Subject: Updated Data Access Draft
Attachments: Data Access Draft - EPA - 4-17-18 - CLEAN.docx; Data Access Draft - EPA - 4-17-18 - TRACK CHANGES VERSION.docx

Attached version addressed comments from SP, OMB, and you all - Note that one has changes tracked and the other is clean. Thanks!

Clint Woods
Deputy Assistant Administrator
Office of Air and Radiation, U.S. EPA
202.564.6562

Pesticide Studies Won E.P.A.'s Trust, Until Trump's Team Scorned 'Secret Science'

Backed by agrochemical companies, the current administration and Congress are moving to curb the role of human health studies in regulation.

Aug. 24, 2018

A strawberry field
in California's
Salinas Valley,
where a yearslong
study, funded in part
by the
Environmental
Protection Agency,
has linked pesticides
to ailments in
children of farm
workers. Carlos
Chavarría for The
New York Times

SALINAS, Calif. —
José Camacho once
worked the fields
here in the Salinas
Valley, known as
“the Salad Bowl of
the World” for its
abundance of lettuce

and vegetables. His wife still does.

But back in 2000, Mr. Camacho, who is 63, got an unusual phone call. He was asked if he wanted to work for a new project studying the effects of pesticides on the children of farm workers.

“This seemed really crazy,” he recalled saying at the time, since he barely spoke English. “A research study?”

The project, run by scientists from the University of California, Berkeley, and funded in part by the Environmental Protection Agency, is still going all these years later.

Known as Chamacos, Spanish for “children,” it has linked pesticides sprayed on fruit and vegetable crops with respiratory complications, developmental

disorders and lower
IQs among
children of farm
workers. State and
federal regulators
have cited its
findings to help
justify proposed
restrictions on
everything from
insecticides to
flame-retardant
chemicals.

But the Trump
administration
wants to restrict
how human studies
like Chamacos are
used in rule-making.
A government
proposal this year,
called Strengthening
Transparency in
Regulatory Science,
could stop them
from being used to
justify regulating
pesticides, lead and
pollutants like soot,
and undermine
foundational
research behind
national air-quality
rules. The E.P.A.,
which has funded
these kinds of
studies, is now
labeling many of

them “secret science.”

Studying disease trends in specific groups of people — a branch of medicine known as epidemiology — started to gain currency at the E.P.A. in recent years. These studies can be difficult because they require adjusting for all the various substances people are exposed to beyond pesticides. But researchers had amassed years of data from a wave of compelling chemical studies begun in the 1990s, giving regulators a new body of research to incorporate into their decision-making.

Under the Obama administration, the E.P.A., which had long favored tests on rats and other laboratory animals in its pesticide

regulation, began considering epidemiological studies more seriously. The agency leaned on this type of research in proposing to ban an insecticide called chlorpyrifos in late 2016, and has been repeatedly prodded to take action on the chemical by federal courts.

But weeks after Donald J. Trump was elected president, CropLife America, the main agrochemical trade group, petitioned the E.P.A. to “halt regulatory decisions that are highly influenced and/or determined by the results of epidemiological studies” unless universities were forced to share more of their data.

José Camacho was asked in 2000 to participate in the study, which tracks families as they go about their normal

lives. Such research was embraced by the E.P.A. during the Obama administration. Carlos Chavarria for The New York Times

Industry leaders aggressively challenged such studies in high-level meetings and emails with E.P.A. leaders, according to thousands of pages of documents obtained through Freedom of Information Act requests. One trade group invited a top E.P.A. official to meet with its Washington lobbyist last year, complaining that “carefully controlled” animal studies were giving way to “conclusions reflected in epidemiological papers.”

Gary W. Van Sickle, executive director of the California Specialty Crops Council,

wrote to the agency
last September that
“there have been
serious flaws with
E.P.A.’s conclusion
to use these data.”

The council,
representing
growers of crops as
diverse as carrots,
garlic, pears and
peppers, cited
“inappropriate use
of the
epidemiology.”

The E.P.A., whose
new leadership is
seeded with industry
veterans, has
responded. In a mid-
July assessment of
atrazine, a widely
used weed killer
long banned in
Europe, the agency
reviewed and
dismissed 12 recent
epidemiological
studies linking the
herbicide to such
ailments as
childhood leukemia
and Parkinson’s
disease. It echoed
the conclusions of
research funded by
Syngenta, atrazine’s
manufacturer,

finding the chemical
unlikely to cause
cancer.

Before scandals
forced Scott Pruitt
out last month as
head of the E.P.A.,
he proposed the
transparency
regulation. It would
ban many
epidemiological
studies, and other
outside research,
unless more data
behind the studies
was made public. In
doing so, he revived
a strategy advanced
for years by
congressional
Republicans and
corporate interests
like tobacco
companies.

“The era of secret
science at E.P.A. is
coming to an end,”
Mr. Pruitt
proclaimed at the
time. The agency’s
new acting
administrator,
Andrew R. Wheeler,
says he’s moving
forward with the
proposal, as the
agency re-evaluates

a class of widely
used insecticides,
called
organophosphates,
that have been the
subject of numerous
epidemiological
studies like
Chamacos.

Nancy B. Beck, a
chemical industry
veteran who is the
E.P.A.'s deputy
assistant
administrator, said
there was no attempt
to thwart
epidemiology,
adding that the
agency was
committed to "the
best available
science in the most
transparent
manner."

But academics and
state health officials
say universities are
being pressured to
release data that
would ultimately
divulge the
identities of study
participants, a
strategy once used
by tobacco
companies seeking
to undermine

research on the dangers of smoking. While participant data is shared with regulators in drug trials, academics fear that the E.P.A.'s proposal would additionally require divulging confidential personal information, potentially violating privacy regulations for federally funded research.

Ana Lilia Sanchez,
a farm worker and
the mother of a
participant in the
Salinas Valley

study, said her family took precautions to avoid pesticide contamination. Carlos Chavarría for The New York Times

“It is a naked attempt to use a false claim that something nefarious is going on with these studies in an effort to allow industry to challenge conclusions that are not in their favor,” said James Kelly, a manager of environmental surveillance at the Minnesota Department of Health.

A Wave of Studies, an Uneasy Industry

An advertisement in a Nebraska student newspaper was looking for people who wanted to “earn extra money.” Thirty-six college

student volunteers
and others from the
community who
responded were paid
\$460 to drink
gelatin capsules
filled with the
pesticide
chlorpyrifos, at up
to 300 times levels
the E.P.A.
considered safe,
without a full
discussion of the
risks.

Sponsored by Dow
Chemical, this
study, conducted in
1998, was one of the
last of its kind. That
year, the E.P.A.
banned the use of
studies exposing
people to pesticides,
and it continues to
severely restrict
them.

Epidemiology,
which has been used
to examine
everything from the
effects of climate
change to childhood
obesity, offered a
way to continue
studying disease
trends, amid new
legal requirements

to examine how
pesticides
particularly affect
infants and children.
And it could do so
by tracking people
during their normal
lives instead of
treating them as if
they were lab rats.
Chamacos and other
studies began
almost immediately,
although it took
decades to collect
sufficient data and
study how
participants changed
over time.

One study by
Columbia
University
researchers linked
an insecticide to
developmental
delays in toddlers.
Another, by
scientists at the
University of
California, Los
Angeles, connected
pesticides to
Parkinson's disease.
Academics at the
University of
Rochester found
that pesticides lower
sperm counts in
men, while

researchers from the Harvard School of Public Health found lower fertility in women.

By 2015, there was a growing body of research, often funded in part by the E.P.A. The agency decided that year to consult epidemiology more seriously in its evaluation of glyphosate, the world's most popular weed killer and the active ingredient in Monsanto's Roundup.

“This is a watershed event in our Program, and one which I feel particularly proud to be a part (go epi!!),” Carol Christensen, then an E.P.A. epidemiologist, wrote in a 2015 email to a colleague — using “epi” as shorthand for epidemiology. “In the 35 year history of our program, this

will be the FIRST
time epi studies are
actively considered
in the decision
making.”

Yet even then, there
was friction over
what to make of
studies aiming to
determine whether
glyphosate causes
cancer.

One E.P.A. division,
the Office of
Research and
Development,
closely examined
epidemiological
research and came
to believe either that
glyphosate was
likely to cause
cancer or that there
was at least some
evidence suggesting
a problem. But
another division, the
Office of Pesticide
Programs, was
dismissive of
epidemiological
studies and
determined that
glyphosate was not
a carcinogen, a view
that prevailed at the
E.P.A., according to
interviews, emails

and an internal memo obtained by The New York Times. Those involved in the agency's debates on epidemiology spoke on the condition of anonymity because the discussions weren't public.

Monsanto said in a statement that "we cannot speak to the internal E.P.A. discussions" but emphasized the agency's ultimate finding that glyphosate was not likely to cause cancer.

The cancer question received renewed attention this month when a California jury awarded \$289 million to a groundskeeper who alleged that the chemical had sickened him. In his closing argument, the plaintiff's attorney, R. Brent Wisner, called epidemiology one of "the three pillars of

cancer science” that
the case relied on.

At the E.P.A., the
debate swung in
favor of
epidemiology.
While such studies
are often complex
and can be of
varying quality, the
agency was
reluctant in the past
to give them as
much weight as lab
experiments on
animals. But by the
Obama
administration’s
final months, the
agency moved for
the first time to ban
a pesticide largely
because of
epidemiological
research.

The pesticide,
chlorpyrifos, was
the same one
ingested years
earlier by unwitting
Nebraskans. It is
applied to crops like
apples, oranges and
strawberries to
combat insects like
spider mites and
sap-sucking bugs.

In California alone, chlorpyrifos was sprayed on 640,000 acres in 2016, according to state data. And research from Salinas, and the Chamacos study, became a central element in the E.P.A.'s recommendation.

“There is a breadth of information available on the potential adverse neurodevelopmental effects in infants and children as a result of prenatal exposure to chlorpyrifos,” the agency concluded in 2016, also citing epidemiological research from Columbia University and the Icahn School of Medicine at Mount Sinai.

The pesticide industry's reaction was loud and intense.

Monsanto, in emails with the E.P.A., was

dismissive of
critical
epidemiological
research related to
Roundup, writing
that “such studies
are well known to
be prone to a
number of biases.”

A Trump
administration
proposal would
prevent the E.P.A.
from using many
epidemiological
studies, like the one
in Salinas, unless
more data behind
them was made
public. Carlos
Chavarría for The
New York Times

Dow Chemical said in reports submitted to the E.P.A. that “the evidence from these studies is insufficient” and called chlorpyrifos a “proven first-line of defense” against new pest outbreaks.

A month after taking over the E.P.A., Mr. Pruitt acted. He disregarded agency scientists and rejected the proposed chlorpyrifos ban, later calling for “a new day, a new future, for a common-sense approach to environmental protection.”

View From the Field

Ana Lilia Sanchez, 50, has worked in the fields in Salinas more than half her life, and one of her daughters has been a Chamacos study participant.

Ms. Sanchez has learned to watch for drifting droplets or the whir of a helicopter spraying overhead.

“Sometimes when we feel it, or we hear it, we start talking about it,” she said recently, sitting with her 5-month-old granddaughter at her home on a Salinas cul-de-sac. “Why wouldn’t they tell us, you know, to get out of here, to not come today?” she asked. “Women, they cover themselves, but men are working in short sleeves, so they are more exposed.”

Insecticides like chlorpyrifos are organophosphates, from the same chemical family as nerve agents like sarin and Novichok, the Russian-developed compound linked to recent attacks in Britain. While the

safety of
insecticides is
extensively tested,
long-term health
impacts, or even
how far pesticides
drift, are the subject
of continuing
disagreement.

Ms. Sanchez
showers after work,
before touching her
granddaughter.

“I also put my
clothes aside,” she
said. “We separate
the clothes we use
when we’re
working, both my
husband and I, and
wash them
separately so they’re
not contaminated.”

While some human
studies examine
potential harm from
pesticide residue
found on fruits and
vegetables, the
Chamacos project is
more personal,
following hundreds
of children in the
heart of where
American food is
grown. California
has the nation’s

largest agricultural
industry and uses
more than 200
million pounds of
pesticides annually.

Brenda Eskenazi,
the director of the

Salinas Valley
project, said that
“well-controlled
epidemiologic
studies” were
essential for
understanding “how
things affect human
health.” Carlos
Chavarría for The
New York Times

For locals,
pesticides are part of
life. “It’s a big
difference from
when I was
working,” Mr.
Camacho said,
while standing in a
strawberry field
framed on three
sides by distant
hills. Men and
women were bent
over nearby, pulling
weeds. “My
supervisor would
say: ‘That’s not
dangerous. Just keep
working.’ There was
no information.”

Chamacos is built
on an unsettling
premise: What
happens to children
of pregnant mothers
certain to have
pesticides in their

bloodstreams? The E.P.A. and other government agencies have spent millions of dollars funding Chamacos.

Half the Chamacos children have been tracked since before birth. Researchers have collected 350,000 samples of blood, urine, breast milk and even household dust and spent nearly two decades studying maturing children. They perform neurodevelopmental and physical assessments and study factors like diet and school performance. After nearly two decades, the study's data appears in more than 160 academic papers.

During a visit to the Chamacos office in Salinas, Brenda Eskenazi, the director of the project and a professor of epidemiology at

Berkeley, was testing out brain monitoring equipment, wearing what looked like a black swim cap strewn with knobs and wiring. She has long been fascinated with cognitive development, going back to when she saw a Woodstock reveler — one having a bad acid trip — dive into pavement.

“Why did he do that?” Ms. Eskenazi remembers wondering at the time. “What was he thinking? What’s going on in that brain?”

“Any science is imperfect,” she said, but stressed that “well-controlled epidemiologic studies” were essential for understanding “how things affect human health.” She added, “Otherwise you’re just making huge assumptions that a

rodent is the same
as a human.”

A Bitter Debate

The day after Mr.
Pruitt made his
March 2017
decision to reject a
ban on chlorpyrifos,
he hosted top
executives from one
of the nation’s
largest farming and
pesticide trade
organizations for a
closed-door
conversation.

Near the top of the
meeting agenda was
“Epidemiology
Study Policy” in the
aftermath of the
“chlorpyrifos
matter,” according
to internal records.

McKinnon
Elementary School
in Salinas. The
pesticide industry
contends that
epidemiological
studies are prone to
biases and not as
reliable as testing on
lab animals. Carlos
Chavarría for The
New York Times

“There are no
guideposts, if you
will, for what is a
legitimate, useful
epidemiology study
and what is not,”
Jay Vroom,
CropLife America’s
president, said in an
interview,

explaining what he had told agency officials at this and other meetings.

In a subsequent letter to the E.P.A., a CropLife America lobbyist said the agency was relying on a “shortsighted approach,” and the group submitted formal proposals to curb the embrace of epidemiology the E.P.A. undertook under the Obama administration.

Mr. Pruitt responded with his proposal, made this past spring, to ban epidemiological and other studies that did not make study details public, including at least some information on study participants.

Academics have resisted previous requests to review their data, notably at Columbia University. In a 2016 letter to the

agency, a university official wrote that it could not provide “extensive individual level data to E.P.A. in a way that ensures the confidentiality” of “our research subjects.”

David Michaels, an epidemiologist at George Washington University’s School of Public Health and head of the Occupational Safety and Health Administration during the Obama administration, said Mr. Pruitt’s plan was not about transparency but about discrediting studies that made pesticides look bad.

“The underlying justification for this ‘transparency’ proposal is a caricature of how science really works,” Mr. Michaels said at a recent hearing. “The cynical approach proposed by E.P.A.

can be best
described as
'weaponized
transparency.'”

It is no coincidence,
he said, that the
term “secret
science” was also
used in the 1970s
when the tobacco
industry was trying
to forestall critical
research about
smoking.

Researchers have
had wins. This
month, a federal
appeals court
ordered the E.P.A.
to ban chlorpyrifos,
citing findings from
human studies. The
Trump
administration is
mulling whether to
appeal.

But epidemiologists
are unsettled. In
mid-July, after
nearly two decades
of work on
Chamacos, the
E.P.A. emailed Ms.
Eskenazi requesting
“the original data”
from her research,
citing “uncertainty

around
neurodevelopmental
effects associated”
with pesticides she
has studied. The
agency made a
similar request to
Columbia.

Ms. Eskenazi,
worried about her
study participants’
privacy, alerted
university lawyers.
She is now
concerned that the
E.P.A. may try to
undermine her
study’s repeated
findings that some
pesticides may be
harming children.

“I knew this was
going to come
sooner or later,” she
said. “And here it
is.”

Danny Hakim
reported from
Salinas, and Eric
Lipton from
Washington.

Open data and protecting privacy — we can do both

By Rep. Lamar Smith
April 19, 2018

After EPA Administrator Scott Pruitt announced that he will implement a policy to make our government more accountable to the American people, we've seen massive media coverage misrepresenting the potential effects of such a policy.

Regrettably, the EPA is able to make rules and regulations based on data that not even rule-makers at the agency have seen. It's time to change that.

We all want clean air and clean water, both today and for future generations. It is the EPA's mission to ensure that happens. We all also agree that the best available science should underlie EPA's rules and regulations.

I have long worked to implement a policy that requires the EPA to base its rules on science that is publicly available. Opponents disagree – they prefer to keep this data hidden. But if we do that, how could we – scientists, policymakers and American citizens – confirm that the regulations that dramatically impact our lives are based on the best available science? If all we can see are studies' conclusions, we don't know whether those conclusions are based on sound science.

Those who oppose making the data public claim it will expose personal information. But confidential patient data and other personal information should and can be kept private. Making data publicly available, as I've advocated in the Honest and Open New EPA Science Treatment Act (HONEST Act), does not mean making confidential information available to anyone with a keyboard.

In fact, there are several ways to make data public without revealing any confidential information. Redacting personally identifying information is one option that agencies across the federal government have used for years. Where redaction would limit the quality of datasets for individuals who wish to see the data underlying a study, access could be granted after they agree to keep the data confidential.

Much of the data that is currently available already requires those requesting datasets to fulfill contractual obligations, preventing them from disseminating confidential patient information. While the HONEST Act's opponents ignore these facts, others in the scientific community recognize the importance of access to data.

The Association of American Universities (AAU) and the Association of Public Land-Grant Universities (APLU) recently provided recommendations for agencies implementing the Obama administration's public access requirements. The AAU and APLU highlight the "growing demand among scholars and the public to have broader access to each other's data" and recommend that the minimum standard be "data that are essential to understanding and reproducing peer reviewed publications ... to be accessible for re-analysis," while adhering to rules protecting personal information.

Those in the scientific community who support disclosing data while protecting confidential information should also support the HONEST Act, which furthers the same goals.

Many opponents of open data have wrongly concluded that requiring new regulations to be based on "publicly available" data will disqualify studies from being considered. A recent article alleges that such a policy would "force the EPA to ignore" studies based on confidential health information. This argument is fraudulent. The reality is that the EPA will consider these studies when they adhere to the publicly available standard.

Open access to science is a goal that furthers public debate and benefits the American people. So the HONEST Act is receiving unfounded criticism from those who know that the data may not justify the regulations.

The American people have a right to understand why and how regulatory decisions are made.

Read the full op-ed [here](#).

Thanks, Liz. By "The Agency's offices should be guided by this policy to the maximum extent practicable", do you mean that it would not be an iron-clad requirement? That is, if there were no other way to quantify the health effects of air pollution on human beings, the EPA would consider studies that rely on, say, confidential patient information?

Thanks.

Best,
Steve

Subject: FW: From Washington Post

With regard to the biomass decision, EU to this day recognizes biomass as a carbon neutral form of energy production. California and other states in the North East also recognize that biomass is a carbon neutral form of energy production in their state renewable portfolio standards.

On the proposed science transparency policy: The Agency's offices should be guided by this policy to the maximum extent practicable during ongoing regulatory action, even where such research has already been generated, solicited, or obtained.

EO 13777 on reg reform calls on task forces to identify for repeal/replace/modify existing "regulations that rely in whole or in part on data, information, or methods that are not publicly available or that are insufficiently transparent to meet the standard for reproducibility."

Proposed rule also requests comment on:

- EPA seeks comment on the effective date of a rule as well as on whether the Agency should seek to phase-in the requirements for certain significant regulatory actions or seek to prioritize specific actions.
- For regulatory programs, like the National Ambient Air Quality Standards program, in which future significant regulatory actions may be based on the administrative record from previous reviews - particularly where the governing statute requires repeated review on a fixed, date-certain cycle -EPA seeks comment on the manner in which this proposed rule should apply to that previous record.
- EPA also solicits comments on whether and how the proposed rule should apply to dose response data and models underlying pivotal regulatory science if those data and models were developed prior to the effective date.
- In addition, EPA seeks comment on how the prospective or retrospective application of the provisions for dose response data and models or pivotal regulatory science could inadvertently introduce bias regarding the timeliness and quality of the scientific information available.

Thank you – Liz

Subject: From Washington Post

Hi Liz and Jahan,

I'm working on an editorial today about Administrator Pruitt's Monday biomass decision and today's secret science decision. The first ratifies a mistake the Europeans made years ago in how to account for emissions from biomass. The second would throw out long-established research and make it difficult/impossible for scientifically valid work to be included in EPA decisions. Any response?

Thanks.

Best,
Steve

Thanks, Liz. By "The Agency's offices should be guided by this policy to the maximum extent practicable", do you mean that it would not be an iron-clad requirement? That is, if there were no other way to quantify the health effects of air pollution on human beings, the EPA would consider studies that rely on, say, confidential patient information?

Thanks.

Best,
Steve

Subject: FW: From Washington Post

With regard to the biomass decision, EU to this day recognizes biomass as a carbon neutral form of energy production. California and other states in the North East also recognize that biomass is a carbon neutral form of energy production in their state renewable portfolio standards.

On the proposed science transparency policy: The Agency's offices should be guided by this policy to the maximum extent practicable during ongoing regulatory action, even where such research has already been generated, solicited, or obtained.

EO 13777 on reg reform calls on task forces to identify for repeal/replace/modify existing "regulations that rely in whole or in part on data, information, or methods that are not publicly available or that are insufficiently transparent to meet the standard for reproducibility."

Proposed rule also requests comment on:

- EPA seeks comment on the effective date of a rule as well as on whether the Agency should seek to phase-in the requirements for certain significant regulatory actions or seek to prioritize specific actions.
- For regulatory programs, like the National Ambient Air Quality Standards program, in which future significant regulatory actions may be based on the administrative record from previous reviews - particularly where the governing statute requires repeated review on a fixed, date-certain cycle -EPA seeks comment on the manner in which this proposed rule should apply to that previous record.
- EPA also solicits comments on whether and how the proposed rule should apply to dose response data and models underlying pivotal regulatory science if those data and models were developed prior to the effective date.
- In addition, EPA seeks comment on how the prospective or retrospective application of the provisions for dose response data and models or pivotal regulatory science could inadvertently introduce bias regarding the timeliness and quality of the scientific information available.

Thank you – Liz

Subject: From Washington Post

Hi Liz and Jahan,

I'm working on an editorial today about Administrator Pruitt's Monday biomass decision and today's secret science decision. The first ratifies a mistake the Europeans made years ago in how to account for emissions from biomass. The second would throw out long-established research and make it difficult/impossible for scientifically valid work to be included in EPA decisions. Any response?

Thanks.

Best,
Steve

From: Eric Lipton [mailto:lipton@nytimes.com]
Sent: Thursday, June 14, 2018 5:04 PM
To: Block, Molly <block.molly@epa.gov>
Subject: Speaking with someone Monday about epidemiology and pesticide decisions

I wanted to talk with someone at EPA about how epidemiology is used in pesticide decisions. I have read the attached document.

I wanted to ask questions like

1) How useful is epidemiology in pesticide decisions and why is it important, if you thin it is

2) CropLife in Nov. 2016, see below, filed a petition asking EPA to “halt regulatory decisions that are highly influenced/determined by results of epidemiological studies that do not meet well-defined data quality standards, and that are not integrated into the health risk assessment in a transparent, well-defined manner.” Any interim or final registration review decision for Phosmet could potentially be impacted by EPA consideration of the epidemiological studies identified in the CLA petition. What ended up happening with this

3) How would the Strengthening Transparency in Regulatory Science proposal impact, if at all, your ability to use epidemiology in pesticide decisions, and if not, why not.

4) I also have questions about organophosphates, including making sure I understand what the 10X debate is about, and what the timeline is for reevaluating this class of pesticides and where the agency stands on health impacts and potential use of epi studies for this effort.

I really hope we can discuss all of this without just getting formal written responses to these questions. Let me know if we can have this conversation on Monday. It could be a mix of on the record and on background.

This is a case where the story is not yet drafted and we want your input in advance to help influence the story.

Thanks in advance

Eric

Subject: 'secret science' proposal

Liz, Jahan – This may be a very silly question, but I have to ask. Could today's proposed change to the types of research EPA can consider in rule-making be used to rescind existing rules and regulations? In other words, could it be applied retroactively? Or is it specifically for future action?

Thanks kindly,

Rich

FYI—Please see attached.

Today, the Administrator signed the proposed rule “Strengthening Transparency in Regulatory Science.” I thought everyone would be interested in reading the document themselves, rather than just relying on other interpretations.

In this notice, EPA solicits comment on this proposal and how it can best be promulgated and implemented in light of existing law and prior Federal policies that already require increasing public access to data and influential scientific information used to inform federal regulation.

Please let me know if you have questions.

CONGRESSIONAL BUDGET OFFICE COST ESTIMATE

March 29, 2017

H.R. 1430 **Honest and Open New EPA Science Treatment (HONEST) Act of 2017**

As passed by the U.S. House of Representatives on March 29, 2017

SUMMARY

H.R. 1430 would amend the Environmental Research, Development, and Demonstration Authorization Act of 1978 to prohibit the Environmental Protection Agency (EPA) from proposing, finalizing, or disseminating a “covered action” unless all scientific and technical information relied on to support that action is publicly available online in a manner that is sufficient for independent analysis and substantial reproduction of research results. Covered actions would include assessments of risks, exposure, or hazards; documents specifying criteria, guidance, standards, or limitations; and regulations and regulatory impact statements.

Although H.R. 1430 would not require the EPA to disseminate any scientific or technical information that it relies on to support covered actions, the act would not prohibit the agency from doing so. Whether the EPA would choose to disseminate such information would determine the cost of implementing H.R. 1430.

Based on information from the EPA and other federal agencies, as well as organizations and researchers in the scientific community that publish in peer-reviewed journals, CBO estimates that the agency could spend between a few million dollars per year to more than one hundred million dollars per year over the 2018-2022 period to ensure that data and other information underlying studies are publicly available in a format sufficient to allow others to substantially reproduce the results of studies. That range reflects the uncertainty about the number of studies the EPA would choose to rely on to support covered actions, the extent to which the agency would invest in data infrastructure to make researchers’ data and models available to others, and in the number of covered actions the agency would issue in future years. The range also reflects the uncertainty in the extent to which the research community would tailor their data management activities to comply with the requirements of the act and how quickly those changes might occur.

EPA officials have explained to CBO that the agency would implement H.R. 1430 with minimal funding and generally would not disseminate information for the scientific studies that it uses to support covered actions. That approach to implementing the legislation

would significantly reduce the number of studies that the agency relies on when issuing or proposing covered actions for the first few years following enactment of the legislation. In total, CBO estimates the EPA would spend about \$5 million over the 2018-2022 period; such spending would be subject to the availability of appropriated funds.

Enacting H.R. 1430 would not affect direct spending or revenues; therefore, pay-as-you-go procedures do not apply. CBO estimates that enacting the legislation would not increase net direct spending and on-budget deficits in any of the four consecutive 10-year periods beginning in 2028.

H.R. 1430 contains no intergovernmental or private-sector mandates as defined in the Unfunded Mandates Reform Act (UMRA) and would impose no costs on state, local, or tribal governments.

ESTIMATED COST TO THE FEDERAL GOVERNMENT

This legislation would direct the EPA to implement H.R. 1430 using up to \$1 million a year from amounts authorized to be appropriated for other activities under current law.

H.R. 1430 would not authorize additional appropriations to implement the requirements of the act, but CBO estimates that implementing the legislation would cost about \$5 million over the 2018-2022 period.

BASIS OF ESTIMATE

Based on information from officials at the EPA about how the agency would implement the legislation, CBO expects that the agency would choose to rely only on studies that already meet the act's requirements at the outset of undertaking covered actions. That manner of implementing the act would significantly cut the number of studies used to support the EPA's actions for the first few years following enactment. Under such an approach, CBO expects that the agency would use existing data infrastructure and would incur small administrative costs to verify that the data of selected studies are publicly available, as required by the legislation.

Under current law, the EPA typically spends about \$500 million each year to support research and development activities, including assessments to determine the potential risk to public health from environmental contaminants. The number of studies involved in supporting covered actions depends on the complexity of the issue being addressed. For example, when addressing a recent issue with flaring at petroleum refineries, the EPA relied on a dozen scientific studies. In contrast, when reviewing the National Ambient Air Quality Standards, the agency relied on thousands of scientific studies. In total, the agency

relies on about 50,000 scientific studies annually to perform its mission—although some of those studies are used more than once from year to year.

While the published manuscripts of scientific studies that the EPA cites to support covered actions are generally available online in publicly accessible journals, the availability of the underlying data, models, code, and other materials necessary for independent reproduction of results varies significantly in terms of quality, detail, and format. Many journals currently require authors to publish their data in online repositories or, at minimum, require that authors develop data management plans and agree to make their data available upon request. Compliance with those data management guidelines varies and enforcement is limited. Federal regulations require that all data from research funded by federal agencies be publicly available and stored in digital repositories. CBO estimates that the majority of the studies the EPA relies on each year comply with the data management requirements of their respective journals and repositories, but those requirements would not satisfy the level of detail specified by this legislation.

If the EPA continued to rely on as many scientific studies as it has used in recent years to support its covered actions, then CBO estimates that the agency would need to spend at least \$100 million dollars per year to upgrade the format and availability of those studies' data to the level required by H.R. 1430. If the EPA chose to make the data available in the specified manner so as to enable the use of additional studies, CBO estimates that the agency would need to spend, on average, \$10,000 per scientific study. That estimate is based on information from the EPA's Office of Research and Development and other federal agencies, as well as feedback from organizations and researchers in the scientific community that publish in peer-reviewed journals. Such spending would cover the costs of obtaining all of the underlying data used in a study, reviewing the data to address any confidentiality concerns, formatting the data for public access, providing access to the computer codes and models used in the study's analysis, and providing descriptions and documentation on how to access the data. Activities could entail corresponding and negotiating with study authors and publishers and processing data to construct, maintain, and store study-related information.

PAY-AS-YOU-GO CONSIDERATIONS: None.

INCREASE IN LONG-TERM DIRECT SPENDING AND DEFICITS

CBO estimates that enacting the legislation would not increase net direct spending or on-budget deficits in any of the four consecutive 10-year periods beginning in 2028.

INTERGOVERNMENTAL AND PRIVATE-SECTOR IMPACT

H.R. 1430 contains no intergovernmental or private-sector mandates as defined in UMRA and would impose no costs on state, local, or tribal governments. Organizations, such as universities or research centers, that produce scientific studies used by the EPA to support covered actions might incur costs to make those studies, and underlying data, available to the public in an online format. However, those costs would result from participation in a voluntary federal program and would not stem from a mandate under UMRA. Researchers coordinating with the EPA could receive federal funds to defray the costs of making information publicly available.

CONGRESSIONAL BUDGET OFFICE COST ESTIMATE

March 11, 2015

H.R. 1030 **Secret Science Reform Act of 2015**

*As ordered reported by the House Committee on Science, Space, and Technology
on March 3, 2015*

SUMMARY

H.R. 1030 would amend the Environmental Research, Development, and Demonstration Authorization Act of 1978 to prohibit the Environmental Protection Agency (EPA) from proposing, finalizing, or disseminating a “covered action” unless all scientific and technical information used to support that action is publicly available in a manner that is sufficient for independent analysis and substantial reproduction of research results. Covered actions would include assessments of risks, exposure, or hazards; documents specifying criteria, guidance, standards, or limitations; and regulations and regulatory impact statements.

Although H.R. 1030 would not require EPA to disseminate any scientific or technical information that it relies on to support covered actions, the bill would not prohibit EPA from doing so. Based on information from EPA, CBO expects that EPA would spend \$250 million annually over the next few years to ensure the transparency of information and data supporting some covered actions.

Enacting H.R. 1030 would not affect direct spending or revenues; therefore, pay-as-you-go procedures do not apply. H.R. 1030 contains no intergovernmental or private-sector mandates as defined in the Unfunded Mandates Reform Act (UMRA) and would not affect the budgets of state, local, or tribal governments.

ESTIMATED COST TO THE FEDERAL GOVERNMENT

This legislation would direct EPA to implement H.R. 1030 using up to \$1 million a year from amounts authorized to be appropriated for other activities under current law. Although H.R. 1030 would not authorize additional appropriations to implement the requirements of the bill, CBO estimates that implementing H.R. 1030 would cost about \$250 million a year for the next few years, subject to appropriation of the necessary amounts. Costs in later years would probably decline gradually from that level. The

additional discretionary spending would cover the costs of expanding the scope of EPA studies and related activities such as data collection and database construction for all of the information necessary to meet the legislation's requirements.

BASIS OF ESTIMATE

Under current law, EPA typically spends about \$500 million each year to support research and development activities, including assessments to determine the potential risk to public health from environmental contaminants. The number of studies involved in supporting covered actions depends on the complexity of the issue being addressed. For example, when addressing a recent issue with flaring at petroleum refineries, EPA relied on a dozen scientific studies. In contrast, when reviewing the National Ambient Air Quality Standards, the agency relied on thousands of scientific studies. In total, the agency relies on about 50,000 scientific studies annually to perform its mission—although some of those studies are used more than once from year to year.

The costs of implementing H.R. 1030 are uncertain because it is not clear how EPA would meet the bill's requirements. Depending on their size and scope, the new activities called for by the bill would cost between \$10,000 and \$30,000 for each scientific study used by the agency. If EPA continued to rely on as many scientific studies as it has used in recent years, while increasing the collection and dissemination of all the technical information used in such studies as directed by H.R. 1030, then implementing the bill would cost at least several hundred million dollars a year. However, EPA could instead rely on significantly fewer studies each year in support of its mission, and limit its spending on data collection and database construction activities to a relatively small expansion of existing study-related activity; in that scenario, implementing the bill would be much less costly.

Thus, the costs of implementing H.R. 1030 would ultimately depend on how EPA adapts to the bill's requirements. (It would also depend on the availability of appropriated funds to conduct the additional data collection and database construction activities and related coordination and reporting activities under the legislation.) CBO expects that EPA would modify its practices, at least to some extent, and would base its future work on fewer scientific studies, and especially those studies that have easily accessible or transparent data. Any such modification of EPA practices would also have to take into consideration the concern that the quality of the agency's work could be compromised if that work relies on a significantly smaller collection of scientific studies; we expect that the agency would seek to reduce its reliance on numerous studies without sacrificing the quality of the agency's covered actions related to research and development.

On balance—recognizing the significant uncertainty regarding EPA’s potential actions under the bill—CBO expects that the agency would probably cut the number of studies it relies on by about one-half and that the agency would aim to limit the costs of new activities required by the bill, such as data collection, correspondence and coordination with study authors, construction of a database to house necessary information, and public dissemination of such information. As a result, CBO estimates the incremental costs to the agency would be around \$250 million a year initially, subject to appropriation of the necessary amounts. In our assessment that figure lies near the middle of a broad range of possible outcomes under H.R. 1030. CBO expects that the additional costs to implement the legislation would decline over time as EPA became more adept and efficient at working with authors and researchers to ensure that the data used to support studies are provided in a standardized and replicable form.

PAY-AS-YOU-GO CONSIDERATIONS: None.

INTERGOVERNMENTAL AND PRIVATE-SECTOR IMPACT

H.R. 1030 contains no intergovernmental or private-sector mandates as defined in UMRA and would not affect the budgets of state, local, or tribal governments.

Pat,

I think the IWGOS members might like to see the letter from the National Academy Presidents to the EPA. I've attached it here.

Subject: Re: REQUEST FOR INPUT: G7 questionnaire

Dear Pat,

We were very pleased to receive responses to the G7 Open Science survey from about 10 federal agencies, and thank them for their time and input.

We consolidated the agency inputs into a US contribution, and sent it to OSTP for EOP review. OSTP has concurred on the attached document. Could you please share it with the IWGOS?

Again, thank you all for working with us on this!
Mangala

Subject: REQUEST FOR INPUT: G7 questionnaire

Hi, All,

On behalf of Dr. Rebecca L. Keiser, Head, Office of International Science and Engineering at the National Science Foundation, I am passing along a request:

OSTP received the attached questionnaire on open science from our Japanese colleagues that is part of the work of the G7 Open Science Working Group.

Deliberative Process / Ex. 5
Deliberative Process / Ex. 5 Therefore, please send your agency's inputs to the questionnaire by Friday, June 1, to Mangala Sharma, **Personal Matters / Ex. 6** NSF will consolidate them. It is fine to input any agency-specific practices for each question. **Deliberative Process / Ex. 5**
Deliberative Process / Ex. 5

A few agencies have already received a request from Dr. Kaiser, so for them apologies for the duplication. We will have time for discussion of this on the agenda for this Thursday's meeting, and Dr. Kaiser hopes to call in to answer any questions. The agenda will be sent out later today with other meeting materials.

All the best - Pat

Open Science Follow-up Survey for G7 Science Ministers' Meeting
Response from the UNITED STATES

At the G7 Science Ministers' Meeting in Italy this September, G7 Ministers encouraged the Open Science Working Group (OS WG) to follow up actions taken by G7 members according to the WG's recommendations and to collect good practices, in order to report to the next G7 Science Ministers' Meeting, under the adopted G7 SCIENCE MINISTERS' COMMUNIQUÉ. In particular, the OS WG is expected to deepen its efforts on the following topics: the incentives for openness of the research ecosystem, including the role of research indicators and metrics relevant to open science; and the infrastructures and standards for optimal use of research data. According to these backgrounds, we hereby conduct a follow-up survey, especially by updating the policies and collecting good practices of each country.

Please answer to the questions below. Attaching reference documents and information are highly appreciated.

Q1: Overview of National Framework of Policies and Programs supporting Open Science Paradigms

Please describe an overview of governmental policies and programs to promote Open Science Paradigms. It is strongly encouraged to include the purposes, targets and goals (ex: what social impacts are expected?) of such policies and programs as well as information of how (ex: set an article in the law) you position them in the national STI framework of your country.

If there are any challenges to respond as one response at the government-wide level, in view of your country's policy situation for open science paradigms,

- (1) please explain the details of the country's situation
- (2) and if possible, please describe policies and programs of the ministries/departments and government agencies to promote open science paradigms in your country.

- You can expand the comment box below for longer responses.

Deliberative Process / Ex. 5

Deliberative Process / Ex. 5

Deliberative Process / Ex. 5

Q2: Examples of Incentives and rewards for researchers to Promote Open Science Paradigms

In Annex 4 of the Communiqué, recommendations are stated for each G7 nation, to engage with research stakeholders to identify and implement enhancements to research evaluation and reward systems that take into consideration the Open Science activities carried out by researchers and research institutions. Accordingly, please show and explain your country's examples of incentives and rewards for researchers to promote Open Science relevant to following topics 2A, 2B, 2C, 2D and 2E. Multiple topics can be selected for each example, if appropriate. Please make sure that your description of a content section clarifies how the selected topic(s) are applicable to the corresponding cases.

2A: Recognizing Open Science practices during evaluation of research funding proposals, and research outcomes.

2B: Recognizing and rewarding research productivity and impact that reflect open science activities by researchers during career advancement reviews.

2C: Including credit for service activities such as reviewing, evaluating, and curation and management of research data.

2D: Developing metrics of Open Science practices.

2E: Other than above

Deliberative Process / Ex. 5

Deliberative Process / Ex. 5

Deliberative Process / Ex. 5

Deliberative Process / Ex. 5

Deliberative Process / Ex. 5

Please describe any budget measurements and/or frameworks (rules, standards, organizations, or any) established for the examples (2A-2E) if you have, and also what they (budget and framework) achieved and what impacts they have on governmental policies, R & D, industry, citizen, education and so on.

- You can expand the comment box below for longer responses.

Deliberative Process / Ex. 5

Please describe any practices, if you have, for utilizing research indicator and/or metrics relevant for evaluation of Open Science activities and their impact on policy, research, industry and/or citizen sectors.

- You can expand the comment box below for longer responses.

Deliberative Process / Ex. 5

Q3: Examples of Infrastructures and Standards for an Optimal Use of Research Data

Each G7 nation is recommended to work to promote the development of practices and the use of technologies and infrastructures in the research community that foster Open Science principles and data sharing. Please show and explain your country's examples of cases, developments, and/or approaches relevant to the following items.

Multiple topics can be selected for each example, if appropriate. Please make sure that your description of a content section clarifies how the selected topic(s) are applicable to the corresponding cases.

3A: Actions if any, towards use of data management plans as part of new research projects, and

other approaches, as important instruments to ensure data quality along the whole data life cycle, data preservation and access.

3B: Any major activities for development of common interfaces and data standards, including software whenever appropriate.

3C: Actions to support development of plans and approaches for maximizing the accessibility, long-term preservation and reproducibility of research data and results, while protecting privacy, confidentiality, national security, and intellectual property.

3D: Other than above

- Please answer one or more appropriate example(s). If needed, please add extra answer box(es).
- You can expand the comment box below for longer responses.

Deliberative Process / Ex. 5

Deliberative Process / Ex. 5

Deliberative Process / Ex. 5

Deliberative Process / Ex. 5

Also please provide information about your country's research data infrastructure initiatives. This information will help future communication and forum between G7 members for fostering global coordination of research data infrastructures.

- You can expand the comment box below for longer responses.

Deliberative Process / Ex. 5

Q4: Any Other Good Practices That Would Be Worthwhile Sharing

Please provide any information (current status, experiences, and/or ongoing plans) of your country which helps promote open science, research data sharing — e.g. formulating codes of conduct for researchers; workforce development on data management skills (education and training) and encouraging best practice in the use of research indicators and metrics for the evaluation of research.

- You can expand the comment box below for longer responses.

Cc: Sinks, Tom <Sinks.Tom@epa.gov>
Subject: FW: DMP comparison chart

Can you take a look at the xlsx and determine if any EPA updates are needed. Once done please forward directly to Andrew Mendoza (OSTP) with a cc to me.

Jerry – Andrew may ask about this next week at IWGOS. Also, a couple IWGOS updates for next week ...

- GAO did contact EPA about beta testing their questionnaire on Agency responses to public access. We were unavailable on the date they were looking for so they sought input from other agencies. We did not see the questionnaire.
- EPA has written a Report to Congress updating the hill on implementation of our Plan to Increase Access to EPA funded Research. The report was sent to OMB which cleared it last week without comment. As of today it is in final sign-off in OCFO. Hopefully it will have been delivered to Congress by the time IWGOS meets. We will post the RtC on our website.
- As of today, 179,800 public comments have been sent into the docket on EPA's proposed rule - Transparency in Regulatory Science. EPA will hold a public hearing at our headquarters on July 17th. Public comments close on August 16th.

To: IWGOS@LISTSERV.NSF.GOV
Subject: FW: DMP comparison chart

Dear IWGOS Members,

Thank you everyone for your responsiveness to my request for information regarding grant terms and conditions. I really appreciate how quickly everyone responded.

On another note, one of items that has come up recently at our meetings are the comparisons of agency data management plans. As you may remember, we distributed the attached agency DMP comparison chart at the last IWGOS meeting. With the Working Group's plans moving forward, it would be helpful if all agencies could update the information on the chart so that it reflects their current guidance or requirements. If additional columns are needed to accommodate other types of instruction/information, please feel free to add them and we can consolidate on the back end. To start, I have added two columns with Jerry's recommendation regarding maximum page length and whether the DMPs (or any portion of them) are made public.

If possible, please submit your agency's update before the end of next week.

Thank you so much!

Andrew G. Mendoza

Subject: SIGNED: Strengthening Transparency in Regulatory Science

Good afternoon

Today, the Administrator signed the proposed rule "Strengthening Transparency in Regulatory Science."

This proposed regulation is intended to strengthen the transparency of EPA regulatory science. The proposed regulation provides that when EPA develops regulations, including regulations for which the public is likely to bear the cost of compliance, with regard to those scientific studies that are pivotal to the action being taken, EPA should ensure that the data underlying those are publicly available in a manner sufficient for independent validation.

In this notice, EPA solicits comment on this proposal and how it can best be promulgated and implemented in light of existing law and prior Federal policies that already require increasing public access to data and influential scientific information used to inform federal regulation.

Attached is the signed and dated proposed rule. For your convenience, please go to p. 19 for the Administrator's signature.

Please contact me if you have any questions.

Sincerely,
Laura

Laura S. Johnson | U.S. Environmental Protection Agency
Special Assistant, Office of the Administrator | Cell (202) 819-4941

Subject: Re: Many mocked this Scott Pruitt proposal. They should have read it first. - The Washington Post

Personal Matters / Ex. 6

Maybe you saw the editorial by Ioannidis? He is known for his work showing that replication of current science is a big problem. Nonetheless he comes down hard on the proposal.

So you know the other side:

EDITORIAL

All science should inform policy and regulation

John P. A. Ioannidis

- Published: May 3, 2018
- <https://doi.org/10.1371/journal.pmed.1002576>

Ioannidis JPA (2018) All science should inform policy and regulation. PLoS Med 15(5): e1002576. <https://doi.org/10.1371/journal.pmed.1002576>

Not all scientific information is created equal. Large differences exist across topics on how much is known, and with what degree of certainty. Some questions are more difficult to answer, and some research tools are more reliable than others. Not all methods can be applied to answer every question. Credibility depends [1] on how large and rigorous studies are, how well researchers have contained conflicts of interest (financial or other), and how successfully the study design and analysis have limited bias, properly accounting for the complexity inherent in each scientific question. Coordinated efforts among scientists instead of furtive competition help improve the odds of success. Transparency with full sharing of data, protocols and computer codes improves trust in research findings. Re-analysis of data by independent teams adds to that trust and replication in new studies further enhances it.

Scientific findings vary in their credibility. Some findings are beyond reasonable doubt. For example, we have extremely strong evidence that the tobacco pandemic is devastating; that the MMR vaccine is generally safe; that climate change is happening; and that air pollution is a major health hazard. Conversely, our evidence base is notoriously weak on most dietary advice one might hope to give about specific nutrients [2]. Within a given discipline, evidence may be strong for some findings but weak for others. E.g., we have strong evidence for some medical interventions, modest evidence for others, and dismally biased evidence for many.

Our society will benefit from using the best available science for governmental regulation and policy. One can only applaud when governments want to support the best possible science, invest in it, find ways to reduce biases, and provide incentives that bolster transparency, reproducibility, and the application of best methods to address questions that matter. However, perceived perfection is not a characteristic of science, but of dogma. Even the strongest science may have imperfections. In using scientific information for decision-making, it is essential to examine evidence in its totality, recognize its relative strengths and weaknesses, and make the best judgment based on what is available.

Making scientific data, methods, protocols, software, and scripts widely available is an exciting, worthy aspiration [3–5]. Government-based regulatory and funding incentives can be instrumental in making this happen at large scale. However, we should recognize that most of the raw data from past studies are not publicly available. In a random sample of the biomedical literature (2000–2014) [6], none of 268 papers shared all of their raw data. Only one shared a full research protocol. The proportion of studies that have had all their raw data independently re-analyzed is probably less than one in a thousand. The number of studies that have been exactly replicated in new investigations is quite larger, but still a minority in most fields. A new standard currently proposed for the Environmental Protection Agency [7] aims to ban the use of scientific studies for regulatory purposes unless all their raw data are widely available in public and can be reproduced. If the proposed rule is approved, science will be practically eliminated from all decision-making processes. Regulation would then depend uniquely on opinion and whim.

Past collected and analyzed information can and should still be used for decision-making, taking into account any relevant imperfections. While fully transparent and reproducible information should certainly be valued more highly, studies with weaknesses can still offer insights. Some deficiencies may be unavoidable. For example, researchers cannot ethically randomize people to harmful exposures in order to tackle confounding, nor violate informed consent agreements that prohibit open sharing of private data from past studies. Instead of violating ethics, we should focus more on future efforts, informed by what we have learned in the past. When avoidable weaknesses are identified, we can improve rigor, transparency and reproducibility (and, eventually, credibility) for future studies.

Successful examples of rigorous, reproducible research can be used as templates for other fields that are struggling with suboptimal research practices. For example, the pivotal research on the health effects of air pollution is particularly strong. The Six Cities [8] and American Cancer Society [9] studies are exemplary large-scale investigations, with careful application of methods, detailed scrutiny of measurements, replication of findings, and, importantly, detailed re-analysis of results and assessment of their robustness by entirely independent investigators [10]. The re-analysis and sensitivity analyses were conducted by the Health Effects Institute that was funded by stakeholders some of whom may have desired to see opposite conclusions. It would be wonderful, if in the future the same rigorous re-analysis and replication standards could become the standard for all important areas of research that can inform policy.

In the USA and elsewhere, governments are major funders of research and their regulatory mandates provide powerful incentives for best science. Making widely applicable, reproducible research practices and sharing the default option for research (with sparse exceptions, when appropriately justified) will strengthen scientific investigation and maximize its benefits to society at large. Governments can bolster their legacy through such initiatives and scientists would be broadly supportive of such a transformative vision to promote a standard of openness in science.

The opposite scenario, of simply ignoring science that has not yet attained such standards, is a nightmare. On the one hand, we would see governments discarding science at massive scale because of perceived imperfections and impurities. Perhaps worse, we would see scientists respond by becoming politically entrenched dogmatic advocates, falsely believing that they defend science. Even well-intentioned academics, perceiving an attack on science, may be tempted to take an unproductive, hand-waving defensive position: “we have no problem with reproducibility”, “everything is fine”, “science is making progress”. Certainly, science is

making progress; with 20 million smart people working in and co-authoring scientific work and with major funding investment, it would be horrible if no progress were made. The issue is how we can accelerate progress. To do this, instead of hiding trash under the carpet, we should make the best use of past work and materialize bigger and better plans for the future. Science is facing a major transformation nowadays, with exponentially more data and far more scientists working on them than ever. Financial and other conflicts are major threats. Many analyses are becoming black boxes and reproducibility problems are widely documented across many fields. Most of the effects pursued by current investigations are of modest size, nowhere close to the huge harms of tobacco or the huge benefits of childhood vaccinations. Many fields lack the high reproducibility standards that are already used in fields such as air pollution and climate change. The scientific enterprise faces great challenges and great opportunities and we need the best research practices in order to succeed [11].

While scientists can work to improve science, governments and regulators can also do better. Most governments around the world have largely neglected the need to support reproducible research practices. Moreover, they have not used science as much as they should. This is particularly worrisome when the evidence is strong, yet governments have not acted forcefully enough. It is a scandal that we continue to allow companies to make money from selling tobacco products, despite expecting about 1 billion tobacco-related deaths in the next 100 years, a Holocaust equivalent of lost lives repeated every year. It is a scandal that the response of governments to climate change and pollution has not been more decisive. It is a scandal that we don't have higher standards for drugs, biologics, and devices. It is a scandal that people die from measles in the 21st century. Current governments have plenty of room to improve over the mediocre performance of their predecessors. They can do this by using, not discarding, science.

Re: **Comments of the Attorneys General of Louisiana, Alabama, Arkansas, Indiana, Kansas, Nebraska, Oklahoma, South Carolina, Texas, Utah, and Wisconsin on EPA's Proposal to Strengthen Transparency in Regulatory Science; 83 Fed. Reg. 18,768 (April 30, 2018);
Docket ID No. EPA-HQ-OA-2018-0259**

Dear Administrator Wheeler:

The undersigned Attorneys General, as the chief legal officers of our States, write to express support for the Environmental Protection Agency's ("EPA") April 30, 2018, proposal to adopt a regulation to provide much-needed transparency regarding the scientific research and data on which the agency bases its regulatory actions ("the Proposed Rule").*

GENERAL COMMENT

The citizens of our States and the industry stakeholders so crucial to our States' economies bear the cost of regulatory compliance. Accordingly, the science on which those regulations are based should be high quality and available to the public. Public disclosures should be sufficient to permit independent validation and analysis of the data, methodology, computational code, and conclusions. Transparency of this sort not only comports most fully with the public participation in rulemaking contemplated by the Administrative Procedure Act, but is a bedrock principle for establishing public confidence in actions taken by the EPA.

The Proposed Rule addresses the troubling erosion of credibility of published scientific literature. EPA is obliged to rely upon the best available science in its regulatory actions. *See, e.g.*, Exec. Order No. 13,783, 82 Fed. Reg. 16,093 (Mar. 31, 2017); Exec. Order No. 13,563, 76 Fed. Reg. 3,821 (Jan. 21, 2011). However, absent open sharing of underlying data, methodology, and computational code, the credibility of the science is open to question. Moreover, reproducibility can be rendered impossible, further crippling the credibility of the research.

As reported in *Science*, reproducibility in scientific work is important to providing confidence in the conclusions reached, but a “troubling proportion” of peer-reviewed studies are not reproducible.¹ *Science* thus revisited the criteria for publication with the aim of increasing confidence in the studies it publishes. Similarly, a recent article in *Nature* identified lack of replication and lack of data sharing as “threats” to reproducible science.² Open and transparent sharing of the methodology applied, the data acquired, and the process of methodology implementation, data analysis and outcome interpretation was identified as the remedy. The type of open science called for in these publications—laying bare both content and process—is precisely what is achieved through the Proposed Rule.

SPECIFIC COMMENT 1: There is strong evidence that publication in a peer reviewed journal is not sufficient to ensure a study reflects valid, reproducible science.

Concern with the quality of published science goes back to at least 2005, when a study of 45 highly-cited articles in *New England Journal of Medicine*, *JAMA*, and *Lancet* concluded that at least 7 articles (16%) were contradicted by subsequent research and another 7 articles (16%) claimed stronger effects than were supported by subsequent research.³ A widely-read essay published later that year suggested that most published research findings are false.⁴ Consistent with that suggestion, Bayer Healthcare disclosed in 2011 that 43 (65%) of the company’s attempts to reproduce 67 published studies resulted in inconsistent data.⁵ In 2012, Amgen, Inc., similarly disclosed that it was only able to reproduce 6 (11%) of 53 studies that the company attempted to confirm.⁶

Consistent with the Bayer and Amgen disclosures, recent estimates for irreproducibility in preclinical and biomedical research range as high as 90% of that research, even for articles published in high-quality journals.^{7, 8, 9} The problem does not appear to be limited to particular fields. For example, a recent survey of 804 ecologists and evolutionary biologists found that questionable research practices were widespread, with 64% of surveyed researchers reporting they had at least once failed to report results because they were not statistically significant (“cherry picking”); 42% reporting they had collected more data after inspecting whether results were statistically significant (a form of “p-hacking”); and 51% acknowledging they had reported an unexpected finding as though it was hypothesized from the start.¹⁰ In short, a large fraction of the surveyed researchers admitted to manipulating their results. Not surprisingly, a 2016 survey by the journal *Nature* found that lack of reproducibility is a widespread concern among scientists.^{11, 12}

SPECIFIC COMMENT 2: There is strong evidence of widespread, outcome-altering errors in the computational code underlying many scientific studies.

¹² Editorial, *Reality Check on Reproducibility*, 533 *NATURE* 437 (2016).

Outcome-altering errors in computational code have been suggested as a significant contributor to the replication crisis.¹³ High profile retractions, technical comments, and corrections because of coding errors include papers in prominent journals such as *Science*, *PNAS*, the *Journal of Molecular Biology*, *Ecology Letters*, *Journal of Mammalogy*, *Journal of the American College of Cardiology*, *Hypertension*, and *American Economic Review*.¹⁴ Such outcome-altering errors can arise from the simplest mistakes. For example, five retractions were based on a flipped minus sign.¹⁵ Perhaps most famously, a 2010 study by Harvard University economists Carmen Reinhart and Kenneth Rogoff was undermined by errors in the authors' spreadsheet.¹⁶ ¹⁷ The Reinhart-Rogoff study had significant public policy consequences, yet the errors went undetected until a graduate student sought and reviewed the authors' working spreadsheet.^{18, 19}

SPECIFIC COMMENT 3: The Proposed Rule is consistent with the publication requirements of major scientific journals, which were adopted specifically to address the reproducibility crisis.

In its commentary accompanying the Proposed Rule, the EPA noted that its policies and the policies of open-science advocates “are informed by the policies recently adopted by some major scientific journals, spurred in some part by the ‘replication crisis.’” 83 Fed. Reg. at 18770. The EPA cited the policies of *PNAS*, *PLOS One*, *Science*, and *Nature* as examples. *Id.* at 18770 & n.11. Those policies were specifically intended to address the inability of researchers to properly assess results in the absence of underlying data and methodology. The journal *Nature* explained:

Over the past year, *Nature* has published a string of articles that highlight failures in the reliability and reproducibility of published research The problems arise in laboratories, but journals such as this one compound them when they fail to exert sufficient scrutiny over the results that they publish, and ***when they do not publish enough information for other researchers to assess results properly.***

From next month, *Nature* and the *Nature* research journals will introduce editorial measures to address the problem by improving the consistency and quality of reporting in life-sciences articles. ***To ease the interpretation and improve the reliability of published results we will more systematically ensure that key methodological details are reported,*** and we will give more space to methods sections. We will examine statistics more closely and ***encourage authors to be transparent, for example by including their raw data.***²⁰

More recently, the editors of *Nature* recognized that—despite the adoption of transparency policies—resolution of the reproducibility crisis “is far from complete.”²¹ They accordingly encouraged “funders, researchers and journals to keep up the pressure towards the openness of complete data sets and any source code required to use them.”²² Although public disclosure of data, methodology, and computational code

may not be *sufficient* to ensure that scientific claims are valid, public disclosure is absolutely *necessary* for confidence in the validity those claims.^{23, 24, 25, 26}

SPECIFIC COMMENT 4: Pre-publication peer review is not an adequate substitute for public availability of data, methodology, and computational code.

In response to the Proposed Rule, some commenters have suggested the Proposed Rule is an attempt to remove valid and relevant scientific evidence from the rule-making process. But that begs the question: in the light of overwhelming evidence that a significant portion of studies published in prominent peer reviewed journals are not reproducible, it is dubious to claim that any particular research is valid and relevant unless—at a minimum—other researchers and the public have access to the underlying data, methodology, and computational code.

More to the point, empirical evidence indicates that peer reviewers routinely fail to identify even major errors.²⁷ And peer review in less prominent journals may often occur in name only.²⁸ In short, the best available metascience—science about science—indicates that pre-publication peer review is not adequate to ensure the validity of published scientific claims.

SPECIFIC COMMENT 5: Promises to share data with qualified researchers are not an adequate substitute for public disclosure of data, methodology, and computational code.

Promises to provide other researchers with access to data, methodology, or computational code are not an adequate substitute for public availability. Such promises often go unfulfilled.²⁹ In an attempt to quantify the problem, researchers from Memorial Sloan-Kettering Cancer Center sought data from the corresponding authors of ten articles that were subject to a data sharing requirement.³⁰ Two of the authors could not be contacted. Of the remaining eight authors, four replied that sharing their data was not possible, three did not respond, and one asked for further details regarding the request. Despite a follow-up contact reminding the authors of their data sharing obligation, the Sloan-Kettering researchers received only a single data set of the ten originally sought.

Significantly, many uncredentialed members of the public are capable of reviewing and identifying errors in data, methodology, and computational code. The Reinhart-Rogoff errors, *supra*, were identified by a graduate student. Other serious, basic errors in high-profile studies have been identified by undergraduates.³¹ If undoubtedly qualified Sloan-Kettering researchers were generally unable to obtain data, there is little reason to believe other researchers—formally qualified or otherwise—will be able to do so. When the EPA decides to regulate, the public is entitled to more than empty promises that data supports that decision.

³¹ R. Nuzzo, *Fooling Ourselves*, 526 NATURE 182 (2015).

SPECIFIC COMMENT 6: The Proposed Rule is supported by and arguably required by the Administrative Procedure Act.

The Administrative Procedure Act (“APA”), 5 U.S.C. § 500 et seq., prohibits agency action, findings, and conclusions that are arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law. *See* 5 U.S.C. § 706(1). In view of the overwhelming evidence that (i) a very high percentage of published studies are not reproducible, (ii) pre-publication peer review is not sufficient to ensure that a study lacks major errors, and (iii) pre-publication peer review is not sufficient to ensure that the computational code underlying a study lacks major errors, we respectfully submit that the Proposed Rule is *necessary* and arguably *required* by the APA. Indeed, an agency action based on a study without fully disclosed data, methodology, and computational code is arguably so lacking in reasoned foundation as to be arbitrary and capricious.

SPECIFIC COMMENT 7: The Proposed Rule should apply to all agency actions that are based on science.

The replication crisis and public confidence rationales that underlie the Proposed Rule suggest that data, methodology, and computational code should be disclosed for all science relied upon to support agency actions. As a first step, the phrase “dose response data and models” should be replaced with “data and models, including dose response data and models” throughout the Proposed Rule.

SPECIFIC COMMENT 8: EPA should identify all studies (or other regulatory science) it will rely upon at the time it proposes any regulation.

In order to meaningfully comment on proposed agency action, the public should be informed of the detailed scientific basis for that action when the action is proposed. Accordingly, Proposed Section 30.4 should be amended to provide:

EPA shall clearly identify all studies (or other regulatory science) relied upon to support ~~when it takes any final agency action.~~ When EPA proposes any agency action, EPA ~~should~~ shall make all such studies (or other regulatory science) available to the public to the extent practicable.

SPECIFIC COMMENT 9: The proposed rule should not include exceptions that are not required by statute or the Executive Branch’s inherent powers.

In view of the widespread problems with replicating even peer-reviewed studies published in prominent journals, the EPA should minimize exceptions to the disclosure requirements set forth in the Proposed Rule. Courts have frequently rejected attempts to withhold information based on claims to privacy, etc., unless protections are specifically provided by law. *See, e.g., Johnson v. Dovey*, 2011 U.S. Dist. LEXIS 128577, at *6-7 (E.D. Cal. Nov. 7, 2011) (rejecting vague assertion of privacy rights: “CDCR’s objections are not specific in any way, and are thus insufficient to assert a privilege.”); *see also Donovan v. Nat’l Bank of Alaska*, 696 F.2d 678 (9th Cir. 1983) (“The bank cannot refuse to comply with the subpoena as a whole on the basis of its vague allegations that it might be required . . . to produce records in violation of the Financial Privacy Act.”). EPA should similarly reject such claims to “privacy, confidentiality, [and] confidential business information” vis-à-vis data and models, unless those claims are clearly supported by law or the Executive Branch’s inherent powers. Accordingly:

(a) EPA should amend the second sentence of Section 30.5 to provide that

Where the Agency is making data or models publicly available, it shall do so in a fashion that is consistent with law, ~~protects privacy, confidentiality, confidential business information,~~ and is sensitive to national and homeland security.

(b) EPA should amend the penultimate sentence of Section 30.5 to provide that

The agency shall make all reasonable efforts to explore methodologies, technologies, and institutional arrangements for making such data available before it concludes that doing so in a manner consistent with law and ~~protection of privacy, confidentiality,~~ national and homeland security is not possible.

Further, in view of the evidence that even studies published in prominent journals are often false or overstate results, the EPA should carefully consider the weight given to studies, data, and models that are not disclosed for review by the public and other researchers, even where non-disclosure is required by law.

SPECIFIC COMMENT 10: In view of the replication crisis, the EPA should re-evaluate existing regulations using the standards set forth in the Proposed Rule.

In the commentary accompanying the Proposed Rule, the EPA states that the Proposed Rule “is intended to apply prospectively . . .” 83 Fed. Reg. at 18771. In view of the overwhelming evidence that (i) a very high percentage of published studies are not reproducible, (ii) peer review is not sufficient to ensure that a study lacks major errors, and (iii) peer review is not sufficient to ensure that the computational code underlying many studies lacks major errors, we submit that the EPA should establish a plan to review the scientific basis for existing regulations under the standards of the Proposed Rule.

SPECIFIC COMMENT 11: The EPA should not delay implementation of this rule unless required to do so by statute.

Certain commenters claim the EPA has not complied with specific statutory obligations. We take no position on the EPA’s statutory obligations, but we encourage the EPA to carefully comply with applicable procedural requirements so as to minimize the risk of dilatory litigation.

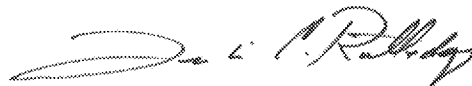

* * * * *

The Proposed Rule makes great inroads towards the EPA’s ensuring public confidence in the regulations it enacts. We support making critical scientific data available in a way that is both timely and transparent to stakeholders and the public at large. To that end, we fully support the Proposed Rule. We appreciate your consideration of this comment and look forward to the prompt enactment of this important regulation.

Subject: EPA Administrator Pruitt Proposes Rule To Strengthen Science Used In EPA Regulations

U.S. ENVIRONMENTAL PROTECTION AGENCY
NEWS RELEASE
WWW.EPA.GOV/NEWSROOM

EPA Administrator Pruitt Proposes Rule To Strengthen Science Used In EPA Regulations

WASHINGTON (April 24, 2018) - Today, U.S. Environmental Protection Agency (EPA) Administrator Scott Pruitt signed a proposed rule to strengthen the science used in regulations issued by EPA. The rule will ensure that the regulatory science underlying Agency actions is fully transparent, and that underlying scientific information is publicly available in a manner sufficient for independent validation.

“The era of secret science at EPA is coming to an end,” **said EPA Administrator Scott Pruitt.** “The ability to test, authenticate, and reproduce scientific findings is vital for the integrity of rulemaking process. Americans deserve to assess the legitimacy of the science underpinning EPA decisions that may impact their lives.”

This proposed rule is in line with the scientific community’s moves toward increased data sharing to address the “replication crisis”—a growing recognition that a significant proportion of published research may not be reproducible. The proposal is consistent with data access requirements for major scientific journals like *Science*, *Nature*, and *Proceedings of the National Academy of Sciences* as well as recommendations from the Bipartisan Policy Center’s *Science for Policy Project* and the Administrative Conference of the United States’ *Science in the Administrative Process Project*.

The proposed rule builds upon President Trump’s executive orders on regulatory reform and energy independence:

- » **Executive Order 13777**, issued in March 2017, provides that regulatory reform efforts shall attempt to identify “those regulations that rely in whole or in part on data, information, or methods that are not publicly available or that are insufficiently transparent to meet the standard of reproducibility.”
- » **Executive Order 13783**, also issued in March 2017, provides that “It is the policy of the United States that necessary and appropriate environmental regulations comply with the law, are of greater benefit than cost, when permissible, achieve environmental improvements for the American people, and are developed through transparent processes that employ the best available peer-reviewed science and economics.”

Chairman Lamar Smith (R-TX): “Administrator Pruitt’s announcement ensures that data will be secret no more. For too long, the EPA has issued rules and regulations based on data that has been withheld from the American people. It’s likely that in the past, the data did not justify all regulations. Today, Administrator Pruitt rightfully is changing business as usual and putting a stop to hidden agendas.”

Senator Mike Rounds (R-SD): “Sound, reliable science is vital to helping us make important policy decisions that impact the health of American families and their livelihoods. Inserting new levels of transparency in the EPA rulemaking process will help make the agency more accountable to the American people and help everyone understand the impact of EPA’s decisions. Today’s directive is a significant step toward making sure these decisions are not made behind closed doors with information accessible only to those writing the regulations, but rather in the full view of those who will be affected.”

Dr. Edward J. Calabrese, Professor, Environmental Health Sciences, University of Massachusetts: “The proposal represents a major scientific step forward by recognizing the widespread occurrence of non-linear dose responses in toxicology and epidemiology for chemicals and radiation and the need to incorporate such data in the risk assessment process.”

Dr. Louis Anthony (Tony) Cox, President, Cox Associates; Member, National Academy of Engineering; and Editor-in-Chief of the Journal *Risk Analysis*: “I believe that transparency and independent reproducibility of analyses and conclusions are bedrock principles of sound science. Some commentators have expressed concerns that making the data behind policy conclusions and recommendations accessible and transparent might threaten the privacy of individuals. But this concern can be fully met by applying current privacy-protection techniques for data analysis. These techniques have been developed and used successfully for years at the Census Bureau and elsewhere. Thus, we can have the scientific benefits of accessible data while protecting individual privacy.”

Dr. Jason Scott Johnston, Director, Olin Law and Economics Program, University of Virginia School of Law: “EPA’s proposed rule, Strengthening Transparency in Regulatory

Science, is badly needed “Best practice among peer-edited scientific journals is to require that data and statistical routines used in published papers be posted online and/or made publicly available. To apply the same standards to research that EPA says justify regulations affecting billions of dollars in economic activity and millions of human lives is essential for those regulations to truly be scientifically based.”

Bruno Pigott, Commissioner of the Indiana Department of Environmental Management (IDEM): “IDEM supports transparency in rulemaking. Good, sound science leads to better regulations.”

Dr. George Wolff, Principal Scientist, Air Improvement Resource, Inc., and former Chairman of EPA’s Clean Air Scientific Advisory Committee (1992 - 1996): “In the development of regulations based on environmental studies, numerous subjective assumptions and choices must be made regarding the selection of data and models that have a profound impact on the strength of any statistical associations and even whether the associations are positive or negative. The appropriateness of the assumptions and choices are not adequately evaluated in the standard peer review process. That is why it is essential that the data and models be placed in the public domain for a more rigorous evaluation by qualified experts. The proposed regulation, Strengthening Transparency in Regulatory Science, will provide an opportunity for such evaluations.”

Subject: Fw: Academies Pan Draft Science Transparency Rule, Offer To Advise EPA (comments attached)
Attachments: Natl Academies on Science Transparency proposal.pdf

Purely fyi.

Conclusion: "The potential negative consequences for EPA's ability to take needed regulatory action require more careful examination. We strongly encourage EPA to seek objective, expert guidance on the complexities of this rule and how it would be implemented. As independent and trusted advisers to the nation, the National Academies would be pleased to assist you in this effort."

Academies Pan Draft Science Transparency Rule, Offer To Advise EPA

July 23, 2018

The presidents of the National Academies, the nation's top scientific institutions, are strongly criticizing EPA's proposed rule mandating use of publicly available research to justify its regulations, charging that while the agency is seeking to cite their advice to justify the measure, it fails to adequately consider potential consequences.

"Although these earlier reports can serve as a valuable resource to help inform decisions about some elements of the proposed rule, they were not designed to address the full breadth of the issues raised by the proposed rule," the presidents of the National Academy of Sciences, the National Academy of Engineering and the National Academy of Medicine write in their July 16 comments. *The letter is available on InsideEPA.com. (Doc. ID: 213635)*

They also charge that EPA has failed to address a host of implementation concerns, such as exemptions to the policy and the risks of releasing data, and offers its help in advising the agency. "The potential impacts of the proposed rule ... will depend on many aspects of the rule's implementation that are not described in detail," the comments state.

EPA's proposed rule calls for barring the use of science where the underlying data and models are not publicly available, while allowing the administrator latitude in determining what exceptions to the rule may be made.

The measure drew strong criticism earlier this week when environmentalists renewed their calls for the administration to withdraw the proposal and start over. But industry officials renewed their support even as they detailed a series of changes they hope the agency will make.

The academies' comments raise a series of concerns targeting the rule's criteria and the lack of processes to make objective and transparent decisions about which studies will be included in scientific analyses used to inform federal regulations; approaches for evaluating the data and models used to characterize the dose-response relationships underlying federal regulations; and approaches for protecting the confidentiality of certain kinds of data while balancing the need to make data publicly available.

The letter acknowledges EPA's references to several of its reports in the agency's *Federal Register* notice announcing the proposed rule's availability for public comment. But the Academies say that the proposed rule's "scope, complexities, and potential serious implications for regulatory science and action clearly warrant additional thorough, independent, objective, and context-specific evaluation and analysis."

Among its cited reports, the officials point to two 2017 studies produced on federal statistics, arguing that "[t]here are several differences in the confidential microdata collected from individuals and businesses by federal statistical agencies ... and results from the kinds of studies that are within the scope of the EPA proposed rule. ... What works well in the federal statistical environment may not translate effectively to EPA, where stakeholders might be strongly motivated to discount study results that run counter to their regulatory preferences."

"EPA's proposed rule ignores the inherent risks involved in data disclosure, the everchanging risk landscape, and the efforts needed to mitigate those risks" including cybersecurity and the possibility of privacy breaches, the letter says.

It warns that the proposal's affects need "more careful examination," and urges the agency "to seek objective, expert guidance on the complexities of this rule and how it would be implemented. As independent and trusted advisers to the nation, the National Academies would be pleased to assist you in this effort."

The officials touch on the concern about the administrator's exemption authority as well, arguing that "It is critical for EPA to define what 'reasonable effort' would be required to make data publicly available before an exemption is granted. Decisions about exemptions should be based on formal agency guidance and not according to criteria established by a single EPA employee."

**FY 2019 CONGRESSIONAL HEARING
“USE” OF SCIENCE IN THE AGENCY**

Question: The Congressman also may ask about the new reports coming out about the “use” of science in the agency. This is not an attack, but more of a chance for the Administrator to set the record straight of why this moved happen.

Answer:

- On April 24, I signed a proposed rule to strengthen the science used in regulations issued by EPA. The rule will ensure that the regulatory science underlying Agency actions is fully transparent, and that underlying scientific information is publicly available in a manner sufficient for independent validation.
- This rule puts an end to the era of secret science at EPA.
- The ability to test, authenticate, and reproduce scientific findings is vital for the integrity of rulemaking process.
- Americans deserve to assess the legitimacy of the science underpinning EPA decisions that may impact their lives.
- The proposed rule is consistent with President Trump’s executive orders on regulatory reform and energy independence, data access requirements for major scientific journals, and EPA’s own internal guidelines for promoting sound science that have not always been followed in the past.

Subject: E&E article on ANPRM -- requests for longer comment period

EPA

Groups want more time to comment on cost-benefit proposal

Maxine Joselow, E&E News reporter

Published: Tuesday, June 12, 2018

EPA headquarters in Washington. Claudine Hellmuth/E&E News

Public interest groups are calling for EPA to extend the comment period on a controversial proposal to alter the way it considers costs and benefits in rulemaking.

The agency will take comments on the proposal for 30 days, according to a [notice](#) set for publication in tomorrow's *Federal Register*.

The plan, titled "Increasing Consistency and Transparency in Considering Costs and Benefits in the Rulemaking Process," is still in the early stages of the rulemaking process. It's an advanced notice of proposed rulemaking, rather than a proposed rule.

But public interest groups are sounding the alarm that the plan reflects a de-emphasis on the benefits of rules, and they're urging EPA to extend the comment period to 60 days or more.

"Just looking at the advanced notice of proposed rulemaking, EPA has opened an enormous Pandora's box with this," said James Goodwin, senior policy analyst with the Center for Progressive Reform. "For their benefit as well as the public's, they really need to allow for a longer comment period so folks can digest this stuff and assemble a set of comments."

Goodwin noted the Natural Resources Defense Council was disinvited from a meeting about the proposal with the White House Office of Information and Regulatory Affairs, even though the office had previously met with three industry groups (*E&E News PM*, June 6).

"The public interest community is already at a disadvantage with this because we were never granted meetings with OIRA," he said. "So at the very least, they need to extend the public comment period so that we can give our side of the story."

Yogin Kothari, Washington representative with the Union of Concerned Scientists' Center for Science and Democracy, said his group was weighing a formal request to lengthen the comment period.

"When you're trying to make these big policy changes at an agency so vital to public health, it's really important to provide for as much stakeholder input as possible," Kothari said. "And I think what we've seen with this EPA is them trying to rush things through without them being vetted."

He added, "I think we would want a minimum of 60 days, even with the advanced notice of proposed rulemaking. For organizations that have resource constraints, it's difficult to turn comments around as quickly as possible."

Precedent

While the Administrative Procedure Act doesn't spell out a minimum period for public comments, there's a precedent for EPA extending the period when it gets an earful from concerned stakeholders.

Last year, for instance, the agency extended the deadline for commenting on its proposed rollback of the Clean Power Plan by 32 days (*E&E News PM*, Nov. 8, 2017).

More recently, EPA added more than two months to the comment period for its "secret science" proposal after receiving a barrage of requests (*Greenwire*, May 24).

Those requests came from environmental and public health organizations as well as dozens of Democratic lawmakers. Rep. Paul Tonko (D-N.Y.) and 64 other House Democrats had asked for at least a two-month extension, while Sen. Sheldon Whitehouse (D-R.I.) and 19 other senators had urged the same in their own letter to EPA Administrator Scott Pruitt.

"At the EPA, Scott Pruitt is executing industry's wish list to the letter," Whitehouse said in a statement to E&E News. "Rushing this proposal through is another example of prioritizing the voices of his polluting benefactors. And if this proposal to ignore the benefits of key environmental protections goes into effect, it will lead to serious consequences for Americans' health and environment."

Separately, Sens. Tom Carper (D-Del.) and Rob Portman (R-Ohio) are asking the Government Accountability Office to "conduct a comprehensive evaluation of the security and efficacy of the means by which federal agencies receive comments on proposed rulemakings." Rep. Trey Gowdy (R-S.C.), chairman of the House Oversight and Government Reform Committee, yesterday joined their request.

Pruitt Testifies at Two Closely Watched Hearings on Capitol Hill

U.S. EPA Administrator Scott Pruitt testified yesterday at two hearings in the House of Representatives to respond to questions surrounding agency funding and policy as well as personal ethics. Appearing before the Appropriations Interior, Environment, & Related Agencies Subcommittee and the Energy & Commerce Environment Subcommittee on the agency's FY19 budget, Pruitt defended himself against criticism regarding certain management and spending practices. He also touched on policy issues including the new proposed rule to strengthen science used in regulations (see related story) and the suite of [FY18 Brownfields Grants](#) announced this week.

In addition, Pruitt addressed actions on the horizon, noting that EPA soon will announce a Waters of the U.S. replacement rule and proposed revisions to EPA's light-duty vehicle greenhouse gas standards. In response to a lawmaker's question about coal combustion residuals, Pruitt noted that few states have filed state coal ash implementation plans pursuant to the new federal policy but that the program is still nascent and EPA is working with several states to assist in their development of permit program applications.

Pruitt's written testimony included a listing of his top priorities: enhancing drinking water and wastewater infrastructure; accelerating the remediation and revitalization of the most contaminated land; improving air quality through reductions in the number of areas not in attainment with the National Ambient Air Quality Standards; and meeting all the statutory deadlines outlined in the amended Toxic Substances Control Act. In addition, the testimony notes support for flexibility for states to address priorities and for cooperative federalism activities through the multipurpose grants program.

The testimony also includes an EPA proposal to increase compliance assistance through new voluntary oil and chemical facility compliance assistance fees allowing EPA to conduct walkthroughs and provide recommendations to facilities. It further notes that while EPA's budget request does not include plans to close Regional offices, the agency will continue "to prioritize efforts that save taxpayer dollars through space consolidation...." [McAleer/Graves/Parisien]

Pruitt Signs Proposed Rule to Eliminate 'Secret Science'

U.S. EPA Administrator Scott Pruitt signed Tuesday a proposed rule to eliminate "secret science" used in regulations issued by the agency. According to EPA, the rule seeks to ensure that all regulatory science underlying EPA actions is fully transparent, publicly available, and sufficient for independent validation. EPA says the rule aligns with the scientific community's push for increased data sharing and reproducible research.

The proposed rule has drawn mixed reviews, with opponents arguing that it skirts statutory mandates to use the best available science and address confidential trade secrets. Some express concern as to whether the policy will prevent use of studies that rely on confidential business information (CBI) or limit EPA's access to health studies, which are subject to patient confidentiality requirements. While the rule does not specifically address these points, it states that the agency believes "that concerns about access to confidential or private information can, in many cases, be addressed through the application of solutions commonly in use across some parts of the [f]ederal government."

EPA soon will accept public comment on a number of the proposed rule's provisions, including authorities to address implementation issues (including CBI) and what criteria the agency should use to justify any exceptions. [Longworth]

U.S. EPA Announces First WIFIA Loan to King County, Washington

Last week, U.S. EPA issued its first loan under the Water Infrastructure Finance and Innovation Act (WIFIA) to King County, Washington.

The loan will help finance the Georgetown Wet Weather Treatment Station, which will collect and treat up to 70 million gallons of wastewater and stormwater per day. During heavy rains the combined sewer pipes spill into the Duwamish River, which drains into Puget Sound. The estimated project cost is \$275 million, and the WIFIA loan will finance nearly half of it.

For more information about the WIFIA program and the Georgetown Wet Weather Treatment Station, click [here](#). [Piper]

Need-to-Know News in Air & Environmental Justice

U.S. EPA Announces Funding to Reduce Emissions from Diesel Engines Nationwide

Area of Focus: Air

On April 24, U.S. EPA announced the availability of grant funding to modernize the nation's diesel fleet by retrofitting or replacing vehicles with cleaner, more efficient diesel engines. EPA anticipates awarding approximately \$40 million in Diesel Emission Reduction Program (DERA) grant funding to eligible applicants, subject to the availability of funds.

EPA anticipates awarding between 20 and 80 assistance agreements to projects that significantly reduce diesel emissions and exposure, especially from fleets operating at goods movements facilities in areas designated as having poor air quality. Priority for funding will be given to projects that engage and benefit local communities and applicants that demonstrate their ability to promote and continue efforts to reduce emissions after the project has ended.

Project proposals are due **June 5**. [Poole]

U.S. EPA Environmental Justice FY2017 Progress Report Notes ECOS Publication

Area of Focus: Environmental Justice

On April 19, U.S. EPA issued its Environmental Justice FY2017 Progress Report. Marking the 25th anniversary of the establishment of the Office of Environmental Justice, the FY2017 report highlights EPA's ongoing environmental justice work focused on demonstrating tangible results in minority, low-income, tribal and indigenous communities.

The report focuses on the themes of delivering environmental results; cooperative federalism; rule of law and fair process; and building community capacity and engagement.

Notably, the report cites the ECOS Green Report on State Approaches to Community Engagement and Equity Considerations in Permitting as an example of cooperative

federalism and best practices regarding community involvement and equity in state permitting programs. [Poole]

U.S. EPA Launches Mobile App for EJSCREEN

Area of Focus: Environmental Justice

On April 24, U.S. EPA launched its [mobile version of EJSCREEN](#), the agency's nationally acclaimed environmental justice screening and mapping tool. This new version makes accessing EJSCREEN easier for those working on the ground in communities.

The mobile version offers most of the same key functions and features as the full online version, but does so in a more compact and accessible layout. Some of the features included are the ability to select locations; access reports; and map environmental, demographic and EJ indicators. [Poole]

Career Opportunities

Massachusetts DEP Seeks Deputy Director, Municipal Services

The Massachusetts Department of Environmental Protection's Bureau of Water Resources seeks applicants for the position of Deputy Director, Municipal Services. The position entails the identification of priority areas for investment of Clean Water and Drinking Water State Revolving Fund financing.

For more information, see [here](#). [Parisien]

Upcoming Events

ECOS Calls

ERIS on Research Needs

In an effort to prioritize states' research needs, ECOS and affiliate Environmental Research Institute of the States is conducting media-specific calls to gather information to inform future planning and contribute to the development of the U.S. EPA Office of Research and Development (ORD) Strategic Research Action Plan.

The water and air-focused calls were held this week. The remaining two calls are scheduled as follows:

- **Waste - April 30: 2-3 p.m. Eastern**
<http://epawebconferencing.acms.com/ecoswastecommittee/>
- **Cross-Media - May 3: 3-4 p.m. Eastern**
<http://epawebconferencing.acms.com/ecoscrossmediacall/>

The call-in number for both calls is (866) 299-3188, with access code (202) 564-6669.

ECOS members and state staff are invited to participate in the calls, and are asked to be prepared to answer the following questions: Are states' priorities the same or different from those identified in the [2016 ERIS survey of state research needs](#)? What emerging issues/challenges should ORD consider in its next Action Plan?

As the calls are held, PowerPoint presentations will be posted on ECOS' website [here](#). States are encouraged to provide comments after the calls to further inform strategic research planning. Please send comments to [Sarah Grace Longworth](#) of ECOS by **May**

11. [Longsworth]

ERIS on State Science Contacts

ERIS will host its bimonthly State Science Contacts call on **May 4 at 11 a.m. Eastern**. The purpose of these calls is to share relevant information on science and research, receive input from states on state science needs, and provide state perspective on various research activities.

An agenda for the call will be sent next week. If you are interested in participating, email [Sarah Grace Longsworth](#) of ECOS. [Longsworth]

Webinars

U.S. EPA on Emerging Sensor Technologies Report

U.S. EPA's Air and Energy National Research Program will host two webinar sessions to update stakeholders on its Emerging Sensor Technologies 2014-2018 Progress Report. The identical sessions will be held on **April 30 at 8:30-11:30 a.m. Eastern and 1:30-4:30 p.m. Eastern**, and will summarize general findings across a broad base of the agency's air sensor research activities over the past several years.

The first two hours of each session will feature presentations by EPA Sensor Performance Evaluation and Application Research team members on topics such as sensor evaluations, data analytics, ammonia detection, citizen science, and detection of select emission sources. The final portion of each session will be a question and answer period.

To register, see [here](#). [Longsworth]

U.S. EPA on Lead Exposure Modeling and Research

U.S. EPA will host its monthly Tools and Resources webinar on **April 30 at 3–4 p.m. Eastern** to discuss multimedia modeling of lead exposure in children and water lead monitoring research to inform public health decisions. Specifically, EPA's Office of Research and Development (ORD) will highlight its innovative exposure-dose modeling approach to better understand the relationship between drinking water lead concentrations and children's blood lead levels considering exposures from water, soil, dust, food, and air. ORD will then discuss the future data needs to apply the approach at state and local levels, and will report on water lead monitoring research relevant to state priorities.

To register, see [here](#). [Longworth]

ITRC on Bioavailability of Contaminants in Soil

The Interstate Technology & Regulatory Council (ITRC) will hold an online training course on Bioavailability of Contaminants in Soil: Considerations for Human Health Risk Assessment on **May 3 at 1-3:15 p.m. Eastern**.

The basis for this training course is the ITRC guidance: Bioavailability of Contaminants in Soil: Considerations for Human Health Risk Assessment (BCS-1). This guidance describes the general concepts of the bioavailability of contaminants in soil, reviews the state of the science, and discusses how to incorporate bioavailability into the human health risk assessment process. Training course participants will learn to apply the decision-making process to determine when a site-specific bioavailability assessment may be appropriate; consider factors that affect arsenic, lead, and PAH bioavailability; select appropriate methods to evaluate soil bioavailability; and use tools to develop site-specific soil bioavailability estimates and incorporate them into human health risk assessment

Learn more and register [here](#). [Bodi]

E-Enterprise Facility Integration Project Team on Opportunities for Involvement

The E-Enterprise Facility Integration Team Co-Chairs will host a webinar on **May 8 at 1-2:30 p.m. Eastern** to report on the team's Phase II accomplishments and plans for Phase III, which is about to begin. Co-Chairs Ron Evans and Susan Joan Smiley (U.S. EPA), Joshua Kalfas (Oklahoma), and Ben Way (Wyoming DEQ) will lead webinar presentations and answer any questions related to the Facility work.

The Facility Integration Team is currently seeking states, tribes and local governments to partner in Phase III. Partnership opportunities will be discussed on the webinar.

Register [here](#) and learn more [here](#). [McAleer]

U.S. EPA on Business Innovations in Reducing Food Waste

U.S. EPA will host a webinar on **May 17 at 10-11:30 a.m. Eastern** to highlight business innovations to reduce food loss and waste. Presenters include three [Food Loss and Waste 2030 Champions](#) who are leading the way in helping the country reach its 50 percent food loss and waste reduction goal. Speakers from each company will share best practices, tools, and resources to prevent food from going to waste. They will address how shifts in company culture have changed operations as well as the critical role of food waste measurement in achieving their goals.

Subject: Morning Energy: Heightened vetting for Pruitt-related FOIAs — EPA narrows air permitting guidelines — Coolant industry: Global warming industry is so cool it's hot

By Kelsey Tamborrino | 05/04/2018 05:41 AM EDT

With help from Anthony Adragna, Eric Wolff and Emily Holden

ALL FOIA ONE, ONE FOIA ALL: You may need to have a little patience if you're waiting for EPA to ship over any documents about Administrator Scott Pruitt's activities. Freedom of Information Act requests that relate to Pruitt get an extra layer of vetting before they are released to the public, new internal emails obtained by POLITICO show. Top aides to the administrator, including chief of staff Ryan Jackson, perform the "awareness reviews" on all or most document requests related to Pruitt — on top of the reviews done by career experts. And that is contributing to the slow flow of information released under records requests at EPA, Pro's Alex Guillén reports.

The new vetting processes described in the emails are done before the agency releases essentially any documents involving the administrator. And the emails show Pruitt's political appointees chastising career employees who released documents in accordance with FOIA without letting them screen the records first.

In one exchange from last August, Jackson and Liz Bowman — the head of EPA's Office of Public Affairs who announced on Thursday she was stepping down — expressed concern about documents related to comments Pruitt made on CNBC disputing that carbon dioxide from human activities was the primary cause of climate change. "Why did Kevin Bogardus from E&E all of a sudden get a response to a FOIA today, without any awareness from our FOIA office?" Bowman wrote on Aug. 2, adding later that the deadline wasn't until the end of the month.

ME readers will recall from February that EPA has been flooded with FOIA requests under Pruitt, forcing many groups to sue for the release of documents. But the new emails, which EPA gave to the Natural Resources Defense Council following legal action, shed new light on the cloud of secrecy that surrounds the agency.

While Obama-era EPA officials said the agency sometimes used awareness reviews during their time at the agency when career staff thought documents would generate a lot of interest, FOIA experts say the extra vetting of documents appears to be on the rise under Pruitt. "This does look like the most burdensome review process that I've seen documented," said Nate Jones, director of the FOIA Project at George Washington University's National Security Archive. Read more.

HAPPY FRIDAY! I'm your host Kelsey Tamborrino, and the American Petroleum Institute's Khary Cauthen correctly guessed that Roger Taney — who was nominated for Treasury secretary — was rejected by the Senate, 18-28, in 1834. Not all hope was lost, however, as Taney went on to become a Supreme Court justice. For today: Who was the only member of the Continental Congress to sign all four of the great state papers? Bonus points if you can name all four papers. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

EPA NARROWS GUIDELINES: EPA will alter its interpretation of when related facilities are considered a single source for air permitting purposes in a way that could ease their permitting requirements, Alex reports.

The April 30 memo was sent by EPA air chief Bill Wehrum concerning the so-called common control designation, which says plants located near each other should be aggregated for permitting purposes and subject to stricter standards if they are operated by the same entity. Under the new guidance, that will include entities that can "dictate decisions of the other that could affect the applicability of, or compliance with, relevant air pollution regulatory requirements." The memo concerns a Pennsylvania landfill and nearby biogas processing facility that are owned by different companies. Read more.

ADD ADELSON'S NAME TO THE LIST: Yet another high-profile political ally emerged Thursday to have helped Pruitt arrange an international trip: GOP mega-donor Sheldon Adelson. According to new documents obtained by The Washington Post, Adelson arranged parts of Pruitt's canceled trip to Israel — where he was in part scheduled to unveil an agreement with Water-Gen, an Israeli water purification company championed by Adelson. Read the full report here.

MORE INFO PLEASE: Four senior House Energy and Commerce Democrats — Frank Pallone, Paul Tonko, Diana DeGette and Kathy Castor — sent a letter to Pruitt Thursday asking for the names of three people Steven Hart — a lobbyist who was also married to the EPA chief's landlord — recommended for slots on the agency's Scientific Advisory Board. "Despite your earlier claims that J. Steven Hart had no clients with business before EPA, it is now clear that Mr. Hart did represent clients with business before your agency and, in fact, lobbied you on their behalf," they wrote.

MORE TIME PLEASE: Sixty-four Democrats signed onto a letter to Pruitt calling for a 90-day comment period on a his recent "secret science" proposal to ban the use of studies that don't publicly disclose all their data. "Given the large response from scientists and stakeholders before the rule was officially proposed, a comment period of 30 days will not allow for meaningful engagement from stakeholders," the letter states. Read it here.

'NOT OKAY': Interior's inspector general found a male National Park Service regional office official made unwanted sexual advances toward a female employee on consecutive days that she told him were "not okay." The official retired before a scheduled interview and stopped responding to the IG. Read the report here.

CLOVIS OUT ... AGAIN: Sam Clovis, a former Trump campaign aide who had been serving as the Agriculture Department's liaison to the White House, is departing the department and will return home to Iowa, a USDA official confirmed to POLITICO's Liz Crampton. The president had previously nominated him to be USDA undersecretary for research, education and economics, where he faced backlash for his lack of science credentials and ultimately withdrew his name from consideration for that position in November. Greens had also particularly focused on Clovis for his comments that he did not believe in man-made climate change. Read more.

COOLANT INDUSTRY: GLOBAL WARMING INDUSTRY IS SO COOL IT'S HOT: The White House now has evidence that a global warming treaty limiting coolants would generate thousands of new jobs, and now it must decide whether to send the treaty to the Senate for ratification. A report released Thursday by the Air Conditioning Heating and Refrigeration Institute and the Alliance for Responsible Atmospheric Policy said that the amendment to the Montreal Protocol limiting use of hydrofluorocarbons, a greenhouse gas, would help American manufacturers who produce the bulk of the world's supply of advanced coolants. Ratifying the treaty would produce 33,000 additional jobs and an extra \$12.5 billion of annual manufacturing output.

The report is considered critical to help presidential aides persuade President Donald Trump to advance the treaty to the Senate, despite the president's aversion to multilateral treaties, his predecessor's accomplishments, and anything involving global warming. "U.S. ratification of the Kigali Amendment is good for American jobs, good for the economy, and crucial for maintaining U.S. leadership across the globe," said John Hurst, Chairman of The Alliance, and Vice President of Lennox International. He added, "Over 30 countries have ratified the amendment. America cannot afford to be on the sideline. America must continue to lead."

ZINKE HIRES GOP ADVISER FOR NPS: Interior Secretary Ryan Zinke hired Chuck Laudner, a Iowa Republican political consultant who was an adviser to Trump's campaign, for a position with the National Park Service, an Interior spokeswoman confirmed to Pro's Ben Lefevre. Laudner previously worked with Rick Santorum's presidential campaign in Iowa in 2012 and was executive director for the Iowa Republican Party from 2007-08. Interior hired Laudner "a few weeks ago," spokeswoman Heather Swift said, though she did not say what job he had taken.

MAY THE FOURTH BE WITH YOU: Zinke teased out some "Star Wars" related news on Thursday. In a video featuring the secretary walking alongside motorized BB-8 and R2-D2 toys, the droid rolls over an Interior logo. Zinke tweeted the video with a message: "Tomorrow is a big day. More to come. #MayTheFourthBeWithYou." See it.

BLANKENSHIP ATTACKS McCONNELL'S "CHINA FAMILY": West Virginia GOP Senate hopeful Don Blankenship released another ad on Thursday attacking Majority Leader Mitch McConnell. This time, the spot claims "Swamp Captain Mitch McConnell has created millions of jobs for China people." The ad, which POLITICO's Alex Isenstadt reports on here, is expected to start airing today. It closes with a shot of Blankenship holding two young children, one on each arm as he pronounces, "I will beat Joe Manchin and ditch cocaine Mitch for the sake of the kids." The ad arrives days ahead of the state's May 8 primary.

FOIA WHAT IT'S WORTH: The Montana-based Western Values Project filed a FOIA request to EPA in an effort to make public any communication about Zinke. The request includes all communications between select EPA employees that contain "Zinke," "RZ" or "Interior Secretary" and comes in response to a report in The Atlantic that alleges an EPA press employee planted stories about Zinke in order to distract from his boss. EPA spokesman Jahan Wilcox in a statement to the Atlantic called the allegations "categorically false."

CLIMATE LAWMAKERS REBUT CARBON LEGISLATION: The Citizens' Climate Lobby released a rebuttal to Rep. Steve Scalise's concurrent resolution, H. Con. Res. 119 (115), which expresses the sense of Congress that a carbon tax would be detrimental to the U.S. economy. The climate lobby refutes the resolution, claiming that if done correctly, a tax or fee on carbon could boost the economy. Read the rebuttal here and the bill text here.

MAIL CALL! BIOFUELS WRITE TO EPA ON STRATEGY: A coalition of Midwest biofuels associations sent a letter Thursday to EPA asking it to move administrative time and staff away from Renewable Fuel Standard exemptions and instead toward approvals for cellulosic ethanol. "The discrepancy between the way EPA is handling RFS exemptions and cellulosic ethanol pathway approvals tells you everything you need to know about how this EPA is treating the RFS," said Iowa Renewable Fuels Association Executive Director Monte Shaw in a statement. Read the letter.

— **The Business Council for Sustainable Energy**, a coalition of companies and trade associations, wrote to members of Congress on Thursday, asking that they reauthorize energy title programs in the farm bill, H.R. 2 (115). "It is essential that a healthy, robust bipartisan energy title continue as part of new comprehensive agriculture legislation," writes the group's president, Lisa Jacobson. The letter also lays out potential improvements to the programs. Read it here.

— **Congressional Western Caucus Chairman Paul Gosar led 18 lawmakers** in a letter requesting Pruitt reverse course and proceed with an intention to withdraw the Obama-era EPA's preemptive veto of the Pebble Limited Partnership mining project under Section 404(c) of the Clean Water Act. They write that EPA's January decision not to overturn the preemptive vote "has sowed tumult for interested parties."

VW'S WINTERKORN CHARGED: Former Volkswagen AG leader Martin Winterkorn was charged with conspiracy and wire fraud in connection with the company's long-running emissions cheating scheme, according to an indictment unsealed Thursday by the Justice Department. The indictment, issued by a federal

grand jury sitting in the Eastern District of Michigan, charged Winterkorn with four counts of violating federal law. The first count charges that he conspired with other senior executives and Volkswagen employees to defraud customers, the United States and violate the Clean Air Act by making false representations about the company's supposedly "clean diesel" vehicles. The other three counts concern wire fraud tied to the scheme. More from Pro's Lauren Gardner [here](#).

GOING OUT WEST: New Mexico Sen. [Martin Heinrich](#) delivers a keynote address today at the [Outdoor Economics Conference](#), and he's [expected to discuss](#) his legislation to establish the White Sands National Monument as a national park, as well as discuss the outdoor recreation industry in the region. Watch it live [here](#).

REPORT: GRID RESILIENCY IN THE FACE OF NUCLEAR CLOSURES: A new IHS Markit report released Thursday examines the effect of five nuclear closures in the PJM Interconnection, finding the closures will reduce annual net benefits for consumers from PJM grid-based electricity by about \$8 billion per year over 2013-2016. That "translates into a consumer net benefit per kilowatt-hour of PJM nuclear generation of about 3 cents per kWh," the report found. The report was prepared for Nuclear Matters, an industry-funded organization. Read it [here](#).

MOVER, SHAKER: The Joseph Rainey Center for Public Policy, a think tank focused on sustainable politics and inclusive governance, has named Sarah Hunt its founding CEO. Hunt previously was director at the Center for Innovation and Technology at the American Legislative Exchange Council.

HITTING THE ROADMAP: The Delta Institute released a "Coal Plant Redevelopment Roadmap" on Thursday to provide insight into coal-impacted municipalities and their transition processes. Modules in the roadmap will show economic and environmental impacts, as well as provide information on engagement strategies for such communities, among other topics. See it [here](#).

ON THE POD: NPR's podcast, Embedded, released a new episode Thursday on coal in Buchanan County, Va. Listen [here](#).

Stories from POLITICO Pro

EPA's top spokesperson to depart [Back](#)

By Emily Holden | 05/03/2018 11:26 AM EDT

EPA's top spokeswoman is leaving the agency, the latest in a string of departures by key staffers amid the swarm of investigations into Administrator Scott Pruitt's potential ethical [lapses](#).

The exit of Liz Bowman comes after Pruitt's lead security agent, Pasquale "Nino" Perrotta, and EPA's Superfund task force head and adviser Albert "Kell" Kelly both [quit](#) earlier this week. Perrotta has cited negative media attention as contributing to his decision. His role in Pruitt's [security spending](#) was under review by the agency's inspector general, and he was interviewed by House Oversight Committee staffers on Wednesday.

EPA also confirmed Kelly was leaving because he attracted controversy over being banned from the banking industry.

Bowman, who will join Iowa Republican Sen. Joni Ernst's staff, has been associate administrator for public affairs since shortly after Pruitt was confirmed in early 2017. She was previously director of issue and advocacy communications for the American Chemistry Council.

"I leave extremely thankful for the opportunity to serve the Trump administration and Administrator Pruitt," Bowman said. "Being a member of the EPA team has allowed me to further my skills, learn from my mistakes and make lifelong friendships. It has also provided me the opportunity to develop a new, and deep, respect for the public servants who serve the American people, day in and day out, to ensure that we all have access to clean air, land and water."

EPA chief of staff Ryan Jackson said Bowman "has been an invaluable lead of our public affairs office during this past year."

"I congratulate her on pursuing great and new opportunities on Capitol Hill where we'll continue to work with her, just in a different capacity," he said.

Bowman's last day at EPA is May 11.

Daniel Lippman contributed to this report.

Critics pound EPA chief after he disputes human role in climate change [Back](#)

By Alex Guillén | 03/09/2017 12:04 PM EDT

EPA Administrator Scott Pruitt said Thursday that carbon dioxide emitted by human activity is not the primary driver of climate change, a conclusion out of step with mainstream climate science that drew immediate condemnation from Democrats and environmentalists.

"I think that measuring with precision human activity on the climate is something very challenging to do, and there's tremendous disagreement about the degree of impact," Pruitt said on CNBC. "So, no, I would not agree that it's a primary contributor to the global warming that we see." He also called for continued study of the issue.

That is a stronger position than Pruitt took during his confirmation hearing, when he said that the degree of human contribution to climate change is "subject to more debate."

Democrats rushed to condemn Pruitt's remarks.

"This is just nuts: EPA chief Scott Pruitt just claimed carbon not causing climate change," Sen. Brian Schatz (D-Hawaii) tweeted a few minutes after the interview aired. "We Senate D's will be a check on his crazy views."

Most scientists agree that greenhouse gases emitted by human activity like burning fossil fuels is the primary driver of climate change. That includes Pruitt's own agency, which says that human-emitted CO2 "is the primary greenhouse gas that is contributing to recent climate change."

One prominent environmentalist suggested Pruitt should be impeached.

"Pruitt misled Congress about his willingness to do a core part of his job," Sierra Club Executive Director Michael Brune wrote on Twitter. "Contradicting science + law should mean removal from office now."

Pruitt also acknowledged on his CNBC appearance that the Supreme Court has ruled on the matter and that the Obama administration issued an "endangerment finding" concluding greenhouse gases are a threatening pollutant.

But, he added, "nowhere in the continuum, nowhere in the equation, has Congress spoken. The legislative branch has not addressed this issue at all."

Pruitt was slated to speak at the CERAWEEK oil industry conference in Houston later Thursday. He said on CNBC that he would bring a "pro-growth, pro-jobs and pro-environment" message to the conference.

EPA narrows guidelines for aggregating sources for air permitting [Back](#)

By Alex Guillén | 05/03/2018 05:59 PM EDT

EPA will alter its interpretation of when related facilities are considered a single source for air permitting purposes in a way that could ease their permitting requirements.

Permitting rules say that plants located near each other should be aggregated for permitting purposes if they are operated by the same entity, known as "common control." In that case, the facilities' emissions can be aggregated and be subject to more stringent permitting requirements than if treated separately.

In an April 30 [memo](#) concerning a common control designation for a Pennsylvania landfill and nearby biogas processing facility that are owned by different companies, EPA air chief Bill Wehrum revised the agency's interpretation so that facilities meet the definition if one entity has "the power or authority ... to dictate decisions of the other that could affect the applicability of, or compliance with, relevant air pollution regulatory requirements."

A dependent relationship should not necessarily mean common control, he added. Facilities can be "economically or operationally interconnected" without being able to direct the other.

In the immediate case of the Pennsylvania landfill and processing plant, Wehrum concluded that the two are not commonly controlled because the landfill could otherwise meet methane emissions limits by burning off biogas and because the processing plant hopes to secure other sources of biogas.

WHAT'S NEXT: Ultimately, EPA's reasoning is only a recommendation. Pennsylvania regulators have the final say on whether these particular facilities fall under "common control."

Sam Clovis is leaving USDA [Back](#)

By Liz Crampton | 05/03/2018 08:16 PM EDT

Sam Clovis, the former Trump campaign aide who had been serving as USDA's liaison to the White House, is leaving the Agriculture Department and will return home to Iowa, a USDA official confirmed Thursday evening.

Clovis' last day is Friday. A "goodbye party" was being held for him on Thursday night, according to a source attending the party.

Clovis had served as a co-chairman and policy adviser on the Trump campaign and later led the USDA beachhead team for the Trump transition, but ran into trouble when President Donald Trump nominated him to be USDA undersecretary for research, education and economics.

Clovis withdrew his name from consideration in November — before the Senate Agriculture Committee could hold a confirmation hearing — after facing a torrent of criticism from Senate Democrats and environmental advocates. Clovis drew fire for his skepticism of climate science, past comments on issues like race and gender, and what critics on the left said was his lack of scientific credentials that are legally required for the position, which would also have had him serve as the department's chief scientist.

Clovis had endured criticism for months, but his withdrawal came shortly after he was swept up in special counsel Robert Mueller's probe of Russian interference in the 2016 campaign and the Trump campaign's alleged ties to Russian interests. While serving on the campaign, Clovis had supervised George Papadopoulos, a Trump campaign foreign policy adviser who struck a plea deal on charges he lied to FBI investigators about his communications with Russia-linked contacts. Clovis' withdrawal followed shortly after news of Papadopoulos' plea deal.

More recently, Clovis had been posted to the Natural Resources Conservation Service to provide guidance.

"Dr. Clovis was one of the first people through the door at USDA in January 2017, and we are grateful for his time here," a USDA spokesman said. "He is a good man and a patriot who for decades has served his country admirably. While we are sad Dr. Clovis is leaving USDA, we wish him well on his future endeavors back home in Iowa."

Daniel Lippman contributed to this report.

Zinke hires Iowa political consultant for Interior parks job [Back](#)

By Ben Lefebvre | 05/03/2018 06:55 PM EDT

Interior Secretary Ryan Zinke has hired Iowa Republican political consultant Chuck Laudner for a position with the National Park Service, an Interior spokeswoman confirmed today.

Interior hired Laudner "a few weeks ago," spokeswoman Heather Swift said, though she did not say what his job he had taken.

"Rebuilding our National Parks infrastructure is a major legislative priority of the Secretary and President and Chuck is helping make it happen," Swift said.

Laudner was an [adviser](#) to President Donald Trump's campaign, and he previously worked with Pennsylvania Republican Sen. Rick Santorum's presidential campaign in Iowa in 2012. Laudner also worked as the executive director for the Iowa Republican Party from 2007 to 2008.

Iowa has two national parks, according to the NPS website.

Laudner's appointment could be the latest example that Zinke is considering a possible presidential run. A [polling firm](#) asked Iowa residents in April their opinion on Zinke, while a political group run by former advisers to Vice President Mike Pence paid for a 30-second [television ad](#) featuring Zinke that aired in Washington, D.C. in March.

"What a curious hire," said Aaron Weiss, media director at Center for Western Priorities, a conservation group. "Chuck Laudner doesn't appear to be at all qualified for a job at the Interior Department, but he's very well-qualified to advise a politician with future ambitions in Iowa."

Blankenship goes after McConnell's 'China family' in new ad [Back](#)

By Alex Isenstadt | 05/03/2018 05:25 PM EDT

West Virginia GOP Senate hopeful Don Blankenship is amping up his racial attacks on Senate Majority Leader Mitch McConnell with a new ad declaring, "Swamp captain Mitch McConnell has created millions of jobs for China people."

"While doing so, Mitch has gotten rich," Blankenship adds. "In fact, his China family has given him tens of millions of dollars."

McConnell's wife, Transportation Secretary Elaine Chao, was born in Taiwan and her parents are Chinese. Her father is chairman of a shipping company.

The new spot, which is expected to start airing on Friday, comes just ahead of the May 8 primary. As the dramatic contest comes to a close, Blankenship, a former coal baron who spent a year in prison following the 2010 explosion at his Upper Big Branch Mine that killed 29 workers, has focused his assault squarely on McConnell — sometimes in harshly racial terms.

During a recent interview with POLITICO, Blankenship said McConnell "has a lot of connections in China." He also said that Chao is "from China, so we have to be really concerned that we are in truth" putting America's interests first.

Earlier this week, Blankenship began running another TV spot labeling McConnell "cocaine Mitch." The spot is apparently in reference to a 2014 report that drugs were once found aboard a shipping vessel owned by Chao's family.

McConnell has singled out Blankenship for defeat, convinced that a Blankenship primary win would destroy the party's prospects for defeating Democratic Sen. Joe Manchin in November. A McConnell-aligned super PAC has aired about \$1.3 million in negative ads against Blankenship.

Blankenship is facing two more mainstream GOP opponents, Rep. Evan Jenkins and state Attorney General Patrick Morrisey. Recent polls have shown Blankenship fading.

With Blankenship going after Chao, McConnell's political team has swung back aggressively. Josh Holmes, a longtime McConnell political adviser, has described Blankenship as "mentally ill."

In his new spot, Blankenship responds to that accusation, saying: "Mitch's swamp people are now running false, negative ads against me. They're also childishly calling me despicable and mentally ill."

The ad closes with a shot of Blankenship holding two young children, one on each arm as he pronounces, "I will beat Joe Manchin and ditch cocaine Mitch for the sake of the kids."

Holmes fired back at Blankenship. "This clown is a walking talking case study for the limitation of a prison's ability to rehabilitate," he wrote in a text message.

While Blankenship has attempted to focus the campaign on China during the closing stretch of the race, McConnell's team has noted that in 1999 Blankenship spoke of moving to China and becoming a Chinese citizen. Blankenship's girlfriend was born in China, according to media reports.

Pruitt airs environmental concerns about proposed Alaska mine [Back](#)

By Alex Guillén | 01/26/2018 07:34 PM EDT

EPA Administrator Scott Pruitt today announced he has serious concerns about any potential mining project in Alaska's Bristol Bay region, creating doubt that the controversial Pebble Mine proposal may ultimately be approved.

EPA said in a release today that it will suspend its proposed withdrawal of Obama-era restrictions after hearing from Alaskan residents and other interested parties. The proposed mine has long drawn opposition from some in the state, including independent Gov. Bill Walker, as well as environmentalists, over worries that it could harm Bristol Bay's critical salmon fisheries.

"It is my judgment at this time that any mining projects in the region likely pose a risk to the abundant natural resources that exist there," Pruitt said in a statement. "Until we know the full extent of that risk, those natural resources and world-class fisheries deserve the utmost protection."

The permitting process, which is handled at this stage by the Army Corps of Engineers, can continue, EPA said. But the agency warned that the developers will have to clear a "high bar." The agency added in a release that not revealing Pruitt's doubts at this stage would be "disingenuous." EPA has veto power over such Army Corps permits.

Pebble Limited Partnership CEO Tom Collier said in a statement that the company "can demonstrate that we can responsibly construct and operate a mine at the Pebble Deposit that meets Alaska's high environmental standards."

DOJ charges former VW CEO with conspiracy, wire fraud [Back](#)

By Lauren Gardner | 05/03/2018 04:42 PM EDT

DOJ unsealed an indictment today charging former Volkswagen AG leader Martin Winterkorn with conspiracy and wire fraud linked to the automaker's effort to cheat U.S. diesel emissions standards.

Winterkorn is charged with one count of conspiracy with other VW executives to defraud the United States, along with the manufacturer's customers. The other three counts concern wire fraud tied to the scheme.

"If you try to deceive the United States, then you will pay a heavy price," Attorney General Jeff Sessions said in a statement. "The indictment unsealed today alleges that Volkswagen's scheme to cheat its legal requirements went all the way to the top of the company. These are serious allegations, and we will prosecute this case to the fullest extent of the law."

The indictment alleges that Winterkorn knew of the emissions cheating as far back as May 2014, and that he was informed again of it in July 2015. VW as a company pleaded guilty in March 2017 to criminal charges related to the regulatory deception and agreed to pay a \$2.8 billion criminal penalty.

The Weekly Focus

EPA's Push To Overhaul NAAQS Poses Test For 'Cooperative Federalism'

EPA's push to overhaul and streamline the national ambient air quality standards (NAAQS) process will pose a major test for Administrator Scott Pruitt's pledge to give states more power over environmental decisions, as some states welcome new NAAQS compliance flexibility while others fear it will boost interstate pollution.

Latest News

SAB Votes To Review EPA's Science, Emissions Rules In Sign Of 'Rebuke'

EPA advisers have voted to review the science underlying agency rules aimed at rolling back a suite of Obama administration's greenhouse gas and emissions regulations, as well as a controversial proposal to require that major rules be based on publicly available science, decisions that environmentalists say amount to a "sharp rebuke" of Administrator Scott Pruitt's deregulatory agenda.

SAB Chair Honeycutt Dodges Tough Questions On EPA Science Policies

Michael Honeycutt, the new chair of EPA's Science Advisory Board (SAB), dodged tough questions from reporters on EPA's "secret science" policy, review of major EPA rulemakings and related issues at the first panel meeting since his appointment, but he reaffirmed his skepticism of the Obama administration's decision to tighten the ozone ambient air standard.

EPA, Sierra Club Fail To Reach Deal On Key 'Sue-And-Settle' Test Case

EPA and the Sierra Club have abandoned an effort to settle a suit over the agency's failure to produce congressionally mandated studies on the environmental impacts of the renewable fuel standard (RFS), seeking instead to brief the case in a move that suggests Administrator Scott Pruitt's directive against settling such cases is driving the action.

Observers Criticize Hill GOP Claim No RIA Needed For 'Glider' Repeal Rule

Key observers are criticizing claims by Hill Republicans that the Office of Management and Budget (OMB) should not require a regulatory impact analysis (RIA) when reviewing EPA's plan to scrap production limits on high-emitting "glider" trucks because it is deregulatory, saying there is no such exception.

Judges Reject Rehearing In Groundwater Suit, Teeing Up High Court Petition

A closely divided appellate court will let stand a panel ruling that imposed Clean Water Act (CWA) liability for an underground pipeline leak that reached surface waters through groundwater, but the narrow vote -- with five judges in favor of *en banc* rehearing -- signals that the question is far from settled and could bolster a Supreme Court petition.

Daily Feed

States launch suit to force EPA to implement landfill rules

Eight states say EPA has failed to take action on state compliance plans for the Obama-era methane standards for existing landfills, charging that the agency has "conceded" its failure to act.

OMB formally reviewing vehicle GHG rule rollback plan

It is not clear if officials have incorporated calls from a wide range of industry groups to seek input on a more moderate plan to largely retain Obama-era stringency levels while offering more compliance "flexibility."

Senate Democrats seek IG inquiry into Pruitt's house hunting

Top Democratic senators are seeking an investigation into whether Administrator Scott Pruitt violated federal regulations when one of his top aides searched for housing on his behalf.

Ewire: Pruitt touts Trump's support amid ethics scandals

EPA Administrator Scott Pruitt says that he has President Donald Trump's support despite a slew of recent ethics scandals and a looming IG report.

PEER claims ethics violations in Pruitt defense fund

A whistleblower group says EPA Administrator Scott Pruitt's legal defense fund seems "calculated to give the appearance of taking untoward gifts," and calls for investigations into its structure and donors.

Former EPA chief launches new Harvard climate center

Gina McCarthy said the new center seeks to transform science into "meaningful actions that will deliver a healthier, more just, and sustainable world."

EPA Floats 'Secret Science' Ban Rule, Signaling Possible Internal Fixes

EPA has sent for White House review a proposed rule to increase the transparency of regulatory science, advancing Administrator Scott Pruitt's controversial efforts to ban the use of "secret science" in a move that suggests officials have addressed at least some internal concerns that such a policy could violate statutory protections of medical privacy and trade secrets.

Previewing Hearing, Environmentalists Fault EPA Coal Ash Rule Revisions

Environmentalists are previewing their testimony for an EPA hearing next week on the agency's planned revisions to its coal ash disposal rule, warning that the changes would increase risks to children's health by removing a mandate to protect sensitive subpopulations and harm communities by ending a requirement to quickly clean up ash spills.

Compliance Costs Create Dilemma For Wehrum's Bid To Kill Utility MACT

ORLANDO, FL -- EPA air chief William Wehrum is acknowledging that he faces a dilemma over whether to grant calls from utilities and others to scrap the regulatory justification for the Obama-era utility air toxics rule as a "satisfying" move, or retain it as even some of its staunchest industry critics have spent millions in compliance costs.

EPA's Chloroform Study Plan Raises Queries Over Reach Of IRIS Reviews

Introducing their plan to science advisors last September, Bahadori's presentation slides explained that chloroform has a "small evidence base" and the plan is to conduct a "targeted update to address Agency need." EPA's Superfund, air and Region 4 offices expressed a specific need for an inhalation reference value for chloroform, the documents say.

CSB Asks Appellate Court To Back Broad Subpoena On 'Potential' Releases

The U.S. Chemical Safety and Hazard Investigation Board's (CSB) is asking a federal appellate court to grant it broad power to subpoena documents related to "potential" releases at facilities where it is investigating industrial incidents, a move that a major refiner is resisting, charging it amounts to an unlawful expansion of the board's powers.

Subject: EPA Announces Extended Comment Period and Public Hearing on Proposed Rule to Strengthen Science Transparency in EPA Regulations

EPA Announces Extended Comment Period and Public Hearing on Proposed Rule to Strengthen Science Transparency in EPA Regulations

WASHINGTON (May 24, 2018) - Today, the U.S. Environmental Protection Agency (EPA) announced an extension of the comment period on the proposed rule, "Strengthening Transparency in Regulatory Science." EPA is also announcing a public hearing for the proposed rule, which will be held on July 17, 2018, in Washington, D.C.

"EPA is committed to public participation and transparency in the rulemaking process," said EPA Administrator Scott Pruitt. **"By extending the comment period for this rule and holding a public hearing, we are giving stakeholders the opportunity to provide valuable input about how EPA can improve the science underlying its rules."**

On April 30, 2018, EPA announced the proposed rule with a 30-day comment period that was scheduled to close on May 30. With today's extension, the comment period will now close on August 17. EPA is soliciting comments on all aspects of the proposal and specifically on the issues identified in Section III. The public hearing will provide a forum for interested parties to present data, views, and arguments regarding EPA's proposed rule.

The proposed rule will strengthen the science used in regulations issued by EPA. It will require that underlying scientific information be publicly available. Also, this rule is consistent with data access requirements for major scientific journals and builds upon Executive Orders 13777 and 13783.

Comments should be identified by Docket ID No. is EPA-HQ-OA-2018-0259 and submitted through the Federal eRulemaking Portal: <http://www.regulations.gov>.

The public hearing will be held at the U.S. Environmental Protection Agency Headquarters, William Jefferson Clinton East Building, Main Floor Room 1153, 1201 Constitution Avenue NW, in Washington, D.C. 20460. The public hearing will convene at 8:00 a.m. EST and continue until 8:00 p.m. EST. Parties interested in presenting oral testimony at the public hearing should register online by July 15, 2018, at <https://www.epa.gov/osa/strengthening-transparency-regulatory-science>.

While we have taken steps to ensure the accuracy of this [Internet version of the rule](#), it is not the official version of the rule for purposes of public comment. Please refer to the official version in a forthcoming *Federal Register* publication.

Subject: Morning Energy, presented by ExxonMobil: Democrats try to make GOP pay at the pump — Nukes out at PJM even as capacity prices double — Senate Appropriations marks up Energy-Water

By Kelsey Tamborrino | 05/24/2018 05:42 AM EDT

With help from Anthony Adragna and Eric Wolff

PUMP UP THE VOLUME: Days away from the Memorial Day weekend, gas prices are on the rise — and Democrats didn't have to look far for someone to blame. During a press conference in front of a notably pricey Exxon gas station, Democratic leaders blamed President Donald Trump's foreign policy decisions — including his move to reimpose sanctions on Iran — for the 50-cent-per-gallon surge in prices since he took office. "There's a straight line between Trump's policies and the price of gasoline," Sen. [Brian Schatz](#) told Pro's Ben Lefebvre and Anthony Adragna.

A page out of the Trump playbook: In pushing the blame onto Republicans, Democrats aren't breaking new ground. Trump himself called for former President Barack Obama's firing when in October 2012 gas prices hit "crazy levels." Republicans weren't surprised by the Democratic talking point, either. "Everyone's going to look for whatever political leverage they have going into an election," Sen. [Lisa Murkowski](#) said. "[But do] you think that Republicans created the high prices? No."

Roadblocks ahead: The Democratic message faces a big obstacle: Short of an energy crisis like the one President Jimmy Carter faced in his 1980 reelection campaign, it's tough to convince voters the president is to blame for expensive gas. Especially because the White House has little control over gas prices, which largely track the movement in global crude oil market prices. Energy market watchers say the price rally is largely due to moves by OPEC and Russia, in addition to the collapse of Venezuela's oil industry. [Read more.](#)

RELATED DOC: Trump has staffed his administration with oil and auto industry insiders, according to a new report from ethics watchdog group Public Citizen. The report breaks down industry influence by the numbers and finds 52 administration staff members have oil and gas ties, 15 with auto industry ties and 10 who have ties to both. Those industry ties are most concentrated at EPA, Interior and the White House. [Read the report.](#)

GOOD THURSDAY MORNING! I'm your host Kelsey Tamborrino. Congrats to the American Petroleum Institute's Khary Cauthen, who was the first to identify Franklin D. Roosevelt as the first president to have a state car custom built to Secret Service standards. For today: In what year did someone first attempt to jump the White House fence? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

POLITICO and the South China Morning Post are partnering to expand coverage of U.S.-China relations. COMMENT PERIOD EXTENDED: EPA [extended](#) the comment period for its controversial "secret science" proposal that was set to end on May 30. The public will now have until Aug 16 to make their voices heard on

the proposal to ban the use of studies that don't publicly disclose all data. EPA also said it would hold a public hearing July 17 in Washington on the proposal rule, heeding public requests to do so.

NUKES OUT OF PJM EVEN AS CAPACITY PRICES DOUBLE: PJM Interconnection, which manages the nation's largest power market, shed almost a third of its nuclear capacity in capacity auction results released yesterday for the 2021-22 delivery year. The auction, which provides extra payments to generators in return for staying available to run at any time, saw prices nearly double to \$140 per megawatt-day, and it will generate \$9.3 billion in revenue for companies with plants that cleared. Stu Bressler, PJM's senior vice president for Operations and Markets said prices rose because companies were trying to make up revenue lost to lower energy prices. "The offers from supply resources into the capacity auction take into account the actual as well as the anticipated energy revenues when they construct those offers in order to meet their required revenues," he told reporters Wednesday.

More megawatts cleared the auction for every other fuel type. Solar capacity quadrupled and wind added 529 MW, making up for ground lost in last year's auction. Coal added 500 MW compared to the previous auction, something that may catch the attention of the Department of Energy, which is trying to save coal plants. "The results of this auction should reassure everyone that the electricity markets are working and maintaining a reliable system," said Susan Buehler, a spokeswoman for the grid operator. "PJM has always said we don't believe there is any need for intervention."

Plenty of power: PJM continues to have far more power than it needs to meet reserve requirements. In 2021-22, it will have a 21.5 percent reserve, well above the 15.8 percent target. That reserve is actually down 2 points from the auction to supply power for 2020-21.

EVERY BILL GETS ITS DAY: The Senate Appropriations Committee will mark up its fiscal 2019 Energy-Water appropriation bill, which puts discretionary funding at \$43.8 billion — \$566 million more than this year's appropriation and \$7.2 billion more than the administration requested. The bill provides \$6.65 billion for the Office of Science — a \$390 million boost — and would increase funds for ARPA-E, which the White House has sought to eliminate. The committee will also consider so-called 302(b) allocations.

How it'll play out: Lamar Alexander is already eyeing how the Senate might move on the title in the coming weeks. "My guess would be two or three bills would come over from the House, Sen. [Mitch] McConnell could put those bills together, put them on the floor at once and allow amendments to them all," Alexander, who chairs the Energy and Water Subcommittee, told reporters. He added that 83 senators had provided input into his bill and that his subcommittee was able to address those suggestions "to some degree in almost every case."

If you go: The markup kicks off at 10:30 a.m. in 106 Dirksen.

BRIDENSTINE'S CLIMATE EVOLUTION COMPLETE: NASA Administrator Jim Bridenstine endorsed a major federal report that echoed the scientific consensus that human activity is the primary driver of climate change. Under questioning Wednesday from Sen. Brian Schatz, the former Oklahoma lawmaker said the National Climate Assessment "has clearly stated that it is extremely likely ... that human activity is the dominate cause of global warming and I have no reason to doubt the science that comes from that." Bridenstine agreed that his new position on the science constituted an evolution of his views and vowed to protect climate science work at the space agency. Keep in mind: The climate report in question is the same assessment Administrator Scott Pruitt sought to rebuff in his proposed "red team-blue team" debate. Watch the Bridenstine clip here.

WHEN WE LAST LEFT OUR HEROES: Top deputies across the Trump administration — including EPA Deputy Administrator Andrew Wheeler, Deputy Energy Secretary Dan Brouillette and USDA Deputy Secretary Stephen Censky — will meet today to try to resolve long-standing tensions over the Renewable Fuel Standard. The group will pick up where the president left off during his meeting on the topic last month, including the unfinished business of whether to allow biofuel exports to receive Renewable Identification Numbers, and whether to reallocate the gallons small refiners were exempted from blending under economic hardship waivers

from EPA. A refining source previously told Pro's Eric Wolff the USDA is trying to capitalize on the controversies surrounding EPA and has been pressing the agency to move quickly on allowing year-round sales of 15 percent ethanol fuel.

And with small refinery exemptions on the table, ME will be looking to see how Wednesday's news that Marathon Petroleum asked EPA for an exemption plays out. Ahead of today's meeting, the ethanol and biofuel trade association Growth Energy released a statement that called out the "flood of illegitimate waivers" and their resulting "'demand destruction' for U.S. farmers at a time when rural communities can least afford it."

**** Presented by ExxonMobil:** Biofuels refined from algae could transform how we power the vehicles that move people and things. It's energy-rich and emits significantly less CO₂ than most transportation fuels. And it doesn't compete with food and fresh water supplies. We're researching how to scale up algae biofuels production in a meaningful way. EnergyFactor.com **

BIODIESEL WANTS MORE: Biodiesel producers think EPA should crank up the biodiesel requirement, not leave it flat, as POLITICO reported yesterday. "These rumored numbers are disappointing," Kurt Kovarik, VO for federal affairs for the National Biodiesel Board said in a statement. "Holding biomass based diesel flat is a missed opportunity to signal growth, which is what the RFS is intended to do. ... The easiest way to fix this and turn around growing dissatisfaction among rural voters is to provide growth to the biodiesel industry and increase this number."

STILL WORKING: John Cornyn, the Senate's No. 2 Republican, said he continues to have discussions on his legislation to overhaul the Renewable Fuel Standard "almost daily, certainly at the staff level," but wasn't sure the talks would bear fruit this year. "We keep making progress but the goal line still seems some ways away," he told reporters. "I'd love to solve the problem this year, but I just don't know."

CARB AND EPA HAVE A MEET: EPA and the California Air Resources Board met Wednesday to open negotiations on a single unified standard for fuel economy, following a White House meeting with automakers earlier in the month. EPA and the National Highway Traffic Safety Administration are threatening to try and revoke California's waiver, risking a lengthy court battle that could balkanize the auto market. "Today's conversations between Administration Officials and the California Air Resources Board were productive," EPA and the Department of Transportation said in a joint statement following the meeting. "We are fully supportive of an open dialogue that proceeds in an expedited manner. EPA and USDOT look forward to moving ahead on a joint proposed rule and receiving practical and productive feedback from all stakeholders."

MOVING QUICKLY: Senate EPW Chairman John Barrasso said Wednesday he's working to reach a time agreement with Democrats to speed floor consideration of a broad water infrastructure package S. 2800 (115) that cleared his panel unanimously earlier this week. Barrasso said it would "be great" to get the bill passed before the Fourth of July recess. His Democratic counterpart on the panel, Sen. Tom Carper, agreed it wouldn't take long for the Senate to complete its work on the bill: "I don't think we're going to need a week. We might need a day," he said.

N.J. GOV DEFENDS EXXON SETTLEMENT USE: New Jersey Gov. Phil Murphy defended using money from a \$225 million settlement with Exxon Mobil to help balance his state's budget. The Democratic governor told reporters he wasn't happy about the decision, but said the state had "been dealt a lousy hand." Environmental groups are appealing the settlement in the hopes of negotiating a new deal, Pro New Jersey's Danielle Muoio reports.

MAIL CALL! FINISH UP, FERC: A new letter from 16 Democratic senators calls on FERC to finish up its rule to allow distributed energy resources to connect to the grid. The letter, led by Sheldon Whitehouse and Ed Markey, concerns the integration of DERs and renewable aggregators into capacity and energy markets. "This

will enable consumers to play a central role in strengthening reliability and avoiding unnecessary costs by supplying localized energy services," the senators write. Read the [letter](#).

REPORT: TRIBAL COMMUNITIES AT RISK: The Clean Air Task Force published a new [brief](#) Wednesday on the adverse health effects from oil and gas pollution on tribal lands. The report, which looked at lands in New Mexico, North Dakota and Utah, found that Native Americans face disproportionate health risks from living near sources of pollutants, such as VOCs, NOx and resultant smog.

WHAT'S HAPPENING IN COLORADO? The Colorado Association of Commerce and Industry and the National Association of Manufacturers will host [an event](#) today with former Interior Secretary and Colorado Attorney General Gale Norton, focusing on the Boulder, Colo., [climate lawsuit](#) against energy manufacturers over their role in contributing to climate change. Ahead of the event, Independent Petroleum Association of America's Energy in Depth is launching a digital ad buy in the state on the opposition against the lawsuit. Watch [the video](#).

THANKS, CHARLIE: The Citizens for Responsible Energy Solutions will announce a \$185,000 [television and digital ad](#) buy today, thanking Massachusetts Gov. Charlie Baker for his actions addressing climate change and on clean energy solutions. The ads will run across the state and encourage residents to thank Baker for his leadership.

MOVER, SHAKER: Van Ness Feldman announced Wednesday that Jason Larrabee, former Interior principal deputy assistant secretary for fish and wildlife and parks, has joined the firm as a senior policy adviser.

Stories from POLITICO Pro

Democrats turn to GOP playbook in pinning gas prices on Trump [Back](#)

By Ben Lefebvre and Anthony Adragna | 05/24/2018 05:02 AM EDT

A spike in gasoline prices is giving Democrats a rare chance to borrow an old Republican tactic: pounding the occupant of the White House for motorists' pain at the pump.

They're unleashing the message with gusto against President Donald Trump, arguing that his foreign policy moves — including his push to reimpose sanctions on Iran — are to blame for a 50-cent-per-gallon surge in prices since he took office. Democrats also note that gas prices are the highest they've been in nearly four years despite the multibillion-dollar windfall that oil companies are set to receive from the GOP-backed tax bill.

"There's a straight line between Trump's policies and the price of gasoline," Rep. [Brian Schatz](#) (D-Hawaii) said in a brief interview, echoing a growing chorus of Democrats.

Voters are already feeling spooked: Forty-two percent of Americans won't take a road trip for summer vacation this year, a much lower number of people than last year, and many of them cited higher gas prices as the reason, according to a [survey](#) by gas station data company GasBuddy.

But the Democratic message faces a big obstacle, even as the party is riding a wave of optimism to the November midterms: Short of an energy crisis like the one former President Jimmy Carter faced in his 1980 reelection campaign, it's tough to convince voters the president is to blame for expensive gas, as GOP candidate Mitt Romney found out when he [tried to use it](#) against former President Barack Obama 2012.

Trump himself frequently criticized Obama for rising gas prices in the run-up to his reelection, [tweeting](#) weeks before the November 2012 vote, "Gas prices are at crazy levels--fire Obama!"

GOP lawmakers say they aren't surprised by the Democrats' efforts and they doubt voters will buy the attacks.

"Everyone's going to look for whatever political leverage they have going into an election," Sen. [Lisa Murkowski](#) (R-Alaska), chairwoman of the Energy and Natural Resources Committee, told POLITICO. "[But do] you think that Republicans created the high prices? No."

Still, Democrats believe that the jump in prices at the pump to [nearly \\$3 a gallon](#) will be a core pocketbook issue for voters on the Memorial Day weekend, which signals the beginning of the high-demand summer driving season.

"I'm going to be having town meetings at home over the course of the week. They'll be in rural areas. People drive a long way and they're not going to see this as an abstract issue," Sen. Ron Wyden (D-Ore.), the top Democrat on the Senate Finance Committee, told POLITICO.

Wyden's panel on Tuesday released a report highlighting the fact that the nation's four largest oil companies are poised to reap some \$15 billion in tax benefits over the next decade from the GOP's tax law, while gas prices reach their highest levels in years. Sen. Ed Markey (D-Mass.) released his own staff report this week using the same tactic, blaming higher prices on "President Trump's incoherent foreign policy."

To be sure, the White House has little control over gas prices, which largely track the movement in global crude oil market prices. Those prices have jumped more than 60 percent since last June, even as U.S. oil production climbs to record levels. Energy market watchers say the price rally is largely because OPEC and Russia have cooperated to sop up extra supplies in the international markets as demand continues to climb.

In addition, the collapse of Venezuela's oil industry, one of the biggest foreign suppliers to the U.S., has pushed prices up. Its oil exports have fallen by a third from January 2016 amid the country's political meltdown, and the Trump administration looks poised to place sanctions on the country's remaining exports.

"Even OPEC could not have hoped for this kind of result," said Kevin Book, analyst at energy consulting firm ClearView Energy.

But analysts are also saying that the White House may indeed be contributing to the rise in prices. Trump's appointment of John Bolton as his national security adviser has spooked oil traders who worry about tensions in the Middle East, said Citigroup energy analyst Eric Lee. Meanwhile, Trump's threat to place heavy sanctions on Iran could remove oil from the global markets, and his moving the U.S. embassy in Israel to Jerusalem may irritate Saudi Arabia enough that the kingdom won't increase its own oil flows to lessen the hurt on U.S. drivers.

"It's a combination of things, but what really took prices to the current level is U.S. policy or at least uncertainty," Lee said in an interview.

On Wednesday, a gaggle of Democratic senators including Markey, Minority Leader Chuck Schumer, Maria Cantwell (Wash.) and Bob Menendez (N.J.) held a news conference at an Exxon filling station near the Capitol to blame the price increase on Trump.

"It's well known that geopolitical instability drives oil prices, and gas prices, around the world higher and higher," said Menendez, ranking member of the Senate Foreign Relations Committee. "The Trump administration's chaotic approach to foreign policy not only served instability around the world, it certainly serves to drive up oil prices higher and higher."

When asked how any president could impact pump prices, Schumer told reporters that Trump should pressure OPEC member states and U.S. oil companies to lower their prices.

"He's very, very tight with the crown prince," Schumer said of Trump's relationship with the head of Saudi Arabia. "He's very, very tight with the head of the UAE, very, very tight, supposedly, with Putin. Why doesn't he use that? Oil companies just got a big tax break. Jawbone them."

Trump and Republicans still have one card to play, analysts said: releasing oil into the market from the Strategic Petroleum Reserve, which could tap down prices. That's precisely what some Democrats asked Obama to do in early 2012 when they faced rising retail prices.

"I wouldn't be surprised if the president were to consider the use of the SPR to dampen prices to play to his base for the midterm elections," said Gary Ross, head of global oil analytics at S&P Global Platts. "He might see

such as a signal that he cares, and one that might deflect some criticism for higher gasoline prices due to Iranian sanctions."

White House and Energy Department spokespeople declined to answer questions about whether the administration would consider an SPR release if prices continue to climb.

Editor's note: A POLITICO partnership in China [Back](#)

By John F. Harris and Carrie Budoff Brown | 05/22/2018 05:04 AM EDT

POLITICO readers will see on our pages today something new and important: the first stories reflecting the publication's commitment to illuminating the U.S. relationship with China.

POLITICO, which began in 2007 as preeminently a Washington publication, in recent years has had a global focus. In Europe, we have the largest news operation covering the increasingly complex and consequential workings of the European Union. Including our growing coverage in the U.S., POLITICO's 250 reporters and editors are now in 15 cities spanning nine time zones. Increasingly, we have heard from our most engaged readers that the place to expand our focus is toward the Pacific, as the U.S. relationship with China — intensely competitive in some spheres, intertwined and mutually dependent in others — will hover over the political and policy debates of the next generation.

One part of our expanding coverage involves a content partnership we are unveiling today with the South China Morning Post. SCMP, based in Hong Kong, is the oldest newspaper in Asia and is the only independent English-language publication in the region. SCMP has an editorial staff of 300 in Asia, with about 40 reporters stationed in mainland China. Like POLITICO, the publication has global ambitions. Under the partnership, SCMP editors will have access to POLITICO stories to share with their readers, and POLITICO editors can draw on the SCMP stories we believe our readers will find most relevant. Over time, editors in both newsrooms will look for opportunities to combine resources on original stories produced in combination with POLITICO and SCMP journalists.

Our experience shows often that the most important stories are best illuminated by being reported simultaneously from multiple perspectives. That's what we do every day in the United States and in Europe. In combination with SCMP, we will now be able to do the same on important subjects — trade, finance, technology and national security among them — at the heart of U.S. interests in China.

And you can expect POLITICO's growth to continue. As our readers' interests reflect a global perspective, so will our publication's journalistic focus and resources.

Senate subcommittee advances energy and water spending bill [Back](#)

By Eric Wolff | 05/22/2018 03:44 PM EDT

A Senate subcommittee today advanced the Energy-Water appropriations bill to the full committee.

The bill appropriates \$43.8 billion in discretionary funding, \$566 million more than last year's appropriation and \$7.2 billion more than the administration requested. Non-defense activities rose \$474 million, while defense activities were increased \$92 million.

The bill provides \$6.65 billion for the Office of Science, \$390 million more than the last appropriation. And it funds an increase for ARPA-E. It also maintains funding for a weatherization assistance program and includes an extra \$196 million for drought resilience, among other measures.

Chairman [Lamar Alexander](#) lamented that writing the bill was made more difficult because the committee "started with an unrealistic budget proposal from the administration."

Appropriators funded DOE's Office of Energy Efficiency and Renewable Energy at \$2.3 billion, the same level as the current appropriation, but \$1.6 billion than President Donald Trump's budget.

The bill also provides \$6.9 billion for the Army Corps of Engineers, the largest appropriation for the corps, according to Alexander. It makes full use of the Inland Waterways Trust Fund, specifically the top four priority projects.

Emails show Pruitt pushing 'red team-blue team' climate debate [Back](#)

By Alex Guillén and Anthony Adragna | 05/15/2018 06:39 PM EDT

EPA Administrator Scott Pruitt had hoped at least twice last year to announce his plans for a controversial red team-blue team debate that would take aim at a federal assessment supporting climate change science, according to newly released emails.

Pruitt's contentious review was abandoned because of the White House's objections, but the [communications](#) reveal new details about how the process would have worked and who was influencing Pruitt.

Many scientists have complained that a red team-blue team style debate was a poor way to examine the scientific evidence that overwhelmingly supports the findings that humans are the primary driver behind climate change. But for Pruitt, who had once suggested the event might be televised, [the debate](#) appeared to be directed at rebuffing the Fourth National Climate Assessment.

That government-wide report issued on Nov. 3 contradicted many Trump administration political appointees who have questioned the connection between greenhouse gas pollution and global warming.

A draft press release that circulated on Nov. 4 among top EPA officials, and which was shared with Pruitt on Nov. 5, laid out the line of attack, according to the documents made public on Tuesday by EPA following a records request from the Natural Resources Defense Council.

"EPA is standing up a Red Team peer review of the report," they wrote, while the "blue team" would essentially be the federal assessment and its authors.

"A robust, transparent public peer review evaluation of climate change is something everyone should support," Pruitt said in the unreleased November statement. "Now is a perfect opportunity for the formation of a 'Red Team' exercise."

The draft release also included space for quotes from two prominent climate science critics: Steve Koonin, an Obama-era Energy Department official, and William Happer, a Princeton physicist who argues that increased carbon dioxide would benefit the planet.

The duo appear to have been tapped to help guide the red-team review together.

"Your contributions even in a small way to the validity of the red team blue team approach would be appreciated," Ryan Jackson, Pruitt's chief of staff, wrote to Koonin and Happer on Nov. 4.

In an email to POLITICO, Happer said the exercise was "badly needed," while Koonin, now the director of the Center for Urban Science and Progress at New York University, told POLITICO the National Climate Assessment was "demonstrably deficient on a number of points."

EPA did not return a request for comment.

Pruitt has previously said a Wall Street Journal piece written by Koonin in April 2017 calling for a similar EPA review of climate science was his inspiration for instigating the "red team" review.

The emails, however, show that Koonin and his allies began wooing Pruitt even before that. In an email more than a week before Koonin's WSJ piece ran, Dan Yergin, the Pulitzer-winning oil historian and vice chairman of IHS Markit who joined a board advising President Donald Trump, introduced Koonin by email to Jackson.

Pruitt and Koonin met April 28, and the emails show Koonin was closely involved in the process afterward.

Koonin sent EPA a "prospectus" outlining the exercise, and though much of it was redacted by EPA before its release, Koonin suggested timing the red team review to the National Climate Assessment, which was due out six months later. Doing so would "ensure that certainties and uncertainties in projections of future climates are accurately presented to the public and decision makers," he wrote.

A revised version of the prospectus was circulated by EPA to White House officials in July after news of Pruitt's plans had leaked.

"There are a lot of press reports about EPA's planning on this. None of it is being run by us. This seems to be getting out of control," wrote Michael Catanzaro, a top energy adviser to Trump who has since left the administration, a few days after receiving Koonin's proposal.

In late June, Liz Bowman, then a top EPA spokeswoman, questioned whether the exercise could be announced as early as July 5 or 6. But it wasn't until November that top Pruitt staffers begin circulating a draft press release on the announcement.

A draft of the announcement on Nov. 5 inspired a [lengthy email chain](#), which EPA redacted, that involved direct messages from Trump chief of staff John Kelly, strategic communications director Mercedes Schlapp, and former White House staff secretary Rob Porter.

Pruitt was [touting](#) his plans to launch the red team review as late as December. Emails early in that month [indicate](#) the agency's air chief, Bill Wehrum, would make the announcement on Dec. 12 while Pruitt traveled in Morocco. One message that included Jackson had the subject line of "Red Team/Blue Team Announcement Planned for Tuesday, Dec. 12."

The [New York Times](#) reported in March that Kelly and other top officials stopped the announcement in the fall, and Kelly's deputy Rick Dearborn met with Pruitt in mid-December to declare the plan dead.

Sources: EPA, DOE, USDA to talk biofuels Thursday [Back](#)

By Eric Wolff | 05/22/2018 05:09 PM EDT

Top deputies for EPA and the departments of Energy and Agriculture will meet on Thursday to hash out changes to the Renewable Fuel Standard, sources in the ethanol industry and the Senate told POLITICO today.

EPA Deputy Administrator Andrew Wheeler, DOE Deputy Secretary Dan Brouillette and USDA Deputy Secretary Stephen Censky will try to resolve long-standing tensions over the program. None of the agencies responded to requests for comment.

The group will pick up the items left unfinished from the meeting with President Donald Trump last month, including whether to allow biofuel exports to receive Renewable Identification Numbers, and whether to reallocate the gallons small refiners were exempted from blending under the economic hardship waivers granted by EPA.

A refining industry source says that USDA has been pressing EPA to move quickly on allowing year-round sales of 15 percent ethanol fuel, and that USDA "is looking to jam EPA" on reallocating the gallons in the 2019 blending mandate.

"They are probably trying to take advantage of what they imagine to be Pruitt's weakened status these days," the source said. "Not sure it will work."

Greetings,

I'm writing an overview/catch-up piece about the proposed "Strengthening Transparency in Regulatory Science" rule. It's an introduction to the debate(s). It explains what the rule would appear to do, why many scientists and organizations say they oppose it in its current form, and shares some of the comments from the public docket. I'd like to run the below questions and comments by you, in the event that EPA would like to respond to any or all of them, or flag anything specific you would like considered for inclusion. Thank you. Eric

1) Any thoughts on these things?:

- A public comment from the Bipartisan Policy Center says that the proposal "is not consistent with the [2009] BPC report in substance or intent" [<https://bit.ly/2Js0NIR>].
- The SAB's Friday agreement to include the transparency rule in its coming letter to the Administrator.
- Five leading peer reviewed journals in a public comment suggest that the rule would "limit the scientific evidence" that can inform policy [<https://bit.ly/2Lm2vZI>].

- The Ranking Member of the House Science Committee, U.S. Rep. Johnson, sent in a public comment that accuses the agency of executive “overreach” [<https://bit.ly/2J86kFb>].
- This recent essay by Stanford’s John Ioannidis: <https://bit.ly/2IopXYl>

Some other questions:

- A comment from a GWU Regulatory Studies Center scholar concludes that "The requirements proposed here are not a radical departure from existing guidelines." What in the proposal is a departure, and why is it necessary?
- Is “secret science” fraudulent science? What studies specifically are the best examples of it? (I noticed that that phrase does not appear in the rule.)
- Is this line from the 2002 “Guidelines for Ensuring and Maximizing the Quality...” a plausible summary of the overall “transparency” v “best available science” debate [<https://bit.ly/2J8qA9r>]? “However, the objectivity standard does not override other compelling interests such as privacy, trade secrets, intellectual property, and other confidentiality protections.” Is this sentence consistent with the proposed rule?
- The same 2002 guidance cites the HEI work on the Harvard Six Cities study and the ACS PM study as an example how to verify studies without absolute public disclosure. Is that 3rd-party verification by HEI still a useful reference for reproducibility? Would this rule vacate that guidance?
- Could small business owners be disproportionately affected by the rule?

- Can you describe the review process for the proposal before it went out on April 30? How deeply were career staff involved in its drafting?
- This question may sound petty, but I'm actually just curious, probably because it relates to my own nightmares when publishing stories on any topic. Copy-editing errors are rare in regulations, but there are at least two in the 4/30 proposal. It just made me wonder if anything about the rule was rushed:
 - Footnote 3: "...Historically, EPA has not consistently observed the policies underlying this proposal, and courts have at times upheld EPA's use non-public data in support..."
 - Section §30.7 heading: "What role does independent peer review in this section?" [This question is written correctly on the prior page.]

Thanks again for any insight.

Highlights

LEADING THE NEWS

'No Planet B,' Macron Tells Congress, Defending Climate Deal

By Dean Scott

French President Emmanuel Macron urged Congress April 25 to reconsider having the U.S. walk away from the Paris climate pact and work with other nations to build a low-carbon economy.

EPA Plan to Limit Science Use May Undercut Air, Climate Programs

By Jennifer Lu and Abby Smith

New EPA plans to limit "secret science" in policy making could unravel the agency's decades-old approach to crafting environmental protections, both supporters and critics of the proposal said.

TODAY'S NEWS

House Takes Up Fish, Science, Pacific Northwest Electricity Bill

By Alan Kovski

House lawmakers are scheduled to vote April 25 whether to override a federal judge's opinion on protections for salmon and steelhead fish at hydroelectric dams on the Columbia River system in Washington state.

Fight Grows Over Who Owns Real Estate Drowned by Climate Change

By Christopher Flavelle

As seas rise and coasts wash away, who owns the land that goes underwater? A debate on that issue is taking place in courtrooms, legislatures, and government offices, raising the question of whether and when climate change justifies seizing private property. The stakes are enormous, affecting not just ownership of offshore mineral and fishing rights but also potentially trillions of dollars of coastal real estate.

Williams Companies to Try Again for New York's Pipeline Approval

By Gerald B. Silverman

The Williams Companies Inc. will press forward to get New York approval of an expansion of its Transco natural gas pipeline through three states, despite a permitting setback from state environmental regulators.

PG&E, Edison Could Gain Shield from Some Wildfire Liability in California

By Mark Chediak

Utility giants PG&E Corp. and Edison International could gain at least some protection against future wildfire damages under a bill that's advancing in California's legislature.

Congress to Seek VW Chief's Testimony in New Cheating Probe (Corrected)

By Ari Natter and Ryan Beene

A U.S. House committee has begun investigating allegations of overseas emissions cheating by Volkswagen AG and seeks testimony from the automaker's chief executive officer Herbert Diess.

Bosch Says Breakthrough Can Save Diesel Engines

By Christoph Rauwald

Robert Bosch GmbH said its engineers have developed a new diesel-exhaust system that cuts emissions far below legal limits taking effect in 2020 and can help automakers avoid potential driving bans in Europe that threaten to doom the engine technology.

Air Pollution Monitors, Not Tighter Rules, Next Step for Indian Cities

By Madhur Singh

India wants to extend air quality monitoring to 100 of its cities, but industrial polluters needn't worry about tighter regulations. At least not yet.

Asia-Pacific Fight for Forests Hitting Fiscal Realities

By Murray Griffin

Asia-Pacific countries see efforts to reduce deforestation and forest degradation as crucial to meeting their climate goals, but still lack the money needed to adequately address the issue, a top official from Fiji said.

Ruling Tosses Green Group Claims Over N.M. Fracking

By Steven M. Sellers

Proposed fracking wells in New Mexico's San Juan Basin, one the largest oil and gas fields in the U.S., may proceed because the U.S. Bureau of Land Management followed federal requirements in assessing and issuing permits for those wells, a federal court in New Mexico ruled.

Federal Circuit Reignites Oil Drilling Equipment Case

By Brian Flood

Imports of oil drilling equipment partially made in China were improperly exempted from anti-dumping and anti-subsidy duties, a Federal Circuit Court of Appeals panel ruled.

TUESDAY NIGHT WRAPUP

Retailers' Costs May Rise Under California Pesticide Label Proposal

By Ayanna Alexander

Retailers could face increased costs from lawsuits if California revises pesticide labeling requirements, an industry group said.

EPA's Ethanol Waivers Reduced Sales, Biofuel Group's Study Says

By Mario Parker

The EPA's hardship exemptions for small refiners "effectively erased" at least 1.6 billion gallons of federally mandated biofuel demand, according to an analysis by the Renewable Fuels Association.

MarkWest Agrees to Spend \$5.6M to Settle Clean Air Act Claims

By Leslie A. Pappas

Two MarkWest Energy Partners LP subsidiaries will pay more than \$5.6 million and cut annual emissions by more than 700 tons to settle allegations of Clean Air Act violations in Pennsylvania and Ohio.

Canada Pushes for Caribou Protection as Alaska Prepares to Drill

By James Munson

Canada will urge the U.S. not to allow oil and gas drilling where Alaskan caribou give birth, during a study of the environmental impacts of new petroleum development.

Divest Automakers That Relax Fuel Standards: California Democrats

By Kate Smith

A group of congressional Democrats representing California urged the state's pension system to divest from any car manufacturer that follows the Trump administration's plan to relax emission standards.

Brazil Lawsuit Seeks to Suspend Sale of Genetically Modified Seeds

By Michael Kepp

Brazil has moved to suspend the sale of three of its most widely planted, genetically modified seeds as scientists evaluate the toxicity of the herbicide that they are bioengineered to resist.

Subject: Afternoon Energy: In with the new — More letters and more hearings for Pruitt — FERC tightens cyber standards

By Garrett Ross and David Beavers | 04/24/2018 05:04 PM EDT

With help from Alex Guillén and Eric Wolff

IN WITH THE NEW: EPA's controversial new science policy was announced by Administrator Scott Pruitt today, after a speedy review by the OMB, and just two days before Pruitt is scheduled to face intense questioning over his reported ethical lapses. The proposed rule, based on legislation pushed by House Science Chairman Lamar Smith (R-Texas), seeks to bar the agency from relying on studies that don't publicly disclose all their data when crafting policy.

"It is a **codification of an approach** that says as we do our business at the agency, the science that we use is going to be transparent, it's going to be reproducible, it's going to be able to be analyzed by those in the marketplace," Pruitt said at an invitation-only meeting at EPA headquarters with supporters of the policy today.

While the proposal has been discussed for weeks by Pruitt, the White House received it for interagency review just last week. Such swift review is very rare for the OMB, which often takes months to vet a new policy. At least one group, the Environmental Defense Fund, has requested a meeting with OMB officials to discuss the rule, but OMB's website shows that no meetings have been scheduled with interested groups.

The idea has faced long-standing opposition, a point which opponents of the move made in a letter to Pruitt on Monday. Smith's legislation "failed to pass Congress for several years for good reason," nearly 1,000 scientists organized by the Union of Concerned Scientists, including former EPA career staffers, wrote in the letter. They said the plan would "weaponize 'transparency' to facilitate political interference in science-based decisionmaking." Read more from Emily Holden and Annie Snider here.

Welcome to Afternoon Energy! We're your hosts Garrett Ross and David Beavers. MORE LETTERS AND MORE HEARINGS: More letters and hearings came from lawmakers' offices and other groups today regarding ongoing and new questioning of Pruitt's behavior.

— **Sens. Tom Carper (D-Del.) and Sheldon Whitehouse (D-R.I.)** wrote in a letter to EPA ethics chief Kevin Minoli that a 2013 waiver covering Pasquale "Nino" Perrotta published in The New York Times earlier this month "is insufficient on its face for at least three reasons" if it was the basis for clearing a contract to look for listening devices in Pruitt's office. The Democrats asked Minoli to produce by May 4 all approvals and denials for outside employment at EPA since 2009. Read more from Alex here.

— **Sen. Lisa Murkowski (R-Alaska), meanwhile,** said Pruitt is scheduled to testify in May before the Senate Appropriations subcommittee that oversees his budget, of which she is chairwoman. She also said it was "absolutely appropriate" for the Environment and Public Works Committee to hold an oversight hearing on the administrator's conduct in office, an idea that has been endorsed by multiple Republicans. Read more from Pro's Anthony Adragna [here](#).

— **Virginia Democratic Reps. Don Beyer and Gerry Connolly** today [wrote](#) to EPA's inspector general, asking the watchdog to look into Albert "Kell" Kelly, the former Oklahoma banker with longtime connections to Pruitt who now runs EPA's Superfund program. "Mr. Kelly came to this position without the necessary qualifications, and with serious and still-unexplained red flags, and his conducts has raised ethical, regulatory and potential legal issues that we believe your office should examine," they wrote. Read more from Alex [here](#).

— **And the liberal group Citizens for Responsibility and Ethics in Washington** [asked EPA's IG](#) to review "the process by which ethics advice and determinations are provided to EPA Administrator Scott Pruitt and other EPA appointees by agency ethics officials and other legal advisors." CREW added: "The clearly inadequate handling of the numerous, increasingly outrageous ethical issues that have recently come to light suggests that the process is broken, and may be compromised by the fear of retaliation against officials who question Administrator Pruitt's conduct."

FERC TIGHTENS CYBER STANDARDS: FERC today released new cybersecurity [standards](#) for laptops, thumb drives and other devices that frequently connect to "low-impact" parts of the grid, Eric reports. The commission approved the new standards last week and will publish them in the Federal Register on Wednesday. FERC Chairman Kevin McIntyre has said he will make improving grid cybersecurity a top priority during his tenure. Read more from Eric [here](#).

MNUCHIN TO CHINA: President Donald Trump today said he is sending his Treasury secretary, Steven Mnuchin, to China "in a few days" to try to negotiate a deal in hopes of eliminating the need for the White House to impose tariffs on as much as \$150 billion in Chinese exports, Pro's Doug Palmer writes. The Trump administration published a list of roughly \$50 billion worth of Chinese exports that could be hit with a new 25 percent tariff, and Beijing responded with its own list of \$50 billion worth of American goods that could be subject to retaliatory duties. Trump did not specify who else would be part of the delegation to China. Read more [here](#).

D.C. CIRCUIT SIDES WITH CITY AGAINST FERC: The D.C. Circuit Court of Appeals said FERC overstepped its bounds when it tried to regulate Clarksville, Tenn.'s municipal gas service. FERC said that because Clarksville was selling gas in Kentucky — a byproduct of supplying Fort Campbell, which straddles state lines — the city is subject to some FERC rules under the Natural Gas Act. But the court noted that the act excludes municipal utilities and [found](#) in favor of Clarksville.

RALLY CAPS ON: The American Federation of Government Employees is planning a "[Rally For Government That Works For America](#)" from noon until 1 p.m. Wednesday, for what the group is describing as a rally "in support of EPA Workers."

QUICK HITS:

— Energy, a bright spot in NAFTA talks, bogged down by dispute over rule change, [The Wall Street Journal](#).

— Controversial contractor was behind island-wide blackout, as Puerto Rico debates full privatization, [The Intercept](#).

— AES coal plant closing in Ohio sheds workers in small communities, [Bloomberg Law](#).

WIDE WORLD OF POLITICS:

- Trump's VA nomination in trouble as allegations of misconduct emerge
- Flipping Cohen against Trump may not be so easy
- Trump defiant over Iran deal as deadline approaches

Pruitt scales back EPA's use of science [Back](#)

By Emily Holden and Annie Snider | 04/24/2018 03:17 PM EDT

Environmental Protection Agency chief Scott Pruitt announced Tuesday he would seek to bar the agency from relying on studies that don't publicly disclose all their data, a major policy change that has long been sought by conservatives that will sharply reduce the research the agency can rely on when crafting new regulations.

The unveiling of the proposed rule delivers a win to Republicans like House Science Chairman [Lamar Smith](#) (R-Texas), who unsuccessfully pushed legislation to impose the same type of change. The move also demonstrates Pruitt's persistence in pursuing President Donald Trump's anti-regulation agenda just two days before the embattled EPA chief is due to face fierce questioning from lawmakers about his hefty spending, expanded security detail and cheap condominium rental from the wife of an energy lobbyist.

At an invitation-only meeting at EPA headquarters with Smith, Sen. [Mike Rounds](#) (R-S.D.) and other supporters of the policy, Pruitt said the proposed rule was critical in ensuring that the agency was transparent about how it is making decisions to justify costly new regulations. It is the latest step Pruitt has taken to fundamentally shift the agency's approach to science.

"It is a codification of an approach that says as we do our business at the agency the science that we use is going to be transparent, it's going to be reproducible, it's going to be able to be analyzed by those in the marketplace. And those who watch what we do can make informed decisions about whether we've drawn the proper conclusions or not," Pruitt said.

Text of the proposed rule was not immediately available.

The proposal, based on legislation pushed by Smith, is intensely controversial, and scientists and public health groups say it will prevent federal regulators from enacting health and safety protections. Nearly 1,000 scientists, including former EPA career staffers, signed a [letter](#) opposing the policy sent by the Union of Concerned Scientists to Pruitt on Monday.

Their primary concern was that many of the country's bedrock air and water quality regulations are based on research that cannot disclose raw data because it includes the personal health information.

But industry has its own version of the same problem. EPA often relies on industry studies that are considered by companies to be confidential business information when determining whether new pesticides and toxic chemicals are safe to use. Internal EPA emails obtained under the Freedom of Information Act show that EPA political officials, including Nancy Beck, who became the chief of the agency's chemical safety office last year

after working for years at a chemical industry lobbying group, worried that the new policy would limit the agency's ability to consider industry data or would force companies to make this proprietary data public.

"We will need to thread this one real tight!" Richard Yamada, political official who led work on the new policy wrote to Beck after she raised the concerns.

It was not immediately clear if the new proposed rule included measures to address those concerns.

Rush Holt, CEO of the American Association for the Advancement of Science, said Pruitt's changes could keep the agency from revising public health regulations as problems arise or new data comes to light.

"On the surface it sounds so innocuous or even beneficial. What could be wrong with transparency? Well it's clear to me that this is not based on an effort to be transparent. It is rather based on an effort to be just the opposite," he said.

"EPA is particularly important because when science is misused, people die," he added.

Pruitt has been discussing the new scientific policy publicly for weeks, but it only went to the White House for interagency review last week. Such swift review is very rare for the Office of Management and Budget, which often takes months to vet a new policy. At least one group, the Environmental Defense Fund, has requested a meeting with OMB officials to discuss the rule, but OMB's website shows that no meetings have been scheduled with interested groups.

Many public health studies can't be replicated without exposing people to contaminants, and environmental disasters such as the Deepwater Horizon oil spill cannot be recreated, the group said, raising intellectual property, proprietary and privacy concerns.

Pruitt's predecessor Gina McCarthy, and her air chief Janet McCabe, in an op-ed in The New York Times in March said concerns about studies are dealt with through the existing peer-review process, which ensures scientific integrity.

"[Pruitt] and some conservative members of Congress are setting up a nonexistent problem in order to prevent the E.P.A. from using the best available science," they said.

Democrats question outside work approval for Pruitt's security chief [Back](#)

By Alex Guillén | 04/24/2018 01:20 PM EDT

Two Democratic senators today questioned whether the head of EPA Administrator Scott Pruitt's security detail, Pasquale "Nino" Perrotta, had been properly cleared for outside work at the security firm he founded.

In a letter to Kevin Minoli, EPA's top ethics official, Sens. Tom Carper (D-Del.) and Sheldon Whitehouse (D-R.I.) note that a 2013 waiver covering Perrotta's outside work was published by the New York Times earlier this month.

But if that was the basis for clearing Perrotta's outside security work with Sequoia Security Group, "it is insufficient on its face for at least three reasons," the lawmakers wrote.

The clearance expired on March 5, 2018, and should have been revised after Perrotta's duties at EPA changed as he was promoted to the head of Pruitt's security detail last year, Carper and Whitehouse wrote. They also argued that Perrotta did not fully represent the scope or nature of his outside work on the authorization forms.

The Democrats asked Minoli to produce all approvals and denials for outside employment at EPA since 2009.

Last April, a member of Sequoia's management team's practice — Edwin Steinmetz Associates — reportedly received a contract to look for listening devices in Pruitt's office.

WHAT'S NEXT: Carper and Whitehouse asked for a response by May 4.

Murkowski: Pruitt will testify to Senate appropriators [Back](#)

By Anthony Adragna | 04/24/2018 03:03 PM EDT

EPA Administrator Scott Pruitt is scheduled to testify in May before the Senate appropriations subcommittee that oversees his budget, Sen. [Lisa Murkowski](#) (R-Alaska), who chairs the panel, said today.

Murkowski did not elaborate on her plans for the hearing or how much it would delve into Pruitt's ethics and spending. But she said it was "absolutely appropriate" for the Environment and Public Works Committee to hold an oversight hearing on the administrator's conduct in office, an idea that has been endorsed by [multiple Republicans](#) on the authorization committee.

"I'm hoping they move on it sooner than later," Murkowski said of the EPW committee.

EPW Chairman [John Barrasso](#) (R-Wyo.) said today he has "serious questions" about how Pruitt has handled taxpayer dollars but stopped short of announcing plans for Pruitt to testify.

"We'll see what comes out of the hearings this Thursday," Barrasso said, referring to Pruitt's scheduled appearance of two House hearings that day.

Barrasso said he planned to send additional letters to EPA, following his recent request for details on the administrator's use of four separate email accounts. In response to that earlier letter, EPA [told him](#) all of Pruitt's accounts are searched in response to public records requests.

"You want to make sure taxpayers are getting value for their dollars," Barrasso told reporters today. "We want to make sure money is being spent appropriately."

WHAT'S NEXT: Murkowski declined to say when Pruitt would appear before her Appropriations Subcommittee on Interior, Environment and Related Agencies, but she has [said previously](#) it was expected to be the week of May 7.

Democrats request IG probe of Pruitt banker-turned-Superfund chief [Back](#)

By Alex Guillén | 04/24/2018 03:30 PM EDT

Two House Democrats today [asked](#) EPA's inspector general to look into Albert "Kell" Kelly, the former Oklahoma banker with longtime connections to Administrator Scott Pruitt who now runs EPA's Superfund program.

"Mr. Kelly came to this position without the necessary qualifications, and with serious and still-unexplained red flags, and his conducts has raised ethical, regulatory and potential legal issues that we believe your office should examine," wrote Reps. [Don Beyer](#) and [Gerry Connolly](#), both Virginia Democrats.

Kelly previously ran Tulsa-based SpiritBank, and last year agreed to pay a \$125,000 fine under a deal with the FDIC that also banned him from banking for the rest of his life for unspecified violations.

Kelly recently [defended](#) the loan in question, saying there was "nothing untoward about it" and noting that "the bank made money." Pruitt also [said](#) this month that he is unfamiliar with Kelly's banking problems and that they have no bearing on his EPA work.

Pruitt and Kelly have a longstanding financial relationship, according to recent reports. Kelly's bank issued mortgages for homes Pruitt bought in Tulsa and Oklahoma City, as well as for a significant stake Pruitt purchased in a minor league baseball team, the New York Times [reported](#) Saturday.

Aside from his qualifications, the lawmakers also asked the IG to review the Superfund task force run last year by Kelly that EPA later said never generated any meeting notes, communications or other documents under the Freedom of Information Act.

WHAT'S NEXT: The IG will decide whether to pursue a review of Kelly.

FERC order tightens cybersecurity standards [Back](#)

By Eric Wolff | 04/24/2018 10:51 AM EDT

FERC is tightening up security standards for laptops and access controls for certain "low-impact" parts of the grid.

The [order](#) approves parts of a new set of standards submitted by the North American Electric Reliability Corporation. It sets up new standards for thumb drives and laptops and other devices that frequently connect

and disconnect from systems. FERC approved the order last week and released it today ahead of its publication in Wednesday's Federal Register.

FERC also decided not to adopt new standards for access control for systems that connect to other systems that provide key grid services. The commission instead asked NERC to review existing access controls and see if they provided enough security. It also decided that provisions setting standards for mitigating the damage from viruses were not sufficiently clear, and asked NERC try again.

FERC Chairman Kevin McIntyre has said that improving cybersecurity from the grid is one of his highest priorities while chairman. The Trump administration in March revealed that Russian hackers penetrated power plant control systems to the extent that they could turn off the power, if they wanted.

Trump: Mnuchin going to China soon for trade talks [Back](#)

By Doug Palmer | 04/24/2018 12:17 PM EDT

U.S. Treasury Secretary Steven Mnuchin will be traveling to China in the hopes of negotiating a deal to eliminate the need for the United States to impose duties on as much as \$150 billion of China's exports to the U.S., President Donald Trump said today.

"The treasury secretary, Steve Mnuchin, will be going to China in a few days to negotiate on trade," Trump said at the start of a White House meeting with French President Emmanuel Macron. "I think China is very serious. We're very serious. We have no choice but to be very serious. You know we've put on very substantial tariffs. And that will continue unless we make a trade deal."

Trump said the United States was sending a delegation to China at Beijing's request, but did not say whether U.S. Trade Representative Robert Lighthizer or Commerce Secretary Wilbur Ross would be part of the team.

"They came here recently, and we're going there," Trump said.

Last month, the Trump administration published a list of about \$50 billion worth of Chinese exports that could be hit with a new 25-percent tariff to punish Beijing for alleged intellectual property theft and forced transfer of valuable American technology. After China responded by publishing its own list of \$50 billion worth of American goods that could be subject to retaliatory duties, Trump upped the ante and asked Lighthizer to consider another \$100 billion worth of Chinese exports that could be targeted with new duties. That second list has not been published.

Trump again complained about the size of the U.S. trade deficit with China, but expressed optimism the two sides could reach an agreement without duties being imposed.

"I think we're — we've got a very good chance of making a deal," Trump said, referring to Chinese President Xi Jinping as "a terrific guy and a friend of mine."

Maya Parthasarathy contributed to this alert.

Trump's VA nomination in trouble as allegations of misconduct emerge [Back](#)

By Andrew Restuccia, Matthew Nussbaum and Burgess Everett | 04/24/2018 09:33 AM EDT

President Donald Trump pledged on Tuesday to stand behind his embattled pick to lead the Department of Veterans Affairs, even as support on Capitol Hill eroded and Trump himself opened the door for Rear Adm. Ronny Jackson to withdraw himself from consideration.

"I said to Dr. Jackson, what do you need it for?" Trump said repeatedly at a news conference, as allegations of workplace misconduct threw the nomination in doubt and led the Senate to postpone a hearing pending an investigation.

"He's a fine man. I'll always stand behind him," Trump said about the White House physician, adding it is Jackson's choice to remain the nominee or withdraw. "What does he need it for? To be abused by a bunch of politicians that aren't thinking nicely about our country? I really don't think personally he should do it, but it's totally his ... decision."

The mixed signals — a pledge to defend Jackson coupled with advice that he withdraw from consideration — came as Jackson appeared to dig in, traveling to Capitol Hill and saying he looks forward to the hearing, whenever it may be.

Lawmakers have delayed the confirmation — which was scheduled for Wednesday — amid allegations of workplace misconduct and over-prescribing medication, according to multiple people briefed on the issue. The allegations have so far mostly been word-of-mouth, and the Senate Veterans' Affairs Committee is demanding 12 years of documents about Jackson's service as the presidential physician and in the White House medical unit.

Trump, who feels strongly that Jackson has been unfairly targeted by the press and his political opponents, is sympathetic to the doctor's situation, according to a White House official. During Tuesday's news conference, Trump wasn't sending a message to Jackson that he should step down, the official said. The president was instead publicly reflecting his frustration at seeing somebody he likes face such intense and personal criticism.

The president and many in the White House are deeply skeptical of the allegations against Jackson, even as they suspect that other administration officials are spreading them. Indeed, the fracas over Jackson's nomination has again brought to the surface a sense among many White House aides that forces in the building are working against them.

The White House official stressed that there are no current plans to push Jackson out. To the contrary, the White House plans to stand behind Jackson if he decides to move forward with the nomination, as Trump said he would.

But others in the White House believe it is foolhardy to continue backing a nominee who faced a rocky confirmation even before the rumors began circulating, given his lack of experience leading such a large organization. One administration official privately expressed annoyance that Trump's penchant for nominating his friends and allies with little vetting has led to another confirmation mess.

White House officials first became aware of the rumors about Jackson when Capitol Hill aides passed along what they were hearing, the White House official said.

Privately, Republicans are fretting that a flood of bad press could prove unsustainable and derail the nomination to lead the sprawling agency.

"I can't tell" if it's in trouble, said Senate Majority Whip John Cornyn (R-Texas). "I don't know if the allegations are credible. If they are it's a serious matter."

Senate Majority Leader Mitch McConnell (R-Ky.) was noncommittal on Tuesday morning when asked if he was confident in Jackson. "We are going to wait and see what the administration and Chairman Isakson recommend," McConnell said, referring to Senate Veterans Affairs Committee Chairman Johnny Isakson (R-Ga.).

Members of Trump's legislative affairs team huddled Tuesday morning to discuss the nomination as reports of allegations proliferated. After the meeting, a White House official said there were no current plans to withdraw the nomination, and the press shop separately issued a public statement in support of Jackson.

"Admiral Jackson has been on the front lines of deadly combat and saved the lives of many others in service to this country," said deputy White House press secretary Hogan Gidley in a statement on Tuesday. "He's served as the physician to three Presidents—Republican and Democrat—and been praised by them all. Admiral Jackson's record of strong, decisive leadership is exactly what's needed at the VA to ensure our veterans receive the benefits they deserve."

Meanwhile, Jackson was making his case for his nomination on Tuesday despite the firestorm, meeting with VA Committee member Sen. Jerry Moran (R-Kan.) in his Capitol Hill office as a horde of media waited outside.

"He does deny that he's done anything wrong in his service to the country and particularly his time at the White House," Moran said after meeting with Jackson. "He knows of nothing that would prohibit him from being qualified."

A failed nomination would be an embarrassing debacle for the White House, and the postponed hearing is reminiscent of Andy Puzder's failed nomination to be Labor Secretary last year. Republicans are operating under a razor-thin majority of 51 senators, several of whom have already expressed concern with Jackson's lack of experience to operate the massive Veterans Affairs agency.

Isakson and ranking member Jon Tester (D-Mont) wrote Trump a letter on Tuesday asking for "all documentation pertaining to Rear Admiral Jackson's service in the White House medical unit and as Physician to the President."

In the meantime, senators are being cautious about the claims of misconduct.

"Swirl of allegations happens all the time. You have to show proof. Haven't seen that yet," said Sen. Joe Manchin (D-W.Va.), a member of the committee.

Trump named the White House physician to lead the sprawling bureaucracy after firing David Shulkin, even after Isakson personally implored Trump to keep Shulkin. The move raised eyebrows in Congress and among veterans groups because Jackson, who was also former President Barack Obama's physician, has never led a large organization.

Veterans groups said the delay and additional vetting for Jackson is appropriate.

"This is an important cabinet position. If the Senate needs more time to properly vet this nominee, they should take that time," said Dan Caldwell, executive director of Concerned Veterans for America. "I just hope that the confirmation process for the VA secretary doesn't distract from passing legislation to fix the VA's Choice and community care programs."

Democrats took an aggressive posture toward the allegations against Jackson, demanding more information and saying the scandal reflects poorly on Trump's White House.

"It needs to be addressed. Right now. Today," Sen. Richard Blumenthal (D-Conn.) told POLITICO. "The White House needs to be forthcoming. It has been clearly careless and negligent in vetting."

The nomination will be "unacceptable" unless the White House offers further information, Blumenthal added.

"Maybe one day the president, who we know acts on impulse, had this nominee in the room ... and said: 'Hey, let's put you up without any vetting,'" said Senate Minority Leader Chuck Schumer (D-N.Y.) on Tuesday morning.

As the White House physician, Jackson had already been subjected to a basic background check and review of his past. But multiple people familiar with the process said Jackson did not undergo a thorough vetting ahead of his nomination as veterans affairs secretary.

The concern on Capitol Hill is palpable. Isakson spoke with fellow committee members over the weekend to discuss the "unsubstantiated allegations," Sen. Mike Rounds (R-S.D.) told NPR on Tuesday.

"We have been given a brief sketch of what they are but I'd prefer not to discuss them at this time. As I say, they are unsubstantiated," Rounds said. "The chairman is aware of them. He's discussed them with the White House. ... These are serious allegations and they're ones that we most certainly want to get through and vet properly."

Elana Schor, Lorraine Woellert and Louis Nelson contributed to this report.

Flipping Cohen against Trump may not be so easy [Back](#)

By Josh Gerstein | 04/24/2018 05:00 AM EDT

Getting Michael Cohen to rat out President Donald Trump may not be as simple as it sounds.

Although Trump's detractors are rooting for Trump's personal attorney to "flip" on the president and cooperate with special counsel Robert Mueller to escape a potentially harsh prison sentence, legal obstacles make it difficult for lawyers to expose their clients' guarded secrets.

Even if Cohen is determined to break his confidences with Trump, legal ethics might deter federal prosecutors from coaxing him to betray his professional confidences with Trump, legal veterans and experts say.

"This idea of 'flipping' Cohen — they can't just flip a lawyer to testify against a client," longtime defense attorney Harvey Silverglate said. "Even if Cohen doesn't know better, one would think the FBI and the prosecutors would know better."

Silverglate said not only Cohen but prosecutors could be disbarred for overstepping the well-established ethical boundaries.

FBI agents raided Cohen's home and office earlier this month and seized records and electronic devices that reportedly contain communications with Trump, whom Cohen has represented for more than a decade.

Because Cohen was Trump's lawyer, many of those communications are likely covered by the legal principle of attorney-client privilege, which would typically prevent them from being admissible in court.

While the privilege can be waived, only Trump — and not Cohen — has the right to do so.

"It is absolutely the case that, even if he is criminally liable himself, Michael Cohen is not allowed to disclose client confidences learned through the attorney-client relationship about any client without their permission," said Paul Rosenzweig, a former legal adviser to Whitewater independent counsel Kenneth Starr.

Attorneys for Cohen and Trump declined to comment for this story. But other lawyers expect that the president's legal team would vigorously object to Cohen discussing Trump's past dealings to prosecutors. Lawyers for Trump are already fighting in court to block prosecutors' access to information the FBI seized on the grounds that it is covered by privilege.

There are exceptions to what privilege will protect. Communications made with the intent of committing or concealing a crime or fraud are exempted, for instance.

And Cohen is entitled to disclose conversations with Trump that are directly related to charges he might face.

"The ethics rules allow lawyers to disclose client confidences from a representation if the lawyer is charged with wrongdoing arising out of the representation," said New York University law professor Stephen Gillers. "You can't trade on client information unless you're charged with wrongdoing because of the representation of that client."

Lawyers said prosecutors are likely to tread carefully because any misstep could jeopardize the investigation by the U.S. attorney's office in New York into Cohen, which includes his payment of \$130,000 in alleged "hush money" payment to porn star Stormy Daniels, who claims she had sex with Trump and was paid to buy her silence shortly before the 2016 election. Trump says he was unaware of the payment.

That federal probe also reportedly involves Cohen's personal business dealings, including financing of dozens of New York City taxi medallions that Cohen has owned.

Casual treatment of information from Cohen could even put at risk Mueller's investigation into alleged collusion between the Trump campaign and Russia, attorneys said. It was Mueller who uncovered and referred to New York federal prosecutors the information that triggered the raid on Cohen's addresses.

On Saturday, Trump lashed out at press reports that Cohen might choose to "flip" against his former boss and client, but the president also seemed to emphasize that Cohen was engaged in business Trump had nothing to do with.

"Michael is a businessman for his own account/lawyer who I have always liked and respected. Most people will flip if the Government lets them out of trouble, even if it means lying or making up stories," Trump wrote. "Sorry, I don't see Michael doing that despite the horrible Witch Hunt and the dishonest media!"

Even if Cohen is inclined to share information about Trump with prosecutors, the government would likely want a judge to rule explicitly that the attorney-client privilege doesn't apply — either because Cohen was engaged in order to commit a crime or because the matter in question did not involve confidential legal advice.

"They have to be very careful. They don't want to taint the members of the Mueller team," said one former federal prosecutor who handled a case in which an attorney was charged criminally. "They get tainted with that, they're off this case. It's a pretty heavy penalty. ... They certainly could not simply bring [Cohen] in. They could not break that privilege without some court deciding that."

Adding to the complexity is the fact that Cohen also served as an attorney for the Trump Organization and acted on his own in various business deals. That means prosecutors could be entitled to ask some questions about Cohen's experiences in dealings with Russia, for example, but may not be entitled to pry into what Cohen told Trump on such issues or vice versa.

"They could ask about what he negotiated with the Russians but cannot ask what he told Trump or what Trump told him," said Silverglate. "The relationship between Trump and his lawyer was probably very mixed. If they were in business together and had a part of some deal together, that wouldn't surprise me."

Ultimately, divining that line will likely require a court-appointed special master to consider what is fair game for prosecutors. Any rulings on those questions could spur protracted litigation but could provide a road map for what prosecutors can talk to Cohen about and what they can't

"It's incredibly complicated. ... The special master is really essential," Silverglate added.

Veteran prosecutors say they can recall few, if any, instances in which attorneys agreed to testify freely about their clients — even in cases where attorneys have been prosecuted for alleged complicity in mafia or drug activity.

Cohen's dilemma does have at least one significant historical echo.

After President Richard Nixon's personal attorney, Herbert Kalmbach, pleaded guilty in 1974 to illegal fundraising for GOP congressional candidates, he agreed to cooperate with prosecutors to reduce his prison sentence and revealed that he knew of payments of illegal "hush money" to Watergate burglars.

Former White House counsel John Dean said Monday he does not recall attorney-client privilege being an issue because Kalmbach's activities were clearly in the fundraising and financial realm and not the provision of legal advice.

Dean, who served as White House counsel to Nixon from 1970 to 1973, said the president ultimately waived any attorney-client privilege to allow his own testimony. However, the president dropped the privilege issue only after Dean made clear he was planning to testify anyway on the ground that some of his actions amounted to crimes.

"Nixon waived the privilege, although he did know that I was going to blow right through it," said the former White House counsel, who pleaded guilty in 1973 to conspiracy to obstruct justice in connection with the payments Kalmbach made to the burglars. "I'd already flipped."

Darren Samuelsohn contributed to this report.

Trump defiant over Iran deal as deadline approaches [Back](#)

By Nahal Toosi and Quint Forgey | 04/24/2018 11:23 AM EDT

President Donald Trump and Iranian President Hassan Rouhani exchanged threats over the Iran nuclear deal Tuesday, with Trump warning that Tehran will face "big problems" if it restarts its nuclear program and Rouhani saying America will face "severe consequences" if it abandons the agreement.

Meanwhile, French President Emmanuel Macron, in Washington on a state visit, called for a "new deal" to complement the 2015 nuclear agreement, covering not just nuclear issues but also ballistic missiles and Iran's roles in conflicts in the Middle East, including the wars in Syria and Yemen.

If he convinces Trump that's worth pursuing, it could buy the nuclear deal more time.

The verbal warfare between Iran and Trump comes ahead of a deadline on May 12 for Trump to decide whether to re-impose some of the economic sanctions on Tehran that were lifted under the nuclear deal. The U.S. president, alongside Macron on Tuesday, repeatedly belittled the Barack Obama-era agreement but didn't say for sure if he'd walk away from it next month.

"It was insane. Ridiculous. It should have never been made," Trump said of the deal, warning Iranian officials that if they restart their nuclear program, they're "going to have big problems, bigger than they've ever had before."

Although Iran has suggested it might restart its nuclear activities should the deal collapse, analysts are divided on whether Tehran would follow through on its threat. Trump's harsh rhetoric, meanwhile, may simply be a tactic to intimidate Iran to accept new restrictions on its behavior that Washington has been demanding.

Macron's visit this week is considered a critical moment for U.S. allies and partners who want to keep the deal in place. The French leader, who has a relatively good relationship with Trump, appeared eager to prove to the U.S. leader that he sympathizes with concerns about the limits of the deal.

But Macron also said he doesn't want to tear up the existing agreement. Rather, he said, the goal is "to work on a new deal with Iran."

This "new deal" would include four pillars, Macron said. One is to block nuclear activity in Iran in the short term, which Macron noted the existing agreement does until parts of it start expiring in 2025. The other three pillars, he said, are having a longer-term agreement on stopping Iranian nuclear activity, putting "an end" to Iran's ballistic missile program, and laying groundwork for political solutions to conflicts in countries such as Yemen, Iraq, Syria and Lebanon, where Iran has significant influence.

Ministers from France and its allies that have already been meeting in small groups to look at ways to deal with Iran could work on establishing such a framework, Macron said. "The purpose is to have some allied powers and we among them and of course also the regional powers to work at the level of this small group" he said.

"And will have some discussions with Russia and Turkey on regional topics including Syria. So as from now, we will work using that method in favor — work towards a deal."

Macron's idea is akin to a "grand bargain" between world powers and Iran, and it is unlikely to become a reality anytime soon, especially if Iran wants major concessions from the West in return. Whether his pitch buys the deal more time could come down to whether Trump will feel comfortable casting Macron's approach as a way to "fix" the existing deal, something he's said he is willing to try before quitting it.

Trump's frustrations with the nuclear deal are many. He is unhappy that it doesn't cover Iran's ballistic missile program, that it doesn't allow for more intrusive international inspections of suspected nuclear sites and that some of its provisions expiring starting in 10 years.

Trump is also unhappy that Iran's non-nuclear activities in the Middle East, including its sponsorship of proxy militias in Arab countries, aren't covered by the agreement. Iran's regional rise has particularly alarmed Israel and Saudi Arabia, two staunch allies of the United States.

During multiple appearances Tuesday, Trump cited Iran's support for Syrian President Bashar Assad, whom U.S. officials allege is using chemical weapons in his fight against rebels. Trump also bemoaned Iran's role in the conflict in Yemen, where Saudi-led forces have been battling Houthi rebels backed by Tehran since March 2015.

Although the nuclear agreement took years to negotiate and was unveiled just a few months after the conflict in Yemen began, Trump was frustrated that it didn't cover the Yemen crisis.

"They should have made a deal that covered Yemen, that covered Syria, that covered other parts of the Middle East where ... Iran is involved," Trump said in a press conference alongside Macron.

Earlier in the day, Trump said the Iranians "have been butchers."

Iran's leaders, meanwhile, have stepped up their own campaign in favor of the existing deal, which they brokered with the Obama administration as well as France, Germany, China, Russia, and Britain.

The July 2015 deal lifted a broad set of nuclear-related U.S. and international sanctions on Iran in exchange for severe curbs on the country's nuclear program.

Iranian officials warn that they will respond if Trump reneges on the U.S. side of the deal.

"I am telling those in the White House that if they do not live up to their commitments... the Iranian government will firmly react," Rouhani, the Iranian president, said in a Tuesday speech, according to a Reuters [report](#).

"If anyone betrays the deal, they should know that they would face severe consequences," Rouhani said. "Iran is prepared for all possible situations."

Iran's foreign minister, Javad Zarif, said in an interview with The Associated Press published Tuesday that if the U.S. withdraws from the agreement, Iran will likely to do same.

"If the United States were to withdraw from the nuclear deal, the immediate consequence in all likelihood would be that Iran would reciprocate and withdraw," Zarif said. He added: "There won't be any deal for Iran to stay in."

In an interview that aired Sunday, Zarif told CBS News that his country could resume its nuclear program "at much greater speed." Zarif insisted, however, that didn't mean developing nuclear weapons because Iran "has never wanted to produce a bomb."

Iran has always said its nuclear program was peaceful, meant for energy and scientific purposes. But Western powers have long suspected Iran wants nuclear weapons capability.

Subject: Scott Pruitt Will End EPA's Use Of 'Secret Science' To Justify Regulations

The Daily Caller

Scott Pruitt Will End EPA's Use Of 'Secret Science' To Justify Regulations

Michael Bastasch

March 19, 2018

<http://dailycaller.com/2018/03/19/epa-scott-pruitt-secret-science/>

Environmental Protection Agency (EPA) Administrator Scott Pruitt will soon end his agency's use of "secret science" to craft regulations.

"We need to make sure their data and methodology are published as part of the record," Pruitt said in an exclusive interview with The Daily Caller News Foundation. "Otherwise, it's not transparent. It's not objectively measured, and that's important."

Pruitt will reverse long-standing EPA policy allowing regulators to rely on non-public scientific data in crafting rules. Such studies have been used to justify tens of billions of dollars worth of regulations.

EPA regulators would only be allowed to consider scientific studies that make their data available for public scrutiny under Pruitt's new policy. Also, EPA-funded studies would need to make all their data public.

"When we do contract that science out, sometimes the findings are published; we make that part of our rule-making processes, but then we don't publish the methodology and data that went into those findings because the third party who did the study won't give it to us," Pruitt added.

“And we’ve said that’s fine — we’re changing that as well,” Pruitt told TheDCNF.

Conservatives have long criticized EPA for relying on scientific studies that published their findings but not the underlying data. However, Democrats and environmental activists have challenged past attempts to bring transparency to studies used in rule making.

Texas Republican Rep. Lamar Smith pushed legislation to end the use of what he calls “secret science” at EPA. Pruitt instituted another policy in 2017 backed by Smith against EPA-funded scientists serving on agency advisory boards.

“If we use a third party to engage in scientific review or inquiry, and that’s the basis of rulemaking, you and every American citizen across the country deserve to know what’s the data, what’s the methodology that was used to reach that conclusion that was the underpinning of what — rules that were adopted by this agency,” Pruitt explained.

Pruitt’s pending science transparency policy mirrors Smith’s HONEST Act, which passed the House in March 2017. Smith’s office was pleased to hear Pruitt was adopting another policy the House Committee on Science, Space and Technology chairman championed.

“The chairman has long worked toward a more open and transparent rule-making process at EPA, and he looks forward to any announcement from Administrator Pruitt that would achieve that goal,” committee spokeswoman Thea McDonald told TheDCNF.

Junk science crusader Steve Milloy also called on EPA to end its use of “secret science” in rule making, especially when it comes to studies on the toxicity of fine particulates in the air.

EPA has primarily relied on two 1990s studies linking fine particulate pollution to premature death. Neither studies have made their data public, but EPA used their findings to justify sweeping air quality regulations.

Reported benefits from EPA rules are “mostly attributable to the reduction in public exposure to fine particulate matter,” according to the White House Office of Management and Budget report. That’s equivalent to billions of dollars.

In fact, one of EPA’s most expensive regulation on the books, called MATS, derived most of its estimated benefits from reducing particulates not from reducing mercury, which the rule was ostensibly crafted to address.

EPA estimated MATS would cost \$8.2 billion but yield between \$28 billion to \$77 billion in public health benefits. It’s a similar story for the Clean Power Plan, which EPA estimated would cost \$8.4 billion and yield from \$14 billion to \$34 billion in health and climate benefits.

Democrats and environmentalists have largely opposed attempts to require EPA rely on transparent scientific data. Said data would restrict the amount of studies EPA can use, but a major objection is making data public would reveal confidential patient data, opponents argue.

“A lot of the data that EPA uses to protect public health and ensure that we have clean air and clean water relies on data that cannot be publicly released,” Union of Concerned Scientists representative Yogin Kothari told E&E News.

“It really hamstrings the ability of the EPA to do anything, to fulfill its mission,” Kothari said.

Milloy, however, countered and argued it’s a “red herring” to claim that forcing regulators to use public science data would harm patient privacy.

“The availability of such data sets is nothing new,” said Milloy, publisher of JunkScience.com and senior fellow at the Energy and Environmental Legal Institute.

“The state of California, for example, makes such data available under the moniker, ‘Public Use Death Files,’” Milloy said. “We used such data in the form of over two million anonymized death certificates in our recent California study on particulates and death.”

“Opponents of data transparency are just trying to hide the data from independent scrutiny,” Milloy added. “But the studies that use this data are taxpayer-financed, and they are used to regulate the public.”

Subject: Morning Energy: How 'the swamp' could overtake West Virginia's primary — Groups react to EPA's proposed 'secret science' rule — API to tap Mike Sommers

By Kelsey Tamborrino | 05/01/2018 06:01 AM EDT

With help from Garrett Ross

HOW 'THE SWAMP' COULD OVERTAKE WEST VIRGINIA'S PRIMARY: West Virginia Attorney General Patrick Morrisey may be touting himself in the GOP Senate primary as a Washington outsider who wants to "blow up" D.C., but his opponents are dragging him through the muddy swamp. "Morrisey got filthy rich in the swamp lobbying for special interests," says the narrator of one of his opponent Rep. Evan Jenkins' ads, Pro's Theodoric Meyer reports. And while Morrisey, who's hoping to take on Democratic Sen. Joe Manchin this fall, has so far weathered the attacks and continues to do well in public polling, the May 8 vote will ultimately test whether GOP voters are willing to send a former lobbyist to Washington.

"Morrisey's self-described 'outsider' rhetoric cloaks an insider record: Before he was elected attorney general, Morrisey spent eight years as a Washington lobbyist, and the influence industry has fueled his campaign with hundreds of thousands of dollars in contributions," Theo writes. "It's going to be challenging, because the word 'lobbyist' has such negative connotations," said Cam Savage, a Republican operative who helped run Sen. Todd Young's successful 2016 campaign against former Democratic Sen. Evan Bayh, whose work for a Washington law and lobbying firm hindered his campaign. Read more.

IN THE OTHER CORNER of the Republican primary sits coal baron Don Blankenship, who spent a year in prison following the 2010 explosion at his Upper Big Branch Mine that killed 29 workers and who continues to escalate his attacks against Senate Majority Leader Mitch McConnell, POLITICO's Alex Isenstadt reports. The Senate hopeful is out with a new ad that dubs McConnell "Cocaine Mitch" as polls show Blankenship falling behind his more mainstream opponents. "One of my goals as U.S. senator will be to ditch Cocaine Mitch," Blankenship says toward the end of the new ad, possibly referring to a 2014 report in the liberal Nation magazine that drugs were once found aboard a shipping vessel owned by the family of McConnell's wife, Transportation Secretary Elaine Chao, Alex reports.

WELCOME TO TUESDAY! I'm your host Kelsey Tamborrino. BP America's Bob Stout was the first to correctly guess that former President Calvin Coolidge was the first president to attend the White House Correspondents' Dinner. For today: Which president brought the first professional baseball team to the White House to visit? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter @kelseytam, @Morning_Energy and @POLITICOPro.

POLITICO's Ben White is bringing Morning Money to the Milken Institute Global Conference to provide coverage of the day's events and evening happenings. The newsletter will run April 29 - May 2. Sign up to keep up with your daily conference coverage.

WHILE CONGRESS IS AWAY, THE CONFERENCES WILL PLAY: The National Hydropower Association continues its Waterpower Week in Washington today with remarks from FERC Chairman Kevin McIntyre and Thomas Smith, chief of operations and regulatory division for the U.S. Army Corps of Engineers. McIntyre will discuss the "global frontiers of waterpower," providing an update on FERC's

hydropower activities and his perspective on the industry's future. Smith will deliver remarks during the presidential luncheon this afternoon, alongside Herbie Johnson, hydro general manager at the Southern Company. The annual conference is tied to three co-located conferences, including the NHA conference, the International Marine Renewable Energy Conference and the Marine Energy Technology Symposium.

— **The Solar Summit 2018 also kicks off today in San Diego**, where Abigail Ross Hopper, president and CEO of the Solar Energy Industries Association, will discuss solar in the Trump era, with a focus on the corporate tax reform, Section 201 and other macro-level risks. Hopper will be joined on stage by Avangrid Renewables' Laura Beane and Charlie Gray, director of the Solar Energy Technologies Office at DOE's Office of Energy Efficiency & Renewable Energy.

A LOAN IN THE SUN: Coinciding with the solar conference, GTM Research is out with a new report this morning on U.S. residential solar financing. The report found that last year was the first year since 2011 when more systems have been purchased with cash and loans (59 percent) than with leases and power purchase agreements (41 percent). That's in part due to the availability of loan products, as well as a shortage of third-party ownership suppliers, and Tesla and Vivint's move away from third-party ownership, the GTM report found.

The report also said that competition has intensified in solar loans, with various solar-specific loan providers, traditional banks and credit unions entering the realm. The increased competition has led to "uber-competitive rates and therefore compressed margins, leaving questions about the financial health and long-term viability of many of these loan providers," a summary of the report said.

RULE REACTIONS: EPA is moving full-speed ahead in its controversial scientific policy that would exclude the use of studies that don't publicly disclose all data. The agency published the proposed rule in the Federal Register on Monday, kicking into gear a 30-day comment period. And already, several groups have come forward to oppose the policy, laying out what they see as the policy's adverse effects — and calling for more consideration before any formal change.

— **The Union of Concerned Scientists** — which sent a letter signed by more than 1,000 scientists to EPA Administrator Scott Pruitt last week asking him to reverse course prior to the rule's announcement — plans to send another urging for the comment period to be extended a minimum of 60 days and calling for the agency to hold three public hearings across the U.S. to receive additional input. "The current timeframe and lack of opportunities for engagement are wholly inadequate and will not allow for thorough public input of this proposed rule and its impact on science-based health and environmental safeguards." Read the letter here.

— **A group of scientific journals** released a joint statement saying that the proposal "does not strengthen policies based on scientific evidence to limit the scientific evidence that can inform them; rather, it is paramount that the full suite of relevant science vetted through peer review, which includes ever more rigorous features, inform the landscape of decision making. Excluding relevant studies simply because they do not meet rigid transparency standards will adversely affect decision-making processes."

A SOMMERS DAY: The American Petroleum Institute is expected to tap Mike Sommers to replace Jack Gerard to lead the oil and gas industry lobbying group, two sources tell POLITICO's Emily Holden and Eric Wolff. Sommers was former House Speaker John Boehner's chief of staff and has since spent two years leading the American Investment Council, a private equity trade group. Gerard announced earlier this year that he would step down in August. Read more.

TRUMP GRANTS TARIFF EXTENSION FOR SOME: The president extended a temporary exemption by one month for Canada, Mexico and the European Union from heavily watched steel and aluminum tariffs, the White House announced Monday. The move gives the key U.S. allies until June 1 to reach a deal with the administration to avoid the tariffs of 25 percent on steel and 10 percent on aluminum exports sent to the United

States. The tariffs were slated to take effect at 12:01 a.m. today if President Donald Trump had not moved to extend the deadline, POLITICO's Megan Cassella [reports](#).

WHISTLEBLOWER SAYS PRUITT LIED: Kevin Chmielewski, the former deputy chief of staff for operations at EPA, told ABC News Pruitt was telling a "bold-faced" lie last week when he testified to lawmakers that none of his employees were retaliated against for raising concerns about his spending decisions. Chmielewski, who was dismissed and is now acting as a whistleblower, told ABC that chief of staff Ryan Jackson called him into his office and said: "Hey — Administrator Pruitt either wants me to fire you or put you in an office so that he doesn't have to see you again." Chmielewski added: "And in addition to that, he wants to put Millan (Hupp) in your spot, as your title and your pay grade."

EPA declined to comment to ABC in response to Chmielewski's allegations, but the outlet said it obtained a personnel form filled out by EPA human resources officials that said Chmielewski resigned on March 17. "The form is not signed by Chmielewski, who says he was actually forced to leave a month before that date," ABC writes. [Read more.](#)

DEMOCRATS PRESS PRUITT ON TESTIMONY: Separately, Democratic Reps. [Doris Matsui](#) and [Paul Tonko](#) sent a letter Monday calling out a different aspect of Pruitt's testimony last week before Congress. The pair point to a contradiction between Pruitt's remarks and reports that the administration has [drafted](#) a proposed rulemaking to block California's waiver authority to set stricter standards for light-duty vehicles. "If true, these reports directly contradict your testimony last week. As you were reminded at the start of that hearing, it is a violation of the law to knowingly make false statements to a Congressional committee," Matsui and Tonko write in a letter to Pruitt. Asked last week about whether he would revoke California's special Clean Air Act waiver, Pruitt [told lawmakers](#) "not at present." The lawmakers requested Monday that Pruitt provide all documentation related to the development of the notice of proposed rulemaking by Friday. [Read the letter here.](#)

SAGE SUIT: Conservation groups are suing the Trump administration over policies that they say would "adversely impact essential habitats and populations" for the greater sage grouse. The lawsuit, filed in the U.S. District Court in Boise, concerns Interior Department's oil and gas lease auctions in Nevada, Utah, Montana, Wyoming and Idaho — and calls on the court to reverse the sales. "There's no scientific or legal support behind these policies, and no public support for them either," said Michael Saul, a senior attorney at the Center for Biological Diversity. "They're clearly intended to make fossil fuel development the dominant use of public land, and that's illegal." [Read the complaint.](#)

DOE 'ENCOURAGED' BY PJM MOVE: The Energy Department said it was "encouraged" by news Monday that PJM Interconnection [will perform](#) "stress tests" on different parts of the grid to identify fuel supply vulnerabilities. "PJM's concerns are consistent with what DOE, NERC, and others have been saying for years: premature retirements of fuel-secure resources are putting the future of our nation's electric grid at risk, and that undermines our national security," DOE press secretary Shaylyn Hynes said in a statement. DOE urges the regulatory agency "to take immediate action to stop the loss of fuel-secure capacity," Hynes said, adding that DOE continues to review all of its options within its authority to ensure a resilient grid. Recently, Energy Secretary Rick Perry [has considered](#) invoking the 1950 Defense Production Act to keep money-losing power plants running by designating them as crucial for national security.

BY PROXY: A new report from the American Council for Capital Formation out today found that proxy advisory firms — which advise shareholders on how to assess and vote on company plans — are operating with minimal oversight and are moving toward an increasingly activist stance on issues relating to the environment, as well as social and political issues. The report, titled "The Conflicted Role of Proxy Advisors," examines the impact such proxy firms have on major policies at most publicly traded companies. [Read it here.](#)

FIRST OFFICIAL DAY ON THE JOB: Today is Secretary of State Mike Pompeo's first full day in Foggy Bottom, where he will deliver a speech to introduce himself to the department. POLITICO's Nahal Toosi breaks

down the differences between Pompeo and his predecessor and former Exxon Mobil CEO Rex Tillerson [here](#). But keep an ear out for any climate mentions, as diplomats and environmentalists [gather](#) today in Bonn, Germany, to work out the kinks of the Paris climate agreement. Greens have hit Pompeo as a climate science doubter, while others like Competitive Enterprise Institute's Myron Ebell have said the Kansas Republican will be a "forceful advocate" of Trump's decision to exit the Paris accord.

A PENNY FOR YOUR FREETHOUGHT CAUCUS: Democratic Reps. [Jared Huffman](#), [Jamie Raskin](#), [Jerry McNerney](#) and [Dan Kildee](#) launched the Congressional Freethought Caucus on Monday "to promote sound public policy based on reason, science, and moral values, protect the secular character of our government, and champion the value of freedom of thought worldwide." In a [statement](#), Huffman said the caucus "will help spark an open dialogue about science and reason-based policy solutions."

PAY THE PRICE: The New York Independent System Operator and state policymakers released [a draft plan](#) on Monday to price carbon as part of the electric system, [Pro New York's Marie French](#) reports. The move comes as an early step toward addressing the impact of state subsidies for renewables and nuclear power on the competitive market. "Under the proposal, a social cost of carbon set by state regulators would be added on to regional energy prices," Marie writes. Read [more](#).

MAIL CALL! A coalition of more than 160 groups sent a letter to Interior Secretary Ryan Zinke on Monday in opposition to the department's [proposal](#) to rescind the "blanket rule" the U.S. Fish and Wildlife Service used to extend protections for endangered species. Read the [letter](#).

— **Oregon Sens. [Ron Wyden](#) and [Jeff Merkley](#)** and Reps. [Earl Blumenauer](#), [Peter DeFazio](#), [Suzanne Bonamici](#) and [Kurt Schrader](#) sent a letter Monday to Office of Management and Budget Director Mick Mulvaney and Assistant Army Secretary R.D. James., requesting federal officials support a flood protection feasibility study for Portland. Read it [here](#).

MOVER, SHAKER: The White House is expected to tap California agriculture attorney Michael Stoker to lead EPA's San Francisco-based Region 9 office, [sources tell E&E News](#). The regional office is the only one to which Trump has not appointed a leader.

A NEW LOOK: Trade association the American Exploration & Production Council is launching today a [new website](#) and [Twitter](#) and [Facebook](#) accounts. The new website will include videos, fact sheets, info-graphics and issue pages.

Stories from POLITICO Pro

Lobbyists fuel lobbyist-turned-'outsider' Senate candidate Back

By Theodoric Meyer | 05/01/2018 05:00 AM EDT

West Virginia Attorney General Patrick Morrisey has gone a notch above pledging to "drain the swamp" during his Senate campaign. "Let's not just change Washington; let's blow it up," Morrisey says in an early TV ad, as he drops a mountain on the Capitol dome.

But Morrisey's self-described "outsider" rhetoric cloaks an insider record: Before he was elected attorney general, Morrisey spent eight years as a Washington lobbyist, and the influence industry has fueled his campaign with hundreds of thousands of dollars in contributions. Morrisey's wife is also a lobbyist, and their work in D.C. has been the subject of unforgiving attacks from both of Morrisey's opponents in the Republican Senate primary.

"Morrisey got filthy rich in the swamp lobbying for special interests," the narrator says in one of Rep. Evan Jenkins' commercials.

Morrisey has weathered the attacks, leading the field or running a close second in recent public polls of the Republican primary to take on Democrat Joe Manchin, one of the most vulnerable senators up for reelection this year. The race has attracted national attention as Washington Republicans attempt to derail the candidacy of Don Blankenship, the former coal-mining executive who spent a year in prison for his role in a mine explosion that killed 29 men. But next week's primary will also test whether GOP voters are willing to send a former lobbyist to Washington, despite President Donald Trump's vow to curb K Street's influence.

"It's going to be challenging, because the word 'lobbyist' has such negative connotations," said Cam Savage, a Republican operative who helped run Sen. Todd Young's (R-Ind.) successful 2016 campaign against former Democratic Sen. Evan Bayh, whose work for a Washington law and lobbying firm hindered his campaign.

While Morrisey has tried to deflect attention away from his lobbying past, he has embraced it behind the scenes. Morrisey's campaign raised more than \$250,000 from more than 200 current and former registered lobbyists through March 31, according to a POLITICO review of campaign finance records — accounting for nearly 20 percent of his individual donations.

Morrisey has raised even more from corporate and lobbying firm PACs, as well as from people who aren't registered lobbyists but clearly work in Washington's influence industry, such as former Rep. Mike Ferguson (R-N.J.), who heads BakerHostetler's federal policy team but isn't registered as a lobbyist. Of the \$250,000, roughly \$167,000 of it comes from lobbyists who are currently registered.

Many of Morrisey's lobbyist contributors work for health care and pharmaceutical interests, which Morrisey represented during his own years on K Street. They include Rodger Currie, the top lobbyist for Pharmaceutical

Research and Manufacturers of America, the powerful trade group for drug companies, who wrote Morrisey's campaign a \$2,000 check in December.

Former Rep. David Jolly (R-Fla.), a former lobbyist elected in 2014, said his lobbying background "was definitely an issue that my opponents tried to use to define me" in the race. He was able to overcome those attacks, he said, because he hadn't lobbied for clients that voters found objectionable.

Morrisey represented about 30 clients during his time at two Washington firms, Sidley Austin and King & Spalding, including big pharmaceutical companies such as Bayer, Novartis and Novo Nordisk. If Jolly had represented such clients, he said, he might have had a tougher race.

"These are very fair and legitimate questions," Jolly said.

Morrisey has shied away from discussing his lobbying days, instead casting himself as an outsider and conservative in contrast with Jenkins, who used to be a Democratic state legislator.

Morrisey refused to say the word "lobbyist" during a debate last week, even as Jenkins and Blankenship attacked him for lobbying for the pharmaceutical industry — a sensitive subject in a state that's struggling to combat an opiate crisis partly fueled by drug distributors. Asked by the moderators at the end of the debate to clear up a misconception about himself, Morrisey said only that he'd "never worked on opiate issues in the private sector."

Morrisey's campaign website uses similar language, describing him as a former "health care attorney in the private sector."

Jenkins, who's facing Blankenship and Morrisey in the three-way race for the nomination, has raised far less from K Street, even though, as a sitting congressman, he has plenty of opportunity to mingle with lobbyists, too.

A review of Jenkins' campaign finance reports turned up only 10 current and former lobbyists who had given a combined \$20,000 to his campaign since he filed to run last May. Four of them are currently registered. Jenkins has raised much more than Morrisey from corporate PACs: about \$136,000 to Morrisey's \$86,000, according to a POLITICO analysis.

Morrisey's campaign declined to make him available for an interview.

"Patrick Morrisey served as a law partner and practice group co-chair at two of the largest law firms in the country, focusing his practice on health care regulatory matters, legislative issues, compliance, fraud and abuse, administrative law, investigations, and solving client problems," Nachama Soloveichik, a Morrisey campaign spokeswoman, said in an statement.

Preeya Noronha Pinto, a partner at King & Spalding who lobbied alongside Morrisey and gave his campaign \$500 last year, said much of their work involved meeting with administration officials and, occasionally, members of Congress in an effort to get Medicare, Medicaid and other government health care programs to cover new drugs and medical devices developed by their clients. She said she hadn't seen the ad in which Morrisey drops a mountain on the Capitol, but she wasn't surprised he was running a campaign critical of Washington.

"I think everybody in a certain respect, even if they've worked here for years, thinks that D.C. is dysfunctional and there's a lot of room for improvement," Pinto said.

Morrisey's wife, Denise Henry Morrisey, has also been the subject of attacks based on her lobbying work.

"His wife's firm lobbies for Planned Parenthood," the narrator charges in one of Blankenship's TV ads. "The Morrisseys won't stop drug abuse or abortions by lobbying for drug companies and abortion clinics."

Soloveichik, the Morrissey campaign spokeswoman, said Denise Morrissey would stop lobbying if her husband were elected to the Senate. But she declined to say whether Denise Morrissey would give up her stake in Capitol Counsel, a top Washington firm in which she owns a 15 percent stake.

Denise Morrissey agreed to an interview with POLITICO last week but later stopped responding to emails and phone calls.

Savage, the Republican operative who worked as a consultant on Young's campaign in 2016, said it was possible to parry lobbying attacks — but only with willingness to answer questions about it.

Savage managed former GOP Sen. Dan Coats' comeback campaign in Indiana in 2010, when he won back his old seat in 2010 after working as a lobbyist. Savage credited Coats' victory, in part, to his willingness to be forthcoming about his lobbying work.

"The attacks after that kind of fell flat, to be honest with you," Savage said.

Kevin Robillard contributed to this report.

Blankenship slams 'Cocaine Mitch' in anti-McConnell ad [Back](#)

By Alex Isenstadt | 04/30/2018 06:23 PM EDT

West Virginia Senate hopeful Don Blankenship is intensifying his offensive against Majority Leader Mitch McConnell, calling him "Cocaine Mitch" in a new TV ad released just more than a week until the Republican primary.

"One of my goals as U.S. senator will be to ditch Cocaine Mitch," Blankenship says toward the end of the [spot](#), which comes as polls show the coal baron falling behind his more mainstream opponents.

Blankenship, who spent a year in prison following the 2010 explosion at his Upper Big Branch Mine that killed 29 workers, offers no context for the jab. But he may be referring to a 2014 [report](#) in the liberal Nation magazine that drugs were once found aboard a shipping vessel owned by the family of McConnell's wife, Transportation Secretary Elaine Chao.

Blankenship has gone after McConnell in startlingly personal ways. During a recent interview with POLITICO, Blankenship said McConnell "has a lot of connections in China," and that Chao is "from China, so we have to be really concerned that we are in truth" putting America's interests first.

A McConnell representative did not respond to a request for comment.

With the May 8 primary fast approaching, Blankenship has launched a slash-and-burn campaign targeting the Senate GOP leader. Blankenship's offensive comes as polls show him falling behind GOP Rep. Evan Jenkins and state Attorney General Patrick Morrisey in the primary.

McConnell's political operation has moved aggressively to block Blankenship's path. Operatives close to the majority leader, convinced that Blankenship would lose to Democrat Joe Manchin in the November general election, have launched a super PAC that has spent about \$1.3 million on TV ads attacking the coal baron.

One ad from Mountain Families PAC describes Blankenship as a "convicted criminal," who lived a lavish lifestyle while ignoring mine safety laws.

"Don Blankenship was about the money," the spot concludes. "West Virginia families paid the price."

Blankenship slams 'Cocaine Mitch' in anti-McConnell ad [Back](#)

By Alex Isenstadt | 04/30/2018 06:23 PM EDT

West Virginia Senate hopeful Don Blankenship is intensifying his offensive against Majority Leader Mitch McConnell, calling him "Cocaine Mitch" in a new TV ad released just more than a week until the Republican primary.

"One of my goals as U.S. senator will be to ditch Cocaine Mitch," Blankenship says toward the end of the spot, which comes as polls show the coal baron falling behind his more mainstream opponents.

Blankenship, who spent a year in prison following the 2010 explosion at his Upper Big Branch Mine that killed 29 workers, offers no context for the jab. But he may be referring to a 2014 report in the liberal Nation magazine that drugs were once found aboard a shipping vessel owned by the family of McConnell's wife, Transportation Secretary Elaine Chao.

Blankenship has gone after McConnell in startlingly personal ways. During a recent interview with POLITICO, Blankenship said McConnell "has a lot of connections in China," and that Chao is "from China, so we have to be really concerned that we are in truth" putting America's interests first.

A McConnell representative did not respond to a request for comment.

With the May 8 primary fast approaching, Blankenship has launched a slash-and-burn campaign targeting the Senate GOP leader. Blankenship's offensive comes as polls show him falling behind GOP Rep. Evan Jenkins and state Attorney General Patrick Morrisey in the primary.

McConnell's political operation has moved aggressively to block Blankenship's path. Operatives close to the majority leader, convinced that Blankenship would lose to Democrat Joe Manchin in the November general election, have launched a super PAC that has spent about \$1.3 million on TV ads attacking the coal baron.

One ad from Mountain Families PAC describes Blankenship as a "convicted criminal," who lived a lavish lifestyle while ignoring mine safety laws.

"Don Blankenship was about the money," the spot concludes. "West Virginia families paid the price."

Pruitt scales back EPA's use of science [Back](#)

By Emily Holden and Annie Snider | 04/24/2018 03:17 PM EDT

Environmental Protection Agency chief Scott Pruitt announced Tuesday he would seek to bar the agency from relying on studies that don't publicly disclose all their data, a major policy change that has long been sought by conservatives that will sharply reduce the research the agency can rely on when crafting new regulations.

The unveiling of the proposed rule delivers a win to Republicans like House Science Chairman [Lamar Smith](#) (R-Texas), who unsuccessfully pushed legislation to impose the same type of change. The move also demonstrates Pruitt's persistence in pursuing President Donald Trump's anti-regulation agenda just two days before the embattled EPA chief is due to face fierce questioning from lawmakers about his hefty spending, expanded security detail and cheap condominium rental from the wife of an energy lobbyist.

At an invitation-only meeting at EPA headquarters with Smith, Sen. [Mike Rounds](#) (R-S.D.) and other supporters of the policy, Pruitt said the proposed rule was critical in ensuring that the agency was transparent about how it is making decisions to justify costly new regulations. It is the latest step Pruitt has taken to fundamentally shift the agency's approach to science.

"It is a codification of an approach that says as we do our business at the agency the science that we use is going to be transparent, it's going to be reproducible, it's going to be able to be analyzed by those in the marketplace. And those who watch what we do can make informed decisions about whether we've drawn the proper conclusions or not," Pruitt said.

Text of the proposed rule was not immediately available.

The proposal, based on legislation pushed by Smith, is intensely controversial, and scientists and public health groups say it will prevent federal regulators from enacting health and safety protections. Nearly 1,000 scientists, including former EPA career staffers, signed a [letter](#) opposing the policy sent by the Union of Concerned Scientists to Pruitt on Monday.

Their primary concern was that many of the country's bedrock air and water quality regulations are based on research that cannot disclose raw data because it includes the personal health information.

But industry has its own version of the same problem. EPA often relies on industry studies that are considered by companies to be confidential business information when determining whether new pesticides and toxic chemicals are safe to use. Internal EPA emails obtained under the Freedom of Information Act show that EPA political officials, including Nancy Beck, who became the chief of the agency's chemical safety office last year after working for years at a chemical industry lobbying group, worried that the new policy would limit the agency's ability to consider industry data or would force companies to make this proprietary data public.

"We will need to thread this one real tight!" Richard Yamada, political official who led work on the new policy wrote to Beck after she raised the concerns.

It was not immediately clear if the new proposed rule included measures to address those concerns.

Rush Holt, CEO of the American Association for the Advancement of Science, said Pruitt's changes could keep the agency from revising public health regulations as problems arise or new data comes to light.

"On the surface it sounds so innocuous or even beneficial. What could be wrong with transparency? Well it's clear to me that this is not based on an effort to be transparent. It is rather based on an effort to be just the opposite," he said.

"EPA is particularly important because when science is misused, people die," he added.

Pruitt has been discussing the new scientific policy publicly for weeks, but it only went to the White House for interagency review last week. Such swift review is very rare for the Office of Management and Budget, which often takes months to vet a new policy. At least one group, the Environmental Defense Fund, has requested a meeting with OMB officials to discuss the rule, but OMB's website shows that no meetings have been scheduled with interested groups.

Many public health studies can't be replicated without exposing people to contaminants, and environmental disasters such as the Deepwater Horizon oil spill cannot be recreated, the group said, raising intellectual property, proprietary and privacy concerns.

Pruitt's predecessor Gina McCarthy, and her air chief Janet McCabe, in an op-ed in The New York Times in March said concerns about studies are dealt with through the existing peer-review process, which ensures scientific integrity.

"[Pruitt] and some conservative members of Congress are setting up a nonexistent problem in order to prevent the E.P.A. from using the best available science," they said.

API's Gerard to exit on an oil industry winning streak [Back](#)

By Ben Lefebvre | 01/17/2018 06:05 PM EDT

American Petroleum Institute President and CEO Jack Gerard's plan to exit the powerful trade association could signal the end an era for oil industry lobbying.

Gerard notched up a long list of achievements during his 10-year tenure, which coincided with the oil and gas boom that turned the U.S. into the world's largest energy producer. He will step down in August after deciding not to renew his contract, API announced.

Gerard took the helm at the API after leading the American Chemistry Council and the National Mining Association. And he was well compensated, receiving \$6 million in salary and other compensation as of 2015, according to the API's latest tax forms.

During his time atop API, flagging U.S. production rebounded with the advent of fracking and horizontal drilling, allowing energy producers to tap new resources in North Dakota, Appalachia and West Texas. And as overall oil output doubled to nearly 10 million barrels a day, API's membership swelled by 50 percent, to more than 600 companies.

That helped API to expand its reach, and it doled out \$9.4 million on lobbying Washington lawmakers in 2017, quadruple the amount it spent in the year Gerard took the helm.

API helped overturn the decades-old ban on oil exports, open new areas to drilling — including the Arctic National Wildlife Refuge — and win federal approval for the Keystone XL pipeline. And under Gerard, API also introduced the term that would eventually be taken up by President Donald Trump, when in 2012 it called for a "new era of American world energy dominance."

"We've taken the nation from energy scarcity to energy abundance," Gerard said of the industry at the API's annual State of American Energy address in Washington earlier this month.

But he warned at that event that it wasn't time for API to take "a victory lap," as he cited a to-do list that contained little more than continuing a yearslong fight to repeal a biofuels mandate the industry finds burdensome and streamlining the federal permitting process.

"It's hard to say API wasn't successful under his tenure," said John Northington, a former Clinton-era Interior Department official who works as an energy consultant for many API member companies, adding that it delivered much of what the industry wanted to accomplish.

Not all energy industry insiders agreed, however. Some pointed that for an organization with annual revenue of around \$250 million — much of which it spent on advertisements, including one that ran during last year's Super Bowl, or donations to Republicans — the API's influence was limited. Despite a string of recent wins, it hadn't managed to record any progress in altering the decade-old Renewable Fuel Standard for biofuels or ending restrictions under the Jones Act against foreign-flagged ships transporting fuel between U.S. ports.

"They have this ridiculous amount of money, but they don't get a lot of results," said one refining industry source who requested anonymity to discuss the association. "They don't do bad work, but for that kind of money, you expect more."

The API's ranks have also become divided over how to handle growing public concern about the oil and gas industry's role in climate change. The group in 2016 created a task force to massage the industry's environmental image and work Democrats on a potential carbon tax, a policy that drives a wedge between companies like Exxon Mobil, which has supported such a tax, and Chevron, which has opposed it.

An API spokeswoman said it was unknown whether Gerard was retiring or would join another organization. Gerard will help lead the search for a new president and CEO, the spokeswoman added.

One possible replacement for Gerard is API's current executive vice president and chief strategy officer, Marty Durbin. Durbin had been in charge of API's government affairs before departing to become head of the lobby group America's Natural Gas Alliance, which subsequently merged with API.

Other names floated by industry insiders as potential candidates included Mike Sommers, a former chief of staff for former House Speaker John Boehner, now CEO of the American Investment Council; Karen Harbert, head of the U.S. Chamber of Commerce's Global Energy Institute; and former Sen. Blanche Lincoln, an Arkansas Democrat.

An API spokeswoman did not comment on possible candidates.

Sources: API expected to tap Sommers as new chief [Back](#)

By Emily Holden and Eric Wolff | 04/30/2018 04:33 PM EDT

The American Petroleum Institute is expected to tap Mike Sommers, the head of a private equity trade group who worked as a top aide to former House Speaker John Boehner, to replace Jack Gerard at the helm of the powerful oil and gas industry lobby group, according to two sources.

Gerard announced his retirement earlier this year after a decade at the helm of the API, where he notched up a long list of achievements including overturning the decades-old ban on crude oil exports. He will step down in August.

API did not reply to a request for comment.

The oil and gas industry has so far gotten strong support from the Trump administration, which has moved to open the Arctic National Wildlife Refuge to exploration, is considering making wide swathes of coastal waters available to the industry, and last week said it would roll back some Obama offshore drilling rules.

But API has urged the White House to scrap its steel and aluminum tariffs, and to keep core provisions of NAFTA in place as it negotiates an update to the trade agreement.

Sommers, who was Boehner's chief of staff, has led the American Investment Council for two years, a position that kept him close to Arclight Capital Partners, The Blackstone Group, EnCap Investments and other firms that have invested heavily in energy projects. He also served as an aide to former President George W. Bush in 2005 at the National Economic Council working on agriculture, trade and food policy.

Barry Worthington, CEO of the United States Energy Association, which brings together public and private organizations, corporations and government agencies, said he'd been told Sommers would succeed Gerard.

"Jack Gerard is going to be a tough act to follow," he said.

Gerard was also one of the best-paid lobbyists in Washington, D.C. He received \$5 million in direct compensation from API, plus another \$1.2 million in perks in 2015, according to the group's latest IRS forms.

Marianne Levine and Ben Lefebvre contributed to this report.

Trump grants key U.S. allies an extra month of tariff relief [Back](#)

By Megan Cassella | 04/30/2018 05:57 PM EDT

President Donald Trump has decided to extend by one month a temporary exemption from steel and aluminum tariffs for Canada, Mexico and the European Union, the White House announced Monday evening.

The move gives key allies — and three of the U.S.' four largest trading partners — until June 1 to reach some sort of deal with the Trump administration to avoid duties of 25 percent on steel and 10 percent on aluminum exports sent to the United States. The tariffs had been set to take effect at 12:01 a.m. Tuesday if Trump had not moved to extend the deadline.

The administration has also reached preliminary agreements with three other countries that had initially been granted a temporary exemption — Argentina, Brazil and Australia — allowing them to escape the duties as details are finalized over the next 30 days, the White House said. Trump did not set a deadline for those details to be worked out but said he would consider reimposing the tariffs if the agreements are not finalized "shortly."

One other country, South Korea, had already reached a preliminary deal for a permanent exemption from the steel tariffs because it agreed to cap its exports to the U.S. at 70 percent of the average export volume over the previous three years. Trump's official proclamation said the administration will monitor the implementation and effectiveness of that quota and left room for Trump to "revisit" his decision if needed.

"In all of these negotiations, the administration is focused on quotas that will restrain imports, prevent transshipment, and protect the national security," the White House said in its declaration. "These agreements underscore the Trump administration's successful strategy to reach fair outcomes with allies to protect our national security and address global challenges to the steel and aluminum industries."

The declaration brings some clarity to a decision-making process that until the official release left key allies wondering whether they would beginning Tuesday face penalties sure to roil international markets and disrupt global supply chains. Few people inside the White House or overseas had been sure of what or even when Trump would decide.

Imposing the duties would also have affected foreign steel industries that depend on access to the U.S. market. Canada and Mexico both send more than half of their steel produced annually into the United States, while the 28 nations of the EU together serve as the largest single supplier of steel to the U.S.

Of \$29.1 billion worth of steel that the United States imported last year, \$6.2 billion came from the 28 nations of the EU and \$2.9 billion from other European countries. About \$5.1 billion came from Canada, \$2.8 billion from South Korea, \$2.5 billion from Mexico, \$1.6 billion from Japan, \$1.4 billion from Russia and just \$976 million from China.

A U.K. government spokesperson called the extension "positive" and said EU countries would continue to work to reach a permanent solution.

"We remain concerned about the impact of these tariffs on global trade and will continue to work with the EU on a multilateral solution to the global problem of overcapacity, as well as to manage the impact on domestic markets," the spokesperson said in a statement Monday night.

Although the move grants some of the United States' closest allies another month to work out a deal, it remains unclear what sort of concessions would satisfy Trump and his administration.

Commerce Secretary Wilbur Ross and other administration officials have said in recent days that countries would have to choose between either quotas or tariffs — but the EU, Canada and Mexico have said they expect a full exemption without having to agree to such restrictions.

"We're busy alienating the few friends we have left," said Bill Reinsch, a senior adviser at the Center for Strategic and International Studies. "The president clearly, on trade issues, doesn't make a distinction between the good guys and the bad guys. If you're not doing exactly what he wants, you're a bad guy by definition — and nothing else counts."

The process of deciding on the exclusions and exemptions has been chaotic since the departure of former White House staff secretary Rob Porter, who was heavily invested in trade policy and making sure that differing viewpoints were included in the decision-making process.

U.S. Trade Representative Robert Lighthizer, meanwhile, has had myriad policy questions on his plate, including the ongoing NAFTA talks and his upcoming trip to China later this week to talk trade.

With any final decision still up in the air, some nations have indicated exactly how they will retaliate if and when Trump does impose the tariffs. The European Union last month generated a list of U.S. exports ranging from peanut butter to lipstick and yachts that would face punitive 25 percent duties on their way into the European market if Brussels is not spared. The EU's list, which is valued at roughly \$3.4 billion, is largely comprised of products from Republican states and districts that would bear the brunt of the tariff impact.

At the same time, European nations have also been working among themselves and with the United States to strike a compromise. German Chancellor Angela Merkel and French President Emmanuel Macron both traveled to the White House last week to talk face-to-face about the issue with Trump, who is still toying with the decision.

Merkel and Macron both spoke over the weekend with U.K. Prime Minister Theresa May about the "vital importance" of Europe's steel and aluminum industries and pledged to work together with the rest of the EU to push for a compromise and a permanent exemption.

To that end, EU Trade Commissioner Cecilia Malmström also spoke again over the phone on Monday with Ross.

Tensions are similarly high with Canada and Mexico, who are in intensive trade negotiations with the United States to update NAFTA.

Both countries have repeatedly made clear that they expect to be granted a full, permanent exemption from the tariffs without having to agree to quotas or any other restrictions. But their temporary reprieve was contingent upon a successful completion of the NAFTA rewrite — and with that deal still at least a week away, it remains unclear whether Trump will make the exemption permanent or at least extend it on a temporary basis while negotiations continue.

For either of the U.S. neighbors, imposition of the duties would ratchet up trade tensions at a time when all three countries are working to wrap up a NAFTA negotiation that has already been technically and politically difficult.

"Obviously, Lighthizer knows very clearly our position and how we have to react if any measure is imposed," Mexican Economy Secretary Ildefonso Guajardo said Friday during a visit to Washington to talk NAFTA. "I have been very clear that in this context a quota on steel won't be the best way to go."

If the tariffs do go ultimately into effect for any of the countries involved, a key question will be whether Trump will ratchet up the pressure again after the countries inevitably retaliate, Reinsch said.

"We act, they act, that's round one. The question will be, is [Trump] then going to start round two?" he said, noting that one round of tit-for-tat is "not that unusual" but that two would be more remarkable. "I think the trade war starts in round two."

Nancy Cook and Jakob Hanke contributed to this report.

Source: EPA draft would halt auto standards at 2021 levels, block California authority [Back](#)

By Alex Guillén | 04/27/2018 06:28 PM EDT

A draft proposal from EPA would freeze auto emissions standards after model year 2021 and seek to block California's ability to enact its own more stringent regulations, according to a source familiar with the draft.

The text of the draft is still reportedly in flux, but if ultimately finalized, it would erase half a decade's worth of the Obama administration's much-touted emissions savings, handing a major win to the oil industry. It would also set up a nasty legal fight with California that many legal experts believe the state could win.

The Los Angeles Times first reported on the draft plan today.

EPA Administrator Scott Pruitt on Thursday told a House Energy and Commerce subcommittee that he did "not at present" have any plans to try to revoke California's Clean Air Act waiver to enforce more stringent standards.

"It's important that we work together to achieve, as was indicated earlier, a national standard," Pruitt added.

Automakers successfully lobbied the Trump administration to revisit the 2022-2025 standards — although most indicated they simply wanted more flexibility to reach the ultimate emissions goals in 2025. They had complained it would be difficult to meet the Obama administration's goals that would have ultimately lifted the average fuel economy target for the nation's fleet of cars and light trucks to 55 miles per gallon by 2025.

Industry trade groups and individual automakers have also cautioned that a single national standard is preferable to a regulatory patchwork of rules.

WHAT'S NEXT: EPA reportedly will send the proposal to the White House for review in the near future. The agency is working alongside the National Highway Traffic Safety Administration, which is writing its own separate but related fuel economy rules for 2022-2025 vehicles.

Pruitt: EPA not going after California's waiver 'at present' [Back](#)

By Anthony Adragna | 04/26/2018 12:04 PM EDT

EPA Administrator Scott Pruitt said today his agency is "not at present" attempting to undo California's special Clean Air Act waiver allowing the state to set stricter emissions levels for vehicles.

"It's important that we work together to achieve, as was indicated earlier, a national standard," Pruitt said at a House Energy and Commerce subcommittee hearing this morning. "We are working very diligently and diplomatically with California to find answers on this issue."

California officials have warned they would diligently challenge any effort by the Trump administration to go after the waiver.

PJM to probe fuel supply vulnerabilities [Back](#)

By Eric Wolff | 04/30/2018 11:08 AM EDT

PJM Interconnection said today it would seek to identify any fuel supply vulnerabilities in its grid and design market tools to increase resilience, a move that appears designed to head off Energy Secretary Rick Perry's effort to bail out coal-fired and nuclear power plants.

PJM says in a report out today it will run models to "stress test" different parts of the grid to see if fuel security could be compromised under different circumstances. If it finds risks of fuel constraints, it would consider allowing different prices for power from generators that are better able to hedge against fuel problems.

"As is the case with reliability standards, PJM believes the most effective way to address fuel security is to define and establish fuel security criteria and then use market forces to allow all resources to compete to meet those criteria," the report says.

The report's biggest concern appears to be a grid dominated by natural gas, since cold weather can increase demand for home heating and constrain gas supplies. The report makes only one mention of renewables.

PJM has consistently opposed efforts by DOE to exercise emergency authority under either the Federal Power Act or the Defense Production Act to directly subsidize coal or nuclear power plants struggling in the face of low cost power from natural gas and renewables.

Perry's latest bid to help coal faces uphill battle [Back](#)

By Eric Wolff | 04/25/2018 05:08 AM EDT

Energy Secretary Rick Perry's latest idea to protect coal-fired and nuclear power plants may not fare much better than his previous efforts, according to energy experts.

Perry is considering invoking the 1950 Defense Production Act to keep money-losing power plants running by designating them as crucial for national security. But that would stretch the definition of the law and almost certainly draw legal challenges — and it would hit a big hurdle in Congress, which would need to approve perhaps billions of dollars in funding to keep the plants afloat, the experts said.

At the urging of President Donald Trump, Perry has sought to keep open coal and nuclear power plants that are threatened with shutdowns amid the stagnant demand for power — and even as natural gas and renewable power sources grab a growing share of the market.

So far, Perry's had no luck. FERC earlier this year rejected his proposal to give the plants financial support, and Energy Department lawyers stymied a push last year to invoke the agency's authority under the Federal Power Act to force the plants to run.

Some experts said any attempt to use the DPA is likely to meet the same fate.

"To me, it's a tough argument to make. It's a specious argument on its surface that seems like a perversion of the intended use of the Defense Production Act," said Tom Hicks, a former acting undersecretary of the Navy under

former President Barack Obama and now a principal at the advisory firm The Mabus Group. "Defense Production Act is on the vanguard of the need for resources, not on the back end for an industry being challenged by economic forces."

But the effort has been a priority for Trump and Perry, who sees saving coal-fired power generation as vital to U.S. security, according to a source familiar with the conversations on the issue.

The Cold War-era law grants the federal government powerful authorities to inject cash into companies essential for national defense in order to preserve domestic supplies of key products. But DOE will have to make the case that electricity produced specifically from coal and nuclear power plants, and not other types of power, is a critical resource.

Using the act to protect the plants when there appeared to be no immediate shortage of power supplies would be a novel application that would almost certainly face legal challenge.

"If the administration uses DPA, they're going to be using it very creatively," said Ari Peskoe, director of the Electricity Law Initiative at the Harvard Law School Environmental and Energy Law Program. "They may come up with reasoning for higher rates and who's going to pay for it. Whether that will hold up, I don't know."

Perry and his staff appear to have very few viable options for bailing out coal and nuclear power, a major energy priority for Trump, who has promised to revive the coal industry. DOE has opened a comments process for interested parties to weigh in on its use of the Federal Power Act's 202(c) emergency provisions, though that would require the agency to go through FERC, which unanimously rejected a similar Perry effort in January.

The 202(c) effort has been pushed by coal magnate Bob Murray, owner of Murray Energy, and by FirstEnergy Solutions, the unit of FirstEnergy Corp. that is in bankruptcy proceedings and which expects to shut down four coal and nuclear power plants. That company asked DOE to use the emergency authority to save not only its plants, but all 85 coal and nuclear power plants in the PJM Interconnection power market.

The DPA was last used by the Obama administration starting in 2012 to help spur the biofuels industry to develop the kind of advanced biofuels that could power ships and aircraft. The government can purchase capital equipment for the cause of national security, and it can fund advertising to support the effort.

And it allows the government to become the buyer of last resort, which could put Washington on the hook to buy excess power generated by coal and nuclear plants. Technically, this electricity could only be purchased at the "cost of production," a level that in the past has been determined by a team within the Defense Department.

While no hard estimate for the cost of a DPA subsidy exists, consultants analyzing Perry's previous bailout proposal estimated costs between \$4 billion and \$10.6 billion annually.

That's a far higher level than Congress typically allocates for the DPA. It provided \$67.4 million in the omnibus passed in March, H.R. 1625 (115), down slightly from the \$76 million it provided for all projects in 2017, according to a report submitted to Congress.

And Congress — and the Republican Party — is deeply divided on using government subsidies to save these plants. Rep. David McKinley (R-W.Va.) has some allies from other coal districts for the effort, but other free market-oriented lawmakers like Rep. Pete Olson (R-Texas) say they want to see markets function unimpeded.

McKinley's staff has been in touch with DOE and the White House, as has West Virginia Sen. Joe Manchin (D).

"I think it's an emergency national concern for the national defense of our country. I think Rick Perry agrees with it, and I think the president does also," Manchin told POLITICO.

PJM has itself said the retirement of FirstEnergy's coal plants did not pose a threat to the region's power supplies, and that it had ample generation to meet demand. It has opposed any effort to mandate to require the plants to stay online.

"We believe that a market-oriented approach consistent with the American free-enterprise system offers better results than government-mandated subsidies," said PJM spokesman Jeff Shields.

Anthony Adragna contributed to this report.

Chatty Pompeo strikes early contrast with reclusive Tillerson [Back](#)

By Nahal Toosi | 04/30/2018 06:11 PM EDT

Mike Pompeo, the new secretary of state, is leaning hard into the side of the job his predecessor seemed to hate the most: public relations.

Within hours of being confirmed last week, Pompeo took along several journalists on a trip to Europe and the Middle East, answering their questions in public and private, and appearing Sunday on ABC News' "This Week." He's planning a town hall meeting with State Department staff soon. And he may even start tweeting.

The moves are in many ways a return to tradition for a secretary of state, a high-profile position where words are the most powerful tool. But they stand in marked contrast to the man Pompeo replaced, Rex Tillerson, whose early lack of visibility caused lingering damage to his reputation inside the Trump administration and beyond.

"It signals that, unlike Tillerson, Pompeo recognizes some of the basic things he needs to do to make the State Department relevant," said Ilan Goldenberg, a former Obama-era State official now with the Center for a New American Security. "By itself, it won't make Pompeo an effective secretary of state. But not doing these things really hurt Tillerson."

On Tuesday afternoon, his first full day in Foggy Bottom itself, Pompeo will deliver a speech introducing himself to the department. Staffers and journalists won't be the only ones listening; foreign diplomats will also parse Pompeo's words carefully.

Tillerson, too, gave a well-received speech his first full day on the job. But for months afterward, he almost seemed to have taken a vow of silence.

He refused to engage reporters, didn't hold a town hall until three months in and had no social media presence. U.S. diplomats soon found themselves aimless, lacking guidance from Tillerson and his small coterie of advisers. Veteran NBC News reporter Andrea Mitchell took to loudly asking questions of a silent Tillerson during his public appearances, videos of which went viral. The department's daily press briefing, a decades-old

tradition, was put on ice for nearly two months. Under pressure, Tillerson brought it back, but in a scaled back format. Headlines asked: "Where's Rex?"

Tillerson puzzled a foreign policy establishment used to secretaries of state — including Hillary Clinton and John Kerry — who sought, rather than shunned, public attention. Many State Department staffers came to see Tillerson as isolated and aloof. And foreign leaders who concluded he was ineffectual and out of the loop engaged directly with the White House instead.

Tillerson greatly increased his visibility in the second half of his 14-month tenure, but the damage was done. Trump fired Tillerson in mid-March.

The difference between Tillerson and Pompeo might be explained, in part, by their respective backgrounds: Tillerson had previously been a taciturn CEO of ExxonMobil, Pompeo a pugnacious congressman from Kansas.

"His background as a congressman is a great asset in his current position," said Brett Schaefer, a foreign policy analyst with the conservative Heritage Foundation. "He has a great deal of experience in interacting with a broad number of people and doing so in a way that is designed to listen to their concerns and respond to them."

Pompeo has also pledged to stay in close touch with his former colleagues in Congress. Tillerson drew criticism for being slow to respond to lawmakers' requests.

And while Tillerson showed no visible interest in social media, a person familiar with Pompeo's situation said he is considering using Twitter.

David Wade, a former chief of staff to Secretary of State John Kerry, argued that a secretary of state's public words matter well beyond the Washington Beltway. "Externally, you're in a race to define the American narrative against those like Russia and China which will fill in their own narrative if you're absent," he said.

Calling Tillerson "an abysmal failure at communications both internally and externally," Wade said Pompeo "can be a good communicator, and as a politician he's more talented than his predecessor." But, he added, "all the public diplomacy in the world can't get him out from under the weight of Trump's tweets and slurs about people from the Middle East to Africa."

The timing of Pompeo's Thursday confirmation vote allowed him to attend a long-scheduled meeting of NATO foreign ministers in Brussels the next day, winning him early plaudits from others in the military alliance.

"He actually jumped on a plane just after he was sworn in and he was able to address the North Atlantic Council, the foreign ministers of NATO, just 12 hours and 34 minutes after his confirmation," NATO Secretary General Jens Stoltenberg said with admiration.

Pompeo left Washington with six journalists on his plane. On his first major overseas trip, Tillerson brought just one reporter, from the conservative Independent Journal Review.

As he continued from Brussels to Saudi Arabia, Israel and Jordan over the weekend, Pompeo picked up two more reporters. He spoke to the reporters on the plane and also took questions during news conferences on the ground.

Tillerson, by contrast, generally avoided even the reporters who — having been denied seats on his official plane — chased him around the world on commercial flights.

Shortly after he took office, Tillerson took a quick trip to Bonn, Germany, for a meeting of G-20 foreign ministers. At an appearance on the sidelines with Russian Foreign Minister Sergey Lavrov, reporters were escorted out of the room before Tillerson gave remarks. Even Lavrov was puzzled: "Why did they shush them out?" he asked.

"I'm not a big media press access person. I personally don't need it," Tillerson would later tell the IJR reporter, who traveled with him to Asia a month later.

During his 15 months as CIA director, Pompeo forged a much closer relationship with Trump than Tillerson. He is believed to have a much better sense of where the president stands, and his own, often-hawkish views appear more in line with Trump's thinking. Pompeo has also been vocal about wanting to improve morale at the State Department, where many diplomats have been distressed over Trump's attempts to slash their budget and Tillerson's unwillingness to listen to their expertise.

In a news conference in Brussels, Pompeo pointed out that he'd met with U.S. diplomats who work in the Belgian capital and that he was committed to making his department more relevant.

The diplomats, he said, "may have been demoralized, but they seemed in good spirits. They are hopeful that the State Department will get its swagger back."

Pruitt's Science Margin for Error • Coal Country Debate • Undersea Robots Study Dead Zone

By Chuck McCutcheon

Scott Pruitt drew lots of attention when he declared limits on “secret science” in policymaking. But it’s no secret to lawyers watching the EPA chief that he has no room for error in crafting the policy.

The proposed open-data policy would enable the EPA head to issue waivers, David Schultz writes in a story being published today. Environmental attorneys say the waiver provision actually makes the proposal even more vulnerable to legal challenges.

“How is EPA choosing when to waive and when not to waive?” asks Amanda Leiter, a law professor at American University in Washington. “Does that give the EPA too much discretion? Will they just be cherry-picking?”

COAL COUNTRY DEBATE: The West Virginia Republican Senate race goes

nationwide tonight, with the three top contenders squaring off in a nationally televised Fox News debate.

All three candidates want the same things for coal—to get the government out of the way, to open more mines, to burn more coal for energy, to export more coal to foreign countries, and to create more jobs at home.

The splashiest name is former coal mogul and ex-convict Don Blankenship. So far, Blankenship has concentrated on criticizing the Mine Safety and Health Administration, which he says is the real culprit for the mine disaster that landed him in jail. Blankenship wants to split MSHA into two agencies, one responsible for regulating and the other for enforcement.

West Virginia Republican U.S. Senate candidate Don Blankenship appears at a town hall campaign event in Huntington in February.
Photographer: Luke Sharrett/Bloomberg via Getty Images

Rival Evan Jenkins walks into the debate with three and a half years' experience in the House and two decades before that as a state lawmaker. If elected, he'd be a reliable vote to pare back the EPA's budget and staffing. He's worked to give money to Appalachian states to clean up abandoned mines and backs funding research to extract rare earth elements from coal.

The third candidate, state Attorney General Patrick Morrisey, shares some similarities to Scott Pruitt. Like the EPA chief when he was Oklahoma's attorney general, Morrisey sued the Obama EPA several times, and both Morrisey and Pruitt are strong believers in deregulation. Stephen Lee is watching.

OMAN DEAD ZONE: It sounds like bad science fiction: Undersea robots spent eight months exploring a marine dead zone off the coast of Oman.

But the robot research yielded scary real-life results, Matthew Kalman writes in a story being published today. Scientists found that the zone of oxygen-starved waters, mapped in the 1960s, had grown and crept closer to the coast of Oman, squeezing valuable tuna, lanternfish, and other fish into a shrinking layer of oxygen-rich water close to the surface.

Dead zones are a “disaster waiting to happen, made worse by climate change, as warmer waters hold less oxygen, and by fertilizer and sewage running off the land into the seas,” says Bastien Queste, a research fellow at the U.K.’s University of East Anglia.

OTHER STORIES WE’RE COVERING

Subject: Morning Energy, presented by Anheuser-Busch: Zinke's turn on the Hill — EPA watchdog: Aides slow to turn over docs — House to take up Yucca bill today

By Kelsey Tamborrino | 05/10/2018 06:01 AM EDT

With help from Eric Wolff, Alex Guillén, Anthony Adragna and Jennifer Haberkorn

ZINKE HEADS TO THE HILL: Interior Secretary Ryan Zinke faces his Senate appropriators today to discuss his department's budget request for fiscal 2019. Expect Democrats to bring up familiar topics, such as his plans to reorganize the department and last year's decision to shrink national monuments in Utah. Subcommittee ranking member Tom Udall plans to tell Zinke that until courts weigh in on whether his move was legal, "I believe that moving forward with land management plans that will open these iconic areas to development is reckless."

Subcommittee Chair Lisa Murkowski may be interested in hearing more about Zinke's plans for oil and gas development in Alaska, after Interior kicked off its environmental review of potential drilling in part of the Arctic National Wildlife Refuge thanks to language she got included in last year's tax bill. And Sen. Lamar Alexander, another member of the subcommittee, can follow up on the maintenance backlog for the national parks, an issue the two discussed when Zinke visited Tennessee last week.

Ahead of the hearing, the Coalition to Protect America's National Parks is sending a letter to Zinke, with signatures from current and former employees of the National Park Service, calling on him to support permanent reauthorization of the Land and Water Conservation Fund, an issue with support in both parties.

If you go: The Senate Appropriations Interior-Environment Subcommittee hearing begins at 9:30 a.m. in 138 Dirksen.

— **But first:** Zinke will join Agriculture Secretary Sonny Perdue at USDA headquarters for an 8 a.m. briefing on the forecast for this year's wildfire season.

WATCHDOG: EPA AIDES SLOW TO SEND DOCS: EPA's internal watchdog complained last year that Administrator Scott Pruitt's aides were taking their sweet time handing over documents related to a probe into their boss' travels, new emails show. Although the standoff between the inspector general's office and Pruitt's staff was resolved a month later, the incident illustrates tensions between political appointees and career oversight officials that developed early on. The IG's office is in the process of conducting multiple reviews into Pruitt's actions.

The new emails, released under a FOIA request from California's Justice Department, show the IG's office was seeking information for its probe of Pruitt's frequent travel to Oklahoma on EPA business, Pro's Alex Guillén reports. That same probe was later expanded to include a wider swath of Pruitt's travel practices, including his first-class flights that cost more than \$100,000. (The investigation is slated to be completed this summer.)

At the time, the agency's assistant inspector general for audits, Kevin Christensen, wrote to a top career official in EPA's finance office to warn of a "potential situation" with the travel audit just two weeks after it began, the emails show. Christensen flagged messages showing Pruitt's chief of staff Ryan Jackson was

"screening" documents before releasing them to the Office of Inspector General. "This does not fit the definition of unfettered access or comply with the Administrator memo on access and providing information to the OIG," Christensen wrote to Jeanne Conklin, EPA's controller who oversees financial management and reporting. "When we are denied access to information until approved for release, it raises the question as to what is being withheld and approved for release."

The emails spotlight concerns about the lack of transparency atop the agency since Pruitt joined. And other emails released to California's Department of Justice also show career ethics officials warning Pruitt's aides about accepting industry awards and attending political events, further exemplifying internal tensions as Pruitt's external problems grow. Read more from Alex [here](#).

— **Related reporting:** Amid ongoing scrutiny, Pruitt met with industry representatives Wednesday, where a reporter asked if he still had the confidence of the White House. Pruitt said: "I think they've spoken very clearly," Bloomberg [reports](#).

WELCOME TO THURSDAY! I'm your host Kelsey Tamborrino. Bracewell's Frank Maisano was the first to correctly identify Detroit as home to the first paved roadway. Woodward Avenue carries the designation M-1 for its status as the first place to pour a 1-mile patch of concrete roadway. For today: Name the state first lady who simultaneously served as a member of the House. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

TRUMP EXTENDS OLIVE BRANCH: President Donald Trump called coal baron Don Blankenship Wednesday to exchange pleasantries and offer up congratulations for waging his campaign, POLITICO's Alex Isenstadt reports. The conversation was described as straightforward, polite and cordial, and comes days after Trump tweeted that voters shouldn't vote for Blankenship in the West Virginia Republican primary. Blankenship also published an [open letter](#) to Trump on Wednesday that in part blamed the president for his loss. "Your interference in the West Virginia election displayed a lack of understanding of the likely outcome of the upcoming general election," Blankenship wrote. But he ended with a note of optimism: "I look forward to meeting with you in the near future." Alex reported the president had also reached out to Rep. [Evan Jenkins](#), who also lost in Tuesday's primary, but had yet to connect with the Republican party's winner, Patrick Morrisey, as of Wednesday evening. Read [more](#).

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks. The zero-emission trucks will be able to travel between 500 and 1,200 miles. Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025. [Learn more](#). **

HOUSE GOES NUCLEAR: The House will take up the long-awaited [H.R. 3053 \(115\)](#), the "Nuclear Waste Policy Amendments Act of 2018," for consideration today, with votes expected between 10:45 a.m. and 11:45 a.m. The bipartisan legislation would update how the U.S. handles nuclear waste and promote development of the Yucca Mountain repository in Nevada, among other provisions. The legislation is expected to pass, although it will face a much shakier Senate reception with Sen. [Dean Heller](#) facing a tough re-election race this year. Rep. [John Shimkus](#), who introduced the comprehensive nuclear waste package, previously said he hadn't had any recent talks with Senate counterparts about potentially moving the bill across the Capitol. Still, its appearance today is a victory for Shimkus: [Greg Walden](#) told reporters this week that Shimkus had sent handwritten letters to the homes of every member of leadership during recess encouraging the bill to come up, praising his tenacity.

COURT SAYS CRA IS A-OK: A federal judge in Alaska yesterday [dismissed](#) an environmental group's lawsuit that called the Congressional Review Act unconstitutional. The Center for Biological Diversity specifically challenged the CRA [resolution](#) successfully passed by Congress last spring that nullified an Interior Department rule regarding hunting in Alaska wildlife refuges.

Judge Sharon Gleason of the U.S. District Court for Alaska, an Obama appointee, noted that both the CRA itself and this specific resolution were passed by both chambers and signed by the president, fulfilling the constitutional requirements for creating laws. Other parts of CBD's argument similarly failed to hold water. "The Court finds that even construing all the facts in favor of CBD, CBD's constitutional claims fail to adequately allege a plausible basis for relief," Gleason wrote.

SUNNY CALIFORNIA: The California Energy Commission voted unanimously Wednesday to require solar panels be installed for all newly built single-family homes and multifamily buildings less than three stories starting in 2020. A CEC study found that installing solar would increase home prices, but that would be more than offset by lower utility bills, according to the Los Angeles Times. The move has been anticipated for years and was supported by much of the home building industry. More from the LAT [here](#).

STEELWORKERS SAY YES TO RFS: The United Steelworkers are supporting Trump's recent decisions on the Renewable Fuel Standard, which include expanding sales of 15 percent ethanol fuels and having EPA and USDA workout some kind of program for biofuel credits on exported ethanol. "While it will continue to review the details, [USW] supports a deal brokered by the President that appears to address the long-running conflict between ethanol producers and oil refiners over federal biofuels mandates," the union said in a press release.

HOUSE GOP DROPS RESCISSIONS PACKAGE: House Majority Leader [Kevin McCarthy](#) unveiled the chamber's batch of [spending cuts](#) Wednesday. Similar to the White House's [request](#), the package makes cuts to Energy Department loan guarantee programs for clean energy and vehicle technologies. The bill is expected to [go directly to the House floor](#) for a vote, Pro's Sarah Ferris [reports](#). Senate GOP leaders have said they will consider the bill if and when it passes the House.

MEANWHILE IN BONN: Things aren't going as planned for the second week of climate talks in Bonn, Germany, punting further discussions to another meeting in September. The U.N. Framework Convention on Climate Change [said](#) Wednesday that there would be an additional meeting from Sept. 3-8 in Bangkok amid a stalemate centered in part around clarity on climate finance between developed and developing countries. The new date underscores the pressure negotiators are under to advance talks enough for ministers to strike a deal later this year at the COP24 in Katowice, Poland. "We need to resolve differences on finance, accounting and transparency," Alden Meyer of the Union of Concerned Scientists [told POLITICO Europe's](#) Kalina Oroschakoff.

CALVERT: EPA-INTERIOR COMING SHORTLY: Rep. [Ken Calvert](#), who oversees EPA and Interior on the Appropriations Committee, told ME to expect their fiscal 2019 bill "pretty soon" as work's going well. "We're working on final details now," he said. As for the perennial question, yes, Calvert expects policy riders to be in play: "There's always riders," he quipped.

AUTOMAKERS WANT MORE FUEL EFFICIENCY: The Alliance of Automobile Manufacturers and the Global Automakers, trade associations which together represent most of the automakers who sell cars in the U.S., will tell Trump that they most definitely want increases in fuel efficiency standards, contra that zero increase preference of the Department of Transportation. They also want the federal government to work out a single national standard with California, rather than face either a bifurcated market or a long legal battle. "Automakers are deeply committed to increased fuel economy and safety measures that meet the needs of our customers, and we expect to share the importance of government policies that provide certainty to the auto sector, continue to reduce greenhouse gas emissions, reflect what consumers will buy and result in a national policy that includes California," the two groups said in a statement.

FOLLOW THE MONEY: The Environmental Integrity Project released a database Wednesday of political contributions from companies and conservative organizations that met with Pruitt between Feb. 21, 2017, and April 13 of this year. The database was compiled via EPA calendars, FEC reports and data from the Center for Responsive Politics. See it [here](#).

SAVE THE DATE: BLM scheduled meetings to discuss its plans for an environmental review of planned oil and gas leases in ANWR. Several will be held in Alaska, including one each in Fairbanks and Anchorage on May 29 and May 30, respectively. Another meeting is scheduled for Washington D.C. on June 15. For those who can't make the hearings, BLM plans to live stream the Fairbanks and Anchorage dates.

MAIL CALL! ISN'T IT IRONIC? Six Democratic senators wrote to Office of Information and Regulatory Affairs Administrator Neomi Rao on the office's review and evaluation process for EPA's proposed "secret science" proposal to ban the use of studies that don't publicly disclose all their data. "The review process and rollout of this rule appears to have been rushed and secretive — which is particularly ironic for a proposal that purportedly aims to improve agency transparency and decision-making processes," they write.

Separately, bipartisan Reps. Ryan Costello and Paul Tonko sent a letter to the National Academy of Sciences asking for its input on the proposed rule, which was discussed when Pruitt testified before the House E&C Committee. Read the letter here.

Of course, Pruitt seems pleased with the proposal: Bloomberg's Ari Natter snapped a photo of new signs at EPA that tout the agency's "Strengthening Transparency in Regulatory Science."

ROCK STARS: Access Fund and American Alpine Club are sponsoring their annual "Climb the Hill" event today with professional rock climbers and outdoor recreation advocacy groups, who will hit the Hill today to talk outdoor recreation and public lands. Sen. Maria Cantwell will attend a reception with the group at 3 p.m. in 385 Russell. High-profile members of the rock-climbing community and executives from REI, Patagonia and The North Face will attend.

QUICK HITS

— Pair of investor-pushed resolutions pass at Kinder Morgan, Axios.

— Saudis pledge to "mitigate" loss of Iranian oil exports from U.S. sanctions. But crude prices rise anyway, The Washington Post.

— Emails: Perdue's donors, agency coordinated on biomass, E&E News.

— Hugh Hewitt used his MSNBC gig to praise efforts to weaken a law that his firm's client is accused of violating, Media Matters.

— Emails show Heritage Foundation offered Pruitt flights, hotel, and talking points for its conference, ThinkProgress.

HAPPENING TODAY

8:00 a.m. — The Women's Council on Energy and the Environment discussion on "Congressional Energy and Environmental Priorities: 2018 and Beyond," 400 North Capitol Street NW

8:30 a.m. — The International Trade Administration meeting of the Renewable Energy and Energy Efficiency Advisory Committee, 1401 Constitution Avenue NW

8:45 a.m. — Peter G. Peterson Foundation holds "the 2018 Fiscal Summit: Debt Matters," 1301 Constitution Ave NW

9:00 a.m. — House Appropriations Interior-Environment Subcommittee two-part hearing on "American Indian/Alaska Native Public Witnesses," 2007 Rayburn

9:00 a.m. — The Environmental Law Institute conference on "Infrastructure Review and Permitting: Is Change in the Wind?" 601 Massachusetts Avenue NW

9:00 a.m. — The Washington Post discussion on "The Energy 202 Live," 1301 K Street NW

9:30 a.m. — Senate Appropriations Interior-Environment Subcommittee hearing on Interior's FY 2019 budget request, 138 Dirksen

10:00 a.m. — House Energy and Commerce Energy Subcommittee hearing examining the state of electric transmission infrastructure investment, planning, construction and alternatives, 2123 Rayburn

1:00 p.m. — The United States Energy Association forum on "Chemical Looping Prospective: An Advanced Approach to Coal Utilization," 1300 Pennsylvania Avenue NW

2:00 p.m. — Center for Climate and Energy Solutions webinar on "City-Utility Partnerships for a Cleaner Energy Future."

THAT'S ALL FOR ME!

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks from the pioneer in hydrogen-electric renewable technology, Nikola Motor Company. The zero-emission trucks — which will be able to travel between 500 and 1,200 miles and be refilled within 20 minutes, reducing idle time — are expected to be integrated into Anheuser-Busch's dedicated fleet beginning in 2020.

Through this agreement Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025.

"At Anheuser-Busch we're continuously searching for ways to improve sustainability across our entire value chain and drive our industry forward," said Michel Doukeris, CEO of Anheuser-Busch. "The transport industry is one that is ripe for innovative solutions and Nikola is leading the way with hydrogen-electric, zero-emission capabilities. We are very excited by the possibilities our partnership with them can offer."

Stories from POLITICO Pro

EPA watchdog knocked Pruitt aides for slowing probe Back

By Alex Guillén | 05/09/2018 06:43 PM EDT

EPA's internal watchdog complained last year that Scott Pruitt's top aides were delaying handing over documents to auditors probing the administrator's travel practices, according to newly released emails.

That standoff between the EPA inspector general's office and Pruitt's team was resolved a month after the IG's staff flagged the issue and warned that the reticence to release the documents came close to impeding their probe, the emails show. But the incident highlights early tension between EPA's political appointees and the internal watchdog, which is now conducting multiple reviews of Pruitt's actions.

And it shows that concerns about the lack of transparency atop the agency since Pruitt joined have rankled people inside the agency as well as outside. POLITICO reported last week that Pruitt's political appointees were screening documents produced for public records requests related to the embattled administrator, slowing the release of information.

The new emails, released under a Freedom of Information Act request from California's Justice Department, show the IG's office was seeking information for its probe of Pruitt's frequent travel to Oklahoma on EPA business, enabling him to spend numerous weekends at his home in Tulsa.

That probe was later expanded to look at Pruitt's other travel practices, including his first-class flights that cost more than \$100,000, and it is expected to be completed by this summer. The watchdog has since opened additional probes into Pruitt's security spending, condo rental, soundproof phone booth, large raises for aides and allegations of retaliation against staff who questioned him.

Kevin Christensen, EPA's assistant inspector general for audits, wrote in September to a top career official in EPA's finance office to warn of a "potential situation" with the travel audit just two weeks after it began, the emails show. He flagged messages showing Pruitt's chief of staff Ryan Jackson was "screening" documents before releasing them to the Office of Inspector General.

"This does not fit the definition of unfettered access or comply with the Administrator memo on access and providing information to the OIG," Christensen wrote to Jeanne Conklin, EPA's controller who oversees financial management and reporting. "When we are denied access to information until approved for release, it raises the question as to what is being withheld and approved for release."

The auditors were able to obtain the documents on Pruitt's flights from the EPA's finance office in Cincinnati, even as Pruitt's staff continued to withhold them, Conklin wrote to Kevin Minoli, a career official who at that time served as EPA's acting general counsel.

"Do they not understand in the [Office of the Administrator]," Conklin asked Minoli. "Perhaps someone can speak to them and make them understand that the OIG has the documents already and they appear close to impeding the audit."

Both Minoli and Conklin stated in their email exchange that neither of them advised Pruitt's staff that they had the power to delay or withhold handing over documents to the OIG.

Minoli said in an email a week later that Jackson had delayed providing the records over concerns the audit might make public some previously redacted information, such as Pruitt's calendar and flight records. Minoli said he discussed the matter with the deputy inspector general, Chuck Sheehan, and noted the IG's office "has a long-standing practice of not using privileged information in their published work unless absolutely necessary."

An EPA spokesman on Wednesday declined to comment on the incident.

Other emails released to California's Department of Justice under the FOIA request also show career ethics officials warning Pruitt's aides about accepting industry awards and attending political events.

In March 2017, the Oklahoma-based National Stripper Well Association told Pruitt it would award him its "Industry Leader Award" at an annual gala, which was sponsored by Koch Industries. The group represents the

owners of the hundreds of thousands of small wells that produce less than 15 barrels of oil or 90,000 cubic feet of natural gas per day.

But EPA ethics official Justina Fugh noted in an email to Pruitt's schedulers, Sydney Hupp and Millan Hupp, that NSWA was registered to lobby the federal government and Pruitt would violate his ethics agreement if he accepted the honor.

The group had praised Pruitt's decision that month to halt the Obama EPA's request for oil and gas companies to provide the agency with information about methane emissions, a possible first step toward regulating pollution in those existing wells. "NSWA Got a Win at EPA Already!" touted an early March [blog post](#) by the group. It is unclear whether Pruitt's award was directly connected to that decision.

Fugh warned the Hupps that Pruitt would have to walk a fine line in accepting anything from a lobbying entity. Items with "no other intrinsic value" like a plaque may be OK, she said, but "an ashtray or coffee table book" would not be.

Pruitt ultimately appears to have accepted a plaque from the NSWA, according to a [photo](#) posted on the group's site and his own internal calendars. Another photo posted on the NSWA's Facebook page shows Pruitt [posing](#) with Koch executives.

Pruitt's Outlook calendar, released in response to public records requests, lists the topic of the speaking engagement as "acceptance of award, thank you."

EPA did not say whether Pruitt officially accepted the award from the group along with the plaque, despite Fugh's advice.

"We gave the plaque to [the Office of the Executive Secretariat] who confirmed that we could keep it," EPA spokesman Jahan Wilcox said. NSWA did not say Wednesday why it honored Pruitt.

Pruitt aides hinted to ethics officials last fall that he expected to be invited to increasing numbers of political events, which ethics officials warned raises a host of Hatch Act concerns about mixing political activities with his official duties.

Earlier in his tenure, Pruitt had decided not to attend an Oklahoma GOP fundraiser after reports revealed the event would feature a speech on EPA issues.

Last fall, Ronna McDaniel, the head of the Republican National Committee, invited Pruitt to attend an Oct. 25 fundraiser in Dallas for Trump Victory, a joint fundraising committee that funnels money to the RNC and Trump's reelection campaign.

"We will get more and more of these" invites as "political season" approaches, Jackson wrote to an ethics official.

Hatch Act restrictions would allow Pruitt to attend, but he would be barred from mentioning his EPA affiliation or asking for donations, Fugh replied. EPA could not cover his travel costs, although the agency could pay for his security detail's travel, Fugh added. Event organizers could not specifically invite guests with issues before the agency and would need to rescind invitations to anyone with business before EPA.

Pruitt ultimately appears to have skipped that fundraiser.

Emily Holden contributed to this report.

Trump calls Blankenship after pushing for his loss in West Virginia [Back](#)

By Alex Isenstadt | 05/09/2018 10:55 PM EDT

President Donald Trump connected by phone on Wednesday with Don Blankenship, the former coal baron and ex-con whose Senate candidacy he helped sink.

Trump and Blankenship spoke briefly, according to three people familiar with the discussion. The conversation was described as straightforward, polite and cordial, with the president calling to exchange pleasantries and offer his congratulations on waging the campaign.

The call came two days after Trump took to Twitter to urge West Virginia Republicans to reject Blankenship's candidacy. In the tweet, Trump argued that Blankenship, who spent a year in jail following a 2010 explosion at his Upper Big Branch Mine that killed 29 workers, would be unable to defeat Democratic Sen. Joe Manchin in November.

Trump's intervention undermined Blankenship, who had aligned himself closely with the president — so much so that he described himself as "Trumpier than Trump."

Blankenship would go on to lose the primary decisively, finishing a distant third behind state Attorney General Patrick Morrisey and Rep. Evan Jenkins.

In his remarks to supporters on Tuesday evening, Blankenship attributed his loss to the president's last-minute intervention in the contest, saying that it had halted his momentum.

"I think if there was any single factor based on the polling at different times, the debates, and all the things I saw, it was probably President Trump's lack of endorsement — I don't know what to call it, but 'Don't vote for Don' tweet," he said. "I don't know what else it would have been."

In the final hours of the race, he said he was convinced that Trump had been pushed into the intervention by Senate Majority Leader Mitch McConnell, who had aggressively opposed Blankenship.

Blankenship on Wednesday released an "open letter" to Trump in which he accused the president of spreading "fake news against me."

"Your interference in the West Virginia election displayed a lack of understanding of the likely outcome of the upcoming general election," Blankenship added. "Patrick Morrisey will likely lose the general election. It's too late to change that, but it's not helpful to do to me what others are doing to you."

The president also connected briefly with Jenkins, but as of Wednesday evening had yet to connect with Morrisey, the winner of the primary. On Tuesday, though, Morrisey spoke with Donald Trump Jr. During the call, the president's eldest son promised to be helpful.

Trump's calls on Wednesday, several Republicans said, were partly aimed at healing the wounds following a deeply divisive primary. Blankenship has yet to endorse Morrissey, who aggressively attacked him during the final days of the race.

Some in the party are concerned that the deep-pocketed Blankenship, who spent more than \$2.5 million of his own funds in the primary, could wage an effort to damage Morrissey in the general election.

DOE loan guarantee programs hit hard in White House rescissions package [Back](#)

By Anthony Adragna | 05/08/2018 11:08 AM EDT

More than \$5 billion in Energy Department loan guarantee programs for clean energy and vehicle technologies would be cut under a \$15 billion rescissions [request](#) unveiled today by the White House.

The proposal would cut \$684 million from clean energy loan guarantee programs, on top of the \$4.33 billion in proposed cuts to Advanced Technology Vehicles Manufacturing loan program [already announced](#) by the Trump administration.

"This proposed rescission would eliminate subsidy amounts that are inconsistent with the President's policies," the proposal says of cutting from the loan guarantee programs.

In addition, the package would cut \$10 million in water quality research grants, which the proposal says "are duplicative with other Federal programs."

WHAT'S NEXT: The package is expected to easily pass the House but faces a less certain fate in the Senate.

[Back](#)

Trump spending cut package to head directly to House floor [Back](#)

By Sarah Ferris | 05/09/2018 01:03 PM EDT

House Republican leaders are moving quickly to tee up the White House's \$15 billion package of proposed spending cutbacks.

GOP leaders plan to release legislative text of [the White House's proposal](#) as early as today, a House GOP aide confirmed.

The package is expected to closely mirror the Trump administration's request, which targeted unspent dollars from years-old accounts.

It will not go through the House Appropriations Committee, another GOP aide confirmed. That sets up the bill directly for a floor vote.

Most Republicans have embraced the proposed cuts, even as some budget hawks complained that most of the savings are only on paper.

But some, like GOP Rep. [Vern Buchanan](#) of Florida, have rejected the idea of cutting \$7 billion of budget authority from the Children's Health Insurance Program.

White House officials have argued that most of the funding has technically expired and can't be used, so it would have zero impact on the program.

The CBO confirmed that point today, saying that there would be no actual cuts or coverage reductions for CHIP.

House GOP leaders unveil rescissions bill [Back](#)

By Sarah Ferris | 05/09/2018 08:28 PM EDT

House Republican leaders today unveiled a package of spending cuts, following a request from President Donald Trump this week.

The House GOP bill contains \$10.45 billion in specific cuts, including roughly \$7 billion to the Children's Health Insurance Program.

Other cutbacks in the GOP bill — including one targeting an energy program in the 2009 Obama-era stimulus bill — do not provide specific dollar amounts.

House GOP leaders will now begin whipping support for the bill, which is expected to go directly to the House floor for a vote. Senate GOP leaders have said they will consider the bill if and when it passes the House.

Under a decades-old law, presidential rescissions requests can pass the Senate with a simple majority, instead of the usual 60-vote threshold for procedural votes.

Democrats argue that Trump's bill would require the full 60 votes, however, because it targets mandatory funding, and not solely discretionary.

Suppliers Seek 'Robust' Vehicle GHG Standards With Additional 'Flexibility'

Auto industry suppliers are detailing their call for the Trump administration to embrace “robust” vehicle greenhouse gas and fuel economy standards with more flexibility for automakers, urging agencies to formally seek comment on an “advanced technologies flexibility option” that would recognize California’s “critical role” in limiting emissions and possibly prevent years of litigation over the program.

Top Advisers Pan Pruitt’s Science Transparency Rule, Seek SAB Review

Top EPA science advisers, including Administrator Scott Pruitt's hand-picked chairman of the agency's Science Advisory Board (SAB), are strongly criticizing the administrator's controversial plan to require only publicly available research to justify its regulations, charging it will undermine rules' integrity and was developed without adequate review.

EPA Science Plan Skirted Usual Process, Raising Finalization, Legal Doubts

The Trump EPA's controversial plan requiring use of publicly available research to justify rules appears to have been developed by political appointees without following the agency's usual action development process (ADP) for crafting important rules, leaving career staff and program offices out of the loop but raising doubts about how it will be finalized without them.

Magistrate Suggests Court Unlikely To Halt Discovery In Youth Climate Suit

A federal magistrate judge is strongly suggesting that he is unlikely to grant the Trump administration's request to halt discovery in a novel suit brought by 21 youth plaintiffs who charge that the government is violating the Constitution and the public trust doctrine by failing to protect them from the worst harms of climate change.

Subject: Morning Energy, presented by America's Pledge: First SAB meeting to eye EPA reg rollbacks — Cramer hits Trump's legislative director — DOE: U.S. generally 'well prepared' for grid hacks

By Kelsey Tamborrino | 05/31/2018 05:43 AM EDT

With help from Eric Wolff

PRUITT'S SAB STORY: EPA's independent Science Advisory Board will meet today and Friday for the first time since Administrator Scott Pruitt barred scientists on the committee from receiving EPA grants and boosted its ranks with industry representatives — and the group's agenda is packed. The SAB will look at Pruitt's "secret science" proposal to bar EPA from using studies that don't make public all their data, as well as the Clean Power Plan repeal, Pruitt's decision to relax 2022-25 auto emissions standards, changes to the 2016 methane rule for new oil and gas wells and effort to repeal a rule regulating emissions from "glider" trucks — and that's not all.

A lot to dive into: The heavy slate of issues is unusual for the advisory board, Pro's Alex Guillén reports. Several current and former SAB members say it's unprecedented for the board to consider reviewing so many regulatory actions. But like green groups and critics of Pruitt, the SAB scientists say EPA has declined to share information about its regulatory rollbacks. "The agency has not been forthcoming about how they're developing the relevant science work products," said Chris Frey, a professor of environmental engineering at North Carolina State University and a SAB member since 2012.

EPA keeps quiet: SAB has been conducting twice-yearly reviews of EPA's planned regulatory actions since 2012, members said. It's an effort designed to enable the advisory board to help guide EPA before its rules are finalized. But this time around, the SAB's working groups say EPA wasn't being forthcoming with information. "Basically they just didn't provide us with any answers," said Frey. "That kind of put us in a position where all we can really do is say EPA has not identified the science or any plan to review it, and clearly there are science issues that are in the proposed rule."

What to expect: It's not immediately clear whether the full SAB will vote today to advance the reviews. But Frey noted that some of the members appointed by Pruitt had been on the working groups, giving him hope that the full board will back the recommendations to look deeper into the regulatory rollbacks. Should SAB adopt them, Alex reports, it likely would mean setting up special subcommittees that include current members plus outside experts to question EPA further. Read more [here](#).

Register for the Pro Summit: Join Pro subscribers, expert reporters and key decision-makers from the executive branch, federal agencies and Congress for a full day of incisive policy conversations on July 17. [Learn more](#).

THE LONG AND SHORT OF IT: In an unusual attack on the White House's legislative affairs director, North Dakota Rep. Kevin Cramer blamed Marc Short explicitly for the party's legislative failures in the Senate, including ending the Obama rule on flaring and venting from oil and gas wells. After POLITICO published a story outlining the awkward dynamic between Heidi Heitkamp, Cramer and the White House, Cramer told North Dakota radio host Rob Port that he had done some digging and believes that there "are some people in the White House that think, you know, the president's too friendly too her," Burgess Everett recaps.

Moreover, Cramer laid specific blame at Short's feet for failed GOP efforts in the Senate to roll back an Obama-era regulation limiting flaring and venting, as well as repealing Obamacare. Heitkamp voted against gutting that flaring rule, something Cramer has criticized her for, in particular. "If Marc Short was very good at his job, you know, we'd have a repeal and replacement of Obamacare, we'd have a replacement of the venting and flaring rule," Cramer said. Read that story here.

PRUITT'S MEDIA BLITZ: The EPA administrator visited Rosslyn, Va., on Wednesday to sit for interviews with two conservative media outlets. One was conducted by Boris Epshteyn for his Sinclair Broadcasting segment, "Bottom Line with Boris." (Watch that here.) The other was with the Washington Free Beacon, where Pruitt repeated familiar talking points in defense of the ongoing scandals and investigations that have surrounded him over the past few months. Pruitt said he still has President Donald Trump's backing, noting that Trump has "spoken very strongly and consistently" about their working relationship. "It's been intense the last couple of months, but he's been very encouraging, very empathetic and very supportive rather consistently," Pruitt said. The administrator also discusses the Paris climate agreement, "The Bachelorette" and, of course, baseball in the 13-minute segment, which you can listen to here.

GRID AND BEAR IT: In response to an executive order signed last year, the Energy Department released a new report Wednesday that said senior government officials and electric sector executives don't know enough about how energy companies could recover from a disruptive cyberattack, and those companies aren't thinking about cyber threats enough when building out their supply chains. While the report mainly hammered home some long-known problems with the grid, DOE highlighted how grid resilience efforts suffer because of "gaps in incorporating cybersecurity concerns, including planning for long-term disruption events, into state emergency response and energy assurance planning." Generally, however, the report said the U.S. is "well prepared to manage most electricity disruptions." Read more from Pro's Eric Geller here.

WHERE'S PERRY? Energy Secretary Rick Perry delivers remarks this morning on critical infrastructure at DOE's Texas-Israel Cyber Security Conference in Dallas. The department also announced that Perry would address the DOE's annual Cyber Conference in Austin on Monday. During both events Perry is expected to discuss DOE's new Cybersecurity, Energy Security and Emergency Response office, as well as efforts at DOE to address cyber vulnerabilities in the energy sector.

ABOUT THAT GLIDER RULE: The New York Times' Eric Lipton tweeted out new documents late Wednesday that give new details into the controversial Tennessee Technological University study on truck emissions that Pruitt used to consider rewriting part of the Phase 2 truck rules. "The letters obtained via open records request show that the principal investigator at Tenn Tech who conducted study funded by Fitzgerald, the company that makes the so-called glider trucks, disavowed the work, saying that it had been distorted in a fraudulent way," Lipton tweeted.

BY THE NUMBERS: The federal government spent \$13.2 billion across 19 agencies during fiscal 2017 on programs related to climate change, a report from the Government Accountability Office says. That's an overall \$1.5 billion increase across the federal government over fiscal 2016, Pro's Anthony Adragna reports. And it's an increase of \$4.4 billion since fiscal 2010, according to the report, which was request by House Science Chairman Lamar Smith. Read more.

CALIFORNIA GETS CHARGED UP FOR EVs: The California Public Utilities Commission is expected to approve a \$589 million program for its four investor-owned utilities to build out their electric vehicle charging infrastructure. The plan is part of the implementation of California's aggressive greenhouse gas law passed in 2015. Most of the money — which will ultimately come from ratepayers — will go toward setting up electric vehicle charging stations and related infrastructure. California leads the nation by far in electric vehicle sales and adoption.

NO MAJOR FLAWS IN FERC PROCESS: Auditors in the DOE inspector general's office said they found no major flaws in FERC's process for reviewing interstate natural gas pipelines, according to a new report. But they also flagged concerns about FERC's transparency and how it handles public comments. The auditors said that "nothing came to our attention to indicate that FERC had not performed its due diligence" in how it balanced public benefits of a proposed project with its adverse impacts. But the report also said regulators' "had not fully ensured" that the certification process was transparent to those who want to participate, and it hit the agency's eLibrary documentation system as difficult to use, Pro's Darius Dixon reports.

**** A message from America's Pledge:** America's Pledge is flipping the script on climate action. One year after the federal government announced it would pull out of the Paris Agreement, 2,700+ U.S. cities, states, and businesses are saying, "We Are Still In." See how far we've come: <https://politi.co/2koAHZb> **

FERC DENIES PENNEAST REHEARING: FERC on Wednesday denied a rehearing sought by the Delaware Riverkeeper Network and Sourland Conservancy on the controversial PennEast pipeline. Commissioner Richard Glick issued a separate statement on the agency's use of tolling orders. "This proceeding, in particular, illustrates the need for prompt action on rehearing requests," Glick wrote. " ... I also have serious concerns regarding the Commission's practice of issuing conditional certificates — which, notwithstanding their name, vest the pipeline developer with full eminent domain authority — in cases where the record does not contain adequate evidence to conclude definitively that the pipeline is in the public interest."

GREENS ENDORSE DE LEON OVER FEINSTEIN: 350.org co-founder Bill McKibben and 350 Action said Wednesday it is backing Kevin de León in his bid to challenge California Sen. Dianne Feinstein. McKibben said de León, a current California state senator, "has been a strong champion of clean energy — and an effective one, using his power in Sacramento to make change happen against the strong opposition of the fossil fuel industry." Read De León's candidate questionnaire answers here.

SELC SUES OMB OVER REORG: The Southern Environmental Law Center sued the Office of Management and Budget Wednesday for its failure to release information under FOIA on the reorganization at federal agencies that manage public lands. SELC says OMB has not provided requested information under a November 2017 FOIA request, nor has it made a determination or otherwise responded to the request, and has subsequently stopped communicating with SELC. The center is seeking "all records in the custody or control of OMB submitted in connection with Executive Order 13781 by any agency responsible for the management of federal public lands," including the Forest Service, National Park Service, BLM and the Fish and Wildlife Service. The EO in question directed each agency head to submit a report to OMB outlining proposed changes to their agency. Read the lawsuit.

CRES BACKS McMASTER IN SOUTH CAROLINA: Citizens for Responsible Energy Solutions will announce a \$175,000 television and digital ad buy today highlighting South Carolina Gov. Henry McMaster's record on clean energy. "First as lieutenant governor and now as governor, his commitment to the development of advanced energy technologies like natural gas and solar power is helping the state's economy and job market thrive," CRES Chairman and Executive Director James Dozier said.

McCARTHY NAMED DIRECTOR OF HARVARD CENTER: Harvard T.H. Chan School of Public Health announced former EPA Administrator Gina McCarthy will lead its newly launched Center for Climate, Health,

and the Global Environment. Under McCarthy, C-CHANGE announced a collaboration between Harvard University and Google to reduce the use of harmful chemicals in construction and renovation projects. "C-CHANGE will ensure that cutting-edge science produced by Harvard Chan School is actionable — that the public understands it, and that it gets into the hands of decision-makers so that science drives decisions," McCarthy said in a statement.

MOVER, SHAKER: Mitch Schwartz started this week as communications director for Jason Crow's campaign in Colorado's 6th Congressional District. Schwartz previously worked for SKDKnickerbocker.

— **PUSH Buffalo, a sustainable housing group**, announced Rahwa Ghirmatzion as its new executive director as of August 2018. Ghirmatzion has served as the organization's deputy director since 2017.

EPA boosts industry membership on key advisory boards [Back](#)

By Alex Guillén | 11/03/2017 01:41 PM EDT

EPA officially announced the new line ups for several key advisory boards today, bolstering their membership with employees of energy companies and state agencies just days after Administrator Scott Pruitt ordered scientists who have received agency grant money to give up their EPA funding or their seat.

As POLITICO [reported](#) on Tuesday, the [Science Advisory Board's](#) new additions include representatives from Phillips 66, Total, Southern Co., the American Chemistry Council and NERA Economic Consulting, a firm frequently hired by industry interests. Their additions boost the industry membership of SAB, although the panel had previously included members from Dow Chemical and other industries or companies.

The [Clean Air Scientific Advisory Committee](#), which provides health advice for air quality standards, also has three new members. Aside from new Chairman Tony Cox, an independent consultant, the new members are Larry Wolk of the Colorado Department of Public Health and Environment and James Boylan of the Georgia Department of Natural Resources.

EPA also announced a slate of new additions to the [Board of Scientific Counselors](#), which advises on research issues. The former chairwoman, Deborah Swackhamer of the University of Minnesota, is now listed as member, while Paul Gilman of waste-to-energy company Covanta has taken over as chair.

Other new BOSC members include representatives from the North Dakota Petroleum Council, Eli Lilly and Co., the Defense Threat Reduction Agency, the Arkansas Department of Environmental Quality, the California Energy Commission and the consulting firm Ramboll Environ.

EPA's science advisers turn eyes on Pruitt's rollbacks [Back](#)

By Alex Guillén | 05/31/2018 05:00 AM EDT

EPA's influential Science Advisory Board will meet on Thursday for its first time since Administrator Scott Pruitt filled it with a slate of industry representatives — and it's got a long list of controversial rule rollbacks to review.

The SAB plans to pore over the science EPA is using to justify rollbacks on emissions regulators for cars, trucks, power plants and oil and gas wells — as well as Pruitt's proposed "transparency" rule for scientific studies.

Several current and former SAB members told POLITICO that it was unprecedented for the board to consider diving into so many regulatory actions, but the heightened scrutiny from the outside experts came about because the agency stonewalled the scientists' questions about Pruitt's deregulatory decisions. That echoes the complaints from environmentalists and public advocacy groups who say EPA has declined to share information about how it was justifying easing the regulations put in place during the Obama administration.

"The agency has not been forthcoming about how they're developing the relevant science work products," said Chris Frey, a professor of environmental engineering at North Carolina State University and a SAB member since 2012.

In a move critics derided as an attempt to stack the 44-member board with industry-friendly voices, Pruitt last year broke with the tradition of reappointing first-term SAB members for second three-year stints by removing several advisers who received grants from the agency. In their places, he installed scientists from the fossil fuel and chemicals sectors and several Republican environmental officials. Among the new members are representatives from Phillips 66, Total, Southern Co., the American Chemistry Council and NERA Economic Consulting.

In addition to studying Pruitt's proposal to bar EPA from using studies that don't make public all their data, the SAB's working groups suggested the full group take a closer look at the repeal of the Clean Power Plan and EPA's reconsideration of its related rule limiting carbon emissions from future power plants. Also up for review are Pruitt's decision to relax 2022-2025 auto emissions standards, changes to the 2016 methane rule for new oil and gas wells, and EPA's effort to repeal a rule regulating emissions from "glider" trucks.

The working groups also deferred decisions on two other rulemakings: the Waters of the U.S. rewrite and rules on a special class of "persistent, bioaccumulative and toxic chemicals" under the Toxic Substances Control Act. SAB can decide whether to conduct a deeper review into those once EPA has reviewable regulatory language available, the groups said.

Frey, who has been a SAB member for six years, said having multiple rules up for review was very unusual for the board.

"It's very rare that we've recommended to the full Science Advisory Board that there should be an SAB action," he said.

SAB has been conducting twice-yearly reviews of EPA's planned regulatory actions since 2012, members said, an effort designed to enable the advisory board to help guide EPA before its rules are finalized.

In the early days, getting information from EPA was "like pulling teeth," said Kimberly Jones, a SAB member from 2011 through 2017 and the chair of environmental engineering at Howard University. But that quickly improved once EPA knew the scope of SAB inquiries, she added.

The SAB's working groups review how EPA uses scientific studies in its rulemakings, including whether and how a study was peer-reviewed and if EPA has properly accounted for uncertainties in the scientific findings. The groups typically find that further reviews aren't needed.

But this time around, the working groups said EPA didn't respond to their questions about many of Pruitt's highest-profile rollbacks.

"Basically, they just didn't provide us with any answers," Frey said. "That kind of put us in a position where all we can really do is say EPA has not identified the science or any plan to review it, and clearly there are science issues that are in the proposed rule."

Frey pointed to lengthy memos from the working groups that included multiple pages of questions that had been posed to EPA for each rulemaking. EPA responded with short statements promising to keep the issues in mind as it develops the final rules.

"The response from the agency was basically a non-response," Frey said.

An agency spokesman said in a statement that SAB "plays an important role" advising EPA.

"We value the Board's expertise, and we welcome feedback from the chartered panel on areas in which they are interested in getting additional scientific information that is relevant to the rulemaking process," the spokesman said.

It was not clear whether the full SAB will vote on Thursday to advance the reviews.

Frey noted that some of the members appointed by Pruitt had been on the working groups, giving him hope that the full board will back the recommendations to look deeper into the regulatory rollbacks.

Should SAB adopt them, it likely would mean setting up special subcommittees that include current members plus outside experts to question EPA further.

The board can advise EPA only on scientific matters, not policy or legal issues. In several cases, like with the repeals of the Clean Power Plan and the glider rule, EPA says it has a legal argument about statutory authority that does not rely on scientific issues.

But even then, Frey said, EPA must keep the science in mind.

"It's in the best interest of the agency to make sure that it's using appropriately developed and reviewed science in its rules," Frey said. "And the flip side of that is if the agency's not doing that, it could open itself up to legal challenges for not following appropriate procedures to develop the science."

GOP sweats Trump's Heitkamp flirtation [Back](#)

By Alex Isenstadt and Burgess Everett | 05/30/2018 05:08 AM EDT

When a small group of alarmed White House aides caught wind that Sen. Heidi Heitkamp — one of the most endangered Democrats up for reelection in 2018 — would be attending President Donald Trump's bill signing last week, they raced to stop it.

Word eventually reached Senate Majority Leader Mitch McConnell, who has made unseating Heitkamp a top priority. He opted not to intervene, and the invitation stood: As the president signed a banking deregulation bill into law before a national audience, Heitkamp was right next to him, the only Democrat in the room.

As the election year kicks into high gear, Republicans have grown increasingly frustrated with Trump's ongoing flirtation with the freshman senator. At a time when many in the GOP fear that the president's unpredictable style will undercut their best-laid midterm plans, the relationship has given Heitkamp — who is seeking reelection in a state where Trump won nearly two-thirds of the vote — fodder to portray herself as a presidential ally.

Her office keeps a running list of the dozen-plus meetings Heitkamp has had with Trump and his top advisers since the 2016 election. And the senator is fond of noting that she forged close ties with Trump's former top economist, Gary Cohn. The president met with Heitkamp in Trump Tower after the 2016 election to discuss a

possible Cabinet position, asked her to join him on Air Force One, and invited her onstage to join him and her Republican opponent, Rep. Kevin Cramer, during an appearance in North Dakota.

"Everyone is saying, 'What's she doing up here?'" the president said at the September event to sell his tax reform plan, which Heitkamp eventually opposed. "But I'll tell you what. Good woman, and I think we'll have your support, I hope we'll have your support. And thank you very much, senator, thank you for coming up."

After last week's bill signing, Heitkamp's allies raced to capitalize. The North Dakota Democratic Party sent out a tweet with an image of Cramer looking on uncomfortably as the president stood next to Heitkamp.

"At a bill signing today, @HeidiHeitkamp got a shout out and all @kevincramer got was a photo op next to a chair," the state party boasted.

"We will see footage of this on every platform," said Doug Heye, a former top Republican National Committee official. "It's a huge gift for her campaign."

Trump aggressively recruited Cramer to give up his House seat to take on Heitkamp, and his actions since have left some of Cramer's closest allies feeling snubbed. They note that while Trump has savaged Democratic incumbents Joe Donnelly of Indiana and Jon Tester of Montana and visited a growing list of states to pump up Republican Senate hopefuls — most recently Tennessee, where he appeared Tuesday on behalf of Rep. Marsha Blackburn — he has yet to make a campaign appearance with Cramer. Nor has the attack dog-in-chief attacked Heitkamp.

After Cramer learned last year that Heitkamp would be accompanying the president on Air Force One to North Dakota, he complained bitterly to the White House, according to two people with direct knowledge of the discussions. Heitkamp, Cramer predicted at the time, would try to use it to her political advantage. (A Cramer adviser, Pat Finken, denied that the congressman had complained about the senator riding on Air Force One.)

The administration has taken steps to assure Cramer that he has the president's full support. The congressman has been regularly in touch with White House political director Bill Stepien, and the two met earlier this month. Trump has agreed to hold a rally for Cramer later this year.

In an interview, Cramer shrugged off Heitkamp's attendance at the bill signing and said there would soon be "clarity" on who Trump supports in the race.

Yet the congressman declined to predict whether the president would go after Heitkamp aggressively, as Trump has done with other Democratic incumbents. Cramer seemed aware of the warmth between the president and the senator. Trump has asked Cramer whether he likes Heitkamp, and when the congressman responds yes, the president seems to be "relieved," Cramer said.

"Politically, North Dakota's a pretty nice state. So I don't know that turning it on her is necessarily politically helpful to me," Cramer said. "They may just be concerned that she's a woman and maybe that has an impact. I just don't know."

Heitkamp said she's proud of her ability to work with the president.

"I have a friendly relationship. I have a very important working relationship," she said in an interview, "not just with him but other members of the administration."

Trump's reluctance to go after Heitkamp stems in part from the simple fact that he needs her vote. With Republicans clinging to a narrow Senate majority, the White House has pushed for her support on several

contentious votes, including the recent confirmations of CIA Director Gina Haspel and Secretary of State Mike Pompeo. She also backed Trump's nominations of Supreme Court Justice Neil Gorsuch and Environmental Protection Agency Administrator Scott Pruitt.

Last week's signing ceremony was organized by White House Office of Legislative Affairs Director Marc Short. He said he extended an invitation to Heitkamp because she played a central role in passing the banking deregulation law.

"She was an original cosponsor of the bill," Short said. "But she's also someone who opposed tax relief, who opposed repeal of Obamacare, and someone who will always support Chuck Schumer. So you can be sure the president will be actively campaigning in North Dakota this cycle."

Cramer's February entry into the race followed an intense pursuit from Trump and top White House officials. After Cramer initially said in January that he wouldn't run for Senate, he received overtures from Trump, White House counselor Kellyanne Conway, and energy executive and Trump donor Harold Hamm within a three-day period. Trump also met with Cramer's wife, Kris.

Cramer said Trump told him at the time that he'll "be out there campaigning more than you are." Trump's entreaties, Republicans contend, helped to push Cramer into the contest. Cramer won his statewide, at-large House seat in 2012, the same year Heitkamp entered the Senate.

"The president leaned on him very hard. The president wanted the best candidate, and everyone in the state thought Kevin was the best candidate to beat Heidi," said Gary Emineth, a former North Dakota GOP chairman who is close with the congressman. "You know how the president is. He just doesn't quit."

Heitkamp predicted that Trump would attack her eventually. While she has maintained a positive working relationship with the president, she said it pales in comparison to Cramer's staunch loyalty.

"I don't think anyone can match his Trump credentials," Heitkamp said. "He is somebody who will always do what the president asks him to do, regardless of whether it's good for North Dakota."

As of late, the senator has been airing commercials that highlight her balancing act. "When I agree with the president I vote with him — and that's over half my votes," she says in a spot that began airing this month. "And if his policies hurt North Dakota, he knows I'll speak up."

Cramer accused Heitkamp of acting like a "Republican wannabe" with her occasional support for key Trump nominees.

"Her trying to cozy up to Donald Trump has resulted in good votes," Cramer said. "But every time she tries to become more like me, it's more flattering to me than it is to her."

Democrats, however, couldn't be happier to portray Cramer as a jilted lover.

Last week, the North Dakota Democratic Party released a video featuring a montage of clips of the president praising Heitkamp and shaking her hand as Cramer looks on — set to the sad sounds of R.E.M.'s "Everybody Hurts."

GOP Senate candidate lashes out at Trump's legislative director [Back](#)

By Burgess Everett | 05/30/2018 06:27 PM EDT

Rep. Kevin Cramer, one of the GOP's top Senate recruits, launched an unusual attack on the White House's legislative director Wednesday, blaming him explicitly for the party's legislative failures in the Senate.

The comments from Cramer (R-N.D.) come amid rising GOP angst over President Donald Trump's close relationship with his opponent in the North Dakota Senate race, Democratic Sen. Heidi Heitkamp.

Heitkamp was the only Democrat invited to the White House last week for a bank deregulation bill signing, alarming some White House aides and Republicans. After POLITICO published a [story](#) on Wednesday outlining the awkward dynamic between Heitkamp, Cramer and the White House, Cramer [told](#) North Dakota radio host Rob Port that he had done some digging and believes that there "are some people in the White House that think, you know, the president's too friendly too her."

Then Cramer laid into White House legislative affairs director Marc Short for two prominent failed GOP efforts in the Senate: Repeal of Obamacare and the rollback of an Obama-era regulation that would limit flaring and venting from oil and gas wells. Heitkamp voted against both and Cramer has criticized her in particular over the flaring vote.

"If Marc Short was very good at his job, you know, we'd have a repeal and replacement of Obamacare, we'd have a replacement of the venting and flaring rule," Cramer said.

In an interview last week with POLITICO, Cramer insisted he is not angry over Trump's political flirtations with Heitkamp: "Not the case at all. I've been fine with it. I just don't think it hurts me." And on Wednesday on Port's show, Cramer said the spat over Heitkamp's attendance at the banking bill signing "just seems to be an argument between Marc Short and other people in the White House."

Short extended an invitation to Heitkamp to the bill signing, but also has knocked Heitkamp for opposing the GOP's tax law. He did not respond to a request for comment for this story.

Heitkamp has tried to stay out of the back and forth, though she is playing up her collaborations with a president that won her state in 2016 by more than 35 points.

"The president has got bigger fish to fry and bigger problems to solve than whether Kevin likes him more than I do," Heitkamp said.

DOE report: U.S. generally 'well prepared' for grid hacking, but gaps remain [Back](#)

By Eric Geller | 05/30/2018 06:05 PM EDT

Senior government officials and electric sector executives don't know enough about how energy companies could recover from a disruptive cyberattack, and those companies don't consider cyber threats enough when building out their supply chains, according to a new Energy Department [report](#).

Grid resilience efforts also suffer because of "gaps in incorporating cybersecurity concerns, including planning for long-term disruption events, into state emergency response and energy assurance planning," said the report.

"The United States is, in general, well prepared to manage most electricity disruptions," the Energy Department said in its report. But gaps still exist in areas like situational awareness, workforce development, separation of roles and responsibilities and the coordinated use of resources like digital defense tools.

DOE completed the report last August as part of President Donald Trump's May 2017 cyber executive order but did not publish it until today.

The report mostly hammered home long-understood problems with protecting the power grid from hackers, including the challenges of sharing cyber threat data between partners

"The variation in infrastructure ownership and operation and the jurisdictional overlap add complexity to sharing actionable information in a timely manner," the report said. "These complexities are compounded when information is classified or sensitive due to the limited options and access to facilitate sharing."

It also warned of compounding problems in the event of a major power outage. For example, "as cyber incidents may impact disparate systems across the country, the impacted owner-operators may not be familiar with each other's systems and procedures."

DOE working to stand up new cyber unit in fiscal 2018 [Back](#)

By Darius Dixon | 03/01/2018 01:11 PM EDT

The Energy Department is aiming to have its new cybersecurity office fired up before the end of the fiscal year, Bruce Walker, the agency's top electricity official, said today.

"We're working with Congress because we put it into the FY 2019 budget proposal ... and we're looking to stand it up earlier because of the importance and our sector-specific agency authority [for cyber incidents]," he told reporters after testifying before the Senate Energy and Natural Resources Committee.

Walker has previously noted that DOE wouldn't need additional congressional authority to create the office or a new assistant secretary job to lead it. Today, he also said that the design change is meant to elevate cyber issues as well as to divide up the agency's infrastructure work into short-term and long-term operations.

Creating the Office of Cybersecurity, Energy Security and Emergency Response is a reaction to a range of issues, including Congress giving DOE more emergency authorities in the 2015 FAST Act ([H.R. 22 \(114\)](#)), the relentless need to improve cyber defenses, and the deepening marriage between the natural gas and electric sectors.

Walker would still lead the electricity office, which would focus on long-term infrastructure plans and set research-and-development goals, including for cybersecurity. Meanwhile, the new CESER office would be "actionable, near-term and highly responsive" recovery work like the devastation in Puerto Rico or the immediate response to a cyberattack, he said.

"One basically feeds the other," Walker said. "[CESER] responds to the incidents, OE will design them out of the system on a going-forward basis."

GAO: Government spent \$13.2B on climate change last year [Back](#)

By Anthony Adragna | 05/30/2018 04:34 PM EDT

The federal government spent \$13.2 billion across 19 agencies during fiscal 2017 for various programs related to climate change, according to [a report](#) from the Government Accountability Office released today.

Overall, climate change-related spending across the federal government rose \$1.5 billion between fiscal 2016 and 2017 and grew \$4.4 billion since fiscal 2010, according to the report.

GAO examined the budget justifications for six agencies accounting for 89 percent of all climate change spending and found just 18 of 533 programs within those agencies whose primary purpose is to address climate change. It further concluded that those programs primarily dedicated to addressing the problem "serve different purposes, target different audiences, or operate at different time periods and scales, which minimizes potential overlap or duplication." The other programs had multiple purposes beyond addressing climate change.

The White House Office of Management and Budget reports the government has spent over \$154 billion since 1993 to understand and address climate change.

House Science Chairman [Lamar Smith](#) (R-Texas) requested the report.

DOE IG: No big flaws in FERC pipeline review process, but transparency should improve [Back](#)

By Darius Dixon | 05/30/2018 03:21 PM EDT

Federal watchdogs said they found no major flaws in FERC's process for reviewing interstate natural gas pipelines, but they flagged concerns about its transparency and how it handles public comments, according to [new report](#).

Auditors in the Energy Department inspector general's office who reviewed FERC's pipeline certification process said that "nothing came to our attention to indicate that FERC had not performed its due diligence" in how it balanced public benefits of a proposed project with its adverse impacts.

But the report said regulators' "had not fully ensured" that the certification process was transparent to those who want to participate and that its eLibrary documentation system was difficult to use. And it said FERC lacked a consistent method for tracking and addressing comments submitted on a proposed project.

"FERC had not specifically designed its public-facing systems for use by the general public," the IG report said, noting that "although available to the general public, eLibrary had been designed for use by practitioners, the legal community, and other stakeholders."

The report also said parts of the eLibrary website "did not contain a sufficient explanation of the entire process" and that a document for landowners who could be affected by a project was not clear about key aspects of the certification process.

"While nothing came to our attention to indicate that natural gas certification applications had been inappropriately approved or disapproved," watchdogs wrote, "FERC can take steps to improve aspects of the natural gas certification process."

WHAT'S NEXT: FERC is in the process of a broad review of its natural gas pipeline certification process but there's no established deadline.

Subject: Morning Energy, presented by Anheuser-Busch: Returning to the battlefield over California car rules — Pruitt screens friendly questions — Art of the RFS deal

By Kelsey Tamborrino | 05/09/2018 05:42 AM EDT

With help from Anthony Adragna

IF AT FIRST YOU DON'T SUCCEED: The looming fight between the Trump administration and the state of California over climate change rules for cars will cover some familiar terrain — where the liberal state and its environmentalist allies have won major legal battles in the past, Pro's Alex Guillén reports. The White House strategy appears to mirror the approach that automakers and dealers unsuccessfully pursued more than a decade ago in an attempt to reverse California's strict limits on vehicles' greenhouse gas emissions.

This again? California — which has a waiver under the Clean Air Act to enact stricter standards — is hoping things play out the same way it did the last time around, when two federal district courts upheld its rules, which other states also can choose to follow. "It's sort of déjà vu because it's going to be basically round two," said Kevin Leske, who was an assistant attorney general in Vermont in 2007 when the state fought off an industry lawsuit seeking to block the greenhouse gas rules for cars.

The details: At issue is the interplay between the long-standing Corporate Average Fuel Economy standards that were established under the 1975 Energy Policy and Conservation Act, and the relatively new emissions standards enforced nationally for the first time under the Obama administration. The Trump administration is expected to nullify the waiver granted to California and then try to circumvent any questions by arguing that EPCA preempts California from enforcing its auto emissions standards — essentially the same argument automakers and dealers deployed in multiple lawsuits over a decade ago.

But keep in mind: That strategy fell short the first time around. A U.S. district court judge in California concluded that greenhouse gas standards are too different from fuel economy regulations to fall under EPCA's "related to" preemption language. However, the cases were never appealed after a larger political deal was reached on the car rules, but advocates of the Trump administration's approach say they hope to take the issue to a higher court this time around. Read [more](#).

GOOD WEDNESDAY MORNING! I'm your host Kelsey Tamborrino. Andrew Fasoli of the American Chemistry Council was the first to correctly guess that former President Ronald Reagan was first to watch a major league baseball game from the dugout, at a Baltimore Orioles game. For today: In what city did the nation's first paved roadway appear? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

BEGS THE QUESTION: EPA Administrator Scott Pruitt and his staff sought extensive control over questions that could be asked to the administrator when he toured the country speaking to industry groups, POLITICO's Anthony Adragna and Emily Holden report. Even seemingly friendly questions got axed by the agency, like, "How often do you get back to Oklahoma?" That question was crossed off a proposed list of questions without

an explanation ahead of Pruitt's appearance in December at an event in Iowa, internal emails made public by the Sierra Club through a public records lawsuit show. (At the time, EPA's inspector general was already investigating Pruitt's frequent trips back home.) The emails offer new insight into EPA staff's desires to limit access by independent journalists, pre-screen questions from friendly interviewers and coordinate Pruitt's message with lobbyists ahead of gatherings with conservative or industry groups. Read the details [here](#).

WHAT HAPPENED AT THAT BIOFUELS POWWOW: President Donald Trump appears to have brokered a deal in the long-running fight between ethanol producers and oil refiners over federal biofuels mandates. At a White House meeting Tuesday with Pruitt, Agriculture Secretary Sonny Perdue and a few Republican senators. Trump reiterated his pledge to allow 15 percent ethanol fuels year-round and rejected a price cap on biofuel credits, called Renewable Identification Numbers. Those are both big wins for the corn crowd, Pro's Eric Wolff [reports](#). But ethanol producers groused about another proposed aspect of the deal that would lower compliance costs for refiners: allowing ethanol exports to qualify for RINs. Refiners, meanwhile, were wary of a separate proposal for EPA to require large refiners to take on the ethanol-blending requirements for which it issued dozens of waivers to smaller refiners.

IT'S KIND OF INFRASTRUCTURE WEEK: Close to none of Trump's big-ticket [proposals](#) to streamline environmental rules made it into the first major bill infrastructure bill introduced in Congress since his election. America's Water Infrastructure Act of 2018, as the Senate bill is called, is so far the "most significant step lawmakers have taken to help fulfill the president's marquee campaign promise to revitalize the country's transportation arteries," Pro's Annie Snider writes. The bill's authors purposefully set their sights on bipartisanship in light of the fast-approaching midterm elections. "We focus on the 80 percent where we have general agreement, and we're going to get something done," said Sen. [Tom Carper](#) (D-Del.), the top Democrat on the panel and a cosponsor of the measure. Read [more](#).

MORRISEY WINS: West Virginia Attorney General Patrick Morrisey came out on top Tuesday, clinching the Republican nomination to take on Democratic Sen. [Joe Manchin](#) come November. Coal baron Don Blankenship, who was running a controversial campaign against the Republican establishment and Mitch McConnell, ended up in third place in the most-watched race of the night. Blankenship, who was convicted in 2015 of conspiring to skirt mine standards after 29 miners were killed at Massey Energy's Upper Big Branch facility, only [received](#) 19.9 percent of the vote to Morrisey's 34.9 percent, and 29.3 percent for Rep. [Evan Jenkins](#), the other major candidate in the race. Read more on all of Tuesday's primaries [here](#).

NEW DETAILS IN PRUITT SAGA: EPA worked closely with groups such as the Heartland Institute and the CO2 Coalition — both of which dispute the scientific consensus on climate change — when planning Pruitt's proposed "red team, blue team" debate over climate science, The New York Times [reports](#) via new documents released by the NRDC. The emails show that EPA scientists were not involved in the discussion, and that political aides continued to work on the idea even after White House chief of staff John Kelly tried to squelch the plan, according to the Times. In a separate report, the Times got a hold of documents that shed new light on the day security officers, fearing for Pruitt's safety, smashed down his condo door. Read it [here](#).

— **Pruitt's former security chief** Pasquale "Nino" Perrotta told the House Oversight Committee that Pruitt and his staff missed a connecting flight on a trip to Morocco because his security detail's weapons and gear couldn't be transferred between the planes in time, the Associated Press reports, citing anonymous committee aides. The delay forced Pruitt to spend more than 24 hours in Paris, and Perrotta's version of events calls into question the official rationale given by EPA. Read that story [here](#).

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks. The zero-emission trucks will be able to travel between 500 and 1,200 miles. Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025. [Learn more](#). **

BARRASSO: 'CLOSELY MONITORING' PRUITT SITUATION: EPW Chairman John Barrasso told ME he's "closely monitoring" the ongoing ethical woes of Pruitt and continuing with unspecified "oversight" of the agency. "The job that he's doing — in terms of the job assigned by the president to roll back regulations and overreach by the federal government — he continues to do well," Barrasso said. "We want to make sure taxpayer money is being well spent and appropriately spent." But Barrasso wouldn't specify if he'd sent additional letters to the agency, again deferring to the White House's vague, ongoing review of the situation.

Wait and see: Senior House Republicans overseeing the EPA also appeared to be publicly sticking with Pruitt as well. Rep. John Shimkus, who oversees the EPA on the House Energy and Commerce Committee, told ME he didn't have plans for additional oversight on his subcommittee but deferred to Chairman Greg Walden on whether it was appropriate. Shimkus acknowledged his lack of oversight plans "might disappoint some of my colleagues," including some Republicans who questioned Pruitt's spending at a hearing several weeks ago. A spokesman for the committee didn't respond to requests for comments on its oversight plans.

HEWITT KNEW IT: Conservative radio host Hugh Hewitt responded Tuesday on his radio show to a POLITICO report about a meeting set up by Hewitt between Pruitt and a water utility that sought a Superfund distinction in his hometown — which it ultimately received. "I knew it was going to show up in the FOIA request," Hewitt said of the meeting request. "I just didn't think it was a story." Separately, the liberal media watchdog group Media Matters reported Tuesday, that The Washington Post's Editorial Page Editor Fred Hiatt had not known of ties between EPA and Hewitt's law firm. "Hewitt, who has not written about Pruitt since September, has agreed not to write about him going forward and has assured us that similar incidents won't occur in the future," Hiatt said in an email to the group.

PERRY PULLS UP: Energy Secretary Rick Perry will testify this morning before the House Science Committee on his department's overall budget for fiscal 2019. Members will likely discuss funding for Advanced Research Projects Agency-Energy and Department's Loan Programs, which are terminated under the budget, as well as Perry's recent moves on coal plants. "Termination of these programs will save over \$300 million in FY 2019 alone while significantly reducing financial risk to the taxpayer moving forward," Perry is expected to say. **If you go:** The hearing kicks off at 9 a.m. in 2318 Rayburn. Watch the livestream here.

AT THE SAME TIME: The House Energy and Commerce Committee is slated to hold a markup on five cybersecurity, small-scale LNG bills this morning. Included in the docket: The bipartisan H.R. 5175 (115), the "Pipeline and LNG Facility Cybersecurity Preparedness Act." The slate of bills — which also includes H.R. 4606 (115), H.R. 5174 (115), H.R. 5239 (115), H.R. 5240 (115) — were approved by the subpanel in April. H.R. 4606 — which would allow the expedited approval of small-scale shipments of liquefied natural gas — got a vote of 19-14 over the objections of most Democrats.

CHATTERJEE SEES CHALLENGES: FERC Commissioner Neil Chatterjee called out natural gas pipeline permitting in New York Tuesday, while speaking at the at the Independent Power Producers of New York conference. "The gravest threat we face to resilience and fuel security is in New England and that's not the result of coal and nuke retirements but because of gas constraints due to a lack of adequate infrastructure," Chatterjee told reporters. Read more from Pro New York's Marie French here.

INTERIOR FACES FOIA SUIT: The Wilderness Society will file a lawsuit today to compel Interior to release documents related to the administration's environmental protection plans on public lands. The group says it filed 21 requests under the Freedom of Information Act for documents related to orders issued by Trump and DOI in March 2017 aimed at removing "potential burdens" to energy development on public lands. TWS says it only received responses to two of those requests.

MAIL CALL! The Environmental Protection Network sent this letter to EPA requesting a public hearing and an extension of the 30-day public comment period on the agency's "secret science" proposal to ban the use of

studies that don't publicly disclose all their data. "The proposal is far too complex, with effects too broad and indeterminate, and requests comment on far too many issues, for a thirty-day response period," the letter says.

WATCH IT: The American Council for Capital Formation released a new ad on Tuesday calling on the president to uphold the investor-state dispute settlement mechanism in any negotiation of NAFTA. Watch it [here](#).

E2 LAUNCHES CLEAN JOBS CAMPAIGN: Environmental Entrepreneurs launched a nationwide campaign Tuesday, dubbed [Clean Jobs Count](#), "to advance awareness and support of America's fastest-growing energy sector." The campaign includes digital ads in Michigan, Ohio, Illinois and Colorado, and additional ad campaigns are planned throughout the rest of the year in at least half a dozen more states.

MOVER, SHAKER: Exelon [announced](#) Constellation CEO Joseph Nigro was promoted to Exelon senior executive vice president and CFO, succeeding Jack Thayer, who becomes senior executive vice president and chief transformation officer. ComEd President and CEO Anne Pramaggiore was promoted to CEO of Exelon Utilities, succeeding Denis O'Brien. And Joseph Dominguez, the executive vice president of governmental and regulatory affairs and public policy, was promoted to CEO of ComEd Chicago.

— **Power Ledger**, a blockchain-powered renewable energy trading platform, announced Dante Disparte was appointed its strategic adviser and ambassador.

THAT'S ALL FOR ME!

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks from the pioneer in hydrogen-electric renewable technology, Nikola Motor Company. The zero-emission trucks — which will be able to travel between 500 and 1,200 miles and be refilled within 20 minutes, reducing idle time — are expected to be integrated into Anheuser-Busch's dedicated fleet beginning in 2020.

Through this agreement Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025.

"At Anheuser-Busch we're continuously searching for ways to improve sustainability across our entire value chain and drive our industry forward," said Michel Doukeris, CEO of Anheuser-Busch. "The transport industry is one that is ripe for innovative solutions and Nikola is leading the way with hydrogen-electric, zero-emission capabilities. We are very excited by the possibilities our partnership with them can offer."

Stories from POLITICO Pro

Failed legal argument against California car rules gets second wind under Trump Back

The Trump administration's plan to stymie California's tough greenhouse gas emissions for cars is about to trigger an epic legal fight — and the White House appears to be planning to use the same strategy that failed to block the state's rules a decade ago.

California's supporters, however, hope any courtroom battles will play out the way they did when the auto industry tried to prevent California and other like-minded states from setting stricter emissions limits than those pushed by EPA: with a pair of resounding legal defeats.

"It's sort of déjà vu because it's going to be basically round two," said Kevin Leske, who was an assistant attorney general in Vermont in 2007 when the state fought off an industry lawsuit seeking to block the greenhouse gas rules for cars.

"Here we are, 10 or 11 years later, basically facing the prospect, it sounds like, of the Trump administration making the same arguments that the auto industry did," added Leske, now a law professor at Barry University in Florida.

If finalized, the move would be one of the biggest regulatory rollbacks of the Trump administration, and it could go even further than what automakers have asked the White House to do. And its advocates say despite the previous legal setbacks, they hope to take the issue to a higher court, something they were denied in the previous battle when a political deal ended the conflict.

In the meantime, California, which has already spearheaded a lawsuit over EPA's April decision to weaken the standards, is already preparing for a major regulatory break with the Trump administration. The state's Air Resources Board on Monday asked for public input for regulatory language that it will not consider cars complying with a weakened federal standard to be acceptable in California.

The legal issue will center on the interplay between the long-standing fuel economy standards known as the Corporate Average Fuel Economy, which is issued by the National Highway Traffic Safety Administration under the 1975 Energy Policy and Conservation Act, and the relatively new greenhouse gas emissions standards enforced nationally for the first time under the Obama administration.

In requiring a national CAFE standard, Congress barred states from issuing their own laws or regulations "related to" fuel economy standards. But California's novel approach to regulate carbon dioxide emissions via the state's special authority under the Clean Air Act gave it significant leverage to force car makers to meet stricter rules.

In order to avoid a patchwork of different regulations between California and its allies and the rest country, the Trump administration is expected to seek to nullify the waiver EPA granted California in 2009 allowing it to enforce its own rules. EPA has never tried to revoke a waiver, and legal observers note the law does not explicitly grant EPA such authority.

But the Trump administration is expected to try to circumvent any questions around revoking the waiver by arguing that EPCA preempts California from enforcing its auto emissions standards — essentially the same argument automakers and dealers deployed in multiple lawsuits over a decade ago.

A May 1 letter from Sen. Tom Carper to EPA and DOT says the draft proposal would adopt that EPCA preemption argument.

That strategy fell short first time around, when a California judge concluded that greenhouse gas standards are too different from fuel economy regulations to fall under EPCA's "related to" preemption language. Emissions

may be closely correlated to fuel efficiency, he ruled, but factors like air conditioning usage and credits for electric vehicles mean that the pollution rules are not explicitly aimed at fuel economy, and thus are not preempted

Meanwhile, a Vermont judge also ruled in 2007 that since EPA had approved the California standard under the Clean Air Act waiver, it becomes a proper government motor vehicle standard, which EPCA requires DOT to take into account when setting fuel economy targets. Congress "could not have intended that an EPA-approved emissions reduction regulation did not have the force of a federal regulation," the judge wrote.

Those two legal rulings with the span of a few months would seem to be formidable hurdles for any EPCA preemption argument. And the case gets even more difficult for the Trump administration when the Supreme Court's landmark ruling in that year's *Massachusetts v. EPA* is added in. In that case, the majority said that fuel economy and greenhouse gas rules may "overlap," but could both be administered in a way that would "avoid inconsistency."

"I think it's fair to say this ground has been trod before and it's not looking good if Pruitt's EPA trots out this EPCA preemption argument again," said Sara Colangelo, the environmental law and policy program director at Georgetown University.

Congress also passed two major Clean Air Act updates after EPCA, in 1977 and 1990, that expanded California's special powers and didn't address the exemption at all, a move Colangelo said "really signals that they intended California to maintain this special position as the laboratory for advancing pollution controls in the emissions arena."

NHTSA declined to address the preemption issue, but said in a statement that its "top priority" is safety and that the administration "must also consider economic practicability." A spokesman for California's Air Resources Board said that the preemption proposal "would harm people's health, boost greenhouse gas pollution and force drivers to pay more money at the pump for years."

Those two previous court losses are not slowing down conservatives pushing the Trump administration to adopt the preemption argument now.

Undeterred, a coalition of industry groups wrote to EPA Administrator Scott Pruitt in March urging him to revoke California's waiver by concluding it is preempted by EPCA.

"Even though these two lower courts have weighed in, I think there's opportunity now for the lawsuits to move on to a higher level," Patrick Hedger, the policy director for the FreedomWorks Foundation, a conservative advocacy group.

He added that no higher court ultimately addressed the issue. Appeals in both cases were dropped as part of the single national standard deal reached between the Obama administration, California and automakers. Hedger noted that the Supreme Court's *Massachusetts v. EPA* ruling was not specifically about EPCA preemption.

Marlo Lewis, a senior fellow at the Competitive Enterprise Institute, believes the best way to win the preemption argument is to focus on the high degree of overlap to show the two standards are "related" under EPCA

"You and your dad are different people. Are you not related?" Lewis said. "The idea that they're not related because they're not identical is just pure rhetorical flimflam."

Like many other deregulatory actions, this proposal would substantially benefit the energy-producing that voted for Trump.

For conservatives, blocking California's climate change authority is the ultimate goal, since the Democratic hold on state politics and California's size mean its aggressive action on climate change has an outsize influence on the rest of the nation.

"I think this is one step in basically saying, 'Look, we're not going to allow California on this issue or any others in the future to continue to supersede federal policy on these issues and basically impose their standards on the entire country just because of the size of the market,'" said Hedger.

Halting fuel economy standards at 2020 levels would mean needing roughly 2 billion barrels more oil over the lifetime of cars built from 2021 to 2026, said David Cooke, a senior vehicles analyst at the Union of Concerned Scientists. And that's not counting the longer-term demands that would be caused for future model years that would start with lower targets because of this potential freeze.

Pruitt sought tight control of events even on friendly turf [Back](#)

By Anthony Adragna and Emily Holden | 05/08/2018 06:38 PM EDT

EPA Administrator Scott Pruitt and his staff went to great lengths to avoid unscripted questions when he toured the country speaking to industry groups, and even a seemingly friendly ice breaker can be deemed unacceptable.

"How often do you get back to Oklahoma?" the top official from the Iowa Association of Electric Cooperatives planned to ask Pruitt when he addressed the group last December, according to internal emails that were recently made public.

That question was crossed out when an EPA staff member sent back a proposed list of questions for Pruitt's "fireside chat" with Chuck Soderberg, the association's executive vice president. Tate Bennett, EPA's associate administrator of public engagement, did not explain why that and another question had been removed, but at the time of his Nov. 29 email the administrator was already [facing questions](#) over his travel practices. A few months earlier, EPA's inspector general had [launched an investigation](#) into whether the agency had sufficient policies in place to "prevent fraud, waste and abuse with the Administrator's travel that included trips to Oklahoma."

The [emails](#) among Bennett, other EPA staffers and representatives of the Iowa cooperatives were included in the thousands of documents obtained by the Sierra Club through a public records lawsuit. They reveal a pattern of Pruitt and his staff working to limit access by independent journalists, pre-screen questions from friendly interviewers and coordinate his message with lobbyists ahead of gatherings with conservative or industry groups.

Ahead of the Iowa event, the co-op association's director of government relations, Kevin Condon, confirmed that neither his group nor EPA would issue a media advisory, and they would cancel a press gaggle but still host an interview with the group's internal Living with Energy in Iowa magazine.

That publication also got questions [pre-approved](#) by EPA staff.

"Let me know if any of these give you heartburn," said Erin Campbell, the co-op group's director of communications. "This would be a friendly interview environment and we're keeping the conversation focused on Iowa consumers."

In another instance, before Pruitt spoke at a U.S. Chamber of Commerce event in June, EPA received a list of 10 proposed questions from the head of the group's energy institute, Karen Harbert. They touched on his regulatory philosophy, his efforts to rollback rules, and whether co-owning a minor league baseball team taught him lessons useful for running a federal agency. EPA staff did not appear to object to Harbert's proposed list.

When Pruitt was slotted to speak at a Texas Oil and Gas Association conference in October, EPA staff asked for a Q&A format with a representative of the group, rather than have the administrator take three pre-screened questions from the crowd.

EPA aides asked for the change in plans after being made aware that four reporters would be attending from the Houston Chronicle, Bloomberg BNA and Reuters.

Bennett wrote that after updating Pruitt that the media would attend, "he'd like to respectfully request that the entire format now be Q&A with two chairs on stage." She also shared a list of questions the moderator could ask, including on regulatory rollbacks, on what Pruitt would consider "true environmentalism" and on what his relationship was like with the president.

"What has it been like to run such a newsworthy agency? More difficult than you imagined?" the last question read.

And in at least one instance, a lobbyist for a group Pruitt was set to address offered to help write his speech for him. Before Pruitt and an entourage of eight staffers and security agents traveled in November to Kiawah Island, South Carolina, for a speaking engagement with the American Chemistry Council, the group's lobbyist Bryan Zumwalt asked a scheduler who to contact to help write Pruitt's speech.

"Who in your sop (sic) should I be working with to help prepare Administrator Pruitt's talking points/speech? Figure someone there might like the help on key areas to discuss," he said.

The scheduler, deputy White House liaison Hayley Ford, replied that Millan Hupp, director of scheduling and advance, and Bennett could assist.

Trump plan leaves biofuel makers cold [Back](#)

By Eric Wolff | 05/08/2018 06:48 PM EDT

President Donald Trump's latest bid to strike a deal on biofuels on Tuesday appeared to win over oil refiners, but a plan to allow ethanol exports to qualify for credits under the federal program left biofuel producers irate.

Trump gave ethanol producers two big victories at the White House meeting by reiterating his promise to allow 15 percent ethanol fuels year-round and rejecting a price cap on the credits, called Renewable Identification Numbers, that are used to prove compliance with the Renewable Fuel Standard. But ethanol producers balked at

the plan to have EPA Administrator Scott Pruitt and Agriculture Secretary Sonny Perdue set up a system to allow ethanol exports to receive RINs.

"The notion of allowing exported ethanol to count toward an oil company's RFS obligation is extremely problematic," Bob Dinneen, president and CEO of the Renewable Fuels Association, said in a statement. "In no way will that ever be acceptable or considered a win for our industry."

But the Trump administration said it has found the right balance between competing parts of its electorate.

"After several meetings and input from stakeholders on both sides, President Trump is pleased to announce that a final decision has been made that allows E15 to be sold year-round, while providing relief to refiners," White House spokeswoman Lindsay Walters said in a statement. "This outcome will protect our hardworking farmers and refinery workers. The President is satisfied with the attention and care that all parties devoted to this issue."

Refiners backed the idea, although they were wary of a separate proposal to allow EPA to consider requiring large oil refineries to take on the ethanol-blending requirements the agency lifted from small refiners by issuing dozens of compliance waivers.

Sen. Ted Cruz (R-Texas) emerged from Tuesday's meeting calling the deal a "win-win." Refiners have been pressing for years to change the program to lower compliance costs that they say are eating away at their profits.

"President Trump brought together two sides that thought a deal couldn't be reached and he found a 'win-win' solution to one of the most intractable regulatory problems facing the nation — a problem that has been neglected for years," refiner Valero Energy said in a statement.

The group of independent refiners pushing for changes, led by Valero, Carl Icahn's CVR and some Philadelphia-area refiners, had previously sought a cap on RIN prices in exchange for supporting an increase in the sales of E15.

At Tuesday's meeting, the seventh so far held by the White House, a source said Trump agreed to definitively reject any price cap, but he also asked Pruitt and Perdue to work out a plan for how exports could ease price pressure on RINs. Currently, ethanol that is shipped abroad is stripped of the RINs that can be used to meet a refiner's RFS obligation. Sources who work with refiners say preserving those credits would increase the supply and drive down prices for refineries.

"Because biofuels exports are a long-time major objective of the farm community, allowing export RINs is literally the anticipated win-win solution, obviating the need for more direct cost containment devices," said a refining industry source close to discussions.

But ethanol producers, who have been increasing their exports in recent years, complain that allowing those shipments to earn RINS would undermine the biofuel program's goals.

"Pursuing a path that includes RIN credits on export gallons would violate the letter and spirit of the RFS, serving the interests of oil refiners who have already benefited from Administrator Pruitt's unprecedented RFS volume waivers at the further expense of America's farmers," Kevin Skunes, president of the National Corn Growers Association, said in a statement.

Sources said Tuesday's meeting included a lengthy discussion about whether EPA could potentially reallocate the 1.2 billion gallons of ethanol demand the industry says has been exempted under the dozens of compliance waivers the agency has granted to small refineries. One source said Pruitt expressed openness to shifting those gallons to large refiners, something the refiners opposed. But that reallocation discussion got tied up with the

idea of export RINs, and Pruitt and Perdue left the White House with instructions to develop some kind of proposal.

"There was discussion about how to reallocate the waived obligations so that demand for biofuels wouldn't be hurt," Sen. Chuck Grassley (R-Iowa) said in a statement. "While details weren't decided, I look forward to reviewing a plan being developed by Secretary Perdue and Administrator Pruitt. Any fix can't hurt domestic biofuels production."

Republican Sen. Pat Toomey of Pennsylvania also expressed reservations about the vague promise of changes to the program.

"The proposal discussed at our White House meeting today might result in lower RIN prices, which would relieve this artificial burden — but even that is not clear until details are established," he said in a statement.

Even as the White House has pushed for a deal, Sen. John Cornyn (R-Texas) and Rep. John Shimkus (R-Ill.) have been leading efforts in Congress to overhaul the program. Shimkus and his staff have said in the past that administrative changes to the program would undermine their effort, though they appear to be moving full-steam ahead for now.

"Executive actions aren't a substitute for legislation," said Shimkus spokesman Jordan Haverly. "The only path to an enduring and equitable deal for farmers, refiners, ethanol producers, automakers and consumers — especially one that won't spend more time in court than on the books — is through Congress. Those legislative efforts remain ongoing."

Trump's latest strike against regulations: His infrastructure plan [Back](#)

By Annie Snider and Anthony Adragna | 02/16/2018 05:01 AM EDT

President Donald Trump's infrastructure plan would trigger one of the most significant regulation rollbacks in decades, benefiting not just roads and bridges, but businesses ranging from coal mines to homebuilders to factories.

The blueprint the White House released this week would eliminate the Environmental Protection Agency's authority to veto the Army Corps of Engineers' wetlands permits, a power that the EPA wielded during the Obama administration to block a controversial mountaintop coal mine in West Virginia. Industrial facilities like coal plants and steel factories could get 15-year Clean Water Act pollution permits — up from five years — that would be automatically renewed. For some infrastructure permits, the deadline for opponents to file legal challenges would shrink from six years to 150 days.

The proposed revisions to some of the nation's bedrock environmental regulations are drawing heavy criticism from congressional Democrats — including in the Senate, where Republicans would need at least nine extra votes to enact Trump's plan. Environmental groups say the ambition of the plan's deregulation push contrasts with the relatively meager amount of federal money the White House is proposing to contribute toward the \$1.5 trillion total.

"This isn't an infrastructure package," said Melissa Samet, an attorney with the National Wildlife Federation. "This is an all-out attack on longstanding environmental protections that have done a lot of good for this country."

Republicans and business groups have long complained that the federal government's often cumbersome permitting process, governed by laws Congress enacted decades ago, creates unnecessary delays for projects. "We built the Empire State Building in just one year," Trump said in his State of the Union address last month. "Is it not a disgrace that it can now take 10 years just to get a permit approved for a simple road?"

Supporters of Trump's plan are happy the White House is pushing for changes.

"We're very pleased with the permitting provisions," said Ross Eisenberg, a vice president at the National Association of Manufacturers. "Even some of them being signed law would be a major improvement. We don't want to blow up the process. We just want it to go faster."

Senate Environment and Public Works Chairman John Barrasso (R-Wyo.) said he hopes Democrats will come around.

"You're never going to win over every obstructing Democrat, but they've got to realize that projects have been slowed down in their states," Barrasso said.

But Democrats say the nation's real infrastructure problem is money — and the Trump proposal calls for just \$200 billion in federal investments over the next decade for needs including roads, bridges, airports, water plants, veterans' hospitals and rural broadband service. And they questioned whether Trump's aim is really just to make regulatory reviews more efficient.

"The president's contentions are not to streamline a process, but to compromise needed environmental and public health issues," Sen. Ben Cardin (D-Md.) told reporters.

Some kind of environmental streamlining has been a part of most of the major infrastructure measures Congress has passed in recent years. Provisions in the 2012 highway bill and a 2014 water bill aimed to get agencies to coordinate their permit reviews more efficiently and impose consequences for delays.

Supporters of those changes included then-Sen. Barbara Boxer (D-Calif.), an environmental stalwart, who argued that the streamlining amounted to common sense despite the opposition of some environmentalists. Many of those provisions have yet to take effect, however.

Trump's infrastructure proposal would go much further, setting strict deadlines for reviews and curtailing EPA's say over projects.

For instance, Trump has touted the proposal's two-year limit for agencies to issue final permitting decisions, including a strict 21-month limit on analyses done under the National Environmental Policy Act of 1970, one of the nation's foundational environmental laws.

The law requires federal agencies to make a public estimate of the environmental impacts when the federal government spends money or makes a permitting decision, although nothing in the law requires agencies to limit environmental damage. Repeated environmental studies under NEPA were one factor that contributed to the Obama administration's nearly seven-year review of the Keystone XL oil pipeline, a project Trump has pushed to revive this year.

Under Trump's proposal, agencies would be required to complete environmental reviews in no more than 21 months. Anyone seeking to challenge the permits would have just 150 days to sue, instead of the current six years.

Industry groups argue the act's long statute of limitations for permit challenges leaves a cloud of uncertainty over projects. But Samet, the National Wildlife Federation attorney, said 150 days runs by quickly when challengers have to track down documents that regularly run hundreds of pages, decipher them, find experts to analyze the data, hire lawyers and scrounge up the money to cover legal costs.

The result, she said: "Bad projects will move forward. There'll be nothing to stop them."

Trump's plan would also deliver on a long-sought Republican goal of curbing EPA's authority under the Clean Water Act's wetlands program — a change that would have sweeping effects not just for infrastructure projects but for nearly any kind of development.

The blueprint would remove EPA's authority to oversee the Army Corps of Engineers' determinations about which streams and wetlands are subject to Clean Water Act protections. And it would take away the EPA's ability to veto dredge-and-fill permits that it decides would cause undue harm to the environment.

EPA has used that veto authority only 13 times since the Clean Water Act was enacted, including with its 2012 reversal of a Army Corps permit for the Mingo Logan mountaintop coal mine in West Virginia — a decision that angered the coal industry's supporters in Congress. Most of the other occasions when it used that power came during Republican administrations.

Trump's proposal would also extend pollution discharge permits under the Clean Water Act from five years to 15, and allow them to be automatically renewed as long as "water quality needs do not require more stringent permit limits." Those changes that would apply not only to municipal wastewater treatment plants but also to industrial facilities.

The plan also calls for eliminating a section of the Clean Air Act that requires EPA to review, comment on and rate other agencies' environmental impact statements.

While the proposal may allow construction on projects to get started faster, it might end up creating bigger problems in the end, argued Kym Hunter, an attorney with the Southern Environmental Law Center. She said a narrower NEPA review wouldn't just keep potential environmental problems from coming to light, but it would also keep the public in the dark about whether a project would live up to its promises.

"NEPA is about taking that hard look," Hunter argued. "When it was promulgated in 1970, the idea was if you think about what you are doing you're likely to make a better decision. This [Trump proposal] would just encourage agencies to rush forward without being thoughtful, without being careful."

Trump's plan also attempts to limit the ability of courts to halt work on projects while lawsuits proceed. But that could backfire too, Hunter said, if it keeps courts from halting an ill-conceived project until after a government body has started spending money and taking on debt.

Sen. Tom Carper of Delaware, the top Democrat on the Environment and Public Works Committee, didn't dismiss the idea of making updates to the decade-old laws. But if the administration's goal is to weaken environmental regulations, he said, "we're not going to get very far."

Trump's proposed regulatory rollbacks left out of Senate infrastructure bill [Back](#)

By Annie Snider | 05/08/2018 06:44 PM EDT

The first major infrastructure bill introduced in Congress since President Donald Trump took office ignores virtually all of the big-ticket deregulatory proposals the White House laid out in its blueprint earlier this year.

Chief among Trump's complaints about the country's infrastructure system is the amount of time it takes to get environmental permits. The package the White House unveiled in February included a meager \$200 billion in federal funding for infrastructure, and instead focused on a number of so-called environmental streamlining provisions. Among them: proposals to eliminate the EPA's authority to veto the Army Corps of Engineers' wetlands permits and reduce the length of time opponents have to file legal challenges to permits from six years to 150 days.

But none of those provisions made it into what stands to be a multibillion dollar water resources measure introduced by top Republicans and Democrats on the Senate Environment and Public Works Committee on Tuesday.

That bill, dubbed America's Water Infrastructure Act of 2018, is so far the most significant step lawmakers have taken to help fulfill the president's marquee campaign promise to revitalize the country's transportation arteries. And in a bid to have a feather in their caps to take home before the 2018 midterm elections, lawmakers in the upper chamber are charting a bipartisan course with the measure.

"We focus on the 80 percent where we have general agreement, and we're going to get something done," Sen. Tom Carper (D-Del.), the top Democrat on the panel and a cosponsor of the measure, told reporters.

The House Transportation and Infrastructure Committee is working on its own water resources bill that also could be released this month, and members are pursuing a bipartisan approach, too, as they have historically.

The Senate bill is sidestepping battles over the nation's foundational environmental laws, including the National Environmental Policy Act and the Clean Water Act. Republicans and business groups fault those laws for delays and skyrocketing costs — "Is it not a disgrace that it can now take 10 years just to get a permit approved for a simple road?" Trump asked in his State of the Union address in January — but Democrats and environmentalists defend them as critical protections.

Instead, the bill's authors set their sights on a suite of more practical changes at the Army Corps of Engineers — one of the government's most red-tape-laden bureaucracies that just about every lawmaker loves to hate.

The bill includes dozens of provisions aimed at making the agency more transparent and responsive to Congress and the communities it works with to build projects. It would make a major change to the way the Army Corps budgets, in an effort to help projects that are important to states but aren't competing well for scarce federal dollars under the current approach. And it would create a board related to water storage projects that an environment committee aide said is aimed at helping communities understand early on whether their project will be able to get a permit.

The measure also includes a number of drinking water and wastewater provisions, issues that became a major component of the last such measure in 2016, when an aid package to help Flint, Mich., recover from its lead

contamination crisis was included. The new Senate bill includes provisions to help small and rural water utilities with technical assistance, allow communities to use federal drinking water dollars to protect their water sources, and to help communities balance multiple costly wastewater upgrade requirements at the same time.

The meat of the bill is six new project authorizations for the Army Corps, including a ship channel extension project in Texas, flood control projects in New York and Hawaii, and hurricane protection projects in Florida and Texas. The bill would also increase the amount that can be spent for the Savannah Harbor expansion project, a top priority for Georgia's senators, and allow more water to be stored at a key Wyoming reservoir.

And it's not just Trump's environmental permitting changes that senators rejected in the bill; they also responded to the White House's past proposals to eliminate or significantly cut a popular Great Lakes restoration program by increasing its authorization. The bill would also require EPA to open a new program office for the Long Island Sound, where the Trump administration also proposed eliminating funding.

Asked Tuesday how work on the the House's measure is coming, Transportation Committee Chairman [Bill Shuster](#) (R-Pa.) said "good."

But one fault line is already emerging between the two chambers.

Shuster has backed a proposal from his water resources subcommittee chairman, Rep. [Garret Graves](#) (R-La.) to move the Army Corps of Engineers out of the Pentagon and to another agency like the Department of Transportation or the Interior Department. But an EPW aide said that both Republicans and Democrats in the Senate have concerns with the idea; their bill would instead mandate a study by the National Academy of Sciences into the structuring of the Army Corps.

"We're trying to pass a bipartisan bill and I think that would make it very difficult to do with the limited amount of time that we have," the aide said.

Top takeaways from the first big primary of 2018 [Back](#)

By Steven Shepard, Elena Schneider and Scott Bland | 05/09/2018 01:13 AM EDT

Republicans can exhale now.

Convicted coal magnate Don Blankenship's surprise third-place finish in Tuesday's West Virginia GOP Senate primary sidestepped yet another debacle for the party after consecutive meltdowns in special elections in Alabama and Pennsylvania. Instead, party leaders celebrated state Attorney General Patrick Morrisey's win, which capped the first multi-state primary of 2018.

The night saw Republicans pick three of the 10 candidates who will take on Democratic senators in states President Donald Trump won, and the first House incumbent go down in a primary in 2018.

Here are POLITICO's seven takeaways from Tuesday:

1. Republicans averted catastrophe, but victory in West Virginia is far from assured.

A Blankenship nomination might well have extinguished GOP hopes of toppling Democratic Sen. Joe Manchin, despite the state's heavy Republican electorate. Blankenship was living in a Phoenix halfway house this time last year, after his conviction for conspiracy to skirt mine safety rules after an incident claimed the life of 29 miners at one of his facilities. He called Senate Majority Leader Mitch McConnell "Cocaine Mitch," and made racially charged comments about McConnell's family.

Morrissey is someone national Republicans can embrace. National Republican Senatorial Committee executive director Chris Hansen said in a statement Tuesday night that Morrissey will "fight for conservative values" and predicted his victory over Manchin in the general election.

But Morrissey enters the race with his own baggage — even if it's nothing like Blankenship's. Morrissey used to be a Washington lobbyist, and Morrissey's wife still is one. Also, Morrissey ran for Congress in 2000 — in New Jersey.

Rep. Evan Jenkins, who finished second on Tuesday night, tried to level those attacks. But the punches didn't land with Blankenship's circus-like candidacy stealing the spotlight.

With Blankenship fading into the distance, Manchin can contrast his folksy, "Pepperoni Roll," West Virginia affect against Morrissey's Jersey accent and D.C. "swamp" ties. Republicans will fire back, alleging that Manchin isn't the aw-shucks bipartisan he claims to be and doesn't stick up for Trump, who is very popular in the state.

2. Words alone can't earn the Trump mantle.

Reps. Luke Messer and Todd Rokita spent the final week of the GOP Senate primary in Indiana trying to convince voters that Mike Braun — the businessman and former one-term state representative who had surged to the front of the field on an outsider message — wasn't a reliable conservative. They cited Braun's participation in Democratic primaries for more than three decades.

But Braun easily defeated both Messer and Rokita because his outsider message, in contrast with his two D.C. insider rivals, resonated more than his Democratic past. (Braun said he only voted in Democratic primaries to influence local elections, but Messer and Rokita painted that as a lame excuse.)

Braun's argument was easier to make after Trump's 2016 presidential campaign. Trump's opponents in the GOP primaries needled the billionaire for his past donations to Democratic candidates, or his past conservative apostasies on issues like abortion and universal health care. Trump parried those attacks, barely breaking a sweat.

Ultimately, as much as Rokita (who donned a red "Make America Great Again" hat in his ads) or Messer (who talked up Trump for a Nobel Peace Prize) tried to claim the Trump mantle, Braun seemed more like the real deal. He hit Messer and Rokita for being attorneys who never practiced law, instead getting into politics at a young age. And Braun, who will now try to unseat Democratic Sen. Joe Donnelly, said he was the only candidate who had signed the front of a paycheck, while his opponents had been endorsing government checks for most of their careers.

3. House members went down hard.

It was a bad night for House members running statewide: Jenkins lost to Morrissey by more than 5 points. Rokita and Messer finished even further behind Braun.

Rep. Jim Renacci, who still won the GOP nomination to face Sen. Sherrod Brown in Ohio, failed to win a majority of the vote in the primary, despite endorsements from Trump and the state Republican Party.

For a party led by a first-time-candidate-turned-president, it's not surprising that Congress isn't the ideal springboard to higher office. But the GOP is relying on other House members to maintain its Senate majority — whether it's Martha McSally in Arizona, Marsha Blackburn in Tennessee or Kevin Cramer in North Dakota.

And for members facing competitive statewide primaries — think McSally, Kristi Noem for governor in South Dakota, Raul Labrador for Idaho governor or Diane Black for Tennessee governor — they may find their congressional résumés are more anchors than propulsion for their candidacies.

4. The first incumbent falls. Will others join?

Rep. Robert Pittenger (R-N.C.) became the first incumbent member of Congress knocked out in a primary in 2018.

Pittenger tried to align himself closely to Trump, touting in his first TV ad that he was the "strongest supporter" of the president. But Mark Harris, a pastor who nearly beat Pittenger in 2016, successfully tagged Pittenger as a part of the "Washington swamp." Republicans in primaries across the country are questioning their opponents' pro-Trump bona fides, a strategy that proved effective here.

Pittenger's loss surprised national and local Republicans, who expected the congressman to survive the primary challenge. But Harris' campaign said Pittenger's "votes didn't match his rhetoric," pointing to his support for the omnibus spending bill in March, said Andy Yates, a spokesman for the campaign. (Harris, a social conservative, said he planned to join the House Freedom Caucus.)

It's not clear that there's a long list of Pittengers about to be swept away in primaries. Still, his defeat could serve as a wake-up call to incumbents who have struggled to unite Republicans at the ballot box in the past, like Reps. Martha Roby (Ala.) and Doug Lamborn (Colo.).

5. Both parties got their men for Ohio governor.

It was an easy night for both parties watching the Ohio gubernatorial race. State Attorney General Mike DeWine easily dispatched Lt. Gov. Mary Taylor in the GOP primary, aided by the imprimatur of the state party.

And on the Democratic side, former state Attorney General Richard Cordray cruised past Rep. Dennis Kucinich after weeks of hand-wringing that the race against the at-times eccentric Kucinich was closer than it should have been.

In the end, Cordray — who until recently headed the federal Consumer Financial Protection Bureau — crushed Kucinich and four other challengers, even winning a greater percentage in the Democratic primary among a fractured field than DeWine earned in a one-on-one matchup with Taylor.

Both parties quickly pivoted to trying to attach a Washington brand to their opponents. The Republican Governors Association called Cordray "a Washington D.C. power-hungry insider," despite DeWine's 20-year congressional tenure.

Meanwhile, the Democratic Governors Association said DeWine was "a card-carrying member of the D.C. and Columbus swamp," despite the fact that Cordray was DeWine's predecessor as attorney general and was an Obama political appointee.

Either way, the gubernatorial election this year will be a rematch of the 2010 attorney general race. DeWine, four years removed from a loss to Brown, toppled the then-incumbent Cordray by 1 percentage point in the GOP wave year.

6. Chalk two up for the GOP establishment.

Establishment Republicans got more good news in Ohio when Troy Balderson and Anthony Gonzalez won primaries for open congressional seats.

Balderson, backed by former Rep. Pat Tiberi, beat Melanie Leneghan in two primaries in Ohio's 12th District on Tuesday — one for the November election, and one for an August special election to complete Tiberi's unexpired term.

The race was a proxy war between Tiberi — an long-time ally of former House Speaker John Boehner — and Rep. Jim Jordan (R-Ohio). Tiberi spent money on TV ads to back Balderson, while Jordan, the House Freedom Caucus co-founder, cut a competing TV ad for Leneghan that aired with help from conservative megadonor Richard Uihlein.

Gonzalez, a former Ohio State University football star, won a similar fight in the state's 16th District. He defeated state Sen. Christina Hagan, who had Jordan's backing in the race.

Both districts have been Republican strongholds — the 16th is even more solidly red than the 12th. But given Democrats' stronger-than-expected performances in special elections in the Trump era, Republicans are gearing up for a fight for the Tiberi seat over the next three months.

"There will be a very clear contrast between Troy and ... [Democratic nominee] Danny O'Connor in the months ahead," said Rep. Steve Stivers (R-Ohio), who chairs the National Republican Congressional Committee.

7. Women are dominating Democratic primaries

Women are running for federal office in record numbers in 2018 — and it looks like Democratic primary voters are poised to support those candidates like never before. There were 20 open Democratic House primaries with women on the ballot Tuesday night, and voters selected a female nominee in 17 of them.

It's a sharp turnaround from past years when female Democrats faced big hurdles in trying to win support from voters. A good number of the primary winners Tuesday night are running in heavily Republican seats with little chance of winning general elections. But they are still part of an important trend: Evidence is building that Democratic voters are tilting toward supporting women this year.

Keep this in mind as we approach primaries in big states full of battleground districts over the next two months: California and New York in June, and Pennsylvania next week.

Pruitt fast-tracked California cleanup after Hugh Hewitt brokered meeting [Back](#)

By Emily Holden and Anthony Adragna | 05/07/2018 10:12 PM EDT

EPA Administrator Scott Pruitt [placed](#) a polluted California area on his personal priority list of Superfund sites targeted for "immediate and intense" action after conservative radio and television host Hugh Hewitt brokered a

meeting between him and lawyers for the water district that was seeking federal help to clean up the polluted Orange County site.

The previously unreported meeting, which was documented in emails released by EPA under a Freedom of Information Act lawsuit by the Sierra Club, showed Pruitt's staff reacting quickly to the request last September by Hewitt, who has been one of Pruitt's staunchest defenders amid a raft of ethics controversies around his expensive travel, security team spending and a cheap Washington condo rental from a lobbyist.

Pruitt has drawn criticism from environmentalists and other critics for letting prominent GOP backers and industry groups influence the agency's agenda — even as he has kicked scientists off of EPA's advisory panels and moved to limit the kinds of peer-reviewed research it will consider when making decisions.

In many cases, the people whose advice Pruitt is heeding could be useful supporters for him in a future race for U.S. senator or president. They include GOP megadonor Sheldon Adelson, who — as POLITICO reported in March — persuaded Pruitt last year to take a meeting with an Israeli water purification company called Water-Gen that later won a research deal with the EPA.

Hewitt, a resident of Orange County whose son James works in EPA's press office, emailed Pruitt in September to set up a meeting between the administrator and the law firm Larson O'Brien, which employs Hewitt and represents the Orange County Water District. Pruitt had been planning to meet with the lawyers in California a month earlier, but cancelled the trip to undergo knee surgery.

"I'll join if the Administrator would like me too or can catch up later at a dinner," Hewitt wrote in his Sept. 18 message. Hewitt added that the issues surrounding the Superfund site were "Greek to me but a big deal in my home county."

Pruitt's aides responded within minutes and quickly confirmed an Oct. 18 meeting for the lawyers and a project director.

Six weeks after that meeting, on Dec. 8, the Orange County North Basin site appeared on Pruitt's list of 21 contaminated areas to address. A month later, Pruitt proposed listing the site on EPA's National Priorities List, a move that could make it eligible for long-term federal cleanup funding from the federal government if the responsible polluters cannot be identified and forced to pay for its remediation.

Since then, Hewitt has been a robust defender of Pruitt, dismissing his recent controversies as "nonsense scandals" on MSNBC in early April and saying his detractors were "just trying to stop the deregulation effort."

Pruitt has touted the agency's Superfund work as one of his key priorities, setting up a task force to seek to speed up the clean-up of the nation's worst contaminated sites. That task force had been headed by Albert "Kell" Kelly, a former banker and longtime friend, who departed the agency last week after news about loans he provided to Pruitt in Oklahoma, including the mortgage provided to Pruitt for a house he bought from a lobbyist when he was a state senator.

Environmental advocates have worried Pruitt's efforts to identify Superfund priority sites would bypass the process set up by Congress to ensure cleanup resources are divided fairly, and that he could focus on sites seen as important to his political supporters. And environmentalists have said Pruitt's rush to claim that contaminated properties have been remediated could risk turning them over to local governments and businesses that might pursue cheaper, inadequate solutions.

Elgie Holstein, senior director for strategic planning at the Environmental Defense Fund who has been tracking EPA's Superfund actions, said the connection to Hewitt is "not a surprise."

"The biggest fear we have is that No. 1, the administrator's political priorities and personal ambitions, political ambitions become the primary criteria for action under this program instead of science and health," Holstein said.

EPA never disclosed the meeting with Hewitt's contacts. It was listed on Pruitt's public calendar as a staff briefing. But on his private Outlook schedule, which the agency has released in response to lawsuits, it appeared as an "Orange County Superfund Site" meeting with Kelly and two other staffers. The records did not list the Californians in attendance at the meeting at EPA headquarters in Washington.

But EPA spokesman Jahan Wilcox confirmed that two lawyers representing the water district, Robert O'Brien and Scott Sommer, and the water district director of special projects, Bill Hunt, were there. A third lawyer, former federal Judge Stephen G. Larson, was forced to cancel his trip due to wildfires in California, according to emails.

"Hugh Hewitt helped arrange the meeting at the request of the water district but did not attend," Wilcox said.

Wilcox said the meeting was for the water district to "brief EPA on the Superfund site's cleanup efforts and request expedited cleanup," following a 2016 agreement with the agency to conduct a remedial investigation and feasibility study, at a cost of \$4 million over two years. Hunt did not immediately respond to a request for comment.

Hewitt in an email to POLITICO called Pruitt a friend and said he does not have a working relationship with him. He said that his firm has represented the water district and worked on the site with EPA's regional office for years but that he had not participated in that work.

Hewitt said he requested a meeting because the water district wanted to brief the new EPA team, he said, adding that he was an Orange County resident until 2016 as well as an Orange County Children and Families Commission member. He said that he "very much" wanted the Superfund site remediated as soon as possible.

According to an EPA fact sheet, the Orange County site has more than five square miles of polluted groundwater containing chlorinated solvents and other contaminants across the cities of Anaheim, Fullerton, and Placentia. It includes the Orange County Groundwater Basin, which provides drinking water to more than 2.4 million residents across 22 cities, according to the agency. Those pollutants can damage humans' nervous systems, kidneys and livers, and some are considered carcinogenic.

EPA has just begun its process of studying the contamination and it has not determined which companies caused the pollution in the area. But an administrative settlement with the EPA in 2016 says the area was home to "electronics manufacturing, metals processing, aerospace manufacturing, musical instrument manufacturing, rubber and plastics manufacturing, and dry cleaning."

Hewitt also thanked EPA schedulers for working to arrange a meeting between Pruitt and the California Lincoln Clubs, which describe themselves as in favor of "limited government, fiscal discipline and personal responsibility." After some rescheduling Pruitt eventually met with representatives of the group on a trip to California in March of this year, according to his public calendar. Prominent Orange County businessman John Warner also helped to connect that group with staffers.

Pruitt and his scheduling staff have frequently sought to set up meetings with or for influential Republican figures, according to the internal EPA emails.

His team accepted an invitation for him to address The Philanthropy Roundtable at an invitation-only event at the White House for "conservative and free-market foundation CEOs and individual wealth creators to discuss

the greatest opportunities for foundations to protect and strengthen free society" and "what [Pruitt] views as unique opportunities for philanthropic action.

As POLITICO reported in March, Pruitt also met with an Indiana coal executive and Trump fundraiser who was seeking to soften a pollution rule.

Pruitt also crafted his travel schedule — including a tour of states in August — to meet with big business much like a member of Congress would during the annual recess.

In July, EPA's associate administrator of public engagement Tate Bennett was working with Pruitt to "essentially create an August recess for the EPA to be out in the states talking with individual companies & doing listening sessions within sectors," said Leah Curtsinger, the federal policy director for the Colorado Association of Commerce & Industry, in an email introducing Bennett to her husband, public affairs director at coal company Cloud Peak Energy and a fellow alum of Senate Majority Leader Mitch McConnell's office.

Annie Snider contributed to this report.

House subpanel approves cybersecurity, small-scale LNG bills [Back](#)

By Anthony Adragna | 04/18/2018 11:19 AM EDT

A House Energy and Commerce subpanel today approved a quartet of bills designed to boost DOE's efforts to protect the nation's electric grid from cyberattack.

All four cybersecurity measures — [H.R. 5174 \(115\)](#), [H.R. 5175 \(115\)](#), [H.R. 5239 \(115\)](#), [H.R. 5240 \(115\)](#) — advanced by voice vote.

H.R. 5175 asks DOE to coordinate the federal, state and business responses to physical and cybersecurity threats. H.R. 5239 would establish a voluntary DOE program to test the cybersecurity of products intended for use in the bulk-power system. H.R. 5240 would encourage public-private partnerships on cybersecurity efforts, while H.R. 5174 would have DOE bolster its emergency response efforts.

In addition, the subcommittee approved [H.R. 4606 \(115\)](#), which would allow the expedited approval of small-scale shipments of liquefied natural gas, over the objections of most Democrats. That vote was 19 to 14.

"Leave it to the Republican leadership of this committee to markup a bill that has even fewer environmental safeguards than a Trump Administration proposal," Rep. [Frank Pallone](#) (D-N.J.), ranking member of the full committee, said. "This bill is unnecessary, it is bad policy and it is a legislative earmark."

WHAT'S NEXT: The bills will get consideration by the full House Energy and Commerce Committee.

EPA Issues Carbon-Neutral Biomass Policy, Spurning SAB Review Efforts

EPA in a new guidance document says it will treat carbon dioxide emissions "resulting from the combustion of biomass from managed forests at stationary sources for energy production as carbon neutral," largely spurning a Science Advisory Board (SAB) review of the issue because the agency believes it has taken too long.

EPA Floats 'Secret Science' Ban Rule, Signaling Possible Internal Fixes

EPA has sent for White House review a proposed rule to increase the transparency of regulatory science, advancing Administrator Scott Pruitt's controversial efforts to ban the use of "secret science" in a move that suggests officials have addressed at least some internal concerns that such a policy could violate statutory protections of medical privacy and trade secrets.

Federal Climate Policy 'Vacuum' Has Spurred Uptick In Novel Climate Suits

The recent increase in climate nuisance and other novel private litigation has occurred because of the federal climate policy "vacuum," according to several legal observers, and while they disagree on the suits' prospects, supporters say the new litigation has already begun to address legal hurdles that would have doomed similar efforts several years ago.

Climate Beat

Litigation: Environmentalists cite major 'legal error' in BLM methane ruling

The groups ask the 10th Circuit to block a lower court ruling that "committed an unprecedented legal error" by staying implementation of BLM's regulation without applying court's traditional four-part tests for such relief.

Litigation: Circuit court vacates Trump NHTSA's CAFE penalty delays

The win for states and environmentalists could presage legal problems for the Trump administration's broader efforts to weaken vehicle fuel efficiency rules, critics say.

Loose Change: White House official reiterates support for Pruitt

In today's news roundup: The comments from White House legislative director come amid new reporting about Pruitt's time in Oklahoma, where he also displayed a taste for VIP treatment and high-end travel.

Subject: Morning Energy: Pruitt's watershed moment — 'Secret science' policy coming — Blankenship slipping

By Kelsey Tamborrino | 04/24/2018 05:42 AM EDT

With help from Emily Holden

PRUITT'S WATERSHED MOMENT: EPA Administrator Scott Pruitt is approaching his two separate House committee hearings this week with sagging support on the hill. The make-or-break moment is approaching as once-stalwart backers begin to express concern about the controversies that have swirled in recent weeks. Republican Sen. Jim Inhofe (Okla.) — perhaps Pruitt's staunchest ally in Congress — told Pro's Anthony Adragna he thinks it's "appropriate to have a hearing in so far as any accusation having to do with his office is concerned," and he cited a report in The New York Times detailing a sweetheart deal Pruitt received on an Oklahoma City home previously owned by a lobbyist.

Sen. Shelley Moore Capito (R-W.Va.) also thought Thursday's hearings before the House Energy and Commerce and Appropriations committees would prove pivotal for Pruitt's long-term future in the administration. "It's really important," Capito said. "He's going to have to answer some tough questions. I'm sure they'll be put to him by both sides and we'll see what his response is."

And Sen. John Boozman joined his two Republican colleagues in supporting hearings by the Environment and Public Works Committee. Meanwhile, sources told Bloomberg that administration officials privately cautioned lawmakers and other conservative allies to pump the brakes on their defenses of Pruitt.

Publicly, however, the White House stands firm in its commitment to Pruitt. Press secretary Sarah Huckabee Sanders told reporters the administration is "continuing to review a number of the reports" about Pruitt, but noted the EPA chief "has done a good job of implementing the president's policies," particularly on deregulation and energy dominance. White House legislative affairs director Marc Short was more direct earlier Monday: "I think Scott Pruitt is doing a great job and we look forward to keeping him there as EPA administrator," he told MSNBC.

More to come? Earlier Monday, five senior congressional Democrats asked House Oversight Chairman Trey Gowdy to obtain further documents and hold hearings after obtaining new records they say raise "troubling" new questions about Pruitt's security expenditures. EPW ranking member Tom Carper told Anthony he had a good conversation with Gowdy regarding Pruitt, but said there was no formal bipartisan agreement to work together on an investigation. "I just gave him plenty of encouragement that he's doing the right thing," Carper said. Read more.

WELCOME TO TUESDAY! I'm your host Kelsey Tamborrino. Congrats to the Nuclear Energy Institute's Robert Powers, who was first to correctly guess Mary Walker was the first woman to receive the Medal of Honor. For today: Who is the last former senator to appear on a U.S. postage stamp? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter @kelseytam, @Morning_Energy and @POLITICOPro.

POLITICO's Ben White is bringing Morning Money to the Milken Institute Global Conference to provide coverage of the day's events and evening happenings. The newsletter will run April 29 - May 2. **Sign up to keep up with your daily conference coverage.**

BLINDED WITH SCIENCE: EPA's Pruitt is expected to unveil his new science policy that restricts the agency from relying on research that doesn't make public all its available data, a source briefed on the announcement tells Pro's Emily Holden. The proposed rule, which the agency submitted to the White House for review last week, will mirror legislation from House Science Chairman Lamar Smith (R-Texas).

Pruitt argues the change will bolster transparency, but scientists and health advocates say it is an effort to constrain rulemaking. The rollout has been delayed as agency officials tried to determine how to treat industry research used to evaluate the safety of pesticides and toxic chemicals, as Pro's Annie Snider reported last week. While academic studies often can't disclose data that includes personal health records, corporations can't reveal proprietary information either.

SCIENTISTS REACT: Close to 1,000 scientists signed onto a letter to Pruitt Monday, calling on the administrator to reverse course on his plans to revise how the agency considers outside research. "EPA can only adequately protect our air and water and keep us safe from harmful chemicals if it takes full advantage of the wealth of scientific research that is available to the agency," write the scientists, including some former EPA career staffers. Read it here.

A BLANK SLIP: GOP establishment attacks on former coal baron Don Blankenship seem to be taking hold, POLITICO's Alex Isenstadt reports via new polling. With the West Virginia Senate primary a mere two weeks away, a poll out Monday found Blankenship falling behind his more mainstream rivals, GOP Rep. Evan Jenkins and state Attorney General Patrick Morrisey. The poll found Morrisey leading with 24 percent, followed by Jenkins with 20 percent, and Blankenship trailing with 12 percent.

National Republicans have scrambled to intervene in the race, concerned that a Blankenship primary win would destroy their prospects of defeating Democratic Sen. Joe Manchin in November. Blankenship, who spent a year in jail following the deadly 2010 explosion at his Upper Big Branch Mine, has poured nearly \$2 million of his own money into a slash-and-burn style campaign savaging Jenkins and Morrisey as pawns of the establishment, Alex writes. Blankenship has also used the Senate run as a path to clear his name. So far, much of his campaign has been geared toward portraying himself as the casualty of the Obama-era Justice Department, which he says was bent on locking him up.

The new survey, which was conducted April 17-April 19 and has a margin of error of 4.9 percentage points, precedes a GOP debate today, and another that will be hosted by Fox News next week for a nationally televised audience. Read more.

SPECIAL ELECTION TODAY: Arizona voters will decide today who will pick up the seat left vacant by Rep. Trent Franks' departure in the state's 8th District. While neither candidate highlights specific environmental issues on her campaign website, Republican Debbie Lesko and Democrat Hiral Tipirneni have markedly different takes on climate change. Tipirneni's site says she believes "climate change is real and that we need to reduce carbon emissions." Meanwhile, Lesko said during a debate earlier this year that "certainly not the majority" of climate change is human-caused. "I think it just goes through cycles and it has to do a lot with the sun. So no, I'm not a global warming proponent," she said.

RULES TO MEET ON COLUMBIA RIVER BILL: The House Rules Committee will meet at 5 p.m. to formulate a rule on H.R. 3144 (115), which would void the environmental impact statement process for altering the hydropower system along the Columbia and Snake rivers. Earlier this month, the 9th Circuit Court of Appeals sided with the state of Oregon, the Nez Perce tribe and conservation groups, ruling that dam operations on the Columbia and Snake rivers must forgo hydropower production during key times of the year to protect

endangered salmon. An environmental impact statement for the system has been the subject of congressional fights, with Rep. Cathy McMorris Rodgers filing the legislation to void that process.

COAL ASH HEARING TODAY: EPA holds a public hearing today on its proposal to roll back the Obama-era regulation for the cleanup and disposal of coal ash. The hearing will begin at 9 a.m. in Arlington, Va., where there will be three sessions: 9 a.m. until noon; another beginning at 1 p.m. and ending at 4 p.m.; and a final session beginning at 5 p.m. and ending at 8 p.m.

PROMISES, PROMISES: Senate spending leaders vowed to restore chamber-wide debate on amendments to individual appropriations bills, Pro's Sarah Ferris and Kaitlyn Burton report. It's a risky move, ME readers may recall, considering how Democrats blocked a largely noncontroversial Energy and Water bill in 2016 because of a proposed amendment on Iran, and in 2015, House Republicans' Interior-Environment bill was tripped up by an unrelated rider on the Confederate flag. But Senate Appropriations Chairman Richard Shelby and his Democratic counterpart Patrick Leahy told committee members in a closed-door meeting Monday that leadership has agreed to allow amendments on the Senate floor for every individual spending bill. And the two have met with Majority Leader Mitch McConnell and Minority Leader Chuck Schumer in recent days about opening up the floor for debate on spending bills.

JUDGE: ENBRIDGE PIPELINE SHOULD STICK TO PLAN : An administrative law judge recommended on Monday that Minnesota regulators approve Enbridge Energy's proposal for replacing its Line 3 crude oil pipeline. But the court stipulated that the pipeline should follow the existing route, not the company's preferred route, which would carry Canadian tar sands crude from Alberta across areas in the Mississippi River, the Associated Press reports. Administrative Law Judge Ann O'Reilly's recommendation to the Public Utilities Commission sets up further disputes, "because the existing line crosses two Ojibwe reservations where tribal governments have made it clear that they won't consent and want the old line removed altogether." Read more.

A METHANE TO THE MADNESS: The comment period on the Bureau of Land Management's proposal to reverse the Methane Waste Prevention Rule ended Monday, drawing thousands of far-reaching comments. The left-leaning Center for Western Priorities analyzed a random sample of 2,000 comments, it said, finding 99.8 percent of them were opposed to the proposal. The Independent Petroleum Association of America and Western Energy Alliance meanwhile submitted joint comments applauding the move. "We were pleased to see workable changes are being considered to the rule that more accurately represent the scope of power and authority given to the BLM for regulating this type of activity," IPAA's Dan Naatz said in a statement. And, E2, an affiliate of the Natural Resources Defense Council, sent a letter to Interior Secretary Ryan Zinke on Monday, expressing its opposition to BLM's proposal. Close to 400 businesses signed onto that letter, which calls BLM's proposal "a net negative for the American public." Read it here.

MAIL CALL! IN HONOR OF NATIONAL PARKS WEEK: League of Conservation Voters organized 122 groups — including the American Civil Liberties Union and the Human Rights Campaign — in a letter to members of Congress opposing the administration's moves on public lands. National monuments "have helped make our public lands more inclusive," the letter states, before calling on lawmakers to "reject any legislation that would limit the president's authority under the Antiquities Act or codify any unlawful rollbacks of existing national monuments." Read it here.

FOR YOUR RADAR: The House will vote to overhaul the 1988 Stafford Act this week, Pro's Budget & Appropriations team reports. The three-decade-old bill is the main piece of legislation overseeing federal disaster-relief efforts, with proposed tweaks that include new incentives to build "smarter and stronger to better withstand disasters in the future," according to GOP Majority Leader Kevin McCarthy's office. That could equate to big changes on how states spend disaster relief money.

ICYMI: ZINKE DRAWS OLIVER'S IRE: The Interior secretary got the full treatment from HBO host John Oliver on "Last Week Tonight" on Sunday. Oliver hit Zinke for referring to himself as a geologist and said he

"has a real flair for creative license." Of course, Zinke is not the first to draw scrutiny from the HBO host. A judge recently dismissed a defamation lawsuit brought by coal magnate Bob Murray against Oliver, who referred to Murray as a "geriatric Dr. Evil." Watch the Zinke video [here](#).

STATE NEWS — CUOMO INTRODUCES PLASTIC BAG BILL: New York Gov. Andrew Cuomo introduced a [bill](#) Monday to ban the use of plastic bags throughout the state, Pro New York's Danielle Muoio reports. The legislation — a long-sought promise from Cuomo — would give the state Department of Environmental Conservation jurisdiction over all matters concerning plastic bags and recycling, but comes with caveats that left some environmental advocates saying it isn't far-reaching enough. White House reiterates support for Pruitt [Back](#)

By Anthony Adragna | 04/23/2018 02:30 PM EDT

The White House says it is still standing behind EPA's Scott Pruitt, voicing support for the embattled administrator two days after it was revealed that a Washington lobbyist whose wife rented a condo to him personally lobbied Pruitt despite weeks of denying they had held any meetings.

"We're reviewing some of those allegations, however Administrator Pruitt has done a good job of implementing the president's policies, particularly on deregulation," press secretary Sarah Huckabee Sanders said at the White House briefing.

She added the administration continues its look into Pruitt's conduct, including his lavish spending, first-class travel arrangements, pay raises for political appointees and use of security personnel. White House budget director Mick Mulvaney told a congressional subcommittee last week he'd investigate the EPA chief's spending \$43,000 on a privacy booth for his office.

Pruitt is scheduled to testify at two House hearings on Thursday.

What's next: Sanders said the White House is "monitoring" additional reports about Pruitt.

White House stands behind Pruitt despite new lobbying disclosure [Back](#)

By Anthony Adragna | 04/23/2018 01:54 PM EDT

The White House said Monday it still stands behind EPA Administrator Scott Pruitt, praising him for enacting President Donald Trump's environmental and energy policies even as it looked into reports of ethical lapses.

It was the first statement from the White House since POLITICO first reported that despite his denials, Pruitt had met with a lobbyist whose wife rented the Environmental Protection Agency chief his \$50-per-night condo. A disclosure form filled late Friday said J. Steven Hart had lobbied the EPA, although both the agency and the lobbyist contend the meeting, held last July, did not constitute formal lobbying.

"We're reviewing some of those allegations. H however, Administrator Pruitt has done a good job of implementing the president's policies, particularly on deregulation," press secretary Sarah Huckabee Sanders said at the White House briefing.

The White House has been looking into Pruitt's lavish spending on first-class travel arrangements, pay raises for political appointees and use of security personnel. Budget director Mick Mulvaney told a congressional subcommittee last week he'd investigate the EPA chief's spending of \$43,000 on a privacy booth for his office.

That's on top of several ongoing probes by the EPA's own watchdog and three by congressional committees, including the House Committee on Oversight and Government Reform.

Pruitt is scheduled to testify at two House hearings on Thursday.

Sanders' comments come as five senior congressional Democrats asked House Oversight Chairman Trey Gowdy (R-S.C.) to seek new documents and hold hearings regarding "troubling" new questions about Pruitt's security expenditures.

According to nonpublic documents cited in the Democrats' letter, Pruitt's office was not cleared for classified communications as of March 2017. EPA previously said Pruitt's need to handle such information justified the installation of the privacy booth. The Government Accountability Office concluded last week the agency violated federal law by not informing Congress of the purchase.

The letter also alleges that a security sweep of Pruitt's office — the contract for which went to a business partner of Pruitt's security chief, Pasquale "Nino" Perrotta — went outside federal contracting norms without proper pre-approval.

"Given the latest developments and these new documents, we believe these and related matters are ripe for additional document requests to EPA and that Administrator Pruitt should testify about all of these matters immediately," the lawmakers wrote. Sens. Tom Carper of Delaware and Sheldon Whitehouse of Rhode Island and Reps. Elijah Cummings of Maryland and Gerry Connolly and Don Beyer, both of Virginia, signed the letter.

Pruitt support in Senate erodes as GOP lawmakers seek hearings [Back](#)

By Anthony Adragna | 04/23/2018 08:32 PM EDT

Scott Pruitt's wall of GOP support developed some new cracks on Monday, with three key Senate defenders calling for hearings into the embattled EPA administrator's recent controversies.

The three, including staunch Pruitt ally Sen. Jim Inhofe (R-Okla), all said they supported hearings by the Senate Environment and Public Works Committee to look into the former Oklahoma attorney general's actions.

"I think that a couple of us on the committee think it's appropriate to have a hearing in so far as any accusation having to do with his office is concerned," Inhofe told POLITICO.

Inhofe said he was troubled by a report over the weekend in The New York Times detailing a sweetheart deal Pruitt received on an Oklahoma City home previously owned by a lobbyist while serving in a state government. The Oklahoma Republican declined to discuss which allegations he found disturbing, but said "there are some things in there that I'd like to check out and see."

Joining his call for a Senate hearing were two other senior GOP members of the EPW panel, Sens. Shelley Moore Capito (W.Va.) and John Boozman (Ark.).

"Most people have concerns about some of the allegations," Boozman said. "At some point he'll be before the committee and we'll dig deeper and see exactly what's going on."

EPW Chairman John Barrasso (R-Wyo.) told reporters he expected Pruitt would come to testify at some point, but he stopped short of providing a specific timeframe or stating his intention to call a hearing.

To date, four House Republicans have called on Pruitt to resign, along with scores of elected Democrats. And Sen. Susan Collins (R-Maine), has said Pruitt was "the wrong person" to lead the agency based on his policies.

Pruitt has drawn criticism about his ethics and lavish spending in recent months. Three Congressional committees, the White House and EPA's inspector general are all probing his behavior, ranging from his security expenses, high pay raises for aides, first-class travel and meetings with a coal group.

The House Oversight Committee has requested interviews with five senior agency aides and the White House said it would formally investigate Pruitt's expenses after the Government Accountability Office last week found EPA broke the law by failing to notify Congress about a \$43,000 privacy booth Pruitt had built in his office.

Pruitt will go to the Hill on Thursday to testify before a House Energy and Commerce subcommittee in the morning and at a House Appropriations subpanel in the afternoon. Those appearances will mark his first time before Congress since the recent allegations broke.

Both Inhofe and Capito said they thought those House hearings would prove pivotal for Pruitt's long-term future in the administration.

"It's really important," Capito said. "He's going to have to answer some tough questions. I'm sure they'll be put to him by both sides and we'll see what his response is."

Meanwhile, EPW ranking member Tom Carper (D-Del.) said he had a good conversation with House Oversight Chairman Trey Gowdy (R-S.C.) regarding Pruitt, but he said there was no formal bipartisan agreement to work together on an investigation.

"I just gave him plenty of encouragement that he's doing the right thing," he said.

But the mounting public criticism from Republicans suggests GOP lawmakers' patience in defending the EPA chief's behavior is waning.

"Some of the things that he's done and that he's been alleged to do are just indefensible," Sen. John Kennedy (R-La.) said. "You just can't put lipstick on those pigs. You can't."

EPA emails show industry worries slowed new science policy [Back](#)

By Annie Snider | 04/19/2018 05:01 PM EDT

EPA's rollout of a controversial new transparency policy that would severely restrict the scientific research the agency can rely on when drafting new regulations has been slowed down by political officials' fears that it could have major unintended consequences for chemical makers, according to newly released EPA documents.

The issue of scientific transparency has been high on the agenda of House Science Chairman [Lamar Smith](#) (R-Texas), who has found strong support from EPA Administrator Scott Pruitt — much to the consternation of public health advocates and green groups, who view the effort as backdoor attack on the agency's ability to enact environmental regulations.

Since Pruitt announced plans for the new policy last month, researchers and public health proponents have raised alarms that it could restrict the agency's ability to consider a broad swath of data about the effects of pollution on human health. But documents released under the Freedom of Information Act show that top EPA officials are more worried the new restrictions would prevent the agency from considering industry studies that frequently support their efforts to justify less stringent regulations.

Emails between EPA officials obtained by the Union of Concerned Scientists show that Nancy Beck, the top political official in the agency's chemicals office who came to the agency after serving as a key expert for the chemical industry's lead lobbying group, voiced major concerns after she received a draft of the not-yet-released policy on Jan. 31.

The new scientific transparency directive is expected to require that the raw data for all studies EPA relies on be publicly available, and that the studies be peer-reviewed. But Beck said these requirements would exclude a great deal of industry data about pesticides and toxic chemicals that her office considers when determining whether a substance is safe or must be restricted.

It costs companies "millions of dollars to do these studies," Beck wrote in an email to Richard Yamada, the political official in EPA's office of research and development who is spearheading work on the new scientific policy and is also a former staffer for the House Science Committee chairman.

"These data will be extremely valuable, extremely high quality, and NOT published," Beck wrote. "The directive needs to be revised."

Moreover, much of this data, Beck noted, is considered proprietary by companies. It is dubbed confidential business information, and even though EPA can consider it as part of its regulatory review, the data cannot legally be made public.

Yamada replied to thank Beck for the heads up. "Yes, thanks this is helpful - didn't know about the intricacies of CBI," he wrote. "We will need to thread this one real tight!"

The term "confidential business information" primarily applies to industry information. That data is separate from the personal medical information that public health researchers worry could block consideration of their work.

Yogin Kothari, a lobbyist for the Union of Concerned Scientists, said the emails show the Trump administration's EPA has been "trying to stack the deck in favor of the industries they're supposed to be regulating."

"They want to potentially create exemptions for industry, but if you look at this entire set of documents ... you will see that there's not a single consideration for the impacts on public health data, on long-term health studies, on studies that EPA does after public health disasters like the BP oil spill," he said.

EPA spokeswoman Liz Bowman emphasized the policy is not yet finalized.

"These discussions are part of the deliberative process; the policy is still being developed. It's important to understand; however, that any standards for protecting [confidential business information] would be the same for all stakeholders," she said in a statement.

The emails indicate Pruitt wanted the new science policy rolled out at the end of February, and teased his plans in an interview with conservative outlet The Daily Caller in mid-March. But the agency has yet to finalize the policy.

The transparency directive has its origins in legislation introduced by Smith during the Obama administration, that had the backing of a number of industry groups, including the American Chemistry Council. The House Science Committee chairman frequently charged that the Obama EPA used "secret science" to justify "costly new regulations."

Although versions of the measure were approved by the House multiple times, the Senate never took it up. CBO estimated that one version of Smith's legislation would cost EPA \$250 million a year, at least in the initial years, and a leaked staff response to questions from the budget office said a later version would be even more costly, would endanger confidential medical and business information, and "would prevent EPA from using the best available science."

But Smith found an ally in Pruitt. The emails indicate that Smith met with Pruitt in early January and show that Pruitt's staff quickly began working on a directive to "internally implement" the legislation.

Industry's backing for the new scientific approach began to waiver under the Trump administration, though. When a top American Chemistry Council scientist testified before Smith's committee in February 2017, she emphasized the need to protect industry information if the transparency initiative moved forward.

"One of the things that we do need to take into consideration as making that data publicly available is that there are adequate protections for confidential business information to ensure that we keep innovation and competitiveness available for the marketplace," Kimberly White told the committee.

Industry has historically claimed that a wide range of information about chemicals, ranging from the processes by which they are produced, to the locations of manufacturing plants, to their very identities, must be kept confidential in order to keep competitors from learning trade secrets. Environmental and public health advocates argue that industry claims this exemption in many cases where it's not necessary and that it often keeps important health and safety information from public view.

The issue was a key point of debate when Congress considered a major overhaul of the nation's primary chemical safety law passed 2016 and has reemerged as Pruitt's EPA sets about implementing the law.

Asked for comment on EPA's new effort to implement the scientific transparency approach internally, American Chemistry Council spokesman Scott Openshaw said the group looks forward to reviewing the directive once it's finalized.

"It is critical that any final directive properly protect confidential business information and competitive intelligence," he said in a statement.

The internal emails show that EPA political staff were particularly attuned to this concern. In a Feb. 23 email to colleagues, Beck forwarded language from a 2005 White House document that laid out narrow exemptions from its requirement that all "important scientific information" disseminated by the federal government go through peer review.

"[Y]ou may need to tweak but hopefully there is something helpful here that can be borrowed/adopted," she wrote.

Richard Denison, lead senior scientist for the Environmental Defense Fund, said that EPA's access to industry data is indeed important to its ability to review the safety of new chemicals and pesticides, but said the internal EPA communications show that Pruitt's EPA wants to "have their cake and eat it too" with the new directive.

"They're trying to force peer review studies done by academic scientists to disclose every last detail, while at the same time allowing industry studies to be kept private or aspects of those to still be kept private," he said.

He pointed out that the concerns Beck raised about the burden the new policy would place on industry are the very same ones that the CBO report said the policy would place on EPA.

Poll: Coal baron Blankenship fading in W.Va. Senate primary [Back](#)

By Alex Isenstadt | 04/23/2018 07:26 PM EDT

WHEELING, W.Va. — A new poll out Monday evening shows recently imprisoned coal baron and Senate hopeful Don Blankenship fading in the Republican primary, amid an avalanche of establishment attacks aimed at stopping him from winning the nomination.

With the primary two weeks away, the survey shows Blankenship, who spent a year in jail following the deadly 2010 explosion at his Upper Big Branch Mine, falling far behind his more mainstream rivals, GOP Rep. Evan Jenkins and state Attorney General Patrick Morrisey. The poll found Morrisey leading with 24 percent, followed by Jenkins with 20 percent, and Blankenship trailing with 12 percent. Thirty-nine percent were undecided.

The survey, which was conducted April 17-19 and has a margin of error of 4.9 percentage points, came as Blankenship squared off against his rivals in a 90-minute debate held at Wheeling Jesuit University. The candidates spent much of the evening aligning themselves with President Donald Trump, and beating up on Democratic Sen. Joe Manchin.

They will also meet on Tuesday, and again next week for a nationally televised debate hosted by Fox News.

The survey of 411 primary voters was commissioned by GOPAC, an organization that promotes state Republican legislators, and was conducted by National Research Inc., a polling firm that worked on Trump's 2016 campaign. Neither has taken sides in the primary.

National Republicans have scrambled to intervene in the contest, fearing that a Blankenship primary win would destroy their prospects of unseating Manchin. The 68-year-old former coal executive has spent nearly \$2 million of his own to fund a slash-and-burn style campaign savaging Jenkins and Morrisey as establishment pawns.

He has also sought to clear his name. Much of Blankenship's campaign has been geared toward portraying himself as the casualty of an Obama Justice Department bent on locking him up.

Fearful that Blankenship was gaining traction, Mountain Families PAC, a super PAC overseen by strategists close to Senate Majority Leader Mitch McConnell's political operation, swung back — airing around \$700,000 worth of TV ads in recent days accusing Blankenship of contaminating drinking water.

The effort to defeat Blankenship has gone further. Earlier this month, Trump flew to West Virginia to hold an event aimed at selling his tax reform legislation. The president was seated next to Jenkins and Morrisey, a clear attempt to promote their candidacies over Blankenship, who was not in attendance.

For national Republicans, the move was not without risk. Last year, a McConnell-aligned super PAC spent millions to stop Alabama Senate candidate Roy Moore from winning the nomination, only to see it backfire. Moore used it to cast himself as the victim of the establishment, and went on to win the primary before losing the general election in a stunning upset.

Blankenship is taking a similar approach. With the contest hurtling into the final stretch, he has begun airing commercials calling McConnell a "swamp creature."

And during a news conference on Monday morning, Blankenship pledged not to support McConnell as Senate GOP leader if he's elected.

"He needs to understand that if I'm there I will not vote for him for majority leader, and so the rest of the senators should understand that they should not put him up if they need my vote," he told reporters.

The candidates largely avoided attacking each other at Monday's debate, perhaps because three lesser-known contenders were also included onstage, a setup that limited the amount of speaking time.

Blankenship used the debate to further his argument against the establishment. He called the 2010 mine explosion "heart-wrenching," and called it "one of the worst days of my life."

But he blamed the disaster on the government, saying it had taken steps to limit the amount of airflow available to the miners.

During his closing remarks, Blankenship referred to Washington as the "district of corruption," and argued that politicians there often tried to make themselves look like they were fighting over ideals when they were merely posturing.

"When I go to D.C.," he said, "it won't be a fake fight, it will be a real fight."

With candidates and outside groups crowding the TV airwaves, much of the firepower is being directed at Jenkins, a second-term congressman who in 2014 defeated longtime Democratic Rep. Nick Rahall. All told, around \$1.2 million is expected to be spent against Jenkins, according to a media buyer.

Among those spending heavily against Jenkins is Duty and Country, an outside Democratic group with offices in Washington. To date the group has spent around \$380,000 on TV, the vast majority of it against Jenkins.

At Monday's debate, Jenkins argued that Democrats were trying to "meddle" in the primary. He said their attacks on him was proof that the opposing party viewed him as the biggest threat to Manchin.

The Democratic effort, he added, was unprecedented in West Virginia politics.

"They're scared to death of Evan Jenkins on the ballot in November because they know Evan Jenkins can beat Joe Manchin," the congressman said.

Court chooses salmon over hydropower in Columbia River fight [Back](#)

The 9th Circuit Court of Appeals has sided with the state of Oregon, the Nez Perce tribe and nearly a dozen conservation groups, ruling that hotly contested dam operations on the Columbia and Snake Rivers must forgo hydropower production during key times of the year in order to protect endangered salmon.

The three-judge panel upheld a lower court's decision requiring that water be spilled over the top of dams along the Columbia River System, including the powerhouse Grand Coulee dam, the largest power station in the U.S., during periods when young salmon and steelhead migrate to the ocean. The hydropower turbines pose a threat to the fish.

The Justice Department, representing the National Marine Fisheries Service, Army Corps of Engineers and Bureau of Reclamation, had argued that requiring such operations would cause electricity rates to spike and could threaten the reliability of the electrical grid.

The ruling stems from a years-long battle over the nearly 100-year-old hydropower system along the Columbia and Snake rivers. Conservation groups and tribes with treaty fishing rights want the system altered and operated to benefit wildlife, including calling for the removal of four dams along the Snake River. As part of that litigation, the federal agencies are also working on an environmental impact statement for the system that has been the subject of congressional fights, with Rep. Cathy McMorris Rodgers (R-Wash.) filing a measure (H.R. 3144) to void that process, and Democratic lawmakers coming out in opposition.

WHAT'S NEXT: Unless they successfully appeal the decision, the federal agencies will need to release water over the top of dams beginning this spring. The ongoing environmental impact statement process will continue.

Senate spending leaders vow to open up floor debate for amendments [Back](#)

By Sarah Ferris and Kaitlyn Burton | 04/23/2018 06:20 PM EDT

Senate Appropriations Chairman Richard Shelby is vowing to restore chamber-wide debate on amendments to individual appropriations bills to help end Congress' stop-and-go funding cycle.

Shelby (R-Ala.), along with his Democratic counterpart Sen. Patrick Leahy, of Vermont, told committee members in a closed-door meeting today that leadership has agreed to allow amendments on the Senate floor for every individual spending bill.

"There is perhaps unanimity, but certainly strong consensus that if the appropriations process is going to work we're going to be casting votes on amendments and we stay here and we vote," Sen. Jerry Moran (R-Kan.) told reporters exiting the meeting, which was the committee's first bipartisan sit-down of fiscal 2019

"I think it's the single best way to restore the Senate the way the Senate's supposed to work. The full Senate gets a chance to offer a variety of amendments, and if you don't like it, you can vote against it," Sen. Lamar Alexander (R-Tenn.) added.

Shelby and Leahy have met with Majority Leader Mitch McConnell and Minority Leader Chuck Schumer in recent days about opening up the floor for debate on spending bills.

When asked if both leaders were on board, Shelby added: "They tell us they are, and I like to believe them." Leahy added: "We both talked with both of them. I think they both understand. The Senate can't go on like this."

It's a risky gambit, particularly in an election year. Contentious amendments have held up bills in both chambers in recent years.

Back in 2016, Senate Democrats blocked a largely noncontroversial Energy and Water bill because of a proposed amendment on Iran. In 2015, the House GOP's Interior-Environment bill was tripped up by an unrelated rider on the Confederate flag.

The number of amendments on Senate spending bills has dropped dramatically in the last two decades, as the chambers considers fewer and fewer individual bills.

Subject: Morning Energy, presented by Anheuser-Busch: Conservative talker has pull with Pruitt — It's primary day in coal country — Trump meets with ethanol

By Kelsey Tamborrino | 05/08/2018 05:40 AM EDT

With help from Eric Wolff and Anthony Adragna

PRUITT GETS TO IT FOR HEWITT: New emails emerged Monday that provide previously unknown details in the ongoing raft of controversies that have plagued EPA Administrator Scott Pruitt — and provide more ammo for onlookers who worry Pruitt spends too much time currying favor with his political allies.

Conservative commentator Hugh Hewitt brokered a meeting that ultimately ended with a polluted California area on Pruitt's personal priority list of Superfund sites, POLITICO's Emily Holden and Anthony Adragna report. Hewitt lives in Orange County, where the Superfund site sits, and has a son who works in EPA's press office. The TV and radio host emailed Pruitt back in September to set up a meeting between Pruitt and the law firm Larson O'Brien, which employs Hewitt and represents the Orange County Water District. "I'll join if the Administrator would like me too or can catch up later at a dinner," Hewitt wrote in the email, which was obtained under a FOIA lawsuit by the Sierra Club. He added that the issues surrounding the Superfund site were "Greek to me but a big deal in my home county."

Weeks later, the Orange County North Basin site in question appeared on Pruitt's list of 21 contaminated areas to address. Pruitt then proposed listing the site on the agency's National Priorities List, making it potentially eligible for long-term federal cleanup funding. Since the meet-up, Hewitt has been a staunch defender of Pruitt, dismissing his recent controversies as "nonsense scandals" on MSNBC in early April. EPA spokesman Jahan Wilcox confirmed that Hewitt helped arrange the meeting at the request of the water district but didn't attend.

The meeting adds to environmentalists' concerns about Pruitt. "The biggest fear we have is that No. 1 the administrator's political priorities and personal ambitions, political ambitions become the primary criteria for action under this program instead of science and health," said Elgie Holstein, senior director for strategic planning at the Environmental Defense Fund who has been tracking EPA's Superfund actions. [Read the story here.](#)

FIRST CLASS MEMO: EPA on Monday also released a copy of a memo written by the former head of Pruitt's security detail justifying his first class flights. "We have observed and increased awareness and at times lashing out from passengers which occurs while the Administrator is seated in coach with [his security detail] not easily accessible to him due to uncontrolled full flights," Pasquale "Nino" Perrotta wrote in the May 1, 2017, memo. "Therefore, we believe that the continued use of coach seats for the Administrator would endanger his life and therefore respectfully ask that he be placed in either business and or first class accommodations." The Washington Post and E&E obtained copies of the memo via a FOIA request. Perrotta retired from the agency last week.

WELCOME TO TUESDAY! I'm your host Kelsey Tamborrino. Congrats to Cummins Inc.'s Patrick Wilson, who was first to identify former House Speaker Nathaniel Banks of Massachusetts as the representative who served 11 terms and ran for election on five different party tickets. He was successful in all but the Liberal

Republican ticket. For today: What president was first to watch a major league baseball game from the dugout? Bonus points if you can name the team. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

BLANKENSHIP'S BIG DAY: We should know by tonight who will face Sen. [Joe Manchin](#) in a West Virginia Senate race that Republicans see as one of their biggest pickup opportunities of the year — that is, unless coal baron Don Blankenship scores a surprise upset in the surprisingly tight GOP primary. President Donald Trump [tweeted](#) Monday that Blankenship "can't win the General Election in your State," though he didn't endorse one of his opponents. That likely didn't ease fears that the two other major candidates — Rep. [Evan Jenkins](#) and state Attorney General Patrick Morrisey — will split the anti-Blankenship vote evenly and allow the former Massey Energy CEO to come out ahead. Blankenship recently was released from a year in jail following an explosion at the Upper Big Branch Mine that killed 29 workers. Blankenship has called the Upper Big Branch disaster the "worst tragedy" of his life, and is working to have his [conviction thrown out](#). (He has previously lost on appeal and failed to convince the Supreme Court to take the case.) For his part, Blankenship said Monday he was confident he would win, POLITICO's Alex Isenstadt [reports](#) from Mount Hope, W. Va.

That's not all: The Mountain State is not alone in kicking the 2018 midterms into gear. Statewide primary elections also are happening today in Ohio and Indiana and North Carolina, including solar energy entrepreneur and Democrat Dan McCready, who is running in North Carolina's 9th District. Vox nicely breaks down today's big races nationwide [here](#) and POLITICO has 7 things to watch [here](#).

SCHNEIDERMAN RESIGNS: New York Attorney General Eric Schneiderman, who has sued Exxon Mobil and fought the Trump administration's deregulatory agenda, [announced](#) his resignation Monday night in the wake of a report from the [New Yorker](#) that four women had accused him of abuse in previous romantic relationships. Two of the women who went on the record "say that they eventually sought medical attention after having been slapped hard across the ear and face, and also choked," according to the magazine. In a statement, Schneiderman disputed the allegations but said they "will effectively prevent me from leading the office's work at this critical time." The resignation takes effect at the close of business today.

Before the New Yorker story broke, Schneiderman and the attorneys general from seven other states called on Pruitt to withdraw his "secret science" proposal to ban the use of studies that don't publicly disclose all their data. Read the letter [here](#).

CHOPPING BLOCK: The White House on Monday [outlined](#) its package of proposed spending cuts, rescinding \$4.3 billion from the Energy Department's Advanced Technology Vehicles Manufacturing loan program, which supports the production of fuel-efficient, advanced technology vehicles. It was part of an overall request for \$15 billion worth of rescissions from previously appropriated funds from prior years. Another package going after the FY18 omnibus is expected later this year. More [here](#).

ON THE GRID: Puerto Rico's electric grid — which failed to provide power for much of the island for several months after last year's hurricanes — will be the focus of a Senate Energy and Natural Resources hearing this morning. The CEO of the Puerto Rico Electric Power Authority Walter Higgins and Bruce Walker, assistant Energy secretary for electricity delivery and energy reliability, are among the names set to testify. "The end goal is a modern and intelligent energy system that can serve as the resilient engine for Puerto Rico's economic revitalization," Walker is expected to say. Officials [say](#) close to 95 percent of power has now been restored on the island. **If you go:** The [hearing](#) kicks off at 10 a.m. in 366 Dirksen.

— **Forty-seven U.S. and international scientific groups** sent a [letter](#) to Puerto Rico Gov. Ricardo Rosselló on Monday, urging him to keep the island's statistical agency, the Puerto Rico Institute of Statistics, and its board of directors fully independent. "To address the challenges posed by its decade-long economic recession and the devastation of back-to-back hurricanes, Puerto Rico must chart its path toward sustainable recovery using reputable and reliable data and statistical methods," the letter says.

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks. The zero-emission trucks will be able to travel between 500 and 1,200 miles. Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025. [Learn more](#). **

ENERGY-WATER BILL ADVANCES: The House Appropriations Energy-Water subpanel swiftly approved its \$44.7 billion energy and water spending bill on a voice vote Monday, sending the measure to the full committee for consideration. The appropriations bill largely ignores the president's budget request, earning the approval of Democrats, who applauded the boost in funding for the Army Corps of Engineers and DOE thanks to the bipartisan agreement to lift spending caps. [Read more](#).

TRUMP MEETS WITH SENATORS ON RFS: In what could perhaps be the final time, Trump plans to meet today with at least Sens. [Chuck Grassley](#), [Joni Ernst](#), [Ted Cruz](#) and [Pat Toomey](#) to discuss their dueling priorities around federal ethanol policy. Who else will be in the room remains unclear, as sources told ME conflicting stories: An ethanol source said neither Pruitt, nor the Ag secretary, would be present, while a Republican Senate aide said both would be there.

A source said Team Ethanol's main goal is to get Trump to affirm his commitment to year-round sales of 15 percent ethanol, but the rest of the agenda seems to be unclear. A biofuels source said they expect Trump to kick the biofuels battle to Congress, where Sen. [John Cornyn](#) and Rep. [John Shimkus](#) have been trying to write a bill to overhaul the RFS. Cruz said at a Capitol Hill rally last week that he would view that decision as doing nothing. Cruz and Toomey are still seeking Renewable Fuel Standard changes to dramatically lower the program's compliance costs for refineries. Trump is scheduled to meet with Republican senators at 11:15 this morning, according to his public schedule.

— **Continuing their push for year-round sales of E15**, fuel retailers from 11 states sent a letter to Trump on Monday, calling on him to instruct EPA to immediately follow up on a pledge to allow the year-round sale of E15 before summer restrictions kick in on June 1. [Read the letter here](#). Eighteen other groups, including the Sierra Club and Earthjustice, signed [onto their own letter](#) expressing concern with the administration's openness to the year-round sale of E15. And the American Energy Alliance launched a digital ad campaign Monday urging for the repeal of the RFS. [Watch that ad here](#).

EXPECTING BIG THINGS: Shimkus is expecting broad support from the House when his comprehensive nuclear waste package [H.R. 3053 \(115\)](#) gets a vote Thursday. "I think people are ready to do something rather than nothing," he told reporters Monday. Shimkus said it's been a months-long process to educate members about the importance of the legislation and added he sent texts to Speaker [Paul Ryan](#) and Majority Leader [Kevin McCarthy](#) thanking them for finally bringing the package to the floor.

But he's not crazy: Shimkus said he hadn't had any recent talks with Senate counterparts about potentially moving the bill across the Capitol and he didn't expect they would this year with one of their most vulnerable incumbents (and ardent Yucca opponent), Sen. [Dean Heller](#), locked in a competitive reelection.

WHERE'S PERRY? Perry is slated to speak today during the Washington Conference on the Americas, where Commerce Secretary Wilbur Ross and Deputy Secretary of State John Sullivan, among others, are set to also appear. Perry will deliver remarks on "energy integration in the Americas" at 3:15 p.m. See the full agenda [here](#).

E&C TACKLES EVs: The House Energy and Commerce Environment Subcommittee will listen to discussion today on how fuel vehicles and electric vehicles will coexist as electric vehicles become more popular. The hearing begins at 10:15 a.m. in 2322 Rayburn, or stream it [here](#).

MAIL CALL: A diverse coalition of energy groups — including Advanced Energy Economy, the American Petroleum Institute and the American Wind Energy Association — on Monday urged Perry not to bail out coal and nuclear plants. Read their [letter](#).

INHOFE BACKS JACKSON: An Axios [report](#) that Pruitt chief of staff Ryan Jackson has been frozen out of the EPA chief's inner circle didn't sound right to his former boss, Sen. [Jim Inhofe](#). "I've known him well since he was 18 years old and I don't think they'd be capable of sidelining him," he told ME. Inhofe admitted that if the report is true — "that's an if I'm not willing to accept," he cautioned — it would be deeply concerning.

PRUITT MEETS MOTHERS ON CHEMICAL BAN: Two mothers will meet today with Pruitt, where they will press the administrator to ban paint strippers containing methylene chloride after their sons died using products with the chemical, according to the Environmental Defense Fund. On former President Barack Obama's last day in office, his administration proposed using the updated Toxic Substances Control Act to ban the use of the chemical in most commercial paint removers. Pruitt [told lawmakers](#) recently that he thinks EPA can make a decision on its proposed ban by the end of the year.

QUICK HITS

10:15 a.m. — House Energy and Commerce Environment Subcommittee hearing on "Sharing the Road: Policy Implications of Electric and Conventional Vehicles in the Years Ahead," 2322 Rayburn

10:15 a.m. — House Natural Resources Committee markup on various bills, 1324 Longworth

12:00 p.m. — The Americas Society/Council of the Americas annual Washington Conference on the Americas with the theme "Investing in the Americas: The New Agenda for Growth," 2201 C Street NW

3:00 p.m. — House Rules Committee meets to formulate a rule on H.R. 3053 (115), the "Nuclear Waste Policy Amendments Act of 2018," H-313

THAT'S ALL FOR ME!

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks from the pioneer in hydrogen-electric renewable technology, Nikola Motor Company. The zero-emission trucks — which will be able to travel between 500 and 1,200 miles and be refilled within 20 minutes, reducing idle time — are expected to be integrated into Anheuser-Busch's dedicated fleet beginning in 2020.

Through this agreement Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025.

"At Anheuser-Busch we're continuously searching for ways to improve sustainability across our entire value chain and drive our industry forward," said Michel Doukeris, CEO of Anheuser-Busch. "The transport industry is one that is ripe for innovative solutions and Nikola is leading the way with hydrogen-electric, zero-emission capabilities. We are very excited by the possibilities our partnership with them can offer."

Pruitt fast-tracked California cleanup after Hugh Hewitt brokered meeting Back

By Emily Holden and Anthony Adragna | 05/07/2018 10:12 PM EDT

EPA Administrator Scott Pruitt placed a polluted California area on his personal priority list of Superfund sites targeted for "immediate and intense" action after conservative radio and television host Hugh Hewitt brokered a meeting between him and lawyers for the water district that was seeking federal help to clean up the polluted Orange County site.

The previously unreported meeting, which was documented in emails released by EPA under a Freedom of Information Act lawsuit by the Sierra Club, showed Pruitt's staff reacting quickly to the request last September by Hewitt, who has been one of Pruitt's staunchest defenders amid a raft of ethics controversies around his expensive travel, security team spending and a cheap Washington condo rental from a lobbyist.

Pruitt has drawn criticism from environmentalists and other critics for letting prominent GOP backers and industry groups influence the agency's agenda — even as he has kicked scientists off of EPA's advisory panels and moved to limit the kinds of peer-reviewed research it will consider when making decisions.

In many cases, the people whose advice Pruitt is heeding could be useful supporters for him in a future race for U.S. senator or president. They include GOP megadonor Sheldon Adelson, who — as POLITICO reported in March — persuaded Pruitt last year to take a meeting with an Israeli water purification company called Water-Gen that later won a research deal with the EPA.

Hewitt, a resident of Orange County whose son James works in EPA's press office, emailed Pruitt in September to set up a meeting between the administrator and the law firm Larson O'Brien, which employs Hewitt and represents the Orange County Water District. Pruitt had been planning to meet with the lawyers in California a month earlier, but cancelled the trip to undergo knee surgery.

"I'll join if the Administrator would like me too or can catch up later at a dinner," Hewitt wrote in his Sept. 18 message. Hewitt added that the issues surrounding the Superfund site were "Greek to me but a big deal in my home county."

Pruitt's aides responded within minutes and quickly confirmed an Oct. 18 meeting for the lawyers and a project director.

Six weeks after that meeting, on Dec. 8, the Orange County North Basin site appeared on Pruitt's list of 21 contaminated areas to address. A month later, Pruitt proposed listing the site on EPA's National Priorities List, a move that could make it eligible for long-term federal cleanup funding from the federal government if the responsible polluters cannot be identified and forced to pay for its remediation.

Since then, Hewitt has been a robust defender of Pruitt, dismissing his recent controversies as "nonsense scandals" on MSNBC in early April and saying his detractors were "just trying to stop the deregulation effort."

Pruitt has touted the agency's Superfund work as one of his key priorities, setting up a task force to seek to speed up the clean-up of the nation's worst contaminated sites. That task force had been headed by Albert "Kell" Kelly, a former banker and longtime friend, who departed the agency last week after news about loans he provided to Pruitt in Oklahoma, including the mortgage provided to Pruitt for a house he bought from a lobbyist when he was a state senator.

Environmental advocates have worried Pruitt's efforts to identify Superfund priority sites would bypass the process set up by Congress to ensure cleanup resources are divided fairly, and that he could focus on sites seen as important to his political supporters. And environmentalists have said Pruitt's rush to claim that contaminated properties have been remediated could risk turning them over to local governments and businesses that might pursue cheaper, inadequate solutions.

Elgie Holstein, senior director for strategic planning at the Environmental Defense Fund who has been tracking EPA's Superfund actions, said the connection to Hewitt is "not a surprise."

"The biggest fear we have is that No. 1, the administrator's political priorities and personal ambitions, political ambitions become the primary criteria for action under this program instead of science and health," Holstein said.

EPA never disclosed the meeting with Hewitt's contacts. It was listed on Pruitt's public calendar as a staff briefing. But on his private Outlook schedule, which the agency has released in response to lawsuits, it appeared as an "Orange County Superfund Site" meeting with Kelly and two other staffers. The records did not list the Californians in attendance at the meeting at EPA headquarters in Washington.

But EPA spokesman Jahan Wilcox confirmed that two lawyers representing the water district, Robert O'Brien and Scott Sommer, and the water district director of special projects, Bill Hunt, were there. A third lawyer, former federal Judge Stephen G. Larson, was forced to cancel his trip due to wildfires in California, according to emails.

"Hugh Hewitt helped arrange the meeting at the request of the water district but did not attend," Wilcox said.

Wilcox said the meeting was for the water district to "brief EPA on the Superfund site's cleanup efforts and request expedited cleanup," following a 2016 agreement with the agency to conduct a remedial investigation and feasibility study, at a cost of \$4 million over two years. Hunt did not immediately respond to a request for comment.

Hewitt in an email to POLITICO called Pruitt a friend and said he does not have a working relationship with him. He said that his firm has represented the water district and worked on the site with EPA's regional office for years but that he had not participated in that work.

Hewitt said he requested a meeting because the water district wanted to brief the new EPA team, he said, adding that he was an Orange County resident until 2016 as well as an Orange County Children and Families Commission member. He said that he "very much" wanted the Superfund site remediated as soon as possible.

According to an EPA fact sheet, the Orange County site has more than five square miles of polluted groundwater containing chlorinated solvents and other contaminants across the cities of Anaheim, Fullerton, and Placentia. It includes the Orange County Groundwater Basin, which provides drinking water to more than 2.4 million residents across 22 cities, according to the agency. Those pollutants can damage humans' nervous systems, kidneys and livers, and some are considered carcinogenic.

EPA has just begun its process of studying the contamination and it has not determined which companies caused the pollution in the area. But an administrative settlement with the EPA in 2016 says the area was home to "electronics manufacturing, metals processing, aerospace manufacturing, musical instrument manufacturing, rubber and plastics manufacturing, and dry cleaning."

Hewitt also thanked EPA schedulers for working to arrange a meeting between Pruitt and the California Lincoln Clubs, which describe themselves as in favor of "limited government, fiscal discipline and personal responsibility." After some rescheduling Pruitt eventually met with representatives of the group on a trip to California in March of this year, according to his public calendar. Prominent Orange County businessman John Warner also helped to connect that group with staffers.

Pruitt and his scheduling staff have frequently sought to set up meetings with or for influential Republican figures, according to the internal EPA emails.

His team accepted an invitation for him to address The Philanthropy Roundtable at an invitation-only event at the White House for "conservative and free-market foundation CEOs and individual wealth creators to discuss the greatest opportunities for foundations to protect and strengthen free society" and "what [Pruitt] views as unique opportunities for philanthropic action.

As POLITICO reported in March, Pruitt also met with an Indiana coal executive and Trump fundraiser who was seeking to soften a pollution rule.

Pruitt also crafted his travel schedule — including a tour of states in August — to meet with big business much like a member of Congress would during the annual recess.

In July, EPA's associate administrator of public engagement Tate Bennett was working with Pruitt to "essentially create an August recess for the EPA to be out in the states talking with individual companies & doing listening sessions within sectors," said Leah Curtsinger, the federal policy director for the Colorado Association of Commerce & Industry, in an email introducing Bennett to her husband, public affairs director at coal company Cloud Peak Energy and a fellow alum of Senate Majority Leader Mitch McConnell's office.

Annie Snider contributed to this report.

Blankenship, predicting victory, thumbs his nose at GOP [Back](#)

By Alex Isenstadt | 05/07/2018 08:27 PM EDT

MOUNT HOPE, W. Va. — A defiant Don Blankenship on Monday shrugged off President Donald Trump's last-minute plea for Republican primary voters to reject his insurgent Senate candidacy — and flatly predicted it would fail to halt his momentum.

On the final day of the dramatic West Virginia campaign, the coal baron and ex-prisoner seemed unbothered by the president's foray into the contest, arguing that voters would see through it as the latest ploy in an establishment-led effort aimed at keeping him from winning the nomination.

"I think it's still over," he declared to reporters here during a frenzied final day of the race. "It probably tightens it a point or two, but I don't think it matters much."

At another point in the day, after a reporter asked if he was feeling confident, Blankenship had a deadpan response: "Yeah, we're gonna win."

Senior Republicans are fretting that Blankenship, who spent a year behind bars after the 2010 explosion at his Upper Big Branch Mine that killed 29 workers, has vaulted into the lead heading into Tuesday's primary. GOP officials reviewed a range of surveys over the weekend, with some showing Blankenship holding a narrow single-digit advantage over his mainstream opponents, Rep. Evan Jenkins and state Attorney General Patrick Morrisey. Others had Blankenship ahead by more.

The national GOP has waged an all-out campaign to stop him from winning the nomination. They're convinced would destroy the party's prospects of ousting Democratic Sen. Joe Manchin in November. And many Republicans say a Blankenship win would be yet another black eye for the party, which is still reeling from last year's loss in the Alabama special election.

Over the past month, a super PAC aligned with Senate Majority Leader Mitch McConnell has spent over \$1.3 million on a barrage of anti-Blankenship TV ads.

With the former prisoner gaining momentum, the effort to stop him has gone into overdrive. As the race entered its final day, Blankenship's rivals — who had spent almost the entire campaign attacking one another — turned their fire on him.

In a not-so-veiled jab at Blankenship, Jenkins held a morning campaign event at a memorial for coal workers. At one point, he noted that one of his great grandfathers died in a mine explosion.

"The president could not have made it any clearer this morning that Don Blankenship is not the guy to beat Joe Manchin," Jenkins said.

Morrissey, who spent the day hopscotching across central West Virginia, announced that he'd sent a letter to Blankenship's parole officer highlighting what he argued was a violation. At one point, he took to Twitter to suggest questions for reporters to ask Blankenship. And he released a digital advertisement unloading on the coal baron, and highlighting his role in the 2010 explosion.

"Families devastated, children left fatherless, wives widowed," a narrator intoned. Many in the party are skeptical that the 11th-hour offensive will succeed — and, behind the scenes, finger-pointing is underway. Some are pinning the blame on the White House, saying it should have rebuked Blankenship earlier. Others say the fault lies with Jenkins and Morrissey, whose near constant attacks left one another badly damaged and created an opening for Blankenship.

Still others are pinning the blame on McConnell, saying that he should have long ago used his political muscle to clear the primary field and thereby avoid the three-way dynamic that has played to Blankenship's benefit.

McConnell has privately expressed concern to associates about Blankenship, whom he has long viewed as a serious threat in the contest. A loss for the Senate GOP leader, who hails from a neighboring Appalachian state and has faced withering attacks from Blankenship, would be embarrassing.

Over the weekend, McConnell spoke by phone with the president about the contest. According to a Republican official briefed on the call, Trump informed McConnell that he planned to criticize Blankenship publicly, a step he hadn't taken previously. Among the issues that arose on the call were Blankenship's TV ads, some of which have gone after McConnell's family in deeply personal, racial terms.

White House aides spent part of Friday drafting a tweet targeting Blankenship. Then, on Monday, the president hit send.

"To the great people of West Virginia we have, together, a really great chance to keep making a big difference," he wrote. "Problem is, Don Blankenship, currently running for Senate, can't win the General Election in your State...No way! Remember Alabama. Vote Rep. Jenkins or A.G. Morrissey!"

For Blankenship, who has tied himself closely to the president and on Monday declared himself "Trumpier than Trump," the attack could have stung. Yet as the race came to a close, Blankenship seemed unbothered.

Speaking to reporters after touring a freight shipping office here, Blankenship said he placed no stock in the president's tweet. It was McConnell, Blankenship said, who convinced Trump to weigh in. After Tuesday, Blankenship added, the president would be embarrassed he followed McConnell's lead.

"It's obvious that the president is suffering from the same thing that many in the public do, which is misinformation and untruths," Blankenship said. "The lesson that will be learned here when I win is that you shouldn't blindly endorse or cast doubts or favoritism unless you actually look at their record and not depend on the people in that swamp that you're trying to drain."

At times, Blankenship seemed to take pleasure in his recalcitrance. He refused to commit to endorsing his primary rivals should they win, which he said wouldn't happen, anyway. He wouldn't apologize for running TV ads lambasting McConnell's "China family." And he reiterated that he wouldn't vote for McConnell to serve as Senate GOP leader.

At one point, Blankenship noted that he'd been disrespected at other times in his career. The Marshall University-educated businessman noted that he'd grown up poor before becoming a multimillionaire, and recalled one episode in which he easily passed a CPA exam that Ivy Leaguers he knew had struggled with.

Now, he said, he was confronting another kind of establishment.

"I've been underestimated," he said, "all my life."

What's in Trump's \$15B spending cuts package [Back](#)

By Kaitlyn Burton | 05/07/2018 08:29 PM EDT

The White House is set to release a \$15 billion spending cuts package Tuesday. Here are some of the plan's targets, a senior administration official told reporters today:

- \$7 billion from the Children's Health Insurance Program, which covers about 9 million low-income children.
- \$4.3 billion from the Energy Department's Advanced Technology Vehicles Manufacturing loan program, which supports the production of fuel-efficient, advanced technology vehicles.
- \$800 million from the Center for Medicare and Medicaid Innovation, which was created under Obamacare.
- \$252 million from the 2015 Ebola outbreak response.
- \$148 million from the Animal and Plant Health Inspection Service for responding to disease outbreaks "that have already been resolved," the official said.
- \$107 million for technical assistance after Hurricane Sandy for emergency watershed programs.
- \$15 million from USDA's Rural Cooperative Development Grant program, which seeks to boost the economies of rural areas.

Trump tries to woo conservatives with bid to cut spending [Back](#)

By Sarah Ferris and Kaitlyn Burton | 05/07/2018 09:05 AM EDT

The White House on Tuesday will send \$15 billion in proposed spending cuts to Congress in an attempt to demonstrate fiscal austerity to skeptical conservatives, senior administration officials confirmed Monday night.

The administration had last week planned to send Congress a package of \$11 billion in spending reductions. But since then, some conservatives have quietly pushed for an even bolder proposal, particularly after the GOP's spending binge in recent months, said Republicans familiar with the discussions.

The White House initially floated as much as \$60 billion in cuts, including an unprecedented attempt to cancel money from this year's omnibus spending bill. The proposal was later downsized to \$11 billion, and then back up to \$15 billion, targeting only unused funding from past years, which POLITICO first reported.

One senior administration official told reporters that the proposal coming Tuesday is "the largest single rescissions package at one time."

The White House also plans to make a second attempt at clawing back funding from the omnibus, but the senior administration official said that could come weeks later.

The official said President Donald Trump will be personally involved in the details of the next package, which will include "substantial" cuts in current spending based on the president's own budget request.

Unlike regular spending bills, a presidential rescissions package is given fast-track authority in both chambers. That means the proposal is one of the rare spending-related bills that is able to bypass the 60-vote threshold in the Senate.

Nearly half of the package, a whopping \$7 billion, pulls from the Children's Health Insurance Program, which covers about 9 million low-income children.

Of this, \$5 billion is fiscal 2017 funding that has already expired, and \$2 billion is money from a so-called contingency fund that states can tap into if they're short on cash.

These CHIP rollbacks "will not impact the program," the senior administration official said.

It would also cut \$800 million from the Center for Medicare & Medicaid Innovation, which was created under Obamacare.

In addition, the proposal will target 38 programs with large amounts of leftover cash, including \$148 million from the Animal and Plant Health Inspection Service, \$107 million for Hurricane Sandy in 2013 and \$252 million for the Ebola outbreak in 2015.

The senior administration official said the White House is starting with "uncontroversial" cutbacks as a sweetener to bring Democrats on board.

"I don't think we believe there's a reason we wouldn't get bipartisan support for a package like this," the official said.

The process also includes a special bonus for fiscal hawks: Whenever the president submits a rescissions request, that spending is frozen automatically for 45 legislative days, or until Congress formally rejects it.

OMB Director Mick Mulvaney said in April that he hopes for a vote in the House before the July Fourth recess, and officials told reporters Monday that the House is "very interested in this package."

The GOP-dominated House is expected to easily clear the rescissions package, but even White House officials are less confident about its fate in the Senate, White House legislative affairs director Marc Short told POLITICO on Monday. Trump is pleased with the \$15 billion proposal, Short said.

In a call with Capitol Hill staff on Monday, White House officials skirted a question about whether Majority Leader Mitch McConnell had signed off on the proposal.

"We are in discussions with the majority leader," the administration official said on the call, which POLITICO was permitted to listen to by a staffer. "We're hopeful the Senate's going to come our way but I would say it's an ongoing conversation right now."

Trump's unusually large request would come after a nearly two-decade drought of any formal rescissions proposal.

Former President Bill Clinton was the last president to propose rescissions. His three requests totaled just \$128 million, a fraction of Trump's request.

Even with Trump's record-setting sum, conservative groups are demanding the Trump administration go further by proposing to cancel funds from the omnibus, which Trump threatened to veto.

Americans for Prosperity, the right-leaning group founded by the Koch brothers, is asking the White House to reel back \$45 billion from the \$1.3 trillion omnibus.

The group on Monday released an exhaustive list of programs it believes should go on the chopping block, including homeless assistance grants, a Coast Guard security center, FBI salaries and the National Cancer Institute.

Behind the scenes, top budget officials have wrestled for weeks with Republican lawmakers on the size and scope of the rescissions package.

The debate was largely centered on whether to cut money across the board from the omnibus spending package, or whether to target individual programs.

Few Republicans wanted the across-the-board cuts as those would have hit the hard-won increases to military spending. But officials also worried that going after specific programs would spur infighting among Republicans, according to one former top GOP congressional aide briefed on the deliberations — an outcome everyone hoped to avoid ahead of the 2018 midterm elections.

Meanwhile, belt-tightening conservatives in the House are still hoping for more than \$15 billion in cuts.

An internal survey of dozens of House Republican Study Committee members found that lawmakers overwhelmingly support the largest possible rescissions request. The survey, which was obtained by POLITICO, found that 71 percent of RSC members said they would back a proposal that cut at least \$60 billion. Another 9 percent said they'd support any amount.

And 94 percent of RSC members surveyed said the rescissions package should cut at least some domestic funding from this year's \$1.3 trillion omnibus. Only 6 percent said "maybe."

Republican budget wonks also wondered if the final package would accomplish the task of reducing government spending in a meaningful way, if it indeed took previously unspent money from old programs.

"This is not a deficit reduction exercise, but more of a public relations exercise to soothe the base and convince them that the White House is fiscally responsible," said G. William Hoagland, a senior vice president at the Bipartisan Policy Center and former director of budget and appropriations for former Senate Majority Leader Bill Frist as well as the former director of the Senate Budget Committee.

"If they are finding unused budget authority and putting that in a special package to Congress as appropriators are trying to put together the [fiscal] 2019 bill, it may have the effect of creating more spending for 2019 rather than less," Hoagland said.

Nancy Cook, John Bresnahan and Matthew Nussbaum contributed to this report

House Appropriations panel advances \$44.7B energy and water bill [Back](#)

By Annie Snider | 05/07/2018 06:15 PM EDT

A House Appropriations Committee subpanel swiftly approved its \$44.7 billion energy and water spending bill on a voice vote today, sending it to the full committee for consideration.

Democrats applauded the boost in funding that the measure provides for the Army Corps of Engineers and DOE thanks to the bipartisan agreement to lift spending caps.

"Our bill is certainly a message to the executive branch that the legislative branch rejects the ill-considered, draconian cuts we have come to expect to every important agency we fund in this bill," said Rep. [Marcy Kaptur](#), the top Democrat on the subcommittee.

Overall, the bill would provide \$7.28 billion to the Army Corps of Engineers, \$451 million over 2018 levels. That includes \$1.6 billion for harbor maintenance activities, or \$160 million more than the level appropriators committed in a major 2014 bill.

DOE's energy programs would get \$13.4 billion under the measure, with increases for fossil and nuclear energy research and cuts for renewable energy and energy efficiency.

Democrats objected to that disparity, as well as to a spate of policy riders in the bill such as a provision to repeal the Obama administration's Waters of the U.S. rule and another to override a court decision and operate the Columbia and Snake rivers' dams for hydropower production rather than protecting endangered salmon.

WHAT'S NEXT: The full House Appropriations Committee is expected to consider the measure soon.

Transition Update #66
Week of April 15-21, 2018

Annual Meeting - May 11, 2018

Our DC Annual Get Together is scheduled for Friday, May 11, 2018 from 5:00 PM to 8:30 PM EDT. The meeting will be held at:

The Offices of Sidley Austin
1501 K Street, NW,
Concourse Level
Washington, DC 20005

[More Information about Annual Meeting](#)

[Online Registration for Annual Meeting](#)

Linda Fisher, Mike Walsh, and Elizabeth Shogren will talk about EPA's future.

Linda J. Fisher

Linda was Chief of Staff to Administrator Lee M. Thomas and was Assistant Administrator for Policy, Planning and Evaluation. In the George W. Bush Administration she served as Assistant Administrator Pesticides and Toxic Substances. She was Deputy Administrator in the George H.W. Administration. Linda retired as the Vice President for Safety, Health, and Environment and Chief Sustainability Officer for DuPont.

Mike Walsh

Mike Walsh is the Founding Chairman and currently Adviser to the International Council on Clean Transportation. Mike was previously EPA DAA for Mobile Sources and served in New York's pollution control office.

Elizabeth
Shogren

Elizabeth Shogren is a reporter for the Center for Investigative Reporting, covering science issues. She was previously a correspondent for High Country News. She covered environmental issues for NPR and before that, for the LA Times where she was also the network's Moscow correspondent.

Nominees and Appointments

Awaiting Hearings - Peter Wright and Charles McIntosh

William Charles McIntosh - announced by the White House as the nominee to be Assistant administrator for international and tribal affairs on March 23rd. The formal appointment was received and referred to the Environment and Public Works Committee on April 9th.

Mr. McIntosh ran Ford's environmental compliance and policy divisions from 1998 until he retired last year. Before Ford, he worked for Michigan Gov. John Engler as his Environmental and Natural Resources Advisor, where he was involved in comprehensive environmental statutory and regulatory reform. He also worked as the deputy director of the Michigan Department of Environmental Quality, where he was responsible for programs, implementing regulatory reform, and criminal investigations.

Peter Wright - On March 6th, the nomination of Peter Wright to be the Assistant Administrator for Land and Emergency Management was received from the White House and immediately referred to the Senate Environment and Public Works Committee. No hearing is scheduled at this time.

Open Positions

The [Washington Post Appointment Tracker](#) shows the following positions at EPA with no one currently nominated or confirmed.

- Assistant administrator for chemical safety and pollution prevention
- Assistant administrator for environmental information
- Assistant administrator for research and development
- Assistant administrator for administration and resources management

GAO found that the EPA violated the Antideficiency Act by spending more than the amount Congress approved.

The Government Accountability Office found that the EPA violated the Financial Services and General Government Appropriations Act by spending more than \$5,000 on the phone booth without notifying Congress.

GAO did not rule on the phone booth's necessity, but said its construction qualified as a furnishing under federal statute, meaning the "EPA was required to notify the appropriations committees of its proposed obligation."

The GAO also found that the expenditure violated the Antideficiency Act by spending more than the amount Congress approved.

Huffington Post: GAO found that the EPA violated the Antideficiency Act by spending more than the amount Congress approved.

**Farm Bill Would Remove ESA Consideration from
EPA Pesticide Decisions**

A provision in the 2018 farm bill would allow EPA to approve pesticides without undertaking reviews now required to protect endangered species. Environmental groups say the provision is an "unprecedented" attack that could have lasting ramifications for ecosystems across the nation.

The bill would allow the EPA to skip consultations with agencies that include the Interior Department's Fish and Wildlife Service and the

National Marine Fisheries Service, which oversee the implementation of Endangered Species Act protections, and opponents have said that it would gut protections for endangered species.

In a December 2017 report, the National Marine Fisheries Service said pesticides like chlorpyrifos, malathion, and diazinon threaten a number of marine animals, including some that are protected, as well as the predators that prey on them. Some types of protected salmon, butterflies and all kinds of pollinators could be harmed by toxic pesticides applied without proper review, advocates worry.

"It's a poison-pill rider in the most literal and unfortunate way," said Jordan Giaconia, federal policy associate for defense at the Sierra Club. It takes just one harmful chemical to be injected into the ecosystem to cause widespread damage, he said. "The ramifications are pretty far reaching."

Republicans on the House Agriculture Committee see the language as a "commonsense reforms" to an "onerous and conflicting" consultation process that needs to be modernized, according to a summary provided by the panel's majority.

Roll Call: EPA Pesticide Approval Without Endangered Species Review in Farm Bill

April 17, 2017
**Human role in climate change removed from
National Park Service science report**

The National Center for Investigative Reporting published a long story on the editing of a National Park Service report on sea level rise and storm surge for apparently political purposes.

National Park Service officials have deleted every mention of humans' role in causing climate change in drafts of a long-awaited report on sea level rise and storm surge, contradicting Interior Secretary Ryan Zinke's vow to Congress that his department is not censoring science.

The research for the first time projects the risks from rising seas and flooding at 118 coastal national park sites, including the National Mall, the original Jamestown settlement and the Wright Brothers National Memorial. Originally drafted in the summer of 2016 yet still not released to the public, the National Park Service report is intended to inform officials and the public about how to protect park resources and visitors from climate change.

Reveal from The Center for Investigative Reporting obtained and analyzed 18 versions of the scientific report. In changes dated Feb. 6, a park service official crossed out the word "anthropogenic," the term for people's impact on nature, in five places. Three references to "human activities" causing climate change also were removed.

The 87-page report, which was written by a University of Colorado Boulder scientist, has been held up for at least 10 months, according to documents obtained by Reveal. The delay has prevented park managers from having access to the best data in situations such as reacting to hurricane forecasts, safeguarding artifacts from floodwaters or deciding where to locate new buildings.

Examples of changes are:

Zinke testified at a Senate committee hearing last month that the Interior Department has not changed any scientific documents.

"There is no incident, no incident at all that I know that we ever changed a comma on a document itself. Now we may have on a press release," Zinke told the senators. "And I challenge you, any member, to find a document that we've actually changed on a report."

Zinke's office did not respond to a request for comment by the the Center for Investigative Reporting.

Reveal: Wipeout: Human role in climate change removed from science report

Trump's EPA quietly revamps rules for air pollution

The Hill describes several industry friendly actions that EPA is taking that will result in more industry friendly air permitting.

In a move announced in December, the EPA will no longer "second guess" companies' calculations of their expected pollution output after certain big projects under a New Source Review. Under the policy, EPA will usually not take action against a company for its calculations if they turn out to be wrong and emissions are higher than estimated.

The EPA will also now allow industry to mover from major sources to minor sources if emissions drop enough. This ends the "once in, always in" policy for major sources.

EPA is also poised to allow project netting" when applying for permits for major projects under the New Source Review program. That means companies can use a more industry-friendly emissions calculation when they argue that a particular project would reduce emissions.

The Hill: Trump's EPA quietly revamps rules for air pollution

Letter to the New Yorker editor from William Ruckelshaus

Pruitt vs. the E.P.A.

Margaret Talbot's article about Scott Pruitt paints a scathing picture of his assault on the Environmental Protection Agency ("Dirty Politics," April 2nd). I was the first, and then the fifth, administrator of the agency. The environment

is far healthier today than it was forty-seven years ago, when the E.P.A. was created, precisely because of the science-based standards that the agency implemented. Pruitt is systematically attacking both the E.P.A.'s budget and its scientific framework. If he is successful, the very reason for the E.P.A.'s creation-illness and disease from pollution-will reëmerge, and we will have to start from square one. The country must challenge the Trump Administration's war on science. Otherwise, as a result of actions taken by Pruitt and this Administration, the uncontrolled pollution that we have greatly reduced in the past five decades will return.

William D. Ruckelshaus
Seattle, Wash.

Libertarian economist at George Mason finds that federal regulations not are strangling the economy

For at least the last 40 years, conservative politicians have been arguing that Federal regulations are strangling the economy. Alex Tabarrok set out to it. That's not what he found.

When Tabarrok and his former grad student Nathan Goldschlag set out to measure how federal regulations impact business growth, they were sure they'd find proof that regulations were dragging down the economy. But they didn't. No matter how they sliced the data, they could find no evidence that federal regulation was bad for business.

For his first paper using a new public database, RegData, Tabarrok decided to analyze the effect of federal regulation on "economic dynamism"-a catch-all term referring to the rate at which new businesses launch and grow, and at which people switch jobs, lose jobs, or migrate for work. There has been a notable and somewhat mysterious decline in dynamism over the last few decades. The rate at which start-ups form is half of what it was forty years ago, the fraction of workers who bounce from one job to another-a sign of competitive labor markets-has plunged, productivity has slowed, and adult employment remains well below its early-2000 peak.

Armed with RegData, Tabarrok and his co-author, Nathan Goldschlag, set out to show that regulations were at least partly to blame. But they couldn't. There was simply no correlation, they found, between the degree of federal regulation and the decline of business dynamism. The decline was seen across many different industries, including those that are heavily regulated and those that are not. They tried two other independent tests that didn't rely on RegData, and came to the same conclusion: an increase in federal regulation just could not explain what was going on.

An idea that is gaining attention, is that rising corporate concentration may be a more likely cause of decreased dynamism in the economy.

'A factory of bad ideas':
How Scott Pruitt undermined his mission at EPA

Has the thread connecting Scott Pruitt to his job just frayed a bit. With all the negative press attention he has attracted, many speculate that Pruitt only holds onto his job because he is doing what Trump wants him to do, and so Trump has been willing to keep him in his job. However, now that Andrew Wheeler has been confirmed as the Deputy Administrator, this Washington Post article speculates that he may be just one bad headline away from dismissal. it says:

"The low-key Wheeler - a former staffer in EPA and the Senate - was sworn in Friday, and his arrival could make Pruitt expendable should more embarrassing revelations surface, according to people inside and outside the administration."

Washington Post: A factory of bad ideas: How Scott Pruitt undermined his mission at EPA

April 20, 2018
Lamar Smith pitched Pruitt on 'secret science.'
Now it's happening

This article in E&E News is another on Pruitt's ban on the use of "secret science" in EPA decision making. As used by people pushing the policy, "secret science" is anything where any data is not available to the public. This includes medical or health studies where the names and other confidential information of people studied is not available.

In addition to discussing how this is being implemented at EPA, the article notes that Nancy Beck, the AA for Chemical Safety and Pollution Prevention, has raised concerns about the effects of the policy on pesticides registrations and TSCA implementation. She notes that a requirement that underlying data be published would require a whole new arm of the publishing industry. Publication is very different than making the data available to other "legitimate researchers" and requiring publication would be very expensive.

There is also the issue of dealing with confidential business information (CBI). It would appear that information submitted as CBI could not be used in EPA decision making under the policy.

Beck came to EPA from the American Chemistry Council, and thus may be more sensitive to industry concerns about cost and CBI than people with strictly political backgrounds.

E&E News: Smith pitched Pruitt on 'secret science.' Now it's happening

April 20, 2018
**Pruitt has "walked away 100 percent" from
EPA job, says Michael Bloomberg**

Very interesting interview with Michael Bloomberg on Face the Nation on April 15th.

"His policies are not good for the world. To debunk science and walk away from it is just ridiculous. Even if you don't believe it. If there's a possibility that it's right you have to take prophylactic actions to prevent a disaster," Bloomberg told "Face the Nation" moderator Margaret Brennan.

With the support of President Trump, Pruitt's agency has gutted the core of climate change regulations, arguing the move would restore lost coal jobs and reduce electricity rates.

"His job is to protect the environment and he has walked away 100 percent from that saying the environment doesn't need protection, I'm going to protect jobs," Bloomberg said, "that's not his job."

CBS News: Pruitt has "walked away 100 percent" from EPA job, says Michael Bloomberg

Fancy Homes, a Shell Company and Friends With Money**

Another story on Scott Pruitt's ethically questionable dealings, this one going back to his time as a state senator in Oklahoma.

Washington Post: Scott Pruitt Before the E.P.A.: Fancy Homes, a Shell Company and Friends With Money

April 19, 2018
Trump's EPA argues more people will die in car accidents

unless California fuel rules are weakened

According to the LA Times, the EPA under Scott Pruitt is taking a cue from auto dealers and free-market think tanks skeptical of mainstream global-warming science and tossing aside reams of federal and California data showing the fuel economy standards are perfectly safe. Instead, Pruitt's directive this month to potentially scale back the fuel standard says "an important factor" is the need to reexamine safety issues.

The agency is preparing to make the case that tough fuel economy rules could effectively force automakers to sell smaller, lighter and thus less crash-worthy vehicles. That, in turn, would lead to more crash-related deaths. And it warns the rules could drive up the cost of cars to the point that consumers will put off buying new, safer models equipped with life-saving technology improvements.

This effectively ignores what has actually happened. In spite of much higher fuel economy averages and much higher populations, traffic deaths are down from over 54,000 per year in the early 1970s to about 37,00 in 2016 (up from less than 33,000 in 2010 and 2011). Deaths per million vehicle miles traveled have fallen from 4.74 in 1970 to 1.18 in 2016. So higher mileage standards have not resulted in more dangerous cars.

HEATH AND ENVIRONMENTAL SAFEGUARDS FOR COAL ASH DISPOSAL

Deadline for public comment: April 30, 2018

Public Hearing: April 24, 2018

Start time: 9 a.m. (EDT)

**Location: DoubleTree by Hilton Hotel,
300 S Army Navy Drive,
Arlington, Virginia 22202**

Coal ash (or coal combustion residuals, CCR) is one of the largest categories of industrial waste in the United States. Created when coal is burned by utilities to produce electricity, coal ash includes mercury, arsenic and other hazardous contaminants. According to the EPA, 470 power plants generated about 110 million tons of coal ash in 2012. When not managed properly, the storage and disposal areas for coal ash can pose serious environmental and health risks. For example, a 2008 spill in Tennessee and another spill in 2014 in North Carolina had devastating impacts on watersheds, nearby homes, and public health. As of 2014, there have been 208 known cases of coal-ash spills and contamination.

In 2015, the EPA issued regulations to reduce the risks of coal ash disposal by requiring monitoring and corrective action for leaks into the groundwater and air; setting restrictions for where coal ash landfills and surface impoundments could be located; and creating liner design criteria for these disposal units. The rule also set out recordkeeping and reporting requirements to better inform the public of the risks and closure requirements for old disposal units. In 2016, Congress passed the Water Infrastructure Improvements for the Nation (WIIN) Act, which provided enforcement authority to the states and federal government over these facilities. Trump Proposal to Roll Back Coal Ash Rule

In response to requests from the utility industry, the Trump Administration is proposing the first of two rules that would weaken several provisions of the 2015 coal ash rule. This proposal would "incorporate flexibilities" into the performance standards for these disposal units, essentially letting states take actions that set less stringent standards for cleanup, groundwater monitoring, and siting of disposal facilities.

More specifically, the rule would allow states to set less strict groundwater standards for certain contaminants rather than cleaning up to background levels. States would also be able to determine that remediation of spills and leaks would not be necessary in certain circumstances. Groundwater monitoring could be modified and, in some cases, suspended if a demonstration could be made that there is no migration of pollutants. The rule would also allow states to reduce the time currently required to monitor corrective actions and post-closure of sites. It would also allow the use of coal ash in construction of cover systems for disposal units.

The proposed rule also responds to various issues remanded by a court in 2016. For example, it adds boron to the list of contaminants that must be monitored and it clarifies the types of woody and grassy vegetation that can be used for slope protection.

Hazardous and Solid Waste Management System: Disposal of Coal Combustion Residuals From Electric Utilities; Amendments to the National Minimum Criteria (Phase One); Proposed Rule

[EPA Web Site for Coal Ash \(Lots of links\)](#)

BLM METHANE AND WASTE PREVENTION RULE

Deadline for public comment: April 23, 2018

The Bureau of Land Management (BLM) issued a rule in November 2016 to reduce waste of natural gas from flaring, venting, and leaks from oil and gas production on public and tribal lands. The requirements are designed to limit waste of federal natural gas resources and avoid loss of royalty payments to federal, state and tribal governments for the sale of their resources. The rule has the additional benefit of reducing air pollutant emissions that drive smog and climate change. Methane is the dominant component of natural gas. The rule replaced old and ineffective regulations that had not been updated in nearly 40 years.

[BLM Methane and Waste Prevention proposed rule rollback at Regulations.gov](#)

[Rule in Federal Register](#)

REPEAL OF THE CLEAN POWER PLAN

Deadline for Public Comment Extended: April 26, 2018

A public hearing was held on November 28 and 29, 2017, in Charleston, WV. EPA has announced three additional "listening sessions":

- February 21, 2018 - Kansas City, MO
- February 28, 2018 - San Francisco, CA
- March 27, 2018 - Gillette, WY

On October 16, 2017, The EPA proposed to repeal the Clean Power Plan that was finalized on October 23, 2015. The basis for the repeal is a revised interpretation Section 111(d) of the Clean Air Act (CAA) that says that EPA does not have the authority to regulate carbon dioxide emissions under the CAA. In particular, the Trump administration interpretation of the CAA is that only changes made at the fossil fuel plants themselves (inside the fence line) are consistent with the language of the Clean Air Act. Therefore, the Administration says that only "inside the fence line" actions should be used to set standards under the Clean Air Act even though, those changes are relatively expensive for the minimal amount of CO2 emissions they reduce.

When issuing the CPP in 2015, EPA recognized that the power generation system in the United States is interconnected, and reasoned that the "best system of emission reduction" would include both making individual plants more efficient, and substituting increased generation from lower-emitting or zero-emitting plants - such as natural-gas-fired plants and solar and wind generation - for some higher-emitting fossil-fuel-fired generation. These emission reduction methods are reflected in the CPP's power plant CO2 emission rates and corresponding state emission goals.

[Save EPA's rule discussion and suggested comments](#)

Proposed Rule in the Federal Register

Air Pollution Controls for the Oil and Gas Sector - Existing Equipment

Deadline for Public Comment: April 23, 2018

The Trump EPA has proposed to withdraw guidelines that assist states in controlling air pollution from the oil and natural gas industry and trigger related clean air planning requirements in many areas with ozone smog problems. The withdrawal would set back efforts to control air pollution from existing equipment in the oil and gas industry.

EPA says the oil and gas sector is the largest industrial source of emissions of volatile organic compounds (VOCs), a group of chemicals that react in the atmosphere to form ground-level ozone (smog). Exposure to ozone is linked to a wide range of health effects, including aggravated asthma, increased emergency room visits and hospital admissions, and premature death.[i]

If left in place, EPA estimates, the guideline would result in pollution reductions each year of more than 64,000 tons of smog-forming VOCs, nearly 200,000 tons of climate-changing methane, and 2,400 tons of hazardous air pollutants linked to a variety of serious health effects.

The EPA Cleans Up Its Science

Now Congress Should Act To Lock In Place Data Transparency

Steve Milloy

March 26, 2018

<https://on.wsj.com/2IV9LeH>

The Environmental Protection Agency will no longer rely on “secret” scientific data to justify regulations, Administrator Scott Pruitt announced last week. EPA regulators and agency-funded researchers have become accustomed to producing unaccountable, dodgy science to advance a political agenda.

The saga began in the early 1990s, when the EPA sought to regulate fine particulate matter known as PM2.5—dust and soot smaller than 2.5 microns in diameter. PM2.5 was not known to cause death, but by 1994 EPA-supported scientists had developed two lines of research purporting to show that it did. When the studies were run past the EPA’s Clean Air Science Advisory Committee, it balked. It believed the studies relied on dubious statistical analysis and asked for the underlying data. The EPA ignored the request.

As the EPA prepared to issue its proposal for PM2.5 regulation in 1996, Congress stepped in. Rep. Thomas Bliley, chairman of the House Commerce Committee, sent a sharply written letter to Administrator Carol Browner asking for the data underlying studies. Ms. Browner delegated the response to a subordinate, who told Mr. Bliley the EPA saw “no useful purpose” in obtaining the data. Congress responded by inserting a provision in a 1998 bill requiring that data used to support federal regulation must be made available to the public via the Freedom of Information Act. But it was hastily written, and a federal appellate court held the law unenforceable in 2003.

The controversy went dormant until 2011, when a newly Republican Congress took exception to the Obama EPA's antioil rules, which relied on the same PM2.5 studies. Again the EPA was defiant. Administrator Gina McCarthy refused requests for the data sets and defied a congressional subpoena.

Bills to resolve the problem died in the Senate. Democrats argued that requiring data for study replication is a threat to intellectual property and an invasion of medical privacy. In fact, the legislation would protect property by requiring a confidentiality agreement, and no personal medical data or information would have been released.

This sort of data is already routinely made public for research use. In 2012 I was desperate for a way around the Obama EPA's secrecy on the PM2.5 issue, I found out in 2012 that I could get California death-certificate data in electronic form. The state's Health Department calls this sort of data "Death Public Use Files." They are scrubbed of all personal identifying and private medical information. Some of my colleagues used this data to prepare a 2017 study, which found PM2.5 was not associated with death.

The best part is that if you don't believe the result, you can get the same data for yourself from California and run your own analysis. Then we'll compare, contrast and debate. That's how science is supposed to work.

It would be better if Congress would pass a law requiring data transparency. A future administrator may backslide on the steps Mr. Pruitt is taking. In the meantime, we have science in the sunshine.

Ban On "Secret Science" In EPA Regulation Makes Sense

Editorial

March 26, 2018

<http://newsok.com/article/5588210/ban-on-secret-science-in-epa-regulation-makes-sense>

The Environmental Protection Agency has announced it will now base new regulations only on the findings of scientific studies whose data and methodology are made public so they can be subjected to independent review. That's a sound move in line with basic scientific transparency and professionalism.

Yet it's being treated as a sign of impending apocalypse by some on the left, which says much about the questionable validity of that group's policy prescriptions.

In an interview with The Daily Caller News Foundation, Administrator Scott Pruitt said the EPA will end its use of studies that do not publish underlying data, only conclusions. "Otherwise, it's not transparent. It's not objectively measured, and that's important," Pruitt said.

In the past, the EPA has advanced air-quality regulations that imposed massive costs based primarily on the findings of two studies done in the 1990s that linked fine particulate pollution to premature death. Neither study made associated data public.

U.S. Rep. Lamar Smith, R-Texas and chairman of the House Committee on Science,

Space and Technology, has long criticized the use of “secret science” and authored legislation to curtail its use by regulators. Last year, Smith said the EPA had “routinely relied on questionable science based on nonpublic information that could not be reproduced, a basic requirement of the scientific method.”

“Americans deserve to see the science for themselves,” Smith said. “If the EPA has nothing to hide, why not make the scientific data it uses for its regulations publicly available? What was the EPA hiding?”

That will strike most people as a fair question. But to some activists, the idea that science should involve review and scrutiny is apparently anathema. In response to a prior effort to ban “secret science” at the EPA, Andrew Rosenberg, director of the Union of Concerned Scientists’ Center for Science and Democracy, said transparency would “gut the EPA at the expense of public health and safety.”

That same group has claimed release of data would require publicizing the confidential patient data of individuals. But Steve Milloy, publisher of JunkScience.com and a senior fellow at the Energy and Environmental Legal Institute, notes that California already makes similar data available in its “Public Use Death Files,” and that has been accomplished without violating patient privacy.

Other critics object that there are costs involved in scrubbing data sets so patient privacy is protected. Perhaps, but that doesn’t mean the public should be kept in the dark about the data and methods used to justify literally billions in new regulatory burden.

Scientific studies are as susceptible to human error and even outright fraud as any other endeavor — particularly when such studies are used in the political realm. Facilitating transparency and independent review will reduce the chances of bad science harming Americans with half-baked regulations, and should enhance the case for regulations when the underlying science has withstood independent scrutiny.

Given the stakes for public health and the national economy, Americans must be assured government regulations are based on sound science, not someone’s “trust me” assurances.

Wheeler's New Approach • Keeping Calendars Public • 'Secret' Science Gets Public Airing

By Marissa Horn

Scott Pruitt's agenda may never go out of style, at least under a GOP president.

But the way that agenda was delivered to the public during Pruitt's 503 days at the EPA is ending, the EPA's acting administrator told Bloomberg Environment in an exclusive [interview](#) yesterday in Canonsburg, Pa.

Later this week, we'll be digging into new acting chief Andrew Wheeler's comments on environmental permitting, enforcement, and a topic that marks an about-face for an agency that [barred](#) three reporters from entering a chemical summit in May—communication.

NOT-SO SECRET CALENDAR: Speaking of Wheeler, [Abby Smith](#) took a look at whom he spoke with during his first week at the EPA.

In another shift from Pruitt's tenure at the agency, Wheeler is updating his calendar daily. Wheeler's anticipated forthrightness—both about his day-to-day

schedule and the EPA's policymaking process—could give regulated industries more clarity, attorneys and consultants say.

For updates, follow [Abby](#) on Twitter and look for the story later today on our [website](#).

SCIENCE TRANSPARENCY: The EPA proposal to [ensure transparency](#) in the science it considers when writing regulations will be the subject of a public hearing today.

Among those speaking in favor of the measure is the U.S. Chamber of Commerce, which according to its written testimony will praise EPA “for finally addressing a longstanding problem inherent in much of its regulatory decision-making processes.” [Sylvia Carignan](#) is tracking.

OTHER STORIES WE'RE COVERING

- The House is expected to take up its second “minibus” package, which would provide more than \$35 billion for the EPA, Interior Department, and other environmental agencies for the coming fiscal year. [David Schultz](#) is covering.
- Wyoming's John Barrasso, who heads the Senate's environment panel, gives fellow senators a push toward thinking about changes to the Endangered Species Act in a hearing today. Follow [Alan Kovski](#) for the latest updates and look for his story [later today](#).
- Lawmakers will lock horns over President Trump's list of 35 critical minerals. Democrats on the Senate Energy and Natural Resources committee are expected to argue the list is a giveaway to the mining industry, while Republicans are likely to counter that streamlined permitting is important for national security. [Stephen Lee](#) has you covered on the hearing.
- Authors from [Wiley Rein LLP](#) point out in an Insights [article](#) five “hot spot” areas that a historic upswing in private actions are targeting in the nation's toxic chemicals law, which was updated in 2016.

QUOTE OF THE DAY

“Anybody who buys on Amazon cannot give me the line that they're environmentally responsible consumers.”

—Yossi Sheffi, engineering professor focusing on supply chain management at the Massachusetts Institute of Technology.

A banner by environmental non-governmental organization Greenpeace is fixed at the Kallio Church tower in Helsinki, Finland, on July 16 ahead of a meeting between President Donald Trump and Russian President Vladimir Putin.

Photographer: Alessandro Rampazzo/AFP/Getty Images

AROUND THE WEB

- Almost the entire Gulf of Finland has been infested with a blue-green algae, the Finnish Environment Institute reports.
- Plutonium went missing in San Antonio more than a year ago, and the federal government still doesn't know where it is.
- As Trump's trade war heats up, a team of trade and climate policy analysts is proposing a new way to counter protectionism that could prod the U.S. back into action on the climate at the same time.
- See the before and after of Louisiana's ambitious effort to rebuild barrier islands by bulking their skeletal remains with tons of sand dredged from the Gulf of Mexico and the Mississippi River.

TODAY'S EVENTS

- **All Day • Pro Summit** • Politico Pro Summit features speakers including California Air Resources Board Chairman Mary Nichols and Murray Energy CEO Robert E. Murray.
- **10 a.m. • Energy** • House science committee's energy and environment panels hold hearing on fossil energy technologies.
- **10 a.m. • Tribal Energy** • House Oversight and Government Reform's interior panel talks about reducing barriers to opportunity for tribal energy resources.
- **10 a.m. • Federal Lands** • House Natural Resources' federal lands panel holds hearing on eight federal lands bills.

- **10 a.m. • FEMA • Atlantic Council** [holds discussion](#) with Daniel Kaniewski, the Federal Emergency Management Agency's deputy administrator, on engaging communities in preparing for and recovering from catastrophes.
- **12 p.m. • Hazardous Waste • Environmental Law Institute** [holds seminar](#) on hazardous waste laws.
- **1 p.m. • New Source Review • The House Energy and Commerce** environmental panel [considers bill](#) that changes the way industrial increases in emissions are calculated when the plants are either modified or constructed.
- **1 p.m. • Coal Combustion • The Air & Waste Management Association** kicks off the first part in a three-part webinar [series](#) looking at the history of coal combustion residual regulations.

Subject: Morning Energy: Spotlight on FERC at Pro summit — Hitching a ride on the 'minibus' — 'Secret science' out in the open

By Kelsey Tamborrino | 07/17/2018 05:43 AM EDT

With help from Emily Holden, Anthony Adragna, Colin Wilhelm and Darius Dixon

SEE YOU THERE: Today's the day — POLITICO Pro is hosting its second annual Pro summit, featuring one-on-one conversations with newsmakers across the policy landscape, including two sessions on energy.

FERC Commissioner Cheryl LaFleur will sit down this afternoon with our own Darius Dixon, before the regulatory body is deadlocked next month following the exit of GOP Commissioner Rob Powelson. LaFleur, a Democrat, has served under presidents from both parties and experienced the agency in almost every configuration — whether it has all five commissioners in place, or just one. There's no shortage of topics to chew over: the potential impact of an Energy Department coal and nuclear rescue plan, the heated rhetoric against states that stand in the way of pipelines, and whether FERC is "on the wrong side of history" when it comes to climate change. Darius' interview with LaFleur starts around 2 p.m.

Also on tap: California Air Resources Board Chairwoman Mary Nichols, Murray Energy CEO Bob Murray and the Council on Foreign Relations' Amy Myers Jaffe will participate in a panel this morning on America's "energy future." Nichols, for one, has been heavily involved in discussions with the Trump administration over car rules that the White House is considering rolling back. Expect questions related to the administration's efforts to pare back regulations and increase oil, gas and coal production — and an in-depth conversation on what that means for free market forces and renewables.

See the full agenda [here](#) and watch the livestream [here](#).

WELCOME TO TUESDAY! I'm your host, Kelsey Tamborrino. Citizens' Climate Lobby's Brett Cease was first to correctly identify the two presidents who threw out the first pitch at an All-Star game in D.C.: Franklin D. Roosevelt in 1937 and John F. Kennedy in 1962. For today: Which state or states have just one consonant in its spelling? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytm](#), [@Morning_Energy](#) and [@POLITICOPro](#).

JUST RELEASED: [View the latest POLITICO/AARP poll](#) to better understand Arizona voters over 50, a voting bloc poised to shape the midterm election outcome. Get up to speed on priority issues for Hispanic voters age 50+, who will help determine whether Arizona turns blue or stays red.

HITCHING A RIDE ON THE 'MINIBUS': The House Rules Committee late Monday made 70 amendments to the EPA and Interior title of the spending minibuss, [H.R. 6147 \(115\)](#). The amendments focus on blocking a host of Obama-era environmental regulations even as the Trump administration is in the process of rolling back many of those. Some of the amendments that caught ME's eye:

— **Diesel emissions grants:** Rep. [Gary Palmer's amendment](#) would eliminate the popular bipartisan Diesel Emissions Reduction Grant program used to retrofit diesel engines like those in school buses,

— **WOTUS:** Rep. Don Beyer's amendment would remove language blocking the Obama administration's Waters of the U.S. regulation,

— **Obama-era methane rule:** Rep. Markwayne Mullin's amendment would block enforcement of the Obama-era regulation aimed at curbing methane emissions from new oil and gas sources, which the Trump administration is already reconsidering,

— **Social cost of carbon:** Another amendment from conservatives would bar the use of the social cost of carbon in rulemakings,

— **Trailer efficiency:** Reps. Barry Loudermilk and Morgan Griffith's amendment would bar EPA from applying stricter fuel efficiency and greenhouse gas emissions standards to certain truck trailers,

— **Chesapeake Bay:** Rep. Bob Goodlatte's effort would limit EPA's ability to go after states that miss Chesapeake Bay cleanup milestones,

— **Ozone:** Rep. Glenn Grothman's amendment would block implementation of EPA's 2015 tightened ozone standard,

— **Coal ash:** A Democratic amendment would block the Trump EPA from revisiting an Obama-era coal ash regulation,

— **Endangered Species Act riders:** Several measures would bar the administration from issuing or enforcing Endangered Species Act rules relating to species like the lesser prairie chicken and Preble's meadow jumping mouse,

— **Attorney fees:** An amendment from Reps. Jason Smith and Greg Gianforte would block attorney fees from being awarded in any Clean Air Act, Clean Water Act or Endangered Species Act settlement, and,

— **Inspectors general:** Nothing related to former Administrator Scott Pruitt was made in order, but the House will consider an amendment from Rep. Raúl Grijalva that would increase the budget of the Interior Department's inspector general by \$2.5 million.

Read the full list of amendments made in order to the measure here.

'SECRET SCIENCE' OUT IN THE OPEN: EPA's controversial proposal to consider only research with publicly available data gets a public hearing at agency headquarters today starting at 8 a.m. Nearly 70 health, medical, academic and science groups — including the American Lung Association, American Heart Association, American Medical Association and American Academy of Pediatrics — oppose the plan, which they say could hamstring public health and environment protections.

EPA's Science Advisory Board voted unanimously to review the proposal, which Pruitt said was meant to bolster transparency. Paul Billings, national senior vice president of advocacy at the American Lung Association, called the rule a "coordinated effort to ignore the science that is inconvenient to the EPA's agenda," and compared it to lobbying efforts by the tobacco industry in the 1990s to exclude studies that showed secondhand smoke could kill.

What's at stake? The proposal could move forward quickly enough to allow EPA to roll back certain air quality standards currently under review. According to the Natural Resources Defense Council, the plan could undercut computer models meant to test chemicals under the new Toxic Substances Control Act and could toss

out landmark studies that relied on personal health records following extraordinary events, including when Hiroshima and Nagasaki victims were tested over time to find out the effects of radiation on humans.

The meeting will run until 8 p.m. or an hour after the last of more than 100 registered speakers has commented. Speakers, aside from many environment and public health groups, include the American Petroleum Institute, the U.S. Chamber of Commerce, the American Chemistry Council, FreedomWorks Foundation and climate science critic Steve Milloy. Dan Byers of the Chamber of Commerce's Global Energy Institute is expected to applaud the agency's efforts and commend EPA for going through the formal public comment and rulemaking process. "It is one thing to be cavalier about transparency principles when their application has little or no import to public policy, but federal rules that impact millions of people and billions of dollars should be held to a higher standard," he is expected to say. Also registered are Reps. Paul Tonko, Suzanne Bonamici and Dan Lipinski. Comments can be submitted until Aug. 16.

Related reading: Competitive Enterprise Institute senior fellow Angela Logomasini looks at the science transparency rule in analysis published today. "The rule is actually far more modest and flexible than depicted by its critics, and its goals are in fact achievable," Logomasini writes. Read it here.

FOR THE RECORD: The House Rules Committee meets at 3 p.m. this afternoon to formulate a rule on an anti-carbon tax resolution, H. Con. Res. 119 (115), that calls a tax on carbon released from fossil fuels "detrimental to the United States economy." The Rules panel will tee up a vote later this week on the resolution, which is led by Majority Whip Steve Scalise and would put a range of lawmakers — most notably the Climate Solutions Caucus — on the record on the issue.

WHERE'S ZINKE? Interior Secretary Ryan Zinke will deliver remarks this morning at the first meeting of the "Made in America" Outdoor Recreation Advisory Committee. The committee is tasked with advising the secretary on "public-private partnerships across all public lands, with the goal of expanding access to and improving infrastructure on public lands and waterways." See the meeting agenda.

AMERICA'S PLEDGE STILL WORKING ON PLEDGES: Michael Bloomberg and California Gov. Jerry Brown, the co-chairs of climate organization "America's Pledge," have unveiled a preview of the report they will release at the Global Climate Action Summit in San Francisco in September, detailing "bottom-up" opportunities for climate action sans federal leadership. The list is familiar: boosting renewables, accelerating coal retirements, retrofitting buildings for energy efficiency, electrifying building energy use, accelerating electric vehicle adoption, phasing out HFCs, preventing methane leaks at the wellhead, reducing methane leaks in cities, reducing emissions from land and starting carbon markets.

Vice Chairman Carl Pope said the group still plans to debut a quantitative analysis outlining what state and local governments are already doing, what they have committed to and what they are keying up. "We have every reason to believe the rest of the world is watching this very closely," Pope said, noting that the U.N.'s top climate official, Patricia Espinosa, mentioned the group and summit by name at the Vatican earlier this month. Read it here.

ESA GETS ITS DAY: Proposed tweaks to the Endangered Species Act will be front and center at a Senate Environment and Public Works hearing this morning. The hearing will feature testimony from Wyoming Gov. Matt Mead, Colorado Parks and Wildlife's Bob Broscheid and Virginia's Secretary of Natural Resources Matthew J. Strickler, and will focus on a discussion draft released by Chairman John Barrasso earlier this month aimed at changing the statute. **If you go:** The hearing kicks off at 9:45 a.m. in 406 Dirksen. Livestream here.

TAKEN BY STORMWATER: The House on Monday passed by voice vote H.R. 3906 (115), the Innovative Stormwater Infrastructure Act of 2017, which would "establish centers of excellence" for stormwater control infrastructure. The legislation, introduced last year by Democratic Rep. Denny Heck, directs EPA to create a

stormwater infrastructure funding task force to make recommendations on the availability of public and private funding for stormwater infrastructure.

DOE ISSUES FIRST TRIBAL LOAN GUARANTEE: The Energy Department will issue its first solicitation for the Tribal Energy Loan Guarantee Program today. The program provides up to \$2 billion in partial loan guarantees to support energy development in Native American and Alaska Native communities. According to DOE, today's solicitation marks more than \$40 billion in energy infrastructure loans and loan guarantees from DOE's Loan Programs Office in five areas.

HOUSE PANEL TO HOLD GRID HEARING: House Natural Resources will hold a hearing on July 25 on Puerto Rico's electric grid recovery and possible improvements to make it more efficient and resilient to future hurricanes. On top of the devastation caused by Hurricane Maria last year, Puerto Rico's electric utility owes bondholders \$9 billion, and most of its leadership departed last week after clashes with Gov. Ricardo Rosselló over executive compensation and political control of the utility, which is quasi-governmental.

MAKING THE GRADE: The Environment America Research & Policy Center is out today with its state-by-state report card, "Renewables on the Rise," which details increases in solar, wind, energy efficiency, electric vehicles and battery storage. The report says the U.S. now produces almost six times as much renewable electricity from wind and solar than it did in 2008. It also found that in March of last year, wind and solar produced 10 percent of the United States' electricity — marking a first. On the state level, the report said California, Arizona, North Carolina, Nevada and Texas saw the greatest total increases from 2008 until 2017 in solar energy generation. See the report [here](#) and a state-by-state interactive map [here](#).

YOU DOWN WITH TIP? A bipartisan group of four senators wrote to Energy Secretary Rick Perry on Monday in support of the Western Area Power Administration's Transmission Infrastructure Program, which was axed under the Trump administration's fiscal 2019 budget proposal. "TIP is one of the few federal programs that directly supports new and upgraded electric transmission," according to the letter, signed by Sens. Catherine Cortez Masto, Martin Heinrich, Dean Heller and Cory Gardner.

HOUSE PLANS FLOOD INSURANCE VOTE: The House is planning to vote next week to extend the National Flood Insurance Program, ahead of its July 31 expiration, sources familiar with the matter tell Pro Financial Services' Zachary Warmbrodt. There are already a few options on the table for the program: one from Financial Services Chairman Jeb Hensarling, who has been trying to put together an extension bill that includes reforms, and a new bill introduced by Scalise and Rep. Tom MacArthur that would reauthorize the program through Nov. 30. Read [more](#).

FOR YOUR RADAR: Republican Sen. Chuck Grassley introduced bipartisan legislation on Monday targeting price fixing by OPEC. The bill would amend the Sherman Act to make oil-producing and exporting cartels illegal, and was co-sponsored by Sens. Amy Klobuchar, Mike Lee and Patrick Leahy. "It's long past time to put an end to illegal price fixing by OPEC," Grassley said in a statement. Read the legislation [here](#).

MAIL CALL! National Rural Electric Cooperative Association CEO Jim Matheson sent a letter to the leadership of the Energy and Commerce Environment Subcommittee on Monday in support of legislation to reform the New Source Review permitting program.

— **More than 100 Democrats** signed onto a letter to members of both House and Senate Armed Services committees today to urge them to oppose any provisions to the National Defense Authorization Act that would "have widespread, negative consequences for the conservation of our imperiled wildlife and public lands." Read the letter [here](#).

— **Iowa's congressional delegation** invited acting EPA Administrator Andrew Wheeler to their state to discuss the Renewable Fuel Standard. Read it [here](#).

What role will Hispanic voters over 50 play in Arizona this Fall? Read POLITICO Magazine's new series "The Deciders" which focuses on this powerful voting bloc that could be the determining factor in turning Arizona blue.

House plans vote to keep flood insurance program going Back

By Zachary Warmbrodt | 07/16/2018 06:49 PM EDT

The House is planning to vote next week to extend the National Flood Insurance Program before leaving town ahead of the program's July 31 expiration, sources familiar with the matter said.

House Financial Services Chairman Jeb Hensarling (R-Texas) has been trying to put together an extension bill that includes reforms, sources said. Another option is a new bill introduced by House Majority Whip Steve Scalise (R-La.) and Rep. Tom MacArthur (R-N.J.) that would reauthorize the program through Nov. 30.

In a statement, Scalise said it was important to keep working on a long-term flood insurance reauthorization but that his bill would take concerns about a lapse off the table for the remainder of hurricane season.

While the House has passed a five-year reauthorization and overhaul, the Senate hasn't reached agreement on its own bill amid disputes over how to retool the program. It's unclear if the Senate would be able to pass anything other than a clean, short-term reauthorization at this stage. Sources said Sen. John Kennedy (R-La.) was planning to try to hotline an extension through January.

Subject: Morning Energy: Second 'minibus' pulls in — The great California divide — Trump-Putin meeting's energy potential

By Kelsey Tamborrino | 07/16/2018 05:42 AM EDT

With help from Daniel Lippman

SECOND 'MINIBUS' PULLS IN: With negotiations still stalled on the first fiscal 2019 "minibus" funding bill, the House Rules Committee will meet today on the second minibus, which means debate on a host of thorny, energy-related issues. The measure, H.R. 6147 (115), combines funding for Interior-Environment with Financial Services, and while not as controversial as some of the other spending bills the House is slated to take up, it'll offer lawmakers ample opportunity to zero in on the indiscretions of former EPA Administrator Scott Pruitt, as well as address issues like what coastlines should be exempt from offshore drilling.

House Republican leaders are aiming to keep any fighting off the floor by curtailing the amendments to the two-bill package, Pro's Lauren Aratani reports. And because the Rules panel will likely seek a "structured" rule, the most controversial tweaks are expected to be cast aside. Still, Democrats will use debate over the spending bill to rehash Pruitt's missteps, Lauren reports, and pursue continued investigation into allegations that he misused taxpayer money.

The panel begins work today on more than 160 proposed amendments submitted last week to the Interior-Environment portion, including one to ensure EPA's inspector general will continue its investigations into Pruitt, and another that would bar funds from being used to install a private phone booth in or near the office of the Interior secretary. Another proposed tweak would require EPA to publicly disclose all funds used for top-level travel, within 10 days of each trip — a clear call to Pruitt's tenure at EPA.

ME is also keeping an eye on an amendment from Democratic Rep. Paul Tonko that would bar EPA from using money to adopt a rule that would keep the agency from using research without publicly disclosed data, as Lauren highlights. Dozens of lawmakers from both parties have also sponsored amendments that would bar federal funds from being used to support offshore drilling in various locations off the nation's coasts, as the White House seeks to expand exploration for oil and gas. Read more here.

GOOD MONDAY MORNING! I'm your host, Kelsey Tamborrino. The League of Conservation Voters' Gene Karpinski was first to identify Hawaii as the state that does not have a straight line forming part of its border. Today's question comes from Bracewell's Frank Maisano in honor of this week's All-Star game: Which presidents threw out the first pitch at an All-Star game in D.C.? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

JUST RELEASED: View the latest POLITICO/AARP poll to better understand Arizona voters over 50, a voting bloc poised to shape the midterm election outcome. Get up to speed on priority issues for Hispanic voters age 50+, who will help determine whether Arizona turns blue or stays red.

What role will Hispanic voters over 50 play in Arizona this Fall? Read POLITICO Magazine's new series "The Deciders" which focuses on this powerful voting bloc that could be the determining factor in turning Arizona blue.

THE GREAT CALIFORNIA DIVIDE: California Democrats rebuked Sen. Dianne Feinstein this weekend and endorsed her progressive opponent, state Sen. Kevin de León, who has been embraced by climate hawks among other liberal activists in his long-shot bid to keep Feinstein from winning a fifth term. The vote offers a glimpse into the dynamics in the state Democratic party, POLITICO's Carla Marinucci and Jeremy B. White report, where infighting between moderate and progressive factions has taken over.

The decision to endorse de León delivers a much-needed lifeline to the struggling campaign of the state Senate president pro tem, who came in second in California's jungle primary earlier this year to earn a spot against Feinstein in November. De León has made climate and environmental policy keystone issues and has been endorsed by Climate Hawks Vote, 350 Action, 350.org's Bill McKibben and billionaire environmentalist Tom Steyer. The nod from the state party ensures his campaign valuable voter outreach information and the potential for an infusion of federal campaign cash, Carla and Jeremy report.

Feinstein on Saturday downplayed the symbolism of the de León endorsement. "This was not a close primary election, and there were 32 people on the ballot," she said of the June vote. "I take nothing for granted ... we work hard." For his part, de León told POLITICO on Saturday that he thinks "it's always good to have younger generations rise up and assume positions of leadership."

Still, the vote draws attention to the deepening divide between in state's Democratic party and what action Feinstein is taking to lessen the pressure. Last week, the California Democrat told E&E News she supports a ban on fracking in the state, something she had previously stopped short of saying. As the ranking Democrat on the Senate Judiciary Committee, Feinstein has also touted her importance in the effort to oppose Brett Kavanaugh's nomination to the Supreme Court — another issue closely watched by environmentalists and industry alike.

Climate Hawks Vote Founder R.L. Miller said in a statement the group appreciated Feinstein's "new position on fracking," but highlighted de León's potential in California. "Kevin de Leon has shown vision, courage, and tenacity," Miller said. "He's an extraordinary leader for extraordinary times, moving California toward a bright future with bills like his SB 100 (100 percent clean energy by 2045) and SB 54, the California Values Act (sanctuary state) that was just upheld in court." Read more.

TRUMP-PUTIN MEETING'S ENERGY POTENTIAL: The president is in Helsinki today for his highly anticipated meeting with Russian President Vladimir Putin. While the two have met before on the sidelines of other events, today's confab will be the first meeting between the two presidents, Jon Huntsman, the U.S. ambassador to Russia, said Sunday. Unlike official presidential summits, the meeting in Helsinki will not feature a joint statement or any predetermined policy results. "You don't know what's going to come out of this meeting, but what it will be is the first opportunity for these presidents to actually sit down across a table, alone and then with their teams, to talk about everything from meddling in the election, to areas where we have some shared interests," Huntsman said.

Of course, President Donald Trump made news last week on the Russian energy front at a breakfast meeting with NATO chief Jens Stoltenberg where he said Germany is "totally controlled by Russia" and specifically called out the controversial Nord Stream 2 gas pipeline project. Energy Secretary Rick Perry said last week Trump thinks the "Nord Stream 2 is not in the European Union's best interest, and my bet is he'll be more than happy to tell President Putin that straight to his face," Axios reported. The State Department told Reuters last week that Western firms invested in the pipeline were at risk of sanctions, although Perry told reporters that sanctions would be "kind of the last place we would like to land" but said they were an option.

WHERE'S WHEELER? Marking another departure from the Pruitt era at EPA, the agency gave a heads-up that acting Administrator Andrew Wheeler will be in Canonsburg, Pa., this afternoon. Wheeler will be in the area to attend a meeting of the Washington County Chamber of Commerce, alongside Region 3 Administrator Cosmo Servidio.

ON TAP THIS WEEK: The Rules Committee will meet Tuesday to consider a resolution, H. Con. Res. 119 (115), that calls a carbon tax "detrimental" to the U.S. economy and "not in the best interest" of the country. The meeting tees up a likely vote later this week on the non-binding resolution, following a recent push by conservative groups to take up the measure. The legislation is led by Majority Whip Steve Scalise, Pro's Anthony Adragna reports, and could offer an interesting vote for Climate Solutions Caucus members, who have yet to weigh in on specific solutions for addressing climate change.

EPA ETHICS OFFICIAL DEFENDS FOIA PROCESS: Kevin Minoli, EPA's principal deputy general counsel, replied last night to the top Democrat on the House Oversight Committee, who on Friday pressed for a subpoena over the agency's handling of FOIA requests. In his letter, Minoli offers to brief Congress on the agency's FOIA Expert Assistance Team that was created in 2013 to "make the FOIA process at EPA better." While Minoli's letter acknowledges "EPA's FOIA program is far from perfect," he highlights the work of the FEAT and other offices, writing that they have "laid a foundation from which EPA's FOIA program could be a model of what a FOIA program should be, not an example of what a FOIA program should not be." Read the letter.

MAIL CALL! Thirteen attorneys general on Friday demanded in a letter to Wheeler that his agency withdraw an order to manufacturers of glider trucks that the agency will not enforce a strict 300-unit production cap for 2018 and 2019, which was issued by Pruitt on his last day. The AGs call the move "clearly unlawful" and a violation of EPA's policy against "no action assurances." In a statement, New York AG Barbara Underwood said Pruitt gave "a parting gift to polluters on his very last day as EPA Administrator — bolstering the Trump Administration's legacy of siding with corporations over people." New York, along with California, Connecticut, Illinois, Maine, Maryland, Massachusetts, New Jersey, North Carolina, Oregon, Pennsylvania, Vermont and Washington, signed onto the letter, as did the Pennsylvania Department of Environmental Protection and the California Air Resources Board.

— **GOP Reps. Greg Walden, Gregg Harper and John Shimkus** wrote to Wheeler on Friday, seeking additional information on EPA's process for reviewing grant applications. Read the letter here.

CLEARPATH ACTION BACKS UPTON: Jay Faison's ClearPath Action Fund will announce its endorsement of Michigan Rep. Fred Upton today. The clean energy advocacy group will begin running digital ads backing the Michigan Republican as part of a six-figure effort for his reelection. Upton, who is the chairman of Energy and Commerce's Energy Subcommittee, "has an accomplished record of shepherding many bills hitting every facet of clean energy innovation," Faison said in a statement.

MOVERS, SHAKERS: Matthew Mailloux, managing director at the American Conservation Coalition, joined the New Hampshire Office of Strategic Initiatives as Gov. Chris Sununu's energy adviser.

— **Katie Valentine** is now a media relations associate at the Conservation Fund. She is the former deputy climate editor at ThinkProgress.

QUICK HITS

— "California is preparing for extreme weather. It's time to plant some trees," The New York Times.

— "Energy execs set fundraiser for Fla. Gov. Rick Scott," E&E News.

— "Widespread unrest erupts in southern Iraq amid acute shortages of water, electricity," The Washington Post.

— "Fill 'er up, or plug it in? Oil, utilities fight to fuel vehicles of the future," The Wall Street Journal.

HAPPENING THIS WEEK

MONDAY

Noon — The National Iranian American Council [briefing](#) on "Joint Comprehensive Plan of Action (JCPOA) 2.0: Iran, Europe, Trump, and the Future of the Iran Deal," SVC-210.

2 p.m. — The Environmental and Energy Study Institute holds a [briefing](#) on safely decommissioning nuclear power plants, HC-8.

4 p.m. — The Institute of World Politics lecture on "Energy Trends: Nuclear and Non-nuclear," 1521 16th St. NW.

5 p.m. — House Rules Committee meets to formulate a rule on [H.R. 6147 \(115\)](#), the "Interior, Environment, Financial Services, and General Government Appropriations Act, 2019," H-313.

6:45 p.m. — Smithsonian Associates [discussion](#) on "Making Sense of Climate Change," 1100 Jefferson Drive SW.

TUESDAY

8:30 a.m. — POLITICO's [Pro Summit](#), 999 Ninth St. NW.

8:45 a.m. — The United States Institute of Peace [discussion](#) on "Wildlife Poaching and Trafficking: Combating a Vital Source of Terrorism," 2301 Constitution Ave. NW.

9:45 a.m. — Senate Environment and Public Works Committee [hearing](#) on "The Endangered Species Act Amendments of 2018," 406 Dirksen.

10 a.m. — House Natural Resources Federal Lands Subcommittee [hearing](#) on federal land bills, 1324 Longworth.

10 a.m. — The Atlantic Council discussion on "Ready and Resilient," focusing on disaster preparedness, 1030 15th St. NW.

10 a.m. — House Oversight Interior, Energy and Environment Subcommittee [hearing](#) on "Tribal Energy Resources: Reducing Barriers to Opportunity," 2247 Rayburn.

10 a.m. — House Science Energy and Environment Subcommittees [joint hearing](#) on "The Future of Fossil: Energy Technologies Leading the Way," 2318 Rayburn.

10 a.m. — Senate Energy and Natural Resources Committee [hearing](#) on the Interior Department's final list of critical minerals, 366 Dirksen.

1 p.m. — EPA [meeting](#) on pesticide health and safety, Rosslyn, Va.

WEDNESDAY

9 a.m. — EPA public hearing on "Proposed Renewable Fuel Standards for 2019, and the Biomass-Based Diesel Volume for 2020," Ypsilanti, Mich.

9 a.m. — House Energy and Commerce Energy Subcommittee hearing on "Powering America: The Role of Energy Storage in the Nation's Electricity System," 2322 Rayburn.

10 a.m. — Senate Commerce Committee hearing on "SHARKS! — Innovations in Shark Research and Technology," 253 Russell.

10 a.m. — House Transportation Economic Development, Public Buildings and Emergency Management Subcommittee hearing on "Are We Ready? Recovering from 2017 Disasters and Preparing for the 2018 Hurricane Season," 2167 Rayburn.

10:30 a.m. — The Center for Strategic and International Studies discussion on "Digitalization in the Industrial Sector: Implications for Energy, Technology, and Policy," 1616 Rhode Island Ave. NW.

2:30 p.m. — Senate Indian Affairs Committee hearing on three bills, including S. 3168 (115), to amend the Omnibus Public Land Management Act of 2009 to make Reclamation Water Settlements Fund permanent, 628 Dirksen.

1 p.m. — The Atlantic Council discussion on "Oil and Iran: How Renewed Sanctions Will Affect Iran and World Markets," 1030 15th St. NW.

THURSDAY

9 a.m. — The Atlantic Council discussion on "Finnish Perspectives on Energy Security in Europe," 1030 15th St. NW.

10 a.m. — Senate Environment and Public Works Committee hearing on nomination of Mary Bridget Neumayr to be a member of the Council on Environmental Quality, 406 Dirksen.

12 p.m. — The Woodrow Wilson Center's China Environment Forum discussion on "Aiming Low: Wielding New Low-carbon Tools to Help Chinese and U.S. Cities Peak Carbon," 1300 Pennsylvania Ave. NW.

FRIDAY

10 a.m. — The Middle East Policy Council briefing on "Withdrawal from the Joint Comprehensive Plan of Action (JCPOA): Options for the Trump Administration," 562 Dirksen.

Lawmakers battle over busting budget to pay for veterans health care [Back](#)

Spooking House conservatives and risking a presidential veto, Senate spending leaders are proposing to blow past budget limits to fund a popular private health care program for military veterans.

Minutes before they were to meet on Thursday, congressional appropriators canceled their first public conference talk that had been intended to settle differences in three of the 12 annual spending bills President Donald Trump must sign by Sept. 30 to avert a government shutdown. One of the three provides for spending on veterans.

The 11th-hour cancellation came amid a cross-Congress showdown over how to pay for a program that allows some veterans to spend taxpayer money on private doctors and hospitals. The question is whether to break budget limits, known as caps, to come up with the cash.

"They canceled the meeting. But it's all about the VA," Senate Appropriations Chairman Richard Shelby (R-Ala.) told reporters Thursday, apparently referring to GOP leaders. "Do we break the caps? Do we prorate everything else? Do we cut other veterans programs to fund this? We got a shortfall, and we got to work it out. And we're not there yet."

Congress needs to approve \$1.6 billion for fiscal 2019, plus nearly \$18.2 billion more in the two years thereafter, to fully fund what has been authorized for the VA Choice program and its successor within the new VA Mission Act.

The suggestion that Congress "break the caps" set by the budget deal, H.R. 1892 (115), struck this year is already irking House conservatives, who would be loath to vote on any final spending bill that goes above those limits — even in the face of an impending shutdown this fall. The idea likely would not play well, either, in talks with a White House that was already seen as surprisingly conciliatory in signing that grand budget deal.

Money for veterans programs comes with special political protections, however, since policymakers want to avoid the uncomfortable optics of fighting funding for those who have served in the military. And top Democrats are already trying to use that perception to their advantage.

"You don't go to a veterans assembly and say 'We're not going to help the veterans,'" Sen. Patrick Leahy (D-Vt.), ranking Democrat on the Senate Appropriations Committee, said Thursday.

The administration has been heavily involved in discussions for weeks. The White House budget office has argued that any extra VA money would be akin to breaking this year's budget deal.

"It's obviously critically important to give veterans the resources they need, and we think that can happen inside the existing caps," according to a senior administration official.

Leahy planned to offer an amendment during the conference meeting that would have added funding for the veterans health care program. The meeting was then postponed, he said, because negotiators didn't want to go on record against doling out that cash. A GOP aide said that Republicans weren't expecting any amendments in Thursday's meeting, the first time negotiators would meet face-to-face.

"A lot of the people were I think concerned, I'm told, that they'd have to vote today," Leahy said.

The issue isn't as simple as supporting or opposing money for VA Choice, though.

The funding problem began last month, when Congress enacted a bill, S. 2372 (115), that created a budget gap by switching the program's community care services from the mandatory side of the ledger to the discretionary side.

Democrats — as well as some Republican appropriators — are in favor of exempting the new money from Congress' strict spending caps. But many Republicans, including White House officials, say the cash should come out of the government's already-determined budget, even if that means trimming the topline for other programs.

That means Congress would need to divert hundreds of millions of dollars from other programs into the veterans health care program, which until this year, was funded automatically.

For their part, House lawmakers have already agreed to pay for part of the program without blowing through budget limits. The veterans spending bill, H.R. 5786 (115), that the House passed last month as part of a three-bill minibus would fully fund the program for fiscal 2019.

In a statement to POLITICO on Thursday, House Speaker Paul Ryan called out Leahy by name, saying the Senate spending bill "neglected" to fund the VA program despite the House's action.

"This attack is the height of hypocrisy," said a senior House GOP aide. "Democrats are scrambling to cover up the fact they have not kept their promises as the House did."

House GOP leaders have repeatedly refused to adjust Congress' current spending cap to pay for the additional discretionary spending on the veterans program. Instead, Republicans agreed to pitch in that \$1.1 billion by reshuffling existing money from the House's funding bill for the Department of Homeland Security.

Their Democratic counterparts, led by Rep. Nita Lowey (D-N.Y.), have protested the move, arguing that it will shortchange other domestic programs. Lowey's own caps-busting amendment was rejected by the spending committee.

The fight over the budget caps has been long simmering and nearly broke out into the open earlier this summer.

Shelby had long backed Leahy's amendment to surpass the caps, but the GOP chairman was forced to shelve his support for bringing it to the floor at the last minute after several conservatives raised issues with it, according to Senate aides.

Shelby even declared on the Senate floor in May that he would support a plan that exceeds the caps, warning that Congress' newest version of the veterans law authorized large sums of spending "without providing any way to pay for it under the spending caps."

"Fortunately, there is existing law and ample precedent for adjusting spending caps to reflect changes resulting from a shift in mandatory spending to discretionary spending," Shelby said on the floor.

Anthony Adragna and John Bresnahan contributed to this report.

Pruitt scales back EPA's use of science [Back](#)

By Emily Holden and Annie Snider | 04/24/2018 03:28 PM EDT

Environmental Protection Agency chief Scott Pruitt announced Tuesday he would seek to bar the agency from relying on studies that don't publicly disclose all their data, a major policy change that has long been sought by conservatives that will sharply reduce the research the agency can rely on when crafting new regulations.

The unveiling of the proposed rule delivers a win to Republicans like House Science Chairman Lamar Smith (R-Texas), who unsuccessfully pushed legislation to impose the same type of change. The move also demonstrates Pruitt's persistence in pursuing President Donald Trump's anti-regulation agenda just two days before the embattled EPA chief is due to face fierce questioning from lawmakers about his hefty spending, expanded security detail and cheap condominium rental from the wife of an energy lobbyist.

At an invitation-only meeting at EPA headquarters with Smith, Sen. Mike Rounds (R-S.D.) and other supporters of the policy, Pruitt said the proposed rule was critical in ensuring that the agency was transparent about how it is making decisions to justify costly new regulations. It is the latest step Pruitt has taken to fundamentally shift the agency's approach to science.

"It is a codification of an approach that says as we do our business at the agency the science that we use is going to be transparent, it's going to be reproduceable, it's going to be able to be analyzed by those in the marketplace. And those who watch what we do can make informed decisions about whether we've drawn the proper conclusions or not," Pruitt said.

Text of the proposed rule was not immediately available.

The proposal, based on legislation pushed by Smith, is intensely controversial, and scientists and public health groups say it will prevent federal regulators from enacting health and safety protections. Nearly 1,000 scientists, including former EPA career staffers, signed a [letter](#) opposing the policy sent by the Union of Concerned Scientists to Pruitt on Monday.

Their primary concern was that many of the country's bedrock air and water quality regulations are based on research that cannot disclose raw data because it includes the personal health information.

But industry has its own version of the same problem. EPA often relies on industry studies that are considered by companies to be confidential business information when determining whether new pesticides and toxic chemicals are safe to use. Internal EPA emails obtained under the Freedom of Information Act show that EPA political officials, including Nancy Beck, who became the chief of the agency's chemical safety office last year after working for years at a chemical industry lobbying group, worried that the new policy would limit the agency's ability to consider industry data or would force companies to make this proprietary data public.

"We will need to thread this one real tight!" Richard Yamada, political official who led work on the new policy wrote to Beck after she raised the concerns.

It was not immediately clear if the new proposed rule included measures to address those concerns.

Rush Holt, CEO of the American Association for the Advancement of Science, said Pruitt's changes could keep the agency from revising public health regulations as problems arise or new data comes to light.

"On the surface it sounds so innocuous or even beneficial. What could be wrong with transparency? Well it's clear to me that this is not based on an effort to be transparent. It is rather based on an effort to be just the opposite," he said.

"EPA is particularly important because when science is misused, people die," he added.

Pruitt has been discussing the new scientific policy publicly for weeks, but it only went to the White House for interagency review last week. Such swift review is very rare for the Office of Management and Budget, which often takes months to vet a new policy. At least one group, the Environmental Defense Fund, has requested a meeting with OMB officials to discuss the rule, but OMB's website shows that no meetings have been scheduled with interested groups.

Many public health studies can't be replicated without exposing people to contaminants, and environmental disasters such as the Deepwater Horizon oil spill cannot be recreated, the group said, raising intellectual property, proprietary and privacy concerns.

Pruitt's predecessor Gina McCarthy, and her air chief Janet McCabe, in an op-ed in The New York Times in March said concerns about studies are dealt with through the existing peer-review process, which ensures scientific integrity.

"[Pruitt] and some conservative members of Congress are setting up a nonexistent problem in order to prevent the E.P.A. from using the best available science," they said.

Net neutrality, offshore drilling, tax-free churches: What's dredged up in the latest spending debate [Back](#)

By Lauren Aratani | 07/16/2018 05:03 AM EDT

House leaders will bring two more spending bills to the floor this week, still aiming to pass all 12 of the fiscal 2019 measures before federal cash runs out on Sept. 30. Albeit a softball compared to the more controversy-packed funding bills, this second "minibus" provides ample opportunity for political potshots and fiery policy debate.

House Republican leaders are expected to keep much of that fighting off the floor by curtailing amendments to the two-bill package, H.R. 6147 (115), which includes funding for the Interior Department, EPA, IRS, SEC and General Services Administration — among several other agencies — as well as federal courts and Washington, D.C.

But issues such as federal jobs for young immigrants, financial transactions with marijuana vendors and the indiscretions of former EPA Administrator Scott Pruitt are sure to come up as GOP leaders prep for floor debate.

The House Rules Committee is set to meet Monday night to wade through the more than 240 proposed amendments to the Financial Services, H.R. 6258 (115), and Interior-Environment titles. Because the panel will likely seek a "structured" rule, the most controversial tweaks are expected to be cast aside before the legislative duo is called up for floor debate. What to watch:

Sticking it to Scott Pruitt

Though Pruitt is EPA administrator no more, Democrats will use this week's spending bill to rehash his missteps and pursue continued investigation into allegations that he misused taxpayer money. One proposed amendment would withhold funds for finalizing any EPA rules Pruitt initiated, until the agency's inspector general completes its investigations into the former administrator's spending.

Another proposed tweak would require the EPA to publicly disclose all funds used for top-level travel, within 10 days of each trip.

The bill already includes a committee-approved, tongue-in-cheek provision that would bar the EPA's chief from purchasing fountain pens that cost more than \$50, following reports that Pruitt spent \$3,230 on especially pricey writing tools. And an amendment has been proposed that would essentially bar the Interior secretary from installing a private phone booth, after Pruitt spent \$43,000 on a soundproof stall.

Supporting the marijuana economy

More than 20 co-sponsors — from both sides of the aisle — have piled on in support of an amendment that would prevent financial institutions from being penalized for serving legal marijuana businesses.

Disputing research requirements

Rep. Paul Tonko (D-N.Y.) has drafted an amendment that would bar the EPA from using money to adopt a rule that would keep the agency from using research without publicly disclosed data. Conservatives argue that the rule brings transparency to scientific research, but many scientists contend that the stipulation would allow the agency, under the guise of transparency, to pick and choose which research it will use for regulations.

Protecting employment for DREAMers

An amendment by Rep. Pete Aguilar (D-Calif.), and another by Rep. Darren Michael Soto (D-Fla.), would ensure immigrants protected under the Deferred Action for Childhood Arrivals program are eligible for federal employment. Although some moderate Republicans have voiced support for that effort, chances of action have grown slim after House Republicans failed last month to bring GOP immigration proposals to the floor.

Stopping offshore drilling

Dozens of lawmakers from both parties have sponsored amendments that would bar federal funds from being used to support offshore drilling in various locations off the nation's coasts, as the White House seeks to expand exploration for oil and gas.

Curtailing church donations

Several Democrats have endorsed an amendment by Rep. Debbie Wasserman Schultz (D-Fla.), and another by Rep. John Lewis (D-Ga.), that would seek to continue enforcement of the current prohibition on tax-exempt nonprofit organizations endorsing or donating to political candidates. House Republicans have included language in the Financial Services title that would basically ban the IRS from rooting out churches that break that rule.

Reviving net neutrality

Democrats have proposed an amendment that would restore the FCC's net neutrality rules, after the commission's repeal took effect this month.

Billionaire Steyer endorses de León over Feinstein [Back](#)

By David Siders | 04/18/2018 11:53 AM EDT

LOS ANGELES — Tom Steyer, the billionaire Democratic mega-donor, is endorsing Kevin de León in his longshot bid to unseat California Sen. Dianne Feinstein, the latest rebuke of Feinstein from her party's increasingly agitated left flank.

Steyer's endorsement - if followed by outside spending - could improve de León's standing in a race that he has so far failed to make competitive. Feinstein, a centrist Democrat, holds a massive advantage over the progressive state senator in both fundraising and public opinion polls.

"I have known Sen. de León for years and have fought alongside him on immigrant rights, expanding health care, and climate change," Steyer said in a prepared statement. "Our work together on behalf of all Californians has assured me that he would be a champion of California's priorities and values. Kevin de León has proven himself to be the best of the next generation, and I am proud to support him for U.S. Senate."

The endorsement was not unexpected. Steyer once considered challenging Feinstein himself, and he has appeared on cable television previously as a near-surrogate for de León. Earlier this year, Steyer described the contest on MSNBC as "incrementalism versus visionary thinking in the Democratic Party."

Lauded by many young, progressive activists in California, de León in February deprived Feinstein of her own state Democratic Party's endorsement, outpolling her by 17 percentage points in the delegate vote.

But the state senator remains largely unknown to the broader electorate in California. Feinstein leads him 42 percent to 16 percent among likely voters, according to a Public Policy Institute of California poll last month.

The race between Feinstein and de León is unlikely to be decided before November. With no prominent Republican running in the state's top-two primary in June, Feinstein and de León are both expected to advance to the general election.

Feinstein: I'm equipped to lead anti-Kavanaugh brigade [Back](#)

By Carla Marinucci | 07/14/2018 01:39 PM EDT

OAKLAND, Calif. — Sen. Dianne Feinstein, the ranking Democrat on the Senate Judiciary Committee, said Saturday that the vetting process for the confirmation of Brett Kavanaugh to the Supreme Court will be "incredibly difficult," and that her staff is reading nearly 1 million documents that she said could give red-state Democrats reason to oppose his nomination.

Feinstein made her toughest comments to date about opposing Kavanaugh's nomination while addressing a "Unity Breakfast" of her supporters at a California Democratic Party executive Committee meeting in Oakland. State party activists will decide later Saturday on an endorsement in Feinstein's race against progressive state Sen. Kevin de León.

Reminding supporters of her seniority in the Senate and her leadership position on the Judiciary Committee, Feinstein said she has helped write the party's modern-day battle plan for a Supreme Court confirmation. She said that she has sat in on more than 10 confirmation hearings for Supreme Court justices since she was elected in 1992. But Kavanaugh's nomination, Feinstein said, "is beyond, [it is] different from all of them. ... Because this man will be the deciding vote on most things we hold most dear."

"This president has said he would appoint the person that would take down Roe [v.Wade] ... and I take him at his word," she said.

Feinstein told Democrats that now, as the nomination process goes forward, "we have a massive effort going ... We collect information from everywhere," including the Bush Presidential archives.

"The vetting process of this justice is going to be incredibly difficult... it's estimated that 1 million pieces of paper that our staff is going to need to go through prior to a hearing," she said. "I can tell you this: That it is really key and critical that Democrats, including those in difficult states, get the support of our party so that they can do the right thing in this vote..."

Feinstein noted that "we have five Democratic [senators up for reelection] from states that Donald Trump won [by large margins], and this makes this vote difficult for them," she said. "For me, it's not difficult at all. But I'm the lead Democrat on the committee, and we will put together a kind of message, I hope, for the American people which will enable those Democrats to vote along with us."

Feinstein gets progressive smackdown [Back](#)

By Carla Marinucci and Jeremy B. White | 07/15/2018 08:01 AM EDT

California Democrats, torn by infighting between moderate and progressive factions, rebuked Sen. Dianne Feinstein's bid for a fifth term — for the second time this year.

The state party's executive committee voted Saturday to endorse progressive state Sen. Kevin de León in the general election, signaling what many fear will be a divisive Democrat-on-Democrat battle going toward the fall in California, where the party hoped to put the focus on a host of crucial congressional races that could determine control of the House of Representatives.

The endorsement delivers a lifeline to de León's struggling campaign — and the party's imprimatur, which is accompanied by valuable access to slate cards, email lists and voter outreach machinery that will allow him to reach an estimated 2 million Democratic voters. And he could also get an infusion of federal campaign cash shared with the party, party officials said.

Feinstein, who was also snubbed in February at the annual state convention where party activists declined to endorse her bid for reelection, had pleaded for party unity prior to Saturday's vote. She asked the executive committee of the California Democrats, the nation's largest state Democratic Party, to choose "no endorsement" — what many saw as a strategic defense to head off an aggressive challenge for the party's endorsement by de León.

And in an effort to frame the endorsement clash in the context of the national political landscape, the senator's team circulated a "no-endorsement" plea signed by a half-dozen Democrats whose campaigns in contested California districts are a linchpin of the national party's strategy to retake the House.

The final vote gave de León 217 votes, or 65 percent — beating the 60 percent required threshold — versus 94 votes, or 28 percent, for the "no endorsement" urged by Feinstein, and 22 votes, or 7 percent, for the senator herself.

The Senate contest pits two contrasting pols: Feinstein — at 85, the oldest member of the Senate — and De León, 51, a former state Senate president pro tem and son of a single immigrant mother. She is a centrist long at odds with her state party's leftist activist grass roots, while he is a progressive who has called for new "bold leadership" from Democrats unafraid of confronting President Donald Trump head-on.

"I think it's always good to have younger generations rise up and assume positions of leadership," de León told POLITICO on Saturday.

His fight, he said, was not about "a gender issue ... it's not an age issue." Pointing to progressive icons Sens. Elizabeth Warren and Bernie Sanders, de León said, "it's about the right values."

The weekend's nail-biter over the party's Senate general election endorsement underscored the depths of the bitter divisions still lingering from the 2016 battles between more progressive backers of Sanders' presidential bid and the more centrist faction of Hillary Clinton supporters in the nation's most populous state.

Although the endorsement involved just a small circle of the most activist voters — a 313-member executive committee in a party that represents 8.4 million voters — many Democratic insiders said it carried potentially dangerous implications for the party beyond the state's borders.

Not only did the internal battle threaten to extend the rift among Democrats in California — a traditional mother lode of campaign contributions — many Democratic leaders, including former state chair Art Torres, worried about the prospect of a circular firing squad.

"We have the opportunity to change the nature and the control of the House," said Torres, a Feinstein backer, adding that a de León endorsement threatened that Democrats "won't have enough federal money to put into those congressional campaigns."

"Federal money is the hardest to raise," he said, "and if the party is going to spend money on a U.S. Senate campaign — why do it?"

For de León's campaign, snagging the party's endorsement was widely seen as his last shot at making a serious run at Feinstein. California's senior senator pummeled him by 32 percentage points in the June all-party primary, winning more than 70 percent of the Democratic vote in a contest in which 32 candidates competed.

She has also dramatically outraised him: Feinstein reported \$10.3 million cash on hand at the end of March, compared with \$672,330 for de León, according to campaign finance reports.

But de León has gained traction among the party's far left as the author of the controversial SB54, the California Values Act, also known as the "sanctuary state" law. The legislation, aimed at curtailing the cooperation of local law enforcement with federal immigration officials, was recently largely upheld by a federal judge's ruling.

De Leon has also called for abolishing the Immigration and Customs Enforcement agency and impeaching Trump — a position that is shared by his friend, wealthy Democratic activist Tom Steyer.

In making the rounds this weekend in caucus meetings at Oakland's Marriott Hotel, Feinstein repeatedly reminded Democrats of her seniority in Washington, her legislative leadership on issues like the assault weapons ban, and of what she vowed will be her pivotal role as the ranking Democrat on the Senate Judiciary Committee — which will weigh Trump's nomination of Brett Kavanaugh to the Supreme Court.

Feinstein on Saturday downplayed the symbolism of a de León endorsement and her difficulty with the party's grass roots, insisting it would have no effect on her campaign. "This was not a close primary election, and there were 32 people on the ballot," she said of the June contest. "I take nothing for granted ... we work hard."

"I think people understand I'm now ranking on Judiciary, going into one of the biggest moments that this party has — the decisive Supreme Court justice," she said. "This is a very big deal because this affects the life of every American going forward. So who that Supreme Court seat goes to is all-important."

Asked why her decades of accomplishments in public office haven't earned her an easy endorsement from her party in her bid this year, Feinstein jokingly shrugged: "Well, that thought occurred to me — but I wiped it out of my mind completely."

In a measure of the contest's intensity, party members said they were inundated with appeals from both camps in recent days, and Feinstein's call for neutrality irked some pro-de León inhabitants of the party's progressive wing.

"Delegates are very angry at the constant barrage of emails we've gotten from people who have endorsed Dianne Feinstein telling us not to endorse," said R.L. Miller, a prominent environmental activist who was wearing one of a profusion of "United4KDL" stickers.

In caucus meetings and in hallways where he made the rounds, de León argued that Trump's recent actions on immigrant family separations, the Supreme Court and environmental policy demanded unfailingly tough action and confrontation from Democrats in Washington. And — without ever naming Feinstein — he repeatedly drew a sharp contrast with her centrist approach and more conciliatory style on Capitol Hill.

"We need bold leadership in Washington today," de León told a meeting of the Women's Caucus. "Brett Kavanaugh is in a position to take away the rights of every American. ... That's why we have to shut the Senate down — and never allow this individual to come to the Senate floor," he said to cheers. "This is where you need the courage of your convictions — to not be on the sidelines, but on the front lines because what's at stake is a generation of power."

Steyer also drew cheers from the Democratic crowd in Oakland when he delivered a similar message to Democratic lawmakers on Capitol Hill: "If you don't have what it takes to lead now, when we are totally under the gun, then don't come asking for support later," he said. "Lead, follow or get out of the way."

Feinstein has appeared to respond to progressive pressures as the campaign has unfolded. She moved left on a pair of issues where her moderation has long stood out in California: she endorsed legalizing marijuana, reversing her longtime opposition, and renounced her prior embrace of the death penalty.

Bill Carrick, Feinstein's campaign strategist, downplayed the importance of this weekend's vote, saying that the opposition of the party's far left to Feinstein is "not a surprise; we've been through this in the past."

Carrick noted that de León "got the lowest total of any candidate" ever in a top-two primary race, while "she won every county, 70 percent of the Democrats, every congressional district of every kind of demographic that exists in California. So I think we're in good shape."

Still, he acknowledged that it would have been "much better for the Democratic Party" to present a unified front as the November election approaches, and to have avoided an endorsement fight.

Despite the passion of progressive voters, he said, a political reality exists even in solidly blue California. "We can't be naïve about these swing districts," he said. "The idea that suddenly we vaporize the Republicans in these districts and just walk in, is just crazy. They're all going to be very, very close districts."

U.S. ambassador: Trump-Putin meeting 'isn't a summit' [Back](#)

By Quint Forgey | 07/15/2018 10:53 AM EDT

President Donald Trump's highly anticipated meeting on Monday in Helsinki with Russian President Vladimir Putin is just that — only a meeting, the U.S. ambassador to Russia said Sunday.

"It isn't a summit. I've heard it called a summit. This is a meeting," Jon Huntsman said on [NBC's "Meet the Press."](#)

"In fact, it's the first meeting between the two presidents," Huntsman added. "They've had some pull-asides, one at the G-20 in Hamburg and the other at the APEC Ministerial in Da Nang, Vietnam, but this is really the first time for both presidents to actually sit across the table and have a conversation."

Unlike previous presidential summits — such as Ronald Reagan's visit to China in 1984, Huntsman said — Trump and Putin's get-together in Helsinki will not feature a state dinner, a joint statement or any predetermined policy deliverables.

"You don't know what's going to come out of this meeting, but what it will be is the first opportunity for these presidents to actually sit down across a table, alone and then with their teams, to talk about everything from meddling in the election, to areas where we have some shared interests," Huntsman said.

Huntsman also said recent developments in special counsel Robert Mueller's investigation of Russian interference in the 2016 presidential election, including the Friday indictment of 12 Russian military officials for hacking the Democratic National Committee, will be a part of Monday's talks.

"That now makes probably almost 30 Russians who have been rolled up by the Mueller indictment. That investigation continues," Huntsman said. "The bigger picture is we need to hold the Russians accountable for what they did, their malign activity throughout Europe as well. That's a part of the conversation that needs to take place."

But Huntsman wouldn't say whether Trump would push Putin for the extradition of the dozen Russian military officers to stand trial in the United States.

"I don't know if he'll make the ask, but it may be part of the agenda. It may be part of their bilateral meeting together. We'll have to see," Huntsman said, adding that the FBI office and the U.S. Embassy in Moscow would work to advance that goal.

"That doesn't necessarily mean that the Russians are going to follow through with it," Huntsman cautioned. "But we'll see if those steps will be taken."

House to vote on whether carbon tax 'detrimental' to economy [Back](#)

By Anthony Adragna | 07/13/2018 01:18 PM EDT

The House Rules Committee will meet Tuesday to tee up chamber consideration of a resolution, [H. Con. Res. 119 \(115\)](#), arguing a carbon tax would be "detrimental" to the U.S. economy and "not in the best interest" of the country, according to [a notice](#).

Nineteen conservative groups, including the Competitive Enterprise Institute, American Energy Alliance and Americans for Tax Reform, sent House leadership [a letter](#) earlier this week urging them to take up the resolution.

The non-binding resolution is led by Majority Whip [Steve Scalise](#) and may be an interesting vote for members of the Climate Solutions Caucus. That bipartisan group's ranks have swelled to more than 80 lawmakers, but members have yet to weigh in on specific solutions for how to address climate change.

WHAT'S NEXT: The Rules Committee will [meet](#) on the resolution July 17 at 3 p.m.

Subject: Afternoon Energy: WOTUS going on — Zinke on California fires, climate change — NRDC pans EPA transparency rule

By Garrett Ross and David Beavers | 08/16/2018 05:22 PM EDT

WOTUS GOING ON: The Trump administration violated administrative legal requirements when it delayed the start of the Obama administration's Waters of the U.S. rule by two years, a federal judge ruled today, meaning the rule will now go into effect for about half the country, Pro's Alex Guillén reports. The judge said EPA and the Army Corps of Engineers had unlawfully declined to consider any comments addressing substantive issues related to WOTUS or an earlier 1982 version when it proposed delaying the rule to give the agencies more time to repeal and replace it.

Judge David Norton of the U.S. District Court for South Carolina ruled that was a fatal flaw and wrote that delaying the WOTUS rule has the effect of reverting to the 1982 rule. Norton's injunction means the Obama-era rule will take effect in 26 states. The other 24 are covered by two different injunctions.

WOTUS may be blocked nationwide again if the rule's opponents get their way: A federal court in Texas has yet to rule on a February request from three states asking for a national injunction. The administration is working to finalize its repeal of the Obama WOTUS rule, and EPA and the Corps are expected to propose a replacement rule in the near future. Read more here.

ZINKE ON CALIFORNIA FIRES, CLIMATE CHANGE: Interior Secretary Ryan Zinke said the "devastation in the California fires is the worst I've ever seen," during an appearance on Fox Business today. "And, the debate, whether it's from climate change or not from climate change is irrelevant to what's occurred. It doesn't relieve you the responsibility to manage the forest." He went on to criticize those who "are claiming to protect our habitat are the same ones who are watching the habitat burn year after year."

On the subject of climate change in general, Zinke contends that the jury is still out. "It's clear in the forest fires the temperatures are being elevated, and the fire season has extended, it's longer. There's no dispute about that, and there's no dispute that the climate is changing, although it has always changed. Whether man is the direct result, how much of that result is, that still is being disputed." Watch the full clip here.

The topic was also broached during President Donald Trump's Cabinet meeting today, where Zinke reiterated that the forests had been mismanaged for decades. "It is a matter of gross mismanagement," he said, according to Bloomberg. Trump chimed in as well: "Ryan was saying it's not a global warming thing it's a management issue," the president said. Read more here.

HOLD YOUR COMMENTS: In advance of today's deadline for commenting on EPA's "scientific transparency" rule, the Natural Resources Defense Council submitted 127 pages of comments opposing the plan, which would prohibit the use of studies that don't publicly disclose their data. The environmental group pans the so-called secret science proposal as an "attack on science" in its comments, adding that "neither the

Proposal nor docket contains any factual, scientific, technical, logical, or legal support for the suggestion that science and data that are 'publicly available in a manner sufficient for independent validation' are necessary elements for the 'validity,' 'reliability,' or 'transparency' of scientific information."

SEE YOU IN COURT: The Center for Biological Diversity filed a lawsuit today against the Trump administration for allegedly failing to protect the West Coast habitat of the remaining Southern Resident Killer Whale population, which is down to 75. The [lawsuit](#), filed in the U.S. District Court for the Western District of Washington, names Secretary of Commerce Wilbur Ross and National Marine Fisheries Service West Coast Regional Administrator Barry Thom as defendants. The environmental group filed a petition in 2014 to expand the whale's habitat to protect their winter feeding areas but says in the lawsuit that no action has been taken.

TAKING MEETINGS: Senate Energy and Natural Resources Chairwoman [Lisa Murkowski](#) (R-Alaska) will sit down with Supreme Court nominee Brett Kavanaugh for a chat next week, according to [E&E News'](#) [Geof Koss](#).

GLICK 'AT A LOSS': FERC Commissioner Richard Glick Wednesday said he's "at a loss" over controversial [comments](#) made by commission chief of staff Anthony Pugliese that FERC is working with the White House, Department of Energy and the National Security Council to identify power plants that are critical to the grid as part of the administration's effort to prop up the coal industry, [Utility Dive reports](#). "I would like to know what they're doing," Glick said, referring to the FERC staff. "I think Commissioner [Neil] Chatterjee would like to know what they're doing and so would Commissioner [Cheryl] LaFleur, so I just thought I'm kind of at a loss right now trying to figure out what they are doing."

IN DENIAL: A Washington state board dealt another blow to a proposed coal project in Longview, upholding the denial of a water quality permit for the Millennium Bulk Terminals facility, [The Daily News reports](#). "The State Department of Ecology in 2017 denied Millennium's application for a Clean Water Act certification, citing 'unavoidable and significant adverse environmental impacts associated with construction and operation of the project,' according to the Pollution Control Board ruling. Millennium spokesperson Wendy Hutchinson said Ecology's decision was based on Millennium's planned train traffic, not impacts to water quality. 'We feel it was an improper application of the Clean Water Act,' she said. 'We're confident that the law is on our side. It's black and white in the Clean Water Act. The question the state was asked was does this harm water quality. It does not.'" [Read more here](#).

FOR YOUR RADAR: Quartz and the Texas Observer embarked on a nine-part investigative series today exploring the nexus of climate change effects on water at the U.S.-Mexico border. "Climate change is already driving water scarcity, a global problem that transcends politics, nationality, borders — and demands a solution that does the same. Shallow Waters investigates the Texas-Mexico border, one of the fastest-growing regions in North America, and a microcosm of a larger story of climate-change conflict, where our survival depends on cross-border cooperation," says the introduction for the series. The first installment is a deep-dive on relations between the two nations in the context of access to water, complete with interactive graphics and illustrations. [Read it here](#) and keep up with the series [here](#).

Judge restores WOTUS rule in 26 states [Back](#)

By Alex Guillén | 08/16/2018 03:20 PM EDT

A federal judge today ruled that the Trump administration violated administrative legal requirements when it delayed the start of the Obama administration's Waters of the U.S. rule by two years — a move that means the rule will now go into effect for about half the country.

The judge said EPA and the Army Corps of Engineers had unlawfully declined to consider any comments addressing substantive issues related to WOTUS or an earlier 1982 version when it proposed delaying the rule to give the agencies more time to repeal and replace it.

That was a fatal flaw, ruled Judge David Norton of the U.S. District Court for South Carolina, a George H.W. Bush appointee. Delaying the WOTUS rule has the effect of reverting to the 1982 rule, he wrote.

Norton's injunction means the Obama-era rule will take effect in 26 states. The other 24 are covered by two different injunctions, one issued to 13 states in 2013 and one issued to another 11 states in June.

However, WOTUS may be blocked nationwide again if the rule's opponents get their way. In another WOTUS lawsuit in a federal court in Texas, three states in February asked for a nationwide injunction of WOTUS. That court has yet to decide on the matter.

WHAT'S NEXT: The Trump administration is working to finalize its repeal of the Obama WOTUS rule. And EPA and the Corps are expected to propose a replacement rule in the near future.

Fears grow of political influence at FERC [Back](#)

By Darius Dixon | 08/09/2018 05:36 PM EDT

Environmentalists and consumer advocates are raising fears about the politicization of FERC following controversial comments from the chairman's chief of staff and news that an architect of the Trump administration's coal and nuclear assistance plan is set to be nominated for the independent commission.

Consumer group Public Citizen called on FERC Chairman Kevin McIntyre to oust his top aide, Anthony Pugliese, who was quoted Thursday criticizing New York state. Pugliese told a nuclear industry conference on Tuesday that he would "pick on New York because I enjoy doing that" and went on to criticize the state's resistance to new pipelines, E&E News reported based on a recording obtained from Atomic Insights' Rod Adams.

"It can be very frustrating from my perspective, from FERC's perspective, from the administration's perspective, when you have states who are unwilling to — they have no desire to put infrastructure in the ground regardless of what it is," Pugliese told a meeting of the American Nuclear Society in Florida on the tape, which POLITICO confirmed Thursday.

Tyson Slocum, Public Citizen's energy program director, urged McIntyre to obtain Pugliese's "immediate resignation" because his criticism of New York undermines FERC's commitment to be an unbiased regulator.

"An apology from Mr. Pugliese is insufficient, as the damage to FERC's reputation has already been done," Slocum wrote in a letter to McIntyre. "Only Mr. Pugliese's immediate resignation can suffice."

Meanwhile, environmentalists pounced after POLITICO reported Wednesday that Energy Department policy chief Bernard McNamee is in line to be nominated for a leadership spot opening up at the end of the week. McNamee helped Energy Secretary Rick Perry roll out a proposal to FERC last year to prop up coal and nuclear power plants, and he is a strong proponent of expanded fossil fuel use.

"It's outrageous that someone so clearly biased, who has championed an expensive and unnecessary bailout for millionaire Trump supporters, is even being considered as a commissioner to this independent agency, and we'll do everything we can stop his nomination," Mary Anne Hitt, the senior director of the Sierra Club's Beyond Coal Campaign, said in a statement.

McNamee would replace outgoing FERC Commissioner Rob Powelson, who is leaving to become head of a water industry trade association. Powelson, a Republican former Pennsylvania state regulator, was one of the leading critics of the Trump administration's efforts to save struggling coal and nuclear plants.

But not everyone was convinced that McNamee's ascension would guarantee FERC's endorsement of coal and nuclear subsidies.

"It is highly unlikely that McNamee's nomination to fill departing Commissioner Powelson's spot will change FERC's overall thought process on the coal/nuclear bailout issue," Rabeha Kamaluddin, a partner with law firm Dorsey & Whitney who works with FERC, said in a statement. "None of the other four FERC commissioners agree that the country's power grid faces a dire enough emergency to justify a plan to invoke national security to save coal/nuclear plants."

However, the authority to declare a grid emergency rests with the president and DOE, not regulators at FERC.

Pugliese, already the most public-facing and outspoken FERC chief of staff in recent memory, also said at the nuclear conference this week that the agency was working with DOE, the Pentagon, and the National Security Council to "identify the plants that we think would be absolutely critical" in case of a disaster — an effort critics see as a precursor to seeking interventions in the power markets.

He also expressed support for keeping nuclear plants online and raised fears of natural gas pipeline vulnerabilities that echoed other members of the Trump administration.

"It is incredibly important to the national security of the United States that we ensure that some of these critical assets like these nuclear plants do not go the way of ... the dodo bird," Pugliese said. There are adversarial countries, he added, "who see, for example, pipelines as an area of great opportunity" for attack.

Public Citizen's Slocum said he plans to submit filings with FERC arguing that the agency's work with another department to identify specific power plants as critically important "needs to be part of the public docket record."

"FERC can't be doing all this work with DOE on an issue directly related to an active docket," he said in an email.

The agency itself sought to downplay Pugliese's comments about coordinating with other agencies to select power plants, but FERC said nothing about this criticisms of New York state, which has used Clean Water Act certifications to block pipeline projects.

"In response to a question after the speech, the Chief of Staff was simply stating that the federal government is working to ensure that important critical infrastructure, like hospitals, remains operational," FERC said in a statement. "FERC is an independent agency and therefore has not assisted in the development of policy but provides technical assistance as subject matter experts."

Just last month, Pugliese rattled many people at FERC and those who do business with it when he did an interview with a conservative Breitbart radio program where he similarly criticized Democrats in the Northeast over natural gas pipelines. His statements this week have only fueled concerns from industry lawyers, agency staff and former officials that he's speaking out in a way that has long been frowned upon for FERC staff in the past.

In his speech to ANS this week, Pugliese also asked members of Congress to "put pressure" on Senate Majority Leader Mitch McConnell to speed up the confirmation of a new FERC commissioner, though he did not name McNamee.

During his brief time as FERC chairman last summer, Commissioner Neil Chatterjee, a former McConnell aide, hired Pugliese into the chief of staff position, traditionally a high-importance but low-profile job at the agency. McIntyre in turn chose to keep Pugliese on board when he took over the chairmanship in December.

Pentagon punishes reporters over tough coverage [Back](#)

By Jason Schwartz | 08/16/2018 05:05 AM EDT

The Pentagon's top spokesperson was ostensibly seeking to make peace with the media when she headed down to the building's press bullpen about three weeks ago for an off-the-record discussion on how to improve relations.

But the meeting quickly grew combative, according to three people who were in the room. When reporters raised issues like vanishing access to Defense Secretary Jim Mattis and other top officials, Dana White pushed back by criticizing the accuracy of press corps members' reporting.

She made clear, according to the reporters present, that she was watching what they wrote and put on-air — with the implication that there would be repercussions for stories she and her staff did not like.

White and the Pentagon's press operation have already restricted access to briefings, interviews and travel with Mattis. But in recent weeks, several reporters said that they increasingly feel as though individual journalists are being retaliated against for stories they've written, losing yet more access. In one case this spring, officials pulled away a reporter's plum opportunity to embed with U.S. troops overseas following a story they found too critical.

Another example involved the military-news outlet Defense One, which was left out of a media roundtable with the deputy secretary of defense earlier this month to help roll out President Donald Trump's proposed Space Force. The slight came after a Defense One reporter got an early scoop on plans to set up the new branch, breaking the story before the Pentagon was ready for it to go public.

Kevin Baron, the executive editor of the site, confirmed that none of his reporters were invited to the briefing and said that White had conceded to him in an email that the snub was due to the initial story.

Baron said White apologized for the incident in the email, saying that she was not aware that Defense One had been singled out and that the decision was made unbeknownst to her office's leadership. The briefing had been organized out of the deputy secretary of defense's office.

"It seems Defense One was deliberately left out of a briefing in retaliation for our reporting," Baron said, adding that he had been assured that "we would be included to all future, relevant briefings."

Baron said he was pleased with how the situation was resolved and that White addressed it with him promptly.

White declined to comment, other than to offer a statement through Pentagon spokesman Charles Summers: "We are guided by the principles of information and committed to ensuring the accessibility of timely and accurate information to the media, the Congress and the American people. And we prioritize diversity of reporting during engagements and travel with Secretary Mattis and all of our senior leaders in the Department of Defense."

After initially declining to comment further, Summers called back to more forcefully deny any retaliation against reporters, though he said he had not seen the email Baron said White sent him and could not address it.

"There is no retaliation," Summers said, adding that while some reporters might feel they are invited on fewer foreign trips with Mattis than they were in previous administrations, that was because the department was seeking to include more "regional media and bring non-traditional media."

"The notion that someone doesn't have access or someone is shut out, that's absolutely not accurate," Summers added.

Still, Pentagon reporters say that the sorts of tactics they're noticing, coupled with eroding access to top Defense Department officials, make it increasingly difficult to provide information to Americans about the activities of the Defense Department, a huge sector of the Trump administration that controls billions of dollars in spending and oversees U.S. troops at home and abroad.

"There is a climate of punitiveness here if you don't write what they like," one reporter said.

Another reporter said: "It's not unusual for an administration to monitor what reporters are doing and reporters produce. What's unusual now is it's being used to evaluate whether we'll be included in things or invited to things. ... It's never been so overt."

White, a political appointee who previously worked for The Heritage Foundation and in Republican politics, has also been accused of retaliating against her own staff: On Tuesday, CNN broke the news that she is being investigated by the Defense Department inspector general for allegedly using staff members to run personal errands, such as picking up dry-cleaning or lunch, and helping her with personal business, including filling out mortgage paperwork. In addition, CNN reported that she is accused of retaliating against staffers who complained by having them transferred.

Reporters say they see similar treatment applied to their colleagues by White and others in her department. Several Pentagon reporters said NBC News' Courtney Kube has not been invited to multiple briefings and has been left off emails alerting reporters about press opportunities. Kube has written about issues in Mattis' relationship with President Donald Trump, earning the particular ire of the defense secretary, who derided one of her stories as "fiction" to other reporters.

Kube did not respond to a request for comment.

Reporters who find themselves left out of briefings or excluded from traveling with the press secretary — seemingly with little explanation — have been left to wonder if it was something they said or wrote. For instance, after The New York Times published a story on the death of four American soldiers in Niger — ahead of the official Pentagon report on the subject — there was a background briefing to prepare reporters for the Pentagon's assessment. Two reporters from other outlets who were in the room told POLITICO that, when they looked around, it struck them as odd that nobody from the Times was present.

Times Washington Bureau Chief Elisabeth Bumiller declined to comment.

"There have been individual cases where people have been told we don't like your coverage," one reporter said. "You'll say to someone innocuously, 'Are you going to that briefing?' and that's how you'll discover they weren't invited. You don't know. You find out by accident you weren't invited."

Mattis occasionally strolls into the Pentagon press bullpen to talk with reporters and, when he does, his staff usually sends out an email to give reporters a heads-up — but the message typically does not reach everybody. As a result, reporters have started alerting one another when such a note goes out.

The issues extend beyond briefings. The Washington Post's Dan Lamothe had a rare opportunity to embed with U.S. Special Forces in Afghanistan in May pulled away after officials objected to an April story he wrote on Afghan commandos, according to reporters familiar with the situation.

The story in question was a straightforward account of how the Afghan military, by increasing its number of elite commando troops, was depleting its conventional army ranks. But officials took issue with the tone and some of the quotes used, the reporters said.

Securing that type of embed with special forces requires intense planning and consideration of risk on both sides, said a reporter from a different outlet, who called it "a hell of a thing to get." To have the opportunity revoked, the reporter said, "is as egregious as it is unusual."

Lamothe was able to embed with other units — salvaging the trip he had planned — but he lost out on his front row seat on the elite U.S. forces.

In a statement to POLITICO, Lamothe said: "During a reporting visit in April to cover U.S. troops in Afghanistan, I was offered a rare opportunity to embed with U.S. Special Forces fighting Islamic State militants in Afghanistan. While preparing for that assignment in May, I was told that the Special Forces embed offer was revoked. I traveled back to Afghanistan a short time later, and instead accepted offers to embed with the Army's new security force adviser brigade and U.S. military advisers who train the Afghan air force. I stand by my reporting, and thank the units that allowed me to spend time alongside them."

It's not clear whether that decision was made by Pentagon civilian staff or by the military. But Baron said tensions have grown to the point that any snub of a news organization raises questions of retribution.

"Because of the preexisting climate, people start to wonder if it's retaliation more than I think you would normally," he said. "I worry, because I've heard that it may be happening to other reporters, and I worry what kind of signal it sends to the rest of military bases around the world."

In many realms of journalism, it's not unheard of for a company or an agency to cut off a reporter after a tough story. Last month, controversy erupted after the White House banned CNN reporter Kaitlan Collins from covering a Rose Garden event, because officials were unhappy with questions she shouted at Trump during an Oval Office photo op.

But given the gravity of their beat, Pentagon reporters have traditionally stayed above the political fray. Journalists who work out of the Pentagon's press center are free to roam most areas of the building, and many have worked there for years, allowing them to build strong relationships, especially with the nonpolitical staff. But much of that has eroded under Trump. Many believe Mattis has avoided the press in part to stay out of the president's cross hairs.

Hired in April 2017, White alienated many in the Pentagon — inside and outside the press corps — by forcing out a popular military spokesman, Col. Steve Warren, shortly after coming on the job. Her relationship with the press has been difficult since, all the way through to the accusations of retribution.

"It's definitely a change of past practice from previous administrations and defense secretaries," said Baron, the Defense One executive editor. "It's not something that we're used to at the Pentagon. Things are just different at the Pentagon. These are veteran reporters who cover life and death and war and peace."

One former Pentagon spokesman said retaliation for stories "should not be in the toolbox."

"You should have good healthy relationships with the press corps covering your agency," the former spokesman said. "If you invest in those relationships, you won't even have to get to the point of retaliation."

He added, "Like war itself, it should be the last option."

Trump irks GOP by praising three candidates in one Senate race [Back](#)

By James Arkin and Alex Isenstadt | 08/16/2018 05:07 AM EDT

In Arizona's Republican Senate primary, front-runner Martha McSally is airing ads featuring a video clip of President Donald Trump calling her "the real deal." Her main challenger, Kelli Ward, is circulating mailers featuring a photo of her smiling alongside the commander-in-chief. The third-place candidate, Joe Arpaio, carries the rare distinction of having received a criminal pardon from Trump: The ex-sheriff recently sent a video of the president praising him to potential donors.

None of the three actually has Trump's endorsement. But all of them are acting like they do — and the president seems just fine with it, even if many in his party are not.

The president's decision so far to withhold his endorsement has led to a total muddle, prolonging the GOP slugfest in one of the most important Senate races in the country and allowing the presumed Democratic nominee, Kyrsten Sinema, to get a free pass.

With the Aug. 28 primary less than two weeks away, establishment Republicans have grown increasingly anxious that they're squandering a critical window of time to define Sinema, who faces a nominal primary opponent. She's spent millions of dollars running positive TV ads to boost her image and set the terms of the general election, while no Republican groups have countered.

The race is critical to both parties' hopes of controlling the Senate, as Republicans defend a 51-49 majority: If Democrats can capture Arizona for the first time in three decades, it will give them a legitimate opening to retake the chamber this fall.

"[Sinema has] used the time well and quite frankly it's shocking to me that it's gone uncontested," said Chuck Coughlin, a veteran Republican strategist based in Phoenix. "She's done a good job of narrating her candidacy and they've given her a blank canvass to work on. I think it's a problem for whoever the Republican nominee is," adding that he expects McSally to prevail in the primary.

Dan Eberhart, a major Republican donor based in Phoenix who supports McSally, said while the leading Republican candidate is working hard, "Basically nobody is happy that she hasn't either put Ward away or aimed her fire at Sinema."

There are indications McSally still sees Ward as a threat. Her campaign this week went up with two TV ads going after Ward, and a pro-McSally super PAC has been hitting Ward with several attack ads.

Most Republicans are confident in polling showing McSally ahead, particularly with early voting by mail well underway. Coughlin said he thinks the anti-Ward ads are being aired "out of an abundance of caution."

Still, during a recent phone call, NRSC Chairman Cory Gardner asked the president to endorse McSally, something GOP officials believe would have essentially locked down the race for the congresswoman. But Trump did not give him a yes or no answer.

McSally traveled to New York this week to be on site for Trump signing a defense spending bill. The president gave her a shoutout during his speech, but not an endorsement.

"There's another member of Congress here today who is not only an Air Force veteran, but the first woman ever to fly a fighter jet in combat in U.S. history and I have gotten to know her very well and she is terrific," Trump said of McSally.

McSally's team was quick to highlight the clip in a news release and on Twitter.

While the president has refused to take sides in the contest, Trump aides have been frustrated by Ward's continued efforts to imply she has the president's support. Ward recently sent out a mailer to voters showing her photographed with the president, rankling White House aides.

The mailer also included an image of a tweet in which Trump said, "Great to see that Dr. Kelli Ward is running." But the mailer cut off the rest of the president's tweet, which was sent in August 2017.

"Great to see that Dr. Kelli Ward is running against Flake Jeff Flake, who is WEAK on borders, crime and a non-factor in Senate. He's toxic!" Trump wrote in the full tweet. (A spokesman for Ward defended the mailer to AZCentral.com, which first reported the omission, saying the message of the tweet remained the same.)

People close to the president say not to expect any firm endorsement in the contest.

"President Trump has not endorsed anyone in the GOP Senate primary in Arizona and any photos or other general expressions of support shouldn't be read as such," said someone familiar with the operations of the Trump campaign. "He likes all of the candidates in the race very much and looks forward to supporting our nominee in the fall campaign to replace Jeff Flake in the Senate."

Two senior Republicans in the state say they expect Trump to hold a post-primary "unity" rally, though the White House hasn't yet announced any plans for an Arizona trip.

In a statement to POLITICO, Arpaio said he was not bothered by the efforts by Republican leaders to secure a Trump endorsement for McSally.

"At this time my only comment is my relationship with the President speaks for itself. It is no secret that Mitch McConnell and the Establishment do not want me in the US Senate," he said.

Ward, in an interview in Washington last month, said much the same.

"I know that the Mitch McConnell faction and the establishment pushes [McSally] out as much as they can because that's their insider advantage that I don't have," she said.

While Republicans continue to slug it out, Sinema's campaign has run free on the airwaves. She's spent more than \$4 million on TV, running six different ads on health care, her work with veterans and her "record of independence." Her first ad, launched in April, featured her brother, who is a veteran and police officer.

One-third of Arizona voters don't identify with either party, and Sinema's ads have been aimed squarely at those voters — none of them mention the word "Trump" or "Democrat." The ad campaign has been so sustained that going "negative against her is going to be extremely difficult," said veteran Arizona Democratic strategist Andy Barr.

Travis Smith, a consultant for McSally's campaign, brushed aside concern about Sinema owning the airwaves all summer. He said internal polling between April and July showed only a small uptick in Sinema's favorability rating, while her negative ratings also rose by a slightly higher amount.

National Democrats haven't had to spend to boost Sinema. Instead, a super PAC, Red and Gold, which was formed this month and hasn't filed any information on its donors, has spent \$1.6 million airing anti-Mcsally ads.

Defend Arizona, a pro-McSally super PAC, launched an ad Wednesday pushing back on the Democratic primary meddling. The group has also been running multiple attack ads against Ward.

"We are focused first on the primary," said Barrett Marson, a spokesman for Defend Arizona, "and then we will focus on Kyrsten Sinema's liberal record."

Subject: Morning Energy: Trump's not-so simple math — Judge orders update of Keystone XL study — States' rights get tricky over water

By Kelsey Tamborrino | 08/16/2018 05:43 AM EDT

With help from Ben Lefebvre and Annie Snider

A NUMBERS GAME: The White House's plan to rewrite the Obama administration's cornerstone climate rule for power plants may be based on some fuzzy math, setting up a potentially brutal court battle for the Justice Department. The legally risky strategy, POLITICO's Alex Guillén and Emily Holden report, calls for redoing the calculations of how much the rule would cost and who would benefit.

EPA's proposed replacement plan is expected to be unveiled any day now and will likely downplay a key feature of the Obama-era greenhouse rule: the money saved by using less electricity. Some expect EPA will also count only a fraction of the improvements in public health from reduced smog and soot pollution, Alex and Emily report, and it won't consider any benefits from slowing climate change outside the U.S.

In doing so, President Donald Trump's EPA will argue that the Obama-era rule had higher costs and fewer benefits than previously stated, a change to help improve the comparison when it unveils its own proposal. The Obama administration had estimated that the benefits from its rule would outstrip the costs by \$26 billion to \$45 billion by 2030, though supporters of that version say those net benefits could be even higher now.

In fact, math could become vital to the success or failure of several of Trump's rules. Critics say similarly fuzzy math underlies other Trump administration proposals to reverse or stymie action on climate change, such as a recent plan by EPA and the Department of Transportation to halt a planned tightening of fuel efficiency standards for cars and trucks. "They are cooking the books on technical analysis to try to justify preconceived conclusions that these regulations are bad," said David Doniger, senior strategic director of the Natural Resources Defense Council's climate program who was influential in the Obama EPA's crafting of the original rule. Read more.

GOOD THURSDAY MORNING! I'm your host, Kelsey Tamborrino. Many of you knew, but ClearView Energy Partners' Mitch Huber was the first to correctly answer that it's Loretta and Linda Sanchez who were the first and only sisters to serve simultaneously in Congress. For today: How many current senators are also former mayors? Bonus points if you can name them. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

DO THAT AGAIN: The Trump administration was ordered Wednesday to update an environmental study of the Keystone XL pipeline despite its contention the alternative route picked last year by Nebraska regulators didn't require an updated environmental impact statement. Instead, Judge Brian Morris of the U.S. District Court for Montana ordered the State Department to go back to its 2014 EIS to take into account the new route, Alex reports for Pros. Morris said the State Department still has a "meaningful opportunity to evaluate" the alternative route that was picked in Nebraska. However, he declined environmentalists' request that Trump's permit be vacated.

STATES' RIGHTS GET TRICKY OVER WATER: The roiling debate over states' right to halt development projects over their water quality effects heads to the Senate Environment and Public Works Committee today. The panel will hold a legislative hearing on a bill from Chairman John Barrasso, S. 3303 (115), the Water Quality Certification Improvement Act of 2018. The measure would limit states' authority under Section 401 of the Clean Water Act, which requires states to certify that projects won't harm their water quality standards before the federal government issues a permit. In recent years a handful of Democratic-led states have used that authority to block natural gas pipelines. Republican Maryland Gov. Larry Hogan is also using the authority to try to force Exelon Corp. to clean up nutrient pollution flowing through one of its dams that harms the Chesapeake Bay.

GOP lawmakers have backed earlier efforts to limit or remove the authority, including in this year's House Appropriations bill, House and Senate energy legislation and standalone bills. But the Western Governors Association, which represents a number of Republican governors, has come out in opposition to reining in states' authority, and the Environmental Council of the States warned Wednesday that such moves could have unintended consequences. **If you go:** The hearing begins at 10 a.m. in 406 Dirksen.

NOMINATIONS ON TAP: Two nominees to the Energy Department will testify before the Senate Energy and Natural Resources Committee this morning: Bill Cooper to be general counsel and Lane Genatowski for director of the Advanced Research Projects Agency-Energy, which the Trump administration has sought to eliminate.

Who are they? Cooper serves as senior counsel and director of the McConnell Valdés law firm. Prior to that he was a subcommittee staff director for House Natural Resources, with a particular policy focus on the National Environmental Policy Act that the White House has sought to change up. Cooper also previously was president of the Center for Liquefied Natural Gas and counsel to the House Energy and Commerce Committee. His credentials have earned him the backing of industry groups, including the Air-Conditioning, Heating, and Refrigeration Institute, the Interstate Natural Gas Association of America, and the Electric Reliability Coordinating Council.

— **Genatowski hails from** a banking background. He's managing partner in investments at Dividend Advisors, a firm he founded in 2012. Genatowski before that was an energy investment banker at JPMorgan Chase and other Wall Street giants. His résumé lines up with others in Rick Perry's Energy Department, which has focused more on businessmen with energy-sector experience. **If you go:** The hearing kicks off at 10 a.m. in 366 Dirksen.

RESCISSIONS — TAKE TWO: The Trump administration is once again weighing a so-called rescissions package to force Congress to roll back federal spending, with just weeks to go until the next budget deadline, Pro's Sarah Ferris and John Bresnahan report. Senate Appropriations Chairman Richard Shelby said Wednesday he was told about the idea: "I heard they were thinking about one, but I haven't seen it." But a Senate leadership source said OMB chief Mick Mulvaney has already begun moving ahead on the effort.

FLORIDA DRILLING BITS: To drill or not to drill off the Florida coast is a question once again heating up the state's election campaigns. Gwen Graham, the current front-runner in the Democratic gubernatorial primary field, sent out a message titled "Drilling 75 Miles off Florida's Beaches is Insane" after a POLITICO report highlighted the idea as one that oil industry lobbyists are pushing to have included in the Interior Department's upcoming offshore drilling plan. Sunshine State Democratic Sen. Bill Nelson took the story to the Senate floor to try to whack current Gov. Rick Scott, who is running to replace him and earlier this year got help from Trump on the drilling issue.

REMEMBRANCE OF TARBALLS PAST: Former Florida Lt. Gov. Jeff Kottkamp is catching heat for his statement at a pro-drilling rally in Tallahassee that oil from the Deepwater Horizon spill "didn't even reach the shores of Florida." The remark, as first reported in the Florida Phoenix, may have surprised those who

remember former Gov. Charlie Crist squatting over oil-stained beaches in Pensacola. Kottkamp, who was speaking as co-chair of Explore Offshore Florida, went on to say "tarballs are naturally occurring." Earthjustice staff attorney Bradley Marshall called it "absurd to claim the Deepwater Horizon spill did not reach Florida" given the damage the state experienced. "That's why so many of Florida's leaders, regardless of what political party they belong to, have been so protective of our coasts all these years," he said in a statement.

WHAT'S THE RISK? EPA acting Administrator Andrew Wheeler delivered a video address at the National Environmental Justice Advisory Council's public meeting in Boston on Wednesday where he acknowledged the need for improvement in risk communication and noted the agency owes it to the American public to improve. "How well or how poorly we communicate risk disproportionately impacts those on the lower end of the socioeconomic ladder," he said. "We have fallen short in the past from our response to the Gold King Mine in Colorado, to the Kanawha River in West Virginia, to Flint, Mich." Watch it here.

CASE CLOSED: Interior's Office of Inspector General has closed its investigation into an allegation made against National Park Service officials. The claim centered around references to human-caused climate change in a report on sea-level rise and storm surge projections that officials allegedly sought to remove. The watchdog office said Wednesday that shortly after it opened the investigation, the NPS "published the report with all original references to human-caused climate change," thus prompting it to close its probe.

'SECRET' AGENTS: Comments are due today on EPA's proposed "scientific transparency" rule, which would ban the use of studies that don't publicly disclose all their data. Experts have said that plan could prohibit the use of vital studies on how pollutants affect human health because researchers typically promise to keep subjects' health information confidential. But conservatives have long accused the agency of relying on "secret science," prompting former Administrator Scott Pruitt to unveil the proposal in the name of transparency.

Under the wire: With the comment deadline approaching, nearly 80 groups, including the Union of Concerned Scientists, Sierra Club and Moms Clean Air Force, signed onto a letter Wednesday calling on Wheeler to withdraw the so-called secret science proposal. Separately, 66 health and medical organizations sent comments to Wheeler in opposition to the proposed rule. That's not to say there isn't support for the proposal; several comments posted Wednesday echoed the refrain that scientists should be required to "show your work."

AFTER THE STORM: The nonprofit Environmental Integrity Project released a new report today leading up to the one-year anniversary of Hurricane Harvey's widespread destruction in Texas. Using records from the Texas Commission on Environmental Quality, the report looks at air pollution during and after the storm as well as the government's and industries' response, and makes recommendations for the future. The "Preparing for the Next Storm" report found that all five of the largest industrial air pollution releases during Harvey were in the Houston area — with the Magellan Galena Park Terminal the biggest polluter, releasing 2,472,402 pounds of air pollution.

Harvey also triggered the release of at least 8.3 million pounds of unpermitted air pollution from petrochemical plants, according to the EIP report. And in the nine months after Harvey, "18 companies revised their air pollution reports to the state to erase 1.7 million pounds of unpermitted emissions during Hurricane Harvey," the report found.

LET'S MAKE A DEAL: Trump might soon strike a deal with Mexico on NAFTA, even as a trade war plays out with the rest of the world, POLITICO's Megan Cassella reports. The apparent turnaround after months of stalemate arrives as Mexican Secretary of Economy Ildefonso Guajardo visited Washington on Wednesday to hammer out some of the most contentious issues on NAFTA. "Both U.S. and Mexican officials now say they could be on the verge of announcing a preliminary agreement on everything from complicated automotive rules to environmental regulations by the end of August," Megan reports.

CATCHING FIRE: Agriculture Secretary Sonny Perdue will join Senate Energy ranking member [Maria Cantwell](#) and Sens. [Steve Daines](#) and [Ron Wyden](#) to unveil a new federal plan for addressing wildfires. Earlier this year, Perdue and Cantwell [worked together](#) on a commitment to use unmanned aircraft technology this fire season, and the Washington Democrat will likely highlight similar tools and technology today. Watch the [livestream here](#).

POLL: CLIMATE A FACTOR FOR MOST: Slightly more than half (53 percent) of U.S. voters believe climate change is a factor in making the ongoing California wildfires more extreme, while 39 percent say it's not, according to a new poll from Quinnipiac University [released](#) Wednesday. Sixty-four percent of voters said they think the country is not doing enough to address climate change, the national poll found. Eighteen percent of voters say the U.S. is doing enough to address the issue, while 10 percent say the U.S. is doing too much.

— **On a related note**, the Natural Resources Defense Council launched [a tracker](#) this week to see where every state's lawmakers stand on offshore drilling.

QUICK HITS

— "A coal company and Interior teamed up to save a power plant," [E&E News](#).

— "FirstEnergy Solutions takes next step toward closure of nuclear power plants," [Akron Business Journal](#).

— "A rising concern? After straws, balloons get more scrutiny," [The Associated Press](#).

Stories from POLITICO Pro

Exclusive: Draft details Trump's plan for reversing Obama climate rule [Back](#)

By Emily Holden | 08/14/2018 07:46 PM EDT

The Trump administration is preparing to unveil its plan for undoing Barack Obama's most ambitious climate regulation — offering a replacement that would do far less to reduce the greenhouse gas emissions that are warming the planet, according to POLITICO's review of a portion of the unpublished draft.

The new climate proposal for coal-burning power plants, expected to be released in the coming days, would give states wide latitude to write their own modest regulations for coal plants or even seek permission to opt out, according to the document and a source who has read other sections of the draft.

That's a sharp contrast from the aims of Obama's Clean Power Plan, a 2015 regulation that would have sped a shift away from coal use and toward less-polluting sources such as natural gas, wind and solar. That plan was the centerpiece of Obama's pledge for the U.S. to cut carbon dioxide emissions as part of the Paris climate agreement, which President Donald Trump has said he plans to exit.

The Environmental Protection Agency acknowledges that both carbon emissions and pollutants such as soot and smog would be higher under its new proposal than under the Clean Power Plan. And Trump's critics call it a recipe for abandoning the effort to take on one of the world's most urgent problems.

The proposal would be "another, more official, sign that the government of the United States is not committed to climate policy," said Janet McCabe, EPA's air chief under Obama.

McCabe said based on a description of the proposal, it would offer "a significant amount of discretion to states to decide that nothing at all needs to be done."

Many red states and several companies sued over the Clean Power Plan, and a federal appeals court was nearing a decision when Trump's EPA asked for time to rewrite the rule. McCabe said the proposal could be meant to eat up time and stall a future president from quickly regulating greenhouse gases.

EPA was widely expected to write a far less stringent replacement rule. Trump promised to nix the Clean Power Plan and exit the Paris deal during his campaign. But the draft offers the first look at the specifics since the agency released a broader notice that it would reconsider the rule in April.

The White House Office of Management and Budget has finished reviewing the draft and sent it back to EPA this week.

The rule would allow states to write rules to make coal plants more efficient, enabling them to burn less coal to produce the same amount of electricity. But that could be bad for the planet, people familiar with state air programs say, by making it cost-effective for power companies to run those plants more often.

EPA looked at the outcomes of various scenarios that could be possible from state-proposed plans in 2025, 2030 and 2035, implying that the plans could be in place before 2025.

Obama's plan was meant to see greenhouse gas emissions from the U.S. power sector fall to 32 percent below 2005 levels by 2030. The nation has already achieved much of that reduction because of trends such as the closures of dozens of older coal plants.

EPA intends to argue that the Obama administration rule illegally sought to regulate the broader power sector, beyond coal plants, and that the compliance costs would have been big and the climate benefits negligible, according to the draft POLITICO reviewed.

Environmental advocates and blue states plan to wage war on the proposal once it is final. But while the legal fights play out, the regulation will be a placeholder that could stall a future president from regulating power plants.

States will be able to present reasons for why they don't want to regulate coal plants, including considering how many more years they have left before they would probably shut down, according to a source who reviewed a different section of the document.

In another contentious portion of the proposal, EPA is looking at letting states decide whether they want to adopt changes to pollution reviews that kick in when a plant makes upgrades. Existing rules are meant to keep plants from making changes that cause more pollution.

Conservatives and industry groups have long argued that the review process, called New Source Review, makes it too expensive for operators to make improvements to plants.

The key to Trump's climate reversal? New math [Back](#)

By Alex Guillén and Emily Holden | 08/16/2018 05:06 AM EDT

The Trump administration's attempt to reverse Barack Obama's most sweeping climate regulation rests on a legally risky strategy — redoing the calculations of how much the rule would cost and who would benefit.

The EPA's proposed replacement is expected to downplay the money that people and businesses would save from using less electricity, a key feature of the Obama-era greenhouse rule for power plants. People tracking the issue also expect that the agency will count only a fraction of the improvements in public health from reduced smog and soot pollution, and won't consider any benefits from slowing climate change outside the U.S.

The upshot: President Donald Trump's Environmental Protection Agency will argue that the Obama administration's rule had more costs and fewer benefits than previously stated, a change to help improve the comparison when it unveils its own, much less ambitious power plant proposal as soon as next week.

The Obama administration had estimated that the benefits from its 2015 rule would outstrip the costs by \$26 billion to \$45 billion by 2030.

Supporters of the Obama version say those net benefits could be even higher now, because states are on track to meet the climate goals and the costs of clean energy have continued to plummet. And they warn that repealing the regulation could keep older, more expensive coal-fired power plants in operation, adding to consumers' costs.

The math could be crucial to the success or failure of a number of Trump rules. That could make the rollbacks legally vulnerable when environmental advocates and states sue to overturn Trump's action, critics of the new proposals say.

"They are cooking the books on technical analysis to try to justify preconceived conclusions that these regulations are bad," said David Doniger, the senior strategic director of the Natural Resources Defense Council's climate program who was influential in the Obama EPA's crafting of the original rule.

EPA did not respond to a request for comment on Wednesday.

Trump administration lawyers reviewing the replacement are already struggling with how to defend a rule that could cost electricity users money but would not do much to address climate change or air pollution, according to a person aware of conversations between the White House and the Justice Department. DOJ would be charged with defending the rule in court.

POLITICO has examined a portion of the agency's unpublished draft of the new rule, which would allow states to write their own modest regulations for coal plants or even let plant operators seek to opt out entirely, according to a source with knowledge of the broader proposal.

The proposed rewrite of the power plant rule is part of a pattern: Critics say similarly fuzzy math underlies other Trump administration proposals to reverse or stymie action on climate change, such as a recent plan by EPA and the Department of Transportation to halt a planned tightening of fuel efficiency standards for cars and trucks.

Sean Donahue, an environmental lawyer who has represented groups like the Environmental Defense Fund, said he would expect a court to be "very skeptical" of any effort that looks as though EPA is trying to evade its obligation to regulate greenhouse gases. But he conceded that will depend on the details of EPA's power plant proposal.

"If it were one or two technical judgments where there's a difference between this administration and the last one, or this administration and prior consistent practice, that would be one thing," Donahue said. "But it's many, many things, all pointing the same way, all pointing toward rolling back greenhouse gas mitigation efforts."

Trump has repeatedly expressed doubts about man-made climate change, and much of his Cabinet shares a similar view. In contrast, the federal government's own scientific assessment finds that human-caused climate change will not only raise temperatures but also make extreme weather more dangerous and lift sea levels by 1 to 4 feet by the end of the century.

Kate Larsen, director of economic research firm Rhodium Group, said the Trump administration's justifications for unraveling climate change policies are symptomatic of its broader governing principles.

"A decision we make today is narrowly focused on the impacts to myself and my immediate neighbor in the next week, but you're not taking into account impacts next year and the following year to yourself, your neighbor, the entire community," she said.

Environmental experts are also scrutinizing the auto rule proposal, released earlier this month, which would freeze the Obama administration's aggressive fuel economy standards after 2020 and dial back EPA greenhouse gas rules to match.

EPA and DOT's National Highway Traffic Safety Administration argued that the freeze would save billions of dollars in costs. Critics say the administration overestimated compliance costs of the Obama-era auto targets by as much as fourfold, which could significantly tip the cost-benefit analysis in their favor. Another claim that the Trump rollback would save more than 1,000 lives per year — yielding benefits of \$77 billion — has also drawn skepticism.

On Tuesday, EPA released a June memo that showed agency staff criticizing a number of "unrealistic" aspects of NHTSA's modeling. They disagreed with the proposal's fatality figures, with EPA staff estimating deaths would increase slightly under the freeze. And they thought the rule overestimated compliance costs and the time needed to recoup those costs in fuel savings, all factors that boosted benefits and lowered costs for the proposed freeze. Both EPA and NHTSA dismissed the memo as only one part of a complex review process.

The administration and industry groups have blasted the Obama administration's use of "co-benefits" — the benefits in improved health or reduced pollution that arise even when they're not the primary aim of a regulation. (One example: Cutting coal plants' carbon dioxide pollution under the power plant regulation would't do much directly to improve people's health, but it would reduce smog.) But Donahue argued that Trump's regulators sometimes lean on co-benefits to help build the case for their rollbacks.

For example, NHTSA's modeling credits changes in consumer behavior as the overwhelming factor behind all the lives that the Trump administration contends its auto rollback would save. The agencies argue that under the previous Obama rule, drivers would be more likely to remain in older, more dangerous cars than purchase more expensive, safer ones.

That "would seem to be a co-benefits argument, since the EPA doesn't have, and NHTSA doesn't have, the authority to regulate used cars," said Donahue, who called the paradox "sort of entertaining."

Counting co-benefits is a long-standing practice for federal regulators, but energy industry groups and Republican state officials grew incensed by the Obama administration's use of it to justify major regulations.

"The co-benefits thing has ballooned into the biggest scandal in environmental regulation," said the conservative Competitive Enterprise Institute's Myron Ebell, who led Trump's post-election transition team at EPA. "You get very small direct benefits, but you make up, essentially, a lot of co-benefits."

Still, he contended that EPA's withdrawal of Obama's power plant rule would eliminate a huge amount of costs in the coming years, saying Obama's regulation represented "just the first emissions cuts."

"There were going to be more beyond that if the Obama administration had been succeeded by the Clinton administration," Ebell said. He added: "By cutting it off in the way that they're doing, we're avoiding immense future costs."

Keystone XL pipeline wins green light in Nebraska — but may face new hurdles [Back](#)

By Ben Lefebvre | 11/20/2017 11:25 AM EDT

Nebraska regulators approved the Keystone XL pipeline Monday, but only if it is built along a new path that may force the project developer to jump through a new set of regulatory hoops.

The 3-2 vote by the Nebraska Public Service Commission gave the green light to a different route than the one preferred by Keystone developer TransCanada, moving it east to run partially alongside the original Keystone pipeline and through a portion of the state's ecologically sensitive Sandhills area as well across the Ogallala Aquifer.

The Trump administration is evaluating whether it would have to re-approve the controversial pipeline to account for the new route. But activists who have spent the better part of a decade fighting to block Keystone said the decision throws the whole project into jeopardy, while TransCanada, the company seeking to build the project, said only that it is evaluating its next steps.

"This decision today throws the entire project into a huge legal question mark," said Jane Kleebe, the activist who led the opposition to the pipeline and who is now Nebraska Democratic Party chair. "TransCanada will have to go back to the State Department because that route has never been reviewed by the feds."

The State Department said it is reviewing the PSC decision for just such a possibility.

"We won't know about any impacts until we learn precisely the extent of any changes, something we are currently engaged in," State Department spokesman Vincent Campos said.

TransCanada President and CEO Russ Girling said the company "will conduct a careful review of the Public Service Commission's ruling while assessing how the decision would impact the cost and schedule of the project."

Former President Barack Obama had blocked the permits for the pipeline in 2015, citing the oil sands' impact on climate change, but President Donald Trump quickly reversed that decision after taking office. Keystone XL is designed to transport up to 830,000 barrels per day of crude from Canada's oil sands and North Dakota's shale fields to oil refineries on the Gulf Coast.

The Nebraska PSC vote comes as TransCanada adds new crews to its cleanup operations in South Dakota, where the original Keystone Pipeline ruptured last week and released 210,000 gallons of oil. But Nebraska law bars the regulators from considering spills or pipeline safety in its decision-making process.

Environmentalists and landowners who opposed Keystone XL's construction have promised to try to overturn the commission's decision.

"We will appeal," Kleebe said. "We will challenge a foreign corporation being given eminent domain in the county courts, with every intent to bring it to the Supreme Court if needed."

Even with the approval, the project, whose costs to build the nearly 1,200 mile artery have ballooned to \$8 billion, is still not ready to be built since TransCanada is gauging the economics of the huge investment. Though prices for oil have rebounded moderately in recent months, and while TransCanada has said demand for space on the pipeline is strong, it's not yet clear that enough companies will commit to the 20-year contracts required to reserve space on it.

The opposition to Keystone XL had been a rallying cry for green activists who have long said mining Canada's oil sands would be a disaster for global climate change, releasing vast amounts of carbon dioxide into the atmosphere.

But supporters have said tapping the oil fields in Alberta is no worse than the oil production in Venezuela, where much of the heavy sour crude that is shipped to U.S. refineries comes from now.

Many in the oil industry, however, no longer see the Keystone XL pipeline as crucial to the U.S. refineries as they once did, especially since the railroad sector stepped in to offer a more flexible — though more expensive — way to ship the oil.

"There's not going to be a parade thrown, although everyone in the industry is going to be grateful," said Tyler Nelson, an energy lobbyist for Cornerstone Government Affairs. "It should have been done years ago. But now a lot of people want it to be over with and done and move on."

The pipeline may struggle to succeed in the oil business. Energy markets have made the Alberta oil sands less attractive, with ExxonMobil, ConocoPhillips and others pulling out of the region to concentrate on U.S. oil

shale development in Texas. Meanwhile, rival pipeline company Enbridge has expanded its pipeline system delivering Canadian crude to the U.S.

Critics have pointed to the recent shale oil boom as a reason that supply from the Canadian and North Dakota fields is in less demand, and they argue that much of the oil from Keystone XL could end up on tankers bound for export. U.S. oil production is on target to average more than 9 million barrels a day this year, nearly double what it was when TransCanada first proposed the massive pipeline.

If TransCanada gives its final approval to go ahead, construction would not start until 2019 at the earliest, Paul Miller, TransCanada's president of liquids pipelines, said during a conference call earlier this month.

The pipeline already is the focus of a court challenge stemming from Trump's State Department approving the project. A coalition of groups is arguing the State Department did not do due diligence before approving the cross-border pipeline in March. The case is still in the beginning stages, with a decision pending from the U.S. District Court of Montana on a Trump administration motion to dismiss.

Judge orders Trump administration to update Keystone XL environmental study [Back](#)

By Alex Guillén | 08/15/2018 08:17 PM EDT

A federal judge today ordered the Trump administration to update its environmental study of the Keystone XL pipeline.

Nebraska regulators last year picked an alternative route through the state after the pipeline was approved by President Donald Trump. Now the State Department must update its previous 2014 environmental impact statement to take that route into account, ruled Judge Brian Morris of the U.S. District Court for Montana.

The Trump administration argued that it did not need to update the EIS, despite Nebraska regulators' decision to pick the alternate route.

But Morris concluded that the State Department still has a "meaningful opportunity to evaluate" the alternative route that was picked in Nebraska. "Federal Defendants cannot escape their responsibility under NEPA to evaluate the Mainline Alternative route," he ruled.

The approved route differs from the one studied in the 2014 EIS by crossing different counties and bodies of water and requiring an extra pump station and electric infrastructure, Morris noted.

However, Morris declined environmentalists' request that Trump's permit be vacated, at least for now.

TransCanada does not plan to start construction before the second quarter of 2019, he said, giving the Trump administration sufficient time "to supplement the EIS in a manner that allows appropriate review before TransCanada's planned construction activities." Morris said he would revisit the issue if "circumstances change" and he is unable to review the new supplemental EIS before TransCanada begins construction.

WHAT'S NEXT: Morris ordered the State Department to propose a schedule to supplement the EIS.

Trump administration to make a second try on spending cutbacks [Back](#)

By Sarah Ferris and John Bresnahan | 08/15/2018 07:15 PM EDT

The Trump administration is eyeing a second attempt to force Congress to roll back federal spending, after its last attempt collapsed in the GOP-led Senate, according to the chairman of the Senate Appropriations Committee as well as a Senate leadership source.

The Office of Management and Budget is said to be considering a second package of so-called rescissions, with just weeks to go until Congress' next budget deadline.

OMB officials did not return a request for comment and it's not known yet what spending the White House might try to cut or eliminate this time around.

Senate Appropriations Chairman Richard Shelby said today he was told about the idea. "I heard they were thinking about one, but I haven't seen it," Shelby (R-Ala.) told POLITICO.

OMB chief Mick Mulvaney has already begun moving ahead, according to the Senate leadership source.

Budget hawks, led by Mulvaney, fought hard for the last package, H.R. 3 (115), which would have pulled back \$15 billion in already-approved federal dollars. That bill ultimately tanked in the Senate, coming up just one vote shy on a procedural vote.

If the White House moves quickly, its next rescissions package could arrive in the middle of a separate major funding fight on Capitol Hill. Lawmakers have until Sept. 30 to send roughly \$1.4 trillion in fiscal 2019 funding to President Donald Trump's desk or risk a funding lapse.

Oil companies ask Florida lawmakers to unlock offshore drilling [Back](#)

By Ben Lefebvre | 08/15/2018 05:01 AM EDT

Oil and gas companies are aggressively lobbying Florida lawmakers to agree to allow offshore drilling in the eastern Gulf of Mexico — seeking to break decades of bipartisan opposition in a state that has long viewed oil spills as an existential threat to its tourist economy.

The effort, which would potentially bring oil rigs as close as 75 miles to Florida beaches, comes just seven months after Interior Secretary Ryan Zinke promised that the state was "off the table" for offshore drilling. And it could complicate Republican Gov. Rick Scott's campaign to unseat Democratic Sen. Bill Nelson, whose opposition to drilling off the coast has been a main theme of his decades in Congress.

But the expansion would aid President Donald Trump's effort to increase U.S. oil and gas production, in what he calls a bid for American "energy dominance."

Gaining access to the millions of barrels of oil and natural gas off Florida's west coast is a top priority for Exxon Mobil, Chevron, Shell and other companies.

Energy lobbyists and trade associations believe Zinke left some wiggle room in his comments, and they are trying to persuade Florida lawmakers to sign on to possible compromises, including allowing drill rigs to operate up to 75 miles off the state's Gulf coast, lawmakers and industry sources said. That would be down from more than 200 miles under an existing drilling moratorium.

Zinke's tweet exempting Florida — which critics charge was simply a political gift for Scott's Senate campaign — and his subsequent statement that he was "removing Florida from consideration for any new oil and gas platforms" shouldn't be read as official Interior policy, said Randall Luthi, president of the trade group National Offshore Industry Association, which is pressing for access to the waters.

"Secretarial tweets and statements to Congress are outside the administrative process, but certainly are indicators of where the Secretary and evidently the White House might end up," Luthi said in a statement to POLITICO. "The Eastern Gulf of Mexico is ripe for some kind of a reasonable compromise."

The Gulf of Mexico Energy Security Act of 2006 put a moratorium on oil and gas exploration in the eastern Gulf until June 2022. Department of Defense offshore training zones put another large part of those waters out of contention for drilling.

Interior's first draft plan included opening up every acre of federal water to oil and gas companies, however. Zinke has implied in later conversations with coastal state governors, senators and trade associations that the final plan wouldn't necessarily include drilling off the coasts of New Jersey, Delaware, Maine, but his plan to announce a final decision this fall could delay unpopular decisions — including possibly opening up the waters off southern California and the Mid-Atlantic region — until after the midterm elections, sources said.

The most aggressive plan industry lobbyists have brought to lawmakers calls for allowing drilling platforms within 75 miles of Florida's Gulf coast, an idea that Interior itself floated in its draft plan. Buffer zones going out as far as 125 miles have also been discussed, sources said. Either could technically adhere to Zinke's promise not to open Florida's waters, since the state's jurisdiction only extends nine nautical miles from the shoreline. Interior proposed the use of so-called exclusion zones for the eastern Gulf of Mexico and the Atlantic coast in its draft plan.

One lobbyist working the issue told POLITICO that Zinke and Scott were careful to "not say the entire Eastern Gulf," was off the table during their press conference at the Tallahassee airport in January.

"There are some Republicans who are prepared to make a deal. Seventy-five miles is the expected buffer, but folks might be willing to throw it a little further," said the lobbyist, speaking anonymously to frankly discuss ongoing negotiations.

That reduced buffer zone would please the oil industry because most of the oil and gas reserves in the eastern Gulf are believed to be in the waters south of Alabama and the Florida Panhandle, said a person at one oil and gas company who was not authorized to discuss the draft plan.

"I think we could live with 75 miles," the person said. "I think that wouldn't hurt anyone."

The idea so far has failed to gain much traction with at least two Florida Republicans who said they have been inundated with industry requests to open the area to drilling.

Florida Republican Rep. Matt Gaetz said he opposes the idea on national security grounds, given that the Defense Department uses a large part of the eastern Gulf for training exercises.

"It seems every week the oil and gas industry is working to obtain permission to crack the Destin Dome," Gaetz said in an interview with POLITICO, referring to one offshore site believed to hold large amounts of natural gas. "That would be devastating to our national security. I don't have a nuanced view on this. I am opposed."

Gaetz said he has raised his concerns on several occasions with Zinke, who he said has not pushed for a specific policy but has espoused an expansion of oil and gas drilling in general.

"I've had meetings with the secretary on this," Gaetz said. "I've had spirited conversations with him. I would not say he was wedded to any particular plan. He was trying to advance the cause of energy exploration."

An Interior spokeswoman did not answer questions about Zinke's meetings with Florida lawmakers or the possibility of establishing a 75-mile buffer zone.

"Secretary Zinke regularly meets with and communicates with many members on both sides of the aisle, coastal and non-coastal," the spokeswoman said in a written statement. "Members often discuss relevant issues pertaining to their districts and states as appropriate."

Republican Rep. Francis Rooney, who opposed drilling off the Florida coast during his 2016 campaign, said the industry has also been reaching out to him. Industry representatives have suggested several compromises, including a 100-mile buffer zone, he said, though he has rejected that plan, saying currents could carry any spilled oil from that part of the Gulf onto state beaches.

Instead, Rooney, who had served on the board of the oil and gas company Laredo Petroleum, offered to allow drilling 200 miles off the coast, west of the area where the military conducts training.

"The oil people have brought up several different things and I have been pretty much recalcitrant in negotiating with them," Rooney told POLITICO. "I think we need a clear delineation of where they will drill and not drill, and we don't need them drilling east of that military mission line."

Environmentalists also oppose any drilling, saying a buffer zone wouldn't protect Florida's beaches and tourism economy.

"The Deepwater Horizon disaster that spoiled Florida's coastline was 200 miles from its shore," said Diane Hoskins, director of environmental group Oceana, referring to the 2010 deepwater gusher that took months to plug. "A 75-mile buffer would be a cold comfort for Floridians."

Trump delivers a Senate race sweetener to Scott [Back](#)

By Marc Caputo, Ben Lefebvre, Matt Dixon and Bruce Ritchie | 01/09/2018 11:24 PM EDT

Donald Trump delivered a big political contribution to Rick Scott on Tuesday as the Florida governor contemplates a bid for U.S. Senate: a pledge to spare Florida from administration plans to expand offshore oil drilling nationwide.

The surprise announcement from Secretary of Interior Ryan Zinke — who went to the trouble of flying to Tallahassee to stand beside Scott — outraged environmentalists and Democrats who insist the decision was a political ploy that unlawfully gave preferential treatment to Florida, a swing state that voted for Trump and that's home to his so-called "Winter White House" escape at Mar-a-Lago in Palm Beach.

Zinke made sure that the term-limited governor got all the credit. In response to a question about what was the final determining factor in his decision, Zinke said: "The governor."

"You have a tremendous governor that is straightforward, easy to work for, says exactly what he means. And I can tell you Florida is well-served," Zinke said.

Zinke's glowing endorsement of Scott has become de facto policy for Trump, who has tried for more than a year to woo Scott publicly and privately to run for U.S. Senate against Democratic incumbent Bill Nelson. The veteran senator is one of the most vocal opponents of offshore oil-drilling in Florida, an issue that typically enjoys broad bipartisan support in a state whose economy depends heavily on tourism and development along 1,300 miles of coastline.

Scott used to be an exception to the blanket opposition to offshore oil drilling. In 2010, the then-political newcomer voiced more support for oil exploration, but the position became a political liability in the state after the Deepwater Horizon oil spill coated some Florida beaches with tar balls and damaged tourism in parts of the Gulf.

A 2016 University of South Florida-Nelson poll found that 47 percent of state residents see offshore drilling as a move in the "wrong direction," a distinction that makes it one of the most unpopular policy proposals in the state.

So when Zinke announced last Thursday that the administration wanted to open vast new stretches of federal waters to oil and gas drilling, opposition was united in Florida — from liberal environmentalists to conservative lawmakers and even Scott, who issued a rare public denunciation of the policy.

At the time, Democrats and Nelson supporters highlighted the unpopular policy announcement by a president who's flagging in the polls. Nelson's campaign began fundraising off of the initial announcement to expand oil exploration.

One Republican insider, however, told POLITICO shortly after the initial announcement that the administration would scale the plan back somewhat to give Scott a political boost that would "be a big win, and it won't be Bill Nelson bringing it home."

As late as Tuesday, Nelson was still fundraising off the drilling announcement. "President Trump is about to hand a huge victory to the oil industry and put Florida's entire economy at risk," Nelson's campaign wrote. "He just announced plans to rollback offshore drilling regulations that were put in place after the 2010 Deepwater Horizon disaster, and open up nearly all federal waters to offshore oil drilling — including the eastern Gulf of Mexico."

But just before that email solicitation was sent out, Zinke was unexpectedly standing in Tallahassee's regional airport with Scott announcing the reversal to the Florida capital press corps.

Nelson said he was incredulous.

"I have spent my entire life fighting to keep oil rigs away from our coasts. But now, suddenly, Secretary Zinke announces plans to drill off Florida's coast and four days later agrees to 'take Florida off the table'? I don't believe it," Nelson said in a written statement. "This is a political stunt orchestrated by the Trump administration to help Rick Scott, who has wanted to drill off Florida's coast his entire career. We shouldn't be playing politics with the future of Florida."

Similarly, the Sierra Club of Florida said the decision was "a purely political move to aid the ambitions of Rick Scott." And the League of Conservation Voters called it a "publicity stunt."

Scott's spokesman, Jonathan Tupps, said oil-drilling opponents should not be upset.

"Senator Nelson and anyone else who opposes oil drilling off of Florida's coast should be happy that the governor was able to secure this commitment," he said. "This isn't about politics. This is good policy for Florida."

Tupps said that, contrary to claims by Scott's opponents, the governor and staff have frequently discussed Florida's opposition to more offshore oil drilling with the Interior Department. Scott personally raised the issue with Zinke in an October meeting in Washington, Tupps said.

Why Zinke suddenly reversed months of planning four days after announcing the new oil and gas exploration policy are unclear. Zinke also made his announcement via Twitter after a brief question-and-answer session with reporters in Tallahassee.

In reversing the policy for Florida, however, Zinke may have run afoul of the Administrative Procedure Act, critics said. That could give ammunition to California and Atlantic Coast states wanting to get on the same no-drill list -- the opposite of what President Donald Trump intended when he directed Zinke to expand oil companies' access to federal waters to boost U.S. energy production.

The American Petroleum Institute President Jack Gerard earlier in the day had applauded the Trump administration's plan to make all available federal waters available for drilling, saying "It represents a bold acknowledgement of the industry's advancements in technology to safely access U.S. energy resources."

Almost immediately after Zinke's announcement, lawmakers from other states took to Twitter to raise the specter of lawsuits, which could lead to courtroom entanglements for Interior's offshore drilling plan. The proposal was supposed to go into effect in 2019 and offer acres off the coast of Florida in late 2022 when a drilling moratorium officially ends.

"Under the Administrative Procedure Act, an agency can't act in an arbitrary and capricious manner. In this case, exempting Florida but not California (which has an even larger coastal economy) is arbitrary and capricious," Rep. Ted Lieu, a California Democrat and attorney, told POLITICO.

"So the agency would either have to not exempt Florida, or in the alternative, exempt Florida, California and any other state that can show the coasts are important to the state's tourism and economy."

California Attorney General Xavier Becerra also hammered that point on Twitter, echoing Scott's argument against drilling off the Florida coast to say "California is also 'unique' & our 'coasts are heavily reliant on tourism as an economic driver.' Our 'local and state voice' is firmly opposed to any and all offshore drilling. If that's your standard, we, too, should be removed from your list. Immediately."

In Virginia, U.S. Sen. Tim Kaine took a more low key approach. "Virginia's governor (and governor-elect) have made this same request [as Florida], but we have not received the same commitment. Wonder why..." he tweeted.

Pruitt touts science policy as transparency as Democrats slam him for secrecy [Back](#)

By Emily Holden and Annie Snider | 04/26/2018 03:17 PM EDT

Embattled EPA Administrator Scott Pruitt sought to fend off criticisms he had clouded his activities within the agency in secrecy, pointing during Thursday's congressional hearing to the new science policy rolled out this week that he said is boosting transparency around new rules.

But that new policy, long a conservative priority, had Democrats howling that Pruitt had effectively given himself carte blanche to conceal studies that would not support his rollback of Obama EPA rules.

"The type of studies you want to exclude are the same kind of scientific studies that were used to prove that lead in pipes and paints harm children and that secondhand smoke is a dangerous carcinogen," said Rep. [Raul Ruiz](#) (D-Calif.). "You have demonstrated a disregard of true science [and] the scientific process," he said.

The discussion was one of the most substantive policy issues at [the hearing](#) of the Energy and Commerce subcommittee that focused largely on the scandals that have erupted around Pruitt in recent weeks.

The draft rule, which was announced at a closed event at agency headquarters on Tuesday, could have far-reaching effects that limit EPA's ability to rely on studies that don't have publicly available raw data when making decisions about air and water regulations. Scientists and public health advocates have argued the change could keep the agency from updating health protections based on new science since those studies typically redact subjects' personal information.

Pruitt's GOP supporters on the panel praised the move as a way to ensure that scientific data used to support new regulations was available for everyone to review.

"I've had a lot of constituents over the years who've been very concerned about decisions ... that get made by administrators or the bureaucracy and in some cases they can't get access to the underlying data that underpins the decisions," said Rep. [Greg Walden](#) (R-Ore.), chairman of the Energy and Commerce Committee.

Rep. [Paul Tonko](#) (D-N.Y.) called Pruitt "hypocritical" because the proposed rule gives broad authority Pruitt to grant exemptions from the new requirements, which he said Pruitt could use "without any transparency or accountability" for his decisions.

Tonko pointed to internal emails between top EPA officials initially released under the Freedom of Information Act that show the agency's top chemicals official, a former leading chemicals industry expert, expressing concerns about the impact the policy could have on companies' confidential business information.

"If EPA was assessing the safety of a chemical, you alone would have the power to selectively block public health studies that do not support your political priorities and allow ones that favor your friends in industry. Not only does this open the door to special treatment for industry over the public health, but you could also pick winners and losers among the industry types," Tonko said.

Pruitt argued the restrictions will apply equally to "all third party studies." He said both business and personal health information could be redacted, which experts have argued would be time-consuming and expensive.

Yogin Kothari, a Washington representative for the Union of Concerned Scientists, which has opposed the change, said Democrats were right to highlight the hypocrisy of the policy that he said was really about restricting science.

"What it highlights is a lack of transparency at the agency because he hasn't really talked about this or explained this or explained his thinking about this," Kothari said.

Frank Maisano, a spokesman for the lobbying firm Bracewell who attended the hearing, said Republicans on the committee appeared to be interested in hearing more about the policy.

"It's a topic that is different from what Democrats are talking about, it's a topic that's substantive," Maisano said. "It's a topic that many in the business community and many in the conservative community have been focused on for years."

EPA's proposal, based on long-sought legislation from House Science Chairman Lamar Smith (R-Texas), also drew support from Rep. Kevin Cramer (R-N.D.) who said it undercut Democrats who attacked Pruitt for secrecy while defending the agency previous use of "secret science."

"You've also been accused of hypocrisy, a lack of transparency, by people who are in the same breath defending secret science as a means of carrying out their political philosophy ... the irony is rich beyond rich with me," he said.

Mexico, U.S. may be heading toward NAFTA deal amid Trump's global trade war [Back](#)

By Megan Cassella | 08/15/2018 05:32 PM EDT

President Donald Trump could be poised to make a deal with Mexico on NAFTA even as he engages in a trade war with the rest of the world.

Mexican Economy Secretary Ildefonso Guajardo arrived in Washington on Wednesday — as he has every week for the past month — to hammer out some of the most contentious issues on NAFTA. U.S. and Mexican officials now say they could be on the verge of announcing a preliminary agreement on everything from complicated automotive rules to environmental regulations by the end of August.

The apparent turnaround after months of stalemate is a surprise outcome of discussions reaching their year anniversary on Thursday. And while the two sides have yet to bring Canada, the third partner in NAFTA, into the latest round, the negotiators' optimistic tone could signal that Trump may be ready to extinguish at least one trade conflagration before the midterms. That would placate Republicans who have been calling for a return to stability as the U.S. and China have been slapping tariffs on each other's exports, roiling international markets and burdening American farmers.

"We're settling in for the long haul with China, so we really need to release the pressure in our backyard," said Dan Ujcz, an international trade lawyer who specializes in Canada-U.S. matters. "I think that's a driving force for the U.S.' desire to get a deal right now."

To be sure, some major controversial issues remain unresolved, including the U.S. proposal to automatically terminate the pact after five years unless all three countries agree to renew it — an idea that Canada and Mexico have both rejected outright. And for the time being, at least, Canada still remains on the outside of the current talks.

But reaching even a bare-bones agreement on NAFTA before November's elections would hand a concrete victory to Trump, who would likely point to the revamped pact as a symbol that his strong-arm tactics have worked, industry sources and experts closely following the talks say. It would also allow U.S. trade officials to clear a major task off their agenda and dedicate more time to areas where U.S. Trade Representative Robert Lighthizer in particular has wanted to focus, primarily trade issues with China.

At the same time, Mexican negotiators are also under renewed pressure to get a deal after the country elected a new leader who takes office in December and who badly wants NAFTA to be signed and off his plate before then. Mexico has pointed to Aug. 25 as the date by which it must wrap up at least a preliminary agreement for outgoing President Enrique Peña Nieto to be able to sign the deal before he leaves office.

Those domestic politics have put Guajardo in a tough position, as he tries to appease the incoming Mexican administration and quickly wrap up a deal while still standing up firmly against some U.S. proposals that Mexico has repeatedly derided as unworkable.

"They're under a lot of pressure to just come up with anything, whatever it is," one source close to the talks said, requesting anonymity to speak freely about internal deliberations. "What I've been hearing from other Mexican parties is that Ildefonso was sort of distraught and frazzled by the fact that he's being asked to wrap it up, and that of course means making concessions that he wasn't ready to make. It lowers his negotiating potential."

Against that backdrop, sources close to the talks say Mexico appears to be poised to accept large swaths of a U.S. proposal involving the rules that govern North American-produced automobiles and dictate what percentage of each car must be sourced from within a NAFTA country to qualify for reduced duties under the agreement.

At the U.S.' urging, Mexico looks likely to agree to an increase in the overall amount of North American-sourced content that must be included in each automobile, and will accept a requirement that a certain percentage of each car must be produced by workers earning at least \$16 an hour, sources say. Mexico is also poised to accept mandates that a certain percentage of the steel, aluminum and plastic included in each vehicle is also sourced from a NAFTA country.

In exchange, the United States would be prepared to give up a controversial proposal that would have made it easier for American fruit and vegetable growers to make the case that Mexico is selling produce at unfairly low prices when crops are in season in a particular region, two sources with knowledge of the trade-off told POLITICO. The U.S. would also submit to Mexico's demand to leave a chapter largely untouched that contains rules on disputes between governments, one of the sources said.

"Essentially, there is a deal," one of the sources said.

At the same time, however, other major aspects of the renegotiation remain unfinished. Chief among them is the so-called sunset clause that the U.S. wants, which would end the pact after five years unless the parties opt to continue it. Several sources close to the talks say the sunset clause has hardly been discussed during the latest set of meetings between the U.S. and Mexico, and the two countries still remain on opposite sides.

And Canada will need to come to the table for a deal to be finalized. Officials from all three countries have sought to emphasize that the U.S.-Mexico engagement is not a sign of ill will toward Canada but is instead an attempt to work out bilateral issues before bringing Ottawa back into the fold.

But negotiators had expected that Washington and Mexico City would have made enough progress by now for Canadian Foreign Minister Chrystia Freeland to have joined the meetings in Washington. The more time that passes, the more likely it is that the strategy to put off a trilateral meeting could backfire, a source close to the talks said.

"Yes, there's U.S.-Mexico momentum — that's a positive message and great from Mexico's point of view," the source said. "But the longer it takes to bring in Canada, the less likely this is going to get done in the short term."

Still, any incremental progress, or even the fact that the U.S. and Mexico are continuing to engage in good-faith negotiations and regular meetings, has offered a signal of some hope to U.S. farmers, consumers and industry groups who have been worn out by months of uncertainty and pummeled by retaliatory tariffs imposed over the past few months.

Retailers and business groups are reluctant to throw their support at this point behind a deal that is still unfinished, particularly when a number of proposals that some have termed poison pills remain on the table.

But at the same time, "I think what all of our members want, what the business industry at large wants, is certainty," said Vanessa Sciarra, a former U.S. trade negotiator who now works as a vice president at the National Foreign Trade Council. "Anything that provides for greater clarity on trade relationships, particularly with Mexico and Canada ... would be helpful."

Adam Behsudi contributed to this report.

Subject: Afternoon Energy: PJM seeks capacity auction delay — Former EPA staff slam 'secret science' proposal — More comments on cost-benefit

By David Beavers and Garrett Ross | 08/14/2018 04:03 PM EDT

With help from Emily Holden, Annie Snider and Daniel Lippman

PJM SEEKS CAPACITY AUCTION DELAY: PJM Interconnection filed a request with FERC today to delay its next capacity auction from May to August 2019, Pro's Darius Dixon reports. The move was prompted by FERC's June order declaring the market was unjust and unreasonable, and it didn't come as a surprise, since that order said such a delay was possible.

"We recognize that modifying the PJM capacity market as discussed herein would be a significant undertaking and that the next Base Residual Auction is scheduled to occur in May 2019. Accordingly, we note that PJM may file requests for waiver or other relief, as appropriate," the June 29 order states.

PJM must draft new rules that will need to be approved and potentially revised by FERC early next year. Read more here.

Welcome to Afternoon Energy! We're your hosts Garrett Ross and David Beavers. Send suggestions, news and tips to gross@politico.com, dbeavers@politico.com, mdaily@politico.com and njuliano@politico.com, and keep up with us on Twitter at [@garrett_ross](https://twitter.com/garrett_ross), [@davidabeavers](https://twitter.com/davidabeavers), [@dailym1](https://twitter.com/dailym1), [@nickjuliano](https://twitter.com/nickjuliano), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

FORMER EPA STAFF SLAM 'SECRET SCIENCE' PROPOSAL: The Environmental Protection Network, a group launched in January 2017 by former EPA staff, submitted comments to the agency today blasting the agency's proposal to restrict the use of scientific studies that contain non-publicly available data. "The impacts of this devastating proposal, should it be finalized, will fall on the most vulnerable in our country, including children (whose lungs are only just developing), asthma sufferers, older Americans, and people with heart and lung disease," the group writes. "When a federal agency proposes to make such massive changes, it has a legal obligation to explain clearly the purpose of the changes and justify them, following well-established legal standards. This proposal completely fails to make the case for why the changes are needed."

MORE COMMENTS ON COST-BENEFIT: A coalition of 13 state attorneys general and state environmental agency officials led by New York AG Barbara Underwood submitted a comment letter urging the EPA to abandon its proposed changes to how it performs cost-benefit analyses of regulations before Monday's comment deadline. In its comments, the group says the agency's notice of proposed rulemaking "signals yet another unsupported attempt to undermine EPA's mission to protect public health and the environment."

EXPANDING THE BATTLEFIELD: With the state pushing back on the Trump administration's auto emissions rollbacks, California industry leaders are beginning to plot new ways to curb environmental impacts, Bloomberg News reports. "'We're looking at other ways to reduce pollution by regulating either the purchase or use of cars and light trucks that don't involve setting standards on the vehicles themselves,' Mary Nichols, the head of the California Air Resources Board, said in an interview. 'That could be a whole bunch of things. Limits

on registrations. Fees and taxes.' The only impediment would be convincing residents to foot the bill. So far, 60 percent of the state's likely voters think emissions standards should go higher, even though most expect that fighting climate change will boost gasoline prices, according to a Public Policy Institute of California poll released last month. Just over half say they'd pay more for electricity from renewable sources." Read more [here](#).

IN 5 YEARS TIME: Even though the past four years have been the warmest ever recorded, a new study released today is projecting that the next five years will be "anomalously warm," The Washington Post reports. "'What we found is that for the next five years or so, there is a high likelihood of an anomalously warm climate compared to anomalously cold,' said Florian Sevellec, a scientist at France's National Center for Scientific Research, who co-authored the study published in Nature Communications with Sybren Drijfhout of the University of Southampton in the United Kingdom. ... It's important to underscore that the result is a forecast based on probability — not a certain outcome." The study forecast a 58 percent chance that the Earth's overall temperature from 2018 through 2022 will be "anomalously warm," and a 69 percent chance that the Earth's oceans will be. That also includes "a dramatic increase of up to 400 percent for an extreme warm event" during 2018 to 2022, it said. Read more [here](#).

SWAMP WATCH: American Ethane Company [terminated](#) its lobbying contract with Bold Strategies, following a [report](#) from E&E News that the company is nearly 90 percent owned by a trio of Russian oligarchs, including one with ties to alleged spy Mariia Butina. E&E made the discovery after Bold Strategies revised its lobbying forms to show American Ethane's foreign owners. Bold Strategies did not return a separate request for comment from POLITICO.

PJM seeks 3-month delay to capacity auction [Back](#)

By Darius Dixon | 08/14/2018 12:50 PM EDT

PJM Interconnection is asking FERC for permission for a three-month delay its next capacity auction to August 2019 in light of FERC's June order declaring the market was unjust and unreasonable, according to a [filing today](#).

The one-time delay from May to August is warranted, PJM says, because of the "unique circumstances" created by FERC's order. PJM now faces a short window of time to draft new rules that must be approved and potentially revised by FERC by early January.

PJM said that the delay would push back the need for a final order from FERC until March 15.

Today's request does not come as a surprise since FERC's order said that such a delay was possible.

"We recognize that modifying the PJM capacity market as discussed herein would be a significant undertaking and that the next Base Residual Auction is scheduled to occur in May 2019. Accordingly, we note that PJM may file requests for waiver or other relief, as appropriate," the June 29 [order states](#).

That order was FERC's most significant move into a long-simmering conflict over state-level energy incentives for nuclear power and renewable energy, and it was approved by FERC, on a 3-2 vote.

WHAT'S NEXT: Initial responses from PJM and others to FERC order are due in two weeks. However, the Organization of PJM States has requested an extension that PJM itself endorsed.

EPA's deputy chief of staff to depart [Back](#)

By Emily Holden and Alex Guillén | 08/09/2018 09:09 AM EDT

Byron Brown, EPA's deputy chief of staff for policy, will depart the agency Friday.

Brown was among the EPA staffers who had formerly worked for Sen. [Jim Inhofe](#) (R-Okla.), a list that also includes acting Administrator Andrew Wheeler and chief of staff Ryan Jackson. Brown previously was senior counsel on the Senate Environment and Public Works Committee.

At EPA, Brown worked on the rollback of Obama-era coal ash regulations and on efforts to streamline permitting.

"Byron has been with EPA since day one of the Trump Administration and has been an invaluable member of our staff. We wish him the best on his future endeavors and thank him for his dedication and hard work implementing President Trump's agenda." Wheeler said in a statement.

It was Brown's third stint at the agency, according to his LinkedIn profile. His wife works as a lobbyist for oil and gas company Hess Corporation.

Trump campaign files for arbitration against Omarosa [Back](#)

By Rebecca Morin | 08/14/2018 11:51 AM EDT

Donald Trump's presidential campaign has filed for arbitration proceedings against former White House aide Omarosa Manigault Newman after she released a tell-all book from her time on the president's 2016 campaign and in the White House.

The move is the latest escalation between the former "Apprentice" star and the president, who has labeled Manigault Newman "wacky," "deranged" and a "dog" in posts to his Twitter account this week.

"Donald J. Trump for President, Inc. has filed an arbitration against Omarosa Manigault-Newman, with the American Arbitration Association in New York City, for breach of her 2016 confidentiality agreement with the Trump Campaign," a campaign official said.

While Manigault Newman has said that she refused to sign the White House's non-disclosure agreement, she did acknowledge during an interview with PBS on Monday that she signed one for Trump's 2016 presidential campaign and another one in 2003 when she was on "The Apprentice."

Those other NDAs have been described as more restrictive than the White House agreement, with potentially more legal heft.

A copy of the Trump campaign NDA that was obtained by POLITICO included a non-disparagement clause to ensure staffers did not release information, confidential or detrimental, about Trump, his business, his family members including grandchildren, and even family members' companies.

Trump tweeted Monday that Manigault Newman had signed a non-disclosure agreement, but did not specify if it was for the White House or his campaign.

During an interview on MSNBC on Tuesday afternoon, Manigault Newman said she does not believe she violated her 2016 agreement.

"I don't believe that I have violated, but I will leave it to the lawyers to sort that out," she said during her first interview since the arbitration move was announced. "It's interesting that he is trying to silence me, what is he trying to hide or be afraid of?"

Press secretary Sarah Huckabee Sanders said during a Tuesday press briefing that she would not disclose whether she signed an NDA but said it was common practice to have employees sign those type of agreements.

"I'm not going to get into the back and forth on who has signed an NDA here at the White House," she said. "I can tell you that it's common in a lot of places for employees to sign NDAs, including in government, particularly anyone with a security clearance."

When later pressed that the act is common for corporations rather than for government, Sanders said the White House's policy is consistent with past administrations.

"It's also, despite contrary opinion, it's actually very normal, and every administration prior to the Trump administration has had NDAs, particularly specific for anyone that had a security clearance," she later added.

It is illegal for those with security clearances to share classified information, but they typically would not sign an NDA.

Manigault Newman has made several media appearances this week to promote her new book "Unhinged," in which she claims that Trump regularly used racial epithets and is a "racist, misogynist and bigot."

The president has countered Manigault Newman's claims with attacks launched via Twitter as well as from his cable-news surrogates,

"When you give a crazed, crying lowlife a break, and give her a job at the White House, I guess it just didn't work out. Good work by General Kelly for quickly firing that dog!" Trump tweeted Tuesday morning.

Manigault Newman continued to push back on Tuesday afternoon, saying that she will continue to blow the whistle on Trump to expose him as "the misogynist and bigot that he is."

She added that she had been interviewed by special counsel Robert Mueller for his Russia probe, but would not provide any details of what she was asked.

"I will say that there is a lot of corruption that went on in both the campaign and the White House, and I'm gonna blow the whistle on all of it," she said.

In a Tuesday interview with "CBS This Morning," the former reality star released a recording she took of herself and campaign officials Katrina Pierson and Lynne Patton discussing during the 2016 campaign how to respond to an inappropriate comment Trump had said, but did not specify what words he had used.

Manigault Newman said on CBS, which aired the recording Tuesday morning, that the three staffers were discussing an alleged recording of Trump using the n-word from his time hosting NBC's "The Apprentice."

Pierson said in a statement that the rumors about the alleged tape were "always being circulated by Omarosa and her alone."

"In her secret tape-recording of me, it was one of many times that I would placate Omarosa to move the discussion along because I was weary of her obsession over this alleged tape," she continued. "That discussion was nothing other than sifting through unconfirmed rumors regarding the Apprentice tape and the transcript supports my statement. Omarosa fabricated the story by conflating numerous discussions."

The president also pushed back on Manigault Newman's claim Monday evening, writing online that "there are NO TAPES of the Apprentice where I used such a terrible and disgusting word."

Sanders said on Tuesday, however, that she could not "guarantee" whether Trump had actually used that word and that "the president addressed this question directly."

"I can tell you that I've never heard it," she said. "I can also tell you that if myself or the people in this building serving this country every single day doing our very best to help people all across this country and make it better, if at any point we felt that the president was who some of his critics claim him to be, we certainly wouldn't be here."

Earlier this week, Manigault Newman also released a recording taken in the White House Situation Room of chief of staff John Kelly firing her. She also revealed a recording of Trump expressing his surprise that Manigault Newman was leaving the White House, though the former White House aide has contended that Trump knew that she going to be fired.

Manigault Newman was fired from the White House in December 2017 after a tumultuous tenure during which she served as the administration's highest-profile liaison to the African-American community.

During Tuesday's briefing, Sanders said that Trump did talk to Kelly about giving him full authority to let Manigault Newman go if they could not get along.

"The president wanted to give her a chance, and he made clear when General Kelly came on and he voiced concerns that this individual didn't have the best interests of the White House and the president and the country at heart, the president said do what you can to get along," Sanders said. "And if you can't, he gave him full authority to carry out the decision to let her go."

Annie Karni and Andrew Restuccia contributed to this report.

Wisconsin Dems jump at chance to finally beat Walker [Back](#)

By Daniel Strauss | 08/14/2018 05:14 AM EDT

Wisconsin Democrats on Tuesday will choose from a field that once swelled to over a dozen candidates — an array of businessmen, state legislators, the mayor of Wisconsin's most liberal city and the chief of the state firefighters union — to realize their long-elusive goal of defeating Republican Gov. Scott Walker.

But the clear frontrunner is state education superintendent Tony Evers, a 66-year-old white man who stands out in a year when Democrats have put forward high numbers of women, young people and first-time candidates for office. What Evers lacks in sizzle, Democrats are hoping he compensates for with a record of clashes with Walker over education that could energize his party and deny the Republican governor a third term.

After years of doing battle with unions and pushing conservative legislation, Walker may be the one Republican who gets Wisconsin Democrats as agitated as President Donald Trump does. And that, say some Democratic officials in the state, might be enough in a year like this.

"If there's a rub on Tony Evers, it might be that he's too nice," said Joe Wineke, a former Wisconsin Democratic Party chairman. "But I'm not convinced Midwestern nice is going to be a bad thing in the year of Trump."

While talk of rolling back Walker's accomplishments has dominated the Democratic primary, Republicans have already sought to define the terms of the campaign. The Republican Party of Wisconsin has already focused attack ads on four candidates: Evers, former Wisconsin Democratic Party chairman Matt Flynn, former state Rep. Kelda Roys, and Professional Firefighters of Wisconsin President Mahlon Mitchell.

"I do think this is our big opportunity. This is a favorable year for Democrats. It's a year in which women candidates and women voters are more energized and are being more successful than ever in modern political history," said Roys.

The Democratic primary has hardly been the bareknuckle brawl one might expect from a big field in a divided state. But it has split money and endorsements over a broad range of candidates, leading the Democratic Governors Association to task an operative with building fundraising infrastructure for the eventual primary winner, to assure the nominee is able to compete with Walker's campaign machine. That has given an edge to Evers, who has been elected statewide three times since 2009.

"We had a gubernatorial primary that really didn't ever take off, and so for that reason Evers is a perfectly acceptable statewide figure who's probably going to win," said Democratic pollster Paul Maslin.

Evers has also embodied the anti-Walker mood, bashing Walker as "anti-education" and vowing to bring back funding for after school program and kindergarten in the next 2019 and 2021 budget.

"To beat Scott Walker we need a stronger vision for our future. Instead of investing a billion dollars in handouts to companies like Foxconn, I'm going to invest in our kids and our workers," Evers said in an ad. The narrator adds: "What's best for our kids is best for our state."

The biggest criticism aimed at Evers came from Matt Flynn, another primary candidate, who's argued that Evers, along with Mitchell and Roys, have run ineffective campaigns and would lose decisively against Walker in a general election matchup. Flynn has accused Evers of being a "politically naïve" candidate.

Mitchell, the labor leader, has rallied most of the other major Wisconsin unions to his side. He has run as a pragmatic liberal candidate who, as an African American, can appeal to minorities in the state and rally labor unions like no other candidate in the field.

But Roys, a former state representative, has highlighted her appeal to female voters with endorsements from Sen. Kirsten Gillibrand (D-N.Y.) and her experience as the executive director of the NARAL Pro-Choice Wisconsin. Roys ran a celebrated primary ad that featured her breastfeeding her child.

As the Democrats have scrapped for votes within their party, Walker has been preparing for the sprint to the finish in the general election, amassing \$4.8 million already. Since it's never been completely clear who he will face in the general election, Walker and his team have worked to highlight his policy accomplishments, framing him as an education-focused governor, while also bashing as many of the Democratic candidates as possible.

"Scott Walker has delivered results and traveled the state tirelessly to share his vision with the people of Wisconsin, and now he's built a campaign to win," Walker senior adviser Brian Reisinger said in a statement. "Tens of millions of dollars in big government special interest money is lining up to distort his record of reform, but the governor will continue to offer a conservative model for others by running on his accomplishments and vision to keep Wisconsin working for generations to come."

Once there's a Democratic nominee, the contrast between Walker and the Democrat will crystallize, said Republican strategist Mark Graul.

"The governor has been in sort of a vacuum. Either you're for Scott Walker or you're not for Scott Walker. And after Tuesday I think it'll be 'either you're for Scott Walker or whether it be Evers or Roys or Mitchell,'" Graul said. "So there will be a clear contrast of what people's choices are going to be in November."

Handler of alleged spy Butina tied to suspicious U.S.-Russia exchange program [Back](#)

By Josh Meyer | 08/14/2018 05:18 AM EDT

Six years before he was exposed for allegedly managing a covert agent on U.S. soil, the Russian politician Alexander Torshin hosted young Americans visiting Moscow as part of two cultural exchange programs, including one that has drawn the FBI's scrutiny.

The gregarious Torshin regularly hosted U.S. visitors in the ornate chambers of Russia's parliament, where he gushed about his love of guns, bourbon and America.

"He was friendly, traveled to the U.S. often and enjoyed sharing his experiences of visiting small-town America," recalls one participant who went on two trips sponsored by the Russian government.

A [photo](#) posted on Facebook by one of the exchange programs shows several young visitors, including the student body president of Princeton University, meeting with Torshin over tea and cookies. (The FBI is not known to have investigated that program. None of the students, or Torshin, has been accused of wrongdoing.)

It wasn't until years later that Torshin would emerge as a major figure in the Trump-Russia saga — a man whom federal prosecutors say oversaw the accused Russian operative Mariia Butina's efforts to infiltrate Republican Party circles, including the National Rifle Association, to push them toward more pro-Russia policies. Torshin himself has attended annual NRA meetings dating back to at least 2011.

Many of the first-class student exchanges were officially organized by the Russian Cultural Center in Washington, D.C., and included top-flight meals, airfare and hotel accommodations. But the center's exchange programs abruptly stopped in fall 2013, after FBI counterintelligence agents urgently located dozens of trip participants and told them the program was an elaborate cover for a Washington-based Russian spy recruiting effort.

The agents said the Russians had prepared dossiers on some of the most promising participants, two of the former students told POLITICO. They pressed for every detail of the program, including whom the students met, where they went and what they discussed. They also said that Russian government official who oversaw the program — from a mansion about a mile and a half from the White House — was a suspected spy and would be kicked out of the U.S. soon.

"They said they had a great degree of confidence that the trips were part of an effort to spot and assess future intelligence assets," the participant, a former student government leader and Russian-language student, said of the three FBI agents who questioned him for more than an hour. "They told us it was standard Russian spycraft."

The FBI's interest in that cultural exchange program for young American political and business leaders was reported at the time, including a single, passing reference to Torshin. But the details of his involvement in the exchanges is a new revelation, as is his participation in the second exchange program for student body presidents at American universities dating back to at least 2010.

The new detail fills out the picture of the Russian lawmaker — now deputy governor of his country's central bank — who is a longtime close ally of Russian President Vladimir Putin. It shows that Torshin's collaboration with Butina was not his first connection to a Kremlin-linked effort to recruit Americans, and underscores that covert Russian spy operations in the U.S. have been underway for years, well before Trump launched his 2016 presidential bid.

While Torshin is not identified by name in the Butina court filings, several sources close to the investigation told POLITICO he is the Russian official described as directing Butina's alleged efforts to establish "unofficial lines of communications with U.S. politicians and political organizations" and "to send reports, seek direction, and receive orders in furtherance of the conspiracy" from Moscow.

His name has also shown up in investigations by Congress, the Federal Election Commission and, reportedly, special counsel Robert Mueller, into Russia's attempts to interfere with the 2016 presidential election. Those include examinations of possible attempts to establish a back channel between Trump and Putin, as well as possible efforts to illegally funnel Russian campaign contributions to Trump.

But his meetings with American students earlier in the decade, coupled with the government's recent allegations in the Butina case, suggest that Torshin may be a more significant Kremlin operative, and for a longer time, than was previously understood.

"All of that needs to be explored now through the lens that Torshin is a handler for Russian intelligence operatives," said Max Bergmann, a State Department senior international security adviser in the Obama administration. "The suspicion has to be raised, given what is laid out in [the Butina] indictment, that this wasn't his first rodeo."

Torshin did not respond to requests for an interview, but has denied any wrongdoing related to the current investigations. The 29-year-old Butina, indicted by federal prosecutors in July, has pleaded not guilty to charges of acting as an illegal foreign agent — including, according to prosecutors, by using sex as a means of influence.

U.S. government Kremlinologists have tracked Torshin, 64, for years, at least since his first known visit to the U.S. in 2004.

As a rising star in Putin's United Russia Political party, Torshin became an ally of the Russian leader. Putin tapped him that same year to run a sensitive parliamentary investigation investigating the horrific terrorist siege of a school in the Russian town of Beslan; many observers considered the resulting report a whitewash that absolved Russian security forces.

By 2010, Torshin had become a leading United Russia voice in the Russian Duma, a trusted Putin aide on sensitive security issues and, most likely, a go-to ally for important missions that didn't fall under his official portfolio, according to Bergmann and other former officials.

Later that year, for instance, Torshin helped orchestrate a secret spy swap between the U.S. and Russia after the FBI arrested 10 Russian operatives who had been living undercover in America for years.

Also in 2010, Torshin met with a delegation of 15 student body presidents from American universities as part of an exchange program paid for, and sponsored by, a Russian government agency focused on "youth affairs."

Because the trip was designed to mirror a popular and high-profile congressional exchange program, the students were given a briefing by top White House and congressional Russia hands, including Michael McFaul, then the National Security Council's director for Russian affairs and later the U.S. ambassador to Russia.

On the conference call, which has not previously been reported, McFaul and others gave the students background about Russia — but also cautioned them to be on guard about unusual overtures, including from their Russian student counterparts, said one participating student who, like others interviewed for this article, spoke on the condition of anonymity because they fear the trips risk could taint their professional reputations. McFaul told POLITICO he doesn't recall the discussion, but his role in the pre-trip briefing was referenced in some university news releases at the time.

Thanks to the briefing, "we went in with our eyes open" about how, in Russia, even a friendly interest in sharing information or establishing long-term relationships, might not be what it seemed, the former student said. He added that the trip went smoothly and nothing appeared suspicious about meetings with Torshin and at least two other Putin allies connected to the current Trump-Russia saga.

The next March, Torshin met with another set of students on an exchange program organized through the same youth affairs agency, in the meeting posted on Facebook.

And the year after that, he met with older groups of young leaders sponsored by the Russian Cultural Center, according to the participant on two trips and another person who went on one exchange.

By the fall of 2013, the FBI was well into an investigation into that exchange program, and had come to believe it was a front for developing young Americans as assets, the two participants said. The D.C. chapter is just one of more than 80 Russian cultural and science centers in various countries that U.S. intelligence officials suspect of being a front for all manner of spy operations.

The cultural center trips were popular among well-connected young Washingtonians interested in spending a week in an exotic foreign country with everything, down to the visa application fee, covered by the sponsor.

But the young former student government leader, who went on two trips in 2012 and 2013, said the organizers also "recruited on their own and made the determination who to select."

"They had a specific type of person they were looking for," he said. "Future leaders."

When the FBI began contacting trip participants in late September and October of 2013, many were shocked at what the agents were telling them. The agents began by reading from a printed card with details of about what they were investigating, including how they believed Russian Cultural Center Director Yuri Zaitsev was overseeing the alleged spy recruitment operation, according to the two participants, both of whom shared details of their trips and FBI interviews with POLITICO.

The discussions were "very frank," according to one of the FBI's top counterintelligence officials at the time. The official said the agents' interviews were exhaustive, in part because Russian intelligence operatives excel at being unobtrusive and patiently laying the groundwork for relationships they hope to develop over years or even decades.

In hindsight, the second trip participant said there were indications that the group's extremely generous Russian hosts might have had ulterior motives.

During his interview, that participant told the FBI agents that he thought it was "unusual" that the group had been granted such high-level meetings, including with top-ranking officials from the Ministry of Foreign

Affairs. The agents were particularly interested in any details about those meetings, he said, "and why are these kids meeting with these super high-level people."

"It seemed like they were trying to foster the exchange in a professional and productive way," the second participant said. But, he added: "If one person out of a group of 20 becomes an asset for them, then I suppose it's worth it for them to pay the whole group for the trip."

After hearing from the FBI, some students backed out of the next scheduled trip. The former participant on two trips, who remains active in other efforts to promote U.S.-Russian relations, said he believed the FBI investigation — reported at the time by Mother Jones and the Washington Post — effectively ended the Russian Cultural Center exchange programs.

In all, the FBI believes that at least 125 people went on cultural exchange programs involving Zaitsev and the Russian Cultural Center, including grad students, non-governmental organization staffers, political aides to national and state officials and business executives. The former FBI official declined to comment on whether agents have investigated other cultural exchange programs, such as those sponsored by Moscow's youth affairs agency, that also included Torshin.

As Butina and Torshin allegedly ramped up their U.S.-based influence operation ahead of the 2016 presidential election, Butina attended numerous events at the Russian Cultural Center. She even met with the organization's director for a dinner that was caught on camera by FBI officials, as POLITICO recently reported.

That director was a suspected Russian intelligence operative just like his predecessor, Zaitsev, and also left the U.S. following FBI investigations, federal authorities allege in Butina's case. Both men denied wrongdoing.

Robert Driscoll, Butina's lawyer, scoffed at the notion that Torshin is a master spy, and said his client's connections to the Russian Cultural Center were merely social. He added that in his frequent talks with Butina, she has described Torshin as someone who genuinely has come to love America — especially Nashville, where the two attended an Alan Jackson country music concert while there for the NRA convention.

"My impression of him from knowing Mariia is that she viewed him as a mentor and as someone who was helpful to her, with her gun rights group and personally," Driscoll said. "He helped raise her profile, and she got to travel and attend different events with him."

The participant on two of the cultural trips said Torshin was especially popular with U.S. visitors, in part because he seemed most interested in small talk and sharing his tales of traveling to the far corners of the United States.

"He was always eager and happy to meet with Americans," he said.

Subject: moment to
chat?

Hi, Jahan,

I'm working on a
story looking into
concerns by the
scientific community
that the Trump

administration is marginalizing and dismissing science. The story looks at examples from across the federal government, but many of them are at the E.P.A.

What are the administrator's responses to the following questions on this? Looking for fresh reax or would welcome your pointing me to specific remarks he's made on these. Overall, interested in his remarks on the allegation that he has reduced or ignored the role of science at the agency.

- Scientists are concerned that Mr. Pruitt has made multiple public statements on climate change that are at odds with decades of research on climate change, including research by the E.P.A.'s own scientists. Mr. Pruitt has said that carbon dioxide is not a primary contributor to global warming, and that scientists don't know how much humans contribute to global warming -- both statements that have been contested by the scientific community. What's his response?

- Critics say the proposed new "secret science" rule would ultimately have the impact of reducing the amount of scientific evidence that is used to formulate regulations that affect human health. Does this concern him?

- Can he speak to the criticism that in his efforts to change the Scientific Advisory Board, he has reduced the role of academic science and replaced it with industry-funded scientists? And that even with its new composition, the SAB has proposed re-examining the scientific basis for some of his proposed rule-makings?

- Critics say Pruitt's NAAQs memo to the CASAC, which would order the committee to take economic impacts of regulations into account, is both an effort to skirt provisions of the Clean Air Act which require the committee to focus on the public health impacts of regulations, and could lead to looser pollution rules that are not based in scientific evidence on the impact of certain

pollutants on human
health.

Can you send answers
to these and give a
call to chat about the
story?

Best,

Coral

Subject: SIGNED: Strengthening Transparency in Regulatory Science

Good afternoon

Today, the Administrator signed the proposed rule "Strengthening Transparency in Regulatory Science."

This proposed regulation is intended to strengthen the transparency of EPA regulatory science. The proposed regulation provides that when EPA develops regulations, including regulations for which the public is likely to bear the cost of compliance, with regard to those scientific studies that are pivotal to the action being taken, EPA should ensure that the data underlying those are publicly available in a manner sufficient for independent validation.

In this notice, EPA solicits comment on this proposal and how it can best be promulgated and implemented in light of existing law and prior Federal policies that already require increasing public access to data and influential scientific information used to inform federal regulation.

Attached is the signed and dated proposed rule. For your convenience, please go to p. 19 for the Administrator's signature.

Please contact me if you have any questions.

Sincerely,
Laura

Subject: Honest Act

Section 6(b) of the Environmental Research, Development, and Demonstration Authorization Act of 1978 (42 U.S.C. 4363 note) is amended to read as follows:

“(b) (1) The Administrator shall not propose, finalize, or disseminate a covered action unless all scientific and technical information relied on to support such covered action is—

“(A) the best available science;

“(B) specifically identified; and

“(C) publicly available online in a manner that is sufficient for independent analysis and substantial reproduction of research results, except that any personally identifiable information, trade secrets, or commercial or financial information obtained from a person and privileged or confidential, shall be redacted prior to public availability.

“(2) The redacted information described in paragraph (1)(C) shall be disclosed to a person only after such person signs a written confidentiality agreement with the Administrator, subject to guidance to be developed by the Administrator.

“(3) Nothing in the subsection shall be construed as—

“(A) requiring the Administrator to disseminate scientific and technical information;

“(B) superseding any nondiscretionary statutory requirement; or

“(C) requiring the Administrator to repeal, reissue, or modify a regulation in effect on the date of enactment of the Honest and Open New EPA Science Treatment Act of 2017.

“(4) In this subsection—

“(A) the term ‘covered action’ means a risk, exposure, or hazard assessment, criteria document, standard, limitation, regulation, regulatory impact analysis, or guidance; and

“(B) the term ‘scientific and technical information’ includes—

“(i) materials, data, and associated protocols necessary to understand, assess, and extend conclusions;

“(ii) computer codes and models involved in the creation and analysis of such information;

“(iii) recorded factual materials; and

“(iv) detailed descriptions of how to access and use such information.

“(5) The Administrator shall carry out this subsection in a manner that does not exceed \$1,000,000 per fiscal year, to be derived from amounts otherwise authorized to be appropriated.”.

Briefing: Update on Data Transparency Guidelines
Tuesday, March 20, 2018
10:45 – 11:30am – Administrator's Office

Update

Following our last briefing, staff made edits to the draft memo and transitioned the document into a Federal Register notice for public comment. The draft notice was submitted to OMB for review last Wednesday. Staff received OMB's initial feedback on a call yesterday afternoon. An updated version, which incorporates some edits from the OMB call, is attached for your review.

Key Provisions

Next Steps

In coordination with OPA, OPE, and OCIR, we are planning a signing ceremony on April 12.

Attendees

- Ryan Jackson
- Brittany Bolen
- Richard Yamada
- Nancy Beck
- Clint Woods
- Justin Schwab

EPA Administrator Pruitt Proposes Rule To Strengthen Science Used In EPA Regulations

WASHINGTON (April 24, 2018) - Today, U.S. Environmental Protection Agency (EPA) Administrator Scott Pruitt signed a proposed rule to strengthen the science used in regulations issued by EPA. The rule will ensure that the regulatory science underlying Agency actions is fully transparent, and that underlying scientific information is publicly available in a manner sufficient for independent validation.

“The era of secret science at EPA is coming to an end,” **said EPA Administrator Scott Pruitt.** “The ability to test, authenticate, and reproduce scientific findings is vital for the integrity of rulemaking process. Americans deserve to assess the legitimacy of the science underpinning EPA decisions that may impact their lives.”

This proposed rule is in line with the scientific community’s moves toward increased data sharing to address the “replication crisis”—a growing recognition that a significant proportion of published research may not be reproducible. The proposal is consistent with data access requirements for major scientific journals like *Science*, *Nature*, and *Proceedings of the National Academy of Sciences* as well as recommendations from the Bipartisan Policy Center’s *Science for Policy Project* and the Administrative Conference of the United States’ *Science in the Administrative Process Project*.

The proposed rule builds upon President Trump's executive orders on regulatory reform and energy independence:

- ✧ **Executive Order 13777**, issued in March 2017, provides that regulatory reform efforts shall attempt to identify “those regulations that rely in whole or in part on data, information, or methods that are not publicly available or that are insufficiently transparent to meet the standard of reproducibility.”
- ✧ **Executive Order 13783**, also issued in March 2017, provides that “It is the policy of the United States that necessary and appropriate environmental regulations comply with the law, are of greater benefit than cost, when permissible, achieve environmental improvements for the American people, and are developed through transparent processes that employ the best available peer-reviewed science and economics.”

Chairman Lamar Smith (R-TX): “Administrator Pruitt’s announcement ensures that data will be secret no more. For too long, the EPA has issued rules and regulations based on data that has been withheld from the American people. It’s likely that in the past, the data did not justify all regulations. Today, Administrator Pruitt rightfully is changing business as usual and putting a stop to hidden agendas.”

Senator Mike Rounds (R-SD): “Sound, reliable science is vital to helping us make important policy decisions that impact the health of American families and their livelihoods. Inserting new levels of transparency in the EPA rulemaking process will help make the agency more accountable to the American people and help everyone understand the impact of EPA’s decisions. Today’s directive is a significant step toward making sure these decisions are not made behind closed doors with information accessible only to those writing the regulations, but rather in the full view of those who will be affected.”

Dr. Edward J. Calabrese, Professor, Environmental Health Sciences, University of Massachusetts: “The proposal represents a major scientific step forward by recognizing the widespread occurrence of non-linear dose responses in toxicology and epidemiology for chemicals and radiation and the need to incorporate such data in the risk assessment process.”

Dr. Louis Anthony (Tony) Cox, President, Cox Associates; Member, National Academy of Engineering; and Editor-in-Chief of the Journal *Risk Analysis*: “I believe that transparency and independent reproducibility of analyses and conclusions are bedrock principles of sound science. Some commentators have expressed concerns that making the data behind policy conclusions and recommendations accessible and transparent might threaten the privacy of individuals. But this concern can be fully met by applying current privacy-protection techniques for data analysis. These techniques have been developed and used successfully for years at the Census Bureau and elsewhere. Thus, we can have the scientific benefits of accessible data while protecting individual privacy.”

Dr. Jason Scott Johnston, Director, Olin Law and Economics Program, University of Virginia School of Law: “EPA’s proposed rule, Strengthening Transparency in Regulatory Science, is badly needed “Best practice among peer-edited scientific journals is to require that data and statistical routines used in published papers be posted online and/or made publicly available. To apply the same standards to research that EPA says justify regulations affecting billions of dollars in economic activity and millions of human lives is essential for those regulations to truly be scientifically based.”

Bruno Pigott, Commissioner of the Indiana Department of Environmental Management (IDEM): “IDEM supports transparency in rulemaking. Good, sound science leads to better regulations.”

Dr. George Wolff, Principal Scientist, Air Improvement Resource, Inc., and former Chairman of EPA’s Clean Air Scientific Advisory Committee (1992 - 1996): “In the development of regulations based on environmental studies, numerous subjective assumptions and choices must be made regarding the selection of data and models that have a profound impact on the strength of any statistical associations and even whether the associations are positive or negative. The appropriateness of the assumptions and choices are not adequately evaluated in the standard peer review process. That is why it is essential that the data and models be placed in the public domain for a more rigorous evaluation by qualified experts. The proposed regulation, Strengthening Transparency in Regulatory Science, will provide an opportunity for such evaluations.”

Subject: Cooler Heads Coalition next meeting reminder and EPA's secret science reforms

The Cooler Heads Coalition will hold its May strategy meeting on Monday, 14th May, beginning at 12 noon at CEI, 1310 L Street, N. W., Seventh Floor. Please e-mail or ring me at Personal Matters / Ex. 6 with questions or agenda items.

EPA's Scientific Transparency Reforms:

EPA Administrator Scott Pruitt on 24th April announced a proposed rule to end the use of secret science (and make other science reforms) in EPA's regulatory process. The press release is [here: https://www.epa.gov/newsreleases/epa-administrator-pruitt-proposes-rule-strengthen-science-used-epa-regulations](https://www.epa.gov/newsreleases/epa-administrator-pruitt-proposes-rule-strengthen-science-used-epa-regulations). The link to the proposed rule is at <https://www.epa.gov/newsroom/proposed-rule-strengthening-transparency-regulatory-science>.

One week before Pruitt's announcement, the National Association of Scholars published an important study by David Randall and Christopher Welser on ***The Irreproducibility Crisis of Modern Science***. Here is the link: https://www.nas.org/projects/irreproducibility_report.

Pruitt deserves lots of credit and so do many people who have worked for decades for scientific transparency. I'll mention only two here: Steve Milloy of JunkScience.com and Representative Lamar Smith, Chairman of the House Science, Space, and Technology Committee. Steve, a charter member of the Cooler Heads Coalition, has ongoing coverage of the controversy at JunkScience.com. Here is Chairman Smith's statement: <https://science.house.gov/news/press-releases/smith-remarks-administrator-pruitt-s-scientific-transparency-announcement>.

The blowback from environmental pressure groups and the junk science community has been amusing to watch. They are all for transparency and reproducibility, but not for requiring it when using junk science to justify costly new rules. Here are some examples: <http://thehill.com/opinion/energy-environment/384898-epa-proposal-will-hobble-good-science-and-harm-american-families>
<https://s3.amazonaws.com/ucs-documents/science-and-democracy/secret-science-letter-4-23-2018.pdf>;

<https://www.popsoci.com/epa-transparency-public-health-data>

Here are three news stories that toe the party line:

https://www.washingtonpost.com/news/energy-environment/wp/2018/04/24/pruitt-to-unveil-controversial-transparency-rule-limiting-what-research-epa-can-use/?noredirect=on&utm_term=.29e5569ee37d

https://www.huffingtonpost.com/entry/pruitt-epa-transparency-rule-science_us_5adf44a8e4b07560f395fb16

<http://www.latimes.com/politics/la-na-pol-epa-science-20180424-story.html>

Although it isn't easy to argue against scientific transparency, the campaign against EPA's reforms is going to be intense. We will need to gear up to counter the mis-information from the environmental pressure groups and spread by the mainstream media. Angela Logomasini, my CEI colleague, does a good job in this article published on the Hill blog:

<http://thehill.com/opinion/energy-environment/385411-pruitts-rule-ending-secret-science-is-pro-science-pro-consumer>

Subject: OIRA Concluding Review of EPA NPRM entitled Strengthening Transparency in Regulatory Science

Clint: OIRA is concluding review of the attached final draft of the NPRM entitled "Strengthening Transparency in Regulatory Science" with a finding of consistent with change. Thank you for working to address interagency comments on a tight schedule. This email constitutes the "official" conclusion of our review; please upload a clean formatted version into ROCIS at your convenience tomorrow so that

we can record the conclusion of review in our recordkeeping system; you do not need to wait for this step to be completed to sign and release to the public.

Please call if you have any questions.

April 23, 2018

The Honorable E. Scott Pruitt
Administrator
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue, NW
Washington, D.C. 20460

Re: Don't Restrict EPA's Ability to Rely on Science

Dear Administrator Pruitt,

As scientists and technical experts, we urge you to cease any plans to restrict the types of science that the Environmental Protection Agency (EPA) can use in regulatory decisionmaking. EPA can only adequately protect our air and water and keep us safe from harmful chemicals if it takes full advantage of the wealth of scientific research that is available to the agency.

Recent news reports¹ suggest that you plan to adopt restrictions on research similar to those contained in two pieces of proposed legislation (the Secret Science Reform Act and the HONEST Act), which have both repeatedly failed to pass Congress for several years for good reason.² Multiple major scientific societies repeatedly came out strongly against the legislation at the time. "We urge caution in setting laws that submerge science beneath politics," they wrote.³

Proponents for these radical restrictions purport to raise two sets of concerns: reproducibility and transparency. In reality, these are phony issues that weaponize 'transparency' to facilitate political interference in science-based decisionmaking, rather than genuinely address either. The result will be policies and practices that will ignore significant risks to the health of every American.

First, many public health studies cannot be replicated, as doing so would require intentionally and unethically exposing people and the environment to harmful contaminants or recreating one-time events (such as the *Deepwater Horizon* oil spill). Second, there are multiple valid reasons why requiring the release of all data does not improve scientific integrity and could actually compromise research, including intellectual property, proprietary, and privacy concerns. Further, EPA has historically been transparent in demonstrating the scientific basis of its decisions, so the public can hold the agency accountable to establish evidence-based safeguards; any changes should be made with the full consultation with and support of the scientific community.

There are ways to improve transparency in the decisionmaking process, but restricting the use of science would improve neither transparency nor the quality of EPA decisionmaking. If fully implemented, this proposal would greatly weaken EPA's ability to comprehensively consider the scientific evidence across the full array of health effects studies. This would negatively impact EPA public protections that reduce levels of lead, harmful chemicals, and fine particle pollution, among others.

Again, we urge you to stop any plans to restrict the science that EPA can use in decision-making across the board or on any specific issue, and instead to protect the integrity of science at EPA. We stand by ready to help EPA fulfill its science-based mission to protect public health and the environment.

Sincerely,

The undersigned,
985 scientists

Hi Rosario –

As discussed, please see attached draft FR notice soliciting public comment on Proposed Guidelines for Strengthening Transparency and Reproducibility for Regulatory Science. Let me know if a call with the team would be helpful.

Thanks,

Brittany

Brittany Bolen

Subject: Morning Energy: What's happening with WOTUS — Keystone fight far from over — Wheeler to Michigan

By Kelsey Tamborrino | 08/17/2018 05:44 AM EDT

With help from Annie Snider, Ben Lefebvre and Alex Guillén

A COUNTRY DIVIDED: Which streams and wetlands are protected under the Clean Water Act? As of Thursday, the answer depends on where you're standing. After a South Carolina District Court [ruling](#) overturning the Trump administration's attempted delay of the Obama administration's Waters of the U.S. rule for failing to offer the public a proper opportunity to comment, the 2015 rule is now officially on the books in 26 states — but not in the other 24 states where other district court injunctions are in place.

"**The agencies refused to engage** in a substantive reevaluation of the definition of the 'waters of the United States' even though the legal effect of the Suspension Rule is that the definition of 'waters of the United States' ceases to be the definition under the WOTUS rule and reverts to the definition under the 1980s regulation," Judge David Norton wrote in Thursday's ruling. "An illusory opportunity to comment is no opportunity at all."

Environmental groups hailed the decision, with Jon Devine of the Natural Resources Defense Council calling it a "sharp rebuke to the Trump administration." Meanwhile, Zippy Duvall, president of the American Farm Bureau Federation, one of the fiercest critics of the Obama-era rule, called on the Trump administration to "to take immediate steps to limit the impact of this dangerous court decision."

But will it hold? The Justice Department is reviewing the decision, a spokesman said, and players on both sides broadly expect an appeal. Separately, EPA said in a statement it and the Army Corps of Engineers "will review the order as the agencies work to determine next steps." But the fate of the delay rule could ultimately become moot if the federal district judge in Texas grants a nationwide injunction request.

And don't forget, this is just the warm-up fight. The battle royale will be over the Trump administration's rule to repeal the 2015 rule, which the agency has not finalized. Geoff Gisler, the Southern Environmental Law Center attorney who brought yesterday's case on behalf of local environmental groups, argued that Thursday's South Carolina court decision has implications for that fight and "should give the agencies pause" as they move forward. "The agencies just aren't telling the public what they're doing," he argued. "What this decision said was you can't just have a comment period, it has to be a meaningful comment period."

WE MADE IT TO FRIDAY! I'm your host, Kelsey Tamborrino. Simon and Company's Jen Covino named the eight senators who formerly served as mayors: [Dianne Feinstein](#), [Cory Booker](#), [Jim Inhofe](#), [Bob Corker](#), [Bernie Sanders](#), [Tim Kaine](#), [Mike Enzi](#) and [Bob Menendez](#). For today: Who are the three current House lawmakers who previously served as ambassadors? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseyam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

FAR FROM OVER: A federal judge's order directing the State Department to conduct a supplemental environmental review for the Keystone XL pipeline's updated path through Nebraska is another setback in nearly a decade full of them for TransCanada. The order is sure to stall construction of the pipeline for months, Pro's Ben Lefebvre [reports](#). Plaintiffs in the case said the review would involve public hearings in Nebraska and consultations with Native American tribes whose land the pipeline would traverse.

Pipeline opponents are hoping to use the new review to push for a broader study of the project, Ben reports. Doug Hayes, a lawyer for the Sierra Club and one of the plaintiffs in the case, said the judge's ruling that the "entire pipeline remains interrelated and requires one [environmental review] to understand the functioning of the entire unit" could open the door for them to seek a new review for the pipeline's entire route. "If they are going back to do a supplemental environmental impact statement, our position is they would need to evaluate all the new impacts of the pipeline," Hayes said. "That would take definitely months."

WHERE'S WHEELER? Acting EPA Administrator Andrew Wheeler travels to Michigan today to discuss issues plaguing the Great Lakes and meet with GOP Rep. Tim Walberg, a member of the Energy and Commerce Committee, and officials from the Michigan Department of Natural Resources and Department of Environmental Quality.

WHEELER DELIVERS MESSAGE ON HARASSMENT: Wheeler reaffirmed EPA's policy against harassment in a memorandum sent to staff Thursday. Wheeler wrote that he expects "all individuals working at the EPA — employees, supervisors and non-employees — will not engage in or be subjected to unlawful and prohibited harassment."

MURKOWSKI: FERC NOMINEE SHOULD GO LITMUS TEST-FREE: Senate Energy Chairman Lisa Murkowski wouldn't comment on POLITICO's report that DOE's Bernard McNamee will be nominated to FERC. But the Alaska Republican said she believes that the next nominee shouldn't face a litmus test over their view of the Trump administration's efforts to prop up coal and nuclear power plants, Pro's Darius Dixon reports. "I worry that this is going to be viewed as, 'If you don't commit to voting against or voting for, then you're not going to have my support,'" Murkowski said. "That's not the way that we should be selecting commissioners for the FERC."

GET YOUR COMMENTS IN: American Petroleum Institute's Frank Macchiarola reiterated the need for Renewable Fuel Standard reform on a call with reporters Thursday outlining the group's comments for EPA's proposed biofuel blending requirements for the coming year under the RFS. "Very simply what we want is an end to this program by 2022," he said. Macchiarola said API is "willing to compromise" on certain policies like a waiver for summertime sales of E15, but only if the program will sunset by 2022. "The problem again is that the ethanol industry has been dug in to not doing anything," Macchiarola said. He added legislation is being drafted to reform the program in both chambers, but noted challenges and lengthy debate are likely ahead. Comments are due today on EPA's proposed volumes, with the final rule due to be released by Nov. 30.

— **API is also looking at the proposed plan** by EPA and the Department of Transportation to freeze fuel efficiency standards for cars and trucks. "It is a very complex proposal to a very complex program," Macchiarola said. "We will say that we appreciate the administration's relooking at CAFE in the light of changing energy market realities."

SECRET'S OUT: Thursday was the last day for comments on EPA's proposed "secret science" rule, which would ban the use of studies that don't publicly disclose all their data. Getting their thoughts in under the wire, Sens. Sheldon Whitehouse, Brian Schatz, Maggie Hassan, Jeff Merkley, Ed Markey, Tammy Duckworth, Kirsten Gillibrand, Tom Carper and Kamala Harris banded together to make their opposition known. "The proposed rule is illegal because it is arbitrary and capricious," they write, adding that "the proposed rule is illegal because it is the result of an effective delegation of rulemaking authority to private interests."

The American Chemistry Council, meanwhile, applauded the proposal in its comment Thursday. "EPA's proposal codifies an important good governance principle — that government agencies should be as transparent as possible, within the bounds of the law, about scientific information relied upon and the justifications for the significant regulatory decisions they make." Still, the trade association also highlighted that implementation of the plan would benefit from better historical context and applicability, and that greater clarity is required on key definitions and regulatory text, among other recommendations.

FIGHTING FIRE WITH A FEDERAL PLAN: The Agriculture Department released a new, aggressive approach to fighting wildfires Thursday, with proactive steps. During a bipartisan press conference, Secretary Sonny Perdue unveiled a plan that emphasizes increased collaboration with states, implementation of mapping and remote sensing tools, and management practices such as prescribed burns and timber sales, Pro's Liz Crampton reports. Though Perdue brushed aside specific questions on climate change's role, he said Interior Secretary Ryan Zinke is on board with the plan and noted further details and costs will be forthcoming from the U.S. Forest Service. "Really a lot of people ... when you talk about climate change, they want to talk about what the causes are," Perdue said. "[What] we're trying to talk about is the impact."

FERC RESTARTS PART OF PIPELINE: FERC modified a stop work order for the Mountain Valley Pipeline this week, allowing construction to restart for around 77 miles of the pipeline's West Virginia route with the exception of a 7-mile area surrounding the Weston and Gauley Bridge Turnpike Bridge Trail, MVP said Thursday. However, the company said about half of its construction workforce has been released due to continued delays. MVP said that it "remains committed to the earliest possible in-service date," though it noted that is now expected to arrive during the fourth quarter of 2019.

GREENS CALL FOR FERC REVIEW: The Southern Environmental Law Center and Appalachian Mountain Advocates petitioned the 4th U.S. Circuit Court of Appeals on Thursday to review FERC's approval of the Atlantic Coast Pipeline. The suit was filed on behalf of 13 other conservation groups. "FERC ordered the ACP construction stopped because the 4th Circuit determined that permits were issued without proper scrutiny," SELC attorney Greg Buppert said in a statement. "On the very same day, FERC rejected a rehearing request in which the conservation groups asserted that it also rushed through its decision to permit a pipeline that we don't need." The 4th Circuit last week vacated two permits issued for the project by the U.S. Fish and Wildlife Service and the National Park Service.

GREENS FILE FOIA SUIT: Environmental group Friends of the Earth filed a lawsuit Thursday against the Interior Department for lack of response to a Freedom of Information Act request. The lawsuit seeks to compel DOI to produce documents related to senior members of the department and the industries they regulate. The suit points to David Bernhardt's work as a lawyer and lobbyist for oil and gas companies and Vincent DeVito's time working as an energy industry representative. Friends of the Earth is being represented by the law firm Meyer Glitzenstein & Eubanks LLP.

AD-ING IT UP: Ahead of Wyoming's gubernatorial primaries Tuesday, a partnership between the Wyoming Wildlife Federation and Rocky Mountain Farmers Union, dubbed the Wyoming Conservation Legacy, will launch a five-figure ad campaign asking candidates to support conservation. The campaign will begin on Saturday and run through Aug. 21 with full-page print ads in the Casper Star Tribune and the Wyoming Tribune Eagle, separate radio buys on Wyoming Public Media programs, and digital ads across the state. See the ads here.

MAIL CALL! ON THE FARM: The National Biodiesel Board sent a letter to farm bill conference committee lawmakers reiterating its support for the inclusion of biodiesel programs in the five-year bill.

STAR-STUDDER SUMMIT: Attendees of the Global Climate Action Summit in San Francisco in September will hear from former White House officials, including former Vice President Al Gore and Secretary of State John Kerry. The summit announced Thursday night that new delegates will join the event, including Executive Secretary of the United Nations Framework Convention on Climate Change Patricia Espinosa and U.N. Special Envoy for Climate Action Michael Bloomberg. Actor Alec Baldwin and chimpanzee expert Jane Goodall will also attend.

GO NUCLEAR: The American Nuclear Society this week launched a nuclear science educational program for middle schoolers that covers topics like fission and fusion, and detecting radiation. The "Navigating Nuclear:"

Energizing Our World" program is aligned with the Next Generation Science Standards framework, which provides an evidence-based foundation for scientific research.

MOVER, SHAKERS: Jack Cramton, policy adviser for Sen. Bill Cassidy (R-La.), will start Monday as a legislative affairs adviser at the Department of Energy's Congressional and Intergovernmental Affairs Office.

QUICK HITS

- "U.S. energy chief applauds Mexico's plan to end fuel imports," Reuters.

Stories from POLITICO Pro

Judge restores WOTUS rule in 26 states Back

By Alex Guillén | 08/16/2018 03:20 PM EDT

A federal judge today ruled that the Trump administration violated administrative legal requirements when it delayed the start of the Obama administration's Waters of the U.S. rule by two years — a move that means the rule will now go into effect for about half the country.

The judge said EPA and the Army Corps of Engineers had unlawfully declined to consider any comments addressing substantive issues related to WOTUS or an earlier 1982 version when it proposed delaying the rule to give the agencies more time to repeal and replace it.

That was a fatal flaw, ruled Judge David Norton of the U.S. District Court for South Carolina, a George H.W. Bush appointee. Delaying the WOTUS rule has the effect of reverting to the 1982 rule, he wrote.

Norton's injunction means the Obama-era rule will take effect in 26 states. The other 24 are covered by two different injunctions, one issued to 13 states in 2013 and one issued to another 11 states in June.

However, WOTUS may be blocked nationwide again if the rule's opponents get their way. In another WOTUS lawsuit in a federal court in Texas, three states in February asked for a nationwide injunction of WOTUS. That court has yet to decide on the matter.

WHAT'S NEXT: The Trump administration is working to finalize its repeal of the Obama WOTUS rule. And EPA and the Corps are expected to propose a replacement rule in the near future.

Montana ruling could set back Keystone XL for months [Back](#)

By Ben Lefebvre | 08/16/2018 04:37 PM EDT

The fight over the Keystone XL pipeline isn't over yet.

District Court Judge Brian Morris' partial order that the State Department must conduct a supplemental environmental review to account for the pipeline's new path through Nebraska is another setback for developer TransCanada that's likely to delay construction of the nearly decade-old project by at least several months.

The order was a response to Nebraska regulators' approval in November 2017 of a route for the 830,000 barrel-a-day pipeline through the state that TransCanada had not proposed. The original environmental assessment the Trump administration used to approve Keystone XL earlier that year — a review conducted during the Obama administration — only considered a different route that TransCanada had planned for the pipeline.

The new route through Nebraska would cross through five counties that weren't included in the State Department's original environmental review, Morris noted in his order, meaning it would cross different waterways and require an additional pump station, .

Pipeline opponents say they hope to use Wednesday's ruling to push for a new broader study of the project.

Doug Hayes, a lawyer for the Sierra Club, one of the plaintiffs in the case, told POLITICO that Judge Morris' statement in his ruling that the "entire pipeline remains interrelated and requires one [environmental review] to understand the functioning of the entire unit" could open the door for them to seek a new review for the pipeline's entire route through the U.S.

"If they are going back to do a supplemental environmental impact statement, our position is they would need to evaluate all the new impacts of the pipeline," Hayes said. "That would take definitely months."

Jane Kleeb, who has long fought the pipeline and is now chairwoman of the Nebraska Democratic Party, said she thought process would drag out even longer.

"We think it buys us a year," she told POLITICO. "We just think there's a lot of significant hurdles in front of them."

Plaintiffs in the case said a new review would entail holding public hearings in Nebraska and consulting with Native American tribes whose land the pipeline would traverse.

Environmental groups have argued the pipeline posed a special risk because of the nature of the heavy oil it would transport, and that it would increase global carbon emissions. The Obama administration quashed the project in 2015, only to see their decision reversed when President Donald Trump took office a year and a half later.

A TransCanada spokesman declined to comment pending the company's review of the judge's decision.

Russ Girling, the company's chief executive officer, said during a call with investors earlier this month that the company hoped to make a final decision on whether to build the pipeline later this year or in early 2019. If approved, construction could start during the first quarter of 2019, Girling added.

A State Department official was not immediately available to comment.

Keystone XL also faces a test in Nebraska Supreme Court, where a lawsuit filed by environmental groups and state landowners challenges Nebraska regulators' approval of a route that TransCanada never formally requested. Hearings in that case are expected to start in October.

TransCanada is also waiting for several permits from federal agencies. Interior's Bureau of Land Management must issue right-of-way permits to cross federal land in Montana, and the Army Corp of Engineers must approve the pipeline's path over several waterways across the country.

Sources: DOE's McNamee to get FERC nod [Back](#)

By Eric Wolff and Darius Dixon | 08/08/2018 04:07 PM EDT

The White House plans to nominate Energy Department official Bernard McNamee to fill the FERC leadership seat being vacated by departing Commissioner Rob Powelson, three sources familiar with discussions tell POLITICO.

McNamee helped roll out Energy Secretary Rick Perry's proposal last year to save struggling coal and nuclear power plants — an issue that sources have said served as a key litmus test for Trump administration officials evaluating a replacement for Powelson, who is [set to resign](#) Friday.

FERC in January unanimously voted down that plan, which sought to create special payments for power plants capable of holding 90 days of fuel on-site. But the administration has been considering additional options such as invoking rarely used emergency powers to force power plants to run, which would potentially give McNamee a chance to provide the pivotal vote on the subsequent rates and rules as a commissioner.

It is unclear when President Donald Trump would formally nominate McNamee, and the vetting process still seems to be underway. It would likely take the Senate several months to confirm him, a process that would start with hearings at the Energy and Natural Resources Committee.

Neither the White House nor DOE immediately responded to requests for comment Wednesday.

McNamee, who runs the DOE's Office of Policy, has been in and out of the agency under Trump. He was deputy general counsel for energy policy last year when he worked on Perry's ill-fated proposal to FERC. In February, he left DOE for a senior post with the Texas Public Policy Foundation, a conservative think tank [with ties to Perry](#), before returning to DOE in May.

Before joining the Trump administration, McNamee previously worked at McGuireWoods, as chief of staff to Texas Attorney General Ken Paxton and as an aide to Sen. [Ted Cruz](#) (R-Texas).

Murkowski: Next FERC nominee should be free of litmus tests [Back](#)

By Darius Dixon | 08/16/2018 05:38 PM EDT

Alaska GOP Sen. [Lisa Murkowski](#) today declined to comment on POLITICO's [report](#) that DOE's Bernard McNamee would be nominated to FERC, but said she believes that the next nominee shouldn't face a litmus test over their view of the Trump administration's efforts to prop up coal and nuclear power plants.

"I worry that this is going to be viewed as 'If you don't commit to voting against or voting for, then you're not going to have my support,'" Murkowski, who chairs the Senate Energy and Natural Resources Committee, told POLITICO, referring to the administration's efforts to stave off coal retirements by potentially issuing emergency orders. "That's not the way that we should be selecting commissioners for the FERC."

Trump will want someone fairly aligned with the administration, she said, though she added that FERC came to the "right decision" in rejecting the Energy Department's controversial push to create special market payments for coal and nuclear plants last year. Still, she hoped that FERC's independence would be respected and that Democrats won't be reflexively opposed to the White House nominee in the way that they have been for Supreme Court nominee Brett Kavanaugh.

"A seat on the FERC is different than being a deputy secretary of Energy or Labor or whatever. Again, this is an independent regulatory agency that has a very different mission," she said. "The mission is not whatever the White House says it is. It is a very specific, statutory mission and so you want somebody who is going to be true to that. My hope is that the White House picks somebody who can demonstrate that they will be true to that."

USDA unveils plan for fighting wildfires [Back](#)

By Liz Crampton | 08/16/2018 03:00 PM EDT

USDA said today it's embarking on a new, aggressive approach to combat wildfires by taking preventative steps like working more with states and upping use of forest management tools.

Department officials at a press conference unveiled a 22-page plan that emphasizes increased collaboration with states, implementation of mapping and remote sensing tools, and management practices such as prescribed burns and timber sales.

Further details and costs of the initiative will be forthcoming after the U.S. Forest Service and other agencies hold discussions with state partners, USDA Secretary Sonny Perdue said. He added that Interior Secretary Ryan Zinke is on board, although he was not in attendance.

The plan comes as the West is enduring yet another brutal wildfire season after 2017 ranked as the most expensive year for wildfires. Federal agencies last year spent \$2.9 billion to suppress wildfires across the country, according to USDA.

"Today to truly protect our forest and communities, we must increase the size of our projects and access larger landscapes across boundaries," Perdue said. "Frankly we cannot do it ourselves. It's got to be done in the shared stewardship of state and local communities."

Perdue was joined by interim Chief of the U.S. Forest Service Vicki Christiansen and Sens. [Maria Cantwell](#) (D-Wash.), [Lisa Murkowski](#) (R-Alaska), [Ron Wyden](#) (D-Ore.) and [Steve Daines](#) (D-Mont.).

Subject: Morning Energy: Trump's not-so simple math — Judge orders update of Keystone XL study — States' rights get tricky over water

By Kelsey Tamborrino | 08/16/2018 05:43 AM EDT

With help from Ben Lefebvre and Annie Snider

A NUMBERS GAME: The White House's plan to rewrite the Obama administration's cornerstone climate rule for power plants may be based on some fuzzy math, setting up a potentially brutal court battle for the Justice Department. The legally risky strategy, POLITICO's Alex Guillén and Emily Holden report, calls for redoing the calculations of how much the rule would cost and who would benefit.

EPA's proposed replacement plan is expected to be unveiled any day now and will likely downplay a key feature of the Obama-era greenhouse rule: the money saved by using less electricity. Some expect EPA will also count only a fraction of the improvements in public health from reduced smog and soot pollution, Alex and Emily report, and it won't consider any benefits from slowing climate change outside the U.S.

In doing so, President Donald Trump's EPA will argue that the Obama-era rule had higher costs and fewer benefits than previously stated, a change to help improve the comparison when it unveils its own proposal. The Obama administration had estimated that the benefits from its rule would outstrip the costs by \$26 billion to \$45 billion by 2030, though supporters of that version say those net benefits could be even higher now.

In fact, math could become vital to the success or failure of several of Trump's rules. Critics say similarly fuzzy math underlies other Trump administration proposals to reverse or stymie action on climate change, such as a recent plan by EPA and the Department of Transportation to halt a planned tightening of fuel efficiency standards for cars and trucks. "They are cooking the books on technical analysis to try to justify preconceived conclusions that these regulations are bad," said David Doniger, senior strategic director of the Natural Resources Defense Council's climate program who was influential in the Obama EPA's crafting of the original rule. Read more.

GOOD THURSDAY MORNING! I'm your host, Kelsey Tamborrino. Many of you knew, but ClearView Energy Partners' Mitch Huber was the first to correctly answer that it's Loretta and Linda Sanchez who were the first and only sisters to serve simultaneously in Congress. For today: How many current senators are also former mayors? Bonus points if you can name them. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

DO THAT AGAIN: The Trump administration was ordered Wednesday to update an environmental study of the Keystone XL pipeline despite its contention the alternative route picked last year by Nebraska regulators didn't require an updated environmental impact statement. Instead, Judge Brian Morris of the U.S. District Court for Montana ordered the State Department to go back to its 2014 EIS to take into account the new route, Alex reports for Pros. Morris said the State Department still has a "meaningful opportunity to evaluate" the alternative route that was picked in Nebraska. However, he declined environmentalists' request that Trump's permit be vacated.

STATES' RIGHTS GET TRICKY OVER WATER: The roiling debate over states' right to halt development projects over their water quality effects heads to the Senate Environment and Public Works Committee today. The panel will hold a legislative hearing on a bill from Chairman John Barrasso, S. 3303 (115), the Water Quality Certification Improvement Act of 2018. The measure would limit states' authority under Section 401 of the Clean Water Act, which requires states to certify that projects won't harm their water quality standards before the federal government issues a permit. In recent years a handful of Democratic-led states have used that authority to block natural gas pipelines. Republican Maryland Gov. Larry Hogan is also using the authority to try to force Exelon Corp. to clean up nutrient pollution flowing through one of its dams that harms the Chesapeake Bay.

GOP lawmakers have backed earlier efforts to limit or remove the authority, including in this year's House Appropriations bill, House and Senate energy legislation and standalone bills. But the Western Governors Association, which represents a number of Republican governors, has come out in opposition to reining in states' authority, and the Environmental Council of the States warned Wednesday that such moves could have unintended consequences. **If you go:** The hearing begins at 10 a.m. in 406 Dirksen.

NOMINATIONS ON TAP: Two nominees to the Energy Department will testify before the Senate Energy and Natural Resources Committee this morning: Bill Cooper to be general counsel and Lane Genatowski for director of the Advanced Research Projects Agency-Energy, which the Trump administration has sought to eliminate.

Who are they? Cooper serves as senior counsel and director of the McConnell Valdés law firm. Prior to that he was a subcommittee staff director for House Natural Resources, with a particular policy focus on the National Environmental Policy Act that the White House has sought to change up. Cooper also previously was president of the Center for Liquefied Natural Gas and counsel to the House Energy and Commerce Committee. His credentials have earned him the backing of industry groups, including the Air-Conditioning, Heating, and Refrigeration Institute, the Interstate Natural Gas Association of America, and the Electric Reliability Coordinating Council.

— **Genatowski hails from** a banking background. He's managing partner in investments at Dividend Advisors, a firm he founded in 2012. Genatowski before that was an energy investment banker at JPMorgan Chase and other Wall Street giants. His résumé lines up with others in Rick Perry's Energy Department, which has focused more on businessmen with energy-sector experience. **If you go:** The hearing kicks off at 10 a.m. in 366 Dirksen.

RESCISSIONS — TAKE TWO: The Trump administration is once again weighing a so-called rescissions package to force Congress to roll back federal spending, with just weeks to go until the next budget deadline, Pro's Sarah Ferris and John Bresnahan report. Senate Appropriations Chairman Richard Shelby said Wednesday he was told about the idea: "I heard they were thinking about one, but I haven't seen it." But a Senate leadership source said OMB chief Mick Mulvaney has already begun moving ahead on the effort.

FLORIDA DRILLING BITS: To drill or not to drill off the Florida coast is a question once again heating up the state's election campaigns. Gwen Graham, the current front-runner in the Democratic gubernatorial primary field, sent out a message titled "Drilling 75 Miles off Florida's Beaches is Insane" after a POLITICO report highlighted the idea as one that oil industry lobbyists are pushing to have included in the Interior Department's upcoming offshore drilling plan. Sunshine State Democratic Sen. Bill Nelson took the story to the Senate floor to try to whack current Gov. Rick Scott, who is running to replace him and earlier this year got help from Trump on the drilling issue.

REMEMBRANCE OF TARBALLS PAST: Former Florida Lt. Gov. Jeff Kottkamp is catching heat for his statement at a pro-drilling rally in Tallahassee that oil from the Deepwater Horizon spill "didn't even reach the shores of Florida." The remark, as first reported in the Florida Phoenix, may have surprised those who

remember former Gov. Charlie Crist squatting over oil-stained beaches in Pensacola. Kottkamp, who was speaking as co-chair of Explore Offshore Florida, went on to say "tarballs are naturally occurring." Earthjustice staff attorney Bradley Marshall called it "absurd to claim the Deepwater Horizon spill did not reach Florida" given the damage the state experienced. "That's why so many of Florida's leaders, regardless of what political party they belong to, have been so protective of our coasts all these years," he said in a statement.

WHAT'S THE RISK? EPA acting Administrator Andrew Wheeler delivered a video address at the National Environmental Justice Advisory Council's public meeting in Boston on Wednesday where he acknowledged the need for improvement in risk communication and noted the agency owes it to the American public to improve. "How well or how poorly we communicate risk disproportionately impacts those on the lower end of the socioeconomic ladder," he said. "We have fallen short in the past from our response to the Gold King Mine in Colorado, to the Kanawha River in West Virginia, to Flint, Mich." Watch it here.

CASE CLOSED: Interior's Office of Inspector General has closed its investigation into an allegation made against National Park Service officials. The claim centered around references to human-caused climate change in a report on sea-level rise and storm surge projections that officials allegedly sought to remove. The watchdog office said Wednesday that shortly after it opened the investigation, the NPS "published the report with all original references to human-caused climate change," thus prompting it to close its probe.

'SECRET' AGENTS: Comments are due today on EPA's proposed "scientific transparency" rule, which would ban the use of studies that don't publicly disclose all their data. Experts have said that plan could prohibit the use of vital studies on how pollutants affect human health because researchers typically promise to keep subjects' health information confidential. But conservatives have long accused the agency of relying on "secret science," prompting former Administrator Scott Pruitt to unveil the proposal in the name of transparency.

Under the wire: With the comment deadline approaching, nearly 80 groups, including the Union of Concerned Scientists, Sierra Club and Moms Clean Air Force, signed onto a letter Wednesday calling on Wheeler to withdraw the so-called secret science proposal. Separately, 66 health and medical organizations sent comments to Wheeler in opposition to the proposed rule. That's not to say there isn't support for the proposal; several comments posted Wednesday echoed the refrain that scientists should be required to "show your work."

AFTER THE STORM: The nonprofit Environmental Integrity Project released a new report today leading up to the one-year anniversary of Hurricane Harvey's widespread destruction in Texas. Using records from the Texas Commission on Environmental Quality, the report looks at air pollution during and after the storm as well as the government's and industries' response, and makes recommendations for the future. The "Preparing for the Next Storm" report found that all five of the largest industrial air pollution releases during Harvey were in the Houston area — with the Magellan Galena Park Terminal the biggest polluter, releasing 2,472,402 pounds of air pollution.

Harvey also triggered the release of at least 8.3 million pounds of unpermitted air pollution from petrochemical plants, according to the EIP report. And in the nine months after Harvey, "18 companies revised their air pollution reports to the state to erase 1.7 million pounds of unpermitted emissions during Hurricane Harvey," the report found.

LET'S MAKE A DEAL: Trump might soon strike a deal with Mexico on NAFTA, even as a trade war plays out with the rest of the world, POLITICO's Megan Cassella reports. The apparent turnaround after months of stalemate arrives as Mexican Secretary of Economy Ildefonso Guajardo visited Washington on Wednesday to hammer out some of the most contentious issues on NAFTA. "Both U.S. and Mexican officials now say they could be on the verge of announcing a preliminary agreement on everything from complicated automotive rules to environmental regulations by the end of August," Megan reports.

CATCHING FIRE: Agriculture Secretary Sonny Perdue will join Senate Energy ranking member [Maria Cantwell](#) and Sens. [Steve Daines](#) and [Ron Wyden](#) to unveil a new federal plan for addressing wildfires. Earlier this year, Perdue and Cantwell [worked together](#) on a commitment to use unmanned aircraft technology this fire season, and the Washington Democrat will likely highlight similar tools and technology today. Watch the livestream [here](#).

POLL: CLIMATE A FACTOR FOR MOST: Slightly more than half (53 percent) of U.S. voters believe climate change is a factor in making the ongoing California wildfires more extreme, while 39 percent say it's not, according to a new poll from Quinnipiac University [released](#) Wednesday. Sixty-four percent of voters said they think the country is not doing enough to address climate change, the national poll found. Eighteen percent of voters say the U.S. is doing enough to address the issue, while 10 percent say the U.S. is doing too much.

— **On a related note**, the Natural Resources Defense Council launched [a tracker](#) this week to see where every state's lawmakers stand on offshore drilling.

QUICK HITS

— "A coal company and Interior teamed up to save a power plant," [E&E News](#).

— "FirstEnergy Solutions takes next step toward closure of nuclear power plants," [Akron Business Journal](#).

— "A rising concern? After straws, balloons get more scrutiny," [The Associated Press](#).

— "Will Washington State Voters Make History on Climate Change?" [The Atlantic](#).

HAPPENING TODAY

10 a.m. — Senate Environment and Public Works Committee [hearing](#) on clean water, 406 Dirksen.

10 a.m. — Senate Energy and Natural Resources Committee [hearing](#) to consider DOE nominees, 366 Dirksen.

10 a.m. — American Petroleum Institute conference call briefing on efforts "to reform the broken Renewable Fuel Standard that threatens to reverse America's energy progress."

12:45 p.m. — Senate Energy and Natural Resources ranking member [Maria Cantwell](#) and Agriculture Secretary Sonny Perdue [unveil](#) a federal plan for addressing wildfire, Senate Room S-115.

THAT'S ALL FOR ME!

Stories from POLITICO Pro

Exclusive: Draft details Trump's plan for reversing Obama climate rule [Back](#)

By Emily Holden | 08/14/2018 07:46 PM EDT

The Trump administration is preparing to unveil its plan for undoing Barack Obama's most ambitious climate regulation — offering a replacement that would do far less to reduce the greenhouse gas emissions that are warming the planet, according to POLITICO's review of a portion of the unpublished draft.

The new climate proposal for coal-burning power plants, expected to be released in the coming days, would give states wide latitude to write their own modest regulations for coal plants or even seek permission to opt out, according to the document and a source who has read other sections of the draft.

That's a sharp contrast from the aims of Obama's Clean Power Plan, a 2015 regulation that would have sped a shift away from coal use and toward less-polluting sources such as natural gas, wind and solar. That plan was the centerpiece of Obama's pledge for the U.S. to cut carbon dioxide emissions as part of the Paris climate agreement, which President Donald Trump has said he plans to exit.

The Environmental Protection Agency acknowledges that both carbon emissions and pollutants such as soot and smog would be higher under its new proposal than under the Clean Power Plan. And Trump's critics call it a recipe for abandoning the effort to take on one of the world's most urgent problems.

The proposal would be "another, more official, sign that the government of the United States is not committed to climate policy," said Janet McCabe, EPA's air chief under Obama.

McCabe said based on a description of the proposal, it would offer "a significant amount of discretion to states to decide that nothing at all needs to be done."

Many red states and several companies sued over the Clean Power Plan, and a federal appeals court was nearing a decision when Trump's EPA asked for time to rewrite the rule. McCabe said the proposal could be meant to eat up time and stall a future president from quickly regulating greenhouse gases.

EPA was widely expected to write a far less stringent replacement rule. Trump promised to nix the Clean Power Plan and exit the Paris deal during his campaign. But the draft offers the first look at the specifics since the agency released a broader notice that it would reconsider the rule in April.

The White House Office of Management and Budget has finished reviewing the draft and sent it back to EPA this week.

The rule would allow states to write rules to make coal plants more efficient, enabling them to burn less coal to produce the same amount of electricity. But that could be bad for the planet, people familiar with state air programs say, by making it cost-effective for power companies to run those plants more often.

EPA looked at the outcomes of various scenarios that could be possible from state-proposed plans in 2025, 2030 and 2035, implying that the plans could be in place before 2025.

Obama's plan was meant to see greenhouse gas emissions from the U.S. power sector fall to 32 percent below 2005 levels by 2030. The nation has already achieved much of that reduction because of trends such as the closures of dozens of older coal plants.

EPA intends to argue that the Obama administration rule illegally sought to regulate the broader power sector, beyond coal plants, and that the compliance costs would have been big and the climate benefits negligible, according to the draft POLITICO reviewed.

Environmental advocates and blue states plan to wage war on the proposal once it is final. But while the legal fights play out, the regulation will be a placeholder that could stall a future president from regulating power plants.

States will be able to present reasons for why they don't want to regulate coal plants, including considering how many more years they have left before they would probably shut down, according to a source who reviewed a different section of the document.

In another contentious portion of the proposal, EPA is looking at letting states decide whether they want to adopt changes to pollution reviews that kick in when a plant makes upgrades. Existing rules are meant to keep plants from making changes that cause more pollution.

Conservatives and industry groups have long argued that the review process, called New Source Review, makes it too expensive for operators to make improvements to plants.

The key to Trump's climate reversal? New math [Back](#)

By Alex Guillén and Emily Holden | 08/16/2018 05:06 AM EDT

The Trump administration's attempt to reverse Barack Obama's most sweeping climate regulation rests on a legally risky strategy — redoing the calculations of how much the rule would cost and who would benefit.

The EPA's proposed replacement is expected to downplay the money that people and businesses would save from using less electricity, a key feature of the Obama-era greenhouse rule for power plants. People tracking the issue also expect that the agency will count only a fraction of the improvements in public health from reduced smog and soot pollution, and won't consider any benefits from slowing climate change outside the U.S.

The upshot: President Donald Trump's Environmental Protection Agency will argue that the Obama administration's rule had more costs and fewer benefits than previously stated, a change to help improve the comparison when it unveils its own, much less ambitious power plant proposal as soon as next week.

The Obama administration had estimated that the benefits from its 2015 rule would outstrip the costs by \$26 billion to \$45 billion by 2030.

Supporters of the Obama version say those net benefits could be even higher now, because states are on track to meet the climate goals and the costs of clean energy have continued to plummet. And they warn that repealing the regulation could keep older, more expensive coal-fired power plants in operation, adding to consumers' costs.

The math could be crucial to the success or failure of a number of Trump rules. That could make the rollbacks legally vulnerable when environmental advocates and states sue to overturn Trump's action, critics of the new proposals say.

"They are cooking the books on technical analysis to try to justify preconceived conclusions that these regulations are bad," said David Doniger, the senior strategic director of the Natural Resources Defense Council's climate program who was influential in the Obama EPA's crafting of the original rule.

EPA did not respond to a request for comment on Wednesday.

Trump administration lawyers reviewing the replacement are already struggling with how to defend a rule that could cost electricity users money but would not do much to address climate change or air pollution, according to a person aware of conversations between the White House and the Justice Department. DOJ would be charged with defending the rule in court.

POLITICO has examined a portion of the agency's unpublished draft of the new rule, which would allow states to write their own modest regulations for coal plants or even let plant operators seek to opt out entirely, according to a source with knowledge of the broader proposal.

The proposed rewrite of the power plant rule is part of a pattern: Critics say similarly fuzzy math underlies other Trump administration proposals to reverse or stymie action on climate change, such as a recent plan by EPA and the Department of Transportation to halt a planned tightening of fuel efficiency standards for cars and trucks.

Sean Donahue, an environmental lawyer who has represented groups like the Environmental Defense Fund, said he would expect a court to be "very skeptical" of any effort that looks as though EPA is trying to evade its obligation to regulate greenhouse gases. But he conceded that will depend on the details of EPA's power plant proposal.

"If it were one or two technical judgments where there's a difference between this administration and the last one, or this administration and prior consistent practice, that would be one thing," Donahue said. "But it's many, many things, all pointing the same way, all pointing toward rolling back greenhouse gas mitigation efforts."

Trump has repeatedly expressed doubts about man-made climate change, and much of his Cabinet shares a similar view. In contrast, the federal government's own scientific assessment finds that human-caused climate change will not only raise temperatures but also make extreme weather more dangerous and lift sea levels by 1 to 4 feet by the end of the century.

Kate Larsen, director of economic research firm Rhodium Group, said the Trump administration's justifications for unraveling climate change policies are symptomatic of its broader governing principles.

"A decision we make today is narrowly focused on the impacts to myself and my immediate neighbor in the next week, but you're not taking into account impacts next year and the following year to yourself, your neighbor, the entire community," she said.

Environmental experts are also scrutinizing the auto rule proposal, released earlier this month, which would freeze the Obama administration's aggressive fuel economy standards after 2020 and dial back EPA greenhouse gas rules to match.

EPA and DOT's National Highway Traffic Safety Administration argued that the freeze would save billions of dollars in costs. Critics say the administration overestimated compliance costs of the Obama-era auto targets by as much as fourfold, which could significantly tip the cost-benefit analysis in their favor. Another claim that the Trump rollback would save more than 1,000 lives per year — yielding benefits of \$77 billion — has also drawn skepticism.

On Tuesday, EPA released a June memo that showed agency staff criticizing a number of "unrealistic" aspects of NHTSA's modeling. They disagreed with the proposal's fatality figures, with EPA staff estimating deaths would increase slightly under the freeze. And they thought the rule overestimated compliance costs and the time needed to recoup those costs in fuel savings, all factors that boosted benefits and lowered costs for the proposed freeze. Both EPA and NHTSA dismissed the memo as only one part of a complex review process.

The administration and industry groups have blasted the Obama administration's use of "co-benefits" — the benefits in improved health or reduced pollution that arise even when they're not the primary aim of a regulation. (One example: Cutting coal plants' carbon dioxide pollution under the power plant regulation would't do much directly to improve people's health, but it would reduce smog.) But Donahue argued that Trump's regulators sometimes lean on co-benefits to help build the case for their rollbacks.

For example, NHTSA's modeling credits changes in consumer behavior as the overwhelming factor behind all the lives that the Trump administration contends its auto rollback would save. The agencies argue that under the previous Obama rule, drivers would be more likely to remain in older, more dangerous cars than purchase more expensive, safer ones.

That "would seem to be a co-benefits argument, since the EPA doesn't have, and NHTSA doesn't have, the authority to regulate used cars," said Donahue, who called the paradox "sort of entertaining."

Counting co-benefits is a long-standing practice for federal regulators, but energy industry groups and Republican state officials grew incensed by the Obama administration's use of it to justify major regulations.

"The co-benefits thing has ballooned into the biggest scandal in environmental regulation," said the conservative Competitive Enterprise Institute's Myron Ebell, who led Trump's post-election transition team at EPA. "You get very small direct benefits, but you make up, essentially, a lot of co-benefits."

Still, he contended that EPA's withdrawal of Obama's power plant rule would eliminate a huge amount of costs in the coming years, saying Obama's regulation represented "just the first emissions cuts."

"There were going to be more beyond that if the Obama administration had been succeeded by the Clinton administration," Ebell said. He added: "By cutting it off in the way that they're doing, we're avoiding immense future costs."

Keystone XL pipeline wins green light in Nebraska — but may face new hurdles [Back](#)

By Ben Lefebvre | 11/20/2017 11:25 AM EDT

Nebraska regulators approved the Keystone XL pipeline Monday, but only if it is built along a new path that may force the project developer to jump through a new set of regulatory hoops.

The 3-2 vote by the Nebraska Public Service Commission gave the green light to a different route than the one preferred by Keystone developer TransCanada, moving it east to run partially alongside the original Keystone pipeline and through a portion of the state's ecologically sensitive Sandhills area as well across the Ogallala Aquifer.

The Trump administration is evaluating whether it would have to re-approve the controversial pipeline to account for the new route. But activists who have spent the better part of a decade fighting to block Keystone said the decision throws the whole project into jeopardy, while TransCanada, the company seeking to build the project, said only that it is evaluating its next steps.

"This decision today throws the entire project into a huge legal question mark," said Jane Kleeb, the activist who led the opposition to the pipeline and who is now Nebraska Democratic Party chair. "TransCanada will have to go back to the State Department because that route has never been reviewed by the feds."

The State Department said it is reviewing the PSC decision for just such a possibility.

"We won't know about any impacts until we learn precisely the extent of any changes, something we are currently engaged in," State Department spokesman Vincent Campos said.

TransCanada President and CEO Russ Girling said the company "will conduct a careful review of the Public Service Commission's ruling while assessing how the decision would impact the cost and schedule of the project."

Former President Barack Obama had blocked the permits for the pipeline in 2015, citing the oil sands' impact on climate change, but President Donald Trump quickly reversed that decision after taking office. Keystone XL is designed to transport up to 830,000 barrels per day of crude from Canada's oil sands and North Dakota's shale fields to oil refineries on the Gulf Coast.

The Nebraska PSC vote comes as TransCanada adds new crews to its cleanup operations in South Dakota, where the original Keystone Pipeline ruptured last week and released 210,000 gallons of oil. But Nebraska law bars the regulators from considering spills or pipeline safety in its decision-making process.

Environmentalists and landowners who opposed Keystone XL's construction have promised to try to overturn the commission's decision.

"We will appeal," Kleeb said. "We will challenge a foreign corporation being given eminent domain in the county courts, with every intent to bring it to the Supreme Court if needed."

Even with the approval, the project, whose costs to build the nearly 1,200 mile artery have ballooned to \$8 billion, is still not ready to be built since TransCanada is gauging the economics of the huge investment. Though prices for oil have rebounded moderately in recent months, and while TransCanada has said demand for space on the pipeline is strong, it's not yet clear that enough companies will commit to the 20-year contracts required to reserve space on it.

The opposition to Keystone XL had been a rallying cry for green activists who have long said mining Canada's oil sands would be a disaster for global climate change, releasing vast amounts of carbon dioxide into the atmosphere.

But supporters have said tapping the oil fields in Alberta is no worse than the oil production in Venezuela, where much of the heavy sour crude that is shipped to U.S. refineries comes from now.

Many in the oil industry, however, no longer see the Keystone XL pipeline as crucial to the U.S. refineries as they once did, especially since the railroad sector stepped in to offer a more flexible — though more expensive — way to ship the oil.

"There's not going to be a parade thrown, although everyone in the industry is going to be grateful," said Tyler Nelson, an energy lobbyist for Cornerstone Government Affairs. "It should have been done years ago. But now a lot of people want it to be over with and done and move on."

The pipeline may struggle to succeed in the oil business. Energy markets have made the Alberta oil sands less attractive, with ExxonMobil, ConocoPhillips and others pulling out of the region to concentrate on U.S. oil

shale development in Texas. Meanwhile, rival pipeline company Enbridge has expanded its pipeline system delivering Canadian crude to the U.S.

Critics have pointed to the recent shale oil boom as a reason that supply from the Canadian and North Dakota fields is in less demand, and they argue that much of the oil from Keystone XL could end up on tankers bound for export. U.S. oil production is on target to average more than 9 million barrels a day this year, nearly double what it was when TransCanada first proposed the massive pipeline.

If TransCanada gives its final approval to go ahead, construction would not start until 2019 at the earliest, Paul Miller, TransCanada's president of liquids pipelines, said during a conference call earlier this month.

The pipeline already is the focus of a court challenge stemming from Trump's State Department approving the project. A coalition of groups is arguing the State Department did not do due diligence before approving the cross-border pipeline in March. The case is still in the beginning stages, with a decision pending from the U.S. District Court of Montana on a Trump administration motion to dismiss.

Judge orders Trump administration to update Keystone XL environmental study [Back](#)

By Alex Guillén | 08/15/2018 08:17 PM EDT

A federal judge today ordered the Trump administration to update its environmental study of the Keystone XL pipeline.

Nebraska regulators last year picked an alternative route through the state after the pipeline was approved by President Donald Trump. Now the State Department must update its previous 2014 environmental impact statement to take that route into account, ruled Judge Brian Morris of the U.S. District Court for Montana.

The Trump administration argued that it did not need to update the EIS, despite Nebraska regulators' decision to pick the alternate route.

But Morris concluded that the State Department still has a "meaningful opportunity to evaluate" the alternative route that was picked in Nebraska. "Federal Defendants cannot escape their responsibility under NEPA to evaluate the Mainline Alternative route," he ruled.

The approved route differs from the one studied in the 2014 EIS by crossing different counties and bodies of water and requiring an extra pump station and electric infrastructure, Morris noted.

However, Morris declined environmentalists' request that Trump's permit be vacated, at least for now.

TransCanada does not plan to start construction before the second quarter of 2019, he said, giving the Trump administration sufficient time "to supplement the EIS in a manner that allows appropriate review before TransCanada's planned construction activities." Morris said he would revisit the issue if "circumstances change" and he is unable to review the new supplemental EIS before TransCanada begins construction.

WHAT'S NEXT: Morris ordered the State Department to propose a schedule to supplement the EIS.

Trump administration to make a second try on spending cutbacks [Back](#)

By Sarah Ferris and John Bresnahan | 08/15/2018 07:15 PM EDT

The Trump administration is eyeing a second attempt to force Congress to roll back federal spending, after its last attempt collapsed in the GOP-led Senate, according to the chairman of the Senate Appropriations Committee as well as a Senate leadership source.

The Office of Management and Budget is said to be considering a second package of so-called rescissions, with just weeks to go until Congress' next budget deadline.

OMB officials did not return a request for comment and it's not known yet what spending the White House might try to cut or eliminate this time around.

Senate Appropriations Chairman Richard Shelby said today he was told about the idea. "I heard they were thinking about one, but I haven't seen it," Shelby (R-Ala.) told POLITICO.

OMB chief Mick Mulvaney has already begun moving ahead, according to the Senate leadership source.

Budget hawks, led by Mulvaney, fought hard for the last package, H.R. 3 (115), which would have pulled back \$15 billion in already-approved federal dollars. That bill ultimately tanked in the Senate, coming up just one vote shy on a procedural vote.

If the White House moves quickly, its next rescissions package could arrive in the middle of a separate major funding fight on Capitol Hill. Lawmakers have until Sept. 30 to send roughly \$1.4 trillion in fiscal 2019 funding to President Donald Trump's desk or risk a funding lapse.

Oil companies ask Florida lawmakers to unlock offshore drilling [Back](#)

By Ben Lefebvre | 08/15/2018 05:01 AM EDT

Oil and gas companies are aggressively lobbying Florida lawmakers to agree to allow offshore drilling in the eastern Gulf of Mexico — seeking to break decades of bipartisan opposition in a state that has long viewed oil spills as an existential threat to its tourist economy.

The effort, which would potentially bring oil rigs as close as 75 miles to Florida beaches, comes just seven months after Interior Secretary Ryan Zinke promised that the state was "off the table" for offshore drilling. And it could complicate Republican Gov. Rick Scott's campaign to unseat Democratic Sen. Bill Nelson, whose opposition to drilling off the coast has been a main theme of his decades in Congress.

But the expansion would aid President Donald Trump's effort to increase U.S. oil and gas production, in what he calls a bid for American "energy dominance."

Gaining access to the millions of barrels of oil and natural gas off Florida's west coast is a top priority for Exxon Mobil, Chevron, Shell and other companies.

Energy lobbyists and trade associations believe Zinke left some wiggle room in his comments, and they are trying to persuade Florida lawmakers to sign on to possible compromises, including allowing drill rigs to operate up to 75 miles off the state's Gulf coast, lawmakers and industry sources said. That would be down from more than 200 miles under an existing drilling moratorium.

Zinke's tweet exempting Florida — which critics charge was simply a political gift for Scott's Senate campaign — and his subsequent statement that he was "removing Florida from consideration for any new oil and gas platforms" shouldn't be read as official Interior policy, said Randall Luthi, president of the trade group National Offshore Industry Association, which is pressing for access to the waters.

"Secretarial tweets and statements to Congress are outside the administrative process, but certainly are indicators of where the Secretary and evidently the White House might end up," Luthi said in a statement to POLITICO. "The Eastern Gulf of Mexico is ripe for some kind of a reasonable compromise."

The Gulf of Mexico Energy Security Act of 2006 put a moratorium on oil and gas exploration in the eastern Gulf until June 2022. Department of Defense offshore training zones put another large part of those waters out of contention for drilling.

Interior's first draft plan included opening up every acre of federal water to oil and gas companies, however. Zinke has implied in later conversations with coastal state governors, senators and trade associations that the final plan wouldn't necessarily include drilling off the coasts of New Jersey, Delaware, Maine, but his plan to announce a final decision this fall could delay unpopular decisions — including possibly opening up the waters off southern California and the Mid-Atlantic region — until after the midterm elections, sources said.

The most aggressive plan industry lobbyists have brought to lawmakers calls for allowing drilling platforms within 75 miles of Florida's Gulf coast, an idea that Interior itself floated in its draft plan. Buffer zones going out as far as 125 miles have also been discussed, sources said. Either could technically adhere to Zinke's promise not to open Florida's waters, since the state's jurisdiction only extends nine nautical miles from the shoreline. Interior proposed the use of so-called exclusion zones for the eastern Gulf of Mexico and the Atlantic coast in its draft plan.

One lobbyist working the issue told POLITICO that Zinke and Scott were careful to "not say the entire Eastern Gulf," was off the table during their press conference at the Tallahassee airport in January.

"There are some Republicans who are prepared to make a deal. Seventy-five miles is the expected buffer, but folks might be willing to throw it a little further," said the lobbyist, speaking anonymously to frankly discuss ongoing negotiations.

That reduced buffer zone would please the oil industry because most of the oil and gas reserves in the eastern Gulf are believed to be in the waters south of Alabama and the Florida Panhandle, said a person at one oil and gas company who was not authorized to discuss the draft plan.

"I think we could live with 75 miles," the person said. "I think that wouldn't hurt anyone."

The idea so far has failed to gain much traction with at least two Florida Republicans who said they have been inundated with industry requests to open the area to drilling.

Florida Republican Rep. Matt Gaetz said he opposes the idea on national security grounds, given that the Defense Department uses a large part of the eastern Gulf for training exercises.

"It seems every week the oil and gas industry is working to obtain permission to crack the Destin Dome," Gaetz said in an interview with POLITICO, referring to one offshore site believed to hold large amounts of natural gas. "That would be devastating to our national security. I don't have a nuanced view on this. I am opposed."

Gaetz said he has raised his concerns on several occasions with Zinke, who he said has not pushed for a specific policy but has espoused an expansion of oil and gas drilling in general.

"I've had meetings with the secretary on this," Gaetz said. "I've had spirited conversations with him. I would not say he was wedded to any particular plan. He was trying to advance the cause of energy exploration."

An Interior spokeswoman did not answer questions about Zinke's meetings with Florida lawmakers or the possibility of establishing a 75-mile buffer zone.

"Secretary Zinke regularly meets with and communicates with many members on both sides of the aisle, coastal and non-coastal," the spokeswoman said in a written statement. "Members often discuss relevant issues pertaining to their districts and states as appropriate."

Republican Rep. Francis Rooney, who opposed drilling off the Florida coast during his 2016 campaign, said the industry has also been reaching out to him. Industry representatives have suggested several compromises, including a 100-mile buffer zone, he said, though he has rejected that plan, saying currents could carry any spilled oil from that part of the Gulf onto state beaches.

Instead, Rooney, who had served on the board of the oil and gas company Laredo Petroleum, offered to allow drilling 200 miles off the coast, west of the area where the military conducts training.

"The oil people have brought up several different things and I have been pretty much recalcitrant in negotiating with them," Rooney told POLITICO. "I think we need a clear delineation of where they will drill and not drill, and we don't need them drilling east of that military mission line."

Environmentalists also oppose any drilling, saying a buffer zone wouldn't protect Florida's beaches and tourism economy.

"The Deepwater Horizon disaster that spoiled Florida's coastline was 200 miles from its shore," said Diane Hoskins, director of environmental group Oceana, referring to the 2010 deepwater gusher that took months to plug. "A 75-mile buffer would be a cold comfort for Floridians."

Trump delivers a Senate race sweetener to Scott [Back](#)

By Marc Caputo, Ben Lefebvre, Matt Dixon and Bruce Ritchie | 01/09/2018 11:24 PM EDT

Donald Trump delivered a big political contribution to Rick Scott on Tuesday as the Florida governor contemplates a bid for U.S. Senate: a pledge to spare Florida from administration plans to expand offshore oil drilling nationwide.

The surprise announcement from Secretary of Interior Ryan Zinke — who went to the trouble of flying to Tallahassee to stand beside Scott — outraged environmentalists and Democrats who insist the decision was a political ploy that unlawfully gave preferential treatment to Florida, a swing state that voted for Trump and that's home to his so-called "Winter White House" escape at Mar-a-Lago in Palm Beach.

Zinke made sure that the term-limited governor got all the credit. In response to a question about what was the final determining factor in his decision, Zinke said: "The governor."

"You have a tremendous governor that is straightforward, easy to work for, says exactly what he means. And I can tell you Florida is well-served," Zinke said.

Zinke's glowing endorsement of Scott has become de facto policy for Trump, who has tried for more than a year to woo Scott publicly and privately to run for U.S. Senate against Democratic incumbent Bill Nelson. The veteran senator is one of the most vocal opponents of offshore oil-drilling in Florida, an issue that typically enjoys broad bipartisan support in a state whose economy depends heavily on tourism and development along 1,300 miles of coastline.

Scott used to be an exception to the blanket opposition to offshore oil drilling. In 2010, the then-political newcomer voiced more support for oil exploration, but the position became a political liability in the state after the Deepwater Horizon oil spill coated some Florida beaches with tar balls and damaged tourism in parts of the Gulf.

A 2016 University of South Florida-Nelson poll found that 47 percent of state residents see offshore drilling as a move in the "wrong direction," a distinction that makes it one of the most unpopular policy proposals in the state.

So when Zinke announced last Thursday that the administration wanted to open vast new stretches of federal waters to oil and gas drilling, opposition was united in Florida — from liberal environmentalists to conservative lawmakers and even Scott, who issued a rare public denunciation of the policy.

At the time, Democrats and Nelson supporters highlighted the unpopular policy announcement by a president who's flagging in the polls. Nelson's campaign began fundraising off of the initial announcement to expand oil exploration.

One Republican insider, however, told POLITICO shortly after the initial announcement that the administration would scale the plan back somewhat to give Scott a political boost that would "be a big win, and it won't be Bill Nelson bringing it home."

As late as Tuesday, Nelson was still fundraising off the drilling announcement. "President Trump is about to hand a huge victory to the oil industry and put Florida's entire economy at risk," Nelson's campaign wrote. "He just announced plans to rollback offshore drilling regulations that were put in place after the 2010 Deepwater Horizon disaster, and open up nearly all federal waters to offshore oil drilling — including the eastern Gulf of Mexico."

But just before that email solicitation was sent out, Zinke was unexpectedly standing in Tallahassee's regional airport with Scott announcing the reversal to the Florida capital press corps.

Nelson said he was incredulous.

"I have spent my entire life fighting to keep oil rigs away from our coasts. But now, suddenly, Secretary Zinke announces plans to drill off Florida's coast and four days later agrees to 'take Florida off the table'? I don't believe it," Nelson said in a written statement. "This is a political stunt orchestrated by the Trump administration to help Rick Scott, who has wanted to drill off Florida's coast his entire career. We shouldn't be playing politics with the future of Florida."

Similarly, the Sierra Club of Florida said the decision was "a purely political move to aid the ambitions of Rick Scott." And the League of Conservation Voters called it a "publicity stunt."

Scott's spokesman, Jonathan Tupps, said oil-drilling opponents should not be upset.

"Senator Nelson and anyone else who opposes oil drilling off of Florida's coast should be happy that the governor was able to secure this commitment," he said. "This isn't about politics. This is good policy for Florida."

Tupps said that, contrary to claims by Scott's opponents, the governor and staff have frequently discussed Florida's opposition to more offshore oil drilling with the Interior Department. Scott personally raised the issue with Zinke in an October meeting in Washington, Tupps said.

Why Zinke suddenly reversed months of planning four days after announcing the new oil and gas exploration policy are unclear. Zinke also made his announcement via Twitter after a brief question-and-answer session with reporters in Tallahassee.

In reversing the policy for Florida, however, Zinke may have run afoul of the Administrative Procedure Act, critics said. That could give ammunition to California and Atlantic Coast states wanting to get on the same no-drill list -- the opposite of what President Donald Trump intended when he directed Zinke to expand oil companies' access to federal waters to boost U.S. energy production.

The American Petroleum Institute President Jack Gerard earlier in the day had applauded the Trump administration's plan to make all available federal waters available for drilling, saying "It represents a bold acknowledgement of the industry's advancements in technology to safely access U.S. energy resources."

Almost immediately after Zinke's announcement, lawmakers from other states took to Twitter to raise the specter of lawsuits, which could lead to courtroom entanglements for Interior's offshore drilling plan. The proposal was supposed to go into effect in 2019 and offer acres off the coast of Florida in late 2022 when a drilling moratorium officially ends.

"Under the Administrative Procedure Act, an agency can't act in an arbitrary and capricious manner. In this case, exempting Florida but not California (which has an even larger coastal economy) is arbitrary and capricious," Rep. Ted Lieu, a California Democrat and attorney, told POLITICO.

"So the agency would either have to not exempt Florida, or in the alternative, exempt Florida, California and any other state that can show the coasts are important to the state's tourism and economy."

California Attorney General Xavier Becerra also hammered that point on Twitter, echoing Scott's argument against drilling off the Florida coast to say "California is also 'unique' & our 'coasts are heavily reliant on tourism as an economic driver.' Our 'local and state voice' is firmly opposed to any and all offshore drilling. If that's your standard, we, too, should be removed from your list. Immediately."

In Virginia, U.S. Sen. Tim Kaine took a more low key approach. "Virginia's governor (and governor-elect) have made this same request [as Florida], but we have not received the same commitment. Wonder why..." he tweeted.

Pruitt touts science policy as transparency as Democrats slam him for secrecy [Back](#)

By Emily Holden and Annie Snider | 04/26/2018 03:17 PM EDT

Embattled EPA Administrator Scott Pruitt sought to fend off criticisms he had clouded his activities within the agency in secrecy, pointing during Thursday's congressional hearing to the new science policy rolled out this week that he said is boosting transparency around new rules.

But that new policy, long a conservative priority, had Democrats howling that Pruitt had effectively given himself carte blanche to conceal studies that would not support his rollback of Obama EPA rules.

"The type of studies you want to exclude are the same kind of scientific studies that were used to prove that lead in pipes and paints harm children and that secondhand smoke is a dangerous carcinogen," said Rep. [Raul Ruiz](#) (D-Calif.). "You have demonstrated a disregard of true science [and] the scientific process," he said.

The discussion was one of the most substantive policy issues at [the hearing](#) of the Energy and Commerce subcommittee that focused largely on the scandals that have erupted around Pruitt in recent weeks.

The draft rule, which was announced at a closed event at agency headquarters on Tuesday, could have far-reaching effects that limit EPA's ability to rely on studies that don't have publicly available raw data when making decisions about air and water regulations. Scientists and public health advocates have argued the change could keep the agency from updating health protections based on new science since those studies typically redact subjects' personal information.

Pruitt's GOP supporters on the panel praised the move as a way to ensure that scientific data used to support new regulations was available for everyone to review.

"I've had a lot of constituents over the years who've been very concerned about decisions ... that get made by administrators or the bureaucracy and in some cases they can't get access to the underlying data that underpins the decisions," said Rep. [Greg Walden](#) (R-Ore.), chairman of the Energy and Commerce Committee.

Rep. [Paul Tonko](#) (D-N.Y.) called Pruitt "hypocritical" because the proposed rule gives broad authority Pruitt to grant exemptions from the new requirements, which he said Pruitt could use "without any transparency or accountability" for his decisions.

Tonko pointed to internal emails between top EPA officials initially released under the Freedom of Information Act that show the agency's top chemicals official, a former leading chemicals industry expert, expressing concerns about the impact the policy could have on companies' confidential business information.

"If EPA was assessing the safety of a chemical, you alone would have the power to selectively block public health studies that do not support your political priorities and allow ones that favor your friends in industry. Not only does this open the door to special treatment for industry over the public health, but you could also pick winners and losers among the industry types," Tonko said.

Pruitt argued the restrictions will apply equally to "all third party studies." He said both business and personal health information could be redacted, which experts have argued would be time-consuming and expensive.

Yogin Kothari, a Washington representative for the Union of Concerned Scientists, which has opposed the change, said Democrats were right to highlight the hypocrisy of the policy that he said was really about restricting science.

"What it highlights is a lack of transparency at the agency because he hasn't really talked about this or explained this or explained his thinking about this," Kothari said.

Frank Maisano, a spokesman for the lobbying firm Bracewell who attended the hearing, said Republicans on the committee appeared to be interested in hearing more about the policy.

"It's a topic that is different from what Democrats are talking about, it's a topic that's substantive," Maisano said. "It's a topic that many in the business community and many in the conservative community have been focused on for years."

EPA's proposal, based on long-sought legislation from House Science Chairman Lamar Smith (R-Texas), also drew support from Rep. Kevin Cramer (R-N.D.) who said it undercut Democrats who attacked Pruitt for secrecy while defending the agency previous use of "secret science."

"You've also been accused of hypocrisy, a lack of transparency, by people who are in the same breath defending secret science as a means of carrying out their political philosophy ... the irony is rich beyond rich with me," he said.

Quint Forgey contributed to this report.

Mexico, U.S. may be heading toward NAFTA deal amid Trump's global trade war [Back](#)

By Megan Cassella | 08/15/2018 05:32 PM EDT

President Donald Trump could be poised to make a deal with Mexico on NAFTA even as he engages in a trade war with the rest of the world.

Mexican Economy Secretary Ildefonso Guajardo arrived in Washington on Wednesday — as he has every week for the past month — to hammer out some of the most contentious issues on NAFTA. U.S. and Mexican officials now say they could be on the verge of announcing a preliminary agreement on everything from complicated automotive rules to environmental regulations by the end of August.

The apparent turnaround after months of stalemate is a surprise outcome of discussions reaching their year anniversary on Thursday. And while the two sides have yet to bring Canada, the third partner in NAFTA, into the latest round, the negotiators' optimistic tone could signal that Trump may be ready to extinguish at least one trade conflagration before the midterms. That would placate Republicans who have been calling for a return to stability as the U.S. and China have been slapping tariffs on each other's exports, roiling international markets and burdening American farmers.

"We're settling in for the long haul with China, so we really need to release the pressure in our backyard," said Dan Ujcz, an international trade lawyer who specializes in Canada-U.S. matters. "I think that's a driving force for the U.S.' desire to get a deal right now."

To be sure, some major controversial issues remain unresolved, including the U.S. proposal to automatically terminate the pact after five years unless all three countries agree to renew it — an idea that Canada and Mexico have both rejected outright. And for the time being, at least, Canada still remains on the outside of the current talks.

But reaching even a bare-bones agreement on NAFTA before November's elections would hand a concrete victory to Trump, who would likely point to the revamped pact as a symbol that his strong-arm tactics have worked, industry sources and experts closely following the talks say. It would also allow U.S. trade officials to clear a major task off their agenda and dedicate more time to areas where U.S. Trade Representative Robert Lighthizer in particular has wanted to focus, primarily trade issues with China.

At the same time, Mexican negotiators are also under renewed pressure to get a deal after the country elected a new leader who takes office in December and who badly wants NAFTA to be signed and off his plate before then. Mexico has pointed to Aug. 25 as the date by which it must wrap up at least a preliminary agreement for outgoing President Enrique Peña Nieto to be able to sign the deal before he leaves office.

Those domestic politics have put Guajardo in a tough position, as he tries to appease the incoming Mexican administration and quickly wrap up a deal while still standing up firmly against some U.S. proposals that Mexico has repeatedly derided as unworkable.

"They're under a lot of pressure to just come up with anything, whatever it is," one source close to the talks said, requesting anonymity to speak freely about internal deliberations. "What I've been hearing from other Mexican parties is that Ildefonso was sort of distraught and frazzled by the fact that he's being asked to wrap it up, and that of course means making concessions that he wasn't ready to make. It lowers his negotiating potential."

Against that backdrop, sources close to the talks say Mexico appears to be poised to accept large swaths of a U.S. proposal involving the rules that govern North American-produced automobiles and dictate what percentage of each car must be sourced from within a NAFTA country to qualify for reduced duties under the agreement.

At the U.S.' urging, Mexico looks likely to agree to an increase in the overall amount of North American-sourced content that must be included in each automobile, and will accept a requirement that a certain percentage of each car must be produced by workers earning at least \$16 an hour, sources say. Mexico is also poised to accept mandates that a certain percentage of the steel, aluminum and plastic included in each vehicle is also sourced from a NAFTA country.

In exchange, the United States would be prepared to give up a controversial proposal that would have made it easier for American fruit and vegetable growers to make the case that Mexico is selling produce at unfairly low prices when crops are in season in a particular region, two sources with knowledge of the trade-off told POLITICO. The U.S. would also submit to Mexico's demand to leave a chapter largely untouched that contains rules on disputes between governments, one of the sources said.

"Essentially, there is a deal," one of the sources said.

At the same time, however, other major aspects of the renegotiation remain unfinished. Chief among them is the so-called sunset clause that the U.S. wants, which would end the pact after five years unless the parties opt to continue it. Several sources close to the talks say the sunset clause has hardly been discussed during the latest set of meetings between the U.S. and Mexico, and the two countries still remain on opposite sides.

And Canada will need to come to the table for a deal to be finalized. Officials from all three countries have sought to emphasize that the U.S.-Mexico engagement is not a sign of ill will toward Canada but is instead an attempt to work out bilateral issues before bringing Ottawa back into the fold.

But negotiators had expected that Washington and Mexico City would have made enough progress by now for Canadian Foreign Minister Chrystia Freeland to have joined the meetings in Washington. The more time that passes, the more likely it is that the strategy to put off a trilateral meeting could backfire, a source close to the talks said.

"Yes, there's U.S.-Mexico momentum — that's a positive message and great from Mexico's point of view," the source said. "But the longer it takes to bring in Canada, the less likely this is going to get done in the short term."

Still, any incremental progress, or even the fact that the U.S. and Mexico are continuing to engage in good-faith negotiations and regular meetings, has offered a signal of some hope to U.S. farmers, consumers and industry groups who have been worn out by months of uncertainty and pummeled by retaliatory tariffs imposed over the past few months.

Retailers and business groups are reluctant to throw their support at this point behind a deal that is still unfinished, particularly when a number of proposals that some have termed poison pills remain on the table.

But at the same time, "I think what all of our members want, what the business industry at large wants, is certainty," said Vanessa Sciarra, a former U.S. trade negotiator who now works as a vice president at the National Foreign Trade Council. "Anything that provides for greater clarity on trade relationships, particularly with Mexico and Canada ... would be helpful."

Adam Behsudi contributed to this report.

Finger Lakes Times: Dundee Getting EPA Funds For New Bus

The Dundee Central School District will be getting a new bus through the U.S. Environmental Protection Agency's Diesel Emissions Reduction Act funding. Nationwide, the EPA is awarding \$8.7 million to replace or retrofit 452 older diesel buses. In New York, \$460,000 is going to replace or retrofit 23 buses, including one in Dundee. Stephanie Cleveland, Dundee's transportation director, learned of the EPA program last year when district officials were looking at purchasing new buses. "We will replacing an older model diesel bus with an approved, newer model bus that meets the requirements of the program," Cleveland said. "The bus submitted for the rebate will be scrapped as part of the requirements of the rebate program. We are very pleased to have been selected for this rebate."

St. Louis Post-Dispatch: EPA Extends Rebates To Missouri Schools For Cleaner Bus Upgrades

The Environmental Protection Agency is offering rebates to 18 Missouri school districts — including some near St. Louis — to replace older, diesel school buses. The \$745,000 total extended to schools around the state will help cover the

replacement of 40 buses. The sum is part of a broader outlay of \$8.7 million nationally for bus replacements and retrofits, funded through the EPA's Diesel Emissions Reduction Act program. The rebates offered through the program will knock down the sticker price that eligible school districts pay by \$15,000 to \$20,000 apiece, depending on the size of the bus. St. Louis-area school districts to receive the funding include De Soto, Mehlville, Valley Park, New Haven and the Lincoln County R-III School District, in Troy, which is by far the state's largest recipient of the money, with \$150,000 to be put toward 10 new buses. No other district received more than \$60,000 to help with three bus upgrades.

Farm Futures: EPA's Pruitt Talks WOTUS, RFS With Farm Bureau Members

EPA Administrator Scott Pruitt talked about the agency's role in American agriculture during a March 14 appearance before more than 300 members of the Iowa, Missouri, Ohio and Alabama Farm Bureau. "I am committed to providing America's farmers with the transparency and regulatory certainty they deserve from Washington," Pruitt said. "EPA is working with our nation's first environmentalists as partners to preserve and steward our natural resources while supporting local economies."

E&E News: Science Reform Eyed As Path To Unravel Endangerment Finding

The plan now being developed at U.S. EPA to restrict the science the agency uses could affect the crafting of regulations for years and become one of the most enduring parts of Administrator Scott Pruitt's legacy. The plan under consideration is expected to limit the science used in EPA regulation to studies where the data could be published and reproduced. And while the agency is still considering the exact scope of its restrictions, both critics and supporters of the plan agree that it will fundamentally transform the way EPA uses research. Supporters say it will prevent opaque "secret science" from being used to form regulations that could affect billions of dollars in economic activity. Opponents say it will eliminate from consideration much of the groundbreaking research the agency has used to protect Americans against pollution.

National News Highlights 3.19.18

The Washington Post: Fourth Austin Explosion Possibly Detonated By Tripwire, Leaving 2 Injured, Police Say

Police in Austin said an explosion in a residential neighborhood Sunday night appeared to be related to the three bombs that detonated earlier this month, plunging the Texas capital further into a frightening mystery that forced residents to remain locked in their home as investigators scoured the area for answers. The blast Sunday, which injured two men who were riding bicycles through a residential area, was the latest in a string of explosions to rock Austin, which has been on edge since the previous bombings killed two people and seriously injured a third. Authorities have seemed at a loss to explain who could be setting off these devices or why, saying only that the bombs were sophisticated and could have been motivated by racial bias, although they acknowledged that this remains only a theory. This latest explosion injured two men in their 20s in the southwest portion of Austin. While the previous blasts all involved packages left at homes, this explosive was on the side of the road and possibly triggered by a tripwire, said Brian Manley, the interim Austin police chief.

The Wall Street Journal: Trump Steps Up Attacks On Mueller Investigation

President Donald Trump and his legal team over the weekend intensified attacks on the special counsel's probe into possible Russian election interference, departing from a previously more cooperative posture and prompting more urgent warnings from senators not to undermine the investigation. In his first Twitter post to target the special counsel, Robert Mueller, by name, Mr. Trump on Saturday said the probe "should never have been started in that there was no collusion and there was no crime." On Sunday, the president mentioned Mr. Mueller again, suggesting his team of prosecutors consisted of "hardened Democrats" intent on taking down the Republican president. Mr. Trump for months has criticized the Russia probe, but his weekend comments showed a more confrontational tone toward Mr. Mueller and prompted senators from both parties to caution the president against taking steps to end the special counsel's investigation. The warnings to Mr. Trump were also triggered by a statement Saturday by the president's personal lawyer, John Dowd, calling for the Justice Department to step in to stop the Mueller investigation.

Dundee Getting EPA Funds For New Bus

By Mike Hibbard, 3/18/18

DUNDEE — The Dundee Central School District will be getting a new bus through the U.S. Environmental Protection Agency's Diesel Emissions Reduction Act funding.

Nationwide, the EPA is awarding \$8.7 million to replace or retrofit 452 older diesel buses. In New York, \$460,000 is going to replace or retrofit 23 buses, including one in Dundee.

Stephanie Cleveland, Dundee's transportation director, learned of the EPA program last year when district officials were looking at purchasing new buses.

"We will replacing an older model diesel bus with an approved, newer model bus that meets the requirements of the program," Cleveland said. "The bus submitted for the rebate will be scrapped as part of the requirements of the rebate program. We are very pleased to have been selected for this rebate."

Federal officials said the new and retrofitted buses will reduce pollutants linked to health problems such as asthma and lung damage.

The EPA launched its "Clean School Bus USA" program 15 years ago.

St. Louis Post-Dispatch

http://www.stltoday.com/business/local/epa-extends-rebates-to-missouri-schools-for-cleaner-bus-upgrades/article_a1fedc95-ba8d-560c-a948-f65cae17cc5f.html

EPA Extends Rebates To Missouri Schools For Cleaner Bus Upgrades

By Bryce Gray, 3/18/18

The Environmental Protection Agency is offering rebates to 18 Missouri school districts — including some near St. Louis — to replace older, diesel school buses.

The \$745,000 total extended to schools around the state will help cover the replacement of 40 buses. The sum is part of a broader outlay of \$8.7 million nationally for bus replacements and retrofits, funded through the EPA's Diesel Emissions Reduction Act program.

The rebates offered through the program will knock down the sticker price that eligible school districts pay by \$15,000 to \$20,000 apiece, depending on the size of the bus.

St. Louis-area school districts to receive the funding include De Soto, Mehlville, Valley Park, New Haven and the Lincoln County R-III School District, in Troy, which is by far the state's largest recipient of the money, with \$150,000 to be put toward 10 new buses. No other district received more than \$60,000 to help with three bus upgrades.

The EPA says the initiative aims to protect the health of children by decreasing emissions of pollutants like nitrogen oxides and particulate matter.

"There are links to health problems like asthma and lung damage, and with school buses carrying our most treasured possessions — our youth — we'd like (the funding) to energize some work in those areas by cities and states," said David Bryan, a public affairs specialist at the agency's regional headquarters near Kansas City.

Funding upgrades to cleaner school buses is gaining widespread traction at other levels of government, too. Though not part of a coordinated effort, the EPA's move is similar to investment under consideration by the Missouri Department of Natural Resources, which signaled that it is likely to pursue similar upgrades with at least some of its \$41 million from the Volkswagen emissions scandal settlement.

Deliberation on how to spend that money is still ongoing, but DNR officials suggested that the EPA's separate move could help "get the most bang for the buck" in terms of funding bus replacements.

"They're separate but certainly related," said Darcy Bybee, director of DNR's Air Pollution Control Program. "The timing is good."

Farm Futures

EPA's Pruitt Talks WOTUS, RFS With Farm Bureau Members

By Farm Futures, 3/19/18

EPA Administrator Scott Pruitt talked about the agency's role in American agriculture during a March 14 appearance before more than 300 members of the Iowa, Missouri, Ohio and Alabama Farm Bureau.

"I am committed to providing America's farmers with the transparency and regulatory certainty they deserve from Washington," Pruitt said. "EPA is working with our nation's first environmentalists as partners to preserve and steward our natural resources while supporting local economies."

Topics covered include:

- Waters of the U.S. rules
- Continued efforts to engage in cooperative federalism on issues affecting farmers and ranchers.
- The Renewable Fuel Standard

Quotes from attending Farm Bureaus

"Administrator Pruitt is willing to work with the people on the front lines instead of against them," said Missouri Farm Bureau President Blake Hurst. "This is a welcome change, and we look forward to making progress on environmental policy with his team."

"I appreciate the new direction Administrator Pruitt is taking the EPA and the outreach that has been made to the farming community," said John DeLoach, a young farmer in town with the Alabama Farmers Federation. "It is encouraging to see the agency working with, rather than against, our nations' farmers in carrying out their mission."

"We appreciate Administrator Pruitt's support on critical issues such as rescinding the Waters of the U.S. (WOTUS) rule and recognizing farmers and ranchers as partners in conservation and environmental stewardship," said Iowa Farm Bureau President Craig Hill.

"Ohio farmers appreciate Administrator Pruitt's willingness to listen to our concerns," said Ohio Farm Bureau President Frank Burkett III. "He shares Farm Bureau's belief that protecting the environment and farming profitably are not exclusive of one another. We appreciate that he chose to spend valuable time with us."

Science Reform Eyed As Path To Unravel Endangerment Finding

By Scott Waldman, 3/19/18

The plan now being developed at U.S. EPA to restrict the science the agency uses could affect the crafting of regulations for years and become one of the most enduring parts of Administrator Scott Pruitt's legacy.

The plan under consideration is expected to limit the science used in EPA regulation to studies where the data could be published and reproduced. And while the agency is still considering the exact scope of its restrictions, both critics and supporters of the plan agree that it will fundamentally transform the way EPA uses research.

Supporters say it will prevent opaque "secret science" from being used to form regulations that could affect billions of dollars in economic activity. Opponents say it will eliminate from consideration much of the groundbreaking research the agency has used to protect Americans against pollution.

EPA's expected reform efforts are inspired by legislative measures boosted by Republican Rep. Lamar Smith of Texas, chairman of the House Committee on Science, Space and Technology and one of Congress' chief antagonists toward mainstream climate scientists. Smith has pushed legislation in recent years that would require new EPA regulations to be based on science that is reproducible and whose data is public. The most recent iteration of Smith's legislation, which is called the "Honest and Open New EPA Science Treatment (HONEST) Act," passed out of the House a year ago but has failed to advance in the Senate.

But a group of influential conservative voices, including Trump EPA transition team members and researchers from conservative think tanks, want Pruitt to go further. They want Pruitt — who recently told a group of conservatives gathered at the Heritage Foundation that the agency was working on the issue — to impose the requirement on all science used at the agency. Some even see it as a way to potentially go after the endangerment finding for greenhouse gases, which is the legal underpinning of EPA's climate regulations.

Science transparency can be used to go after the supporting documents for the endangerment finding, to evaluate its quality, said Pat Michaels, director of the Center for the Study of Science at the libertarian Cato Institute, which had a representative at the Heritage Foundation meeting. Michaels has long criticized climate models used in future predictions, and he believes that making data around the models transparent would prove his theory and make it easier to pick apart the models.

"We're all for rigorous examination of the models that are being used, especially the models for the endangerment finding," he said. "It's pretty apparent they're not working well, and if, for some reason, it's left to me and my few friends to point this out, I think it would be a good idea [and] that the agency should do it."

Regardless of whether it becomes a club against the endangerment finding, the directive could have significant impacts for studies now in place, said Bernard Goldstein, dean emeritus of the University of Pittsburgh Graduate School of Public Health and the former EPA assistant administrator for research and development in the Reagan administration. For example, air pollution rules must be re-evaluated by the agency every five years under the Clean Air Act, and the science data directive could sharply limit "just about everything" in those reviews, he said. That includes research from around the world, and there is little chance that scientists in Britain, France or Australia would turn over raw data to the Trump administration, he said.

"You're basically throwing out the data you have, that you've built up over many, many years," he said.

In pushing back against the estimates by EPA's career staff that the "HONEST Act" would cost more than \$250 million annually, Pruitt's EPA staff suggested that it would not apply to many studies that it would rely upon, according to a Congressional Budget Office analysis. That may suggest that the agency is now looking at crafting the plan to fit future regulations, rather than a retroactive look at those in place. That would mean Pruitt could roll out the plan in a dramatic public presentation as he did with his reform of the science advisory boards, but it would have a far smaller impact.

EPA didn't respond to a request for comment about the expected announcement.

Bad for industry?

Critics of the proposal say it would have lasting damage and might even earn industry's ire because it could easily be reversed by the next administration.

The requirement would privilege industry data, because many key studies upon which regulations were built are historical and don't have raw data available, said David Michaels, a George Washington University epidemiologist and former assistant secretary at the Occupational Safety and Health Administration in the Obama administration. That means EPA's regulatory, or deregulatory, agenda wouldn't be based on the best available science but only that which has been produced by industry and has raw data. One example, he said, of studies that would be excluded by data restrictions is some of the key research on lead, which goes back years, and which Pruitt has said is a priority for the agency this year.

"Industry would provide the studies they've done that show the effects are minimal or less, and they would provide the raw data," he said. "But some of the historical studies which have found a higher risk associated with this exposure might not be available, and so this sort of process could support that rolling back of regulations even though good science would tell you not to do that."

Even if the science reforms are issued through a directive, and it is wiped out by the first post-Trump EPA administrator, it has the potential to create lasting damage for years, he said. That sort of back-and-forth creates an uncertainty that even industry will oppose, he said.

"If this is being used to alter regulation, then those take many years to change, and that's a concern," he said. "It's bad for public health; it's bad for industry, which needs some certainty."

Pruitt mentioned that a plan was forthcoming to a group of conservatives gathered at the Heritage Foundation last week. Some of those who were there, or whose group was in attendance, want Pruitt to go further than the "HONEST Act."

"I hope that it's tighter than that," said Steve Milloy, a former coal executive and member of Trump's EPA transition team who has pushed the agency to impose such restrictions for years. "I hope that EPA does not regulate at all unless the underlying scientific data can be made available, and I don't think there is any legislation yet that is that strong."

Milloy said the final plan would likely not go as far as he would like, because some industry groups, including the pharmaceutical industry, are lobbying against it. He said his goal is that EPA does not rely on any data that cannot be challenged.

"If they don't want to defend their data, I'm hoping that is the last we see of it," he said.

Critics of the plan say the greatest danger of the plan, and perhaps its most problematic legacy is its ability to quickly spread to other federal agencies. It's likely that if proponents see the plan put in place at EPA, they'll seek it in the Federal Drug Administration or Department of Agriculture, anywhere that government has imposed regulations, said Goldstein, the former EPA official in the Reagan administration. It would also interfere with ongoing regulatory efforts that have been underway for years, he said, wiping out the potential use of an unprecedented amount of essential research.

"This scares the hell out of me and has for quite some time," he said. "You can just about pick any agency that's using science on regulatory things and say, 'Hey, if we get away with it at EPA, we can do it for any of these.'"

The Washington Post

Fourth Austin Explosion Possibly Detonated By Tripwire, Leaving 2 Injured, Police Say

By Eva Ruth Moravec, Meagan Flynn, Mark Berman, 3/19/18

AUSTIN — Police in Austin said an explosion in a residential neighborhood Sunday night appeared to be related to the three bombs that detonated earlier this month, plunging the Texas capital further into a frightening mystery that forced residents to remain locked in their home as investigators scoured the area for answers.

The blast Sunday, which injured two men who were riding bicycles through a residential area, was the latest in a string of explosions to rock Austin, which has been on edge since the previous bombings killed two people and seriously injured a third. Authorities have seemed at a loss to explain who could be setting off these devices or why, saying only that the bombs were sophisticated and could have been motivated by racial bias, although they acknowledged that this remains only a theory.

This latest explosion injured two men in their 20s in the southwest portion of Austin. While the previous blasts all involved packages left at homes, this explosive was on the side of the road and possibly triggered by a tripwire, said Brian Manley, the interim Austin police chief.

“We are working under the belief that this is related to the other bombing incidents that have occurred in our community over the last couple weeks,” Manley said at a news conference early Monday.

Yet this latest blast has only deepened the uncertainty surrounding what is happening in Austin at a time when the city has been inundated with visitors for the South by Southwest festival.

The first two bombs killed black people — a 39-year-old construction worker and a 17-year-old high school student — related to prominent members of Austin’s African American community who were also close personal friends. The third bomb seriously injured a 75-year-old Hispanic woman, but it was addressed to a different home and apparently exploded when she was carrying it, according to two people familiar with the case.

The first three explosions detonated in the eastern part of Austin, impacting areas where the city’s black and Hispanic residents live, which prompted some in the area to question whether the initial blast would have prompted more urgency had it gone off in the more affluent, predominantly white neighborhoods.

This fourth explosion went off in the southwestern part of the city, far from the first three, and police said Monday that the two men injured were both white. They were taken to the hospital with serious but not life-threatening injuries, officials said, and the hospital said they were in good condition.

Still, police said they were still considering whether at least some of the bombings could have been a hate crime.

“We’ve said from the beginning that we’re not willing to rule anything out, just because when you rule something out you limit your focus,” Manley said in an interview Monday with ABC’s “Good Morning America.” “This does change the concerns that we had initially, although we have still not yet ruled it out until we understand what the ideology or motive is behind the suspect or suspects.”

Manley said in the interview that police do not have any specific evidence leading them to a particular suspect, and he reiterated his plea to the public for tips and information.

Authorities have described the explosives as the sophisticated work of a person or people who know what they are doing, saying that the bombers have been able to assemble and deliver these packages without setting them off at any point. Manley said the explosion Sunday night suggested that the bomber is even more proficient than authorities feared.

“If this explosion last night was the result of a bomb that was utilizing tripwire technology, that is showing a different level of skill, above what we were already concerned that this suspect or suspects possess,” Manley said.

Austin Mayor Steve Adler said that while the initial concern after the first bombings focused on packages left on doorsteps, Sunday night’s explosion caused officials to cast a wider net.

"We understand the anxiousness that we all feel, but there is just an army of law enforcement personnel working on this at this point," he said Monday in a telephone interview with The Washington Post.

Adler said that "with each additional event, the horrible part is that people are getting hurt." But, he added, "it also means that law enforcement folks get additional forensic evidence."

The fourth explosion went off just hours after the Austin police made a public appeal in the case, increasing the reward for information to \$100,000 and addressing the bomber or bombers in particular.

"These events in Austin have garnered worldwide attention," Manley said during the earlier announcement. "And we assure you that we are listening. We want to understand what brought you to this point, and we want to listen to you."

After Sunday's explosion, Manley urged residents in the surrounding neighborhood to remain in their homes while investigators continue to probe the area. Because of the darkness, he said, police may not know until after sunrise whether other suspicious devices were left in the neighborhood. He said that people who needed to leave their homes should call 911 for an escort.

"Given the darkness, we have not really had the opportunity to really look at this blast site to determine what has happened," Manley said at a news conference late Sunday. "It's obvious there's been an explosion; it's obvious it caused significant injuries to two people, and it is important right now for anyone in the neighborhood behind us to remain inside and give us time to work through this."

Manley also said that officers were working to clear a backpack left in the area. The FBI and Bureau of Alcohol, Tobacco, Firearms and Explosives were also on the scene, and Manley said more than 500 officers have followed up on 435 leads and have conducted 236 interviews. None have resulted in a suspect so far.

Steve Brown, 53, had gone out to dinner Sunday and was returning home when he saw the police tape.

"It's kind of surreal," he told The Washington Post. "It had been on the other side of town — now it's on our street."

He said his 80-year-old mother-in-law was at home and told them she heard a "boom."

Early Monday, the Austin Independent School District announced on Facebook that it was keeping school buses out of the neighborhood and would be excusing any related tardiness or absences. Regents School of Austin, a private Christian school near the neighborhood where the explosive went off, said class would begin later Monday before ultimately canceling school.

After the first explosion on March 2 killed Anthony Stephan House, police said initially described it as an "isolated incident." However, when two more bombs exploded 10 days later, police reversed course and said they believed all three were related.

The first blast on March 12 killed Draylen Mason, a high school senior well known for his love of music, playing everything from funk to mariachi to classical music. The second bomb that day critically wounded Esperanza Herrera, who was visiting her mother's house where the package was delivered.

At least two of the victims of the bombings have had an connection, though its significance was not immediately clear. House's stepfather, Freddie Dixon, told The Post last week that he is close to Mason's grandfather, Norman Mason. They were fraternity brothers, and Norman Mason also attended the church where Dixon was once a pastor, Dixon said.

Dixon said he did not think the connection was a coincidence.

"Somebody's done their homework on both of us, and they knew what they were doing," he said, adding that he believed the explosions were possibly a hate crime or the result of a vendetta.

Authorities have said they do not think the bombings were connected to the South by Southwest festival, though fears from these explosions crept into the event, with a bomb threat forcing the Roots to cancel a concert they were going to hold Saturday night. Police said they arrested a 26-year-old Trevor Weldon Ingram in connection with that threat.

Trump Steps Up Attacks On Mueller Investigation

By Louise Radnofsky, Rebecca Ballhaus and Aruna Viswanatha, 3/19/18

WASHINGTON—President Donald Trump and his legal team over the weekend intensified attacks on the special counsel's probe into possible Russian election interference, departing from a previously more cooperative posture and prompting more urgent warnings from senators not to undermine the investigation.

In his first Twitter post to target the special counsel, Robert Mueller, by name, Mr. Trump on Saturday said the probe "should never have been started in that there was no collusion and there was no crime." On Sunday, the president mentioned Mr. Mueller again, suggesting his team of prosecutors consisted of "hardened Democrats" intent on taking down the Republican president.

Mr. Trump for months has criticized the Russia probe, but his weekend comments showed a more confrontational tone toward Mr. Mueller and prompted senators from both parties to caution the president against taking steps to end the special counsel's investigation. The warnings to Mr. Trump were also triggered by a statement Saturday by the president's personal lawyer, John Dowd, calling for the Justice Department to step in to stop the Mueller investigation.

Such a step "would be the beginning of the end of his presidency, because we are a rule-of-law nation," Sen. Lindsey Graham (R., S.C.) said on CNN.

Rep. Trey Gowdy (R., S.C.) said on Fox that Mr. Dowd's remarks were "a disservice," adding, "If you have an innocent client, Mr. Dowd, act like it." Mr. Gowdy, who has said he isn't seeking re-election, is a member of the House Intelligence Committee and a former federal prosecutor.

The latest flare-up over the Russia probe came days after news that the special counsel had subpoenaed Mr. Trump's company, the Trump Organization, for documents related to his investigation. It also came after the Justice Department fired a former top Federal Bureau of Investigation official whom Mr. Trump has repeatedly criticized publicly and who is a potential witness to the events surrounding Mr. Trump's dismissal last year of James Comey as FBI director.

Mr. Mueller is investigating the firing for evidence of obstruction of justice, as part of his probe of any ties between the Trump 2016 campaign and Moscow. That investigation has led to five public guilty pleas, including by two top Trump campaign aides, while Mr. Mueller last month returned indictments of three Russian companies and 13 Russian citizens on charges of engaging in a widespread effort to interfere in the election.

Mr. Trump has said his presidential campaign didn't collude with Russia, and he has denied attempting to block the probe. At times, he has also indicated that he doubts U.S. intelligence assessments that Russia attempted to tip the election to Mr. Trump. Russia has denied those assessments as well.

Mr. Trump's legal team has sought to provide Mr. Mueller the documents he has requested and has discussed offering a sit-down interview with Mr. Trump if it would more quickly end the investigation. Mr. Trump's attorneys have also urged him to show restraint in his tweets and not antagonize the special counsel.

Mr. Trump in another tweet approved of the late-Friday firing of Andrew McCabe, a former FBI deputy director, and leveled a new attack on Mr. Comey and what he called the "lies and corruption going on at the highest levels" of the FBI.

The firing of Mr. McCabe by Attorney General Jeff Sessions, who himself has come under fire from Mr. Trump, came after the Justice Department's inspector general found a "lack of candor" in Mr. McCabe's disclosures about contact with the news media, in relation to an October 2016 Wall Street Journal report.

The FBI's Office of Professional Responsibility recommends dismissal if "lack of candor" is found, but allies of Mr. McCabe say the finding was rushed and lacks a substantive basis.

The McCabe firing, which came hours before he was set to retire, depriving him of at least part of pension, sparked debate over whether it was merited or was an attempt to undermine the Mueller probe. Mr. Trump's attacks also follow the news that Mr. McCabe wrote memos describing his conversations with Mr. Trump and turned them over Mr. Mueller.

A person familiar with the memos said they outlined three or four meetings or calls between Messrs. McCabe and Trump. While it wasn't the main point of the memos, the documents say that in each interaction, Mr. Trump commented on Mr. McCabe's wife, who ran for the state Senate in Virginia in 2015 as a Democrat and received campaign funding from the political organization of then- Gov. Terry McAuliffe, a longtime friend of Bill and Hillary Clinton. Mr. Trump tried to cast doubt on the report of the memos, writing on Twitter Sunday that he "spent very little time with Andrew McCabe, but he never took notes when he was with me."

In remarks after the McCabe firing, John Brennan, director of the Central Intelligence Agency under President Barack Obama and an official in the George W. Bush administration, said on Twitter that Mr. Trump would be seen as a "disgraced demagogue," adding, "You may scapegoat Andy McCabe, but you will not destroy America."

The White House circulated a statement Sunday night from Ty Cobb, the White House lawyer handling the Russia probe. "In response to media speculation and related questions being posed to the Administration, the White House yet again confirms that the President is not considering or discussing the firing of the Special Counsel, Robert Mueller," Mr. Cobb said.

Rep. Mark Meadows (R., N.C.) said he was comfortable with the termination of Mr. McCabe and didn't see it as unfair, from what he knew.

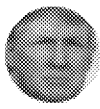

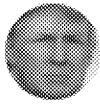

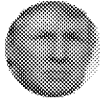

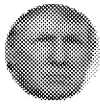

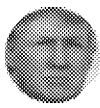

"Based on the information that I have...I would think that the termination of Andrew McCabe by the Department of Justice and FBI was certainly appropriate," he said.

Mr. Trump's tweet suggesting an anti-GOP bent to the Mueller team came even though Mr. Mueller is a registered Republican and was appointed and is overseen by another Republican, Deputy Attorney General Rod Rosenstein. Mr. Trump and his supporters have pointed to indications that some members of the Mueller team, including deputy Andrew Weissman, are Democrats and therefore can't be impartial. Mr. Weissman attended Mrs. Clinton's election-night party in New York, according to people familiar with his attendance.

Other lawyers on the team have made donations to Democratic candidates in the past, which under federal law can't be a barrier when they are being assessed for career positions in the agency.

The White House on Sunday said cooperation with Mr. Mueller hadn't ended. "I don't think that the president or anybody right now in our White House is suggesting not cooperating in any way with the Mueller investigation," said Marc Short, the president's director of legislative affairs, on CBS.

Finger Lakes Times: Dundee Getting EPA Funds For New Bus

The Dundee Central School District will be getting a new bus through the U.S. Environmental Protection Agency's Diesel Emissions Reduction Act funding. Nationwide, the EPA is awarding \$8.7 million to replace or retrofit 452 older diesel buses. In New York, \$460,000 is going to replace or retrofit 23 buses, including one in Dundee. Stephanie Cleveland, Dundee's transportation director, learned of the EPA program last year when district officials were looking at purchasing new buses. "We will replacing an older model diesel bus with an approved, newer model bus that meets the requirements of the program," Cleveland said. "The bus submitted for the rebate will be scrapped as part of the requirements of the rebate program. We are very pleased to have been selected for this rebate."

St. Louis Post-Dispatch: EPA Extends Rebates To Missouri Schools For Cleaner Bus Upgrades

The Environmental Protection Agency is offering rebates to 18 Missouri school districts — including some near St. Louis — to replace older, diesel school buses. The \$745,000 total extended to schools around the state will help cover the replacement of 40 buses. The sum is part of a broader outlay of \$8.7 million nationally for bus replacements and retrofits, funded through the EPA's Diesel Emissions Reduction Act program. The rebates offered through the program will knock down the sticker price that eligible school districts pay by \$15,000 to \$20,000 apiece, depending on the size of the bus. St. Louis-area school districts to receive the funding include De Soto, Mehlville, Valley Park, New Haven and the Lincoln County R-III School District, in Troy, which is by far the state's largest recipient of the money, with \$150,000 to be put toward 10 new buses. No other district received more than \$60,000 to help with three bus upgrades.

Farm Futures: EPA's Pruitt Talks WOTUS, RFS With Farm Bureau Members

EPA Administrator Scott Pruitt talked about the agency's role in American agriculture during a March 14 appearance before more than 300 members of the Iowa, Missouri, Ohio and Alabama Farm Bureau. "I am committed to providing America's farmers with the transparency and regulatory certainty they deserve from Washington," Pruitt said. "EPA is working with our nation's first environmentalists as partners to preserve and steward our natural resources while supporting local economies."

E&E News: Science Reform Eyed As Path To Unravel Endangerment Finding

The plan now being developed at U.S. EPA to restrict the science the agency uses could affect the crafting of regulations for years and become one of the most enduring parts of Administrator Scott Pruitt's legacy. The plan under consideration is expected to limit the science used in EPA regulation to studies where the data could be published and reproduced. And while the agency is still considering the exact scope of its restrictions, both critics and supporters of the plan agree that it will fundamentally transform the way EPA uses research. Supporters say it will prevent opaque "secret science" from being used to form regulations that could affect billions of dollars in economic activity. Opponents say it will eliminate from consideration much of the groundbreaking research the agency has used to protect Americans against pollution.

National News Highlights 3.19.18

The Washington Post: Fourth Austin Explosion Possibly Detonated By Tripwire, Leaving 2 Injured, Police Say

Police in Austin said an explosion in a residential neighborhood Sunday night appeared to be related to the three bombs that detonated earlier this month, plunging the Texas capital further into a frightening mystery that forced residents to remain locked in their home as investigators scoured the area for answers. The blast Sunday, which injured two men who were riding bicycles through a residential area, was the latest in a string of explosions to rock Austin, which has been on edge since the previous bombings killed two people and seriously injured a third. Authorities have seemed at a loss to explain who could be setting off these devices or why, saying only that the bombs were sophisticated and could have been motivated by racial bias, although they acknowledged that this remains only a theory. This latest explosion injured two men in their 20s in the southwest portion of Austin. While the previous blasts all involved packages left at homes, this explosive was on the side of the road and possibly triggered by a tripwire, said Brian Manley, the interim Austin police chief.

The Wall Street Journal: Trump Steps Up Attacks On Mueller Investigation

President Donald Trump and his legal team over the weekend intensified attacks on the special counsel's probe into possible Russian election interference, departing from a previously more cooperative posture and prompting more urgent warnings from senators not to undermine the investigation. In his first Twitter post to target the special counsel, Robert Mueller, by name, Mr. Trump on Saturday said the probe "should never have been started in that there was no collusion and there was no crime." On Sunday, the president mentioned Mr. Mueller again, suggesting his team of prosecutors consisted of "hardened Democrats" intent on taking down the Republican president. Mr. Trump for months has criticized the Russia probe, but his weekend comments showed a more confrontational tone toward Mr. Mueller and prompted senators from both parties to caution the president against taking steps to end the special counsel's investigation. The warnings to Mr. Trump were also triggered by a statement Saturday by the president's personal lawyer, John Dowd, calling for the Justice Department to step in to stop the Mueller investigation.

Dundee Getting EPA Funds For New Bus

By Mike Hibbard, 3/18/18

DUNDEE — The Dundee Central School District will be getting a new bus through the U.S. Environmental Protection Agency's Diesel Emissions Reduction Act funding.

Nationwide, the EPA is awarding \$8.7 million to replace or retrofit 452 older diesel buses. In New York, \$460,000 is going to replace or retrofit 23 buses, including one in Dundee.

Stephanie Cleveland, Dundee's transportation director, learned of the EPA program last year when district officials were looking at purchasing new buses.

"We will replacing an older model diesel bus with an approved, newer model bus that meets the requirements of the program," Cleveland said. "The bus submitted for the rebate will be scrapped as part of the requirements of the rebate program. We are very pleased to have been selected for this rebate."

Federal officials said the new and retrofitted buses will reduce pollutants linked to health problems such as asthma and lung damage.

The EPA launched its "Clean School Bus USA" program 15 years ago.

St. Louis Post-Dispatch

http://www.stltoday.com/business/local/epa-extends-rebates-to-missouri-schools-for-cleaner-bus-upgrades/article_a1fedc95-ba8d-560c-a948-f65cae17cc5f.html

EPA Extends Rebates To Missouri Schools For Cleaner Bus Upgrades

By Bryce Gray, 3/18/18

The Environmental Protection Agency is offering rebates to 18 Missouri school districts — including some near St. Louis — to replace older, diesel school buses.

The \$745,000 total extended to schools around the state will help cover the replacement of 40 buses. The sum is part of a broader outlay of \$8.7 million nationally for bus replacements and retrofits, funded through the EPA's Diesel Emissions Reduction Act program.

The rebates offered through the program will knock down the sticker price that eligible school districts pay by \$15,000 to \$20,000 apiece, depending on the size of the bus.

St. Louis-area school districts to receive the funding include De Soto, Mehlville, Valley Park, New Haven and the Lincoln County R-III School District, in Troy, which is by far the state's largest recipient of the money, with \$150,000 to be put toward 10 new buses. No other district received more than \$60,000 to help with three bus upgrades.

The EPA says the initiative aims to protect the health of children by decreasing emissions of pollutants like nitrogen oxides and particulate matter.

"There are links to health problems like asthma and lung damage, and with school buses carrying our most treasured possessions — our youth — we'd like (the funding) to energize some work in those areas by cities and states," said David Bryan, a public affairs specialist at the agency's regional headquarters near Kansas City.

Funding upgrades to cleaner school buses is gaining widespread traction at other levels of government, too. Though not part of a coordinated effort, the EPA's move is similar to investment under consideration by the Missouri Department of Natural Resources, which signaled that it is likely to pursue similar upgrades with at least some of its \$41 million from the Volkswagen emissions scandal settlement.

Deliberation on how to spend that money is still ongoing, but DNR officials suggested that the EPA's separate move could help "get the most bang for the buck" in terms of funding bus replacements.

"They're separate but certainly related," said Darcy Bybee, director of DNR's Air Pollution Control Program. "The timing is good."

Farm Futures

EPA's Pruitt Talks WOTUS, RFS With Farm Bureau Members

By Farm Futures, 3/19/18

EPA Administrator Scott Pruitt talked about the agency's role in American agriculture during a March 14 appearance before more than 300 members of the Iowa, Missouri, Ohio and Alabama Farm Bureau.

"I am committed to providing America's farmers with the transparency and regulatory certainty they deserve from Washington," Pruitt said. "EPA is working with our nation's first environmentalists as partners to preserve and steward our natural resources while supporting local economies."

Topics covered include:

- Waters of the U.S. rules
- Continued efforts to engage in cooperative federalism on issues affecting farmers and ranchers.
- The Renewable Fuel Standard

Quotes from attending Farm Bureaus

“Administrator Pruitt is willing to work with the people on the front lines instead of against them,” said Missouri Farm Bureau President Blake Hurst. “This is a welcome change, and we look forward to making progress on environmental policy with his team.”

“I appreciate the new direction Administrator Pruitt is taking the EPA and the outreach that has been made to the farming community,” said John DeLoach, a young farmer in town with the Alabama Farmers Federation. “It is encouraging to see the agency working with, rather than against, our nations’ farmers in carrying out their mission.”

“We appreciate Administrator Pruitt’s support on critical issues such as rescinding the Waters of the U.S. (WOTUS) rule and recognizing farmers and ranchers as partners in conservation and environmental stewardship,” said Iowa Farm Bureau President Craig Hill.

“Ohio farmers appreciate Administrator Pruitt’s willingness to listen to our concerns,” said Ohio Farm Bureau President Frank Burkett III. “He shares Farm Bureau’s belief that protecting the environment and farming profitably are not exclusive of one another. We appreciate that he chose to spend valuable time with us.”

Science Reform Eyed As Path To Unravel Endangerment Finding

By Scott Waldman, 3/19/18

The plan now being developed at U.S. EPA to restrict the science the agency uses could affect the crafting of regulations for years and become one of the most enduring parts of Administrator Scott Pruitt's legacy.

The plan under consideration is expected to limit the science used in EPA regulation to studies where the data could be published and reproduced. And while the agency is still considering the exact scope of its restrictions, both critics and supporters of the plan agree that it will fundamentally transform the way EPA uses research.

Supporters say it will prevent opaque "secret science" from being used to form regulations that could affect billions of dollars in economic activity. Opponents say it will eliminate from consideration much of the groundbreaking research the agency has used to protect Americans against pollution.

EPA's expected reform efforts are inspired by legislative measures boosted by Republican Rep. Lamar Smith of Texas, chairman of the House Committee on Science, Space and Technology and one of Congress' chief antagonists toward mainstream climate scientists. Smith has pushed legislation in recent years that would require new EPA regulations to be based on science that is reproducible and whose data is public. The most recent iteration of Smith's legislation, which is called the "Honest and Open New EPA Science Treatment (HONEST) Act," passed out of the House a year ago but has failed to advance in the Senate.

But a group of influential conservative voices, including Trump EPA transition team members and researchers from conservative think tanks, want Pruitt to go further. They want Pruitt — who recently told a group of conservatives gathered at the Heritage Foundation that the agency was working on the issue — to impose the requirement on all science used at the agency. Some even see it as a way to potentially go after the endangerment finding for greenhouse gases, which is the legal underpinning of EPA's climate regulations.

Science transparency can be used to go after the supporting documents for the endangerment finding, to evaluate its quality, said Pat Michaels, director of the Center for the Study of Science at the libertarian Cato Institute, which had a representative at the Heritage Foundation meeting. Michaels has long criticized climate models used in future predictions, and he believes that making data around the models transparent would prove his theory and make it easier to pick apart the models.

"We're all for rigorous examination of the models that are being used, especially the models for the endangerment finding," he said. "It's pretty apparent they're not working well, and if, for some reason, it's left to me and my few friends to point this out, I think it would be a good idea [and] that the agency should do it."

Regardless of whether it becomes a club against the endangerment finding, the directive could have significant impacts for studies now in place, said Bernard Goldstein, dean emeritus of the University of Pittsburgh Graduate School of Public Health and the former EPA assistant administrator for research and development in the Reagan administration. For example, air pollution rules must be re-evaluated by the agency every five years under the Clean Air Act, and the science data directive could sharply limit "just about everything" in those reviews, he said. That includes research from around the world, and there is little chance that scientists in Britain, France or Australia would turn over raw data to the Trump administration, he said.

"You're basically throwing out the data you have, that you've built up over many, many years," he said.

In pushing back against the estimates by EPA's career staff that the "HONEST Act" would cost more than \$250 million annually, Pruitt's EPA staff suggested that it would not apply to many studies that it would rely upon, according to a Congressional Budget Office analysis. That may suggest that the agency is now looking at crafting the plan to fit future regulations, rather than a retroactive look at those in place. That would mean Pruitt could roll out the plan in a dramatic public presentation as he did with his reform of the science advisory boards, but it would have a far smaller impact.

EPA didn't respond to a request for comment about the expected announcement.

Bad for industry?

Critics of the proposal say it would have lasting damage and might even earn industry's ire because it could easily be reversed by the next administration.

The requirement would privilege industry data, because many key studies upon which regulations were built are historical and don't have raw data available, said David Michaels, a George Washington University epidemiologist and former assistant secretary at the Occupational Safety and Health Administration in the Obama administration. That means EPA's regulatory, or deregulatory, agenda wouldn't be based on the best available science but only that which has been produced by industry and has raw data. One example, he said, of studies that would be excluded by data restrictions is some of the key research on lead, which goes back years, and which Pruitt has said is a priority for the agency this year.

"Industry would provide the studies they've done that show the effects are minimal or less, and they would provide the raw data," he said. "But some of the historical studies which have found a higher risk associated with this exposure might not be available, and so this sort of process could support that rolling back of regulations even though good science would tell you not to do that."

Even if the science reforms are issued through a directive, and it is wiped out by the first post-Trump EPA administrator, it has the potential to create lasting damage for years, he said. That sort of back-and-forth creates an uncertainty that even industry will oppose, he said.

"If this is being used to alter regulation, then those take many years to change, and that's a concern," he said. "It's bad for public health; it's bad for industry, which needs some certainty."

Pruitt mentioned that a plan was forthcoming to a group of conservatives gathered at the Heritage Foundation last week. Some of those who were there, or whose group was in attendance, want Pruitt to go further than the "HONEST Act."

"I hope that it's tighter than that," said Steve Milloy, a former coal executive and member of Trump's EPA transition team who has pushed the agency to impose such restrictions for years. "I hope that EPA does not regulate at all unless the underlying scientific data can be made available, and I don't think there is any legislation yet that is that strong."

Milloy said the final plan would likely not go as far as he would like, because some industry groups, including the pharmaceutical industry, are lobbying against it. He said his goal is that EPA does not rely on any data that cannot be challenged.

"If they don't want to defend their data, I'm hoping that is the last we see of it," he said.

Critics of the plan say the greatest danger of the plan, and perhaps its most problematic legacy is its ability to quickly spread to other federal agencies. It's likely that if proponents see the plan put in place at EPA, they'll seek it in the Federal Drug Administration or Department of Agriculture, anywhere that government has imposed regulations, said Goldstein, the former EPA official in the Reagan administration. It would also interfere with ongoing regulatory efforts that have been underway for years, he said, wiping out the potential use of an unprecedented amount of essential research.

"This scares the hell out of me and has for quite some time," he said. "You can just about pick any agency that's using science on regulatory things and say, 'Hey, if we get away with it at EPA, we can do it for any of these.'"

The Washington Post

https://www.washingtonpost.com/news/morning-mix/wp/2018/03/18/two-injured-in-explosion-in-austin-police-say/?utm_term=.b679eef88fe8

Fourth Austin Explosion Possibly Detonated By Tripwire, Leaving 2 Injured, Police Say

By Eva Ruth Moravec, Meagan Flynn, Mark Berman, 3/19/18

AUSTIN — Police in Austin said an explosion in a residential neighborhood Sunday night appeared to be related to the three bombs that detonated earlier this month, plunging the Texas capital further into a frightening mystery that forced residents to remain locked in their home as investigators scoured the area for answers.

The blast Sunday, which injured two men who were riding bicycles through a residential area, was the latest in a string of explosions to rock Austin, which has been on edge since the previous bombings killed two people and seriously injured a third. Authorities have seemed at a loss to explain who could be setting off these devices or why, saying only that the bombs were sophisticated and could have been motivated by racial bias, although they acknowledged that this remains only a theory.

This latest explosion injured two men in their 20s in the southwest portion of Austin. While the previous blasts all involved packages left at homes, this explosive was on the side of the road and possibly triggered by a tripwire, said Brian Manley, the interim Austin police chief.

"We are working under the belief that this is related to the other bombing incidents that have occurred in our community over the last couple weeks," Manley said at a news conference early Monday.

Yet this latest blast has only deepened the uncertainty surrounding what is happening in Austin at a time when the city has been inundated with visitors for the South by Southwest festival.

The first two bombs killed black people — a 39-year-old construction worker and a 17-year-old high school student — related to prominent members of Austin's African American community who were also close personal friends. The third bomb seriously injured a 75-year-old Hispanic woman, but it was addressed to a different home and apparently exploded when she was carrying it, according to two people familiar with the case.

The first three explosions detonated in the eastern part of Austin, impacting areas where the city's black and Hispanic residents live, which prompted some in the area to question whether the initial blast would have prompted more urgency had it gone off in the more affluent, predominantly white neighborhoods.

This fourth explosion went off in the southwestern part of the city, far from the first three, and police said Monday that the two men injured were both white. They were taken to the hospital with serious but not life-threatening injuries, officials said, and the hospital said they were in good condition.

Still, police said they were still considering whether at least some of the bombings could have been a hate crime.

"We've said from the beginning that we're not willing to rule anything out, just because when you rule something out you limit your focus," Manley said in an interview Monday with ABC's "Good Morning America." "This does change the concerns that we had initially, although we have still not yet ruled it out until we understand what the ideology or motive is behind the suspect or suspects."

Manley said in the interview that police do not have any specific evidence leading them to a particular suspect, and he reiterated his plea to the public for tips and information.

Authorities have described the explosives as the sophisticated work of a person or people who know what they are doing, saying that the bombers have been able to assemble and deliver these packages without setting them off at any point. Manley said the explosion Sunday night suggested that the bomber is even more proficient than authorities feared.

"If this explosion last night was the result of a bomb that was utilizing tripwire technology, that is showing a different level of skill, above what we were already concerned that this suspect or suspects possess," Manley said.

Austin Mayor Steve Adler said that while the initial concern after the first bombings focused on packages left on doorsteps, Sunday night's explosion caused officials to cast a wider net.

"We understand the anxiousness that we all feel, but there is just an army of law enforcement personnel working on this at this point," he said Monday in a telephone interview with The Washington Post.

Adler said that "with each additional event, the horrible part is that people are getting hurt." But, he added, "it also means that law enforcement folks get additional forensic evidence."

The fourth explosion went off just hours after the Austin police made a public appeal in the case, increasing the reward for information to \$100,000 and addressing the bomber or bombers in particular.

"These events in Austin have garnered worldwide attention," Manley said during the earlier announcement. "And we assure you that we are listening. We want to understand what brought you to this point, and we want to listen to you."

After Sunday's explosion, Manley urged residents in the surrounding neighborhood to remain in their homes while investigators continue to probe the area. Because of the darkness, he said, police may not know until after sunrise whether other suspicious devices were left in the neighborhood. He said that people who needed to leave their homes should call 911 for an escort.

"Given the darkness, we have not really had the opportunity to really look at this blast site to determine what has happened," Manley said at a news conference late Sunday. "It's obvious there's been an explosion; it's obvious it caused significant injuries to two people, and it is important right now for anyone in the neighborhood behind us to remain inside and give us time to work through this."

Manley also said that officers were working to clear a backpack left in the area. The FBI and Bureau of Alcohol, Tobacco, Firearms and Explosives were also on the scene, and Manley said more than 500 officers have followed up on 435 leads and have conducted 236 interviews. None have resulted in a suspect so far.

Steve Brown, 53, had gone out to dinner Sunday and was returning home when he saw the police tape.

“It’s kind of surreal,” he told The Washington Post. “It had been on the other side of town — now it’s on our street.”

He said his 80-year-old mother-in-law was at home and told them she heard a “boom.”

Early Monday, the Austin Independent School District announced on Facebook that it was keeping school buses out of the neighborhood and would be excusing any related tardiness or absences. Regents School of Austin, a private Christian school near the neighborhood where the explosive went off, said class would begin later Monday before ultimately canceling school.

After the first explosion on March 2 killed Anthony Stephan House, police said initially described it as an “isolated incident.” However, when two more bombs exploded 10 days later, police reversed course and said they believed all three were related.

The first blast on March 12 killed Draylen Mason, a high school senior well known for his love of music, playing everything from funk to mariachi to classical music. The second bomb that day critically wounded Esperanza Herrera, who was visiting her mother’s house where the package was delivered.

At least two of the victims of the bombings have had an connection, though its significance was not immediately clear. House’s stepfather, Freddie Dixon, told The Post last week that he is close to Mason’s grandfather, Norman Mason. They were fraternity brothers, and Norman Mason also attended the church where Dixon was once a pastor, Dixon said.

Dixon said he did not think the connection was a coincidence.

“Somebody’s done their homework on both of us, and they knew what they were doing,” he said, adding that he believed the explosions were possibly a hate crime or the result of a vendetta.

Authorities have said they do not think the bombings were connected to the South by Southwest festival, though fears from these explosions crept into the event, with a bomb threat forcing the Roots to cancel a concert they were going to hold Saturday night. Police said they arrested a 26-year-old Trevor Weldon Ingram in connection with that threat.

Trump Steps Up Attacks On Mueller Investigation

By Louise Radnofsky, Rebecca Ballhaus and Aruna Viswanatha, 3/19/18

WASHINGTON—President Donald Trump and his legal team over the weekend intensified attacks on the special counsel’s probe into possible Russian election interference, departing from a previously more cooperative posture and prompting more urgent warnings from senators not to undermine the investigation.

In his first Twitter post to target the special counsel, Robert Mueller, by name, Mr. Trump on Saturday said the probe “should never have been started in that there was no collusion and there was no crime.” On Sunday, the president mentioned Mr. Mueller again, suggesting his team of prosecutors consisted of “hardened Democrats” intent on taking down the Republican president.

Mr. Trump for months has criticized the Russia probe, but his weekend comments showed a more confrontational tone toward Mr. Mueller and prompted senators from both parties to caution the president against taking steps to end the special counsel's investigation. The warnings to Mr. Trump were also triggered by a statement Saturday by the president's personal lawyer, John Dowd, calling for the Justice Department to step in to stop the Mueller investigation.

Such a step "would be the beginning of the end of his presidency, because we are a rule-of-law nation," Sen. Lindsey Graham (R., S.C.) said on CNN.

Rep. Trey Gowdy (R., S.C.) said on Fox that Mr. Dowd's remarks were "a disservice," adding, "If you have an innocent client, Mr. Dowd, act like it." Mr. Gowdy, who has said he isn't seeking re-election, is a member of the House Intelligence Committee and a former federal prosecutor.

The latest flare-up over the Russia probe came days after news that the special counsel had subpoenaed Mr. Trump's company, the Trump Organization, for documents related to his investigation. It also came after the Justice Department fired a former top Federal Bureau of Investigation official whom Mr. Trump has repeatedly criticized publicly and who is a potential witness to the events surrounding Mr. Trump's dismissal last year of James Comey as FBI director.

Mr. Mueller is investigating the firing for evidence of obstruction of justice, as part of his probe of any ties between the Trump 2016 campaign and Moscow. That investigation has led to five public guilty pleas, including by two top Trump campaign aides, while Mr. Mueller last month returned indictments of three Russian companies and 13 Russian citizens on charges of engaging in a widespread effort to interfere in the election.

Mr. Trump has said his presidential campaign didn't collude with Russia, and he has denied attempting to block the probe. At times, he has also indicated that he doubts U.S. intelligence assessments that Russia attempted to tip the election to Mr. Trump. Russia has denied those assessments as well.

Mr. Trump's legal team has sought to provide Mr. Mueller the documents he has requested and has discussed offering a sit-down interview with Mr. Trump if it would more quickly end the investigation. Mr. Trump's attorneys have also urged him to show restraint in his tweets and not antagonize the special counsel.

Mr. Trump in another tweet approved of the late-Friday firing of Andrew McCabe, a former FBI deputy director, and leveled a new attack on Mr. Comey and what he called the "lies and corruption going on at the highest levels" of the FBI.

The firing of Mr. McCabe by Attorney General Jeff Sessions, who himself has come under fire from Mr. Trump, came after the Justice Department's inspector general found a "lack of candor" in Mr. McCabe's disclosures about contact with the news media, in relation to an October 2016 Wall Street Journal report.

The FBI's Office of Professional Responsibility recommends dismissal if "lack of candor" is found, but allies of Mr. McCabe say the finding was rushed and lacks a substantive basis.

The McCabe firing, which came hours before he was set to retire, depriving him of at least part of pension, sparked debate over whether it was merited or was an attempt to undermine the Mueller probe. Mr. Trump's attacks also follow the news that Mr. McCabe wrote memos describing his conversations with Mr. Trump and turned them over Mr. Mueller.

A person familiar with the memos said they outlined three or four meetings or calls between Messrs. McCabe and Trump. While it wasn't the main point of the memos, the documents say that in each interaction, Mr. Trump commented on Mr. McCabe's wife, who ran for the state Senate in Virginia in 2015 as a Democrat and received campaign funding from the political organization of then- Gov. Terry McAuliffe, a longtime friend of Bill and Hillary Clinton. Mr. Trump tried to cast doubt on the report of the memos, writing on Twitter Sunday that he "spent very little time with Andrew McCabe, but he never took notes when he was with me."

In remarks after the McCabe firing, John Brennan, director of the Central Intelligence Agency under President Barack Obama and an official in the George W. Bush administration, said on Twitter that Mr. Trump would be seen as a “disgraced demagogue,” adding, “You may scapegoat Andy McCabe, but you will not destroy America.”

The White House circulated a statement Sunday night from Ty Cobb, the White House lawyer handling the Russia probe. “In response to media speculation and related questions being posed to the Administration, the White House yet again confirms that the President is not considering or discussing the firing of the Special Counsel, Robert Mueller,” Mr. Cobb said.

Rep. Mark Meadows (R., N.C.) said he was comfortable with the termination of Mr. McCabe and didn’t see it as unfair, from what he knew.

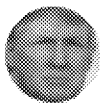

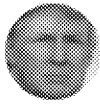

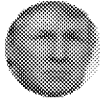

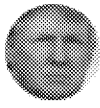

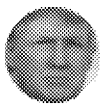

“Based on the information that I have...I would think that the termination of Andrew McCabe by the Department of Justice and FBI was certainly appropriate,” he said.

Mr. Trump’s tweet suggesting an anti-GOP bent to the Mueller team came even though Mr. Mueller is a registered Republican and was appointed and is overseen by another Republican, Deputy Attorney General Rod Rosenstein. Mr. Trump and his supporters have pointed to indications that some members of the Mueller team, including deputy Andrew Weissman, are Democrats and therefore can’t be impartial. Mr. Weissman attended Mrs. Clinton’s election-night party in New York, according to people familiar with his attendance.

Other lawyers on the team have made donations to Democratic candidates in the past, which under federal law can’t be a barrier when they are being assessed for career positions in the agency.

The White House on Sunday said cooperation with Mr. Mueller hadn’t ended. “I don’t think that the president or anybody right now in our White House is suggesting not cooperating in any way with the Mueller investigation,” said Marc Short, the president’s director of legislative affairs, on CBS.

TRUMP TWEETS

	Donald J. Trump  @realDonaldTrump · 10m	▼

Subject: [SPAM-Sender] Former OMB Official on EPA Transparency in Science Rule

Ms. Bradford:

EPA's well intended--but poorly designed--- rule for transparency in science will not provide the relief so claimed and will thwart real reform because it fails to capitalize on existing statutes which address an identical problem.

I am with the Center for Regulatory Effectiveness and I am addressing an issue seldom addressed in the comments submitted to EPA as of this date notwithstanding EPA highlighting its concern, namely:

"EPA solicits comment on this proposal and how it can best be promulgated and implemented in light of existing law and prior Federal policies that already require increasing public access to data and influential scientific information used to inform federal regulation.

To verify the authenticity of the Center for Regulatory Effectiveness and my association thereto here is a link to articles I have written which have been published on the Yale Law – American Bar Association Website: <http://yalejreg.com/nc/?s=tozzi>. Open any article on the aforementioned website and you will see at the end of each article a link to both the Center for Regulatory Effectiveness and one which describes my affiliation with it.

You may then read my views on this subject by visiting the website of the Center for Regulatory Effectiveness at <http://www.thecre.com/forum8/?p=2276>

We would appreciate receiving any relevant materials you have on this subject for our use in upcoming discussions with Administration officials.

Respectfully,

jim

Subject: Morning Energy: Spotlight on FERC at Pro summit — Hitching a ride on the 'minibus' — 'Secret science' out in the open

By Kelsey Tamborrino | 07/17/2018 05:43 AM EDT

With help from Emily Holden, Anthony Adragna, Colin Wilhelm and Darius Dixon

SEE YOU THERE: Today's the day — POLITICO Pro is hosting its second annual Pro summit, featuring one-on-one conversations with newsmakers across the policy landscape, including two sessions on energy.

FERC Commissioner Cheryl LaFleur will sit down this afternoon with our own Darius Dixon, before the regulatory body is deadlocked next month following the exit of GOP Commissioner Rob Powelson. LaFleur, a Democrat, has served under presidents from both parties and experienced the agency in almost every configuration — whether it has all five commissioners in place, or just one. There's no shortage of topics to chew over: the potential impact of an Energy Department coal and nuclear rescue plan, the heated rhetoric against states that stand in the way of pipelines, and whether FERC is "on the wrong side of history" when it comes to climate change. Darius' interview with LaFleur starts around 2 p.m.

Also on tap: California Air Resources Board Chairwoman Mary Nichols, Murray Energy CEO Bob Murray and the Council on Foreign Relations' Amy Myers Jaffe will participate in a panel this morning on America's "energy future." Nichols, for one, has been heavily involved in discussions with the Trump administration over car rules that the White House is considering rolling back. Expect questions related to the administration's efforts to pare back regulations and increase oil, gas and coal production — and an in-depth conversation on what that means for free market forces and renewables.

See the full agenda [here](#) and watch the livestream [here](#).

WELCOME TO TUESDAY! I'm your host, Kelsey Tamborrino. Citizens' Climate Lobby's Brett Cease was first to correctly identify the two presidents who threw out the first pitch at an All-Star game in D.C.: Franklin D. Roosevelt in 1937 and John F. Kennedy in 1962. For today: Which state or states have just one consonant in its spelling? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

JUST RELEASED: [View the latest POLITICO/AARP poll](#) to better understand Arizona voters over 50, a voting bloc poised to shape the midterm election outcome. Get up to speed on priority issues for Hispanic voters age 50+, who will help determine whether Arizona turns blue or stays red.

HITCHING A RIDE ON THE 'MINIBUS': The House Rules Committee late Monday made 70 amendments to the EPA and Interior title of the spending minibuss, [H.R. 6147 \(115\)](#). The amendments focus on blocking a host of Obama-era environmental regulations even as the Trump administration is in the process of rolling back many of those. Some of the amendments that caught ME's eye:

— **Diesel emissions grants:** Rep. [Gary Palmer's amendment](#) would eliminate the popular bipartisan Diesel Emissions Reduction Grant program used to retrofit diesel engines like those in school buses,

— **WOTUS:** Rep. Don Beyer's amendment would remove language blocking the Obama administration's Waters of the U.S. regulation,

— **Obama-era methane rule:** Rep. Markwayne Mullin's amendment would block enforcement of the Obama-era regulation aimed at curbing methane emissions from new oil and gas sources, which the Trump administration is already reconsidering,

— **Social cost of carbon:** Another amendment from conservatives would bar the use of the social cost of carbon in rulemakings,

— **Trailer efficiency:** Reps. Barry Loudermilk and Morgan Griffith's amendment would bar EPA from applying stricter fuel efficiency and greenhouse gas emissions standards to certain truck trailers,

— **Chesapeake Bay:** Rep. Bob Goodlatte's effort would limit EPA's ability to go after states that miss Chesapeake Bay cleanup milestones,

— **Ozone:** Rep. Glenn Grothman's amendment would block implementation of EPA's 2015 tightened ozone standard,

— **Coal ash:** A Democratic amendment would block the Trump EPA from revisiting an Obama-era coal ash regulation,

— **Endangered Species Act riders:** Several measures would bar the administration from issuing or enforcing Endangered Species Act rules relating to species like the lesser prairie chicken and Preble's meadow jumping mouse,

— **Attorney fees:** An amendment from Reps. Jason Smith and Greg Gianforte would block attorney fees from being awarded in any Clean Air Act, Clean Water Act or Endangered Species Act settlement, and,

— **Inspectors general:** Nothing related to former Administrator Scott Pruitt was made in order, but the House will consider an amendment from Rep. Raúl Grijalva that would increase the budget of the Interior Department's inspector general by \$2.5 million.

Read the full list of amendments made in order to the measure here.

'SECRET SCIENCE' OUT IN THE OPEN: EPA's controversial proposal to consider only research with publicly available data gets a public hearing at agency headquarters today starting at 8 a.m. Nearly 70 health, medical, academic and science groups — including the American Lung Association, American Heart Association, American Medical Association and American Academy of Pediatrics — oppose the plan, which they say could hamstring public health and environment protections.

EPA's Science Advisory Board voted unanimously to review the proposal, which Pruitt said was meant to bolster transparency. Paul Billings, national senior vice president of advocacy at the American Lung Association, called the rule a "coordinated effort to ignore the science that is inconvenient to the EPA's agenda," and compared it to lobbying efforts by the tobacco industry in the 1990s to exclude studies that showed secondhand smoke could kill.

What's at stake? The proposal could move forward quickly enough to allow EPA to roll back certain air quality standards currently under review. According to the Natural Resources Defense Council, the plan could undercut computer models meant to test chemicals under the new Toxic Substances Control Act and could toss

out landmark studies that relied on personal health records following extraordinary events, including when Hiroshima and Nagasaki victims were tested over time to find out the effects of radiation on humans.

The meeting will run until 8 p.m. or an hour after the last of more than 100 registered speakers has commented. Speakers, aside from many environment and public health groups, include the American Petroleum Institute, the U.S. Chamber of Commerce, the American Chemistry Council, FreedomWorks Foundation and climate science critic Steve Milloy. Dan Byers of the Chamber of Commerce's Global Energy Institute is expected to applaud the agency's efforts and commend EPA for going through the formal public comment and rulemaking process. "It is one thing to be cavalier about transparency principles when their application has little or no import to public policy, but federal rules that impact millions of people and billions of dollars should be held to a higher standard," he is expected to say. Also registered are Reps. Paul Tonko, Suzanne Bonamici and Dan Lipinski. Comments can be submitted until Aug. 16.

Related reading: Competitive Enterprise Institute senior fellow Angela Logomasini looks at the science transparency rule in analysis published today. "The rule is actually far more modest and flexible than depicted by its critics, and its goals are in fact achievable," Logomasini writes. Read it here.

FOR THE RECORD: The House Rules Committee meets at 3 p.m. this afternoon to formulate a rule on an anti-carbon tax resolution, H. Con. Res. 119 (115), that calls a tax on carbon released from fossil fuels "detrimental to the United States economy." The Rules panel will tee up a vote later this week on the resolution, which is led by Majority Whip Steve Scalise and would put a range of lawmakers — most notably the Climate Solutions Caucus — on the record on the issue.

WHERE'S ZINKE? Interior Secretary Ryan Zinke will deliver remarks this morning at the first meeting of the "Made in America" Outdoor Recreation Advisory Committee. The committee is tasked with advising the secretary on "public-private partnerships across all public lands, with the goal of expanding access to and improving infrastructure on public lands and waterways." See the meeting agenda.

AMERICA'S PLEDGE STILL WORKING ON PLEDGES: Michael Bloomberg and California Gov. Jerry Brown, the co-chairs of climate organization "America's Pledge," have unveiled a preview of the report they will release at the Global Climate Action Summit in San Francisco in September, detailing "bottom-up" opportunities for climate action sans federal leadership. The list is familiar: boosting renewables, accelerating coal retirements, retrofitting buildings for energy efficiency, electrifying building energy use, accelerating electric vehicle adoption, phasing out HFCs, preventing methane leaks at the wellhead, reducing methane leaks in cities, reducing emissions from land and starting carbon markets.

Vice Chairman Carl Pope said the group still plans to debut a quantitative analysis outlining what state and local governments are already doing, what they have committed to and what they are keying up. "We have every reason to believe the rest of the world is watching this very closely," Pope said, noting that the U.N.'s top climate official, Patricia Espinosa, mentioned the group and summit by name at the Vatican earlier this month. Read it here.

ESA GETS ITS DAY: Proposed tweaks to the Endangered Species Act will be front and center at a Senate Environment and Public Works hearing this morning. The hearing will feature testimony from Wyoming Gov. Matt Mead, Colorado Parks and Wildlife's Bob Broscheid and Virginia's Secretary of Natural Resources Matthew J. Strickler, and will focus on a discussion draft released by Chairman John Barrasso earlier this month aimed at changing the statute. **If you go:** The hearing kicks off at 9:45 a.m. in 406 Dirksen. Livestream here.

TAKEN BY STORMWATER: The House on Monday passed by voice vote H.R. 3906 (115), the Innovative Stormwater Infrastructure Act of 2017, which would "establish centers of excellence" for stormwater control infrastructure. The legislation, introduced last year by Democratic Rep. Denny Heck, directs EPA to create a

stormwater infrastructure funding task force to make recommendations on the availability of public and private funding for stormwater infrastructure.

DOE ISSUES FIRST TRIBAL LOAN GUARANTEE: The Energy Department will issue its first solicitation for the Tribal Energy Loan Guarantee Program today. The program provides up to \$2 billion in partial loan guarantees to support energy development in Native American and Alaska Native communities. According to DOE, today's solicitation marks more than \$40 billion in energy infrastructure loans and loan guarantees from DOE's Loan Programs Office in five areas.

HOUSE PANEL TO HOLD GRID HEARING: House Natural Resources will hold a hearing on July 25 on Puerto Rico's electric grid recovery and possible improvements to make it more efficient and resilient to future hurricanes. On top of the devastation caused by Hurricane Maria last year, Puerto Rico's electric utility owes bondholders \$9 billion, and most of its leadership departed last week after clashes with Gov. Ricardo Rosselló over executive compensation and political control of the utility, which is quasi-governmental.

MAKING THE GRADE: The Environment America Research & Policy Center is out today with its state-by-state report card, "Renewables on the Rise," which details increases in solar, wind, energy efficiency, electric vehicles and battery storage. The report says the U.S. now produces almost six times as much renewable electricity from wind and solar than it did in 2008. It also found that in March of last year, wind and solar produced 10 percent of the United States' electricity — marking a first. On the state level, the report said California, Arizona, North Carolina, Nevada and Texas saw the greatest total increases from 2008 until 2017 in solar energy generation. See the report [here](#) and a state-by-state interactive map [here](#).

YOU DOWN WITH TIP? A bipartisan group of four senators wrote to Energy Secretary Rick Perry on Monday in support of the Western Area Power Administration's Transmission Infrastructure Program, which was axed under the Trump administration's fiscal 2019 budget proposal. "TIP is one of the few federal programs that directly supports new and upgraded electric transmission," according to the letter, signed by Sens. Catherine Cortez Masto, Martin Heinrich, Dean Heller and Cory Gardner.

HOUSE PLANS FLOOD INSURANCE VOTE: The House is planning to vote next week to extend the National Flood Insurance Program, ahead of its July 31 expiration, sources familiar with the matter tell Pro Financial Services' Zachary Warmbrodt. There are already a few options on the table for the program: one from Financial Services Chairman Jeb Hensarling, who has been trying to put together an extension bill that includes reforms, and a new bill introduced by Scalise and Rep. Tom MacArthur that would reauthorize the program through Nov. 30. Read [more](#).

FOR YOUR RADAR: Republican Sen. Chuck Grassley introduced bipartisan legislation on Monday targeting price fixing by OPEC. The bill would amend the Sherman Act to make oil-producing and exporting cartels illegal, and was co-sponsored by Sens. Amy Klobuchar, Mike Lee and Patrick Leahy. "It's long past time to put an end to illegal price fixing by OPEC," Grassley said in a statement. Read the legislation [here](#).

MAIL CALL! National Rural Electric Cooperative Association CEO Jim Matheson sent a letter to the leadership of the Energy and Commerce Environment Subcommittee on Monday in support of legislation to reform the New Source Review permitting program.

— **More than 100 Democrats** signed onto a letter to members of both House and Senate Armed Services committees today to urge them to oppose any provisions to the National Defense Authorization Act that would "have widespread, negative consequences for the conservation of our imperiled wildlife and public lands." Read the letter [here](#).

— **Iowa's congressional delegation** invited acting EPA Administrator Andrew Wheeler to their state to discuss the Renewable Fuel Standard. Read it [here](#).

What role will Hispanic voters over 50 play in Arizona this Fall? Read POLITICO Magazine's new series "The Deciders" which focuses on this powerful voting bloc that could be the determining factor in turning Arizona blue.

QUICK HITS

- "Oil boom in Southern New Mexico ignites groundwater feud with Texas," Water Deeply.
- "In N.Y., farmers think about what might have been," E&E News.
- "Same agenda, different style, acting EPA head pledges," Bloomberg Environment.

HAPPENING TODAY

8:30 a.m. — POLITICO's Pro Summit, 999 Ninth St. NW.

8:45 a.m. — The United States Institute of Peace discussion on "Wildlife Poaching and Trafficking: Combating a Vital Source of Terrorism," 2301 Constitution Avenue NW.

9 a.m. — The Resilient Puerto Rico Advisory Commission discussion with the authors of the newly released "ReImagina Puerto Rico" report, 14th and F St. NW.

9 a.m. — The National Academy of Sciences' Board on Atmospheric Sciences and Climate meeting to discuss a research agenda for adaptation science, 2101 Constitution Ave. NW.

9:45 a.m. — Senate Environment and Public Works Committee hearing on "The Endangered Species Act Amendments of 2018," 406 Dirksen.

10 a.m. — House Natural Resources Federal Lands Subcommittee hearing on federal land bills, 1324 Longworth.

10 a.m. — The Atlantic Council discussion on "Ready and Resilient," focusing on disaster preparedness, 1030 15th St. NW.

10 a.m. — House Oversight Interior, Energy and Environment Subcommittee hearing on "Tribal Energy Resources: Reducing Barriers to Opportunity," 2247 Rayburn.

10 a.m. — House Science Energy and Environment Subcommittees joint hearing on "The Future of Fossil: Energy Technologies Leading the Way," 2318 Rayburn.

10 a.m. — Senate Energy and Natural Resources Committee hearing on the Interior Department's final list of critical minerals, 366 Dirksen.

12:30 p.m. — The Washington Institute for Near East Policy discussion on "Reimplementing Iran Sanctions: Where, How and How Much?" 1111 19th St. NW.

12:30 p.m. — Sens. Ed Markey and Tom Carper press conference on Supreme Court nominee Brett Kavanaugh, S-115.

1 p.m. — EPA meeting on pesticide health and safety, Rosslyn, Va.

1 p.m. — House Energy and Commerce Environment Subcommittee markup of H.R. 3128 (115), 2322 Rayburn.

3 p.m. — House Rules Committee meets to formulate a rule on H. Con. Res. 119 (115), H-313.

THAT'S ALL FOR ME!

House plans vote to keep flood insurance program going Back

By Zachary Warmbrodt | 07/16/2018 06:49 PM EDT

The House is planning to vote next week to extend the National Flood Insurance Program before leaving town ahead of the program's July 31 expiration, sources familiar with the matter said.

House Financial Services Chairman Jeb Hensarling (R-Texas) has been trying to put together an extension bill that includes reforms, sources said. Another option is a new bill introduced by House Majority Whip Steve Scalise (R-La.) and Rep. Tom MacArthur (R-N.J.) that would reauthorize the program through Nov. 30.

In a statement, Scalise said it was important to keep working on a long-term flood insurance reauthorization but that his bill would take concerns about a lapse off the table for the remainder of hurricane season.

While the House has passed a five-year reauthorization and overhaul, the Senate hasn't reached agreement on its own bill amid disputes over how to retool the program. It's unclear if the Senate would be able to pass anything other than a clean, short-term reauthorization at this stage. Sources said Sen. John Kennedy (R-La.) was planning to try to hotline an extension through January.

Subject: Morning Energy: Another mess for Pruitt — Virgin Islands party boss: Zinke ties improved hurricane response — Coal magnate delivered draft orders to Trump

By Kelsey Tamborrino | 06/07/2018 05:41 AM EDT

With help from Darius Dixon, Anthony Adragna and Annie Snider

ANOTHER MESS FOR PRUITT: Scott Pruitt has an appetite for food from the White House mess — a U.S. Navy-run restaurant for use only by White House officials, Cabinet members and other dignitaries. In fact, he loves eating there so much, the White House asked him to stop coming by so often, POLITICO's Emily Holden, Andrew Restuccia and Anthony Adragna report.

The message was clear, according to one person close to Pruitt: "We love having Mr. Pruitt, but it's not meant for everyday use." A member of the White House's Cabinet affairs team told agency chiefs of staff last year that their bosses shouldn't treat the mess like their personal dining hall — a comment that came in response to Pruitt's recurring use of the restaurant, sources said.

Pruitt's allies privately disputed that the warning about overuse of the mess was aimed squarely at him, but nobody contests that he's a frequent presence at the establishment in the basement of the West Wing. The White House did not respond when asked about his lunch habits, and EPA declined to comment.

A billing statement from July 2017 offered a glimpse into Pruitt's trips to the mess, racking up a bill of \$400 over nine trips that month — a relative bargain in downtown Washington considering the menu. A cheeseburger at the White House runs just \$6.35, according to Pruitt's bill. Compare that to the \$17 you'd pay for a burger from another favorite Pruitt spot, French bistro Le Diplomate. Read [more](#).

Support for Pruitt is also falling on Capitol Hill, Anthony and Emily report, in the wake of this week's news that Pruitt sought to buy a used mattress from the Trump Hotel and inquired about securing a Chick-fil-A franchise for his wife. Two more top aides to Pruitt — scheduler Millan Hupp and counsel Sarah Greenwalt — also are leaving the agency. "I'm not going to come down here, just because he happens to be a nominee of a president I support or a nominee from my party, and try to defend the indefensible," Sen. [John Neely Kennedy](#) said. More [here](#).

On the other hand, [Cory Gardner](#), who heads the Senate GOP campaign arm, told reporters he doesn't think Pruitt's ongoing ethics woes will harm his party in the midterms. "The states like Missouri, Indiana, North Dakota have benefited from a regulatory approach this administration has taken," Gardner said.

Environmentalists' "Boot Pruitt" campaign will gather a "group of cows" outside the Capitol South Metro station today from 8 a.m. to 9:15 a.m. to hand out fake Chick-fil-A coupons for a free chicken sandwich with a donation to Pruitt's legal defense fund. They'll hold signs reading: "Breeth Mor Carhun" and "What the Cluck, Pruitt?"

VIRGIN ISLANDS BOSS PLAYS UP ZINKE RELATIONSHIP: The head of the Virgin Islands Republican Party suggested his fundraising group's longstanding relationship with Interior Secretary Ryan Zinke helped improve the department's response to last year's hurricanes that struck the island territory, Pro's

Ben Lefebvre reports. John Canegata said he had direct access to Interior officials after the storm thanks to money his group raised for Zinke when he was a member of Congress.

Calling Zinke a "close friend," Canegata boasted of his connections in a televised appearance that aired in the Virgin Islands last month but has not received widespread attention outside of the territory. While numerous officials played a role in helping the islands recover from hurricanes Maria and Irma, "behind the scenes, trust me, a lot of telephone calls, a lot of maneuvering was going on because, I think, some of the relationships we built," Canegata said of Zinke.

Interior acknowledged that officials contacted Canegata after the hurricanes but said they did so as part of a wider effort to contact business leaders based in the territory and Zinke did not call him personally. Canegata works for Cruzan Rum, but a company representative told Ben he was not involved in coordinating its relief efforts. Interior expedited the reimbursement of taxes on Virgin Islands rum following the storms, but it was unclear whether Canegata influenced that decision; he did not respond to a request for comment.

For his part, Zinke has known Canegata since at least 2015, Ben reports. The secretary previously came under fire for a fundraiser for the VIGOP, as the group is known, during an official trip to the islands in his first month in President Donald Trump's Cabinet. Read more.

IT'S THURSDAY! I'm your host Kelsey Tamborrino. NRECA's Dan Riedinger correctly identified John Tyler as the only president to have not been a resident of the U.S. when he died. Tyler resided in Virginia at the time, which was part of the Confederate States of America. Today's question: Which Congress had the largest number of veterans in office? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

POLITICO convened leading thinkers and policymakers to look closely at the financial well-being of future American retirees. MURRAY DELIVERED EXECUTIVE ORDERS TO TRUMP: Coal magnate Bob Murray handed off drafts of six executive orders that would roll back Obama-era environmental regulations to Trump during the beginning of his administration, according to documents from DOE released under FOIA. The documents include a letter to Energy Secretary Rick Perry from Murray praising Trump's March 2017 energy independence executive order, and included a note where Murray wrote, "we have developed the enclosed materials for your review and consideration, consisting of: six (6) Executive Orders further rescinding anti-coal regulations of the Obama administration; and one (1) memorandum outlining the legal rationale for each of these action, and others."

While Trump did not sign those exact orders, the administration has moved to enact similar policies, Pro's Darius Dixon reports. The documents, which were sent to DOE the day Trump signed his energy independence order and one day before Murray met with Perry and DOE chief of staff Brian McCormack, also included concepts about grid security and "resiliency" that Perry later touted as part of his push to stop coal power plants from closing. Read more.

BAILOUT ON HIS MIND: In private remarks given during his visit to FEMA headquarters Wednesday, Trump mentioned a slew of topics that had nothing to do with hurricanes, The Washington Post reports, while only briefly mentioning Puerto Rico. Trump instead encouraged Perry to make an announcement about rescuing economically struggling coal and nuclear power plants, the Post reports. "I'd love to put it out — 'clean coal, nuclear,' it's a very important message," he said, telling Perry he needed to hold a news conference.

WRDA MOVES AHEAD: The House passed the Water Resources Development Act of 2018 (H.R. 8 (115)) last night, marking the first major piece of infrastructure legislation to move under the Trump administration, Pro's Annie Snider reports. Lawmakers signed off on the measure on a broadly bipartisan vote of 408-2. The bill — markedly narrower than the Senate's measure — would authorize six new Army Corps of Engineers projects and enact a suite of policy reforms at the red tape-laden agency.

What about the Senate? For those wondering, EPW Chairman John Barrasso told ME he'd not yet locked down a time for the Senate to consider its broader version of the water resources infrastructure legislation. Separately, Sen. Tammy Baldwin sent this letter to Trump, calling on him to urge Congress to include a permanent Buy America provision in the legislation.

MUM'S THE WORD: Barrasso, whose state produces a lot of coal and uranium, told ME he isn't ready to back Trump's proposed bailout for coal and nuclear power plants. "I've read the article but I want to actually see what the proposal is," he said. DOE is still formulating the details of how it would intervene to save the struggling plants.

RESCISSIONS VOTE TODAY: The House is set to vote today on Trump's \$15 billion rescissions bill, Pro's Sarah Ferris reports. The House Rules Committee teed up the bill, H.R. 3 (115), on Wednesday, a quick turnaround that surprised even some GOP lawmakers.

ALL ABOARD: After the rescissions package, the House is ready to start debate on its "minibus" appropriations package, which includes energy and water, legislative branch and military construction-VA spending bills, Pro's Kaitlyn Burton reports. The Rules Committee has set up floor votes on 50 amendments to the energy and water title. A final vote on the overall bill is expected Friday.

SHIMKUS SPEAKS: Rep. John Shimkus, one of the most ardent Yucca Mountain champions in Congress, said his loud floor dispute with Paul Ryan on Tuesday was simply a dispute over "strategy going forward." Other members suggested it had to do with the timing of the Energy-Water bill, since Shimkus thinks delaying until after the midterms might allow Yucca language to make it into the title. The Senate has avoided tackling Yucca due to Sen. Dean Heller's close reelection contest.

POWER OF THE PEN: The House Appropriations Committee agreed to bar EPA from spending more than \$50 on a fountain pen. The amendment — an apparent reference to the \$1,560 Pruitt spent on a dozen fancy writing implements — passed on a voice vote at Wednesday's markup. The panel cleared its version of the fiscal 2019 EPA-Interior bill, on a vote of 25-20. Committee Republicans blocked an effort from Democrats to boost EPA's Office of Inspector General by \$12 million, but approved an amendment that would change revenue sharing for drilling in the Arctic National Wildlife Refuge. And while the pen amendment passed, the committee shot down another amendment from Democratic Rep. Mike Quigley related to Pruitt's travel.

MEETING WITH A FULL DECK: The last time the leadership of FERC and the Nuclear Regulatory Commission got together, there were just enough commissioners between the two agencies to fill one five-member board. Fast-forward to today, and it's a full house for the first time in years thanks to confirmation of two new NRC leaders last month. The get-together is slated to run for just over two hours. An agenda hasn't been released but the meetings usually involve staff presentations on grid reliability — and how it might be impacted by the retirement of nuclear plants — and cybersecurity regulations. Finding the areas where an

economic regulator overlaps with a safety watchdog isn't always obvious. The meeting is slated to run from 9 a.m. to 11:15 a.m. at FERC headquarters, and will be [webcast](#).

ROYALTY RUMPUS: Interior's Royalty Policy Committee approved recommendations Wednesday aimed at expanding energy lease sales and lowering royalty rates, Ben recaps. But during the advisory committee's meeting, two members questioned whether it had the power to suggest changes to federal environmental review. "NEPA is not referred to in the [committee] charter," Rod Eggert, a professor at the Colorado School of Mines, said during the meeting. "The text in the charter refers to royalties and collections of royalties." Read more [here](#).

Later Wednesday, BLM sent out a [memo](#) instructing field offices to look for ways to speed up permit processing, including by using categorical exclusions, Ben [reports](#).

— **Meanwhile, the Central Arizona Project will meet today** on proposals for sourcing cheaper power to run the Navajo Generating Station. The Bureau of Land Reclamation last week sought to delay the coal-fired power plant's closure, arguing that a 1968 law gives Zinke the authority to require the Arizona water project buy energy from the power plant. Reuters has the rundown [here](#).

GROUPS WARY OF INTERIOR DRAFT BILL: A coalition of sportsmen's groups is concerned about draft legislation that appeared before the House Natural Resources Energy Subcommittee on Wednesday. According to the [draft bill](#), it would enable Interior to recover the costs of administrative protests to oil and gas lease sales, drilling permits and other applications. The bill, [they say](#), would make it more difficult for sportsmen and women to comment on oil and gas lease sales on public land.

BLANKENSHIP IS BACK: Former coal baron Don Blankenship hasn't given up hope to take on the establishment and earn himself a spot in the Senate. After losing a primary bid to West Virginia Attorney General Patrick Morrisey, Blankenship's campaign [announced](#) Wednesday it is petitioning to gain ballot access for the general election as the nominee for the Constitution Party.

BIPARTISAN LETTER ASKS PRUITT TO DROP 'SECRET SCIENCE': More than 100 lawmakers — including Republican Reps. [Brian Fitzpatrick](#), [Carlos Curbelo](#), [Ryan Costello](#) and [Ileana Ros-Lehtinen](#) — signed onto a letter to Pruitt today, asking him to withdraw EPA's so-called secret science proposal to bar EPA from using studies that don't make public all their data. Read the letter [here](#).

DEMS WARN AGAINST E15: Democratic Sens. [Tom Udall](#) and [Peter Welch](#) are calling on EPA to abide "by all legal and regulatory requirements" as the Trump administration weighs the year-round sale of 15 percent ethanol blends of gasoline. "We are very concerned that career EPA officials may be being directed to reverse over 25 years of the agency's position to manufacture legal and scientific justifications for a politically-directed decision on E15," they write. Read the [letter](#).

MAIL CALL! RELEASE THE STUDY: A coalition of environmental groups will send [this letter](#) today to HHS Secretary Alex Azar, calling on him to release the controversial federal chemical pollution study [blocked](#) by EPA officials.

— **Nineteen environmental groups filed a letter** to the House in opposition of [H.R. 5895 \(115\)](#), the so-called minibus, which they say sets up an improper use of water and natural resources, and undermines safe nuclear waste disposal. Read it [here](#).

FOR YOUR RADAR: The International Wildlife Conservation Council, which came [under fire](#) for the big-game trophy hunters added to its ranks, will hold its next meeting June 19 in Atlanta, according to the [Federal Register](#).

ON THE WEB: The Center for American Progress is launching a new website today that is dedicated to tracking legal challenges to the Trump administration's conservation agenda. See it [here](#).

Another mess for Pruitt: Overstaying his White House welcome at lunch [Back](#)

By Emily Holden, Andrew Restuccia and Anthony Adragna | 06/06/2018 10:17 PM EDT

EPA Administrator Scott Pruitt loves eating at the White House mess, an exclusive U.S. Navy-run restaurant open only to White House officials, Cabinet members and other dignitaries.

But apparently he liked it too much, and the White House asked him to please eat elsewhere sometimes.

In response to Pruitt's recurring use of the restaurant next to the Situation Room in the basement of the West Wing, a member of the White House's Cabinet affairs team told agency chiefs of staff in a meeting last year that Cabinet members shouldn't treat the mess as their personal dining hall, according to three people with knowledge of the issue.

The message was clear, according to one person close to Pruitt: "We love having Mr. Pruitt, but it's not meant for everyday use." Another person added that the White House asked Cabinet members to visit the mess only occasionally because there are [few tables available](#).

A renovation to update the West Wing HVAC last August included the mess kitchen and may have limited space, one person said. The renovation came shortly after the president tapped John Kelly as chief of staff, and he implemented several day-to-day changes to bring order to the White House.

The White House did not respond to a request for comment and EPA declined to comment. Pruitt's allies privately disputed that the warning about overuse of the mess was aimed squarely at him, but nobody contests that he's a frequent presence at the White House for lunch.

Pruitt has been known to complain that EPA headquarters has no cafeteria of its own and no private dining quarters, according to multiple sources, who said Pruitt still often heads to the White House for lunch. One source said EPA officials called the White House to explain that Pruitt didn't have a place to eat at EPA and would like to continue to visit. Pruitt's EPA office is only a few blocks up Pennsylvania Avenue from the White House.

A [billing statement](#) from July 2017 offered a glimpse into Pruitt's use of the mess, showing the EPA chief or people linked to him dined at the mess at least nine times that month, racking up a bill of \$400, a relative bargain in downtown Washington. Pruitt and his guests dined on dishes like "cowboy" skirt steak, popcorn chicken and waffles, spinach strawberry salad and beer-braised brisket tacos.

While the food is considered to be top-notch, the prices are a real bargain. Skirt steak runs just \$10.25, while coriander beef kabobs were just \$11.95 each. And a cheeseburger runs just \$6.35, according to his bill. The burger at another of Pruitt's haunts, French bistro Le Diplomate, runs \$17.

Records obtained through a Sierra Club Freedom of Information Act request [also show](#) Pruitt often sought to bring friends from Oklahoma to the White House mess.

Five friends from Tulsa — Charlie Polston, Carlyn Mattox, David Mattox, Bob Wagoner and Jerry Dillon — were invited for a September lunch there with him, though it didn't appear in Pruitt's detailed calendar obtained through FOIA.

That lunch came just two weeks after Pruitt made a lunch date there with Bob Funk, a wealthy Oklahoma Republican with whom he bought a major stake in the minor league Oklahoma City RedHawks baseball team back in 2003.

"Please have Mr. Funk arrive at EPA building at 11:40am to ride with Administrator Pruitt to the WH," Lincoln Ferguson, a senior adviser for public affairs, wrote in [an email](#). There was no entry in Pruitt's calendar for the time when the lunch was to have taken place.

Calendars from Pruitt's senior aides show he made frequent use of the space in the month following his February 2017 Senate confirmation. He dined there on Feb. 27, March 2 and met with Ivanka Trump, the president's daughter and West Wing adviser, on March 13. Chief of staff Ryan Jackson's calendar also lists a lunch in the "Mess" on March 16.

Pruitt also hosted representatives from the Oklahoma Farm Bureau on March 29, according to Jackson's calendar. And he returned for lunch with Mike Catanzaro, a senior White House energy aide, and several senior aides on April 7.

Pruitt and his guests also seemed to have a sweet tooth, partaking of a dessert called "Chocolate Freedom" on multiple occasions. As [POLITICO reported](#) in January 2017, the dish — a molten cake made with imported French chocolate that must be ordered at the beginning of lunch because of the baking time — was also popular among Obama administration staffers on their way out the door.

Chocolate Freedom has garnered [rave reviews online](#), and once prompted comedian Zach Galifianakis to [ask](#) whether it was also the staff's nickname for former President Barack Obama.

Also available to diners: boxes of red, white and blue M&Ms featuring the presidential seal.

Pruitt wanted to buy 'old mattress' from Trump International Hotel [Back](#)

By Anthony Adragna | 06/04/2018 10:43 AM EDT

Two senior House Oversight Democrats are demanding Chairman Trey Gowdy (R-S.C.) subpoena Scott Pruitt for documents after one of his closest aides told congressional investigators the EPA administrator had her book a personal flight to the Rose Bowl, search for housing for him and try to buy him an "old mattress" from the Trump International Hotel.

Ranking member Elijah Cummings (D-Md.) and Gerry Connolly (D-Va.) demanded that Gowdy compel Pruitt to turn over all documents related to the potential mattress purchase, efforts to secure personal flights, and work that agency employees performed on non-EPA tasks for Pruitt that have been withheld from an earlier April Democratic request. That followed a May 18 transcribed interview with Millan Hupp, Pruitt's scheduler.

"If Ms. Hupp's statements to the Committee are accurate, Administrator Pruitt crossed a very clear line and must be held accountable," they wrote. "Federal ethics laws prohibit Administrator Pruitt from using his official position for personal gain and from requesting and accepting services from a subordinate employee that are not part of that employee's official duties."

As part of its investigation into Pruitt, the Oversight Committee said it has conducted several transcribed interviews and obtained 2,350 pages of documents, and a spokeswoman criticized the release of Hupp's testimony.

"Selectively releasing portions of witness interview transcripts damages the credibility of our investigation and discourages future witnesses from coming forward. The Committee will continue conducting a serious, fact-driven investigation, and therefore will wait until the conclusion of our investigation to release our findings," committee spokeswoman Amanda Gonzalez said in a statement.

White House Press Secretary Sarah Huckabee Sanders said Monday the administration is "looking into" the issues in the Democrats' letter, but didn't outline any more specific steps.

"I couldn't comment on the specifics of the furniture use in his apartment and certainly would not attempt to," she said, referring to Pruitt's interest in the mattress.

According to the Democrats' letter, Hupp told Oversight staff she worked with the managing director of the Trump International Hotel in hopes of securing an old mattress. She said Pruitt had told her someone at the hotel indicated he could purchase the mattress, though she did not know why he wished to do so and did not know if he ultimately bought it.

In addition, Hupp said she sent several emails to real estate agents over a period of several months last summer during work hours to help Pruitt find housing after he verbally asked for her help. She said she visited a "probably more than 10" properties during her lunch hour over the course of several months. Hupp said she didn't use work email for the searches and was not paid for her efforts.

Pruitt and his wife ultimately settled on an apartment on 13th and U streets, but left it shortly afterwards because "they were not comfortable in the area," according to Hupp.

Democratic lawmakers have honed in on Pruitt's admission during a May 16 Senate subcommittee hearing that Hupp had searched for housing for him without pay on her own personal time.

"It doesn't cut it that they're a friend or that kind of thing," Sen. Tom Udall (D-N.M.) told Pruitt at the hearing, because having a subordinate staff member voluntarily conduct tasks on personal time would constitute a gift.

"That's in violation of federal law," Udall told Pruitt.

An EPA spokesman said the agency continued to give the information it was seeking.

"We are working diligently with Chairman Gowdy and are in full cooperation in providing the Committee with the necessary documents, travel vouchers, receipts and witnesses to his inquiries." EPA spokesman Jahan Wilcox said in a statement.

According to the Democrats' letter, Hupp said around Christmas she used a personal credit card from Pruitt in her possession to arrange his personal trip to the Rose Bowl in California to watch the Oklahoma Sooners football team play. She did not know why Pruitt, who sent her the details for the trip, and couldn't book the flight on his own.

"He just sent me the flights details and asked me to book for him," Hupp said.

Hupp indicated she considered Pruitt a personal friend, which was why she did these tasks for him. She said the two had met for dinners that were attended by just the two of them.

"We worked very closely together and spent a lot of time together," she said. "I traveled with him, so naturally a friendship developed."

Republicans losing patience with scandal-scarred Pruitt [Back](#)

By Anthony Adragna and Emily Holden | 06/06/2018 05:37 PM EDT

Republicans on Capitol Hill are growing frustrated with EPA Administrator Scott Pruitt — and many are now publicly questioning whether he can hang on to his job amid the unending stream of scandals.

Several GOP lawmakers said their patience was running thin after this week's news that Pruitt sought to buy to buy a used mattress from the Trump Hotel and inquired about securing a Chick-fil-A franchise for his wife. And Pruitt's circle of confidantes inside the agency appeared to be shrinking as well, with two of his closest aides set to depart in the coming days.

"The constant drip needs to stop so the agency can get its footing and focus back," House Energy and Commerce Chairman Greg Walden (R-Ore.) told reporters. "They're doing some really good work in the environmental front, but this needs to stop."

"Sometimes people get tripped up on other things besides the core mission, and I think that's what you're seeing," Sen. Shelley Moore Capito (R-W.Va.) told reporters.

Pruitt's scheduler, Millan Hupp, is resigning following her interview by the House Oversight Committee during which she disclosed that she helped her boss find housing and inquired about purchasing a used mattress for him from the Trump International Hotel.

And his top legal counsel, Sarah Greenwalt, will also depart, according to sources. Both women had worked for Pruitt in the Oklahoma attorney general's office and both were among the staff that received raises that had been rejected by the White House.

"I think it's extremely fair to say her and Millan both are tired of the daily grind here," one EPA official said. "Everybody is painfully aware of that."

While acknowledging that President Donald Trump would ultimately make any decision about Pruitt's job, several Republicans indicated Pruitt's support was waning in their conference.

"I'm not going to come down here, just because he happens to be a nominee of a president I support or a nominee from my party, and try to defend the indefensible," Sen. John Kennedy (R-La.) said. "I thought that Mr. Pruitt would have learned his lesson."

Kennedy added: "I said the same thing about Tom Price," referring to Trump's former HHS secretary who resigned after spending lavishly on military and private jets.

Trump reaffirmed his support for Pruitt on Wednesday when they participated in a briefing on the 2018 hurricane season with several Cabinet officials.

"EPA is doing really, really well," Trump said. "You know, somebody has to say that about you a little bit. You know that, Scott."

But even staunch Pruitt allies like Sen. Jim Inhofe (R-Okla.) said the mounting scandals had them rethinking their support.

"Some are true, some are not true. Whether he can weather the storm, I'm not sure," Inhofe said. "The accusations are all troubling. They are."

A few Republicans stood by Pruitt, arguing he's been targeted by an environmental community and press corps eager to take him down.

"I like him," Sen. Roger Wicker (R-Miss.) said. "He is a target because he's keeping the president's campaign promises."

But a more common view among GOP lawmakers was the collective stream of scandals were taking their toll and making Pruitt's position untenable.

"Take a thousand cuts and [there's] not much energy left," Senate Appropriations Chairman Richard Shelby (R-Ala.) told reporters.

Rep. John Shimkus (R-Ill.), who leads the Energy and Commerce subcommittee overseeing EPA, joked he "can't keep up" with the flood of allegations and said he's concerned they haven't stopped.

"These unforced errors are unforced errors," he said. "I don't like being asked all the time about this."

But he raised a possible reason why Republicans weren't abandoning Pruitt: getting a replacement confirmed by the Senate would be nearly impossible.

"Are you going to promise me we could even get an administrator?" he said. "I think that's another concern."

In a video posted by a Nexstar Wednesday, Pruitt defended his attempts to set his wife up with a Chick-fil-A franchise Wednesday, while the president reaffirmed his support in the administrator.

Pruitt said that his wife is "an entrepreneur herself" and that the pair loved the fast-food franchise. As he has in the past, Pruitt dismissed criticism of his behavior as being driven by opposition to the Trump administration's deregulatory policies.

"With great change comes, I think, opposition," he said in a clip the reporter posted to Twitter.

Pruitt did not directly address whether he had asked an EPA aide to reach out to Chick-fil-A President Dan Cathy to inquire about his wife opening up her own restaurant, as the Washington Post first reported Tuesday.

"Chick-fil-A is a franchise of faith and it's one of the best in the country, so that was something we were very excited about," he told the Nextstar reporter Wednesday. "We need more of them in Tulsa, [Okla.]. We need more of them across the country."

Kelsey Tamborrino contributed to this report.

Trump's Interior chief 'hopping around from campaign event to campaign event' [Back](#)

By Ben Lefebvre and Esther Whieldon | 10/05/2017 05:01 AM EDT

Republican donors paid up to \$5,000 per couple for a photo with Interior Secretary Ryan Zinke at a fundraiser held during a taxpayer-funded trip to the U.S. Virgin Islands, according to documents reviewed by POLITICO — raising questions about his habit of mixing official government business with political activism.

The new details about Zinke's March trip to the Caribbean, including the previously undisclosed invitation to the Virgin Islands Republican Party fundraiser, emerged after weeks of scrutiny of the former Montana GOP congressman's travels. The nearly two-hour event was one of more than a half-dozen times Zinke has met with big donors or political groups while on department-paid trips, Interior travel records and other documents show.

Ethics watchdogs say Zinke is combining politics with his Interior duties so frequently that he risks tripping over the prohibitions against using government resources for partisan activity, even though his appearance at the Virgin Islands event seems to have been legal. Democrats have also seized on the issue, including 26 House members who wrote in a letter Tuesday that Zinke's travels "give the appearance that you are mixing political gatherings and personal destinations with official business."

Zinke has said all his actions have obeyed the law, dismissing concerns about his travel as "a little BS."

But some ethics advocates say Zinke's attendance at a fundraiser during his first month as secretary is not in line with past administrations' conduct, even if he crossed no legal red lines.

"It happens on occasion with other Cabinet secretaries, perhaps even a little more often as you get near the election, but it is not a very common practice for Cabinet members to be hopping around from campaign event to campaign event like we're seeing with Zinke," said Craig Holman, government affairs specialist for government watchdog Public Citizen.

The secretary is already under investigation by his department's inspector general over his use of taxpayer-funded private planes for some of the trips, and the Office of Special Counsel is looking into an activist group's allegations that he violated the Hatch Act, the law limiting political activism by federal employees. The White House has cracked down on Cabinet members' travel habits following former HHS Secretary Tom Price's resignation on Friday, which occurred after POLITICO reported on his own expensive flights.

Zinke visited the Virgin Islands from March 30 to April 1 on an official trip related to the Interior Department's role overseeing the U.S. territory. On his first day, following a "veterans meet and greet" and a reception with Gov. Kenneth Mapp, he appeared in his personal capacity at a March fundraiser for the local Republican Party at the patio bar of the Club Comanche Hotel St. Croix, department records show.

Tickets for the fundraiser ranged from \$75 per person to as much as \$5,000 per couple to be an event "Patron," according to Zinke's official calendar and a copy of the invitation. Patrons and members of the host committee, who paid \$1,500 per couple, could get a photo with Zinke at the start of the event, which was attended by local party members and elected officials.

The following day, Zinke took a \$3,150 flight on a private plane, paid for by the department, from St. Croix to official functions on St. Thomas and returned later that evening. Interior Department officials said there was no

other way to accommodate his schedule, which included official events on both islands commemorating the 100th anniversary of the Dutch government transferring control of the islands to the United States.

Zinke is allowed to engage in partisan political activity in a "purely personal (not official) capacity," so long as he does not use government resources, according to Interior Department guidelines on the Hatch Act and other federal laws. The invitation to the GOP fundraiser did not identify Zinke by his official title and included a disclaimer that the money is being solicited by the local party and "not by any federal official."

All told, Zinke has spent around \$20,000 for three charter flights as secretary, nowhere near the \$1 million tab Price racked up on non-commercial trips. But he has on numerous occasions attended political receptions, spoken to influential conservative groups or appeared alongside past campaign donors during trips has taken outside of Washington, D.C., for official department business.

In one instance, Zinke gave a motivational speech for a professional hockey team owned by a major campaign contributor that he said was official business — and which required him to charter a \$12,000 flight to Montana for an appearance at the Western Governors Association the next day.

In another case, during a speech to the Western Conservative Summit in Denver, he was introduced via a recorded voice as the Interior secretary and Zinke proceeded to talk about the agency's priorities. The summit was organized by the Centennial Institute, which bills itself as Colorado Christian University's think tank and is a part of the State Policy Network of organizations that collectively push for conservative state-level legislation.

An Interior spokeswoman said Zinke always follows the law but declined to answer specific questions about his appearance at the Virgin Islands fundraiser, nor say whether he would keep raising political money. The agency also has yet to post Zinke's trip expenses involving any of the political events.

"The Interior Department under the Trump Administration has always and will always work to ensure all officials follow appropriate rules and regulations when traveling, including seeking commercial options at all times appropriate and feasible, to ensure the efficient use of government resources," spokeswoman Heather Swift said in a statement.

Swift did not respond to questions about whether the department had gotten reimbursement for the political portion of Zinke's three-day Virgin Islands trip, as the head of one watchdog group says it should have.

"Some of this travel is clearly political and that part of the travel should have been paid for by the RNC, NRCC, state political parties, a campaign committee or Zinke personally," said Daniel Stevens, executive director of the Campaign for Accountability.

No payments to the department are listed in the Virgin Islands Republican Party's FEC records.

Zinke is not the first Interior secretary, or Cabinet member, to have his activities questioned.

In 2012, a watchdog group called Cause of Action urged the Office of Special Counsel to investigate whether President Barack Obama's then- Interior Secretary Ken Salazar had violated the Hatch Act while taking an Obama reelection campaign RV tour of Colorado with a couple of lawmakers and the state lieutenant governor. Local organizers of one stop on that tour had billed Salazar on its online events calendar as attending the political rally in his official role. OSC would not say whether its investigation uncovered any problems, but travel records Interior has posted show that one of Salazar's aides had told the tour's coordinator the schedule "should not refer to (Salazar as) 'secretary.'" Salazar did not respond to a request for comment.

A former Salazar aide, who was not authorized to speak on the record, said the Obama administration generally tried to avoid scheduling political events that coincided with official travel because it was difficult to divvy up what expenses should be reimbursed by a campaign.

The special counsel's office found Obama HHS Secretary Kathleen Sebelius in violation of the Hatch Act in 2012, saying she had made "extemporaneous partisan remarks" by endorsing a candidate for North Carolina governor during a speech she made in her official capacity. Sebelius tried to scrub the violation by reclassifying the appearance as political and reimbursing the Treasury Department for costs associated with the trip.

Sally Jewell, who was Interior secretary during Obama's second term, said Zinke was within his rights to appear at the fundraiser in the Virgin Islands. Jewell said she once appeared at a fundraiser for Democratic Sen. Maria Cantwell while in Obama's Cabinet, though she paid her own way to Washington state and was not identified by her official title.

"If he had legitimate business while he's on the island, to do a political thing on the side, I don't think that is that unusual," Jewell said in an interview.

EPA Administrator Scott Pruitt canceled his scheduled appearance at a fundraiser for the Oklahoma Republican Party in April because an invitation had identified him by his official title and said he would discuss his work at the agency. EPA ethics officials said he would have been cleared to attend the event if not for that language on the invitation.

Watchdog groups say Zinke's behavior fits a pattern for Trump's Cabinet.

"These government resources have been abused by this administration," said Virginia Canter, an executive branch ethics counsel for Citizens for Responsibility and Ethics in Washington who previously worked as an ethics official for Presidents George H.W. Bush, George W. Bush and Obama. "To the extent that some of that supports their political ambitions is inconsistent with the intent of this authority."

The Campaign for Accountability called on Interior's inspector general and the Office of Special Counsel to investigate whether Zinke violated the Hatch Act or department ethics rules with his speech to the hockey team, which the group said appeared to be a favor for a donor. Interior's IG office announced its investigation earlier this week, and OSC told the Campaign for Accountability that it was looking into the group's complaint, according to an email shared with POLITICO. The OSC declined to comment.

Reps. Raúl Grijalva (D-Ariz.) and Donald McEachin (D-Va.) have asked Interior's IG to also look into any trips on which the secretary was accompanied by his wife, Lola Zinke, who is chairing the campaign of Montana Republican Troy Downing, a candidate to unseat Democratic Sen. Jon Tester next year. Swift said Lola Zinke was not in the Virgin Islands and has paid her own way whenever she has traveled with her husband on official trips.

Many who know him see Zinke's travels as an attempt to keep in touch with political contacts as he contemplates what he will do after leaving the Trump administration. Back home, the 55-year-old former Montana congressman is seen as an attractive candidate for the open-seat governor's race in 2020, when Democratic Gov. Steve Bullock will have to step down because of term limits.

"I think he's definitely got political aspirations; that's one of the reasons why he is where he is at right now," said Land Tawney, executive director of Backcountry Hunters and Anglers, a Montana-based sportsman group that supported Zinke's bid for Interior secretary. "You don't go from being a Montana legislator to a first-term congressman to [Interior] secretary without having ambition."

The Virgin Islands trip was Zinke's first interaction with big donors or influential conservative groups during his travel as Interior secretary.

A weeklong trip in May that took Zinke through Montana, Utah and California also offered a chance to squeeze in some political events.

Zinke delivered the keynote speech at the RNC spring meeting on May 11 in Coronado, Calif. Zinke had flown to California the previous night, after several days touring monuments in Utah, and the RNC speech was his only event in the state aside from a meeting earlier that afternoon with Rep. Amata Radewagen, the Republican delegate from American Samoa, and members of the American Tunaboat Association.

The next day, Zinke flew back to Montana, where he joined Sen. Steve Daines (R-Mont.) and Vice President Mike Pence to tour a coal mine on the Crow Indian reservation operated by the Westmoreland Coal Co.

The trip offered Zinke and Pence an opportunity to tout the Trump administration's work to promote new coal mining on federal lands — and it allowed them to make a brief detour to promote Zinke's congressional replacement. That Friday night, Zinke, Pence and Daines attended a political rally for GOP candidate Greg Gianforte, and Zinke attended a get-out-the vote event for the Montana GOP the next day.

Zinke apparently paid for his return trip to Washington out of his own pocket — it was marked "personal travel" on his calendar, a designation not applied to the other flights on that trip.

Gianforte, whose wife is a major political donor in Montana, won the May 25 special election to take over Zinke's House seat.

Greg and Susan Gianforte donated more than \$10,000 to Zinke's 2016 congressional campaign and another \$10,000 to a joint Zinke-Daines PAC, according to federal records. The couple donated \$5,000 for his earlier run for Congress.

Zinke met with big influencers and donors in June as well.

On June 25, he flew from D.C. to Reno, Nev., where his only scheduled event was a meeting of the Rule of Law Defense Fund, a group of Republican attorneys general that has been linked to the Koch brothers, where he spoke and took questions for about 30 minutes, according to his schedule.

After his remarks, he sat at a dinner table with Montana's attorney general, the government relations specialist for the Venetian Resort Hotel Casino and Las Vegas Sands, and Koch Industries lobbyist Allen Richardson, Interior documents show.

The next day, Zinke flew to Las Vegas for an event on public lands in nearby Pahrump, Nev., and a speech that night to the National Hockey League's Vegas Golden Knights. Bill Foley, the team owner and chairman of Fidelity, introduced Zinke. Foley donated \$7,800 to Zinke's 2014 campaign, while employees and PACs associated with Fidelity and related companies gave another \$180,000. Interior officials said the speech to the NHL team was part of Zinke's official duties, and they pointed to scheduling conflicts it created to justify his use of a \$12,000 private plane to get to a Western Governors Association meeting in Montana the next day.

In July, Zinke spoke to several conservative groups in Colorado during a three-day trip that also included tours of Interior Department facilities in the state. He flew into Denver on July 20 so he could appear that evening at a closed-door reception for the American Legislative Exchange Council, a group of conservative state legislators, lobbyists and industry groups that has pushed for more state control over federal lands.

And over the next two days, he was a featured speaker at a Republican committee roundtable and attended the Western Conservative Summit in Denver.

Eric Wolff contributed to this report.

Zinke's political ties to Virgin Islands improved Interior's hurricane response, party boss says [Back](#)

By Ben Lefebvre | 06/07/2018 05:11 AM EDT

The top GOP official in the U.S. Virgin Islands suggested his fundraising group's "behind the scenes" relationship with Interior Secretary Ryan Zinke helped influence the department's response to last year's hurricanes in the island territory.

John Canegata, the head of the Virgin Islands Republican Party, said he had direct access to Interior officials after the storm thanks to money his group raised for Zinke, whom he described as a "close friend." Zinke, a former congressman, has known Canegata since at least 2015, and the secretary was at a [fundraiser](#) for the VIGOP, as the group is known, during an official trip to the islands in his first month in President Donald Trump's Cabinet.

Interior officials acknowledged reaching out to Canegata, who also works for a major rum distiller in the territory, although they said it was part of a wider effort to contact business leaders based in the territory and Zinke did not call him personally. However, a representative of the distiller said Canegata was not involved in their relief efforts, and a spokesman for the Virgin Islands' House delegate disputed Canegata's involvement in the hurricane response.

The department expedited reimbursements of rum taxes as part of its response to the hurricanes, although it's unclear whether Canegata's connection influenced that decision. Interior has jurisdiction over U.S. territories including the Virgin Islands but not Puerto Rico, which suffered more extensive devastation.

Disaster response experts say it would be inappropriate for Canegata's political connections to influence Interior's efforts in the Virgin Islands.

"These are processes that are supposed to be transparent and supposed to be above the board," said Eric LeCompte, executive director of Jubilee USA, an anti-poverty group that has been involved in hurricane disaster relief efforts. "So, it would not be something a political party would be part of."

VIGOP is not a typical political party and faces frequent inquiries from the FEC to better explain its fundraising practices and expenses. Some critics, including past Republican clients, say the group bilks conservative donors with promises to fight Democrats while spending the bulk of its money on overhead instead of political advocacy. The group spends the [vast majority of its money](#) on a small group of Washington-area political consultants who have also done work for Zinke's campaign and leadership PACs.

Zinke was introduced to the VIGOP in 2015 by a Washington fundraising consultant who also did work for his campaigns, and as a member of Congress he has traveled to at least two political conferences in the Virgin

Islands sponsored by the group, POLITICO reported last year. Zinke and Canegata are seen together during a prior trip in a photo posted to Facebook.

Canegata boasted about his Zinke ties in a televised appearance on WTJX Virgin Islands Public Broadcasting that aired last month but has not received widespread attention outside of the territory.

"We were in direct connection with the Department of Interior," Canegata said in the broadcast.

"Secretary Zinke, happens to be, I wouldn't say a personal friend, but a close friend," Canegata continued.

"Prior to him being the secretary of Interior, we spent some time in Washington, we spent some time here in the Virgin Islands. We supported him when he was a congressman and, behold, he becomes the secretary of Interior."

While Canegata credited other officials with their part in aiding the island's response, he said the pre-existing connection to Zinke was key.

"Obviously, we have our congresswoman, our governor doing their job," Canegata continued. "But behind the scenes, trust me, a lot of telephone calls, a lot of maneuvering was going on because, I think, some of the relationships we built."

The Office of Special Counsel on Tuesday closed its investigation into Zinke's appearance at the Virgin Islands fundraiser in March 2017, finding that he had not violated the Hatch Act because he was there in his official capacity and VIGOP reimbursed Interior for its expenses. Interior's inspector general also recently said the appearance at the fundraiser was not inappropriate. It is unclear whether either of those investigations addressed any link between VIGOP and Interior's hurricane response; both offices declined to comment.

Interior's Office of Insular Affairs, which oversees the Virgin Islands, "reached out to dozens of local government employees as well as major private sector employers in the USVI to check their power status and to see how the office could help," Interior spokeswoman Heather Swift said in an email. Canegata "was contacted by those Insular Affairs officials because he works for one of those major private employers, Cruzan Rum."

Canegata, a supply chain specialist at the rum distillery, had no role in the company's disaster relief efforts, according to Cruzan Rum human resources manager Ayanda Daniels.

"He wasn't part of the coordination," Daniels told POLITICO. "Maybe he had a conversation with someone in order to do something, but we had another team for company response."

James Norton, a former Department of Homeland Security Deputy official during the George W. Bush administration, said it is important for disaster response efforts to be handled through the appropriate channels.

"As a matter of proper procedure, it would only be appropriate for all federal actions to be dealt with solely with official authorities at the Department of Defense, Interior, Homeland Security, FEMA, etc., and those local officials on the ground," said Norton, who is now head of the consulting agency Play-Action Strategies.

"Anything other than raising awareness and reaching out to get an update on what's happening would be inappropriate, as a political party or other organization doesn't have command and control authority, nor would they be the designated principal federal official on the ground directing rescue operations."

A spokesman for Stacey Plaskett, the Democratic House delegate from the Virgin Islands, disputed Canegata's version of events.

"I cannot honestly remember hearing them or seeing them do anything to that effect," Plaskett's spokesman Mike McQuerry said. "The congresswoman was the person here in D.C. that worked extremely hard during that time to get those funds to the Virgin Islands."

Canegata did not respond to a request for comment this week.

Interior expedited reimbursement of \$223 million in taxes on Virgin Islands rum imported into the mainland and provided a \$567,500 grant to help with a post-hurricane finance audit. Other hurricane relief funds would have come from FEMA, an Insular Affairs spokesperson said.

Otherwise, Zinke and Insular Affairs head Doug Domenech met with Virgin Islands Gov. Kenneth Mapp to discuss recovery efforts, the Insular Affairs spokesperson said. In November, Domenech also met representatives of Cruzan Rum's parent company, Beam Suntory, to discuss the rum tax reimbursements Interior makes to the territory. Beam Suntory donated \$1.5 million to hurricane relief efforts the previous month.

Swift said Zinke did not personally reach out to Canegata. "The only official in the USVI the Secretary called was Governor Mapp," she said.

Murray had early access to Perry to share coal plan [Back](#)

By Eric Wolff | 12/07/2017 04:22 PM EDT

Coal magnate Bob Murray pitched Energy Secretary Rick Perry on his plan to throw an economic lifeline to coal companies less than a month before Perry set in motion plans to aid the industry, according to newly disclosed photographs that show the two meeting.

The liberal magazine In These Times obtained pictures of Murray and Perry from a March 29 meeting at Energy Department headquarters, less than a month after Perry was sworn in. Several other officials were in attendance, including Andrew Wheeler, who at the time was a lobbyist for Murray and has since been nominated as EPA's No. 2 official.

The meeting puts Murray and Perry together at a crucial moment in the timeline of the Trump administration's push to save the struggling coal industry, an effort that would benefit Murray Energy in particular while hiking electricity prices for potentially millions of people. A month before the meeting, one of Murray's biggest customers, FirstEnergy Corp., had told investors it was seriously considering sending its merchant division, FirstEnergy Solutions, into bankruptcy, a move which would likely void its supply contracts with Murray's coal mines.

Three weeks after Murray's visit, Perry would order a grid study that later became part of the justification for a proposed rule to reward coal and nuclear power plants for providing "grid resiliency." FERC, which has jurisdiction over the proposal, must make a decision on it by Monday.

At the time of the meeting, Wheeler was already the leading candidate to become the deputy administrator for EPA. Wheeler, who represented Murray as a lobbyist for Faegre Baker Daniels, would not be officially

nominated for months. Wheeler, who has acknowledged participating in meetings on Murray's coal plan at DOE and on Capitol Hill, cleared committee last week and is awaiting Senate confirmation.

Murray is an outspoken supporter of President Donald Trump and held a fundraiser for him during the 2016 campaign.

DOE did not dispute the validity of the photos.

"Industry stakeholders visit the Department of Energy on a daily basis," DOE spokeswoman Shaylyn Hynes said, when asked about the meeting. "The DOE proposal to FERC was about the future and resiliency of the nation's power supply, an issue much bigger than one industry or company."

The photographs show Perry sitting at the head of a table in the Department of Energy, with Bob Murray, CEO of Murray Energy, to his left, and Wheeler down the table from Murray.

"Enclosed is an Action Plan for achieving reliable and low cost electricity ... and to assist in the survival of our Country's coal industry, which ... power grid reliability and low cost electricity," Murray writes in a cover letter to Perry, parts of which are visible in one photo from the meeting.

Though the document has never been publicly released, DOE critics say Murray's plan appears to have inspired DOE's grid study and the proposed rule Perry sent FERC in September. Copies are visible at the seats of most of the participants, including Perry and Murray. Wheeler, who told members of the Senate Environment Committee he had only seen the memo briefly, is not holding a copy in the photos obtained by In These Times. Murray told Greenwire in November he "didn't have any involvement" in writing the rule.

Murray has acknowledged sharing the plan with Trump.

"I gave Mr. Trump what I called an action plan very early," Murray said in a recent PBS Frontline documentary on EPA. "It's about three-and-a-half pages and — of what he needed to do in his administration. He's wiped out page one."

The meeting appears to have been successful for all. One of the photos shows Perry and Murray in a big bear hug.

Murray delivered executive orders on coal rules to Trump administration [Back](#)

By Darius Dixon | 06/06/2018 07:05 PM EDT

Coal magnate Bob Murray delivered six draft executive orders ready for President Donald Trump to sign to roll back Obama-era environmental regulations in the early weeks of the administration, according to newly released Energy Department documents.

The documents released Wednesday after a Freedom of Information Act request include a letter to Energy Secretary Rick Perry from Murray praising Trump's March 2017 energy independence executive order, which largely aimed to help the coal industry. And to bolster that effort, Murray wrote, "we have developed the

enclosed materials for your review and consideration, consisting of: six (6) Executive Orders further rescinding anti-coal regulations of the Obama administration; and one (1) memorandum outlining the legal rationale for each of these action, and others."

Those executive orders were also sent to EPA Administrator Scott Pruitt, whose agency had jurisdiction over most of the issues they involved, such as ozone rules and regulations on coal ash.

Trump has not signed executive orders resembling Murray's, but the administration has moved to enact the policies, such as pulling U.S. out of the Paris climate agreement. The documents, which were sent to DOE the day Trump signed his energy independence order and one day before Murray met with Perry and DOE chief of staff Brian McCormack, also included concepts about grid security and "resiliency" that Perry later touted as part of his push to stop coal power plants from closing.

"The Department of Energy ("DOE") must issue an emergency directive to have an immediate study done of the security and resiliency of our electric power grids," the document states. "DOE will direct that no power plants having an available fuel supply of at least forty-five (45) days be closed during the study period, or a minimum of two (2) years."

Perry later ordered his staff to write a study about the electric grid that was eventually tied to a regulatory proposal that FERC create financial rewards for power plants with a 90-day supply of fuel on-site. That condition would have overwhelmingly benefited coal and nuclear generators, but it was shot down by FERC in January.

Critics have said Murray would be the biggest beneficiary of Trump's efforts, since his company supplies coal to many of the power plants at risk of closing because of stiff competition from cheap natural gas and renewable power as well as lagging electricity demand from consumers.

Murray spokesman Gary Broadbent confirmed the company had submitted the documents to Perry "to assist in the reversal of the illegal, job-killing, anti-coal regulations of the Obama Administration."

"Mr. Murray has always sought to secure reliable, low-cost electricity for all Americans, as well as to preserve and protect the jobs and family livelihoods of thousands of coal mining families," he said in a statement. "We applaud the actions taken by President Trump's Administration, to date, to protect these jobs and to advance the energy security of the United States."

Murray has repeatedly called on DOE to issue must-run orders for FirstEnergy power plants that consume his coal, and he blasted the FERC commissioners who opposed the on-site fuel proposal.

On Tuesday, a top DOE official said the agency is still formulating a plan to keep struggling coal and nuclear power plants from closing, and it had no deadline to meet Trump's demand to rescue them.

"We are evaluating options," Energy Undersecretary Mark Menezes told reporters. Last week, Trump called on DOE to take "immediate steps" to stop a wave of coal and nuclear power plant retirements, and like Perry, he cast the shutdowns as a threat to national security.

House passes WRDA bill [Back](#)

By Annie Snider | 06/06/2018 09:42 PM EDT

The House has overwhelmingly approved the Water Resources Development Act of 2018, [H.R. 8 \(115\)](#), the first major infrastructure legislation to move under the Trump administration.

Lawmakers signed off on the measure on a broadly bipartisan vote of 408-2. The bill would authorize six new Army Corps of Engineers projects and enact a suite of policy reforms at the red tape-laden agency. It is significantly narrower than the Senate's measure, which would also make changes to EPA drinking water and wastewater programs.

And it includes a provision that could stir some controversy with the Senate, ordering a study of whether the Army Corps' civilian work should remain within the Department of Defense.

But House leaders dodged provisions that could have derailed the bill by blocking controversial amendments from floor consideration. Those included efforts to repeal the Obama administration's Waters of the U.S. rule, allow firearms at Army Corps recreational sites and exempt pesticide spraying from Clean Water Act permitting requirements.

WHAT'S NEXT: The Senate is expected to consider its version of the WRDA bill, America's Water Infrastructure Act of 2018, [S. 2800 \(115\)](#), this summer.

Trump calls for coal, nuclear power plant bailout [Back](#)

By Eric Wolff | 06/01/2018 02:29 PM EDT

President Donald Trump pressed for a quick regulatory bailout for struggling coal power plants on Friday — a move that would buoy a mining industry that offered him crucial support in 2016, but is riling other energy companies and even some free-market conservatives.

The White House called on Energy Secretary Rick Perry to take immediate steps to keep both coal and nuclear power plants running, backing Perry's claim that plant closures threaten national security. An administration strategy to do that laid out in a memo to the National Security Council circulated widely among industry groups on Friday, but it was not clear that intervention could survive the inevitable political and legal challenges.

It was the latest step in more than a year of efforts by the administration to compel power companies to keep operating the money-losing plants that are suffering from the rise of competing energy sources like natural gas. Those proposals have drawn opposition from most utilities, along with environmentalists, gas producers, power grid operators and conservatives who say it would be an unwarranted intrusion to the energy markets.

The White House statement calling for action came after days of Trump making similarly aggressive moves on international trade, slapping tariffs on the European Union, Canada and Mexico to protect U.S. industries like aluminum and steel. In this case, the president is acting on behalf of what he likes to call "beautiful, clean coal," a once-dominant fuel that still plays a major role in his stump speeches.

Trump "has directed Secretary of Energy Rick Perry to prepare immediate steps to stop the loss of these resources," White House press secretary Sarah Huckabee Sanders said in a statement Friday, referring to coal and nuclear plants.

She added that Trump believes "keeping America's energy grid and infrastructure strong and secure protects our national security... Unfortunately, impending retirements of fuel-secure power facilities are leading to a rapid depletion of a critical part of our nation's energy mix, and impacting the resilience of our power grid."

The statement came five months after federal energy regulators rejected Perry's call that they adopt his proposal to keep the struggling coal and nuclear power plants operating. That proposal would have overwhelmingly benefited mining magnate Bob Murray, an outspoken Trump supporter whose operations supply coal to several endangered plants in the Midwest and Northeast, according to a POLITICO analysis.

Trump's National Security Council gathered Friday to discuss the draft memo that lays out arguments why the administration should use federal authority to keep the money-losing power plants open — despite the assurances from some of the nation's grid operators that no such emergency exists.

"Any federal intervention in the market to order customers to buy electricity from specific power plants would be damaging to the markets and therefore costly to consumers," said the PJM Interconnection, which operates the nation's largest power grid and stretches from the Midwest the Atlantic Coast, in a statement. "There is no need for any such drastic action."

A broad swath of trade associations representing oil and gas, wind and solar power, consumer groups and advanced energy technologies slammed the plan, and they were joined by some congressional Democrats.

"This would be an egregious abuse of power," Sen. Ron Wyden (D-Ore.) said in a statement. "I fought this proposal before, and I will continue to fight this corrupt scheme to prop up the coal industry at the expense of American consumers."

That new 41-page memo, first revealed by Bloomberg News on Thursday evening, says that under the 2015 highway and transit bill known as the FAST Act, DOE must identify critical energy infrastructure, a process the agency is undertaking now with the help of its national labs. But because that is likely to take two years, DOE in the meantime should use the 1950 Defense Production Act and the Federal Power Act to require the plants to keep operating, the memo says.

Power sector experts have said using the two laws to keep specific plants operating would stretch both those measures, and would certainly trigger a major legal fight. Critics of the administration's strategy said the memo appears to signal that the White House is preparing for a fight.

"One way to view the release of this draft is that it is a trial balloon to see how fierce and fast the opposition will be," said Dena Wiggins, CEO of the industry lobby group Natural Gas Supply Association, which opposes the DOE plan. "We've known for some time that all of these federal authorities ... were in play, so the fact that we've now seen it in writing doesn't really change anything. It does, however, underscore how hard it is to cobble together a sound legal rationale to bail out otherwise uneconomic coal and nuclear plants."

And critics say the push to bail out the plants is simply Trump's effort to reward backers like Murray, the coal baron, and live up to his campaign promise to revive coal country. Perry first began work on the power plant issue in March 2017, when he met with Murray at DOE, and Trump himself personally directed Perry to take action on the issue since last summer.

Murray's coal mines have been a major supplier for power plants owned by FirstEnergy Solutions, a unit of Ohio-based utility giant FirstEnergy that sank into bankruptcy this spring. FirstEnergy Solutions has said it plans to close or sell five of its money-losing coal and nuclear power plants.

But the Federal Energy Regulatory Commission and the grid operator have said that even with the planned closures, the region has ample power to supply the market's needs. Stagnant power consumption growth, coupled with the rise of natural gas and renewable power sources like wind, has displaced many of the older coal and nuclear facilities in the markets.

The memo also calls for establishing a new requirement for the electric grid based on "resilience," a term Perry injected into the regulatory conversation last fall with a proposed rule that would have rewarded plants that could keep 90 days of fuel on site. FERC rejected that rule, but it also created a new proceeding to try to define "resilience," which some in the industry say pertains to the grid's ability to withstand and recover from a physical or cyberattack.

The memo largely focuses on the issue of resilience, which it says would suffer if coal and nuclear power plants retire. It specifically targets natural gas as a weakness, because the plants that burn the fuel rely on pipelines that could be disrupted, while coal and nuclear power plants can keep months' worth of fuel on site.

"Natural gas pipelines are increasingly vulnerable to cyber and physical attacks," the memo says. "The incapacitation of certain pipelines through the United States would have severe effects on electric generation necessary to supply critical infrastructure facilities."

House to vote Thursday on Trump's spending cuts plan [Back](#)

By Sarah Ferris | 06/06/2018 05:32 PM EDT

President Donald Trump's prized deficit-reduction package is rolling toward the House floor this week, though its prospects in the Senate remain in doubt — with little time to spare.

House leaders have set a vote Thursday on the Trump administration's roughly \$15 billion rescissions bill, according to a GOP aide, nearly a full month after the proposal was first delivered to Capitol Hill.

The House Rules Committee will tee up the bill, [H.R. 3 \(115\)](#), on Wednesday evening, a lightning turnaround that surprised even some GOP lawmakers.

The last-minute scheduling change comes after the White House [agreed this week](#) not to slash hundreds of millions of dollars from politically sensitive programs, like Hurricane Sandy aid, which helped [secure votes](#) from numerous GOP holdouts.

Even with some of those unpopular cuts reversed, several House Republicans remain anxious about the plan's optics — specifically, cuts to the ultra-popular Children's Health Insurance Program.

At a closed-door meeting of House Republicans Wednesday, several GOP lawmakers stood up to complain that the kids' health cuts could hit hard on the campaign trail, despite assurance from neutral budget experts that the cuts wouldn't harm the program.

In fact, the vast majority of the White House's proposed spending cuts would exist only on paper. The bill would save only \$1 billion over a decade, according to the CBO, which is far less than 1 percent of the size of Congress' last spending bill, H.R. 1625 (115).

Next, the White House will have to sell the bill to the Senate, where a single Republican "no" vote could sink the package.

Budget chief Mick Mulvaney has already met with Sen. Lisa Murkowski, an Alaska Republican who has raised issues with the cuts to CHIP. Sen. Susan Collins of Maine, another GOP moderate, has not yet said whether she supports the bill.

If the House clears the bill Thursday, the Senate will have roughly two weeks to send the measure to Trump's desk before its filibuster-proof powers expire June 22.

Minibus spending package ready for House floor action [Back](#)

By Kaitlyn Burton | 06/06/2018 07:46 PM EDT

The House Rules Committee today teed up a three-bill spending bundle for floor consideration as soon as Thursday.

All in all, the panel approved 50 Energy-Water amendments, 22 Military Construction-VA amendments and seven Legislative Branch amendments, setting them up for floor votes.

While the minibuss, H.R. 5895 (115), will likely pass, House Democratic leaders threw a wrench in things when they urged lawmakers to oppose the bill, POLITICO reported Tuesday evening.

Votes on the package are expected to come after a separate Thursday vote on the White House's rescissions measure, H.R. 3 (115). Conservatives, including the Republican Study Committee, asked for the spending cuts to be taken up first, according to a House GOP aide. The Rules Committee teed up the rescissions proposal in a 9-3 vote tonight, allowing no amendment votes.

The minibuss would be the first House-passed fiscal 2019 funding measure.

Sarah Ferris contributed to this alert.

House appropriators advance \$35B Interior-EPA spending package [Back](#)

By Alex Guillén | 06/06/2018 05:04 PM EDT

The House Appropriations Committee today approved its \$35 billion Interior-EPA spending bill by a party-line vote of 25-20.

Committee Republicans blocked an effort from Democrats to boost EPA's Office of Inspector General by \$12 million, saying the watchdog already has "robust" appropriations. The bill funds the OIG at \$12 million less than his request, but higher than the amount requested by the White House.

The committee voted down an amendment that would have required EPA's administrator and deputy administrator to report public details of travel costs within 10 days of a trip, along with various amendments targeting a repeal of the Waters of the U.S. rule and other policy riders, along with EPA's proposed science transparency policy, offshore drilling and other standard policy disputes.

Lawmakers approved an amendment that would change revenue sharing for drilling in the Arctic National Wildlife Refuge. The approved amendment would send 50 percent of revenue to the federal government, 47 percent to the state and 3 percent to the Alaskan Native claims settlement fund.

They also backed a tongue-in-cheek amendment from Rep. [Marcy Kaptur](#) (D-Mich.) that would limit EPA from spending more than \$50 on any one fountain pen, a response to a recent Washington Post report that Pruitt spent \$1,560 for a dozen personalized fountain pens. The amendment passed with no "nay" votes.

WHAT'S NEXT: Lawmakers hope to have the bill before the full House sometime this summer, but it is unclear whether the Senate will act on a similar timeframe. Like most other appropriations bills in recent years, Congress has passed an omnibus rather than conferencing directly.

GOP blocks funding increase for EPA watchdog probing Pruitt activities [Back](#)

By Alex Guillén | 06/06/2018 03:06 PM EDT

House Republicans today blocked a Democratic effort to increase funding for EPA's Office of Inspector General to help the watchdog deal with the increased workload stemming from Administrator Scott Pruitt's spending and ethics scandals.

Rep. [Mark Pocan](#) (D-Wis.) and a bloc of Democrats on the House Appropriations Committee pushed an amendment that would have boosted OIG funding for fiscal 2019. It ultimately was voted down on a party-line vote of 21-26.

"It's hard to imagine that there is a more overworked inspector general than at the EPA these days," Pocan said. "This is not a Democrat/Republican thing, this should be a good government thing."

Interior-EPA Appropriations Chairman [Ken Calvert](#) (R-Calif.) said the bill "already includes robust support for EPA's inspector general."

The House Interior-EPA spending package would provide the OIG funding of just over \$50 million, about flat with 2018's level. Most of that is appropriated directly, though some of it is pulled from the Superfund program for OIG's work on Superfund-specific issues. Pocan's amendment would have drawn the extra \$12 million from EPA's "workforce reshaping" account inside the \$2.5 billion environmental programs.

In a February [letter](#), EPA Inspector General Arthur Elkins said the president's proposed OIG budget of \$46 million would "substantially inhibit the OIG from performing the duties of the office." He asked instead for a budget of \$62 million. That request came before an avalanche of congressional requests to review various Pruitt-related issues on spending and ethics.

WHAT'S NEXT: The committee will vote later today on the full spending bill.

Interior advisory committee recommends streamlining environmental reviews for drilling [Back](#)

By Ben Lefebvre | 06/06/2018 06:31 PM EDT

An Interior Department advisory board on Wednesday approved a slew of recommendations aimed at expanding energy lease sales and lowering royalty rates, even as some members questioned whether it had the power to suggest changes to federal environmental reviews.

The Royalty Policy Committee wrapped up its latest meeting in New Mexico after approving nine [recommendations](#) for Secretary Ryan Zinke to change how the department collects payments from energy production on federal land. Most of the suggestions would benefit oil and gas companies operating on federal acres, while two recommendations were aimed at boosting renewable energy production.

Two committee members disagreed with a recommendation for the Bureau of Land Management to issue "categorical exclusions" for certain oil and gas projects, allowing those projects to forgo full environmental reviews under the National Environmental Protection Act.

"NEPA is not referred to in the [committee] charter," Rod Eggert, a professor at the Colorado School of Mines, said during the meeting. "The text in the charter refers to royalties and collections of royalties."

Committee member Monte Mills of the University of Montana agreed that recommending categorical exclusions fell outside of the committee's scope.

Western Energy Alliance President Kathleen Sgamma, another member of the committee, defended the recommendation, saying it would increase royalty payments to Interior by making it easier for companies to drill on public land.

"We're trying to increase competitiveness of federal lands," Sgamma said during the meeting. "NEPA is often the aspect of the federal process that takes the longest and decreases the competitiveness of public lands the most."

Ultimately, the committee approved the recommendation and deferred further discussion about the scope of its charter until its next meeting, yet to be scheduled.

The committee also suggested Interior make it easier for companies to pay lower royalty rates for mature oil and gas wells and those "difficult" to operate. And it recommended Zinke ask Congress to amend the Outer Continental Shelf Lands Act with language allowing Interior to hold offshore energy project lease sales in Guam and other U.S. territories.

The committee's two renewable power suggestions were that Interior offer annual lease sales for 2 gigawatts of offshore wind power every year for a decade starting in 2024; and to instruct BLM to reduce fees and streamline permit requirements for solar projects.

BLM tells field office to expedite drilling permit reviews [Back](#)

By Ben Lefebvre | 06/06/2018 08:20 PM EDT

The Bureau of Land Management instructed field offices to prioritize the use of old environmental reviews or categorical exclusions to expedite drilling permit applications for sites where work is already underway, according to a memo released today.

The bulletin posted on the BLM website said those methods will allow officials to process the applications "in the most expeditious and appropriate manner" under the National Environmental Policy Act.

The BLM bulletin directed its field offices that existing environmental analysis for new projects proposed for old sites "should be used to the greatest extent possible" instead of starting a new environmental review process.

If the old analysis isn't sufficient, field offices should determine whether the application falls under an existing categorical exclusion, meaning a new NEPA review would not be required. Criteria to determine whether an exclusion would be available include whether a similar project has already occurred on the same site within the previous five years.

BLM posted its memo soon after Interior's Royalty Policy Committee recommended earlier today that the agency increase its use of categorical exclusions.

WHAT'S NEXT: The environmental review priority list goes into effect immediately.

White House, EPA headed off chemical pollution study [Back](#)

By Annie Snider | 05/14/2018 12:43 PM EDT

Scott Pruitt's EPA and the White House sought to block publication of a federal health study on a nationwide water-contamination crisis, after one Trump administration aide warned it would cause a "public relations nightmare," newly disclosed emails reveal.

The intervention early this year — not previously disclosed — came as HHS' Agency for Toxic Substances and Disease Registry was preparing to publish its assessment of a class of toxic chemicals that has contaminated water supplies near military bases, chemical plants and other sites from New York to Michigan to West Virginia.

The study would show that the chemicals endanger human health at a far lower level than EPA has previously called safe, according to the emails.

"The public, media, and Congressional reaction to these numbers is going to be huge," one unidentified White House aide said in an email forwarded on Jan. 30 by James Herz, a political appointee who oversees environmental issues at the OMB. The email added: "The impact to EPA and [the Defense Department] is going to be extremely painful. We (DoD and EPA) cannot seem to get ATSDR to realize the potential public relations nightmare this is going to be."

More than three months later, the draft study remains unpublished, and the HHS unit says it has no scheduled date to release it for public comment. Critics say the delay shows the Trump administration is placing politics ahead of an urgent public health concern — something they had feared would happen after agency leaders like Pruitt started placing industry advocates in charge of issues like chemical safety.

Sen. Maggie Hassan (D-N.H.) called the delay "deeply troubling" on Monday, urging Pruitt and President Donald Trump "to immediately release this important study."

"Families who have been exposed to emerging contaminants in their drinking water have a right to know about any health impacts, and keeping such information from the public threatens the safety, health, and vitality of communities across our country," Hassan said, citing POLITICO's reporting of the issue. Details of the internal discussions emerged from EPA emails released to the Union of Concerned Scientists under the Freedom of Information Act.

Sen. Jeanne Shaheen, a fellow New Hampshire Democrat, called the delay "an egregious example of politics interfering with the public's right to know. ... [I]t's unconscionable that even the existence of this study has been withheld until now."

The emails portray a "brazenly political" response to the contamination crisis, said Judith Enck, a former EPA official who dealt with the same pollutants during the Obama administration — saying it goes far beyond a normal debate among scientists.

"Scientists always debate each other, but under the law, ATSDR is the agency that's supposed to make health recommendations," she said.

The White House referred questions about the issue to HHS, which confirmed that the study has no scheduled release date.

Pruitt's chief of staff, Ryan Jackson, defended EPA's actions, telling POLITICO the agency was helping "ensure that the federal government is responding in a uniform way to our local, state, and Congressional constituents and partners."

Still, Pruitt has faced steady criticism for his handling of science at the agency, even before the recent spate of ethics investigations into his upscale travels and dealings with lobbyists. In his year leading EPA, he has overhauled several scientific advisory panels to include more industry representatives and recently ordered limits on the kinds of scientific studies the agency will consider on the health effects of pollution.

On the other hand, Pruitt has also called water pollution one of his signature priorities.

The chemicals at issue in the HHS study have long been used in products like Teflon and firefighting foam, and are contaminating water systems around the country. Known as PFOA and PFOS, they have been linked with thyroid defects, problems in pregnancy and certain cancers, even at low levels of exposure.

The problem has already proven to be enormously costly for chemicals manufacturers. The 3M Co., which used them to make Scotchguard, paid more than \$1.5 billion to settle lawsuits related to water contamination and personal injury claims.

But some of the biggest liabilities reside with the Defense Department, which used foam containing the chemicals in exercises at bases across the country. In a March report to Congress, the Defense Department listed 126 facilities where tests of nearby water supplies showed the substances exceeded the current safety guidelines.

A government study concluding that the chemicals are more dangerous than previously thought could dramatically increase the cost of cleanups at sites like military bases and chemical manufacturing plants, and force neighboring communities to pour money into treating their drinking water supplies.

The discussions about how to address the HHS study involved Pruitt's chief of staff and other top aides, including a chemical industry official who now oversees EPA's chemical safety office.

Herz, the OMB staffer, forwarded the email warning about the study's "extremely painful" consequences to EPA's top financial officer on Jan. 30. Later that day, Nancy Beck, deputy assistant administrator for EPA's Office of Chemical Safety and Pollution Prevention, suggested elevating the study to OMB's Office of Information and Regulatory Affairs to coordinate an interagency review. Beck, who worked as a toxicologist in that office for 10 years, suggested it would be a "good neutral arbiter" of the dispute.

"OMB/OIRA played this role quite a bit under the Bush Administration, but under Obama they just let each agency do their own thing..." Beck wrote in one email that was released to UCS.

Beck, who started at OMB in 2002, worked on a similar issue involving perchlorate, an ingredient in rocket fuel — linked with thyroid problems and other ailments — that has leached from defense facilities and manufacturing sites into the drinking water of at least 20 million Americans. Beck stayed on at OMB into the Obama administration, leaving the office in January 2012 and going to work for the American Chemistry Council, where she was senior director for regulatory science policy until joining EPA last year.

Yogin Kothari, a lobbyist with the Union of Concerned Scientists, called Beck's January email "extremely troubling because it appears as though the White House is trying to interfere in a science-based risk assessment."

Environmentalists say such interference was routine during the Bush administration.

"It's why the Obama administration issued a call for scientific integrity policies across the federal government," Kothari said in an email to POLITICO. "Dr. Beck should know firsthand that the Bush administration sidelined science at every turn, given that she spent time at OMB during that time."

Soon after the Trump White House raised concerns about the impending study, EPA chief of staff Ryan Jackson reached out to his HHS counterpart, as well as senior officials in charge of the agency overseeing the assessment to discuss coordinating work among HHS, EPA and the Pentagon. Jackson confirmed the outreach last week, saying it is important for the government to speak with a single voice on such a serious issue.

"EPA is eager to participate in and, contribute to a coordinated approach so each federal stakeholder is fully informed on what the other stakeholders' concerns, roles, and expertise can contribute and to ensure that the federal government is responding in a uniform way to our local, state, and Congressional constituents and partners," Jackson told POLITICO via email.

Pruitt has made addressing per- and polyfluoroalkyl substances, or PFAS, a priority for EPA. The unpublished HHS study focused on two specific chemicals from this class, PFOA and PFOS.

States have been pleading with EPA for help, and experts say that contamination is so widespread, the chemicals are found in nearly every water supply that gets tested.

In December, the Trump administration's nominee to head the agency's chemical safety office, industry consultant Michael Dourson, withdrew his nomination after North Carolina's Republican senators said they would not support him, in large part because of their state's struggles with PFAS contamination. Dourson's previous research on the subject has been criticized as too favorable to the chemical industry.

Shortly after Dourson's nomination was dropped, Pruitt announced a "leadership summit" with states to discuss the issue scheduled for next week.

In 2016, the agency published a voluntary health advisory for PFOA and PFOS, warning that exposure to the chemicals at levels above 70 parts per trillion, total, could be dangerous. One part per trillion is roughly the equivalent of a single grain of sand in an Olympic-sized swimming pool.

The updated HHS assessment was poised to find that exposure to the chemicals at less than one-sixth of that level could be dangerous for sensitive populations like infants and breastfeeding mothers, according to the emails.

Dave Andrews, a senior scientist with the Environmental Working Group, said those conclusions line up with recent studies on the health effects of PFAS.

"They are looking at very subtle effects like increased risk of obesity for children exposed in womb, lowered immune response, and childhood vaccines becoming not as effective," Andrews said.

The HHS document at issue is called a toxicological profile, which describes the dangers of a chemical based on a review of previous scientific studies. It would carry no regulatory weight itself, but could factor into cleanup requirements at Superfund sites.

EPA scientists, including career staffers, were already talking with the HHS researchers about the differences in their two approaches to evaluating the chemicals when officials at the White House raised alarm in late January, the emails show. Those differences, according to the correspondence, stemmed from the agencies' use of different scientific studies as a basis, and from taking different approaches to accounting for the harm that the chemicals can do to the immune system — an area of research that has burgeoned in the two years since EPA issued its health advisory.

Enck, the former EPA official, said she sees one troubling gap in the emails: They make "no mention of the people who are exposed to PFOA or PFOS, there's no health concern expressed here."

Subject: Morning Energy, presented by America's Pledge: First SAB meeting to eye EPA reg rollbacks — Cramer hits Trump's legislative director — DOE: U.S. generally 'well prepared' for grid hacks

By Kelsey Tamborrino | 05/31/2018 05:43 AM EDT

With help from Eric Wolff

PRUITT'S SAB STORY: EPA's independent Science Advisory Board will meet today and Friday for the first time since Administrator Scott Pruitt barred scientists on the committee from receiving EPA grants and boosted its ranks with industry representatives — and the group's agenda is packed. The SAB will look at Pruitt's "secret science" proposal to bar EPA from using studies that don't make public all their data, as well as the Clean Power Plan repeal, Pruitt's decision to relax 2022-25 auto emissions standards, changes to the 2016 methane rule for new oil and gas wells and effort to repeal a rule regulating emissions from "glider" trucks — and that's not all.

A lot to dive into: The heavy slate of issues is unusual for the advisory board, Pro's Alex Guillén reports. Several current and former SAB members say it's unprecedented for the board to consider reviewing so many regulatory actions. But like green groups and critics of Pruitt, the SAB scientists say EPA has declined to share information about its regulatory rollbacks. "The agency has not been forthcoming about how they're developing the relevant science work products," said Chris Frey, a professor of environmental engineering at North Carolina State University and a SAB member since 2012.

EPA keeps quiet: SAB has been conducting twice-yearly reviews of EPA's planned regulatory actions since 2012, members said. It's an effort designed to enable the advisory board to help guide EPA before its rules are finalized. But this time around, the SAB's working groups say EPA wasn't being forthcoming with information. "Basically they just didn't provide us with any answers," said Frey. "That kind of put us in a position where all we can really do is say EPA has not identified the science or any plan to review it, and clearly there are science issues that are in the proposed rule."

What to expect: It's not immediately clear whether the full SAB will vote today to advance the reviews. But Frey noted that some of the members appointed by Pruitt had been on the working groups, giving him hope that the full board will back the recommendations to look deeper into the regulatory rollbacks. Should SAB adopt them, Alex reports, it likely would mean setting up special subcommittees that include current members plus outside experts to question EPA further. Read more [here](#).

IT'S THURSDAY! I'm your host Kelsey Tamborrino, and Entergy's Rob Hall correctly identified former President William Howard Taft as the first to see a Major League Baseball game in his hometown of Cincinnati. Register for the Pro Summit: Join Pro subscribers, expert reporters and key decision-makers from the executive branch, federal agencies and Congress for a full day of incisive policy conversations on July 17. [Learn more](#).

THE LONG AND SHORT OF IT: In an unusual attack on the White House's legislative affairs director, North Dakota Rep. Kevin Cramer blamed Marc Short explicitly for the party's legislative failures in the Senate, including ending the Obama rule on flaring and venting from oil and gas wells. After POLITICO published a story outlining the awkward dynamic between Heidi Heitkamp, Cramer and the White House, Cramer told North Dakota radio host Rob Port that he had done some digging and believes that there "are some people in the White House that think, you know, the president's too friendly too her," Burgess Everett recaps.

Moreover, Cramer laid specific blame at Short's feet for failed GOP efforts in the Senate to roll back an Obama-era regulation limiting flaring and venting, as well as repealing Obamacare. Heitkamp voted against gutting that flaring rule, something Cramer has criticized her for, in particular. "If Marc Short was very good at his job, you know, we'd have a repeal and replacement of Obamacare, we'd have a replacement of the venting and flaring rule," Cramer said. Read that story here.

PRUITT'S MEDIA BLITZ: The EPA administrator visited Rosslyn, Va., on Wednesday to sit for interviews with two conservative media outlets. One was conducted by Boris Epshteyn for his Sinclair Broadcasting segment, "Bottom Line with Boris." (Watch that here.) The other was with the Washington Free Beacon, where Pruitt repeated familiar talking points in defense of the ongoing scandals and investigations that have surrounded him over the past few months. Pruitt said he still has President Donald Trump's backing, noting that Trump has "spoken very strongly and consistently" about their working relationship. "It's been intense the last couple of months, but he's been very encouraging, very empathetic and very supportive rather consistently," Pruitt said. The administrator also discusses the Paris climate agreement, "The Bachelorette" and, of course, baseball in the 13-minute segment, which you can listen to here.

GRID AND BEAR IT: In response to an executive order signed last year, the Energy Department released a new report Wednesday that said senior government officials and electric sector executives don't know enough about how energy companies could recover from a disruptive cyberattack, and those companies aren't thinking about cyber threats enough when building out their supply chains. While the report mainly hammered home some long-known problems with the grid, DOE highlighted how grid resilience efforts suffer because of "gaps in incorporating cybersecurity concerns, including planning for long-term disruption events, into state emergency response and energy assurance planning." Generally, however, the report said the U.S. is "well prepared to manage most electricity disruptions." Read more from Pro's Eric Geller here.

WHERE'S PERRY? Energy Secretary Rick Perry delivers remarks this morning on critical infrastructure at DOE's Texas-Israel Cyber Security Conference in Dallas. The department also announced that Perry would address the DOE's annual Cyber Conference in Austin on Monday. During both events Perry is expected to discuss DOE's new Cybersecurity, Energy Security and Emergency Response office, as well as efforts at DOE to address cyber vulnerabilities in the energy sector.

ABOUT THAT GLIDER RULE: The New York Times' Eric Lipton tweeted out new documents late Wednesday that give new details into the controversial Tennessee Technological University study on truck emissions that Pruitt used to consider rewriting part of the Phase 2 truck rules. "The letters obtained via open records request show that the principal investigator at Tenn Tech who conducted study funded by Fitzgerald, the company that makes the so-called glider trucks, disavowed the work, saying that it had been distorted in a fraudulent way," Lipton tweeted.

BY THE NUMBERS: The federal government spent \$13.2 billion across 19 agencies during fiscal 2017 on programs related to climate change, a report from the Government Accountability Office says. That's an overall \$1.5 billion increase across the federal government over fiscal 2016, Pro's Anthony Adragna reports. And it's an increase of \$4.4 billion since fiscal 2010, according to the report, which was request by House Science Chairman Lamar Smith. Read more.

CALIFORNIA GETS CHARGED UP FOR EVs: The California Public Utilities Commission is expected to approve a \$589 million program for its four investor-owned utilities to build out their electric vehicle charging infrastructure. The plan is part of the implementation of California's aggressive greenhouse gas law passed in 2015. Most of the money — which will ultimately come from ratepayers — will go toward setting up electric vehicle charging stations and related infrastructure. California leads the nation by far in electric vehicle sales and adoption.

NO MAJOR FLAWS IN FERC PROCESS: Auditors in the DOE inspector general's office said they found no major flaws in FERC's process for reviewing interstate natural gas pipelines, according to a new report. But they also flagged concerns about FERC's transparency and how it handles public comments. The auditors said that "nothing came to our attention to indicate that FERC had not performed its due diligence" in how it balanced public benefits of a proposed project with its adverse impacts. But the report also said regulators' "had not fully ensured" that the certification process was transparent to those who want to participate, and it hit the agency's eLibrary documentation system as difficult to use, Pro's Darius Dixon reports.

**** A message from America's Pledge:** America's Pledge is flipping the script on climate action. One year after the federal government announced it would pull out of the Paris Agreement, 2,700+ U.S. cities, states, and businesses are saying, "We Are Still In." See how far we've come: <https://politi.co/2koAHZb> **

FERC DENIES PENNEAST REHEARING: FERC on Wednesday denied a rehearing sought by the Delaware Riverkeeper Network and Sourland Conservancy on the controversial PennEast pipeline. Commissioner Richard Glick issued a separate statement on the agency's use of tolling orders. "This proceeding, in particular, illustrates the need for prompt action on rehearing requests," Glick wrote. " ... I also have serious concerns regarding the Commission's practice of issuing conditional certificates — which, notwithstanding their name, vest the pipeline developer with full eminent domain authority — in cases where the record does not contain adequate evidence to conclude definitively that the pipeline is in the public interest."

GREENS ENDORSE DE LEON OVER FEINSTEIN: 350.org co-founder Bill McKibben and 350 Action said Wednesday it is backing Kevin de León in his bid to challenge California Sen. Dianne Feinstein. McKibben said de León, a current California state senator, "has been a strong champion of clean energy — and an effective one, using his power in Sacramento to make change happen against the strong opposition of the fossil fuel industry." Read De León's candidate questionnaire answers here.

SELC SUES OMB OVER REORG: The Southern Environmental Law Center sued the Office of Management and Budget Wednesday for its failure to release information under FOIA on the reorganization at federal agencies that manage public lands. SELC says OMB has not provided requested information under a November 2017 FOIA request, nor has it made a determination or otherwise responded to the request, and has subsequently stopped communicating with SELC. The center is seeking "all records in the custody or control of OMB submitted in connection with Executive Order 13781 by any agency responsible for the management of federal public lands," including the Forest Service, National Park Service, BLM and the Fish and Wildlife Service. The EO in question directed each agency head to submit a report to OMB outlining proposed changes to their agency. Read the lawsuit.

CRES BACKS McMASTER IN SOUTH CAROLINA: Citizens for Responsible Energy Solutions will announce a \$175,000 television and digital ad buy today highlighting South Carolina Gov. Henry McMaster's record on clean energy. "First as lieutenant governor and now as governor, his commitment to the development of advanced energy technologies like natural gas and solar power is helping the state's economy and job market thrive," CRES Chairman and Executive Director James Dozier said.

McCARTHY NAMED DIRECTOR OF HARVARD CENTER: Harvard T.H. Chan School of Public Health announced former EPA Administrator Gina McCarthy will lead its newly launched Center for Climate, Health,

and the Global Environment. Under McCarthy, C-CHANGE announced a collaboration between Harvard University and Google to reduce the use of harmful chemicals in construction and renovation projects. "C-CHANGE will ensure that cutting-edge science produced by Harvard Chan School is actionable — that the public understands it, and that it gets into the hands of decision-makers so that science drives decisions," McCarthy said in a statement.

MOVER, SHAKER: Mitch Schwartz started this week as communications director for Jason Crow's campaign in Colorado's 6th Congressional District. Schwartz previously worked for SKDKnickerbocker.

— **PUSH Buffalo, a sustainable housing group**, announced Rahwa Ghirmatzion as its new executive director as of August 2018. Ghirmatzion has served as the organization's deputy director since 2017.

EPA boosts industry membership on key advisory boards [Back](#)

By Alex Guillén | 11/03/2017 01:41 PM EDT

EPA officially announced the new line ups for several key advisory boards today, bolstering their membership with employees of energy companies and state agencies just days after Administrator Scott Pruitt ordered scientists who have received agency grant money to give up their EPA funding or their seat.

As POLITICO [reported](#) on Tuesday, the [Science Advisory Board](#)'s new additions include representatives from Phillips 66, Total, Southern Co., the American Chemistry Council and NERA Economic Consulting, a firm frequently hired by industry interests. Their additions boost the industry membership of SAB, although the panel had previously included members from Dow Chemical and other industries or companies.

The [Clean Air Scientific Advisory Committee](#), which provides health advice for air quality standards, also has three new members. Aside from new Chairman Tony Cox, an independent consultant, the new members are Larry Wolk of the Colorado Department of Public Health and Environment and James Boylan of the Georgia Department of Natural Resources.

EPA also announced a slate of new additions to the [Board of Scientific Counselors](#), which advises on research issues. The former chairwoman, Deborah Swackhamer of the University of Minnesota, is now listed as member, while Paul Gilman of waste-to-energy company Covanta has taken over as chair.

Other new BOSC members include representatives from the North Dakota Petroleum Council, Eli Lilly and Co., the Defense Threat Reduction Agency, the Arkansas Department of Environmental Quality, the California Energy Commission and the consulting firm Ramboll Environ.

EPA's science advisers turn eyes on Pruitt's rollbacks [Back](#)

By Alex Guillén | 05/31/2018 05:00 AM EDT

EPA's influential Science Advisory Board will meet on Thursday for its first time since Administrator Scott Pruitt filled it with a slate of industry representatives — and it's got a long list of controversial rule rollbacks to review.

The SAB plans to pore over the science EPA is using to justify rollbacks on emissions regulators for cars, trucks, power plants and oil and gas wells — as well as Pruitt's proposed "transparency" rule for scientific studies.

Several current and former SAB members told POLITICO that it was unprecedented for the board to consider diving into so many regulatory actions, but the heightened scrutiny from the outside experts came about because the agency stonewalled the scientists' questions about Pruitt's deregulatory decisions. That echoes the complaints from environmentalists and public advocacy groups who say EPA has declined to share information about how it was justifying easing the regulations put in place during the Obama administration.

"The agency has not been forthcoming about how they're developing the relevant science work products," said Chris Frey, a professor of environmental engineering at North Carolina State University and a SAB member since 2012.

In a move critics derided as an attempt to stack the 44-member board with industry-friendly voices, Pruitt last year broke with the tradition of reappointing first-term SAB members for second three-year stints by removing several advisers who received grants from the agency. In their places, he installed scientists from the fossil fuel and chemicals sectors and several Republican environmental officials. Among the new members are representatives from Phillips 66, Total, Southern Co., the American Chemistry Council and NERA Economic Consulting.

In addition to studying Pruitt's proposal to bar EPA from using studies that don't make public all their data, the SAB's working groups suggested the full group take a closer look at the repeal of the Clean Power Plan and EPA's reconsideration of its related rule limiting carbon emissions from future power plants. Also up for review are Pruitt's decision to relax 2022-2025 auto emissions standards, changes to the 2016 methane rule for new oil and gas wells, and EPA's effort to repeal a rule regulating emissions from "glider" trucks.

The working groups also deferred decisions on two other rulemakings: the Waters of the U.S. rewrite and rules on a special class of "persistent, bioaccumulative and toxic chemicals" under the Toxic Substances Control Act. SAB can decide whether to conduct a deeper review into those once EPA has reviewable regulatory language available, the groups said.

Frey, who has been a SAB member for six years, said having multiple rules up for review was very unusual for the board.

"It's very rare that we've recommended to the full Science Advisory Board that there should be an SAB action," he said.

SAB has been conducting twice-yearly reviews of EPA's planned regulatory actions since 2012, members said, an effort designed to enable the advisory board to help guide EPA before its rules are finalized.

In the early days, getting information from EPA was "like pulling teeth," said Kimberly Jones, a SAB member from 2011 through 2017 and the chair of environmental engineering at Howard University. But that quickly improved once EPA knew the scope of SAB inquiries, she added.

The SAB's working groups review how EPA uses scientific studies in its rulemakings, including whether and how a study was peer-reviewed and if EPA has properly accounted for uncertainties in the scientific findings. The groups typically find that further reviews aren't needed.

But this time around, the working groups said EPA didn't respond to their questions about many of Pruitt's highest-profile rollbacks.

"Basically, they just didn't provide us with any answers," Frey said. "That kind of put us in a position where all we can really do is say EPA has not identified the science or any plan to review it, and clearly there are science issues that are in the proposed rule."

Frey pointed to lengthy memos from the working groups that included multiple pages of questions that had been posed to EPA for each rulemaking. EPA responded with short statements promising to keep the issues in mind as it develops the final rules.

"The response from the agency was basically a non-response," Frey said.

An agency spokesman said in a statement that SAB "plays an important role" advising EPA.

"We value the Board's expertise, and we welcome feedback from the chartered panel on areas in which they are interested in getting additional scientific information that is relevant to the rulemaking process," the spokesman said.

It was not clear whether the full SAB will vote on Thursday to advance the reviews.

Frey noted that some of the members appointed by Pruitt had been on the working groups, giving him hope that the full board will back the recommendations to look deeper into the regulatory rollbacks.

Should SAB adopt them, it likely would mean setting up special subcommittees that include current members plus outside experts to question EPA further.

The board can advise EPA only on scientific matters, not policy or legal issues. In several cases, like with the repeals of the Clean Power Plan and the glider rule, EPA says it has a legal argument about statutory authority that does not rely on scientific issues.

But even then, Frey said, EPA must keep the science in mind.

"It's in the best interest of the agency to make sure that it's using appropriately developed and reviewed science in its rules," Frey said. "And the flip side of that is if the agency's not doing that, it could open itself up to legal challenges for not following appropriate procedures to develop the science."

GOP sweats Trump's Heitkamp flirtation [Back](#)

By Alex Isenstadt and Burgess Everett | 05/30/2018 05:08 AM EDT

When a small group of alarmed White House aides caught wind that Sen. Heidi Heitkamp — one of the most endangered Democrats up for reelection in 2018 — would be attending President Donald Trump's bill signing last week, they raced to stop it.

Word eventually reached Senate Majority Leader Mitch McConnell, who has made unseating Heitkamp a top priority. He opted not to intervene, and the invitation stood: As the president signed a banking deregulation bill into law before a national audience, Heitkamp was right next to him, the only Democrat in the room.

As the election year kicks into high gear, Republicans have grown increasingly frustrated with Trump's ongoing flirtation with the freshman senator. At a time when many in the GOP fear that the president's unpredictable style will undercut their best-laid midterm plans, the relationship has given Heitkamp — who is seeking reelection in a state where Trump won nearly two-thirds of the vote — fodder to portray herself as a presidential ally.

Her office keeps a running list of the dozen-plus meetings Heitkamp has had with Trump and his top advisers since the 2016 election. And the senator is fond of noting that she forged close ties with Trump's former top economist, Gary Cohn. The president met with Heitkamp in Trump Tower after the 2016 election to discuss a

possible Cabinet position, asked her to join him on Air Force One, and invited her onstage to join him and her Republican opponent, Rep. Kevin Cramer, during an appearance in North Dakota.

"Everyone is saying, 'What's she doing up here?'" the president said at the September event to sell his tax reform plan, which Heitkamp eventually opposed. "But I'll tell you what. Good woman, and I think we'll have your support, I hope we'll have your support. And thank you very much, senator, thank you for coming up."

After last week's bill signing, Heitkamp's allies raced to capitalize. The North Dakota Democratic Party sent out a tweet with an image of Cramer looking on uncomfortably as the president stood next to Heitkamp.

"At a bill signing today, @HeidiHeitkamp got a shout out and all @kevincramer got was a photo op next to a chair," the state party boasted.

"We will see footage of this on every platform," said Doug Heye, a former top Republican National Committee official. "It's a huge gift for her campaign."

Trump aggressively recruited Cramer to give up his House seat to take on Heitkamp, and his actions since have left some of Cramer's closest allies feeling snubbed. They note that while Trump has savaged Democratic incumbents Joe Donnelly of Indiana and Jon Tester of Montana and visited a growing list of states to pump up Republican Senate hopefuls — most recently Tennessee, where he appeared Tuesday on behalf of Rep. Marsha Blackburn — he has yet to make a campaign appearance with Cramer. Nor has the attack dog-in-chief attacked Heitkamp.

After Cramer learned last year that Heitkamp would be accompanying the president on Air Force One to North Dakota, he complained bitterly to the White House, according to two people with direct knowledge of the discussions. Heitkamp, Cramer predicted at the time, would try to use it to her political advantage. (A Cramer adviser, Pat Finken, denied that the congressman had complained about the senator riding on Air Force One.)

The administration has taken steps to assure Cramer that he has the president's full support. The congressman has been regularly in touch with White House political director Bill Stepien, and the two met earlier this month. Trump has agreed to hold a rally for Cramer later this year.

In an interview, Cramer shrugged off Heitkamp's attendance at the bill signing and said there would soon be "clarity" on who Trump supports in the race.

Yet the congressman declined to predict whether the president would go after Heitkamp aggressively, as Trump has done with other Democratic incumbents. Cramer seemed aware of the warmth between the president and the senator. Trump has asked Cramer whether he likes Heitkamp, and when the congressman responds yes, the president seems to be "relieved," Cramer said.

"Politically, North Dakota's a pretty nice state. So I don't know that turning it on her is necessarily politically helpful to me," Cramer said. "They may just be concerned that she's a woman and maybe that has an impact. I just don't know."

Heitkamp said she's proud of her ability to work with the president.

"I have a friendly relationship. I have a very important working relationship," she said in an interview, "not just with him but other members of the administration."

Trump's reluctance to go after Heitkamp stems in part from the simple fact that he needs her vote. With Republicans clinging to a narrow Senate majority, the White House has pushed for her support on several

contentious votes, including the recent confirmations of CIA Director Gina Haspel and Secretary of State Mike Pompeo. She also backed Trump's nominations of Supreme Court Justice Neil Gorsuch and Environmental Protection Agency Administrator Scott Pruitt.

Last week's signing ceremony was organized by White House Office of Legislative Affairs Director Marc Short. He said he extended an invitation to Heitkamp because she played a central role in passing the banking deregulation law.

"She was an original cosponsor of the bill," Short said. "But she's also someone who opposed tax relief, who opposed repeal of Obamacare, and someone who will always support Chuck Schumer. So you can be sure the president will be actively campaigning in North Dakota this cycle."

Cramer's February entry into the race followed an intense pursuit from Trump and top White House officials. After Cramer initially said in January that he wouldn't run for Senate, he received overtures from Trump, White House counselor Kellyanne Conway, and energy executive and Trump donor Harold Hamm within a three-day period. Trump also met with Cramer's wife, Kris.

Cramer said Trump told him at the time that he'll "be out there campaigning more than you are." Trump's entreaties, Republicans contend, helped to push Cramer into the contest. Cramer won his statewide, at-large House seat in 2012, the same year Heitkamp entered the Senate.

"The president leaned on him very hard. The president wanted the best candidate, and everyone in the state thought Kevin was the best candidate to beat Heidi," said Gary Emineth, a former North Dakota GOP chairman who is close with the congressman. "You know how the president is. He just doesn't quit."

Heitkamp predicted that Trump would attack her eventually. While she has maintained a positive working relationship with the president, she said it pales in comparison to Cramer's staunch loyalty.

"I don't think anyone can match his Trump credentials," Heitkamp said. "He is somebody who will always do what the president asks him to do, regardless of whether it's good for North Dakota."

As of late, the senator has been airing commercials that highlight her balancing act. "When I agree with the president I vote with him — and that's over half my votes," she says in a spot that began airing this month. "And if his policies hurt North Dakota, he knows I'll speak up."

Cramer accused Heitkamp of acting like a "Republican wannabe" with her occasional support for key Trump nominees.

"Her trying to cozy up to Donald Trump has resulted in good votes," Cramer said. "But every time she tries to become more like me, it's more flattering to me than it is to her."

Democrats, however, couldn't be happier to portray Cramer as a jilted lover.

Last week, the North Dakota Democratic Party released a video featuring a montage of clips of the president praising Heitkamp and shaking her hand as Cramer looks on — set to the sad sounds of R.E.M.'s "Everybody Hurts."

GOP Senate candidate lashes out at Trump's legislative director [Back](#)

By Burgess Everett | 05/30/2018 06:27 PM EDT

Rep. Kevin Cramer, one of the GOP's top Senate recruits, launched an unusual attack on the White House's legislative director Wednesday, blaming him explicitly for the party's legislative failures in the Senate.

The comments from Cramer (R-N.D.) come amid rising GOP angst over President Donald Trump's close relationship with his opponent in the North Dakota Senate race, Democratic Sen. Heidi Heitkamp.

Heitkamp was the only Democrat invited to the White House last week for a bank deregulation bill signing, alarming some White House aides and Republicans. After POLITICO published a [story](#) on Wednesday outlining the awkward dynamic between Heitkamp, Cramer and the White House, Cramer [told](#) North Dakota radio host Rob Port that he had done some digging and believes that there "are some people in the White House that think, you know, the president's too friendly too her."

Then Cramer laid into White House legislative affairs director Marc Short for two prominent failed GOP efforts in the Senate: Repeal of Obamacare and the rollback of an Obama-era regulation that would limit flaring and venting from oil and gas wells. Heitkamp voted against both and Cramer has criticized her in particular over the flaring vote.

"If Marc Short was very good at his job, you know, we'd have a repeal and replacement of Obamacare, we'd have a replacement of the venting and flaring rule," Cramer said.

In an interview last week with POLITICO, Cramer insisted he is not angry over Trump's political flirtations with Heitkamp: "Not the case at all. I've been fine with it. I just don't think it hurts me." And on Wednesday on Port's show, Cramer said the spat over Heitkamp's attendance at the banking bill signing "just seems to be an argument between Marc Short and other people in the White House."

Short extended an invitation to Heitkamp to the bill signing, but also has knocked Heitkamp for opposing the GOP's tax law. He did not respond to a request for comment for this story.

Heitkamp has tried to stay out of the back and forth, though she is playing up her collaborations with a president that won her state in 2016 by more than 35 points.

"The president has got bigger fish to fry and bigger problems to solve than whether Kevin likes him more than I do," Heitkamp said.

DOE report: U.S. generally 'well prepared' for grid hacking, but gaps remain [Back](#)

By Eric Geller | 05/30/2018 06:05 PM EDT

Senior government officials and electric sector executives don't know enough about how energy companies could recover from a disruptive cyberattack, and those companies don't consider cyber threats enough when building out their supply chains, according to a new Energy Department [report](#).

Grid resilience efforts also suffer because of "gaps in incorporating cybersecurity concerns, including planning for long-term disruption events, into state emergency response and energy assurance planning," said the report.

"The United States is, in general, well prepared to manage most electricity disruptions," the Energy Department said in its report. But gaps still exist in areas like situational awareness, workforce development, separation of roles and responsibilities and the coordinated use of resources like digital defense tools.

DOE completed the report last August as part of President Donald Trump's May 2017 cyber executive order but did not publish it until today.

The report mostly hammered home long-understood problems with protecting the power grid from hackers, including the challenges of sharing cyber threat data between partners

"The variation in infrastructure ownership and operation and the jurisdictional overlap add complexity to sharing actionable information in a timely manner," the report said. "These complexities are compounded when information is classified or sensitive due to the limited options and access to facilitate sharing."

It also warned of compounding problems in the event of a major power outage. For example, "as cyber incidents may impact disparate systems across the country, the impacted owner-operators may not be familiar with each other's systems and procedures."

DOE working to stand up new cyber unit in fiscal 2018 [Back](#)

By Darius Dixon | 03/01/2018 01:11 PM EDT

The Energy Department is aiming to have its new cybersecurity office fired up before the end of the fiscal year, Bruce Walker, the agency's top electricity official, said today.

"We're working with Congress because we put it into the FY 2019 budget proposal ... and we're looking to stand it up earlier because of the importance and our sector-specific agency authority [for cyber incidents]," he told reporters after testifying before the Senate Energy and Natural Resources Committee.

Walker has previously noted that DOE wouldn't need additional congressional authority to create the office or a new assistant secretary job to lead it. Today, he also said that the design change is meant to elevate cyber issues as well as to divide up the agency's infrastructure work into short-term and long-term operations.

Creating the Office of Cybersecurity, Energy Security and Emergency Response is a reaction to a range of issues, including Congress giving DOE more emergency authorities in the 2015 FAST Act ([H.R. 22 \(114\)](#)), the relentless need to improve cyber defenses, and the deepening marriage between the natural gas and electric sectors.

Walker would still lead the electricity office, which would focus on long-term infrastructure plans and set research-and-development goals, including for cybersecurity. Meanwhile, the new CESER office would be "actionable, near-term and highly responsive" recovery work like the devastation in Puerto Rico or the immediate response to a cyberattack, he said.

"One basically feeds the other," Walker said. "[CESER] responds to the incidents, OE will design them out of the system on a going-forward basis."

GAO: Government spent \$13.2B on climate change last year [Back](#)

By Anthony Adragna | 05/30/2018 04:34 PM EDT

The federal government spent \$13.2 billion across 19 agencies during fiscal 2017 for various programs related to climate change, according to [a report](#) from the Government Accountability Office released today.

Overall, climate change-related spending across the federal government rose \$1.5 billion between fiscal 2016 and 2017 and grew \$4.4 billion since fiscal 2010, according to the report.

GAO examined the budget justifications for six agencies accounting for 89 percent of all climate change spending and found just 18 of 533 programs within those agencies whose primary purpose is to address climate change. It further concluded that those programs primarily dedicated to addressing the problem "serve different purposes, target different audiences, or operate at different time periods and scales, which minimizes potential overlap or duplication." The other programs had multiple purposes beyond addressing climate change.

The White House Office of Management and Budget reports the government has spent over \$154 billion since 1993 to understand and address climate change.

House Science Chairman [Lamar Smith](#) (R-Texas) requested the report.

DOE IG: No big flaws in FERC pipeline review process, but transparency should improve [Back](#)

By Darius Dixon | 05/30/2018 03:21 PM EDT

Federal watchdogs said they found no major flaws in FERC's process for reviewing interstate natural gas pipelines, but they flagged concerns about its transparency and how it handles public comments, according to [new report](#).

Auditors in the Energy Department inspector general's office who reviewed FERC's pipeline certification process said that "nothing came to our attention to indicate that FERC had not performed its due diligence" in how it balanced public benefits of a proposed project with its adverse impacts.

But the report said regulators' "had not fully ensured" that the certification process was transparent to those who want to participate and that its eLibrary documentation system was difficult to use. And it said FERC lacked a consistent method for tracking and addressing comments submitted on a proposed project.

"FERC had not specifically designed its public-facing systems for use by the general public," the IG report said, noting that "although available to the general public, eLibrary had been designed for use by practitioners, the legal community, and other stakeholders."

The report also said parts of the eLibrary website "did not contain a sufficient explanation of the entire process" and that a document for landowners who could be affected by a project was not clear about key aspects of the certification process.

"While nothing came to our attention to indicate that natural gas certification applications had been inappropriately approved or disapproved," watchdogs wrote, "FERC can take steps to improve aspects of the natural gas certification process."

WHAT'S NEXT: FERC is in the process of a broad review of its natural gas pipeline certification process but there's no established deadline.

Subject: Morning Energy, presented by America's Pledge: Battle in the Bakken state? — Groups sue over EPA waiver exemptions — Deja vu on formaldehyde

By Kelsey Tamborrino | 05/30/2018 05:41 AM EDT

With help from Annie Snider and Ben Lefebvre

BATTLE IN THE BAKKEN STATE? As the election year kicks into high gear, President Donald Trump's friendly relationship with Democratic Sen. Heidi Heitkamp is worrying some within the Republican party, POLITICO's Alex Isenstadt and Burgess Everett report. Republicans have grown increasingly frustrated with Trump's ongoing flirtation with the freshman senator from the No. 2 oil-producing state, especially at a time when many in the GOP fear that the president's unpredictable style will undercut their midterm plans. Heitkamp, who is seeking reelection in a state where Trump won nearly two-thirds of the vote, has a friendly relationship with the president, even after Trump aggressively recruited Rep. Kevin Cramer — who advised his campaign on energy issues — to give up his House seat and enter that race, leaving some of Cramer's closest allies feeling snubbed.

In an interview, Cramer said there would soon be "clarity" on who Trump supports in the race. But the congressman declined to predict whether the president would go after Heitkamp aggressively, as Trump has done with other Democratic incumbents. Cramer seemed aware of the warmth between the president and the senator, Alex and Burgess report. Trump has asked Cramer if he likes Heitkamp, and when the congressman responds yes, the president seems to be "relieved," Cramer said. "Politically, North Dakota's a pretty nice state. So I don't know that turning it on her is necessarily politically helpful to me," Cramer said. "They may just be concerned that she's a woman and maybe that has an impact. I just don't know."

For her part, Heitkamp said she's proud of her ability to work with the president. "I have a friendly relationship, I have a very important working relationship," she said in an interview, "not just with him but other members of the administration." Read the story [here](#).

WELCOME TO WEDNESDAY! I'm your host Kelsey Tamborrino, and Peter Robertson of the Pebble Partnership was the first to correctly identify California and Ohio as the two states that don't have an avenue named after them in D.C. Instead, there's a California Street and Ohio Drive. For today: Which president was the first to see a major league baseball game in his hometown, and which town was it? GROUPS SUE ON WAIVER EXEMPTIONS: Ethanol and farm groups say they've filed a lawsuit against EPA over some of the waivers granted to small refineries allowing them to shed their Renewable Fuel Standard requirements on blending biofuels, Pro's Eric Wolff reports. The Renewable Fuels Association, National Corn Growers Association, American Coalition for Ethanol and National Farmers Union are challenging the waivers granted to CVR Refining's Wynnewood, Okla., refinery and the HollyFrontier refineries at Cheyenne, Wyo. and

Woods Cross, Utah. Those refineries have collectively saved \$170 million in compliance costs, the coalition said.

Those waivers, which ethanol backers say violate the volume mandates under the RFS, are also the subject of some horse-trading in the discussions between EPA Administrator Scott Pruitt and USDA Secretary Sonny Perdue. The two are trying to put the final touches on a compromise deal over EPA's rules for biofuels. Read [more](#).

CHEVRON SHAREHOLDERS VOTE: Shareholders at Chevron's annual meeting today will vote on a pair of climate change-related provisions. First up is a proposal that the oil giant report to investors how it will change its business model to account for any decreased demand for oil and gas resulting from greater development of renewable energy sources. Another proposal is that Chevron start providing reports on steps it is taking to minimize methane emissions from its fracking operations. Chevron's board of directors have advised against both proposals, saying the company is already making sufficient efforts on both matters.

Exxon, which also holds its annual meeting today, is getting a break this year from the sort of environmental proposals its shareholders considered in 2017.

**** A message from America's Pledge:** America's Pledge is flipping the script on climate action. One year after the federal government announced it would pull out of the Paris Agreement, 2,700+ U.S. cities, states, and businesses are saying, "We Are Still In." See how far we've come: <https://politi.co/2koAHZb> **

DEJA VU? Already under fire for their handling of a controversial assessment of nonstick chemicals in drinking water, a newly uncovered EPA email suggests that public relations strategy was also front-of-mind for EPA staffers as the agency contemplated reevaluating the risks of formaldehyde. Reuters reported last week that EPA delayed release of a new assessment of the chemical that is expected to for the first time link formaldehyde with leukemia after meeting with the American Chemistry Council in January.

"They reiterated the concern you have raised about information leaking before it's been vetted and asked that the Agency have appropriate communication materials ready to use if needed," Jennifer Orme-Zavaleta, who heads EPA's Office of Research and Development, wrote in a Jan. 24 email to EPA chief of staff Ryan Jackson and Richard Yamada, deputy assistant administrator for research and development. The email was released to the Union of Concerned Scientists under the Freedom of Information Act.

Yogin Kothari, a lobbyist of UCS, said the email "sounds eerily similar" to concerns that EPA and White House officials expressed about a HHS assessment of the chemicals PFOA and PFOS. "It's not surprising that the ACC is attempting to wield its influence over EPA when its former staff are basically running the place," Kothari said by email.

WE'RE CLOSED: The Environmental Council of the States' upcoming fall meeting will close to the public certain sessions attended by EPA officials, according to the group's draft agenda for the August meeting. The draft shows ECOS will hold closed sessions on several issues, including a state-EPA roundtable on "cooperative federalism" and joint PFAS activities. (h/t E&E News' Sean Reilly)

NAFTA TALKS STILL STALLED: Recent NAFTA talks between the U.S., Mexico and Canada have not resulted in progress on the thorniest issues because the U.S. remains unwilling to offer important concessions, two sources close to the talks told Pro's Sabrina Rodriguez. Negotiators from the Office of the U.S. Trade Representative continue to demand that "they want everything, and there's no possible way they'll get everything they want," one of the sources said. "Conversations have stalled entirely." Read [more](#).

WE'LL ALWAYS HAVE PARIS: This week marks the one-year anniversary of Trump's decision to pull the U.S. out of the Paris climate agreement. The United States still technically remains in the 2015 pact for the next

two-and-a-half years, but the action to implement it is playing out in the rest of the world. To mark the occasion, the World Resources Institute will host a [discussion](#) today on whether other nations have moved on since Trump's decision to exit the agreement. Among those participating is Todd Stern, the former State Department special envoy for climate change who helped seal the deal. In the lead-up to the event, WRI's Eliza Northrop laid out the seven signs of progress since Trump's announcement [here](#), including a timeline of events over the last year. If you go: The discussion kicks off at 2:30 p.m at 10 G Street NW. Watch the livestream [here](#).

— **And the National League of Cities**, as well as mayors from across the country, will release today their latest "State of the Cities" report that will look into the trend of cities taking on clean energy goals, despite the federal government.

OFFSHORE DRILLER FINED \$4M: Oil and gas company Energy Resource Technology was fined \$4 million Tuesday by the U.S. Attorney's Office for the Eastern District of Louisiana for fabricating data about the readiness of a key piece equipment used to prevent oil spills, Interior said. The fine comes as a result of an [investigation](#) by Interior's Office of Inspector General that found that ERT management directed an employee on its rig in the Gulf of Mexico to create a fake blowout preventer pressure test chart to conceal a failed test result, Pro's Ben Lefebvre reports. Read [more](#).

EPA, KILDEE SPAR OVER SUMMIT: EPA defended its move to only allow federal agency and state representatives on the second day of last week's summit on toxic chemicals in drinking water, dismissing Democratic Rep. [Dan Kildee](#)'s complaint that members of his staff had been barred from attending as a mischaracterization. EPA Associate Administrator Troy Lyons wrote in a letter Tuesday to Kildee and obtained by POLITICO that the agency worked with Kildee's office ahead of time to allow a staffer to attend the first day of the summit.

"**I trust you understand our disappointment** when we discovered that no one from your office attended the summit on May 22, particularly in light of the subsequent events on May 23," Lyons wrote. In a statement, Mitchell Rivard, Kildee's chief of staff, said that "it is hard to mischaracterize the EPA's actions — it had been widely reported that the EPA blocked both journalists and a congressional office from the taxpayer-funded PFAS summit." Read the letter [here](#).

MAIL CALL! 45Q AND YOU: Rep. Cramer shared [a letter](#) Tuesday from the Treasury Department in response to [his request](#) for direction on the expanded 45Q tax credit for capturing and storing carbon dioxide. In the letter, Assistant Secretary for Legislative Affairs Drew Maloney said Treasury is developing published guidance to provide clarity to taxpayers for the purpose of using the credit.

— **A coalition of 12 state and city attorneys general** and attorneys sent a letter to National Academy of Sciences President Marcia McNutt saying EPA's so-called secret science proposal to ban the use of studies that don't publicly disclose all data is "too vague and rushed to allow for meaningful public review." And they pressed for the group to weigh in, saying "the National Academy's input on this extremely consequential proposal." Read it [here](#).

API WRITES TO TRUMP ON SECTION 232: The American Petroleum Institute [sent a letter](#) to Trump last week requesting that the list of countries currently exempt from Section 232 tariffs on steel and aluminum be expanded "without imposing alternative measures such as quotas," and that the president remove any associated import quotas that have already been imposed. In his letter, API President and CEO Jack Gerard writes that additional import restrictions "will have a negative effect on our industry just as we have achieved the highest level of domestic hydrocarbon (oil and natural gas and natural gas liquids, or NGLs) production since 1949," according to EIA.

TRUDEAU COMMENTS ON PIPELINE: Canadian Prime Minister Justin Trudeau defended the Canadian government's plan to buy and complete the expansion of Kinder Morgan's Trans Mountain pipeline. "The

project became too risky for a commercial entity to go forward with it; that's what Kinder Morgan told us," Trudeau said during a Bloomberg Businessweek event. "We are going to ensure that it gets built so that we can get our resources to new markets." More [here](#).

WHITE HOUSE TALKS PUERTO RICO: Aboard an Air Force One flight, press secretary Sarah Huckabee Sanders was asked whether the president — despite his [previous comments](#) — now thinks Puerto Rico constitutes a "real catastrophe" following the release of a Harvard University study that found at least 4,645 people died from the September 2017 storm rather than the 64 deaths federal authorities counted. The White House continues to be supportive of the governor of Puerto Rico, Sanders said according to pool reports, and of "transparency and accountability." The people of Puerto Rico "deserve nothing less than that, and were going to continue to be focused on helping in every way we can," she said. "FEMA has already done the largest response ever in history to any natural disaster. They're in Puerto Rico, and we're going to continue to give as much assistance as possible."

RBS COMMITS TO NEW ENERGY FINANCING: Ahead of its shareholder meeting today, the Royal Bank of Scotland [announced](#) Tuesday new energy financing policies to support a transition to low carbon. The bank said it would no longer provide "project-specific finance" to new coal-fired power plants, thermal coal mines or oil sands projects, among other projects. Additionally, RBS said it is tightening restrictions on general lending to mining and power companies generating more than 40 percent of their revenues from thermal coal and of electricity from coal, respectively. In response, Rainforest Action Network Executive Director Lindsey Allen said the announcement "comes as a result of groups like us pressuring banks to defund fossil fuels and deforestation," but said the "policy is only half a step forward because it leaves loopholes in place."

REPORT: COOK TAPPED FOR SUPERFUND JOB: EPA has named Steven Cook — a former senior counsel at chemical giant LyondellBasell — to the agency's Superfund Task Force in the position left vacant by Albert "Kell" Kelly, Bloomberg BNA [reported](#). Cook has been serving as deputy assistant administrator for the agency's land and waste office, prior to his move to the Superfund spot.

ZINKE DEFENDS 'KONICHIWA' GREETING: In a wide-ranging radio interview with Breitbart Radio, Interior Secretary Ryan Zinke defended his use of the greeting "konichiwa" in response to a question from Rep. Colleen Hanabusa on preserving internment sites during a March Natural Resources hearing. "I grew up in a little logging, timber town, railroad town in Montana and a lot of my family lived through the years of the internment camps. I've long since had friends that were Japanese families that went through that," Zinke said, calling it an "appropriate salute." Listen to the full interview [here](#).

AD WARS: Club for Growth Action said Tuesday that it would spend \$250,000 on new ads attacking Russ Fagg, a former judge and Republican candidate for Senate in Montana. Campaign Pro's James Arkin [reports](#) the new ad campaign attacks Fagg over his record during his two decades as a district judge, including the time he called a judge who "undercut" Trump's rollback of environmental rules a "thoughtful moderate." Watch the TV ad [here](#).

MOVER, SHAKER: Stuart Siffring joined the Western Energy Alliance as a regulatory analyst, the trade group announced Tuesday. Siffring previously worked as a permit engineer at EPA and the Colorado Department of Public Health and Environment.

Stories from POLITICO Pro

The one Democrat Trump can't help but like [Back](#)

By Alex Isenstadt and Burgess Everett | 05/30/2018 05:08 AM EDT

When a small group of alarmed White House aides caught wind that Sen. Heidi Heitkamp — one of the most endangered Democrats up for reelection in 2018 — would be attending President Donald Trump's bill signing last week, they raced to stop it.

Word eventually reached Senate Majority Leader Mitch McConnell, who has made unseating Heitkamp a top priority. He opted not to intervene, and the invitation stood: As the president signed a banking deregulation bill into law before a national audience, Heitkamp was right next to him, the only Democrat in the room.

As the election year kicks into high gear, Republicans have grown increasingly frustrated with Trump's ongoing flirtation with the freshman senator. At a time when many in the GOP fear that the president's unpredictable

style will undercut their best-laid midterm plans, the relationship has given Heitkamp — who is seeking reelection in a state where Trump won nearly two-thirds of the vote — fodder to portray herself as a presidential ally.

Her office keeps a running list of the dozen-plus meetings Heitkamp has had with Trump and his top advisers since the 2016 election. And the senator is fond of noting that she forged close ties with Trump's former top economist, Gary Cohn. The president met with Heitkamp in Trump Tower after the 2016 election to discuss a possible Cabinet position, asked her to join him on Air Force One, and invited her onstage to join him and her Republican opponent, Rep. Kevin Cramer, during an appearance in North Dakota.

"Everyone is saying, 'What's she doing up here?'" the president said at the September event to sell his tax reform plan, which Heitkamp eventually opposed. "But I'll tell you what. Good woman, and I think we'll have your support, I hope we'll have your support. And thank you very much, senator, thank you for coming up."

After last week's bill signing, Heitkamp's allies raced to capitalize. The North Dakota Democratic Party sent out a tweet with an image of Cramer looking on uncomfortably as the president stood next to Heitkamp.

"At a bill signing today, @HeidiHeitkamp got a shout out and all @kevincramer got was a photo op next to a chair," the state party boasted.

"We will see footage of this on every platform," said Doug Heye, a former top Republican National Committee official. "It's a huge gift for her campaign."

Trump aggressively recruited Cramer to give up his House seat to take on Heitkamp, and his actions since have left some of Cramer's closest allies feeling snubbed. They note that while Trump has savaged Democratic incumbents Joe Donnelly of Indiana and Jon Tester of Montana and visited a growing list of states to pump up Republican Senate hopefuls — most recently Tennessee, where he appeared Tuesday on behalf of Rep. Marsha Blackburn — he has yet to make a campaign appearance with Cramer. Nor has the attack dog-in-chief attacked Heitkamp.

After Cramer learned last year that Heitkamp would be accompanying the president on Air Force One to North Dakota, he complained bitterly to the White House, according to two people with direct knowledge of the discussions. Heitkamp, Cramer predicted at the time, would try to use it to her political advantage. (A Cramer adviser, Pat Finken, denied that the congressman had complained about the senator riding on Air Force One.)

The administration has taken steps to assure Cramer that he has the president's full support. The congressman has been regularly in touch with White House political director Bill Stepien, and the two met earlier this month. Trump has agreed to hold a rally for Cramer later this year.

In an interview, Cramer shrugged off Heitkamp's attendance at the bill signing and said there would soon be "clarity" on who Trump supports in the race.

Yet the congressman declined to predict whether the president would go after Heitkamp aggressively, as Trump has done with other Democratic incumbents. Cramer seemed aware of the warmth between the president and the senator. Trump has asked Cramer whether he likes Heitkamp, and when the congressman responds yes, the president seems to be "relieved," Cramer said.

"Politically, North Dakota's a pretty nice state. So I don't know that turning it on her is necessarily politically helpful to me," Cramer said. "They may just be concerned that she's a woman and maybe that has an impact. I just don't know."

Heitkamp said she's proud of her ability to work with the president.

"I have a friendly relationship. I have a very important working relationship," she said in an interview, "not just with him but other members of the administration."

Trump's reluctance to go after Heitkamp stems in part from the simple fact that he needs her vote. With Republicans clinging to a narrow Senate majority, the White House has pushed for her support on several contentious votes, including the recent confirmations of CIA Director Gina Haspel and Secretary of State Mike Pompeo. She also backed Trump's nominations of Supreme Court Justice Neil Gorsuch and Environmental Protection Agency Administrator Scott Pruitt.

Last week's signing ceremony was organized by White House Office of Legislative Affairs Director Marc Short. He said he extended an invitation to Heitkamp because she played a central role in passing the banking deregulation law.

"She was an original cosponsor of the bill," Short said. "But she's also someone who opposed tax relief, who opposed repeal of Obamacare, and someone who will always support Chuck Schumer. So you can be sure the president will be actively campaigning in North Dakota this cycle."

Cramer's February entry into the race followed an intense pursuit from Trump and top White House officials. After Cramer initially said in January that he wouldn't run for Senate, he received overtures from Trump, White House counselor Kellyanne Conway, and energy executive and Trump donor Harold Hamm within a three-day period. Trump also met with Cramer's wife, Kris.

Cramer said Trump told him at the time that he'll "be out there campaigning more than you are." Trump's entreaties, Republicans contend, helped to push Cramer into the contest. Cramer won his statewide, at-large House seat in 2012, the same year Heitkamp entered the Senate.

"The president leaned on him very hard. The president wanted the best candidate, and everyone in the state thought Kevin was the best candidate to beat Heidi," said Gary Emineth, a former North Dakota GOP chairman who is close with the congressman. "You know how the president is. He just doesn't quit."

Heitkamp predicted that Trump would attack her eventually. While she has maintained a positive working relationship with the president, she said it pales in comparison to Cramer's staunch loyalty.

"I don't think anyone can match his Trump credentials," Heitkamp said. "He is somebody who will always do what the president asks him to do, regardless of whether it's good for North Dakota."

As of late, the senator has been airing commercials that highlight her balancing act. "When I agree with the president I vote with him — and that's over half my votes," she says in a spot that began airing this month. "And if his policies hurt North Dakota, he knows I'll speak up."

Cramer accused Heitkamp of acting like a "Republican wannabe" with her occasional support for key Trump nominees.

"Her trying to cozy up to Donald Trump has resulted in good votes," Cramer said. "But every time she tries to become more like me, it's more flattering to me than it is to her."

Democrats, however, couldn't be happier to portray Cramer as a jilted lover.

Last week, the North Dakota Democratic Party released a video featuring a montage of clips of the president praising Heitkamp and shaking her hand as Cramer looks on — set to the sad sounds of R.E.M.'s "Everybody Hurts."

Ethanol, farm groups sue EPA over exemptions [Back](#)

By Eric Wolff | 05/29/2018 07:13 PM EDT

A coalition of ethanol and farmers groups said they filed a lawsuit in federal court today against EPA seeking to overturn some of the waivers the agency has granted to small refineries allowing them to shed their Renewable Fuel Standard requirements on blending biofuels.

The Renewable Fuels Association, National Corn Growers Association, American Coalition for Ethanol and National Farmers Union are challenging the waivers granted to CVR Refining's Wynnewood, Okla., refinery and the HollyFrontier refineries at Cheyenne, Wyo. and Woods Cross, Utah. Those refineries have collectively saved \$170 million in compliance costs, the coalition said.

The groups, along with their allies in Congress, have criticized EPA's frequent use of the waivers, which they say undermines the RFS mandates on the amount of biofuel that must be sold into the U.S. fuel market.

"EPA is trying to undermine the RFS program under the cover of night," RFA CEO Bob Dinneen said in a statement. "And there's a reason it has been done in secret — it's because EPA is acting in contravention of the statute and its own regulations, methodically destroying the demand for renewable fuels."

The Advanced Biofuels Association challenged the waivers May 1.

WHAT'S NEXT: The complaint will be heard in the U.S. Court of Appeals for the 10th Circuit.

Exxon shareholders win vote to build Paris climate pact into plans [Back](#)

By Ben Lefebvre | 05/31/2017 02:37 PM EDT

The Trump administration may be preparing to [withdraw the U.S.](#) from the Paris climate change accords, but shareholders at Exxon Mobil and at least one other U.S. oil company are demanding the companies incorporate the international deal in their business models.

Nearly two-thirds of Exxon's shareholders backed a proposal on Wednesday calling for the company to assess how climate change and global efforts to limit temperature increases will affect its business. The vote is non-binding, but the results show that the once-fringe idea of linking climate change to big oil's operations has gained momentum.

The vote at the Exxon annual shareholder meeting in Dallas came after investors in its smaller rival Occidental Petroleum earlier this month cast more than two-thirds of their votes for a measure calling for the company to

assess how its business would be affected by the Paris climate change accord's target of holding global warming to 2-degrees. Company credit rating agency Moody's said last year it would start to use the Paris pledge to assess financial risk for corporations.

"Shareholders have spoken clearly on climate," said Danielle Fugere, president and chief counsel for As You Sow, a group that helps shareholders introduce environmental proposals. "If there's less demand for oil and the world is awash in oil, there's going to be more competition among these companies. Shareholders are trying to figure out who is the best bet."

Not all of these climate-related investor proposals succeeded, however. Chevron shareholders Wednesday morning rejected a motion that the company issue a report on how limiting global temperature increase to 2 degrees Celsius (3.6 degrees Fahrenheit) would affect its business. Only 27 percent of voting shareholders approved the proposal, down from more than 40 percent who voted for a similar proposal last year.

Exxon, Chevron and other energy companies facing such proposals argue that they are already taking the Paris agreement seriously and incorporating it into their business plans. Exxon in particular pointed out that it was developing technology that would capture the carbon emitted at natural gas power plants and then either store it or use it to produce more electricity.

"We believe the goal of carbon policy is to reduce emissions at the lowest cost to society," Exxon Chief Executive Darren Woods said at the shareholder meeting. "These goals led us to support the Paris Agreement." Woods sent President Donald Trump a letter earlier this month urging the U.S. to stay in the Paris deal.

For Exxon, the votes also illustrate how entangled the company has become in New York state climate change politics. The climate change proposal shareholders approved was partly sponsored by the New York State Common Retirement Fund, which is run by the State's comptroller. Meanwhile, the company is embroiled in a lawsuit with the New York and Massachusetts attorneys general over whether it withheld its own research on climate change from shareholders.

"The burden is now on Exxon Mobil to respond swiftly and demonstrate that it takes shareholder concerns about climate risk seriously," New York State Comptroller Thomas P. DiNapoli said in a prepared statement after the vote.

NAFTA talks stall amid apparent refusal of U.S. to make concessions [Back](#)

By Sabrina Rodriguez | 05/29/2018 07:41 PM EDT

Recent high-level NAFTA talks between the U.S., Mexico and Canada have not resulted in progress on the thorniest issues because the U.S. remains unwilling to offer important concessions, two sources close to the talks said on Tuesday.

Negotiators from the Office of the U.S. Trade Representative continue to demand that "they want everything, and there's no possible way they'll get everything they want," one of the sources told POLITICO. "Conversations have stalled entirely."

As the U.S. and Canada resumed talks in Washington on Tuesday, the sources confirmed that Mexican Trade Undersecretary Juan Carlos Baker met with officials from USTR last week to present a counterproposal that would see Mexico make concessions on wages in the automotive sector in return for U.S. concessions on other flashpoint issues.

Under the offer, Mexico reportedly would accept language on automotive rules of origin that would require that 20 percent of cars produced within North America be made by workers earning at least \$16 an hour.

In exchange, Mexico reportedly asked that the U.S. back off some of its thorniest proposals, like placing limits on government procurement as well as a so-called sunset clause, which would allow for the deal to be terminated if all three countries don't agree to renew it after five years. News of the counterproposal was first reported by Bloomberg.

Mexico's counterproposal was not well received by USTR, the sources said.

"USTR did not take a close look at their proposal before rejecting it," one of the sources said. "As soon as it included [the U.S.] giving in on something, it was a 'no' from USTR."

That leaves it up to U.S. Trade Representative Robert Lighthizer to decide if the U.S. will offer any concessions to Mexico and Canada, the sources added.

USTR did not immediately respond to a request for comment on Tuesday evening.

The latest deadlock comes as Mexico and Canada face a looming deadline in their effort to secure a permanent exemption from the U.S. steel and aluminum tariffs. Mexico and Canada were temporarily exempted from the duties, but to win a permanent reprieve each country must reach a separate agreement to satisfy U.S. national security concerns by June 1.

Mexican President Enrique Peña Nieto and Canadian Prime Minister Justin Trudeau have both emphasized in recent days that they will not be pressured into accepting a NAFTA deal that is bad for their respective countries.

"No NAFTA is better than a bad deal, and we've made that very clear to [President Donald Trump]," Trudeau said Tuesday in an interview with Bloomberg. "We are not going to move ahead just for the sake of moving ahead."

Trudeau discussed the NAFTA talks during a call with Vice President Mike Pence on Tuesday, the White House said in a readout that provided no details of the conversation.

Negotiators have made some gains, despite the continued difficulties over the hot-button topics. Canadian Foreign Minister Chrystia Freeland, Canada's top NAFTA official, said she had a "very substantive" conversation with her U.S. counterpart in Washington on Tuesday.

The NAFTA nations' top trade officials have been in consistent contact over the phone since they last met in Washington two weeks ago.

Lighthizer had acknowledged at that point that the three countries still faced "gaping differences" on a number of issues, such as market access for agricultural products and automotive rules of origin. "The NAFTA countries are nowhere near close to a deal," Lighthizer said then.

Talks have continued to move forward on the NAFTA modernization chapters, like e-commerce, "but as long as USTR keeps the thorny issues on the table, there won't be movement," one of the sources said.

Negotiators have so far closed nine chapters and six sectoral annexes, Mexico's chief negotiator, Kenneth Smith Ramos, said last week. Those chapters include: telecommunications, small- and medium-sized enterprises, competition, and technical barriers to trade.

Gulf of Mexico rig operator fined \$4M after Interior Department investigation [Back](#)

By Ben Lefebvre | 05/29/2018 04:36 PM EDT

The U.S. Attorney's Office for the Eastern District of Louisiana fined offshore oil and gas company Energy Resource Technology \$4 million for fabricating data about readiness of a key piece equipment used to prevent oil spills, the Interior Department said today.

The fine was a result of an [investigation](#) by Interior's Office of Inspector General that found that ERT management directed an employee on its rig in the Gulf of Mexico to create a fake blowout preventer pressure test chart to conceal a failed test result. The failure by a blowout preventer was one of the main causes of Deepwater Horizon rig accident that killed 11 people in 2010.

An ERT supervisor on the same rig had employees perform welding near an active well in violation of Interior safety regulations.

Interior had fined ERT \$4 million in 2012 for earlier violations on its rigs, and an accident [killed](#) a contract worker on an ERT rig in February.

ERT is a subsidiary of Houston-based Talos Energy.

WHAT'S NEXT: In addition to the fine, ERT was sentenced to 36 months' probation and ordered to pay \$200,000 in restitution.

Study: 4,645 people died after Hurricane Maria, far more than official estimate [Back](#)

By Mel Leonor | 05/29/2018 11:40 AM EDT

At least 4,645 people died amid the devastation wrought by Hurricane Maria in Puerto Rico — more than 70 times the official government death toll of 64, according to a new study from Harvard University.

Locals, journalists and public health experts have for months questioned the government estimate of deaths from the storm, which caused more than \$90 billion in damage.

President Donald Trump, however, said in October that Puerto Rico officials should be "very proud" of the low death toll.

The study, published Tuesday in the New England Journal of Medicine, is based on household surveys of more than 3,000 homes in the territory, where researchers found a boom in the mortality rate between late September and late December 2017.

The authors of the study, which was largely funded by the Harvard T.H. Chan School of Public Health, described the official death count as a "substantial underestimate" and called it evidence of the "inattention of the U.S. government to the frail infrastructure of Puerto Rico."

"The timely estimation of the death toll after a natural disaster is critical to defining the scale and severity of the crisis and to targeting interventions for recovery," they wrote.

Researchers found that "interruption of medical care was the primary cause" of the high mortality rate that came after the storm made landfall.

With the 2018 hurricane season in swing, the authors also urged chronically ill patients, communities and health care providers to develop contingency plans for future disasters.

Carlos R. Mercader, executive director of the Puerto Rico Federal Affairs Administration, said in a statement that officials would analyze the report, adding, "We have always expected the number to be higher than what was previously reported."

He said the Puerto Rico government has commissioned a report from George Washington University, which he said would be released "soon."

Trump said in October that the storm had been less devastating than Hurricane Katrina in 2005, but the new study indicates that may not be true. Hurricane Katrina resulted in the deaths of 1,833 people, according to FEMA.

"Every death is a horror," Trump said at the time, "but if you look at a real catastrophe like Katrina and you look at the tremendous — hundreds and hundreds of people that died — and you look at what happened here with, really, a storm that was just totally overpowering ... no one has ever seen anything like this."

Rep. Nydia Velázquez (D-N.Y.) said after the report was released Tuesday that the apparent undercounting of deaths "concealed" the impact of Hurricane Maria on the territory.

"By obscuring this, many were left to believe the Trump Administration's mythology that Puerto Rico was not hit hard by Maria," Velázquez said in a statement. "We must get to the bottom of this discrepancy."

The White House did not respond to a request for comment.

Last year, Velázquez and Rep. Bennie Thompson (D-Miss.) asked a government watchdog to investigate how Puerto Rican officials "originally arrived at such a low number."

New Club for Growth ads attack Fagg in Montana [Back](#)

By James Arkin | 05/29/2018 03:48 PM EDT

Club for Growth Action, the super PAC arm of the Club for Growth, announced today that it would spend \$250,000 on new ads attacking Russ Fagg, a former judge and Republican candidate for Senate in Montana.

The Club is backing state auditor Matt Rosendale in the race in the race to face Democratic Sen. Jon Tester, and its PACs have spent more than \$1 million on ads backing Rosendale and attacking Fagg, one of his top challengers in the June 5 primary.

The new ad campaign attacks Fagg over his record during his two decades as a district judge. The TV ad makes three claims against Fagg: that he defended another judge who suggested a rape victim was to blame for her own attack; that he called a judge who "undercut" President Donald Trump's rollback of environmental rules a "thoughtful moderate"; and that he "praised a liberal federal judge who ruled against speeding up deportations."

"Russ Fagg's values are not Montana values," the narrator says.

The radio version of the ad features a woman and a man having a conversation about Fagg's record and pointing listeners to a website, factsformontana.com, funded by Club for Growth Action.

You can watch the TV ad [here](#) and listen to the radio ad [here](#).

Subject: EPA Announces Extended Comment Period and Public Hearing on Proposed Rule to Strengthen Science Transparency in EPA Regulations

EPA Announces Extended Comment Period and Public Hearing on Proposed Rule to Strengthen Science Transparency in EPA Regulations

WASHINGTON (May 24, 2018) - Today, the U.S. Environmental Protection Agency (EPA) announced an extension of the comment period on the proposed rule, "Strengthening Transparency in Regulatory Science." EPA is also announcing a public hearing for the proposed rule, which will be held on July 17, 2018, in Washington, D.C.

"EPA is committed to public participation and transparency in the rulemaking process," said EPA Administrator Scott Pruitt. **"By extending the comment period for this rule and holding a public hearing, we are giving stakeholders the opportunity to provide valuable input about how EPA can improve the science underlying its rules."**

On April 30, 2018, EPA announced the proposed rule with a 30-day comment period that was scheduled to close on May 30. With today's extension, the comment period will now close on August 17. EPA is soliciting comments on all aspects of the proposal and specifically on the issues identified in Section III. The public hearing will provide a forum for interested parties to present data, views, and arguments regarding EPA's proposed rule.

The proposed rule will strengthen the science used in regulations issued by EPA. It will require that underlying scientific information be publicly available. Also, this rule is consistent with data access requirements for major scientific journals and builds upon Executive Orders 13777 and 13783.

Comments should be identified by Docket ID No. is EPA-HQ-OA-2018-0259 and submitted through the Federal eRulemaking Portal: <http://www.regulations.gov>.

The public hearing will be held at the U.S. Environmental Protection Agency Headquarters, William Jefferson Clinton East Building, Main Floor Room 1153, 1201 Constitution Avenue NW, in Washington, D.C. 20460. The public hearing will convene at 8:00 a.m. EST and continue until 8:00 p.m. EST. Parties interested in presenting oral testimony at the public hearing should register online by July 15, 2018, at <https://www.epa.gov/osa/strengthening-transparency-regulatory-science>.

While we have taken steps to ensure the accuracy of this [Internet version of the rule](#), it is not the official version of the rule for purposes of public comment. Please refer to the official version in a forthcoming *Federal Register* publication.

Subject: Morning Energy, presented by ExxonMobil: Democrats try to make GOP pay at the pump — Nukes out at PJM even as capacity prices double — Senate Appropriations marks up Energy-Water

By Kelsey Tamborrino | 05/24/2018 05:42 AM EDT

With help from Anthony Adragna and Eric Wolff

PUMP UP THE VOLUME: Days away from the Memorial Day weekend, gas prices are on the rise — and Democrats didn't have to look far for someone to blame. During a press conference in front of a notably pricey Exxon gas station, Democratic leaders blamed President Donald Trump's foreign policy decisions — including his move to reimpose sanctions on Iran — for the 50-cent-per-gallon surge in prices since he took office. "There's a straight line between Trump's policies and the price of gasoline," Sen. [Brian Schatz](#) told Pro's Ben Lefebvre and Anthony Adragna.

A page out of the Trump playbook: In pushing the blame onto Republicans, Democrats aren't breaking new ground. Trump himself called for former President Barack Obama's firing when in October 2012 gas prices hit "crazy levels." Republicans weren't surprised by the Democratic talking point, either. "Everyone's going to look for whatever political leverage they have going into an election," Sen. [Lisa Murkowski](#) said. "[But do] you think that Republicans created the high prices? No."

Roadblocks ahead: The Democratic message faces a big obstacle: Short of an energy crisis like the one President Jimmy Carter faced in his 1980 reelection campaign, it's tough to convince voters the president is to blame for expensive gas. Especially because the White House has little control over gas prices, which largely track the movement in global crude oil market prices. Energy market watchers say the price rally is largely due to moves by OPEC and Russia, in addition to the collapse of Venezuela's oil industry. [Read more.](#)

RELATED DOC: Trump has staffed his administration with oil and auto industry insiders, according to a new report from ethics watchdog group Public Citizen. The report breaks down industry influence by the numbers and finds 52 administration staff members have oil and gas ties, 15 with auto industry ties and 10 who have ties to both. Those industry ties are most concentrated at EPA, Interior and the White House. [Read the report.](#)

GOOD THURSDAY MORNING! I'm your host Kelsey Tamborrino. Congrats to the American Petroleum Institute's Khary Cauthen, who was the first to identify Franklin D. Roosevelt as the first president to have a state car custom built to Secret Service standards. For today: In what year did someone first attempt to jump the White House fence? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

POLITICO and the South China Morning Post are partnering to expand coverage of U.S.-China relations. If you want all China-related content that appears through this partnership sent directly to your inbox, go to your [account settings](#) to sign up for the South China Morning Post tag or reach out to your [account manager](#) for assistance.

COMMENT PERIOD EXTENDED: EPA [extended](#) the comment period for its controversial "secret science" proposal that was set to end on May 30. The public will now have until Aug 16 to make their voices heard on

the proposal to ban the use of studies that don't publicly disclose all data. EPA also said it would hold a public hearing July 17 in Washington on the proposal rule, heeding public requests to do so.

NUKES OUT OF PJM EVEN AS CAPACITY PRICES DOUBLE: PJM Interconnection, which manages the nation's largest power market, shed almost a third of its nuclear capacity in capacity auction results released yesterday for the 2021-22 delivery year. The auction, which provides extra payments to generators in return for staying available to run at any time, saw prices nearly double to \$140 per megawatt-day, and it will generate \$9.3 billion in revenue for companies with plants that cleared. Stu Bressler, PJM's senior vice president for Operations and Markets said prices rose because companies were trying to make up revenue lost to lower energy prices. "The offers from supply resources into the capacity auction take into account the actual as well as the anticipated energy revenues when they construct those offers in order to meet their required revenues," he told reporters Wednesday.

More megawatts cleared the auction for every other fuel type. Solar capacity quadrupled and wind added 529 MW, making up for ground lost in last year's auction. Coal added 500 MW compared to the previous auction, something that may catch the attention of the Department of Energy, which is trying to save coal plants. "The results of this auction should reassure everyone that the electricity markets are working and maintaining a reliable system," said Susan Buehler, a spokeswoman for the grid operator. "PJM has always said we don't believe there is any need for intervention."

Plenty of power: PJM continues to have far more power than it needs to meet reserve requirements. In 2021-22, it will have a 21.5 percent reserve, well above the 15.8 percent target. That reserve is actually down 2 points from the auction to supply power for 2020-21.

EVERY BILL GETS ITS DAY: The Senate Appropriations Committee will mark up its fiscal 2019 Energy-Water appropriation bill, which puts discretionary funding at \$43.8 billion — \$566 million more than this year's appropriation and \$7.2 billion more than the administration requested. The bill provides \$6.65 billion for the Office of Science — a \$390 million boost — and would increase funds for ARPA-E, which the White House has sought to eliminate. The committee will also consider so-called 302(b) allocations.

How it'll play out: Lamar Alexander is already eyeing how the Senate might move on the title in the coming weeks. "My guess would be two or three bills would come over from the House, Sen. [Mitch] McConnell could put those bills together, put them on the floor at once and allow amendments to them all," Alexander, who chairs the Energy and Water Subcommittee, told reporters. He added that 83 senators had provided input into his bill and that his subcommittee was able to address those suggestions "to some degree in almost every case."

If you go: The markup kicks off at 10:30 a.m. in 106 Dirksen.

BRIDENSTINE'S CLIMATE EVOLUTION COMPLETE: NASA Administrator Jim Bridenstine endorsed a major federal report that echoed the scientific consensus that human activity is the primary driver of climate change. Under questioning Wednesday from Sen. Brian Schatz, the former Oklahoma lawmaker said the National Climate Assessment "has clearly stated that it is extremely likely ... that human activity is the dominate cause of global warming and I have no reason to doubt the science that comes from that." Bridenstine agreed that his new position on the science constituted an evolution of his views and vowed to protect climate science work at the space agency. Keep in mind: The climate report in question is the same assessment Administrator Scott Pruitt sought to rebuff in his proposed "red team-blue team" debate. Watch the Bridenstine clip here.

WHEN WE LAST LEFT OUR HEROES: Top deputies across the Trump administration — including EPA Deputy Administrator Andrew Wheeler, Deputy Energy Secretary Dan Brouillette and USDA Deputy Secretary Stephen Censky — will meet today to try to resolve long-standing tensions over the Renewable Fuel Standard. The group will pick up where the president left off during his meeting on the topic last month, including the unfinished business of whether to allow biofuel exports to receive Renewable Identification Numbers, and whether to reallocate the gallons small refiners were exempted from blending under economic hardship waivers

from EPA. A refining source previously told Pro's Eric Wolff the USDA is trying to capitalize on the controversies surrounding EPA and has been pressing the agency to move quickly on allowing year-round sales of 15 percent ethanol fuel.

And with small refinery exemptions on the table, ME will be looking to see how Wednesday's news that Marathon Petroleum asked EPA for an exemption plays out. Ahead of today's meeting, the ethanol and biofuel trade association Growth Energy released a statement that called out the "flood of illegitimate waivers" and their resulting "'demand destruction' for U.S. farmers at a time when rural communities can least afford it."

**** Presented by ExxonMobil:** Biofuels refined from algae could transform how we power the vehicles that move people and things. It's energy-rich and emits significantly less CO₂ than most transportation fuels. And it doesn't compete with food and fresh water supplies. We're researching how to scale up algae biofuels production in a meaningful way. EnergyFactor.com **

BIODIESEL WANTS MORE: Biodiesel producers think EPA should crank up the biodiesel requirement, not leave it flat, as POLITICO reported yesterday. "These rumored numbers are disappointing," Kurt Kovarik, VO for federal affairs for the National Biodiesel Board said in a statement. "Holding biomass based diesel flat is a missed opportunity to signal growth, which is what the RFS is intended to do. ... The easiest way to fix this and turn around growing dissatisfaction among rural voters is to provide growth to the biodiesel industry and increase this number."

STILL WORKING: John Cornyn, the Senate's No. 2 Republican, said he continues to have discussions on his legislation to overhaul the Renewable Fuel Standard "almost daily, certainly at the staff level," but wasn't sure the talks would bear fruit this year. "We keep making progress but the goal line still seems some ways away," he told reporters. "I'd love to solve the problem this year, but I just don't know."

CARB AND EPA HAVE A MEET: EPA and the California Air Resources Board met Wednesday to open negotiations on a single unified standard for fuel economy, following a White House meeting with automakers earlier in the month. EPA and the National Highway Traffic Safety Administration are threatening to try and revoke California's waiver, risking a lengthy court battle that could balkanize the auto market. "Today's conversations between Administration Officials and the California Air Resources Board were productive," EPA and the Department of Transportation said in a joint statement following the meeting. "We are fully supportive of an open dialogue that proceeds in an expedited manner. EPA and USDOT look forward to moving ahead on a joint proposed rule and receiving practical and productive feedback from all stakeholders."

MOVING QUICKLY: Senate EPW Chairman John Barrasso said Wednesday he's working to reach a time agreement with Democrats to speed floor consideration of a broad water infrastructure package S. 2800 (115) that cleared his panel unanimously earlier this week. Barrasso said it would "be great" to get the bill passed before the Fourth of July recess. His Democratic counterpart on the panel, Sen. Tom Carper, agreed it wouldn't take long for the Senate to complete its work on the bill: "I don't think we're going to need a week. We might need a day," he said.

N.J. GOV DEFENDS EXXON SETTLEMENT USE: New Jersey Gov. Phil Murphy defended using money from a \$225 million settlement with Exxon Mobil to help balance his state's budget. The Democratic governor told reporters he wasn't happy about the decision, but said the state had "been dealt a lousy hand." Environmental groups are appealing the settlement in the hopes of negotiating a new deal, Pro New Jersey's Danielle Muoio reports.

MAIL CALL! FINISH UP, FERC: A new letter from 16 Democratic senators calls on FERC to finish up its rule to allow distributed energy resources to connect to the grid. The letter, led by Sheldon Whitehouse and Ed Markey, concerns the integration of DERs and renewable aggregators into capacity and energy markets. "This

will enable consumers to play a central role in strengthening reliability and avoiding unnecessary costs by supplying localized energy services," the senators write. Read the [letter](#).

REPORT: TRIBAL COMMUNITIES AT RISK: The Clean Air Task Force published a new [brief](#) Wednesday on the adverse health effects from oil and gas pollution on tribal lands. The report, which looked at lands in New Mexico, North Dakota and Utah, found that Native Americans face disproportionate health risks from living near sources of pollutants, such as VOCs, NOx and resultant smog.

WHAT'S HAPPENING IN COLORADO? The Colorado Association of Commerce and Industry and the National Association of Manufacturers will host [an event](#) today with former Interior Secretary and Colorado Attorney General Gale Norton, focusing on the Boulder, Colo., [climate lawsuit](#) against energy manufacturers over their role in contributing to climate change. Ahead of the event, Independent Petroleum Association of America's Energy in Depth is launching a digital ad buy in the state on the opposition against the lawsuit. Watch [the video](#).

THANKS, CHARLIE: The Citizens for Responsible Energy Solutions will announce a \$185,000 [television and digital ad](#) buy today, thanking Massachusetts Gov. Charlie Baker for his actions addressing climate change and on clean energy solutions. The ads will run across the state and encourage residents to thank Baker for his leadership.

MOVER, SHAKER: Van Ness Feldman announced Wednesday that Jason Larrabee, former Interior principal deputy assistant secretary for fish and wildlife and parks, has joined the firm as a senior policy adviser.

Democrats turn to GOP playbook in pinning gas prices on Trump [Back](#)

By Ben Lefebvre and Anthony Adragna | 05/24/2018 05:02 AM EDT

A spike in gasoline prices is giving Democrats a rare chance to borrow an old Republican tactic: pounding the occupant of the White House for motorists' pain at the pump.

They're unleashing the message with gusto against President Donald Trump, arguing that his foreign policy moves — including his push to reimpose sanctions on Iran — are to blame for a 50-cent-per-gallon surge in prices since he took office. Democrats also note that gas prices are the highest they've been in nearly four years despite the multibillion-dollar windfall that oil companies are set to receive from the GOP-backed tax bill.

"There's a straight line between Trump's policies and the price of gasoline," Rep. [Brian Schatz](#) (D-Hawaii) said in a brief interview, echoing a growing chorus of Democrats.

Voters are already feeling spooked: Forty-two percent of Americans won't take a road trip for summer vacation this year, a much lower number of people than last year, and many of them cited higher gas prices as the reason, according to a [survey](#) by gas station data company GasBuddy.

But the Democratic message faces a big obstacle, even as the party is riding a wave of optimism to the November midterms: Short of an energy crisis like the one former President Jimmy Carter faced in his 1980 reelection campaign, it's tough to convince voters the president is to blame for expensive gas, as GOP candidate Mitt Romney found out when he [tried to use it](#) against former President Barack Obama 2012.

Trump himself frequently criticized Obama for rising gas prices in the run-up to his reelection, [tweeting](#) weeks before the November 2012 vote, "Gas prices are at crazy levels--fire Obama!"

GOP lawmakers say they aren't surprised by the Democrats' efforts and they doubt voters will buy the attacks.

"Everyone's going to look for whatever political leverage they have going into an election," Sen. [Lisa Murkowski](#) (R-Alaska), chairwoman of the Energy and Natural Resources Committee, told POLITICO. "[But do] you think that Republicans created the high prices? No."

Still, Democrats believe that the jump in prices at the pump to [nearly \\$3 a gallon](#) will be a core pocketbook issue for voters on the Memorial Day weekend, which signals the beginning of the high-demand summer driving season.

"I'm going to be having town meetings at home over the course of the week. They'll be in rural areas. People drive a long way and they're not going to see this as an abstract issue," Sen. Ron Wyden (D-Ore.), the top Democrat on the Senate Finance Committee, told POLITICO.

Wyden's panel on Tuesday released a report highlighting the fact that the nation's four largest oil companies are poised to reap some \$15 billion in tax benefits over the next decade from the GOP's tax law, while gas prices reach their highest levels in years. Sen. Ed Markey (D-Mass.) released his own staff report this week using the same tactic, blaming higher prices on "President Trump's incoherent foreign policy."

To be sure, the White House has little control over gas prices, which largely track the movement in global crude oil market prices. Those prices have jumped more than 60 percent since last June, even as U.S. oil production climbs to record levels. Energy market watchers say the price rally is largely because OPEC and Russia have cooperated to sop up extra supplies in the international markets as demand continues to climb.

In addition, the collapse of Venezuela's oil industry, one of the biggest foreign suppliers to the U.S., has pushed prices up. Its oil exports have fallen by a third from January 2016 amid the country's political meltdown, and the Trump administration looks poised to place sanctions on the country's remaining exports.

"Even OPEC could not have hoped for this kind of result," said Kevin Book, analyst at energy consulting firm ClearView Energy.

But analysts are also saying that the White House may indeed be contributing to the rise in prices. Trump's appointment of John Bolton as his national security adviser has spooked oil traders who worry about tensions in the Middle East, said Citigroup energy analyst Eric Lee. Meanwhile, Trump's threat to place heavy sanctions on Iran could remove oil from the global markets, and his moving the U.S. embassy in Israel to Jerusalem may irritate Saudi Arabia enough that the kingdom won't increase its own oil flows to lessen the hurt on U.S. drivers.

"It's a combination of things, but what really took prices to the current level is U.S. policy or at least uncertainty," Lee said in an interview.

On Wednesday, a gaggle of Democratic senators including Markey, Minority Leader Chuck Schumer, Maria Cantwell (Wash.) and Bob Menendez (N.J.) held a news conference at an Exxon filling station near the Capitol to blame the price increase on Trump.

"It's well known that geopolitical instability drives oil prices, and gas prices, around the world higher and higher," said Menendez, ranking member of the Senate Foreign Relations Committee. "The Trump administration's chaotic approach to foreign policy not only served instability around the world, it certainly serves to drive up oil prices higher and higher."

When asked how any president could impact pump prices, Schumer told reporters that Trump should pressure OPEC member states and U.S. oil companies to lower their prices.

"He's very, very tight with the crown prince," Schumer said of Trump's relationship with the head of Saudi Arabia. "He's very, very tight with the head of the UAE, very, very tight, supposedly, with Putin. Why doesn't he use that? Oil companies just got a big tax break. Jawbone them."

Trump and Republicans still have one card to play, analysts said: releasing oil into the market from the Strategic Petroleum Reserve, which could tap down prices. That's precisely what some Democrats asked Obama to do in early 2012 when they faced rising retail prices.

"I wouldn't be surprised if the president were to consider the use of the SPR to dampen prices to play to his base for the midterm elections," said Gary Ross, head of global oil analytics at S&P Global Platts. "He might see

such as a signal that he cares, and one that might deflect some criticism for higher gasoline prices due to Iranian sanctions."

White House and Energy Department spokespeople declined to answer questions about whether the administration would consider an SPR release if prices continue to climb.

Editor's note: A POLITICO partnership in China [Back](#)

By John F. Harris and Carrie Budoff Brown | 05/22/2018 05:04 AM EDT

POLITICO readers will see on our pages today something new and important: the first stories reflecting the publication's commitment to illuminating the U.S. relationship with China.

POLITICO, which began in 2007 as preeminently a Washington publication, in recent years has had a global focus. In Europe, we have the largest news operation covering the increasingly complex and consequential workings of the European Union. Including our growing coverage in the U.S., POLITICO's 250 reporters and editors are now in 15 cities spanning nine time zones. Increasingly, we have heard from our most engaged readers that the place to expand our focus is toward the Pacific, as the U.S. relationship with China — intensely competitive in some spheres, intertwined and mutually dependent in others — will hover over the political and policy debates of the next generation.

One part of our expanding coverage involves a content partnership we are unveiling today with the South China Morning Post. SCMP, based in Hong Kong, is the oldest newspaper in Asia and is the only independent English-language publication in the region. SCMP has an editorial staff of 300 in Asia, with about 40 reporters stationed in mainland China. Like POLITICO, the publication has global ambitions. Under the partnership, SCMP editors will have access to POLITICO stories to share with their readers, and POLITICO editors can draw on the SCMP stories we believe our readers will find most relevant. Over time, editors in both newsrooms will look for opportunities to combine resources on original stories produced in combination with POLITICO and SCMP journalists.

Our experience shows often that the most important stories are best illuminated by being reported simultaneously from multiple perspectives. That's what we do every day in the United States and in Europe. In combination with SCMP, we will now be able to do the same on important subjects — trade, finance, technology and national security among them — at the heart of U.S. interests in China.

And you can expect POLITICO's growth to continue. As our readers' interests reflect a global perspective, so will our publication's journalistic focus and resources.

Senate subcommittee advances energy and water spending bill [Back](#)

By Eric Wolff | 05/22/2018 03:44 PM EDT

A Senate subcommittee today advanced the Energy-Water appropriations bill to the full committee.

The bill appropriates \$43.8 billion in discretionary funding, \$566 million more than last year's appropriation and \$7.2 billion more than the administration requested. Non-defense activities rose \$474 million, while defense activities were increased \$92 million.

The bill provides \$6.65 billion for the Office of Science, \$390 million more than the last appropriation. And it funds an increase for ARPA-E. It also maintains funding for a weatherization assistance program and includes an extra \$196 million for drought resilience, among other measures.

Chairman [Lamar Alexander](#) lamented that writing the bill was made more difficult because the committee "started with an unrealistic budget proposal from the administration."

Appropriators funded DOE's Office of Energy Efficiency and Renewable Energy at \$2.3 billion, the same level as the current appropriation, but \$1.6 billion than President Donald Trump's budget.

The bill also provides \$6.9 billion for the Army Corps of Engineers, the largest appropriation for the corps, according to Alexander. It makes full use of the Inland Waterways Trust Fund, specifically the top four priority projects.

Emails show Pruitt pushing 'red team-blue team' climate debate [Back](#)

By Alex Guillén and Anthony Adragna | 05/15/2018 06:39 PM EDT

EPA Administrator Scott Pruitt had hoped at least twice last year to announce his plans for a controversial red team-blue team debate that would take aim at a federal assessment supporting climate change science, according to newly released emails.

Pruitt's contentious review was abandoned because of the White House's objections, but the [communications](#) reveal new details about how the process would have worked and who was influencing Pruitt.

Many scientists have complained that a red team-blue team style debate was a poor way to examine the scientific evidence that overwhelmingly supports the findings that humans are the primary driver behind climate change. But for Pruitt, who had once suggested the event might be televised, [the debate](#) appeared to be directed at rebuffing the Fourth National Climate Assessment.

That government-wide report issued on Nov. 3 contradicted many Trump administration political appointees who have questioned the connection between greenhouse gas pollution and global warming.

A draft press release that circulated on Nov. 4 among top EPA officials, and which was shared with Pruitt on Nov. 5, laid out the line of attack, according to the documents made public on Tuesday by EPA following a records request from the Natural Resources Defense Council.

"EPA is standing up a Red Team peer review of the report," they wrote, while the "blue team" would essentially be the federal assessment and its authors.

"A robust, transparent public peer review evaluation of climate change is something everyone should support," Pruitt said in the unreleased November statement. "Now is a perfect opportunity for the formation of a 'Red Team' exercise."

The draft release also included space for quotes from two prominent climate science critics: Steve Koonin, an Obama-era Energy Department official, and William Happer, a Princeton physicist who argues that increased carbon dioxide would benefit the planet.

The duo appear to have been tapped to help guide the red-team review together.

"Your contributions even in a small way to the validity of the red team blue team approach would be appreciated," Ryan Jackson, Pruitt's chief of staff, wrote to Koonin and Happer on Nov. 4.

In an email to POLITICO, Happer said the exercise was "badly needed," while Koonin, now the director of the Center for Urban Science and Progress at New York University, told POLITICO the National Climate Assessment was "demonstrably deficient on a number of points."

EPA did not return a request for comment.

Pruitt has previously said a Wall Street Journal piece written by Koonin in April 2017 calling for a similar EPA review of climate science was his inspiration for instigating the "red team" review.

The emails, however, show that Koonin and his allies began wooing Pruitt even before that. In an email more than a week before Koonin's WSJ piece ran, Dan Yergin, the Pulitzer-winning oil historian and vice chairman of IHS Markit who joined a board advising President Donald Trump, introduced Koonin by email to Jackson.

Pruitt and Koonin met April 28, and the emails show Koonin was closely involved in the process afterward.

Koonin sent EPA a "prospectus" outlining the exercise, and though much of it was redacted by EPA before its release, Koonin suggested timing the red team review to the National Climate Assessment, which was due out six months later. Doing so would "ensure that certainties and uncertainties in projections of future climates are accurately presented to the public and decision makers," he wrote.

A revised version of the prospectus was circulated by EPA to White House officials in July after news of Pruitt's plans had leaked.

"There are a lot of press reports about EPA's planning on this. None of it is being run by us. This seems to be getting out of control," wrote Michael Catanzaro, a top energy adviser to Trump who has since left the administration, a few days after receiving Koonin's proposal.

In late June, Liz Bowman, then a top EPA spokeswoman, questioned whether the exercise could be announced as early as July 5 or 6. But it wasn't until November that top Pruitt staffers begin circulating a draft press release on the announcement.

A draft of the announcement on Nov. 5 inspired a [lengthy email chain](#), which EPA redacted, that involved direct messages from Trump chief of staff John Kelly, strategic communications director Mercedes Schlapp, and former White House staff secretary Rob Porter.

Pruitt was [touting](#) his plans to launch the red team review as late as December. Emails early in that month [indicate](#) the agency's air chief, Bill Wehrum, would make the announcement on Dec. 12 while Pruitt traveled in Morocco. One message that included Jackson had the subject line of "Red Team/Blue Team Announcement Planned for Tuesday, Dec. 12."

The [New York Times](#) reported in March that Kelly and other top officials stopped the announcement in the fall, and Kelly's deputy Rick Dearborn met with Pruitt in mid-December to declare the plan dead.

Sources: EPA, DOE, USDA to talk biofuels Thursday [Back](#)

By Eric Wolff | 05/22/2018 05:09 PM EDT

Top deputies for EPA and the departments of Energy and Agriculture will meet on Thursday to hash out changes to the Renewable Fuel Standard, sources in the ethanol industry and the Senate told POLITICO today.

EPA Deputy Administrator Andrew Wheeler, DOE Deputy Secretary Dan Brouillette and USDA Deputy Secretary Stephen Censky will try to resolve long-standing tensions over the program. None of the agencies responded to requests for comment.

The group will pick up the items left unfinished from the meeting with President Donald Trump last month, including whether to allow biofuel exports to receive Renewable Identification Numbers, and whether to reallocate the gallons small refiners were exempted from blending under the economic hardship waivers granted by EPA.

A refining industry source says that USDA has been pressing EPA to move quickly on allowing year-round sales of 15 percent ethanol fuel, and that USDA "is looking to jam EPA" on reallocating the gallons in the 2019 blending mandate.

"They are probably trying to take advantage of what they imagine to be Pruitt's weakened status these days," the source said. "Not sure it will work."

EPA News Highlights 3.27.18

The Wall Street Journal: The EPA Cleans Up Its Science

The Environmental Protection Agency will no longer rely on “secret” scientific data to justify regulations, Administrator Scott Pruitt announced last week. EPA regulators and agency-funded researchers have become accustomed to producing unaccountable, dodgy science to advance a political agenda. The saga began in the early 1990s, when the EPA sought to regulate fine particulate matter known as PM2.5—dust and soot smaller than 2.5 microns in diameter. PM2.5 was not known to cause death, but by 1994 EPA-supported scientists had developed two lines of research purporting to show that it did. When the studies were run past the EPA’s Clean Air Science Advisory Committee, it balked. It believed the studies relied on dubious statistical analysis and asked for the underlying data. The EPA ignored the request. As the EPA prepared to issue its proposal for PM2.5 regulation in 1996, Congress stepped in. Rep. Thomas Bliley, chairman of the House Commerce Committee, sent a sharply written letter to Administrator Carol Browner asking for the data underlying studies. Ms. Browner delegated the response to a subordinate, who told Mr. Bliley the EPA saw “no useful purpose” in obtaining the data. Congress responded by inserting a provision in a 1998 bill requiring that data used to

support federal regulation must be made available to the public via the Freedom of Information Act. But it was hastily written, and a federal appellate court held the law unenforceable in 2003.

The Philadelphia Inquirer: EPA Settlement At Upper Merion Superfund Site Could Make Way For New Apartments

The U.S. Environmental Protection Agency said Monday that it had reached a \$1.8 million settlement with owners of a Superfund site in Upper Merion to clean up a portion of the area and pave the way for high-density housing... The EPA has been pushing to get Superfund site settlements completed to make way for development. EPA Administrator Scott Pruitt said in a recent interview with the Inquirer that some sites have been on the National Priorities List for decades. "The Superfund area, just to speak to it generally, seemed to be languishing as we arrived," said Pruitt, who took office in March 2017. "There didn't seem to be sufficient focus on providing leadership."

Casper Star Tribune: Washington To Hear From Coal Country In Clean Power Plan Meeting Tuesday In Wyoming

The federal agency responsible for the emissions-cutting Clean Power Plan will hold a public meeting today in Gillette, one of only three across the country this season as the agency plans to dissolve the Obama-era rule. The Clean Power Plan would have dealt a painful blow to one of Wyoming's key industries, and both its supporters and opponents are lining up to speak at the event in coal country. Many of the arguments will be familiar to those who have followed the development, and more recent devolution, of the Clean Power Plan. Supporters say regulations to cut carbon dioxide emissions are a necessary step towards combating climate change. Others will criticize the Environmental Protection Agency's regulation as an unwieldy and ineffective tool that targeted the coal industry.

The New York Times: Scott Pruitt's Attack on Science Would Paralyze the E.P.A.

Scott Pruitt, the administrator of the Environmental Protection Agency, has announced that he alone will decide what is and isn't acceptable science for the agency to use when developing policies that affect your health and the environment. It is his latest effort to cripple the agency. Mr. Pruitt, who as Oklahoma's attorney general described himself as "a leading advocate against the E.P.A.'s activist agenda," said in an interview published in The Daily Caller last week that he would no longer allow the agency to use studies that include nonpublic scientific data to develop rules to safeguard public health and prevent pollution. Opponents of the agency and of mainstream climate science call these studies "secret science." But that's simply not true. Peer review ensures that the analytic methodologies underlying studies funded by the agency are sound.

National News Highlights 3.27.18

The Wall Street Journal: U.S. Stocks Extend Gains As Trade Fears Ease

U.S. stocks edged higher, extending sharp gains from the previous session, as fears of a trade war between the U.S. and China continued to fade. The Dow Jones Industrial Average rose 23 points, or 0.1%, to 24226 shortly after the opening bell, while the S&P 500 climbed 0.1% and the tech-focused Nasdaq Composite added 0.2%. U.S. technology and financial stocks in the S&P 500 rose, with software firm Red Hat—after an upbeat earnings call—climbing 6.7% and BB&T rising 1.7%. Meanwhile, real estate stocks declined 0.6% and shares of health-care firms fell 0.2%. European stocks rebounded, with the Stoxx Europe 600 climbing 1.4%, more than recouping its Monday decline, which came amid rising tensions between multiple EU nations and Russia.

The New York Times: Despite Concerns, Census Will Ask Respondents If They Are U.S. Citizens

The 2020 census will ask respondents whether they are United States citizens, the Commerce Department announced Monday night, agreeing to a Trump administration request with highly charged political and social implications that many officials feared would result in a substantial undercount. In a statement released Monday, the Commerce Department, which oversees the Census Bureau, said Commerce Secretary Wilbur Ross had "determined that reinstatement of a citizenship question on the 2020 decennial census questionnaire is necessary to provide complete and accurate census block level data," allowing the department to accurately measure the portion of the population eligible to vote. But his decision immediately invited a legal challenge: Xavier Becerra, California's attorney general, plans to sue the Trump administration over the decision, a spokeswoman for Mr. Becerra said late Monday.

The EPA Cleans Up Its Science

By Steve Milloy, 3/26/18

The Environmental Protection Agency will no longer rely on “secret” scientific data to justify regulations, Administrator Scott Pruitt announced last week. EPA regulators and agency-funded researchers have become accustomed to producing unaccountable, dodgy science to advance a political agenda.

The saga began in the early 1990s, when the EPA sought to regulate fine particulate matter known as PM2.5—dust and soot smaller than 2.5 microns in diameter. PM2.5 was not known to cause death, but by 1994 EPA-supported scientists had developed two lines of research purporting to show that it did. When the studies were run past the EPA’s Clean Air Science Advisory Committee, it balked. It believed the studies relied on dubious statistical analysis and asked for the underlying data. The EPA ignored the request.

As the EPA prepared to issue its proposal for PM2.5 regulation in 1996, Congress stepped in. Rep. Thomas Bliley, chairman of the House Commerce Committee, sent a sharply written letter to Administrator Carol Browner asking for the data underlying studies. Ms. Browner delegated the response to a subordinate, who told Mr. Bliley the EPA saw “no useful purpose” in obtaining the data. Congress responded by inserting a provision in a 1998 bill requiring that data used to support federal regulation must be made available to the public via the Freedom of Information Act. But it was hastily written, and a federal appellate court held the law unenforceable in 2003.

The controversy went dormant until 2011, when a newly Republican Congress took exception to the Obama EPA’s antioal rules, which relied on the same PM2.5 studies. Again the EPA was defiant. Administrator Gina McCarthy refused requests for the data sets and defied a congressional subpoena.

Bills to resolve the problem died in the Senate. Democrats argued that requiring data for study replication is a threat to intellectual property and an invasion of medical privacy. In fact, the legislation would protect property by requiring a confidentiality agreement, and no personal medical data or information would have been released.

This sort of data is already routinely made public for research use. In 2012 I was desperate for a way around the Obama EPA’s secrecy on the PM2.5 issue, I found out in 2012 that I could get California death-certificate data in electronic form. The state’s Health Department calls this sort of data “Death Public Use Files.” They are scrubbed of all personal identifying and private medical information. Some of my colleagues used this data to prepare a 2017 study, which found PM2.5 was not associated with death.

The best part is that if you don’t believe the result, you can get the same data for yourself from California and run your own analysis. Then we’ll compare, contrast and debate. That’s how science is supposed to work.

It would be better if Congress would pass a law requiring data transparency. A future administrator may backslide on the steps Mr. Pruitt is taking. In the meantime, we have science in the sunshine.

EPA Settlement At Upper Merion Superfund Site Could Make Way For New Apartments

By Frank Kummer, 3/26/18

The U.S. Environmental Protection Agency said Monday that it had reached a \$1.8 million settlement with owners of a Superfund site in Upper Merion to clean up a portion of the area and pave the way for high-density housing.

The 50-acre site, known as Crater Resources, was contaminated by coking and steel operations that sent hazardous chemicals into soil and groundwater. The site contains four quarries spanning about 14 acres.

As part of the settlement, two of the quarries will be cleaned by their owner, Renaissance Land Associates, with the goal of development, according to the civil suit filing. Renaissance Land Associates II and III completed purchase of those quarries in 2001. The two limited liability companies are under the control of O'Neill Properties.

The site, near the Gulph Mills Golf Club, has a long history of contamination stretching to 1919, when the Alan Wood Steel Co. disposed of coking wastes in the quarries. The Keystone Coke Co. purchased that firm in 1977 and continued until 1980 dumping "waste ammonia liquor" at the site — a by-product of a steel plant in Conshohocken.

Tests showed the soil and quarries were contaminated with hazards including cyanide, arsenic, mercury, fluorene, ammonia, phenol and other volatile organic compounds. The EPA placed the site on the National Priorities List of Superfund Sites in 1992.

Cleanup began in 2009, including removal of contaminated soil and building of caps designed to prevent contaminants from leaching into groundwater and to reduce the threat to public health. Groundwater contamination is also being addressed.

Much of the site is already redeveloped, with projects including the Renaissance Park office park. A small part of the Gulph Mills Golf Club is on the southern part of the site.

More commercial and residential projects are proposed for the 5.15 acres that contain the two quarries. EPA spokesman Roy Seneca said both will be capped before anything is built.

Upper Merion Township planner Rob Loeper said representatives of Renaissance Land Associates presented a plan in 2016 to build up to 300 multi-family units at one end of the property, provided issues were resolved with the EPA. Loeper said the units would likely be apartments.

Last year, the EPA said the company could build residential units provided the protective caps were built. The company agreed to take the extra measures as part of the agreement reached Monday.

The EPA has been pushing to get Superfund site settlements completed to make way for development.

EPA Administrator Scott Pruitt said in a recent interview with the Inquirer that some sites have been on the National Priorities List for decades.

"The Superfund area, just to speak to it generally, seemed to be languishing as we arrived," said Pruitt, who took office in March 2017. "There didn't seem to be sufficient focus on providing leadership."

Washington To Hear From Coal Country In Clean Power Plan Meeting Tuesday In Wyoming

By Heather Richards, 3/26/18

The federal agency responsible for the emissions-cutting Clean Power Plan will hold a public meeting today in Gillette, one of only three across the country this season as the agency plans to dissolve the Obama-era rule.

The Clean Power Plan would have dealt a painful blow to one of Wyoming's key industries, and both its supporters and opponents are lining up to speak at the event in coal country.

Many of the arguments will be familiar to those who have followed the development, and more recent devolution, of the Clean Power Plan. Supporters say regulations to cut carbon dioxide emissions are a necessary step towards combating climate change. Others will criticize the Environmental Protection Agency's regulation as an unwieldy and ineffective tool that targeted the coal industry.

Some may criticize climate science, which identifies the burning of fossil fuels as the catalyst for human-caused climate change. EPA Administrator Scott Pruitt, along with others in the Trump administration, has expressed doubts about that conclusion, despite a widespread consensus of scientists from NASA to the University of Wyoming.

Finalized in 2015, the plan aimed to cut carbon dioxide emissions from the power sector by about 30 percent compared to 2005 levels. It would start taking effect in 2022 and ramp up to full implementation by 2030. But the plan was immediately tied up in court when states like Wyoming objected. Wyoming economists noted a potential 25 to 50 percent reduction in the state's coal production if the plan was implemented.

President Donald Trump's campaign promised to repeal the rule. The pledge sent a hopeful jolt through Wyoming's coal industry, which at the time suffered from contractions in coal demand, bankruptcies and layoffs.

Gillian Malone, a supporter of carbon dioxide emissions regulations and a member of the Powder River Basin Resource Council said in a statement Monday that the coal industry will continue to face market pressures with or without the Clean Power Plan, noting the closure of coal plants across the country in favor of natural gas and renewables.

"The Trump Administration's efforts to champion coal haven't been successful in bringing coal back, and cutting the Clean Power Plan won't save coal jobs and communities," Malone said.

Travis Deti, executive director of the Wyoming Mining Association noted that coal is juggling a number of challenges; however, the Clean Power Plan is a different beast.

"There is no doubt that we face headwinds," Deti said. "We face competition from natural gas and low gas prices. But they are separate issues. This is dealing with the regulatory burden on the industry."

The Clean Power Plan was designed to push coal out of the electricity mix, he said. A less-punitive approach that utilizes carbon capture technology would be preferable from industry's perspective, he said, noting Wyoming's work in capturing carbon dioxide and studying its alternative uses.

"You address the carbon dioxide. You solve it with technology, and you keep coal as a viable industry," he said.

Repealing the Clean Power Plan is not a simple step. The Environmental Protection Agency is required to go through a similar process in undoing or rewriting the Clean Power Plan as it did when crafting it.

Tuesday's meeting to discuss unraveling the plan is part of that public process.

Despite the contention over the Clean Power Plan, the Environmental Protection Agency is also hamstrung by an endangerment finding from 2009. It determined that carbon dioxide was a harmful emission that the agency had to regulate under the Clean Air Act. Under the finding, the agency will have to attempt to curb carbon dioxide emissions, of which coal-burning power plants are a key contributor.

The EPA originally only scheduled a single meeting in West Virginia coal country. It was heavily attended by both sides, and the department later scheduled three additional listening sessions in San Francisco, Kansas City, Missouri and Gillette.

Pruitt, the EPA administrator, will be visiting coal country later in the week to see Wyoming's industry first hand. The state's delegates to Washington applauded the visit.

"In our community, it doesn't take long to understand how the coal industry is a source of reliable and affordable energy, a provider of high paying jobs and an amazing steward of the land," said Sen. Mike Enzi, former mayor of Gillette. "If a picture is worth a thousand words, being on the ground is worth more than a thousand pictures."

Scott Pruitt's Attack on Science Would Paralyze the E.P.A.

By Gina McCarthy and Janet G. McCabe, 3/26/18

Scott Pruitt, the administrator of the Environmental Protection Agency, has announced that he alone will decide what is and isn't acceptable science for the agency to use when developing policies that affect your health and the environment.

It is his latest effort to cripple the agency. Mr. Pruitt, who as Oklahoma's attorney general described himself as "a leading advocate against the E.P.A.'s activist agenda," said in an interview published in The Daily Caller last week that he would no longer allow the agency to use studies that include nonpublic scientific data to develop rules to safeguard public health and prevent pollution.

Opponents of the agency and of mainstream climate science call these studies "secret science." But that's simply not true. Peer review ensures that the analytic methodologies underlying studies funded by the agency are sound.

Some of those studies, particularly those that determine the effects of exposure to chemicals and pollution on health, rely on medical records that by law are confidential because of patient privacy policies. These studies summarize the analysis of raw data and draw conclusions based on that analysis. Other government agencies also use studies like these to develop policy and regulations, and to buttress and defend rules against legal challenges. They are, in fact, essential to making sound public policy.

The agency also relies on industry data to develop rules on chemical safety that is often kept confidential for business reasons.

For instance, foundational epidemiological research into the effects of air pollution on health by scientists at Harvard and the American Cancer Society established a clear connection between exposure to fine particles and increased mortality. This research led to further studies that supported the development of air quality standards and rules requiring industry to reduce pollution, improving health and reducing costs for millions of Americans.

Yet, because the personal health data associated with individuals participating in the studies were obtained with guarantees of confidentiality, Mr. Pruitt apparently would have argued for those studies to be tossed out had he been at the helm then.

The E.P.A. administrator simply can't make determinations on what science is appropriate in rule-making without calling into question decisions by other federal agencies based on similar kinds of studies, including on the safety and efficacy of pharmaceuticals, and research into cancer and other diseases. All rely to some extent on data from individual health records. If one agency rejects studies based on that sort of data, it could open up policies by other agencies based on similar studies to challenge.

Mr. Pruitt — who is a lawyer, not a scientist — told The Daily Caller: "We need to make sure their data and methodology are published as part of the record. Otherwise, it's not transparent. It's not objectively measured, and that's important."

We don't have the details of the new policy. But don't be fooled by this talk of transparency. He and some conservative members of Congress are setting up a nonexistent problem in order to prevent the E.P.A. from using the best available science. These studies adhere to all professional standards and meet every expectation of the scientific community in terms of peer review and scientific integrity. In the case of the air pollution studies, a rigorous follow-up examination was done by the Health Effects Institute, a nonprofit research group that studies air pollution. The institute corroborated the findings.

In taking this action, Mr. Pruitt appears to be adopting the policies of the Honest and Open New E.P.A. Science Treatment Act, a bill aimed at the agency. Conservative lawmakers have tried to pass versions of this bill before to shackle the agency's rule making. That law would prohibit the E.P.A. from taking any action "unless all scientific and technical information relied on to support" it is "specifically identified, and publicly available in a manner sufficient for independent analysis and substantial reproduction of research results."

An analysis of a similar bill introduced in 2015 by the Congressional Budget Office estimated it would cost \$250 million a year over the first few years to carry out because it would require new "data collection, correspondence and coordination with study authors, construction of a database to house necessary information, and public dissemination" of the information.

The analysis, which did not appear to take into account the cost of redacting details like trade secrets or personally identifiable medical information, also predicted the agency would reduce by half the number of studies it relies on in developing policies and regulations because of the cost of complying with the law.

"The quality of the agency's work would be compromised if that work relies on a significantly smaller collection of scientific studies," the analysis found.

This approach would undermine the nation's scientific credibility. And should Mr. Pruitt reconsider regulations now in place, this new policy could be a catalyst for the unraveling of existing public health protections if the studies used to justify them could no longer be used by E.P.A.

So why would he want to prohibit his own agency from using these studies? It's not a mystery. Time and again the Trump administration has put the profits of regulated industries over the health of the American people. Fundamental research on the effects of air pollution on public health has long been a target of those who oppose the E.P.A.'s air quality regulations, like the rule that requires power plants to reduce their mercury emissions.

Mr. Pruitt's goal is simple: No studies, no data, no rules. No climate science, for instance, means no climate policy.

If a tree falls in the forest, we know it makes a sound, even if people aren't there to hear it. When people are exposed to mercury, lead or other air- and waterborne pollutants, we know their health is affected, whether or not E.P.A. is allowed to use the scientific studies that confirm those health impacts.

This policy no doubt will become a matter of litigation. It will be interesting to hear the agency defend Mr. Pruitt's view that peer-reviewed studies that meet every standard for proper scientific method and integrity should not be considered in drafting policies and regulations that regulate threats to the environment.

Representative Bill Foster, a physicist and Democrat from Illinois, has argued that "scientists should set the standards for research, not politicians."

We couldn't agree more. Scientific research provides factual support for policies that reduce exposure to pollution and protect the American people from costly and dangerous illnesses and premature deaths. Under Mr. Pruitt's approach to science, the E.P.A. would be turning its back on its mandate to "protect human health and the environment."

U.S. Stocks Extend Gains As Trade Fears Ease

By David Hodari, 3/27/18

U.S. stocks edged higher, extending sharp gains from the previous session, as fears of a trade war between the U.S. and China continued to fade.

The Dow Jones Industrial Average rose 23 points, or 0.1%, to 24226 shortly after the opening bell, while the S&P 500 climbed 0.1% and the tech-focused Nasdaq Composite added 0.2%.

U.S. technology and financial stocks in the S&P 500 rose, with software firm Red Hat—after an upbeat earnings call—climbing 6.7% and BB&T rising 1.7%.

Meanwhile, real estate stocks declined 0.6% and shares of health-care firms fell 0.2%.

European stocks rebounded, with the Stoxx Europe 600 climbing 1.4%, more than recouping its Monday decline, which came amid rising tensions between multiple EU nations and Russia.

Pharmaceuticals company GlaxoSmithKline climbed 5.7% higher after buying Novartis's 36.5% stake in its health-care joint venture for \$13 billion. Novartis shares rose 2.3%.

Shares in Dutch paint maker Akzo Nobel rose 2.9% after the company confirmed the \$12.6 billion sale of its specialty chemicals arm to a Carlyle Group-led consortium.

The upbeat trading in Europe echoed the sharp resurgence in equities markets in Asia-Pacific. That recovery began on Monday as the U.S. and China appeared to soften their stances over trade, after tensions between the two superpowers ratcheted up last week.

The two countries traded barbs after the Trump administration threatened \$60 billion of levies in addition to import tariffs on aluminum and steel. China responded with its own measures and the promise of immediate retaliation to further tariffs.

The friction was soothed Monday by the news that the two countries were in talks to improve U.S. access to Chinese markets.

That said, rules requiring foreign companies to form joint ventures with domestic partners in China were likely to be a sticking point, given that U.S. firms would be required to divulge trade secrets.

"Talk of these tariffs started off with the EU coming back strongly, saying they'd look at countermeasures, so the U.S. added in that caveat about allies and friends being exempted. [That exemption] has been extended to more and more countries and if its also extended to China it will look like it was a bit of saber-rattling to bring China to the table and that seems to have succeeded," Edward Park, a director at asset manager Brooks Macdonald, said.

Some analysts see stock swings as a consequence of investor pessimism and broadly healthy equity-market performance.

"The market seemed to be assuming the worst-case scenario. That they responded this way may reflect overall positioning because we've had quite a good run and that correction was a bit stronger than expected," said Geoffrey Yu, head of the U.K. investment office at UBS Wealth Management. "That volatility is going to continue due to [central bank] renormalization."

Rising inflation has prompted growing speculation about the Federal Reserve's interest-rate policy, with some analysts suggesting the central bank will increase rates four times in 2018 instead of the three times it has penciled in.

"If the Fed does change to four hikes this year, it's not that much of a concern unless it's in reaction to much higher inflation. A rapid rate hike cycle would concern investors," Brooks Macdonald's Mr. Park said.

Higher stock valuations may continue to drive volatility, according to Shane Oliver, head of investment strategy and chief economist at AMP Capital in Sydney. "You don't have a valuation buffer as you had in the past," he said.

In Asia, the Shanghai Composite Index closed 1.1% higher and the tech-heavy Shenzhen composite index rose 2.2%. Taiwan's Taixex climbed 1.4% and Hong Kong's Hang Seng increased by 0.8%.

Japan's Nikkei closed 2.7% higher, clawing back some more of Friday's 4.5% amid easing domestic political concerns. Former finance ministry official Nobuhisa Sagawa told parliament that Prime Minister Shinzo Abe didn't order officials to alter documents in a disputed sale of government land.

The New York Times

<https://www.nytimes.com/2018/03/26/us/politics/census-citizenship-question-trump.html>

Despite Concerns, Census Will Ask Respondents If They Are U.S. Citizens

By Emily Baumgaertner, 3/26/18

WASHINGTON — The 2020 census will ask respondents whether they are United States citizens, the Commerce Department announced Monday night, agreeing to a Trump administration request with highly charged political and social implications that many officials feared would result in a substantial undercount.

In a statement released Monday, the Commerce Department, which oversees the Census Bureau, said Commerce Secretary Wilbur Ross had "determined that reinstatement of a citizenship question on the 2020 decennial census questionnaire is necessary to provide complete and accurate census block level data," allowing the department to accurately measure the portion of the population eligible to vote.

But his decision immediately invited a legal challenge: Xavier Becerra, California's attorney general, plans to sue the Trump administration over the decision, a spokeswoman for Mr. Becerra said late Monday.

Critics of the change and experts in the Census Bureau itself have said that, amid a fiery immigration debate, the inclusion of a citizenship question could prompt immigrants who are in the country illegally not to respond. That would result in a severe undercount of the population — and, in turn, faulty data for government agencies and outside groups that rely on the census. The effects would also bleed into the redistricting of the House and state legislatures in the next decade.

The Justice Department had requested the change in December, arguing that asking participants about their citizenship status in the decennial census would help enforce Section 2 of the Voting Rights Act, which aims to prevent voting rights violations.

"The Justice Department is committed to free and fair elections for all Americans, and has sought reinstatement of the citizenship question on the census to fulfill that commitment," a Justice Department spokesman, Devin M. O'Malley, told The New York Times in February.

In a memorandum explaining his decision, Mr. Ross wrote that he had considered opponents' arguments about the potential to discourage responses.

"I find that the need for accurate citizenship data and the limited burden that the reinstatement of the citizenship question would impose outweigh fears about a potentially lower response rate," he wrote.

The decennial census generally included a citizenship inquiry for more than 100 years through 1950, according to the Commerce Department. And other, smaller population surveys, such as the Current Population Survey and the American Community Survey, continue to ask respondents about it.

But critics dismissed administration officials' reassurances.

"The census numbers provide the backbone for planning how our communities can grow and thrive in the coming decade," said Mr. Becerra. "What the Trump administration is requesting is not just alarming, it is an unconstitutional attempt to discourage an accurate census count."

Others argued that an undercount in regions with high immigrant populations would lead not only to unreliable data but also to unfair redistricting, to the benefit of Republicans.

"Adding this question will result in a bad census — deeply flawed population data that will skew public and private sector decisions to ensure equal representation, allocate government resources and anticipate economic growth opportunities — for the next 10 years," Vanita Gupta, the chief executive of the Leadership Conference on Civil and Human Rights and a deputy attorney general in the Obama administration, said in a statement Monday night. "The stakes are too high to allow this. We urge Congress to overturn this error in judgment."

The announcement of the citizenship question comes at a troublesome time for the Census Bureau: Its top two positions have interim occupants, and it has been forced to skip two of its three trial runs for the 2020 census because of funding shortfalls. If response rates for the census are low, critics worry that the bureau may be unable to adjust the data or deploy enough census takers to low-response communities.

The bureau is required to submit a final list of the 2020 census questions to Congress by the end of March.

The EPA Cleans Up Its Science

By Steve Milloy, 3/26/18

The Environmental Protection Agency will no longer rely on “secret” scientific data to justify regulations, Administrator Scott Pruitt announced last week. EPA regulators and agency-funded researchers have become accustomed to producing unaccountable, dodgy science to advance a political agenda.

The saga began in the early 1990s, when the EPA sought to regulate fine particulate matter known as PM2.5—dust and soot smaller than 2.5 microns in diameter. PM2.5 was not known to cause death, but by 1994 EPA-supported scientists had developed two lines of research purporting to show that it did. When the studies were run past the EPA’s Clean Air Science Advisory Committee, it balked. It believed the studies relied on dubious statistical analysis and asked for the underlying data. The EPA ignored the request.

As the EPA prepared to issue its proposal for PM2.5 regulation in 1996, Congress stepped in. Rep. Thomas Bliley, chairman of the House Commerce Committee, sent a sharply written letter to Administrator Carol Browner asking for the data underlying studies. Ms. Browner delegated the response to a subordinate, who told Mr. Bliley the EPA saw “no useful purpose” in obtaining the data. Congress responded by inserting a provision in a 1998 bill requiring that data used to support federal regulation must be made available to the public via the Freedom of Information Act. But it was hastily written, and a federal appellate court held the law unenforceable in 2003.

The controversy went dormant until 2011, when a newly Republican Congress took exception to the Obama EPA’s antioal rules, which relied on the same PM2.5 studies. Again the EPA was defiant. Administrator Gina McCarthy refused requests for the data sets and defied a congressional subpoena.

Bills to resolve the problem died in the Senate. Democrats argued that requiring data for study replication is a threat to intellectual property and an invasion of medical privacy. In fact, the legislation would protect property by requiring a confidentiality agreement, and no personal medical data or information would have been released.

This sort of data is already routinely made public for research use. In 2012 I was desperate for a way around the Obama EPA’s secrecy on the PM2.5 issue, I found out in 2012 that I could get California death-certificate data in electronic form. The state’s Health Department calls this sort of data “Death Public Use Files.” They are scrubbed of all personal identifying and private medical information. Some of my colleagues used this data to prepare a 2017 study, which found PM2.5 was not associated with death.

The best part is that if you don't believe the result, you can get the same data for yourself from California and run your own analysis. Then we'll compare, contrast and debate. That's how science is supposed to work.

It would be better if Congress would pass a law requiring data transparency. A future administrator may backslide on the steps Mr. Pruitt is taking. In the meantime, we have science in the sunshine.

EPA Settlement At Upper Merion Superfund Site Could Make Way For New Apartments

By Frank Kummer, 3/26/18

The U.S. Environmental Protection Agency said Monday that it had reached a \$1.8 million settlement with owners of a Superfund site in Upper Merion to clean up a portion of the area and pave the way for high-density housing.

The 50-acre site, known as Crater Resources, was contaminated by coking and steel operations that sent hazardous chemicals into soil and groundwater. The site contains four quarries spanning about 14 acres.

As part of the settlement, two of the quarries will be cleaned by their owner, Renaissance Land Associates, with the goal of development, according to the civil suit filing. Renaissance Land Associates II and III completed purchase of those quarries in 2001. The two limited liability companies are under the control of O'Neill Properties.

The site, near the Gulph Mills Golf Club, has a long history of contamination stretching to 1919, when the Alan Wood Steel Co. disposed of coking wastes in the quarries. The Keystone Coke Co. purchased that firm in 1977 and continued until 1980 dumping "waste ammonia liquor" at the site — a by-product of a steel plant in Conshohocken.

Tests showed the soil and quarries were contaminated with hazards including cyanide, arsenic, mercury, fluorene, ammonia, phenol and other volatile organic compounds. The EPA placed the site on the National Priorities List of Superfund Sites in 1992.

Cleanup began in 2009, including removal of contaminated soil and building of caps designed to prevent contaminants from leaching into groundwater and to reduce the threat to public health. Groundwater contamination is also being addressed.

Much of the site is already redeveloped, with projects including the Renaissance Park office park. A small part of the Gulph Mills Golf Club is on the southern part of the site.

More commercial and residential projects are proposed for the 5.15 acres that contain the two quarries. EPA spokesman Roy Seneca said both will be capped before anything is built.

Upper Merion Township planner Rob Loeper said representatives of Renaissance Land Associates presented a plan in 2016 to build up to 300 multi-family units at one end of the property, provided issues were resolved with the EPA. Loeper said the units would likely be apartments.

Last year, the EPA said the company could build residential units provided the protective caps were built. The company agreed to take the extra measures as part of the agreement reached Monday.

The EPA has been pushing to get Superfund site settlements completed to make way for development.

EPA Administrator Scott Pruitt said in a recent interview with the Inquirer that some sites have been on the National Priorities List for decades.

“The Superfund area, just to speak to it generally, seemed to be languishing as we arrived,” said Pruitt, who took office in March 2017. “There didn’t seem to be sufficient focus on providing leadership.”

http://trib.com/business/energy/washington-to-hear-from-coal-country-in-clean-power-plan/article_c2e50386-0da1-5637-b03e-6b118af603b9.html

Washington To Hear From Coal Country In Clean Power Plan Meeting Tuesday In Wyoming

By Heather Richards, 3/26/18

The federal agency responsible for the emissions-cutting Clean Power Plan will hold a public meeting today in Gillette, one of only three across the country this season as the agency plans to dissolve the Obama-era rule.

The Clean Power Plan would have dealt a painful blow to one of Wyoming’s key industries, and both its supporters and opponents are lining up to speak at the event in coal country.

Many of the arguments will be familiar to those who have followed the development, and more recent devolution, of the Clean Power Plan. Supporters say regulations to cut carbon dioxide emissions are a necessary step towards combating climate change. Others will criticize the Environmental Protection Agency’s regulation as an unwieldy and ineffective tool that targeted the coal industry.

Some may criticize climate science, which identifies the burning of fossil fuels as the catalyst for human-caused climate change. EPA Administrator Scott Pruitt, along with others in the Trump administration, has expressed doubts about that conclusion, despite a widespread consensus of scientists from NASA to the University of Wyoming.

Finalized in 2015, the plan aimed to cut carbon dioxide emissions from the power sector by about 30 percent compared to 2005 levels. It would start taking effect in 2022 and ramp up to full implementation by 2030. But the plan was immediately tied up in court when states like Wyoming objected. Wyoming economists noted a potential 25 to 50 percent reduction in the state’s coal production if the plan was implemented.

President Donald Trump’s campaign promised to repeal the rule. The pledge sent a hopeful jolt through Wyoming’s coal industry, which at the time suffered from contractions in coal demand, bankruptcies and layoffs.

Gillian Malone, a supporter of carbon dioxide emissions regulations and a member of the Powder River Basin Resource Council said in a statement Monday that the coal industry will continue to face market pressures with or without the Clean Power Plan, noting the closure of coal plants across the country in favor of natural gas and renewables.

“The Trump Administration’s efforts to champion coal haven’t been successful in bringing coal back, and cutting the Clean Power Plan won’t save coal jobs and communities,” Malone said.

Travis Deti, executive director of the Wyoming Mining Association noted that coal is juggling a number of challenges; however, the Clean Power Plan is a different beast.

“There is no doubt that we face headwinds,” Deti said. “We face competition from natural gas and low gas prices. But they are separate issues. This is dealing with the regulatory burden on the industry.”

The Clean Power Plan was designed to push coal out of the electricity mix, he said. A less-punitive approach that utilizes carbon capture technology would be preferable from industry's perspective, he said, noting Wyoming's work in capturing carbon dioxide and studying its alternative uses.

"You address the carbon dioxide. You solve it with technology, and you keep coal as a viable industry," he said.

Repealing the Clean Power Plan is not a simple step. The Environmental Protection Agency is required to go through a similar process in undoing or rewriting the Clean Power Plan as it did when crafting it.

Tuesday's meeting to discuss unraveling the plan is part of that public process.

Despite the contention over the Clean Power Plan, the Environmental Protection Agency is also hamstrung by an endangerment finding from 2009. It determined that carbon dioxide was a harmful emission that the agency had to regulate under the Clean Air Act. Under the finding, the agency will have to attempt to curb carbon dioxide emissions, of which coal-burning power plants are a key contributor.

The EPA originally only scheduled a single meeting in West Virginia coal country. It was heavily attended by both sides, and the department later scheduled three additional listening sessions in San Francisco, Kansas City, Missouri and Gillette.

Pruitt, the EPA administrator, will be visiting coal country later in the week to see Wyoming's industry first hand. The state's delegates to Washington applauded the visit.

"In our community, it doesn't take long to understand how the coal industry is a source of reliable and affordable energy, a provider of high paying jobs and an amazing steward of the land," said Sen. Mike Enzi, former mayor of Gillette. "If a picture is worth a thousand words, being on the ground is worth more than a thousand pictures."

Scott Pruitt's Attack on Science Would Paralyze the E.P.A.

By Gina McCarthy and Janet G. McCabe, 3/26/18

Scott Pruitt, the administrator of the Environmental Protection Agency, has announced that he alone will decide what is and isn't acceptable science for the agency to use when developing policies that affect your health and the environment.

It is his latest effort to cripple the agency. Mr. Pruitt, who as Oklahoma's attorney general described himself as "a leading advocate against the E.P.A.'s activist agenda," said in an interview published in The Daily Caller last week that he would no longer allow the agency to use studies that include nonpublic scientific data to develop rules to safeguard public health and prevent pollution.

Opponents of the agency and of mainstream climate science call these studies "secret science." But that's simply not true. Peer review ensures that the analytic methodologies underlying studies funded by the agency are sound.

Some of those studies, particularly those that determine the effects of exposure to chemicals and pollution on health, rely on medical records that by law are confidential because of patient privacy policies. These studies summarize the analysis of raw data and draw conclusions based on that analysis. Other government agencies also use studies like these to develop policy and regulations, and to buttress and defend rules against legal challenges. They are, in fact, essential to making sound public policy.

The agency also relies on industry data to develop rules on chemical safety that is often kept confidential for business reasons.

For instance, foundational epidemiological research into the effects of air pollution on health by scientists at Harvard and the American Cancer Society established a clear connection between exposure to fine particles and increased mortality. This research led to further studies that supported the development of air quality standards and rules requiring industry to reduce pollution, improving health and reducing costs for millions of Americans.

Yet, because the personal health data associated with individuals participating in the studies were obtained with guarantees of confidentiality, Mr. Pruitt apparently would have argued for those studies to be tossed out had he been at the helm then.

The E.P.A. administrator simply can't make determinations on what science is appropriate in rule-making without calling into question decisions by other federal agencies based on similar kinds of studies, including on the safety and efficacy of pharmaceuticals, and research into cancer and other diseases. All rely to some extent on data from individual health records. If one agency rejects studies based on that sort of data, it could open up policies by other agencies based on similar studies to challenge.

Mr. Pruitt — who is a lawyer, not a scientist — told The Daily Caller: "We need to make sure their data and methodology are published as part of the record. Otherwise, it's not transparent. It's not objectively measured, and that's important."

We don't have the details of the new policy. But don't be fooled by this talk of transparency. He and some conservative members of Congress are setting up a nonexistent problem in order to prevent the E.P.A. from using the best available science. These studies adhere to all professional standards and meet every expectation of the scientific community in terms of peer review and scientific integrity. In the case of the air pollution studies, a rigorous follow-up examination was done by the Health Effects Institute, a nonprofit research group that studies air pollution. The institute corroborated the findings.

In taking this action, Mr. Pruitt appears to be adopting the policies of the Honest and Open New E.P.A. Science Treatment Act, a bill aimed at the agency. Conservative lawmakers have tried to pass versions of this bill before to shackle the agency's rule making. That law would prohibit the E.P.A. from taking any action "unless all scientific and technical information relied on to support" it is "specifically identified, and publicly available in a manner sufficient for independent analysis and substantial reproduction of research results."

An analysis of a similar bill introduced in 2015 by the Congressional Budget Office estimated it would cost \$250 million a year over the first few years to carry out because it would require new "data collection, correspondence and coordination with study authors, construction of a database to house necessary information, and public dissemination" of the information.

The analysis, which did not appear to take into account the cost of redacting details like trade secrets or personally identifiable medical information, also predicted the agency would reduce by half the number of studies it relies on in developing policies and regulations because of the cost of complying with the law.

"The quality of the agency's work would be compromised if that work relies on a significantly smaller collection of scientific studies," the analysis found.

This approach would undermine the nation's scientific credibility. And should Mr. Pruitt reconsider regulations now in place, this new policy could be a catalyst for the unraveling of existing public health protections if the studies used to justify them could no longer be used by E.P.A.

So why would he want to prohibit his own agency from using these studies? It's not a mystery. Time and again the Trump administration has put the profits of regulated industries over the health of the American people. Fundamental research on the effects of air pollution on public health has long been a target of those who oppose the E.P.A.'s air quality regulations, like the rule that requires power plants to reduce their mercury emissions.

Mr. Pruitt's goal is simple: No studies, no data, no rules. No climate science, for instance, means no climate policy.

If a tree falls in the forest, we know it makes a sound, even if people aren't there to hear it. When people are exposed to mercury, lead or other air- and waterborne pollutants, we know their health is affected, whether or not E.P.A. is allowed to use the scientific studies that confirm those health impacts.

This policy no doubt will become a matter of litigation. It will be interesting to hear the agency defend Mr. Pruitt's view that peer-reviewed studies that meet every standard for proper scientific method and integrity should not be considered in drafting policies and regulations that regulate threats to the environment.

Representative Bill Foster, a physicist and Democrat from Illinois, has argued that "scientists should set the standards for research, not politicians."

We couldn't agree more. Scientific research provides factual support for policies that reduce exposure to pollution and protect the American people from costly and dangerous illnesses and premature deaths. Under Mr. Pruitt's approach to science, the E.P.A. would be turning its back on its mandate to "protect human health and the environment."

U.S. Stocks Extend Gains As Trade Fears Ease

By David Hodari, 3/27/18

U.S. stocks edged higher, extending sharp gains from the previous session, as fears of a trade war between the U.S. and China continued to fade.

The Dow Jones Industrial Average rose 23 points, or 0.1%, to 24226 shortly after the opening bell, while the S&P 500 climbed 0.1% and the tech-focused Nasdaq Composite added 0.2%.

U.S. technology and financial stocks in the S&P 500 rose, with software firm Red Hat—after an upbeat earnings call—climbing 6.7% and BB&T rising 1.7%.

Meanwhile, real estate stocks declined 0.6% and shares of health-care firms fell 0.2%.

European stocks rebounded, with the Stoxx Europe 600 climbing 1.4%, more than recouping its Monday decline, which came amid rising tensions between multiple EU nations and Russia.

Pharmaceuticals company GlaxoSmithKline climbed 5.7% higher after buying Novartis's 36.5% stake in its health-care joint venture for \$13 billion. Novartis shares rose 2.3%.

Shares in Dutch paint maker Akzo Nobel rose 2.9% after the company confirmed the \$12.6 billion sale of its specialty chemicals arm to a Carlyle Group-led consortium.

The upbeat trading in Europe echoed the sharp resurgence in equities markets in Asia-Pacific. That recovery began on Monday as the U.S. and China appeared to soften their stances over trade, after tensions between the two superpowers ratcheted up last week.

The two countries traded barbs after the Trump administration threatened \$60 billion of levies in addition to import tariffs on aluminum and steel. China responded with its own measures and the promise of immediate retaliation to further tariffs.

The friction was soothed Monday by the news that the two countries were in talks to improve U.S. access to Chinese markets.

That said, rules requiring foreign companies to form joint ventures with domestic partners in China were likely to be a sticking point, given that U.S. firms would be required to divulge trade secrets.

“Talk of these tariffs started off with the EU coming back strongly, saying they’d look at countermeasures, so the U.S. added in that caveat about allies and friends being exempted. [That exemption] has been extended to more and more countries and if its also extended to China it will look like it was a bit of saber-rattling to bring China to the table and that seems to have succeeded,” Edward Park, a director at asset manager Brooks Macdonald, said.

Some analysts see stock swings as a consequence of investor pessimism and broadly healthy equity-market performance.

“The market seemed to be assuming the worst-case scenario. That they responded this way may reflect overall positioning because we’ve had quite a good run and that correction was a bit stronger than expected,” said Geoffrey Yu, head of the U.K. investment office at UBS Wealth Management. “That volatility is going to continue due to [central bank] renormalization.”

Rising inflation has prompted growing speculation about the Federal Reserve’s interest-rate policy, with some analysts suggesting the central bank will increase rates four times in 2018 instead of the three times it has penciled in.

“If the Fed does change to four hikes this year, it’s not that much of a concern unless it’s in reaction to much higher inflation. A rapid rate hike cycle would concern investors,” Brooks Macdonald’s Mr. Park said.

Higher stock valuations may continue to drive volatility, according to Shane Oliver, head of investment strategy and chief economist at AMP Capital in Sydney. “You don’t have a valuation buffer as you had in the past,” he said.

In Asia, the Shanghai Composite Index closed 1.1% higher and the tech-heavy Shenzhen composite index rose 2.2%. Taiwan’s Taixex climbed 1.4% and Hong Kong’s Hang Seng increased by 0.8%.

Japan’s Nikkei closed 2.7% higher, clawing back some more of Friday’s 4.5% amid easing domestic political concerns. Former finance ministry official Nobuhisa Sagawa told parliament that Prime Minister Shinzo Abe didn’t order officials to alter documents in a disputed sale of government land.

The New York Times

<https://www.nytimes.com/2018/03/26/us/politics/census-citizenship-question-trump.html>

Despite Concerns, Census Will Ask Respondents If They Are U.S. Citizens

By Emily Baumgaertner, 3/26/18

WASHINGTON — The 2020 census will ask respondents whether they are United States citizens, the Commerce Department announced Monday night, agreeing to a Trump administration request with highly charged political and social implications that many officials feared would result in a substantial undercount.

In a statement released Monday, the Commerce Department, which oversees the Census Bureau, said Commerce Secretary Wilbur Ross had “determined that reinstatement of a citizenship question on the 2020 decennial census

questionnaire is necessary to provide complete and accurate census block level data,” allowing the department to accurately measure the portion of the population eligible to vote.

But his decision immediately invited a legal challenge: Xavier Becerra, California’s attorney general, plans to sue the Trump administration over the decision, a spokeswoman for Mr. Becerra said late Monday.

Critics of the change and experts in the Census Bureau itself have said that, amid a fiery immigration debate, the inclusion of a citizenship question could prompt immigrants who are in the country illegally not to respond. That would result in a severe undercount of the population — and, in turn, faulty data for government agencies and outside groups that rely on the census. The effects would also bleed into the redistricting of the House and state legislatures in the next decade.

The Justice Department had requested the change in December, arguing that asking participants about their citizenship status in the decennial census would help enforce Section 2 of the Voting Rights Act, which aims to prevent voting rights violations.

“The Justice Department is committed to free and fair elections for all Americans, and has sought reinstatement of the citizenship question on the census to fulfill that commitment,” a Justice Department spokesman, Devin M. O’Malley, told The New York Times in February.

In a memorandum explaining his decision, Mr. Ross wrote that he had considered opponents’ arguments about the potential to discourage responses.

“I find that the need for accurate citizenship data and the limited burden that the reinstatement of the citizenship question would impose outweigh fears about a potentially lower response rate,” he wrote.

The decennial census generally included a citizenship inquiry for more than 100 years through 1950, according to the Commerce Department. And other, smaller population surveys, such as the Current Population Survey and the American Community Survey, continue to ask respondents about it.

But critics dismissed administration officials’ reassurances.

“The census numbers provide the backbone for planning how our communities can grow and thrive in the coming decade,” said Mr. Becerra. “What the Trump administration is requesting is not just alarming, it is an unconstitutional attempt to discourage an accurate census count.”

Others argued that an undercount in regions with high immigrant populations would lead not only to unreliable data but also to unfair redistricting, to the benefit of Republicans.

“Adding this question will result in a bad census — deeply flawed population data that will skew public and private sector decisions to ensure equal representation, allocate government resources and anticipate economic growth opportunities — for the next 10 years,” Vanita Gupta, the chief executive of the Leadership Conference on Civil and Human Rights and a deputy attorney general in the Obama administration, said in a statement Monday night. “The stakes are too high to allow this. We urge Congress to overturn this error in judgment.”

The announcement of the citizenship question comes at a troublesome time for the Census Bureau: Its top two positions have interim occupants, and it has been forced to skip two of its three trial runs for the 2020 census because of funding shortfalls. If response rates for the census are low, critics worry that the bureau may be unable to adjust the data or deploy enough census takers to low-response communities.

The bureau is required to submit a final list of the 2020 census questions to Congress by the end of March.

Subject: Morning Energy: How Trump favored Texas over Puerto Rico — EPA holds final 'listening session' on climate rule repeal — DOE gets pushback on 'market-based' efficiency rules

By Kelsey Tamborrino | 03/27/2018 05:45 AM EDT

With help from Nick Juliano and Eric Wolff

HOW TRUMP FAVORED TEXAS OVER PUERTO RICO: A double standard has emerged in President Donald Trump's handling of disaster relief efforts in Texas versus in Puerto Rico, POLITICO's Danny Vinik found in a new investigation out today. A review of public documents, never-before-published FEMA records and interviews with more than 50 people involved with disaster response show an imbalance that tracks with one core person's attention: the president.

Behind the scenes, people with direct knowledge of Trump's comments said the president was focused less on the details of the relief effort than on public appearances, repeatedly using conference calls and meetings to direct FEMA Administrator Brock Long to spend more time on television touting his agency's progress. And as the administration moves to rebuild Texas and Puerto Rico, the contrast in the Trump administration's responses are taking on new dimensions, Danny writes.

During the first nine days after Hurricane Harvey, FEMA provided 5.1 million meals, 4.5 million liters of water and over 20,000 tarps to Houston; but in the same period, it delivered just 1.6 million meals, 2.8 million liters of water and roughly 5,000 tarps to Puerto Rico.

The federal government has already begun funding projects to help make permanent repairs to Texas infrastructure. But in Puerto Rico, that funding has yet to begin, as details of an experimental funding system are negotiated with Trump's Office of Management and Budget — an experimental formula that multiple congressional staffers and people with knowledge said White House officials told Puerto Rico Gov. Ricardo Rosselló to agree to if wanted money for his island. Read it [here](#).

GOOD TUESDAY MORNING! I'm your host Kelsey Tamborrino. Andrew Fasoli of the American Chemistry Council was fastest in identifying former first lady Helen Herron Taft as the first to plant the saplings of the Japanese cherry trees in D.C., which now surround the Tidal Basin and Capitol grounds. For today: Who is the only former Cabinet member to be selected as "designated survivor" twice during past State of the Union addresses? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

POLITICO Space is our new, free weekly briefing on the policies and personalities shaping the second space age in Washington and beyond. **Sign up today to start receiving the newsletter right at launch on April 6.** *Presented by Boeing.*

OFFSHORE ORCHESTRATION: Interior Secretary Ryan Zinke's meeting with Florida Gov. Rick Scott at the Tallahassee airport back in January — after which Zinke declared the state "off the table" for expanded offshore drilling — wasn't as spontaneous as it first seemed, POLITICO Florida's Matt Dixon reports. Scott's office cast the announcement as a hastily arranged example of the governor's ability to influence Trump administration policy, all while dismissing any suggestion that the move had anything to do with his expected

entrance into this year's Senate race. But Matt got ahold of 1,200 documents — including emails, text messages and phone records — that show Interior officials and Scott aides had been coordinating days ahead of the meeting. More from Matt [here](#).

ONE LAST TIME: EPA will hold its final "[listening session](#)" today in Gillette, Wyo., on the proposed repeal of the Clean Power Plan. A preliminary list of speakers shows a range of voices will attend the session — including various speakers from Cloud Peak Energy, a firm headquartered in Gillette that mines coal in the Powder River Basin, and the Rocky Mountain Coal Mining Institute. Sens. [John Barrasso](#) and [Mike Enzi](#) — who have previously [applauded](#) the proposed repeal — are also scheduled to speak. Barrasso plans to emphasize how the rule would hurt energy workers in his state, an aide tells ME, and will highlight bipartisan [efforts](#) in Congress to promote carbon capture technologies.

On the other side, advocates from the American Lung Association, Moms Clean Air Force and National Wildlife Federation will speak. Moms Clean Air Force will highlight EPA's "legal and moral obligation" to action on greenhouse gas emissions, according to the group's talking points. Administrator Scott Pruitt won't be there today, but he is set to [make a separate trip](#) to Wyoming this week to visit the state's coal-mining operations.

WHERE'S PERRY? Energy Secretary Rick Perry is in California today, where he'll tour the Lawrence Berkeley National Laboratory and hold an all-hands meeting with the facility's employees at 3 p.m. The trip follows Perry's [visit](#) to the Lawrence Livermore National Lab on Monday.

REFINERS: MORE THAN EPA'S PES WAIVER IS NEEDED TO SURVIVE THE RFS : Two Philadelphia-area refiners said a consent decree between EPA and Philadelphia Energy Services was an acknowledgment by the government that the Renewable Fuel Standard is broken and needs significant reform. PBF told DOJ, which took comments on the agreement until Monday, that "one-time forgiveness of RIN obligations fails to remedy the root cause for the bankruptcy and provides the wrong incentives to the [Renewable Identification Number] market." Monroe said the agreement "is a reflection, an acknowledgment, of the economic harm caused by the RFS program." Both of them were joined by refining giant Valero in arguing that the program needs to be changed more radically than just the one-time waiver offered by EPA. Ethanol producers said in their own earlier comments that they oppose the consent decree and reject the idea that PES' bankruptcy could be blamed on the RFS.

Read Monroe's comments [here](#), PBF's [here](#) and Valero's [here](#).

JUDGE LEAVES SOLAR TARIFFS IN PLACE: A judge in the U.S. Court of International Trade on Monday rejected requests for a stay of U.S. solar tariffs pending an appeal. Silfab Solar, Heliene, Canadian Solar (USA) and Canadian Solar Solutions had been hoping the court would block the 30 percent tariff the Trump administration imposed on imported solar panel and solar cells last month. The court had rejected their motions for a temporary restraining order and preliminary injunction earlier in March.

TRADE DEADLINE: Can appliances be regulated like automobiles? That's the question the Energy Department posed last year in an effort to apply Trump's regulatory reform goals to its efficiency standards program, and responses were due by Monday. DOE asked for input on several potential reforms, including enforcing efficiency rules similar to the Corporate Average Fuel Economy program, which averages performance across an automakers' entire vehicle fleet. DOE's request for information also pointed to state-level renewable portfolio standards or California's cap-and-trade program as examples of the ideas it was considering.

But those "market based" approaches probably won't work, numerous commenters told DOE. The main barrier is "anti-backsliding" provisions in the Energy Policy and Conservation Act, which prevents DOE from weakening existing requirements. Current law "precludes the use of averaging, credit-trading, or providing feebates as an alternative to minimum energy-efficiency requirements," the Alliance to Save Energy, a pro-

efficiency group, wrote in its [comments](#). A coalition of industry trade associations agreed that such mechanisms would be unlikely to work; in their [comments](#), the groups, including the Air-Conditioning, Heating and Refrigeration Institute and the Association of Home Appliance Manufacturers, urged DOE "to focus its limited resources on reforming the existing program" through changes to a separate process improvement rule. Read additional comments from [AHRI](#), the [Natural Resources Defense Council](#), [Lennox International](#), [E2](#), [Whirlpool](#), the [Edison Electric Institute](#), [Dow](#), [Southern Company](#) and the [California Energy Commission](#).

DEFENDING EPA'S SCIENCE: Former EPA Administrator Gina McCarthy and Janet McCabe, the former acting assistant administrator of the Office of Air and Radiation, [wrote an op-ed](#) in The New York Times Monday defending EPA's use of scientific studies to support its regulations. Conservatives have long accused the agency of relying on "secret science," and Pruitt says he plans to start relying only on publicly available data. But McCarthy and McCabe say that would deprive EPA of valuable research based on individuals' private health records or proprietary information that businesses want to protect. "Opponents of the agency and of mainstream climate science call these studies 'secret science,'" the pair writes. "But that's simply not true."

BSEE: WE COULD USE YOUR HELP: Interior is calling on its career staff to come up with ways to speed up the offshore drilling permitting process, Pro's Ben Lefebvre [reports](#). The Bureau of Safety and Environmental Enforcement will assemble teams of employees across departments to periodically review the process and look for ways to improve its efficiency across the agency, BSEE said Monday.

MAIL CALL! CALLING OUT WEAK LEASE SALES: House Natural Resources ranking member [Raúl Grijalva](#) sent a [letter](#) to Zinke Monday, requesting additional information on his agency's budget priorities. Grijalva also asked Zinke to keep royalty rates for offshore drilling development stable, in light of [weak demand](#) for lease sales.

— **Sens. [Sheldon Whitehouse](#) and [Brian Schatz](#)** wrote to the CEOs of [BlackRock](#) and [JP Morgan Chase](#) questioning the firms' investment in companies active in the Amazon rainforest.

NEW JERSEY TO BLOCK DRILLING: New Jersey Gov. Phil Murphy is expected sign a bill that would prohibit state regulators from approving permits for pipelines or related infrastructure to facilitate expanded offshore drilling in federal waters. Pro New Jersey's Danielle Muoio [has more](#).

MOVER, SHAKER: Friends of the Earth announced Monday that Liz Butler will become vice president of organizing and strategic alliances. Butler will lead a staff of five organizers and 13 organizing fellows in grassroots environmental campaigns.

— **Michael Pratt is joining the American Enterprise Institute's** press office as director of media relations and marketing. Pratt previously served in several other roles at AEI in the digital and media relations departments.

HAPPENING TODAY

7:30 a.m. — The American Water Works Association holds Sustainable Water Management Conference, Seattle

8:00 a.m. — The California Solar Power Expo, San Diego

8:00 a.m. — The Mediterranean Oil and Gas Forum 2018 with Mark Menezes, undersecretary of Energy, Nicosia, Cyprus

8:45 a.m. — Energy Thought Summit, Austin, Texas

9:00 a.m. — Inter-American Dialogue discussion "Unconventional Oil and Gas in Argentina," 1155 15th Street NW

9:30 a.m. — American Fuel and Petrochemical Manufacturers holds International Petrochemical Conference, San Antonio, Texas.

11:00 a.m. — The National Academy of Sciences webinar on "Improving Characterization of Anthropogenic Methane Emissions in the United States."

12:00 p.m. — Americans for a Clean Energy Grid webinar on "Transmission Needed to Meet Corporate America's Growing Demand for Renewable Power."

5:00 p.m. — The Johns Hopkins University Paul H. Nitze School of Advanced International Studies book discussion on "The Fracking Debate: The Risks, Benefits, and Uncertainties of the Shale Revolution," 1717 Massachusetts Avenue NW

THAT'S ALL FOR ME!

Stories from POLITICO Pro

How Trump favored Texas over Puerto Rico Back

By Danny Vinik | 03/27/2018 05:00 AM EDT

SAN JUAN, Puerto Rico — As Hurricane Maria unleashed its fury on Puerto Rico in mid-September, knocking out the island's electrical system and damaging hundreds of thousands of homes, disaster recovery experts expected that only one man could handle the enormity of the task ahead: Mike Byrne.

But Byrne, a widely acknowledged star of the Federal Emergency Management Agency, remained in Houston, which had been ravaged by Hurricane Harvey less than a month earlier.

Today, disaster recovery experts still express shock that FEMA kept Byrne in an already-stabilizing Texas and didn't send him to Puerto Rico for three more weeks. But now, the decision strikes many as emblematic of a

double standard within the Trump administration. A POLITICO review of public documents, newly obtained FEMA records and interviews with more than 50 people involved with disaster response indicates that the Trump administration — and the president himself — responded far more aggressively to Texas than to Puerto Rico.

"We have the U.S. Army and Marine Corps. We go anywhere, anytime we want in the world," bemoaned retired Army Lt. Gen. Russel Honoré, who led the military's relief efforts after Hurricane Katrina. "And [in Puerto Rico] we didn't use those assets the way they should have been used."

No two hurricanes are alike, and Harvey and Maria were vastly different storms that struck areas with vastly different financial, geographic and political situations. But a comparison of government statistics relating to the two recovery efforts strongly supports the views of disaster-recovery experts that FEMA and the Trump administration exerted a faster, and initially greater, effort in Texas, even though the damage in Puerto Rico exceeded that in Houston.

Within six days of Hurricane Harvey, U.S. Northern Command had deployed 73 helicopters over Houston, which are critical for saving victims and delivering emergency supplies. It took at least three weeks after Maria before it had more than 70 helicopters flying above Puerto Rico.

Nine days after the respective hurricanes, FEMA had approved \$141.8 million in individual assistance to Harvey victims, versus just \$6.2 million for Maria victims.

During the first nine days after Harvey, FEMA provided 5.1 million meals, 4.5 million liters of water and over 20,000 tarps to Houston; but in the same period, it delivered just 1.6 million meals, 2.8 million liters of water and roughly 5,000 tarps to Puerto Rico.

Nine days after Harvey, the federal government had 30,000 personnel in the Houston region, compared with 10,000 at the same point after Maria.

It took just 10 days for FEMA to approve permanent disaster work for Texas, compared with 43 days for Puerto Rico.

Seventy-eight days after each hurricane, FEMA had approved 39 percent of federal applications for relief from victims of Harvey, versus 28 percent for Maria.

Those imbalances track with another one: the attention of President Donald Trump. In public, Trump appeared much more concerned with the victims of Harvey than Maria. He visited Houston twice during the first eight days after the hurricane, but didn't visit Puerto Rico for 13 days. In the first week after the disasters, Trump sent three times as many tweets about Harvey as Maria — 24 about the plight of Texas and eight about Puerto Rico, including a series of comments about Puerto Rico's debt level and quality of infrastructure that local officials considered insulting and enraging while lives were still in jeopardy.

"Wow - Now experts are calling #Harvey a once in 500 year flood! We have an all out effort going, and going well!" he crowed about Texas on Aug. 27, two days after the storm made landfall.

On Sept. 30, 10 days after Maria, and while fielding criticism from Puerto Rican officials, Trump testily tweeted: "[They] want everything to be done for them and it should be a community effort. 10,000 Federal workers now on island doing a fantastic job."

Behind the scenes, according to people with direct knowledge of his comments, Trump was focused less on the details of the relief effort than on public appearances, repeatedly using conference calls and meetings designed

to update him on the relief effort to direct FEMA Administrator Brock Long to spend more time on television touting his agency's progress.

In addition, Trump spent the first weekend after the Puerto Rico crisis tweeting repeatedly about NFL players kneeling for the national anthem. Those messages, experts said, send a subtle, yet important signal to the federal bureaucracy.

"On Texas and Florida [during Hurricane Irma], the president was very vocal and engaged in the run-up to the storm. His messaging was frankly pretty good," said Jeremy Konyndyk, the former top disaster response official at USAID under former President Barack Obama. "If you look at his public messaging on a comparable timeline around Puerto Rico, there's virtually nothing. ... That sends a signal to the whole federal bureaucracy about how they should prioritize."

FEMA and administration officials defend the response to the storm, saying it posed unprecedented logistical challenges as the agency faced perhaps the most demanding stretch in its 39-year history. Hurricane Maria was the third major hurricane to strike the United States in less than a month. Combine that with an overwhelmed local government and nonexistent communications and it created a fog-of-war atmosphere that made it difficult to determine what resources were needed when and how to get them to an island whose ports and airports were heavily damaged.

In a statement to POLITICO, Long defended FEMA's efforts, arguing that, unlike in Texas, the agency was forced to take on a greater role in the post-disaster response. "We provided Puerto Rico the same, if not more support, as we have for all presidentially declared disasters across the nation," he said, "but an optimal response cannot rely on FEMA's efforts alone."

A spokesperson for the National Security Council said Trump was "personally engaged" on the response and his "primary directive" to Long was to oversee a unified and effective federal response.

But in that situation, former FEMA officials say, extra political pressure and impetus can make a difference. Puerto Rico, as a U.S. territory rather than a state, has just a single, nonvoting delegate in Congress, compared with the 36 representatives and two senators from Texas who loudly demanded proper resources for their state. Likewise, victims of Superstorm Sandy had six senators and dozens of U.S. representatives in the states of New York, New Jersey and Connecticut to demand extra disaster relief, including powerful lawmakers like Chuck Schumer, then the No. 3 Democrat in the Senate.

"After Sandy, [Rep.] Peter King was all over FEMA continuously. So was Schumer," said Michael Balboni, a former New York state legislator and an expert on disaster response. That constant pressure on senior federal officials, he added, is critical to getting the proper resources after a disaster.

In that vacuum, presidential leadership plays a larger role. But as the administration moves to rebuild Texas and Puerto Rico, the contrast in the Trump administration's responses to Harvey and Maria is taking on new dimensions. The federal government has already begun funding projects to help make permanent repairs to Texas infrastructure. But in Puerto Rico, that funding has yet to start, as local officials continue to negotiate the details of an experimental funding system that the island agreed to adopt after a long, contentious discussion with Trump's Office of Management and Budget.

Multiple congressional staffers and people with direct knowledge of the arrangement said White House officials told Puerto Rico's governor, Ricardo Rosselló, that if he didn't agree to the experimental formula, the island wouldn't get the money, effectively forcing the island to take a huge gamble since it would be responsible for any cost overruns, a requirement that doesn't exist for Texas. The White House denies making that demand.

"There is no doubt that Puerto Rico gets treated differently to a state. And there is no doubt that it has been true for the disaster response as well," Rosselló said in an interview at the governor's mansion in Old San Juan. He added, "Our objective is to eradicate this notion of second-class citizenship in the United States, so that whenever a disaster hits — whether it's Texas, Florida, New York or Puerto Rico — the federal government responds equally in all cases."

After Hurricane Harvey hit the Houston region on Aug. 25, dropping over 50 inches of rain and flooding whole swaths of the metropolitan region, FEMA quickly mobilized, sending out mission assignments to a long list of federal agencies. In less than a week, U.S. Northern Command deployed 73 helicopters and the Coast Guard sent an additional 18. Within nine days, a whopping 30,000 federal personnel were helping an army of state and local authorities with the response, conducting search-and-rescue missions, removing debris and helping victims apply for disaster assistance, among many other assignments.

The response was effective enough that by Sept. 14, Texas Gov. Greg Abbott reported that "The risk to lives has now been reduced, if not completely eliminated."

On Sept. 20, after four days of increasingly dire forecasts, Hurricane Maria made landfall in a Puerto Rico already reeling from Hurricane Irma two weeks earlier.

POLITICO's analysis of data on Harvey and Maria, pieced together through news releases, internal FEMA documents, revealed for the first time, and numbers supplied by the agency, indicates that FEMA's response to Maria was much slower than it was to Harvey. Helicopters, which are crucial to rescue people from remote, flooded areas, were slow to arrive. In the initial days, Northern Command had, at most, just a few dozen helicopters on the island and the U.S. Virgin Islands while the Coast Guard deployed just six. By Day 9, just 10,000 federal personnel were on the island, about a third as many as were dealing with Harvey at the same point. Those figures increased over time — Northern Command eventually supplied over 70 helicopters and the government deployed more than 20,000 personnel — but the ramp-up took more than three weeks.

The increase in personnel coincided with the arrival of Byrne. A former New York City firefighter, Byrne has spent his career working in emergency management, serving as a senior regional FEMA officer after 9/11 and as a private sector consultant, helping manage a \$10 billion recovery program after hurricanes Katrina and Rita. After Superstorm Sandy in 2013, he led FEMA's recovery operations, a position known as the federal coordinating officer, or FCO. Last September, he was promoted to assistant administrator for field operations, overseeing the entire disaster workforce.

Despite his promotion, Byrne still often goes out into the field to oversee the most important assignments. So it came as no surprise to disaster-recovery experts when Long, the FEMA administrator, announced on Sept. 1, a week after Harvey hit Houston, that Byrne was heading down to Houston to help with the recovery efforts.

The surprise came on Sept. 20, the day that Hurricane Maria hit Puerto Rico, when FEMA named Alejandro De La Campa the FCO, while it kept Byrne in Texas.

De La Campa, a Puerto Rican native who runs FEMA's local office on the island, has strong relationships with Puerto Rican officials but is not considered one of FEMA's top disaster response leaders, much less the best person for one of the most complicated and challenging disasters in FEMA's history. Even at the time, the decision shocked former FEMA officials, many of whom thought well of De La Campa, who goes by Alex, but were expecting Long to deploy a much more experienced official for such a critical job.

"When I started hearing things, I was thinking there are a lot of heavy hitters sitting on the bench," said Craig Fugate, the head of FEMA during the Obama administration. Fugate acknowledged that it's difficult to second guess the decision-making without being in the meetings at the time. But he said, "I would have put my heavy hitters in there."

The storm impacted every part of the island, wiping out the electricity system and leaving even the local first responders as victims, many of whom lost power and first had to protect their families. Even today, more than 5 percent of the island remains without power. While the Houston region has about twice as many people as Puerto Rico, the severity and nature of the damage caused by Maria overshadowed that of Harvey. As such, FEMA eventually both received and approved more applications for individual assistance from victims of Hurricane Maria than of Hurricane Harvey.

"You had almost a perfect storm," said Jeff Parks, who worked for Honoré on the Katrina recovery effort and traveled to Puerto Rico in a private capacity soon after Maria.

Byrne said he wasn't involved in the FCO decision for Puerto Rico but that he wasn't surprised with the selection of De La Campa, explaining that he has a "stellar reputation." FEMA declined to make De La Campa available for an interview. Asked for further information on why De La Campa was initially selected to serve as the FCO, a FEMA spokesperson said the "question has been answered and addressed."

FEMA also deployed Justo "Tito" Hernandez, an experienced first responder who previously had served as an FCO on the island, as De La Campa's deputy. Hernandez, also a Puerto Rico native, did not comment directly on the selection, instead stressing that FEMA's personnel in Puerto Rico were a team.

Still, he added, "Mike [Byrne] is the best person for the job."

The best person for the job, though, was nearly 2,000 miles away during the first three weeks after Hurricane Maria made landfall, and he was quickly missed. On Oct. 10, in a five-sentence news release, billed as an expansion of the leadership team, FEMA announced it was replacing De La Campa with Byrne.

Former FEMA officials and disaster response experts said the slow ramp-up in force — from the delay in deploying Byrne to the limited number of helicopters — in Puerto Rico and the U.S. Virgin Islands is evidence that the agency underestimated the ferocity of the storm and failed to properly pre-position assets.

"That says that they didn't have the right footprint in place," said Konyndyk. "It's one thing if that's happening over a week or two. It's very different if that's taking a month."

Federal officials caution against comparing Harvey and Maria, arguing that Texas' and Puerto Rico's very different geographic, financial and political situations make comparisons misleading. After POLITICO requested data from U.S. Northern Command on helicopters deployed on certain dates after Maria and Harvey, a spokesperson declined to provide any figures, saying that the only overlap between Florida, Texas and Puerto Rico was that all three experienced hurricanes.

"That's where the comparison stops for us," he said.

Byrne and Hernandez offered two main explanations for the limited number of military assets, particularly helicopters, in the first week after Hurricane Maria. They said it was much easier to deploy helicopters to Houston than to Puerto Rico and the U.S. Virgin Islands, which were 1,000 miles from the United States and had no working ports or airports immediately after the disaster. And even if FEMA could get more responders to Puerto Rico, they said, it had no place to house them.

But it still took weeks for FEMA and the Department of Defense to increase their forces in Puerto Rico and the U.S. Virgin Islands, even though the main airports and ports were opened within a few days. Disaster-recovery experts also faulted the government for failing to direct the aircraft carrier USS Abraham Lincoln and other ships, which have their own fleets of helicopters and were deployed off the coast for Florida to help with Hurricane Irma in early September, to help with the response efforts to Hurricane Maria. The Lincoln began to position itself to help with Irma two days before the storm hit Florida. FEMA never requested that the Department of Defense send the Lincoln to Puerto Rico and the U.S. Virgin Islands.

The USNS Comfort, a hospital ship, didn't even embark from Norfolk, Virginia, to reach Puerto Rico and the U.S. Virgin Islands until nine days after the storm, despite the fact that few hospitals in the region had consistent power, leaving thousands of patients in dire medical condition.

FEMA directed questions about the Comfort and Lincoln to the Department of Defense, which said that during Irma, the Lincoln was also not requested by FEMA for help with civil authorities but instead helped secure military installations in Florida. A spokesperson for NORTHCOM also said that an agreement between DOD and FEMA to send the Comfort was reached "on/about Sept. 25," five days after the storm. It then takes the ship roughly four days to assemble its crew, add necessary supplies and start the ship's engine before it can embark, the spokesperson said.

Other data raise questions about FEMA's claim that a lack of housing prevented a quicker ramp-up in federal personnel on the island.

According to internal FEMA documents given to POLITICO by a person involved in the response efforts, a week after Hurricane Maria, FEMA had filled only 150 of 250 beds that were set aside for first responders at the Puerto Rico Convention Center. Two weeks after Maria, FEMA had filled only 1,258 of 2,250 beds allotted for its first responders at the convention center and aboard two training vessels from the U.S. Maritime Service.

A FEMA spokesperson did not say why the beds weren't used but explained that the numbers were fluid during those days as FEMA staff frequently moved to different parts of the island. "During an emergency, deployed staff comes in and out and depending on where they are needed, they are moved around to support federal and state partners," the spokesperson said.

Nonetheless, Byrne and Hernandez said in separate interviews that FEMA had enough resources to complete its missions, whether conducting search-and-rescue operations or providing food and water to the victims.

"The fact that we ramped up to about 20,000 people in the first month, month-and-a-half, that's impressive to me," said Hernandez. "Whoever says it was slow, I ask them where were you. Where were you when we were moving as fast as we could with the resources that we had?"

Byrne added: "We didn't have any deaths from starving on this. We didn't have any deaths from dehydration. We got plenty of water and food out to people."

People on the ground, however, describe a different scene, one defined by mass confusion and little coordination among the dozens of different nonprofit groups and federal, state and local officials involved in the response, most of whom had little ability to communicate with one another. They said FEMA was mostly absent during the initial days after the storm.

"For the first couple weeks, right after the hurricane, we were the only thing moving out there," said Mike Soto, a founder of a Puerto Rican think tank who became a leader in the response effort after the storm hit Puerto

Rico. "The government was definitely catatonic. FEMA wasn't around and when they were finally here, it took them awhile."

Bernardo Márquez, the mayor of Toa Baja, a municipality of less than 100,000 people in northern Puerto Rico, said just two pallets of water and one pallet of food arrived from FEMA in the first week, forcing local officials to rely on donations from local supermarkets and nonprofits like the Red Cross. "It was slow," he said.

FEMA did deliver some supplies during the first few weeks: In the first nine days after Hurricane Maria, the agency provided 1.6 million meals, 2.8 million liters of water and roughly 5,000 tarps to the island. But that was only a third as many meals and half as much water as it provided to Texas in the same time period after Harvey. Within three days of Harvey's landfall, FEMA had delivered over 20,000 tarps to Texas.

The agency argued that any comparison of the delivery of assistance between Puerto Rico and Texas is effectively impossible. Texas is accessible by roads, making it easy for FEMA to truck food, water and other emergency supplies into Houston while Puerto Rico is 1,000 miles away from the mainland U.S. "We moved stuff. We moved stuff pretty efficiently," said Byrne. "And the challenge here was getting it by ship."

According to a document obtained by POLITICO through the person involved in the response efforts, federal officials were also slow to begin installing "blue roofs" on the island, the hard, plastic covering that allows victims to return and live in their homes before permanent repairs begin.

Twenty-five days after the storm, the Army Corps of Engineers, the federal agency responsible for installing the roofs, had completed just 260 installations in Puerto Rico out of an estimated 60,000 that were needed, equal to 0.4 percent.

There's no similar data for Harvey because Texas didn't request any blue roofs and instead handled temporary housing relief in the first weeks after the storm by itself. But 25 days after Hurricane Irma struck Florida, the Army Corps had installed 1,600 blue roofs, out of 15,000 estimated, or 10.7 percent. A week later, the Army Corps had completed more than a third of the installations in Florida, compared with just 2.8 percent during the same period in Puerto Rico.

Jacqueline Tate, a spokeswoman for the Army Corps, wrote in an email that the agency faced multiple challenges with its blue roof program in Puerto Rico, including locating where victims lived based on their provided address and road closures resulting from landslides and debris.

Experts said it's difficult to pinpoint the exact costs of all these delays.

The official death toll as a result of Hurricane Maria currently stands at 64, compared with 103 from Hurricane Harvey, but a New York Times report in December, using a statistical analysis to compare deaths in the weeks after the storm with a similar period in 2015 and 2016, put the number as high as 1,052. According to the report, deaths from sepsis, pneumonia and breathing disorders jumped considerably. Local officials and experts are suspicious of FEMA's official death count and also said the delays, if not causing deaths, significantly aggravated the pain and stress felt by many Puerto Ricans.

Eventually, officials agree, FEMA's distribution of food and water accelerated; since the storm, FEMA has distributed more than 64 million meals and 72 million liters of water, both records for the agency. But the initial delays represented lost time that can never be recovered.

For FEMA, the response to Hurricane Maria put the agency in an unfamiliar position, forcing it to take on the lead role in the response when it typically acts as a support agency, fulfilling requests from state and local officials. In Puerto Rico, the state and local governments didn't always know what they needed or what they could even request. But after FEMA struggled under similar conditions after Hurricane Katrina, Congress gave

the agency additional authorities to send commodities and help with the emergency response even before it receives official requests from local officials. Many disaster response experts suggested that FEMA failed to use those authorities effectively after Hurricane Maria.

"My big mantra is I never get time back," said Fugate, the former FEMA administrator from the Obama administration, adding that he always erred on the side of sending relief supplies rather than waiting for an official request.

As hurricane victims look to start rebuilding their lives in the aftermath of a storm, many first turn to FEMA to apply for federal assistance. Applicants can receive a quick infusion of cash — up to \$34,000, depending on their needs and the severity of the damage — to start fixing their homes, money that also helps jump-start the local economy. But that money was slow to arrive in Puerto Rico.

According to FEMA data on its individual assistance program, the agency processed applications more slowly for victims of Hurricane Maria than victims of Hurricane Harvey. Nine days after Harvey, FEMA had already approved more than \$141.8 million in federal assistance, compared with just \$6 million during the same period after Maria. In fact, from Oct. 2 to Oct. 9, FEMA approved just \$6,008 in individual assistance for Puerto Rico.

A FEMA spokesperson explained that communications were a challenge in the first days after the storm, preventing Puerto Ricans from using the online application and making it difficult for federal officials to follow up with survivors. Many victims also had trouble proving their residency with a deed or title, the spokesperson said.

Still, Puerto Ricans found a way to register in the first two weeks. By Oct. 5, the agency had received 248,281 registrations for individual assistance, rising to 496,418 by Oct. 13.

Seventy-eight days after the two hurricanes, FEMA had received 18 percent more applications from victims of Maria than from victims of Harvey but had approved 13 percent more applicants from Harvey than from Maria. At the time, 39 percent of applicants from Harvey had been approved compared with just 28 percent of applicants from Maria.

"People are grateful for what FEMA was done. Mayors won't openly say we hate FEMA," said Sen. Eduardo Bhatia, the minority leader of the Puerto Rico Senate. "But if you talk to them enough, they will say it was totally frustrating. It was an absolute mess. No communication, no coordination, no chain of command and certainly no reasonable plans given the magnitude of the problem."

A little before noon on Oct. 3, Air Force One landed at the Luis Muñiz Air National Guard Base in Carolina, Puerto Rico, where Trump was scheduled to get a first-hand look at the devastation wrought by Hurricane Maria, his first trip to the island since the storm hit 13 days earlier. He visited Texas twice in the first eight days after Harvey but was slower to visit Puerto Rico, the NSC spokesperson said, so that his trip "didn't have a negative impact on ongoing response operations."

Nonetheless, Puerto Ricans were grateful for the chance for national attention, given what they considered the still-daunting magnitude of the crisis.

Quickly, however, they realized that Trump's visit wasn't going to include the worst-hit areas, and that Trump didn't have patience for any complaints.

Instead, the carefully scripted trip appeared to be something of a victory tour, as Trump praised FEMA's response and gave an "A+" to Long, the FEMA administrator, and touted the fact that the death count at the time stood at 16, compared with nearly 2,000 after Hurricane Katrina.

At a briefing on the base, he indirectly alluded to Puerto Rico's financial woes, suggesting that the federal response to the storm was creating new challenges for Mick Mulvaney, the White House budget director. "Now, I hate to tell you, Puerto Rico," Trump said, "but you've thrown our budget a little out of whack because we've spent a lot of money on Puerto Rico, and that's fine."

On a walking tour during the afternoon, Trump visited a neighborhood in nearby Guaynabo, an effort to show the president the damage on the ground. But the area had been one of the least-affected neighborhoods in Puerto Rico, according to multiple Puerto Rican officials, because most of the houses were constructed with cement.

"Nothing happened. Everything was perfect," said Sandra Rodriguez, a communications consultant who lives eight minutes away from the neighborhood. "The only thing was, it didn't have any electric power."

At a church, Trump handed out bags of rice to local residents before taking paper towels and impersonating a basketball player as he shot them into the crowd, whose members scrambled to grab the free supplies. To many Puerto Rican residents, that image — Trump's arms arched as if shooting a three-pointer — illustrated the president's cavalier attitude toward the island.

"The president's visit made it very clear that he did not think this was a big deal," said Bhatia, the Senate minority leader. "The whole paper towel incident was silly. He was making a joke out of it."

The NSC spokesperson defended the location chosen for Trump's walking tour, saying the president was fully aware of the challenges facing Puerto Rico. "Had the president visited areas that were severely impacted by the Hurricane, security measures would have required that rescue and relief efforts be temporarily redirected, which is not what the president wanted," the spokesperson said.

James Norton, a senior official in the Department of Homeland Security under former President George W. Bush, said public appearances and visits to storm-wrecked regions play an important role in establishing priorities within the federal government — as Bush learned the hard way when he was criticized for not getting more personally involved in the Katrina recovery effort.

"Bush made every effort to correct [the mistakes made after Hurricane Katrina] given how many visits he made to the region," he said. "Compare that to Trump: He made one visit. That type of executive attention drives the bureaucracy. While there might be people working behind the scenes, not having that constant attention and trips to region does have an impact on the level of effort."

To some aides, Trump didn't seem to approach Hurricane Maria any differently than Hurricane Harvey. In both cases, he lauded the efforts of FEMA and the military, heaping praise on officials who he believed were reflecting positively on his administration. "He came across as a coach, like Mickey in those Rocky movies," one person familiar with his comments said. "'You're killing them, go get 'em.'"

But in Trump's Twitter feed, a proxy for his daily attention, he didn't seem particularly concerned with the fate of Puerto Rico after Hurricane Maria. According to a POLITICO tally, he tweeted just eight times about the island in the week after the storm, often to criticize Puerto Rico. In a three-part tweet on Sept. 25, he said Puerto Rico "is in deep trouble," due to its debt and infrastructure; during that same week, he tweeted 18 times about NFL players not standing for the national anthem. In comparison, in the week after Harvey, he was laser focused on the storm, tweeting 24 times about the relief efforts in Texas and repeatedly praising the first responders.

Trump also got into verbal disputes with local Puerto Rican officials, including the mayor of San Juan, Carmen Yulín Cruz, who criticized the federal response at a Sept. 29 news conference, saying that "We are dying and you are killing us with the inefficiency."

A day later, Trump struck back, slamming Cruz for her "poor leadership" and tweeting that she and "others in Puerto Rico ... want everything to be done for them."

"It was a little disheartening to see the exchange between the president and the mayor," said Michael Coen, former chief of staff of FEMA during the Obama administration. "It doesn't help morale at FEMA and the staff who are working hard."

On Oct. 12, more than three weeks after Hurricane Maria hit Puerto Rico, the president suggested that the federal government wasn't prepared to help the island indefinitely. "We cannot keep FEMA, the Military & the First Responders, who have been amazing (under the most difficult circumstances) in P.R. forever!" The next day, he walked back that tweet in another tweet, saying about Puerto Ricans, "I will always be with them!"

To many Puerto Rican officials and disaster experts, Trump's public comments about Puerto Rico, a territory with no voting representation in Congress, exacerbated the challenges it faces with the federal bureaucracy due to its political status. "There is certainly a different treatment and many of these things, in order to get some reaction, there has to be some pushing," said Rosselló.

The NSC spokesperson said in a statement that the idea that Trump's public comments negatively affected the federal response was a "ridiculous insinuation" and "an insult to the thousands of FEMA and other federal employees who were in Puerto Rico before, during and after the storms." The official added that such criticisms were "partisan political shots."

But there is a lot of evidence that political pressure can lead to a stepped-up disaster response.

In Texas, Senate Majority Whip John Cornyn (R-Texas) held up the nomination of the deputy director of the White House budget office for months over concerns about inadequate support for his state in the wake of Harvey. He finally allowed the nomination to move forward in February after Congress passed a bill with \$90 billion of disaster relief funding and Trump signed it.

Rep. Dan Donovan (R-N.Y.), who leads the House Homeland Security subcommittee on emergency preparedness, told POLITICO that even today, more than five years after Superstorm Sandy, he still has to keep lobbying FEMA to support his constituents on different issues resulting from the storm, such as flood insurance mitigation measures. "We are always putting pressure on them," he said.

Puerto Rico, with a single, nonvoting delegate in the House, can't hold up White House nominations. The territory doesn't have a full delegation of lawmakers — or congressional staffers — to put pressure on FEMA. "Unless you are God, you can't do the job of six people just yourself and without a vote," said Kenneth McClintock, the former secretary of state of Puerto Rico.

As of March 20, six months after Hurricane Harvey, Texas was already receiving federal dollars from FEMA for more than a dozen permanent projects to repair schools, roads and other public infrastructure that were damaged by the storm.

But for Puerto Rico, FEMA has so far not funded a single dollar for similar permanent work projects.

The gap is a result of Puerto Rico's decision to use an experimental formula for calculating the federal funds allocated to rebuild its public infrastructure. The new formula gives Puerto Rico significant flexibility during the rebuilding process, but it also requires the island to pay for any cost overruns, a burden that doesn't apply to Texas, where FEMA will pay for any excess costs. For a cash-strapped territory like Puerto Rico, which is more than \$70 billion in debt, the potential for cost overruns is a huge risk, making the decision to use the new formula across all rebuilding projects a somewhat surprising gamble.

But according to multiple congressional officials and people with direct knowledge of the arrangement, the island was forced to take that gamble. According to those people, White House officials, led by Mulvaney and Homeland Security Adviser Tom Bossert, told Puerto Rico that in order to receive money for permanent work projects, it had to adopt the experimental funding formula for all its projects.

That formula, which dates to Hurricane Katrina and was used on a major housing project after Superstorm Sandy, has never been tried on this scale and Puerto Rican officials weren't interested in being the guinea pig. But in a series of contentious meetings and conversations in late October, White House officials told Puerto Rico it had no choice, according to the congressional staffers and people with direct knowledge of the meetings.

On Nov. 2, with almost no media attention, FEMA published an amendment to its disaster declaration for Puerto Rico that required the use of the experimental funding formula across all projects. It had never been included in a disaster declaration before.

"This is unusual and when it came out, I had lots of phone calls from people," said Elizabeth Zimmerman, a former senior FEMA official who helped create the program when she was in the Obama administration.

Byrne defended the process, arguing that the administration did not force Puerto Rico to adopt the new formula.

"We made a strong case. We showed them all the pluses to it because of the flexibility you'd have, the increased use of mitigation," he said. "It speaks for itself. And at the end of the day, the governor put it in writing that that's how he wanted it done."

A senior administration official said it was "absolutely false" that FEMA forced Puerto Rico's hand.

Rosselló said the administration was "not explicit" in ordering Puerto Rico to adopt the experimental formula, which is known as 428 for its section in the Stafford Act, but he added that "they were very adamant about 428."

Rosselló also argued that the process has slowed down Puerto Rico's ability to rebuild its infrastructure. The process for authorizing permanent funding for Puerto Rico took 43 days, compared with 10 days for Texas. The U.S. Virgin Islands received that authorization within 15 days.

The senior administration official acknowledged that projects might get rebuilt quicker under the traditional payment method but said the delay reflects the time necessary to build back the island's infrastructure in a smarter, more effective way. "It does take a little more time to plan that out," the official said, adding that many emergency projects, including some road repairs and electricity generation, are ongoing. FEMA has already spent more than \$1.3 billion on such emergency projects.

Still, today, more than six months after Hurricane Maria, FEMA still hasn't funded any permanent work projects on the island as Puerto Rico and federal officials negotiate an agreement under 428. The most important piece of those negotiations is the cost estimate. Puerto Rico is on the hook for any overruns, so state officials are very concerned about who is conducting the estimate. According to Rosselló, FEMA agreed in November that Puerto Rico and FEMA would jointly be in charge of the estimate. "We had this explicitly written down in order for us to agree to 428," he said.

Byrne, however, suggested that FEMA would ultimately determine the estimate. "We're more than happy to have Puerto Rico engineers and engineering firms be part of this, and they can help us with the estimates," he said, citing an inspector general's report after Sandy that faulted FEMA for weaknesses in its financial controls in using the new formula. "At the end of the day, we're going to do the estimate." Any disagreements would go to a third-party panel for review, he added. "This is going to be fair."

Bryan Koon, who served as the director for Florida's emergency management agency from 2011 to last October, said he supports 428 and thinks it could help Puerto Rico. But if he were in charge, he said, he would object to FEMA conducting the cost estimate itself. "As a state guy, I would be opposed to that."

The senior administration official conceded that there is "tension" around the cost estimate but said it should reflect a collaborative approach. "We recognize that you don't want to take the number we're giving you and you have to recognize that we're not going to just take the number you give us," the official said. "That's the way this works."

The official also argued that the Trump administration has put Puerto Rico in a better position to use 428 by requesting and receiving from Congress an exemption from the requirement that the cost estimate be based upon the pre-disaster conditions of Puerto Rico's infrastructure. "That's a big deal," the official said. The exemption could prove lucrative to Puerto Rico, since FEMA now can now fund permanent work projects without deducting for any pre-existing damage that was not caused by Maria.

Experts on the formula said it could have additional benefits. It is, effectively, a block grant, allowing the island to more efficiently allocate resources to rebuild its roads, bridges and power system. Under the formula, FEMA also distributes the money up front, instead of reimbursing the island for individual projects, an important benefit for the cash-strapped territory that also cuts down on burdensome paperwork.

Rosselló said he was examining the formula before the White House approached him, realizing that it would be a mistake to rebuild Puerto Rico's outdated infrastructure to its previous condition. "Puerto Rico is in hurricane alley," he said. "It's going to come again."

But Rosselló and other Puerto Rican officials worry that the administration's position on 428 is representative of a broader White House strategy to limit funding toward Puerto Rico. The governor particularly pointed to the Treasury Department's decision to withhold more than half of a \$4.7 billion loan that Congress authorized for Puerto Rico in an October spending bill. Treasury said Puerto Rico didn't need the money, which was earmarked to help the island pay for essential services, since it had a cash balance of \$1.7 billion at the end of 2017. The two sides reached an agreement over the loan last week.

Rosselló believes the president is committed to funding Puerto Rico's recovery, but he's worried that it will not be a priority as the administration moves on to other issues. "When we asked for him a certain set of things ... [Trump] has responded," he said. "My concern is that somewhere along the way, it has sort of fizzled."

"I don't know who it is, but there certainly is evidence that they are trying to penny-pinch," the governor added.

The senior administration official rejected that accusation, saying, "I'm not sure where he is getting that impression" and noting that the federal government has already committed more than \$10 billion in funding to Puerto Rico. "Our No. 1 concern is to make sure we deliver for the people of Puerto Rico," the official said, adding, "Things take longer than anyone would like them to."

Puerto Rico's recovery will take many years and will continue to put pressure on the federal budget. The historic 2017 hurricane season and California wildfires have already forced Congress to pass three disaster spending bills, totaling more than \$140 billion, and another disaster spending bill could be needed later this year. The Trump administration, led by Mulvaney, has attempted to keep costs down, sending a funding request to

Congress in November that Democrats and Republicans both derided as too low. The White House budget office included in that request a list of spending cuts that Congress could use to offset the extra hurricane-related costs, which lawmakers also ignored in February's disaster spending bill.

Many Puerto Rican officials and disaster-recovery experts fear that the contentious battles over 428 and the Treasury Department loan are just the first of many future fights between Puerto Rico and the federal government. It's a fear shared by many in Puerto Rico, who, now more than ever, feel like second-class citizens.

"There is a lingering lack of knowledge about Puerto Rico and a lingering tendency to want to treat Puerto Rico differently," said McClintock, the former Puerto Rico secretary of state, "and always for the worst."

POLITICO Florida: Records, Zinke's office refute Scott framing of impromptu oil-drilling reversal [Back](#)

By Matt Dixon | 03/27/2018 05:05 AM EDT

TALLAHASSEE — When Gov. Rick Scott and U.S. Interior Secretary Ryan Zinke announced Jan. 9 Florida was "off the table" for offshore oil drilling, the governor cast the hastily arranged news conference at the Tallahassee airport as unplanned and the Trump administration's decision as something Scott had influenced at the eleventh hour.

In fact, Zinke's top advance staffer, whose job it is to plan ahead for such events, was in Tallahassee the previous day. And top officials from the offices of both Scott and the secretary were in regular contact for several days leading up to the announcement, according to more than 1,200 documents reviewed by POLITICO Florida as part of a public records request.

The documents, which include phone records, text messages, and emails, contradict the supposed spontaneous event that portrayed Scott as single-handedly securing a politically popular win for Florida's environmental future only days after the administration had spelled out a controversial new national five-year plan to boost offshore oil drilling. The event left Scott, at least for the moment, with a big victory to hold over Sen. [Bill Nelson](#) (D-Fla.), whom the term-limited Scott is almost assuredly challenging in 2018.

The records reaffirm the perception at the time that the Trump administration's decision to reverse course and remove Florida from the list was carefully choreographed to give Scott a political win in his widely expected challenge this year to unseat Nelson.

"Whatever Rick needs, they [Trump administration] will do. There will be net more offshore drilling, but the governor will get what he needs," one Republican who spoke directly with Zinke [told POLITICO Florida](#) at the time, a prediction that came true.

It will "be a big win, and it won't be Bill Nelson bringing it home," the Republican added.

Turns out all the optics were orchestrated long before that January day.

Zinke press secretary Heather Swift told POLITICO Florida Monday that "the governor's staff was certainly aware that the secretary was traveling to Florida at the governor's request," but Scott's office — at the time — gave no indication the meeting and oil drilling deal had been hashed out prior to the Jan. 9 airport meeting.

Scott's office did not include the meeting on his original public schedule, which is released each morning. The event was sent out as part of an amended calendar around 4:50 p.m. on January 9, about an hour before the event. Around the same time, Scott's office began telling reporters to get to the airport, but there was no notice prior to the amended statement and calls from staff. There was an absolute feeling in Florida political circles at the time that the announcement came out of nowhere.

The decision to give no public notice was done despite Zinke's staff being already in Tallahassee to help coordinate the event: "Even the shortest trips require a lot of coordination and planning," Swift said.

Scott spokesman McKinley Lewis said Monday Scott wanted the meeting with Zinke to "express his strong opposition to drilling off Florida's coast," but did not discuss the public perception that the meeting was not planned.

"Governor Scott was glad to have the opportunity to quickly meet with Secretary Zinke and get commitment from him in that meeting to take Florida off the table for future off shore drilling," Lewis said.

He did not return follow up questions about why the meeting was kept off Scott's original public Jan. 9 calendar.

Records clearly show Rusty Roddy, Zinke's former advance staffer, was in Tallahassee ahead of the Jan. 9 event helping coordinate with Scott's staff.

"Head's up. Secretary having issues with flight out of Atlanta," wrote Roddy in a text message the day of the event to Scott deputy chief of staff Craig Carbone. "Arrival here TBD but looks like it will be later than planned for sure."

Roddy, who is no longer with Zinke's office, acknowledged that the event was "planned" and that he was in Tallahassee prior to the airport meeting. Additional records further confirm the "off the table" airport event was not as hastily thrown together as it then seemed publicly. In emails, Roddy indicated he was planning to be in Florida before the event as early as Friday, Jan. 5, a day after Zinke announced Florida was on the oil drilling list, and days before the Jan. 9 airport event, which officials said was not planned.

"Look forward to seeing you guys Monday," he said in a Jan. 5 email to Jackie Schutz Zeckman, Scott's former chief of staff. She resigned Monday and is likely to join Scott's Senate campaign.

The way Scott's office framed the Zinke trip helped downplay the perception of political gamesmanship from the announcement. Scott's office maintains that 2018 politics had no role in the process, a sentiment they stressed in January.

"This is not about politics," John Tupps, Scott's communications director, told POLITICO Florida at the time. "This is good policy for Florida."

Records show that between the Jan. 4 announcement that Florida could see additional oil drilling rigs off its shore and the Jan. 9 meeting where the state was taken "off the table," Carbone spoke with Roddy, the Zinke advance staffer, 17 times, while Schutz Zeckman spoke with Kate MacGregor, who at the time was acting assistant secretary of Land and Minerals Management, seven times. MacGregor was the point person for much of the discussions, and traveled with Zinke for the Tallahassee rollout, records show.

The records show a general uptick in Scott administration contact with the Interior Department officials in the months leading up to the oil drilling announcements. Those increased conversations were something Scott talked about at the time, as he said he was lobbying to keep Florida off any oil drilling lists.

There were at least 60 calls Carbone and Schutz Zeckman had over the last three months of October with Interior officials. Prior to October, Scott's office and the Interior Department had discussions about various policy issues, but the discussions became much more frequent as the oil drilling announcements approached.

Nelson, Democrats and other Scott opponents always saw political motivations in the quick about-face by the Trump administration toward Florida. Scott was one of Trump's earliest political supporters, and is the current chairman of a pro-Trump super PAC.

"I have spent my entire life fighting to keep oil rigs away from our coasts. But now, suddenly, Secretary Zinke announces plans to drill off Florida's coast and four days later agrees to 'take Florida off the table?' I don't believe," Nelson said in a statement at the time. "This is a political stunt orchestrated by the Trump administration to help Rick Scott, who has wanted to drill off Florida's coast his entire career."

That last point has been one of debate. Nelson's camp has tied Scott to oil drilling, pointing to the fact that in 2010 when first running for office, Scott said that there must be "sound policies in place" when working to "explore the expansion of domestic drilling in the U.S."

Scott now opposes offshore oil drilling, and he immediately tweeted opposition to Trump's oil drilling plan when it was first announced in early January. That garnered him a "full flop" from PolitiFact Florida earlier this year.

His stance also opened a brief rift between the two political pals, but his past statements are not likely to go away headed into the mid-term elections.

"Just like Donald Trump," the Florida Democratic Party responded in January, "Governor Scott is trying to rewrite his long anti-environment record with a tweet."

This article first appeared on POLITICO Florida on March 26, 2018.

BSEE to review offshore safety permitting process for efficiency [Back](#)

By Ben Lefebvre | 03/26/2018 03:49 PM EDT

The Interior Department is asking career staff to come up with new ways to speed up permitting for offshore energy development.

Interior's Bureau of Safety and Environmental Enforcement will soon assemble teams of employees from various departments to periodically review the permitting process and look for ways to make it more efficient and consistent across the agency, BSEE announced today.

BSEE's regional directors and deputy regional directors will nominate employees to the teams, agency spokesman Greg Julian said.

"In the coming weeks, BSEE plans to identify permit types to be assessed and nominate team members for assessments to take place this year," Julian said.

The move comes as Interior tries to roll back regulations and otherwise speed the permitting process across all its agencies. BSEE earlier proposed to roll back Obama-era rules on offshore oil and gas well safety.

WHAT'S NEXT: Interior is still trying to decide whether to merge BSEE with the Bureau of Ocean Energy Management, which is in charge of offering offshore oil and gas drilling leases.

'Bellwether' auction shows weak demand for offshore oil leases Back

By Ben Lefebvre | 03/21/2018 01:22 PM EDT

An Interior Department auction for offshore drilling leases generated \$124.7 million, a relatively low amount that shows little industry interest as of yet in a key part of the Trump administration's offshore energy policy.

The Trump administration has promoted offshore drilling as part of its policy to increase oil and gas production, advertising this lease sale as the largest ever in the Gulf of Mexico. Interior for the second auction in a row put its entire Gulf holdings up for lease, breaking previous practice of only offering parts of the Gulf up for auction at a time. And it again offered reduced rates for less attractive, shallow water parcels as it did at its August 2017 lease sale in the Gulf.

Interior Secretary Ryan Zinke, who has proposed opening virtually the entire U.S. coastline to oil and gas exploration, recently pointed to the auction as a "bellwether" of industry interest in expanded offshore drilling, compared to surging onshore production in states like Texas and North Dakota.

But the auction brought in about the same amount of money as an August lease sale, which raised just \$121 million — about 40 percent below the government's initial forecast. As recently as March 2017, Interior raised over \$274 million with a single lease sale.

Interior has actively promoted coastal drilling as a way to boost oil and gas production, but so far hasn't been able to buck market trends that work against companies investing billions of dollars in deepwater projects that take years to start producing.

Michael Celata, regional director for the Gulf of Mexico region at Interior's Bureau of Ocean Energy Management, argued it was unfair to compare Wednesday's sale to results before Interior started offering leases in the entire Gulf up for sale last August.

"It's difficult to compare this sale to sales from years past," Celata told reporters on a conference call Wednesday. "The best comparison is directly to the last previous sale."

Celata did not have the numbers for how much BOEM had forecast this latest lease sale would generate. Celata also said that lowering the royalty rates for shallow water tracts may have helped increase interest in the area. Data released after the sale showed companies had bid for 43 tracts in shallow water regions, nearly double the number from the March 2017 lease sale when shallow water royalty rates had been higher.

Oil production coming from projects started in years past has helped bring oil production in the U.S. Gulf of Mexico to record highs, according to the Energy Information Administration. But more recently, Exxon, Chevron and other companies have hesitated to add more area to their operations in federal waters, preferring to drill in North Dakota, Texas and other onshore shale plays that have proven much cheaper to set up and much faster in producing new oil.

But the area is also facing new competition for industry attention as Mexico has become more open to allowing foreign companies to drill in its part of the Gulf. Mexico for decades only allowed its national oil company Pemex to drill in those waters, meaning the area is much less developed than on the U.S. side.

Shell and other international oil companies participated in a January auction of Mexican offshore oil leases, bidding aggressively despite fears that a change of government later this year could roll back the country's energy policy reforms.

In a time of low oil prices and strict limits on capital spending, companies have to decide whether to gamble on buying space in a less developed area or sticking to known territory on the U.S. side, said Bernadette Johnson, VP of market intelligence for Drillinginfo, an industry research organization.

"You may do both, but many won't," Johnson said. "Companies are going to be much choosier because margins are tight and are going to stay tight."

Subject: Morning Energy, presented by Chevron: Pruitt makes his Senate return — Emails: Pruitt pushed 'red team-blue team' climate debate — The WIFIA balancing act

By Kelsey Tamborrino | 05/16/2018 05:40 AM EDT

With help from Anthony Adragna

TIME TO FACE THE MUSIC: Scott Pruitt hits the Hill again today, and on top of the questions he can expect on his lavish spending and ethical quandaries, the EPA administrator will be asked to explain why EPA helped to bury a federal study that would have increased warnings about toxic chemicals found in hundreds of water supplies across the country. As POLITICO reported this week, emails released under the Freedom of Information Act indicate the study was being prepared for release in January, before EPA intervened. It has not been made public more than three months later and the agency producing it says it has no timeline for doing so.

Now lawmakers are looking for answers, including Republicans whose districts suffered contamination from the chemicals PFOA and PFOS, which are linked with certain cancers, thyroid problems and life-threatening pregnancy complications. Annie Snider, who broke the story, has more on the fallout [here](#).

Plus, today's hearing in front of a Senate Appropriations panel comes less than 24 hours after yet [another probe](#) was launched by the agency's inspector general into the handling of Pruitt's emails. That brings the number of probes and investigations into his behavior to an even dozen.

Sparks flying: When Pruitt last appeared on the Hill in April before two House committees, he played the [blame game](#), in part pushing the burden of some of his ethical decisions onto his staff. And since today's appearance will be his first before the Senate since the steady drip of news stories began earlier this year, he'll face a range of inquiries from Democrats, some of whom have been leading the charge against him. The subpanel's ranking Democrat, [Tom Udall](#), has been critical of Pruitt in the past and plans to question him on his spending and ethical issues. "Administrator Pruitt, it's hard to know where to begin this morning. Every day there seems to be a new scandal ... with you at the dead center," Udall will say.

Expect the New Mexico Democrat to discuss the [range of investigations](#) that currently eye Pruitt. "I can only wonder if more investigations will start based on your fast-tracking a new Superfund site at the behest of a conservative media personality and other reports that EPA has taken quick actions to help political donors and lobbyists," he'll say, referencing another [POLITICO story](#).

Both Democrats and Republicans on the subcommittee tell ME they want to discuss the policy at hand. Republican [Shelley Moore Capito](#) said she wants to ask Pruitt about a number of different things, but added she wanted to "just concentrate on the policy." Still, Democrat [Chris Van Hollen](#) said he has a long list of questions for the administrator that involve policy as well as a "betrayal of the public trust." And, fellow subpanel Democrat [Jeff Merkley](#) told ME: "[I] certainly want to get a better understanding of why he feels that he's so comfortable using government funds in all kinds of inappropriate ways, but also the policy."

Separately, EPW Chairman John Barrasso, who is not on the Appropriations committee, suggested [in a letter](#) Tuesday he'll also be watching to see what comes out of today's hearing. That letter comes in response to a request from six Democratic EPW members, who [demanded](#) Barrasso bring Pruitt before the panel. Barrasso

said EPA provided Pruitt's responses to previous questions from the panel earlier this week and added that he intends to call Pruitt for another hearing but will wait to see what comes out of the ongoing probes already looking into Pruitt's activities.

In the crowd: Environmental groups in the audience today will look for senators to ask the tough questions. Moms Clean Air Force will be bringing in local moms and their children, and the group will hand out their Pruitt "report card." Similarly, the Environmental Defense Fund will be watching to see if Pruitt dodges on questions that aim to hold him accountable. EDF will again hand out its "Non-Trivial Pruitt Questions" cards and dropped off hard copies of its "101 Questions" document to committee members' offices. **If you go:** The hearing kicks off at 9:30 a.m. in 124 Dirksen.

GONE QUIET: Sen. Jim Inhofe told reporters he hasn't talked with his buddy Pruitt in "about a month" but said the former Oklahoma attorney general is "weathering the storm" fine. But, he predicted, the tempest was not done yet. "Storms are never over," he said. "They always come back — you know that — in Washington."

WELCOME TO WEDNESDAY! I'm your host Kelsey Tamborrino. Clean Energy Business Network's Andy Barnes was the first to guess that two bathtubs remain in the Senate after they were uncovered in 1936 — although six were first installed in the chamber. Today's question: Who was the first sitting member of Congress sentenced to prison? Bonus points if you can guess the charge. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

THIS MIGHT COME UP: New communications reveal additional details about how the controversial red team-blue team debate over climate science would have played out at EPA and who was influencing Pruitt. Pro's Alex Guillén and Anthony Adragna report on a draft press release that circulated on Nov. 4 among top EPA officials, which laid out the line of attack. "EPA is standing up a Red Team peer review of the report," they wrote, rebuffing the Fourth National Climate Assessment, which countered many Trump administration political appointees who have questioned the connection between greenhouse gas pollution and global warming. The "blue team" would essentially be the federal assessment and its authors. Read more on that here.

THE WIFIA BALANCING ACT: A battle is brewing between small and rural communities and the larger ones whose infrastructure projects can be costly — and it could upend a bipartisan effort to pass the first major infrastructure bill during the Trump era. Annie reports on the measure at hand, called the Securing Required Funding for Water Infrastructure Now, or SRF WIN Act. The provision would expand the WIFIA program that loans federal money for water infrastructure projects at Treasury's attractive long-term interest rates, but also includes changes to make the WIFIA program more accessible to small and mid-sized communities. Now the measure has sparked opposition from the groups that originally conceived of the WIFIA program, who say the new proposal tilts too far toward the small communities. Read more here.

**** A message from Chevron:** Chevron and local partners are helping to provide DOERS with the hands-on technical training needed for today's jobs in the manufacturing and energy industries. Watch the video: <https://politi.co/2rBPIuI> **

CANCEL THOSE VACATIONS: Senate Appropriations Chairman Richard Shelby told reporters he's been in talks with Majority Leader Mitch McConnell about shelving the chamber's planned August recess unless they make more progress in the appropriations process. "We might not have an August recess," he said. Asked if it would be realistic to do so in an election year, Shelby quipped: "Might not be realistic for the Democrats — they have a lot more seats." Put ME down as skeptical on this one. Never underestimate the power of late July jet fumes.

INTERIOR-EPA PACKAGE MOVES AHEAD: The House Appropriations Committee's Interior-Environment panel cleared a \$35.25 billion spending package on Tuesday, setting the measure up for committee consideration as early as next week. The bill cleared on a voice vote, Alex reports, and is likely to face contentious amendments before the full committee. Alex breaks down the bill further here.

FOR YOUR RADAR: The full House Appropriations Committee will mark up the fiscal 2019 Energy-Water bill this morning. Read the bill text here.

ENERGY NOM ON TAP: The Senate Foreign Relations Committee will hold a markup on the nomination of Frank Fannon to be an assistant secretary of State for energy resources. Fannon was a former staffer to Inhofe, who released a statement ahead of the vote that called the nominee a "good friend." Inhofe pointed out expanding U.S. energy exports to Eastern Europe, and said Fannon "can use his leadership and expertise effectively to advance American energy dominance and enforce energy sanctions, like those against Russia and Iran."

LISTEN IN: EPA announced Tuesday its Office of Enforcement and Compliance Assurance will host a series of "web-based listening sessions" beginning May 21, on specific recommendations from the agency's Superfund Task Force Recommendations Report.

NEW FOSSIL FUEL ALLIANCE COMING? The Trump administration is weighing the creation of "a new, central institution" that would advocate for natural gas and coal technology and exports, according to draft document obtained and reported on by E&E News. The draft "Clean and Advanced Fossil Fuel Alliance" talking points, though "pre-decisional," lay out a previously described loose affiliation of countries the United States is courting. Read the story here.

MONIZ UNVEILS ENERGY EMPLOYMENT REPORT: Former Energy Secretary Ernest Moniz will unveil the third installment of the 2018 U.S. Energy & Employment Report this morning. The report arrives via Energy Futures Initiative — where Moniz is CEO and president — and the National Association of State Energy Officials. It was originally established during Moniz' time at the DOE, and offers insight into the employment trends of four energy sectors. Moniz will be joined by NASEO head David Terry and author David Foster, as well as Senate Energy ranking member Maria Cantwell. The event will be livestreamed on both the NASEO and EFI websites.

JUDGES HALT ATLANTIC COAST: A federal appeals court ordered the construction of the Atlantic Coast pipeline be halted, following a legal challenge by environmental opponents who argued a review by the U.S. Fish and Wildlife Service was inadequate, the Richmond Times-Dispatch reports. The order vacates FWS' Incidental Take Statement. In a research notice sent by ClearView Energy Partners, the group said there was "a high probability that FERC will direct suspension of construction operations in these areas while the FWS revises the ITS."

NSR PERMITTING FOCUS OF HEARING: The House Energy and Commerce Environment Subcommittee holds a hearing on new source review permitting reform this morning. EPA air chief Bill Wehrum will testify, as well as Bracewell's Jeff Holmstead, NRECA's Kirk Johnson and NAM's Ross Eisenberg, among others. Although the administration doesn't have an official position on the discussion draft that is the focus of the hearing, Wehrum will say the current "program is unnecessarily complicated and confusing," and should be improved.

Eisenberg will say that NAM supports the bill and the need to reform NSR, more so now than ever. "One of our members estimates that there are over a hundred million tons of CO2 that could be reduced by deploying the full suite of available turbine upgrades at power plants," he'll say, adding that many such upgrades "have been impeded because they may potentially trigger NSR." **If you go:** It begins at 10:15 a.m. in 2322 Rayburn.

NWF MEETS WITH ZINKE: The National Wildlife Federation will meet today with Interior Secretary Ryan Zinke, where the group will discuss conservation issues. Ahead of the meeting, the group submitted five of its priorities, including concerns about some of the locations of upcoming lease sales and mining proposals and Zinke's broader conservation agenda.

Heads up! Zinke will deliver the keynote speech at next week's annual Williston Basin Petroleum Conference, in Bismarck, N.D., local KFYY-TV [reports](#).

IT'S A BIRD, IT'S A DRONE: Interior is for the first time investing in small-unmanned aircraft systems services, or drones, to help tackle wildfires. DOI [awarded](#) a "Call When Needed" contract to four U.S. companies, which will allow the agency to employ the drones when needed to support wildland fire operations, search and rescue and emergency management.

MAIL CALL! A group of 20 Democratic senators called on Pruitt Tuesday to extend the comment deadline until July 30 for the agency's "secret science" proposal to ban the use of studies that don't publicly disclose all their data, and to hold more public hearings on the topic. Read [the letter](#).

— **Ahead of the House's vote on the farm bill**, 114 state legislators signed a letter in opposition to a provision they say would exempt EPA from key requirements under the Endangered Species Act that protect pollinators. Read it [here](#).

STUDY: BUSINESSES TAKING THE LEAD: Deloitte is out with two new reports today — one on global battery storage markets and another on energy management and consumption views from businesses and consumers. The latter report found that businesses are taking the lead to address climate change. They are reviewing or changing their energy management policies in response to the U.S. pulling out of the Paris climate agreement, the report found. According to the report, the number of companies with carbon footprint goals increased to 61 percent in 2018, from slightly more than half the year before. Read that report [here](#) and the energy storage report [here](#).

REPORT OUT ON MANUFACTURING AT DOE: The Information Technology and Innovation Foundation will release its new report today reviewing DOE's "Manufacturing USA" institutes, looking at areas of progress and stability. Given the potential ITIF says the institutes have to bridge gaps in private sector investment, the report lays out national goals at stake at the nexus of manufacturing and energy, and outlines why federal action is necessary. Read the report [here](#).

Stories from POLITICO Pro

EPA move on chemical study may trip up Pruitt [Back](#)

By Annie Snider | 05/16/2018 05:02 AM EDT

EPA Administrator Scott Pruitt is facing a new controversy over chemical contamination that could prove even more damaging than his spate of recent ethics scandals.

When Pruitt returns to Capitol Hill Wednesday, he will likely be asked to explain why EPA helped to bury a federal study that would have increased warnings about toxic chemicals found in hundreds of water supplies across the country. A handful of Republicans were quick to demand answers after POLITICO reported Monday that senior aides to Pruitt intervened after the White House warned of a "public relations nightmare" from the impending Health and Human Services Department assessment.

While Pruitt has said partisan witch hunts are to blame for the controversies around his first-class travel, extensive security spending and friendliness with lobbyists, he will struggle to make the same case this time. Emails released under the Freedom of Information Act indicate the HHS study was being prepared for release in January, before EPA intervened. It has not been made public more than three months later, and the agency producing it says it has no timeline for doing so.

Long used in Teflon and firefighting foam, the chemicals PFOA and PFOS are linked with certain cancers, thyroid problems and life-threatening pregnancy complications. Studies have found them in 98 percent of Americans' blood, and communities from West Virginia to Michigan to New York have been in an uproar after discovering that their drinking water has been contaminated with the chemicals.

Tristan Brown, who served as the Obama administration's liaison between EPA and members of Congress when the agency issued a health advisory for PFOA and PFOS in 2016, said that lawmakers on both sides of the aisle are deeply concerned about the issue. He said anger over the Trump administration's interference could snowball if powerful Republicans who have experienced contamination in their states speak out strongly.

"That could be the beginning of a breach of the dam," Brown said.

Already, key Senate Republicans have shown their willingness to break with the Trump administration when it comes to chemical contamination. In December, North Carolina's two Republican senators came out in opposition to the administration's nominee to head EPA's chemical safety office, industry consultant Michael Dourson, in part because of a crisis in their home state with a chemical similar to PFOA and PFOS, called GenX.

At least three Republican lawmakers have joined a host of Democrats in demanding answers from the Trump administration about the HHS study.

Sen. Shelley Moore Capito of West Virginia, which experienced a major chemical spill a few years ago and has a major PFOA and PFOS problem, said she wants to see the study made public.

"It's important that the findings of the study are released so we can determine the health impacts and any potential threats our communities may face as a result of exposure to perfluorinated chemicals. I would encourage the administration to look into this matter," Capito, a member of the Appropriations subcommittee with EPA jurisdiction, where Pruitt will testify Wednesday, said in a statement to POLITICO.

Rep. Mike Turner (R-Ohio), who chairs a House Armed Services subcommittee, chimed in as well.

"This is not an issue of public relations — this is an issue of public health and safety," he said in a statement Tuesday after writing to Pruitt on the matter.

"It would be unacceptable if the political considerations of those at the highest levels of the EPA led to the suppression of information concerning the public health of Americans," Rep. Brian Fitzpatrick (R-Pa.) said in a statement. "The EPA must provide my constituents with answers to these allegations immediately."

"It is vital that there are proper measures in place to perform accurate, expeditious, scientific assessments for chemicals that pose a threat to public health," he said in a statement to POLITICO, citing his state's "tragic history" with chemical contamination.

Pruitt says he is taking the chemicals issue seriously. Not long after the North Carolina senators torpedoed the chemicals nominee, Pruitt announced a "leadership summit" on PFOA, PFOS and related chemicals that is scheduled to be held at EPA headquarters next week.

But few are expecting his response to include any new regulatory action.

EPA has not regulated a single new contaminant under the Safe Drinking Water Act in more than two decades. The agency's 2016 drinking water advisory only provided advice to the states and local water managers — it set no mandatory limits.

And Pruitt's EPA doesn't even plan to go that far for other chemicals. The agency's No. 2 water official, Dennis Lee Forsgren, has told drinking water groups that under Pruitt, the agency won't issue any new health advisories for GenX or other chemicals.

Betsy Southerland, a career staffer who led work on the 2016 health advisory as director of science and technology at EPA's water office before resigning last year, said states would have to translate the information provided by EPA about the chemicals into health advisory levels or drinking water limits on their own, something few are equipped to do.

Pruitt's "not allowing EPA to provide the state with that expertise," she said.

EPA spokesman Jahan Wilcox, defending the agency's approach, said officials are "stressing that all options — not just health advisories — are on the table as we move into the National Leadership Summit and taking additional steps to address PFAS."

EPA watchdog launches new probe into Pruitt's email habits [Back](#)

By Anthony Adragna | 05/15/2018 06:18 PM EDT

EPA's inspector general said Tuesday it would look into Scott Pruitt's use of nonpublic email accounts, bringing the number of federal probes into the EPA administrator's behavior to an even dozen.

Specifically, the inspector general said it would look into whether Pruitt is properly preserving email records as required under federal law and whether the agency is properly searching all of his accounts in response to public records requests.

Two senior Senate Environment and Public Works Committee Democrats — ranking member Tom Carper of Delaware and Jeff Merkley of Oregon — released [the letter](#), dated May 2, confirming the probe.

EPW Chairman John Barrasso (R-Wyo.) has previously raised concerns about Pruitt's use of nonpublic email accounts. In response, the agency said it searches all of his accounts when responding to public records

requests. Previous EPA administrators also routinely used nonpublic accounts for day-to-day email communications.

The new probe comes as Pruitt faces a litany of questions surrounding his spending and ethical woes. EPA's inspector general, the Government Accountability Office and the House Oversight Committee are all looking into aspects of his conduct.

Those probes involve Pruitt's first-class travel, use of security on personal trips, pay for top political aides and a sweetheart condo deal with an energy lobbyist who later met with him, among others.

In the letter, EPA Inspector General Arthur Elkins warned that a stretched budget and staff meant he could not say when the probe would begin.

"The fact is that the OIG has been funded at less than the levels we deem adequate to do all of the work that should be done, and we therefore have to make difficult decisions about whether to accept any given potential undertaking," he said. "However, despite these constraints, we have determined that the issues raised in your letter are within the authority of the OIG to review, and we will do so."

Pruitt is set to appear before a Senate Appropriations subpanel Wednesday.

EPA staff in 'despair' after Pruitt blame game [Back](#)

By Emily Holden | 04/27/2018 05:33 PM EDT

Scott Pruitt may have survived his testimony on Capitol Hill, but he's coming back to a further enraged and demoralized Environmental Protection Agency staff.

Several current and former EPA officials and other people close to the agency said Pruitt did himself no favors with his congressional testimony Thursday, in which he blamed his aides for installing a \$43,000 privacy booth in his office and approving more than \$100,000 in first-class flights that he took last year. Pruitt also denied knowing key details about raises that his top staff received last year. And he declined to defend his former policy chief against Democrats' accusations that she had failed to show up for work for three months, even though she and Pruitt had been photographed attending the same meeting during the period in question.

In conversations with 11 people who know the atmosphere inside EPA, including Republican political appointees, a handful said his refusal to grovel may have pleased President Donald Trump. But others said his strategy was appalling to the current and former staffers who found themselves thrown under the bus.

"I think his credibility is damaged, and whether or not he gets fired by a tweet isn't going to diminish the fact that his credibility has been seriously damaged by all of this," one person close to the administration told POLITICO. "It shows a real lack of leadership that he did not defend, or blame, his staff. These are the people that he's asking for loyalty from. These are the people that are defending him. He's not returning the favor. That's not leadership."

A current EPA official said Friday that employees are veering between "despair" and "embarrassment," and Pruitt's televised performance did not help.

"I will tell you, it did not go unnoticed from people who watched the hearing that he did not take responsibility on the policy pieces" of the testimony, the official said. "It was not lost on us on the stuff we know about that he used very careful language, he was parsing his words, that some might say he did not speak the whole truth."

One former EPA official said even political aides are "sick of Pruitt constantly putting himself first," and "putting himself before the president's agenda."

"He's rarely been interested in selling regulatory reform as improving Americans' lives, and is far more interested in saving his political career," the former official said.

But Trump has shown no signs of abandoning his EPA chief, who has won the strong backing of conservative groups with his efforts to erase Obama-era environmental regulations. So far, that has outweighed the anger of White House staff members and exasperation of key Republican lawmakers at Pruitt's series of controversies over luxe travel, extensive security, a below-market D.C. condo rental from a lobbyist and history of questionable real estate deals in his native Oklahoma.

A senior EPA official said Pruitt's strategy of fighting the allegations was designed to appeal to Trump, who disdains members of his team who appear weak on television.

"They like fighters no matter what," the official said. "No matter what, fight. That's what we've been conditioned to."

The official predicted that the White House takeaway from the hours of hearings would be that Republican lawmakers stood with Pruitt, while Democrats squandered their opportunity by spending too much time criticizing Pruitt's deregulatory agenda — which Trump supports — rather than hitting him for the ethics issues.

"Any audience would say the White House saw a Republican bench entirely supportive of him," the EPA source said. "On the Democrat side, the White House also saw Democrats who used half their time to criticize policies he's doing that the White House likes. If they wanted to land punches, why do you ask about these policies? That's not going to do it for you."

Pruitt ally Sen. Jim Inhofe (R-Okla.) took that message from Thursday's hearings, despite saying earlier in the week that he was troubled by some recent allegations about the EPA leader's past dealings in Oklahoma. "After a full day of mudslinging and partisan questioning from the Democratic members of the committees, it is clear that the only fault they could find with Scott Pruitt is that he's successfully ending the EPA's history of overreach and over-regulation," Inhofe said in a statement Friday.

Still, the senior EPA official said, Pruitt's relatively good day in Congress could be "washed away" if his inconsistencies about what he knew about the raises generates a steady narrative that he lied to the White House, as at least one CNN pundit alleged.

And until Trump weighs in, the tension around Pruitt at EPA will remain high.

"There needs to be a halt to this because it's exhausting," the same official said.

Pruitt also still faces multiple investigations inside the executive branch and on Capitol Hill. On Friday, for example, the agency was due to deliver a "batch of documents" to the staff of House Oversight Chairman Trey Gowdy (R-S.C.), who is leading one of the probes.

Departed EPA aides who have said Pruitt didn't tolerate internal criticism of his spending and secrecy say current staffers still fear they'll be similarly swept up in the scandals — but won't be able to find jobs if they quit now and gain a reputation for disloyalty.

"They're trying to do the best they can in a toxic environment," one former staffer said. "You cannot express any idea that might be misconstrued as a political attack on Pruitt or any policy issues, so people just do what they're told. They're professional. ... They don't want to get caught in an undertow."

Another former EPA official has been getting phone calls from staffers who are frustrated by the controversies but keeping their heads down.

"Everyone in the building wants to come out and say something ... but as soon as they say something, they're out of a job," that person said.

Not everyone in the agency was upset that Pruitt pinned many of his controversies on his staff Thursday, after giving an opening statement in the House in which he confessed that his first year on the job had been "a learning process."

"When he was putting it on staff, that's the reality of it," one current EPA political appointee said. "Sure, he's the administrator; sure, he's the head of the agency. That doesn't mean he was aware of the \$40,000. He asked for a secure phone line and the next thing you know it turned into a secure phone booth. ... Overall, I think his staff continue to stand beside him today and will continue to do that."

In his testimony, Pruitt said he had never asked for a \$43,000 secure phone booth — only "access to secure communication" — or biometric locks for his office, and he said his security staffers made the call for him to fly first-class to avoid possible threats from other passengers. He said he had authorized his chief of staff, Ryan Jackson, to give raises to his top staff but had no idea that they were circumventing disapproval from the White House. And he chose not to defend his former policy chief against allegations from Democratic lawmakers that she was not in the office for months, even though an EPA spokesman had dismissed the accusations as "baseless and absurd."

A second political appointee said Pruitt didn't break any new ground with his defenses and that controversies dogging him had been "all blown out of context."

The person called Pruitt a "disruptor" and said "folks don't like that aggressive style."

"Administrator Pruitt speaks for a certain aspect of the Trump administration conservative movement," the appointee said.

Pruitt fast-tracked California cleanup after Hugh Hewitt brokered meeting [Back](#)

By Emily Holden and Anthony Adragna | 05/07/2018 10:12 PM EDT

EPA Administrator Scott Pruitt placed a polluted California area on his personal priority list of Superfund sites targeted for "immediate and intense" action after conservative radio and television host Hugh Hewitt brokered a meeting between him and lawyers for the water district that was seeking federal help to clean up the polluted Orange County site.

The previously unreported meeting, which was documented in emails released by EPA under a Freedom of Information Act lawsuit by the Sierra Club, showed Pruitt's staff reacting quickly to the request last September by Hewitt, who has been one of Pruitt's staunchest defenders amid a raft of ethics controversies around his expensive travel, security team spending and a cheap Washington condo rental from a lobbyist.

Pruitt has drawn criticism from environmentalists and other critics for letting prominent GOP backers and industry groups influence the agency's agenda — even as he has kicked scientists off of EPA's advisory panels and moved to limit the kinds of peer-reviewed research it will consider when making decisions.

In many cases, the people whose advice Pruitt is heeding could be useful supporters for him in a future race for U.S. senator or president. They include GOP megadonor Sheldon Adelson, who — as POLITICO reported in March — persuaded Pruitt last year to take a meeting with an Israeli water purification company called Water-Gen that later won a research deal with the EPA.

Hewitt, a resident of Orange County whose son James works in EPA's press office, emailed Pruitt in September to set up a meeting between the administrator and the law firm Larson O'Brien, which employs Hewitt and represents the Orange County Water District. Pruitt had been planning to meet with the lawyers in California a month earlier, but cancelled the trip to undergo knee surgery.

"I'll join if the Administrator would like me too or can catch up later at a dinner," Hewitt wrote in his Sept. 18 message. Hewitt added that the issues surrounding the Superfund site were "Greek to me but a big deal in my home county."

Pruitt's aides responded within minutes and quickly confirmed an Oct. 18 meeting for the lawyers and a project director.

Six weeks after that meeting, on Dec. 8, the Orange County North Basin site appeared on Pruitt's list of 21 contaminated areas to address. A month later, Pruitt proposed listing the site on EPA's National Priorities List, a move that could make it eligible for long-term federal cleanup funding from the federal government if the responsible polluters cannot be identified and forced to pay for its remediation.

Since then, Hewitt has been a robust defender of Pruitt, dismissing his recent controversies as "nonsense scandals" on MSNBC in early April and saying his detractors were "just trying to stop the deregulation effort."

Pruitt has touted the agency's Superfund work as one of his key priorities, setting up a task force to seek to speed up the clean-up of the nation's worst contaminated sites. That task force had been headed by Albert "Kell" Kelly, a former banker and longtime friend, who departed the agency last week after news about loans he provided to Pruitt in Oklahoma, including the mortgage provided to Pruitt for a house he bought from a lobbyist when he was a state senator.

Environmental advocates have worried Pruitt's efforts to identify Superfund priority sites would bypass the process set up by Congress to ensure cleanup resources are divided fairly, and that he could focus on sites seen as important to his political supporters. And environmentalists have said Pruitt's rush to claim that contaminated properties have been remediated could risk turning them over to local governments and businesses that might pursue cheaper, inadequate solutions.

Elgie Holstein, senior director for strategic planning at the Environmental Defense Fund who has been tracking EPA's Superfund actions, said the connection to Hewitt is "not a surprise."

"The biggest fear we have is that No. 1, the administrator's political priorities and personal ambitions, political ambitions become the primary criteria for action under this program instead of science and health," Holstein said.

EPA never disclosed the meeting with Hewitt's contacts. It was listed on Pruitt's public calendar as a staff briefing. But on his private Outlook schedule, which the agency has released in response to lawsuits, it appeared as an "Orange County Superfund Site" meeting with Kelly and two other staffers. The records did not list the Californians in attendance at the meeting at EPA headquarters in Washington.

But EPA spokesman Jahan Wilcox confirmed that two lawyers representing the water district, Robert O'Brien and Scott Sommer, and the water district director of special projects, Bill Hunt, were there. A third lawyer, former federal Judge Stephen G. Larson, was forced to cancel his trip due to wildfires in California, according to emails.

"Hugh Hewitt helped arrange the meeting at the request of the water district but did not attend," Wilcox said.

Wilcox said the meeting was for the water district to "brief EPA on the Superfund site's cleanup efforts and request expedited cleanup," following a 2016 agreement with the agency to conduct a remedial investigation and feasibility study, at a cost of \$4 million over two years. Hunt did not immediately respond to a request for comment.

Hewitt in an email to POLITICO called Pruitt a friend and said he does not have a working relationship with him. He said that his firm has represented the water district and worked on the site with EPA's regional office for years but that he had not participated in that work.

Hewitt said he requested a meeting because the water district wanted to brief the new EPA team, he said, adding that he was an Orange County resident until 2016 as well as an Orange County Children and Families Commission member. He said that he "very much" wanted the Superfund site remediated as soon as possible.

According to an EPA fact sheet, the Orange County site has more than five square miles of polluted groundwater containing chlorinated solvents and other contaminants across the cities of Anaheim, Fullerton, and Placentia. It includes the Orange County Groundwater Basin, which provides drinking water to more than 2.4 million residents across 22 cities, according to the agency. Those pollutants can damage humans' nervous systems, kidneys and livers, and some are considered carcinogenic.

EPA has just begun its process of studying the contamination and it has not determined which companies caused the pollution in the area. But an administrative settlement with the EPA in 2016 says the area was home to "electronics manufacturing, metals processing, aerospace manufacturing, musical instrument manufacturing, rubber and plastics manufacturing, and dry cleaning."

Hewitt also thanked EPA schedulers for working to arrange a meeting between Pruitt and the California Lincoln Clubs, which describe themselves as in favor of "limited government, fiscal discipline and personal responsibility." After some rescheduling Pruitt eventually met with representatives of the group on a trip to California in March of this year, according to his public calendar. Prominent Orange County businessman John Warner also helped to connect that group with staffers.

Pruitt and his scheduling staff have frequently sought to set up meetings with or for influential Republican figures, according to the internal EPA emails.

His team accepted an invitation for him to address The Philanthropy Roundtable at an invitation-only event at the White House for "conservative and free-market foundation CEOs and individual wealth creators to discuss the greatest opportunities for foundations to protect and strengthen free society" and "what [Pruitt] views as unique opportunities for philanthropic action.

As POLITICO reported in March, Pruitt also met with an Indiana coal executive and Trump fundraiser who was seeking to soften a pollution rule.

Pruitt also crafted his travel schedule — including a tour of states in August — to meet with big business much like a member of Congress would during the annual recess.

In July, EPA's associate administrator of public engagement Tate Bennett was working with Pruitt to "essentially create an August recess for the EPA to be out in the states talking with individual companies & doing listening sessions within sectors," said Leah Curtsinger, the federal policy director for the Colorado Association of Commerce & Industry, in an email introducing Bennett to her husband, public affairs director at coal company Cloud Peak Energy and a fellow alum of Senate Majority Leader Mitch McConnell's office.

Annie Snider contributed to this report.

Emails show Pruitt pushing 'red team-blue team' climate debate [Back](#)

By Alex Guillén and Anthony Adragna | 05/15/2018 06:39 PM EDT

EPA Administrator Scott Pruitt had hoped at least twice last year to announce his plans for a controversial red team-blue team debate that would take aim at a federal assessment supporting climate change science, according to newly released emails.

Pruitt's contentious review was abandoned because of the White House's objections, but the communications reveal new details about how the process would have worked and who was influencing Pruitt.

Many scientists have complained that a red team-blue team style debate was a poor way to examine the scientific evidence that overwhelmingly supports the findings that humans are the primary driver behind climate change. But for Pruitt, who had once suggested the event might be televised, the debate appeared to be directed at rebuffing the Fourth National Climate Assessment.

That government-wide report issued on Nov. 3 contradicted many Trump administration political appointees who have questioned the connection between greenhouse gas pollution and global warming.

A draft press release that circulated on Nov. 4 among top EPA officials, and which was shared with Pruitt on Nov. 5, laid out the line of attack, according to the documents made public on Tuesday by EPA following a records request from the Natural Resources Defense Council.

"EPA is standing up a Red Team peer review of the report," they wrote, while the "blue team" would essentially be the federal assessment and its authors.

"A robust, transparent public peer review evaluation of climate change is something everyone should support," Pruitt said in the unreleased November statement. "Now is a perfect opportunity for the formation of a 'Red Team' exercise."

The draft release also included space for quotes from two prominent climate science critics: Steve Koonin, an Obama-era Energy Department official, and William Happer, a Princeton physicist who argues that increased carbon dioxide would benefit the planet.

The duo appear to have been tapped to help guide the red-team review together.

"Your contributions even in a small way to the validity of the red team blue team approach would be appreciated," Ryan Jackson, Pruitt's chief of staff, wrote to Koonin and Happer on Nov. 4.

In an email to POLITICO, Happer said the exercise was "badly needed," while Koonin, now the director of the Center for Urban Science and Progress at New York University, told POLITICO the National Climate Assessment was "demonstrably deficient on a number of points."

EPA did not return a request for comment.

Pruitt has previously said a Wall Street Journal piece written by Koonin in April 2017 calling for a similar EPA review of climate science was his inspiration for instigating the "red team" review.

The emails, however, show that Koonin and his allies began wooing Pruitt even before that. In an email more than a week before Koonin's WSJ piece ran, Dan Yergin, the Pulitzer-winning oil historian and vice chairman of IHS Markit who joined a board advising President Donald Trump, introduced Koonin by email to Jackson.

Pruitt and Koonin met April 28, and the emails show Koonin was closely involved in the process afterward.

Koonin sent EPA a "prospectus" outlining the exercise, and though much of it was redacted by EPA before its release, Koonin suggested timing the red team review to the National Climate Assessment, which was due out six months later. Doing so would "ensure that certainties and uncertainties in projections of future climates are accurately presented to the public and decision makers," he wrote.

A revised version of the prospectus was circulated by EPA to White House officials in July after news of Pruitt's plans had leaked.

"There are a lot of press reports about EPA's planning on this. None of it is being run by us. This seems to be getting out of control," wrote Michael Catanzaro, a top energy adviser to Trump who has since left the administration, a few days after receiving Koonin's proposal.

In late June, Liz Bowman, then a top EPA spokeswoman, questioned whether the exercise could be announced as early as July 5 or 6. But it wasn't until November that top Pruitt staffers begin circulating a draft press release on the announcement.

A draft of the announcement on Nov. 5 inspired a lengthy email chain, which EPA redacted, that involved direct messages from Trump chief of staff John Kelly, strategic communications director Mercedes Schlapp, and former White House staff secretary Rob Porter.

Pruitt was touting his plans to launch the red team review as late as December. Emails early in that month indicate the agency's air chief, Bill Wehrum, would make the announcement on Dec. 12 while Pruitt traveled in

Morocco. One message that included Jackson had the subject line of "Red Team/Blue Team Announcement Planned for Tuesday, Dec. 12."

The [New York Times](#) reported in March that Kelly and other top officials stopped the announcement in the fall, and Kelly's deputy Rick Dearborn met with Pruitt in mid-December to declare the plan dead.

WRDA faces stumbling block over small community projects [Back](#)

By Annie Snider | 05/15/2018 04:48 PM EDT

A battle over boosting funding for drinking water and wastewater projects in small communities is threatening a bipartisan effort to pass the first major infrastructure bill under the Trump administration.

The measure at issue, Securing Required Funding for Water Infrastructure Now, or SRF WIN Act, would expand the popular WIFIA program that loans federal money for water infrastructure projects at Treasury's attractive long-term interest rates. The bill includes a number of changes seeking to make the WIFIA program more accessible to small and mid-sized communities.

Senate Environment and Public Works Chairman [John Barrasso](#) (R-Wyo.) said last week that he supported adding it to this year's Water Resources Development Act, [S. 2800 \(115\)](#), through a manager's amendment. But he said attaching the measure, which was introduced by Sens. [John Boozman](#) (R-Ark.), [Cory Booker](#) (D-N.J.) and nine others, wasn't a done deal. "We're working to try and get to that," he told reporters.

The SRF measure has sparked fierce opposition from the groups that originally conceived of the WIFIA program that say the new proposal tilts too far toward the small communities, and they are now threatening to revoke their support from the overall infrastructure bill if it gets added.

"We believe that SRF WIN Act is a fundamentally flawed proposal that, if enacted, would pose a severe threat to the future viability of the WIFIA program," the American Water Works Association, the Association of Metropolitan Water Agencies and the Water Environment Federation wrote in a [letter](#) to Senate EPW leaders last week.

The fight pits small and rural communities against larger communities whose projects can often run into the billions of dollars.

The WIFIA program, authorized as part of the 2014 WRDA bill, targets those larger-scale projects, in part because they have a harder time competing for money from the State Revolving Funds, the main federal funding mechanism for municipal water projects. Those funds prioritize spending in areas with public health problems, and some states have capped the amount that can go to larger projects so they don't drain the funds.

The groups opposing the new measure argue that small and rural communities already have access to a carve-out that gives them 15 percent of WIFIA funding. The proposed changes, they say, would put larger communities at an unfair disadvantage and could ultimately lead to the demise of EPA's State Revolving Funds program.

EPA estimates that \$472.6 billion will be needed over the next two decades to improve drinking water infrastructure, alone. The federal government funds just a fraction of that — most years Congress appropriates less than \$3 billion.

Beyond the rural carve-out under WIFIA, states can also bundle smaller projects together to reach the \$20 million minimum funding requirement, and EPA recently conditionally approved one such application from the Indiana Finance Authority.

The changes being proposed in the SRF WIN Act seek to make this option more accessible, including by waiving the \$100,000 application fee for states filing such applications and authorizing \$200 million annually to go toward such projects.

"This legislation is an innovative approach to helping communities of all sizes, in every state secure loans so they can improve their crumbling infrastructure," Boozman said in a statement introducing the legislation.

Dozens of groups have endorsed including the SRF WIN Act in the Senate's WRDA bill, called America's Water Infrastructure Act, including the Chamber of Commerce, the American Society of Civil Engineers and the Vinyl Institute.

"We believe the inclusion of the SRF WIN Act in the America's Water Infrastructure Act will make a really good bill even better," more than 25 groups wrote in a [letter](#) to Senate EPW leaders on Tuesday.

But the opposing groups argue that Boozman's bill would decrease the program's leveraging rate — an aspect that has been wildly popular with lawmakers since it allows small appropriations to fund much larger infrastructure investments. EPA expects that the \$25 million it got for WIFIA in fiscal 2017 will result in \$2.3 billion worth of loans, the groups said.

"These robust rates enable the federal government to get a tremendous 'bang for the buck' when appropriating funds for water and wastewater infrastructure," AWWA, AMWA and WEF wrote.

The Senate Environment and Public Works Committee is seeking to move its WRDA bill swiftly. It will hold its second legislative [hearing](#) on the measure Thursday, with the assistant secretary of the Army for Civil Works due to testify. Barrasso said a markup will be held shortly thereafter.

Panel moves \$35B Interior-EPA spending bill to full committee [Back](#)

By Alex Guillén | 05/15/2018 06:18 PM EDT

The House Appropriations Committee's Interior-Environment panel today cleared its \$35.25 billion spending package, teeing it up for consideration by the full committee as early as next week.

The [bill](#) cleared on a voice vote. It is likely to face contentious amendments before the full committee.

Before the bill advanced, ranking member Betty McCollum (D-Minn.) criticized the policy riders and complained that EPA has not yet reported to Congress regarding the GAO's April conclusion that EPA's construction of a soundproof booth for Administrator Scott Pruitt violated spending laws.

The bill provided \$7.96 billion for EPA, a \$100 million overall reduction from 2018 levels. Along with language repealing the Waters of the U.S. rule, the bill provided \$2.6 billion for the Clean Water and Drinking Water State Revolving Loans and \$75 million for the Water Infrastructure Finance and Innovation Act program.

Among the Interior Department's major agencies, the bill includes a \$55 million increase for the Bureau of Land Management to \$1.4 billion, a \$19 million hike for the U.S. Geological Survey to \$1.2 billion and another \$53 million to boost the National Park Service to \$3.25 billion.

The Office of Surface Mining would get \$229 million, including \$90 million for another year of a pilot program aimed at cleaning up abandoned Appalachian mines. The Fish and Wildlife Service's budget would drop by \$11 million to \$1.6 billion.

The bill also provided \$6.1 billion for the Agriculture Department's Forest Service, including \$3 billion for wildfire work.

WHAT'S NEXT: The full package will be considered by the full House Appropriations Committee at an unspecified later date.

EPA News Highlights 3.26.18

The Oklahoman: Ban On "Secret Science" In EPA Regulation Makes Sense

The Environmental Protection Agency has announced it will now base new regulations only on the findings of scientific studies whose data and methodology are made public so they can be subjected to independent review. That's a sound move in line with basic scientific transparency and professionalism. Yet it's being treated as a sign of impending apocalypse by some on the left, which says much about the questionable validity of that group's policy prescriptions. In an interview with The Daily Caller News Foundation, Administrator Scott Pruitt said the EPA will end its use of studies that do not publish underlying data, only conclusions. "Otherwise, it's not transparent. It's not objectively measured, and that's important," Pruitt said. In the past, the EPA has advanced air-quality regulations that imposed massive costs based primarily on the findings of two studies done in the 1990s that linked fine particulate pollution to premature death. Neither study made associated data public.

RealClearPolitics: Pruitt Leads The Way On Regulatory Rollback

This month, the Environmental Protection Agency released its EPA Year in Review for 2017–2018. To call it impressive would be a gross understatement. With Administrator Scott Pruitt leading the charge, the agency has shown unrivaled commitment to carrying out the president’s agenda of deregulation. Before taking over at the EPA, Pruitt was as a leading opponent of regulatory overreach by the agency. As general of Oklahoma, for instance, he dissolved the Environmental Protection Unit and instead created a Federalism Unit to fight President Obama’s aggressive regulatory agenda. He brought more than a dozen lawsuits against the EPA, fighting such rules as the Cross State Air Pollution Rule and the Clean Water Rule, and successfully challenging the Clean Power Plan. Now, as EPA administrator, Pruitt is taking even more direct action and doing so in a cooperative and transparent manner. When Office of Management and Budget Director Mick Mulvaney discussed the deregulation effort at the Conservative Political Action Conference last month, he highlighted the rules that were top priority for the administration’s regulatory roll back: the Waters of the United States rule and the Clean Power Plan. Both fall within Pruitt’s jurisdiction at the EPA. No surprise that action on EPA regulations has moved to the forefront of the administration’s agenda.

Montana Standard: Omnibus Bill Restores EPA Funding

The Environmental Protection Agency is getting more than it asked for this fiscal year due to the \$1.3 trillion omnibus spending package passed in Congress last week and signed by President Donald Trump Friday. Trump had wanted to slash the EPA’s budget by 31 percent, a reduction of \$2.6 billion from what the EPA had to operate on in 2017. The EPA’s biggest operating budget since its inception in 1970 came along in 2010, when the Democratic-controlled Congress and President Barack Obama gave the EPA \$10.2 billion to work with. EPA administrator Scott Pruitt asked for \$5.655 billion last May to operate the agency this year. The ink on Trump’s signature to the 2,232-page bill was still wet enough Friday that the EPA had not altered its website to reflect the new spending levels for 2018. What the infusion of federal dollars will mean for the EPA — and more specifically for Butte and Anaconda and EPA Region 8 as a whole — is not clear. Because Congress could not pass a federal spending bill last fall, this bill’s passage comes six months into the current fiscal year.

Zanesville Times Recorder: Farmers Don’t Need Government Overreach

I am a farmer who raises cattle and hay. I think the EPA got far too nosy into farmers’ lives under the Obama Administration and that created a needless ordeal for us. I am glad that the Trump Administration is addressing this problem by pushing for smart reforms to EPA regulations affecting agriculture. A few years ago, the EPA told us that we had to put fences around all of our creeks and ponds so the cattle couldn’t run in them. The Waters of the United State Rule even gave the government jurisdiction over dry creeks. I don’t think matters such as these are any of the government’s business. They just don’t have the right to tell us how to do things. When it comes to banning products, we need to make sure that we aren’t going after ones that are safe. The previous administration even wanted to ban safe pesticides and that doesn’t help farmers at all. These are all examples of how the federal government further intruded into our land and our lives. Now, our leaders have a chance to correct some of the regulations that were harming farmers. That’s a good thing. After all, these regulations weren’t helping anyone anyway. We need our government officials to use common sense. We don’t need to be burdened with unnecessary regulations. Small farmers don’t make much money to begin with and we should not be harmed by government overreach. I am glad the Trump Administration is working to reverse these intrusions.

The Wall Street Journal: EPA Tentatively Decides To Ease Vehicle Emission Standards

The Environmental Protection Agency has tentatively concluded that future vehicle emissions standards should be eased, a decision long lobbied for by car companies that argued looming regulations are too stringent and need revision. The EPA has drafted a so-called final determination that outlines arguments for relaxing standards requiring auto makers to cut emissions enough so vehicles sold average more than 50 miles a gallon by 2025, said a person familiar with the matter. The EPA delivered the draft, which covers standards between 2022 and 2025, to the Office of Management and Budget this week, the person said. The EPA faces an April 1 deadline to determine whether the targets should be strengthened, relaxed or left unchanged. No changes would be imminent even with the issuing of a final determination. Rules would have to be devised afterward detailing any revisions, a process that could take weeks or months. Bloomberg News earlier reported on the draft determination.

National News Highlights 3.26.18

CNBC: Dow Rises 500 Points As Trade Tensions Ease

Stocks traded sharply higher on Monday, bouncing back from strong losses in the previous session, as trade tensions between the U.S. and China appear to ease. The Dow Jones industrial average rose 500 points, with Microsoft as the best-performing stock in the index. The S&P 500 gained 1.8 percent, with technology and financials leading all sectors higher. The Nasdaq composite advanced 2 percent. The Financial Times reported China has offered to buy more semiconductors from the U.S. to help cut its trade surplus with the U.S. The Wall Street Journal also reported that U.S. and Chinese officials are working to improve U.S. access to China's markets.

The Associated Press: US Expels 60 Russian Diplomats, Shuttters Seattle Consulate

The Trump administration expelled 60 Russian diplomats on Monday and ordered Russia's consulate in Seattle to close, as the United States and European nations sought to jointly punish Moscow for its alleged role in poisoning an ex-spy in Britain. Senior Trump administration officials said all 60 Russians were spies working in the U.S. under diplomatic cover, including a dozen at Russia's mission to the United Nations. The officials said the administration was taking the action to send a message to Russia's leaders about the "unacceptably high" number of Russian intelligence operatives in the U.S. The expelled Russians will have seven days to leave the U.S, said the officials. They weren't authorized to be identified by name and requested anonymity. They added that the Seattle consulate is a counter-intelligence concern because of its proximity to a U.S. Navy base. White House spokeswoman Sarah Huckabee Sanders said the actions would make the U.S. safer by "reducing Russia's ability to spy on Americans and to conduct covert operations" that threaten U.S. national security.

Ban On "Secret Science" In EPA Regulation Makes Sense

By The Oklahoman Editorial Board, 3/26/18

THE Environmental Protection Agency has announced it will now base new regulations only on the findings of scientific studies whose data and methodology are made public so they can be subjected to independent review. That's a sound move in line with basic scientific transparency and professionalism.

Yet it's being treated as a sign of impending apocalypse by some on the left, which says much about the questionable validity of that group's policy prescriptions.

In an interview with The Daily Caller News Foundation, Administrator Scott Pruitt said the EPA will end its use of studies that do not publish underlying data, only conclusions. "Otherwise, it's not transparent. It's not objectively measured, and that's important," Pruitt said.

In the past, the EPA has advanced air-quality regulations that imposed massive costs based primarily on the findings of two studies done in the 1990s that linked fine particulate pollution to premature death. Neither study made associated data public.

U.S. Rep. Lamar Smith, R-Texas and chairman of the House Committee on Science, Space and Technology, has long criticized the use of "secret science" and authored legislation to curtail its use by regulators. Last year, Smith said the EPA had "routinely relied on questionable science based on nonpublic information that could not be reproduced, a basic requirement of the scientific method."

"Americans deserve to see the science for themselves," Smith said. "If the EPA has nothing to hide, why not make the scientific data it uses for its regulations publicly available? What was the EPA hiding?"

That will strike most people as a fair question. But to some activists, the idea that science should involve review and scrutiny is apparently anathema. In response to a prior effort to ban "secret science" at the EPA, Andrew Rosenberg,

director of the Union of Concerned Scientists' Center for Science and Democracy, said transparency would “gut the EPA at the expense of public health and safety.”

That same group has claimed release of data would require publicizing the confidential patient data of individuals. But Steve Milloy, publisher of JunkScience.com and a senior fellow at the Energy and Environmental Legal Institute, notes that California already makes similar data available in its “Public Use Death Files,” and that has been accomplished without violating patient privacy.

Other critics object that there are costs involved in scrubbing data sets so patient privacy is protected. Perhaps, but that doesn't mean the public should be kept in the dark about the data and methods used to justify literally billions in new regulatory burden.

Scientific studies are as susceptible to human error and even outright fraud as any other endeavor — particularly when such studies are used in the political realm. Facilitating transparency and independent review will reduce the chances of bad science harming Americans with half-baked regulations, and should enhance the case for regulations when the underlying science has withstood independent scrutiny.

Given the stakes for public health and the national economy, Americans must be assured government regulations are based on sound science, not someone's “trust me” assurances.

Pruitt Leads The Way On Regulatory Rollback

By Ken Cuccinelli, 3/26/18

This month, the Environmental Protection Agency released its EPA Year in Review for 2017–2018. To call it impressive would be a gross understatement. With Administrator Scott Pruitt leading the charge, the agency has shown unrivaled commitment to carrying out the president's agenda of deregulation.

Before taking over at the EPA, Pruitt was as a leading opponent of regulatory overreach by the agency. As general of Oklahoma, for instance, he dissolved the Environmental Protection Unit and instead created a Federalism Unit to fight President Obama's aggressive regulatory agenda. He brought more than a dozen lawsuits against the EPA, fighting such rules as the Cross State Air Pollution Rule and the Clean Water Rule, and successfully challenging the Clean Power Plan.

Now, as EPA administrator, Pruitt is taking even more direct action and doing so in a cooperative and transparent manner. When Office of Management and Budget Director Mick Mulvaney discussed the deregulation effort at the Conservative Political Action Conference last month, he highlighted the rules that were top priority for the administration's regulatory roll back: the Waters of the United States rule and the Clean Power Plan. Both fall within Pruitt's jurisdiction at the EPA. No surprise that action on EPA regulations has moved to the forefront of the administration's agenda.

From his first days at the agency, Pruitt took steps to facilitate cooperation with the states on environmental policy. Federalism is an essential principle of American governance, and Pruitt has put this principle into practice. During his first year, Pruitt travelled to 30 states to discuss the EPA's work, personally meeting with 34 governors — Democrats and Republicans — as well as over 350 stakeholder groups. This level of personal involvement is nearly unparalleled, even inside an administration with such a clear focus on deregulation. And it is paying dividends.

The EPA Year in Review booklet is nearly 40 pages long, outlining the regulatory rollback, increased transparency, and government reform measures accomplished in the last year alone. This includes finalizing 22 deregulatory actions and savings of more than \$1 billion in regulatory costs, which previously fell on Americans' shoulders. By comparison, a similar document out of the Department of Labor, headed by Secretary of Labor Alexander Acosta, is only four pages long.

As he says in a letter at the front of the EPA Year in Review, Administrator Pruitt “look[s] forward to working together to accomplish even more progress in 2018.” We applaud Mr. Pruitt’s accomplishments in his first year as head of EPA, and hope that his success provides an example to other agencies. Executive agencies can take the lead on growing the economy by freeing Americans from excessive regulatory burdens. This, the EPA — with Pruitt at the helm — has proven.

Montana Standard

Omnibus Bill Restores EPA Funding

By Susan Dunlap, 3/25/18

The Environmental Protection Agency is getting more than it asked for this fiscal year due to the \$1.3 trillion omnibus spending package passed in Congress last week and signed by President Donald Trump Friday.

Trump had wanted to slash the EPA’s budget by 31 percent, a reduction of \$2.6 billion from what the EPA had to operate on in 2017. The EPA’s biggest operating budget since its inception in 1970 came along in 2010, when the Democratic-controlled Congress and President Barack Obama gave the EPA \$10.2 billion to work with.

EPA administrator Scott Pruitt asked for \$5.655 billion last May to operate the agency this year.

The ink on Trump’s signature to the 2,232-page bill was still wet enough Friday that the EPA had not altered its website to reflect the new spending levels for 2018. What the infusion of federal dollars will mean for the EPA — and more specifically for Butte and Anaconda and EPA Region 8 as a whole — is not clear. Because Congress could not pass a federal spending bill last fall, this bill’s passage comes six months into the current fiscal year.

The EPA’s Washington D.C. office did not respond to a request for comment. The EPA’s Denver office responded with a note that inquiries about EPA budget concerns should be forwarded to the Washington D.C. office.

The \$1.3 trillion omnibus spending package rushed through both houses of Congress last week returns the EPA’s budget to above the spending level it had in 2017 and restores it closer to the 2016 budget level. The EPA’s 2017 general operating budget was \$8 billion. Congress reinstated the EPA’s 2018 budget to \$8.1 billion plus an added \$763 million for various EPA water infrastructure programs and Superfund site spending, according to TheHill.com.

The EPA’s 2016 budget was \$8.1 billion.

The bill passed the Senate 65-32 with three who didn’t vote. Democrat Sen. Jon Tester voted for the bill. Republican Sen. Steve Daines voted against it.

Tester said Saturday, “It is critically important for Butte’s families and businesses that the EPA live up to its commitment to remove waste and contamination. This funding bill restores the resources needed to hold polluters accountable, builds on the progress that has been made, and ensures folks in Butte have access to clean water.”

Daines was on his way to China on a delegation trip, leading a group of senators. A spokesperson said, “Senator Daines believes the Superfund sites must be cleaned up and will continue to support funding, but it’s critical that funding is implemented effectively.”

The House gave its approval of the bill by a 256-167 vote with seven abstaining. Republican Congressman Greg Gianforte also voted against the bill, although he told The Montana Standard last summer during a press conference that he wanted to “put funding back in” for the EPA.

A spokesman for Gianforte said, "Greg has consistently supported the Superfund to clean up our impacted Montana communities. Greg will continue being a strong voice to make our communities whole again while also working to protect Montanans by standing up to Washington's overspending."

There were many conservative critics of the omnibus package. One primary complaint was that no one had a chance to read the more than 2,000 pages before votes began on the House floor. Conservative Kentucky Congressman Rand Paul tweeted Thursday that it took him more than two hours just to print all 2,232 pages. He later tweeted he had ordered in pizza to help him get through it.

Trump waffled on signing the bill Friday morning. He tweeted in the early hours of the day that the bill didn't give enough money for a border wall along the U.S.-Mexico border. Trump ran his 2016 election campaign in part on the idea that the U.S. would erect a wall along its border with Mexico and that Mexico would pay for it.

The bill provides \$1.2 billion to replace fencing along the U.S.-Mexico border that is in need of repair and enhance surveillance of the border with upgraded technology, according to The New York Times.

But ultimately, Trump did sign the bill, saying on Twitter that he needed to do so "as a matter of national security." The budget provided \$654.6 billion for the Pentagon.

EPA Tentatively Decides To Ease Vehicle Emission Standards

By Mike Spector, 3/23/18

The Environmental Protection Agency has tentatively concluded that future vehicle emissions standards should be eased, a decision long lobbied for by car companies that argued looming regulations are too stringent and need revision.

The EPA has drafted a so-called final determination that outlines arguments for relaxing standards requiring auto makers to cut emissions enough so vehicles sold average more than 50 miles a gallon by 2025, said a person familiar with the matter.

The EPA delivered the draft, which covers standards between 2022 and 2025, to the Office of Management and Budget this week, the person said. The EPA faces an April 1 deadline to determine whether the targets should be strengthened, relaxed or left unchanged.

No changes would be imminent even with the issuing of a final determination. Rules would have to be devised afterward detailing any revisions, a process that could take weeks or months. Bloomberg News earlier reported on the draft determination.

Auto makers have argued the future standards, which for 2025 equate to roughly 36 mpg in real-world driving, are too difficult to meet in an era of cheap gasoline. Low fuel prices have resulted in soaring sales of less-efficient pickup trucks and sport-utility vehicles that now eclipse 60% of the U.S. market. Electric cars that don't contribute to greenhouse-gas emissions amount to only about 1% of U.S. sales.

Still, auto makers also want to ensure that California and other states following its aggressive standards that collectively represent about 40% of the U.S. market are on board with changes, lest they face a patchwork of different rules across state lines.

California currently has an EPA waiver to set its own standards separate and apart from U.S. rules and had been in lockstep with targets the Obama administration finalized just before President Donald Trump's inauguration in January 2017. The Trump administration reopened a review of the future standards after lobbying from car companies, a move that angered California officials.

"The draft determination has been sent to OMB and is undergoing interagency review. A final determination will be signed by April 1, 2018, consistent with the original timeline," said Liz Bowman, an EPA spokeswoman. She didn't elaborate on the contents of the draft.

A spokesman for the California Air Resources Board, the state agency that regulates tailpipe emissions, said officials were "troubled" by word of the EPA's tentative decision to revise the standards. "We have not seen the document in question and California had no input into its content," the spokesman said.

Trump administration and California officials have held meetings and phone calls in recent months, but haven't agreed on any proposed changes. CARB Chairwoman Mary Nichols traveled to Washington in January to meet with officials from the White House, EPA and National Highway Traffic Safety Administration, an agency that sets its own separate fuel-economy standards and has been involved in negotiating possible changes.

Ms. Nichols and other state officials signaled a willingness to discuss possible changes at that meeting without committing to any specific proposals. She joined another check-in call with Trump administration officials in recent weeks, the person familiar with the matter said.

"California paved the way for a single national program and is fully committed to maintaining it. However, we feel that this rumored finding—if official—places that program in jeopardy," the CARB spokesman said, adding that revising the future targets would waste fuel, increase emissions and cost consumers more money.

"We won't take any action until we have the opportunity to see the document itself and any supporting data, evidence, or analysis that purports to justify what we think would be an unfounded conclusion," the CARB spokesman said.

"We can't comment on a determination we haven't seen, but remain absolutely convinced that one national program is the preferred policy path," said Mitch Bainwol, head of a Washington lobbying group representing a dozen auto makers, including General Motors Co. , Ford Motor Co. and Toyota Motor Corp.

Auto makers contend that complying with the current standards would ultimately cost them \$200 billion and threaten jobs. Vehicle prices could also rise, leading consumers to keep older automobiles that pollute more longer, the companies argue.

GM Chief Executive Mary Barra met earlier this month with EPA Administrator Scott Pruitt and Transportation Secretary Elaine Chao and "reconfirmed our priorities for modernizing fuel economy standards, which is the need for one national set of requirements and the need to comprehend new technology developments like increased shared and autonomous electric vehicles," a GM spokeswoman said.

Mr. Pruitt has expressed the view that California shouldn't dictate nationwide policy on vehicle emissions.

California Gov. Jerry Brown called the Trump administration's decision to review the standards a "gift to polluters" in a letter last year to Mr. Pruitt. Attorneys general in states across the U.S. that follow California's standards have pledged to take the Trump administration to court if federal targets are weakened.

CNBC

Dow Rises 500 Points As Trade Tensions Ease

By Fred Imbert, 3/26/18

Stocks traded sharply higher on Monday, bouncing back from strong losses in the previous session, as trade tensions between the U.S. and China appear to ease.

The Dow Jones industrial average rose 500 points, with Microsoft as the best-performing stock in the index. The S&P 500 gained 1.8 percent, with technology and financials leading all sectors higher. The Nasdaq composite advanced 2 percent.

The Financial Times reported China has offered to buy more semiconductors from the U.S. to help cut its trade surplus with the U.S. The Wall Street Journal also reported that U.S. and Chinese officials are working to improve U.S. access to China's markets.

Investors "have apparently recognized that a trade war is in no one's best interests and therefore extremely unlikely," said Jeremy Klein, chief market strategist at FBN Securities, in a note. "Specifically, the President merely wants to fulfill a campaign promise while China will only enact token countermeasures to appease its citizens."

Markets overseas also jumped on Monday. In Asia, some indexes rose after news surfaced that the U.S. had agreed to excuse South Korea from steel levies. Meantime in Europe, stocks were slightly higher as investors tried to shake off worries surrounding a potential trade war.

Wall Street finished Friday's session deep in the red on Friday, with the Dow dropping more than 400 points by the close — closing at its lowest level since November and finishing in correction territory, as it was 11.6 percent down from its 52-week high. The S&P 500 ended Friday's session just outside of correction territory.

"The SPX comes into the last week of March and the 1st quarter after of the worst weekly showings in the last decade. With the recent intense back and forth action, the environment is looking more like 2011 once again," Frank Cappelleri, executive director at Instinet, said in a note to clients.

Last week, President Donald Trump signed an executive memorandum that would inflict tariffs on Chinese imports — of up to \$60 billion. China retaliated with their own set of levies, drawing up a list of 128 U.S. products that could be possible retaliation targets.

Social media firms continue to be under the radar, as abuse of people's data remains a key topic of discussion. Last week, reports emerged alleging that Cambridge Analytica, an analytics company, had gathered data from 50 million Facebook profiles without the permission of its users. While Facebook have since come out to apologize and try to rectify the matter, concerns remain. Facebook shares dropped 1.6 percent and briefly dipped into bear market territory.

On the central banking front, members of the U.S. Federal Reserve are due to deliver speeches at respective events Monday, including one by Fed Vice Chair Randal Quarles, who is due to speak at the HOPE Global Forum annual meeting in Atlanta.

US Expels 60 Russian Diplomats, Shuttters Seattle Consulate

By Josh Lederman, 3/26/18

WASHINGTON (AP) — The Trump administration expelled 60 Russian diplomats on Monday and ordered Russia's consulate in Seattle to close, as the United States and European nations sought to jointly punish Moscow for its alleged role in poisoning an ex-spy in Britain.

Senior Trump administration officials said all 60 Russians were spies working in the U.S. under diplomatic cover, including a dozen at Russia's mission to the United Nations. The officials said the administration was taking the action to send a message to Russia's leaders about the "unacceptably high" number of Russian intelligence operatives in the U.S.

The expelled Russians will have seven days to leave the U.S, said the officials. They weren't authorized to be identified by name and requested anonymity. They added that the Seattle consulate is a counter-intelligence concern because of its proximity to a U.S. Navy base.

White House spokeswoman Sarah Huckabee Sanders said the actions would make the U.S. safer by "reducing Russia's ability to spy on Americans and to conduct covert operations" that threaten U.S. national security.

"With these steps, the United States and our allies and partners make clear to Russia that its actions have consequences," Sanders said.

The move was one of the most significant actions President Donald Trump's administration has taken to date to push back on Moscow and Russian President Vladimir Putin. Less than a week ago, Trump congratulated Putin by phone for his re-election but didn't raise the spy case, renewing questions about whether the U.S. president is too soft on the Kremlin.

The U.S. actions came as more than a dozen nations, including those in Russia's neighborhood, were expected to announce similar steps to reduce Russia's diplomatic presence in their countries or other actions to punish Moscow. Poland summoned Russia's ambassador for talks, and its foreign ministry was among several in Europe planning news conferences later Monday.

Britain has already expelled 23 Russian diplomats, accusing them of being undeclared intelligence agents, which led Russia to expel the same number of British diplomats. The European Union has already recalled its ambassador to Russia.

The steps on both sides of the Atlantic Ocean add to a serious escalation of tensions between Russia and the West that has been building since the March 4 poisoning of Sergei Skripal, a former Russian military intelligence officer convicted

of spying for the U.K., and his daughter, Yulia. The two remain in critical condition and unconscious. A policeman who responded to their home was also injured.

Britain has accused Moscow of perpetrating the attack using a Soviet-developed nerve agent known as Novichok. The U.S., France and Germany have agreed it's highly likely Russia was responsible.

Russia's government has denied responsibility and has blasted Britain's investigation into the poisoning. There was no immediate reaction from Russia on Friday to the U.S. announcement.

EPA News Highlights 3.26.18

The Oklahoman: Ban On "Secret Science" In EPA Regulation Makes Sense

The Environmental Protection Agency has announced it will now base new regulations only on the findings of scientific studies whose data and methodology are made public so they can be subjected to independent review. That's a sound move in line with basic scientific transparency and professionalism. Yet it's being treated as a sign of impending apocalypse by some on the left, which says much about the questionable validity of that group's policy prescriptions. In an interview with The Daily Caller News Foundation, Administrator Scott Pruitt said the EPA will end its use of studies that do not publish underlying data, only conclusions. "Otherwise, it's not transparent. It's not objectively measured, and that's important," Pruitt said. In the past, the EPA has advanced air-quality regulations that imposed massive costs based primarily on the findings of two studies done in the 1990s that linked fine particulate pollution to premature death. Neither study made associated data public.

RealClearPolitics: Pruitt Leads The Way On Regulatory Rollback

This month, the Environmental Protection Agency released its EPA Year in Review for 2017–2018. To call it impressive would be a gross understatement. With Administrator Scott Pruitt leading the charge, the agency has shown unrivaled commitment to carrying out the president's agenda of deregulation. Before taking over at the EPA, Pruitt was as a leading opponent of regulatory overreach by the agency. As general of Oklahoma, for instance, he dissolved the Environmental Protection Unit and instead created a Federalism Unit to fight President Obama's aggressive regulatory agenda. He brought more than a dozen lawsuits against the EPA, fighting such rules as the Cross State Air Pollution Rule and the Clean Water Rule, and successfully challenging the Clean Power Plan. Now, as EPA administrator, Pruitt is taking even more direct action and doing so in a cooperative and transparent manner. When Office of Management and Budget Director Mick Mulvaney discussed the deregulation effort at the Conservative Political Action Conference last month, he highlighted the rules that were top priority for the administration's regulatory roll back: the Waters of the United States rule and the Clean Power Plan. Both fall within Pruitt's jurisdiction at the EPA. No surprise that action on EPA regulations has moved to the forefront of the administration's agenda.

Montana Standard: Omnibus Bill Restores EPA Funding

The Environmental Protection Agency is getting more than it asked for this fiscal year due to the \$1.3 trillion omnibus spending package passed in Congress last week and signed by President Donald Trump Friday. Trump had wanted to slash the EPA's budget by 31 percent, a reduction of \$2.6 billion from what the EPA had to operate on in 2017. The EPA's biggest operating budget since its inception in 1970 came along in 2010, when the Democratic-controlled Congress and President Barack Obama gave the EPA \$10.2 billion to work with. EPA administrator Scott Pruitt asked for \$5.655 billion last May to operate the agency this year. The ink on Trump's signature to the 2,232-page bill was still wet enough Friday that the EPA had not altered its website to reflect the new spending levels for 2018. What the infusion of federal dollars will mean for the EPA — and more specifically for Butte and Anaconda and EPA Region 8 as a whole — is not clear. Because Congress could not pass a federal spending bill last fall, this bill's passage comes six months into the current fiscal year.

Zanesville Times Recorder: Farmers Don't Need Government Overreach

I am a farmer who raises cattle and hay. I think the EPA got far too nosy into farmers' lives under the Obama Administration and that created a needless ordeal for us. I am glad that the Trump Administration is addressing this problem by pushing for smart reforms to EPA regulations affecting agriculture. A few years ago, the EPA told us that we had to put fences around all of our creeks and ponds so the cattle couldn't run in them. The Waters of the United State Rule even gave the government jurisdiction over dry creeks. I don't think matters such as these are any of the government's business. They just don't have the right to tell us how to do things. When it comes to banning products, we need to make sure that we aren't going after ones that are safe. The previous administration even wanted to ban safe pesticides and that doesn't help farmers at all. These are all examples of how the federal government further intruded into our land and our lives. Now, our leaders have a chance to correct some of the regulations that were harming farmers. That's a good thing. After all, these regulations weren't helping anyone anyway. We need our government officials to use common sense. We don't need to be burdened with unnecessary regulations. Small farmers

don't make much money to begin with and we should not be harmed by government overreach. I am glad the Trump Administration is working to reverse these intrusions.

The Wall Street Journal: EPA Tentatively Decides To Ease Vehicle Emission Standards

The Environmental Protection Agency has tentatively concluded that future vehicle emissions standards should be eased, a decision long lobbied for by car companies that argued looming regulations are too stringent and need revision. The EPA has drafted a so-called final determination that outlines arguments for relaxing standards requiring auto makers to cut emissions enough so vehicles sold average more than 50 miles a gallon by 2025, said a person familiar with the matter. The EPA delivered the draft, which covers standards between 2022 and 2025, to the Office of Management and Budget this week, the person said. The EPA faces an April 1 deadline to determine whether the targets should be strengthened, relaxed or left unchanged. No changes would be imminent even with the issuing of a final determination. Rules would have to be devised afterward detailing any revisions, a process that could take weeks or months. Bloomberg News earlier reported on the draft determination.

National News Highlights 3.26.18

CNBC: Dow Rises 500 Points As Trade Tensions Ease

Stocks traded sharply higher on Monday, bouncing back from strong losses in the previous session, as trade tensions between the U.S. and China appear to ease. The Dow Jones industrial average rose 500 points, with Microsoft as the best-performing stock in the index. The S&P 500 gained 1.8 percent, with technology and financials leading all sectors higher. The Nasdaq composite advanced 2 percent. The Financial Times reported China has offered to buy more semiconductors from the U.S. to help cut its trade surplus with the U.S. The Wall Street Journal also reported that U.S. and Chinese officials are working to improve U.S. access to China's markets.

The Associated Press: US Expels 60 Russian Diplomats, Shuttters Seattle Consulate

The Trump administration expelled 60 Russian diplomats on Monday and ordered Russia's consulate in Seattle to close, as the United States and European nations sought to jointly punish Moscow for its alleged role in poisoning an ex-spy in Britain. Senior Trump administration officials said all 60 Russians were spies working in the U.S. under diplomatic cover, including a dozen at Russia's mission to the United Nations. The officials said the administration was taking the action to send a message to Russia's leaders about the "unacceptably high" number of Russian intelligence operatives in the U.S. The expelled Russians will have seven days to leave the U.S, said the officials. Ban On "Secret Science" In EPA Regulation Makes Sense

By The Oklahoman Editorial Board, 3/26/18

THE Environmental Protection Agency has announced it will now base new regulations only on the findings of scientific studies whose data and methodology are made public so they can be subjected to independent review. That's a sound move in line with basic scientific transparency and professionalism.

Yet it's being treated as a sign of impending apocalypse by some on the left, which says much about the questionable validity of that group's policy prescriptions.

In an interview with The Daily Caller News Foundation, Administrator Scott Pruitt said the EPA will end its use of studies that do not publish underlying data, only conclusions. “Otherwise, it’s not transparent. It’s not objectively measured, and that’s important,” Pruitt said.

In the past, the EPA has advanced air-quality regulations that imposed massive costs based primarily on the findings of two studies done in the 1990s that linked fine particulate pollution to premature death. Neither study made associated data public.

U.S. Rep. Lamar Smith, R-Texas and chairman of the House Committee on Science, Space and Technology, has long criticized the use of “secret science” and authored legislation to curtail its use by regulators. Last year, Smith said the EPA had “routinely relied on questionable science based on nonpublic information that could not be reproduced, a basic requirement of the scientific method.”

“Americans deserve to see the science for themselves,” Smith said. “If the EPA has nothing to hide, why not make the scientific data it uses for its regulations publicly available? What was the EPA hiding?”

That will strike most people as a fair question. But to some activists, the idea that science should involve review and scrutiny is apparently anathema. In response to a prior effort to ban “secret science” at the EPA, Andrew Rosenberg, director of the Union of Concerned Scientists’ Center for Science and Democracy, said transparency would “gut the EPA at the expense of public health and safety.”

That same group has claimed release of data would require publicizing the confidential patient data of individuals. But Steve Milloy, publisher of JunkScience.com and a senior fellow at the Energy and Environmental Legal Institute, notes that California already makes similar data available in its “Public Use Death Files,” and that has been accomplished without violating patient privacy.

Other critics object that there are costs involved in scrubbing data sets so patient privacy is protected. Perhaps, but that doesn’t mean the public should be kept in the dark about the data and methods used to justify literally billions in new regulatory burden.

Scientific studies are as susceptible to human error and even outright fraud as any other endeavor — particularly when such studies are used in the political realm. Facilitating transparency and independent review will reduce the chances of bad science harming Americans with half-baked regulations, and should enhance the case for regulations when the underlying science has withstood independent scrutiny.

Given the stakes for public health and the national economy, Americans must be assured government regulations are based on sound science, not someone’s “trust me” assurances.

RealClearPolitics

https://www.realclearpolicy.com/articles/2018/03/26/pruitt_leads_the_way_on_regulatory_rollback_110563.html

Pruitt Leads The Way On Regulatory Rollback

By Ken Cuccinelli, 3/26/18

This month, the Environmental Protection Agency released its EPA Year in Review for 2017–2018. To call it impressive would be a gross understatement. With Administrator Scott Pruitt leading the charge, the agency has shown unrivaled commitment to carrying out the president’s agenda of deregulation.

Before taking over at the EPA, Pruitt was as a leading opponent of regulatory overreach by the agency. As general of Oklahoma, for instance, he dissolved the Environmental Protection Unit and instead created a Federalism Unit to fight President Obama’s aggressive regulatory agenda. He brought more than a dozen lawsuits against the EPA, fighting such rules as the Cross State Air Pollution Rule and the Clean Water Rule, and successfully challenging the Clean Power Plan.

Now, as EPA administrator, Pruitt is taking even more direct action and doing so in a cooperative and transparent manner. When Office of Management and Budget Director Mick Mulvaney discussed the deregulation effort at the Conservative Political Action Conference last month, he highlighted the rules that were top priority for the administration's regulatory roll back: the Waters of the United States rule and the Clean Power Plan. Both fall within Pruitt's jurisdiction at the EPA. No surprise that action on EPA regulations has moved to the forefront of the administration's agenda.

From his first days at the agency, Pruitt took steps to facilitate cooperation with the states on environmental policy. Federalism is an essential principle of American governance, and Pruitt has put this principle into practice. During his first year, Pruitt travelled to 30 states to discuss the EPA's work, personally meeting with 34 governors — Democrats and Republicans — as well as over 350 stakeholder groups. This level of personal involvement is nearly unparalleled, even inside an administration with such a clear focus on deregulation. And it is paying dividends.

The EPA Year in Review booklet is nearly 40 pages long, outlining the regulatory rollback, increased transparency, and government reform measures accomplished in the last year alone. This includes finalizing 22 deregulatory actions and savings of more than \$1 billion in regulatory costs, which previously fell on Americans' shoulders. By comparison, a similar document out of the Department of Labor, headed by Secretary of Labor Alexander Acosta, is only four pages long.

As he says in a letter at the front of the EPA Year in Review, Administrator Pruitt "look[s] forward to working together to accomplish even more progress in 2018." We applaud Mr. Pruitt's accomplishments in his first year as head of EPA, and hope that his success provides an example to other agencies. Executive agencies can take the lead on growing the economy by freeing Americans from excessive regulatory burdens. This, the EPA — with Pruitt at the helm — has proven.

Montana Standard

Omnibus Bill Restores EPA Funding

By Susan Dunlap, 3/25/18

The Environmental Protection Agency is getting more than it asked for this fiscal year due to the \$1.3 trillion omnibus spending package passed in Congress last week and signed by President Donald Trump Friday.

Trump had wanted to slash the EPA's budget by 31 percent, a reduction of \$2.6 billion from what the EPA had to operate on in 2017. The EPA's biggest operating budget since its inception in 1970 came along in 2010, when the Democratic-controlled Congress and President Barack Obama gave the EPA \$10.2 billion to work with.

EPA administrator Scott Pruitt asked for \$5.655 billion last May to operate the agency this year.

The ink on Trump's signature to the 2,232-page bill was still wet enough Friday that the EPA had not altered its website to reflect the new spending levels for 2018. What the infusion of federal dollars will mean for the EPA — and more specifically for Butte and Anaconda and EPA Region 8 as a whole — is not clear. Because Congress could not pass a federal spending bill last fall, this bill's passage comes six months into the current fiscal year.

The EPA's Washington D.C. office did not respond to a request for comment. The EPA's Denver office responded with a note that inquiries about EPA budget concerns should be forwarded to the Washington D.C. office.

The \$1.3 trillion omnibus spending package rushed through both houses of Congress last week returns the EPA's budget to above the spending level it had in 2017 and restores it closer to the 2016 budget level. The EPA's 2017 general

operating budget was \$8 billion. Congress reinstated the EPA's 2018 budget to \$8.1 billion plus an added \$763 million for various EPA water infrastructure programs and Superfund site spending, according to TheHill.com.

The EPA's 2016 budget was \$8.1 billion.

The bill passed the Senate 65-32 with three who didn't vote. Democrat Sen. Jon Tester voted for the bill. Republican Sen. Steve Daines voted against it.

Tester said Saturday, "It is critically important for Butte's families and businesses that the EPA live up to its commitment to remove waste and contamination. This funding bill restores the resources needed to hold polluters accountable, builds on the progress that has been made, and ensures folks in Butte have access to clean water."

Daines was on his way to China on a delegation trip, leading a group of senators. A spokesperson said, "Senator Daines believes the Superfund sites must be cleaned up and will continue to support funding, but it's critical that funding is implemented effectively."

The House gave its approval of the bill by a 256-167 vote with seven abstaining. Republican Congressman Greg Gianforte also voted against the bill, although he told The Montana Standard last summer during a press conference that he wanted to "put funding back in" for the EPA.

A spokesman for Gianforte said, "Greg has consistently supported the Superfund to clean up our impacted Montana communities. Greg will continue being a strong voice to make our communities whole again while also working to protect Montanans by standing up to Washington's overspending."

There were many conservative critics of the omnibus package. One primary complaint was that no one had a chance to read the more than 2,000 pages before votes began on the House floor. Conservative Kentucky Congressman Rand Paul tweeted Thursday that it took him more than two hours just to print all 2,232 pages. He later tweeted he had ordered in pizza to help him get through it.

Trump waffled on signing the bill Friday morning. He tweeted in the early hours of the day that the bill didn't give enough money for a border wall along the U.S.-Mexico border. Trump ran his 2016 election campaign in part on the idea that the U.S. would erect a wall along its border with Mexico and that Mexico would pay for it.

The bill provides \$1.2 billion to replace fencing along the U.S.-Mexico border that is in need of repair and enhance surveillance of the border with upgraded technology, according to The New York Times.

But ultimately, Trump did sign the bill, saying on Twitter that he needed to do so "as a matter of national security." The budget provided \$654.6 billion for the Pentagon.

EPA Tentatively Decides To Ease Vehicle Emission Standards

By Mike Spector, 3/23/18

The Environmental Protection Agency has tentatively concluded that future vehicle emissions standards should be eased, a decision long lobbied for by car companies that argued looming regulations are too stringent and need revision.

The EPA has drafted a so-called final determination that outlines arguments for relaxing standards requiring auto makers to cut emissions enough so vehicles sold average more than 50 miles a gallon by 2025, said a person familiar with the matter.

The EPA delivered the draft, which covers standards between 2022 and 2025, to the Office of Management and Budget this week, the person said. The EPA faces an April 1 deadline to determine whether the targets should be strengthened, relaxed or left unchanged.

No changes would be imminent even with the issuing of a final determination. Rules would have to be devised afterward detailing any revisions, a process that could take weeks or months. Bloomberg News earlier reported on the draft determination.

Auto makers have argued the future standards, which for 2025 equate to roughly 36 mpg in real-world driving, are too difficult to meet in an era of cheap gasoline. Low fuel prices have resulted in soaring sales of less-efficient pickup trucks and sport-utility vehicles that now eclipse 60% of the U.S. market. Electric cars that don't contribute to greenhouse-gas emissions amount to only about 1% of U.S. sales.

Still, auto makers also want to ensure that California and other states following its aggressive standards that collectively represent about 40% of the U.S. market are on board with changes, lest they face a patchwork of different rules across state lines.

California currently has an EPA waiver to set its own standards separate and apart from U.S. rules and had been in lockstep with targets the Obama administration finalized just before President Donald Trump's inauguration in January

2017. The Trump administration reopened a review of the future standards after lobbying from car companies, a move that angered California officials.

“The draft determination has been sent to OMB and is undergoing interagency review. A final determination will be signed by April 1, 2018, consistent with the original timeline,” said Liz Bowman, an EPA spokeswoman. She didn’t elaborate on the contents of the draft.

A spokesman for the California Air Resources Board, the state agency that regulates tailpipe emissions, said officials were “troubled” by word of the EPA’s tentative decision to revise the standards. “We have not seen the document in question and California had no input into its content,” the spokesman said.

Trump administration and California officials have held meetings and phone calls in recent months, but haven’t agreed on any proposed changes. CARB Chairwoman Mary Nichols traveled to Washington in January to meet with officials from the White House, EPA and National Highway Traffic Safety Administration, an agency that sets its own separate fuel-economy standards and has been involved in negotiating possible changes.

Ms. Nichols and other state officials signaled a willingness to discuss possible changes at that meeting without committing to any specific proposals. She joined another check-in call with Trump administration officials in recent weeks, the person familiar with the matter said.

“California paved the way for a single national program and is fully committed to maintaining it. However, we feel that this rumored finding—if official—places that program in jeopardy,” the CARB spokesman said, adding that revising the future targets would waste fuel, increase emissions and cost consumers more money.

“We won’t take any action until we have the opportunity to see the document itself and any supporting data, evidence, or analysis that purports to justify what we think would be an unfounded conclusion,” the CARB spokesman said.

“We can’t comment on a determination we haven’t seen, but remain absolutely convinced that one national program is the preferred policy path,” said Mitch Bainwol, head of a Washington lobbying group representing a dozen auto makers, including General Motors Co. , Ford Motor Co. and Toyota Motor Corp.

Auto makers contend that complying with the current standards would ultimately cost them \$200 billion and threaten jobs. Vehicle prices could also rise, leading consumers to keep older automobiles that pollute more longer, the companies argue.

GM Chief Executive Mary Barra met earlier this month with EPA Administrator Scott Pruitt and Transportation Secretary Elaine Chao and “reconfirmed our priorities for modernizing fuel economy standards, which is the need for one national set of requirements and the need to comprehend new technology developments like increased shared and autonomous electric vehicles,” a GM spokeswoman said.

Mr. Pruitt has expressed the view that California shouldn’t dictate nationwide policy on vehicle emissions.

California Gov. Jerry Brown called the Trump administration’s decision to review the standards a “gift to polluters” in a letter last year to Mr. Pruitt. Attorneys general in states across the U.S. that follow California’s standards have pledged to take the Trump administration to court if federal targets are weakened.

Dow Rises 500 Points As Trade Tensions Ease

By Fred Imbert, 3/26/18

Stocks traded sharply higher on Monday, bouncing back from strong losses in the previous session, as trade tensions between the U.S. and China appear to ease.

The Dow Jones industrial average rose 500 points, with Microsoft as the best-performing stock in the index. The S&P 500 gained 1.8 percent, with technology and financials leading all sectors higher. The Nasdaq composite advanced 2 percent.

The Financial Times reported China has offered to buy more semiconductors from the U.S. to help cut its trade surplus with the U.S. The Wall Street Journal also reported that U.S. and Chinese officials are working to improve U.S. access to China's markets.

Investors "have apparently recognized that a trade war is in no one's best interests and therefore extremely unlikely," said Jeremy Klein, chief market strategist at FBN Securities, in a note. "Specifically, the President merely wants to fulfill a campaign promise while China will only enact token countermeasures to appease its citizens."

Markets overseas also jumped on Monday. In Asia, some indexes rose after news surfaced that the U.S. had agreed to excuse South Korea from steel levies. Meantime in Europe, stocks were slightly higher as investors tried to shake off worries surrounding a potential trade war.

Wall Street finished Friday's session deep in the red on Friday, with the Dow dropping more than 400 points by the close — closing at its lowest level since November and finishing in correction territory, as it was 11.6 percent down from its 52-week high. The S&P 500 ended Friday's session just outside of correction territory.

"The SPX comes into the last week of March and the 1st quarter after of the worst weekly showings in the last decade. With the recent intense back and forth action, the environment is looking more like 2011 once again," Frank Cappelleri, executive director at Instinet, said in a note to clients.

Last week, President Donald Trump signed an executive memorandum that would inflict tariffs on Chinese imports — of up to \$60 billion. China retaliated with their own set of levies, drawing up a list of 128 U.S. products that could be possible retaliation targets.

Social media firms continue to be under the radar, as abuse of people's data remains a key topic of discussion. Last week, reports emerged alleging that Cambridge Analytica, an analytics company, had gathered data from 50 million Facebook profiles without the permission of its users. While Facebook have since come out to apologize and try to rectify the matter, concerns remain. Facebook shares dropped 1.6 percent and briefly dipped into bear market territory.

On the central banking front, members of the U.S. Federal Reserve are due to deliver speeches at respective events Monday, including one by Fed Vice Chair Randal Quarles, who is due to speak at the HOPE Global Forum annual meeting in Atlanta.

The Associated Press

<https://www.yahoo.com/news/poland-summons-russias-ambassador-over-spy-case-123355904.html>

US Expels 60 Russian Diplomats, Shuts Seattle Consulate

By Josh Lederman, 3/26/18

WASHINGTON (AP) — The Trump administration expelled 60 Russian diplomats on Monday and ordered Russia's consulate in Seattle to close, as the United States and European nations sought to jointly punish Moscow for its alleged role in poisoning an ex-spy in Britain.

Senior Trump administration officials said all 60 Russians were spies working in the U.S. under diplomatic cover, including a dozen at Russia's mission to the United Nations. The officials said the administration was taking the action to send a message to Russia's leaders about the "unacceptably high" number of Russian intelligence operatives in the U.S.

The expelled Russians will have seven days to leave the U.S, said the officials. They weren't authorized to be identified by name and requested anonymity. They added that the Seattle consulate is a counter-intelligence concern because of its proximity to a U.S. Navy base.

White House spokeswoman Sarah Huckabee Sanders said the actions would make the U.S. safer by "reducing Russia's ability to spy on Americans and to conduct covert operations" that threaten U.S. national security.

"With these steps, the United States and our allies and partners make clear to Russia that its actions have consequences," Sanders said.

The move was one of the most significant actions President Donald Trump's administration has taken to date to push back on Moscow and Russian President Vladimir Putin. Less than a week ago, Trump congratulated Putin by phone for his re-election but didn't raise the spy case, renewing questions about whether the U.S. president is too soft on the Kremlin.

The U.S. actions came as more than a dozen nations, including those in Russia's neighborhood, were expected to announce similar steps to reduce Russia's diplomatic presence in their countries or other actions to punish Moscow. Poland summoned Russia's ambassador for talks, and its foreign ministry was among several in Europe planning news conferences later Monday.

Britain has already expelled 23 Russian diplomats, accusing them of being undeclared intelligence agents, which led Russia to expel the same number of British diplomats. The European Union has already recalled its ambassador to Russia.

The steps on both sides of the Atlantic Ocean add to a serious escalation of tensions between Russia and the West that has been building since the March 4 poisoning of Sergei Skripal, a former Russian military intelligence officer convicted of spying for the U.K., and his daughter, Yulia. The two remain in critical condition and unconscious. A policeman who responded to their home was also injured.

Britain has accused Moscow of perpetrating the attack using a Soviet-developed nerve agent known as Novichok. The U.S., France and Germany have agreed it's highly likely Russia was responsible.

Russia's government has denied responsibility and has blasted Britain's investigation into the poisoning. There was no immediate reaction from Russia on Friday to the U.S. announcement.

Pruitt Testifies at Two Closely Watched Hearings on Capitol Hill

U.S. EPA Administrator Scott Pruitt testified yesterday at two hearings in the House of Representatives to respond to questions surrounding agency funding and policy as well as personal ethics. Appearing before the Appropriations Interior, Environment, & Related Agencies Subcommittee and the Energy & Commerce Environment Subcommittee on the agency's FY19 budget, Pruitt defended himself against criticism regarding certain management and spending practices. He also touched on policy issues including the new proposed rule to strengthen science used in regulations (see related story) and the suite of [FY18 Brownfields Grants](#) announced this week.

In addition, Pruitt addressed actions on the horizon, noting that EPA soon will announce a Waters of the U.S. replacement rule and proposed revisions to EPA's light-duty vehicle greenhouse gas standards. In response to a lawmaker's question about coal combustion residuals, Pruitt noted that few states have filed state coal ash implementation plans pursuant to the new federal policy but that the program is still nascent and EPA is working

with several states to assist in their development of permit program applications.

Pruitt's written testimony included a listing of his top priorities: enhancing drinking water and wastewater infrastructure; accelerating the remediation and revitalization of the most contaminated land; improving air quality through reductions in the number of areas not in attainment with the National Ambient Air Quality Standards; and meeting all the statutory deadlines outlined in the amended Toxic Substances Control Act. In addition, the testimony notes support for flexibility for states to address priorities and for cooperative federalism activities through the multipurpose grants program.

The testimony also includes an EPA proposal to increase compliance assistance through new voluntary oil and chemical facility compliance assistance fees allowing EPA to conduct walkthroughs and provide recommendations to facilities. It further notes that while EPA's budget request does not include plans to close Regional offices, the agency will continue "to prioritize efforts that save taxpayer dollars through space consolidation...." [McAleer/Graves/Parisien]

Pruitt Signs Proposed Rule to Eliminate 'Secret Science'

U.S. EPA Administrator Scott Pruitt signed Tuesday a proposed rule to eliminate "secret science" used in regulations issued by the agency. According to EPA, the rule seeks to ensure that all regulatory science underlying EPA actions is fully transparent, publicly available, and sufficient for independent validation. EPA says the rule aligns with the scientific community's push for increased data sharing and reproducible research.

The proposed rule has drawn mixed reviews, with opponents arguing that it skirts statutory mandates to use the best available science and address confidential trade secrets. Some express concern as to whether the policy will prevent use of studies that rely on confidential business information (CBI) or limit EPA's access to health studies, which are subject to patient confidentiality requirements. While the rule does not specifically address these points, it states that the agency believes "that concerns about access to confidential

or private information can, in many cases, be addressed through the application of solutions commonly in use across some parts of the [f]ederal government.”

EPA soon will accept public comment on a number of the proposed rule’s provisions, including authorities to address implementation issues (including CBI) and what criteria the agency should use to justify any exceptions. [Longworth]

U.S. EPA Announces First WIFIA Loan to King County, Washington

Last week, U.S. EPA issued its first loan under the Water Infrastructure Finance and Innovation Act (WIFIA) to King County, Washington.

The loan will help finance the Georgetown Wet Weather Treatment Station, which will collect and treat up to 70 million gallons of wastewater and stormwater per day. During heavy rains the combined sewer pipes spill into the Duwamish River, which drains into Puget Sound. The estimated project cost is \$275 million, and the WIFIA loan will finance nearly half of it.

For more information about the WIFIA program and the Georgetown Wet Weather Treatment Station, click [here](#). [Piper]

Need-to-Know News in Air & Environmental Justice

U.S. EPA Announces Funding to Reduce Emissions from Diesel Engines Nationwide

Area of Focus: Air

On April 24, U.S. EPA announced the availability of grant funding to modernize the nation's diesel fleet by retrofitting or replacing vehicles with cleaner, more efficient diesel engines.

EPA anticipates awarding approximately \$40 million in Diesel Emission Reduction Program (DERA) grant funding to eligible applicants, subject to the availability of funds.

EPA anticipates awarding between 20 and 80 assistance agreements to projects that significantly reduce diesel emissions and exposure, especially from fleets operating at goods movements facilities in areas designated as having poor air quality. Priority for funding will be given to projects that engage and benefit local communities and applicants that demonstrate their ability to promote and continue efforts to reduce emissions after the project has ended.

Project proposals are due **June 5**. [Poole]

U.S. EPA Environmental Justice FY2017 Progress Report Notes ECOS Publication

Area of Focus: Environmental Justice

On April 19, U.S. EPA issued its Environmental Justice FY2017 Progress Report. Marking the 25th anniversary of the establishment of the Office of Environmental Justice, the FY2017 report highlights EPA's ongoing environmental justice work focused on demonstrating tangible results in minority, low-income, tribal and indigenous communities.

The report focuses on the themes of delivering environmental results; cooperative federalism; rule of law and fair process; and building community capacity and engagement.

Notably, the report cites the ECOS Green Report on State Approaches to Community Engagement and Equity Considerations in Permitting as an example of cooperative federalism and best practices regarding community involvement and equity in state permitting programs. [Poole]

U.S. EPA Launches Mobile App for EJSCREEN

Area of Focus: Environmental Justice

On April 24, U.S. EPA launched its mobile version of EJSCREEN, the agency's nationally

acclaimed environmental justice screening and mapping tool. This new version makes accessing EJSCREEN easier for those working on the ground in communities.

The mobile version offers most of the same key functions and features as the full online version, but does so in a more compact and accessible layout. Some of the features included are the ability to select locations; access reports; and map environmental, demographic and EJ indicators. [Poole]

Career Opportunities

Massachusetts DEP Seeks Deputy Director, Municipal Services

The Massachusetts Department of Environmental Protection's Bureau of Water Resources seeks applicants for the position of Deputy Director, Municipal Services. The position entails the identification of priority areas for investment of Clean Water and Drinking Water State Revolving Fund financing.

Upcoming Events

ECOS Calls

ERIS on Research Needs

In an effort to prioritize states' research needs, ECOS and affiliate Environmental Research Institute of the States is conducting media-specific calls to gather information to inform future planning and contribute to the development of the U.S. EPA Office of Research and Development (ORD) Strategic Research Action Plan.

The water and air-focused calls were held this week. The remaining two calls are scheduled as follows:

- **Waste - April 30: 2-3 p.m. Eastern**
<http://epawebconferencing.acms.com/ecoswastecommittee/>
- **Cross-Media - May 3: 3-4 p.m. Eastern**
<http://epawebconferencing.acms.com/ecoscrossmediacall/>

The call-in number for both calls is (866) 299-3188, with access code (202) 564-6669.

ECOS members and state staff are invited to participate in the calls, and are asked to be prepared to answer the following questions: Are states' priorities the same or different from those identified in the [2016 ERIS survey of state research needs](#)? What emerging issues/challenges should ORD consider in its next Action Plan?

As the calls are held, PowerPoint presentations will be posted on ECOS' website [here](#). States are encouraged to provide comments after the calls to further inform strategic research planning. Please send comments to [Sarah Grace Longworth](#) of ECOS by May 11. [Longworth]

ERIS on State Science Contacts

ERIS will host its bimonthly State Science Contacts call on **May 4 at 11 a.m. Eastern**. The purpose of these calls is to share relevant information on science and research, receive input from states on state science needs, and provide state perspective on various

research activities.

An agenda for the call will be sent next week. If you are interested in participating, email [Sarah Grace Longworth](#) of ECOS. [Longworth]

Webinars

U.S. EPA on Emerging Sensor Technologies Report

U.S. EPA's Air and Energy National Research Program will host two webinar sessions to update stakeholders on its Emerging Sensor Technologies 2014-2018 Progress Report. The identical sessions will be held on **April 30 at 8:30-11:30 a.m. Eastern and 1:30-4:30 p.m. Eastern**, and will summarize general findings across a broad base of the agency's air sensor research activities over the past several years.

The first two hours of each session will feature presentations by EPA Sensor Performance Evaluation and Application Research team members on topics such as sensor evaluations, data analytics, ammonia detection, citizen science, and detection of select emission sources. The final portion of each session will be a question and answer period.

To register, see [here](#). [Longworth]

U.S. EPA on Lead Exposure Modeling and Research

U.S. EPA will host its monthly Tools and Resources webinar on **April 30 at 3-4 p.m. Eastern** to discuss multimedia modeling of lead exposure in children and water lead monitoring research to inform public health decisions. Specifically, EPA's Office of Research and Development (ORD) will highlight its innovative exposure-dose [modeling approach](#) to better understand the relationship between drinking water lead concentrations and children's blood lead levels considering exposures from water, soil, dust, food, and air. ORD will then discuss the future data needs to apply the approach at state and local

levels, and will report on water lead monitoring research relevant to state priorities.

To register, see [here](#). [Longworth]

ITRC on Bioavailability of Contaminants in Soil

The Interstate Technology & Regulatory Council (ITRC) will hold an online training course on Bioavailability of Contaminants in Soil: Considerations for Human Health Risk Assessment on **May 3 at 1-3:15 p.m. Eastern**.

The basis for this training course is the ITRC guidance: [Bioavailability of Contaminants in Soil: Considerations for Human Health Risk Assessment \(BCS-1\)](#). This guidance describes the general concepts of the bioavailability of contaminants in soil, reviews the state of the science, and discusses how to incorporate bioavailability into the human health risk assessment process. Training course participants will learn to apply the decision-making process to determine when a site-specific bioavailability assessment may be appropriate; consider factors that affect arsenic, lead, and PAH bioavailability; select appropriate methods to evaluate soil bioavailability; and use tools to develop site-specific soil bioavailability estimates and incorporate them into human health risk assessment

Learn more and register [here](#). [Bodi]

E-Enterprise Facility Integration Project Team on Opportunities for Involvement

The E-Enterprise Facility Integration Team Co-Chairs will host a webinar on **May 8 at 1-2:30 p.m. Eastern** to report on the team's Phase II accomplishments and plans for Phase III, which is about to begin. Co-Chairs Ron Evans and Susan Joan Smiley (U.S. EPA), Joshua Kalfas (Oklahoma), and Ben Way (Wyoming DEQ) will lead webinar presentations and answer any questions related to the Facility work.

The Facility Integration Team is currently seeking states, tribes and local governments to

partner in Phase III. Partnership opportunities will be discussed on the webinar.

Register [here](#) and learn more [here](#). [McAleer]

U.S. EPA on Business Innovations in Reducing Food Waste

U.S. EPA will host a webinar on **May 17 at 10-11:30 a.m. Eastern** to highlight business innovations to reduce food loss and waste. Presenters include three [Food Loss and Waste 2030 Champions](#) who are leading the way in helping the country reach its 50 percent food loss and waste reduction goal. Speakers from each company will share best practices, tools, and resources to prevent food from going to waste. They will address how shifts in company culture have changed operations as well as the critical role of food waste measurement in achieving their goals.

Subject: Morning Energy, presented by Anheuser-Busch: Zinke's turn on the Hill — EPA watchdog: Aides slow to turn over docs — House to take up Yucca bill today

By Kelsey Tamborrino | 05/10/2018 06:01 AM EDT

With help from Eric Wolff, Alex Guillén, Anthony Adragna and Jennifer Haberkorn

ZINKE HEADS TO THE HILL: Interior Secretary Ryan Zinke faces his Senate appropriators today to discuss his department's budget request for fiscal 2019. Expect Democrats to bring up familiar topics, such as his plans to reorganize the department and last year's decision to shrink national monuments in Utah. Subcommittee ranking member Tom Udall plans to tell Zinke that until courts weigh in on whether his move was legal, "I believe that moving forward with land management plans that will open these iconic areas to development is reckless."

Subcommittee Chair Lisa Murkowski may be interested in hearing more about Zinke's plans for oil and gas development in Alaska, after Interior kicked off its environmental review of potential drilling in part of the Arctic National Wildlife Refuge thanks to language she got included in last year's tax bill. And Sen. Lamar Alexander, another member of the subcommittee, can follow up on the maintenance backlog for the national parks, an issue the two discussed when Zinke visited Tennessee last week.

Ahead of the hearing, the Coalition to Protect America's National Parks is sending a letter to Zinke, with signatures from current and former employees of the National Park Service, calling on him to support permanent reauthorization of the Land and Water Conservation Fund, an issue with support in both parties.

If you go: The Senate Appropriations Interior-Environment Subcommittee hearing begins at 9:30 a.m. in 138 Dirksen.

— **But first:** Zinke will join Agriculture Secretary Sonny Perdue at USDA headquarters for an 8 a.m. briefing on the forecast for this year's wildfire season.

WATCHDOG: EPA AIDES SLOW TO SEND DOCS: EPA's internal watchdog complained last year that Administrator Scott Pruitt's aides were taking their sweet time handing over documents related to a probe into their boss' travels, new emails show. Although the standoff between the inspector general's office and Pruitt's staff was resolved a month later, the incident illustrates tensions between political appointees and career oversight officials that developed early on. The IG's office is in the process of conducting multiple reviews into Pruitt's actions.

The new emails, released under a FOIA request from California's Justice Department, show the IG's office was seeking information for its probe of Pruitt's frequent travel to Oklahoma on EPA business, Pro's Alex Guillén reports. That same probe was later expanded to include a wider swath of Pruitt's travel practices, including his first-class flights that cost more than \$100,000. (The investigation is slated to be completed this summer.)

At the time, the agency's assistant inspector general for audits, Kevin Christensen, wrote to a top career official in EPA's finance office to warn of a "potential situation" with the travel audit just two weeks after it began, the emails show. Christensen flagged messages showing Pruitt's chief of staff Ryan Jackson was

"screening" documents before releasing them to the Office of Inspector General. "This does not fit the definition of unfettered access or comply with the Administrator memo on access and providing information to the OIG," Christensen wrote to Jeanne Conklin, EPA's controller who oversees financial management and reporting. "When we are denied access to information until approved for release, it raises the question as to what is being withheld and approved for release."

The emails spotlight concerns about the lack of transparency atop the agency since Pruitt joined. And other emails released to California's Department of Justice also show career ethics officials warning Pruitt's aides about accepting industry awards and attending political events, further exemplifying internal tensions as Pruitt's external problems grow. Read more from Alex [here](#).

— **Related reporting:** Amid ongoing scrutiny, Pruitt met with industry representatives Wednesday, where a reporter asked if he still had the confidence of the White House. Pruitt said: "I think they've spoken very clearly," Bloomberg [reports](#).

WELCOME TO THURSDAY! I'm your host Kelsey Tamborrino. Bracewell's Frank Maisano was the first to correctly identify Detroit as home to the first paved roadway. Woodward Avenue carries the designation M-1 for its status as the first place to pour a 1-mile patch of concrete roadway. For today: Name the state first lady who simultaneously served as a member of the House. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

TRUMP EXTENDS OLIVE BRANCH: President Donald Trump called coal baron Don Blankenship Wednesday to exchange pleasantries and offer up congratulations for waging his campaign, POLITICO's Alex Isenstadt reports. The conversation was described as straightforward, polite and cordial, and comes days after Trump tweeted that voters shouldn't vote for Blankenship in the West Virginia Republican primary. Blankenship also published an [open letter](#) to Trump on Wednesday that in part blamed the president for his loss. "Your interference in the West Virginia election displayed a lack of understanding of the likely outcome of the upcoming general election," Blankenship wrote. But he ended with a note of optimism: "I look forward to meeting with you in the near future." Alex reported the president had also reached out to Rep. [Evan Jenkins](#), who also lost in Tuesday's primary, but had yet to connect with the Republican party's winner, Patrick Morrisey, as of Wednesday evening. Read [more](#).

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks. The zero-emission trucks will be able to travel between 500 and 1,200 miles. Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025. [Learn more](#). **

HOUSE GOES NUCLEAR: The House will take up the long-awaited [H.R. 3053 \(115\)](#), the "Nuclear Waste Policy Amendments Act of 2018," for consideration today, with votes expected between 10:45 a.m. and 11:45 a.m. The bipartisan legislation would update how the U.S. handles nuclear waste and promote development of the Yucca Mountain repository in Nevada, among other provisions. The legislation is expected to pass, although it will face a much shakier Senate reception with Sen. [Dean Heller](#) facing a tough re-election race this year. Rep. [John Shimkus](#), who introduced the comprehensive nuclear waste package, previously said he hadn't had any recent talks with Senate counterparts about potentially moving the bill across the Capitol. Still, its appearance today is a victory for Shimkus: [Greg Walden](#) told reporters this week that Shimkus had sent handwritten letters to the homes of every member of leadership during recess encouraging the bill to come up, praising his tenacity.

COURT SAYS CRA IS A-OK: A federal judge in Alaska yesterday [dismissed](#) an environmental group's lawsuit that called the Congressional Review Act unconstitutional. The Center for Biological Diversity specifically challenged the CRA [resolution](#) successfully passed by Congress last spring that nullified an Interior Department rule regarding hunting in Alaska wildlife refuges.

Judge Sharon Gleason of the U.S. District Court for Alaska, an Obama appointee, noted that both the CRA itself and this specific resolution were passed by both chambers and signed by the president, fulfilling the constitutional requirements for creating laws. Other parts of CBD's argument similarly failed to hold water. "The Court finds that even construing all the facts in favor of CBD, CBD's constitutional claims fail to adequately allege a plausible basis for relief," Gleason wrote.

SUNNY CALIFORNIA: The California Energy Commission voted unanimously Wednesday to require solar panels be installed for all newly built single-family homes and multifamily buildings less than three stories starting in 2020. A CEC study found that installing solar would increase home prices, but that would be more than offset by lower utility bills, according to the Los Angeles Times. The move has been anticipated for years and was supported by much of the home building industry. More from the LAT [here](#).

STEELWORKERS SAY YES TO RFS: The United Steelworkers are supporting Trump's recent decisions on the Renewable Fuel Standard, which include expanding sales of 15 percent ethanol fuels and having EPA and USDA workout some kind of program for biofuel credits on exported ethanol. "While it will continue to review the details, [USW] supports a deal brokered by the President that appears to address the long-running conflict between ethanol producers and oil refiners over federal biofuels mandates," the union said in a press release.

HOUSE GOP DROPS RESCISSIONS PACKAGE: House Majority Leader [Kevin McCarthy](#) unveiled the chamber's batch of [spending cuts](#) Wednesday. Similar to the White House's [request](#), the package makes cuts to Energy Department loan guarantee programs for clean energy and vehicle technologies. The bill is expected to [go directly to the House floor](#) for a vote, Pro's Sarah Ferris [reports](#). Senate GOP leaders have said they will consider the bill if and when it passes the House.

MEANWHILE IN BONN: Things aren't going as planned for the second week of climate talks in Bonn, Germany, punting further discussions to another meeting in September. The U.N. Framework Convention on Climate Change [said](#) Wednesday that there would be an additional meeting from Sept. 3-8 in Bangkok amid a stalemate centered in part around clarity on climate finance between developed and developing countries. The new date underscores the pressure negotiators are under to advance talks enough for ministers to strike a deal later this year at the COP24 in Katowice, Poland. "We need to resolve differences on finance, accounting and transparency," Alden Meyer of the Union of Concerned Scientists [told POLITICO Europe's](#) Kalina Oroschakoff.

CALVERT: EPA-INTERIOR COMING SHORTLY: Rep. [Ken Calvert](#), who oversees EPA and Interior on the Appropriations Committee, told ME to expect their fiscal 2019 bill "pretty soon" as work's going well. "We're working on final details now," he said. As for the perennial question, yes, Calvert expects policy riders to be in play: "There's always riders," he quipped.

AUTOMAKERS WANT MORE FUEL EFFICIENCY: The Alliance of Automobile Manufacturers and the Global Automakers, trade associations which together represent most of the automakers who sell cars in the U.S., will tell Trump that they most definitely want increases in fuel efficiency standards, contra that zero increase preference of the Department of Transportation. They also want the federal government to work out a single national standard with California, rather than face either a bifurcated market or a long legal battle. "Automakers are deeply committed to increased fuel economy and safety measures that meet the needs of our customers, and we expect to share the importance of government policies that provide certainty to the auto sector, continue to reduce greenhouse gas emissions, reflect what consumers will buy and result in a national policy that includes California," the two groups said in a statement.

FOLLOW THE MONEY: The Environmental Integrity Project released a database Wednesday of political contributions from companies and conservative organizations that met with Pruitt between Feb. 21, 2017, and April 13 of this year. The database was compiled via EPA calendars, FEC reports and data from the Center for Responsive Politics. See it [here](#).

SAVE THE DATE: BLM scheduled meetings to discuss its plans for an environmental review of planned oil and gas leases in ANWR. Several will be held in Alaska, including one each in Fairbanks and Anchorage on May 29 and May 30, respectively. Another meeting is scheduled for Washington D.C. on June 15. For those who can't make the hearings, BLM plans to live stream the Fairbanks and Anchorage dates.

MAIL CALL! ISN'T IT IRONIC? Six Democratic senators wrote to Office of Information and Regulatory Affairs Administrator Neomi Rao on the office's review and evaluation process for EPA's proposed "secret science" proposal to ban the use of studies that don't publicly disclose all their data. "The review process and rollout of this rule appears to have been rushed and secretive — which is particularly ironic for a proposal that purportedly aims to improve agency transparency and decision-making processes," they write.

Separately, bipartisan Reps. Ryan Costello and Paul Tonko sent a letter to the National Academy of Sciences asking for its input on the proposed rule, which was discussed when Pruitt testified before the House E&C Committee. Read the letter here.

Of course, Pruitt seems pleased with the proposal: Bloomberg's Ari Natter snapped a photo of new signs at EPA that tout the agency's "Strengthening Transparency in Regulatory Science."

ROCK STARS: Access Fund and American Alpine Club are sponsoring their annual "Climb the Hill" event today with professional rock climbers and outdoor recreation advocacy groups, who will hit the Hill today to talk outdoor recreation and public lands. Sen. Maria Cantwell will attend a reception with the group at 3 p.m. in 385 Russell. High-profile members of the rock-climbing community and executives from REI, Patagonia and The North Face will attend.

QUICK HITS

1:00 p.m. — The United States Energy Association forum on "Chemical Looping Prospective: An Advanced Approach to Coal Utilization," 1300 Pennsylvania Avenue NW

2:00 p.m. — Center for Climate and Energy Solutions webinar on "City-Utility Partnerships for a Cleaner Energy Future."

THAT'S ALL FOR ME!

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks from the pioneer in hydrogen-electric renewable technology, Nikola Motor Company. The zero-emission trucks — which will be able to travel between 500 and 1,200 miles and be refilled within 20 minutes, reducing idle time — are expected to be integrated into Anheuser-Busch's dedicated fleet beginning in 2020.

Through this agreement Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025.

"At Anheuser-Busch we're continuously searching for ways to improve sustainability across our entire value chain and drive our industry forward," said Michel Doukeris, CEO of Anheuser-Busch. "The transport industry is one that is ripe for innovative solutions and Nikola is leading the way with hydrogen-electric, zero-emission capabilities. We are very excited by the possibilities our partnership with them can offer."

Stories from POLITICO Pro

EPA watchdog knocked Pruitt aides for slowing probe Back

By Alex Guillén | 05/09/2018 06:43 PM EDT

EPA's internal watchdog complained last year that Scott Pruitt's top aides were delaying handing over documents to auditors probing the administrator's travel practices, according to newly released emails.

That standoff between the EPA inspector general's office and Pruitt's team was resolved a month after the IG's staff flagged the issue and warned that the reticence to release the documents came close to impeding their probe, the emails show. But the incident highlights early tension between EPA's political appointees and the internal watchdog, which is now conducting multiple reviews of Pruitt's actions.

And it shows that concerns about the lack of transparency atop the agency since Pruitt joined have rankled people inside the agency as well as outside. POLITICO reported last week that Pruitt's political appointees were screening documents produced for public records requests related to the embattled administrator, slowing the release of information.

The new emails, released under a Freedom of Information Act request from California's Justice Department, show the IG's office was seeking information for its probe of Pruitt's frequent travel to Oklahoma on EPA business, enabling him to spend numerous weekends at his home in Tulsa.

That probe was later expanded to look at Pruitt's other travel practices, including his first-class flights that cost more than \$100,000, and it is expected to be completed by this summer. The watchdog has since opened additional probes into Pruitt's security spending, condo rental, soundproof phone booth, large raises for aides and allegations of retaliation against staff who questioned him.

Kevin Christensen, EPA's assistant inspector general for audits, wrote in September to a top career official in EPA's finance office to warn of a "potential situation" with the travel audit just two weeks after it began, the emails show. He flagged messages showing Pruitt's chief of staff Ryan Jackson was "screening" documents before releasing them to the Office of Inspector General.

"This does not fit the definition of unfettered access or comply with the Administrator memo on access and providing information to the OIG," Christensen wrote to Jeanne Conklin, EPA's controller who oversees financial management and reporting. "When we are denied access to information until approved for release, it raises the question as to what is being withheld and approved for release."

The auditors were able to obtain the documents on Pruitt's flights from the EPA's finance office in Cincinnati, even as Pruitt's staff continued to withhold them, Conklin wrote to Kevin Minoli, a career official who at that time served as EPA's acting general counsel.

"Do they not understand in the [Office of the Administrator]," Conklin asked Minoli. "Perhaps someone can speak to them and make them understand that the OIG has the documents already and they appear close to impeding the audit."

Both Minoli and Conklin stated in their email exchange that neither of them advised Pruitt's staff that they had the power to delay or withhold handing over documents to the OIG.

Minoli said in an email a week later that Jackson had delayed providing the records over concerns the audit might make public some previously redacted information, such as Pruitt's calendar and flight records. Minoli said he discussed the matter with the deputy inspector general, Chuck Sheehan, and noted the IG's office "has a long-standing practice of not using privileged information in their published work unless absolutely necessary."

An EPA spokesman on Wednesday declined to comment on the incident.

Other emails released to California's Department of Justice under the FOIA request also show career ethics officials warning Pruitt's aides about accepting industry awards and attending political events.

In March 2017, the Oklahoma-based National Stripper Well Association told Pruitt it would award him its "Industry Leader Award" at an annual gala, which was sponsored by Koch Industries. The group represents the

owners of the hundreds of thousands of small wells that produce less than 15 barrels of oil or 90,000 cubic feet of natural gas per day.

But EPA ethics official Justina Fugh noted in an email to Pruitt's schedulers, Sydney Hupp and Millan Hupp, that NSWA was registered to lobby the federal government and Pruitt would violate his ethics agreement if he accepted the honor.

The group had praised Pruitt's decision that month to halt the Obama EPA's request for oil and gas companies to provide the agency with information about methane emissions, a possible first step toward regulating pollution in those existing wells. "NSWA Got a Win at EPA Already!" touted an early March [blog post](#) by the group. It is unclear whether Pruitt's award was directly connected to that decision.

Fugh warned the Hupps that Pruitt would have to walk a fine line in accepting anything from a lobbying entity. Items with "no other intrinsic value" like a plaque may be OK, she said, but "an ashtray or coffee table book" would not be.

Pruitt ultimately appears to have accepted a plaque from the NSWA, according to a [photo](#) posted on the group's site and his own internal calendars. Another photo posted on the NSWA's Facebook page shows Pruitt [posing](#) with Koch executives.

Pruitt's Outlook calendar, released in response to public records requests, lists the topic of the speaking engagement as "acceptance of award, thank you."

EPA did not say whether Pruitt officially accepted the award from the group along with the plaque, despite Fugh's advice.

"We gave the plaque to [the Office of the Executive Secretariat] who confirmed that we could keep it," EPA spokesman Jahan Wilcox said. NSWA did not say Wednesday why it honored Pruitt.

Pruitt aides hinted to ethics officials last fall that he expected to be invited to increasing numbers of political events, which ethics officials warned raises a host of Hatch Act concerns about mixing political activities with his official duties.

Earlier in his tenure, Pruitt had decided not to attend an Oklahoma GOP fundraiser after reports revealed the event would feature a speech on EPA issues.

Last fall, Ronna McDaniel, the head of the Republican National Committee, invited Pruitt to attend an Oct. 25 fundraiser in Dallas for Trump Victory, a joint fundraising committee that funnels money to the RNC and Trump's reelection campaign.

"We will get more and more of these" invites as "political season" approaches, Jackson wrote to an ethics official.

Hatch Act restrictions would allow Pruitt to attend, but he would be barred from mentioning his EPA affiliation or asking for donations, Fugh replied. EPA could not cover his travel costs, although the agency could pay for his security detail's travel, Fugh added. Event organizers could not specifically invite guests with issues before the agency and would need to rescind invitations to anyone with business before EPA.

Pruitt ultimately appears to have skipped that fundraiser.

Emily Holden contributed to this report.

Trump calls Blankenship after pushing for his loss in West Virginia [Back](#)

By Alex Isenstadt | 05/09/2018 10:55 PM EDT

President Donald Trump connected by phone on Wednesday with Don Blankenship, the former coal baron and ex-con whose Senate candidacy he helped sink.

Trump and Blankenship spoke briefly, according to three people familiar with the discussion. The conversation was described as straightforward, polite and cordial, with the president calling to exchange pleasantries and offer his congratulations on waging the campaign.

The call came two days after Trump took to Twitter to urge West Virginia Republicans to reject Blankenship's candidacy. In the tweet, Trump argued that Blankenship, who spent a year in jail following a 2010 explosion at his Upper Big Branch Mine that killed 29 workers, would be unable to defeat Democratic Sen. Joe Manchin in November.

Trump's intervention undermined Blankenship, who had aligned himself closely with the president — so much so that he described himself as "Trumpier than Trump."

Blankenship would go on to lose the primary decisively, finishing a distant third behind state Attorney General Patrick Morrisey and Rep. Evan Jenkins.

In his remarks to supporters on Tuesday evening, Blankenship attributed his loss to the president's last-minute intervention in the contest, saying that it had halted his momentum.

"I think if there was any single factor based on the polling at different times, the debates, and all the things I saw, it was probably President Trump's lack of endorsement — I don't know what to call it, but 'Don't vote for Don' tweet," he said. "I don't know what else it would have been."

In the final hours of the race, he said he was convinced that Trump had been pushed into the intervention by Senate Majority Leader Mitch McConnell, who had aggressively opposed Blankenship.

Blankenship on Wednesday released an "open letter" to Trump in which he accused the president of spreading "fake news against me."

"Your interference in the West Virginia election displayed a lack of understanding of the likely outcome of the upcoming general election," Blankenship added. "Patrick Morrisey will likely lose the general election. It's too late to change that, but it's not helpful to do to me what others are doing to you."

The president also connected briefly with Jenkins, but as of Wednesday evening had yet to connect with Morrisey, the winner of the primary. On Tuesday, though, Morrisey spoke with Donald Trump Jr. During the call, the president's eldest son promised to be helpful.

Trump's calls on Wednesday, several Republicans said, were partly aimed at healing the wounds following a deeply divisive primary. Blankenship has yet to endorse Morrissey, who aggressively attacked him during the final days of the race.

Some in the party are concerned that the deep-pocketed Blankenship, who spent more than \$2.5 million of his own funds in the primary, could wage an effort to damage Morrissey in the general election.

DOE loan guarantee programs hit hard in White House rescissions package [Back](#)

By Anthony Adragna | 05/08/2018 11:08 AM EDT

More than \$5 billion in Energy Department loan guarantee programs for clean energy and vehicle technologies would be cut under a \$15 billion rescissions [request](#) unveiled today by the White House.

The proposal would cut \$684 million from clean energy loan guarantee programs, on top of the \$4.33 billion in proposed cuts to Advanced Technology Vehicles Manufacturing loan program [already announced](#) by the Trump administration.

"This proposed rescission would eliminate subsidy amounts that are inconsistent with the President's policies," the proposal says of cutting from the loan guarantee programs.

In addition, the package would cut \$10 million in water quality research grants, which the proposal says "are duplicative with other Federal programs."

WHAT'S NEXT: The package is expected to easily pass the House but faces a less certain fate in the Senate.

Trump spending cut package to head directly to House floor [Back](#)

By Sarah Ferris | 05/09/2018 01:03 PM EDT

House Republican leaders are moving quickly to tee up the White House's \$15 billion package of proposed spending cutbacks.

GOP leaders plan to release legislative text of [the White House's proposal](#) as early as today, a House GOP aide confirmed.

The package is expected to closely mirror the Trump administration's request, which targeted unspent dollars from years-old accounts.

It will not go through the House Appropriations Committee, another GOP aide confirmed. That sets up the bill directly for a floor vote.

Most Republicans have embraced the proposed cuts, even as some budget hawks complained that most of the savings are only on paper.

But some, like GOP Rep. Vern Buchanan of Florida, have rejected the idea of cutting \$7 billion of budget authority from the Children's Health Insurance Program.

White House officials have argued that most of the funding has technically expired and can't be used, so it would have zero impact on the program.

The CBO confirmed that point today, saying that there would be no actual cuts or coverage reductions for CHIP.

House GOP leaders unveil rescissions bill [Back](#)

By Sarah Ferris | 05/09/2018 08:28 PM EDT

House Republican leaders today unveiled a package of spending cuts, following a request from President Donald Trump this week.

The House GOP bill contains \$10.45 billion in specific cuts, including roughly \$7 billion to the Children's Health Insurance Program.

Other cutbacks in the GOP bill — including one targeting an energy program in the 2009 Obama-era stimulus bill — do not provide specific dollar amounts.

House GOP leaders will now begin whipping support for the bill, which is expected to go directly to the House floor for a vote. Senate GOP leaders have said they will consider the bill if and when it passes the House.

Under a decades-old law, presidential rescissions requests can pass the Senate with a simple majority, instead of the usual 60-vote threshold for procedural votes.

Democrats argue that Trump's bill would require the full 60 votes, however, because it targets mandatory funding, and not solely discretionary.

Subject: Morning Energy: Did Pruitt skate by? — EPA prepping Oversight docs — McConnell tries for West Virginia redemption

By Kelsey Tamborrino | 04/27/2018 06:01 AM EDT

With help from Anthony Adragna

DID PRUITT SKATE BY? EPA Administrator Scott Pruitt had a simple task Thursday: Keep his conservative backers happy — and in turn, keep the president happy. And he may have managed to do just that. While Democrats and environmentalists panned Pruitt's performance, the EPA chief, who is facing a heavy stack of ethical and spending quandaries, left most Republicans pleased enough with his performance that he's probably salvaged his job for now.

But of course, President Donald Trump has yet to weigh in on Pruitt's performance. And on a day that saw Trump's nominee for Veterans Affairs withdraw, triggering a long Trump rant on "Fox & Friends," that could be good news for the EPA chief, POLITICO's Nancy Cook reports. "As long as [Pruitt's] explanations hold and there are no crazy discrepancies or smoking gun or anything like that, I don't think that creates any red flags for Pruitt," said one Republican close to the White House, who predicted Pruitt would survive the scrutiny.

Still, Pruitt's shifting answers about what he knew about controversial raises for two close aides raised a lot of concerns that he hadn't been completely forthright during his interview with Fox News earlier this month. Under lawmakers' questioning, he acknowledged that he had authorized his chief of staff to award pay increases to his aides — but said he did not know how high they would be or that they would circumvent the White House's disapproval. That's different than what he told Fox's Ed Henry when he said he hadn't known about the raises until after the fact and that he did not know who authorized them.

Pruitt used the two hearings to blame his torrent of scandals on career staff, as POLITICO's Anthony Adragna, Annie Snider and Alex Guillén reported, while maintaining the headlines surrounding him aren't painting an accurate picture. "Let me be very clear: I have nothing to hide as it relates to how I've run the agency for the past 16 months," Pruitt said. (In case you missed it, POLITICO's Energy team has the full recap of the key moments here.)

But all in all, his critical audience of House Republicans exited two separate hearings Thursday believing that Pruitt fared well. "I found his responses credible," said Rep. Mike Simpson, a House appropriator. Meanwhile, Rep. Ken Calvert, the chairman of the House Appropriations Interior-Environment subcommittee, said Pruitt did "fine." "He answered our questions," he said. "... He's doing well, he's very professional, he's doing his job." And Illinois' John Shimkus, who chaired Pruitt's first hearing, said he thought Pruitt handled himself well and that Republican members were tough in their questions, Anthony recaps. "Some of it was accountability for policy, so I don't know what more [critics] want," Shimkus said. "I think that he answered the questions in the best way that he could answer them."

Of course, Pruitt's performance did not please everyone. "I think the opprobrium that you've generated on some of these spending decisions is actually warranted," GOP Rep. Ryan Costello, who is retiring from Congress, told Pruitt. Ana Unruh Cohen, managing director of government affairs at the Natural Resources Defense Council said the EPA administrator "demonstrated beyond any doubt that he is unqualified" to lead his

agency. "He should be fired before sundown," she said. And Rep. Marcy Kaptur, ranking member of the Appropriations subcommittee that questioned Pruitt, used the term "evasive" to describe the performance. "For someone who has been in the job a year and a half, he didn't seem to command a lot of the details," she said. "... I don't think we know the full extent of what he's done yet."

WHAT COMES NEXT? Keep in mind: Pruitt's under multiple investigations that have yet to fully play out. "We have a committee that's looking into these charges and we'll have a resolution," Calvert said of Pruitt's ongoing scandals. "We'll see what comes of it." Today, for one, marks the deadline set by House Oversight Chairman Trey Gowdy in his expanded probe into the embattled EPA chief's activities. He's called for a host of documents to be delivered and interviews to be scheduled by today. An EPA official said the agency is currently in the process of providing the documents, Anthony reports. The official said the documents will respond to the allegations of lavish spending and unethical conduct and may negate the need for several aides to appear for interviews.

WELCOME TO FRIDAY! I'm your host Kelsey Tamborrino, and no one guessed Alabama — the home state of the first officially designated Democratic floor leader, Oscar Underwood. For today: Name the only senator to be preceded by both of his or her parents. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

POLITICO's Ben White is bringing Morning Money to the Milken Institute Global Conference to provide coverage of the day's events and evening happenings. The newsletter will run April 29 - May 2. **Sign up to keep up with your daily conference coverage.**

PRUITT RAISES UNDONE AFTER FOX INTERVIEW: Amid the deluge of news coming out of the hearings, Pro's Emily Holden and Nick Juliano reported via documents released by EPA that the agency reversed raises for the two top aides to Pruitt the day after his interview with Fox News. Pruitt told Fox he had "corrected them" after finding out about them. A day later, on April 5, Pruitt's chief of staff Ryan Jackson signed personnel forms reverting the aides to their previous pay grades, according to copies of the forms reviewed by POLITICO. Read more here.

McCONNELL'S WEST VIRGINIA REDEMPTION: Amid an increasingly tense GOP primary battle for Democratic Sen. Joe Manchin's seat, coal baron Don Blankenship has focused his efforts into a relentless slash-and-burn campaign targeting Majority Leader Mitch McConnell. Blankenship — who spent a year in prison following the deadly 2010 Upper Big Branch mine disaster — compared his current battle against the McConnell-led Republican establishment to his past legal fight against the federal government, POLITICO's Alex Isenstadt writes. But as the May 8 primary inches closer, McConnell is fighting back with an avalanche of attacks from a super PAC aligned with the Senate leader, among other efforts.

Blankenship's attacks have grown intensely personal. During an interview with POLITICO, Blankenship said that McConnell "has a lot of connections in China," adding that the GOP leader's wife is Transportation Secretary Elaine Chao. And during an appearance on a local radio show, Blankenship described Chao's father as a "wealthy Chinaperson," who was "well-connected in China." Read more.

DOE TO ANNOUNCE FUNDS FOR ADVANCED NUCLEAR: Energy Secretary Rick Perry will announce today the selection of 13 projects that will receive about \$60 million in funding to support cost-shared research and development in advanced nuclear technologies. The selections — broken down into categories pertaining to nuclear demonstration readiness, advanced reactor development, and regulatory assistance grants — are the first under the Office of Nuclear Energy's "U.S. Industry Opportunities for Advanced Nuclear Technology Development" funding opportunity announcement. "Making these new investments is an important step to reviving and revitalizing nuclear energy, and ensuring that our nation continues to benefit from this clean, reliable, resilient source of electricity," Perry said in a statement.

ALL IN THE TIMING: The Office of Management and Budget completed its review of EPA's proposed "secret science" rule Wednesday, E&E News' Sean Reilly reports, even though Pruitt had already signed it by then. The policy that bars the agency from relying on studies that don't publicly disclose all their data got Pruitt's signature on Tuesday, but the Reginfo.gov site showed the review completion date as Wednesday. "While OMB is sometimes slow to update the site, it was unclear why Pruitt would have signed a rule before the review was completed," Reilly writes. EPA spokeswoman Liz Bowman suggested to E&E the fault lay with OMB. "Interagency review concluded before this proposal was signed," she said in a statement. Reilly later tweeted: "[@OMBPress](https://twitter.com/OMBPress) has now changed the date on the <http://Reginfo.gov> site to show that the review of this proposed [#EPA](#) rule was completed on April 23, not April 25. A [#OMB](#) spokesman won't discuss the reason for the change on the record."

TESTER TESTS TRUMP: The president is coming after Democratic Sen. Jon Tester, in what could be a problematic move for the Montanan as he fights to win reelection. Trump was enraged over Tester's work documenting allegations of malfeasance by Rear Adm. Ronny Jackson, provoking a series of inquiries that ultimately led to Jackson withdrawing his nomination to be VA secretary. POLITICO's Burgess Everett reports Tester is now at a turning point in his relationship with Trump, who railed against him on Thursday morning. "The incident and its fallout underscores how the burly, plain-spoken Tester hasn't exactly tacked to the center in an election year," Burgess writes. "Perhaps he feels emboldened after dodging a big-name opponent; after Ryan Zinke was drafted into the Trump administration and the state attorney general passed on the race, Tester's opposition is made up of lesser known opponents that will compete in a June primary." Read more.

SENATE MAKES POMPEO OFFICIAL: The Senate narrowly confirmed Mike Pompeo on Thursday, shifting him from CIA director to secretary of State. Pompeo was confirmed 57-42, ultimately winning support from Democrats Heidi Heitkamp, Manchin, Joe Donnelly, Bill Nelson, Claire McCaskill and Doug Jones. Supreme Court Justice Samuel Alito swore in Pompeo shortly after the vote Thursday, formally installing Pompeo, who has previously doubted climate science — a point greens jumped onto ahead of the vote. "There's some who think we're warming, there's some who think we're cooling," Pompeo said in 2013.

"Democrats that jumped ship to support this dangerous climate denier must and will be held accountable by the people," Food & Water Watch Executive Director Wenonah Hauter said in a statement. But others cheered the move: Competitive Enterprise Institute director of the Center for Energy and Environment, Myron Ebell, said in a statement he was "pleased." Pompeo, he said, "understands the importance of affordable, reliable energy to Americans' health and ability to provide for our families." Pompeo will be a "forceful advocate" of Trump's decision to remove the U.S. from the Paris climate agreement, Ebell said.

MANCHIN TRIES AGAIN: Manchin sent another letter this week urging Perry and Defense Secretary Jim Mattis to examine use of the Defense Production Act to protect coal-fired power plants. "The ability to produce reliable electricity and to recover from disruptions to our grid are critical to ensuring our nation's security against the various threats facing our nation today — whether those threats be extreme weather events or adversarial foreign actors," he writes. Earlier this month, Manchin similarly wrote to the president on the issue, although, as Pro's Eric Wolff reported, it faces an uphill battle on many fronts. Read the letter.

WATCH: House Speaker Paul Ryan was asked about climate change Thursday — by the 7-year-old daughter of E&E News' Scott Walden. See it here.

PRUITT FOCUS OF NEW AD: The opposition research firm American Bridge is scheduled to air an ad this morning on "Fox and Friends" focusing on Pruitt's swirling scandals and his previous criticism of the president. Watch it here.

DEMOCRATS COME OUT IN FULL FORCE FOR CPP: Ahead of the comment deadline, eight Democratic senators signed onto a letter led by EPW ranking member Tom Carper opposing EPA's proposal to repeal the Clean Power Plan. The senators write that the law is instrumental in fighting climate change and say

that rescinding it "ignores scientific evidence on the risks of climate change and puts generations of Americans at grave health and economic risk."

— **A coalition of 16 attorneys general and municipalities** submitted a supplemental comment letter to EPA with evidence of what they say are due process violations and ethical issues due to Pruitt's involvement. The group previously wrote to EPA, claiming Pruitt had not had an open mind on CPP. "Since then, the evidence continues to grow that Administrator Pruitt should have been disqualified from participating in this rulemaking before it began," they write. "His involvement has irreparably tainted the current administrative process, and as a result, EPA must withdraw the proposed CPP repeal." Read it [here](#).

MAIL CALL! WE NEED AN EXTENSION: Sens. [Ron Wyden](#) and [Jeff Merkley](#) and Reps. [Peter DeFazio](#) and [Jared Huffman](#) wrote to Interior Secretary Ryan Zinke and Agriculture Secretary Sonny Perdue on Thursday, urging an extension on interim mineral withdrawal protections for the Chetco River in southwest Oregon. Read it [here](#).

— **Sixteen senators, led by Democratic Sen. [Tom Udall](#)**, sent [this letter](#) to Zinke asking him to pause any plans for the management of Bears Ears and Grand Staircase-Escalante national monuments until legal challenges related to the president are resolved.

— **The House Biofuel Caucus sent a letter** to Pruitt objecting to Renewable Fuel Standard waivers issued by EPA, demanding Pruitt "immediately cease all waiver activity" and provide lawmakers a "full list" with further details. Read it [here](#).

CSB TO INVESTIGATE HUSKY EXPLOSION: The Chemical Safety Board said Thursday it is sending a four-person investigative team to Superior, Wis., to the scene of the Husky Energy explosion that injured several Thursday morning. The refinery was shutting down in preparation for a five-week turnaround, CSB said, when the explosion occurred. The Superior Police Department [evacuated](#) areas within miles of the explosion, including a small hospital nearby as a precaution. As of the latest count, at least 11 people were injured in the explosion, the Associated Press [reports](#).

CHA-CHING: Following a House Natural Resources hearing Thursday on offshore energy revenue sharing for Gulf-producing states, Interior announced it would disburse nearly \$188 million to four states: Alabama, Louisiana, Mississippi and Texas, as well as their coastal political subdivisions. It is the first disbursement of funds under Phase II of the Gulf of Mexico Energy Security Act of 2006, which comes from oil and gas leasing revenues on the Outer Continental Shelf, according to DOI. See the **massive** check [here](#).

Stories from POLITICO Pro

Ronny Jackson drama overshadows Pompeo success for White House Back

By Nancy Cook | 04/26/2018 06:05 PM EDT

White House aides were reveling in the pomp of French President Emmanuel Macron's state visit, viewing it as a welcome reprieve from the chaos of Cabinet confirmations, an intensifying Russia probe and a boss with a short fuse. Then reality hit.

President Donald Trump's pick for Veterans Affairs Secretary Ronny Jackson finally withdrew from the confirmation process amid escalating allegations of misconduct, and Trump called into the TV show *Fox and Friends* to deliver an unscripted interview touching on everything from the Russia probe and the investigation of his personal attorney Michael Cohen to fan-tweets from Kanye West—all before 10 a.m.

The day also included the confirmation of Mike Pompeo, previously Trump's CIA director, as secretary of state—an unexpectedly hard-fought victory that was overshadowed by routine House hearings featuring testimony from EPA Administrator Scott Pruitt, who has been accused of a string of ethics violations.

"The state visit was cool for folks in the White House and fun distraction for one hour from stories about Scott Pruitt or Michael Cohen before everyone got back to the shitshow," said one former White House official.

The president often publicly frames these hectic junctures as a White House unduly under siege from the press or other opponents. About Jackson's nomination, Trump said on Thursday: "He's a great man, and he got treated very, very unfairly. He got treated really unfairly. And he's a hell of a man."

The lack of vetting and Trump's tendency to name top-level nominees with little scrutiny dates back to the presidential transition in the fall of 2016. It's a pattern that surprises few insiders, even as it creates headaches for the White House and the nominees.

"Generally, White House aides are blaming the president from shooting from the hip and without giving it any thought, but this is how every decision he has made has gone," said the former White House official.

On Wednesday, the night before Jackson dropped out of consideration, a number of administration aides and Republicans close to the White House gathered at the Trump International Hotel for after-work drinks—and a few aides kept hoping aloud that Jackson would announce he was dropping out on TV, so no one would have to run back to the White House and everyone could keep drinking, according to one attendee.

The biggest beneficiary of this week's chaos was Pruitt, who started out the week under great scrutiny and disdain from several disparate circles of White House staffers and then ultimately skated through his two Capitol Hill hearings with little incident. Earlier in the week, those hearings were seen as a make-or-break moment for the EPA Administrator and ones that the president would pay attention to.

"As long as his explanations hold and there are no crazy discrepancies or smoking gun or anything like that, I don't think that creates any red flags for Pruitt," said one Republican close to the White House, who predicted Pruitt would survive the scrutiny.

What helps Pruitt and other Cabinet nominees who frustrate the White House or Trump is the math in the Senate. The Republicans do not have a large or cohesive enough majority to easily confirm new Cabinet secretaries, and the drama surrounding Jackson's departure puts a damper on creating any new vacancies to fill.

"In the ideal situation, the only headlines coming out of the agencies are the policy decisions advancing the president's agenda," said one senior administration aide, speaking about the spate of bad headlines surrounding Pruitt's leadership at the EPA. "That is the clear direction from the top, and we've communicated that."

But many White House officials—and the president himself—have adopted the view that the administration is unfairly maligned, no matter what it does.

Many aides were surprised that Pompeo's confirmation process seemed so shaky at certain points, given the White House's huge, upcoming foreign policy decisions on meeting with North Korea, keeping troops in Syria, and deciding the fate of the U.S.'s role in the Iran deal. The White House's Director of Legislative Affairs Marc Short devoted most of his time over the past few weeks to ensuring Pompeo got confirmed.

"We can only pick so many battles, and Pompeo has got to get done as quickly as possible," said one White House official.

Pruitt dodges blame [Back](#)

By Anthony Adragna, Annie Snider and Alex Guillén | 04/26/2018 10:46 AM EDT

Scott Pruitt may have handled his daylong congressional grilling well enough to salvage his job for now — but only after he blamed his torrent of scandals on staff, disavowed one of his top advisers and raised new questions about what he knew about massive raises awarded to some of his closest aides.

The Environmental Protection Agency administrator shrugged off responsibility Thursday for a \$43,000 privacy booth and more than \$100,000 in first-class flights, and even said he has no idea whether his chief policy adviser showed up for work at all during a three-month stretch.

But the former Oklahoma attorney general stayed calm throughout the nearly six hours of questioning. And his televised performance brought no immediate complaints from the one person whose opinion matters — the media-obsessed president who has so far stuck with Pruitt despite a multitude of investigations and the exasperation of key White House staff.

"Let me be very clear: I have nothing to hide as it relates to how I've run the agency for the past 16 months," Pruitt told a House Energy and Commerce subcommittee, the first of two panels to subject him to hours of questioning Thursday.

But he also didn't offer enough specifics to satisfy Democratic lawmakers — and a few Republicans — who criticized the lavish spending, cozy relations with lobbyists and other controversies that have taken root on his watch. He pointedly refused to apologize, instead accusing his critics of trying to "derail" President Donald Trump's policies.

Several Republican lawmakers who defended him during the hearings said he'd held his own against a barrage of Democratic complaints.

"I think he did well," said Rep. Tom Cole (R-Okla.), adding, "I know him well enough to not believe that he's deliberately done anything wrong or that he's made decisions in an inappropriate or unethical manner."

Still, Cole admitted any decision on Pruitt's fate is in Trump's hands.

Rep. Betty McCollum (D-Minn.) said Pruitt merely tried to dodge accountability for actions such as a massive expansion of his personal security team, while sidestepping accusations that he had punished staffers who questioned whether he faces serious threats to his safety.

"He could have taken personal responsibility and really meant it," McCollum told reporters after an afternoon hearing by a House Appropriations subcommittee, where she had told Pruitt he should resign. "Instead he messed up in that he got caught up in thinking he needed more security than he needed, and that when employees pushed back on him, he did retaliate."

One aspect of Thursday's testimony drew a notable amount of attention — Pruitt's shifting explanations for what he knew, and when, about raises as high as 72 percent that went to some of his key aides.

Weeks ago, Pruitt told Fox News that he hadn't known about the raises until after the fact, that he did not know who authorized them and that the aides should not have received them. But under lawmakers' questioning Thursday, he acknowledged that he had authorized his chief of staff to award pay increases to the aides — but said he did not know how high they would be or that they would circumvent the White House's disapproval.

"I was not aware of the amount, nor was I aware of the bypassing or the [Presidential Personnel Office] process not being respected," Pruitt said, responding to a question from Rep. Paul Tonko of New York, the top Democrat on the Energy and Commerce Environment Subcommittee.

An EPA spokesman later said Pruitt had given his chief of staff, Ryan Jackson, blanket authorization to handle hiring and raises using the EPA's power under a water law that didn't require the White House's sign-off.

Lawmakers didn't ask — and Pruitt didn't say — whether he would discipline Jackson for his handling of the raises.

A preliminary report from EPA's inspector general has found that Jackson signed off on the pay hikes to Sarah Greenwalt, a Pruitt adviser who previously worked as his general counsel in the Oklahoma attorney general's

office, and Millan Hupp, a former "Team Pruitt Operations Director" who is now his director of scheduling and advance.

Pruitt also said he didn't know whether one of his top aides, Samantha Dravis, had failed to show up for work for much or all of November through January, as Sen. Tom Carper (D-Del.) has alleged. His answer essentially abandoned a past statement by an EPA spokesman, who called the accusations "baseless and absurd."

"I'm not aware that she did or did not appear for work. So that's something that is being reviewed at this point," Pruitt told lawmakers Thursday, referring to an inspector general decision to review her attendance.

Dravis, EPA's associate administrator in charge of EPA's Office of Policy until last week, was such a senior aide that she had traveled with Pruitt on official business in Morocco as recently as December. She also appears with him in a meeting photo that Pruitt's EPA Twitter account tweeted Dec. 6.

Pruitt also blamed his staff for the controversial purchase and installation of the privacy booth in his office, and said he would have stopped it if he knew the cost. He said the installation came after he'd received a phone call "of a sensitive nature" and requested "access to secure communication."

"I gave direction to my staff to address that, and out of that came a \$43,000 expenditure that I did not approve," he said. "If I'd known about it, I would have refused it."

Pruitt did not single out the staff members he was blaming for the phone booth installation, but agency staffers have told POLITICO that those and other pricey expenditures were overseen by Pasquale "Nino" Perrotta, the career employee who heads his security detail.

Even after surviving Thursday's gauntlet, Pruitt is still facing numerous investigations from Congress, the White House and government watchdogs into his taxpayer-funded first-class travel; unprecedented, 24-hour security detail; and sweetheart rental deal with the wife of a lobbyist who sought to influence his agency. A senior EPA official said Thursday that high-level staffers including Jackson, Greenwalt and Perrotta are willing to sit for interviews with staff of the House Oversight Committee, which is carrying out one of the probes of Pruitt's actions.

Ahead of Thursday's hearing, EPA distributed a 23-page document responding to various allegations.

Democrats ripped into him from the start, charging that Pruitt had put his own interests and political ambitions over the job of protecting the environment and human health, and he had shown he didn't deserve the public trust.

"I think your actions are an embarrassment to President Trump and distract from the EPA's ability to effectively carry out the president's mission, and if I were the president I wouldn't want your help," said Frank Pallone (D-N.J.). "I'd get rid of you."

Sitting in front of protesters wearing "Impeach Pruitt" T-shirts and a sign calling him "Mr. Corruption" on Thursday morning, Pruitt dismissed the wave of criticism as an attempt to undercut "transformational change" happening at the agency.

"Let's have no illusions about what's really going on here: Those who have attacked the EPA and attacked me are doing so because they want to attack and derail the president's agenda and undermine this administration's priorities," he said. "I'm simply not going to let that happen."

Rep. John Shimkus (R-Ill.), who chaired the morning hearing, said afterward that he thought Pruitt had acquitted himself well.

"I think that he answered the questions in the best way that he could answer them," Shimkus said.

Shimkus wouldn't speculate about potential next steps by the Energy and Commerce panel, saying the decision was up to full committee Chairman Greg Walden (R-Ore.). He also declined say whether he thought questions remain unanswered.

"I'm just glad he showed up," Shimkus said.

Pruitt's defenders, like Rep. David McKinley (R-W.Va.), who has praised Pruitt's rollback of climate change and water regulations, dismissed the Democrats' complaints as political posturing.

"To the public, I think this has been a lot of classic display of innuendo and McCarthyism that we're seeing too often here in Washington that I think unfortunately works against civility and respect for people in public office," he said. "Some can't resist the limelight, the opportunity to grandstand."

Rep. Joe Barton (R-Texas) said the focus on the controversies was an attempt to undermine Pruitt's, and Trump's, policies.

"If you can't debate the policies in Washington, you attack the personality, and that's what's happening to you," Barton told Pruitt. "Republicans do it when it's a Democratic president. Democrats do it when it's a Republican president. And in my opinion, it's just my opinion, that's what's happening to you."

Not every Republican came to Pruitt's defense, though. Rep. Ryan Costello of Pennsylvania offered the harshest criticism from the GOP, saying his activities deserved the anger they had provoked.

"I think the opprobrium that you've generated on some of these spending decisions is actually warranted," Costello, who is retiring from Congress, told Pruitt. "I've reviewed your answers, and I find some of them lacking or insufficient. And I believe you've not demonstrated the requisite good judgment required of an appointed executive branch official on some of these spending items."

Trump has so far stood by Pruitt, praising his work to pare back environmental rules and remaining wary of upsetting conservatives who strongly support the administrator.

The administration's desire to avoid another tough confirmation fight also appears to be weighing in Pruitt's favor. While new Secretary of State Mike Pompeo narrowly won Senate confirmation and was sworn in Thursday, Rear Adm. Ronny Jackson's nomination to head the Department of Veterans Affairs crashed and burned, and Trump also needs to win approval for a controversial pick to head the CIA.

Democrats suggested that Pruitt's controversies were the result of his penchant for abusing the perks of his position and rewarding his political backers.

"Only in recent weeks have we come to understand the extent of your political ambitions, your tendency to abuse your position for personal gain and to advance the agendas of your political benefactors in what appears to be a propensity for grift," Tonko said.

Under questioning from Rep. Anna Eshoo (D-Calif.), Pruitt declined multiple times to answer whether he felt any remorse for wasteful spending at the agency,

"I think there are changes I've made already," he said. But he deflected several questions about his first-class flights, saying his security detail decides where he sits on airplanes, and that he now plans to fly coach.

Eshoo didn't buy it.

"With all due respect, I may be elected, but I'm not a fool," she said. "That's really a lousy answer from someone that has a high position in the federal government."

'Embarrassment' or 'McCarthyism': Key moments as Pruitt faces lawmakers [Back](#)

By Quint Forgey, Anthony Adragna, Alex Guillén and Annie Snider | 04/26/2018 01:40 PM EDT

Scott Pruitt, the scandal-ridden administrator of the Environmental Protection Agency, appeared on Capitol Hill on Thursday for back-to-back House committee hearings on his agency's budget request.

But the only spending most lawmakers wanted to discuss were reports of Pruitt's taxpayer-funded air travel, the sweetheart condo lease he secured from a lobbyist, and the numerous other allegations of misappropriating funds and unethical management that have tarred his tenure at the EPA.

Here are key moments from the contentious hearings, held by subcommittees of the House Energy and Commerce and House Appropriations committees:

A defiant Pruitt says he has nothing to hide. The former Oklahoma attorney general argued his critics were simply attempting to undercut the "transformational change" he's making at the agency on behalf of President Donald Trump. "Let's have no illusions about what's really going on here: Those who have attacked the EPA and attacked me are doing so because they want to attack and derail the president's agenda and undermine this administration's priorities," he said at the outside of the day's first hearing, in front of a House Energy and Commerce subcommittee. "I'm simply not going to let that happen." Pruitt maintained had "nothing to hide," and suggested some of the reports regarding his behavior were inaccurate. "Facts are facts and fiction are fiction," he said. "And a lie doesn't become truth just because it appears on the front page of a newspaper."

Pruitt acknowledged he authorized pay raises for his key aides. But he said he didn't know how much they were, or that his chief of staff — who took the blame for signing off on the salary hikes — circumvented the White House to award them. "I was not aware of the amount, nor was I aware of the bypassing or the [Presidential Personnel Office] process not being respected," Pruitt told lawmakers. Pruitt had earlier said on Fox News that he hadn't known about the raises and that the aides should not have received them. A preliminary report from EPA's inspector general found that chief of staff Ryan Jackson signed off on multiple large raises using Safe Drinking Water Act authority, which allows the agency to move forward without White House sign-off. The raises totaled as much as 72.3 percent.

But he blamed EPA's career staff for his \$43,000 privacy booth. He said career employees signed off on the expensive soundproof phone booth installed in his office — and maintained he would have refused it if he'd known about the cost. "I did have a phone call that came in of a sensitive nature and I did not have access to

secure communication," he said. "I gave direction to my staff to address that and out of that came a \$43,000 expenditure that I did not approve." The Government Accountability Office has said the agency violated spending laws by not informing Congress about the booth beforehand. To Pruitt's critics, the booth has come a prominent symbol of his reputation for high-spending and extreme secrecy. Pruitt later said he uses the booth only "rarely," and that "it depends on the nature of the call and how urgent the call is."

Pruitt also had trouble explaining the expensive biometric locks recently installed in his office. They require a code for him to enter, but he wouldn't say whether the locks feature fingerprint scanners or some other type of identification system. When Pruitt said career staffers made the decision to install the locks, Rep. Peter Welch (D-Vt.) wasn't impressed. "It's really starting to seem like there's something on the desk with a motto, 'The buck stops nowhere,'" he quipped.

It's still not clear whether one of Pruitt's top aides came to work for three months. "I'm not aware that she did or did not appear for work. So that's something that is being reviewed at this point," Pruitt said of Samantha Dravis, the associate administrator in charge of EPA's Office of Policy. Sen. Tom Carper (D-Del.) has alleged that Dravis largely did not work the months of November through January, and EPA's inspector general has agreed to review her attendance. Dravis said several weeks ago that she planned to resign, and her last day was reportedly April 20. Pruitt's comments Thursday were a shift from EPA's past statements that the no-show accusation is "completely baseless and absurd."

Democrats pounded him early and often. Those included top Energy and Commerce Democrat Frank Pallone of New Jersey, who said the scandals enveloping Pruitt are "an embarrassment to President Trump and distract from the EPA's ability to effectively carry out the president's mission. And if I were the president, I wouldn't want your help. I'd get rid of you."

Some Republicans also warned Pruitt he needs to answer questions. Environment subcommittee Chairman John Shimkus (R-Ill.) said he considered much of the media narrative surrounding the EPA chief's scandals to be "a distraction," but the committee "cannot ignore" reports of Pruitt's impropriety. "As public servants, our jobs are not based solely on the things we do, or the things we have done, but also on the way we conduct our business," Shimkus said in his opening statement. "It is no secret that there have been many stories in the press about the management and operations of the agency and your dealings with potentially regulated sectors." And full Energy and Commerce Chairman Greg Walden (R-Ore.) expressed concerns that Pruitt's progress on policy is being "undercut" by the allegations. "These issues are too persistent to ignore," said Walden, a member of House Republican leadership.

But other GOP lawmakers came to his rescue, and one likened the criticism to "McCarthyism." Rep. Joe Barton, a former Energy and Commerce chairman, and Rep. David McKinley (R-W.Va.), a staunch Pruitt ally, blamed Democrats and toxic partisanship for Pruitt's precarious professional standing. "If you can't debate the policies in Washington, you attack the personality, and that's what's happening to you," Barton lamented. McKinley accused Democrats on the panel of not being able to "resist the limelight" and said Pruitt's detractors were simply grandstanding. "I think this has been a lot of classic display of innuendo and McCarthyism that we're seeing too often here in Washington, that I think unfortunately works against civility and respect for people in public office," McKinley said.

Rep. Bill Johnson (R-Ohio) also jumped to shield Pruitt. "I think it's shameful today that this hearing has turned into a personal attack hearing and a shameful attempt to denigrate the work that's being done at the EPA and with this administration," he said. Public officials should have ethical standards "beyond reproach," Johnson said, "but so should members of Congress."

Staffers moved or dismissed under Pruitt weren't being punished, he said. "There's no truth to the assertion that decisions have been made about reassignments or otherwise as far as employment status based upon the things you reference. I'm not aware of that ever happening, and it's something I want to make very, very clear,"

Pruitt said, vowing he would not retaliate against civil servants who flag wrongdoing. The New York Times reported this month that several top staffers were reassigned or demoted after questioning Pruitt, and POLITICO reported that the agency's deputy homeland security chief was dismissed after signing off on a report questioning Pruitt's security spending.

One Republican ripped into Pruitt with particular gusto. "I think the opprobrium that you've generated on some of these spending decisions is actually warranted," Ryan Costello (R-Pa.), who is retiring from Congress, told the EPA chief. "I've reviewed your answers and I find some of them lacking or insufficient. And I believe you've not demonstrated the requisite good judgment required of an appointed executive branch official on some of these spending items." He went on to ask specifically about reports of retaliation against employees who questioned Pruitt, as well as whether security threats against him were "warranted or credible."

Pruitt: I only took that controversial trip to Morocco because the country's ambassador invited me.

"There was a free trade agreement that is in existence with Morocco and the ambassador of Morocco invited me to Morocco to negotiate the environmental chapter on that free trade agreement," Pruitt told lawmakers. The EPA administrator's December jaunt to the North African nation came under intense scrutiny when the agency, in a news release after the fact, described the trip as dual-purpose: to discuss updates to a U.S.-Morocco Free Trade Agreement "and the potential benefit of liquified [sic] natural gas (LNG) imports on Morocco's economy." Later on Thursday, Pruitt attempted to downplay his role in promoting American natural gas exports. "There was a lot of reference made to LNG only because the ambassador [of Morocco] asked me to share that with individuals when I was in country," he said.

Pruitt the leaker? After facing questions about the severity of the threats the EPA chief has faced in office — which the agency has cited to justify his pricey security budget — Pruitt read part of a report from the inspector general's office that documented threats directed at him and his family. Asked whether EPA Inspector General Arthur Elkins Jr. had written the report he cited, Pruitt replied, "I'm looking at the document that says inspector general." But a spokeswoman for the IG's office said Thursday that it came from another official, not Elkins himself. "It was an internal memo from Assistant IG for Investigations Patrick Sullivan," OIG spokeswoman Tia Elbaum said in an email. "It was leaked without authorization. It will be released in the near future as part of an OIG FOIA response."

By the time Pruitt was finished, Shimkus was "just glad he showed up." The Illinois Republican, who chaired Pruitt's first hearing, said he thought the administrator handled himself well and that GOP members were suitably tough in their questioning. "Some of it was accountability for policy, so I don't know what more [critics] want," Shimkus told POLITICO of Pruitt's performance. "I think that he answered the questions in the best way that he could answer them." Shimkus declined to speculate about potential next steps the House Energy and Commerce Committee or the Environment subcommittee would take, and didn't specifically state whether he thought questions remain unanswered after today's grilling. "I knew it would be painful," he said.

Shimkus praises Pruitt performance in first hearing [Back](#)

By Anthony Adragna | 04/26/2018 02:39 PM EDT

Rep. [John Shimkus](#) (R-Ill.), who chaired EPA Administrator Scott Pruitt's first hearing today, said he thought Pruitt handled himself well and that Republican members were tough in their questions.

Shimkus pointed to questions from Reps. Ryan Costello (R-Pa.), Leonard Lance (R-N.J.) and Billy Long (R-Mo.) at the Energy and Commerce environment subcommittee hearing this morning.

"Some of it was accountability for policy, so I don't know what more [critics] want," Shimkus told POLITICO of Pruitt's performance. "I think that he answered the questions in the best way that he could answer them."

Shimkus declined to speculate about potential next steps, saying that decision was up to full committee Chairman Greg Walden (R-Ore.). And he declined to specifically state whether he thought questions remain unanswered.

"I'm just glad he showed up," he said. "I knew it would be painful. There would be policy and politics."

Gowdy expands probe into EPA's Pruitt [Back](#)

By Anthony Adragna and Alex Guillén | 04/13/2018 05:45 PM EDT

House Oversight Chairman Trey Gowdy (R-S.C.) said Friday he's expanding his probe into the alleged ethical and spending abuses by EPA Administrator Scott Pruitt one day after his staff met for several hours with a former EPA aide who was pushed out of the agency.

Gowdy's latest letter is a further sign of the deepening bipartisan scrutiny facing President Donald Trump's environmental chief, whose critics accuse him of excessive spending on travel, vehicles, staff raises and luxe security features such as a \$43,000 soundproof phone booth.

The committee's new request focuses on the decision to increase Pruitt's security to round-the-clock protection, contracts to sweep Pruitt's office for electronic surveillance, his trips to Italy and Morocco, the hiring of an Italian security firm, and travel by Pruitt's security chief, Pasquale "Nino" Perrotta.

The letter comes after the committee interviewed ousted EPA employee and former Trump campaign aide Kevin Chmielewski, who is being treated as a whistleblower. A committee spokeswoman said the information he provided is consistent with allegations laid out in a letter released Thursday by House and Senate Democrats who had also spoken to him.

The committee also asked for sit-down interviews with four senior EPA officials: Perrotta; Ryan Jackson, Pruitt's chief of staff; Millan Hupp, a scheduling and advance aide; and Sarah Greenwalt, a senior counsel to Pruitt. Gowdy requested the agency schedule those interviews and provide a litany of documents by April 27. Gowdy also requested an on-the-record interview with Chmielewski, who spoke more informally with lawmakers this week.

Hupp and Greenwalt, both of whom have worked for Pruitt since he was Oklahoma's attorney general, are the two staffers who received raises via a special authority granted Pruitt under the Safe Drinking Water Act. Pruitt told Fox News last week he was not aware of the raises, although Chmielewski told Democrats this week that the raises were "100 percent Pruitt himself."

EPA spokesman Jahan Wilcox said the agency had "responded to Chairman Gowdy's inquiries and we will continue to work with him."

EPA's inspector general is also investigating complaints about Pruitt's travel spending and other practices. The inspector general's office said it will release an interim report Monday afternoon on one of its probes, which involves whether Pruitt misused special hiring authority provided by the Safe Drinking Water Act to bring some key aides into the agency.

It's unclear whether the IG has expanded that probe to include a recent controversy around EPA's use of the same water law to grant raises to the two Pruitt aides despite the White House's disapproval.

Chmielewski told Democrats this week that EPA fired him after he refused to sign off retroactively on first-class travel for one of Pruitt's closest aides, Samantha Dravis. Gowdy's letter does not request an interview with Dravis, who has announced her intent to leave the agency.

During congressional interviews earlier this week, Chmielewski outlined a detailed litany of seemingly unethical behavior against Pruitt. He said the EPA chief insisted on staying at expensive hotels while traveling even if they exceeded permissible federal spending limits, directed staff to book him on Delta Air Lines so he could accrue frequent flier miles, made a close aide "act as a personal real estate representative" and then retaliated against staff who questioned his behavior, among other allegations.

EPA has previously dismissed Chmielewski as one of a "group of disgruntled employees who have either been dismissed or reassigned." The agency did not immediately comment on the latest letter.

Gowdy's probe into Pruitt's activities has been in contrast to his GOP colleagues, who have adopted a "wait and see" approach toward the EPA chief's ethical woes. Lawmakers this week expressed discomfort with Pruitt's spending when asked and vowed to press him about it at future hearings. But they've stopped short of demanding documents or issuing subpoenas to investigate the alleged ethics lapses.

Pruitt last appeared before Congress in late January before the Senate Environment and Public Works Committee. Unlike his fellow Cabinet members, he has yet to appear before any congressional committees to defend his fiscal 2019 budget request. And he's not scheduled to return to Capitol Hill for another two weeks, when he is scheduled to attend an April 26 session with the House Energy and Commerce Committee.

"The Republicans are absolving themselves of all oversight responsibility even in the face of the most egregious conduct. They may as well stop calling committees oversight," Melanie Sloan, senior adviser at American Oversight, told POLITICO. "What would it take? Would he literally have to kill somebody before they say it's a problem?"

GOP lawmakers were less patient with Obama EPA officials. Senate and House lawmakers questioned former Administrators Lisa Jackson and Gina McCarthy, as well as other senior brass, on issues ranging from the use of nonofficial email accounts, whether they used texting to avoid record-keeping requirements, whether they allowed a senior staffer to commit time fraud and why they hadn't fired employees who spent hours watching pornography at work more quickly.

EPW Chairman John Barrasso (R-Wyo.) has said he planned to await the results of a White House review of Pruitt's conduct and would not comment on multiple occasions this week on when the administrator would return to his committee.

"He was just here earlier this year and answered questions for 2½ hours, but I expect him to come back again," Barrasso told reporters.

EPA prepping documents in response to Oversight probe [Back](#)

By Anthony Adragna | 04/26/2018 08:11 PM EDT

EPA staff is in the process of providing documents to the House Oversight Committee that it believes will respond to allegations of lavish spending and unethical conduct by Administrator Scott Pruitt and may negate the need for several aides to appear for interviews, according to a senior EPA official.

The agency staffers believe the documents will show former Trump campaign aide Kevin Chmielewski, who served as a senior aide to Pruitt, made a number of "exaggerations" when he spoke with Democratic and Republican lawmakers, according to the official.

Senior staffers at the agency are also willing to sit for interviews with Oversight staff if desired, the official said. Those officials include: Pasquale "Nino" Perrotta, Pruitt's security chief; Ryan Jackson, Pruitt's chief of staff; Millan Hupp, a scheduling and advance aide; and Sarah Greenwalt, a senior counsel to Pruitt.

House Oversight Chairman [Trey Gowdy](#) (R-S.C.) [expanded his probe](#) into the embattled EPA chief's activities one day after his staff sat down with Chmielewski. In an April 13 letter, Gowdy requested a host of documents and that the interviews be scheduled by April 27.

In addition, an Oversight Committee aide said earlier this week the committee had informally requested on April 16 that Samantha Dravis, formerly one of Pruitt's closest aides, appear for a transcribed interview with committee staff. Dravis had not been included in Gowdy's original letter because it was thought she left the agency, but her resignation was actually effective April 20, according to the aide.

A spokeswoman for the Oversight Committee did not respond to request for comment today.

Documents: EPA reversed raises one day after Pruitt's Fox interview [Back](#)

By Emily Holden and Nick Juliano | 04/26/2018 06:45 PM EDT

EPA reversed raises for two top aides to Administrator Scott Pruitt the day after his interview with Fox News, according to [documents](#) shared by the agency today.

Pruitt [told Fox](#) his staff had authorized the raises and he had "corrected them." A day later, on April 5, Pruitt's chief of staff, Ryan Jackson, signed personnel forms reverting the aides to their previous pay grades, according to copies of the forms reviewed by POLITICO. Jackson signed the documents "for Scott Pruitt," as he had on forms authorizing the initial pay bumps a few days earlier, according to documents [previously released](#) by EPA's inspector general.

Sarah Greenwalt, senior counsel to Pruitt, received a \$56,765 increase in her annual salary on April 1, and Millan Hupp, director of scheduling and advance, saw a \$28,130 increase that same day, according to the earlier IG documents.

Jackson reversed those moves on April 5, bumping Greenwalt's salary back to \$109,900 per year, and Hupp's to \$88,450, according to the new documents.

Pruitt signed a memo in March 2017 delegating to Jackson the ability to make hiring and salary decisions using a special section of the Safe Drinking Water Act.

"Administrator Pruitt has consistently said he was not aware of the amount of the raises or the process that was used, as he said both today and in prior interviews," EPA spokesman Jahan Wilcox said in a statement. "He was aware one of the individuals was receiving changes to job responsibilities and might be asking for a raise, but had no further involvement in the discussions, negotiations or approvals, because he had authorized his Chief of Staff and other EPA officials to handle all personnel matters."

McConnell seeks redemption in ugly West Virginia primary [Back](#)

By Alex Isenstadt | 04/26/2018 04:48 PM EDT

HUNTINGTON, W. Va. — Don Blankenship walked into the Guyan Golf & Country Club on Tuesday afternoon and bluntly laid out his plan for the final two-week stretch of the GOP Senate primary: a relentless slash-and-burn campaign targeting Mitch McConnell.

As the assembled local GOP women's group munched on chocolate chip cookies, the coal baron who spent a year behind bars after a deadly 2010 mine explosion compared his current battle against the McConnell-led Republican establishment to his past legal fight against the federal government.

"When you've been falsely charged, when you've had seven of 10 bill of rights flagrantly violated, you tend to fight back. ... I make no apologies for that," he said, adding that when he sees people like McConnell "leading us to the left, I will speak out about it, because I know bad people join good organizations."

As the dramatic May 8 primary campaign hurtles to a close, it's taking on an all-too familiar outline. For the second time in a matter of months, an insurgent outsider is taking aim at McConnell, looking to capitalize on the broiling anti-establishment unrest that's dominating Republican politics. And just like last time, McConnell is fighting back.

In the fall, the leader's aggressive campaign to defeat Alabama Republican Roy Moore backfired spectacularly. This time, his attempt to stop the 68-year-old Blankenship seems to be faring better. Amid an avalanche of attacks from a McConnell-aligned super PAC, two new polls out this week show Blankenship, once seen as an early front-runner, plunging into third place.

Crisscrossing the state this week, Blankenship savaged the Kentucky Republican as weak-kneed, accused him of failing to stand up for the coal industry, and said he'd long ago lost touch with Republican voters.

Blankenship vowed to oppose McConnell as Senate GOP leader if he won and began airing a TV ad — which he personally composed — envisioning McConnell as a bog-enveloped "swamp captain."

At times, the attacks grew intensely personal. During an interview with POLITICO on Sunday, Blankenship said McConnell "has a lot of connections in China," adding that the GOP leader's wife, Transportation Secretary Elaine Chao, is "from China, so we have to be really concerned that we are in truth" putting America's interests first. Blankenship's girlfriend was born in China.

During an appearance on a local radio show the following day, Blankenship repeated the jab, describing Chao's father as a "wealthy Chinaperson," who was "well-connected in China."

Asked about the remarks, Josh Holmes, a longtime McConnell political adviser, charged that Blankenship is "mentally ill," noting that Blankenship had once spoken of moving to China and becoming a Chinese citizen. Holmes also said Blankenship had used a "racial blast" against the Taiwan-born Chao, whom he described as "the dictionary definition of the American dream."

"The one consistency we've seen over the last decade is that the death rattle of a primary candidate is always a tendency to attack other Republicans because they know reporters will report it," Holmes added. "At this point what's clear is that voters are writing him off and so he knows that by attacking McConnell he'll get attention."

Driving the McConnell team's offensive is a belief that Blankenship cannot defeat Democratic Sen. Joe Manchin in November.

This spring, Steven Law, president of the McConnell-aligned Senate Leadership Fund super PAC, wrote a memo to top Republican Party donors that stated Manchin was beatable — but not if Blankenship wins the primary.

"We would forfeit any chance of beating Manchin if Blankenship becomes the nominee," wrote Law, underlining the sentence for emphasis.

Republican strategists spent weeks deliberating how to take down Blankenship, concerned that an overtly Washington-led effort would only strengthen him - just as it did when Senate Leadership Fund spent millions of dollars against Moore.

Finally, a group of Republican strategists who've previously worked with Senate Leadership Fund mobilized and earlier this month launched the generically-titled Mountain Families PAC. Over the span of a little more than a week, the super PAC pummeled Blankenship with over \$700,000 in TV ads accusing him of contaminating drinking water with coal slurry.

The creative force behind the commercials was a GOP consulting firm spearheaded by Larry McCarthy, a McConnell ally who is widely viewed as the master of the political attack ad. Among his credits: the 1988 Willie Horton spot that helped to sink Democrat Michael Dukakis' presidential bid.

Apparently not finished with Blankenship, Mountain Families PAC on Thursday began purchasing additional commercial airtime.

With Blankenship cratering in polls, many Republicans are convinced that Blankenship has been effectively neutralized and that the contest has emerged as a two-person race between GOP Rep. Evan Jenkins and state Attorney General Patrick Morrisey. The coal baron has derided both as pawns of the establishment.

As he hit the trail this week, Blankenship bristled over the effort to upend his candidacy. Each time, he pointed to the super PAC's connection to the GOP leader.

"As you know," he said at the GOP women's luncheon in Huntington, "I've even been beat up by the Republican Mitch McConnell."

During a news conference on Monday afternoon, Blankenship fired back at Washington Republicans who called him unelectable, saying even his dog could beat Manchin.

At one point, he was asked point-blank whether he had a message for McConnell.

"He needs to understand that if I'm there I will not vote for him for majority leader, and so the rest of the senators should understand that they should not put him up if they need my vote," Blankenship responded.

In an interview, Blankenship recounted a personal history with McConnell, a fellow coal country pol, that he said dated back nearly three decades. He said he first met McConnell during the late 1980s while visiting the home of a GOP donor in Kentucky, and that their paths occasionally crossed over the years after. The coal company that Blankenship formerly presided over, Massey Energy, has mines in Kentucky.

Massey, Blankenship said, had been helpful to McConnell early in his political career. In 1999, Blankenship, a longtime GOP donor who for years bankrolled West Virginia campaigns, contributed \$1,000 to McConnell's reelection campaign, according to federal filings.

Over time, though, Blankenship said he came to see the Republican leader as insufficiently supportive of the mining industry. He said they haven't spoken in about a decade.

"I never felt that he fought very hard for coal. He seemed to be too willing to compromise on climate change legislation," said Blankenship, adding that West Virginians felt that McConnell didn't put up enough of a fight against President Barack Obama's push to regulate carbon emissions.

McConnell advisers dispute the criticism. "People have accused Mitch McConnell of a lot of things over the years, but I've never heard anyone say he's insufficiently pro-coal," said Holmes.

After being released from prison last year, Blankenship launched his campaign with an eye toward clearing his name and pushing back against the allegations the federal government leveled against him. As the race has progressed, he has come to see his war with McConnell as intertwined with the central theme of his candidacy: that the Washington establishment is out to get him.

At Blankenship campaign events, he hands out copies of "An American Political Prisoner," the manifesto he wrote while in jail.

The anti-McConnell campaign has a decidedly homemade flavor. Blankenship, who's staffed his campaign with West Virginia-based operatives rather than ones from Washington, personally wrote the "swamp captain" ad, an amateur-style spot that lacks the slick production of typical political commercials. After producing the concept and the script, his small group of advisers made some edits before releasing it to TV stations.

But as the race enters its final days, Blankenship finds himself playing catch-up against his more establishment-friendly rivals.

During his closing remarks in a Tuesday afternoon debate, he chose to go after one of his opponents with a familiar weapon.

"Will Evan Jenkins stand up when Mitch McConnell looks at him?" Blankenship asked as the congressman looked on. "That's the question."

Pruitt scales back EPA's use of science [Back](#)

By Emily Holden and Annie Snider | 04/24/2018 03:17 PM EDT

Environmental Protection Agency chief Scott Pruitt announced Tuesday he would seek to bar the agency from relying on studies that don't publicly disclose all their data, a major policy change that has long been sought by conservatives that will sharply reduce the research the agency can rely on when crafting new regulations.

The unveiling of the proposed rule delivers a win to Republicans like House Science Chairman [Lamar Smith](#) (R-Texas), who unsuccessfully pushed legislation to impose the same type of change. The move also demonstrates Pruitt's persistence in pursuing President Donald Trump's anti-regulation agenda just two days before the embattled EPA chief is due to face fierce questioning from lawmakers about his hefty spending, expanded security detail and cheap condominium rental from the wife of an energy lobbyist.

At an invitation-only meeting at EPA headquarters with Smith, Sen. [Mike Rounds](#) (R-S.D.) and other supporters of the policy, Pruitt said the proposed rule was critical in ensuring that the agency was transparent about how it is making decisions to justify costly new regulations. It is the latest step Pruitt has taken to fundamentally shift the agency's approach to science.

"It is a codification of an approach that says as we do our business at the agency the science that we use is going to be transparent, it's going to be reproducible, it's going to be able to be analyzed by those in the marketplace. And those who watch what we do can make informed decisions about whether we've drawn the proper conclusions or not," Pruitt said.

Text of the proposed rule was not immediately available.

The proposal, based on legislation pushed by Smith, is intensely controversial, and scientists and public health groups say it will prevent federal regulators from enacting health and safety protections. Nearly 1,000 scientists, including former EPA career staffers, signed a [letter](#) opposing the policy sent by the Union of Concerned Scientists to Pruitt on Monday.

Their primary concern was that many of the country's bedrock air and water quality regulations are based on research that cannot disclose raw data because it includes the personal health information.

But industry has its own version of the same problem. EPA often relies on industry studies that are considered by companies to be confidential business information when determining whether new pesticides and toxic chemicals are safe to use. Internal EPA emails obtained under the Freedom of Information Act show that EPA political officials, including Nancy Beck, who became the chief of the agency's chemical safety office last year after working for years at a chemical industry lobbying group, worried that the new policy would limit the agency's ability to consider industry data or would force companies to make this proprietary data public.

"We will need to thread this one real tight!" Richard Yamada, political official who led work on the new policy wrote to Beck after she raised the concerns.

It was not immediately clear if the new proposed rule included measures to address those concerns.

Rush Holt, CEO of the American Association for the Advancement of Science, said Pruitt's changes could keep the agency from revising public health regulations as problems arise or new data comes to light.

"On the surface it sounds so innocuous or even beneficial. What could be wrong with transparency? Well it's clear to me that this is not based on an effort to be transparent. It is rather based on an effort to be just the opposite," he said.

"EPA is particularly important because when science is misused, people die," he added.

Pruitt has been discussing the new scientific policy publicly for weeks, but it only went to the White House for interagency review last week. Such swift review is very rare for the Office of Management and Budget, which often takes months to vet a new policy. At least one group, the Environmental Defense Fund, has requested a meeting with OMB officials to discuss the rule, but OMB's website shows that no meetings have been scheduled with interested groups.

Many public health studies can't be replicated without exposing people to contaminants, and environmental disasters such as the Deepwater Horizon oil spill cannot be recreated, the group said, raising intellectual property, proprietary and privacy concerns.

Pruitt's predecessor Gina McCarthy, and her air chief Janet McCabe, in an op-ed in The New York Times in March said concerns about studies are dealt with through the existing peer-review process, which ensures scientific integrity.

"[Pruitt] and some conservative members of Congress are setting up a nonexistent problem in order to prevent the E.P.A. from using the best available science," they said.

'Jon poked the bear': Tester braces for Trump's revenge [Back](#)

By Burgess Everett | 04/26/2018 05:47 PM EDT

Jon Tester didn't intend to play a central role in taking down President Donald Trump's pick to lead the Veterans Affairs Department. Yet that's exactly what the Montana Democrat ended up doing

And now, Trump is coming after him.

The president is enraged over Tester's work documenting allegations of malfeasance by Rear Adm. Ronny Jackson, which quickly unraveled Jackson's nomination to be VA secretary and marks a turning point in the relationship between the moderate Democrat and Trump.

As Tester's reelection campaign kicks into high gear, Trump is more motivated than ever to campaign against him in the ruby-red state — accusing the senator of irresponsibly leaking the damaging information to undermine the president's nominee.

Trump said Thursday that Tester will have a "big price to pay" for his part in working to sink Jackson's nomination. But Tester is sanguine about his decision to go public with accusations about Jackson's workplace misconduct, poor prescription practices and drinking on the job.

"If he thinks it's my job to sweep his stuff under the table and ignore our military folks, he's wrong. If he thinks I should not be sticking up for veterans, he's wrong," Tester said Thursday of the president. "I look forward to working with President Trump. I've worked with him many times in the past, but we disagree."

Tester has repeatedly tried to emphasize points of agreement with Trump in his nascent reelection campaign, including sending Trump 13 of his bills to sign. But Trump and other Republicans are taking it personally that as ranking member of the Senate Veterans Affairs Committee, Tester and his staff compiled interviews with more than two dozen current and former military members describing Jackson's alleged wrongdoing and then released them this week.

Senate Majority Whip John Cornyn (R-Texas) said Tester "painted a big target on himself" this fall in Montana, which Trump won by 20 points. And a Republican senator, granted anonymity to speak candidly about a colleague, said a "livid" Trump is now set to prioritize the campaign to knock off Tester this fall.

"Jon poked the bear. Did you see the bear today? The bear was mad," the senator said. "If there was any doubt he was coming to Montana it was removed today. He overreached."

The allegations, sourced anonymously, were the death knell of Jackson's nomination.

"That was not Jon's best time with regards to his Senate career," said Sen. Pat Roberts (R-Kan.). "Man, they aim low. They really aim low. And they brought him down."

Democrats strongly reject that argument. They say Tester did the right thing by speaking up about a crucial post and that Trump and Republican are deflecting blame for the Jackson debacle.

"Sen. Tester released profoundly serious, credible allegations from military men and women who put their careers on the line," said Sen. Richard Blumenthal (D-Conn.). "The administration bungled this nomination from the start. And then it fumbled the defense of its nominee. So the blame really lies with the administration."

Former Secretary of Defense Chuck Hagel also defended Tester from partisan attacks.

"I've always admired Jon Tester's commitment to helping veterans — not using veterans for political purposes. Veterans know who their champions are, and Jon Tester is one of them," said Hagel, who also served as a Republican senator from Nebraska.

Still, in interviews this week, Tester acknowledged it was "risky" for him to release the information about Jackson. The allegations could turn out to be false, he acknowledged, and take on a more partisan tinge by coming from the Democratic minority.

Tester felt compelled to move given the circumstances and received no criticism for doing so from Senate Veterans' Affairs Chairman Johnny Isakson (R-Ga.) on Thursday. In fact, until about a week ago, Jackson's nomination appeared to be going relatively smoothly, save for concerns about his lack of experience. But then Tester's staff started getting calls. Lots of calls.

By Wednesday, 23 people had contacted the committee about Jackson's history of misconduct, according to Democratic aides. Tester spoke to some of them, while his staff handled most of the work.

And as inquiries poured in from the press, Tester felt he had no choice but to go forward publicly. Each allegation in the two-page document, including that Jackson drunkenly crashed a government vehicle and wrote his own prescriptions, was verified by at least two sources, Democratic aides said. Two more people buttressing the claims contacted the committee after the summary was released.

"I don't want to be in this situation. But the truth is. We got the information. It's our obligation to follow up," Tester said. "We did not initiate any of this. None of it. It was news to us."

Tester gradually ramped up his role in challenging Jackson's beleaguered nomination as the week wore on. After allegations about Jackson's history dangled anonymously for two days, Tester confirmed them in an NPR interview on Tuesday night then did several cable news hits before releasing the two-page summary of Jackson's alleged misconduct on Wednesday.

Sen. Dan Sullivan (R-Alaska) said Tester's move "poisons the well" in a committee that generally operates outside partisan politics, but allies said Tester had no choice and that Republicans were disingenuously claiming they wouldn't have done the same.

"Do you think if the shoe was on the other foot it would have been released? It would be irresponsible if it wasn't. Military members came forward wanting to talk about the doctor," said Sen. Claire McCaskill (D-Mo.).

But Tester is under heavy attack from Trump, the White House and Republicans for the move. Trump said Thursday that Tester's work "is going to cause him a lot of problems in his state."

"I find it outrageous for a senator for political gain to take uncorroborated allegations that have not been investigated and to throw them out in a way to besmirch somebody's character," said Marc Short, Trump's legislative director. "Very irresponsible to go on national TV and make those allegations knowing that that would besmirch that person's character."

The incident and its fallout underscores how the burly, plain-spoken Tester hasn't exactly tacked to the center in an election year. Perhaps he feels emboldened after dodging a big-name opponent; after former Rep. Ryan Zinke was drafted into the Trump administration and the state attorney general passed on the race, Tester's opposition is made up of lesser known opponents who will compete in a June primary.

And since Trump became president, Tester often votes in a different manner than his fellow red state incumbents, seemingly unworried about his state's GOP lean. He was the lone red state Democrat to oppose Mike Pompeo to be secretary of state on Thursday and voted twice against a government funding bill in January.

But Tester has also positioned himself as someone who sends Trump bills to sign, including eight on veterans issues, and is open to working with the president. And he seems to genuinely believe that if he sticks to his guns and does not try to pander to conservative voters, the politics will work out this fall.

"It was going to be difficult anyway," Tester said of his campaign. "Look, if I made decisions around here based on the election, I wouldn't be a very good senator."

Tester's decision to aggressively take on Trump is rare among at-risk senators. Now, Tester is credited with helping bring down the confirmation prospects of a man whom Trump counts as a confidant, friend and personal doctor.

And Trump is plainly angry about it, to almost no one's surprise.

"I can understand that, if [Trump] thinks it's a personal attack. If you have a friend and someone personally attacks your friend, you're going to have to fight back," said Sen. Joe Manchin (D-W.Va.). "But Jon is also going to have to do his job, too."

Pompeo confirmed as secretary of state [Back](#)

By Nolan D. McCaskill | 04/26/2018 12:35 PM EDT

The Senate confirmed Mike Pompeo to be President Donald Trump's secretary of state on Thursday, after a handful of Democrats facing difficult reelection challenges joined every Republican in backing the CIA director.

Pompeo's hawkish foreign policy views drew strong opposition from the left, but he ultimately won over Democratic Sens. Heidi Heitkamp of North Dakota, Joe Manchin of West Virginia, Joe Donnelly of Indiana, Bill Nelson of Florida, Claire McCaskill of Missouri and Doug Jones of Alabama.

Pompeo, who was confirmed on a 57-42 vote, was sworn in early Thursday afternoon by Supreme Court Justice Samuel Alito, according to State Department spokesperson Heather Nauert.

He's wasting little time. Almost immediately after being sworn in, Pompeo was to fly to Brussels for a meeting of foreign ministers, followed by stops in Riyadh, Jerusalem and Amman over the next four days. The newly minted secretary of state is expected to discuss a range of hot issues with counterparts in Europe and the Middle East, including the fate of the Iran nuclear deal.

Pompeo ultimately received more Democratic votes for secretary of state than Rex Tillerson. And unlike Tillerson, who repeatedly clashed with and was undercut by Trump, Pompeo enjoys a positive relationship with the president. Trump applauded Pompeo's confirmation, hailing him as a "patriot" with "immense talent, energy and intellect" who will be an asset for the United States.

"He will always put the interests of America first," Trump said in a statement. "He has my trust. He has my support."

Pompeo is also expected to play a major role in talks with North Korea. He met with dictator Kim Jong Un over Easter weekend in a private trip to Pyongyang. The secret summit came ahead of an expected meeting between Trump and Kim.

The Trump administration had little margin for error in confirming Pompeo. With Sen. John McCain (R-Ariz.) out recovering from cancer treatment, Republicans' majority had slimmed to 50-49. Libertarian-leaning Sen. Rand Paul (R-Ky.), a member of the Senate Foreign Relations Committee, had also initially announced his opposition to Pompeo.

The former Kansas congressman was poised just days ago to get an unfavorable recommendation from the Senate Foreign Relations Committee until Paul flipped, citing assurances from the president and incoming secretary that the war in Iraq was a "mistake" and that the U.S. should wind down its presence in Afghanistan.

Republican leaders were determined to bring Pompeo's nomination to the floor regardless of the committee vote. But had Paul remained opposed, he and Democrats could have killed the nomination outright.

Paul's shifting position, however, all but assured Pompeo would breeze through Thursday's confirmation. Republicans maintained that he is well-qualified to be America's top diplomat and criticized Democrats for playing politics with his nomination. Fourteen Senate Democrats had voted to confirm him as CIA director in January 2017.

"From the founding of the republic until 2017, the Senate has never required a cloture vote to confirm a secretary of state nominee. Now we're at two," Senate Majority Leader Mitch McConnell complained earlier Thursday. "I guess Senate Democrats are in a history-making mood. Because over the past 15 months, they've embarked on a partisan campaign to block, obstruct and delay President Trump's nominees that is quite simply without precedent in American history."

Senate Minority Leader Chuck Schumer (D-N.Y.) said Wednesday he was troubled by Pompeo's past rhetoric and argued that he was too hawkish to be secretary of state. He also indicated that Pompeo's confirmation hearing did nothing to convince him that he would serve as a check on the president.

"This is not about denying the president his team just for the sake of it," Schumer said. "This is about the role of the Congress and, frankly, the Cabinet to provide a check on the president, who might go off the rails and undo the respect for rule of law, the tradition of rule of law that we have had in this country for so long."

Aside from concerns about his foreign policy views, many Democrats also opposed Pompeo because of past comments he's made denigrating Muslims and members of the LGBT community.

Pompeo was among a trio of controversial Cabinet and Cabinet-level nominees the president named in recent weeks, and he is expected to have the easiest time getting confirmed.

Pompeo's deputy at the CIA, Gina Haspel, is expected to have her confirmation hearing to succeed him as CIA director next month. Department of Veterans Affairs secretary nominee Ronny Jackson withdrew from consideration Thursday morning following allegations that he drank on the job and loosely dispensed pills on foreign trips.

The Senate also confirmed Richard Grenell to be the ambassador to Germany on Thursday on a 56-42 vote.

Nahal Toosi contributed to this report.

Perry's latest bid to help coal faces uphill battle [Back](#)

By Eric Wolff | 04/25/2018 05:08 AM EDT

Energy Secretary Rick Perry's latest idea to protect coal-fired and nuclear power plants may not fare much better than his previous efforts, according to energy experts.

Perry is considering invoking the 1950 Defense Production Act to keep money-losing power plants running by designating them as crucial for national security. But that would stretch the definition of the law and almost certainly draw legal challenges — and it would hit a big hurdle in Congress, which would need to approve perhaps billions of dollars in funding to keep the plants afloat, the experts said.

At the urging of President Donald Trump, Perry has sought to keep open coal and nuclear power plants that are threatened with shutdowns amid the stagnant demand for power — and even as natural gas and renewable power sources grab a growing share of the market.

So far, Perry's had no luck. FERC earlier this year rejected his proposal to give the plants financial support, and Energy Department lawyers stymied a push last year to invoke the agency's authority under the Federal Power Act to force the plants to run.

Some experts said any attempt to use the DPA is likely to meet the same fate.

"To me, it's a tough argument to make. It's a specious argument on its surface that seems like a perversion of the intended use of the Defense Production Act," said Tom Hicks, a former acting undersecretary of the Navy under former President Barack Obama and now a principal at the advisory firm The Mabus Group. "Defense Production Act is on the vanguard of the need for resources, not on the back end for an industry being challenged by economic forces."

But the effort has been a priority for Trump and Perry, who sees saving coal-fired power generation as vital to U.S. security, according to a source familiar with the conversations on the issue.

The Cold War-era law grants the federal government powerful authorities to inject cash into companies essential for national defense in order to preserve domestic supplies of key products. But DOE will have to make the case that electricity produced specifically from coal and nuclear power plants, and not other types of power, is a critical resource.

Using the act to protect the plants when there appeared to be no immediate shortage of power supplies would be a novel application that would almost certainly face legal challenge.

"If the administration uses DPA, they're going to be using it very creatively," said Ari Peskoe, director of the Electricity Law Initiative at the Harvard Law School Environmental and Energy Law Program. "They may come up with reasoning for higher rates and who's going to pay for it. Whether that will hold up, I don't know."

Perry and his staff appear to have very few viable options for bailing out coal and nuclear power, a major energy priority for Trump, who has promised to revive the coal industry. DOE has opened a comments process for interested parties to weigh in on its use of the Federal Power Act's 202(c) emergency provisions, though that would require the agency to go through FERC, which unanimously rejected a similar Perry effort in January.

The 202(c) effort has been pushed by coal magnate Bob Murray, owner of Murray Energy, and by FirstEnergy Solutions, the unit of FirstEnergy Corp. that is in bankruptcy proceedings and which expects to shut down four coal and nuclear power plants. That company asked DOE to use the emergency authority to save not only its plants, but all 85 coal and nuclear power plants in the PJM Interconnection power market.

The DPA was last used by the Obama administration starting in 2012 to help spur the biofuels industry to develop the kind of advanced biofuels that could power ships and aircraft. The government can purchase capital equipment for the cause of national security, and it can fund advertising to support the effort.

And it allows the government to become the buyer of last resort, which could put Washington on the hook to buy excess power generated by coal and nuclear plants. Technically, this electricity could only be purchased at the "cost of production," a level that in the past has been determined by a team within the Defense Department.

While no hard estimate for the cost of a DPA subsidy exists, consultants analyzing Perry's previous bailout proposal estimated costs between \$4 billion and \$10.6 billion annually.

That's a far higher level than Congress typically allocates for the DPA. It provided \$67.4 million in the omnibus passed in March, H.R. 1625 (115), down slightly from the \$76 million it provided for all projects in 2017, according to a report submitted to Congress.

And Congress — and the Republican Party — is deeply divided on using government subsidies to save these plants. Rep. David McKinley (R-W.Va.) has some allies from other coal districts for the effort, but other free market-oriented lawmakers like Rep. Pete Olson (R-Texas) say they want to see markets function unimpeded.

McKinley's staff has been in touch with DOE and the White House, as has West Virginia Sen. Joe Manchin (D).

"I think it's an emergency national concern for the national defense of our country. I think Rick Perry agrees with it, and I think the president does also," Manchin told POLITICO.

PJM has itself said the retirement of FirstEnergy's coal plants did not pose a threat to the region's power supplies, and that it had ample generation to meet demand. It has opposed any effort to mandate to require the plants to stay online.

"We believe that a market-oriented approach consistent with the American free-enterprise system offers better results than government-mandated subsidies," said PJM spokesman Jeff Shields.

Anthony Adragna contributed to this report.

Subject: Morning Energy, presented by Anheuser-Busch: Returning to the battlefield over California car rules — Pruitt screens friendly questions — Art of the RFS deal

By Kelsey Tamborrino | 05/09/2018 05:42 AM EDT

With help from Anthony Adragna

IF AT FIRST YOU DON'T SUCCEED: The looming fight between the Trump administration and the state of California over climate change rules for cars will cover some familiar terrain — where the liberal state and its environmentalist allies have won major legal battles in the past, Pro's Alex Guillén reports. The White House strategy appears to mirror the approach that automakers and dealers unsuccessfully pursued more than a decade ago in an attempt to reverse California's strict limits on vehicles' greenhouse gas emissions.

This again? California — which has a waiver under the Clean Air Act to enact stricter standards — is hoping things play out the same way it did the last time around, when two federal district courts upheld its rules, which other states also can choose to follow. "It's sort of déjà vu because it's going to be basically round two," said Kevin Leske, who was an assistant attorney general in Vermont in 2007 when the state fought off an industry lawsuit seeking to block the greenhouse gas rules for cars.

The details: At issue is the interplay between the long-standing Corporate Average Fuel Economy standards that were established under the 1975 Energy Policy and Conservation Act, and the relatively new emissions standards enforced nationally for the first time under the Obama administration. The Trump administration is expected to nullify the waiver granted to California and then try to circumvent any questions by arguing that EPCA preempts California from enforcing its auto emissions standards — essentially the same argument automakers and dealers deployed in multiple lawsuits over a decade ago.

But keep in mind: That strategy fell short the first time around. A U.S. district court judge in California concluded that greenhouse gas standards are too different from fuel economy regulations to fall under EPCA's "related to" preemption language. However, the cases were never appealed after a larger political deal was reached on the car rules, but advocates of the Trump administration's approach say they hope to take the issue to a higher court this time around. BEGS THE QUESTION: EPA Administrator Scott Pruitt and his staff sought extensive control over questions that could be asked to the administrator when he toured the country speaking to industry groups, POLITICO's Anthony Adragna and Emily Holden report. Even seemingly friendly questions got axed by the agency, like, "How often do you get back to Oklahoma?" That question was crossed off a proposed list of questions without

an explanation ahead of Pruitt's appearance in December at an event in Iowa, internal emails made public by the Sierra Club through a public records lawsuit show. (At the time, EPA's inspector general was already investigating Pruitt's frequent trips back home.) The emails offer new insight into EPA staff's desires to limit access by independent journalists, pre-screen questions from friendly interviewers and coordinate Pruitt's message with lobbyists ahead of gatherings with conservative or industry groups. Read the details [here](#).

WHAT HAPPENED AT THAT BIOFUELS POWWOW: President Donald Trump appears to have brokered a deal in the long-running fight between ethanol producers and oil refiners over federal biofuels mandates. At a White House meeting Tuesday with Pruitt, Agriculture Secretary Sonny Perdue and a few Republican senators. Trump reiterated his pledge to allow 15 percent ethanol fuels year-round and rejected a price cap on biofuel credits, called Renewable Identification Numbers. Those are both big wins for the corn crowd, Pro's Eric Wolff [reports](#). But ethanol producers groused about another proposed aspect of the deal that would lower compliance costs for refiners: allowing ethanol exports to qualify for RINs. Refiners, meanwhile, were wary of a separate proposal for EPA to require large refiners to take on the ethanol-blending requirements for which it issued dozens of waivers to smaller refiners.

IT'S KIND OF INFRASTRUCTURE WEEK: Close to none of Trump's big-ticket [proposals](#) to streamline environmental rules made it into the first major bill infrastructure bill introduced in Congress since his election. America's Water Infrastructure Act of 2018, as the Senate bill is called, is so far the "most significant step lawmakers have taken to help fulfill the president's marquee campaign promise to revitalize the country's transportation arteries," Pro's Annie Snider writes. The bill's authors purposefully set their sights on bipartisanship in light of the fast-approaching midterm elections. "We focus on the 80 percent where we have general agreement, and we're going to get something done," said Sen. [Tom Carper](#) (D-Del.), the top Democrat on the panel and a cosponsor of the measure. Read [more](#).

MORRISEY WINS: West Virginia Attorney General Patrick Morrisey came out on top Tuesday, clinching the Republican nomination to take on Democratic Sen. [Joe Manchin](#) come November. Coal baron Don Blankenship, who was running a controversial campaign against the Republican establishment and Mitch McConnell, ended up in third place in the most-watched race of the night. Blankenship, who was convicted in 2015 of conspiring to skirt mine standards after 29 miners were killed at Massey Energy's Upper Big Branch facility, only [received](#) 19.9 percent of the vote to Morrisey's 34.9 percent, and 29.3 percent for Rep. [Evan Jenkins](#), the other major candidate in the race. Read more on all of Tuesday's primaries [here](#).

NEW DETAILS IN PRUITT SAGA: EPA worked closely with groups such as the Heartland Institute and the CO2 Coalition — both of which dispute the scientific consensus on climate change — when planning Pruitt's proposed "red team, blue team" debate over climate science, The New York Times [reports](#) via new documents released by the NRDC. The emails show that EPA scientists were not involved in the discussion, and that political aides continued to work on the idea even after White House chief of staff John Kelly tried to squelch the plan, according to the Times. In a separate report, the Times got a hold of documents that shed new light on the day security officers, fearing for Pruitt's safety, smashed down his condo door. Read it [here](#).

— **Pruitt's former security chief** Pasquale "Nino" Perrotta told the House Oversight Committee that Pruitt and his staff missed a connecting flight on a trip to Morocco because his security detail's weapons and gear couldn't be transferred between the planes in time, the Associated Press reports, citing anonymous committee aides. The delay forced Pruitt to spend more than 24 hours in Paris, and Perrotta's version of events calls into question the official rationale given by EPA. Read that story [here](#).

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks. The zero-emission trucks will be able to travel between 500 and 1,200 miles. Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025. [Learn more](#). **

BARRASSO: 'CLOSELY MONITORING' PRUITT SITUATION: EPW Chairman John Barrasso told ME he's "closely monitoring" the ongoing ethical woes of Pruitt and continuing with unspecified "oversight" of the agency. "The job that he's doing — in terms of the job assigned by the president to roll back regulations and overreach by the federal government — he continues to do well," Barrasso said. "We want to make sure taxpayer money is being well spent and appropriately spent." But Barrasso wouldn't specify if he'd sent additional letters to the agency, again deferring to the White House's vague, ongoing review of the situation.

Wait and see: Senior House Republicans overseeing the EPA also appeared to be publicly sticking with Pruitt as well. Rep. John Shimkus, who oversees the EPA on the House Energy and Commerce Committee, told ME he didn't have plans for additional oversight on his subcommittee but deferred to Chairman Greg Walden on whether it was appropriate. Shimkus acknowledged his lack of oversight plans "might disappoint some of my colleagues," including some Republicans who questioned Pruitt's spending at a hearing several weeks ago. A spokesman for the committee didn't respond to requests for comments on its oversight plans.

HEWITT KNEW IT: Conservative radio host Hugh Hewitt responded Tuesday on his radio show to a POLITICO report about a meeting set up by Hewitt between Pruitt and a water utility that sought a Superfund distinction in his hometown — which it ultimately received. "I knew it was going to show up in the FOIA request," Hewitt said of the meeting request. "I just didn't think it was a story." Separately, the liberal media watchdog group Media Matters reported Tuesday, that The Washington Post's Editorial Page Editor Fred Hiatt had not known of ties between EPA and Hewitt's law firm. "Hewitt, who has not written about Pruitt since September, has agreed not to write about him going forward and has assured us that similar incidents won't occur in the future," Hiatt said in an email to the group.

PERRY PULLS UP: Energy Secretary Rick Perry will testify this morning before the House Science Committee on his department's overall budget for fiscal 2019. Members will likely discuss funding for Advanced Research Projects Agency-Energy and Department's Loan Programs, which are terminated under the budget, as well as Perry's recent moves on coal plants. "Termination of these programs will save over \$300 million in FY 2019 alone while significantly reducing financial risk to the taxpayer moving forward," Perry is expected to say. **If you go:** The hearing kicks off at 9 a.m. in 2318 Rayburn. Watch the livestream here.

AT THE SAME TIME: The House Energy and Commerce Committee is slated to hold a markup on five cybersecurity, small-scale LNG bills this morning. Included in the docket: The bipartisan H.R. 5175 (115), the "Pipeline and LNG Facility Cybersecurity Preparedness Act." The slate of bills — which also includes H.R. 4606 (115), H.R. 5174 (115), H.R. 5239 (115), H.R. 5240 (115) — were approved by the subpanel in April. H.R. 4606 — which would allow the expedited approval of small-scale shipments of liquefied natural gas — got a vote of 19-14 over the objections of most Democrats.

CHATTERJEE SEES CHALLENGES: FERC Commissioner Neil Chatterjee called out natural gas pipeline permitting in New York Tuesday, while speaking at the at the Independent Power Producers of New York conference. "The gravest threat we face to resilience and fuel security is in New England and that's not the result of coal and nuke retirements but because of gas constraints due to a lack of adequate infrastructure," Chatterjee told reporters. Read more from Pro New York's Marie French here.

INTERIOR FACES FOIA SUIT: The Wilderness Society will file a lawsuit today to compel Interior to release documents related to the administration's environmental protection plans on public lands. The group says it filed 21 requests under the Freedom of Information Act for documents related to orders issued by Trump and DOI in March 2017 aimed at removing "potential burdens" to energy development on public lands. TWS says it only received responses to two of those requests.

MAIL CALL! The Environmental Protection Network sent this letter to EPA requesting a public hearing and an extension of the 30-day public comment period on the agency's "secret science" proposal to ban the use of

studies that don't publicly disclose all their data. "The proposal is far too complex, with effects too broad and indeterminate, and requests comment on far too many issues, for a thirty-day response period," the letter says.

WATCH IT: The American Council for Capital Formation released a new ad on Tuesday calling on the president to uphold the investor-state dispute settlement mechanism in any negotiation of NAFTA. Watch it [here](#).

E2 LAUNCHES CLEAN JOBS CAMPAIGN: Environmental Entrepreneurs launched a nationwide campaign Tuesday, dubbed [Clean Jobs Count](#), "to advance awareness and support of America's fastest-growing energy sector." The campaign includes digital ads in Michigan, Ohio, Illinois and Colorado, and additional ad campaigns are planned throughout the rest of the year in at least half a dozen more states.

MOVER, SHAKER: Exelon [announced](#) Constellation CEO Joseph Nigro was promoted to Exelon senior executive vice president and CFO, succeeding Jack Thayer, who becomes senior executive vice president and chief transformation officer. ComEd President and CEO Anne Pramaggiore was promoted to CEO of Exelon Utilities, succeeding Denis O'Brien. And Joseph Dominguez, the executive vice president of governmental and regulatory affairs and public policy, was promoted to CEO of ComEd Chicago.

THAT'S ALL FOR ME!

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks from the pioneer in hydrogen-electric renewable technology, Nikola Motor Company. The zero-emission trucks — which will be able to travel between 500 and 1,200 miles and be refilled within 20 minutes, reducing idle time — are expected to be integrated into Anheuser-Busch's dedicated fleet beginning in 2020.

Through this agreement Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025.

"At Anheuser-Busch we're continuously searching for ways to improve sustainability across our entire value chain and drive our industry forward," said Michel Doukeris, CEO of Anheuser-Busch. "The transport industry is one that is ripe for innovative solutions and Nikola is leading the way with hydrogen-electric, zero-emission capabilities. We are very excited by the possibilities our partnership with them can offer."

Stories from POLITICO Pro

Failed legal argument against California car rules gets second wind under Trump Back

The Trump administration's plan to stymie California's tough greenhouse gas emissions for cars is about to trigger an epic legal fight — and the White House appears to be planning to use the same strategy that failed to block the state's rules a decade ago.

California's supporters, however, hope any courtroom battles will play out the way they did when the auto industry tried to prevent California and other like-minded states from setting stricter emissions limits than those pushed by EPA: with a pair of resounding legal defeats.

"It's sort of déjà vu because it's going to be basically round two," said Kevin Leske, who was an assistant attorney general in Vermont in 2007 when the state fought off an industry lawsuit seeking to block the greenhouse gas rules for cars.

"Here we are, 10 or 11 years later, basically facing the prospect, it sounds like, of the Trump administration making the same arguments that the auto industry did," added Leske, now a law professor at Barry University in Florida.

If finalized, the move would be one of the biggest regulatory rollbacks of the Trump administration, and it could go even further than what automakers have asked the White House to do. And its advocates say despite the previous legal setbacks, they hope to take the issue to a higher court, something they were denied in the previous battle when a political deal ended the conflict.

In the meantime, California, which has already spearheaded a lawsuit over EPA's April decision to weaken the standards, is already preparing for a major regulatory break with the Trump administration. The state's Air Resources Board on Monday asked for public input for regulatory language that it will not consider cars complying with a weakened federal standard to be acceptable in California.

The legal issue will center on the interplay between the long-standing fuel economy standards known as the Corporate Average Fuel Economy, which is issued by the National Highway Traffic Safety Administration under the 1975 Energy Policy and Conservation Act, and the relatively new greenhouse gas emissions standards enforced nationally for the first time under the Obama administration.

In requiring a national CAFE standard, Congress barred states from issuing their own laws or regulations "related to" fuel economy standards. But California's novel approach to regulate carbon dioxide emissions via the state's special authority under the Clean Air Act gave it significant leverage to force car makers to meet stricter rules.

In order to avoid a patchwork of different regulations between California and its allies and the rest country, the Trump administration is expected to seek to nullify the waiver EPA granted California in 2009 allowing it to enforce its own rules. EPA has never tried to revoke a waiver, and legal observers note the law does not explicitly grant EPA such authority.

But the Trump administration is expected to try to circumvent any questions around revoking the waiver by arguing that EPCA preempts California from enforcing its auto emissions standards — essentially the same argument automakers and dealers deployed in multiple lawsuits over a decade ago.

A May 1 letter from Sen. Tom Carper to EPA and DOT says the draft proposal would adopt that EPCA preemption argument.

That strategy fell short first time around, when a California judge concluded that greenhouse gas standards are too different from fuel economy regulations to fall under EPCA's "related to" preemption language. Emissions

may be closely correlated to fuel efficiency, he ruled, but factors like air conditioning usage and credits for electric vehicles mean that the pollution rules are not explicitly aimed at fuel economy, and thus are not preempted

Meanwhile, a Vermont judge also ruled in 2007 that since EPA had approved the California standard under the Clean Air Act waiver, it becomes a proper government motor vehicle standard, which EPCA requires DOT to take into account when setting fuel economy targets. Congress "could not have intended that an EPA-approved emissions reduction regulation did not have the force of a federal regulation," the judge wrote.

Those two legal rulings with the span of a few months would seem to be formidable hurdles for any EPCA preemption argument. And the case gets even more difficult for the Trump administration when the Supreme Court's landmark ruling in that year's *Massachusetts v. EPA* is added in. In that case, the majority said that fuel economy and greenhouse gas rules may "overlap," but could both be administered in a way that would "avoid inconsistency."

"I think it's fair to say this ground has been trod before and it's not looking good if Pruitt's EPA trots out this EPCA preemption argument again," said Sara Colangelo, the environmental law and policy program director at Georgetown University.

Congress also passed two major Clean Air Act updates after EPCA, in 1977 and 1990, that expanded California's special powers and didn't address the exemption at all, a move Colangelo said "really signals that they intended California to maintain this special position as the laboratory for advancing pollution controls in the emissions arena."

NHTSA declined to address the preemption issue, but said in a statement that its "top priority" is safety and that the administration "must also consider economic practicability." A spokesman for California's Air Resources Board said that the preemption proposal "would harm people's health, boost greenhouse gas pollution and force drivers to pay more money at the pump for years."

Those two previous court losses are not slowing down conservatives pushing the Trump administration to adopt the preemption argument now.

Undeterred, a coalition of industry groups wrote to EPA Administrator Scott Pruitt in March urging him to revoke California's waiver by concluding it is preempted by EPCA.

"Even though these two lower courts have weighed in, I think there's opportunity now for the lawsuits to move on to a higher level," Patrick Hedger, the policy director for the FreedomWorks Foundation, a conservative advocacy group.

He added that no higher court ultimately addressed the issue. Appeals in both cases were dropped as part of the single national standard deal reached between the Obama administration, California and automakers. Hedger noted that the Supreme Court's *Massachusetts v. EPA* ruling was not specifically about EPCA preemption.

Marlo Lewis, a senior fellow at the Competitive Enterprise Institute, believes the best way to win the preemption argument is to focus on the high degree of overlap to show the two standards are "related" under EPCA

"You and your dad are different people. Are you not related?" Lewis said. "The idea that they're not related because they're not identical is just pure rhetorical flimflam."

Like many other deregulatory actions, this proposal would substantially benefit the energy-producing that voted for Trump.

For conservatives, blocking California's climate change authority is the ultimate goal, since the Democratic hold on state politics and California's size mean its aggressive action on climate change has an outsize influence on the rest of the nation.

"I think this is one step in basically saying, 'Look, we're not going to allow California on this issue or any others in the future to continue to supersede federal policy on these issues and basically impose their standards on the entire country just because of the size of the market,'" said Hedger.

Halting fuel economy standards at 2020 levels would mean needing roughly 2 billion barrels more oil over the lifetime of cars built from 2021 to 2026, said David Cooke, a senior vehicles analyst at the Union of Concerned Scientists. And that's not counting the longer-term demands that would be caused for future model years that would start with lower targets because of this potential freeze.

Pruitt sought tight control of events even on friendly turf [Back](#)

By Anthony Adragna and Emily Holden | 05/08/2018 06:38 PM EDT

EPA Administrator Scott Pruitt and his staff went to great lengths to avoid unscripted questions when he toured the country speaking to industry groups, and even a seemingly friendly ice breaker can be deemed unacceptable.

"How often do you get back to Oklahoma?" the top official from the Iowa Association of Electric Cooperatives planned to ask Pruitt when he addressed the group last December, according to internal emails that were recently made public.

That question was crossed out when an EPA staff member sent back a proposed list of questions for Pruitt's "fireside chat" with Chuck Soderberg, the association's executive vice president. Tate Bennett, EPA's associate administrator of public engagement, did not explain why that and another question had been removed, but at the time of his Nov. 29 email the administrator was already [facing questions](#) over his travel practices. A few months earlier, EPA's inspector general had [launched an investigation](#) into whether the agency had sufficient policies in place to "prevent fraud, waste and abuse with the Administrator's travel that included trips to Oklahoma."

The [emails](#) among Bennett, other EPA staffers and representatives of the Iowa cooperatives were included in the thousands of documents obtained by the Sierra Club through a public records lawsuit. They reveal a pattern of Pruitt and his staff working to limit access by independent journalists, pre-screen questions from friendly interviewers and coordinate his message with lobbyists ahead of gatherings with conservative or industry groups.

Ahead of the Iowa event, the co-op association's director of government relations, Kevin Condon, confirmed that neither his group nor EPA would issue a media advisory, and they would cancel a press gaggle but still host an interview with the group's internal Living with Energy in Iowa magazine.

That publication also got questions [pre-approved](#) by EPA staff.

"Let me know if any of these give you heartburn," said Erin Campbell, the co-op group's director of communications. "This would be a friendly interview environment and we're keeping the conversation focused on Iowa consumers."

In another instance, before Pruitt spoke at a U.S. Chamber of Commerce event in June, EPA received a list of 10 proposed questions from the head of the group's energy institute, Karen Harbert. They touched on his regulatory philosophy, his efforts to rollback rules, and whether co-owning a minor league baseball team taught him lessons useful for running a federal agency. EPA staff did not appear to object to Harbert's proposed list.

When Pruitt was slotted to speak at a Texas Oil and Gas Association conference in October, EPA staff asked for a Q&A format with a representative of the group, rather than have the administrator take three pre-screened questions from the crowd.

EPA aides asked for the change in plans after being made aware that four reporters would be attending from the Houston Chronicle, Bloomberg BNA and Reuters.

Bennett wrote that after updating Pruitt that the media would attend, "he'd like to respectfully request that the entire format now be Q&A with two chairs on stage." She also shared a list of questions the moderator could ask, including on regulatory rollbacks, on what Pruitt would consider "true environmentalism" and on what his relationship was like with the president.

"What has it been like to run such a newsworthy agency? More difficult than you imagined?" the last question read.

And in at least one instance, a lobbyist for a group Pruitt was set to address offered to help write his speech for him. Before Pruitt and an entourage of eight staffers and security agents traveled in November to Kiawah Island, South Carolina, for a speaking engagement with the American Chemistry Council, the group's lobbyist Bryan Zumwalt asked a scheduler who to contact to help write Pruitt's speech.

"Who in your sop (sic) should I be working with to help prepare Administrator Pruitt's talking points/speech? Figure someone there might like the help on key areas to discuss," he said.

The scheduler, deputy White House liaison Hayley Ford, replied that Millan Hupp, director of scheduling and advance, and Bennett could assist.

Trump plan leaves biofuel makers cold [Back](#)

By Eric Wolff | 05/08/2018 06:48 PM EDT

President Donald Trump's latest bid to strike a deal on biofuels on Tuesday appeared to win over oil refiners, but a plan to allow ethanol exports to qualify for credits under the federal program left biofuel producers irate.

Trump gave ethanol producers two big victories at the White House meeting by reiterating his promise to allow 15 percent ethanol fuels year-round and rejecting a price cap on the credits, called Renewable Identification Numbers, that are used to prove compliance with the Renewable Fuel Standard. But ethanol producers balked at

the plan to have EPA Administrator Scott Pruitt and Agriculture Secretary Sonny Perdue set up a system to allow ethanol exports to receive RINs.

"The notion of allowing exported ethanol to count toward an oil company's RFS obligation is extremely problematic," Bob Dinneen, president and CEO of the Renewable Fuels Association, said in a statement. "In no way will that ever be acceptable or considered a win for our industry."

But the Trump administration said it has found the right balance between competing parts of its electorate.

"After several meetings and input from stakeholders on both sides, President Trump is pleased to announce that a final decision has been made that allows E15 to be sold year-round, while providing relief to refiners," White House spokeswoman Lindsay Walters said in a statement. "This outcome will protect our hardworking farmers and refinery workers. The President is satisfied with the attention and care that all parties devoted to this issue."

Refiners backed the idea, although they were wary of a separate proposal to allow EPA to consider requiring large oil refineries to take on the ethanol-blending requirements the agency lifted from small refiners by issuing dozens of compliance waivers.

Sen. Ted Cruz (R-Texas) emerged from Tuesday's meeting calling the deal a "win-win." Refiners have been pressing for years to change the program to lower compliance costs that they say are eating away at their profits.

"President Trump brought together two sides that thought a deal couldn't be reached and he found a 'win-win' solution to one of the most intractable regulatory problems facing the nation — a problem that has been neglected for years," refiner Valero Energy said in a statement.

The group of independent refiners pushing for changes, led by Valero, Carl Icahn's CVR and some Philadelphia-area refiners, had previously sought a cap on RIN prices in exchange for supporting an increase in the sales of E15.

At Tuesday's meeting, the seventh so far held by the White House, a source said Trump agreed to definitively reject any price cap, but he also asked Pruitt and Perdue to work out a plan for how exports could ease price pressure on RINs. Currently, ethanol that is shipped abroad is stripped of the RINs that can be used to meet a refiner's RFS obligation. Sources who work with refiners say preserving those credits would increase the supply and drive down prices for refineries.

"Because biofuels exports are a long-time major objective of the farm community, allowing export RINs is literally the anticipated win-win solution, obviating the need for more direct cost containment devices," said a refining industry source close to discussions.

But ethanol producers, who have been increasing their exports in recent years, complain that allowing those shipments to earn RINS would undermine the biofuel program's goals.

"Pursuing a path that includes RIN credits on export gallons would violate the letter and spirit of the RFS, serving the interests of oil refiners who have already benefited from Administrator Pruitt's unprecedented RFS volume waivers at the further expense of America's farmers," Kevin Skunes, president of the National Corn Growers Association, said in a statement.

Sources said Tuesday's meeting included a lengthy discussion about whether EPA could potentially reallocate the 1.2 billion gallons of ethanol demand the industry says has been exempted under the dozens of compliance waivers the agency has granted to small refineries. One source said Pruitt expressed openness to shifting those gallons to large refiners, something the refiners opposed. But that reallocation discussion got tied up with the

idea of export RINs, and Pruitt and Perdue left the White House with instructions to develop some kind of proposal.

"There was discussion about how to reallocate the waived obligations so that demand for biofuels wouldn't be hurt," Sen. Chuck Grassley (R-Iowa) said in a statement. "While details weren't decided, I look forward to reviewing a plan being developed by Secretary Perdue and Administrator Pruitt. Any fix can't hurt domestic biofuels production."

Republican Sen. Pat Toomey of Pennsylvania also expressed reservations about the vague promise of changes to the program.

"The proposal discussed at our White House meeting today might result in lower RIN prices, which would relieve this artificial burden — but even that is not clear until details are established," he said in a statement.

Even as the White House has pushed for a deal, Sen. John Cornyn (R-Texas) and Rep. John Shimkus (R-Ill.) have been leading efforts in Congress to overhaul the program. Shimkus and his staff have said in the past that administrative changes to the program would undermine their effort, though they appear to be moving full-steam ahead for now.

"Executive actions aren't a substitute for legislation," said Shimkus spokesman Jordan Haverly. "The only path to an enduring and equitable deal for farmers, refiners, ethanol producers, automakers and consumers — especially one that won't spend more time in court than on the books — is through Congress. Those legislative efforts remain ongoing."

Trump's latest strike against regulations: His infrastructure plan [Back](#)

By Annie Snider and Anthony Adragna | 02/16/2018 05:01 AM EDT

President Donald Trump's infrastructure plan would trigger one of the most significant regulation rollbacks in decades, benefiting not just roads and bridges, but businesses ranging from coal mines to homebuilders to factories.

The blueprint the White House released this week would eliminate the Environmental Protection Agency's authority to veto the Army Corps of Engineers' wetlands permits, a power that the EPA wielded during the Obama administration to block a controversial mountaintop coal mine in West Virginia. Industrial facilities like coal plants and steel factories could get 15-year Clean Water Act pollution permits — up from five years — that would be automatically renewed. For some infrastructure permits, the deadline for opponents to file legal challenges would shrink from six years to 150 days.

The proposed revisions to some of the nation's bedrock environmental regulations are drawing heavy criticism from congressional Democrats — including in the Senate, where Republicans would need at least nine extra votes to enact Trump's plan. Environmental groups say the ambition of the plan's deregulation push contrasts with the relatively meager amount of federal money the White House is proposing to contribute toward the \$1.5 trillion total.

"This isn't an infrastructure package," said Melissa Samet, an attorney with the National Wildlife Federation. "This is an all-out attack on longstanding environmental protections that have done a lot of good for this country."

Republicans and business groups have long complained that the federal government's often cumbersome permitting process, governed by laws Congress enacted decades ago, creates unnecessary delays for projects. "We built the Empire State Building in just one year," Trump said in his State of the Union address last month. "Is it not a disgrace that it can now take 10 years just to get a permit approved for a simple road?"

Supporters of Trump's plan are happy the White House is pushing for changes.

"We're very pleased with the permitting provisions," said Ross Eisenberg, a vice president at the National Association of Manufacturers. "Even some of them being signed law would be a major improvement. We don't want to blow up the process. We just want it to go faster."

Senate Environment and Public Works Chairman John Barrasso (R-Wyo.) said he hopes Democrats will come around.

"You're never going to win over every obstructing Democrat, but they've got to realize that projects have been slowed down in their states," Barrasso said.

But Democrats say the nation's real infrastructure problem is money — and the Trump proposal calls for just \$200 billion in federal investments over the next decade for needs including roads, bridges, airports, water plants, veterans' hospitals and rural broadband service. And they questioned whether Trump's aim is really just to make regulatory reviews more efficient.

"The president's contentions are not to streamline a process, but to compromise needed environmental and public health issues," Sen. Ben Cardin (D-Md.) told reporters.

Some kind of environmental streamlining has been a part of most of the major infrastructure measures Congress has passed in recent years. Provisions in the 2012 highway bill and a 2014 water bill aimed to get agencies to coordinate their permit reviews more efficiently and impose consequences for delays.

Supporters of those changes included then-Sen. Barbara Boxer (D-Calif.), an environmental stalwart, who argued that the streamlining amounted to common sense despite the opposition of some environmentalists. Many of those provisions have yet to take effect, however.

Trump's infrastructure proposal would go much further, setting strict deadlines for reviews and curtailing EPA's say over projects.

For instance, Trump has touted the proposal's two-year limit for agencies to issue final permitting decisions, including a strict 21-month limit on analyses done under the National Environmental Policy Act of 1970, one of the nation's foundational environmental laws.

The law requires federal agencies to make a public estimate of the environmental impacts when the federal government spends money or makes a permitting decision, although nothing in the law requires agencies to limit environmental damage. Repeated environmental studies under NEPA were one factor that contributed to the Obama administration's nearly seven-year review of the Keystone XL oil pipeline, a project Trump has pushed to revive this year.

Under Trump's proposal, agencies would be required to complete environmental reviews in no more than 21 months. Anyone seeking to challenge the permits would have just 150 days to sue, instead of the current six years.

Industry groups argue the act's long statute of limitations for permit challenges leaves a cloud of uncertainty over projects. But Samet, the National Wildlife Federation attorney, said 150 days runs by quickly when challengers have to track down documents that regularly run hundreds of pages, decipher them, find experts to analyze the data, hire lawyers and scrounge up the money to cover legal costs.

The result, she said: "Bad projects will move forward. There'll be nothing to stop them."

Trump's plan would also deliver on a long-sought Republican goal of curbing EPA's authority under the Clean Water Act's wetlands program — a change that would have sweeping effects not just for infrastructure projects but for nearly any kind of development.

The blueprint would remove EPA's authority to oversee the Army Corps of Engineers' determinations about which streams and wetlands are subject to Clean Water Act protections. And it would take away the EPA's ability to veto dredge-and-fill permits that it decides would cause undue harm to the environment.

EPA has used that veto authority only 13 times since the Clean Water Act was enacted, including with its 2012 reversal of a Army Corps permit for the Mingo Logan mountaintop coal mine in West Virginia — a decision that angered the coal industry's supporters in Congress. Most of the other occasions when it used that power came during Republican administrations.

Trump's proposal would also extend pollution discharge permits under the Clean Water Act from five years to 15, and allow them to be automatically renewed as long as "water quality needs do not require more stringent permit limits." Those changes that would apply not only to municipal wastewater treatment plants but also to industrial facilities.

The plan also calls for eliminating a section of the Clean Air Act that requires EPA to review, comment on and rate other agencies' environmental impact statements.

While the proposal may allow construction on projects to get started faster, it might end up creating bigger problems in the end, argued Kym Hunter, an attorney with the Southern Environmental Law Center. She said a narrower NEPA review wouldn't just keep potential environmental problems from coming to light, but it would also keep the public in the dark about whether a project would live up to its promises.

"NEPA is about taking that hard look," Hunter argued. "When it was promulgated in 1970, the idea was if you think about what you are doing you're likely to make a better decision. This [Trump proposal] would just encourage agencies to rush forward without being thoughtful, without being careful."

Trump's plan also attempts to limit the ability of courts to halt work on projects while lawsuits proceed. But that could backfire too, Hunter said, if it keeps courts from halting an ill-conceived project until after a government body has started spending money and taking on debt.

Sen. Tom Carper of Delaware, the top Democrat on the Environment and Public Works Committee, didn't dismiss the idea of making updates to the decade-old laws. But if the administration's goal is to weaken environmental regulations, he said, "we're not going to get very far."

Trump's proposed regulatory rollbacks left out of Senate infrastructure bill [Back](#)

By Annie Snider | 05/08/2018 06:44 PM EDT

The first major infrastructure bill introduced in Congress since President Donald Trump took office ignores virtually all of the big-ticket deregulatory proposals the White House laid out in its blueprint earlier this year.

Chief among Trump's complaints about the country's infrastructure system is the amount of time it takes to get environmental permits. The package the White House unveiled in February included a meager \$200 billion in federal funding for infrastructure, and instead focused on a number of so-called environmental streamlining provisions. Among them: proposals to eliminate the EPA's authority to veto the Army Corps of Engineers' wetlands permits and reduce the length of time opponents have to file legal challenges to permits from six years to 150 days.

But none of those provisions made it into what stands to be a multibillion dollar water resources measure introduced by top Republicans and Democrats on the Senate Environment and Public Works Committee on Tuesday.

That bill, dubbed America's Water Infrastructure Act of 2018, is so far the most significant step lawmakers have taken to help fulfill the president's marquee campaign promise to revitalize the country's transportation arteries. And in a bid to have a feather in their caps to take home before the 2018 midterm elections, lawmakers in the upper chamber are charting a bipartisan course with the measure.

"We focus on the 80 percent where we have general agreement, and we're going to get something done," Sen. Tom Carper (D-Del.), the top Democrat on the panel and a cosponsor of the measure, told reporters.

The House Transportation and Infrastructure Committee is working on its own water resources bill that also could be released this month, and members are pursuing a bipartisan approach, too, as they have historically.

The Senate bill is sidestepping battles over the nation's foundational environmental laws, including the National Environmental Policy Act and the Clean Water Act. Republicans and business groups fault those laws for delays and skyrocketing costs — "Is it not a disgrace that it can now take 10 years just to get a permit approved for a simple road?" Trump asked in his State of the Union address in January — but Democrats and environmentalists defend them as critical protections.

Instead, the bill's authors set their sights on a suite of more practical changes at the Army Corps of Engineers — one of the government's most red-tape-laden bureaucracies that just about every lawmaker loves to hate.

The bill includes dozens of provisions aimed at making the agency more transparent and responsive to Congress and the communities it works with to build projects. It would make a major change to the way the Army Corps budgets, in an effort to help projects that are important to states but aren't competing well for scarce federal dollars under the current approach. And it would create a board related to water storage projects that an environment committee aide said is aimed at helping communities understand early on whether their project will be able to get a permit.

The measure also includes a number of drinking water and wastewater provisions, issues that became a major component of the last such measure in 2016, when an aid package to help Flint, Mich., recover from its lead

contamination crisis was included. The new Senate bill includes provisions to help small and rural water utilities with technical assistance, allow communities to use federal drinking water dollars to protect their water sources, and to help communities balance multiple costly wastewater upgrade requirements at the same time.

The meat of the bill is six new project authorizations for the Army Corps, including a ship channel extension project in Texas, flood control projects in New York and Hawaii, and hurricane protection projects in Florida and Texas. The bill would also increase the amount that can be spent for the Savannah Harbor expansion project, a top priority for Georgia's senators, and allow more water to be stored at a key Wyoming reservoir.

And it's not just Trump's environmental permitting changes that senators rejected in the bill; they also responded to the White House's past proposals to eliminate or significantly cut a popular Great Lakes restoration program by increasing its authorization. The bill would also require EPA to open a new program office for the Long Island Sound, where the Trump administration also proposed eliminating funding.

Asked Tuesday how work on the the House's measure is coming, Transportation Committee Chairman [Bill Shuster](#) (R-Pa.) said "good."

But one fault line is already emerging between the two chambers.

Shuster has backed a proposal from his water resources subcommittee chairman, Rep. [Garret Graves](#) (R-La.) to move the Army Corps of Engineers out of the Pentagon and to another agency like the Department of Transportation or the Interior Department. But an EPW aide said that both Republicans and Democrats in the Senate have concerns with the idea; their bill would instead mandate a study by the National Academy of Sciences into the structuring of the Army Corps.

"We're trying to pass a bipartisan bill and I think that would make it very difficult to do with the limited amount of time that we have," the aide said.

Top takeaways from the first big primary of 2018 [Back](#)

By Steven Shepard, Elena Schneider and Scott Bland | 05/09/2018 01:13 AM EDT

Republicans can exhale now.

Convicted coal magnate Don Blankenship's surprise third-place finish in Tuesday's West Virginia GOP Senate primary sidestepped yet another debacle for the party after consecutive meltdowns in special elections in Alabama and Pennsylvania. Instead, party leaders celebrated state Attorney General Patrick Morrisey's win, which capped the first multi-state primary of 2018.

The night saw Republicans pick three of the 10 candidates who will take on Democratic senators in states President Donald Trump won, and the first House incumbent go down in a primary in 2018.

Here are POLITICO's seven takeaways from Tuesday:

1. Republicans averted catastrophe, but victory in West Virginia is far from assured.

A Blankenship nomination might well have extinguished GOP hopes of toppling Democratic Sen. Joe Manchin, despite the state's heavy Republican electorate. Blankenship was living in a Phoenix halfway house this time last year, after his conviction for conspiracy to skirt mine safety rules after an incident claimed the life of 29 miners at one of his facilities. He called Senate Majority Leader Mitch McConnell "Cocaine Mitch," and made racially charged comments about McConnell's family.

Morrissey is someone national Republicans can embrace. National Republican Senatorial Committee executive director Chris Hansen said in a statement Tuesday night that Morrissey will "fight for conservative values" and predicted his victory over Manchin in the general election.

But Morrissey enters the race with his own baggage — even if it's nothing like Blankenship's. Morrissey used to be a Washington lobbyist, and Morrissey's wife still is one. Also, Morrissey ran for Congress in 2000 — in New Jersey.

Rep. Evan Jenkins, who finished second on Tuesday night, tried to level those attacks. But the punches didn't land with Blankenship's circus-like candidacy stealing the spotlight.

With Blankenship fading into the distance, Manchin can contrast his folksy, "Pepperoni Roll," West Virginia affect against Morrissey's Jersey accent and D.C. "swamp" ties. Republicans will fire back, alleging that Manchin isn't the aw-shucks bipartisan he claims to be and doesn't stick up for Trump, who is very popular in the state.

2. Words alone can't earn the Trump mantle.

Reps. Luke Messer and Todd Rokita spent the final week of the GOP Senate primary in Indiana trying to convince voters that Mike Braun — the businessman and former one-term state representative who had surged to the front of the field on an outsider message — wasn't a reliable conservative. They cited Braun's participation in Democratic primaries for more than three decades.

But Braun easily defeated both Messer and Rokita because his outsider message, in contrast with his two D.C. insider rivals, resonated more than his Democratic past. (Braun said he only voted in Democratic primaries to influence local elections, but Messer and Rokita painted that as a lame excuse.)

Braun's argument was easier to make after Trump's 2016 presidential campaign. Trump's opponents in the GOP primaries needled the billionaire for his past donations to Democratic candidates, or his past conservative apostasies on issues like abortion and universal health care. Trump parried those attacks, barely breaking a sweat.

Ultimately, as much as Rokita (who donned a red "Make America Great Again" hat in his ads) or Messer (who talked up Trump for a Nobel Peace Prize) tried to claim the Trump mantle, Braun seemed more like the real deal. He hit Messer and Rokita for being attorneys who never practiced law, instead getting into politics at a young age. And Braun, who will now try to unseat Democratic Sen. Joe Donnelly, said he was the only candidate who had signed the front of a paycheck, while his opponents had been endorsing government checks for most of their careers.

3. House members went down hard.

It was a bad night for House members running statewide: Jenkins lost to Morrissey by more than 5 points. Rokita and Messer finished even further behind Braun.

Rep. Jim Renacci, who still won the GOP nomination to face Sen. Sherrod Brown in Ohio, failed to win a majority of the vote in the primary, despite endorsements from Trump and the state Republican Party.

For a party led by a first-time-candidate-turned-president, it's not surprising that Congress isn't the ideal springboard to higher office. But the GOP is relying on other House members to maintain its Senate majority — whether it's Martha McSally in Arizona, Marsha Blackburn in Tennessee or Kevin Cramer in North Dakota.

And for members facing competitive statewide primaries — think McSally, Kristi Noem for governor in South Dakota, Raul Labrador for Idaho governor or Diane Black for Tennessee governor — they may find their congressional résumés are more anchors than propulsion for their candidacies.

4. The first incumbent falls. Will others join?

Rep. Robert Pittenger (R-N.C.) became the first incumbent member of Congress knocked out in a primary in 2018.

Pittenger tried to align himself closely to Trump, touting in his first TV ad that he was the "strongest supporter" of the president. But Mark Harris, a pastor who nearly beat Pittenger in 2016, successfully tagged Pittenger as a part of the "Washington swamp." Republicans in primaries across the country are questioning their opponents' pro-Trump bona fides, a strategy that proved effective here.

Pittenger's loss surprised national and local Republicans, who expected the congressman to survive the primary challenge. But Harris' campaign said Pittenger's "votes didn't match his rhetoric," pointing to his support for the omnibus spending bill in March, said Andy Yates, a spokesman for the campaign. (Harris, a social conservative, said he planned to join the House Freedom Caucus.)

It's not clear that there's a long list of Pittengers about to be swept away in primaries. Still, his defeat could serve as a wake-up call to incumbents who have struggled to unite Republicans at the ballot box in the past, like Reps. Martha Roby (Ala.) and Doug Lamborn (Colo.).

5. Both parties got their men for Ohio governor.

It was an easy night for both parties watching the Ohio gubernatorial race. State Attorney General Mike DeWine easily dispatched Lt. Gov. Mary Taylor in the GOP primary, aided by the imprimatur of the state party.

And on the Democratic side, former state Attorney General Richard Cordray cruised past Rep. Dennis Kucinich after weeks of hand-wringing that the race against the at-times eccentric Kucinich was closer than it should have been.

In the end, Cordray — who until recently headed the federal Consumer Financial Protection Bureau — crushed Kucinich and four other challengers, even winning a greater percentage in the Democratic primary among a fractured field than DeWine earned in a one-on-one matchup with Taylor.

Both parties quickly pivoted to trying to attach a Washington brand to their opponents. The Republican Governors Association called Cordray "a Washington D.C. power-hungry insider," despite DeWine's 20-year congressional tenure.

Meanwhile, the Democratic Governors Association said DeWine was "a card-carrying member of the D.C. and Columbus swamp," despite the fact that Cordray was DeWine's predecessor as attorney general and was an Obama political appointee.

Either way, the gubernatorial election this year will be a rematch of the 2010 attorney general race. DeWine, four years removed from a loss to Brown, toppled the then-incumbent Cordray by 1 percentage point in the GOP wave year.

6. Chalk two up for the GOP establishment.

Establishment Republicans got more good news in Ohio when Troy Balderson and Anthony Gonzalez won primaries for open congressional seats.

Balderson, backed by former Rep. Pat Tiberi, beat Melanie Leneghan in two primaries in Ohio's 12th District on Tuesday — one for the November election, and one for an August special election to complete Tiberi's unexpired term.

The race was a proxy war between Tiberi — an long-time ally of former House Speaker John Boehner — and Rep. Jim Jordan (R-Ohio). Tiberi spent money on TV ads to back Balderson, while Jordan, the House Freedom Caucus co-founder, cut a competing TV ad for Leneghan that aired with help from conservative megadonor Richard Uihlein.

Gonzalez, a former Ohio State University football star, won a similar fight in the state's 16th District. He defeated state Sen. Christina Hagan, who had Jordan's backing in the race.

Both districts have been Republican strongholds — the 16th is even more solidly red than the 12th. But given Democrats' stronger-than-expected performances in special elections in the Trump era, Republicans are gearing up for a fight for the Tiberi seat over the next three months.

"There will be a very clear contrast between Troy and ... [Democratic nominee] Danny O'Connor in the months ahead," said Rep. Steve Stivers (R-Ohio), who chairs the National Republican Congressional Committee.

7. Women are dominating Democratic primaries

Women are running for federal office in record numbers in 2018 — and it looks like Democratic primary voters are poised to support those candidates like never before. There were 20 open Democratic House primaries with women on the ballot Tuesday night, and voters selected a female nominee in 17 of them.

It's a sharp turnaround from past years when female Democrats faced big hurdles in trying to win support from voters. A good number of the primary winners Tuesday night are running in heavily Republican seats with little chance of winning general elections. But they are still part of an important trend: Evidence is building that Democratic voters are tilting toward supporting women this year.

Keep this in mind as we approach primaries in big states full of battleground districts over the next two months: California and New York in June, and Pennsylvania next week.

Pruitt fast-tracked California cleanup after Hugh Hewitt brokered meeting [Back](#)

By Emily Holden and Anthony Adragna | 05/07/2018 10:12 PM EDT

EPA Administrator Scott Pruitt [placed](#) a polluted California area on his personal priority list of Superfund sites targeted for "immediate and intense" action after conservative radio and television host Hugh Hewitt brokered a

meeting between him and lawyers for the water district that was seeking federal help to clean up the polluted Orange County site.

The previously unreported meeting, which was documented in emails released by EPA under a Freedom of Information Act lawsuit by the Sierra Club, showed Pruitt's staff reacting quickly to the request last September by Hewitt, who has been one of Pruitt's staunchest defenders amid a raft of ethics controversies around his expensive travel, security team spending and a cheap Washington condo rental from a lobbyist.

Pruitt has drawn criticism from environmentalists and other critics for letting prominent GOP backers and industry groups influence the agency's agenda — even as he has kicked scientists off of EPA's advisory panels and moved to limit the kinds of peer-reviewed research it will consider when making decisions.

In many cases, the people whose advice Pruitt is heeding could be useful supporters for him in a future race for U.S. senator or president. They include GOP megadonor Sheldon Adelson, who — as POLITICO reported in March — persuaded Pruitt last year to take a meeting with an Israeli water purification company called Water-Gen that later won a research deal with the EPA.

Hewitt, a resident of Orange County whose son James works in EPA's press office, emailed Pruitt in September to set up a meeting between the administrator and the law firm Larson O'Brien, which employs Hewitt and represents the Orange County Water District. Pruitt had been planning to meet with the lawyers in California a month earlier, but cancelled the trip to undergo knee surgery.

"I'll join if the Administrator would like me too or can catch up later at a dinner," Hewitt wrote in his Sept. 18 message. Hewitt added that the issues surrounding the Superfund site were "Greek to me but a big deal in my home county."

Pruitt's aides responded within minutes and quickly confirmed an Oct. 18 meeting for the lawyers and a project director.

Six weeks after that meeting, on Dec. 8, the Orange County North Basin site appeared on Pruitt's list of 21 contaminated areas to address. A month later, Pruitt proposed listing the site on EPA's National Priorities List, a move that could make it eligible for long-term federal cleanup funding from the federal government if the responsible polluters cannot be identified and forced to pay for its remediation.

Since then, Hewitt has been a robust defender of Pruitt, dismissing his recent controversies as "nonsense scandals" on MSNBC in early April and saying his detractors were "just trying to stop the deregulation effort."

Pruitt has touted the agency's Superfund work as one of his key priorities, setting up a task force to seek to speed up the clean-up of the nation's worst contaminated sites. That task force had been headed by Albert "Kell" Kelly, a former banker and longtime friend, who departed the agency last week after news about loans he provided to Pruitt in Oklahoma, including the mortgage provided to Pruitt for a house he bought from a lobbyist when he was a state senator.

Environmental advocates have worried Pruitt's efforts to identify Superfund priority sites would bypass the process set up by Congress to ensure cleanup resources are divided fairly, and that he could focus on sites seen as important to his political supporters. And environmentalists have said Pruitt's rush to claim that contaminated properties have been remediated could risk turning them over to local governments and businesses that might pursue cheaper, inadequate solutions.

Elgie Holstein, senior director for strategic planning at the Environmental Defense Fund who has been tracking EPA's Superfund actions, said the connection to Hewitt is "not a surprise."

"The biggest fear we have is that No. 1, the administrator's political priorities and personal ambitions, political ambitions become the primary criteria for action under this program instead of science and health," Holstein said.

EPA never disclosed the meeting with Hewitt's contacts. It was listed on Pruitt's public calendar as a staff briefing. But on his private Outlook schedule, which the agency has released in response to lawsuits, it appeared as an "Orange County Superfund Site" meeting with Kelly and two other staffers. The records did not list the Californians in attendance at the meeting at EPA headquarters in Washington.

But EPA spokesman Jahan Wilcox confirmed that two lawyers representing the water district, Robert O'Brien and Scott Sommer, and the water district director of special projects, Bill Hunt, were there. A third lawyer, former federal Judge Stephen G. Larson, was forced to cancel his trip due to wildfires in California, according to emails.

"Hugh Hewitt helped arrange the meeting at the request of the water district but did not attend," Wilcox said.

Wilcox said the meeting was for the water district to "brief EPA on the Superfund site's cleanup efforts and request expedited cleanup," following a 2016 agreement with the agency to conduct a remedial investigation and feasibility study, at a cost of \$4 million over two years. Hunt did not immediately respond to a request for comment.

Hewitt in an email to POLITICO called Pruitt a friend and said he does not have a working relationship with him. He said that his firm has represented the water district and worked on the site with EPA's regional office for years but that he had not participated in that work.

Hewitt said he requested a meeting because the water district wanted to brief the new EPA team, he said, adding that he was an Orange County resident until 2016 as well as an Orange County Children and Families Commission member. He said that he "very much" wanted the Superfund site remediated as soon as possible.

According to an EPA fact sheet, the Orange County site has more than five square miles of polluted groundwater containing chlorinated solvents and other contaminants across the cities of Anaheim, Fullerton, and Placentia. It includes the Orange County Groundwater Basin, which provides drinking water to more than 2.4 million residents across 22 cities, according to the agency. Those pollutants can damage humans' nervous systems, kidneys and livers, and some are considered carcinogenic.

EPA has just begun its process of studying the contamination and it has not determined which companies caused the pollution in the area. But an administrative settlement with the EPA in 2016 says the area was home to "electronics manufacturing, metals processing, aerospace manufacturing, musical instrument manufacturing, rubber and plastics manufacturing, and dry cleaning."

Hewitt also thanked EPA schedulers for working to arrange a meeting between Pruitt and the California Lincoln Clubs, which describe themselves as in favor of "limited government, fiscal discipline and personal responsibility." After some rescheduling Pruitt eventually met with representatives of the group on a trip to California in March of this year, according to his public calendar. Prominent Orange County businessman John Warner also helped to connect that group with staffers.

Pruitt and his scheduling staff have frequently sought to set up meetings with or for influential Republican figures, according to the internal EPA emails.

His team accepted an invitation for him to address The Philanthropy Roundtable at an invitation-only event at the White House for "conservative and free-market foundation CEOs and individual wealth creators to discuss

the greatest opportunities for foundations to protect and strengthen free society" and "what [Pruitt] views as unique opportunities for philanthropic action.

As POLITICO reported in March, Pruitt also met with an Indiana coal executive and Trump fundraiser who was seeking to soften a pollution rule.

Pruitt also crafted his travel schedule — including a tour of states in August — to meet with big business much like a member of Congress would during the annual recess.

In July, EPA's associate administrator of public engagement Tate Bennett was working with Pruitt to "essentially create an August recess for the EPA to be out in the states talking with individual companies & doing listening sessions within sectors," said Leah Curtsinger, the federal policy director for the Colorado Association of Commerce & Industry, in an email introducing Bennett to her husband, public affairs director at coal company Cloud Peak Energy and a fellow alum of Senate Majority Leader Mitch McConnell's office.

Annie Snider contributed to this report.

House subpanel approves cybersecurity, small-scale LNG bills [Back](#)

By Anthony Adragna | 04/18/2018 11:19 AM EDT

A House Energy and Commerce subpanel today approved a quartet of bills designed to boost DOE's efforts to protect the nation's electric grid from cyberattack.

All four cybersecurity measures — [H.R. 5174 \(115\)](#), [H.R. 5175 \(115\)](#), [H.R. 5239 \(115\)](#), [H.R. 5240 \(115\)](#) — advanced by voice vote.

H.R. 5175 asks DOE to coordinate the federal, state and business responses to physical and cybersecurity threats. H.R. 5239 would establish a voluntary DOE program to test the cybersecurity of products intended for use in the bulk-power system. H.R. 5240 would encourage public-private partnerships on cybersecurity efforts, while H.R. 5174 would have DOE bolster its emergency response efforts.

In addition, the subcommittee approved [H.R. 4606 \(115\)](#), which would allow the expedited approval of small-scale shipments of liquefied natural gas, over the objections of most Democrats. That vote was 19 to 14.

"Leave it to the Republican leadership of this committee to markup a bill that has even fewer environmental safeguards than a Trump Administration proposal," Rep. [Frank Pallone](#) (D-N.J.), ranking member of the full committee, said. "This bill is unnecessary, it is bad policy and it is a legislative earmark."

WHAT'S NEXT: The bills will get consideration by the full House Energy and Commerce Committee.

Subject: Morning Energy, presented by Anheuser-Busch: Conservative talker has pull with Pruitt — It's primary day in coal country — Trump meets with ethanol

By Kelsey Tamborrino | 05/08/2018 05:40 AM EDT

With help from Eric Wolff and Anthony Adragna

PRUITT GETS TO IT FOR HEWITT: New emails emerged Monday that provide previously unknown details in the ongoing raft of controversies that have plagued EPA Administrator Scott Pruitt — and provide more ammo for onlookers who worry Pruitt spends too much time currying favor with his political allies.

Conservative commentator Hugh Hewitt brokered a meeting that ultimately ended with a polluted California area on Pruitt's personal priority list of Superfund sites, POLITICO's Emily Holden and Anthony Adragna report. Hewitt lives in Orange County, where the Superfund site sits, and has a son who works in EPA's press office. The TV and radio host emailed Pruitt back in September to set up a meeting between Pruitt and the law firm Larson O'Brien, which employs Hewitt and represents the Orange County Water District. "I'll join if the Administrator would like me too or can catch up later at a dinner," Hewitt wrote in the email, which was obtained under a FOIA lawsuit by the Sierra Club. He added that the issues surrounding the Superfund site were "Greek to me but a big deal in my home county."

Weeks later, the Orange County North Basin site in question appeared on Pruitt's list of 21 contaminated areas to address. Pruitt then proposed listing the site on the agency's National Priorities List, making it potentially eligible for long-term federal cleanup funding. Since the meet-up, Hewitt has been a staunch defender of Pruitt, dismissing his recent controversies as "nonsense scandals" on MSNBC in early April. EPA spokesman Jahan Wilcox confirmed that Hewitt helped arrange the meeting at the request of the water district but didn't attend.

The meeting adds to environmentalists' concerns about Pruitt. "The biggest fear we have is that No. 1 the administrator's political priorities and personal ambitions, political ambitions become the primary criteria for action under this program instead of science and health," said Elgie Holstein, senior director for strategic planning at the Environmental Defense Fund who has been tracking EPA's Superfund actions. [Read the story here.](#)

FIRST CLASS MEMO: EPA on Monday also released a copy of a memo written by the former head of Pruitt's security detail justifying his first class flights. "We have observed and increased awareness and at times lashing out from passengers which occurs while the Administrator is seated in coach with [his security detail] not easily accessible to him due to uncontrolled full flights," Pasquale "Nino" Perrotta wrote in the May 1, 2017, memo. "Therefore, we believe that the continued use of coach seats for the Administrator would endanger his life and therefore respectfully ask that he be placed in either business and or first class accommodations." The Washington Post and E&E obtained copies of the memo via a FOIA request. Perrotta retired from the agency last week.

WELCOME TO TUESDAY! I'm your host Kelsey Tamborrino. Congrats to Cummins Inc.'s Patrick Wilson, who was first to identify former House Speaker Nathaniel Banks of Massachusetts as the representative who served 11 terms and ran for election on five different party tickets. He was successful in all but the Liberal

Republican ticket. For today: What president was first to watch a major league baseball game from the dugout? Bonus points if you can name the team. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

BLANKENSHIP'S BIG DAY: We should know by tonight who will face Sen. [Joe Manchin](#) in a West Virginia Senate race that Republicans see as one of their biggest pickup opportunities of the year — that is, unless coal baron Don Blankenship scores a surprise upset in the surprisingly tight GOP primary. President Donald Trump [tweeted](#) Monday that Blankenship "can't win the General Election in your State," though he didn't endorse one of his opponents. That likely didn't ease fears that the two other major candidates — Rep. [Evan Jenkins](#) and state Attorney General Patrick Morrisey — will split the anti-Blankenship vote evenly and allow the former Massey Energy CEO to come out ahead. Blankenship recently was released from a year in jail following an explosion at the Upper Big Branch Mine that killed 29 workers. Blankenship has called the Upper Big Branch disaster the "worst tragedy" of his life, and is working to have his [conviction thrown out](#). (He has previously lost on appeal and failed to convince the Supreme Court to take the case.) For his part, Blankenship said Monday he was confident he would win, POLITICO's Alex Isenstadt [reports](#) from Mount Hope, W. Va.

That's not all: The Mountain State is not alone in kicking the 2018 midterms into gear. Statewide primary elections also are happening today in Ohio and Indiana and North Carolina, including solar energy entrepreneur and Democrat Dan McCready, who is running in North Carolina's 9th District. Vox nicely breaks down today's big races nationwide [here](#) and POLITICO has 7 things to watch [here](#).

SCHNEIDERMAN RESIGNS: New York Attorney General Eric Schneiderman, who has sued Exxon Mobil and fought the Trump administration's deregulatory agenda, [announced](#) his resignation Monday night in the wake of a report from the [New Yorker](#) that four women had accused him of abuse in previous romantic relationships. Two of the women who went on the record "say that they eventually sought medical attention after having been slapped hard across the ear and face, and also choked," according to the magazine. In a statement, Schneiderman disputed the allegations but said they "will effectively prevent me from leading the office's work at this critical time." The resignation takes effect at the close of business today.

Before the New Yorker story broke, Schneiderman and the attorneys general from seven other states called on Pruitt to withdraw his "secret science" proposal to ban the use of studies that don't publicly disclose all their data. Read the letter [here](#).

CHOPPING BLOCK: The White House on Monday [outlined](#) its package of proposed spending cuts, rescinding \$4.3 billion from the Energy Department's Advanced Technology Vehicles Manufacturing loan program, which supports the production of fuel-efficient, advanced technology vehicles. It was part of an overall request for \$15 billion worth of rescissions from previously appropriated funds from prior years. Another package going after the FY18 omnibus is expected later this year. More [here](#).

ON THE GRID: Puerto Rico's electric grid — which failed to provide power for much of the island for several months after last year's hurricanes — will be the focus of a Senate Energy and Natural Resources hearing this morning. The CEO of the Puerto Rico Electric Power Authority Walter Higgins and Bruce Walker, assistant Energy secretary for electricity delivery and energy reliability, are among the names set to testify. "The end goal is a modern and intelligent energy system that can serve as the resilient engine for Puerto Rico's economic revitalization," Walker is expected to say. Officials [say](#) close to 95 percent of power has now been restored on the island. **If you go:** The [hearing](#) kicks off at 10 a.m. in 366 Dirksen.

— **Forty-seven U.S. and international scientific groups** sent a [letter](#) to Puerto Rico Gov. Ricardo Rosselló on Monday, urging him to keep the island's statistical agency, the Puerto Rico Institute of Statistics, and its board of directors fully independent. "To address the challenges posed by its decade-long economic recession and the devastation of back-to-back hurricanes, Puerto Rico must chart its path toward sustainable recovery using reputable and reliable data and statistical methods," the letter says.

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks. The zero-emission trucks will be able to travel between 500 and 1,200 miles. Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025. [Learn more](#). **

ENERGY-WATER BILL ADVANCES: The House Appropriations Energy-Water subpanel swiftly approved its \$44.7 billion energy and water spending bill on a voice vote Monday, sending the measure to the full committee for consideration. The appropriations bill largely ignores the president's budget request, earning the approval of Democrats, who applauded the boost in funding for the Army Corps of Engineers and DOE thanks to the bipartisan agreement to lift spending caps. [Read more](#).

TRUMP MEETS WITH SENATORS ON RFS: In what could perhaps be the final time, Trump plans to meet today with at least Sens. [Chuck Grassley](#), [Joni Ernst](#), [Ted Cruz](#) and [Pat Toomey](#) to discuss their dueling priorities around federal ethanol policy. Who else will be in the room remains unclear, as sources told ME conflicting stories: An ethanol source said neither Pruitt, nor the Ag secretary, would be present, while a Republican Senate aide said both would be there.

A source said Team Ethanol's main goal is to get Trump to affirm his commitment to year-round sales of 15 percent ethanol, but the rest of the agenda seems to be unclear. A biofuels source said they expect Trump to kick the biofuels battle to Congress, where Sen. [John Cornyn](#) and Rep. [John Shimkus](#) have been trying to write a bill to overhaul the RFS. Cruz said at a Capitol Hill rally last week that he would view that decision as doing nothing. Cruz and Toomey are still seeking Renewable Fuel Standard changes to dramatically lower the program's compliance costs for refineries. Trump is scheduled to meet with Republican senators at 11:15 this morning, according to his public schedule.

— **Continuing their push for year-round sales of E15**, fuel retailers from 11 states sent a letter to Trump on Monday, calling on him to instruct EPA to immediately follow up on a pledge to allow the year-round sale of E15 before summer restrictions kick in on June 1. [Read the letter here](#). Eighteen other groups, including the Sierra Club and Earthjustice, signed [onto their own letter](#) expressing concern with the administration's openness to the year-round sale of E15. And the American Energy Alliance launched a digital ad campaign Monday urging for the repeal of the RFS. [Watch that ad here](#).

EXPECTING BIG THINGS: Shimkus is expecting broad support from the House when his comprehensive nuclear waste package [H.R. 3053 \(115\)](#) gets a vote Thursday. "I think people are ready to do something rather than nothing," he told reporters Monday. Shimkus said it's been a months-long process to educate members about the importance of the legislation and added he sent texts to Speaker [Paul Ryan](#) and Majority Leader [Kevin McCarthy](#) thanking them for finally bringing the package to the floor.

But he's not crazy: Shimkus said he hadn't had any recent talks with Senate counterparts about potentially moving the bill across the Capitol and he didn't expect they would this year with one of their most vulnerable incumbents (and ardent Yucca opponent), Sen. [Dean Heller](#), locked in a competitive reelection.

WHERE'S PERRY? Perry is slated to speak today during the Washington Conference on the Americas, where Commerce Secretary Wilbur Ross and Deputy Secretary of State John Sullivan, among others, are set to also appear. Perry will deliver remarks on "energy integration in the Americas" at 3:15 p.m. See the full agenda [here](#).

E&C TACKLES EVs: The House Energy and Commerce Environment Subcommittee will listen to discussion today on how fuel vehicles and electric vehicles will coexist as electric vehicles become more popular. The hearing begins at 10:15 a.m. in 2322 Rayburn, or stream it [here](#).

MAIL CALL: A diverse coalition of energy groups — including Advanced Energy Economy, the American Petroleum Institute and the American Wind Energy Association — on Monday urged Perry not to bail out coal and nuclear plants. Read their [letter](#).

INHOFE BACKS JACKSON: An Axios [report](#) that Pruitt chief of staff Ryan Jackson has been frozen out of the EPA chief's inner circle didn't sound right to his former boss, Sen. [Jim Inhofe](#). "I've known him well since he was 18 years old and I don't think they'd be capable of sidelining him," he told ME. Inhofe admitted that if the report is true — "that's an if I'm not willing to accept," he cautioned — it would be deeply concerning.

PRUITT MEETS MOTHERS ON CHEMICAL BAN: Two mothers will meet today with Pruitt, where they will press the administrator to ban paint strippers containing methylene chloride after their sons died using products with the chemical, according to the Environmental Defense Fund. On former President Barack Obama's last day in office, his administration proposed using the updated Toxic Substances Control Act to ban the use of the chemical in most commercial paint removers. Pruitt [told lawmakers](#) recently that he thinks EPA can make a decision on its proposed ban by the end of the year.

3:00 p.m. — House Rules Committee meets to formulate a rule on H.R. 3053 (115), the "Nuclear Waste Policy Amendments Act of 2018," H-313

THAT'S ALL FOR ME!

**** A message from Anheuser-Busch:** Anheuser-Busch announced that America's leading brewer has placed an order for up to 800 hydrogen-electric powered semi-trucks from the pioneer in hydrogen-electric renewable technology, Nikola Motor Company. The zero-emission trucks — which will be able to travel between 500 and 1,200 miles and be refilled within 20 minutes, reducing idle time — are expected to be integrated into Anheuser-Busch's dedicated fleet beginning in 2020.

Through this agreement Anheuser-Busch aims to convert its entire long-haul dedicated fleet to renewable powered trucks by 2025.

"At Anheuser-Busch we're continuously searching for ways to improve sustainability across our entire value chain and drive our industry forward," said Michel Doukeris, CEO of Anheuser-Busch. "The transport industry is one that is ripe for innovative solutions and Nikola is leading the way with hydrogen-electric, zero-emission capabilities. We are very excited by the possibilities our partnership with them can offer."

Pruitt fast-tracked California cleanup after Hugh Hewitt brokered meeting Back

By Emily Holden and Anthony Adragna | 05/07/2018 10:12 PM EDT

EPA Administrator Scott Pruitt placed a polluted California area on his personal priority list of Superfund sites targeted for "immediate and intense" action after conservative radio and television host Hugh Hewitt brokered a meeting between him and lawyers for the water district that was seeking federal help to clean up the polluted Orange County site.

The previously unreported meeting, which was documented in emails released by EPA under a Freedom of Information Act lawsuit by the Sierra Club, showed Pruitt's staff reacting quickly to the request last September by Hewitt, who has been one of Pruitt's staunchest defenders amid a raft of ethics controversies around his expensive travel, security team spending and a cheap Washington condo rental from a lobbyist.

Pruitt has drawn criticism from environmentalists and other critics for letting prominent GOP backers and industry groups influence the agency's agenda — even as he has kicked scientists off of EPA's advisory panels and moved to limit the kinds of peer-reviewed research it will consider when making decisions.

In many cases, the people whose advice Pruitt is heeding could be useful supporters for him in a future race for U.S. senator or president. They include GOP megadonor Sheldon Adelson, who — as POLITICO reported in March — persuaded Pruitt last year to take a meeting with an Israeli water purification company called Water-Gen that later won a research deal with the EPA.

Hewitt, a resident of Orange County whose son James works in EPA's press office, emailed Pruitt in September to set up a meeting between the administrator and the law firm Larson O'Brien, which employs Hewitt and represents the Orange County Water District. Pruitt had been planning to meet with the lawyers in California a month earlier, but cancelled the trip to undergo knee surgery.

"I'll join if the Administrator would like me too or can catch up later at a dinner," Hewitt wrote in his Sept. 18 message. Hewitt added that the issues surrounding the Superfund site were "Greek to me but a big deal in my home county."

Pruitt's aides responded within minutes and quickly confirmed an Oct. 18 meeting for the lawyers and a project director.

Six weeks after that meeting, on Dec. 8, the Orange County North Basin site appeared on Pruitt's list of 21 contaminated areas to address. A month later, Pruitt proposed listing the site on EPA's National Priorities List, a move that could make it eligible for long-term federal cleanup funding from the federal government if the responsible polluters cannot be identified and forced to pay for its remediation.

Since then, Hewitt has been a robust defender of Pruitt, dismissing his recent controversies as "nonsense scandals" on MSNBC in early April and saying his detractors were "just trying to stop the deregulation effort."

Pruitt has touted the agency's Superfund work as one of his key priorities, setting up a task force to seek to speed up the clean-up of the nation's worst contaminated sites. That task force had been headed by Albert "Kell" Kelly, a former banker and longtime friend, who departed the agency last week after news about loans he provided to Pruitt in Oklahoma, including the mortgage provided to Pruitt for a house he bought from a lobbyist when he was a state senator.

Environmental advocates have worried Pruitt's efforts to identify Superfund priority sites would bypass the process set up by Congress to ensure cleanup resources are divided fairly, and that he could focus on sites seen as important to his political supporters. And environmentalists have said Pruitt's rush to claim that contaminated properties have been remediated could risk turning them over to local governments and businesses that might pursue cheaper, inadequate solutions.

Elgie Holstein, senior director for strategic planning at the Environmental Defense Fund who has been tracking EPA's Superfund actions, said the connection to Hewitt is "not a surprise."

"The biggest fear we have is that No. 1, the administrator's political priorities and personal ambitions, political ambitions become the primary criteria for action under this program instead of science and health," Holstein said.

EPA never disclosed the meeting with Hewitt's contacts. It was listed on Pruitt's public calendar as a staff briefing. But on his private Outlook schedule, which the agency has released in response to lawsuits, it appeared as an "Orange County Superfund Site" meeting with Kelly and two other staffers. The records did not list the Californians in attendance at the meeting at EPA headquarters in Washington.

But EPA spokesman Jahan Wilcox confirmed that two lawyers representing the water district, Robert O'Brien and Scott Sommer, and the water district director of special projects, Bill Hunt, were there. A third lawyer, former federal Judge Stephen G. Larson, was forced to cancel his trip due to wildfires in California, according to emails.

"Hugh Hewitt helped arrange the meeting at the request of the water district but did not attend," Wilcox said.

Wilcox said the meeting was for the water district to "brief EPA on the Superfund site's cleanup efforts and request expedited cleanup," following a 2016 agreement with the agency to conduct a remedial investigation and feasibility study, at a cost of \$4 million over two years. Hunt did not immediately respond to a request for comment.

Hewitt in an email to POLITICO called Pruitt a friend and said he does not have a working relationship with him. He said that his firm has represented the water district and worked on the site with EPA's regional office for years but that he had not participated in that work.

Hewitt said he requested a meeting because the water district wanted to brief the new EPA team, he said, adding that he was an Orange County resident until 2016 as well as an Orange County Children and Families Commission member. He said that he "very much" wanted the Superfund site remediated as soon as possible.

According to an EPA fact sheet, the Orange County site has more than five square miles of polluted groundwater containing chlorinated solvents and other contaminants across the cities of Anaheim, Fullerton, and Placentia. It includes the Orange County Groundwater Basin, which provides drinking water to more than 2.4 million residents across 22 cities, according to the agency. Those pollutants can damage humans' nervous systems, kidneys and livers, and some are considered carcinogenic.

EPA has just begun its process of studying the contamination and it has not determined which companies caused the pollution in the area. But an administrative settlement with the EPA in 2016 says the area was home to "electronics manufacturing, metals processing, aerospace manufacturing, musical instrument manufacturing, rubber and plastics manufacturing, and dry cleaning."

Hewitt also thanked EPA schedulers for working to arrange a meeting between Pruitt and the California Lincoln Clubs, which describe themselves as in favor of "limited government, fiscal discipline and personal responsibility." After some rescheduling Pruitt eventually met with representatives of the group on a trip to California in March of this year, according to his public calendar. Prominent Orange County businessman John Warner also helped to connect that group with staffers.

Pruitt and his scheduling staff have frequently sought to set up meetings with or for influential Republican figures, according to the internal EPA emails.

His team accepted an invitation for him to address The Philanthropy Roundtable at an invitation-only event at the White House for "conservative and free-market foundation CEOs and individual wealth creators to discuss the greatest opportunities for foundations to protect and strengthen free society" and "what [Pruitt] views as unique opportunities for philanthropic action.

As POLITICO reported in March, Pruitt also met with an Indiana coal executive and Trump fundraiser who was seeking to soften a pollution rule.

Pruitt also crafted his travel schedule — including a tour of states in August — to meet with big business much like a member of Congress would during the annual recess.

In July, EPA's associate administrator of public engagement Tate Bennett was working with Pruitt to "essentially create an August recess for the EPA to be out in the states talking with individual companies & doing listening sessions within sectors," said Leah Curtsinger, the federal policy director for the Colorado Association of Commerce & Industry, in an email introducing Bennett to her husband, public affairs director at coal company Cloud Peak Energy and a fellow alum of Senate Majority Leader Mitch McConnell's office.

Annie Snider contributed to this report.

Blankenship, predicting victory, thumbs his nose at GOP [Back](#)

By Alex Isenstadt | 05/07/2018 08:27 PM EDT

MOUNT HOPE, W. Va. — A defiant Don Blankenship on Monday shrugged off President Donald Trump's last-minute plea for Republican primary voters to reject his insurgent Senate candidacy — and flatly predicted it would fail to halt his momentum.

On the final day of the dramatic West Virginia campaign, the coal baron and ex-prisoner seemed unbothered by the president's foray into the contest, arguing that voters would see through it as the latest ploy in an establishment-led effort aimed at keeping him from winning the nomination.

"I think it's still over," he declared to reporters here during a frenzied final day of the race. "It probably tightens it a point or two, but I don't think it matters much."

At another point in the day, after a reporter asked if he was feeling confident, Blankenship had a deadpan response: "Yeah, we're gonna win."

Senior Republicans are fretting that Blankenship, who spent a year behind bars after the 2010 explosion at his Upper Big Branch Mine that killed 29 workers, has vaulted into the lead heading into Tuesday's primary. GOP officials reviewed a range of surveys over the weekend, with some showing Blankenship holding a narrow single-digit advantage over his mainstream opponents, Rep. Evan Jenkins and state Attorney General Patrick Morrisey. Others had Blankenship ahead by more.

The national GOP has waged an all-out campaign to stop him from winning the nomination. They're convinced would destroy the party's prospects of ousting Democratic Sen. Joe Manchin in November. And many Republicans say a Blankenship win would be yet another black eye for the party, which is still reeling from last year's loss in the Alabama special election.

Over the past month, a super PAC aligned with Senate Majority Leader Mitch McConnell has spent over \$1.3 million on a barrage of anti-Blankenship TV ads.

With the former prisoner gaining momentum, the effort to stop him has gone into overdrive. As the race entered its final day, Blankenship's rivals — who had spent almost the entire campaign attacking one another — turned their fire on him.

In a not-so-veiled jab at Blankenship, Jenkins held a morning campaign event at a memorial for coal workers. At one point, he noted that one of his great grandfathers died in a mine explosion.

"The president could not have made it any clearer this morning that Don Blankenship is not the guy to beat Joe Manchin," Jenkins said.

Morrissey, who spent the day hopscotching across central West Virginia, announced that he'd sent a letter to Blankenship's parole officer highlighting what he argued was a violation. At one point, he took to Twitter to suggest questions for reporters to ask Blankenship. And he released a digital advertisement unloading on the coal baron, and highlighting his role in the 2010 explosion.

"Families devastated, children left fatherless, wives widowed," a narrator intoned. Many in the party are skeptical that the 11th-hour offensive will succeed — and, behind the scenes, finger-pointing is underway. Some are pinning the blame on the White House, saying it should have rebuked Blankenship earlier. Others say the fault lies with Jenkins and Morrissey, whose near constant attacks left one another badly damaged and created an opening for Blankenship.

Still others are pinning the blame on McConnell, saying that he should have long ago used his political muscle to clear the primary field and thereby avoid the three-way dynamic that has played to Blankenship's benefit.

McConnell has privately expressed concern to associates about Blankenship, whom he has long viewed as a serious threat in the contest. A loss for the Senate GOP leader, who hails from a neighboring Appalachian state and has faced withering attacks from Blankenship, would be embarrassing.

Over the weekend, McConnell spoke by phone with the president about the contest. According to a Republican official briefed on the call, Trump informed McConnell that he planned to criticize Blankenship publicly, a step he hadn't taken previously. Among the issues that arose on the call were Blankenship's TV ads, some of which have gone after McConnell's family in deeply personal, racial terms.

White House aides spent part of Friday drafting a tweet targeting Blankenship. Then, on Monday, the president hit send.

"To the great people of West Virginia we have, together, a really great chance to keep making a big difference," he wrote. "Problem is, Don Blankenship, currently running for Senate, can't win the General Election in your State...No way! Remember Alabama. Vote Rep. Jenkins or A.G. Morrissey!"

For Blankenship, who has tied himself closely to the president and on Monday declared himself "Trumpier than Trump," the attack could have stung. Yet as the race came to a close, Blankenship seemed unbothered.

Speaking to reporters after touring a freight shipping office here, Blankenship said he placed no stock in the president's tweet. It was McConnell, Blankenship said, who convinced Trump to weigh in. After Tuesday, Blankenship added, the president would be embarrassed he followed McConnell's lead.

"It's obvious that the president is suffering from the same thing that many in the public do, which is misinformation and untruths," Blankenship said. "The lesson that will be learned here when I win is that you shouldn't blindly endorse or cast doubts or favoritism unless you actually look at their record and not depend on the people in that swamp that you're trying to drain."

At times, Blankenship seemed to take pleasure in his recalcitrance. He refused to commit to endorsing his primary rivals should they win, which he said wouldn't happen, anyway. He wouldn't apologize for running TV ads lambasting McConnell's "China family." And he reiterated that he wouldn't vote for McConnell to serve as Senate GOP leader.

At one point, Blankenship noted that he'd been disrespected at other times in his career. The Marshall University-educated businessman noted that he'd grown up poor before becoming a multimillionaire, and recalled one episode in which he easily passed a CPA exam that Ivy Leaguers he knew had struggled with.

Now, he said, he was confronting another kind of establishment.

"I've been underestimated," he said, "all my life."

What's in Trump's \$15B spending cuts package [Back](#)

By Kaitlyn Burton | 05/07/2018 08:29 PM EDT

The White House is set to release a \$15 billion spending cuts package Tuesday. Here are some of the plan's targets, a senior administration official told reporters today:

- \$7 billion from the Children's Health Insurance Program, which covers about 9 million low-income children.
- \$4.3 billion from the Energy Department's Advanced Technology Vehicles Manufacturing loan program, which supports the production of fuel-efficient, advanced technology vehicles.
- \$800 million from the Center for Medicare and Medicaid Innovation, which was created under Obamacare.
- \$252 million from the 2015 Ebola outbreak response.
- \$148 million from the Animal and Plant Health Inspection Service for responding to disease outbreaks "that have already been resolved," the official said.
- \$107 million for technical assistance after Hurricane Sandy for emergency watershed programs.
- \$15 million from USDA's Rural Cooperative Development Grant program, which seeks to boost the economies of rural areas.

Trump tries to woo conservatives with bid to cut spending [Back](#)

By Sarah Ferris and Kaitlyn Burton | 05/07/2018 09:05 AM EDT

The White House on Tuesday will send \$15 billion in proposed spending cuts to Congress in an attempt to demonstrate fiscal austerity to skeptical conservatives, senior administration officials confirmed Monday night.

The administration had last week planned to send Congress a package of \$11 billion in spending reductions. But since then, some conservatives have quietly pushed for an even bolder proposal, particularly after the GOP's spending binge in recent months, said Republicans familiar with the discussions.

The White House initially floated as much as \$60 billion in cuts, including an unprecedented attempt to cancel money from this year's omnibus spending bill. The proposal was later downsized to \$11 billion, and then back up to \$15 billion, targeting only unused funding from past years, which POLITICO first reported.

One senior administration official told reporters that the proposal coming Tuesday is "the largest single rescissions package at one time."

The White House also plans to make a second attempt at clawing back funding from the omnibus, but the senior administration official said that could come weeks later.

The official said President Donald Trump will be personally involved in the details of the next package, which will include "substantial" cuts in current spending based on the president's own budget request.

Unlike regular spending bills, a presidential rescissions package is given fast-track authority in both chambers. That means the proposal is one of the rare spending-related bills that is able to bypass the 60-vote threshold in the Senate.

Nearly half of the package, a whopping \$7 billion, pulls from the Children's Health Insurance Program, which covers about 9 million low-income children.

Of this, \$5 billion is fiscal 2017 funding that has already expired, and \$2 billion is money from a so-called contingency fund that states can tap into if they're short on cash.

These CHIP rollbacks "will not impact the program," the senior administration official said.

It would also cut \$800 million from the Center for Medicare & Medicaid Innovation, which was created under Obamacare.

In addition, the proposal will target 38 programs with large amounts of leftover cash, including \$148 million from the Animal and Plant Health Inspection Service, \$107 million for Hurricane Sandy in 2013 and \$252 million for the Ebola outbreak in 2015.

The senior administration official said the White House is starting with "uncontroversial" cutbacks as a sweetener to bring Democrats on board.

"I don't think we believe there's a reason we wouldn't get bipartisan support for a package like this," the official said.

The process also includes a special bonus for fiscal hawks: Whenever the president submits a rescissions request, that spending is frozen automatically for 45 legislative days, or until Congress formally rejects it.

OMB Director Mick Mulvaney said in April that he hopes for a vote in the House before the July Fourth recess, and officials told reporters Monday that the House is "very interested in this package."

The GOP-dominated House is expected to easily clear the rescissions package, but even White House officials are less confident about its fate in the Senate, White House legislative affairs director Marc Short told POLITICO on Monday. Trump is pleased with the \$15 billion proposal, Short said.

In a call with Capitol Hill staff on Monday, White House officials skirted a question about whether Majority Leader Mitch McConnell had signed off on the proposal.

"We are in discussions with the majority leader," the administration official said on the call, which POLITICO was permitted to listen to by a staffer. "We're hopeful the Senate's going to come our way but I would say it's an ongoing conversation right now."

Trump's unusually large request would come after a nearly two-decade drought of any formal rescissions proposal.

Former President Bill Clinton was the last president to propose rescissions. His three requests totaled just \$128 million, a fraction of Trump's request.

Even with Trump's record-setting sum, conservative groups are demanding the Trump administration go further by proposing to cancel funds from the omnibus, which Trump threatened to veto.

Americans for Prosperity, the right-leaning group founded by the Koch brothers, is asking the White House to reel back \$45 billion from the \$1.3 trillion omnibus.

The group on Monday released an exhaustive list of programs it believes should go on the chopping block, including homeless assistance grants, a Coast Guard security center, FBI salaries and the National Cancer Institute.

Behind the scenes, top budget officials have wrestled for weeks with Republican lawmakers on the size and scope of the rescissions package.

The debate was largely centered on whether to cut money across the board from the omnibus spending package, or whether to target individual programs.

Few Republicans wanted the across-the-board cuts as those would have hit the hard-won increases to military spending. But officials also worried that going after specific programs would spur infighting among Republicans, according to one former top GOP congressional aide briefed on the deliberations — an outcome everyone hoped to avoid ahead of the 2018 midterm elections.

Meanwhile, belt-tightening conservatives in the House are still hoping for more than \$15 billion in cuts.

An internal survey of dozens of House Republican Study Committee members found that lawmakers overwhelmingly support the largest possible rescissions request. The survey, which was obtained by POLITICO, found that 71 percent of RSC members said they would back a proposal that cut at least \$60 billion. Another 9 percent said they'd support any amount.

And 94 percent of RSC members surveyed said the rescissions package should cut at least some domestic funding from this year's \$1.3 trillion omnibus. Only 6 percent said "maybe."

Republican budget wonks also wondered if the final package would accomplish the task of reducing government spending in a meaningful way, if it indeed took previously unspent money from old programs.

"This is not a deficit reduction exercise, but more of a public relations exercise to soothe the base and convince them that the White House is fiscally responsible," said G. William Hoagland, a senior vice president at the Bipartisan Policy Center and former director of budget and appropriations for former Senate Majority Leader Bill Frist as well as the former director of the Senate Budget Committee.

"If they are finding unused budget authority and putting that in a special package to Congress as appropriators are trying to put together the [fiscal] 2019 bill, it may have the effect of creating more spending for 2019 rather than less," Hoagland said.

Nancy Cook, John Bresnahan and Matthew Nussbaum contributed to this report

House Appropriations panel advances \$44.7B energy and water bill [Back](#)

By Annie Snider | 05/07/2018 06:15 PM EDT

A House Appropriations Committee subpanel swiftly approved its \$44.7 billion energy and water spending bill on a voice vote today, sending it to the full committee for consideration.

Democrats applauded the boost in funding that the measure provides for the Army Corps of Engineers and DOE thanks to the bipartisan agreement to lift spending caps.

"Our bill is certainly a message to the executive branch that the legislative branch rejects the ill-considered, draconian cuts we have come to expect to every important agency we fund in this bill," said Rep. [Marcy Kaptur](#), the top Democrat on the subcommittee.

Overall, the bill would provide \$7.28 billion to the Army Corps of Engineers, \$451 million over 2018 levels. That includes \$1.6 billion for harbor maintenance activities, or \$160 million more than the level appropriators committed in a major 2014 bill.

DOE's energy programs would get \$13.4 billion under the measure, with increases for fossil and nuclear energy research and cuts for renewable energy and energy efficiency.

Democrats objected to that disparity, as well as to a spate of policy riders in the bill such as a provision to repeal the Obama administration's Waters of the U.S. rule and another to override a court decision and operate the Columbia and Snake rivers' dams for hydropower production rather than protecting endangered salmon.

WHAT'S NEXT: The full House Appropriations Committee is expected to consider the measure soon.

Subject: Morning Energy: Pruitt steps up to the plate — Tester's 'great equalizer' — Bishop still talking NEPA

By Kelsey Tamborrino | 04/26/2018 05:42 AM EDT

With help from Anthony Adragna

PRUITT STEPS UP TO THE PLATE: Scott Pruitt makes his eagerly anticipated trip to the Hill this morning, and the stakes couldn't be higher for the embattled EPA administrator. His appearances before the House E&C Committee in the morning and Appropriations panel in the afternoon — ostensibly to defend the Trump administration's proposed cuts to EPA's budget — will give lawmakers their first opportunity to directly question Pruitt since the news broke about his heavy spending, sweetheart condo rental, VIP security and first-class flights. And while both Democrats and Republicans are expected to pull no punches as they weigh Pruitt's behavior, the real audience will be sitting in 1600 Pennsylvania Ave.

Check out this graphic breakdown of Pruitt's problems by POLITICO's Emily Holden, Alex Guillén and your ME host.

— **The administrator has kept a low profile** in the lead-up to today's events — even leaving press out of a Tuesday announcement on his plan to ban secret science — but expect the cameras to be out in force this morning. ME breaks down what to expect today as Pruitt heads for the batter's box. (ME is also taking suggestions for an appropriate walk-up song. One option here.)

THE GAME PLAN: Pruitt will point out he now flies coach when he travels, and shift the blame to staffers for the raises given to two of his close aides, according to a talking points document — dubbed "hot topics" — obtained by The New York Times. He will likely also say officials who were reassigned or demoted after challenging his spending all had performance issues.

— **EPA did not dispute the authenticity** of the Times document, but spokesman Jahan Wilcox said Pruitt would tout "the accomplishments of President Trump's EPA," including "working to repeal Obama's Clean Power Plan and Waters of the United States, providing regulatory certainty, and declaring a war on lead — all while returning to Reagan-era staffing levels." You can read Pruitt's full opening statement for the E&C hearing here.

DEMOCRATS WILL SEARCH FOR ANSWERS: The afternoon session is expected to dive into Pruitt's proposed deep cuts to the agency's budget and his deregulatory actions, but that doesn't mean Democrats will ignore the ethics woes dogging the embattled chief. "Administrator Pruitt, you are letting the American people and your agency down," Rep. Betty McCollum, ranking member of the Appropriations subpanel, plans to say. Democrat Nita Lowey, the ranking House appropriator, will question Pruitt on the Antideficiency Act after the Government Accountability Office found EPA illegally failed to notify Congress about the cost of his secure phone booth. Meanwhile, E&C's top Democrat Frank Pallone wouldn't tip his hand: "I just hope he shows up," he said when ME asked for his plan of attack.

— **House Energy and Commerce Democrats** will hold a news conference at 9 a.m. to once again call for Pruitt's ouster. Kathy Castor and Paul Tonko will attend, alongside representatives from numerous green groups.

REPUBLICANS OFFER SOME ADVICE: "Answer the questions and stay calm," John Shimkus said. "And the time will eventually end." The Illinois Republican didn't let on about his line of questions to Pruitt, but added: "It's not going to all be addressing stewardship issues. There are going to be policy questions."

— **Fellow Oklahoman and member of the Approps committee** Tom Cole expects the "highly charged" hearing to contain some "pretty much straight budget questions" — at least from the Republican side. Cole said he recently spoke to Pruitt on the upcoming hearing and warned him it would be "rugged."

Keep in mind: None of the committee Republicans said they'd been in contact with the White House ahead of the session. Shimkus said the Republicans hadn't huddled ahead of time to develop a game plan as they sometimes do with high-profile hearings. And Democrats are expected to turn out in force — E&C members not on the Environment subpanel will "waive in" to the hearing. They don't need GOP permission to do so, but will have to wait until all subcommittee members participate before asking questions. ME would look here for especially fiery questions or any surprises.

STRIKE 3? Pruitt's critical audience, of course, will be President Donald Trump, who has so far stuck by him, but is expected to judge how Pruitt fares in front of the cameras, POLITICO's Anthony Adragna and Nancy Cook report. So far, Pruitt's support among Trump's conservative backers has kept him on solid ground, despite the growing resentment of a "high maintenance" EPA chief among White House officials. "The president is always nervous about offending his base, and Pruitt has real support in the base," said one Republican close to the White House. "If that base diminishes, he does not have a chance of being reelected. He generally likes what Pruitt is doing over there, but he has no relationship with Pruitt of any note. He could get someone else."

IN THE OUTFIELD: Environmental group Defend Our Future will hand out first-class boarding passes today at the Pruitt hearing, while Moms Clean Air Force will deliver these report cards. And the League of Conservation Voters and its state partners will launch television ads today urging Sens. Dean Heller and Cory Gardner to hold Pruitt accountable. Watch them here and here.

If you go: The E&C hearing will begin at 10 a.m. in 2323 Rayburn, and the Appropriations hearing at 2 p.m. in 2007 Rayburn. Watch the livestreams here and here.

IT'S THURSDAY! I'm your host Kelsey Tamborrino, and the American Petroleum Institute's Jeff Stein was the first to name Khartoum, Sudan — the capital city where the Blue and White Niles meet to form the Nile. For today: Name the state where the first officially designated Democratic floor leader hailed. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter @kelseytam, @Morning_Energy and @POLITICOPro.

POLITICO's Ben White is bringing Morning Money to the Milken Institute Global Conference to provide coverage of the day's events and evening happenings. The newsletter will run April 29 - May 2. Sign up to keep up with your daily conference coverage.

PUBLIC LANDS CRUCIAL FOR TESTER: Democratic Sen. Jon Tester's bid for reelection could come down to how he handles public lands issues, Pro's Kevin Robillard reports. Close to one-third of the land in Tester's home state of Montana is under federal government ownership, and the Democratic senator hopes to use it to keep on board those who voted Trump — including hunters, hikers, snowmobilers and ranchers. "Public lands is one of the great equalizers. It's part of who we are," Democratic Gov. Steve Bullock told Kevin. "It doesn't matter what our political beliefs are, it's a core part of our lives."

Tester's strategy is part of a larger effort by Democrats in the West to emphasize lands. Bullock emphasized it in his reelection bid in 2016 and New Mexico Sen. Martin Heinrich, who is expected to easily win reelection in 2018, started his reelection bid with a video focused heavily on public lands issues. And Democratic strategists think it can help them in states throughout the interior west. "There a lot of people here who are

single-issue voters, and that issue is public lands," said Nick Gevock, the conservation director at the Montana Wildlife Federation. Read [more](#).

DEMOCRATS CALL FOR SPECIAL COUNSEL: In a letter Wednesday to the U.S. Office of Special Counsel, Pallone and Oversight ranking member [Elijah Cummings](#) requested an investigation into whether there is a pattern of problematic personnel practices at EPA. The Democrats point to recent reports of agency officials being reassigned, demoted or requesting new roles, after voicing concerns on Pruitt. "The reassignment or dismissal of employees who questioned Administrator Pruitt's wasteful and potentially unlawful expenditures suggests a troubling pattern of retaliation against EPA employees that may be illegal," they write. Read the letter [here](#).

BISHOP STILL TALKING NEPA: House Natural Resources Chairman [Rob Bishop](#) told ME he's been in contact with administration officials "over the last few weeks" about a series of modifications to NEPA that he says "run the gamut." His two overarching goals are to speed the permitting process and to enact categorical exclusions that will limit litigation to allow projects to advance more quickly. "It's one of the consistent problems they recognize," he said of the administration's engagement on NEPA.

Apples to oranges: Controversy over [\\$139,000 spent on doors](#) at Interior is not comparable to spending woes engulfing Pruitt, according to Bishop. "There are some real issues and there are some issues that we play around with," he said. "This is one I think people are playing with." Interior officials said previously that career facilities and security officials recommended the work and that Secretary Ryan Zinke was not aware of it.

THAT DAM BILL: The House passed a heavily watched measure, [H.R. 3144 \(115\)](#), Wednesday that would override a court decision requiring changes in the operations of major hydropower dams in the Pacific Northwest to help protect endangered salmon. The measure, from Washington Rep. [Cathy McMorris Rodgers](#), passed by a nearly party-line vote of 225-189, and now heads to the Senate, where some of the region's Democratic senators have [made known](#) their opposition. Pro's Annie Snider breaks down more [here](#).

REFINERY WORKERS HIT THE HILL: Close to 100 workers from refineries Monroe Energy, Philadelphia Energy Solutions and PBF Energy will rally for their jobs and Renewable Fuel Standard reform on the Hill today, the United Steelworkers said. The rally begins at 1 p.m. in the "Senate Swamp" — the grass across the drive from the east Senate steps. Texas Sen. [Ted Cruz](#) will participate in a press conference with the workers at the same time. Watch the livestream [here](#).

OFF-SHORE UP SUPPORT: While it didn't have quite the same build-up as Pruitt's hearings this morning, the House Natural Resources energy and mineral resources subcommittee will hold a hearing today on offshore energy revenue sharing for Gulf-producing states, with a focus on the Gulf of Mexico Energy Security Act. Democrats intend to call out the oil and gas industry and demand they take responsibility for their role in causing the destruction of Louisiana wetlands, according to a release. Former Sen. Mary Landrieu (D-La.), now a senior policy adviser at Van Ness Feldman, and John Barry, former board member of the Southeast Louisiana Flood Protection Authority — East, will testify, among others. **If you go:** The [hearing](#) begins at 10 a.m. in 1324 Longworth.

GET YOUR COMMENTS IN: [Comments](#) are due today on EPA's proposed repeal of the Clean Power Plan. The Competitive Enterprise Institute, for one, will file a comment today in support of the proposed repeal, calling the CPP "unlawful." Close to 20 other individuals from free-market groups signed onto the joint comment. Google, meanwhile, submitted its own comment Wednesday "respectfully" urging EPA to forgo the repeal. "Google continues to believe that the Clean Power Plan aligns with overall electricity sector trends and the specific goals of our company," [it says](#). The Natural Resources Defense Council and NRDC Action Fund said it generated 208,000 comments in support of keeping the CPP.

MAIL CALL! IN THE AIR TONIGHT: California Sen. [Dianne Feinstein](#) wrote to Transportation Secretary Elaine Chao Wednesday, calling on her to maintain national fuel economy standards set by California under the Clean Air Act. "I ask for your commitment to maintain the Corporate Average Fuel Economy standards at the maximum feasible level, as required by law, and to seek consensus with California so that we can continue to enjoy the success of a coordinated national program to improve fuel economy," Feinstein wrote. Read the letter [here](#).

— **Eighty-seven lawmakers signed onto a letter Wednesday** that calls on Pruitt to reinstate the "once in, always in" [policy](#) to "safeguard" from harmful air pollutants. "This is a matter of critical human health and safety," the lawmakers write. Read it [here](#).

GoT RENEWABLES? Rapper Kanye West [tweeted](#) about his connection to Trump and their "dragon energy" on Wednesday. "We are both dragon energy. He is my brother. I love everyone. I don't agree with everything anyone does." Spoiler: It's not an energy company we forgot to tell you about. Bloomberg breaks it down [here](#), but earlier in the day, West described dragon energy as, "Natural born leaders Very instinctive Great foresight." The House Natural Resources [account tweeted](#) the exchange telling West to "have your people call our people."

Pruitt scales back EPA's use of science Back

By Emily Holden and Annie Snider | 04/24/2018 03:17 PM EDT

Environmental Protection Agency chief Scott Pruitt announced Tuesday he would seek to bar the agency from relying on studies that don't publicly disclose all their data, a major policy change that has long been sought by conservatives that will sharply reduce the research the agency can rely on when crafting new regulations.

The unveiling of the proposed rule delivers a win to Republicans like House Science Chairman Lamar Smith (R-Texas), who unsuccessfully pushed legislation to impose the same type of change. The move also demonstrates Pruitt's persistence in pursuing President Donald Trump's anti-regulation agenda just two days before the embattled EPA chief is due to face fierce questioning from lawmakers about his hefty spending, expanded security detail and cheap condominium rental from the wife of an energy lobbyist.

At an invitation-only meeting at EPA headquarters with Smith, Sen. Mike Rounds (R-S.D.) and other supporters of the policy, Pruitt said the proposed rule was critical in ensuring that the agency was transparent about how it is making decisions to justify costly new regulations. It is the latest step Pruitt has taken to fundamentally shift the agency's approach to science.

"It is a codification of an approach that says as we do our business at the agency the science that we use is going to be transparent, it's going to be reproducible, it's going to be able to be analyzed by those in the marketplace. And those who watch what we do can make informed decisions about whether we've drawn the proper conclusions or not," Pruitt said.

Text of the proposed rule was not immediately available.

The proposal, based on legislation pushed by Smith, is intensely controversial, and scientists and public health groups say it will prevent federal regulators from enacting health and safety protections. Nearly 1,000 scientists, including former EPA career staffers, signed a letter opposing the policy sent by the Union of Concerned Scientists to Pruitt on Monday.

Their primary concern was that many of the country's bedrock air and water quality regulations are based on research that cannot disclose raw data because it includes the personal health information.

But industry has its own version of the same problem. EPA often relies on industry studies that are considered by companies to be confidential business information when determining whether new pesticides and toxic chemicals are safe to use. Internal EPA emails obtained under the Freedom of Information Act show that EPA political officials, including Nancy Beck, who became the chief of the agency's chemical safety office last year after working for years at a chemical industry lobbying group, worried that the new policy would limit the agency's ability to consider industry data or would force companies to make this proprietary data public.

"We will need to thread this one real tight!" Richard Yamada, political official who led work on the new policy wrote to Beck after she raised the concerns.

It was not immediately clear if the new proposed rule included measures to address those concerns.

Rush Holt, CEO of the American Association for the Advancement of Science, said Pruitt's changes could keep the agency from revising public health regulations as problems arise or new data comes to light.

"On the surface it sounds so innocuous or even beneficial. What could be wrong with transparency? Well it's clear to me that this is not based on an effort to be transparent. It is rather based on an effort to be just the opposite," he said.

"EPA is particularly important because when science is misused, people die," he added.

Pruitt has been discussing the new scientific policy publicly for weeks, but it only went to the White House for interagency review last week. Such swift review is very rare for the Office of Management and Budget, which often takes months to vet a new policy. At least one group, the Environmental Defense Fund, has requested a meeting with OMB officials to discuss the rule, but OMB's website shows that no meetings have been scheduled with interested groups.

Many public health studies can't be replicated without exposing people to contaminants, and environmental disasters such as the Deepwater Horizon oil spill cannot be recreated, the group said, raising intellectual property, proprietary and privacy concerns.

Pruitt's predecessor Gina McCarthy, and her air chief Janet McCabe, in an op-ed in The New York Times in March said concerns about studies are dealt with through the existing peer-review process, which ensures scientific integrity.

"[Pruitt] and some conservative members of Congress are setting up a nonexistent problem in order to prevent the E.P.A. from using the best available science," they said.

Report: Pruitt plans to shift blame for scandals [Back](#)

By Emily Holden | 04/25/2018 01:55 PM EDT

EPA chief Scott Pruitt will seek to shift the blame for some of his ethics controversies by blaming his staff when he testifies at two House hearings Thursday, according to an internal EPA document reviewed by The New York Times.

Pruitt is prepared to say that he now flies coach rather than first-class, that staffers were responsible for large raises given to close aides without White House sign-off and that officials who were reportedly sidelined for questioning his behavior had performance issues, according to the Times.

The defenses are in line with what Pruitt and EPA spokespeople have said in recent months.

EPA did not dispute the authenticity of the document, but spokesman Jahan Wilcox said Pruitt would tout "the accomplishments of President [Donald] Trump's EPA," including "working to repeal Obama's Clean Power Plan and Waters of the United States, providing regulatory certainty, and declaring a war on lead — all while returning to Reagan-era staffing levels."

Pruitt is expected to face questions about his bargain condo rental from the wife of a lobbyist who has since resigned from his firm, his spending on a round-the-clock security detail and his previous refusal to fly coach. He is under investigation by three congressional committees, the EPA's inspector general and the GAO, among other oversight bodies. White House deputy press secretary Hogan Gidley told NPR today that Pruitt will have to answer questions about the potential ethics violations "in short order."

'It could be pretty painful' when Pruitt faces Congress [Back](#)

By Anthony Adragna and Nancy Cook | 04/25/2018 06:00 PM EDT

When Scott Pruitt returns to Capitol Hill on Thursday, he will find few friends ready to greet him — and an audience of one waiting to determine his fate.

Republicans say they aren't going to give the Environmental Protection Agency chief a free pass on accusations of lavish spending, a sweetheart condo lease and luxe air travel during a pair of high-stakes hearings. Since Pruitt's previous appearance on Capitol Hill in January, he has faced an avalanche of damaging headlines and investigations that have alienated much of the White House and raised questions about his future leading the agency.

President Donald Trump has so far stuck by Pruitt. But the biggest test for the media-obsessed president may be how Pruitt fares in front of the cameras — only three weeks after he drew poor reviews for a combative interview with Fox News' Ed Henry.

House Energy and Commerce Chairman Greg Walden (R-Ore.) said Pruitt will receive a "cordial reception, but he's got some tough questions to answer."

Rep. John Shimkus (R-Ill.), whose subcommittee will be Pruitt's first stop Thursday, said the administrator should expect a "cool" reception from Republicans — who still strongly support his work to pare back EPA rules.

"It could be pretty painful, but when you accept the position of a senior administrator in a federal agency you've got to expect [that]," Shimkus, who chairs the Energy and Commerce Environment Subcommittee, told Politico. "You've just to grin and bear it and get through it."

Pruitt has few allies left in the White House, apart from the president himself. Senior administration aides characterized the hearings as potential make-or-break moments for Pruitt but said it's ultimately up to the president as to whether the White House wants to tolerate Pruitt's bad press.

Trump is largely keeping Pruitt around because he appreciates Pruitt's hard-charging agenda and because the White House does not want to go through another bruising confirmation battle over another Republican to lead EPA, according to senior administration officials and Republicans close to the White House. Already the White House expended great political energy this week on its pick for secretary of state, Mike Pompeo, a former congressman whom the White House views as eminently qualified but who is barely expected to squeak through the Senate confirmation process.

Most important, the president fears that dumping Pruitt would anger conservatives.

"The president is always nervous about offending his base, and Pruitt has real support in the base," said one Republican close to the White House. "If that base diminishes, he does not have a chance of being reelected. He generally likes what Pruitt is doing over there, but he has no relationship with Pruitt of any note. He could get someone else."

When asked at the White House briefing on Wednesday about Pruitt's spending and potential ethical violations, press secretary Sarah Huckabee Sanders would only say: "We are evaluating these concerns, and we expect the EPA administrator to answer for them."

Pruitt's waning support among White House aides has been months in the making. And at this point, many administration officials say they are tired of the terrible headlines and consider the allegations about Pruitt a nonstop swirl of distractions. It's not just Pruitt's handling of the questions that has irked White House officials but the facts themselves about the way he's led the EPA and run his own staff.

Over the past year, Pruitt has also alienated members of the communications team, National Economic Council, and Cabinet Affairs in various fights over policy like the Paris climate deal, messaging over policy rollouts, and spending decisions at the EPA. Another Republican close to the White House said Pruitt has earned a reputation among White House aides as "high maintenance."

The White House was not involved in helping to prepare Pruitt for the two Hill hearings on Thursday.

Shimkus predicted the toughest questions would come from the other side of the aisle.

"We need to make sure that we understand and recognize the valid, valid concerns that are out there on policy and administrative activity," he said. "But I don't think we'll be gouging his eyes out either — I think we'll have other folks that'll do that."

Some Pruitt supporters say he should be judged on his overall tenure.

"It should be based on his past performance, not necessarily standing in front of a microphone," House Natural Resources Chairman Rob Bishop (R-Utah) said. Bishop's committee does not have jurisdiction over EPA, but he has been a strong supporter of Pruitt's policy goals.

In his opening statement released ahead of the hearing, Pruitt will sidestep any discussion of the latest controversies, instead focusing on policy goals like Superfund cleanups and working more closely with states. "I will focus on key objectives to improve air quality, provide for clean and safe water, revitalize land and prevent contamination, ensure the safety of chemicals in the marketplace, assure compliance with the law, and improve efficiency and effectiveness," Pruitt will say in his prepared remarks.

Democrats are expected to tie the scandals facing Pruitt to his aggressive deregulatory push and proposal to slash EPA's budget by more than a quarter — which they see as just as worrisome as his alleged ethical improprieties. Multiple aides said there's such strong interest in the session that committee Democrats not on the Environment Subcommittee plan to participate, which does not require signoff from the majority.

"There's a confluence of concerns here that I think the Democrats are going to want to get answers to," Rep. Paul Tonko of New York, top Democrat on the panel, told POLITICO. "We were concerned yesterday, we're concerned today and we'll be concerned tomorrow if he's there."

There will be no shortage of things to ask him about, including the more than \$105,000 the agency has spent on his first-class flights, lavish spending on a \$43,000 soundproof phone booth and round-the-clock security, a cushy \$50-per-night condo lease from a Washington lobbyist who personally met with Pruitt to discuss the agency's Chesapeake Bay work, and a trip to Morocco in December on which he spent time promoting liquefied natural gas exports — a topic that isn't part of his agency's portfolio. Pruitt is also facing scrutiny over the significant pay raises the agency gave to a handful of his longtime aides from Oklahoma despite the White House's objections.

Federal watchdogs, the agency's inspector general, congressional investigators and the White House have launched more than a dozen investigations into various aspects of Pruitt's conduct.

But Rep. Joe Barton (R-Texas), the longest-serving member of Energy and Commerce, said Pruitt's ethics issues are "not the purpose of the hearing" and suggested many Republicans would come to the administrator's defense. However, he said the panel's GOP members have not met in advance to plot strategy.

"He's had a lot of death threats. I don't have a problem with his security costs," Barton said Wednesday. "I don't really have a major problem with his telecommunications setup. It's a difficult job to be the EPA administrator when you're a Republican."

Still, signs are increasing of weariness toward Pruitt among congressional Republicans. Three senior Senate Environment and Public Works Committee Republicans, including his staunch ally Sen. Jim Inhofe (R-Okla.), called for hearings into Pruitt's behavior earlier this week. Four House Republicans have called for his resignation. And EPW Chairman John Barrasso (R-Wyo.) said he has "serious questions" about Pruitt's spending and pledged to send additional oversight letters.

"He'll need to acquit himself well," Sen. John Thune, the No. 3 Republican in the Senate, said when asked about how important the sessions will be for Pruitt's future in the administration.

An aide to Rep. Betty McCollum of Minnesota, top Democrat on the House Appropriations Interior and Environment Subcommittee, where Pruitt will appear Thursday afternoon, told POLITICO their hearing would likely focus more on Pruitt's proposed cuts to nearly a quarter of the agency's budget and regulatory rollbacks.

"I expect the E&C hearing will have a greater focus on the ethical concerns surrounding Pruitt," the aide said.

Some Democrats on Energy and Commerce acknowledge Pruitt has in the past performed well in congressional hearings, which they said could allow him to respond to some of the charges.

"If Mr. Trump is going to look for a good performance, I bet he'll put up a great performance," said Rep. Scott Peters (D-Calif.), another member of the subpanel. "But if he doesn't address the substance of the ethical and environmental challenges, I hope that they would think about finding someone else."

Other Democrats think Pruitt's main goal will be to avoid a major gaffe but they don't see any way he will emerge from the hearing in a significantly strengthened position.

"One or two of these transgressions would be survivable but there are so many scandals that it's really hard for me to imagine that Republicans want to lower the bar this much," said Sen. Brian Schatz (D-Hawaii), an outspoken Pruitt critic. "It is actually beyond me why they're sticking by him."

Tester leans on public lands as key reelection issue [Back](#)

By Kevin Robillard | 04/26/2018 05:05 AM EDT

HELENA, Mont. — The issue that could prove key to Democratic Sen. Jon Tester's reelection bid is under the radar in Washington politics but practically ever-present in Montana life.

Nearly a third of the land in Montana is under federal government ownership, and Tester wants to keep it that way. It's a way the Democratic senator, who is running for a third term, hopes to keep voters who pulled the lever for President Donald Trump — including hunters, hikers, snowmobilers and ranchers — on his side in 2018.

"Public lands is one of the great equalizers. It's part of who we are," Democratic Gov. Steve Bullock said in a phone interview. "It doesn't what matter what our political beliefs are, it's a core part of our lives."

Tester's strategy is part of a larger effort by Democrats in the West to emphasize the issue. Bullock emphasized it in his reelection bid in 2016 as he defeated Republican Greg Gianforte (now Montana's congressman) by 4 percentage points after hammering the Republican billionaire over stream access. New Mexico Sen. Martin Heinrich, who is expected to easily win reelection in 2018, started his reelection bid with a video focused heavily on public lands issues. And Democratic strategists think it can help them in states throughout the interior West.

"There are a lot of people here who are single-issue voters, and that issue is public lands," said Nick Gevock, the conservation director at the Montana Wildlife Federation.

Outdoor recreation is now Montana's largest industry, surpassing agriculture, and contributes \$7 billion and 71,000 jobs to the state's economy.

"They like to go hunting, they like to go fishing, they like to go hiking, they just like to get in the mountains where their cellphone doesn't work," Tester said in an interview. "I want to make sure there's not a mine put at the head of the Yellowstone River, or at the borders of Glacier Park."

A Montana Republican on the national stage is also raising the profile of the issue in-state. Conservationists had high hopes for Interior Secretary Ryan Zinke when he was first named to the job, but his decision to shrink the size of two national monuments has left them dismayed and disappointed.

"We were hopeful that, being a Montanan, he was going to live Montana values and be the Teddy Roosevelt conservationist he said he was," Gevock said, but noting Zinke's Interior Department was "putting the oil and gas industry above every other use."

Tester introduced Zinke at his confirmation hearing and had similar hopes, but is heavily critical of him today.

"It was because I thought he understood conversation. I haven't seen that over the last 14 months," Tester said, adding: "He has time to redeem himself."

The strategy is a proven vote-winner in Montana. Throughout the 2016 gubernatorial campaign, and in his earlier bids for governor and attorney general, Bullock emphasized stream access laws for fishermen. And he hammered Gianforte for fighting stream access laws in multiple television ads last cycle.

The state and national GOP platforms both support selling federal public lands to the states, where many environmentalists feel they would be exposed to oil and gas interests. Tester's opponents don't endorse those views.

"The people of Montana do not want the public lands transferred," state Auditor Matt Rosendale said in an interview, echoing the views of businessman Troy Downing and former judge Russ Fagg. (Rosendale supported selling the land during a 2014 bid for Congress but has changed his position.)

All three said they would like localities to have more say in how lands are managed and how federal authorities balance multiple uses. Rosendale, for instance, criticized the Forest Service for shutting down too many roads in the state.

But while Democrats in Montana have aggressively used the issue, public lands haven't become a top-tier issue in Colorado, Arizona or elsewhere in the interior West, which some Democratic strategists believe is a missed opportunity.
