview document outlining the basic steps and criteria used in developing the Integrated Science Assessments," which EPA references as a companion document to each Integrated Science Assessment.³¹⁴ As EPA explains, the "Preamble describes the process of searching the literature, selecting studies for consideration, evaluating study quality, synthesizing and integrating the evidence, and characterizing the evidence for public health and welfare impacts of criteria air pollutants."³¹⁵ It also "describes the five-level causal framework for evaluating weight of evidence and drawing scientific conclusions and causal judgments."³¹⁶ Central to this scientific assessment process is the understanding that evidence from all types of studies, such as animal studies, human observational studies (cohort, time series), controlled chamber studies, and exposure assessments, among others, must be evaluated and incorporated into final determinations of effects. No single study alone drives the final determinations of causality; rather, the weight of evidence from several lines of inquiry is critical.³¹⁷ This framework to evaluate all available science builds upon decades of accrued knowledge and thinking drawing from expertise across several disciplines, including evidence-based decision making.³¹⁸

The Preamble states: "In its evaluation and integration of the scientific evidence on health or welfare effects of criteria pollutants, the U.S. EPA determines the weight of evidence in support of causation and characterizes the strength of any resulting causal classification."³¹⁹ The

³¹⁹ EPA, *Preamble to the Integrated Science Assessments* at 18.

Preamble explains in further detail:

In the ISA, the U.S. EPA assesses the body of relevant literature, building upon evidence available during previous NAAQS reviews, to draw conclusions on the causal relationships between relevant pollutant exposures and health or environmental effects. ISAs use a five-level hierarchy that classifies the weight of evidence for causation. This weight-of-evidence evaluation is based on the integration of findings from various lines of evidence from across health and environmental effect disciplines that are integrated into a qualitative statement about the overall weight of the evidence and causality.³²⁰

Similarly, section 26 of the Toxic Substances Control Act (TSCA) requires that decisions made under sections 4, 5, or 6 of the law must adhere to certain scientific standards including use of best available science and a weight of the scientific evidence approach.³²¹ In its final regulation, Procedures for Chemical Risk Evaluation Under the Amended Toxic Substances Control Act, EPA defines weight of scientific evidence as:

Weight of scientific evidence means a systematic review method, applied in a manner suited to the nature of the evidence or decision, that uses a pre-established protocol to comprehensively, objectively, transparently, and consistently, identify and evaluate each stream of evidence, including strengths, limitations, and relevance of each study and to integrate evidence as necessary and appropriate based upon strengths, limitations, and relevance.³²²

Systematic review in turn requires a full review of the body of scientific evidence available, where study quality is evaluated largely according to methodological design and not the degree to which underlying data are publicly available.³²³ EPA's Proposal contravenes TSCA's requirements to apply a weight of the scientific evidence approach, as defined by the agency, by instating a process that, among other things, conflicts with applying a systematic review approach in the evaluation of chemicals under TSCA.

The Proposal's approach of preemptively barring studies based on the unavailability of data cannot be reconciled with EPA's detailed policies for scientific assessment.

4. EPA irrationally conflates scientific "validity" and "transparency" with data availability, incorrectly assuming that eliminating the use of studies without publicly available data will improve scientific validity and transparency.

In the preamble to the proposed rule, EPA states that the intent of the regulation is "to strengthen the transparency of EPA regulatory science."³²⁴ Later in the preamble, EPA states: "[e]nhancing the transparency and validity of the scientific information relied upon by EPA

³²⁰ *Id.* at 22 (footnote omitted).

strengthens the integrity of EPA's regulatory actions and its obligation to ensure the Agency is not arbitrary in its conclusions." ³²⁵ EPA then leaps to the unexplained conclusion that barring the use of studies without publicly available data will enhance transparency and validity. EPA's assumption that data availability (or "transparency" in the form of data availability) ensures the use of valid science or its equivalent to using the best available science is manifestly incorrect, and hence provides an irrational basis for the proposed rule. In fact, neither data availability in particular, nor transparency in general, is equivalent to or a guarantee of "validity" in scientific studies.

- a) EPA arbitrarily fails to explain why EPA's existing mechanisms are inadequate to ensure the scientific integrity of its actions.

The Proposal ignores both the available approaches embraced by the scientific community and the record of past EPA assessments, which reveal alternative methods for ensuring the credibility of potentially useful scientific studies. These alternatives include, but are not limited to: confidential sharing of data with independent research teams that are in a position to validate results; comparisons of research findings with the results of other peer-reviewed research efforts, including through meta-analyses and literature reviews that are designed to shed light on consistent findings across studies; and strong peer-review processes led by scientific journals, by EPA, or by advisory bodies such as the SAB. ³²⁶ Indeed, the SAB workgroup that examined the Proposal expressly noted its failure to acknowledge any of these mechanisms:

The proposed rule fails to mention that there are various ways to assess the validity of prior epidemiologic studies without public access to data and analytic methods. For example, the Health Effects Institute (HEI) conducted a re-analysis of the influential Harvard Six Cities and American Cancer Society (ACS) epidemiologic studies and was able to replicate its findings and to assess the robustness of the findings via sensitivity analysis . . . in this particular case, an unusually rigorous form of peer review and independent reanalysis, coupled with many follow-up studies, has accomplished a measure of confidence in findings without public access to data and analytic methods. . . . The proposed rule fails to mention that EPA has mechanisms for vetting science through several expert panels For example, the EPA CASAC routinely reviews and evaluates epidemiologic and toxicological studies that are the basis for dose-response relationships used in risk and exposure assessments for air pollutants regulated under the National Ambient Air Quality Standards. Although such mechanisms do not typically engage in reanalysis of original data using the same methods as the original investigators, they do entail a rigorous review process that goes beyond the typical journal peer review procedures. ³²⁷

³²⁷ Memorandum from Chair of the SAB Work Group on EPA Planned Actions for SAB Consideration of the Underlying Science, Alison Cullen, to Members of the Chartered SAB and SAB Liaisons 4 (May 12, 2018), [https://yosemite.epa.gov/sab/sabproduct.nsf//E21FFAE956B548258525828C00808BB7/\\$File/WkGrp_memo_2080-AA14_final_05132018.pdf](https://yosemite.epa.gov/sab/sabproduct.nsf//E21FFAE956B548258525828C00808BB7/$File/WkGrp_memo_2080-AA14_final_05132018.pdf).

EPA scientific assessments typically begin with expert staff identifying and assessing peer reviewed studies and studies published in reputable scientific journals. This includes examining the strengths and weaknesses of individual studies, including factors such as design, the reputation and past work of the researchers, quality assurance, methods and analyses. This is followed by a broader look to examine the consistency and coherence of the study with respect to the findings of similar study types across multiple studies, as well as a more integrated assessment of the weight-of-evidence that considers multiple lines of scientific evidence. The assessments are in turn peer reviewed by EPA scientific advisory committees as well as the public.³²⁸ In certain exceptional cases, reanalysis by EPA or competent third party investigators can provide some additional credibility.

As the SAB workgroup that examined the Proposal noted, the record of EPA's treatment of the evidence in the case of two landmark fine particle epidemiology studies shows how scientific researchers and EPA used all of these approaches in examining the association between long-term exposures to fine particles and mortality. This effort began with Harvard's "Six Cities" study, reported in (Dockery et al., 1993).³²⁹ The researchers initially sought to reproduce their initial findings using a data base with a much larger number of subjects and cities and did indeed reproduce those findings (Pope et al., 1995) (see below).³³⁰ By 2009 enough new evidence had accumulated for EPA's integrated assessment for particulate matter to conclude that the number of large U.S. cohort studies, together with supporting evidence from other epidemiology and toxicological studies were sufficient to infer a causal relationship between long-term PM_{2.5} exposures and mortality and cardiovascular effects. This conclusion regarding causality (the strongest finding possible under the causality classification methodology³³¹) based on these studies was endorsed by the external Clean Air Scientific Advisory Committee (CASAC), which noted: "The five-level classification of strength of evidence for causal inference has been systematically applied; this approach has provided transparency and a clear statement of the level of confidence with regard to causation, and we recommend its continued use in future ISAs."³³² (Samet, 2009). Thus, the link between particulate matter exposure and mortality that was observed in the Six Cities study has been vetted through multiple mechanisms that have confirmed the validity of the findings *without* public access to the underlying data—including extensive reanalysis using larger datasets with longer duration of follow up and different statistical methods; reproduction and corroboration with independent studies using distinct populations and methodologies; and rigorous external review by independent scientists.

³³¹ The Preamble to the Integrated Science Assessments Sections describes the five-level hierarchy that classifies the weight of evidence for causation and methodology to make the determination, and "causal relationship" is the strongest finding.

³³² Letter from Dr. Jonathan M. Samet, Professor & Chair, Dep't of Preventive Med, Univ. of S. Cal., to Lisa P. Jackson, Adm'r, EPA (Nov. 2, 2009).

The Proposal says virtually nothing about the use of these existing mechanisms in EPA's current scientific assessment practices, or the level of confidence those mechanisms afford in EPA's regulatory science. Yet despite the proven track record of these mechanisms in assuring the validity of landmark studies such as the ACS and Six Cities studies, the Proposal would effectively reject their use and require EPA instead to exclude consideration of studies based on the sole criterion of public availability of underlying data. The Proposal's failure to explain this choice is arbitrary and capricious.

b) EPA arbitrarily equates data availability with valid science.

As discussed in detail in Section II.C.2, the absence of publicly available underlying data does not make the results of a study invalid or even suggest that the study is likely to be invalid. Nor has EPA presented evidence to suggest that studies with publicly available underlying data are more likely to represent strong science than studies without such data availability. As discussed in Section II.A.1, key reasons why researchers do not make data for some studies publicly available have nothing to do with scientific quality. Further, as discussed below and in the *Terminology* section, while reanalyzing study results using the same data is one way to help validate those results, it is neither the primary nor a sufficient way to do so. Hence, EPA's apparent conflation of data availability and best available science is not based on any evidence cited by EPA, is contrary to the evidence before EPA, and is simply arbitrary.

EPA's Preamble to the Integrated Science Assessments provides another discussion of how EPA evaluates study quality, and similarly, does not call out publicly available data:

[T]he individual study quality is evaluated by considering the design, methods, conduct, and documentation of each study, but not the study results. This uniform approach aims to consider the strengths, limitations, and possible roles of chance, confounding, and other biases that may affect the interpretation of individual studies and the strength of inference from the results of the study.³³³

A statement by the American Statistical Association on p-Values: Context, Process, and Purpose further emphasizes the multiple considerations related to quality, stating "Researchers should bring many contextual factors into play to derive scientific inferences, including the design of a study, the quality of the measurements, the external evidence for the phenomenon under study, and the validity of assumptions that underlie the data analysis."³³⁴ Similarly, the letter filed by the Presidents of the National Academies of Sciences, Engineering, and Medicine in this docket lists multiple reports conducted since 2007 that have examined EPA's scientific assessment processes and "that advise EPA on the scientific bases of regulatory decisions related to human health and the environment."³³⁵ According to the NASEM Presidents,

³³³ EPA, Preamble to the Integrated Science Assessments at 7, <https://cfpub.epa.gov/ncea/isa/recordisplay.cfm?deid=310244>.

³³⁴ Ronald L. Wasserstein & Nicole A. Lazar, *The ASA's Statement on p-Values: Context, Process and Purpose*, 70:2 *The American Statistician* 129, 131 (2016).

³³⁵ Letter to Acting Administrator Wheeler from Marcia McNutt, President of the National Academy of Sciences, C.D. Mote, Jr., President of the National Academy of Engineering, and Victor J. Dzau, President of the National Academy of Medicine 2 (July 16, 2018).

These reports encourage EPA to consider *all available science in the rule-making process* and provide guidance about how the agency could be more transparent in describing how evidence is gathered and evaluated. . . . Individual study quality should be evaluated on the basis of information that is available in standard journal articles, such as the study design elements, analytical techniques, and statistical methods. Researchers may be contacted to answer questions about the conduct of the study or be asked to provide additional data. *If the study data are not available, their absence may affect how the study is rated and used in the analysis, but the study should not necessarily be eliminated from the assessment.*³³⁶

OMB's *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by Federal Agencies* provide another important example of the distinction between information transparency and quality. Unlike the Proposal, which conflates transparency with quality, OMB's Guidelines encourage transparency as a means to obtain greater objectivity in data, but do not consider it an absolute requirement or the only means by which objectivity can be achieved. The Guidelines specifically provide that it is possible to verify the objectivity of information that cannot be made publicly available through other types of "robustness checks."³³⁷

As an example, the OMB Guidelines point to the Harvard Six Cities Study, where underlying data could not be made publicly available due to confidentiality concerns. In that case, the raw data was released only to researchers at the Health Effects Institute, who were bound to the same confidentiality requirements as the original researchers, and who were able to reanalyze and reproduce the study's results.³³⁸

c) Reanalyzing a study using publicly available data is not necessary to ensure valid science nor sufficient to ensure against invalid results.

To ensure the validity of scientific research, the scientific community relies most heavily upon peer review. In peer review, independent scientists with related expertise evaluate a study's quality using the types of factors discussed above. Studies used by EPA are often further evaluated by one of EPA's scientific advisory boards, such as the Clean Air Science Advisory Committee or the Science Advisory Board. These types of reviews do not depend on a study's data being made publicly available.

Making data available does allow independent researchers to try to reanalyze the same data and produce the same results. But reanalyzing a study is just one of many ways the scientific community ensures integrity, and it is not, in fact a widely used mechanism.³³⁹

³³⁶ *Id.* (emphasis added).

³³⁷ OMB, *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by Federal Agencies*; *Republication*, 67 Fed. Reg. 8,452, 8,460 (Feb. 22, 2002).

³³⁸ *Id.* at 8,456.

³³⁹ See John P.A. Ioannidis, *All science should inform policy and regulation*, 15 PLOS Med 1, 2 (May 3, 2018), <http://journals.plos.org/plosmedicine/article?id=10.1371/journal.pmed.1002576> (However, we should recognize that

Reproducing study results using a different population or method is generally considered a stronger validation than simply reanalyzing the results using the same data, as it shows that the results hold across a different population.³⁴⁰

5. EPA arbitrarily attempts to bolster one element of scientific transparency, while ignoring significant other transparency-related concerns.

Another arbitrary aspect of this proposal is that EPA appears to assume that the only way to enhance transparency in regulatory science is to ensure that the underlying data and modeling for individual studies are publicly available. In fact, significant concerns have been raised about other non-public aspects of the modern scientific research and publication process that may undermine the accuracy of scientific results. For example, there are rising concerns about the increasing numbers of predatory pay-to-publish journals, which provide little-to-no guarantee of scientific integrity of their published studies.³⁴¹ Other areas of concern include undisclosed financial bias.³⁴² But rather than evaluating concerns related to transparency across the spectrum of peer-reviewed science, EPA has arbitrarily seized upon one narrow area. This area also happens to be a target of regulated industries, as discussed further in Section VII.

6. EPA's justification of the proposal is incoherent and lacks almost any evidentiary support.

Although as discussed above, EPA has not identified a problem with EPA's use of science, EPA may be assuming (without any basis of support) that it needs to strengthen the validity of the science EPA uses in rulemaking. If so, EPA then appears to leap to the conclusions (again without any supporting evidence) that the only way to strengthen the validity of the science is by enhancing transparency, that no other possible steps to enhancing integrity are worth considering, and that enhancing transparency means making underlying data and models publicly available. This is all before EPA even gets to its obviously illogical conclusion

most of the raw data from past studies are not publicly available. In a random sample of the biomedical literature (2000–2014), none of 268 papers shared all of their raw data. Only one shared a full research protocol. The proportion of studies that have had all their raw data independently re-analyzed is probably less than one in a thousand. The number of studies that have been exactly replicated in new investigations is quite larger, but still a minority in most fields.”) (citing Iqbal S, Wallach J, Khoury MJ, Schully S, Ioannidis JPA., *Reproducible research practices and transparency across the biomedical literature*, 14 PLoS Biol. 1 (2016) (“Replication studies were rare ($n = 4$), and only 16 studies had their data included in a subsequent systematic review or meta-analysis.”)).

³⁴⁰ See, e.g., Comments of the International Society for Environmental Epidemiology on EPA's proposed rule on Strengthening Transparency in Regulatory Science Section 2 (EPA-HQ-OA2018-0259-0001), <https://www.regulations.gov/document?D=EPA-HQ-OA-2018-0259-1973> (“However, although data reanalysis has a role to play, ultimately, the key determination of the consistency of scientific evidence comes from replication, not reanalysis.”) (note that ISEE uses the term “replicate” to mean what we have defined in these comments as “reproduce”).

³⁴¹ See Gina Kolata, *Many Academics are Eager to Publish in Worthless Journals*, N.Y. Times (Oct. 30, 2017), <https://www.nytimes.com/2017/10/30/science/predatory-journals-academics.html>; *Publish and Don't Be Damned*, The Economist (June 23, 2018), <https://www.economist.com/science-and-technology/2018/06/23/some-science-journals-that-claim-to-peer-review-papers-do-not-do-so>.

³⁴² EPA, *Scientific Integrity Policy*, https://www.epa.gov/sites/production/files/2014-02/documents/scientific_integrity_policy_2012.pdf (seeking to protect agency reliance on science from political interference, personal motivations, conflicts of interest, bias, etc.).

that threatening exclusion of studies without publicly available data will “increase access to dose response data and models underlying pivotal regulatory science,”³⁴³ rather than simply bar EPA from considering a vast universe of useful and rigorously vetted studies. The evidence cited by EPA in support of the need to strengthen science through its proposed approach is so vague and perfunctory that it is largely impossible even to tell which conclusions various sources are supposed to support. EPA’s rationale for its data availability requirements consists of a few conclusory statements by EPA itself, a reference to “the replication crisis,” and citations to a handful of articles and guidance issued by EPA and OMB. None of these provide a rational basis of support for the Proposal.

EPA begins by stating that the “proposed rule is consistent with the principles underlying the Administrative Procedure Act and programmatic statutes that EPA administers to disclose to the public the bases for agency rules and to rationally execute and adequately explain agency actions.”³⁴⁴ While EPA is correct that it must disclose the basis and provide an adequate explanation for rulemaking (principles EPA manifestly fails to follow in this Proposal), it does not follow that these principles either require or support the quite specific notion that dose response data and models must be publicly available. Nor does EPA attempt to explain how these broadest of rulemaking principles support EPA’s specific proposed approach here.

Next, EPA states that the proposal is “consistent with” two recent executive orders and OMB guidelines on information quality and agency information management.³⁴⁵ One of the executive orders says nothing more than that environmental regulations should be “developed through transparent processes that employ the best available peer-reviewed science”³⁴⁶ The other is targeted at eliminating regulations including those that are “unnecessary” and “ineffective,” which, as our comments detail, the Proposal clearly would be.³⁴⁷ While the OMB guidelines on information quality generally support transparency in science, they call for a far more nuanced approach than EPA proposes here and do not call for agencies to exclude studies for which underlying data is not available, as discussed above in section I.C. In fact, as discussed above, EPA’s proposal unlawfully contravenes these guidelines.

EPA then states that the Proposal “builds upon” prior EPA actions in response to government-wide data access and sharing policies.³⁴⁸ In support of this claim, EPA cites generally to five prior EPA policy documents related to science. EPA fails to point to a single statement, provision or requirement in any of these documents, however, as support for the specific approach proposed here. This is not surprising, as EPA’s proposal to exclude studies with non-public data is actually a significant change from the prior policies, which supported balancing the interest in access to data with interests in privacy and confidentiality, as discussed in more detail in Section II.E. In fact, one of the documents cited by EPA, the *Plan to Increase Access to Results of EPA-Funded Scientific Research*, directly contradicts an apparent premise of

³⁴³ 83 Fed. Reg. at 18,770.

³⁴⁸ 83 Fed. Reg. at 18,770.

EPA's Proposal, stating: "Whether research data are fully available to the public or available to researchers through other means does not affect the validity of the scientific conclusions from peer-reviewed research publications."³⁴⁹ EPA ignores this contradiction altogether and provides no explanation whatsoever as to how the Proposal "applies concepts and lessons learned from [EPA's] ongoing implementation" of this plan, as EPA asserts.³⁵⁰

EPA also claims that the Proposal builds on the "experience of other federal agencies in this space."³⁵¹ In this case, EPA simply lists other federal agencies without referring to any policies, documents or actions by those agencies, except for one particular Census Bureau database that allows federal Census data to be shared securely. Obviously a bald uncited statement that other federal agencies have "experience in this space" is far too vague to allow meaningful comment by the public on EPA's rationale for its action, much less provide any support or rationale for the proposed policy. Further, the Census Bureau database cited is an example of how an agency can provide secure access to its own data, but it does nothing to explain or justify EPA's Proposal to exclude third party studies with nonpublic data from consideration in rulemaking. The U.S. Census Bureau operates the Federal Statistical Research Data Centers, which are secure facilities providing authorized access to restricted-use microdata for statistical purposes only. To gain access, researchers must obtain Census Bureau Special Sworn Status—passing a moderate risk background check and swearing to protect respondent confidentiality for life. This approach meets the U.S. Census Bureau's needs by allowing access to confidential information only to researchers whose proposals meet certain criteria, who go through a vetting process, and who agree to protect the information. Yet again, this is a structure designed to protect data collected by the government, not third parties, and there are substantial costs to this approach, which are borne by the Census Bureau. It is clearly not directly transferable to the context of the Proposal.³⁵² It is also unclear whether such a structure, even if it were practical (which it is not), would be sufficient to satisfy EPA's requirement to make data and models "publicly available."

Next, EPA vaguely refers to recommendations from third party advocates supporting "open science."³⁵³ EPA does not specify, let alone discuss, those recommendations. EPA certainly does not explain how EPA's current use of science is inconsistent with any such recommendations or inadequate in light of them, or whether any of these third party organizations believe that studies with nonpublic data are insufficiently valid for use in rulemaking. Indeed, one of the organizations cited by EPA—the Bipartisan Policy Center

³⁵² See Letter to Acting Administrator Wheeler from Marcia McNutt, President of the National Academy of Sciences, C.D. Mote, Jr., President of the National Academy of Engineering, and Victor J. Dzau, President of the National Academy of Medicine 3 (July 16, 2018). ("There are several differences in the confidential microdata collected from individuals and businesses by federal statistical agencies through surveys, versus data and results from the kinds of studies that are within the scope of the EPA proposed rule. These differences have important implications about making data publicly accessible. What works well in the federal statistical environment may not translate effectively to EPA, where stakeholders might be strongly motivated to discount study results that run counter to their regulatory preferences.").

³⁵³ 83 Fed. Reg. at 18770.

“BPC”)—filed a letter in this docket stating emphatically that “the proposed rule is not consistent with the BPC report in substance or intent. While the Science for Policy Project panel encouraged greater transparency and access to data, the report never suggested excluding studies from consideration in developing regulation if data from those studies were not publicly available.”³⁵⁴ Again, the policy documents cited in the footnote accompanying this statement generally undercut rather than support EPA’s Proposal, as discussed in detail in Appendix A.

EPA also suggests that “these policies” (which policies it is unclear) “are informed by the policies recently adopted by some major scientific journals.”³⁵⁵ EPA does not cite any specific policies adopted by the journals named in the footnote, but it does not appear that any of those journals has determined that studies with nonpublic data are invalid and should not be relied upon or used. To the contrary, the editors of these journals issued a strong public statement affirming that “in not every case can all data be fully shared,” that “the merits of studies relying on data that cannot be made publicly available can still be judged,” and that “[i]t does not strengthen policies based on scientific evidence to limit the scientific evidence that can inform them... Excluding relevant studies simply because they do not meet rigorous transparency standards will adversely affect decision-making processes.”³⁵⁶ Again, however, EPA’s failure to provide any specific information or citations in support of its conclusory statements make it impossible to meaningfully comment on the support for EPA’s Proposal.

Further, EPA mentions “the replication crisis,”³⁵⁷ but provides no information on the reality, seriousness, scope, implications, or causes of such a crisis. EPA fails to explain what it understands the “replication crisis” to be, much less how EPA’s proposal might ameliorate it. It is not even clear whether EPA understands the meaning of the term “replication,” as the agency fails to distinguish between “replicability” and “reproducibility,” and uses both terms apparently interchangeably.³⁵⁸ See earlier discussion of key terminology at page 9.

The proposed regulatory text provides, “[i]nformation is considered ‘publicly available in a manner sufficient for independent validation’ when it include the information necessary for the public to understand, assess, and *replicate* findings” and then lists “data” as the first type of information that may be included.³⁵⁹ Yet “replicating findings” is essentially limited to laboratory animal and randomized controlled trials and does not capture the vast majority of human epidemiological studies. More importantly, replicating studies does not require access to underlying study data, but rather details regarding the methodological design. Further “reproducing” studies is generally viewed as a more informative and resource efficient approach to validation of research.

³⁵⁴ Letter from Jason Grumet, President of BPC to Administrator Scott Pruitt (May 22, 2018).

³⁵⁷ *Id.*

³⁵⁸ Compare, e.g., 83 Fed. Reg. at 18774 (proposed rule requires information to be available “for the public to understand, assess, and replicate findings”), and 83 Fed. Reg. at 18770 (alluding to “replication crisis” as a basis for the need for the proposed rule), with 83 Fed. Reg. at 18772 (discussing an analysis purporting net benefits from the proposal due to “greater reproducibility”), and 83 Fed. Reg. at 18769 (“EPA must. . . ensure that its decision-making is marked by independence, objectivity, transparency, clarity, and reproducibility.”).

³⁵⁹ 83 Fed. Reg. at 18773-74 (emphasis added).

Finally, to the extent that specific circumstances justify actually replicating a study, EPA fails to explain why it is necessary to make a study's underlying data broadly available to the public rather than employing a more secure approach that protects personal privacy. For example, to quell concerns about the validity of the American Cancer Society Cancer Prevention Study II (ACS CPSII) and the Harvard Six Cities Study—both seminal air pollution studies that are described earlier in these comments—an independent panel of Canadian and American scientists independently audited and reanalyzed them. Due to personal privacy concerns, the data was not made publicly available but was instead held in a restricted access data warehouse at the Health Effects Institute, an organization funded by both the automotive industry and EPA. The independent audit and reanalysis took three years and roughly one million dollars. It evaluated the consistency and accuracy of the data and then undertook a series of comprehensive analyses to test the robustness of the original findings and interpretations to alternative analytic approaches. The results of the independent analysis found resoundingly similar results for both studies.³⁶⁰

The results of this reanalysis suggest that routine assessment of quality indicators such as methodology, confounding and bias routinely evaluated in the peer review process are generally sufficient to confirm a study's validity. Further, while it plainly would be infeasible to undertake such an expensive and time-consuming reanalysis for the vast majority of studies, this example demonstrates that it is possible to undertake a reanalysis without making underlying data broadly available to the entire public. Yet EPA's proposed rule apparently would bar regulators from relying on these high quality and extensively vetted studies due to the fact that the underlying data was never made publicly available. EPA does not—and cannot—explain how a rule that would prohibit the agency from considering these seminal, high quality scientific studies comports with its goal of strengthening the agency's use of science in regulatory actions.

7. EPA has failed to explain why it has singled out dose response studies to be excluded if their underlying data and models are not publicly available, but has not similarly targeted any other types of studies commonly used by EPA.

EPA also has proposed to target the requirements for public availability specifically to the data and modeling underlying one specific subset of scientific research—dose response studies. EPA has provided no explanation or justification for targeting dose response studies in particular or for not including other types of studies or scientific information. EPA has not suggested that these studies are inherently less reliable than other studies, that they more

³⁶⁰ For the Harvard Six cities study, the reanalysis results were 1.28 hazard ratio for mortality per 18.6 microgram per meter cube of PM_{2.5}, in comparison to a hazard ratio of 1.26 found in the original study. For the ACS CPSII study, the reanalysis showed that for every 25.4 microgram per meter cube change in PM_{2.5} there was an associated hazard ratio for mortality of 1.18 (results of the independent reanalysis), as compared to the hazard Ratio of 1.17 reported by the original investigators. Daniel Krewski, et al., *Overview of the reanalysis of the Harvard six cities study and American Cancer Society study of particulate air pollution and mortality*, 66 J. Toxicology & Envtl. Health Part A 1507 (2003); Health Effects Inst., *Reanalysis of the Harvard Six Cities Study and the American Cancer Society Study of Particulate Air Pollution and Mortality* (2000).

commonly fail to publicly disclose data and modeling information, that replication is more necessary for these studies than others, or any other conceivable reason. Absent any explanation from the agency, it is impossible to comment on the factual predicates for EPA's proposed decision, or the reasonableness of EPA's justification, except to state that it appears completely arbitrary in the absence of any rationale. *See, e.g., Transactive Corp., v. United States*, 91 F.3d 232, 237 (D.C. Cir. 1996) ("A long line of precedent has established that an agency action is arbitrary when the agency offered insufficient reasons for treating similar situations differently.").

8. EPA arbitrarily failed to consider the implications of this proposal on interagency coordination.

Additionally, EPA arbitrarily failed to consider the far-reaching implications this Proposal could have on inter-agency coordination and consultation given that other agencies normally rely on research potentially excluded by the Proposal.³⁶¹ In the numerous environmental statutes that EPA cites, there are dozens of provisions that require EPA to coordinate or consult with other Federal entities—especially when implementing research programs and issuing information or guidelines.³⁶² The Proposal would almost certainly frustrate and impair this coordination and consultation, either by forcing EPA to ignore the science provided by other agencies or by severely restricting the science that EPA itself would be able to share with other agencies in these statutorily required processes. The Proposal arbitrarily ignores these potential impacts.

In addition to the many examples of statutorily required consultation that are identified in Appendix B, other federal agencies routinely incorporate and rely upon EPA science assessments in their own efforts to carry out their mandates to protect human health and safety. As with statutorily required consultations, the Proposal utterly fails to acknowledge or consider what impacts restricting EPA's own use of dose-response studies would have on the work of these other agencies. Indeed, there is no evidence that these other agencies were even permitted to comment on the Proposal as part of the usual process of interagency review.

Some selected examples of other federal agency programs that rely on EPA science include:

- The Food and Drug Administration (FDA) enforces tolerances established by EPA for pesticide chemical residues in human and animal foods under the Federal Insecticide,

³⁶¹ *See Motor Vehicle Mfrs. Ass'n v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 43 (1983) ("Normally, an agency rule would be arbitrary and capricious if the agency has . . . entirely failed to consider an important aspect of the problem.").

³⁶² *See* 42 U.S.C. §§ 7403, 7408(a), 7408(c), 7408(f), 7412 (Clean Air Act §§ 103, 108, 112); 33 U.S.C. §§ 1314, 1317(a)(7), 1345(d)(1) (Clean Water Act §§ 304, 307(a)(7), 404(d)(1)); 42 U.S.C. §§ 6907(a), 6911, 6912(a)(2)-(6), 6942(b), 6981(a) (Resource Conservation and Recovery Act §§ 1008(a), 2001, 2002(a)(2)-(6), 4002(b), 8001(a)); 7 U.S.C. §§ 136w-3, 136w(d), 136a-1(n)(2)-(3), 136(l)(2), 136t(b), 136i-2(c) (Federal Insecticide, Fungicide, and Rodenticide Act §§ 2, 4, 11, 22, 25, 28); 15 U.S.C. §§ 2608(d), 2604(f)(5), 2604(h)(2)(B)(ii) (Toxic Substances Control Act); 42 U.S.C. § 300g-1 (b)(1)(D), 300g-1(d), 300j-13(a)(5), 300j-3d, 300j-19(b)(2)(A) (Safe Water Drinking Act). *See also* Appendix B: Table of Consultation Requirements.

Fungicide, and Rodenticide Act, including through a comprehensive pesticide residue monitoring program that tests for approximately 700 pesticide residues in both imported and domestic commodities.³⁶³ To the extent the Proposal affects EPA's tolerances, the nature and effectiveness of FDA's own work to monitor for violations of those tolerances would be impacted.

- FDA also regulates contaminants in bottled water under the Federal Food, Drug and Cosmetics Act. Section 410 of the Act requires that FDA regulations for bottled water be issued in coordination with the effective date of National Primary Drinking Water Regulations issued under the Safe Drinking Water Act, and be no less protective of public health than those standards. If the Proposal impedes EPA's work to establish drinking water standards, this may affect FDA's own ability to justify protective bottled water standards.³⁶⁴
- In certain circumstances, FDA also coordinates with EPA to provide the public with information and advice on environmental contaminants in foods. For example, in 2017 FDA and EPA released a joint advisory on mercury hazards associated with the consumption of fish and shellfish, which was based in part on EPA's assessment of the "reference dose" or level of exposure that a person can experience over a lifetime without a risk of harm.³⁶⁵ The Proposal could radically alter the science EPA would be permitted to consider in future such initiatives, and frustrate the ability of FDA and other agencies to coordinate effectively with EPA to develop joint advice and information.
- The Department of Housing and Urban Development is required by statute to assist EPA in assessing the extent of radon contamination in the United States and developing measures to avoid and reduce radon contamination.³⁶⁶ HUD has also developed policies to require radon testing at properties receiving federal financing, which incorporate EPA radon standards.³⁶⁷ To the extent the Proposal affects future EPA assessments of radon risks, the scope, cost and effectiveness of HUD radon programs could be affected as well.

9. EPA's proposal irrationally excludes proceedings that tend to benefit industry interests, even though these proceedings are far less transparent than the rulemakings EPA has targeted.

EPA's claims that it values transparency are clearly a pretext for eliminating "inconvenient," life-saving science from rulemakings that increase public health protection. Among other things, by excluding adjudications, permit proceedings, and certain rulemakings, EPA has excluded proceedings where EPA and industry regularly rely on nondisclosed information and where agency action in general, and particularly expeditious action, tends to

favor industry. By limiting the proposal to “significant regulatory actions,” the proposed rule would treat exactly the same study differently depending on whether it supports regulation or non-regulation in a particular context. The proposed rule will tend to exclude evidence when it supports a health-protective regulation that is costly to industry, but the proposed rule will then allow the use of the exact same evidence when the ultimate agency decision avoids regulation or deregulates industry activities or otherwise has low compliance costs. Thus, the Proposal is clearly shaped to favor industry interests, not to further transparency.

Specifically, EPA has chosen to limit the application of this Proposal to “significant regulatory actions” under E.O. 12866, and thus EPA does not extend this Proposal to adjudications, permit proceedings, or many less economically significant rulemakings.³⁶⁸ In particular, EPA has effectively exempted the TSCA new chemicals program where industry seeks expeditious actions allowing market access and EPA regularly fails to disclose its own analyses and the studies and materials supporting those decisions, much less any underlying data. As explained below, in these proceedings industry seeks affirmative authorization from EPA to commercialize chemicals, so industry has a vested interest in expeditious government action.

EPA’s decision to exempt these proceedings is particularly egregious because these proceedings are extraordinarily more opaque than the rulemakings EPA has targeted with this Proposal. In the TSCA new chemicals program, EPA often provides no meaningful opportunity for public review or comment before EPA takes action, and EPA regularly violates its existing statutory and regulatory obligations by disclosing almost none of its analyses or the information supporting its decisions to authorize the manufacture of new chemicals. Notably, much of the information at issue has never been peer-reviewed or subjected to nearly the level of public scrutiny as have the studies that EPA is trying to exclude from health-protective rulemakings under the proposed rule. EPA cannot credibly claim to pursue transparency with this Proposal while running certain programs as “black boxes” where little, if any, information is disclosed. To be clear, the problem is that EPA often does not disclose its own analyses or many of the underlying studies at all, much less underlying data; it is outrageous for EPA to then turn around and suggest that, in other contexts, disclosure of its analyses and the supporting peer-reviewed studies provides insufficient transparency.

As drafted, EPA’s Proposal will not apply to EPA’s New Chemicals Review Program under TSCA. TSCA § 5 governs EPA’s review of “new chemical substance[s],” generally chemicals that have not previously been distributed in U.S. commerce.³⁶⁹ By and large, no person may manufacture (defined to include import) a “new chemical substance” in the United States without providing EPA notice at least 90 days beforehand.³⁷⁰ When a person submits a pre-manufacture notice (PMN), EPA must review the PMN and make one of three types of determinations under TSCA § 5(a)(3).³⁷¹ EPA then must take the actions required by the

³⁶⁸ 83 Fed. Reg. at 18,771.

³⁶⁹ See 15 U.S.C. §§ 2604, 2602(11).

³⁷⁰ *Id.* § 2604(a)(1).

³⁷¹ *Id.* § 2604(a)(1)(B). Depending on the circumstances, instead of submitting a PMN, a person may seek to obtain one of several exemptions from the PMN process, such as the Test Marketing Exemption. The proceedings governing applications for these exemptions involve even less public disclosure than EPA’s processing of PMNs. EPA’s proposal will also not apply to the proceedings governing these exemptions.

relevant determination, and the person must comply with any applicable requirement imposed.³⁷² The person may not begin manufacturing the chemical substance until EPA has completed its review and made a determination. These proceedings do not qualify as significant regulatory actions under E.O. 12866, because EPA does not consider them rulemakings and because the regulation of chemicals that have not yet been introduced to the market generally will not be economically significant within the meaning of the E.O.

Because industry generally cannot manufacture a new chemical substance until EPA has completed its review, industry has a strong interest in expeditious action on PMNs. Nor is this idle speculation; industry commenters have repeatedly called for EPA to move more expeditiously.³⁷³ Providing disclosure in these proceedings would likely, at a minimum, take additional time, and thus it seems likely that EPA has exempted these proceedings to serve industry's interest in hasty resolution.

Moreover, the New Chemicals Program is infinitely more opaque than the rulemakings EPA is currently targeting with its Proposal, often in direct violation of law. EPA does not make the public files for new chemicals electronically available, and when a person does obtain a copy of the public file from EPA,³⁷⁴ the files generally reveal almost none of EPA's analyses supporting its decisions or the information submitted to support those decisions, with massive amounts of data redacted or concealed as Confidential Business Information (CBI). It's not a question of failing to disclose all the underlying data; EPA often fails to disclose the supporting studies or information at all.

³⁷² *Id.*

³⁷³ See, e.g., Am. Coatings Ass'n Comment on New Chemicals Review Program 2 (Jan. 20, 2018), <https://www.regulations.gov/document?D=EPA-HQ-OPPT-2017-0585-0068> ("We urge the Agency to expedite the process as much as possible, so that manufacturing is able to commence."), Docket ID: EPA-HQ-OPPT-2017-0585-0068; Am. Chemistry Council Comment on New Chemicals Review Program 7 (Jan. 19, 2018), <https://www.regulations.gov/document?D=EPA-HQ-OPPT-2017-0585-0062> ("These delays underscore industry's continuing concerns that the section 5 program remains too slow . . ."), Docket ID: EPA-HQ-OPPT-2017-0585-0062; U.S. Chamber of Commerce Comment on New Chemicals Review Program 3 (Jan. 19, 2018), <https://www.regulations.gov/document?D=EPA-HQ-OPPT-2017-0585-0057> ("[T]he Chamber believes that EPA should continue to strive to meet the 90-day goal in a timelier and more effective fashion . . ."), Docket ID: EPA-HQ-OPPT-2017-0585-0057; Am. Petrol. Inst. Comment on New Chemicals Review Program 2 (Jan. 19, 2018), <https://www.regulations.gov/document?D=EPA-HQ-OPPT-2017-0585-0053> ("EPA should respond to a request for a Pre-Notice Consultation in a short timeframe—two to four days, rather than two to four weeks."), Docket ID: EPA-HQ-OPPT-2017-0585-0053; Int'l Fragrance Ass'n N. Am. Comment on New Chemicals Review Program 1 (Jan. 20, 2018), <https://www.regulations.gov/document?D=EPA-HQ-OPPT-2017-0585-0064> (identifying as a problem "review periods far exceeding 90 days – some exceeding a year"), Docket ID: EPA-HQ-OPPT-2017-0585-0064.

³⁷⁴ As EDF has previously explained, EPA is already committing systematic procedural violations by failing to make the public files for new chemicals electronically available to the general public. Env'tl. Def. Fund Comment on New Chemicals Review Program 23–26 (Jan. 20, 2018), <https://www.regulations.gov/document?D=EPA-HQ-OPPT-2017-0585-0071>, Docket ID: EPA-HQ-OPPT-2017-0585-0071. Under TSCA § 5(d), each Pre-manufacture Notice (PMN) "shall be made available, subject to section 14, for examination by interested persons." 15 U.S.C. § 2604(d)(1). EPA's implementing regulations provide that "[a]ll information submitted with a notice, including any health and safety study and other supporting documentation, will become part of the public file for that notice," 40 C.F.R. § 720.95, and those public files are supposed to be "available in the electronic docket at <http://www.regulations.gov>." *Id.* § 700.17(b)(1). But EPA generally does not make the public files for PMNs electronically available.

As EDF detailed in prior comments and in various blog posts, EPA regularly conceals vast swathes of information in this program, including providing many blank documents identified as consisting of health and safety studies.³⁷⁵ Notably, in this same context, industry commenters have urged EPA to take steps to accept data and information that will not be publicly disclosed or where EPA will only be provided with or make public industry-prepared summaries of the underlying data. *See, e.g.*, Comment submitted by Raleigh Davis, Assistant Direction, EHS, American Coatings Association (ACA), <https://www.regulations.gov/document?D=EPA-HQ-OPPT-2017-0585-0068> (“ACA strongly encourages EPA to develop as many of these [non-disclosure agreements] as possible.”); Comment submitted by Jared Rothstein, Senior Manager, Regulatory Affairs, Society of Chemical Manufacturers & Affiliates (SOCMA), p.1 <https://www.regulations.gov/document?D=EPA-HQ-OPPT-2017-0585-0049> (“EPA should accept the submission of robust summaries.”). Thus, industry has expressed a desire for EPA to continue to operate the new chemicals program with limited disclosure, and thus far, EPA has acceded to that wish.

If EPA extended the rule articulated in proposed § 30.5 to the new chemicals program, it would seem that EPA would either have to make much of the information in the public files available *or* EPA would be precluded from using this information. 83 Fed. Reg. at 18,769 n.3 (stating that EPA is proposing to preclude itself from using such data in future regulatory actions). Without this information, EPA generally would not be able to find that the new chemical “is not likely to present an unreasonable risk of injury to health or the environment,” the finding that allows unregulated manufacture of the chemical. *See* 15 U.S.C. § 2604(a)(3)(C). Notably, TSCA expressly provides a resolution when EPA has insufficient information, requiring that EPA regulate the chemical. *Id.* § 2604(a)(3)(B)(i), (e). When “the information available to [EPA] is insufficient to permit a reasoned evaluation of the health and environmental effects of the relevant chemical substance; ... [EPA] shall issue an order” regulating the chemical “to the extent necessary to protect against an unreasonable risk of injury to health or the environment.” *Id.* 2604(e). Thus, excluding the information would require EPA to regulate the new chemicals before they could enter the market.

Thus, EPA’s exclusion of the new chemicals program clearly favors industry, allowing industry to conceal information and evade regulation. In addition, EPA cannot rationally impose stringent new disclosure requirements that exclude extensive peer-reviewed, high-quality studies in some contexts while simultaneously authorizing the commercial distribution of new chemicals with almost no disclosure and no peer-review.

³⁷⁵ Env’tl. Def. Fund Comment on New Chemicals Review Program 24-25, <https://www.regulations.gov/document?D=EPA-HQ-OPPT-2017-0585-0071>. For more detail, see EDF’s series of blog posts on its finding in its our review of public files for nearly 70 new chemicals for which EPA made “not likely to present an unreasonable risk” determinations, *E.g.*, Stephanie Schwartz & Richard Dennison, *EPA’s Appalling Failure to Provide Public Access to Public Data on TSCA New Chemicals*, EDF Health Blog (Jan. 24, 2018), <http://blogs.edf.org/health/2018/01/24/epas-appalling-failure-to-provide-public-access-to-public-data-on-tsca-new-chemicals/>.

E. EPA's Proposal is Arbitrary Because it is Inconsistent With Long-Standing EPA and Federal Government Policies and Ongoing Efforts to Strengthen Science Quality in a Measured and Balanced Way through EPA's Existing Science Policies.

EPA claims throughout the Proposal that it is consistent with EPA and other federal government policies and approaches to transparency. However, a closer look reveals that the documents that EPA itself cites do not support the over-simplified and drastic approach taken by the Proposal. Federal government policies to promote data transparency have instead advocated a careful approach that balances the benefits of data disclosure with the costs and risks associated with it. Nowhere do they suggest that confidential information that cannot be made public is no longer valid for agency use. Instead, they aim to maximize the integrity and usability of data through data sharing when possible and practical—to enhance rather than hinder the ability of government agencies to achieve their missions. The Proposal is based on unsubstantiated claims that lack evidence, deviates from existing EPA and broader federal government policy without acknowledgement or explanation, and conflicts with leading research and policy proposals in this area—rendering the Proposal arbitrary and capricious.

Agencies are required to justify reversals in policy by addressing the existing record and reasons for why a change in policy is appropriate.³⁷⁶ They must acknowledge the change and “show that there are good reasons for the new policy.”³⁷⁷ The agency must supply a reasoned analysis beyond which would be required in the absence of the old policy.³⁷⁸ An agency may not “disregard contrary or inconvenient factual determinations that it made in the past.”³⁷⁹ EPA in the past took the position that:

[EPA] does not believe that it is appropriate to refuse to consider published studies in the absence of underlying data. The EPA frequently relies on peer reviewed studies in the public literature across agency programs without possessing underlying data and the Federal courts have made clear that the EPA is not required to obtain or analyze the raw data in order to rely on such studies. If the EPA and other governmental agencies could not rely on published studies without conducting independent analyses of the raw data underlying them, then much relevant scientific information would become unavailable for use in setting standards to protect public health and the environment.³⁸⁰

³⁷⁷ *Id.*

³⁷⁸ *Motor Vehicle Mfrs. Ass'n v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 42 (1983) (“[A]n agency changing its course by rescinding a rule is obligated to supply a reasoned analysis for the change beyond that which may be required when an agency does not act in the first instance”).

³⁷⁹ *FCC v. Fox Television Stations, Inc.* 556 U.S. 502, 537 (2009) (Kennedy, J. concurring).

³⁸⁰ House of Representatives, Committee on Agriculture, *Hearing to Consider the Impacts of the Environmental Protection Agency's Actions on the Rural Economy* Serial No. 114-41, 82 (Feb. 11, 2016) (response to questions from Gina McCarthy, Administrator, EPA); *See also* Email from Nancy Beck to Justin Schwab and Richard Yamada (Mar. 5, 2018, 1:42:01 AM) (part of FOIA release to request by Union of Concerned Scientists citing EPA pesticide program documents from December 2016) (email flags language from EPA pesticide program documents: “To be clear, EPA continues to believe that the raw data should be made available for public inspection to ensure that EPA’s assessments are as transparent as possible. While the EPA therefore strives to ensure that data underlying research it relies upon are accessible to the extent possible, it does not believe that it is appropriate to refuse to consider published studies in the absence of underlying data. The EPA frequently relies on peer reviewed studies in

Thus, EPA in the past set forth a view diametrically opposed to the one it is taking now—in the past relying heavily on studies it would now be excluded from using. EPA previously recognized that there are other ways to validate scientific studies, such as through peer review, that do not require release of underlying data and its prior view rightly saw the danger in adopting a policy that would require EPA to make public underlying data.

EPA's current policies set forth standards of scientific integrity that involve use of the best scientific information available (see II.D.2), which the Proposal also now re-writes. While previously EPA took the view that all valid science (with proper quality control and assessment measures in place) should be considered as it sets standards, EPA now takes the position that it is more important to use only those studies where the underlying data and models are made available to the public, even if this compromises EPA's ability to use the best available science. EPA's existing open data policies recognize with exceptions and exemptions that as much as the pursuit of making data public is a worthy goal, there are competing interests. EPA has always taken the view that not releasing certain kinds of data to uphold these competing interests does not in fact compromise its scientific integrity or commitment to transparency—and the balance it strikes is the one most suitable to help it achieve its greater mission. The Proposal is arbitrary because EPA does not even acknowledge that it is now changing its view drastically and does not address the valid reasons underlying its prior policies or explain why they now merit changing.

1. Instead of providing a reasoned explanation for its change in policy, EPA wrongfully claims the Proposal is consistent with existing EPA, federal government, and third-party practices and policies.

As discussed further below in Section VIII.D, the footnotes of EPA's Proposal in many cases provide only vague references to policies and reports that purportedly support the Proposal, leaving the public to guess as to what EPA is referring and embark on a treasure hunt for the relevant item. But even where EPA provides specific citations, examination quickly reveals that frequently they do not fully support the propositions they accompany, and, when viewed in full context, provide evidence against the Proposal. Because EPA makes a series of conclusory statements provided with no explanation or reasoning that would help the reader understand why EPA interpreted the cited record to support the Proposal, the Proposal appears to be completely unsupported by evidence and explanation—rendering it arbitrary and capricious. A full documentation of the misrepresentations made in the footnotes of the Proposal is available in Appendix A and demonstrates that EPA is not able to substantiate its claims that the Proposal has been informed by or is consistent with the policies of EPA, other agencies, or other organizations.

the public literature across agency programs without possessing underlying data and the federal courts (see *Coalition of Battery Recyclers Association v. EPA*, 604 F.3d 613 (D.C. Cir. 2010); *American Trucking Associations v. EPA*, 203 F.3d 355 (D.C. Cir. 2002)) have made clear that EPA is not required to obtain or analyze the raw data in order to rely on such studies. If EPA and other governmental agencies could not rely on published studies without conducting an independent analysis of the raw data underlying them, then much relevant scientific information would become unavailable for use in setting standards to protect public health and the environment.”).

EPA claims: “The proposed rule takes into consideration the policies or recommendations of third party organizations who advocated for open science.”³⁸¹ The sentence is accompanied by a footnote listing a number of organizations, for most of them not providing reference to any specific policies, recommendations, or statements.³⁸²

One of these vague references points to the Administrative Conference of the United States’ Science in the Administrative Process Project, without providing further detail. Assuming that EPA is referring to the Administrative Conference of the United States’ *Recommendation 2013-3: Science in the Administrative Process*, Wendy Wagner, sole author of ACUS’s final report *Science in Regulation: A Study of Agency Decisionmaking Approaches* and who served on the panel that produced the Bipartisan Policy Center’s recommendations also cited by the Proposal has stated: “They don’t adopt any of our recommendations, and they go in a direction that’s completely opposite, completely different. . . . They don’t adopt any of the recommendations of *any* of the sources they cite. I’m not sure why they cited them.”³⁸³ While ACUS recommends agencies increase transparency of how they rely on scientific information and strive to make data underlying scientific information publicly available, nowhere does it suggest that agencies should not consider or rely on studies where underlying data and models cannot be made publicly available, or that these circumstances make scientific information less valid. ACUS instead suggests that information be made publicly available “to reproduce or assess the agency’s technical or scientific conclusions” “[c]onsistent with the limitations in the Information Quality Act (IQA) guidelines issued by the Office of Management and Budget and its own IQA guidelines”³⁸⁴ Moreover, ACUS acknowledges valid limitations on public disclosure of data such as legal protections for privacy, trade secrets, and confidential business information.³⁸⁵ Thus, ACUS recommends data be made public only “[t]o the extent practicable and permitted by law and applicable policies.”³⁸⁶ Unlike the Proposal, the recommendation acknowledges that agencies may still use information where underlying data cannot be publicly disclosed, and suggest agencies “note that fact and explain why they used the results if they chose to do so.”³⁸⁷ It thus provides a much more nuanced policy recommendation than that outlined in the Proposal—which suggests EPA either find a way to make underlying data and models public, despite the numerous potential obstacles and concerns in doing so, or completely disregard the research study.

³⁸¹ 83 Fed. Reg. at 18,770.

³⁸² 83 Fed. Reg. at 18,770. n. 10 (“These include policies and recommendations from: The Administrative Conference of the United States’ Science in the Administrative Process Project; National Academies’ reports on *Improving Access to and Confidentiality of Research Data*, *Expanding Access to Research Data*, and *Access to Research Data in the 21st Century*; the Health Effects Institute; Center for Open Science; members of the Risk Assessment Specialty Section of the Society of Toxicology, the Dose Response Section of the Society for Risk Analysis, and the International Society for Regulatory Toxicology and Pharmacology; and the Bipartisan Policy Center’s Science for Policy Project”).

³⁸⁷ 78 Fed. Reg. 41,352, 41,358 (July 10, 2013).

EPA's claims that its Proposal is consistent with the policies of major science journals is similarly misleading.³⁸⁸ EPA does not explain why the policies of scientific journals regarding the disclosure of data underlying their published studies *should* inform how an agency with a mission to protect human health and the environment uses research for regulatory actions. Additionally, these journals' policies provide exceptions for when privacy or other concerns do not allow for public sharing of data, and they never represent that this on its own weakens the validity of the research.³⁸⁹ And, as discussed *supra* in Section I.B.2.a), the editors of these journals have specifically dismissed the Proposal.³⁹⁰

EPA wrongfully claims its policy is consistent with existing OMB and EPA policies, while failing to recognize that these policies—while advocating for more transparency—take a measured, nuanced approach to data disclosure.³⁹¹ EPA cannot finalize this policy without acknowledging and providing a reasoned explanation for its divergence from long-standing policy and without providing actual evidence that supports the Proposal, which it has not done. Prior policies recognize that government decision-making requires considering all scientific information, and legitimate limitations to data disclosure should not obstruct sound policy-making. EPA cannot rely on these documents to support the rule, leaving an inadequately thin record of evidence to support the Proposal, and must respond to policy rationales articulated in these documents as it now changes course.

³⁸⁸ 83 Fed. Reg. at 18,770 (EPA states that the policies and recommendations it considered were “informed by the policies recently adopted by some major scientific journals and cites to “related policies from the Proceedings of the National Academy of Sciences, PLOS ONE, Science, and Nature.”); 83 Fed. Reg. at 18,771 n. 20 (citing “policies or recommendations of publishers Taylor & Francis, Elsevier, PLOS, and Springer Nature” as potential mechanisms for compliance with Proposal).

(last accessed Aug. 15, 2018); Elsevier, *Research Data Policy*, <https://www.elsevier.com/about/our-business/policies/research-data> (policy merely encourages when possible, rather than requires, data sharing: “Research data should be made available free of charge to all researchers wherever possible and with minimal reuse restrictions.”) (last accessed Aug. 15, 2018); PLOS One, *Data Availability*, <http://journals.plos.org/plosone/s/data-availability> (allows exceptions to making data public “for ethical or legal reasons, e.g., public availability would compromise patient confidentiality or participant privacy” or present other threats) (last accessed Aug. 15, 2018); Springer Nature, *Research data policies FAQs*, <https://group.springernature.com/gp/authors/research-data-policy/faqs/12327154> (“reasonable restrictions on data availability are permitted to protect human privacy, biosafety or respect reasonable terms of use for data obtained under license from third parties.”) (last accessed Aug. 15, 2018). See, also, discussion in Appendix A.

³⁹⁰ Jeremy Berg et. al., *Joint statement on EPA proposed rule and public availability of data*, Science (Apr. 30, 2018), <http://science.sciencemag.org/content/early/2018/04/30/science.aau0116>.

³⁹¹ EPA states: “This proposed rule is also consistent with . . . the focus on transparency in OMB’s *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility and Integrity of Information Disseminated by Federal Agencies* (the Guidelines) and OMB Memorandum 13–13: *Open Data Policy—Managing Information as an Asset*.” 83 Fed. Reg. at 18,769–70. EPA says the Proposal “builds upon prior EPA actions in response to government wide data access and sharing policies,” that it applies “concepts and lessons learned” from implementation of to the 2016 *Plan to Increase Access to Results of EPA-Funded Scientific Research*, 83 Fed. Reg. at 18,770, also citing to EPA *Open Government Plan 4.0*, *Open Data Implementation Plan*, *EPA’s Scientific Integrity Policy*, and *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by the Environmental Protection Agency*, 83 Fed. Reg. at 18,770 n. 8.

The *Plan to Increase Access to Results of EPA-Funded Scientific Research*, discussed supra at I.B.2.b), represents the view EPA has consistently espoused in the past, that when it can make data available without compromising other critical values, it does, but will not exclude information from its consideration when it cannot.³⁹²

EPA cites to its implementation of OMB's guidelines, *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by the Environmental Protection Agency*. These Guidelines note "[t]he mission of the EPA is to protect human health and safeguard the natural environment upon which life depends" and "[t]he collection, use, and dissemination of information of known and appropriate quality are integral to ensuring that EPA achieves its mission."³⁹³ They thus highlight that the controls on data quality exist to allow EPA to meet its mission—unlike the Proposal, which changes EPA's existing view by placing transparency of data, apparently for its own sake even when unrelated to data quality, ahead of EPA's ability to achieve its mission. As explained above in Section I.C, the Proposal violates the Information Quality Act and these Guidelines.³⁹⁴

EPA disregards the careful approach to data disclosure outlined in OMB Memorandum M-13-13, *Open Data Policy-Managing Information as an Asset*, which requires agencies to collect or create information in a way that supports downstream information processing and dissemination activities, and does not establish a policy of requiring agency data to be made public in order for the agency to be able to rely on it.³⁹⁵ It recognizes that sharing agency data with the public can result in numerous benefits, but requires careful thought about privacy and confidentiality concerns. The memorandum establishes "a framework to help institutionalize the principles of effective information management at each stage of the information's life cycle to promote interoperability and openness," noting "[w]hether or not particular information can be made public, agencies can apply this framework to all information resources to promote efficiency and produce value."³⁹⁶ It places consideration of privacy concerns at the forefront, saying "[a]gencies should exercise judgment before publicly distributing data residing in an existing system by weighing the value of openness against the cost of making those data public."³⁹⁷ EPA has provided no indication that it has carefully weighed these costs and benefits.

Before agencies make data publicly available, OMB Memorandum M-13-13 requires that agencies "review the information collected or created for valid restrictions" such as legal, "privacy, confidentiality pledge, security, trade secret, contractual, or other valid restrictions to release."³⁹⁸ OMB recognizes these restrictions "may affect the amount, type, form, and detail of

³⁹⁸ *Id.* at 9.

data released by agencies.”³⁹⁹ It also requires agencies to consider the “‘mosaic effect’ of data aggregation,” discussed at Section II.A.2.b)ii, which EPA does not acknowledge at all in the Proposal.⁴⁰⁰

EPA’s *Open Government Plan 4.0* acknowledges that not all data is releasable to the public, even as it aims to “increase publicly accessible EPA data to support citizens’ participation in government and promote transparency and accountability of Agency operations.”⁴⁰¹ EPA states: “By providing *releasable* information in open and machine-readable formats, EPA enables the public and other organizations to better leverage the rich wealth of information available.”⁴⁰² EPA’s own *Open Data Policy* notes that it is important to develop “policies and processes to ensure that only appropriate data are released to the public and made available online.”⁴⁰³ To do so, EPA uses different “access levels” for different data sets, (public, restricted public and non-public) and notes that it may not be able to publicize data due to “law, regulation or policy, which address privacy, confidentiality, security or other valid restrictions.”⁴⁰⁴ EPA has not made clear that restricted access would satisfy the requirement of making information “publicly available.” The Proposal seems to completely do-away with this multi-level, nuanced approach, imposing a blanket “publicly available” requirement for all studies EPA intends to rely on, despite obstacles to their release.

The Proposal turns away from EPA’s *Scientific Integrity Policy*, which stresses “a firm commitment to evidence,”⁴⁰⁵ endorses use of “the best available science”⁴⁰⁶ and “[r]equire[s] reviews. . . regarding the content of a scientific product to be based only on scientific quality considerations.”⁴⁰⁷ The Proposal, on the other hand, inhibits use of sound scientific information and evidence by arbitrarily excluding science for reasons unrelated to its quality. While the policy “[r]ecognizes the value of independent validation of scientific methods”⁴⁰⁸ and facilitating “the free flow of scientific information” by making information available “including access to data and non-proprietary models underlying Agency policy decisions,”⁴⁰⁹ this is proposed as a flexible standard and an ideal to aspire to, not an absolute rule that takes priority over other competing interests—such as use of the best scientific information. As discussed more in Section VII.C this Administration has blatantly violated key aspects of the policy by silencing scientists and the dissemination of scientific information, which this Proposal seems aimed at continuing, directly undoing “EPA’s longstanding commitment to the timely and unfiltered dissemination of its scientific information – uncompromised by political or other interference” and goal to communicate scientific findings openly and actively to the public.⁴¹⁰ By now placing

“transparency” ahead of use of the best available science, aside from violating statutory requirements, EPA is changing its own policies and priorities and must justify this new position.

In footnote 2, EPA dubiously claims the Proposal is consistent with the *Memorandum for the Heads of Executive Department and Agencies on Scientific Integrity* (Mar. 9, 2009).⁴¹¹ Notably, the Memorandum specifies, “Except for information that is *properly restricted from disclosure* under procedures established in accordance with statute, regulation, Executive Order, or Presidential Memorandum, each agency should make available to the public the scientific or technological findings or conclusions considered or relied on in policy decisions.”⁴¹² Not only does the Memorandum provide no support for the notion that agencies should be barred from relying on studies where the underlying data is properly restricted from disclosure it additionally discusses disclosure only of findings and conclusions, not underlying data.

Thus, despite EPA’s claims to the contrary, the Proposal marks a shift in policy that EPA has up to this point followed EPA arbitrarily fails to acknowledge this shift, to identify good reasons for the change, or to explain why EPA believes the proposed rule would be an improvement over current mechanisms utilized by EPA to ensure the integrity of EPA’s actions.

2. EPA’s Proposal fails to consider important implementation problems that existing EPA and federal government policies place at the forefront.

An agency rule is arbitrary and capricious if it “entirely failed to consider an important aspect of the problem.”⁴¹³ EPA’s Proposal completely fails to consider the numerous barriers that currently exist to making underlying data public. As highlighted in OMB and EPA policies, there is an understanding that the worthy goal of ensuring greater transparency of scientific information is in tension with other compelling, competing interests such as privacy and confidentiality. When these two are in tension, existing policies have recognized that this will prevent certain data from being publicly released—and that agencies still need to be able to use scientific information in these circumstances. Transparency goals should not override the ability of the agency to rely on otherwise valid scientific information as it goes about achieving its core mission. While the Proposal purports to take into account privacy and confidentiality concerns, it appears to do so by either grossly oversimplifying EPA’s ability to address these concerns or by deeming all such information unusable—essentially completely failing to consider the problems of this approach.

OMB Circular A-130 recognizes that the values of openness, transparency, and allowing the free flow of information between the federal government and the public are important values, they must be contextualized. Thus, it cautions: “Promoting openness and interoperability, *subject*

⁴¹¹ 83 Fed. Reg. at 18,769 n. 2 (“If scientific and technological information is developed and used by the Federal Government, it should ordinarily be made available to the public. To the extent permitted by law, there should be transparency in the preparation, identification, and use of scientific and technological information in policymaking.”)

⁴¹² *Memorandum for the Heads of Executive Department and Agencies on Scientific Integrity* (Mar. 9, 2009), 74 Fed. Reg. 10671 (Mar. 11, 2009), <https://obamawhitehouse.archives.gov/the-press-office/memorandum-heads-executive-departments-and-agencies-3-9-09> (emphasis added).

⁴¹³ *Motor Vehicle Mfrs. Ass’n v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 43 (1983).

to applicable legal and policy requirements, increases operational efficiencies, reduces costs, improves services, supports mission needs, and increases public access to valuable Federal information.”⁴¹⁴ Similarly it states: “The open and efficient exchange of scientific and technical Federal information, *subject to applicable security and privacy controls* and the proprietary rights of others, fosters excellence in scientific research and effective use of Federal research and development resources.”⁴¹⁵ Circular A-130 makes clear that “[p]rotecting an individual’s privacy is of utmost importance. The Federal Government shall consider and protect an individual’s privacy throughout the information life cycle.”⁴¹⁶ It requires that agencies recognize that “Federal information is managed by making information accessible, discoverable, and usable by the public to the extent permitted by law and *subject to privacy, security (which includes confidentiality), or other valid restrictions pertaining to access, use, dissemination, and disclosure*. . . .”⁴¹⁷

Further, Circular A-130 requires agencies to “[l]imit the creation, collection, use, processing, storage, maintenance, dissemination, and disclosure of [personally identifiable information] to that which is legally authorized, relevant, and reasonably deemed necessary for the proper performance of agency functions” and “[t]o the extent reasonably practicable. . . .reduce all [personally identifiable information] to the minimum necessary for the proper performance of authorized agency functions.”⁴¹⁸

The appendix to the Circular realizes that privacy protections require ongoing progress and:

Emerging technologies and services may continue to shift the ways in which agencies acquire, develop, manage, and use information and technology. As technologies and services continue to change, so will the threat environment. Agency programs must have the capability to identify, respond to, and recover from current threats while protecting their information resources and the privacy of the individuals whose information they maintain.⁴¹⁹

OMB Memorandum M-14-06 specifically lays out policies intended to help agencies make the most of “administrative data that cannot be made publicly available due to statutory, regulatory, or policy protections,” for statistical purposes, including “activities typically characterized as research, evaluation, and analysis, as long as the focus of those activities is on reporting aggregate findings about a group.”⁴²⁰ It notes “[s]ome administrative data can be publicly released, whereas other administrative data cannot be released. . . [and] it is the case that both types of administrative data (public and nonpublic) can be useful for Federal statistical

purposes,” suggesting agencies should not abandon reliance on data not able to be publicly released.⁴²¹

OMB Memorandum M-11-02 “strongly encourages Federal agencies to engage in coordinated efforts to share high-value data” but notes that in certain cases sharing data will contravene other compelling concerns and that federal agencies need to think about applicable privacy laws, regulations, and policies to “fully protect[] individual privacy” and preserve public trust.⁴²² Unlike the Proposal, it takes a more nuanced approach recognizing that sharing data is not always appropriate and should only be done “responsibly and appropriately.”⁴²³

OMB recognizes that even when just sharing information among agencies, privacy concerns must be weighed against those benefits that agencies can achieve with sharing data: “Agencies should work together to determine what data sharing opportunities are desirable, feasible, and appropriate. In general, data sharing should only be pursued if the benefits outweigh the costs.”⁴²⁴

OMB Memorandum M-10-06 also encourages “a plan for timely publication of the underlying data. . . in an open format and as granular as possible, consistent with statutory responsibilities and subject to valid privacy, confidentiality, security, or other restrictions.”⁴²⁵ The memorandum aims to achieve “transparency, participation, and collaboration,”⁴²⁶ recognizing that not making data available does not deter those goals when there are valid concerns and the legitimacy of the data is not otherwise questioned.

EPA’s *Draft Strategic Data Action Plan Version 1.0* similarly aims to work towards a more open government, and to increase the public’s access to high quality data. However, the agency recognizes barriers to this goal, not applying the plan to “data resources containing Confidential Business Information (CBI) or sensitive data that are not available for public access.”⁴²⁷ In similarly recognizes that “[i]n order to protect the privacy and security of the public, businesses, and US Government staff and operations, some types of data may be deemed sensitive and will not be made public or published on Data.gov.”⁴²⁸

These all highlight instances where EPA and OMB have recognized that privacy and confidentiality present ongoing concerns that are not easily addressed and that conflict with other aims of federal government. Yet, they recognize that protecting information in these cases is a valid path, and not making data public does not compromise the validity of the findings or

conclusions upon which the data is based and should prevent agencies from using those findings, conclusions, and data to inform their work. The Proposal provides no explanation for why EPA is now changing its view to a conflicting one, making the Proposal arbitrary.

III. The Proposed Rule's Peer Review Provisions Raise Numerous Concerns.

Proposed section 30.7 provides that “EPA shall conduct independent peer review on all *pivotal regulatory science* used to justify *regulatory decisions* consistent with the requirements of the OMB Final Information Quality Bulletin for Peer Review (70 Fed. Reg. 2664) and the exemptions described therein.” This proposed provision generally appears to be designed to enshrine OMB’s existing peer review requirements for “influential scientific information.”⁴²⁹

Remarkably, the preamble to the proposed rulemaking lacks any explanation whatsoever for why EPA is proposing this new peer review requirement or what its impact might be. EPA has additionally not provided any information to suggest that EPA is not already following OMB’s Peer Review Bulletin. EPA’s lack of any supporting rationale or analysis frustrates the public’s ability to provide meaningful comment on this provision,⁴³⁰ and is itself a sign that this requirement is fundamentally arbitrary. In addition, the discussion below outlines several specific concerns with this proposed regulatory requirement.

A. EPA Has Failed to Consider the Costs of Making OMB Peer Review Requirements Judicially Enforceable.

The most obvious change wrought by EPA’s incorporation of OMB’s Peer Review Bulletin into EPA’s regulations is that it apparently would make the OMB Peer Review requirements judicially enforceable. At present, OMB Peer Review Bulletin requirements are not judicially enforceable.⁴³¹ Rather, the Bulletin “specifically disclaims that its contents create any enforceable rights, thereby preserving the agency’s discretion to interpret and apply” the Bulletin.⁴³² If EPA finalizes its proposed peer review rules, EPA may find itself subject to countless legal challenges to its regulations based on compliance with OMB Peer Review requirements. These additional legal challenges would come at a cost, including the financial cost of increased litigation as well as the cost to public health and the environment when unwarranted legal challenges lead to lengthy delays in implementation of needed regulatory protections. Given that EPA is already subject to OMB Peer Review requirements, it is unclear

⁴²⁹ OMB, *Final Information Quality Bulletin for Peer Review*, 70 Fed. Reg. 2664, 2677 (Jan. 14, 2005) [Hereinafter: OMB Peer Review Bulletin].

⁴³⁰ See *Connecticut Light & Power Co. v. Nuclear Regulatory Com.*, 673 F.2d 525, 530 (D.C. Cir. 1982) (“The purpose of the comment period is to allow interested members of the public to communicate information, concerns, and criticisms to the agency during the rule-making process. If the notice of proposed rule-making fails to provide an accurate picture of the reasoning that has led the agency to the proposed rule, interested parties will not be able to comment meaningfully upon the agency’s proposals.”); *Honeywell Int’l, Inc. v. EPA*, 372 F.3d 441, 445, (D.C. Cir. 2004) (“Under the Administrative Procedure Act, a notice of proposed rulemaking must “provide sufficient factual detail and rationale for the rule to permit interested parties to comment meaningfully.”).

⁴³¹ OMB Peer Review Bulletin § XII, 70 Fed. Reg. at 2674 (“This Bulletin is intended to improve the internal management of the executive branch, and is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity, against the United States, its agencies or other entities, its officers or employees, or any other person.”).

⁴³² *Family Farm Alliance v. Salazar*, 749 F.Supp. 2d 1083, 1095 (E.D. Ca. 2010).

whether the proposed regulation would provide any new benefits in terms of ensuring that EPA's regulations are based on valid and unbiased science. Yet the administrative record for this proposed rulemaking is devoid of any EPA analysis of the costs and benefits of making the existing peer review requirements judicially enforceable. EPA must carefully evaluate the anticipated costs and benefits from these proposed regulatory requirements and provide a reasoned explanation for why they are needed.

B. EPA Must Clarify that Studies that Have Already Been Adequately Peer-Reviewed by Third Parties Need Not be Re-Reviewed by EPA.

Because proposed section 30.7 expressly incorporates the OMB Peer Review Bulletin “and the exemptions described therein,” it appears that EPA intends to incorporate the OMB Peer Review Bulletin provision providing that “agencies need not have further peer review conducted on information that has already been subjected to adequate peer review.”⁴³³ However, there is some ambiguity due to language in proposed section 30.7 instructing that EPA must “ask peer reviewers to articulate the strengths and weaknesses of EPA’s justifications for the assumptions applied and the implications of those assumption for the results.” Obviously, peer review conducted prior to EPA’s reliance on a study would not have involved review of the strengths and weaknesses of EPA’s justifications. If EPA were required to re-peer review all influential scientific information, this rulemaking would burden EPA with needless and significant costs that likely would bring many EPA rulemakings to a standstill, preventing EPA from fulfilling its statutory mission of protecting public health and the environment. To prevent this from happening, EPA must clarify that the proposed rule will not supplant EPA’s existing authority under the OMB Peer Review Bulletin not to conduct further peer review where information has already been subject to adequate peer review—and that such prior peer review is not subject to the requirement in proposed section 30.7 that reviewers consider the strengths and weaknesses of EPA’s justifications.

C. EPA Must Clarify the Intent of the Exemption Provision with Respect to Peer Review Requirements and Confirm that the OMB Peer Review Bulletin’s Waiver Provision Would Remain in Effect for EPA.

EDF does not support the peer review provisions for the reasons detailed in this section, but if EPA moves ahead with these proposed provisions, EPA must revise the proposed regulatory language to clarify that the waiver authority provided by the OMB Peer Review Bulletin—which OMB itself has emphasized “ensure[s] needed flexibility”—would remain in effect for EPA even if EPA finalizes the proposed peer review regulations.⁴³⁴

Proposed section 30.9(b) provides that the Administrator may grant an exemption from the peer review requirements if he or she determines that “[it] is not feasible to conduct independent peer review on all pivotal regulatory science used to justify regulatory decisions for reasons outlined in OMB Final Information Quality for Peer Review (70 FR 2664), Section IX.” Oddly, however, only two of the seven enumerated exemptions in Section IX of the OMB Peer

⁴³³ OMB Peer Review Bulletin, 70 Fed. Reg. at 2675.

⁴³⁴ OMB Peer Review Bulletin, 70 Fed. Reg. at 2673.

Review Bulletin pertain to feasibility—Exemption 1 governing “national security, foreign affairs, or negotiations involving international trade or treaties” and Exemption 3 governing time-sensitive health or safety disseminations.⁴³⁵ If EPA decides to finalize peer review requirements, EPA must amend its proposed regulation to clarify that all of the exemptions set forth in section IX of the OMB Peer Review Bulletin remain in effect regardless of whether they pertain to feasibility. Furthermore, EPA must clarify what, if any, additional effect is intended by the exemption provision in proposed section 30.9.

Additionally, EPA must amend the proposed rule to confirm that the “Deferral and Waiver” provision set forth in Section VIII of the OMB Peer Review Bulletin remains in effect for EPA. That provision provides: “The agency head may waive or defer some or all of the peer review requirements of Sections II and III of this Bulletin where warranted by a compelling rationale. If the agency head defers the peer review requirements prior to dissemination, peer review shall be conducted as soon as practicable.”⁴³⁶ OMB explained that this provision “ensure[s] needed flexibility in unusual and compelling situations not otherwise covered by the exemptions in the Bulletin before information is disseminated.”⁴³⁷ If EPA were to finalize the “exemption” language in proposed section 30.9(b) without clarification, it is possible that it could be read to encompass the entirety of the Administrator’s ability to grant exemptions, supplanting Section VIII of the OMB Peer Review Bulletin.

D. EPA Must Clarify How the Proposed Rule Would Impact EPA’s Existing Peer Review Handbook.

EPA’s Peer Review Handbook incorporates the provisions of OMB’s Peer Review Bulletin.⁴³⁸ In the Handbook, EPA confirms that it “conducts peer review of its products in accordance with the guidance in the OMB Peer Review Bulletin.”⁴³⁹ However, the EPA Peer Review Handbook adds details and specific procedures that are not present in the OMB Peer Review Bulletin.

Surprisingly, EPA’s proposed peer review regulations do not even mention EPA’s Peer Review Handbook, let alone explain how the new proposed regulations would impact EPA’s compliance with the Handbook. For example, EPA’s Handbook specifies “exemption criteria” in Section 3.3.⁴⁴⁰ EPA must clarify whether anything in the proposed peer review regulation would supplant instructions in the Peer Review Handbook, and if so, provide a reasoned explanation for the change. Likewise, EPA must explain the role of the Peer Review Handbook going forward in administering peer review requirements.

IV. The Proposal Would Impose Arbitrary and Inappropriate Methods for Assessing Health Risks

A. EPA's Proposal Seeks to Undermine Key Scientific and Public Health Tenets Relating to Dose-Response and the Use of Defaults.

The proposed rule asserts that a broad interest of the current Administration is to “ensure that the data and models underlying scientific studies that are pivotal to . . . regulatory action are available to the public”⁴⁴¹ and to “change agency culture and practices regarding data access so that the scientific justification for regulatory actions is truly available for validation and analysis.”⁴⁴² However, the Proposal specifies a particular interest and initial focus on “dose response data and models” as evident throughout the preamble and proposed regulatory provisions.

Dose-response studies are a critical element of risk assessments for toxicants including air pollutants. Assessment of a toxicant's risks typically proceeds through a four-step process: 1) hazard identification, 2) dose-response assessment, 3) exposure assessment, and 4) risk characterization.⁴⁴³ Dose-response assessment describes the relationship between exposure to a toxicant and observed effect on human or ecological receptor. EPA provides the following description of dose-response on its website: “Dose-Response Assessment . . . characterizes the quantitative relationship between chemical exposure and each credible health hazard. These quantitative relationships are then used to derive toxicity values.”⁴⁴⁴ Dose-response plays a central role in the evaluation of chemical risks as it provides the characterization of the potency or effect size of the toxicant. In other words, dose-response assessment is used to determine the levels of exposure at which adverse effects will occur and thus informs what risk management actions should be taken to protect human and ecological health. Dose-response assessments are commonly used to derive chemical toxicity values. The lower a substance's toxicity value the greater its potency and the less exposure is necessary for an effect to occur.

EPA reveals the underlying motivation behind its interest in transparency of dose-response data and models on page eight of the Proposal, where it states:

In addition, this proposed regulation is designed to increase transparency of the assumptions underlying dose response models. As a case in point, there is growing empirical evidence of non-linearity in the concentration-response function for specific pollutants and health effects. The use of default models, without consideration of alternatives or model uncertainty, can obscure the scientific justification for EPA actions. To be even more transparent about these complex relationships, EPA should give appropriate consideration to high quality studies

⁴⁴¹ Proposed Rule, 83 Fed. Reg. at 18769-70.

⁴⁴² Proposed Rule, 83 Fed. Reg. at 18770.

⁴⁴³ EPA, *Conducting a Human Health Risk Assessment*, <https://www.epa.gov/risk/conducting-human-health-risk-assessment> (last accessed Aug. 16, 2018).

⁴⁴⁴ EPA, *Basic Information about the Integrated Risk Information System*, <https://www.epa.gov/iris/basic-information-about-integrated-risk-information-system> (last accessed Aug. 16, 2018).

that explore: A broad class of parametric concentration-response models with a robust set of potential confounding variables; nonparametric models that incorporate fewer assumptions; various threshold models across the exposure range; and spatial heterogeneity. EPA should also incorporate the concept of model uncertainty when needed as a default to optimize low dose risk estimation based on major competing models, including linear, threshold, and U-shaped, J-shaped, and bell-shaped models.⁴⁴⁵

This excerpt raises several troubling and erroneous concepts that are contrary to core scientific tenets and best practices in chemical hazard and risk assessment as discussed extensively in a seminal 2009 report by the National Academies (Academies): *Science and Decisions: Advancing Risk Assessment (Science and Decisions)*.⁴⁴⁶ The report was requested and sponsored by EPA's National Center for Environmental Assessment and was developed over a three-year period by a 15-member committee that included state environmental agencies, non-governmental organizations, industry, and academic institutions. The committee was specifically tasked with "developing scientific and technical recommendations for improving risk analysis approaches used by EPA, including providing practical improvements that EPA could make in the near term (2-5 years) and in the longer term (10-20 years)."⁴⁴⁷ The report has been cited over 400 times in the scientific literature.

The Proposal fails to discuss these best practices for risk assessment, much less provide any persuasive reason for departing from them. The Proposal provides no support for its assertion that there is "growing empirical evidence" of nonlinearity in dose-response relationships; fails to acknowledge or contend with the National Academies' finding that non-threshold dose-response relationships are common for toxicants, and should be assumed as a default; fails to discuss the well-known rationales put forward by the National Academies for using default models; and irrationally prioritizes consideration of studies that employ a wide range of dose-response models, without any consideration for whether those alternative dose-response models are appropriate for risk assessment. Alarming, the Proposal offers no analysis of how the proposed requirements to consider threshold-response relationships and avoid default models would further the protection of human health and the environment—and gives no indication that the Agency has considered whether its proposed approach affords appropriate protection for the public in evaluating the risks of dangerous pollutants and toxicants. The proposed requirement is irretrievably arbitrary and unjustified, and must be withdrawn.

1. The proposal arbitrarily dismisses linear (i.e., non-threshold) dose-response relationships.

EPA makes a blanket assertion that "there is growing empirical evidence of non-linearity in the concentration-response function for specific pollutants and health effects" without any evidentiary basis.⁴⁴⁸ In contrast, in *Science and Decisions*, the Academies discussed at length the

⁴⁴⁵ Proposed Rule, 83 Fed. Reg. at 18770.

⁴⁴⁶ National Academies, *Science and Decisions: Advancing Risk Assessment* (2009), <https://www.nap.edu/catalog/12209/science-and-decisions-advancing-risk-assessment>.

⁴⁴⁷ *Id.*

⁴⁴⁸ Proposed Rule, 83 Fed. Reg. at 18770.

evidence for the opposite. Namely, non-linear dose-response relationships—that is the existence of thresholds of chemical exposure below which effects are not expected to be observed—is the exception rather than the rule when considering background exposures, co-exposures, variability across the diverse population and other considerations. The *Science and Decisions* report notes:

. . . [A]n individual's risk from exposure to an environmental chemical is determined by the chemical itself, by concurrent background exposures to other environmental and endogenous chemicals that affect toxicity pathways and disease processes, and by the individual's biologic susceptibility due to genetic, lifestyle, health, and other factors. How the population responds to chemical insults depends on individual responses, which vary among individuals.⁴⁴⁹

In this regard, it is important to note that risk assessments are typically designed to estimate incremental risk in the population due to exposure to a single hazard. As discussed by the Academies, individual risk is determined by both the chemical exposure and an individual's unique circumstance of factors (e.g., co-exposures and susceptibilities). Cancer incidence in the population illustrates the significance of these additional factors in considering actual individual risk to a particular chemical exposure. Individual lifetime risk of developing cancer is 1 in 3, and 1 in 5 for dying from cancer,⁴⁵⁰ indicating a substantial population baseline risk resulting from a large number of exposures and other risk factors. Assuming that there is somehow a threshold for everyone cannot be supported by the evidence. Therefore, given that the mission of EPA is to protect public health, the linear approach is most appropriate unless there is strong evidence in favor of an alternative as recommended in *Science and Decisions*.

EPA currently approaches risk assessment of 1) carcinogens and 2) noncarcinogens and carcinogens “acting through an MOA [mode of action] considered nonlinear at low doses”⁴⁵¹ separately—applying a linear dose-response framework for the former and a non-linear dose-response framework for the latter. The Academies strongly argued against this arbitrary distinction and recommended a uniform *linear* approach to the assessment of all chemicals. Indeed, for carcinogens purported to have a non-linear MOA, the Academies indicated:

. . . omissions in this overall approach for low-dose nonlinear carcinogens could yield inaccurate and misleading assessments. . . . [T]he current EPA practice of determining “nonlinear” MOAs does not account for mechanistic factors that create linearity at low dose. The dose-response relationship can be linear at a low dose when an exposure contributes to an existing disease process. Effects of exposures that add to background processes and background endogenous and exogenous exposures can lack a threshold if a baseline level of dysfunction occurs without the toxicant and the toxicant adds to or augments the background process. Thus, even small doses may have a relevant biologic effect. That may be difficult

⁴⁴⁹ National Academies, *Science and Decisions: Advancing Risk Assessment* 135 (2009).

⁴⁵⁰ American Cancer Society, Lifetime Risk of Developing or Dying From Cancer, <https://www.cancer.org/cancer/cancer-basics/lifetime-probability-of-developing-or-dying-from-cancer.html> (last revised Jan. 4, 2018).

⁴⁵¹ National Academies, *Science and Decisions: Advancing Risk Assessment* 129 (2009).

to measure because of background noise in the system but may be addressed through dose-response modeling procedures. Human variability with respect to individual thresholds for a nongenotoxic cancer mechanism can result in linear dose-response in the population.⁴⁵²

Similarly, for noncarcinogens, the Academies indicated that “noncarcinogens can exhibit low-dose linearity, for example, when there is considerable interindividual variability in susceptibility and each individual has his or her own threshold, especially when an underlying disease (such as cardiopulmonary disease) can interact with the toxicant (such as particulate matter [PM] or ozone).”⁴⁵³

The Academies ultimately and definitively recommended that “cancer and noncancer responses be assumed to be linear as a default. . . [and that] [a]n alternative analytic option. . . is available for cases in which it can be shown that background is unlikely to be an important contributor to risk, according to the recommended evaluation of MOAs and background.”⁴⁵⁴

2. The proposal improperly dismisses defaults.

EPA’s Proposal also indicates an interest and intent to move away from “default models, without consideration of alternatives or model uncertainty” which purportedly “can obscure the scientific justification for EPA actions.”⁴⁵⁵ Here, EPA demotes and ignores the purpose of science-based defaults, in suggesting that they “obscure the scientific justification for EPA actions” while simultaneously encouraging routine application of model alternatives without meaningful justification or substantiation.

Again, EPA’s Proposal deviates significantly from the recommendations in *Science and Decisions* where the Academies wrote,

[D]efaults need to be maintained for the steps in risk assessment that require inferences or to fill common data gaps. Criteria are needed for judging whether, in specific cases, data are adequate to support a different inference from the default (or whether data are sufficient to justify departure from a default).⁴⁵⁶

The Academies further recommended that 1) “EPA should continue and expand use of the best, most current science to support or revise its default assumptions,” 2) “work toward the development of explicitly stated defaults to take place of implicit or missing defaults,” and 3) that “departure [from defaults] should occur only when the evidence of the plausibility of alternatives is clearly superior to the evidence of the value of the default.”⁴⁵⁷ These recommendations underscore and reaffirm the role of defaults, and make clear that deviations

⁴⁵⁷ *Id.*

from defaults are to be considered carefully, on a case-by-case basis, and only when adequately justified.

3. The Proposal arbitrarily promotes studies that include a variety of dose-response models.

EPA's Proposal promotes the use of studies that explore a variety of dose-response models. Use of dose-response models to estimate pollutant or chemical risk should generally address issues such as goodness-of-fit, confidence bounds around predicted risks, biological plausibility, and sensitivity of the prediction to untested assumptions.⁴⁵⁸

However, giving higher weight to studies that use a wide range of models just because they use a wide range models is wholly inappropriate, arbitrary, and without scientific or public health justification. In fact, it creates a perverse incentive to apply multiple models to data without regard to appropriateness of fit and underlying assumptions (among other key considerations), and importantly, without regard to public health and ecological protection. It is worth noting that nowhere in the Proposal has the agency articulated how this requirement would further its primary mission and purpose of protecting human health and the environment.

There are numerous dose-response analyses that could be applied to any data set. Any analysis of the data assumes an underlying statistical distribution of the data, models for mean response, variance structures, shapes, and other data fit considerations that are subject to choice in the formal analysis. Scientists have historically used a reduced set of science-based, empirically supported models for specific types of data that have obtained widespread acceptance. EPA's specification of various types of modeling approaches the agency should consider ignores this reality.

4. The proposed rule provides no justification for codifying scientific approaches into regulation.

The proposed rule's provisions addressing dose-response models are inappropriate for the numerous reasons discussed in this section. They also unnecessarily and inappropriately memorialize highly complex and technical scientific issues into regulation—a generally frowned approach given the inherently evolving nature of science. These issues are more appropriately dealt with in guidance, a more flexible vehicle better equipped for adapting to new scientific understanding and in this way supporting use of best available science.

V. EPA Fails to Adequately Consider Costs and Benefits of the Proposal.

It is arbitrary and capricious to “‘entirely fail[] to consider an important aspect of the problem’ when deciding whether regulation is appropriate.” *Michigan v. EPA*, 135 S. Ct. 2699, 2707 (2015) (quoting *State Farm*, 463 U.S. at 43). As in *Michigan*, failure to consider the costs and benefits of a regulation where there is no statutory bar to doing so is arbitrary and capricious.

⁴⁵⁸ Nat'l Research Council, *Health Risks from Dioxin and Related Compounds: Evaluation of the EPA Reassessment* (2006), <https://www.nap.edu/catalog/11688/health-risks-from-dioxin-and-related-compounds-evaluation-of-the>.

The proposed rule entirely fails to comply with the requirements of non-arbitrary-and-capricious rulemaking because it fails to disclose, much less analyze or consider, any of the costs of the rule; barely discusses and does not analyze or quantify the benefits; does not provide any *reasoned* explanation of why the benefits of the rule justify its costs; and does not consider potential alternatives. The Proposal’s discussion of costs and benefits is a scant two paragraphs⁴⁵⁹ (and was apparently not included at all in the version sent to the Office of Management and Budget).⁴⁶⁰ The proposed rule begins by conclusorily asserting that “EPA believes the benefits of this proposed rule justify the costs.”⁴⁶¹ It then briefly discusses the perceived benefits, incorrectly suggesting that the National Academy of Sciences shares EPA’s view by citing to a publication that discusses both *risks* and opportunities of expanding access to research data, and does not discuss *at all* the costs and benefits of *ignoring* relevant science in regulatory decisionmaking.⁴⁶² It then merely states that the “action should be implemented in a cost-effective manner,” citing vaguely to “recent activities of the scientific community and other federal agencies” without any concrete examples or analysis.⁴⁶³ The preamble’s discussion emphasizes that the Proposal does not compel EPA to make information available where it concludes that doing so is not possible, but omits that if compliance is not possible, EPA will not consider the study, which has its own costs. It then concludes by citing the working paper of the Mercatus Center⁴⁶⁴ that baldly asserts that improvements in reproducibility “can be thought of as increasing the net benefits of regulation because they would avoid situations in which costs or benefits are wrongly estimated to occur or in which regulatory costs are imposed without corresponding benefits.”⁴⁶⁵ Setting aside the lack of substantiation for this assertion, it entirely omits situations in which costs and benefits are wrongly estimated because the relevant science is not used—and the costs that would be imposed on society if EPA inadequately protects communities from harmful pollution or toxic exposures.

Indeed, the Proposal *nowhere* discusses its significant costs in either quantitative or qualitative terms, costs that have actually been examined by independent organizations, and that are susceptible to analysis. If the Proposal is truly “designed to provide a mechanism to increase access to” data “in a manner consistent with statutory requirements for protection of privacy and confidentiality of research participants,” 83 Fed. Reg. at 18,770, then it will have significant costs. And if, as it appears, the Proposal’s true “mechanism” is excluding science from regulatory decisionmaking, its costs will be even greater in the form of insufficiently protective regulations.

⁴⁵⁹ Proposed Rule, 83 Fed. Reg. at 18,772.

⁴⁶⁰ *Compare*, EO 12866 Proposal 2080-AA14 OIRA Conclusion Document (Docket ID. No. EPA-HQ-OA-2018-0259-0006) *with* EO 12866 Proposal 2080-AA14 OIRA Review Start Document (Docket ID. No. EPA-HQ-OA-2018-0259-0007).

⁴⁶¹ Proposed Rule, 83 Fed. Reg. at 18,772.

⁴⁶² *Id.*

⁴⁶³ *Id.*

⁴⁶⁴ For a proposal allegedly aimed at increasing transparency, it is notable that EPA does not disclose that Charles Koch—an outspoken opponent of public health protections who stands to gain financially from deregulation—is a board member of the Mercatus Center. Mercatus Center, *Charles Koch*, <https://www.mercatus.org/charles-koch> (last accessed: Aug. 1, 2018).

⁴⁶⁵ Proposed Rule, 83 Fed. Reg. at 18,772.

If it were not possible to quantify and monetize any of the costs, which is not the case here as discussed below, EPA would still be required under E.O. 12866 and the requirements of rational rulemaking to identify and discuss the qualitative costs of this Proposal. It is inherently irrational for an agency to take an action without any consideration of any costs, disadvantages or negative effects of that action. The qualitative costs of this Proposal include the costs to researchers of actions they must undertake to protect the confidentiality of patient and subject data, as well as to compile and make public their raw data, and the potential loss of subjects (and attendant damage to research efforts and results) due to confidentiality concerns. There are also various costs to the agency of administering the regulation, which include contacting researchers, gathering data, ensuring that patient confidentiality and confidential business information are not disclosed. Additional costs could also be incurred through conducting any additional peer reviews required by proposed section 30.7 and any additional analyses imposed by proposed section 30.6's requirement that "EPA shall clearly explain the scientific basis for each model assumption used and present analyses showing the sensitivity of the modeled results to alternative assumptions." Most importantly, there are potentially huge costs of regulating without using the relevant science merely because the underlying raw data is not publicly available. If studies supporting a stronger standard are excluded and EPA can therefore only justify a weaker requirement that leaves large numbers of people at risk of health effects from a pollutant, pesticide, or chemical, then this Proposal could impose enormous costs for each insufficiently protective regulation.⁴⁶⁶ Yet the Proposal fails even to mention these costs, let alone discuss their scope and significance.

In addition, many of these costs can be quantified and monetized, but EPA has neither attempted to do so nor explained why it could not. For example, EPA has extensive information available to it on what the agency would need to do to implement this Proposal and how much those activities would cost. In fact, EPA already gathered much of this data and provided it to the Congressional Budget Office for use in estimating the costs of a similar (though not identical) proposal from Congress, the HONEST Act. With respect to the Congressional proposal, CBO concluded, just with respect to the costs to EPA, that "based on information from the EPA and other federal agencies, as well as organizations and researchers in the scientific community that publish in peer-reviewed journals," EPA "could spend between a few million dollars per year to more than one hundred million dollars per year ... to ensure that data and other information underlying studies are publicly available in a format sufficient to allow others to substantially reproduce the results of studies."⁴⁶⁷ In the 2017 estimate, CBO concluded that "[i]f the EPA continued to rely on as many scientific studies as it has used in recent years ... then CBO

⁴⁶⁶ In footnote 3 of the Proposal, Proposed Rule, 83 Fed. Reg. at 18,769, EPA suggests that the studies underlying the NAAQS for particulate matter, at issue in the case cited—*Am. Trucking Ass'ns v. EPA*, 283 F.3d 355, 358 (D.C. Cir. 2002)—are an example of data the agency would be "preclude[d]" from using in the future. The benefits of these NAAQS included up to \$75,100 million in annual benefits from avoided cases of mortality in 2010 alone for a partial attainment scenario. National Research Council (US) Committee, *Estimating the Health-Risk-Reduction Benefits of Proposed Air Pollution Regulations*, 43

National Academies Press (2002), <https://www.ncbi.nlm.nih.gov/books/NBK221028/>.

⁴⁶⁷ Congressional Budget Cost Estimate for H.R. 1430, Honest and Open New EPA Science Treatment (HONEST) Act of 2017 (Mar. 29, 2017) ("2017 CBO Estimate"); see also Congressional Budget Office Cost Estimate, S. 544, Secret Science Reform Act of 2015 (June 5, 2015) (estimating that another similar congressional proposal would cost up to \$250 million per year).

estimates that the agency would need to spend at least \$100 million dollars per year to upgrade the format and availability of those studies' data," "on average, \$10,000 per scientific study."⁴⁶⁸ Such costs would cover the costs of "obtaining all the underlying data used in a study, reviewing the data to address any confidentiality concerns, formatting the data for public access, providing access to the computer codes and models used in the study's analysis, and providing descriptions and documentation on how to access the data."⁴⁶⁹ Notably, this does not include the cost to researchers to engage in this effort. As Deputy Assistant Administrator Nancy Beck noted, during the development of the Proposal, requiring "a huge amount of data to be submitted to the agency" would "be incredibly burdensome" and "not practical."⁴⁷⁰

Even the Mercatus working paper—apparently the only thing EPA relied upon in discussing the costs and benefits of the Proposal, 83 Fed. Reg. 18,772 n. 24, notes, with respect to the HONEST Act, that "[t]he cost of providing access to data has been one of the primary concerns about requiring access to data used by the federal government."⁴⁷¹ Far from concluding, as the Proposal suggests, an increase in net benefits from greater reproducibility, the Mercatus working paper simply explained a figure the authors were suggesting could be calculated (the point where net benefits would be positive); the authors do not themselves calculate the benefits, and admit that their "estimates of the benefits of public access to data supporting federal regulatory decisions fall short of proving that the benefits outweigh the associated costs."⁴⁷² And while the Mercatus working paper disagrees with CBO's cost estimates, it does not argue that that requiring access to data is cost-less; indeed, it discusses the "costly activities and services that need to be performed," including activities related to "data collection and data accessibility."⁴⁷³ According to that working paper, data collection requires "correspond[ing] with researchers and publishers to obtain the data, review[ing] the data for confidentiality concerns, format[ing] the data for public access, publicly post[ing] the computer code and models used in each study's analysis, and provid[ing] descriptions and documentation on how to obtain the data."⁴⁷⁴ Data accessibility requires "computer processing services to construct and maintain data bases to store study-related information."⁴⁷⁵ While the actual calculations put forward by the Mercatus working paper appear faulty (for example, it entirely omits the cost to researchers to compile and make their data public, does not include the costs of ensuring patient privacy is protected,⁴⁷⁶ and makes assumptions about the similarity of a chemical manufacturer collecting its own studies and EPA collecting and disseminating information of other researchers), the working paper at least acknowledges that there are costs, something EPA's Proposal completely ignores.

⁴⁶⁸ 2017 CBO Estimate at 3.

⁴⁷⁰ Email from Nancy Beck to Richard Yamada (Jan. 31, 2018 2:51 PM).

⁴⁷¹ Mercatus Working Paper 19.

⁴⁷² *Id.* at 27-29.

⁴⁷³ *Id.* at 20.

⁴⁷⁴ *Id.*

⁴⁷⁵ *Id.* at 20-21 (quoting CBO, "Cost Estimate, S. 544, Secret Science Reform Act of 2015," June 5, 2015).

⁴⁷⁶ For example, this may require special archiving and access arrangements to limit data sharing, such as those in NIH data sharing plans, which NIH requires only for studies that receive more than \$500,000 in federal funding in a year. NIH, NIH Data Sharing Policy and Implementation Guidance, https://grants.nih.gov/grants/policy/data_sharing/data_sharing_guidance.htm (last accessed Aug. 16, 2018).

Nor does the proposed rule disclose the cost—highlighted on the very first page of a National Academy of Sciences (NAS) report on data access—that “perceived risks to privacy and confidentiality reduce survey participation,” a cost that the NAS explains is “borne out by research.”⁴⁷⁷ NAS explains that this “threatens the research enterprise itself, because concerns about privacy and confidentiality are among the reasons often given by potential respondents for refusing to participate in surveys, and those concerns have been shown to affect behavior as well.”⁴⁷⁸ The NAS panel emphasized: “Any confidentiality breach that became known would be likely to heighten such concerns and, correspondingly, reduce survey response rates. Efforts to increase researchers’ access to data must, therefore, take into account the need to avoid increasing the actual and perceived risks of confidentiality breaches.”⁴⁷⁹ The Proposal does not so much as discuss this potential cost.

This confidentiality risk has a further cost: it affects the quality of the data collected. As the NAS explained:

The reason for confidentiality pledges and for stringent procedures to prevent disclosure is that they improve the quality of data collected from individuals, households, and firms. It is essential that respondents believe they can provide accurate, complete information without any fear that the information will be disclosed inappropriately. Indeed, if the information was disclosed, harm might come to an individual respondent.⁴⁸⁰

The Proposal’s only acknowledgment of this complex problem and cost is its statement that “EPA believes that concerns about access to confidential or private information can, in many cases, be addressed through the application of solutions commonly in use across some parts of the Federal government.”⁴⁸¹ Remarkably, EPA does not cite a single example of these common solutions, citing only vaguely to “examples from the U.S. Department of Health and Human Services, National Institute of Standards and Technology, U.S. Department of Education, and the U.S. Census Bureau” and some hyperlinks not in the Proposal added to the docket almost a month into the comment period.⁴⁸² Accordingly, not only does the Proposal include no analysis of these alleged solutions and their costs and benefits, it does not even explain what the solutions are that EPA believes address this concern.

And if EPA complies with the regulation *not* by spending the money to make data publicly available, and if the research community does not bear those costs itself, *see* 83 Fed. Reg. at 18,770-71 (“Nothing in the proposed rule compels the disclosure of any confidential or private information in a manner that violates applicable legal and ethical protections.”), then it appears that EPA would simply ignore studies that do not comply with the regulation. *See* 83 Fed. Reg. at 18,769 n. 3 (“EPA is proposing to exercise its discretionary authority to establish a

⁴⁷⁷ National Research Council, *Expanding Access to Research Data: Reconciling Risks and Opportunities*, vii (National Academies Press (2005)).

⁴⁷⁸ *Id.* at 51; *see also id.* at 52-54 (describing the research supporting this risk).

⁴⁷⁹ *Id.* at 51.

⁴⁸⁰ *Id.*

⁴⁸¹ 83 Fed. Reg. at 18,770.

⁴⁸² *Id.*

policy that would preclude it from using such data in future regulatory actions.”). That course of action has its own significant costs, and EPA provides no analysis in the Proposal of the magnitude of studies that it has previously relied upon that it could no longer rely upon in regulating. *See* 2017 CBO Estimate (“EPA officials have explained to CBO that the agency would implement H.R. 1430 with minimal funding and generally would not disseminate information for the scientific studies that it uses to support covered actions. That approach to implementing the legislation would significantly reduce the number of studies that the agency relies on when issuing or proposing covered actions....”). As the SAB noted in its May 12, 2018 letter, “[t]he proposed rule does not include any assessment of the impact of data restrictions on existing or future regulatory programs. Without access to the restricted data, regulatory programs could become more or less stringent than they otherwise would be, with consequences for both regulatory costs and benefits.”⁴⁸³

Likewise, EPA has included only a cursory mention of the expected qualitative benefits of the Proposal, with no discussion of the anticipated likelihood, scope, or impact of the suggested benefits, let alone any effort to quantify them, much less monetize them. EPA simply assumes that the Proposal will “improve the data and scientific quality of the Agency’s actions and facilitate expanded data sharing an exploration of key data sets” without any analysis or evidence. In fact, as we have explained, the likely outcome of the Proposal is that it will degrade the data and scientific quality of the Agency’s actions by ignoring relevant science simply because the underlying data is not publicly available. Moreover, EPA’s finding is not consistent with the conclusions of the National Academies, as the Proposal suggests. As also explained above, the NAS report highlighted both the risks and benefits of making data publicly available and nowhere concluded that there were benefits to excluding data from the agency’s regulatory decisions simply because the underlying data was not publicly available. Nor does the agency analyze how likely its Proposal is to actually facilitate expanded data sharing, and its main aim appears to be excluding science as it does not actually provide any funding, mechanisms, or best practices for sharing data.

It is more than ironic that EPA claims—without any data or analysis—that its Proposal will increase the net benefits of other regulations while it does nothing to actually consider the costs and benefits of the Proposal itself. Moreover, there is no reason to think that excluding relevant science merely because the underlying data is not publicly available would increase the net benefits of a regulation. For example, it appears that under the proposed rule EPA would exclude a peer-reviewed, published study whose conclusion had been reproduced based upon numerous different datasets (and whose underlying data, though not publicly available, had been reevaluated by outside experts), while including a study that had had no peer review, was not published, had no corroborating studies, and had not actually been replicated or reproduced, merely because the underlying data was made publicly available. That is simply not a recipe for more accurate decisionmaking.

The proposed rule also violates the APA and other statutes’ requirements for reasoned decisionmaking by failing to consider any alternative approaches, much less their costs, here. This is particularly irrational in this context where it appears that many of the benefits sought by

⁴⁸³ Memorandum from Alison Cullen, Chair, SAB Work Group on EPA Planned Actions for SAB Consideration of the Underlying Science to Members of the Chartered SAB and SAB Liaisons 3 (May 18, 2018).

EPA could be largely achieved with much less burdensome and costly approaches. A critical element of reasoned decision making is consideration of alternatives which are congruent with agencies' statutory responsibilities and objectives. *Motor Vehicle Mfrs. Ass'n v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 48, 50 (1983) (safety agency acted arbitrarily in failing to consider alternative safety measures after rejecting passive restraints). EPA failed to consider other methods to ensure scientific robustness at the agency. For example, the SAB letter notes that "[t]he proposed rule fails to mention that there are various ways to assess the validity of prior epidemiologic studies without public access to data and analytic methods."⁴⁸⁴ The Proposal does not consider any alternatives to ensuring that studies are reliable even where the underlying data cannot be made public because of privacy or other concerns.

Furthermore, by failing to consider costs and benefits, the Proposal contravenes Executive Order 12866. Executive Order 12866 requires agencies to assess the costs and benefits of proposed regulations and propose or adopt a regulation only upon a reasoned determination that the benefits justify the costs.⁴⁸⁵ For "significant regulatory actions," like the proposed rule, 83 Fed. Reg. at 18,772, the agency must provide:

- (i) An assessment, including the underlying analysis, of benefits anticipated from the regulatory action (such as, but not limited to, the promotion of the efficient functioning of the economy and private markets, the enhancement of health and safety, the protection of the natural environment, and the elimination or reduction of discrimination or bias) together with, to the extent feasible, a quantification of those benefits;
- (ii) An assessment, including the underlying analysis, of costs anticipated from the regulatory action (such as, but not limited to, the direct cost both to the government in administering the regulation and to businesses and others in complying with the regulation, and any adverse effects on the efficient functioning of the economy, private markets (including productivity, employment, and competitiveness), health, safety, and the natural environment), together with, to the extent feasible, a quantification of those costs; and
- (iii) An assessment, including the underlying analysis, of costs and benefits of potentially effective and reasonably feasible alternatives to the planned regulation, identified by the agencies or the public (including improving the current regulation and reasonably viable nonregulatory actions), and an explanation why the planned regulatory action is preferable to the identified potential alternatives.⁴⁸⁶

⁴⁸⁴ *Id.* at 4 (pointing to the Health Effects Institute re-analysis of the Harvard Six Cities and American Cancer Society epidemiological studies).

⁴⁸⁵ Exec. Order 12866 § 1(b)(6)-(7) (Oct. 4, 1993).

⁴⁸⁶ Exec. Order 12866 § 6(a)(3)(C).

The agency must also make these assessments and analyses “available to the public.”⁴⁸⁷ Executive Order 13563 reaffirms these principles and requirements, explaining that agencies “must take into account benefits and costs, both quantitative and qualitative.”⁴⁸⁸

Agencies are further encouraged to weigh the costs and benefits of developing higher information quality in OMB’s Information Quality Guidelines.⁴⁸⁹ Costs that the Guidelines encourage agencies to consider include “costs attributable to agency processing effort, respondent burden, maintenance of needed privacy, and assurances of suitable confidentiality.”⁴⁹⁰ EPA’s existing information quality guidelines track the OMB Guidelines closely. EPA’s disregard of the Guidelines’ recommended weighing costs and benefits further contributes to the arbitrariness of EPA’s failure to consider the costs of the Proposal.

The Proposal’s failure to analyze and disclose costs and benefits cannot be cured in a final regulation. Should EPA not abandon this misguided Proposal, it must re-propose it after first analyzing its costs (both to public health, to researchers, and to the agency itself) and benefits, and providing the requisite opportunity for public comment on its analysis. As discussed further below in Section VIII.D, the public cannot meaningfully comment on the proposed rule without understanding the actual costs and benefits of the Proposal, the alternatives EPA considered, and the analyses underlying EPA’s assessments.

VI. EPA Fails to Comply with the Paperwork Reduction Act.

EPA and the White House Office of Management and Budget (OMB) must scrutinize the Proposal for its information collection burden, as that concept is defined under the Paperwork Reduction Act (PRA).⁴⁹¹ The only reference to the PRA in the Proposal is EPA’s denial that this action “contain[s] any information collection activities” or “impose[s] an information collection burden.”⁴⁹² But if finalized, the Proposal would significantly increase that burden in the rulemakings to which it applies. EPA and OMB cannot rationally ignore such an entirely foreseeable impact when considering this Proposal.

The PRA institutes procedural safeguards to “minimize the paperwork burden for individuals, small business, educational and nonprofit institutions,” and others.⁴⁹³ It requires that, prior to initiating a “collection of information,” agencies must “provide 60-day notice in the Federal Register . . . to solicit comment to,” inter alia, “evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency,” “evaluate the accuracy of the agency’s estimate of the burden of the proposed collection of information,”

⁴⁸⁷ Exec. Order 12,866 § 6(a)(3)(E)(i).

⁴⁸⁸ Exec. Order 13563 § 1(a) (Jan. 18, 2011).

⁴⁸⁹ OMB, *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by Federal Agencies; Republication*, 67 Fed. Reg. 8452, 8453 (Feb. 22, 2002).

⁴⁹⁰ OMB, *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by Federal Agencies; Republication*, 67 Fed. Reg. 8452, 8453 (Feb. 22, 2002).

⁴⁹¹ See 44 U.S.C. § 3502(2), (3) (defining “burden” and “collection of information”).

⁴⁹² See 83 Fed. Reg. at 18,772.

⁴⁹³ 44 U.S.C. § 3501(1).

and “minimize the burden of the collection of the information on those who are to respond.”⁴⁹⁴ After evaluating public comments, agencies must submit the proposed collection of information to OMB for additional review and publish a notice in the Federal Register setting forth “an estimate of the burden that shall result from the collection of information” and “notice that comments may be submitted to the agency and [OMB].”⁴⁹⁵ Any such collection of information is subject to OMB approval.⁴⁹⁶ OMB is required to determine “whether the collection of information . . . is necessary for the proper performance of the functions of the agency.”⁴⁹⁷ A negative determination precludes the agency from initiating the collection of information.⁴⁹⁸

The requirements that EPA would impose through this Proposal qualify as collections of information under the PRA. The statute defines “collection of information” to include “the obtaining [or] causing to be obtained . . . of facts or opinions by or for an agency, regardless of form or format, calling for . . . answers to identical questions posed to, or identical reporting or recordkeeping requirements imposed on, ten or more persons”⁴⁹⁹ OMB regulations emphasize the breadth of this definition, specifying that “[a] Collection of information may be in any form or format, including . . . reporting or recordkeeping requirements; . . . policy statements; . . . rules or regulations; . . . oral communications;” and others.⁵⁰⁰ “Any recordkeeping, reporting, or disclosure requirement contained in a rule of general applicability is deemed to involve ten or more persons.”⁵⁰¹ The definition of “collection of information” is agnostic as to whether disclosure is “mandatory, voluntary, or required to obtain or retain a benefit,” and to whether disclosure is to an agency or “members of the public or the public at large.”⁵⁰²

The Proposal would impose a burden that falls squarely within the definition of “collection of information.” In order to use scientific research, the agency would “obtain[] or caus[e] to be obtained . . . facts.” Assuming the requirements are applied consistently, the “questions posed,” or “reporting or recordkeeping requirements imposed,” would be “identical.” As the requirements are “contained in a rule of general applicability”—i.e., the instant Proposal—they are “deemed to involve ten or more persons.” It makes no difference whether the agency seeks the information through a questionnaire, telephone call, or some other format. Nor does it matter whether the agency directly mandates that entities provide the information, or provides that entities must “voluntary[ly]” provide the information in order for research to be eligible for consideration in important rulemakings.

While EPA has refrained from detailing the mechanics by which entities would provide the information, the agency expressly contemplates that the burden of providing such information would fall at least partly to members of the public whom the PRA exists to

⁴⁹⁴ 44 U.S.C. § 3506(c)(2)(i), (ii), (iv).

⁴⁹⁵ *Id.* § 3507(a)(1)(D)(ii)(V), (VI).

⁴⁹⁶ *See id.* § 3507(a)(2).

⁴⁹⁷ *Id.* § 3508.

⁴⁹⁸ *Id.*

⁴⁹⁹ 44 U.S.C. § 3502(3)(A)(i).

⁵⁰⁰ 5 C.F.R. § 1320.3(c)(1).

⁵⁰¹ *Id.* § 1320.3(c)(4)(i).

⁵⁰² *Id.* § 1320.3(c), (c)(2).

protect.⁵⁰³ For example, proposed regulation 40 C.F.R. § 30.5 provides that, “[w]here data is controlled by third parties, EPA shall work with those parties to endeavor to make the data available in a manner that complies with this section.” Moreover, the agency specifically “solicits comment on how to incorporate stronger data and model access requirements in the terms and conditions of cooperative agreements and grants.”⁵⁰⁴ As noted above, the PRA is implicated when collection of information is “required to obtain or retain a benefit,”⁵⁰⁵ and OMB guidance has identified grants as a “Federal benefit” for purposes of the PRA.⁵⁰⁶

EPA cannot evade the PRA requirements by narrowly asserting that “this action” imposes no information collection burden and ignoring the action’s entirely foreseeable future impacts. The proposal expressly “is intended to apply prospectively,” suggesting that it “prospectively” requires burdensome collections of information in future rulemakings. EPA must not ignore the PRA in this rulemaking, only to claim in future rulemakings that this rule moots or constrains the PRA’s application by compelling certain collections of information.

In the alternative, if EPA genuinely believes that this Proposal would not burden the public with new collections of information, then EPA’s stated basis for this rulemaking is exposed as a farce. EPA claims that the Proposal would “ensure” that certain data “are publicly available” and expresses specific concern for science “developed outside the agency.”⁵⁰⁷ Collection of information, including from researchers employed outside of the federal government, is central to the purpose—and essential to the implementation—of the Proposal. Providing this information would inevitably impose a burden on researchers. If the agency does not actually intend to collect information under this Proposal, it underscores that EPA’s true purpose is not to increase transparency, but rather to thwart the development and maintenance of vital public health protections on the grounds that the agency lacks the information it would need to support them.

At a minimum, EPA must acknowledge and describe the information collection burden that this Proposal would impose so that OMB and the public can conduct a proper evaluation and provide responsive comments.

VII. The Circumstances Surrounding the Proposed Rule Indicate that it Was Based on a Desire to Suppress Vital Public Health Science for the Benefit of Certain Regulated Industries.

The circumstances surrounding the development of this proposed rule underscore that it is not intended to “strengthen the transparency of EPA regulatory science.”⁵⁰⁸ Far from furthering EPA’s mission of protecting human health and the environment based on the best available science, the Proposal is EPA’s effort to implement failed congressional legislation that

⁵⁰³ *Cf. id.* § 1320.3(k) (defining “person” for purposes of the PRA).

⁵⁰⁸ 83 Fed. Reg. 18,768.

was intended to suppress rigorous science for the benefit of private industry and at the expense of public health.

EPA's Proposal is largely based upon the HONEST Act of 2017, an unenacted House bill that aimed at undermining climate and regulatory science. Available information about the Proposal's evolution indicates that regulated industries had a disproportionate role in its development. In addition, the Proposal mirrors advocacy tactics employed by the tobacco industry in the 1990's in order to suppress scientific research demonstrating the adverse health effects of cigarettes and second-hand smoke. Finally, the Proposal follows a host of instances in which the Agency, under former EPA Administrator Scott Pruitt, suppressed science and transparency—underscoring the bad faith nature of the purported justifications for this rule.

A. The Proposed Rule is an Attempt by EPA to Implement an Unenacted Congressional Bill, The HONEST Act.

EPA's Proposal is an outgrowth of a failed congressional bill, the HONEST Act. The bill was vigorously supported by Congress members with strong ties to the precise industries that would have benefited from its enactment. Internal and external EPA communications illustrate that the HONEST Act served as a precursor to EPA's Proposal. The intertwined history of the HONEST Act and EPA's Proposal cast doubt on the Agency's proffered rationale.

The HONEST Act

The HONEST Act⁵⁰⁹ is a House bill introduced in 2017 by sponsor Representative Lamar Smith (R-TX), and is the latest manifestation of various bills aimed at undermining EPA regulation through limitations on the types of scientific research the Agency may use.⁵¹⁰ The HONEST Act and these related bills were introduced and passed in the House three times, but each time, failed to progress in the Senate.⁵¹¹

Like the current Proposal, the HONEST Act was touted by its proponents as an effort to enhance the transparency and credibility of regulatory science at EPA. But the HONEST Act—like the Proposal—would in fact have had the effect of limiting the scope and quality of science underlying EPA actions. Indeed the HONEST Act was widely criticized and opposed by scientists, scientific organizations, medical organizations and other scientific authorities for precisely this reason. For example, eight public health and medical associations including the American Lung Association, American Public Health Association, National Medical Association, and Physicians for Social Responsibility issued an open letter to Congress in spring 2017 opposing the HONEST Act because it “would limit the kinds of scientific data EPA can use

⁵⁰⁹ HONEST Act, H.R. 1430, 115th Cong. (2017).

⁵¹⁰ See Secret Science Reform Act of 2014, H.R. 4012, 113th Cong. (2014); Secret Science Reform Act of 2015, H.R. 1030, 114th Cong. (2015); H.R. 1430; HONEST Act, S. 1794, 115th Cong. (2017).

⁵¹¹ On March 2017, Representative Smith introduced the HONEST Act in the 115th Congress. On March 29, 2017, the bill passed the House without amendment. Most recently, Senator Mike Rounds (R-SD) introduced a Senate version of the HONEST Act on September 12, 2017. As with past versions of the bill, the Senate referred the Bill to the Committee on Environment and Public Works, but took no further action.

as it develops policy to protect the American public from environmental exposures and permit violation of patient confidentiality.”⁵¹² The American Association for the Advancement of Science and twenty-two other leading scientific organizations and research universities likewise sent a letter to House Majority Whip Kevin McCarthy in March 2017 opposing the bill and warning that it could lead to a “situation where the EPA would be prevented from using the best available science and disseminating public information in a timely fashion.”⁵¹³ As we have noted elsewhere in these comments, the Congressional Budget Office – after consulting with EPA staff – likewise concluded that the HONEST Act would “significantly reduce the number of studies that the agency relies on when issuing or proposing covered actions.”⁵¹⁴

That the HONEST Act would suppress rather than promote good science at EPA is not surprising, given that the sponsors of the HONEST Act have a history of rejecting established climate science and strong ties to industries that would benefit from limiting the role of science in EPA rulemakings. Representative Lamar Smith is widely known as an opponent of mainstream climate science and public health and environmental safeguards.⁵¹⁵ In a July 24, 2017 opinion piece, Representative Smith lauded the benefits of increased atmospheric carbon dioxide: “A higher concentration of carbon dioxide in our atmosphere would aid photosynthesis, which in turn contributes to increased plant growth.”⁵¹⁶ Smith and the sponsor of the Senate version, Mike Rounds, also receive substantial contributions from the same industries that will benefit from the proposal.⁵¹⁷

⁵¹² Letter from Alliance of Nurses for Health Environments, American Lung Association, American Public Health Association, American Thoracic Society, Asthma and Allergy Foundation of America, Health Care Without Harm, National Medical Association, and Physicians for Social Responsibility to U.S. House (Mar. 27, 2017), <http://www.lung.org/assets/documents/advocacy-archive/letter-to-us-house-opposing-2.pdf>.

⁵¹⁷ Throughout his congressional career, Representative Smith received over \$787,047 in contributions from the oil and gas sector. Center for Responsive Politics, *Rep. Lamar Smith – Texas District 21: Summary*, Open Secrets: Congress, <https://www.opensecrets.org/members-of-congress/summary?cid=N00001811&cycle=CAREER&type=I> (last visited June 6, 2018). From 2011 to 2018, Senator Rounds received over \$215,000 from oil and gas companies alone. Center for Responsive Politics, *Sen. Mike Rounds – South Dakota: Summary*, Open Secrets: Congress, <https://www.opensecrets.org/members-of-congress/summary?cid=N00035187&cycle=CAREER&type=I> (last visited June 14, 2018).

Representative Smith also has ties to EPA staff who drafted the proposal, underscoring the close connection between his failed legislation and this proposed rule. Dr. Richard Yamada, former professional staff member on Smith's House Committee on Science, Space & Technology now serves as the Deputy Assistant Administrator for EPA's Office of Research and Development.⁵¹⁸ At EPA, Dr. Yamada has participated in the drafting and development of the Agency's version of the proposal.⁵¹⁹

The HONEST Act as Predecessor for the Proposal

As this section details, it is clear that the HONEST Act is a direct predecessor of this proposed rule and that both initiatives share the same purpose: to undermine EPA's use of rigorous science in crafting health and environmental protections. The language used in the proposal shares strong similarities with the HONEST Act. Furthermore, internal and external communications from EPA leadership demonstrate the proposal's origins in the HONEST Act.

While lengthier than the congressional HONEST Act, EPA's proposal contains parallel language to the bill. One can compare examples from the text of the 2017 HONEST Act as passed in the House, to the text of the proposal from the Final Federal Register Notice:

The HONEST Act of 2017

An Act: To prohibit the [EPA] from proposing, finalizing, or disseminating regulations or assessments based upon science that is not transparent or reproducible....

The Administrator shall not proposed, finalize, or disseminate a covered action unless all scientific and technical information relied on to support such covered action is—(A) the best available science; (B) specifically identified; and (C) publicly available online in a manner that is sufficient for independent analysis and substantial reproduction of search results....⁵²⁰

Strengthening Transparency in Regulatory Science Proposal

EPA shall clearly identify all studies (or other regulatory science) relied upon when it takes any final action. EPA should make all studies available to the public to the extent practicable . . . When promulgating significant regulatory actions, the Agency shall ensure that dose response data and models underlying pivotal regulatory science are publicly available in a manner sufficient for independent validation.⁵²¹

Safety and Pollution Prevention (Jan. 29, 2019, 10:58 PM), <https://drive.google.com/file/d/1peMXjBhq6lUYGGNBWbSjpOu1Zh-qLl4p/>.

⁵²⁰ H.R. 1430 § 2(b)(1).

⁵²¹ Strengthening Transparency in Regulatory Science, 83 Fed. Reg. 18,768, 18,773 (Apr. 30, 2018) (proposed 40 C.F.R. §§ 30.4, 30.5).

The best available science must serve as the foundation of EPA's regulatory actions.⁵²²

Responsive records released to the Union of Concerned Scientists ("UCS") make evident that the HONEST Act served a predecessor to the proposal. Administrator Pruitt's schedule reveals that he met with Representative Smith on January 9, 2018, less than four months before the Federal Register announcement of the proposal.⁵²³ Emails from Pruitt and his staff, dated just over a week after that meeting, indicate that Smith was working on a "pitch that EPA internally implement the HONEST Act."⁵²⁴ Subsequent emails sent between Pruitt's EPA staff in February 2018 demonstrate that EPA officials promptly began drafting the proposal.⁵²⁵

Before Smith's internal EPA 'pitch,' Agency leadership commented favorably on the HONEST Act of 2017. Although EPA initially estimated that implementation of the act would cost over \$250 million per year,⁵²⁶ that estimate was never reported to the Congressional Budget Office ("CBO"). As CBO's cost estimate determination indicates, EPA political leadership diverged from the earlier estimate and instead assured CBO that the bill could be implemented "with minimal funding."⁵²⁷ Several news sources have reported that the Administrator's Office of the EPA became involved in communications with CBO, and decided to respond to CBO directly with the assurance the bill could be implemented at 'no cost.'⁵²⁸

Finally, in an exclusive interview with the Daily Caller shortly before the proposal's publication, former Administrator Pruitt promised:

⁵²⁸ E.g., Scott Tong, *Critics Say HONEST Act undercuts EPA's use of science*, Marketplace: Sustainability (Apr. 10, 2017, 1:08 PM), <https://www.marketplace.org/2017/04/10/sustainability/honest-act-seen-critics-undercutting-epa-s-use-science>.

If we use a third party to engage in scientific review or inquiry, and that's the basis of rulemaking, you and every American citizen across the country deserve to know what's the data, what's the methodology that was used to reach that conclusion that was the underpinning of what — rules that were adopted by this agency.⁵²⁹

The Daily Caller directly linked the proposal to the HONEST Act, “Pruitt’s pending science transparency policy mirrors Smith’s HONEST Act, which passed the House in March 2017.”⁵³⁰

Spokeswoman for Chairman Smith’s House Committee on Science, Space, and Technology, Thea McDonald, also told the Daily Caller: “[t]he chairman has long worked toward a more open and transparent rule-making process at EPA, and he looks forward to any announcement from Administrator Pruitt that would achieve that goal.”⁵³¹

1. Available information on the development of the proposal illustrate its industry origins.

The history of the proposal’s internal development indicates that certain representatives of regulated industries had a nearly exclusive role in its promulgation, and that industry concerns were given special solicitude by EPA’s senior political leadership. Meanwhile, the scientific community and the EPA’s own Science Advisory Board were neither involved in the evolution of the proposal nor notified of its initiation until after its official publication in the Federal Register, further suggesting that this proposal is not grounded in a genuine concern for advancing science at EPA and is, in fact, at odds with EPA’s mission of protecting human health and the environment.

Nancy Beck, key decision maker and EPA’s current Deputy Assistant Administrator of the Office of Chemical Safety and Pollution Prevention, previously served as the Senior Director, Regulatory & Technical Affairs for the American Chemistry Council.⁵³² While employed by the ACC, Beck submitted a written statement in general support of the HONEST Act.⁵³³

In internal EPA emails released pursuant to Union of Concerned Scientists’ Freedom of Information Act (“FOIA”) request, Beck expressed concerns that repeated those of industry. Her concerns that certain language in the proposal might compromise industry confidential business information (“CBP”) or alter individual party adjudications were met with assurances by Deputy Assistant Administrator for the Office of Research and Development, Richard Yamada, that the

⁵³¹ *Id.*

⁵³² Nancy Beck, LinkedIn, <https://www.linkedin.com/in/nancybbeck/> (last visited June 6, 2018).

⁵³³ *Written Statement of Nancy B. Beck Before the U.S. Senate Committee on Homeland Security and Governmental Affairs, Subcommittee on Regulatory Affairs and Federal Management Regarding a Hearing on the Agency Use of Science in the Rulemaking Process: Proposals for Improving Transparency and Accountability*, American Chemistry Council 1 (Mar. 9, 2017), <https://www.hsgac.senate.gov/imo/media/doc/BECK%20TESTIMONY.pdf>.

agency would “thread” the proposal “real tight.”⁵³⁴ Concerns about protecting CBI, expressed in Beck’s emails, echo her statement in support of the HONEST Act to the House Subcommittee on Regulatory Affairs and Federal Management while she was employed by the ACC.⁵³⁵

The proposal’s justifications regarding the private-sector burden of regulatory costs reiterates concerns and suggestions about EPA’s policy for evaluating science that the Agency received from industry itself. In emails to EPA leadership from May 2014, the National Association of Manufacturers (“NAM”) specifically identified dozens of EPA regulations that were “affecting its members,” many of which were chemical, air, and water regulations which were based upon the types of research and studies that would be excluded under EPA’s proposed rule.⁵³⁶

In response to EPA’s 2017 proposed rule, Procedures for Prioritization of Chemicals for Risk Evaluations, NAM made recommendations that EPA ensure that TSCA prioritization relied upon “the best available science” in a process that requires “a heightened level of transparency.”⁵³⁷ NAM also provided the EPA with materials that called for reform of EPA’s “process for evaluating science to improve transparency and better involve the public.”⁵³⁸ This parallels NAM’s 2014 letter to the House in support of that year’s version of Rep. Smith’s HONEST Act.⁵³⁹

The American Petroleum Institute’s (“API”) Senior Director of Regulatory and Scientific Affairs wrote to the EPA: “[t]he science and data used to support a regulation should be reviewed to determine if they are still valid based on scientific integrity, consistent with EPA’s Principles of Scientific Integrity and Policy (2012), with meaningful disclosure of all potential areas of bias, guarding against manipulation or misinterpretation.”⁵⁴⁰

API also issued a press release on that same day, May 15, 2017, in which the organization summarized its conversations with EPA: “API today urged the EPA to adopt a

regulatory system that enhances safety and protects the environment while prioritizing the production and refining of American natural gas and oil.”⁵⁴¹

In contrast, EPA’s Science Advisory Board (“SAB”) leadership was not notified of the rulemaking activity until it was published in the Federal Register, in contravention of Agency practices for communicating major actions such as the proposed rule.⁵⁴² EPA also failed to provide the SAB with a description of the proposal.⁵⁴³

Despite the SAB’s Congressionally-mandated role to formally review and comment on EPA actions of this nature,⁵⁴⁴ the SAB and scientific community were not consulted in the development of the rule.⁵⁴⁵ Indeed, SAB leadership questioned the scientific support behind the proposal: “[a]lthough the proposed rule cites several valuable publications that support enhanced transparency, the precise design of the rule appears to have been developed without a public process for soliciting input from the scientific community.”⁵⁴⁶

SAB leadership took note of the HONEST Act’s connection to the proposal, stating the rule was “highly controversial” as indicated by the fact that “a similar legislative effort in the House has been stalled in Congress for several years.”⁵⁴⁷

B. EPA’s Proposed Rule Mirrors Policies That the Tobacco Industry Advocated for in the 1990’s to Suppress Unfavorable Science.

Both this proposed rule and the HONEST Act bear close similarities to policies promoted by the tobacco industry in the 1990’s to suppress unfavorable science—further confirming that the proposed rule would degrade the quality of science at EPA and undermine public health. Before EPA’s proposed rule and the HONEST Act, Philip Morris (today, Altria) and public-relations firm APCO partnered to establish The Advancement of Sound Science Coalition (“TASSC”) in order to “inform the market of the problem with unsound science” that demonstrated adverse health effects of tobacco and second-hand smoke.⁵⁴⁸ TASSC led a worldwide publicity campaign in the 1990s to promote “Good Epidemiological Practices” that

aimed at undermining U.S. and international regulatory efforts based on epidemiologic studies of passive smoking and lung cancer.⁵⁴⁹

During the same period, Philip Morris made it a strategic priority to pursue legislation and policies to require public disclosure of epidemiological data. A May 1997 planning document advocated for using “existing political and business coalitions” that opposed clean air regulations to promote “legislative solutions to ensure that public policy is based on sound science” and “require epidemiological studies to meet a minimum set of criteria and/or require researchers to make public the underlying data before these studies can be used as a basis for regulations at the state or federal level.”⁵⁵⁰ In 1998, Powell Tate – a lobbying firm that represented R.J. Reynolds – organized a “secret science” working group focused on “requiring the disclosure of taxpayer-funded analytical data upon which federal and state rules and regulations are based, as well as the analytic data underlying health and safety studies funded by the government”⁵⁵¹

Although TASSC no longer exists, its executive director, Steve Milloy, continues the organization’s “sound science” rhetoric against other types of regulation through his website, JunkScience.com.⁵⁵² In fact, Milloy has personally taken credit for EPA’s proposal and was one of a select few invited to Pruitt’s public announcement of the proposal earlier this year.⁵⁵³ After the proposed rule was announced, Milloy told reporters, “I look at this as one of my proudest achievements. The reason this is anywhere is because of Steve Milloy.”⁵⁵⁴

C. EPA, Under the Trump Administration, Has a History Of Suppressing Science and Transparency, Undermining the Purported Justifications for the Proposal.

A FOIA request submitted by E&E News uncovered a document emailed by former EPA official David Schnare laying out a strategy to overturn the 2009 Greenhouse Gas Endangerment Finding.⁵⁵⁵ In the document, one of the steps contemplated as part of the reconsideration included EPA only relying “on information, data and studies where the original data upon which assessment is based is available to the public. . . . EPA would not rely on any study whose authors refuse to

provide the underlying data, including computer code used to evaluate and analyze the data.”⁵⁵⁶ This is just one example among numerous others that this proceeding is not intended to increase transparency, but rather aimed at weakening EPA standards that the current Administration disapproves of, despite their grounding in robust scientific evidence.

EPA’s non-transparent approach to this rulemaking, as well as other Agency actions, underscore that the proposal was not offered in good faith. The Agency has removed thousands of webpages from its website, limited public and press access to Agency events, and withheld key data underlying rulemakings and proceedings. These practices cast doubt on EPA’s proffered justifications of transparency and accountability.

In EPA’s stay of the Oil and Natural Gas Sector: Emissions Standards for New, Reconstructed, and Modified Sources, EPA failed to disclose directly relevant evidence for the basis of revision of the standards consisting of industry compliance reports.⁵⁵⁷ Despite the fact that these compliance reports were in the agency’s possession and comprised of public documents containing factual data that should have been available for public inspection, EPA has to date still not released all of the compliance reports in its possession.

In August 2017, EDF received information pursuant a FOIA request revealing that more than 1,900 climate-related webpages and files on EPA’s website were removed or modified.⁵⁵⁸ Many of the removed and modified pages were related to climate change science and impacts, such as “Climate Impact on Health Through Life Stages,” “Climate Change Science,” and “Methane and Black Carbon Impacts on the Arctic: Communicating the Science.”⁵⁵⁹

In January 2018, EDF received additional responsive records to another FOIA request demonstrating that former Administrator Pruitt directed the removal of many climate change science, impacts, and resources pages as well as all material related to the Clean Power Plan on EPA.gov.⁵⁶⁰

⁵⁶⁰ E-mail from Lincoln Ferguson, Senior Advisor, Office of Public Affairs, to Amy Graham, Advisor, Office of Public Affairs; John Konkus, Deputy Associate Administrator, Office of Public Affairs; JP Freier, Associate Administrator, Office of Public Affairs; Liz Bowman, Acting Associate Administrator, Office of Public Affairs; and Jahan Wilcox, Strategic Communications Advisor, Office of Public Affairs (Apr. 5, 2017, 4:15 PM) in EDF, *Newly Released Records Refer to Pruitt’s Personal Involvement in Removal of Climate Information from EPA Website*, EDF: Press release archive (Jan. 29, 2018), <https://www.edf.org/sites/default/files/2018.01.05-partial-production.pdf>.

At the same time, EPA was soliciting comments on its proposal to repeal the Clean Power Plan. The removal of webpages related to climate and Clean Power Plan topics from the EPA website restricted the public's ability to formulate informed comments throughout the rulemaking process.⁵⁶¹ Thus, the public lacked the same "access to data and influential scientific information used to inform federal regulation"⁵⁶² which EPA claims to observe in its proposal.

The Administration has not rigorously pursued its purported goal of transparency in other contexts by limiting public and press access to Agency events and withholding key data underlying several recent rulemaking proceedings.

At the event where former Administrator Pruitt announced the proposal, reporters were not invited to attend.⁵⁶³ Documents received in response to a Sierra Club FOIA request to the EPA reveal that the Administrator had requested press access and advertisement to the public be limited for other events.

For his speaking engagement at a Federalist Society event in March 2017, Pruitt's scheduling director asked that organizers not advertise to press directly and directed organizers to tell media that the event "is not open to press and is off the record."⁵⁶⁴ Emails also demonstrate that the Agency worked with a public relations firm to devise a plan to promote positive comments and censor negative comments on media from the Administrator's facility visits.⁵⁶⁵

EPA additionally failed to provide the public with access to data in key rulemakings and proceedings. For example, in EPA's rulemaking to repeal emissions requirements for glider vehicles, engines, and kits, commenced in November 2017, the Agency failed to release the underlying reports and data before the public comment period closed.⁵⁶⁶ At this date, EPA still has not released data used in a key study cited in the Agency's proposal.

In the words of the proposal, EPA acted in contravention of its goals of "better informing the public," "enhancing the public's ability to understand and meaningfully participate in the

regulatory process,” and “ensur[ing] that its decision-making is marked by independence, transparency, clarity, and reproducibility” as it proceeded through rulemakings that “will affect the public” and where “the public is likely to bear the cost of compliance.”⁵⁶⁷

VIII. The Proposal Violates Procedural Requirements of the APA, CAA, and Other Statutes and Executive Orders

The proposed rule fails to meet even the most basic procedural and substantive obligations. The Administrative Procedure Act (APA) requires that the “opportunity for comment must be a meaningful opportunity,” and “[t]hat means enough time with enough information to comment and for the agency to consider and respond to the comments.” *Prometheus Radio Project v. FCC*, 652 F.3d 431, 450 (3d Cir. 2011) (internal citation and quotation marks omitted). *See also Am. Hosp. Ass’n v. Bowen*, 834 F.2d 1037, 1044-45 (D.C. Cir. 1987) (noting the “obvious importance of the [APA’s] policy goals of maximum participation and full information.”). For its part, the Clean Air Act (CAA) “requires a much more detailed notice of proposed rulemaking than does the APA.” *Union Oil Co. of Cal. v. EPA*, 821 F.2d 678, 682 (D.C. Cir. 1987); *see Small Refiner Lead Phase-Down Task Force v. EPA*, 705 F.2d 506, 550 (D.C. Cir. 1983) (“[T]he additional notice requirements in § 307(d)(3) suggest that Congress intended agency notice under the Clean Air Act to be more, not less, extensive than under the APA.”). Executive Order 13563 underscores these obligations requiring that to promote “open exchange of information and perspectives among State, local, and tribal officials, experts in relevant disciplines, affected stakeholders in the private sector, and the public as a whole,” agencies “shall endeavor to provide the public with an opportunity to participate in the regulatory process.”⁵⁶⁸

Moreover, notice has to be provided by the agency; it cannot be bootstrapped from the public comments.⁵⁶⁹ The reasons are evident: there is no requirement for parties to monitor all of the thousands or tens of thousands of submitted comments in order to guess the issues on which to comment.⁵⁷⁰ A contrary rule “would turn notice into an elaborate treasure hunt, in which interested parties, assisted by high-priced guides (called ‘lawyers’), must search the record for the buried treasure of a possibly relevant comment.”⁵⁷¹

Drafting these comments has entailed a great deal of guesswork. The comments of EDF or any other commenter on a particular issue thus should not be taken to mean that EPA provided sufficient notice of that issue.

The proposed rule lacks essential elements needed to understand it, rendering the opportunity for comment meaningless. The Proposal contains vague and contradictory statements about its actual substance and effect, fails entirely to analyze and disclose its costs

⁵⁶⁷ 83 Fed. Reg. 18,768, 18,768-9 (Apr. 30, 2018).

⁵⁷¹ *Small Refiner Lead Phase Down*, 705 F.2d at 550.

and benefits, and is littered with vague references to entire websites and executive branch departments. The cursory reasoning and wholly inadequate record offered in support of the proposed rule prevents stakeholders from engaging with the agency on its rationale for the proposed action and its costs and benefits, or offering contrary evidence. Finally, EPA has not provided any basis whatsoever to warrant the gross inadequacies of the proposed rule and the process to consider it. With such a deeply deficient basis for action, the only legally viable course is to withdraw the Proposal.

A. The Proposed Rule is a Binding, Legislative Rule and Subject to the Requirements of the APA

The Administrative Procedure Act, the Clean Air Act, and other federal statutes proscribe procedures that must be followed in agency rulemaking, and which EPA has failed to meet in its Proposal. This proposed rule does not fit into any of the exceptions the APA provides for the procedural requirements of rulemaking—it is neither an interpretive rule, general statement of policy, or a rule of agency organization, procedure or practice.⁵⁷²

The proposed rule does not purport to clarify or explain an already existing statute or rule, and thus is not an interpretive rule.⁵⁷³ The proposed rule is not a general statement of policy, because it establishes a standard of conduct, which has the force of law. It uses mandatory language indicating a requirement: “When promulgating significant regulatory actions, the Agency *shall* ensure that dose response data and models underlying pivotal regulatory science are publicly available in a manner sufficient for independent validation.”⁵⁷⁴ Unlike a general statement of policy, which “does not establish a ‘binding norm,’ . . . [and] is not finally determinative of the issues or rights to which it is addressed,” EPA here makes no qualifications that it has any leeway to not follow the Proposal’s new requirements in all future regulatory actions.⁵⁷⁵ The provision allowing the EPA Administrator to grant exceptions in a limited number of cases does not turn this rule into a general statement of policy because it also binds the Administrator’s discretion, allowing deviation from the policy only when they make specific findings.⁵⁷⁶ EPA has not indicated that “in subsequent proceedings it will thoroughly consider not only the policy’s applicability to the facts of a given case but also the underlying validity of the policy itself,” but seems poised to apply the policy in all instances—granting exceptions only in limited circumstances where compliance is deemed impracticable.⁵⁷⁷ It nowhere indicates that EPA may reassess in each case whether following this rule is the best means to achieve scientific integrity as it undertakes regulatory action. The Proposal has other indications of a binding rule, including that EPA intends to codify it in the Code of Federal Regulations, and EPA has itself characterized the Proposal as a binding rule.⁵⁷⁸

⁵⁷² 5 U.S.C. § 553.

⁵⁷⁸ Robinson Meyer, *Scott Pruitt’s New Rule Could Completely Transform the EPA*, The Atlantic (Apr. 24, 2018), <https://www.theatlantic.com/science/archive/2018/04/how-the-epas-new-secret-science-rule/558878/> (as

This rule is also not a rule of agency organization, procedure or practice, for purposes of the APA. Agency actions in this category are those “that do not themselves alter the rights or interests of parties, although it may alter the manner in which the parties present themselves or their viewpoints to the agency.”⁵⁷⁹ An agency action that “trenches on substantial private rights and interests” does not fall under this exemption.⁵⁸⁰ By restricting the scientific studies on which EPA may base final significant regulatory actions, EPA severely limits parties from relying on excluded studies in advocating for particular safeguards. In the preamble, EPA makes clear that the rule is about “EPA’s regulatory actions” and underlying conclusions.⁵⁸¹ Because the rule substantively impacts agency conclusions and regulations, it impacts private rights and interests. The rule does not allow private individuals to submit for consideration (or renders such submittal a nullity) studies that they would have been permitted to prior to the proposed rule, thus impacting the substantive standards that EPA is able to justify setting—which has implications for the regulated community as well as for public health. The Proposal “encodes a substantive value judgment or puts a stamp of approval or disapproval on a given type of behavior” by requiring regulatory actions to be supported only by certain scientific information deemed acceptable by the proposed rule.⁵⁸²

In *CropLife Am. v. E.P.A.*, the Court held that a similar rule promulgated by EPA, barring third-party human studies from agency consideration during pesticide registrations was a binding regulation because it used “clear and unequivocal language” reflecting “an obvious change in established agency practice” that created a “binding norm.”⁵⁸³ The Court stated: “EPA’s stated rule is binding on petitioners, who are now barred from relying on third-party human studies (even in cases where such studies formerly were approved), and is binding on the agency because EPA has made it clear that it simply ‘will not consider’ human studies.”⁵⁸⁴ Similarly, the Proposal appears to bind EPA to not consider scientific information it could consider before, unless it falls under certain narrow, ambiguously defined exceptions, and binds the public and organizations such as EDF who can no longer submit studies to EPA that EPA would previously have been required to consider as part of the rulemaking process.

B. The Proposal is Subject to the Procedural Requirements of the Clean Air Act.

Administrator Pruitt signed the Proposal, he stated: “This is not a policy. This is not a memo. This is a proposed rule.”).

⁵⁸¹ 83 Fed. Reg. 18,769.

⁵⁸² *Am. Hosp. Asso. v. Bowen*, 834 F.2d 1037, 1047 (D.C. Cir. 1987). *See also Pharm. Mfrs. Asso. v. Finch*, 307 F. Supp. 858, 865 (D. Del. 1970) (finding that a regulation promulgating new criteria for clinical investigations that will meet the standards of evidence necessary to demonstrate the effectiveness of drug products, and excluding certain kinds of clinical investigations, was not merely a procedural rule, because they “did effect a material narrowing of the range of evidence which previously had been considered relevant in evaluating a drug’s efficacy. Because of the important clarification of acceptable testing standards effected by the September regulations and because of the substantial impact of these regulations on the drug industry. . . .”)

⁵⁸³ 329 F.3d 876, 881 (D.C. Cir. 2003).

⁵⁸⁴ *Id.*

Section 307(d) applies to “such. . . actions as the Administrator may determine.”⁵⁸⁵ EPA claims to take this action under “authority of the statutes it administers. . . including Clean Air Act sections 103, 301(a).”⁵⁸⁶ By issuing this Proposal through notice and comment procedures, Administrator Pruitt appears to have determined that 307(d) procedures apply.

Even without that invocation, the proposed rule is subject to these procedural requirements because it materially impacts many of the actions delineated in 307(d)(1) to which the CAA rulemaking procedures explicitly apply. The Proposal applies to “significant regulatory actions,” which many of these actions are. The CAA requires science-based decision-making that the Proposal will materially affect. For example, by restricting the science EPA may rely on in regulatory actions, the Proposal materially impacts residual risk determinations for hazardous air pollutants (§ 307(d)(1)(C)), standards for mobile source air toxics (§ 307(d)(1)(K)), and residual risk standards for municipal solid waste combustors (§ 307(d)(1)(D)).⁵⁸⁷

This proposed rule directly affects EPA’s setting and review of National Ambient Air Quality Standards (NAAQS),⁵⁸⁸ the promulgation or revision of which is subject to the CAA rulemaking requirements.⁵⁸⁹ Section 108(a) of the Clean Air Act requires the Administrator to set air quality criteria for air pollutants that “reflect the latest scientific knowledge.” This Proposal amends the science EPA can consider for air quality criteria. Under CAA section 109 EPA must use the air quality criteria to set primary and secondary NAAQS and periodically review them—which EPA is currently doing for Particulate Matter.⁵⁹⁰ In the Proposal, EPA cites *Am. Trucking Ass’ns v. EPA*, 283 F.3d 355, 358 (D.C. Cir. 2002) as an example of an instance where EPA relied on a scientific study where the underlying data was not publicly available. EPA states that under the Proposal use of such science would be “preclude[d]”.⁵⁹¹ In *Am. Trucking Ass’ns* the Court upheld EPA’s use of key studies underlying the NAAQS for PM. Under the Proposal, EPA would not have been permitted to use those studies, and it is unclear how the Proposal will affect EPA’s reliance on these studies as it undertakes its review. This demonstrates how this Proposal would have an immediate impact on EPA NAAQS-setting under the CAA. EPA is thus subject to the CAA 307(d) procedural requirements for this Proposal.

C. EPA Has Failed to Provide a Properly Developed Docket and Record as Required by the APA and CAA and Has Thereby Violated the Notice Requirements of these Statutes

EPA has failed to provide a properly developed record in support of the proposed rule. EPA has not identified sufficient supporting evidence in the Proposal or in its docket and has failed to provide adequate notice of the supporting evidence for the public to respond to

⁵⁹¹ 83 Fed. Reg. at 18,769 n. 3.

meaningfully, as the Administrative Procedure Act, the Clean Air Act, and other substantive statutes require.

Under the APA, agencies must base their actions on examination of the facts, “the agency must examine the relevant data and articulate a satisfactory explanation for its action including a ‘rational connection between the facts found and the choice made.’”⁵⁹² The factual determination underlying the agency decision must be based on substantial evidence and will be set aside “if the agency ‘relied on factors which Congress has not intended it to consider, entirely failed to consider an important aspect of the problem, offered an explanation for its decision that runs counter to the evidence before the agency, or is so implausible that it could not be ascribed to a difference in view or the product of agency expertise.’”⁵⁹³

Rulemaking under the Clean Air Act is subject to the same general requirements of statutory conformity and reasoned decision-making derived from the APA and basic principles of administrative law. Clean Air Act rules cannot be “arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law,” “in excess of statutory jurisdiction, authority, or limitations, or short of statutory right,” or “without observance of procedure required by law.”

As noted in Appendix A and below in Section VIII.D EPA’s citations for support in the Proposal are vague and uninformative, and even where the particular citation can be identified and located, it is often not clear how EPA thinks the citation supports the Proposal. This does not meet the standards of the APA and CAA.

Additionally, EPA has failed to meet the docket requirements of the CAA. CAA section 307(d)(3) requires that publication of the proposed rule in the Federal Register include a summary of the factual data on which the proposed rule is based, the methodology used in obtaining the data and in analyzing the data, and the major legal interpretations and policy consideration underlying the proposed rule. It also requires the agency to place “[a]ll data, information, and documents. . . on which the proposed rule relies” in the rulemaking docket on the date of publication of the proposed rule.⁵⁹⁴ The undifferentiated citation of articles and policies, most of which contradict the Proposal or otherwise offer no support for it, fails abjectly to satisfy these requirements.⁵⁹⁵ Any document that becomes available after the proposed rule

⁵⁹² *Motor Vehicle Mfrs. Ass’n v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 43–44, (1983).

⁵⁹³ *Cablevision Sys. Corp. v. FCC*, 597 F.3d 1306, 1310 (D.C. Cir. 2010).

⁵⁹⁴ CAA Section 307(d)(3).

⁵⁹⁵ See *Kennecott v. EPA*, 684 F.2d 1007, 1018 (D.C. Cir. 1982) (“Section 307(d)(3) requires that notice of proposed . . . regulations be accompanied by a statement of their basis and purpose, including the factual data on which the proposed regulations are based, the methodology used in obtaining and analyzing the data, and the major legal interpretations and policy considerations underlying the proposed regulations. . . . Though EPA states in its preamble to the final regulations that its current eligibility test is based upon a closure policy adopted by EPA before 1977, and that it has used financial tests similar to the present closure test under the agency’s existing policy, no documents embodying those tests or demonstrating the methodology used before 1977 were ever placed in the docket. The only document in the docket purporting to explain that a closure test was ever employed by EPA was a memorandum in which EPA economist Hale sets forth his recollection that such a test had been used before 1977 to determine whether smelters would be permitted to rely upon dispersion techniques to meet the ambient standards. That memo, dated August 17, 1979, was placed in the docket on March 12, 1980, approximately eleven months after

has been published and that is of central relevance to the rulemaking must also be placed in the docket as soon as possible after its availability.⁵⁹⁶ The agency must allow enough time for participants in the rulemaking to respond to those documents with comments.⁵⁹⁷

As of the date of the publication of the Proposal, the docket at regulations.gov contained only the following 12 documents: (1) OIRA Review Start Document (Apr. 17, 2018); (2) OIRA Review Conclusion Document (Apr. 23, 2018); (3) White House Memorandum on Scientific Integrity (Mar. 9, 2009); (4) *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by Federal Agencies*; Republication, 67 Fed. Reg. 8,452 (Feb. 22, 2002); (5) Exec. Order 13,777, *Enforcing the Regulatory Reform Agenda*, 82 Fed. Reg. 12,285 (Feb. 24, 2017); (6) EPA, *Plan to Increase Access to Results of EPA-Funded Scientific Research* (Nov. 29, 2016); (7) OMB Memorandum M-05-03 on Issuance of OMB's "Final Information Quality Bulletin for Peer Review" (Dec. 16, 2018); (8) EPA, *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by the Environmental Protection Agency* (Oct. 2002); (9) Exec. Order 13,563, *Improving Regulation and Regulatory Review*, 76 Fed. Reg. 3,821 (Jan. 18, 2011); (10) Exec. Order 16,093, *Promoting Energy Independence and Economic Growth*, 82 Fed. Reg. 16,093 (Mar. 28, 2017); (11) OMB Memorandum M-13-13: Open Data Policy-Managing Information as an Asset (May 9, 2013); (12) Commission on Evidence-Based Policymaking, *The Promise of Evidence-Based Policymaking* (Sep. 2017).

This clearly is not enough to meet the APA's or CAA's requirements. Aside from the drafts of the proposed rule submitted to OIRA, each of these documents was a pre-existing memorandum, policy document, or executive order that contains no specific analysis—factual, legal, policy or otherwise—that pertains to the impacts of or at all justifies *this* proposed rule. While EPA in the proposed rule cites to some of these documents as purportedly being consistent with these prior policies, *see, e.g.*, 83 Fed. Reg. at 18,769-70, as is discussed in Section II and in Appendix A, these policies do not in fact provide any basis for the Proposal. The record that EPA provides clearly fails to support its proposed action. Some of the factual data, legal interpretations, and policy considerations that EPA has not sufficiently provided evidence for include: the number of scientific studies that would be precluded from consideration under the Proposal; whether there are fields of research where the Proposal would result in insufficient scientific information available for EPA to meet its statutory duties; how EPA will address the substantial privacy concerns implicated by the Proposal; how application of this Proposal will impact substantive agency actions; what the costs of implementing this Proposal are if EPA intends to not just exclude studies from consideration where too costly to provide access, etc.

EPA, for instance, includes Executive Order 13,563 in the docket to support its statement that "[t]he best available science must serve as the foundation of EPA's regulatory actions."⁵⁹⁸ While Executive Order 13,563 makes that statement, it does not support EPA's Proposal, which

the close of the public comment period, and reveals neither the actual tests nor the methodology used by EPA. The failure of EPA to observe the procedures mandated by §§ 307(d)(3) and 307(d)(6) was thus arbitrary and capricious.")

⁵⁹⁶ CAA Section 307(d)(4).

⁵⁹⁷ *Sierra Club v. Costle*, 657 F.2d 298, 352 (D.C. Cir. 1981); *Union Oil Co. v. EPA*, 821 F.2d 678, 683 (D.C. Cir. 1987).

⁵⁹⁸ 83 Fed. Reg. at 18,769 n. 1.

as explained above, hinders EPA's use of the best available science. EPA provides no evidence or explanation in the docket or Proposal for why EPA believes this policy would further that goal. The executive order only states that agencies should make available to the public the scientific or technological *findings or conclusions* on which rules rely, as opposed to underlying raw data that EPA has targeted with this Proposal. Meanwhile, EPA blatantly violates the executive order's provisions requiring agencies to weigh costs and benefits; to write regulations that are easy to understand; and to provide the scientific and technical findings underlying the rule for the public to comment on.

Section 307(d)(3) of the CAA requires that "[a]ll data, information, and documents ... on which the proposed rule relies shall be included in the docket on the date of publication of the proposed rule." Many items that EPA cites to in the Proposal as providing a basis for the proposed rule do not appear in the docket. For example, EPA states: "The proposed rule takes into consideration the policies or recommendations of third party organizations who advocated for open science."⁵⁹⁹ In a footnote, EPA provides: "These include policies and recommendations from: The Administrative Conference of the United States' Science in the Administrative Process Project; National Academies' reports on *Improving Access to and Confidentiality of Research Data*, *Expanding Access to Research Data*, and *Access to Research Data in the 21st Century*; the Health Effects Institute; Center for Open Science; members of the Risk Assessment Specialty Section of the Society of Toxicology, the Dose Response Section of the Society for Risk Analysis, and the International Society for Regulatory Toxicology and Pharmacology; and the Bipartisan Policy Center's Science for Policy Project."⁶⁰⁰ Many of these policies and recommendations did not appear in the docket on the date of publication of the Proposal and still do not appear in the docket—a clear violation of the CAA—nor are the specific documents or reports even identified or properly cited so that they may be tracked down. This is evidently prejudicial to commenters—it undermines commenters ability to submit meaningful feedback when the agency is hiding the ball in this manner.

These policies and recommendations are not easily identifiable on their own either, even after significant internet research. This is also true of footnote 16, where EPA lists a number of agencies to support its claim that the federal government is already implementing solutions to data disclosure.⁶⁰¹ EPA cites, for example, the National Institute of Standards of Technology. NIST has numerous policy documents on protecting privacy concerns and keeping data secure as well as its own internal policies on releasing data. It is hard to see how any are relevant here, but without a particular cite the public is denied even a chance to respond to whatever EPA is trying to use as support—or must respond to *everything* that might be being referenced, creating a burdensome task. Throughout these comments, as we attempt to respond to EPA's Proposal, we have been very practically limited by our inability, even after much research and consideration, to be fully certain we have identified the appropriate policies to respond to. This presents a situation that the CAA's docket requirement was exactly formulated to prevent.

⁵⁹⁹ 83 Fed. Reg. at 18,770.

⁶⁰⁰ 83 Fed. Reg. at 18,770 n. 10.

⁶⁰¹ 83 Fed. Reg. at 18,770 n. 16.

On May 25, 2018, EPA added a memorandum to the docket for this rulemaking.⁶⁰² This memorandum contains hyperlinks apparently intended to accompany various citations in the footnotes of the Proposal. This document does not cure the former procedural defect, as the CAA requires information the proposed rule relies on to be placed in the docket on the day the proposed rule is published.⁶⁰³ Further, these hyperlinks still link ambiguously to various documents and agency websites without providing any information about what specifically EPA intends to cite or how the cited information is being used or considered by EPA. Additionally, simply adding such a document to the docket does not provide adequate notice to the public. Someone who had access only to the proposed rule and was not carefully monitoring the docket would have no indication or notice of this new document.

Either EPA is failing to comply with the CAA's requirements by failing to include in the docket factual data, legal interpretations, and policy considerations that support the Proposal, or these supporting items do not exist, deeming this rulemaking completely arbitrary—in either case the Proposal fails to meet the standards of the APA and CAA. Under the CAA the rulemaking docket “must provide the entire basis for the final rule and the exclusive record for judicial review,” this docket clearly cannot support a final rule.⁶⁰⁴

D. The Proposal is too Vague for Meaningful Comment.

Section 553 of the APA, 5 U.S.C. § 553(b)(3), requires that an agency proposing a rule “provide sufficient factual detail and rationale for the rule to permit interested parties to comment meaningfully.”⁶⁰⁵ The Clean Air Act requires even more, that the Federal Register notice be accompanied by a statement of basis and purpose that includes a summary of the factual data on which the proposed rule is based, the methodology used in obtaining the data and in analyzing the data; and the major legal interpretations and policy considerations underlying the proposed rule.⁶⁰⁶ As discussed above, all data, information, and documents on which the proposed rule relies must be included in the docket on the date of publication of the proposed rule.⁶⁰⁷

These core requirements are “designed (1) to ensure that agency regulations are tested via exposure to diverse public comment, (2) to ensure fairness to affected parties, and (3) to give affected parties an opportunity to develop evidence in the record to support their objections to the rule and thereby enhance the quality of judicial review.”⁶⁰⁸ In addition, “a chance to comment ... [enables] the agency [to] maintain[] a flexible and open-minded attitude towards its

own rules,”⁶⁰⁹ and “avoid[s] the inherently arbitrary nature of unpublished ad hoc determinations.”⁶¹⁰ The “notice required by the APA ... must disclose in detail the thinking that has animated the form of a proposed rule and the data upon which that rule is based [A]n agency proposing informal rulemaking has an obligation to make its views known to the public in a concrete and focused form so as to make criticism or formulation of alternatives possible.” *Home Box Office, Inc. v. FCC*, 567 F.2d 9, 35-36 (D.C. Cir. 1977); *see also Horsehead Res. Dev. Co., Inc. v. Browner*, 16 F.3d 1246, 1268 (D.C. Cir. 1994) (“[A]n agency must describe the range of alternatives being considered with reasonable specificity. Otherwise, interested parties will not know what to comment on, and notice will not lead to better-informed agency decision-making.”) (internal citations and quotation marks omitted).

The failure to include critical documents relevant to the proposed rule in the docket, as required by the Clean Air Act, itself constitutes a notice violation because “absence of those documents, or of comparable materials. . . makes impossible any meaningful comment on the merits of EPA’s assertions.”⁶¹¹ By failing to provide a more developed docket, EPA is frustrating the terms and purposes of these statute’s notice requirements. These procedures are in place to form a “specific” proposal that can serve as a “focus for comments,” *Small Refiner Lead Phase-Down Task Force v. EPA*, 705 F.2d 506, 548-49 (D.C. Cir. 1983); *see Home Box Office, Inc. v. FCC*, 567 F.2d 9, 36 (D.C. Cir. 1977) (agency must “make its views known . . . in a concrete and focused form so as to make criticism or formulation of alternatives possible”). Because EPA has not provided supporting evidence, has not included key items it points to as major considerations underlying the Proposal, and has generally presented a vague and unspecified proposed rule and docket, EDF and the public are hindered in our ability to provide specific comment focused on the underpinnings of the Proposal, because we do not know and can only guess as to what they are.⁶¹²

Even the text of EPA’s proposed rule and the statement of basis and purpose fails to provide the requisite notice to allow meaningful comment. At the most fundamental level, it contains vague and contradictory statements about the actual effect of the Proposal. The Proposal generally appears to make its requirements mandatory—i.e., failure to make information publicly available will preclude the agency from relying on the study at all. *See* 83 Fed. Reg. at 18,769 n. 3 (“EPA is proposing to exercise its discretionary authority to establish a policy that would preclude it from using such data in future regulatory actions.”); *id.* at 18,771 (“the regulatory text would impose requirements”); *see also id.* at 18,769 (“EPA *will* ensure that the data and models underlying the science is publicly available...”) (emphasis added) and proposed section 30.5 (“When promulgating significant regulatory actions, the Agency shall ensure that does response data and models underlying pivotal regulatory science are publicly available in a manner sufficient for independent validation”). In a few places, however, the Proposal makes it sound as if its aims are more aspirational. *See id.* at 18,770 (“Where *available and appropriate*, EPA will use peer-reviewed information, standardized test methods, consistent data evaluation procedures,

⁶⁰⁹ *McLouth Steel Prods. Corp. v. Thomas*, 838 F.2d 1317, 1325 (D.C. Cir. 1988) (internal citation and quotation marks omitted).

⁶¹⁰ *United States v. Reynolds*, 710 F.3d 498, 519-20 (3d Cir. 2013).

⁶¹¹ *Kennecott Corp. v. EPA*, 684 F.2d 1007, 1018 (D.C. Cir. 1982).

⁶¹² “Without a readily accessible statement of the agency’s rationale, interested parties [could not] comment meaningfully during the rulemaking process.” *Ne. Md. Waste Disposal Auth. v. EPA*, 358 F.3d 936, 949 (D.C. Cir. 2004).

and good laboratory practices to ensure transparent, understandable, and reproducible scientific assessments.”) (emphasis added); *id.* at 18,772 (“The proposed rule directs EPA to make *all reasonable efforts* to” make data publicly available, but “does not compel the Agency to make that information available where it concludes after all such reasonable efforts that doing so in way [sic] that complies with the law and appropriate protections is not possible.”) (emphasis added); *see also id.* at 18,768 (“EPA *should* ensure that the data underlying those are publicly available...”) (emphasis added). The difference between a *requirement precluding* use of science and making *all best efforts* to make data publicly available is enormous.

To the extent EPA intends to propose a rule that would *preclude* use of science, as it appears the Proposal would do, the proposed rule is further flawed because it contains no analysis of how that would affect regulations. How many studies does EPA typically rely on in promulgating regulations? What percentage of these would meet EPA’s new requirements? For those that do not, how many could not meet these requirements for patient privacy, confidential business information, or other reasons? How would EPA set standards if it must rely on many fewer studies? Would EPA be precautionary in the face of less evidence? Would EPA delay promulgating regulations in order to comply with this new mandate? How does this mandate interact with statutory deadlines or statutory requirements that EPA look at a wide range of science? None of these very basic questions are addressed in the proposed rule and without answering them, it is impossible for the public to assess the import and likely consequences of the Proposal. Even more basically, the agency gives no notice as to the Proposal’s impacts, its costs, its benefits, why it applies only to regulatory requirements but not to any regulatory actions (like licensing or permitting) that confer a benefit, substantive and procedural criteria for adjudicating waivers, or even the legal theory under which the Proposal issues—the plaintive solicitation for comment as to “additional or alternative sources” of authority, 83 Fed. Reg. at 18771, does not suffice.

To the extent the Proposal is intended to solicit comment on how EPA may make reasonable efforts to make data publicly available it is also unlawfully vague. The proposed rule includes numerous footnotes referencing entire websites or even Departments of the Executive Branch. For example, the Proposal claims that “EPA believes that concerns about access to confidential or private information can, in many cases, be addressed through the application of solutions commonly used across some parts of the Federal government.”⁶¹³ To support this proposition, EPA remarkably cites (without any further elaboration or explanation in the proposal itself) to “examples from the U.S. Department of Health and Human Services, National Institute of Standards and Technology, U.S. Department of Education, and the U.S. Census Bureau.”⁶¹⁴ *See Small Lead Refiner Phase Down*, 705 F. 2d at 548 (requirement that comments are to raise issues with “reasonable specificity” applies equally to the agency giving notice). For example, it is not possible to identify whether the sources referenced support EPA’s claim that there are approaches available to address the serious privacy issues raised by the Proposal—without providing the specific policies and recommendations, a public commenter has no way of knowing whether they are consistent or why EPA believes them to be consistent. It is impossible to respond in a meaningful way without significant guesswork.

⁶¹³ Proposed Rule, 83 Fed. Reg. at 18,770.

⁶¹⁴ *Id.* at 18,770 n. 16.

Similarly, in footnote 10, where EPA lists a number of organizations whose “policies and recommendations” the Proposal allegedly took under consideration—no explanation is provided.⁶¹⁵ In addition, in the proposed rule EPA fails to adequately define key terms like “validation”, “independence”, “reproducibility”, “replication,” and “uncertainty,” while also citing a “replication crisis” in science. It is important that these terms are defined clearly as these terms are not defined consistently across the scientific community nor governments—which has implications for the scope and purview of the proposed rule.

This amount of information is wholly insufficient to allow a public commenter to provide meaningful comments about these issues.

Courts have been reluctant to find that important information appearing solely in the footnote of a rulemaking document satisfied the notice requirement of the APA, holding that “an agency may not turn the provision of notice into a bureaucratic game of hide and seek.”⁶¹⁶ Referencing a key document without further discussion in the rulemaking document itself, and without incorporating it by reference or publishing it in the Federal Register, also does not satisfy the notice requirements of the APA.⁶¹⁷ Subsequent publication of the document may not be enough to cure a defect of notice where an important issue is “belied by the obscurity of the footnote intended to give notice” and further agency procedure is required to provide the public with “the opportunity to comment on a significant part of the agency’s decisionmaking process as required by section 553.”⁶¹⁸ Thus, the undifferentiated citations in the footnotes of the Proposal do not give adequate notice for public comment.⁶¹⁹

E. EPA Must Comply With Other Requirements of the Clean Air Act

As discussed above, the Proposal impacts EPA’s process for setting NAAQs in material ways by amending the scientific information that can be used as air quality criteria. Under the CAA air quality criteria cannot be amended without review by the Clean Air Science Advisory Committee (CASAC).⁶²⁰ Thus, EPA must submit this proposal to CASAC for review, consider

⁶²⁰ CAA § 109(d)(2)(B).

their recommendations, and provide reasonable explanation for deviation from those recommendations.⁶²¹

F. EPA Failed to Submit the Proposal to the SAB or to Consult with the Scientific and Technical Community

There is no indication that EPA consulted with the scientific and technical community—or even its own Science Advisory Board—before proposing to require that the underlying data and models be made publicly available for all pivotal regulatory science regardless of ethical, feasibility, or confidentiality constraints. As detailed in a June 28, 2018 letter from the chair of the SAB, the SAB learned of the rule only through a press event, federal register notice, and news articles.⁶²² The letter further explained that the proposed rule “was not identified as a major action in either of the Spring 2017 or Fall 2017 semi-annual Regulatory Agendas,” and that SAB members “had no information regarding the timeline for finalizing the rule”⁶²³ The letter also points out that “the precise design of the proposed rule appears to have been developed without a public process for soliciting input specifically from the scientific community,” even though the proposed rule raises important scientific questions.⁶²⁴

Not surprisingly, the SAB concluded in its May 31, 2018 meeting that the Proposal merits SAB review because it “deals with issues of scientific practice and proposes constraints to the use of scientific studies in particular contexts.”⁶²⁵ Moreover, the SAB chair’s June 28 letter raises a number of questions that echo the concerns we have detailed in our comments, including the feasibility of providing access to data and methods for already-completed studies; “legitimate confidentiality and privacy interests” that would counsel against providing “complete public access”; the costs and effort associated with implementing the Proposal; the relationship between the Proposal and previous EPA efforts to encourage transparency; and the need to consider “the multiple existing methods to assess the validity of prior epidemiologic studies” that “do not provide public access to data and analytic methods.”⁶²⁶

EPA’s failure to consult with the SAB is contrary to statute and to EPA’s well-established practice. EPA must submit its Proposal to the SAB pursuant to the requirements of 42 U.S.C. § 4365(c)(1) (the Environmental Research Development Demonstration Authorization Act or “ERDAA”), which requires the Administrator to submit to the SAB any proposed criteria document, standard, limitation, or regulation, together with relevant scientific and technical information in the possession of the (EPA) on which the proposed action is based at the time it provides that proposal to another agency of the government for formal review. The SAB must

⁶²³ *Id.*

⁶²⁴ *Id.*

⁶²⁵ *Id.*

⁶²⁶ *Id.*

then review and comment on the proposal.⁶²⁷ While the Administrator need not receive the SAB's final approval, the Administrator must consider the SAB's advice and comments.⁶²⁸

As the SAB chair's letter notes, EPA's "usual process" is to inform the SAB about the publication of the agency's semi-annual regulatory agenda and provide descriptions of actions that are contained in the agenda, including "available information regarding the science that is informing these agency actions."⁶²⁹ That procedure was not followed here. In its evident zeal in the name of purported "transparency," EPA has ignored major statutory and regulatory requirements that provide *actual* transparency to the Clean Air Act's scientific review process.⁶³⁰ Should EPA decide to move forward with this Proposal, it must first allow the SAB to complete its review and take into account the SAB's recommendations in any final rule.

G. EPA's Proposal Fails to Meet the Procedural Requirements of FIFRA

The Proposal lists FIFRA section 25 as an authority for the rulemaking.⁶³¹ The agency, however, has already failed to follow several required procedures for issuing a valid regulation under this section of FIFRA. FIFRA section 25 requires the agency to seek comments from the Secretary of Agriculture on all draft proposed regulations 60 days prior to signing a proposed regulation for publication,⁶³² and 30 days prior to publication for a final rule. If the Secretary of Agriculture provides comments, the Administrator must also respond in writing as part of the proposed rulemaking package.⁶³³ FIFRA additionally requires EPA to publish a notice in the Federal Register simultaneously with the transmission of the proposed rule to USDA.⁶³⁴ And the statute requires the agency to submit a copy of the proposed rule for comment to the Scientific Advisory Panel ("SAP"),⁶³⁵ as well as a copy to the Agriculture Committees in the House and Senate *any time* the agency is required to consult with the Secretary of Agriculture.⁶³⁶ This means that EPA here should have provided both committees and the SAP with a copy of the proposed regulation at least 60 days prior to publication of the Proposal in the Federal Register.

⁶³³ 7 U.S.C. 136w(a)(2)(B).

⁶³⁴ 7 U.S.C. 136w(a)(2)(D).

⁶³⁵ 7 U.S.C. 136w(d)(1).

⁶³⁶ 7 U.S.C. 136w(a)(3).

The agency did not comply with any of these requirements, and does not indicate that it will in any final rule. The Proposal is therefore unlawful.⁶³⁷

To be sure, in some instances the Administrator and Secretary may together agree to waive some of the consultation requirements among themselves,⁶³⁸ but there is no indication that Administrator Pruitt did that with this Proposal. And even if the Administrator and Secretary later agree to waive the consultation requirement section 25(a)(2)(A) and (B), that waiver would not alter EPA's obligation to provide the SAP and the House and Senate Committees with a copy of the regulation. Nor would it change the fact that the Administrator illegally issued the Proposal without consulting the Secretary of Agriculture. A very serious consequence of these procedural mistakes is to deprive the agency of a full understanding of how the proposed rulemaking might affect the regulation of pesticides and thereby affect agriculture, human health, and the environment.⁶³⁹ Therefore, the only lawful path forward here is for the Agency to withdraw the Proposal, consult with the entities required by FIFRA, and then subsequently re-notice the Proposal.

H. EPA's Proposal Fails to Meet the Procedural Requirements of the Safe Drinking Water Act, 42 U.S.C. § 300f Et Seq.

EPA cites the Safe Drinking Water Act as an authority for the Proposal, but has failed to comply with the procedural requirements of the statute. The SDWA provides authority to promulgate regulations at 42 U.S.C. 300g-1(d). Though EPA does not cite this particular section, it is the only provision of the SDWA that provides EPA with rulemaking authority. The SDWA requires the Administrator to consult with the Secretary of Health and Human Services and the National Drinking Water Advisory Council in proposing and promulgating regulations under this section. EPA has not met these requirements here, and as such cannot claim to be using SDWA authority to promulgate this rule.

I. EPA Unlawfully Failed to Consult with Other Agencies as Required by TSCA.

When promulgating the Proposal, EPA unlawfully failed to consult with other entities as required by TSCA. For example, consider the sole statutory authority EPA cites under TSCA—§ 10.

To the extent EPA acts under TSCA § 10, TSCA § 10 repeatedly directs EPA to consult, cooperate, and/or coordinate with the Secretary of Health and Human Services, and sometimes other agencies as well.⁶⁴⁰ EPA has not identified any specific provision of TSCA § 10 that authorizes the proposed rule, and as noted above, no provision does. But if EPA acts under TSCA § 10, then EPA needs to comply with the requirements of whichever provision EPA

⁶³⁷ If finalized, the proposal will also have to be transmitted to the Secretary of the Senate and Clerk of the House of Representatives. See 7 U.S.C. 136w(a)(4). The rule does not become effective until 60 days after this rule or regulation is transmitted.

⁶³⁸ 7 U.S.C. 136w(a)(2)(C).

⁶³⁹ See also, Section II.D.8.

⁶⁴⁰ 15 U.S.C. § 2609(a), (b)(2)(A), (b)(2)(B), (c), (d), (e), (g).

considers relevant. Most of the provisions of TSCA § 10 expressly require that EPA consult, coordinate, or cooperate with, at least, the Secretary of Health and Human Services (section 10(a), 10(b)(2)(A), 10(b)(2)(B), 10(c), 10(d), 10(e), 10(g)). For example, the provision that mentions “research and development results” states that EPA shall act “in consultation with the Secretary of Health and Human Services and other heads of appropriate departments and agencies.”⁶⁴¹ EPA does not appear to have complied with any of the procedural requirements of TSCA § 10.

J. EPA Has Failed to Consult with the Science Advisory Committee on Chemicals

As discussed above, this proposed rule has severe implications for the implementation of TSCA. The Science Advisory Committee on Chemicals’ purpose is “to provide independent advice and expert consultation, at the request of the Administrator, with respect to the scientific and technical aspects of issues relating to the implementation of this subchapter.”⁶⁴² This rulemaking specifically involves “the scientific and technical aspects of issues relating to the implementation of [this Act],” yet there is no indication that the Administrator has consulted with the committee.⁶⁴³ Congress specifically created this Committee to consult on these types of issues, and thus EPA is abusing its discretion to not consult with this Committee about a proposal that will so radically affect the scientific and technical aspects of issues relating to the implementation of TSCA.

K. EPA Has Failed to Provide Documents in Response to EDF’s FOIA Requests

EDF currently has two Freedom of Information Act Requests directly related to the substance of this rulemaking pending at EPA, for which we have received *no* responsive documents thus far, despite the passage of the statutory deadlines for a response. The first request (No. EPA-HQ-2018-005636) was submitted on March 20, with a determination from EPA statutorily due by April 19—which has not been provided. EDF submitted a second request (No. EPA-HQ-2018-007397) on May 4. Given the lack of transparency and information around the basis for this rule, its impacts, and its true motivations, EDF and the public cannot provide informed comment on this rule without the public records that have been requested. For EPA to close the public comment period on this Proposal before all relevant records are released to the public is arbitrary and prevents our ability to meaningfully comment.

L. The OIRA Review Process for the Proposal Was Too Rushed to be Meaningful and EPA Has Not Sufficiently Coordinated with Other Federal Agencies

EPA did not provide enough time for the Office of Information and Regulatory Affairs (“OIRA”) to meaningfully review the Proposal. Executive Order 12,866 requires agencies to

⁶⁴¹ 15 U.S.C. § 2609(g).

⁶⁴² 15 U.S.C. § 2625(o)(2).

⁶⁴³ 15 U.S.C. § 2625(o)(2).

submit all significant regulatory actions to OIRA.⁶⁴⁴ This submission must contain “an assessment of the potential costs and benefits of the regulatory action” in addition to other analyses.⁶⁴⁵ Executive Order 12,866 provides OIRA 90 days to review and return the draft regulatory action to the agency.⁶⁴⁶ As indicated above, the Proposal gives scant consideration to the costs of the proposed action. The April 17, 2018 draft sent to OIRA for review contained *no* mention of cost and benefits of the Proposal at all.⁶⁴⁷ It appears that OMB drafted the two paragraphs on costs that appear in the Proposal as published in the federal register.⁶⁴⁸

EPA transmitted the Proposal to OIRA on April 19, and OIRA’s website indicates that its review concluded on April 23.⁶⁴⁹ This is not nearly sufficient time for White House review of this far-reaching Proposal that raises important inter-agency issues. Further, media outlets report that there were discrepancies in the date when OIRA concluded its review of the proposed rule, suggesting that the date was backdated from April 25 to April 23 only after Administrator Pruitt signed the proposed rule on April 24.⁶⁵⁰ The public record also shows OIRA convened no Executive Order 12,866 meetings in regards to this rule. EDF requested such a meeting on the morning of April 24; our request was not granted, even though the Proposal was still listed as under OIRA review.

The rushed process is particularly concerning given the proposed rule’s complex cross-agency impacts. A letter from a group of Democratic senators to OIRA raising these concerns highlighted that, on average, OIRA review of EPA rules takes 55 days.⁶⁵¹ Given how bare-bones EPA’s proposed rule was, lacking many of the elements required by Executive Order 12,866, it seems that OIRA should have required even more time to review the Proposal. Because this rule affects EPA’s regulatory actions across program areas and statutes and interacts with the work of other agencies, as discussed more in Section II.D.8, adequate OIRA review was required to ensure consistency across the federal government. Certain other agencies base their standards on standards set by EPA. For example, FDA and EPA work together to promulgate advice on fish consumption, based on the reference dose calculated by EPA. The Proposal could thus have an impact on FDA’s ability to promulgate advice on fish consumption sufficient to protect human health.⁶⁵² Thus, EPA’s disregard of scientific evidence as it sets these standards will directly impact the sufficiency of standards set by these agencies.

⁶⁵² FDA, *Technical Information on Development of Fish Consumption Advice - FDA/EPA Advice on What Pregnant Women and Parents Should Know about Eating Fish*,

As noted above, EPA failed to consult with other federal agencies before proposing this rule. EPA also violated its own data access plan, which says EPA “will consider how, when, and whether to apply the EPA policy to research that is subject to public access policies from other agencies” as it recognizes that “duplicative or conflicting requirements might result when research is subject to public access policies from multiple federal agencies”.⁶⁵³ There is no evidence that EPA considered these issues or that EPA followed its own policy to “coordinate with other agencies and the private sector” as it implements new data access policies.⁶⁵⁴

The usual procedures appear to have been set aside for this proposed rule, and EPA has provided no explanation for why shortened review procedures were necessary. It was initially reported that this Proposal was categorized as a “tier 3” measure, subject to the lowest amount of scrutiny in EPA’s own internal review process, and developed largely by political appointees with no input from career staff, despite having characteristics of a “tier 1” measure, subject to the highest level of scrutiny.⁶⁵⁵ These characteristics include being precedent-setting; controversial; having cross-Agency, cross-media, and inter-agency impacts and controversies; and raising external interest, all of which are present here. Though the agency appears to have now raised it to “tier 1” status, the Proposal that is now available for public comment was subject only to these initial hasty procedures, calling into question its validity.⁶⁵⁶

EPA must withdraw the Proposal and release it only under the full, proper procedures.

Appendix A. Analysis of Sources Cited to in the Proposal

This appendix provides an analysis of the sources EPA cites in the proposed rule, showing ultimately that EPA has provided no sources or authorities that support or provide a reasoned basis for the proposed rule and that many of the sources raise key implementation concerns that EPA fails at all to address—rendering the proposal arbitrary and capricious.

Footnote 1: See Exec. Order No. 13563, 76 Fed. Reg. 3821 (Jan. 21, 2011). “Our regulatory system must protect public health, welfare, safety, and our environment while promoting economic growth, innovation, competitiveness, and job creation. It must be based on the best available science.”

Exec. Order No. 13563 requires agencies to utilize the “best available science” in regulatory actions.⁶⁵⁷ This requirement is further encoded in numerous statutes and policies that EPA implements. EPA states in the proposed rule that: “The best available science must serve as the foundation of EPA’s regulatory actions.”⁶⁵⁸ However, as the comments raise more thoroughly, by arbitrarily restricting the scientific studies EPA will consider, this proposed rule will *hinder* EPA’s use of the best available science and therefore violates the command of Exec. Order No. 13563 and other versions of these requirements.

Furthermore, this executive order requires agencies to “ensure the objectivity of any scientific and technological information and processes used to support the agency’s regulatory actions” consistent with the President’s Memorandum for the Heads of Executive Departments and Agencies, “Scientific Integrity” (March 9, 2009). As the comments note, however, the proposed rule along with the provision allowing the Administrator to grant discretionary exemptions will harm the objectivity of scientific and technological information and processes at EPA by paving the way for politics, rather than objective scientific criteria, to dictate which scientific studies are considered.

Footnote 2: See Memorandum for the Heads of Executive Department[sic] and Agencies on Scientific Integrity (Mar. 9, 2009). “If scientific and technological information is developed and used by the Federal Government, it should ordinarily be made available to the public. To the extent permitted by law, there should be transparency in the preparation, identification, and use of scientific and technological information in policymaking.”

EPA claims about the proposal that “[b]y better informing the public, the Agency in[sic] enhancing the public’s ability to understand and meaningfully participate in the regulatory process.” EPA then cites to the Memorandum for the Heads of Executive Departments and Agencies on Scientific Integrity.⁶⁵⁹ Not only does the proposal conflict with this memorandum, but it will make it more difficult for the public to meaningfully participate in the regulatory process.

⁶⁵⁷ Exec. Order No. 13563, 76 Fed. Reg. 3821 (Jan. 21, 2011).

⁶⁵⁸ 83 Fed. Reg. at 18,769.

⁶⁵⁹ 83 Fed. Reg. at 18,769 n. 2.

The memorandum sets out a number of actions for agencies to take to ensure scientific integrity.⁶⁶⁰ Just *one* of these factors involves making scientific and technological information publicly available, notably specifying, “*Except for information that is properly restricted from disclosure* under procedures established in accordance with statute, regulation, Executive Order, or Presidential Memorandum, each agency should make available to the public the scientific or technological *findings or conclusions* considered or relied on in policy decisions.”⁶⁶¹ The memorandum thus supports only making scientific findings and conclusions publicly available, not the data underlying those findings and conclusions. Further, it correctly notes that some information is properly restricted from disclosure. It does not say that the inability to disclose such information should prevent it from being considered by agencies. The memorandum thus provides *no* support for the notion that agencies should be barred from relying on studies where the underlying data cannot be disclosed. The memorandum’s narrow approach to public disclosure should not be taken to support EPA’s proposal but rather counsels against the proposal’s mandate that all underlying data be made publicly available.

EPA’s proposal fundamentally conflicts with the heart of the memorandum—that “[t]he public must be able to trust the science and scientific process informing public policy decisions.”⁶⁶² To earn this trust, the memorandum declares: “Political officials should not suppress or alter scientific or technological findings and conclusions.”⁶⁶³ By discarding scientific studies where underlying data cannot be made publicly available, this proposal will result in scientific findings being suppressed. By allowing the Administrator to grant exemptions to this policy based on their discretion with no public record or explanation, the proposal allows for the Administrator to pick and choose based on their preference the science informing the agency’s actions, eroding the public’s trust in the science informing public policy decisions.

The memorandum provides a number of ways in which agencies can ensure scientific integrity which the proposal does not consider including: hiring candidates for science and technology position based on their “knowledge, credentials, experience, and integrity,” having in place appropriate rules and procedures to ensure integrity of the scientific process, establishing scientific processes such as peer review and accurately reflecting scientific and technological information, establishing procedures to identify when scientific integrity may be compromised, including establishing whistleblower protections.⁶⁶⁴ EPA does not explain why any of these pathways would not serve as a better means of ensuring scientific integrity.

Footnote 3: EPA has the authority to establish policies governing its reliance on science in the administration of its regulatory functions. Historically, EPA has not consistently observed the policies underlying this proposal, and courts have at times upheld EPA’s use

⁶⁶³ Memorandum for the Heads of Executive Departments and Agencies on Scientific Integrity (Mar. 9, 2009), 74 Fed. Reg. 10671 (Mar. 11, 2009).

⁶⁶⁴ Memorandum for the Heads of Executive Departments and Agencies on Scientific Integrity (Mar. 9, 2009), 74 Fed. Reg. 10671 (Mar. 11, 2009).

non-public data in support of its regulatory actions. See *Coalition of Battery Recyclers Ass’n v. EPA*, 604 F.3d 613, 623 (D.C. Cir. 2010); *American Trucking Ass’ns v. EPA*, 283 F.3d 355, 372 (D.C. Cir. 2002). EPA is proposing to exercise its discretionary authority to establish a policy that would preclude it from using such data in future regulatory actions.

In footnote 3 of the proposal, EPA notes that “courts have at times upheld EPA’s use [sic] non-public data in support of its regulatory actions” and cites to *Coalition of Battery Recyclers Ass’n v. EPA*, 604 F.3d 613, 623 (D.C. Cir. 2010) and *American Trucking Ass’ns v. EPA*, 283 F.3d 355, 372 (D.C. Cir. 2002).⁶⁶⁵ These cases indeed held that EPA’s prior, long-standing position of relying on scientific studies even when the underlying data could not be made publicly available was reasonable. It is well-established that agencies must acknowledge changes in position and “show that there are good reasons for the new policy.”⁶⁶⁶ This footnote, the only mention of EPA’s previous policy, does not sufficiently acknowledge or explain why EPA is now changing its position.

In *American Trucking Ass’ns v. EPA* the Court held that the Clean Air Act did not require EPA to make public underlying data where EPA relied on the study itself and not the raw data underlying the study.⁶⁶⁷ The Court stated that such a requirement “would be impractical and unnecessary.”⁶⁶⁸ They agreed with EPA’s then statement that:

If EPA and other governmental agencies could not rely on published studies without conducting an independent analysis of the enormous volume of raw data underlying them, then much plainly relevant scientific information would become unavailable to EPA for use in setting standards to protect public health and the environment.... Such data are often the property of scientific investigators and are often not readily available because of ... proprietary interests ... or because of [confidentiality] arrangements [with study participants].⁶⁶⁹

In *Coalition of Battery Recyclers Ass’n v. EPA*, the Court cited *American Trucking Ass’ns v. EPA* and held, again, that EPA was permitted to rely on studies without making the underlying data public.⁶⁷⁰ They noted, “raw data often is unavailable due to proprietary interests of a study’s scientific investigators or confidentiality agreements with study participants.”⁶⁷¹ These court cases thus not only upheld EPA’s prior practice as permissible, but went on to agree that EPA’s prior practice was preferable and necessary in light of these other policy concerns.

EPA provides no response to this history, saying only: “Historically, EPA has not consistently observed the policies underlying this proposal. . . .”⁶⁷² EPA fails explicitly to

⁶⁶⁵ 83 Fed. Reg. at 18, 769.

recognize that this proposal changes its past policy and provides no justification in light of the compelling opposing points that both EPA and the Courts previously recognized as deterring this approach.

Footnote 4: Exec. Order No. 13777, 82 Fed. Reg. 12285 (Mar. 1, 2017). Regulatory reform efforts shall attempt to identify “those regulations that rely in whole or in part on data, information, or methods that are not publicly available or that are insufficiently transparent to meet the standard for reproducibility.”

EPA claims that the proposal is consistent with Exec. Order No. 13777.⁶⁷³ This executive order provides no support for the proposal, and in fact is targeted at eliminating regulations including those that are “unnecessary” and “ineffective,” which, as our comments detail, the proposal clearly would be.⁶⁷⁴

This executive order creates a Regulatory Reform Task Force and calls for them to identify for repeal, replacement, or modification regulations that among other criteria are inconsistent with the requirements of section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516 note), or the guidance issued pursuant to that provision, in particular those regulations that rely in whole or in part on data, information, or methods that are not publicly available or that are insufficiently transparent to meet the standard for reproducibility.⁶⁷⁵

As described in detail in our comments and below, contrary to the inference drawn here in Exec. Order No. 13777, the Data Quality Act and OMB’s guidelines issued pursuant to it *do not* require research data and models to be made publicly available for reproducibility purposes in order for agencies to rely on the scientific findings and conclusions produced using that data.

Executive orders cannot override the statutory requirements that EPA use the best available science or the laws governing administrative procedure including the APA. The proposal’s “consistency” with this executive order then cannot serve as a legal basis for EPA to adopt an arbitrary and capricious policy that contravenes these best available science requirements reflected in the statutes EPA administers.

Additionally, Exec. Order No. 13777 by its terms requires only the identification of regulations that rely in whole or in part on data not publicly available, it says nothing about precluding agencies from relying on such studies and does not and cannot require agencies to adopt such practices. However, if the proposed rule is to be “consistent” with the executive order then it must also follow section 3(e):

In performing the evaluation described in subsection (d) of this section, each Regulatory Reform Task Force shall seek input and other assistance, as permitted by law, from entities significantly affected by Federal regulations, including State, local, and tribal

⁶⁷³ 83 Fed. Reg. at 18, 769.

⁶⁷⁵ Exec. Order No. 13777, 82 Fed. Reg. 12285, 12286 (Mar. 1, 2017).

governments, small businesses, consumers, non-governmental organizations, and trade associations.⁶⁷⁶

There is no evidence that EPA consulted with the many stakeholders impacted by this policy, including the medical or scientific research communities, which have been largely opposed to this policy.

Footnote 5: Exec. Order No. 13783, 82 Fed. Reg. 16093 (Mar. 31, 2017). “It is also the policy of the United States that necessary and appropriate environmental regulations comply with the law, are of greater benefit than cost, when permissible, achieve environmental improvements for the American people, and are developed through transparent processes that employ the best available peer-reviewed science and economics.”

EPA claims the proposal is consistent with Exec. Order No. 13783.⁶⁷⁷ However, Exec. Order No. 13783 calls for agencies to consider salient information that the proposal has patently ignored. Exec. Order No. 13783 calls for agencies to consider the costs and benefits “that are based on the best available science and economics” to ensure sound regulatory decision-making.⁶⁷⁸ The proposal provides no analysis of the costs and benefits of implementing this new policy, despite there likely being high costs to making research data public with little evidence of significant benefits achieved from this policy alone.

Further, by arbitrarily excluding scientific information that EPA may use in its regulatory analyses, the proposal conflicts with the executive order’s command to employ the best available science and economics.⁶⁷⁹

Footnote 6: February 22, 2002 (67 F.R 8453) OMB’s Guidelines Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information (2002)
<https://www.federalregister.gov/documents/2002/02/22/R2-59/guidelines-for-ensuring-and-maximizing-the-quality-objectivity-utility-and-integrity-of-information>.

EPA wrongly claims that the proposal is “consistent with. . . the focus on transparency in OMB’s *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility and Integrity of Information Disseminated by Federal Agencies*.”⁶⁸⁰ To say that OMB’s Guidelines have a “focus on transparency” that is furthered by EPA’s proposal is a gross oversimplification. EPA here appears to suggest that transparency is the highest objective to be achieved, divorced from any consideration of whether transparency hinders or furthers any other goals. The OMB Guidelines, while imposing high standards of quality, objectivity, utility, and integrity of information disseminated by Federal Agencies, recognize the need to implement controls “flexibly, and in a

⁶⁷⁶ Exec. Order No. 13777, 82 Fed. Reg. 12285, 12286 (Mar. 1, 2017).

⁶⁷⁷ 83 Fed. Reg. at 18,769.

⁶⁷⁸ Exec. Order No. 13783, 82 Fed. Reg. 16093, 16095 (Mar. 31, 2017).

⁶⁷⁹ Exec. Order No. 13783, 82 Fed. Reg. 16093 (Mar. 31, 2017).

⁶⁸⁰ 83 Fed. Reg. at 18,769-70.

manner appropriate to the nature. . . of the information to be disseminated.”⁶⁸¹ They suggest thinking about transparency strategically to further the aims of good government, unlike the proposal, which conflates transparency and quality without consideration of other factors.

As part of ensuring “objectivity” of information these guidelines encourage agencies which disseminate influential scientific, financial, or statistical information, “to include a high degree of transparency about data and methods to facilitate the reproducibility of such information by qualified third parties.”⁶⁸² However, they emphasize the need to treat certain data differently, due to privacy and confidentiality concerns.⁶⁸³ While they recommend agencies “identify the sources of the disseminated information” they note that this is “to the extent possible, consistent with confidentiality protections.”⁶⁸⁴ Importantly, they take great pains to urge agencies *not* to subject all data to a reproducibility requirement where this could hamper agencies.⁶⁸⁵ They require agencies, instead, to consult with “the relevant scientific and technical communities” to identify data that “can practicable [sic] be subjected to a reproducibility requirement, given ethical, feasibility, or confidentiality constraints.”⁶⁸⁶ There is no indication that EPA consulted with the scientific and technical community, with EPA’s own Science Advisory Board raising concerns about the proposal and finding that “[t]his action merits further review by the SAB.”⁶⁸⁷ The Guidelines make clear:

Making the data and methods publicly available will assist in determining whether analytic results are reproducible. However, the objectivity standard does not override other compelling interests such as privacy, trade secrets, intellectual property, and other confidentiality protections.⁶⁸⁸

In direct conflict with the reasoning underlying EPA’s proposal, the Guidelines specifically provide that it is possible to verify the objectivity of information that cannot be made publicly available through other types of “robustness checks.”⁶⁸⁹ As an example, they point to the Harvard Six Cities Study, where underlying data could not be made publicly available due to confidentiality concerns, but the raw data was released instead to researchers at the Health Effects Institute, bound to the same confidentiality requirements as the original researchers, who were able to replicate its results.⁶⁹⁰ In contrast, EPA’s proposal would not allow for the consideration of this study.⁶⁹¹

⁶⁸¹ OMB’s *Guidelines Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information*, 67 Fed. Reg. 8452, 8453 (Feb. 22, 2002).

⁶⁸³ *Id.*

⁶⁸⁴ 67 Fed. Reg. 8452, 8459.

⁶⁸⁵ 67 Fed. Reg. 8452, 8460 (“With regard to original and supporting data related thereto, agency guidelines shall not require that all disseminated data be subjected to a reproducibility requirement.”)

⁶⁸⁶ *Id.*

⁶⁸⁷ Memorandum from SAB Work Group on EPA Planned Actions for SAB Consideration of the Underlying Science (May 12, 2018).

⁶⁸⁸ 67 Fed. Reg. 8452, 8460.

⁶⁸⁹ *Id.*

⁶⁹⁰ 67 Fed. Reg. 8452, 8456.

⁶⁹¹ 83 Fed. Reg. at 18769 n. 3 (citing to a case challenging EPA’s reliance on this study and saying the rule “would preclude it from using such data in future regulatory actions.”)

The guidelines also recommend agencies recognize that information quality comes at a cost, and that agencies should weigh the costs and benefits, which EPA has not done in the proposal.⁶⁹²

Thus, the proposal completely turns away from OMB's guidelines where OMB "urges caution in the treatment of original and supporting data because it may often be impractical or even impermissible or unethical to apply the reproducibility standard to such data."⁶⁹³ As the comments discuss further, the proposal rule thus unlawfully conflicts with this flexible approach that prioritizes agencies' ability to use science as set out by OMB under the Information Quality Act.

Footnote 7: Memorandum for the Heads of Executive Departments and Agencies on Open Data Policy—Managing Information as an Asset (<https://project-open-data.cio.gov/policy-memo/>). "Specifically, this Memorandum requires agencies to collect or create information in a way that supports downstream information processing and dissemination activities. This includes using machine-readable and open formats, data standards, and common core and extensible metadata for all new information creation and collection efforts. It also includes agencies ensuring information stewardship through the use of open licenses and review of information for privacy, confidentiality, security, or other restrictions to release."

EPA claims the proposal is consistent with OMB's memorandum on Open Data Policy.⁶⁹⁴ This is incorrect, however, as the memorandum supports downstream information processing and dissemination—not through complete public disclosure without regard to privacy or security—but through instituting a framework of data collection, formatting, and storage that allows for public dissemination, *if possible*.⁶⁹⁵ Recognizing that not all data can be publicly disclosed, and that such data is still useful, the memorandum declares: "Whether or not particular information can be made public, agencies can apply this framework to all information resources to promote efficiency and produce value."⁶⁹⁶

The proposal is thus inconsistent with the memorandum, which stresses the importance of information stewardship and "review of information for privacy, confidentiality, security, or other restrictions to release."⁶⁹⁷ When information cannot be released, the memorandum does not suggest agencies ignore the information or not rely on it for regulatory purposes. It focuses on prescribing agency practices to maximize the downstream usability of data that *can* be made publicly available, including through "using machine-readable and open formats, data standards, and common core and extensible metadata for all new information creation and collection efforts"⁶⁹⁸ as well as "building or modernizing information systems in a way that maximizes interoperability and information accessibility, maintains internal and external data asset

inventories, enhances information safeguards, and clarifies information management responsibilities.”⁶⁹⁹ Thus, while the memorandum centers on how agencies can marginally increase the utility of information they possess for use by the public, the proposal turns this on its head by advocating for discard of otherwise high quality scientific information if the data underlying such information cannot be made publicly available.

OMB stresses that to achieve “open data,” agencies should adopt a presumption in favor of openness that is importantly limited by countervailing privacy, confidentiality, security, or other valid restrictions.⁷⁰⁰ Thus, agencies are expected to “exercise judgment before publicly distributing data residing in an existing system by weighing the value of openness against the cost of making those data public.”⁷⁰¹ The proposal does not at all weigh the costs, to the agency or to the public, of requiring all underlying data to be made publicly available.

While requiring agencies to adopt measures to strengthen privacy protections and data security, the memorandum recognizes serious limitation to data disclosure that EPA completely fails to consider. For example, the memorandum mandates that agencies take into consideration the “mosaic effect,”⁷⁰² which EPA does not at all acknowledge—all while making superficial and unsupported statements about how privacy concerns can be easily addressed.⁷⁰³ The memorandum recognizes and stresses the challenge of responding to this threat, which requires undertaking a “risk-based analysis, often utilizing statistical methods whose parameters can change over time, depending on the nature of the information, the availability of other information, and the technology in place that could facilitate the process of identification.”⁷⁰⁴ OMB importantly notes this analysis “may affect the amount, type, form, and detail of data released by agencies.”⁷⁰⁵ Because it ignores these concerns, EPA’s proposal is arbitrary and capricious.

Footnote 8: Plan to Increase Access to Results of EPA-Funded Scientific Research; EPA Open Government Plan 4.0; Open Data Implementation Plan; EPA’s Scientific Integrity

⁶⁹⁹ *Id.* at 2.

⁷⁰⁰ *Id.* at 5.

⁷⁰¹ *Id.* at 6.

⁷⁰² OMB explains: “The mosaic effect occurs when the information in an individual dataset, in isolation, may not pose a risk of identifying an individual (or threatening some other important interest such as security), but when combined with other available information, could pose such risk. Before disclosing potential PIT or other potentially sensitive information, agencies must consider other publicly available data—in any medium and from any source—to determine whether some combination of existing data and the data intended to be publicly released could allow for the identification of an individual or pose another security concern.” Memorandum for the Heads of Executive Departments and Agencies on Open Data Policy—Managing Information as an Asset, M-13-13 at 4-5 (May 9, 2013).

Policy; Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by the Environmental Protection Agency.

Rather than acknowledge the drastic change in EPA policy this proposal would implement, EPA contrarily claims that the proposal simply “builds upon prior EPA actions.”⁷⁰⁶ None of the sources EPA cites here call into question the validity of scientific research for which underlying data and models cannot be made public. Indeed, they consistently recognize the legitimate limitation on data disclosure while also acknowledging the need for the agency to rely on information for which underlying data may not be released without compromising important privacy and confidentiality concerns.

I. Plan to Increase Access to Results of EPA-Funded Scientific Research, <https://www.epa.gov/sites/production/files/2016-12/documents/epascientificresearchtransperancyplan.pdf>

Contrary to EPA’s claim that the proposal “builds upon” prior EPA policy, it is actually a radical shift away from the view EPA takes in its *Plan to Increase Access to Results of EPA-Funded Scientific Research*, which notes even though “some research data cannot be made fully available to the public but instead may need to be made available in more limited ways,” this availability “does not affect the validity of the scientific conclusions from peer-reviewed research publications.”⁷⁰⁷ The *Plan to Increase Access to Results of EPA-Funded Scientific Research* thus dictates the view EPA has consistently espoused in the past, that it may make data available when it can without compromising other critical values, but that it will not exclude information from its consideration when it cannot. Yet EPA denies, rather than acknowledging and explaining, its new decision to reverse its past stance.

The *Plan* requires EPA to make publications resulting from EPA-funded research publicly accessible on NIH’s PubMed Central (PMC).⁷⁰⁸ It aims to “maximize access, by the general public and without charge, to digitally formatted data resulting from EPA funded research, *while protecting confidentiality and personal privacy, recognizing proprietary interests, business confidential information and intellectual property rights, and preserving the balance between the relative benefits and costs of long-term preservation and access.*”⁷⁰⁹ It recognizes important exceptions for when “the research data cannot be released due to one or more constraints, such as requirements to protect confidentiality, personal privacy, proprietary interest, or property rights.”⁷¹⁰ It specifically declares: “The validity of scientific conclusions drawn from research publications or their associated research data, or EPA’s ability to consider those conclusions and data in its actions, does not depend on compliance with this Plan.”⁷¹¹

⁷⁰⁶ 83 Fed. Reg. at 18,770.

⁷⁰⁷ EPA, *Plan to Increase Access to Results of EPA-Funded Scientific Research* 4-5 (Nov. 29, 2016), <https://www.epa.gov/sites/production/files/2016-12/documents/epascientificresearchtransperancyplan.pdf>

⁷⁰⁸ *Id.* at 8.

⁷⁰⁹ *Id.* at 11 (emphasis added).

⁷¹⁰ *Id.*

⁷¹¹ *Id.* at 6.

The *Plan* acknowledges making more limited releases of data “e.g., establishing data use agreements with researchers that respect necessary protections,” that fall short of full public disclosure.⁷¹² Unlike the proposal, which fails to account for the costs of implementation, the plan also acknowledges the need to “balance between the value of providing long-term access and its associated costs.”⁷¹³

The *Plan* thus further enshrines the view that this rule is unnecessary—where EPA has access to data and can release it without compromising other interests, it already does so. It further supports the notion that this type of disclosure is not necessary, and will not help, to ensure EPA’s reliance on valid scientific conclusion. EPA must fully explain its decision to deviate from this prior-held stance.

II. EPA Open Government Plan 4.0, https://www.epa.gov/sites/production/files/2016-09/documents/2016epaopengovplan4_0draft091516update1.pdf

EPA’s *Open Government Plan 4.0* also acknowledges that not all data is releasable to the public, even as it aims to “increase publicly accessible EPA data to support citizens’ participation in government and promote transparency and accountability of Agency operations.”⁷¹⁴ EPA states in the *Plan*: “By providing *releasable* information in open and machine-readable formats, EPA enables the public and other organizations to better leverage the rich wealth of information available.”⁷¹⁵ Further, in the *Plan* EPA notes the stringent requirements it has in place on the “collection, access, use, dissemination, and storage of personally identifiable information (PII) and Privacy Act information to prevent unwarranted invasions of personal privacy.”⁷¹⁶

Rather than suggesting that EPA release underlying data to the public in order to rely on scientific information, the *Plan* only speaks to utilizing a careful approach—with due regard for privacy and limitations to data release—to making EPA data more accessible to the public where possible.

III. Open Data Implementation Plan, https://www.epa.gov/sites/production/files/2015-05/documents/opendatapolicyimplementationplan_030415_finalb.pdf

EPA’s own Open Data Policy, which implements the requirements of White House “Open Data Policy – Managing Information as an Asset” Memorandum M-13-13, notes that it is important to develop “policies and processes to ensure that only appropriate data are released to

⁷¹² *Id.* at 4.

⁷¹³ *Id.*

⁷¹⁴ EPA, *Open Government Plan 4.0* 4 (Sep. 2016), https://www.epa.gov/sites/production/files/2016-09/documents/2016epaopengovplan4_0draft091516update1.pdf.

⁷¹⁵ EPA, *Open Government Plan 4.0* 4 (Sep. 2016), https://www.epa.gov/sites/production/files/2016-09/documents/2016epaopengovplan4_0draft091516update1.pdf (emphasis added).

⁷¹⁶ EPA, *Open Government Plan 4.0* 23 (Sep. 2016), https://www.epa.gov/sites/production/files/2016-09/documents/2016epaopengovplan4_0draft091516update1.pdf.

the public and made available online.”⁷¹⁷ To do so, EPA uses different “access levels” for different data sets, (public, restricted public, and non-public) and notes that it may not be able to publicize data due to “law, regulation or policy, which address privacy, confidentiality, security or other valid restrictions.”⁷¹⁸

Thus, while the Open Data Policy applies a multi-level, nuanced approach to data disclosure, the Proposal completely does away with this by applying a blanket requirement to make all underlying data and models publicly available. The Open Data Policy this conflicts with, rather than supports, the Proposal.

IV. EPA’s Scientific Integrity Policy, https://www.epa.gov/sites/production/files/2014-02/documents/scientific_integrity_policy_2012.pdf

Contrary to EPA’s claim, the Proposal turns away from EPA’s Scientific Integrity Policy, which stresses “a firm commitment to evidence,” endorses use of “the best available science” and “[r]equire[s] reviews. . . regarding the content of a scientific product to be based only on scientific quality considerations.”⁷¹⁹ The Proposal, on the other hand, inhibits use of sound scientific information and evidence by arbitrarily excluding science from EPA’s consideration for reasons unrelated to its quality.⁷²⁰

While the policy “[r]ecognizes the value of independent validation of scientific methods”⁷²¹ and facilitating “the free flow of scientific information” by making information available “including access to data and non-proprietary models underlying Agency policy decisions,”⁷²² this is a flexible standard and an ideal to aspire to, not to take priority over other competing interests—such as use of the best available science. This measure is meant to “facilitate[] the free flow of scientific information” and “expand and promote access to scientific information.”⁷²³ The Proposal, however, limits the free flow of scientific information and restricts access to scientific information by restricting EPA’s consideration of scientific studies.

As discussed in our comments, this Administration has blatantly violated key aspects of the policy by silencing scientists and the limiting the dissemination of scientific information, directly undoing “EPA’s longstanding commitment to the timely and unfiltered dissemination of its scientific information – uncompromised by political or other interference” and goal to communicate scientific findings openly and actively to the public.⁷²⁴ The Scientific Integrity Policy is meant to uphold scientific ideals—and prevent arbitrary, politicized decisions about which science to utilize—and the Proposal is thus in strong conflict with it.

V. Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by the Environmental Protection Agency, <https://www.epa.gov/quality/guidelines-ensuring-and-maximizing-quality-objectivity-utility-and-integrity-information>

EPA's Proposal also does not "build upon" its *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by the Environmental Protection Agency*. The *Guidelines* note that it may not be possible for underlying data and models to be subject to same degree of disclosure as analytic results, and highlight other methods of ensuring the quality of scientific research where disclosure is not possible.

The *Guidelines* start by noting, "[t]he mission of the EPA is to protect human health and safeguard the natural environment upon which life depends" and "[t]he collection, use, and dissemination of information of known and appropriate quality are integral to ensuring that EPA achieves its mission."⁷²⁵ They thus highlight that the controls on data quality exist to allow EPA to meet its mission—unlike the Proposal, which makes no mention of EPA's mission or how the Proposal would further that mission. Because the Proposal restricts EPA's ability to rely on the best available science, it obscures EPA in achieving its mission to set safeguards that are protective of human health and the environment, and thus such a statement could not truthfully be made.

While the *Guidelines* seek to maximize the quality of influential information by facilitating the reproducibility of the information—they note:

In addition, if access to data and methods cannot occur due to compelling interests such as privacy, trade secrets, intellectual property, and other confidentiality protections, EPA should, to the extent practicable, apply especially rigorous robustness checks to analytic results and carefully document all checks that were undertaken. Original and supporting data may not be subject to the high and specific degree of transparency provided for analytic results; however, EPA should apply, to the extent practicable, relevant Agency policies and procedures to achieve reproducibility, given ethical, feasibility, and confidentiality constraints.⁷²⁶

EPA's *Guidelines* detail EPA's long-standing position, that it may validate research studies even when data cannot be made publicly available—unlike the Proposal, which apparently assumes disclosure of underlying data and models is necessary to ensure scientific validity. The *Guidelines* discuss existing programs, such as EPA's Quality System and EPA's Peer Review

⁷²⁵ EPA, *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by the Environmental Protection Agency* 5 (Oct. 2002), <https://www.epa.gov/quality/guidelines-ensuring-and-maximizing-quality-objectivity-utility-and-integrity-information>.

⁷²⁶ *Id.* at 21.

Policy⁷²⁷ that are in place to assure the high quality of EPA information disseminates. EPA does not explain in the Proposal why these other checks are now insufficient.

Footnote 9: For example, see related policies from the National Science Foundation, National Institute of Science and Technology, the National Institutes of Health; and the US Census Bureau, which provides secure access to data from several agencies in an environment that protects against unauthorized disclosure (<https://www.census.gov/fsrdc>).

EPA purports that the Proposal builds upon “the experience of other federal agencies in this space” but the citations reveal that is simply not the case.⁷²⁸ To support this statement, EPA provides only a hyperlink to a U.S. Census Bureau website along with vague references to entire executive branch agencies, with no explanation or discussion of which of their policies EPA believes the Proposal is building upon. Without a more specific citation, it is impossible to know which policies EPA is referencing or to respond to them meaningfully.

EPA cites to the U.S. Census Bureau’s Federal Statistical Research Data Centers as an example of use of secure facilities that allow the Census Bureau to provide controlled access to authorized researchers to use restricted-use microdata for statistical purposes only. In order to gain access, researchers must obtain Census Bureau Special Sworn Status by passing a moderate risk background check and swearing to protect respondent confidentiality for life. While this “solution” meets the U.S. Census Bureau’s needs by allowing access to confidential information only to researchers whose proposals meet certain criteria, who go through a vetting process, and who agree to protect the information, this is done at a cost—which EPA has not accounted for—and would not satisfy EPA’s requirement to make data and models “publicly available.” Thus, this example provides no support for the Proposal.

Footnote 10: These include policies and recommendations from: the Administrative Conference of the United States’ Science in the Administrative Process Project; National Academies’ reports on Improving Access to and Confidentiality of Research Data, Expanding Access to Research Data, and Access to Research Data in the 21st Century; the Health Effects Institute; Center for Open Science; members of the Risk Assessment Specialty Section of the Society of Toxicology, the Dose Response Section of the Society for Risk Analysis, and the International Society for Regulatory Toxicology and Pharmacology; and the Bipartisan Policy Center’s Science for Policy Project.

In footnote 10, EPA lists a number of organizations whose recommendations and policies the Proposal allegedly took into consideration. In fact, since the Proposal was published, many of these organizations have issued statements opposing the Proposal and contesting EPA’s claim that their policies and recommendations endorse the Proposal. In this footnote, EPA provided no hyperlinks or specific citations for which recommendations and policies it was referencing, making it impossible to understand why EPA believed these organizations supported the Proposal or to respond to them.

⁷²⁷ *Id.* at 10-13.

⁷²⁸ 83 Fed. Reg. at 18,770.

I. The Administrative Conference of the United States' Science in the Administrative Process Project

EPA cites to the Administrative Conference of the United States' Science in the Administrative Process Project—*Recommendation 2013-3: Science in the Administrative Process*. Wendy Wagner, sole author of ACUS's final report *Science in Regulation: A Study of Agency Decisionmaking Approaches* and who served on the panel that produced the recommendations strongly opposed the notion that the Proposal builds upon these recommendations, saying: "They don't adopt any of our recommendations, and they go in a direction that's completely opposite, completely different. . . . They don't adopt any of the recommendations of *any* of the sources they cite. I'm not sure why they cited them."⁷²⁹

While ACUS recommends agencies increase transparency of how they rely on scientific information and strive to make data underlying scientific information publicly available, nowhere do they suggest that agencies should not consider or rely on studies where underlying data and models cannot be made publicly available, or that these circumstances make scientific information less valid. They instead suggest that information be made publicly available for assessment and reproducibility purposes "[c]onsistent with the limitations in the Information Quality Act (IQA) guidelines issued by the Office of Management and Budget and its own IQA guidelines."⁷³⁰ They acknowledge valid limitations such as legal protections for privacy, trade secrets, and confidential business information.⁷³¹ Thus, they recommend data be made public only "[t]o the extent practicable and permitted by law and applicable policies."⁷³² Unlike the Proposal, the recommendation acknowledges that agencies may still use information where underlying data cannot be publicly disclosed, and suggest agencies "note that fact and explain why they used the results if they chose to do so."⁷³³ It thus provides a much more nuanced policy recommendation than that outlined in the Proposal—which suggests EPA either find a way to make underlying data and models public, despite the numerous potential obstacles and concerns in doing so, or completely disregard the research study.

II. National Academies Improving Access to and Confidentiality of Research Data

Rather than containing any particular recommendations or policy proposals, this report discusses a number of issues pertaining to data disclosure and privacy protection, the tradeoffs "between increasing data access on the one hand and improving data security and confidentiality

⁷²⁹ Robinson Meyer, *Scott Pruitt's New Rule Could Completely Transform the EPA*, The Atlantic (Apr. 25, 2018), <https://www.theatlantic.com/science/archive/2018/04/how-the-epas-new-secret-science-rule/558878/>.

⁷³⁰ *Administrative Conference Recommendation 2013-3: Science in the Administrative Process*, 78 Fed. Reg. 41,352, 41,358 (July 10, 2013).

⁷³² *Administrative Conference Recommendation 2013-3: Science in the Administrative Process*, 78 Fed. Reg. 41,352, 41,357 (July 10, 2013).

⁷³³ *Administrative Conference Recommendation 2013-3: Science in the Administrative Process*, 78 Fed. Reg. 41,352, 41,358 (July 10, 2013).

on the other,”⁷³⁴ and “alternative approaches to limiting disclosure risk while facilitating data access the benefits and limitation of various approaches to these issues.”⁷³⁵ Thus, rather than calling on agencies to rely only on scientific studies where the underlying data and models are made public, the report in fact discusses challenges and obstacles to achieving greater data disclosure, for which the Proposal provides no substantive or meaningful explanation.

The report discusses why exercising caution with respect to disclosing confidential personal information is so important, because if such information is exposed it could lead to

being arrested for a crime, being denied eligibility for welfare or Medicaid, being charged with tax evasion, losing a job or an election, failing to qualify for a mortgage, or having trouble getting into college. Disclosure of a history of alcoholism, mental illness, venereal disease, or illegitimacy can result in embarrassment and loss of reputation. Less directly, research results based on personal data can cause harm by affecting perceptions about a group to which a person belongs.⁷³⁶

The report reveals very legitimate reasons why researchers and study participants would be reluctant to allow underlying data to be made publicly available—and these reasons in no way compromise the validity of the scientific conclusions based upon this data.

The report also discusses the nuances of selecting methods to protect privacy while making underlying data publicly available. For example, while EPA casually makes claims that controlled access is an example of a solution in place across federal agencies⁷³⁷—this report points out the drawbacks of such an approach:

The use of restricted access arrangements, which has been deemed necessary to provide adequate protection for confidential information about individuals and businesses, results in increased costs to conduct research. Custodians of the data files need additional resources to process applications, operate inspection systems, staff research data centers, and inspect outputs to ensure that disclosure does not occur. Researchers require resources to prepare applications for access, to provide appropriate physical security for the data, or to visit a secure site.⁷³⁸

The report also discusses the difficulty of funding such centers—noting that while the costs are currently covered by a combination of federal agency budgets and user fees, including grants from the National Science Foundation and National Institute on Aging, federal funding may no longer be able to support such efforts.⁷³⁹ EPA’s cursory mention to use of restricted access facilities as a potential solution to the concerns implicated by the Proposal fail to mention or address any of these challenges.

⁷³⁸ *Id.* at 48.

⁷³⁹ *Id.*

III. National Academies Expanding Access to Research Data: Reconciling Risks and Opportunities

EPA's Proposal in no way takes into consideration the recommendations of the National Academies report *Expanding Access to Research Data: Reconciling Risks and Opportunities*. This report considers competing approaches to increase use of research data while protecting confidentiality, and concludes that "no one way is optimal for all data users or all purposes" and, importantly, that "the nation's statistical and research agencies must provide both unrestricted access to anonymized public-use files and restricted access to detailed, individually identifiable confidential data for researchers under carefully specified conditions."⁷⁴⁰ In other words, the report finds that making data publicly available without restriction while respecting confidentiality concerns is not currently feasible or compatible with the missions of federal agencies.

Furthermore, the report mainly concerns itself with how agencies might increase access to data in their control and possession to allow for more research in social issues and provide a better basis for more informed policy decisions—it does not discuss whether federal agencies should make data publicly available in order to allow for independent validation of scientific research they rely on for regulatory purposes and thus cannot be a basis for the Proposal.⁷⁴¹ While the report discusses that one of the benefits of data sharing is that it allows for "verification, refutation, or refinement of original results," nowhere does the report suggest that agencies should rely only on research studies that make data publicly available or that such verification is necessary to validate a research study.⁷⁴² Indeed, it details a discussion on this topic that presents competing views on requirements to make research data available to the public to allow for replication. John Bailer raised concerns that researchers would be deterred from doing certain kinds of work if they feared it would be subject to "hostile scrutiny" and that competitors could seize data for their interests.⁷⁴³ Others disagreed with this position.⁷⁴⁴ However, EPA failed to engage any of these considerations or at all justify its decision to implement a policy that could have severe negative implications. None of the researchers stated agencies should disregard the study if underlying data could not be made public.

The "recommendations" made by the report do not endorse EPA's proposal. The report provides 15 recommendations in Chapter 5.⁷⁴⁵ Recommendations 1-4 concern documentation and data access and call on agencies to better document how the data they make available is used; to use a variety of modes to provide access to data they produce or fund using a combination of restricted access to confidential data and unrestricted access to appropriately altered public-use data; to support research to guide more efficient allocation of resources among different data access modes; and to involve users in planning modes of access to their data.⁷⁴⁶

⁷⁴⁰ The National Academies, *Expanding Access to Research Data: Reconciling Risks and Opportunities*, National Academies Press 2 (2005).

⁷⁴¹ *Id.* at 7.

⁷⁴² *Id.* at 39.

⁷⁴³ *Id.* at 105-06.

⁷⁴⁴ *See id.* at 107.

⁷⁴⁵ *Id.* at 63.

⁷⁴⁶ *Id.* at 66-69.

In this Proposal, EPA does nothing to better document use of data that it makes public, has only called for a requirement to make research data and models “publicly available” rather than recognizing that a variety of modes and levels of access may be necessary, and does nothing to support more research into methods of making data more widely available without compromising confidentiality—indeed blithely assuming that such means are already available and sufficient—and also has not indicated that there has been any widespread call for EPA to make such data available or pointed to any comments of users of this data in this process.

Recommendations 5-8 concern public use data and call on agencies to support research on techniques to provide useful innovative public-use data that minimizes the risk of disclosure; streamlined procedures to allow researchers access to public-use microdata through existing and new data archives; a warning on all public-use data that they are provided for statistical purposes only and that any attempt to identify an individual is a violation, and requiring users to attest to having read the warning; and restricting access to public-use data to those who agree to abide by confidentiality protections, subject to meaningful penalties.⁷⁴⁷

EPA’s proposal once again ignores these recommendations that call for greater research and a measured approach to making data more widely available. The Proposal provides no ideas or methods or support for research that would help strengthen confidentiality protections while making data more available.

Recommendations 9-13 concern research data centers, remote access, and licensing agreements and call on the Census Bureau to (1) broaden the interpretation of the criteria for assessing the benefits of access to data; (2) maintain the continuous review cycle; and (3) take account of prior scientific review of research proposals by established peer review processes when awarding access to research data centers; for more research on cost effective means of providing secure access to confidential data by remote access; increasing use of licensing agreements for access to confidential data; working with data users to develop flexible, consistent standards for licensing agreements and implementation procedures for access to confidential data; and including auditing procedures and legal penalties in licensing agreements for willful misuse of confidential data.⁷⁴⁸

EPA’s proposal does not increase any research into use of remote data centers or licensing agreements, simply making passing references to these modes as potential solutions with no discussion or explanation—and ignoring the recommendations here suggesting that more work is needed to realize their potential.

Recommendations 14-15 concern maintaining the public’s trust and call on agencies to give certain basic information about confidentiality and data access to everyone asked to participate in statistical surveys; and to support continuing research on the views of data providers and the public about research benefits and risks.⁷⁴⁹

⁷⁴⁷ *Id.* at 69-74.

⁷⁴⁸ *Id.* at 74-80.

⁷⁴⁹ *Id.* at 80-81.

EPA's proposal does not involve anything that increases the public knowledge about confidentiality protections or their views on research benefits and risks.

Recommendations 16-19 concern training, monitoring, and education to complement other protections on data. They call on data collection agencies to provide employees with continually updated written guidelines on confidentiality protection and training in confidentiality practices and data management and to institute procedures for monitoring violations of confidentiality protections practices and confidentiality breaches. They also call on educational and professional organizations to provide training in ethical issues for all those involved in the design, collection, distribution, and use of data obtained under pledges of confidentiality and for the development of strong codes of ethical conduct that reflect the need to protect confidentiality.⁷⁵⁰

EPA's proposal also contains no provisions on increasing training, monitoring, or education, within the agency or among researchers to allow for more careful handling of confidential data.

Thus, EPA's Proposal completely ignores the careful research and thinking the National Academies and researchers have done on what is needed from federal agencies in order to make data more publicly available, and how to do so in a responsible manner. It does not implement any of the recommendations in the report, and in no way builds upon this work.

IV. National Academies Access to Research Data in the 21st Century: An Ongoing Dialogue Among Interested Parties: Report of Workshop

EPA cites to the National Academies' *Access to Research Data in the 21st Century: An Ongoing Dialogue Among Interested Parties: Report of Workshop* as one for which it took into consideration "policies or recommendations," despite the fact that this report comes with the explicit limitation that:

The goal of the workshop was not to reach conclusions or recommendations; nor could it address other pressing issues beyond the regulatory process, such as protection of intellectual property, the influence of broader access on scientific competition, the potential for increased administrative burdens and changes in the research process, and the challenge of providing data access in an increasingly electronic world.⁷⁵¹

Thus, this report stresses the many unanswered, challenging policy questions that must be addressed as agencies contemplate how to make data publicly available. These are the questions EPA should have addressed in its Proposal, but did not.

⁷⁵⁰ *Id.* at 81-84.

⁷⁵¹ Science, Technology, and Law Panel; Policy and Global Affairs; National Research Council, *Access to Research Data in the 21st Century: An Ongoing Dialogue Among Interested Parties: Report of Workshop*, The National Academies Press ix (2002).

The Report offers a look into the scientific review process that also calls into question the underlying assumption in EPA's proposal—that making data publicly available is necessary to ensure the validity of a scientific finding. The report notes that scientific claims “are not ‘binary’” they instead “fall in the category of being uncertain to various degrees.”⁷⁵² The reliability of a particular scientific finding can be assessed using various mechanisms, starting with an examination of the strength of the design, methods, and statistical results.⁷⁵³ Then “one asks whether there is consistency within the data (pertaining to mechanisms of effect or related outcomes) and with other studies and scientific theories.”⁷⁵⁴ Finally, “the robustness of the findings is evaluated through the use of different analytical approaches.”⁷⁵⁵

The report describes how studies may be validated through a range of approaches.⁷⁵⁶ While it notes that in some cases it is possible to exactly replicate the original study, this is not always the case, especially in large epidemiological studies where “repeating a study is seldom either possible or desirable.”⁷⁵⁷ Then “replication” can take a variety of forms, not all of which require access to underlying data, including:

- Additional analyses done on the data set by the original or collaborating Investigators;
- New results generated from older data sets;
- New studies addressing the same hypothesis;
- Independent analysis of the same data set by different people;
- Monitoring of the results of actions taken on the basis of the findings.⁷⁵⁸

Another form of replication the report describes is

meta-analysis, which is a systematic strategy for comprehensively describing and summarizing a body of research evidence from two or more studies. The goal is to produce a quantitative synthesis of the evidence presented in multiple studies that relate to a research question. In a typical meta-analysis, all the data used have been published in the public domain and are easy to inspect and analyze.⁷⁵⁹

The report specifically mentions the Harvard Six Cities Study as an example of a study where data could not be made publicly available, but which was verified to allow the agency to justifiably rely on it to set important air standards.⁷⁶⁰ Thus, unlike the Proposal the report acknowledges the many different pathways that exist for researchers to assess other studies, and does not suggest that allowing the general public access to underlying data and models is necessary.

⁷⁶⁰ *Id.* at 8-12.

One of the panels of the workshop discussed the Shelby Amendment, and public access to data underlying agency regulation. A bench scientist expressed concerns that, though the idea of sharing data was a good idea, because any person could request information for any reason, this mechanism could be used to harass scientists whose work was found objectionable.⁷⁶¹ A representative of NIH similarly stated that while sharing data with other researchers was good scientific practice, allowing for indiscriminate public access to data serves “little purpose for those without the skills to reanalyze it.”⁷⁶² Additionally, access through FOIA does not allow for limitations to be put on the use of the data, which is typically available in other data-sharing modes.⁷⁶³ A representative from EPA raised issues including:

The Shelby Amendment. . . raises several questions for the EPA about rule making as a legal and deliberative process. At what point should the agency disclose what type of regulation is going to be considered or issued? The timing of the release can influence its reception. Should the agency use contracts to support the research needed for regulations? Contracting, as opposed to grants that support more flexible work, might narrow the type of information the agency receives and could possibly limit the scope of the science underlying the regulation.⁷⁶⁴

These questions and concerns are highly relevant to the Proposal as well, yet EPA provides no indication that it has given them any consideration.

Finally, a representative from NRDC pointed to other mechanisms that are already in place to ensure agencies rely on high quality data. For example, under the Administrative Procedure Act, agencies must respond to any comments that raise questions about a scientific studies design, performance, or conclusion.⁷⁶⁵ Courts can determine whether an agency was reasonable in its decision to refuse to accept the findings of a study because it could not access underlying data or refuses a request from a study participant.⁷⁶⁶ EPA does not explain why these existing mechanisms are not sufficient to ensure the integrity of the science it relies on.

V. The Health Effects Institute

In the original federal register notice, EPA provided no specificity as to which Health Effects policy EPA was referring to or why it supported the Proposal. Such a vague and unspecified reference does not meet the notice requirements of the APA and other statutes, and makes it impossible to respond.

VI. Center for Open Science

⁷⁶¹ *Id.* at 14.

⁷⁶² *Id.* at 15.

⁷⁶³ *Id.*

⁷⁶⁴ *Id.* at 16.

⁷⁶⁵ *Id.* at 17.

⁷⁶⁶ *Id.*

In the original federal register notice, EPA provided no specificity as to which Center for Open Science policy EPA was referring to or why it supported the Proposal. Such a vague and unspecified reference does not meet the notice requirements of the APA and other statutes, and makes it impossible to respond.

VII. Members of the Risk Assessment Specialty Section of the Society of Toxicology, the Dose Response Section of the Society for Risk Analysis, and the International Society for Regulatory Toxicology and Pharmacology

In the original federal register notice, EPA provided no specificity as to which policy of the Members of the Risk Assessment Specialty Section of the Society of Toxicology, the Dose Response Section of the Society for Risk Analysis, and the International Society for Regulatory Toxicology and Pharmacology EPA was referring to or why it supported the Proposal. Such a vague and unspecified reference does not meet the notice requirements of the APA and other statutes, and makes it impossible to respond.

VIII. Bipartisan Policy Center's Science for Policy Project

In the original federal register notice, EPA provided no specificity as to which Bipartisan Policy Center's Science for Policy Project policy EPA was referring to or why it supported the Proposal. Such a vague and unspecified reference does not meet the notice requirements of the APA and other statutes, and makes it impossible to respond.

Footnote 11: For example, see related policies from the Proceedings of the National Academy of Sciences, PLOS ONE, Science, and Nature

EPA claims that the Proposal takes into consideration policies adopted by scientific journals, but does not specify which "related policies" from these journals.⁷⁶⁷ While some of these journals have adopted certain policies encouraging or requiring researchers to share underlying data for the studies they publish, they all allow for exceptions when data cannot be released for compelling reasons, such as confidentiality protections.

Furthermore, the editors of these journals have issued a joint statement opposing the Proposal and noting that their policies do not endorse such an approach by EPA. They note that some data sets cannot be shared publicly, and that there are still other methods available to verify scientific findings. The statement also strongly condemns the notion of excluding scientific information from consideration when underlying data cannot be made publicly available:

It does not strengthen policies based on scientific evidence to limit the scientific evidence that can inform them; rather, it is paramount that the full suite of relevant science vetted through peer review, which includes ever more rigorous features, inform the landscape of decision making. Excluding relevant studies simply because they do not meet rigid transparency standards will adversely affect decision-making processes.⁷⁶⁸

⁷⁶⁷ 83 Fed. Reg. at 18,770.

⁷⁶⁸ Jeremy Berg et. al., *Joint statement on EPA proposed rule and public availability of data*, Science (Apr. 30, 2018), <http://science.sciencemag.org/content/early/2018/04/30/science.aau0116>.

Thus, EPA cannot claim that the Proposal is in any way supported by the data sharing policies of these scientific journals.

Footnote 12: See: <https://www.nature.com/articles/s41562-016-0021>;
<http://journals.plos.org/plosmedicine/article?id=10.1371/journal.pmed.0020124>;
<http://science.sciencemag.org/content/343/6168/229.long>;

<http://stm.sciencemag.org/content/8/341/341ps12.full>.

EPA claims that the Proposal is informed by the policies of scientific journals in response to the “replication crisis.”⁷⁶⁹ EPA provides no explanation or evidence to support the fact that such a “crisis” is occurring or that EPA’s Proposal would do anything to address the crisis. The sources EPA cites for this proposition speak to a concern about scientific studies being reproducible or replicable due to a number of different conditions related to poor scientific practices. While some of the articles speak about making data more available as an ideal to aspire to, none of them support the idea that a research study whose underlying data has not been made publicly available should, for that reason alone, be considered invalid. Further, many of these articles speak to how current scientific norms do not result in underlying data being available, which is a huge barrier to EPA’s Proposal that EPA does not at all address.

I. Marcus R. Munafó et. al, *A Manifesto for Reproducible Science*, 1 Nature Human Behavior 1 (2017)

Far from suggesting that agencies rely only on scientific studies if the underlying data is made public, or even that making underlying data public is necessary to ensure validity of scientific conclusions, the article discusses at a high level a number of systemic and cultural challenges to reproducible science. By ignoring the nuances of this article and presenting it without any explanation as support for its Proposal, EPA runs into the problem the article specifically cautions against, warning: “Some solutions may be ineffective or even harmful to the efficiency and reliability of science, even if conceptually they appear sensible.”⁷⁷⁰

This article does not endorse the existence of a “replication crisis” and in fact says, “[w]hether ‘crisis’ is the appropriate term to describe the current state or trajectory of science is debatable.”⁷⁷¹ Instead it notes a very different problem than the one EPA appears to target with the Proposal. It points broadly to an issue of there being “substantial room for improvement with regard to research practices to maximize the efficiency of the research community’s use of the public’s financial investment in research.”⁷⁷²

⁷⁶⁹ 83 Fed. Reg. at 18,770.

⁷⁷⁰ Marcus R. Munafó et. al, *A Manifesto for Reproducible Science*, 1 Nature Human Behavior 1, 7 (2017).

⁷⁷¹ *Id.* at 1.

⁷⁷² *Id.* at 1.

This article makes clear that open data requirements are just *one* of many solutions and steps to take towards increasing efficiency of use of resources and robustness of scientific findings—and never suggests that a lack of publicly available underlying data should automatically disqualify a research finding from consideration. It discusses a number of other improvements including protecting against cognitive biases through blinding, improving methodological training, implementing methodological support, encouraging collaboration and team science, promoting study pre-registration, improving quality of reporting, diversifying peer review, and changing incentives to promote efficient and effective research instead of just innovative outcomes.

While the article recognizes transparency as a “scientific ideal”⁷⁷³ it notes many challenges that currently exist to achieving this ideal, which EPA does not at all address. The article notes, “In reality, science often lacks openness: many published articles are not available to people without a personal or institutional subscription, and most data, materials and code supporting research outcomes are not made accessible, for example, in a public repository.”⁷⁷⁴ It further finds “substantial barriers to meeting these ideals, including vested financial interests (particularly in scholarly publishing) and few incentives for researchers to pursue open practices.” Nowhere does the article suggest that the many scientific studies for which data is not available due to prevailing scientific norms and practices be completely discarded. These challenges suggest that many studies EPA wishes to rely on may not be able to meet the rigid requirements of EPA’s proposal severely restricting the science EPA can use, degrading the quality of its decision-making.

Marcus R. Munafó, lead author on this paper, has since published a piece specifically dismissing science policy approaches that overemphasize the importance of replication.⁷⁷⁵ It states that the overemphasis on replicability is detrimental to science—that “[i]f a study is skewed and replications recapitulate that approach, findings will be consistently incorrect or biased.”⁷⁷⁶ Instead, the author suggests that “an essential protection against flawed ideas is triangulation” or “the strategic use of multiple approaches to address one question.”⁷⁷⁷ This involves looking at a broad base of different scientific studies and does not require underlying data to be made publicly available, not individual studies based on whether or not they can be replicated.⁷⁷⁸ By excluding scientific studies from EPA’s consideration, the Proposal overemphasizes the value of replication to the detriment of being able to evaluate a study in the context of many other studies examining the same issue through a variety of methods. The Proposal may well lead to reliance on less robust science and is thus arbitrary.

II. John P.A. Ioannidis, *Why Most Published Research is False*, 2 PLoS Medicine 0696 (2005)

The article suggests “the high rate of nonreplication (lack of confirmation) of research discoveries is a consequence of the convenient, yet ill-founded strategy of claiming conclusive research findings solely on the basis of a single study assessed by formal statistical significance, typically for a p -value less than 0.05.”⁷⁷⁹ It looks at a number of different contributors to false positive findings and discusses solutions to this problem. Importantly, it stresses the need to focus on large studies, consider the totality of the evidence, and improve understanding of pre-study odds.⁷⁸⁰ These solutions each involve considering more evidence and more scientific studies to contextualize any one given study. Nowhere does the article suggest requiring underlying data be made public or fewer studies be considered. EPA’s proposal contrarily emphasizes data disclosure above all other practices for ensuring scientific integrity—and will result in fewer studies being considered to shed light on the scientific truth.

The author of this article has specifically criticized EPA’s Proposal, saying that, if it is finalized, “science will be practically eliminated from all decision-making processes” and “[r]egulation would then depend uniquely on opinion and whim.”⁷⁸¹ The author highlights the inherent problem in EPA’s Proposal, that “most of the raw data from past studies are not publicly available” and that indeed “[i]n a random sample of the biomedical literature (2000–2014) none of 268 papers shared all of their raw data. . . [and] [o]nly one shared a full research protocol.”⁷⁸² EPA has not addressed this major issue that suggests the Proposal would bar EPA from relying on massive amounts of scientific research. The article notes that reproducibility issues vary across the disciplines and that in many areas in which EPA operates, a solid and large foundation of scientific research has produced credible and widely-affirmed findings, including “in fields such as air pollution and climate change.”⁷⁸³ Even in these other fields, however, it firmly states that “simply ignoring science that has not yet attained such standards, is a nightmare.”⁷⁸⁴

III. Marcia McNutt, *Reproducibility*, 343 Science 229 (2014), <http://science.sciencemag.org/content/343/6168/229.long>

EPA cites an announcement by Science that, in response to reports “that a troubling proportion of peer-reviewed preclinical studies are not reproducible,”⁷⁸⁵ Science is adopting new policies requiring authors making submissions to the journal to disclose “whether there was a pre-experimental plan for data handling (such as how to deal with outliers), whether they conducted a sample size estimation to ensure a sufficient signal-to-noise ratio, whether samples were treated randomly, and whether the experimenter was blind to the conduct of the

experiment.”⁷⁸⁶ While the article considers steps to increase reproducibility of science, it notes that data availability is not a necessary or sufficient step to ensure credibility of research findings, and that “ultimate responsibility lies with authors to be completely open with their methods, all of their findings, and the possible pitfalls that could invalidate their conclusions.”⁷⁸⁷ EPA’s Proposal ignores the ability to assess studies through these other important indicators to assure their validity.

VI. *How Science Goes Wrong*, Economist (Oct. 21, 2013), <https://www.economist.com/news/leaders/21588069-scientific-research-has-changed-world-now-it-needs-change-itself-how-science-goes-wrong>

This article opposes the view that verification of a study depends solely on the underlying data being made publicly available. While it identifies that much scientific research is unable to be replicated, the solution it proposes include tightening standards, particularly in statistics, registering research protocols in advance and monitoring them, and: “[w]here possible, trial data also should be open for other researchers to inspect and test.”⁷⁸⁸ Thus, even to the extent it discusses data availability, it suggests data should be open for other *researchers*, as opposed to the public, and recognizes this may not always be possible.⁷⁸⁹

VII. Steve N. Goodman, *What does research reproducibility mean?*, 8 Science Translational Medicine 1 (2016), <http://stm.sciencemag.org/content/8/341/341ps12.full>

Rather than saying anything about agencies relying only on scientific studies where underlying data is made public, this article discusses the importance of clearly defining key terms in the discussion about scientific reproducibility, noting that there is a lack of standardized definitions of terms such as “reproducibility, replicability, reliability, robustness, and generalizability.”⁷⁹⁰ This raises a key issue of vagueness in EPA’s proposal—EPA does not provide definition for key terms such as “independently validate” or “reproducible” and confusing mentions a “replication crisis” while citing to articles that speak to a “reproducibility crisis.”

While providing definitions for these various terms, the article notes that there terms all represent various methods of attempting to verify studies to ensure “scientific claims based on scientific results are true” and cautions against “treating reproducibility as an end in itself—rather than as an imperfect surrogate for scientific truth.”⁷⁹¹ Instead, it promoted the view of looking across studies to “assess their cumulative evidential weight.”⁷⁹² EPA Proposal thus directly contradicts the suggestions of this article.

⁷⁹² *Id.* at 3.

Footnote 13: EPA has not consistently followed previous EPA policy (e.g, EPA’s Scientific Integrity Guidance, referenced above) that encouraged the use of non-proprietary data and models.

While EPA in a footnotes suggests that EPA has not consistently followed EPA’s EPA’s Scientific Integrity Policy encouraging the use of non-proprietary data and models, it misses the fact that EPA’s policy was not written as an absolute standard, but was intended to be a flexible one. The policy states only that “the use of non-proprietary data and models are encouraged, when feasible, to increase transparency.”⁷⁹³ EPA must thus explain and justify its deviation from its prior flexible approach that the Proposal now imposes.

Footnote 14: <https://www.whitehouse.gov/wp-content/uploads/2017/11/2005-M-05-03-Issuance-of-OMBs-Final-Information-Quality-Bulletin-for-Peer-Review-December-16-2004.pdf>

The Proposal appears to issue a requirement for independent peer review of all *pivotal regulatory science* used to justify *regulatory decisions*, consistent with the requirements of the OMB Final Information Quality Bulletin for Peer Review. EPA cites to OMB’s Final Information Quality Bulletin for Peer Review, explaining existing peer review requirements that nowhere does EPA suggest are not already being complied with.

As discussed in our comments, there is some vagueness as to whether the Proposal maintains, expands, or narrows these already existing requirements. OMB’s bulletin underwent a rigorous stakeholder process including response to comments on multiple drafts from stakeholders, a federal agency workshop at NAS, outreach to major scientific organizations and societies, a formal interagency review.⁷⁹⁴ EPA’s Proposal has not gone through nearly the same level of review, or as our comments detail, even met the minimum legal requirements for consultation and review. OMB’s guidance further provides that agencies should consider the “tradeoffs between depth of peer review and timeliness”⁷⁹⁵ This includes considering a benefit-cost framework for peer review that takes into account “the direct costs of the peer review activity and those stemming from potential delay in government and private actions that can result from peer review.”⁷⁹⁶ As our comments detail, EPA has not provided any meaningful benefit-cost analysis of the Proposal. Thus, it would be improper and in conflict with OMB’s guidance for EPA to be expanding the peer review requirements through this Proposal.

Footnote 15: February 22, 2002 (67 FR 8453) OMB’s Guidelines Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information (2002)

⁷⁹³ EPA, *Scientific Integrity Policy* at 4.

⁷⁹⁴ *Final Information Quality Bulletin for Peer Review*, 70 Fed. Reg. 2664 (Jan. 14, 2005).

⁷⁹⁵ *Id.* at 2,668.

⁷⁹⁶ *Id.* at 2,668

<https://www.federalregister.gov/documents/2002/02/22/R2-59/guidelines-for-ensuring-and-maximizing-the-quality-objectivity-utility-and-integrity-of-information>.

As discussed above in the Section on footnote 6, EPA’s attempt to align its proposal with OMB’s guidelines is misguided.

Footnote 16: See examples from the U.S. Department of Health and Human Services, National Institute of Standards and Technology, U.S. Department of Education, and the U.S. Census Bureau.

In the original Proposal EPA provided no specific “examples” and this vague cite provided very little direction about what EPA was referencing here—making it impossible to review these examples or respond to them.

Footnote 17: <https://www.hhs.gov/hipaa/for-professionals/privacy/special-topics/de-identification/index.html>.

EPA states that other agencies have tools to de-identify information private information, but fails to recognize that these methods are not transferable to EPA’s context.⁷⁹⁷ EPA links to guidance on de-identification requirements under HIPAA. This guidance provides two methods for de-identifying data: (1) expert determination method, where an expert determines that, after application of statistical and scientific principals and methods, the risk is very small that the information alone or with other available information could be used to identify the subject; and (2) the safe harbor method, requiring that a number of identifiers are removed. The first method requires case-by-case work and EPA has provided no information regarding how EPA could implement it or how much it might cost and thus the feasibility of requiring researchers or EPA to de-identify data this way is questionable. The second method requires removal of much information useful for research that may be necessary to be able to independently validate the research, so it is unclear that it would satisfy the Proposal’s demands. Furthermore, the safe harbor method has been shown to provide potentially insufficient privacy protections.⁷⁹⁸

Footnote 18: <https://www.nap.edu/catalog/11434/expanding-access-to-research-data-reconciling-risks-and-opportunities>.

In this footnote, EPA cites to a report by the National Academies for the proposition that “The National Academies have noted that simple data masking, coding, and de-identification techniques have been developed over the last half century. . . .”⁷⁹⁹ This incorrectly makes it seem as though the National Academies have identified simple techniques to de-identify data for public release without compromising personal privacy. A full review of the report reveals the

⁷⁹⁷ 83 Fed. Reg. at 18,771.

⁷⁹⁸ Latanya Sweeney, Ji Su Yon, Laura Perovich, Katherine E Boronow, Phil Brown, and Julia Green Brody, *Re-identification Risks in HIPAA Safe Harbor Data: A Study of Data From One Environmental Health Study*, Technology Science (August 28, 2017).

⁷⁹⁹ 83 Fed. Reg. at 18,771; National Research Council, *Expanding Access to Research Data: Reconciling Risks and Opportunities*, National Academies Press (2005).

opposite is true, that The National Academies in fact recognize that complex, evolving, and yet undeveloped techniques are needed to resolve these concerns. It offers recommendations that are intended to *improve upon* existing techniques, indicating that this area is under constant change and many advances are left to be made.⁸⁰⁰ Further, the report notes this improvement requires “strong partnership between the research community and statistical and research agencies in the design of innovative research on disclosure avoidance techniques and data access modalities and in the implementation of the advances that result from such research.”⁸⁰¹ The Proposal takes no steps towards advancing design of new techniques or providing resources to undertake all that needs to be done to make the Proposal remotely feasible.

Further, the Report notes that a changing landscape is making it increasingly difficult to apply past techniques to sufficiently protect data from identification, saying: “Initially, relatively simple data masking techniques, such as top coding income amounts. . . were used to generate restricted data products [,] [d]uring the last decade the increasing risks of confidentiality breaches have led researchers to develop increasingly sophisticated methodologies for restricted data products.”⁸⁰² They state, “more research is clearly needed to assess the relative ability of different masking methods, and of synthetic data, to reduce the risk of disclosure while preserving data utility.”⁸⁰³ EPA does not acknowledge these newly emerging concerns.

The National Academies recognize the current limitations of producing restricted data that sufficiently limits identifiability to allow it to be made publicly available in a useful form. They note that “well-informed policy making” requires “[r]esearch using detailed confidential data” that cannot be made public—which the Proposal fails to acknowledge to the detriment of the quality of EPA’s policy decisions.⁸⁰⁴ Just because certain information cannot be made public for legitimate reasons does not mean the government should refuse to use it to inform policy. And much of the data useful for environmental and health research is particularly sensitive—the report notes there is increased vulnerability in “[d]ata with geographic detail, such as census block data” and longitudinal data obtained in panel surveys, which is often salient in environmental research.⁸⁰⁵ In the meantime, the National Academies state that more work is needed to allow “[h]igh-quality public-use files” that still assure “the inferential validity of the data while safeguarding their confidentiality.”⁸⁰⁶

They also point to broader implications of not implementing sufficient privacy protections that EPA does not consider at all may result from the Proposal. The quality of data collected is likely to suffer as “[i]t is essential that respondents believe they can provide accurate, complete information without any fear that the information will be disclosed inappropriately.”⁸⁰⁷ Essentially, the report leaves as an open question “decisions about how much disclosure risk is acceptable in order to achieve the benefits of greater access to research data involve weighing the

⁸⁰⁵ *Id.* at 22.

⁸⁰⁶ *Id.* at 2.

⁸⁰⁷ *Id.* at 51.

potential harm posed by disclosure against the benefits potentially foregone.”⁸⁰⁸ Thus, EPA wrongfully points to this report as supporting the notion that simple techniques exist to address privacy concerns. The report recommends only more research to reduce risks and increase data utility along with consultation with data users and providers about these issues—which the Proposal does not implement and thus the report does not support the Proposal.⁸⁰⁹

Footnote 19: <https://www.cep.gov/content/dam/cep/report/cep-final-report.pdf>; <https://www.nap.edu/catalog/24652/innovations-in-federal-statistics-combining-data-sources-while-protecting-privacy>; <https://www.nap.edu/catalog/24893/federal-statistics-multiple-data-sources-and-privacy-protection-next-steps>.

EPA claims that “the National Academies and the Bipartisan Commission on Evidence Based Policy have discussed the challenges and opportunities for facilitating to secure access to confidential data for non-government analysts.”⁸¹⁰ The proposal does not explain how these examples are relevant, as there is no indication that secure access to underlying data would meet the requirements of making underlying data “publicly available.” Further, even if it were relevant, a review of the sources cited reveal that they do discuss many challenges in this space—which the Proposal does not at all address—and provide no support for the Proposal.

I. Commission on Evidence-Based Policymaking, The Promise of Evidence-Based Policymaking (2017)

This report centers on how to enhance infrastructure to increase the access and use of data between federal agencies to support government policy-making, rather than increase public access to data to non-governmental analysts for purposes of independently validating regulatory science.⁸¹¹ Further, its focus is to help efforts to make *more* data available for government purposes to better inform policies. The Proposal on the other hand seeks to make data available to validate individual studies while ultimately making *less* data available for EPA to consider as it creates policies.

To the extent the report does speak to making more data *publicly* available, it envisions an entirely new framework to provide adequate privacy protections. Chapter Three of the report discusses increasing threats to privacy as “the amount of information about individuals that is publicly available has grown and the technology that can permit unauthorized re-identification has improved.”⁸¹² It notes that forming solutions to this problem while preserving the quality of data is difficult, and that a challenge is “ensuring that enhanced statistical disclosure methods do not change the data in ways that increase the difficulty of reproducing research results.” It thus specifically notes that protecting confidentiality can be in tension with allowing data to be used for reproducibility purposes.

⁸⁰⁸ *Id.* at 62.

⁸⁰⁹ *Id.*

⁸¹⁰ 83 Fed. Reg. at 18,771.

⁸¹¹ Commission on Evidence-Based Policymaking, *The Promise of Evidence-Based Policymaking* (2017).

⁸¹² *Id.* at 54-55.

The report recommends: (1) amending federal statutes to require Federal departments to conduct a comprehensive risk assessment on de-identified confidential data intended for public release and release de-identified confidential data subject to the Privacy Act and CIPSEA only after a disclosure review board approves the release and publicly provides the risk assessment and a description of steps taken to mitigate risk; (2) federal departments to adopt state-of-the-art database, cryptography, privacy-preserving, and privacy-enhancing technologies for confidential data used for evidence building; (3) federal departments assign a senior official the responsibility for coordinating access to and stewardship of the department's data resources; (4) new legislation ensuring that data acquired under a pledge of confidentiality are kept confidential and used exclusively for statistical purposes.⁸¹³ The Proposal does not discuss or contribute to any of these efforts.

Chapter Four recognizes that some data cannot be made publicly available without sacrificing the utility of the evidence and thus sets forth recommendations for creating a new National Secure Database Service to allow researchers to access “detailed data that cannot be made publicly available, and only for exclusively statistical purposes.”⁸¹⁴ This report thus implicitly recognizes the value of using confidential data to “securely generate evidence about government policies and programs.”⁸¹⁵ While transparency is a crucial goal, using data that cannot be made publicly available can help inform government policies in important ways.

The Report details the many obstacles to making data publicly available, and ultimately concludes that much more work is needed in this area, none of which is being furthered by EPA's Proposal.

II. NAS, *Innovations in Federal Statistics: Combining Data Sources While Protecting Privacy* (2017)

This report provides recommendations to increase sharing and use of data by the federal government and between agencies.⁸¹⁶ It places maintaining privacy and confidentiality at the forefront. The report provides a discussion of the benefits and challenges to allowing external researchers to access data held by government agencies. This assumes that agency has access to data in the first place—which may not be the case with the studies EPA wishes to rely on that would be barred by its Proposal.

The report notes multiple risks to privacy and confidentiality from data breaches, identity theft, and the threat from the ability to combine multiple data sources to re-identify anonymized data as more and more data is made publicly available.⁸¹⁷ The solutions that the report proposes to minimize these risks include: data minimization, restricted data, restricted access (including licensing agreements, federal statistical research data centers, nongovernment data enclaves).⁸¹⁸

⁸¹⁷ *Id.* at 76-79.

⁸¹⁸ *Id.* at 82-88.

The Proposal does not allow for data minimization since it is aimed at making public complete underlying data that is likely to involve salient personally identifiable information for an unlimited amount of time.⁸¹⁹ Data restriction involves “removing explicit identifiers and applying a variety of statistical disclosure limitation methods to the dataset to reduce the risk of disclosure.”⁸²⁰ However, because these techniques “decrease the precision of the variables in the dataset and. . . introduce errors” it is unclear that they would preserve data for independent validation while also sufficiently protecting privacy.⁸²¹ Restricted access involves using “administrative procedures and technology to restrict who can access the dataset and what kinds of analyses can be done with the data to reduce the risk of disclosure.”⁸²² This specifically limits access to data from the general public, which seemingly would not meet the requirements of EPA’s proposal. Thus, EPA has not addressed how it would meet any of the challenges raised in this document.

III. NAS, Federal Statistics, Multiple Data Sources, and Privacy Protection: Next Steps (2017)

This report is not directly relevant as it discusses ways to combine diverse data sources from government and private sector sources and the privacy issues that arise from combining multiple data sets.⁸²³ The purpose of the report is to help “federal statistical agencies examine and evaluate data from alternative sources and then combine them as appropriate to provide the country with more timely, actionable, and useful information for policy makers, businesses, and individuals.”⁸²⁴ EPA’s proposal will in fact restrict the information that EPA can use.

The report notes that the “privacy status of data is dynamic over time, that datasets that are not individually identifiable today may in the future become individually identifiable” with the availability of new techniques and auxiliary data.⁸²⁵ It notes that as data sets are linked, these privacy threats increase.⁸²⁶ The Proposal does not discuss or address threats to privacy from data linkages.

The panel highlighted a number of threats to privacy and data security, including from security threats and inferential disclosure, and concluded “there is awareness of weaknesses of current statistical disclosure limitation methods, but the feasibility for federal statistical agencies of implementing new technologies, such as differential privacy, has not been clearly demonstrated.”⁸²⁷ Finally, they state:

⁸¹⁹ *Id.* at 82-83.

⁸²⁰ *Id.* at 83.

⁸²¹ *Id.*

⁸²² *Id.* at 85.

⁸²³ NAS, *Federal Statistics, Multiple Data Sources, and Privacy Protection: Next Steps*, National Academies Press (2017).

⁸²⁴ *Id.* at 2.

⁸²⁵ *Id.* at 71.

⁸²⁶ *Id.* at 72.

⁸²⁷ *Id.* at 105.

Overall, much work, interaction, and collaboration will be needed across the various disciplines and stakeholders as agencies seek to move forward to provide stronger privacy protection for the data they either collect from respondents or acquire access to from other administrative and private-sector sources for statistical purposes. It will be critical for there to be robust discussions of the implications of this approach for all stakeholders and these discussions will need to be informed by concrete examples to help everyone understand how use of these technologies will affect them.⁸²⁸

The report notes that in order to provide greater access to data much more research and resources are needed. The Proposal identifies no such resources or processes needed to develop needed methods and techniques to allow for greater data disclosure.

Footnote 20: For example, see policies or recommendations of publishers Taylor & Francis, Elsevier, PLOS, and Springer Nature

EPA cites to “policies or recommendation” of several journals that require data be deposited in public data repositories as an example of the Proposal’s requirement of data availability.⁸²⁹ EPA provided only a list of journals with no reference to any specific policies making it difficult to respond fully to this statement.

Each of these journals, however, has exceptions to its data availability requirements when there are valid reasons preventing authors from making their data publicly available via a public data repository. Further, the editors of these journals released a joint statement that explains why their policies with regards to data availability should not be used to support a policy by a federal agency that would in fact restrict the scientific studies it could rely on.⁸³⁰ Given the vastly different contexts and aims of federal agencies and scientific journals when it comes to making data publicly available, journal policies should not inform EPA’s direction. None of these journals claims that lack of data availability in itself calls into question the validity of a scientific conclusion based on that data—and thus these policies do not support the Proposal.

Footnote 21: For example: <https://osp.od.nih.gov/scientific-sharing/requesting-access-to-controlled-access-data-maintained-in-nih-designated-data-repositories-e-g-dbgap/>; <https://www.census.gov/fsrdc>

As examples of controlled access to data in federal research data centers, EPA cites to the National Institutes of Health’s policy for requesting access to controlled-access data maintained in NIH-designated data repositories and the U.S. Census Bureau’s website on Federal Statistical Research Data Centers, secure facilities providing authorized access to restricted-use microdata for statistical purposes only. NIH requires researches to be a tenure-track professor, senior

⁸²⁸ *Id.* at 106.

⁸²⁹ 83 Fed. Reg. at 18,771.

⁸³⁰ Jeremy Berg et. al., *Joint statement on EPA proposed rule and public availability of data*, Science (Apr. 30, 2018), <http://science.sciencemag.org/content/early/2018/04/30/science.aau0116>.

scientist, or equivalent and go through required procedures prior to gaining access.⁸³¹ The U.S. Census Bureau requires researchers to obtain Census Bureau Special Sworn Status, which requires passing a moderate risk background check and swearing to protect respondent confidentiality for life, with significant financial and legal penalties under Title 13 and Title 26 for failure to do so.⁸³²

It is unclear how these policies are informing EPA's proposal. EPA's proposal would require data to be made "publicly available," and these forms of restricted access specifically do not make data publicly available. They require significant resources and infrastructure and careful thought about who will be permitted to access such data and under what conditions—none of which EPA has provided any discussion of in the Proposal.

Footnote 22: These recommendations are consistent with those of Lutter and Zorn (2016). [https:// www.mercatus.org/system/files/Mercatus-Lutter-Public-Access-Data-v3.pdf](https://www.mercatus.org/system/files/Mercatus-Lutter-Public-Access-Data-v3.pdf).we re.

EPA cites to a working paper by Randall Lutter and David Zorn as supporting the proposition that "EPA should collaborate with other federal agencies to identify strategies to protect confidential and private information in any circumstance in which it is making information publicly available. These strategies should be cost-effective and may also include: Requiring applications for access; restricting access to data for the purposes of replication, validation, and sensitivity evaluation; establishing physical controls on data storage; online training for researchers; and nondisclosure agreements."⁸³³

Lutter and Zorn reference these strategies as ones agencies could use to minimize the risks to personally identifiable information when agencies make data publicly available.⁸³⁴ However, EPA's proposed regulations do not discuss or propose implementation of any of these strategies. The Proposal would result in a rule that mandates only that data be made "publicly available" without any possibility for more restricted release. As the comments discuss, EPA has further not consulted with other federal agencies on this Proposal.

Lutter and Zorn additionally do not argue that agencies should immediately disregard studies where data cannot be made publicly available, and provide alternative procedures agencies should utilize in those cases when still relying on studies.⁸³⁵ In a separate statement on the HONEST Act, which contains similar requirements as the Proposal, Lutter and Zorn stated that the legislation "should also allow agencies to regulate in instances where they do not possess data."⁸³⁶ While these additional procedures they recommend agencies follow could still be overly

⁸³⁵ *Id.* at 32-33.

⁸³⁶ Randall Lutter and David Zorn, *The Data That Our Government Uses Must be Transparent*, SmartRegs (Mar. 13, 2017), <https://smartregs.org/the-data-that-our-government-uses-must-be-transparent-caa16b3dc19d>.

burdensome and barriers to EPA promulgating important safeguards, it is important to note that even they see the dangers in a rule that would force the agency to disregard studies when underlying data could not be made public.

Footnote 23: <https://www.nap.edu/catalog/11434/expanding-access-to-research-data-reconciling-risks-and-opportunities>.

The Proposal claims “The benefits EPA ensuring that dose response data and models underlying pivotal regulatory science are publicly available in a manner sufficient for independent validation are that it will improve the data and scientific quality of the Agency’s actions and facilitate expanded data sharing and exploration of key data sets.”⁸³⁷ EPA cites to a National Academies report. This report does speak to many benefits of making data available to researchers, including helping to maintain and improve data quality,⁸³⁸ promoting new research and exploration of new questions using existing data,⁸³⁹ and allowing for verification, refutation, or refinement of original results.⁸⁴⁰

However, the report simply considers the benefits of making data publicly available in a broad sense, it does not consider the issue in the Proposal—which is that new data is not necessarily being made publicly available that was not before, and at the same time EPA’s consideration of scientific research is being limited. Thus, it does not consider the costs to government policy-making that come from EPA’s refusing to consider scientific research where underlying data is not publicly available. Since it is questionable whether the Proposal will result in any new data being made available to the public, and certain that it will result in EPA’s ignoring valid scientific findings, it is unlikely that this Proposal will “improve the data and scientific quality of the Agency’s actions” as EPA claims.

Footnote 24: <https://www.mercatus.org/system/files/Mercatus-Lutter-Public-Access-Data-v3.pdf>.

EPA cites to a paper by Randall Lutter and David Zorn for its analysis that “an increase in existing net benefits from greater reproducibility, which, if it occurred, would cover the costs of obtaining the data and making the data available.”⁸⁴¹ However, there are important limitation to this analysis that seriously call this conclusion into question.

First, the statement that EPA cites to is taken out of context. The entire sentence is: “More specifically, we can calculate an increase in existing net benefits from greater reproducibility, which, if it occurred, would cover the costs of obtaining the data and making the data available.”⁸⁴² This statement is *not* a conclusion that the benefits of making publicly

⁸⁴² *Id.* at 27.

available data underlying research that federal agencies use to promulgate significant public policies would outweigh the costs. It is describing the figure that Lutter and Zorn go on to calculate—the threshold level of increase in net benefits required by this policy to equal the costs of implementation. They find that “an improvement in net benefits of 0.02 to 2.08 percent would imply that the net benefits of requiring data access are positive.”⁸⁴³ They themselves note that this estimate “fall[s] short of proving that the benefits outweigh the associated costs.”⁸⁴⁴

Their analysis itself is suspect because it differs greatly from the cost estimate provided by the Congressional Budget Office for H.R. 1430, Honest and Open New EPA Science Treatment Act of 2017. The CBO estimated that, if the agency were to choose to rely only on studies that met the Act’s requirements from the outset, implementing this legislation would cost about \$5 million from 2018-2022.⁸⁴⁵ They assumed it would cost \$10,000 per study to make data available to enable use of studies.⁸⁴⁶ They estimated costs of at least \$100 million per year if EPA were to continue to rely on as many studies to support its actions as it has done in recent years.⁸⁴⁷ An older cost estimate from CBO on a prior version of the HONEST Act estimated that it would cost “about \$250 million a year for the next few years.”⁸⁴⁸ This assumed that EPA would spend from \$10,000 to \$30,000 per study to make the data available and that EPA would reduce the number of studies it relies on by about one-half.⁸⁴⁹

Zutter and Lorn calculated an alternative amount for the costs to EPA of this legislation. They find that “the total cost to the EPA for data collection and public accessibility would be \$2,558 per study, or about 26 percent of the \$10,000 per study cost estimated by CBO.”⁸⁵⁰ They used estimates that EPA reported under the Paperwork Reduction Act for time that entities in the chemical industry would need to spend to comply with EPA’s Health and Safety Data Reporting Rule (40 C.F.R. 716).⁸⁵¹ While they purport that the requirements of that rule are similar to the activities that EPA would undertake to comply with the HONEST Act and similar legislation, they provide no further basis for this.⁸⁵² Given the great discrepancy between their and CBO’s estimates, it is unclear that their estimate sufficiently accounts for the numerous costs associated with EPA locating underlying research data not currently in its possession and upgrading it to enable it to be made publicly available.

They also rely on questionable assumptions in their calculation. They assume that “given modern technology, by the time research has been published, almost all relevant underlying data

⁸⁵² *Id.*

and computer code and models will be in electronic format” so time spend photocopying studies will be reduced.⁸⁵³ This does not consider that EPA may want to rely on older studies where all relevant information is not available in electronic, easily accessible formats. They provide unsupported estimates for activities that EPA would need to undertake to comply with HONEST Act-like legislation that has no corresponding requirement in EPA’s Health and Safety Data Reporting Rule—such as estimating 10 hours for EPA to format unformatted data for public access.⁸⁵⁴

They additionally produce their own estimate for the number of studies that EPA relies on each year, looking at materials posted in dockets on regulations.gov and coming to a total of 18,000 pieces of scientific research per year.⁸⁵⁵ CBO estimated 50,000 scientific studies per year.⁸⁵⁶ Assuming that EPA continued to rely on all 18,000 studies per year, Zutter and Lorn came to total implementation costs of about \$46 million per year, far below the estimate by CBO assuming EPA still relied on at least half of the studies it does currently. Thus, one should view this cost estimate with suspicion, and there is no reason it should be relied on over CBO’s cost estimates and does not suffice for EPA providing its own cost benefit analysis.

May 25, 2018 Memorandum

On May 25, 2018, EPA provided a memorandum that provided additional hyperlinks for some of the sources cited in the footnotes.⁸⁵⁷

Footnote 9

- **National Science Foundation:** <https://www.nsf.gov/bfa/dias/policy/dmp.jsp>
- **National Institute of Science and Technology:** <https://www.nist.gov/open>
- **National Institutes of Health:** <https://grants.nih.gov/policy/sharing.htm>

The hyperlinks that EPA provides fail to point to any relevant policies that support EPA’s Proposal. First, EPA links to the National Science Foundation’s policies requiring investigators who receive NSF grants to share research data with other researchers.⁸⁵⁸ Importantly, they are only to release privileged or confidential information “in a form that protects the privacy of individuals and subjects involved” and NSF may make adjustments or exceptions when needed

⁸⁵³ *Id.* at 22.

⁸⁵⁴ *Id.*

⁸⁵⁵ *Id.* at 24.

⁸⁵⁶ Congressional Budget Office Cost Estimate: H.R. 1430, Honest and Open New EPA Science Treatment (HONEST) Act of 2017 (Mar. 29, 2017), <https://www.cbo.gov/system/files/115th-congress-2017-2018/costestimate/hr1430.pdf>. 3

⁸⁵⁷ May 25, 2018 Memorandum Re: Omitted Hyperlinks for Footnotes in the Proposed Rule (Docket ID No. EPA–HQ–OA–2018–0259)

⁸⁵⁸ NSF, *Disseminating and Sharing of Research Results*, <https://www.nsf.gov/bfa/dias/policy/dmp.jsp> (last accessed Aug. 10, 2018).

“to safeguard the rights of individuals and subjects, the validity of results, or the integrity of collections or to accommodate the legitimate interest of investigators.”⁸⁵⁹

EPA links to the National Institute of Science and Technology policy on sharing data arising from NIST-funded research.⁸⁶⁰ The plan clearly exempts “[p]ersonnel and medical information and similar information the disclosure of which would constitute a clearly unwarranted invasion of personal privacy” from being subject to the data sharing policy.⁸⁶¹

EPA also cites to The National Institutes of Health. The hyperlink links to a webpage consisting of a number of policies dictating sharing of NIH-funded research with no clarification of which policy EPA is referring to or why it is relevant to the Proposal. While NIH policies do in many cases require data from NIG-funded research to be shared publicly—these policies place protection of personal information at the forefront and thus include controls such as controlled access, de-identification of information, data aggregation and allow exceptions when data cannot be made publicly available.

These examples all deal with policies to share data that the agencies have access to and the ability to share—because they deal with federally-funded research. EPA’s Proposal, on the other hand, applies to all data whether or not EPA has the data in its possession or is authorized to release it. They all speak to making data available to increase its utility, not to making data available specifically for the purposes of independent validation of research results, which requires data be available on a more granular level that makes privacy protection more difficult. Further, EPA already has policies in place to make publicly available data that is produced by research it funds. Also, none of these policies address regulating how the agencies themselves rely on or use scientific information. Thus the Proposal in no way “builds upon” the efforts they represent.

EPA provides a link to the HEI Policy On The Provision Of Access To Data Underlying HEI funded Studies. This policy is “to provide access expeditiously to data for studies that it has funded and to provide that data in a manner that facilitates review and verification of the work but also protects the confidentiality of any volunteers who may have participated in the study and respects the intellectual interests of the original investigator of the work.”⁸⁶² It is written to be consistent with OMB Circular A-110, which requires agencies to respond to FOIA requests for data underlying federally supported research used to develop federal agency actions with the force and effect of law. EPA already has policies in place to make public the data underlying research that it funds, and already must comply with OMB Circular A-110, thus, it is unclear how this Proposal builds upon this policy.

Furthermore, the policy specifically excludes “personal and medical information and similar information that is personally identifiable, and the disclosure of which would constitute a clearly unwarranted invasion of personal privacy, such as information that could be used to identify a particular person in a research study” and requires the requestor to pay reasonable costs. In this manner, it further deviates from the Proposal.⁸⁶³

II. Center for Open Science,
https://osf.io/x2w9h/?_ga=2.15543670.1160736397.1518527893-776332106.1518527893

EPA links to the Center for Open Science's 2017-2020 Strategic Plan.⁸⁶⁴ While the strategic plan outlines COS's own mission to “increase openness, integrity, and reproducibility of scholarly research” and to meet its goal of creating “a future scholarly community in which the process, content, and outcomes of research are openly accessible by default” nothing in this

⁸⁶² HEI, *APPENDIX D: HEI POLICY ON THE PROVISION OF ACCESS TO DATA UNDERLYING HEI FUNDED STUDIES*, https://www.healtheffects.org/system/files/AppendixD-data-access_3.pdf (last accessed Aug. 10, 2018).

⁸⁶³ *Id.*

⁸⁶⁴ Center for Open Science, *Strategic Plan*, https://osf.io/x2w9h/?_ga=2.15543670.1160736397.1518527893-776332106.1518527893.

strategic plan suggests anything like EPA's Proposal.⁸⁶⁵ It does not discuss barring use of studies or ensuring access to underlying data—and thus is completely irrelevant to the Proposal.

III. Members of the Risk Assessment Specialty Section of the Society of Toxicology, the Dose Response Section of the Society for Risk Analysis, and the International Society for Regulatory Toxicology and Pharmacology:
http://www.isrtp.org/GMU%20WEBINAR_DEC_2013/GMU%20Study%20Document4.pdf

EPA links to a survey conducted by the Center for Media and Public Affairs and Center for Health and Risk Communication at George Mason University.⁸⁶⁶ They surveyed members of the Risk Assessment Specialty Section of the Society of Toxicology, the Dose Response Section of the Society for Risk Analysis, and the International Society for Regulatory Toxicology and Pharmacology. However, the survey thus does not represent any official recommendation or policy position from these professional organizations, and represent only the views of the members who chose to participate in the survey.

Thus, while the survey found 69 % of those surveyed “regard it as “very important” for assessors to have access to underlying raw data for the most critical studies in order to independently analyze their results,” this should be viewed in the rightful context.⁸⁶⁷ The survey did not ask whether agencies should continue to rely on scientific studies where the underlying data cannot be made public or independently analyzed. The survey question further appears to have only asked whether researchers assessing studies should have access to underlying data to independently analyze results, not whether underlying data should be made *publicly available*.

Further, the Dose Response Section of the Society for Risk Analysis has since submitted a comment to EPA that states this footnote and the claim that EPA makes that the Proposal took into consideration these recommendations and policies is “inaccurate” and that “the ‘Dose-Response Section [sic] of the Society for Risk Analysis’ has never adopted any ‘policies or recommendations’ on this or any other topic.”⁸⁶⁸ They have asked that EPA remove all references to the organization and make clear in the comment response for this rule that “‘third party Organizations’ whose policies and recommendations were considered do not include the Society for Risk Analysis or the Dose-Response Specialty Section.”

The Society for Toxicology similarly have said this survey does not constitute support from the Specialty Section or the SOT as a whole, and requesting “that any and all references to “members of the Risk Assessment Specialty Section of the Society of Toxicology” be removed

from the Final Rule.”⁸⁶⁹ They also specifically comment that “invalidating data solely on the basis of public availability is inappropriate.”⁸⁷⁰

IV. Bipartisan Policy Center’s Science for Policy Project,
[http://bipartisanpolicy.org/wp-](http://bipartisanpolicy.org/wp-content/uploads/sites/default/files/BPC%20Science%20Report%20fnl.pdf)
[content/uploads/sites/default/files/BPC%20Science%20Report%20fnl.pdf](http://bipartisanpolicy.org/wp-content/uploads/sites/default/files/BPC%20Science%20Report%20fnl.pdf)

EPA provides a hyperlink to the Final Report of the Science for Policy Project *Improving the Use of Science in Regulatory Policy*.⁸⁷¹ This report makes a number of recommendations, none of which endorse the Proposal. In relevant part, Recommendation Three suggests “Agencies and their scientific advisory committees should cast a wide net in reviewing studies relevant to regulatory policy, and should make their methods for filtering and evaluating those studies more transparent.”⁸⁷² They urge agencies to increase availability of data and information on research studies and subject all studies relied on in the formulation of regulation to be subject to the requirements of the Shelby Amendment and OMB Circular A-110 regardless of who funded the study.⁸⁷³ Importantly, those requirements contain important exception for confidentiality and privacy concerns—and thus do not support the Proposal.

This recommendation is also aimed at *increasing* use of science in regulatory policy, and does not suggest that agencies not rely on studies where those data access requirements cannot be met because of other concerns. It also highlights that the use of CBI to prevent access to data appears to be overused and urges agencies to make procedures more stringent to allow only for legitimate claims of CBI—which EPA does not address in its Proposal.⁸⁷⁴

Recommendation Four states: “The federal government, universities, scientific journals and scientists themselves can help improve the use of science in the regulatory process by strengthening peer review, expanding the information available about scientific studies, and setting and enforcing clear standards governing conflict of interest.”⁸⁷⁵ As part of this recommendation, the report “Federal agencies, universities and journals should encourage or require on-line publication of the methods and data underlying published scientific studies.”⁸⁷⁶ However, it once again does not say that agencies should not consider research studies where this is not possible due to privacy or other compelling reasons.

Wendy Wagner, who served on the panel that produced the recommendations has stated: “They don’t adopt any of our recommendations, and they go in a direction that’s completely

- **Nature:** <http://www.nature.com/authors/policies/data/data-availability-statements-data-citations.pdf>

While EPA links to journal policies that encourage or require, in some instances, sharing data, they contain exceptions when privacy would be compromised.⁸⁷⁸ The editors of these journals issued a joint statement opposing the Proposal. They note that some data sets cannot be shared publicly, and that there are still other methods available to verify scientific findings. The statement also strongly condemns the notion of excluding scientific information from consideration when underlying data cannot be made publicly available:

It does not strengthen policies based on scientific evidence to limit the scientific evidence that can inform them; rather, it is paramount that the full suite of relevant science vetted through peer review, which includes ever more rigorous features, inform the landscape of decision making. Excluding relevant studies simply because they do not meet rigid transparency standards will adversely affect decision-making processes.⁸⁷⁹

Thus, journal policies encouraging the sharing of underlying data do not support a proposal by a regulatory agency to exclude from consideration studies when the underlying data is not publicly available.

Footnote 16:

- **U.S. Department of Health and Human Services:** <https://www.hhs.gov/hipaa/for-professionals/privacy/special-topics/de-identification/index.html>
- **National Institute of Standards and Technology:**
<https://nvlpubs.nist.gov/nistpubs/ir/2015/NIST.IR.8053.pdf>

EPA suggests the examples linked to could address concerns about privacy and confidentiality arising from the Proposal. However, the cited sources provide no assurance that

⁸⁷⁷ Robinson Meyer, *Scott Pruitt's New Rule Could Completely Transform the EPA*, The Atlantic (Apr. 25, 2018), <https://www.theatlantic.com/science/archive/2018/04/how-the-epas-new-secret-science-rule/558878/>.

⁸⁷⁸ See discussion below on footnote 20.

⁸⁷⁹ Jeremy Berg et. al., *Joint statement on EPA proposed rule and public availability of data*, Science (Apr. 30, 2018), <http://science.sciencemag.org/content/early/2018/04/30/science.aau0116>.

the Proposal could be implemented to expand disclosure of personal data without serious risks to privacy.

I. U.S. Department of Health and Human Services, <https://www.hhs.gov/hipaa/for-professionals/privacy/special-topics/de-identification/index.html>

EPA first points to guidance on de-identification requirements under HIPAA. This guidance provides two methods for de-identifying data: (1) expert determination method, where an expert determines that, after application of statistical and scientific principals and methods, the risk is very small that the information alone or with other available information could be used to identify the subject; and (2) the safe harbor method, requiring that a number of identifiers are removed. The first method requires case-by-case work and EPA has provided no information regarding how EPA could implement it or how much it might cost and thus the feasibility of requiring researchers or EPA to de-identify data this way is questionable. The second method requires removal of much information useful for research that may be necessary to be able to independently validate the research, so it is unclear that it would satisfy the Proposal's demands. Furthermore, the safe harbor method has been shown to provide potentially insufficient privacy protections.⁸⁸⁰

II. National Institute of Standards and Technology, <https://nvlpubs.nist.gov/nistpubs/ir/2015/NIST.IR.8053.pdf>

EPA links to a NIST document entitled *De-Identification of Personal Information* as a potential solution to address concerns about confidentiality and privacy.⁸⁸¹ This document discusses different techniques and issues with de-identification of personal information. However, the document does not discuss de-identification of personal information specifically for the purposes of making research data publicly available for independently validating scientific studies. The document instead notes that:

The purpose of de-identifying data is to allow some uses of the de-identified data while providing for some privacy protection by shielding the identity of the data subjects. These two goals are antagonistic, in that there is a trade-off between the amount of de-identification and the utility of the resulting data. However, de-identification opens up new uses for the data that were previously prohibited due to privacy concerns. It is thus the role of the data controller, standards bodies, regulators, lawmakers and courts to determine the appropriate level of security, and thereby the acceptable trade-off between de-identification and utility.⁸⁸²

EPA completely fails to note this obstacle, that as data is stripped of identifiable material it also loses utility to researchers. EPA cites to broad privacy protection techniques without explaining

⁸⁸⁰ Latanya Sweeney, Ji Su Yon, Laura Perovich, Katherine E Boronow, Phil Brown, and Julia Green Brody, *Re-identification Risks in HIPAA Safe Harbor Data: A Study of Data From One Environmental Health Study*, Technology Science (August 28, 2017).

⁸⁸¹ Simson L. Garfinkel, *De-Identification of Personal Information* (NISTIR 8053), NIST (Oct. 2015), <https://nvlpubs.nist.gov/nistpubs/ir/2015/NIST.IR.8053.pdf>.

⁸⁸² *Id.* at 11-12.

whether they could be applied to protect privacy while still allowing enough utility in the data set to allow for independent validation as required by the Proposal.

The document notes many of the challenges to protecting privacy including that: “de-identification approaches based on suppressing or generalizing specific fields in a database cannot provide absolute privacy guarantees, because there is always a chance that the remaining data can be re-identified using an auxiliary dataset.”⁸⁸³ The harms of data linkages and increasing difficulty to preserve privacy as more and more information about individuals is made available is another challenge that EPA has not addressed.

III. U.S. Department of Education,

https://studentprivacy.ed.gov/sites/default/files/resource_document/file/data_deidentification_terms.pdf

EPA links to a document of the Privacy Technical Assistance Center, *Data De-identification: An Overview of Basic Terms*, which provides a high-level overview of key terms and practices to help educational agencies and institutions comply with the Family Educational Rights and Privacy Act (FERPA).⁸⁸⁴ EPA has not explained why the requirements of FERPA are applicable here. This document is concerned with data disclosure that occurs “when schools, districts, or states publish reports on student achievement or share students’ data with external researchers” not to make information publicly available for independent validation.⁸⁸⁵ Thus its unclear that methods used to de-identify but preserve data for those purposes would be adequate in this context.

For example, one of the methods that the U.S. Department of Education uses for disclosure avoidance for tabular data is to not release information for any cell that has a size below some minimum, which essentially means not disclosing information where there are small numbers in a certain cell.⁸⁸⁶ This could obviously lead to a loss of information that would prevent a de-identified data set from being used to independently validate research findings.

IV. U.S. Census Bureau,

<https://www.census.gov/about/adrm/linkage/technical-documentation/processing-de-identification.html>

EPA provides a link to a website titled *Data Ingest and Linkage* that details the U.S. Census Bureau’s approach to linking data across many records held by the Bureau, permitting more detailed information to be linked back to one individual to allow for analysis and research. The website links to a working paper that describes the method by which the Bureau assigns a unique person identifier to records it holds that enables it to link records together to create the

⁸⁸³ *Id.* at 5.

⁸⁸⁴ U.S. Department of Education, Privacy Technical Assistance Center, *Data De-identification: An Overview of Basic Terms* (Oct. 2012), https://studentprivacy.ed.gov/sites/default/files/resource_document/file/data_deidentification_terms.pdf.

⁸⁸⁵ *Id.*

⁸⁸⁶ *Id.* at 4.

final file.⁸⁸⁷ It is totally unclear how this process on linking together records is a solution that EPA could implement to protect privacy of individuals when disclosing data as it concerns how to identify data to specific people—not how to make data available while protecting their privacy.

Footnote 20:

- Taylor & Francis: <https://authorservices.taylorandfrancis.com/data-repositories/>
- Elsevier: <https://www.elsevier.com/authors/author-services/research-data>
- PLOS: <http://journals.plos.org/plosone/s/data-availability>
- Springer Nature: <https://www.springernature.com/gp/authors/research-data-policy/repositories>

EPA cites to “policies or recommendation” of several journals that require data be deposited in public data repositories as an example of the Proposal’s requirement of data availability.⁸⁸⁸ While these journals have policies that encourage authors to deposit data in public data repositories, they all have important exceptions in cases where this is not feasible or ethical.

The hyperlink for Taylor & Francis links to a page that provides information about how to find public data repositories to submit data to in order to comply with journal sharing policies. However, Taylor & Francis’ basic data sharing policy “which applies across many of [their] journals” does not *require* data be submitted to a public data repository, but “encourages authors to share and make data open where this does not violate protection of human subjects or other valid subject privacy concerns.”⁸⁸⁹ Thus, this policy is flexible and allows exceptions for when privacy concerns are at stake.

The hyperlink for Elsevier links to a page providing general information about data sharing. While the web page notes that researchers “are increasingly encouraged, or even mandated, to make. . . research data available, accessible, discoverable and usable,” it also provides important qualifications.⁸⁹⁰ It notes, “there are times when the data is simply not available to post or there are good reasons why it shouldn’t be shared.”⁸⁹¹ In these cases, authors are encouraged to provide a data statement explaining why the data cannot be shared.

The hyperlink for PLOS links to a page describing PLOS’s data availability policies. It explains, “PLOS journals require authors to make all data underlying the findings described in their manuscript fully available without restriction, with rare exception.”⁸⁹² The policy recommends deposition of the data into a public repository, however, it recognizes that there are

Appendix B. Provisions of Federal Environmental Statutes Requiring EPA to Consult With Other Federal Agencies in Implementing Key Programs

Consultation Provisions in Clean Air Act

Section	Section Title	Consultation Requirement
§118(c)	President's Air Quality Advisory Board and Advisory Committees	(c) Prior to- (1) issuing criteria for an air pollutant under section 108(a)(2) (2) publishing any list under section 111(b)(1)(A) or 112(b)(1)(A), (3) publishing any standard under section 111 or section 112, or (4) publishing any regulation under section 202(a), The administrator shall, to the maximum extent practicable within the time provided, consult with appropriate advisory committees, independent experts, and Federal departments and agencies.
§103	Research, Investigation, Training, and other Activities	Consult with other Federal agencies to coordinate research and avoid duplication of activities
§108(a)	Air Quality Criteria and Control Techniques	Consult with Federal agencies to issue information on air pollution control techniques
§108(c)	Air Quality Criteria and Control Techniques	"[A]fter consultation with the Secretary of Transportation... update the June 1978 Transportation-Air Quality Planning Guidelines and publish guidance on the development and implementation of transportation and other measures necessary to demonstrate and maintain attainment of national ambient air quality standards."
§108(f)(1)	Air Quality Criteria and Control Techniques	Consult with Secretary of Transportation to provide information "regarding the formulation and emission reduction potential of transportation control measures related to criteria pollutants and their precursors."
§112(d)(9)	Hazardous Air Pollutants	Allows Administrator not to list radionuclide emissions if Administrator determines, after consultation with Nuclear Regulatory Commission (NRC), that NRC regulations already provide an adequate margin of safety.
§122	Listing of Certain Unregulated Pollutants	Consult with NRC before listing any nuclear or nuclear by-product material
§169A	Visibility Protections for Federal Class 1 Areas	Consultation with Department of Interior and Federal Land Managers for regional haze determinations
§231(a)(2)(B)(i)	Aircraft Emission Standards	Consult with Federal Aviation Administration on aircraft engine emission standards
§250 (d)	General Provisions	Consult with Department of Energy (DOE) and Department of Transportation (DOT) in carrying out Administrator's duties under the this part (Clean Fuel Vehicles)
§404(f)(1)(A)	Energy Conservation and Renewable Energy	Consult with Secretary of Energy to determine Qualified Energy Conservation Measure

§507(b)(3)(A)	Small Business Stationary Source Technical and Environmental Compliance Assistance Program	Consult with SBA Administrator to determine which category of small business sources could be exempted
---------------	--	--

Consultation Provisions in Clean Water Act

Section	Section Title	Text
§304(c)	Information and Guidelines	Consult with appropriate Federal and State agencies to issue information on pollution-reducing procedures and operating methods to implement standards of performance under §306.
§304(d)(1)-(2)	Information and Guidelines	Consult with appropriate Federal and State agencies to publish the amount of reduction attainable through secondary treatment and information on alternative waste treatment management techniques.
§304(e)	Information and Guidelines	Consult with appropriate Federal and State agencies to publish supplemental regulations to control plant site runoff, leaks/spillage, sludge/waste disposal, and drainage
§304(f)	Information and Guidelines	Consult with Federal and State agencies to issue guidelines for evaluating nonpoint sources and methods to control pollution from those sources.
§307(a)(7)	Toxic Pretreatment Effluent Standards	Consult with Federal departments and agencies prior to publishing regulations pursuant to this section
§404(d)(1)	Disposal of Sewage Sludge	Administrator must consult with Federal agencies on regulations providing guidelines for the disposal of sludge and the utilization of sludge for various purposes.
§118(a)	Lake Tahoe Study	Coordinate with Secretary of Agriculture and other Federal agencies regarding adequacy and need for extending Federal oversight of Lake Tahoe
§311(d)(2)(M)	Oil and Hazardous Substance Liability	Consultation with FWS and NOAA for a fish and wildlife response plan
§312(e)	Marine Sanitation Devices	“Before the standards and regulations under this section are promulgated, the Administrator and the Secretary of the department in which the Coast Guard is operating shall consult with the Secretary of State; the Secretary of Health, Education, and Welfare; the Secretary of Defense; the Secretary of the Treasury; the Secretary of Commerce; other interested Federal agencies....”

Consultation Provisions in Federal Insecticide, Fungicide, and Rodenticide Act

Section	Section Title	Text
136w(a)(2)(A)	Authority of the Administrator: Procedure: Proposed regulations	<p>(A) Proposed Regulations:</p> <p>At least 60 days prior to signing any proposed regulation for publication in the Federal Register, the Administrator shall provide the Secretary of Agriculture with a copy of such regulation. If the Secretary comments in writing to</p>

		<p>the Administrator regarding any such regulation within 30 days after receiving it, the Administrator shall publish in the Federal Register (with the proposed regulation) the comments of the Secretary and the response of the Administrator with regard to the Secretary's comments. If the Secretary does not comment in writing to the Administrator regarding the regulation within 30 days after receiving it, the Administrator may sign such regulation for publication in the Federal Register any time after such 30-day period notwithstanding the foregoing 60-day time requirement.</p>
136w(a)(2)(B)	Authority of the Administrator: Final Regulations	<p>At least 30 days prior to signing any regulation in final form for publication in the Federal Register, the Administrator shall provide the Secretary of Agriculture with a copy of such regulation. If the Secretary comments in writing to the Administrator regarding any such final regulation within 15 days after receiving it, the Administrator shall publish in the Federal Register (with the final regulation) the comments of the Secretary, if requested by the Secretary, and the response of the Administrator concerning the Secretary's comments. If the Secretary does not comment in writing to the Administrator regarding the regulation within 15 days after receiving it, the Administrator may sign such regulation for publication in the Federal Register at any time after such 15-day period notwithstanding the foregoing 30-day time requirement. In taking any final action under this subsection, the Administrator shall include among those factors to be taken into account the effect of the regulation on production and prices of agricultural commodities, retail food prices, and otherwise on the agricultural economy, and the Administrator shall publish in the Federal Register an analysis of such effect</p>
136w(a)(3)	Authority of the Administrator: Procedure: Congressional Committees	<p>At such time as the Administrator is required under paragraph (2) of this subsection to provide the Secretary of Agriculture with a copy of proposed regulations and a copy of the final form of regulations, the Administrator shall also furnish a copy of such regulations to the Committee on Agriculture of the House of Representatives and the Committee on Agriculture, Nutrition, and Forestry of the Senate.</p>
136w(a)(4)	Authority of the Administrator	<p>Simultaneously with the promulgation of any rule or regulation under this subchapter, the Administrator shall transmit a copy thereof to the Secretary of the Senate and the Clerk of the House of Representatives. The rule or regulation shall not become effective until the passage of 60 calendar days after the rule or regulation is so transmitted.</p>

136w-3	Identification of Pests; cooperation with Department of Agriculture	The Administrator, in coordination with the Secretary of Agriculture, shall identify those pests that must be brought under control. The Administrator shall also coordinate and cooperate with the Secretary of Agriculture's research and implementation programs to develop and improve the safe use and effectiveness of chemical, biological, and alternative methods to combat and control pests that reduce the quality and economical production and distribution of agricultural products to domestic and foreign consumers.
136(r)(a)	Research and Monitoring: Research	The Administrator shall undertake research including research by grant or contract with other Federal agencies, universities, or others as may be necessary to carry out the purposes of this subchapter, and the Administrator shall conduct research into integrated pest management in coordination with the Secretary of Agriculture. The Administrator shall also take care to ensure that such research does not duplicate research being undertaken by any other Federal agency.
136a-1(n)(2)-(3)	Reregistration of registered pesticides: Authorization of funds to develop public health data	<p>(2) Consultation. In the case of a pesticide registered for use in public health programs for vector control or for other uses the Administrator determines to be human health protection uses, the Administrator shall, upon timely request by the registrant or any other interested person, or on the Administrator's own initiative may, consult with the Secretary [of Health and Human Services] prior to taking final action to suspend registration under section 3(c)(2)(B)(iv) or cancel a registration under section 4, 6(e), or 6(f). In consultation with the Secretary, the Administrator shall prescribe the form and content of requests under this section.</p> <p>(3) Benefits to support family. The Administrator, after consulting with the Secretary, shall make a determination whether the potential benefits of continued use of the pesticide for public health or health protection purposes are of such significance as to warrant a commitment by the Secretary to conduct or to arrange for the conduct of the studies required by the Administrator to support continued registration under section or reregistration under section 4</p>
7 USCS 136(l)(2)	Definitions: Minor Use	(2) the Administrator, in consultation with the Secretary of Agriculture, determines that, based on information provided by an applicant for registration or a registrant, the use does not provide sufficient economic incentive to support the initial registration or continuing registration of a pesticide for such use and--

136i(a)(1)	Use of restricted use pesticides; applicators	Requires the Administrator to consult with Governor of each state to conduct a program for the certification of use of specific pesticides.
136a(c)(1)(F)(ii)	Registration of Pesticides: Procedure for registration	The period of exclusive data use provided under clause (i) shall be extended 1 additional year for each 3 minor uses registered after the date of enactment of this clause [enacted Aug. 3, 1996] and within 7 years of the commencement of the exclusive use period, up to a total of 3 additional years for all minor uses registered by the Administrator if the Administrator, in consultation with the Secretary of Agriculture, determines that, based on information provided by an applicant for registration or a registrant, that--(I) there are insufficient efficacious alternative registered pesticides available for the use; (II) the alternatives to the minor use pesticide pose greater risks to the environment or human health; (III) the minor use pesticide plays or will play a significant part in managing pest resistance; or (IV) the minor use pesticide plays or will play a significant part in an integrated pest management program.
136t(b)	Delegation and Cooperation	(b) Cooperation. The Administrator shall cooperate with the Department of Agriculture, any other Federal agency, and any appropriate agency of any State or any political subdivision thereof, in carrying out the provisions of this Act and in securing uniformity of regulations.
136o(e)	Imports and Exports	Secretary of the Treasury shall prescribe regulations for this section in consultation with the Administrator.
136p	Exemption of Federal and State Agencies	The Administrator may, at the Administrator's discretion, exempt any Federal or State agency from any provision of this Act if the Administrator determines that emergency conditions exist which require such exemption. The Administrator, in determining whether or not such emergency conditions exist, shall consult with the Secretary of Agriculture and the Governor of any State concerned if they request such determination.
136w-7	Department of Agriculture Minor Use Program	(A) Grant authority. The Secretary, in consultation with the Administrator, shall establish a program to make grants for the development of data to support minor use pesticide registrations and reregistrations. The amount of any such grant shall not exceed 1/2 of the cost of the project for which the grant is made.
136i-1(a)(1)	Pesticide Recordkeeping	The Secretary of Agriculture, in consultation with the Administrator of the Environmental Protection Agency, shall require certified applicators of restricted use pesticides
136i-2(c)	Collection of Pesticide Use Information	Coordination. The Secretary of Agriculture shall, as appropriate, coordinate with the Administrator of the Environmental Protection Agency in the design of the

		surveys and make available to the Administrator the aggregate results of the surveys to assist the Administrator.
--	--	---

Consultation provisions under the Toxic Substances Control Act

Section	Title	Text
2609(a)	Research, Development, collection, dissemination, and utilization of data	(a) Authority. The Administrator shall, in consultation and cooperation with the Secretary of Health and Human Services and with other heads of appropriate departments and agencies, conduct such research, development, and monitoring as is necessary to carry out the purposes of this Act. The Administrator may enter into contracts and may make grants for research, development, and monitoring under this subsection. Contracts may be entered into under this subsection without regard to sections 3648 and 3709 of the Revised Statutes
2609(b)(1), (2)	Research, development, collection, dissemination, and utilization of information: Information Systems	Administrator shall Consult and cooperate with Secretary of HHS and other heads of appropriate departments and agencies, to establish an efficient system for retrieval of toxicological and other scientific information which could be useful
2609(c)	Research, development, collection, dissemination, and utilization of information: Screening Techniques	Administrator shall coordinate with Assistant Secretary for HHS to develop screening techniques
2609(d)	Research, development, collection, dissemination, and utilization of information: Monitoring	Administrator shall, in consultation and cooperation with the Secretary of Health and Human Services, establish and be responsible for research aimed at the development, in cooperation with local, State, and Federal agencies, of monitoring techniques and instruments which may be used in the detection of toxic chemical substances and mixtures and which are reliable, economical, and capable of being implemented under a wide variety of conditions
2609(e)	Research, development, collection, dissemination, and utilization of information: Basic Research	The Administrator shall, in consultation and cooperation with the Secretary of Health and Human Services, establish research programs to develop the fundamental scientific basis of the screening and monitoring techniques described in subsections (c) and (d), the bounds of the reliability of such techniques, and the opportunities for their improvement.
2609(g)	Research, development, collection, dissemination, and utilization of information: Exchange of research and development results	The Administrator shall, in consultation with the Secretary of Health and Human Services and other heads of appropriate departments and agencies, establish and coordinate a system for exchange among Federal, State, and local authorities of research and development results respecting toxic chemical substances and mixtures, including a system to facilitate and promote the development of standard information format and analysis and consistent testing procedures.

2608(d)	Coordination	“Coordination. In administering this Act [15 USCS §§ 2601 et seq.], the Administrator shall consult and coordinate with the Secretary of Health and Human Services and the heads of any other appropriate Federal executive department or agency, any relevant independent regulatory agency, and any other appropriate instrumentality of the Federal Government for the purpose of achieving the maximum enforcement of this Act . . .”
2608(e)	Exposure Information	If the Administrator obtains information related to exposures or releases of a chemical substance or mixture that may be prevented or reduced under another Federal law, including a law not administered by the Administrator, the Administrator shall make such information available to the relevant Federal agency or office of the Environmental Protection Agency.
2604(f)(5)	Manufacturing and Processing Notices: Protection Against Unreasonable Risks	Consult with Assistant Secretary of Labor prior to adopting any restriction of chemical substance for workplace exposures
2604(h)(2)(B)(ii)	Manufacturing and Processing Notices: Exemptions	Consult with AG of the Federal Trade Commission about exempting persons from information requirements.

Consultation Provisions in the Safe Drinking Water Act

Section	Title	Text
300g-1 (b)(1)(D)	Standards: Listing of Contaminants for Consideration, Urgent Threats to Public Health	The Administrator may promulgate an interim national primary drinking water regulation for a contaminant without making a determination for the contaminant under paragraph (4)(C), or completing the analysis under paragraph (3)(C), to address an urgent threat to public health as determined by the Administrator after consultation with and written response to any comments provided by the Secretary of Health and Human Services, acting through the director of the Centers for Disease Control and Prevention or the director of the National Institutes of Health.
300g-1(d)	Regulations:	Regulations; public hearings; administrative consultations. Regulations under this section shall be prescribed in accordance with section 553 of title 5, United States Code (relating to rule-making), except that the Administrator shall provide opportunity for public hearing prior to promulgation of such regulations. In proposing and promulgating regulations under this section, the Administrator shall consult with the Secretary and the National Drinking Water Advisory Council.
300j-12(i)(2)	Funds: Indian Tribes: Use of Funds	(2) Use of funds. Funds reserved pursuant to paragraph (1) shall be used to address the most significant threats to public health associated with public water systems that serve Indian Tribes, as determined by the Administrator in consultation with the Director of the Indian Health Service and Indian Tribes.
300j-13(a)(5)	Source Water Quality Assessment	Demonstration project. The Administrator shall, as soon as practicable, conduct a demonstration project, in consultation with other Federal agencies, to demonstrate the most effective and protective means of

		assessing and protecting source waters serving large metropolitan areas and located on Federal lands.
300j-5(b)	National Drinking Water Advisory Council	(b) Functions. The Council shall advise, consult with, and make recommendations to, the Administrator on matters relating to activities, functions, and policies of the Agency under this <u>title [42 USCS §§ 300f et seq.]</u> .
300j-3d	Water Supply Cost Savings	(a) Drinking water technology clearinghouse. The Administrator, in consultation with the Secretary of Agriculture, shall— (1) develop a technology clearinghouse for information on the cost-effectiveness of innovative and alternative drinking water delivery systems, including wells and well systems; and (2) disseminate such information to the public and to communities and not-for-profit organizations seeking Federal funding for drinking water delivery systems serving 500 or fewer persons.
300i-3(a)	Contaminant Prevention, Detection and Response	In general. The Administrator, in consultation with the Centers for Disease Control and, after consultation with appropriate departments and agencies of the Federal Government and with State and local governments, shall review (or enter into contracts or cooperative agreements to provide for a review of) current and future methods to prevent, detect and respond to the intentional introduction of chemical, biological or radiological contaminants into community water systems and source water for community water systems, including each of the following:
300j-19(b)(2)(A)	Algal Toxin Risk Assessment and Management	(b) Information coordination. In carrying out this section the Administrator shall-- (2) as appropriate, consult with-- • (A) other Federal agencies that-- ○ (i) examine or analyze cyanobacteria or algal toxins; or ○ (ii) address public health concerns related to harmful algal blooms;

Consultation Provisions in the Comprehensive Environmental Response, Compensation, and Liability Act

Section	Section Title	Consultation Requirement
§311(a)(1)	Research, Development, and Demonstration	The Secretary of Health and Human Services...in consultation with the Administrator, shall establish and support a basic research and training program...consisting of the following (A) Basic research (including epidemiologic and ecologic studies) which may include each of the following: (i) Advanced techniques for the detection, assessment, and evaluation of the effects on human health of hazardous substances. (ii) Methods to assess the risks to human health presented by hazardous substances. (iii) Methods and technologies to detect hazardous substances in the environment and basic biological, chemical, and physical methods to reduce the amount and toxicity of hazardous substances. (B) Training, which may include each of the following:

		<p>(i) Short courses and continuing education for State and local health and environment agency personnel and other personnel engaged in the handling of hazardous substances, in the management of facilities at which hazardous substances are located, and in the evaluation of the hazards to human health presented by such facilities.</p> <p>(ii) Graduate or advanced training in environmental and occupational health and safety and in the public health and engineering aspects of hazardous waste control.</p> <p>(iii) Graduate training in the geosciences, including hydrogeology, geological engineering, geophysics, geochemistry, and related fields necessary to meet professional personnel needs in the public and private (a) sectors and to effectuate the purposes of this Act.</p>
§311(a)(2)	Research, Development, and Demonstration	The Director of the National Institute for Environmental Health Sciences shall cooperate fully with the relevant Federal agencies referred to in subparagraph (A) of paragraph (5) in carrying out the purposes of this section.
§311(a)(5)	Research, Development, and Demonstration	<p>To assist in the implementation of this subsection and to aid in the coordination of research and demonstration and training activities funded from the Fund under this section, the Secretary shall appoint an advisory council (hereinafter in this subsection referred to as the “Advisory Council”) which shall consist of representatives of the following:</p> <p>(A) The relevant Federal agencies.</p> <p>(B) The chemical industry.</p> <p>(C) The toxic waste management industry.</p> <p>(D) Institutions of higher education.</p> <p>(E) State and local health and environmental agencies.</p> <p>(F) The general public.</p>
§311(a)(6)	Research, Development, and Demonstration	Within nine months after the date of the enactment of this subsection, the Secretary, acting through the Director of the National Institute for Environmental Health Sciences, shall issue a plan for the implementation of paragraph (1). The plan shall include priorities for actions under paragraph (1) and include research and training relevant to scientific and technological issues resulting from site specific hazardous substance response experience. The Secretary shall, to the maximum extent practicable, take appropriate steps to coordinate program activities under this plan with the activities of other Federal agencies in order to avoid duplication of effort. The plan shall be consistent with the need for the development of new technologies for meeting the goals of response actions in accordance with the provisions of this Act. The Advisory Council shall be provided an opportunity to review and comment on the plan and priorities and assist appropriate coordination among the relevant Federal agencies referred to in subparagraph (A) of paragraph (5).
§311(c)	Research, Development, and Demonstration	<p>HAZARDOUS SUBSTANCE RESEARCH.—The Administrator may conduct and support, through grants, cooperative agreements, and contracts, research with respect to the detection, assessment, and evaluation of the effects on and risks to human health of hazardous substances and detection of hazardous substances in the environment. The Administrator shall coordinate such research with the Secretary of Health and Human Services, acting through the advisory council established under this section, in order to avoid duplication of effort.</p>

§104(i)(4)	Response Authorities	The Administrator of the ATSDR shall provide consultations upon request on health issues relating to exposure to hazardous or toxic substances, on the basis of available information, to the Administrator of EPA
§104(i)(5)(A)	Response Authorities	For each hazardous substance listed pursuant to paragraph (2), the Administrator of ATSDR (in consultation with the Administrator of EPA and other agencies and programs of the Public Health Service) shall assess whether adequate information on the health effects of such substance is available. For any such substance for which adequate information is not available (or under development), the Administrator of ATSDR, in cooperation with the Director of the National Toxicology Program, shall assure the initiation of a program of research designed to determine the health effects (and techniques for development of methods to determine such health effects) of such substance.
§104(i)(6)(C)	Response Authorities	In determining the priority in which to conduct health assessments under this subsection, the Administrator of ATSDR, in consultation with the Administrator of EPA, shall give priority to those facilities at which there is documented evidence of the release of hazardous substances, at which the potential risk to human health appears highest, and for which in the judgment of the Administrator of ATSDR existing health assessment data are inadequate to assess the potential risk to human health as provided in subparagraph (F). In determining the priorities for conducting health assessments
§107(c)	Abatement Action	Within one hundred and eighty days after enactment of this Act, the Administrator of the Environmental Protection Agency shall, after consultation with the Attorney General, establish and publish guidelines for using the imminent hazard, enforcement, and emergency response authorities of this section and other existing statutes administered by the Administrator of the Environmental Protection Agency to effectuate the responsibilities and powers created by this Act.
§120(e)(1)	Federal Facilities	Not later than 6 months after the inclusion of any facility on the National Priorities List, the department, agency, or instrumentality which owns or operates such facility shall, in consultation with the Administrator and appropriate State authorities, commence a remedial investigation and feasibility study for such facility.
§120(e)(6)	Federal Facilities	Administrator, after consultation with other departments, may determine that remedial efforts should be done by another potentially responsible party and may enter into a settlement agreement with such party.

Consultation Provisions in the Resource Conservation and Recovery Act

Section	Section Title	Consultation Requirement
§2002(a)(1)	Authorities of Administrator	In carrying out this Act, the Administrator is authorized to— (1) prescribe, in consultation with Federal, State, and regional authorities, such regulations as are necessary to carry out his functions under this Act;
§1008(a)	Solid Waste Management Information and Guidelines	Administrator shall consult with Federal agencies, among others, to develop and publish guidelines for solid waste management.

§2001	Office of Solid Waste and Interagency Coordinating Committee	Establishing an Interagency Coordinating Committee for RCRA between EPA, Department of Energy, Department of Commerce, and all other Federal agencies. Includes coordinating research and projects.
§2002(a)(2)-(6)	Authorities of Administrator	<p>(2) consult with or exchange information with other Federal agencies undertaking research, development, demonstration projects, studies, or investigations relating to solid waste;</p> <p>...</p> <p>(5) utilize the information, facilities, personnel and other resources of Federal agencies, including the National Bureau of Standards 1 and the National Bureau of the Census, on a reimbursable basis, to perform research and analyses and conduct studies and investigations related to resource recovery and conservation and to otherwise carry out the Administrator's functions under this Act; and</p> <p>(6) to delegate to the Secretary of Transportation the performance of any inspection or enforcement function under this Act relating to the transportation of hazardous waste where such delegation would avoid unnecessary duplication of activity and would carry out the objectives of this Act and of the Hazardous Materials Transportation Act.</p>
§4002(b)	Federal Guidelines for Plans	Not later than 18 months after enactment, Administrator shall consult with appropriate agencies to promulgate guidelines for the development and implementation of State plans. Such guidelines should be reviewed and revised at least every three years.
§8001(a)	Research, Demonstrations, Training, and Other Activities	<p>The Administrator, alone or after consultation with the [Department of Energy], or [FERC], shall conduct, and encourage, cooperate with, and render financial and other assistance to appropriate public (whether Federal, State, interstate, or local) authorities, agencies, and institutions, private agencies and institutions, and individuals in the conduct of, and promote the coordination of, research, investigations, experiments, training, demonstrations, surveys, public education programs, and studies relating to—</p> <p>(1) any adverse health and welfare effects of the release into the environment of material present in solid waste, and methods to eliminate such effects....</p>
§8001(b)(2)(D)	Research, Demonstrations, Training, and Other Activities	any activities undertaken under provisions of sections 8002 and 8003 as related to energy; as related to energy or synthetic fuels recovery from waste; or as related to energy conservation shall be accomplished through coordination and consultation with the [Department of Energy]

Subject: Issues related to Data Sharing
Attachments: HEI Oral Comments Proposed Transparency in Regulatory Science Rule July 17 2018.pdf; HEI Response to Kadeli Letter on Data Sharing August 27, 2013.pdf

Two very useful items on issues arising in the transparency proposal.....per my request to HEI.

One...you folks have no doubt seen or heard...HEI's brief comments at the public meeting.

The other, an HEI letter to Lek Kadeli from 2013 on many of the same issues (still relatively brief and readable), that was written no doubt in the context public access to data issue that was actively being considered at that time.

Carl

Hi Tom,

Just a quick note to confirm that you will be at our Board meeting Thursday to represent the Agency and answer questions/help the discussion on the Proposed Rule: Strengthening Transparency in Regulatory Science RIN (2080-AA14) . This will be an important part of the agenda and meeting and I appreciate your support during this discussion.

Feel free to contact me or Tom C if you wish to discuss further or have any questions about the meeting.

Regards,

Tom Brennan

Subject: FW: SAB Review of the Regulatory Agenda Materials for the May 31 meeting

Tom –

Thanks for reaching out about point s of contact for planned actions for the SAB to discuss at this week's meeting.

I wanted to be clear that Discussions of Proposed Rule: Strengthening Transparency in Regulatory Science RIN (2080-AA14) is on the agenda and will be discussed late on Thursday. I think it is a good opportunity to share that the comment period was extended to August 17 and there will be a public hearing on the rule in July. Please note that the Board initiated this memorandum this action was published as part of the Spring 2018 Regulatory Agenda. I confirmed with Caryn Muellerleile that the identification of major planned actions in the Spring 2018 is not yet complete but assume this action would be included for the SAB to screen.

Best
Tom

Subject: FW: SAB Review of the Regulatory Agenda Materials for the May 31 meeting

Greetings

I attached a list of the planned actions the SAB will be discussing next week. I noted the staffers that will be the point of contact for planned actions in case the SAB members raise questions during the meeting.

The SAB and Work Group Chairs intend to address the Spring agenda first and move to the Fall. The Board will discuss the planned action by work recommendation category for each agenda, that is the "does not merit further review", then "Deferred for more information", and then actions that merit further review."

20 public commenters have registered and we are working on the agenda to start the discussion on planned actions about 2:30 rather than 3:15. We will begin with public commenters.

If you have any questions please don't hesitate to reach out.

Dear Colleague,

Attached are links to the Memoranda from an SAB Work Group on the planned actions in the regulatory agendas posted on the SAB website. The SAB will be discussing the Work Group's recommendations and determining whether the SAB wishes to provide advice or comment on the planned actions on May 31, 2018 at 3:15pm. The memoranda and a draft agenda are attached for your convenience. Also attached is the "best practices" memorandum outlining participation in discussion on planned actions with the SAB.

To facilitate the discussion please let me know the point person from your office for the planned actions, and how they will attend (via phone or in person). The meeting is at Washington Plaza at Thomas Circle

Subject: SIGNED: Strengthening Transparency in Regulatory Science

Good afternoon

Today, the Administrator signed the proposed rule "Strengthening Transparency in Regulatory Science."

This proposed regulation is intended to strengthen the transparency of EPA regulatory science. The proposed regulation provides that when EPA develops regulations, including regulations for which the public is likely to bear the cost of compliance, with regard to those scientific studies that are pivotal to the action being taken, EPA should ensure that the data underlying those are publicly available in a manner sufficient for independent validation.

In this notice, EPA solicits comment on this proposal and how it can best be promulgated and implemented in light of existing law and prior Federal policies that already require increasing public access to data and influential scientific information used to inform federal regulation.

Attached is the signed and dated proposed rule. For your convenience, please go to p. 19 for the Administrator's signature.

Please contact me if you have any questions.

Sincerely,
Laura

Laura S. Johnson | U.S. Environmental Protection Agency
Special Assistant, Office of the Administrator | Cell (202) 819-4941

Subject: Request re BYU Professor Pope and Proposed EPA Transparency Rule

Dear Colleagues of BYU Professor Clive Arden Pope III,

I am writing regarding the Proposed EPA Rule “Strengthening Transparency in Regulatory Science” (<https://www.federalregister.gov/documents/2018/04/30/2018-09078/strengthening-transparency-in-regulatory-science>). The Summary of this Rule is “This document proposes a regulation intended to strengthen the transparency of EPA regulatory science. The proposed regulation provides that when EPA develops regulations, including regulations for which the public is likely to bear the cost of compliance, with regard to those scientific studies that are pivotal to the action being taken, EPA should ensure that the data underlying those are publicly available in a manner sufficient for independent validation.”

This rule is necessary in large part because Professor Pope and the American Cancer Society (ACS) have conducted ‘secret science’ epidemiologic research on fine particulate matter (PM2.5) and mortality that has been used by EPA to establish and tighten the 1997 PM2.5 National Ambient Air Quality Standard (NAAQS). My March 28, 2017 *Dose-Response* article “Fine Particulate Matter and Total Mortality in the Cancer Prevention Study Cohort Reanalysis” (<http://journals.sagepub.com/doi/full/10.1177/1559325817693345>), based on my independent reanalysis of the 1982 ACS Cancer Prevention Study (CPS II) data, found that Professor Pope’s research is seriously flawed and does not support a scientific and public health basis for the PM2.5 NAAQS. My reanalysis clearly demonstrates the importance of access to underlying data and shows the need for the EPA Transparency Rule.

Since you have been involved in some way with Professor Pope’s PM2.5 health effects research, please email me as soon as possible your YES or NO answer to the following four questions:

- 1) <!--[if !supportLists]--><!--[endif]-->Do you support the Proposed EPA Rule “Strengthening Transparency in Regulatory Science”?
- 2) <!--[if !supportLists]--><!--[endif]-->Is there extensive valid evidence that contradicts Professor Pope’s evidence relating PM2.5 to premature deaths?
- 3) <!--[if !supportLists]--><!--[endif]-->Should Professor Pope be held fully accountable for the validity of his research relating PM2.5 to premature deaths?
- 4) <!--[if !supportLists]--><!--[endif]-->Should Americans, particularly Californians, be relieved of PM2.5 regulations that are based on a scientifically invalid relationship of PM2.5 to premature deaths?

Please let me know if you need clarification of these questions or this request. Until you respond to the contrary, I will assume that your answers to all four questions are NO.

Thank you very much for your consideration of this important request.

Sincerely yours,

James E. Enstrom, PhD, MPH, FFACE

Subject: Public access to EPA funded scientific research and protecting personal identifying information

Dear STPC members:

The Office of the Science Advisor (OSA) establishes Agency wide guidance and policies for increasing access to EPA-funded research. OSA also houses the Program in Human Research Ethics and Oversight. Together these responsibilities promote public access to EPA-funded research data and protect the confidentiality of PII for human subjects included in EPA-funded research. Whereas a variety of approaches exist for protecting PII, EPA has not systematically reviewed these approaches, determined the infrastructure needed to support them, or considered a risk-based approach for protecting differing types and/or sources of PII. OSA has developed a Scope of Work for a contractor to help us focus more attention onto to this issue. Jennifer Orme-Zavaleta asked me to share this with you for awareness and to make sure there were no significant concerns about pursuing this issue. Additional input, by July 26th, is welcome.

Yesterday Administrator Pruitt signed this NPRM which should be posted in the Federal Register today or tomorrow. It is open for comment, I believe for 30 days. If possible, I'd like to ask the chairs for time on tomorrow's agenda to discuss this proposed rule and its connection to our work on open access to research data.

Thanks

NIEHS Colleagues:

Yesterday Administrator Pruitt signed this Proposed Rule opening the door for public comment. I believe it important for NIEHS to be aware of it because so much of your intramural and extramural research is used by EPA in rulemaking. The new NIH policy that established automatic Certificates of Confidentiality on all ongoing and or future research containing PII may also have implications for this rule. Please feel free to consider commenting and distributing this proposed rule.

SAB Votes To Review EPA's Science, Emissions Rules In Sign Of 'Rebuke'

May 31, 2018

EPA advisers have voted to review the science underlying agency rules aimed at rolling back a suite of Obama administration's greenhouse gas and emissions regulations, as well as a controversial proposal to require that major rules be based on publicly available science, decisions that environmentalists say amount to a "sharp rebuke" of Administrator Scott Pruitt's deregulatory agenda.

At a May 31 meeting, EPA's Science Advisory Board (SAB) voted to endorse a series of recommendations from SAB workgroups urging the full board to consider the science behind pending EPA plans to scale back light-duty vehicle GHG standards, the agency's proposal to scrap production limits on high-emitting glider trucks, EPA's plan to reconsider new source performance standards for oil and gas operations, EPA's planned repeal of the Clean Power Plan, the agency's retreat from GHG requirements for new and modified power plants, and EPA's science data rule.

The planned reviews, which impose a new level of scrutiny on key prongs in the Trump administration's deregulatory agenda, mark what may be the first instance of SAB oversight of agency regulations since the practice was instituted by the Obama administration.

And they comes despite suggestions by some current advisers that SAB consider deferring on issues including the power plant rules amid promises of clearer EPA communication with the board.

And in the case of the light-duty vehicle regulations, the move turned aside suggestions that SAB might want to defer a review until EPA and the Transportation Department issue a proposal in the coming weeks.

"We can say it merits review, and then at a later date, if we decide there is not much to review, we can sunset that review instead of deferring," one SAB member said.

While the board voted to review the rules, SAB members did not rule out sunseting their review if more information becomes available that allays their concerns.

Nevertheless, the move is significant because the meeting marked SAB's first gathering since Pruitt removed a host of board members who had received agency grant funds and replaced them with state and industry officials – including a new chair, Michael Honeycutt – who were widely viewed as being more supportive of the administrator's deregulatory agenda.

As such, the board's decision is already winning praise from environmentalists. "The leadership of the board was chosen by Pruitt himself, so their decision today is a sharp rebuke of his leadership and this dangerous [science rule] proposal," Ana Unruh Cohen, managing director of government affairs at the Natural Resources Defense Council, said in a statement.

"Pruitt's decisions fly in the face of science, the law, and the desires of the American people, and he will continue to be met with resistance in the courts, in the streets, and among his own advisers," John Coequyt, Sierra Club's global climate policy director, said in a separate statement.

Such statements underscore environmentalists' broader concerns with Pruitt's deregulatory agenda and his efforts to craft science to justify it, including his selection of science advisers as well as the proposed science rule, which they fear will undercut the use of studies containing private health data that the agency has long used to justify strict air quality and other rules.

SAB Frustration

Several SAB members expressed signs of frustration on the quality of EPA communication to date on its planned rules as well as the science underlying those rules.

"We make a request to EPA for information and we get really hardly anything in return," SAB member Chris Frey of North Carolina University said at one point, echoing others present that this does not necessarily mean the science behind EPA's regulations is flawed but that SAB wants to err on the side of examining the issues.

"My general sense is in any of these recommendations for review is, if there comes a point where EPA is responsive and has identified the science products that they are going to develop or use, and has convinced the [SAB] that they have already obtained or are implementing an appropriate review process, then I think we can step out of it," Frey said.

But prior statements from the SAB workgroups recommending review – as well as statements by SAB officials at the meeting – also made clear that they harbor significant concerns.

The move to review the agency's repeal of rules on high-emitting glider trucks, for example, which combine a new chassis with used engines, comes after an SAB workgroup in its recommendations blasted the apparent science underlying the rule as "dubious."

Similarly, the workgroup that recommended review of the science data rule strongly criticized the plan, charging it will undermine rules' integrity and was developed without adequate review.

"The proposed rule does not include any assessment of the impact of data restrictions on existing or future regulatory programs. Without access to the restricted data, regulatory programs could become more or less stringent than they otherwise would be, with consequences for both regulatory costs and benefits," the workgroup said.

SAB also discussed, but ultimately decided to spurn, proposals to hold off on reviewing several of the stationary source GHG rules, despite remarks from EPA officials present downplaying the extent to which the agency will need to rely on novel science.

For example, EPA's Kevin Culligan walked the panel through EPA's view that the agency was not using novel "influential" science information that would require such review.

With respect to EPA's new power plant rule, for example, Culligan said the main issue in play in that rule is a previous determination on whether carbon capture and storage (CCS) represents the best system of emissions reduction for new coal plants – an issue that he characterized as mostly a policy decision.

"Ultimately the way we look at it is, while there is science information that goes into it, the question . . . is really a policy decision," Culligan, said, citing policy issues including the appropriateness of requiring CCS in areas of the country where it may not be viable due to lack of sequestration opportunities.

But such views failed to win over the SAB.

And the vote in support of reviewing the science rule was widely assumed to be inevitable – even by SAB chair Honeycutt.

"Does anyone think we should not review this?" he said during the discussion of the science rule. "This might be the quickest decision ever." – *Doug Obey* (dobey@iwpnews.com)

SAB Chair Honeycutt Dodges Tough Questions On EPA Science Policies

May 31, 2018

Michael Honeycutt, the new chair of EPA's Science Advisory Board (SAB), dodged tough questions from reporters on EPA's "secret science" policy, review of major EPA rulemakings and related issues at the first panel meeting since his appointment, but he reaffirmed his skepticism of the Obama administration's decision to tighten the ozone ambient air standard.

Speaking to reporters on the sidelines of the May 31 meeting in Washington, D.C., Honeycutt -- appointed by EPA Administrator Scott Pruitt to head the independent committee -- faced pointed questions over his views on several controversial policy issues, but largely demurred with his answers.

Honeycutt is toxicology director at the Texas Commission on Environmental Quality (TCEQ), the state's environmental regulator, and is known for his doubts over Obama-era air quality regulations and the science underpinning them.

Reporters asked Honeycutt, for example, if SAB should be consulted on Pruitt's proposed science policy that precludes the agency from relying on studies to set regulations when the underlying data are not publicly available. Democratic lawmakers and others say EPA should have consulted various science advisors at the outset, and fear the policy will be used to bar use of science that could otherwise help justify stricter regulations.

SAB work groups have also called for the full panel to review several key rulemakings through which the Trump administration is aiming to undo Obama-era rules on greenhouse gases emissions from power plants, the oil and gas sector, and trucks and cars.

"It is not for me to say right now" whether SAB should review the science policy, Honeycutt told reporters, noting that the issue was still under discussion by the panel. "We have guidelines for what constitutes significant science" worthy of review. "We follow process."

While he declined to answer questions, he later voted to approve workgroup recommendation that the full SAB review the proposed science rule, as well as the various GHG measures.

Asked about another Pruitt policy that prohibits scientists serving on SAB and other advisory panels from receiving EPA funds, but allows those funded by industry to serve, Honeycutt said, "that is not for me to speak to. That is really not my call."

On his views regarding fine particulate matter (PM2.5) pollution's health impacts, he said, "it depends on who you talk to." There are some studies that show associations with health effects, and those that don't, he said. "You have to look at data as a whole. You don't necessarily look at individual studies by themselves."

He denied having claimed that PM2.5 could under some circumstances be beneficial to health. "I haven't said that," he said.

PM2.5 is widely regarded as the most harmful air pollutant in terms of damage to public health, and reductions in PM2.5 drive much of the estimated benefits of many EPA air rules. EPA has stated its goal to complete review of the 2010 Obama PM2.5 standard of 12 micrograms per cubic meter by 2020 -- but that process has only just begun.

'Different Viewpoints'

Asked about Pruitt's prior criticisms that there is a cultural problem at EPA, with too little representation of industry viewpoints and Midwestern or Southern states, Honeycutt demurred. "There are a lot of different viewpoints in science," he said. "We are here to give advice to the administrator."

But on one issue, Honeycutt was clear. He has long criticized EPA's ozone national ambient air quality standard (NAAQS) of 70 parts per billion (ppb) as too tough. EPA tightened the standard in 2015 down from the 75 ppb limit set in 2008 by the George W. Bush EPA. "I think lowering the standard from 75 ppb to 70 ppb won't get you much" in terms of health benefits, he said. "We think 75 ppb is still protective."

This view contrasts with that of EPA's top air experts on the Clean Air Scientific Advisory Committee (CASAC), which advises EPA on how to set the NAAQS. CASAC twice unanimously recommended that EPA set the ozone standard at a level between 60 ppb and 70 ppb. EPA has committed itself to completing a review of the ozone standard in 2020, and is still weighing a reconsideration of the standard. -- *Stuart Parker* (sparker@iwpnews.com)

EPA

Advisory board to review Pruitt's science overhaul

[Scott Waldman](#), E&E News reporter

Published: Friday, June 1, 2018

EPA's Science Advisory Board is ideologically divided over many science-based decisions made by the agency in the last year, but you might not know it from the board's first meeting after it was significantly reworked by Administrator Scott Pruitt.

At its first meeting after an eight-month hiatus, the SAB had a cordial first dive into policies that would have dramatic effects on vehicle emissions, the science used in regulations and the ability of super-polluting trucks to evade clean air rules.

There were no fireworks at the public meeting, which was mostly attended by journalists, advocacy groups and EPA employees.

However, at the end of the five-hour meeting in a room with little air conditioning on a muggy day in Washington, D.C., board members did disagree, very politely, over whether to defer some regulatory reviews and about the merits of a proposed rule to limit the science used by the agency to craft regulations.

The latter issue, which the group voted to review, has received extensive blowback, including 120,000 public comments in just a month, according to EPA.

"There is a real lack of clarity in how you would unroll this and actually apply it," said Alison Cullen, a professor at the University of Washington and a member of the board.

Stanley Young, a statistician and frequent critic of well-established air pollution studies that have been extensively peer-reviewed and replicated, said he supports the science rule. He suggested air pollution researchers behind groundbreaking studies may be guilty of misconduct.

"This is a sticky issue. It's been well-discussed in the literature, and there are examples where, I would say, mischief has been done," Young said at the meeting.

In the end, the board agree to move forward with its review of the science on a number of EPA actions, including those related to greenhouse gas emissions and science transparency.

Despite the somnolent tone to the proceedings, the Science Advisory Board has experienced a sea change since it last met in person. Gone are a number of academic researchers, leaders in their fields of expertise. Their replacements include researchers allied with and funded by industry, whose work is used to fight against public health regulations. Some are longtime critics of EPA.

At yesterday's meeting at the Washington Plaza Hotel in D.C., 17 new members were at the table, which had a decidedly stronger industry presence.

At the head was the new chairman of the SAB, Michael Honeycutt, who previously served as head toxicologist for the Texas Commission of Environmental Quality and who has said there is evidence that air pollution "makes you live longer."

Among the others at the table were the statistician Young, who has produced work funded by the American Petroleum Institute that says EPA's air regulations are based on faulty science; Kimberly White of the industry group American Chemistry Council; and Robert Phalen, who heads the Air Pollution Health Effects Laboratory at the University of California, Irvine, and has said "modern air is a little too clean for optimum health."

During a discussion of air pollution regulations, industry-affiliated researchers expressed concern about EPA actions. White expressed concern over an "overestimation of risk" at the agency.

Don van der Vaart, a Pruitt appointee who questions mainstream climate science and is the former secretary of the North Carolina Department of Environmental Quality, questioned air emissions data, saying, "Emissions data is always wrong; the question is, how wrong, and can you do anything about it?"

Young asked whether companies subject to more stringent pollution regulations would have the ability to dispute them and said the review of some research would depend on one's perspective about whether carbon dioxide and air pollution are bad.

In September, the SAB requested that Pruitt join its meeting. He was not in attendance.

About two dozen people spoke during the meeting's public comment period, almost all in opposition to the science overhaul plan and the proposed rollback of vehicle fuel efficiency standards.

"The core science/policy problem with EPA's proposal is that it elevates what it calls 'transparency' above all other attributes of a published study as a criterion for assessing its value," said John Bachmann, a former EPA official who worked in the agency's air office in North Carolina. He is not a member of the board. "Thus, a study that has been replicated many times may be excluded from consideration, while one that uses an inferior database that is publicly available would be considered."

One theme that fired up some board members was their complaint that they're not getting enough scientific information from EPA to back up its decisions.

Christopher Frey, an engineering professor at North Carolina State University, said an SAB working group asked the agency for more information but was rebuffed. He said the board should send a "nastygram" to the agency, because it has typically been deficient in providing information for review, not just during Pruitt's tenure but stretching back into the Obama administration, as well.

"We make a request to EPA for information, and we get hardly anything in return," he said.

Jeanne VanBriesen, director of the Center for Water Quality in Urban Environmental Systems at Carnegie Mellon University, said the board's work has been significantly affected by the lack of response from the agency. She said reviewing the science behind the rulemaking would "light a fire" under EPA officials and that deferring would unnecessarily delay actions for months.

"We mean something when we defer," she said. "We mean there isn't information to have been reviewed. There is information to be reviewed here; we were not provided it, that's a very different case."

Climate Rollbacks, Science Rule to Get EPA Science Advisers Review

Posted May 31, 2018, 7:38 PM

By [Abbey Smith](#)

- Science Advisory Board votes nearly unanimously to review EPA revisions to five Obama-era climate rules
- Panel also will scrutinize EPA efforts to restrict agency science

EPA Administrator Scott Pruitt's plans to revise five Obama-era climate regulations—and his efforts to limit the types of science the agency can use—will get the scrutiny of the agency's science advisers, the full panel voted May 31.

The Science Advisory Board, which counsels the Environmental Protection Agency on the science it uses, will move forward with vetting the scientific and technical analysis underpinning the EPA's plans to rewrite several greenhouse gas regulations.

Those include: the agency's review of the Obama administration's carbon limits for new and existing power plants, its reconsideration of methane limits for new oil and gas wells, its plans to rewrite fuel economy standards for passenger cars, and its proposal to eliminate emissions limits for so-called glider trucks.

The panel also voted to take up a review of the EPA's proposal barring the use of scientific research including data that isn't or can't be made public.

The Science Advisory Board voted nearly unanimously that all six proposals merit further review.

It is a crucial step in the process, but the reviews may not all follow the same steps, Thomas Brennan, acting director of the

Science Advisory Board staff office, told reporters on the sidelines of the May 31 meeting.

A work group of several panel members recommended review of the regulations, citing potential technical flaws and gaps in the scientific basis.

Seeking Better Response From Staff

The science advisers will now engage further with EPA staff. Several Science Advisory Board members argued that they didn't receive enough information from the agency about the planned regulations upfront.

"We make a request for information, and we haven't gotten much in return," said Chris Frey, an engineering professor at North Carolina State University and a member of the work group that recommended the rules for review. He and other members of the advisory board stressed the need for better response from EPA staff.

Michael Honeycutt, chairman of the board and toxicology director at the Texas Commission on Environmental Quality, offered at one point to speak with EPA air chief Bill Wehrum to urge him to make staff available to discuss the agency's regulatory rollbacks with the science advisers.

Brennan told reporters that the science panel's reviews are likely to run at different paces. The panel could decide to combine reviews of regulations that deal with the same issues, he added.

For example, several members of the board suggested combining review of the EPA's plans to repeal carbon limits for existing power plants, known as the Clean Power Plan, with efforts to rewrite the companion limits for new power plants.

Advocates Urge Rigor

Nearly two-dozen environmental advocates and scientists urged the science advisers to take up the reviews, sharply criticizing the lack of scientific and technical basis for the EPA's determination to revise Obama-era fuel economy standards and its plans to repeal emissions limits on glider trucks.

Advocates also urged the Science Advisory Board to rigorously examine the EPA's science transparency proposal.

The board needs to "ensure EPA follows the law and uses the best available scientific information as it makes regulatory decisions that will affect the health and welfare of all Americans," David McCabe, a scientist with the Clean Air Task Force, told the panel.

DEADLINE: 12:00 PM Thursday, May 31, 2018

Attached please find draft QFRs from OMB (Rao) from a Thursday, April 12th hearing entitled "Examining the Office of Information and Regulatory Affairs' Role in Reviewing Agency Rulemaking"

before the HSGAC subcommittee on Regulatory Affairs and Federal Management. OMB testimony for the hearing was cleared under LRM SS-115-113.

Among other topics, the QFRs discuss recent regulatory actions by EPA and OIRA input on those actions; a DOL proposed rule; deregulatory actions related to tax regulations; Executive Order 13771; and race and ethnicity standards for Federal information collections.

Please review the draft 16-page QFRs and respond by the deadline.

Aaron,

It was great to see you last week and appreciate the Administrator's time. Chairman Smith is very keen for our staff to get together to discuss further transparent science-based regulations at the EPA. We can meet at your earliest convenience with the appropriate EPA staff to discuss this matter further. When you have identified who is best to handle this matter moving forward please let me know and we can schedule some time to discuss. Hope to hear from you soon. Next week we are not in session so we should have a number of days and times available.

Thank you,
Joe

Subject: Circling Back on Administrator Meeting

Aaron,

It was great to see you last week and appreciate the Administrator's time. Chairman Smith is very keen for our staff to get together to discuss further transparent science-based regulations at the EPA. We can meet at your earliest convenience with the appropriate EPA staff to discuss this matter further. When you have identified who is best to handle this matter moving forward please let me know and we can schedule some time to discuss. Hope to hear from you soon. Next week we are not in session so we should have a number of days and times available.

Thank you,
Joe

Joseph A. Brazauskas
Staff Director and Senior Counsel
Subcommittee on Environment
Committee on Science, Space and Technology

Deliberative Process / Ex. 5

On Jun 11, 2018, at 8:06 AM, Block, Molly <block.molly@epa.gov> wrote:

Yes, thank you! Her question was on the use of science overall in the Administration. Here's what we sent her on Friday:

"The era of secret science at EPA is coming to an end," said EPA Administrator Scott Pruitt. **"The ability to test, authenticate, and reproduce scientific findings is vital for the integrity of rulemaking process. Americans deserve to assess the legitimacy of the science underpinning EPA decisions that may impact their lives."**

"As part of Administrator Pruitt's October 31st FACA directive, EPA sought a wider range of voices to weigh into the FACA selection processes. EPA was thrilled with the response of over 700 applicants and now has highly-qualified FACA boards that are independent and geographically diverse." EPA spokesman, Jahan Wilcox

BACKGROUND ...

On science transparency ...

- The proposed rule is in line with the scientific community's moves toward increased data sharing to address the "replication crisis," in which a significant proportion of published research may be false or not reproducible. Examples of the current data access provisions for authors publishing in major scientific journals:
 - Science: "All data used in the analysis must be available to any researcher for purposes of reproducing or extending the analysis."
 - Nature: "This policy builds upon our long-standing policy on data availability, which requires that authors make materials, data, code, and associated protocols promptly available to readers without undue qualifications. The preferred way to share large data sets is via public repositories."
 - Proceedings of the National Academy of Sciences: "To allow others to replicate and build on work published in PNAS, authors must make materials, data, and associated protocols, including code and scripts, available to readers."

On NAAQS memo ...

- "A consequence of EPA's non-transparent National Ambient Air Quality Standards (NAAQS) setting process (which the Administrator rectified last month), has been the establishment of some standards near background levels," said **Principal Scientist for Air Improvement Resource, Inc., and former Chairman of EPA's Clean Air Scientific Advisory Committee (1992 – 1996) Dr. George Wolff**. "The policy ramifications of this have not been fully appreciated.

Setting the NAAQS at such low levels has also exacerbated unintended adverse impacts. The contributions to uncontrollable background levels and the nature of these adverse effects need to be better understood to inform policy making decisions. It is not only appropriate that CASAC be an integral part of these discussions, but it is also mandated by an often-overlooked section of the Clean Air Act.”

- “These NAAQS process reforms better separate scientific judgments from policy decisions,” **said former EPA Deputy Administrator (2005 – 2009) Marcus Peacock**. “Setting air quality standards is murky enough without muddying the distinctly different duties of scientists and political appointees in protecting human health and the environment.”

Was any of that provided to Coral?

On Jun 7, 2018, at 10:05 PM, Woods, Clint <woods.clint@epa.gov> wrote:

More on NAAQS Memo, let me know if I can help on the others:

The May 9 memorandum outlining a “Back-to-Basics” process for reviewing National Ambient Air Quality (NAAQS) ensures that EPA and its independent science advisors follow a transparent, timely, and efficient process in reviewing and revising public health- and welfare-based NAAQS. These reforms, advancing initiatives set out in President Trump’s April 12 Memorandum on Promoting Domestic Manufacturing and Job Creation – Policies and Procedures Relating to Implementation of Air Quality Standards, include incorporating important policy-relevant context, as required in the Clean Air Act, on issues like background pollution and potential adverse health, welfare, economic, energy, and social effects from strategies to attain and maintain the NAAQS.

Quotes from the accompanying press release

(<https://www.epa.gov/newsreleases/administrator-pruitt-signs-memo-reform-national-ambient-air-quality-standards-review>):

“A consequence of EPA’s non-transparent National Ambient Air Quality Standards (NAAQS) setting process (which the Administrator rectified last month), has been the establishment of some standards near background levels,” **said Principal Scientist for Air Improvement Resource, Inc., and former Chairman of EPA’s Clean Air Scientific Advisory Committee (1992 – 1996) Dr. George Wolff**. “The policy ramifications of this have not been fully appreciated. Setting the NAAQS at such low levels has also exacerbated unintended adverse impacts. The contributions to uncontrollable background levels and the nature of these adverse effects need to be better understood to inform policy making decisions. It is not only appropriate that CASAC be an integral part of these discussions, but it is also mandated by an often-overlooked section of the Clean Air Act.”

“I have been a participant and observer of the NAAQS review process since 1977 including serving as CASAC Chair and on Panels reviewing all of the criteria

pollutants. The process has continued to improve over the decades, however, serious issues still remain. I applaud key principles outlined in the memo,” **said Independent Advisor on Toxicology and Human Health Risk Assessment and former Chairman of EPA's Clean Air Scientific Advisory Committee (1988 – 1992) Dr. Roger O. McClellan.** “It is appropriate to commit to meeting the statutory deadline of completing the review of each NAAQS every five years. Coordinating the Ozone and Particulate Matter reviews so they are completed close to each other, in October 2020 for Ozone and December 2020 for PM, should increase the efficiency and effectiveness of the process. The focus needs to be on the policy relevant information that will inform the policy decisions the CAA requires the Administrator to make.”

“These NAAQS process reforms better separate scientific judgments from policy decisions,” **said former EPA Deputy Administrator (2005 – 2009) Marcus Peacock.** “Setting air quality standards is murky enough without muddying the distinctly different duties of scientists and political appointees in protecting human health and the environment.”

Subject: moment to
chat?

Hi, Jahan,

I'm working on a
story looking into
concerns by the
scientific community
that the Trump
administration is
marginalizing and
dismissing science.
The story looks at
examples from across
the federal
government, but
many of them are at
the E.P.A.

What are the
administrator's
responses to the
following questions
on this? Looking for
fresh reax or would
welcome your
pointing me to
specific remarks he's

made on these.
Overall, interested in his remarks on the allegation that he has reduced or ignored the role of science at the agency.

- Scientists are concerned that Mr. Pruitt has made multiple public statements on climate change that are at odds with decades of research on climate change, including research by the E.P.A.'s own scientists. Mr. Pruitt has said that carbon dioxide is not a primary contributor to global warming, and that scientists don't know how much humans contribute to global warming -- both statements that have been contested by the scientific community. What's his response?

- Critics say the proposed new "secret science" rule would ultimately have the impact of reducing the amount of scientific evidence that is used to formulate regulations that affect human health. Does this concern him?

- Can he speak to the criticism that in his efforts to change the Scientific Advisory Board, he has reduced

the role of academic science and replaced it with industry-funded scientists? And that even with its new composition, the SAB has proposed re-examining the scientific basis for some of his proposed rule-makings?

- Critics say Pruitt's NAAQs memo to the CASAC, which would order the committee to take economic impacts of regulations into account, is both an effort to skirt provisions of the Clean Air Act which require the committee to focus on the public health impacts of regulations, and could lead to looser pollution rules that are not based in scientific evidence on the impact of certain pollutants on human health.

Can you send answers to these and give a call to chat about the story?
Best,
Coral

Hi folks:

In the attached letter, the Environmental Protection Network, a group that includes former EPA employees, says that the proposed rule must be reviewed by the CASAC because it would amend air quality criteria for lead and particulate matter. If you have any comment on that point, let me know. My deadline is 12:30 this afternoon.

Thanks,
Sean

ENVIRONMENTAL PROTECTION NETWORK

May 7, 2018

Administrator Scott Pruitt
U.S. Environmental Protection Agency (Mail Code 1101A)
U.S. EPA Headquarters, William Jefferson Clinton Building
1200 Pennsylvania Ave. N.W.
Washington, D.C. 20460
Also via email to docket

Re: Request for a Comment Period Extension, a Hearing, and CASAC Review for EPA's Proposal entitled "Strengthening Transparency in Regulatory Science", 83 Fed. Reg. 18768 (April 30, 2018); Docket No. EPA-HQ-OA-2018-0259

Dear Mr. Pruitt,

I am writing on behalf of the Environmental Protection Network, an organization of former EPA employees and others concerned about the future of the agency, to request an extension of time for public comment, the scheduling of a public hearing or hearings, and other actions.

Our reasons are supported by examples drawn from multiple statutes administered by EPA and will be presented as such.

General concerns supporting an extension of time. The proposal is far too complex, with effects too broad and indeterminate, and requests comment on far too many issues, for a thirty-day response period.

First, although the proposal suggests it will apply to eight environmental statutes, it does not identify any statutory or regulatory provisions requiring the use of science such that the rule will affect their implementation (or effectively amend them). Potential commenters will have to locate and pore through each such provision for themselves in order to assess the proposal's likely effect, *before* they can prepare comments addressing it.

Second, the astonishing breadth of the request for comments also requires extending the comment period. The notice requests comments on a host of general questions, with enough variations or alternatives to bring the total to more than fifty. In many cases, the notice simply identifies the potential comment topics, with no analysis, and no indication which approach the final rule will adopt.

Third, any proposal must meet the obligation to include sufficient, specific information to enable commenters to identify, understand, and respond to the supporting evidence advanced by the agency. This obligation is particularly weighty in a proposal with such sweeping, multi-statutory impact and ambitious, potentially unprecedented scope of change. Yet most of the footnotes are so general and unspecific as to be uninformative (see fn. 8-12, 16-21), or are conclusory without supporting evidence (see fn. 13, part fn. 3).

The amorphousness and breadth of the request for comments, combined with the absence of information about the potential statutory and regulatory provisions the proposal will affect, and the lack of specific information

www.EnvironmentalProtectionNetwork.org

info@EnvironmentalProtectionNetwork.org

[202-656-6229](tel:202-656-6229)

and supporting evidence in the footnotes, suggest that the proposal should be withdrawn and reissued as an advanced notice of proposed rulemaking (ANPRM). Failing that, EPA should extend the comment period.

Specific Clean Air Act provisions requiring more process.

EPN requests that EPA schedule a public hearing or hearings under the Clean Air Act (CAA) on this proposal, that it extend the public comment period to accommodate that hearing as the CAA requires, and that it submit the proposal for review by the Clean Air Act Scientific Advisory Committee (CASAC) and re-propose it to the extent CASAC directs any changes.

For the following reasons, these steps are legally required:

1. This proposal amends the air quality criteria, adopted under §108 (b) of the CAA, for particulate matter (PM) and lead. See proposed rule fn. 3 final sentence which states that the proposed rule would “preclude” “future regulatory actions” using the Lanphear study which is part of the criteria for the National Ambient Air Quality Standard (NAAQS) for lead, and the Harvard Six Cities and American Cancer Society II study (Dockery and Pope) which are part of the criteria for the PM NAAQS. Air quality criteria cannot be amended without review by CASAC. See CAA §109 (d)(2)(B). EPA consequently must submit its proposal to CASAC for its review, following all procedural requirements for public meeting and deliberations in doing so. CASAC must then submit its recommendations to the Administrator (see §109 (d)(2)(B) final clause), and the Administrator must consider these recommendations and provide a reasonable explanation for any actions that deviate significantly from those recommendations (CAA section 307 (d)(3)). EPA cannot proceed with this action until these requirements are satisfied.

2. Quite apart from the requirement to seek CASAC review, EPA must hold a public hearing on the proposal. The proposal would amend the substantive standards for decision-making for a host of actions covered by §307 (d). It would do so by making in advance a critical part of the regulatory decision in any covered proceeding, namely the decision which scientific evidence to give weight to, and how much – a decision that has previously been made by detailed review in the rulemaking itself. Under the existing approach, such decisions are made after considering the substantive goals of the particular statutory provision involved, are guided by the attitude toward scientific evidence embodied in that provision, and strive for conformity with any applicable procedural requirement. Accordingly, any attempt to make a part of this decision in advance must meet these same standards.

Among the CAA regulatory decisions subject to §307(d) that would be affected in this manner are the NAAQS (§307 (d)(1)(A)), residual risk determinations for hazardous air pollutants (§307 (d) (1)(C)), standards for mobile source air toxics (§307 (d)(1)(K)), and residual risk standards for municipal solid waste combustors (§307 (d)(1)(D)). Therefore, CAA §§307 (d)(5)(ii) and (iv) require the Administrator to hold a public hearing on his proposal and to keep the record open for an additional thirty days “to provide an opportunity for submission of rebuttal and supplementary information”.

3. EPA must also submit its proposal to the Science Advisory Board pursuant to the requirements of 42 U.S.C. §4365 (c)(1) (the Environmental Research Development Demonstration Authorization Act), which requires the Administrator to submit to the SAB any “proposed criteria document, standard, limitation, or regulation, together with relevant scientific and technical information in the possession of the (EPA) ... on which the proposed action is based” at the time it provides that proposal to another agency of the government for formal

review. The SAB is then to review and comment on the proposal, which the Administrator is to consider, although the Administrator is not required to obtain SAB approval for any final action. See H. Rep. No. 95-722 (95th Cong. 1st Sess. (1977) (Conference Report)).

Further examples of statutory provisions which appear inconsistent with and are not addressed by the proposal

A 30 day comment period is inadequate time to identify and analyze the provisions of multiple statutes administered by EPA with language that will have implications for the actions contemplated by this proposal. Section I.C. of the preamble to this proposal asserts authority for this proposal by identifying, in a very general sense, provisions in several statutes dealing with science and research. The proposal nowhere acknowledges, identifies, or addresses many provisions in these statutes which govern regulatory decision-making and direct how the Administrator is to use science in such decision-making. A couple of illustrative examples drawn from the many relevant provisions raise serious questions as to whether the Administrator has the authority to promulgate such a sweeping, multi-statute rule without addressing the particular, distinctive requirements for regulatory decision-making Congress imposed in each statute. These are issues that would be addressed in an adequate proposal. Because they are not, the proposal in effect tries to shift the burden to commenters to try to make sense of the proposal in the context of statutory language. That is impossible to achieve in 30 days.

Toxic Substances Control Act (TSCA):

While TSCA Section 26 is not identified in the proposal, it includes provisions that raise questions about EPA's authority for and potential application of the proposal. Section 26(h), "Scientific Standards", states that "to the extent that the Administrator makes a decision based on science, the Administrator shall use scientific information, technical procedures, measures, methods, protocols, methodologies, or models, employed in a manner consistent with the best available science." EPA must consider each of these factors "as applicable." The availability of sufficient underlying data to "validate" or "reproduce" study results is *not* among the relevant factors that EPA must consider.

Similarly, section 26(i) addresses WEIGHT OF SCIENTIFIC EVIDENCE directing that:—"The Administrator shall make decisions under sections 4, 5, and 6 based on the weight of the scientific evidence." This requires the Administrator to evaluate the totality of available scientific evidence and make a judgment about its "weight" – not excluding evidence based solely on the availability of data sufficient for its validation.

These subsections indicate, at a minimum, that this proposal to require that "*dose response data and models* underlying *pivotal regulatory science* are publicly available in a manner sufficient for independent validation.... [w]hen promulgating significant regulatory actions" may not be consistent with the scientific standards and methodology for decision-making Congress prescribed for such actions under TSCA Section 26.

Safe Drinking Water Act (SDWA):

Similarly, although unacknowledged in the proposal including its request for comments, SDWA's standard-setting section, §1412 (42 U.S.C. § 300g-1), addresses the use of science in decisionmaking under that authority:

§1412(b)(3)(A) Use of science in decisionmaking.— In carrying out this section, and, to the degree that an Agency action is based on science, the Administrator shall use—

- (i) the best available, peer-reviewed science and supporting studies conducted in accordance with sound and objective scientific practices; and
- (ii) data collected by accepted methods or best available methods (if the reliability of the method and the nature of the decision justifies use of the data).

So long as the data used is otherwise collected, assessed, and presented “in accordance with sound and objective scientific practices,” Congress did not give the Administrator discretion to ignore the “best available, peer-reviewed science and supporting studies” based on any factor relating to the public availability or unavailability of data, as this proposal would seek to compel. Further, the Report of the Senate Committee on Environment and Public Works – whose language in this provision on the use of science was adopted verbatim in P.L. 104-182 – directs that the “Administrator has a duty to seek and rely upon the best available science and information to support.... [m]any of the most important activities including selecting contaminants for regulation, setting standards, designing analytical methods and structuring waivers, variances and exemptions” (Rpt. 104-169, at 28).

These fundamental omissions illustrate the proposal’s inadequacy to identify or address its own implications for the statutory authorities that authorize EPA’s programs. These examples, and many more that could be cited, bolster the imperative to withdraw this proposal and grapple meaningfully with these questions in an ANPRM or better fleshed out proposed rule with greater opportunities for exploration and discussion of them via public hearings. Failing that, the agency should at least extend the comment period to 90 days to enable commenters to compile and submit analyses of these questions that EPA has not examined.

The Environmental Protection Network will continue to inventory other statutes and regulations that will be affected by this rulemaking. But even where there are no requirements for a formal hearing or coordination, this proposed rule would change the regulatory framework for determining standards and requirements with no acknowledgement or identification of inconsistencies or conflicts with existing statutory or regulatory requirements or processes, and no opportunity for the public to comment on the specific changes. That makes it imperative to maximize opportunities for the public to review and comment on the regulatory changes being made in this proposal by extending the comment period.

We look forward to your affirmative response to this request.

Respectfully Submitted,

Ruth Greenspan Bell, President, Board of Directors, Environmental Protection Network

Subject: SIGNED: Strengthening Transparency in Regulatory Science

Good afternoon

Today, the Administrator signed the proposed rule "Strengthening Transparency in Regulatory Science."

This proposed regulation is intended to strengthen the transparency of EPA regulatory science. The proposed regulation provides that when EPA develops regulations, including regulations for which the public is likely to bear the cost of compliance, with regard to those scientific studies that are pivotal to the action being taken, EPA should ensure that the data underlying those are publicly available in a manner sufficient for independent validation.

In this notice, EPA solicits comment on this proposal and how it can best be promulgated and implemented in light of existing law and prior Federal policies that already require increasing public access to data and influential scientific information used to inform federal regulation.

Attached is the signed and dated proposed rule. For your convenience, please go to p. 19 for the Administrator's signature.

Please contact me if you have any questions.

Sincerely,
Laura

Subject: some questions

Thanks for speaking with me earlier, Richard. Following up on our conversation, I am wondering if you can answer any of the following questions on the record.

1. What are the challenges in the larger field of science that necessitate the EPA's proposed science transparency rule?
2. How has your work as an academic informed your work at the EPA? What lessons from that experience do you apply to work today, and what are some of the problems you observed during your tenure in academe that you now want to fix?
3. Are you concerned that some of these policies may go too far, i.e. restricting the type of research that can be used in regulations? What are you doing to ensure that doesn't happen?

4. Please describe your outreach with science organizations in crafting policy? Have you brought in AAAS or AGU or other groups to help inform your work?
5. Please include anything else you feel is relevant or important to know.

Thanks very much,

Scott Waldman

Subject: "Secret science" and "war on lead"--E&E News

Hi everyone,

I am working on an article about EPA's proposed rule about which science the agency can base rulemakings on. I've spoken to a number of public health advocates, researchers and former EPA employees who say that the proposal could severely restrict the kinds of studies EPA uses in regulating lead exposure via water, paint, dust and air. Given Admin. Pruitt's "war on lead," I wanted to ask if you had any comment on this.

My deadline is noon tomorrow.

Thanks,

Ariel

Subject: SIGNED: Strengthening Transparency in Regulatory Science

Good afternoon

Today, the Administrator signed the proposed rule "Strengthening Transparency in Regulatory Science."

This proposed regulation is intended to strengthen the transparency of EPA regulatory science. The proposed regulation provides that when EPA develops regulations, including regulations for which the public is likely to bear the cost of compliance, with regard to those scientific studies that are pivotal to the action being taken, EPA should ensure that the data underlying those are publicly available in a manner sufficient for independent validation.

In this notice, EPA solicits comment on this proposal and how it can best be promulgated and implemented in light of existing law and prior Federal policies that already require increasing public access to data and influential scientific information used to inform federal regulation.

Attached is the signed and dated proposed rule. For your convenience, please go to p. 19 for the Administrator's signature.

Please contact me if you have any questions.

Sincerely,
Laura

Subject: Sound Science Proposed Rule

Good afternoon,

As we discussed, I am putting together some options for my boss to consider for a regulatory oversight hearing. One idea I may run by him (for a hearing in September) would be regarding sound science at the EPA (including his bill, the HONEST Act).

Do you know where this proposed rule is in the process toward becoming a finalized rule? I.e., likely to be after September.

<https://www.federalregister.gov/documents/2018/04/30/2018-09078/strengthening-transparency-in-regulatory-science>

I had also read that you had a public hearing on it in July, so if you happen to have any information on that, that'd be helpful.

Thanks,
Joe Bliss

Subject: Follow up from Administrator Meeting

Hey Aaron,

I wanted to follow up with you regarding Chairman Smith's meeting with Administrator Pruitt. The Chairman has been asking me for an update on the progress of convening a staff meeting as agreed to in that meeting. I understand that you have been speaking on this issue internally with the Air Office and others. Is it possible that we can set a date for this meeting to take place so that we can meet and get a better understanding of a path forward? Our schedule is pretty flexible, but would be available to meet anytime on Thursday or Friday of next week or any time the week after. Please let me know if any of these days make sense for this meeting. Again, the Chairman has been asking me daily about the status of this meeting, so want to get something on the books as quickly as possible.

Thank you,
Joe

Subject: Letter of Support

June 23, 2014

The Honorable Lamar Smith, Chairman
House Committee on Science, Space, and Technology
2321 Rayburn House Office Building
Washington, D.C 20515

Dear Chairman Smith,

We write in support of the principles contained in H.R. 4012, the Secret Science Reform Act. This legislation supports a basic tenet: the Environmental Protection Agency's regulations should be based on transparent and reproducible science.

Potentially costly regulations should be grounded in data and analyses that are available to academic, government, and independent scientists. Pushing EPA to ensure that the data, models, and methods it relies on are open to public and scientific scrutiny will make the Agency's regulations more accountable, credible, and enforceable.

While we hail from a variety of scientific and academic disciplines, we agree that the provisions of this legislation could be satisfied by EPA without difficulty. The bill is also consistent with recent trends toward access among major scientific journals across these fields. Transparency and reproducibility in EPA regulatory science will encourage more robust analysis of findings by investigators with diverse perspectives while allowing the Agency to base its policy decisions on the best available science. Complying with H.R. 4012 can be accomplished without imposing unnecessary burdens, discouraging research, or raising confidentiality concerns. Across different disciplines, numerous statistical and technical approaches exist to protect any sensitive information.

We support passage of this legislation and thank your Committee for its leadership on this important issue.

115TH CONGRESS
2D SESSION

H. R. _____

To direct that certain assessments with respect to toxicity of chemicals be carried out by the program offices of the Environmental Protection Agency, and for other purposes.

IN THE HOUSE OF REPRESENTATIVES

M____. _____ introduced the following bill; which was referred to the
Committee on _____

A BILL

To direct that certain assessments with respect to toxicity of chemicals be carried out by the program offices of the Environmental Protection Agency, and for other purposes.

1 *Be it enacted by the Senate and House of Representa-*
2 *tives of the United States of America in Congress assembled,*

3 **SECTION 1. SHORT TITLE.**

4 This Act may be cited as the “Improving Science in
5 Chemical Assessments Act”.

1 **SEC. 2. RESEARCH NEEDS AND PRIORITIES OF EPA PRO-**
2 **GRAM OFFICES.**

3 The Environmental Research, Development, and
4 Demonstration Authorization Act is amended by striking
5 section 7 (42 U.S.C. 4364) and inserting the following:

6 **“SEC. 7. RESEARCH NEEDS AND PRIORITIES OF EPA PRO-**
7 **GRAM OFFICES.**

8 “(a) IN GENERAL.—The Administrator of the Envi-
9 ronmental Protection Agency shall assure that the expend-
10 iture of any funds appropriated pursuant to this Act or
11 any other provision of law for environmental research and
12 development related to regulatory program activities shall
13 be coordinated with and reflect the research needs and pri-
14 orities of the relevant program offices, as well as the over-
15 all research needs and priorities of the Agency, including
16 those defined in the five-year research plan.

17 “(b) HAZARD IDENTIFICATION AND DOSE RESPONSE
18 ASSESSMENTS.—Beginning on the date of the enactment
19 of the Improving Science in Chemical Assessments Act,
20 any covered assessments carried out with respect to a
21 chemical substance through the Integrated Risk Informa-
22 tion System program of the Environmental Protection
23 Agency as of the day before such date of enactment shall,
24 in lieu of being carried out through such program, be car-
25 ried out by the relevant program office of the Environ-
26 mental Protection Agency, so long as the relevant program

1 office determines there is a need for such an assessment.
2 Such an assessment shall be carried out using the sci-
3 entific standards specified in section 7B and be based on
4 the weight of the scientific evidence.

5 “(c) TOXICITY VALUES.—In carrying out a covered
6 assessment with respect to a chemical substance under
7 subsection (a), the relevant program office shall assign a
8 toxicity value or values, when scientifically supported by
9 the available data, for such chemical substance. With re-
10 spect to that assignment, the following shall apply:

11 “(1) When supported by the available data, the
12 toxicity value or values shall include a range of point
13 estimates of risk as well as sources and magnitudes
14 of uncertainty associated with the estimates.

15 “(2) When multiple point estimates can be de-
16 veloped, the relevant program office shall—

17 “(A) consider all datasets; and

18 “(B) make a determination about how best
19 to represent the human health risk posed by the
20 chemical substance involved.

21 “(d) CHEMICAL ASSESSMENT DATABASE.—

22 “(1) IN GENERAL.—A toxicity value or values
23 assigned to a chemical substance under subsection
24 (c) shall be included in a chemical assessment data-
25 base to be maintained by the Office of Research and

1 Development of the Environmental Protection Agen-
2 cy.

3 “(2) COMPLETED ASSESSMENTS.—All covered
4 assessments stored, as of the date of the enactment
5 of this Act, in the IRIS database of the Environ-
6 mental Protection Agency shall be retained in the
7 chemical assessment database established pursuant
8 to paragraph (1).

9 “(3) UPDATES.—Such database shall be up-
10 dated pursuant to a covered assessment performed
11 by a relevant program office, including to make a
12 change in the existing toxicity value or values for a
13 chemical substance included in such database.

14 “(e) CERTIFICATION.—Beginning 2 years after the
15 date of the enactment of the Improving Science in Chem-
16 ical Assessments Act and every 2 years thereafter, the Of-
17 fice of Research and Development of the Environmental
18 Protection Agency shall submit to the Committee on
19 Science, Space, and Technology and the Committee on
20 Energy and Commerce of the House of Representatives
21 and the Committee on Environment and Public Works of
22 the Senate, a report containing a certification that each
23 covered assessment completed during the period covered
24 by the report was conducted using the scientific standards
25 specified in section 7B.

1 “(f) DEFINITIONS.—In this section:

2 “(1) The term ‘covered assessment’ means, with
3 respect to the evaluation of the human health effects
4 resulting from chronic exposure to a chemical sub-
5 stance, a chemical hazard identification and dose re-
6 sponse assessment (as such terms are defined by the
7 Environmental Protection Agency on the day before
8 the date of the enactment of this Act).

9 “(2) The term ‘relevant program office’ in-
10 cludes the following offices of the Environmental
11 Protection Agency:

12 “(A) The Office of Water.

13 “(B) The Office of Air and Radiation.

14 “(C) The Office of Land and Emergency
15 Management.

16 “(D) The Office of Chemical Safety and
17 Pollution Prevention.

18 “(E) Any successor to an office specified in
19 subparagraphs (A) through (D) and any other
20 office determined to be relevant by the Adminis-
21 trator of the Environmental Protection Agency.

22 **“SEC. 7A. HAZARD IDENTIFICATION AND DOSE RESPONSE**
23 **STEERING COMMITTEE.**

24 “(a) ESTABLISHMENT.—Not later than 30 days after
25 the date of the enactment of this Act, the Administrator

1 of the Environmental Protection Agency shall establish a
2 chemical hazard identification and dose response steering
3 committee (referred to in this Act as the ‘steering com-
4 mittee’) to coordinate the conduct of covered assessments
5 by relevant program offices for purposes of ensuring that,
6 with respect to such assessments, there is no duplication
7 of effort by such offices.

8 “(b) DUTY.—The duties of the steering committee
9 are the following:

10 “(1) If the steering committee learns that more
11 than one relevant program office intends to conduct
12 covered assessments with respect to the same chem-
13 ical substance, the steering committee shall deter-
14 mine the most effective means of carrying out a sin-
15 gle covered assessment to prevent duplication of ef-
16 fort by such offices.

17 “(2) For purposes of supplementing a covered
18 assessment, the steering committee shall consider
19 any third-party assessment of a chemical substance
20 generated by another Federal, State, or inter-
21 national agency or agencies or members of the sci-
22 entific community that meets the requirements spec-
23 ified in subsection (e).

24 “(c) CHAIR; COMPOSITION.—

1 “(1) CHAIR.—The steering committee shall be
2 chaired by the Assistant Administrator of the Office
3 of Research and Development of the Environmental
4 Protection Agency.

5 “(2) COMPOSITION.—The steering committee
6 shall be composed of 15 members, all of whom shall
7 be active, full-time employees of the Environmental
8 Protection Agency, with at least one member rep-
9 resenting each relevant program office and each re-
10 gional office of the Environmental Protection Agen-
11 cy. The members of the steering committee shall be
12 appointed by the Administrator of the Environ-
13 mental Protection Agency. Any vacancy shall be
14 filled in the same manner as the initial appointment.

15 “(d) MEETINGS.—The steering committee shall meet
16 at least once each calendar year.

17 “(e) THIRD PARTY ASSESSMENT REQUIREMENTS.—
18 The requirements specified in this subsection with respect
19 to a third-party assessment of a chemical substance are
20 that the assessment —

21 “(1) is conducted using scientific standards
22 specified in section 7B;

23 “(2) has undergone independent scientific re-
24 view for transparency, completeness, and quality;
25 and

1 “(3) reflects the best available science and the
2 weight of the available scientific evidence.

3 **“SEC. 7B. SCIENTIFIC STANDARDS.**

4 “ Covered assessments carried out under section 7
5 and discussion of such assessments and review of third
6 party assessments carried out under section 7A, shall be
7 conducted using scientific information, technical proce-
8 dures, measures, methods, protocols, methodologies, or
9 models in a manner consistent with the best available
10 science. In carrying out such an assessment, the relevant
11 program office shall integrate all lines of scientific evi-
12 dence and consider, as applicable—

13 “(1) the extent to which the scientific informa-
14 tion, technical procedures, measures, methods, proto-
15 cols, methodologies, or models employed to generate
16 the scientific information are reasonable for and con-
17 sistent with the intended use of the scientific infor-
18 mation;

19 “(2) the extent to which the scientific informa-
20 tion is relevant for the relevant program office’s use
21 in making a decision about a chemical substance;

22 “(3) the degree of clarity and completeness with
23 which the data, assumptions, methods, quality assur-
24 ance, analyses employed to generate the scientific in-
25 formation are documented and publicly available in

1 a manner that honors legal and ethical obligations to
2 reduce the risks of unauthorized disclosure and re-
3 identification;

4 “(4) the extent to which the variability and un-
5 certainty in the scientific information, or in the pro-
6 cedures, measures, methods, protocols, methodolo-
7 gies, or models, are evaluated and characterized;

8 “(5) the extent of independent verification or
9 peer review of the scientific information or of the
10 procedures, measures, methods, protocols, meth-
11 odologies, or models;

12 “(6) the ability of the scientific findings and re-
13 search to be replicated or reproduced; and

14 “(7) the extent to which the available scientific
15 information supports dose-response modeling, using
16 non-linear approaches.”.

Subject: reporter question

Hi Richard. I'm writing about how you are a thread connecting three of the most significant EPA efforts, the secret science proposed rule, the science advisory board reforms and the proposed red team exercise. I saw your name mentioned a number of times in emails and public schedules that were recently released under FOIA, and I know those efforts all stem from the House Science Committee as well. I've also spoken with some of the people outside of the EPA who spoke with you on those issues.

Do you have a few minutes to talk today?

Thanks,

Scott Waldman

Subject: RE: Transparency/Data Access Statements of Support

Below are 5 statements of support for the release, followed by contact info for two other scientists willing to speak to reporters on the issue. Attached are some talking points which may be helpful. We're talking to OIRA at 11:00 and should have a clean(er) version of proposed rule to share after that call.

Deliberative Process / Ex. 5

"IDEM supports transparency in rulemaking," says **Bruno Pigott, Commissioner of the Indiana Department of Environmental Management (IDEM)**. "Good, sound science leads to better regulations."

"I believe that transparency and independent reproducibility of analyses and conclusions are bedrock principles of sound science," said **Dr. Louis Anthony (Tony) Cox, President, Cox Associates; Member, National Academy of Engineering; and Editor-in-Chief of the journal Risk Analysis**. "Some commentators have expressed concerns that making the data behind policy conclusions and recommendations accessible and transparent might threaten the privacy of individuals. But this concern can be fully met by applying current privacy-protection techniques for data analysis. These techniques have been developed and used successfully for years at the Census Bureau and elsewhere. Thus, we can have the scientific benefits of accessible data while protecting individual privacy."

“EPA’s proposed rule, Strengthening Transparency in Regulatory Science, is badly needed,” said **Dr. Jason Scott Johnston, Director, Olin Law and Economics Program, University of Virginia School of Law**. “Best practice among peer-edited scientific journals is to require that data and statistical routines used in published papers be posted online and/or made publicly available. To apply the same standards to research that EPA says justify regulations affecting billions of dollars in economic activity and millions of human lives is essential for those regulations to truly be scientifically based.”

“In the development of regulations based on environmental studies, numerous subjective assumptions and choices must be made regarding the selection of data and models that have a profound impact on the strength of any statistical associations and even whether the associations are positive or negative. The appropriateness of the assumptions and choices are not adequately evaluated in the standard peer review process. That is why it is essential that the data and models be placed in the public domain for a more rigorous evaluation by qualified experts. The proposed regulation, Strengthening Transparency in Regulatory Science, will provide an opportunity for such evaluations,” said **Dr. George Wolff, Principal Scientist, Air Improvement Resource, Inc., and former Chairman of EPA’s Clean Air Scientific Advisory Committee (1992 – 1996)**.

“The proposal represents a major scientific step forward by recognizing the widespread occurrence of non-linear dose responses in toxicology and epidemiology for chemicals and radiation and the need to incorporate such data in the risk assessment process,” stated **Dr. Edward J. Calabrese, Professor, Environmental Health Sciences, University of Massachusetts**

Two others willing to speak to reporters:

- Dr. Gary Marchant, Distinguished Sustainability Scientist, Julie Ann Wrigley Global Institute of Sustainability; Regents' Professor and Lincoln Professor of Emerging Technologies, Law and Ethics, Sandra Day O'Connor College of Law, Arizona State University; Executive Director and Faculty Fellow, Center for the Study of Law, Science and Innovation

Personal Phone / Ex. 6

- Dr. Geoffrey Kabat, Senior Epidemiologist, Albert Einstein College of Medicine

Subject: Transparency/Data Access Statements of Support

Happy to work on some talking points for a release to accompany Tuesday's announcement.

We should have 2-3 sentence statements of support from:

- Jason Scott Johnston, PhD/JD, Director, Olin Law and Economics Program, University of Virginia School of Law
- Edward J. Calabrese, PhD, Professor, Environmental Health Sciences, University of Massachusetts
- Louis Anthony (Tony) Cox, Jr., PhD, President, Cox Associates, Member, National Academy of Engineering, Editor-in-Chief, *Risk Analysis*
- Bruno Pigott, Commissioner, Indiana Department of Environmental Management
- George Wolff, PhD, Former Chair of EPA's Clean Air Scientific Advisory Committee (1993 – 1996)

A few examples:

COMMITTEE ON ENVIRONMENT AND PUBLIC WORKS

WASHINGTON, DC 20510-6176

RICHARD M. RUSSELL, MAJORITY STAFF DIRECTOR
MARY FRANCES REHRIG, MINORITY STAFF DIRECTOR

April 24, 2018

The Honorable Scott Pruitt
Administrator
U.S. Environmental Protection Agency (EPA)
1200 Pennsylvania Avenue NW
Washington, DC 20004

Dear Administrator Pruitt,

We write to inquire about recent reports regarding your intention to limit the ways in which EPA uses scientific information. Your proposed new policy likely violates several laws with which EPA must comply as the agency writes rules to protect our air, water and land from harmful pollution. The proposed new policy would require EPA to use only data that are public and reproducible. It is very similar to Congressional efforts to require that all raw data from scientific studies is available to the public before EPA can use it to act.¹ In April 2017, Senator Carper sent a letter to you regarding your staff's analysis of one of these efforts, H.R. 1430, the HONEST Act. In that letter, Senator Carper shared his concerns regarding reports that EPA's leadership prevented analysis conducted by EPA career staff analysts from being transmitted to the Congressional Budget Office. That staff analysis found that the HONEST Act would cost \$250 million per year to implement. You have yet to respond to the April 2017 letter.

The proposed new policy will require EPA—when developing rules—to rely only on scientific studies where the underlying data have been made public and are available to be reproduced. Such a policy would likely violate several laws that mandate the use of “best available science,” including the Toxic Substances Control Act² and Safe Drinking Water Act³ because it would require EPA to ignore some of the “best” scientific studies. Courts have explained that “best available science” means that agencies “should seek out and consider all existing scientific evidence relevant to the decision” and “cannot ignore existing data.”⁴

In addition to potentially violating statutory requirements, EPA's proposed new policy would also likely run afoul of the Administrative Procedure Act (APA), which requires agencies to consider and respond to all information presented to it pursuant to a rulemaking. Were a comment that contained scientific information that the proposed new policy would exclude from consideration to be submitted as part of a rulemaking, the APA would require that you consider it, setting up a direct conflict between the APA and the proposed new policy.

¹ <https://blogs.scientificamerican.com/observations/scott-pruitt-will-restrict-the-epas-use-of-legitimate-science/>

² 15 U.S.C. 2625(h)

³ 42 U.S.C. § 300g-1(b)(3)(A)

⁴ *Ecology Ctr., Inc. v. U.S. Forest Serv.*, 451 F.3d 1183, 1194 n.4 (10th Cir. 2006)

What's more, this proposed new policy could force EPA to choose whether to ignore non-public information submitted by companies, or to disclose it publicly. For example, EPA might not be able to consider confidential business information when determining whether to allow a chemical company to manufacture a new chemical. Further, the agency might not be able to use proprietary information submitted by auto companies intended to aid in determining appropriate greenhouse gas tailpipe standards unless the data were made public.

Finally, under the new policy's requirement that the underlying data used to develop regulations must be reproducible, EPA could not use unique research study data collected following pollution events. Such a requirement would exclude valuable information, such as the studies done after the BP oil spill⁵ or the human health studies done to study the effects of nuclear weapons,⁶ or the Framingham Heart Study (a 70-years-long cardiovascular study of the residents of Framingham, Massachusetts).

To help us better understand this anticipated policy and how it will be implemented in a manner consistent with EPA's other statutory obligations and responsibility to make sound and informed policy decisions, we respectfully request that you respond to the following questions by May 24, 2018:

1. Please provide a copy of the new policy.
2. The anticipated policy, as well as the HONEST Act and Secret Science Act, were born from the allegation that EPA's work is often based on secret science—i.e., scientific studies whose data has not been made available to and vetted by the public. However, in reality, scientific studies—whether they and the underlying data are made publicly available or not—are subject to rigorous peer review to ensure that the science is sound before agencies rely on it to make policy. In fact, courts have recognized that the best available science required under the law must be peer-reviewed.⁷ Please explain why you believe that the peer review process used in the scientific community is not sufficient to be relied upon for agency policy-making.
3. Please provide all documents (including emails, comments, memos, white papers, meeting minutes and correspondence) related to this new policy and its development.
4. Please provide all documents (including emails, comments, memos, white papers, meeting minutes and correspondence) containing any discussion or analysis regarding how it will be possible to comply with both this policy and the Administrative Procedure

⁵ <https://www.eenews.net/stories/1060076559>

⁶ <https://www.smithsonianmag.com/smart-news/how-bombings-hiroshima-and-nagasaki-still-inform-health-today-180956185/>

⁷ *Chlorine Chemistry Council v. EPA*, 206 F.3d 1286 (D.C. Cir. 2000) ("When EPA relies in any way on scientific information to set SDWA standards, the agency is required to use 'the best available, peer-reviewed science and supporting studies conducted in accordance with sound and objective scientific practices'"); *Ecology Ctr., Inc. v. U.S. Forest Serv.*, 451 F.3d 1183, 1194 n.4 (10th Cir. 2006) ("While the agency's scientific judgments are viewed deferentially it 'must be good science that is reliable, peer-reviewed, or otherwise complying with valid scientific methods.'")

Act. How will EPA treat a study that is ineligible for consideration under the new policy but must be considered and responded to under the Administrative Procedure Act because, for example, a member of the public has submitted it to the Agency during notice and comment on a proposed rule?

5. Please provide all documents (including emails, comments, memos, white papers, meeting minutes and correspondence) containing any discussion or analysis regarding how it will be possible to comply with both this policy and statutory mandates to use the best available science (or other statutory requirements that guide EPA's use of scientific information).
6. Please provide all documents (including emails, comments, memos, white papers, meeting minutes and correspondence) containing any discussion or analysis regarding how EPA will handle confidential personal health information, confidential business information, trade secrets or other information required to be kept non-public under this new policy. How does EPA intend to handle confidential information submitted to it by companies? For example, will EPA reject chemical safety data submitted by chemical companies from being considered under the Toxic Substances Control Act because that data contains confidential business information? Will it disclose proprietary data submitted by car companies, or simply decide not to use it?
7. Has EPA conducted an analysis of the cost of implementing the new policy? If so, please provide a copy of the analysis as well as all documents (including emails, comments, memos, white papers, meeting minutes and correspondence) related to the analysis. Does EPA plan to redact confidential information before the science is made public, or will it just eliminate the study from being utilized completely? If EPA intends to redact the information, has EPA calculated the cost of redacting thousands of documents and ensuring that each page made public is in compliance with EPA's own privacy policy?⁸
8. Have EPA and the White House Office of Information and Regulatory Affairs discussed this new policy? If so, please provide all documents (including emails, comments, memos, white papers, meeting minutes and correspondence) containing any discussions between EPA and the Office of Information and Regulatory Affairs regarding this new policy.
9. Did EPA communicate with scientific advocacy organizations or academies, such as the American Association for the Advancement of Science or the American Geophysical Union, while formulating this new policy? If so, please provide all documents (including emails, comments, memos, white papers, meeting minutes and correspondence) evincing these discussions.
10. Did EPA communicate with any regulated entities or trade associations, such as the American Chemistry Council, about the policy at any time before its release? If so, please provide all documents (including emails, comments, memos, white papers, meeting minutes and correspondence) evincing these discussions. Will the new policy

⁸ <https://www.epa.gov/sites/production/files/2015-09/documents/2151.1.pdf>

apply to all regulated areas (air, water, and land) and regulated industries equally? If not, please explain any differences.

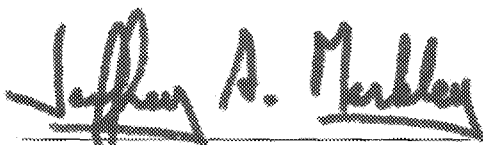

11. Please provide all documents (including emails, comments, memos, white papers, meeting minutes and correspondence) containing any discussions or analysis about how EPA will treat data collected in unique research studies that cannot or should not be reproduced. Will EPA exclude these important studies under the reproducibility prong of the new policy?

Thank you very much for your attention to this important matter. If you have any questions or concerns, please ask the appropriate members of your staff to contact Michal Freedhoff, of the Environment and Public Works Committee staff, at 202-224-8832.

Sincerely,

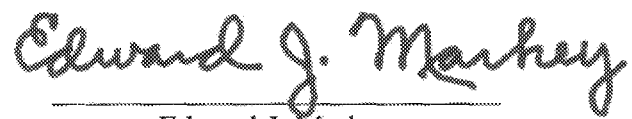

Thomas R. Carper

Subject: OIRA Concluding Review of EPA NPRM entitled Strengthening Transparency in Regulatory Science

Clint: OIRA is concluding review of the attached final draft of the NPRM entitled "Strengthening Transparency in Regulatory Science" with a finding of consistent with change. Thank you for working to address interagency comments on a tight schedule. This email constitutes the "official" conclusion of our review; please upload a clean formatted version into ROCIS at your convenience tomorrow so that we can record the conclusion of review in our recordkeeping system; you do not need to wait for this step to be completed to sign and release to the public.

Please call if you have any questions.

Jim Laity
Chief, Natural Resources and Environment Branch
Office of Information and Regulatory Affairs
Office of Management and Budget

Subject: FW: Comment on EPA Transparency Rule
Attachments: Coons_Comment_EPA_Transparency_Rule.pdf

Good afternoon,

Please see the attached letter from Coons offering comments on the proposed rule. I believe this just needs to be added to the docket? I'm copying both Jennifer and Richard as well so that everyone has it. Let me know if there's anything more I need to do, and if you all are sending out responses to Congressionals of this nature as they come in. If so, I will upload in CMS and assign to your organization.

Look forward to hearing from you.

Enjoy your weekend!

Subject: FW: Comment on EPA Transparency Rule

Hey Christina – Is your team the correct route to have this added to the docket?
Thanks,
Tony

Subject: Comment on EPA Transparency Rule

Hi Tony,

Senator Coons has submitted the attached letter to Acting Administrator Wheeler as a comment on the “Strengthening Transparency in Regulatory Science” rule (Docket No. EPA-HQ-OA-2018-0259). I wanted to follow up by sending it directly to you. Please let me know if you have any questions.

Best,
Mallory
